The influences on the changes of the health system within a B’laan indigenous community in Southern Philippines are considered to be strong influences to the changes in the health system. As the change in the health system among the B’laans is inevitable and apparent, their ability to create an adaptive mechanism in the management of sickness, health and well-being is very limited. In turn, low adaptation capacity to western-based medicine, and agro-industrialization are considered to be strong influences to the changes in the health system. On the other hand, internal influences to change include the demise and decline of traditional healers in the community as well as the non-utilization of the present locals to their traditional health knowledge.

As the change in the health system among the B’laans is inevitable and apparent, their ability to create an adaptive mechanism in the management of sickness, health and well-being is very limited. In turn, low adaptation capacity to western-based medicine likely result to poor health outcomes among the indigenous groups when compared to their referent majority population. Beneath the forceful influences, we go through the production and relations of power within the health system as the driving element for low-adaptive capacity.

A Comparison Between Time-Use Data Collected By Smartphones and a Paper Diary

Smartphones and “apps” allows time-use research to be set up in a completely different way, such as for example a time-use app. Smartphone users have (almost) permanently access to this device, so respondents can report (more easily) their activities at multiple times per day, instead of using a paper diary in traditional time-use research. Additionally, smartphones enable to collect complementar information such as exact location, such as GPS, how people feel at random moments during the day (i.e. experience sampling), what short-term activities they do throughout the day (by pop-up questions such as about social media use), etc.

The Netherlands Institute for Social Research | SCP

智能手机和“apps”允许时间使用研究设置在一个完全不同的方式，例如一个时间使用应用。智能手机用户有（几乎）永久访问这个设备，因此，受访者可以更容易报告（更容易）他们一天中的活动，而不仅仅是使用纸质日记的传统时间使用研究。此外，智能手机使收集补充信息成为可能，例如GPS，人们在随机时刻的感觉，他们在一天中做什么（例如通过弹出问题如关于社交媒体使用），等。

The Netherlands Institute for Social Research | SCP

XVIII ISA World Congress of Sociology

Journals and books are widely used to disseminate research findings, but they are not the only means to communicate research. In the digital age, the Internet has become an increasingly important platform for sharing research. This is exemplified by the growth of social media, where researchers can engage with each other and with the public, and by the rise of open access journals, which make research freely available to anyone with an internet connection.

Despite these advances, there are still challenges to making research accessible. One of the main challenges is the sheer volume of research being produced. Researchers must find ways to make their work stand out from the crowd and to communicate its value. Another challenge is the need for researchers to engage with policymakers and other stakeholders, who may not have the time or expertise to read academic articles.

In recent years, there has been a growing trend towards using social media to share research. This can be done through blogs, Twitter, Facebook, and other platforms. Researchers can use these tools to share their work with a wider audience, including policymakers and the general public.

Another way to make research more accessible is to use open access journals. These journals are free to access and are often funded by a variety of sources, including academic institutions and non-profits. This makes it possible for anyone with an internet connection to access research, regardless of their financial situation.

In conclusion, there are a number of ways to make research more accessible. By using social media and open access journals, researchers can reach a wider audience and communicate the value of their work to a broader public.
Economic and Labour Market Outsideness Among Young People in the EU

This paper analyses economic and labour market outsiderness for young people across different European countries and welfare regime models. We define ‘outsiders’ as those people who are either unemployed, in temporary contracts or have an income below 60% of the median. By using cross-sectional data from the European Union Statistics on Income and Living Conditions (EU-SILC, 2006) we find: (1) a considerable variation in rates of youth outsiderness across EU member states. The youth outsiderness – measured observing the duration of the spell of outsiderness – is higher in Mediterranean countries than in Liberal, Continental and Scandinavian countries; (2) that the depth of youth outsiderness is influenced by the different types of skills possessed by young people. However, the strength of the effect varies across different welfare regimes.

Climate and People in a Region of Tension Between High Urbanization and High Biodiversity: Social and Ecological Dimensions of Climate Change

Single policies adopted at a global scale are unlikely to cope with risks, impacts and uncertainties associated to climate change (Ostrom, 2009). Stakeholders of science, policy and civil society recognize that dealing with environmental global change requires a multilevel and interdisciplinary approach to identify gaps and priorities, and promote collective action. While climate change will expose regions to similar impacts, the extent of those impacts and effective response at the local level will be determined not only by the location’s sensitivity and vulnerability but also by local groups and individuals’ capacity, including their institutional links, social networks and motivation to actions. Considering this perspective, a research project is undertaken on São Paulo Coast, Brazil, a region of tension between high urbanization and high biodiversity. The São Paulo Coast exhibits the socio-ecological dilemmas of contemporary economic development. The combined pressures of tourism, industry, oil extraction transport, and sustainable development are increasingly difficult to resolve. The prospect of climate change intensifies this problem. Drawing on an empirical research on this area, our study aimed to set groundwork research on the environmental consequences of climate change along the coast of São Paulo, including the investigation of how solutions may require better understanding of local and regional government stakeholders’ knowledge, concerns and actions related to climate change. Our results point out that different arenas and conflicts around the local environmental issues. The identified arenas are characterized by different interests and aims, and asymmetric capacities to mobilize resources. The results highlight how local stakeholders and residents perceive climate change risks, indicating that the social and economic context and government support are determinants in the way people responded to risk threats. Our results also indicate how climate change issues are being framed by local governments in terms of policy strategies and instruments.

Global Environmental Change: Environmental Policies in China with Reference to Brazil

The environmental issue has assumed the status of global problem, mobilizing civil society organizations, media sectors and governments around the world from the last two decades of the twentieth century. Among global environmental changes, climate change has proved to be structuring the debate in recent years, characterized as one of the main challenges of the global society at the entrance of the XXI century. Both Brazil and China still have many challenges to be addressed with respect to the set of problems that make up the environmental issue in a world characterized by high modernity, by the risk society and by the context of global environmental changes. These two countries have been noted for their international importance and, above all, the importance of environmental issues at the core of their political processes. In this context, this project aims to investigate the different European countries and welfare regime models by which Brazil-China have internalized the environmental issue, especially with regard to the climate issue, primarily analyzing two social spheres fundamentally present in this process: the sphere of government and the scientific community. The study of the pillar Science-Policy in Brazil-China is of fundamental importance, and consequently one of the innovations proposed in this research is the methodological aspects, claerifying in which case the investigation will be adopted, including, in particular, the systematic analysis of primary and secondary sources, such as the bibliographic and documentary research, and semi-structured interviews with government and scientific agents. We have a team of Doctors and Postgraduate students who will participate in the activities described in this research project, contributing to the realization of the proposed study in this project.

The Dynamic Equation Between Social Conflicts, Natural Resources and Environmental Disasters: The State of the Art and a Theoretical Proposal

In the recent years, environment, risk, biodiversity and climate have been among the main intellectual dilemmas presented by the social reality and constituting the greatest challenge to the sociological investigation. The social sciences field has not only sought to theorize these dilemmas, but also to analyze empirically recent objects of the contemporary societies, in order to deal with the super complexification of social dynamics in a polycentric and polyphonic world. Considering this perspective, recent studies on conflicts demands a robust intellectual substratum which involves a review of classic and contemporary approaches from authors affiliated with Sociology and Anthropology areas as well as efforts from social scientists to be opened to the power of the investigated social reality. It means that social scientists are called to better understand social groups who live or work on affected areas by different restricting factors, such as: (i) legal issues, related to the use or appropriation of natural resources; (ii) scarcity related to quantity or quality of resources; (iii) natural disasters or disasters caused by human activities; (iv) issues related to the exclusion of territory or resources provoked by disputes among different social groups and among social groups and species. This paper seeks to clarify the state of the art on social conflicts focused on natural resources and catastrophic events that have been debated in the international literature. We also seek to present and debate our theoretical affiliation which has been hold our studies on these issues.

Different Viewpoints of Contemporary African Intraestate Small Wars

ABSTRACT
Africa has always been affected by external influences such as Western colonial rule and processes of independence of most states since the 1960s. The changing nature of African post-colonial politics led to increasing conflicts in most states because of power devolution and violent regime changes by military coups. Historical causes of intraestate small wars are mostly due to belligerents and non-state actors having longerved and grievance issues, power struggles, resource wars, ethnic and religious differences, a lack of western norms and values which are not part of cultural ideas of development and also a lack of democratic principles, as these are not yet instituted in most countries. The default action is always to fall back on violence when belligerents are dissatisfied with current governments and breaking of peace accords by either of them. Changing sides in Africa is a normal occurrence, because alliances can change overnight. Enduring conflicts such as those in the Democratic Republic of Congo (DRC) and Sudan lead to economic hardships and social problems through the internal displacement of thousands of people in their home countries, as well as those of political refugees. Consequently, two-thirds of global conflict is currently in Africa and the majority of United Nations (UN) peace missions are hosted in these conflict-ridden African states. Reference to South African peacekeeping contributions in these states will be made briefly.

Impacts of the Economic Crisis on Gender and Class Inequalities in Europe

The presentation aims to understand to what extent the present crisis increases gender and class inequalities and subjective well being in Europe. In periods of rising unemployment and reduced disposable income it is clearly relevant to assess their differential impact on gender and class relations.

Evidence will mainly be collected from the different rounds of the European Social Survey (ESS - 2002; 2004; 2006; 2008; 2010 and 2012). Other sources will also be used such as official information of GDP. Unemployment rates, Gini Indexes per country, Human Development Index (HDI), Gender Development Index (GDI) and Gender Empowerment Measurement (GEM), in order to “quantify” the effects of the crisis, comparing rescued and non-rescued European countries, the last ones being submitted for long to severe austerity policies.

Differences and inequalities between women and men should be accounted for, among other evidences, in social values types and loads of paid and unpaid work and in levels of life and work satisfaction.

Reflections about Work, Time and Subjectivity in the Contemporary Culture

The obsession for innovation, planned obsolescence and the consequent discardability have become conditions of the contemporary culture. A culture of consumption and the commodity form have impregnated our way of life, even people and their relationships. In this article, methodologically inserted in the dialogue between psychoanalysis and social theory, we will start from the premise that in this new version of capitalism, people can be considered as commodities in the labor market. And if we are commodities, in this endless shelf of products, we need to remain saleable because we are also disposable (or, to use common expression in business: we must invest, continuously, in our employability). It is precisely this point that interests us. The rules are unfair but clear: we must uninterruptedly upgrade to keep up with the frenetic speed of technological change. As well as the products, we have to innovate ourselves to keep our chances of employment. It is necessary to always deliver more in less time; we must perpetually upgrade to keep up with the frenetic speed of technological change. And all of this is necessary, but it is not enough. Besides not being sufficient there is no guarantee. Furthermore, in this condition of full mobilization, in this new capitalism of spirit, there is no separation between working time and lifetime.
The rise of sociology during the Nineteenth century represented not only the strengthening of new ways of understanding the reality of social problems. In this historical process, it is also possible to see the rise of new ways of comprehending the scientific knowledge, specially the problem of objectivity in social science fields in connection with the objectivity foundations of natural sciences. The sociological "discourses" have been observed and understood throughout the classic period as a proto-religious critical concern about the logical development of the scientific reasoning, both in natural and human sciences (Geisteswissenschaften).

As a result of the classical sociological analysis of the scientific method as a way of constructing the epistemic roots of social sciences reasoning, the sociology developed during the XIX century an important and unique capacity of comprehending "science through the scientific method". Thus, in this paper we aim to develop a historical analysis of the rise of the critical and "reflexive vocation" of classic sociology as an important epistemic condition to the strengthening of the modern sociological conception of science in different fields of sociology like sociology of knowledge, sociology of science and sociology of scientific knowledge. In a first moment, the classics of sociology pointed out the "problem of knowledge" as an internal challenge to the development of a sociology as a scientific way of thinking; in a second moment, the contemporary sociology pointed out the "problem of knowledge" as a general difficulty to the whole scientific conception of reality, promoting a crisis in the logical demarcation of science in face of a real "social demarcation of knowledge".

The Role Of Farmer Education In South Australia

There is a significant challenge involved with balancing food security at local and global levels whilst mitigating the environmental and social consequences of the historically productive food chain. This work evaluates the importance of education in the South Australian agricultural sector as a tool to maximise beneficial outcomes. The results of a blended mixed method research project, which involved farmers and governance stakeholders in South Australia, are presented as empirical evidence highlighting the positive roles education, in particular university education; have in regard to increasing sustainability. Interviews with agricultural governance stakeholders emphasised the important role that education will play in building the adaptive capacity of farmers and having positive outcomes on the future development of the South Australian agricultural industry. It was also found that higher levels of formal education contributed to farmers: having greater confidence in their respective communities; being more likely to prioritise their environmental stewardship roles; being less concerned about the risks posed by large agri-business corporations; feeling there was less necessity to regulate the agricultural industry or restrict imports; and, looking for more support from government to adapt to a changing climate. Most importantly, however, was the dramatic reduction in farmer concerns with government support programs as education levels went from secondary or less, through to vocational qualifications, and finally university degrees. These results suggest that further education provides farmers with the capacity to compete effectively in a liberalised economy.

A New Tsunami : The South African Anti-Nuclear Movement in the Wake of Fukushima

South Africa's government has made clear its plans to order a fleet of six nuclear reactors, providing an additional output of 9 600 megawatts. It also aims to reactivating the other elements of the nuclear fuel chain such as the construction of an enrichment plant, a fuel fabrication plant, and a nuclear waste smelter. President Zuma has taken over from his deputy the chairing of the National Nuclear Energy Executive Co-ordination Committee, the intra-governmental body that is charged with overseeing procurement. The overnight costs of the reactors alone are likely to amount to between US$60 – 100 billion, by far the biggest infrastructural purchase made by democratic South Africa in its 20-year history.

Seemingly the impact of Fukushima has not had repercussions among the responsible decision makers. Instead they have sought and gained approval from the International Atomic Energy Agency for the expanded nuclear programme. However, civil society continues to challenge the plans as a fait accompli. Whilst the nuclear threat in the and april context is well understood, the environmental NGO sector, new formations and new sectoral opposition is notable. Significant disquiet has been voiced by the trade union movement (in political alliance with government, but not on this issue), faith-based communities, academic energy researchers and civil society energy lobbyists, the consortium of large-scale electricity using companies, communities situated close to the construction of nuclear facilities, and even the government's National Planning Commission. The paper seeks to understand the dynamics of government indifference to Fukushima, and the stress on Fukushima by opposing social movements, who have adopted TSUNAMI as the name of their coalition (The SouthAfrican Unified National AntiNuclear Mobilising Initiative).

Shale Gas in South Africa: Regulating a Resource Grab

A number of transnational oil companies have recently been given the go ahead by the South African government to initiate hydraulic fracturing for the exploration of shale gas in a semi-arid part of the country, the Karoo region, despite a lack of robust regulatory procedures being in place. When she lifted an earlier moratorium in September 2012, the minister of mineral resources provided no indications of the source from which the substantial quantity of fresh water necessary for fracking would be derived. Existing economic sectors fear the contamination by the oil companies of local groundwater, on which all farming and tourism depend, and a substantial portion of the country’s surface water heritage. In the race to exploit the resource, encouraged by the National Planning Commission, a grab will be made for up to 20 per cent of South Africa’s land surface.

* denotes a presenting author. Abstracts are organized by first presenting author's last name. 277
The country's mineral rights are not vested in landowners but in the state, which has allocated them to the oil transnationals. Taken together with scarce water resources, the cost of the industry's activities will be far higher than the temporary energy dividend. Yet government uses the language of energy security, lower carbon emissions, and local economic development, all of which concepts have been questioned by civil society, pointing to shale gas as typifying the 'resource curse'.

The presentation looks at potential socio-economic and environmental impacts of shale gas exploration and mining, raises questions about the functioning of the new South African democracy in deciding on controversial new technologies, and proposes legal and regulatory instruments steps that need to be put in place.

Inscribing Dance: From Embodiment to Digital Media

Inscribing dance: from embodiment to digital media

The ephemeral aesthetic of dance, in comparison to other art forms, contains no tangible corpus. It's matter - body and motion in live performance - are transitory and defy any attempts to record the practice in order to create an accurate transcription and permanancy.

Since the beginning of the 21st century the accessibility and proliferation of digital media has influenced the way we document and archive the practice. On one hand, it has contributed to recording unique traditional dance forms that are considered to be in danger of disappearance due, mainly, to socio-political and ecological disturbances. However, though video recording has the potential to preserve intangible cultural heritage through the documentation of the interpretation of dance works, it cannot be taken for the work itself (as is the text of a play in theatre or the score for music). Further, this accessibility of information through technology, this "visibility in excess", is questioned both by practitioners and scholars of dance who wish to protect cultural bias, contributing to the contamination by cultural assimilation and globalization of a specific practice - to a certain extent, erasing what makes it unique.

Using specific examples of traditional and contemporary dance practices - the body as the first site of inscription of kinesthetic knowledge, text-based documents, audio and visual recording - this paper will attempt to shed light onto the different methods of inscribing and documenting dance, taking into account the sensory distribution of the different mediums. What is lost? What remains? And different methods of inscribing and documenting dance, taking into account the different mediums, audio and visual recording - this paper will attempt to shed light onto the reception of the dances (values and practices) between the generations of older adults and young people. An ethnographic research using interviews and direct observation as techniques was carried out in the community. The interpretation of the information took place on the grounds of authors who discuss the topic in the field of social science in dialogue with physical education. As a conclusion, we can affirm that the bodies intertwine in the feas and dances and promote dancing dialogues established between generations. The ritual system, constituted by means of feats and dances, reveals the senses and meanings of the dances as a cultural resistance strategy, while allowing for the reconstruction of the past and the re-signification of the present of this social group analyzed. This way, we observed the establishment of hybridization processes between traditionalism (older adults' dance – sussa) and modernity (youth's dance – forró), revealing multiple influences between traditional culture and the cultural industry, resulting in other cultural patterns.

"Movements Wrestling: Union Engagement with Migrant Worker Policy and Organizing in Comparative Perspective

Migrants crossing borders in search of better economic opportunities are often able to utilize their social networks to gain employment but they face the deprivities of the labour market alone unless unions and other non-governmental organizations become involved in supporting voice, not only in the workplace but in the polity as well. An institutionalized labour movement can provide protection and support and the possibility of ongoing representation for migrant workers. Indeed, migrant workers are taking advantage of increased opportunities to partner with unions, but this is happening at a time of great peril for the labour movement. Historically, unions have engaged in vigorous debates regarding labour migration; even when they have adopted "pro-migration" policy positions, approaches to organizing and representation have varied depending upon the individual culture, structure and ideology of specific national and local unions. Of course decisions do not act to influence policy or organise migrant workers in a vacuum, rather they do so within specific state contexts. This paper will focus on some of the key debates concerning migrant issues that unions have engaged, as well as the strategies and specific types of organising efforts that have been launched in recent times and the underlying impetus for these efforts including the role played by national union federations, national unions, global union federations and NGOs. It will draw upon research conducted on US, UK, Jordan, Dominican Republic, Sri Lanka and South African cases.

A State/Society Approach to Labor Standards Enforcement

Given the tremendous gap between passing laws and outcomes for workers, how can labor organizations improve enforcement? We contrast two sets of strategies for labor organizations which align with distinct conceptions of the state and enforcement. On the one hand, labor organizations can advocate for laws to be passed and then push the state to enforce them using its own capacities. This strategy accepts a view of enforcement as primarily a technical problem to be solved by regulators. Once there is political will for implementation, it is up to the state to provide the resources and choose the best strategy to ensure compliance. On the other hand, after getting legislation passed, labor organizations create conditions for partnering with agencies in enforcement and can become directly involved in the operational aspects of enforcement. This approach is based on a fundamentally different view of state capacity, which is constituted by a combination of the regulators and organized groups in society that complement the state. Such a view challenges the notion that setting enforcement right is a technical problem that can be solved with the right strategy or correct internal organization of the bureaucracy. By contrast, it treats enforcement as a political problem of constructing institutions that can facilitate collaboration across the state and society divide, thus ensuring greater enforcement capacity. In the context of cases from highly different political contexts (US and Argentina), we contend that the latter approach has the potential to help

...
labor organizations further enforce and argue that these findings suggest a need to develop more expansive theories of the enforcement process.

Intergenerational Dependencies: Challenges for Theory, Research and Policy

This paper examines recent developments in the theory of intergenerational solidarity and dependency, drawing on a review of key sociological studies and policy documents. Despite the rejection of the generational conflict hypothesis in the sociology of ageing, prominent public authors such as Fishman (2010) continue to give popular support to the perspective of demographic determinism and apocalyptic demography. As well as helping to refute such views, attention to the theory of intergenerational dependencies is argued, has the capacity to reinvigorate research on the sociology of ageing and to provide new research perspectives on policy in the epoch of longevity.

Comparing Two “Banglatowns” – Reflections on the Use and Transformation of the Streets in Rome and London

The paper aims at comparing how two different “Banglatowns” were built-up in London and Rome. In both cases the “street” played a core role in urban transformation.

In London, the Spitalfields’ case will be analysed. Here, a typical inner city has become in the last 40 years one of the biggest Bangladeshi enclaves in Europe. Since the end of the 1990s, its marketing as London’s Banglatown was a product of an alliance between Bangladeshi political and commercial elites that represent the majority in the local Council. A number of area-based initiatives played a core role in this process.

In Rome, the Torpignattara case will be considered. This is an Italian “periphery” that started to receive foreign immigrants, in particular from Bangladesh, since the 1990s. Here it was the absence of this place in the policy agenda, and some consequent intensive uses of the streets by the immigrants’ population that led to its labelling as a Banglatown.

Based on the idea of “diversity” that considers multiple axes of differentiation (e.g. national origin, class, gender), the paper will explore how these places’ transformation led to a reconfiguration of the streets’ uses that included new groups, excluding others.

The comparison between the two cases will focus on some core issues:

• With reference to the debate between formal vs. informal, policy vs. practice, citizenship right vs. urbanity right, was the presence/absence of a public policy where the immigrants played a core role a minus or a plus in these places?

• Is the street a privileged space for the cohabitation of differences?

• What kind of diversity is produced in the space of the street?

• With reference to the Bangla-towns image, what kind of “authenticity” was produced? Is authenticity a meaningful issue for the social construction of spaces?

Distrust and Law-Evasion In Iran (Case study: Tehran city)

Distrust and law-evasion in Iran. Case study: Tehran city

Social capital is basis of development and stability in every society. Trust is one of the most important social capital indicators. Distrust is signe of erosion of social capital in every society. Erosion of social capital is named as Weak Intergroup objective and subjective relations in society, can issue disorder or law evasion in society. Therefore distrust to other (people and the authorities) about law-obligation can lead to law evasion in society. So this article explains distrust effect on law-evasion. In this research is used Putnam and fukuyama theory to analyze social capital erosion. This method is survey research the study population of this study of women and men over 24 years in Tehran. And the data collected by questionnaire from a sample of size 384 people in Tehran. Method of sampling is Multi-stage sampling. After data collecting, research hypothesizes examined in two inferential and descriptive levels by Amos and Spss package. Law evasion is divided in two dimensions: objective law-evasion (behavior) and subjective law-evasion (orientation). In contextual variables, it is seen meaningful relation among gender, marriage position, type of job, age, education, economic position with two dimensions of law-evasion. Basic variables in this research with their total effect on dependent variable consist of, civil distrust (0/44), generalized distrust (0/21), disbelieve to law (0/26). Generally, these independent variables (with subjective law-evasion) explain 43% of the dependent variable variance (objective law-evasion). Whereas these variables explain 43% of subjective law-evasion variance. So social capital erosion has more effect on subjective law-evasion (orientation) into objective law-evasion (behavior), hence to support inter group social capital in society can issue revival of law orientations and hence obey the law in society.

Keywords:
Distrust, subjective law-evasion, objective law-evasion, disbelieve to law,
Emotions and the Self’s Past and Future

A Canadian philosopher, Charles Taylor, spoke of emotions, such as love and loyalty, as revealing to oneself and others what one strongly cares about. He argued that they play a role of a moral compass and in this capacity are constitutive of one’s identity and morality. Many of his examples make it difficult to distinguish them from particular emotions or, better yet, from emotional geographies, as constitutive of unique individual identities in the sense of fixing or freezing the way an individual relates to her or his self, others and to the past, present and/or future.

Explaining Women’s Employment Patterns in the Local Context: The Role of Education and Local Care Policies in Terrassa (Spain)

Empirical research into the factors determining female employment has given rise to a lot of interpretations regarding the cultural, institutional and individual effects on women’s employment. To explore heterogeneity of women’s employment patterns over the family life course in different local contexts and among different groups of women, Steiber and Haas (2012) have shown that women’s education partly explains different patterns with respect to employment, work-family balance and access to family help in the city of Terrassa (Spain). The analysis is based on information drawn from focus groups with different categories of women. Qualitative analysis is supplemented by the results of a survey conducted locally providing evidence of the relationship between employment and use of formal and informal care. The initial hypothesis is that women’s employment patterns over the family life course are closely linked to preferences regarding jobs and the family, with education and the local care system playing a key role as both a mediating and differentiating factor in the formation of these preferences and values.

Indicators for the Institutionalization of the Social Sciences and Humanities

We will present an interim report of work done in the EU-funded INTERCO-SSH project, which deals with the institutionalisation and development of the social sciences and the humanities (SSH) in Europe. We will suggest a concise set of indicators which is being established for a comparative analysis of the development of the SSH in different national contexts. Preliminary data will focus on SSH disciplines in Germany, France and the UK from 1945 to the present. We will ask how these indicators can be used for the history of the SSH and what developments they are able to depict. The sources used are of qualitative and quantitative nature: interviews, statistical and bibliometric data, academic texts and archival records are gathered and combined for this purpose.

In the present contribution, in the framework of a research project under way on father involvement in the care of children, we are trying to explore the characteristics and profiles of these families with a special emphasis on the changing role of fathers, in an institutional context where new social policies of fatherhood are being developed in the last decade. Using data from ECSHP 2011, a regional dataset in Catalonia (Spain), we are trying to explore the changing role of fathers or will they fade away as soon as there is an economic recovery?
International Mobility of German Diplomats and Their Families: Direct and Cross-over Effects on Quality of Life, Family and Partnership Outcomes

International work assignments are often found to be stressful and to affect employees’ and their accompanying partners' well-being. However, whether this applies also to diplomatic personnel who are relocated regularly is unclear. The study surveyed the health-related quality of life, the reconciliation of work and family life, and the partnership satisfaction of German diplomats. Potential risk factors are the duration of international mobility (years spent in the diplomatic rotation scheme, number of postings abroad), perceived stress, and employee's attitudes towards working/in vivo diplomatic rotation. Protective and risk factors are cognitive coping, internal control beliefs, self-efficacy, preoccupation with the host country’s culture, and social support. As a key aspect, stress effects between employees and accompanying partners are analyzed. N=2,433 active diplomats in the German Foreign Service were assessed using self-rated outcome questionnaires. Corresponding assessments were obtained from N=321 accompanying partners. While perceived stress had negative effects on all three outcomes, the number of years passed in diplomatic service and the number of postings had no effect. Diplomats who saw more advantages over disadvantages in diplomatic rotation reported better health, easier reconciliation of work and family life and better partnership satisfaction. Cognitive coping, self-efficacy and social support had several positive effects on the outcomes. Additionally, cognitive coping moderated the effects of stress on health. Crossover effects revealed that accompanying partners’ stress levels and their attitudes towards living in diplomatic rotation are among the determinants of expatriates’ quality of life, family, and partnership outcomes. Implications are drawn for personnel management, development and health promotion. The importance of considering families within employer’s preventive strategies is emphasized. Examining the highly mobile group of diplomats and their families is an important aspect in the understanding of the major issues and challenges for spatially mobile societies.

FLINKFELDT, MARIE* (Uppsala University, marie.flinkfeldt@soc. uu.se)
‘cultures of Sick Leave’: Institutional Categorization, Legitimacy, and Moral Order at the Intersection of Research and Politics in Sweden

In line with what has been described as a ‘cultural turn’ in the social sciences over the last decade, ‘cultures of sick leave’ has become an important concept in Swedish social insurance studies as well as in political debates. ‘Culture’ has been used for understanding variations in sickness benefit usage between groups and between different geographical areas in Sweden. Examining how the concept is used and what it does, this study offers an ethnomethodological understanding both on the empirical level and on a meta-level. It is found that ‘culture’ tends to be used (or refuted) as explanation, without much theoretical or methodological grounding. Instead, culture is often applied in a common-sense manner, rarely problematizing how it translates into empirical studies. The paper discusses how the concept of culture works to negotiate the institutional category ‘sick absentee’ in the intersection of research and politics, positioning the individual in relation to the welfare state and bringing notions of accountability, legitimacy and morality into play: whose fault is a ‘culture’ anyway, and what can be done about it? As a contribution to this approach, the paper suggests ethnomethodology’s way of studying culture as it is being ‘done’. Seeing culture as constituted in discourse, and placing culture in action rather than action in culture, opens up for a bottom-up analysis in which members’ situated practices are in focus. Furthermore, conversation analysis provides a rigorous methodological framework for analyzing institutional categorization processes by closely attending to linguistic detail in interaction. Drawing on a Swedish study of meetings between people on sick leave, their doctor, and the state official administering their sickness benefit, the paper illustrates the use of such an approach, showing just how the legitimate boundaries of the concept are co-constructed and negotiated: how ‘cultures of sick leave’ are done in the fine details of interaction.

Buddhism and Critical Social Science on the Causes of Suffering: Towards a Dialogue

In order to demonstrate the possibilities of building a philosophically and empirically informed framework for the study and alleviation of suffering, this paper compares the Buddhist tradition and critical social science from the perspective of their understanding of the causes of suffering. Though both traditions are driven by the wish to combat suffering, their understanding of the causes of suffering differs. There may be, however, a productive complementarity in this difference, and yet frictions between the two traditions are real enough. Furthermore, neither tradition exists in a social or ideological vacuum. Thus, establishing a dialogue between these and other traditions calls also for reflexivity, critique and self-critique.

Globalización y Construcción Identitaria. El Caso De Los Jóvenes Universitarios En México

La globalización ha generado diversos procesos que permiten la movilidad de productos, mercancías, personas, información e ideas sin que las fronteras de los países sean un obstáculo, salvo en algunos casos. En este proceso identitario, las costumbres, valores y significados de una determinada región eran los que conformaban la identidad de una persona o colectivo. Con los procesos de movilidad resulta de la globalización, la permanencia física en un lugar no es necesariamente determinante en la conformación de la identidad, ya que al estar en contacto con los productos, valores e ideas de otros lugares, éstos van formando parte de las nuevas maneras de construcción identitaria. Lo anterior puede observarse con mayor facilidad en las ciudades, donde existen los recursos que permiten este intercambio de ideas. Dentro de los centros urbanos, los jóvenes por sus características, resultan consumidores ideales de las propuestas surgidas en el entorno global. En este sector, quienes disfrutan de un grado universitario pueden contar con mayor libertad de decisiones y mayor movilidad para integrarse en un sistema global. Por esto, resulta pertinente estudiar cómo es que la identidad de los jóvenes universitarios se construye. La poca que se propone es parte de la investigación que se realiza para integrar la tesis de grado dentro del programa del Doctorado en Ciencias Sociales. Se busca explicar cómo se da la construcción identitaria a través de los agentes socializadores presentes en la vida de los jóvenes. Los medios de comunicación y las tecnologías de información resultan de gran importancia en este proceso, ya que es gracias a ellos que se facilita el intercambio de ideas. Para entender cómo una persona ha construido su identidad con base en la contextualización de los significados externos, se estudia cómo verbaliza su historia.

On the Maturation of Immigration Detention: Theological Approaches and Evidence

The detention of irregular migrants and asylum seekers has become a prominent feature of both national and international efforts to “manage” global migration. An important aspect of this phenomenon is the emergence of new institutions devoted to migrant detention, which can be observed for example in the gradual shift in countries across the globe from using prisons or other “off-the-shelf” facilities to dedicated immigration detention centers. This maturation of immigration detention regimes has important implications, not least of which is the fact that it appears to have occurred at the same time that the number of migrant detainees has increased. Is there a correlation between the institutionalization of detention regimes and the increasing reliance of this method of migration control? Using data on detention regimes from the member states of the Council of Europe, where human rights norms appear to have had an important impact on how detention practices have evolved in recent years, this paper seeks to address this question through differing theoretical approaches to state behavior. For example, has pressure from human rights actors been a key driving force for the institutionalization of detention? If so, what implications might this have for how rights actors view the long-term consequences of certain liberal forms? On the other hand, does a Weberian model of institution-building provide a better explanatory framework for how detention regimes have evolved? Do theories of policy diffusion shed light on the spreading of these practices across the European region and beyond? Or, is growth in detention institutions more the result of increasing private-sector involvement in state functions, including incarceration? Ultimately, the paper seeks to provide some initial guideposts for investigating immigration detention institutions while making clear the broader implications of this phenomenon.

Frontier Societies: Culture and Social Institutions

The paper presents a cross-cultural study of contemporary frontier societies, based on an analysis of World Values Survey data from the USA, the Russian Federation, Canada, Australia, Argentina, and Brazil. Consistent with Turner’s “frontier thesis”, we find that frontier societies carry a common syndrome of socio-cultural attributes, ranging from higher levels of membership in voluntary associations and civic activism, to greater libertarianism and skepticism of government. The “frontier thesis” therefore explains not only the historical experience of America, but constitutes a common frontier phenomenon in other world regions and continents, with different settling patterns of new lands. The experience of living on the border areas leads to the formation of a stable set of values, distinctive features of frontier life, such as individualism, egalitarianism, libertarian commitment to the principles of economics, social activism, higher levels of social trust and tolerance of outgroups, civic protest, social conservatism, traditionalism, less support for the federal government rule and others.

Re-Thinking Cautious Urban Renewal. the Iba (Berlin, 1984/87) As an Early Example for a Politicized Strategy for a Sustainable City

Apart from the fact that the strategies for a sustainable city today form the basis of a neo-liberal urban, mainly environmental policy, the main question remains of the causalities and initial potential of some of the key concepts. The International Building Exhibition (IBA) in Berlin in 1984/87 with its two areas IBA Alt and IBA Neu, and the two strategies of a critical reconstruction and a cautious urban renewal, seen as a paradigmatic case study in light of the specific situation in Germany in the 1980s, especially the conditions in West Berlin, by linking urban rehabilitation with social and ecological objectives produced alternative, but ultimately normative models of urban regeneration, not only with regard to European urban planning, but of global interest. This paper analyzes, to what extend primarily the IBA Alt - as a paradigmatic concept of development in response to the policy of redevelopment by demolition and reconstruction of the 1960s and 70s - maintained a cautious squating practice, with its procedures of advocacy, participation, and self-building for the socially engaged and responsible restoration and maintenance of old tenements, new forms of responsibility and ownership, the provision of green spaces and social infrastructure – at first promised a politicization and democratization of urban renewal and everyday life. Since the IBA, funded by federal and state agencies, is called back to mind for its projects and protagonists with various research, exhibition and publication projects to mark its 25th anniversary, I will discuss the function of cautious urban renewal, both its positive achievements and uttered criticisms. In revisiting the IBA I intend to provide a historically argued contribution to the current debate on sustainability and the city, by not only by highlighting planning processes, but by challenging the dimensions of the ecological and the social.

When Symbolic Violence Changes: The Example of the Educational Reform of Vichy

This paper aims to understand the mechanisms of symbolic violence through the capacity of the State to impose a specific social order by means of public policies. Public policies are, according to Pierre Bourdieu, one of the main tools for exercising power. This power is exercised through the exercise of symbolic violence. It is the main purpose of this paper to analyze the phenomenon of symbolic violence and to demonstrate how it can lead to change in public policies.

Social Innovation and Societal Change: Role and Impact of Clinical Sociology

For over twenty years, a wide range of research processes and activities have been developed in response to demands brought forth by representatives from local initiatives working towards social innovation specifically by means of social transformation. Among the main organizations that embarked on this undertaking are the Service aux collectivités (SAC) of the Université du Québec à Montréal (UQAM), the Alliance de recherche universités-communautés en économie sociale (ARUC-ES), the Centre de recherche sur les innovations sociales (CRISES) and the Incubateur universitaire Parole d'excédés (IUPE).

In this context, collaborations were formed with labour representatives (to counteract plant closures and mass layoffs), with local development initiatives (similar to those involved in the revitalization of the Angus brownfield in Montréal.)
al), with community organizations (working to provide social housing in the fight against poverty and social exclusion) as well as with the social economy and solidarity-based economy (through Quebec government support for the new social economy).

With this historical backdrop, we present a summary of our reflections on the capacity of such initiatives to impact social change. When evaluating initiatives, we proceed in three steps. To begin, we examine the extent to which an initiative is able to respond to social or socio-economic emergencies, thereby testing its reformist capacity. We then look at its institutional impact on the production of societal frameworks, namely through its ability to contribute to the determination of new path dependences. In a third step, we identify the conditions that would allow it to increase its reformist or restorative capacity as well as its potential to act as an agent of change within the societal framework.

Entre Dispositif Institutionnel, Représentations Et Usages : Le Numérique Comme Pouvoir De Renforcement Des inégalités Sociales

Si les inégalités numériques s'intègrent plus largement dans la définition des inégalités, la réalité de la vie sociale des individus et leurs pratiques numériques sont dans un rapport dialectique. Une continuité existe entre les pratiques off et on line (Granjon, 2009 ; Cassili, 2010 ; Fontar, 2010). Ainsi, interroger les inégalités numériques nécessite de questionner les rapports entre institutions, représentations et usages.

Le MenteC (2010 et ANR INEDUC) interrogera l'articulation institutions/usages en montrant en quoi les institutions d'aide à l'insertion renforcent les phénomènes d'exclusion à travers la mise en place de dispositifs techniques présupposant des savoir-faire chez les usagers. Plus largement, la relation d'aide proposée s'établit sur un rapport dominant-dominé créant une forme d'inégalité qui touche les capacités d'actions des personnes. Fontar (2010 et ANR INEDUC) questionnera le rapport représentations/usages en montrant que la tyrannie de la majorité (Pasquoy, 2005) crée une norme sociale pouvant générer des difficultés d'approche chez les adolescents. La pression sociale à « devoir y être » ne sous-entend pas nécessairement des compétences développées ni des usages variés. Elle s'achètera à déconstruire le mythe du « Digital Natives » (Prensky, 2001) qui présuppose implicitement une inégalité des pratiques et voile le rôle des apprentissages.

Ainsi, cette proposition de communication contribue à relativiser les visions enchantées du numérique (notamment ces bienfaits émancipatoires) en en montrant son pouvoir de renforcement des inégalités sociales.

Consumption and the Social Organization of the Illusion

CONSUMPTION AND THE SOCIAL ORGANIZATION OF THE ILLUSION

Isleide A. Fontenelle
Associate Professor - Fundação Getulio Vargas - Brazil
idefontenelle@uol.com.br

In order to reflect on the reach and limits of the social organization of the illusion that constitutes the very nature of capitalism, and based on the transformations that are occurring in contemporary capitalism, this article analyses how consumption lies at the very heart of the operation of this illusion. The analysis adopts the Marxist approach with regard to consumption's place in expanding value within the context of industrial capitalism. It also looks at the history of marketing strategies that aim to produce a new form of subjectivity who is moved by a desire to consume. Resorting to the dialectical method as developed by Marx, i.e. based on the idea of movement and contradiction, the article tries to reveal the contradictions that surround the consumption sphere in the predominant financial and immaterial operating methods assumed by current capitalism, which may result in the possibility of over-consumption, which in turn leads to the non-realization of value. While this points, on the one hand, to the possibility of capitalism coming up against something that is in itself impossible, like the infinite self-expansion of capital, on the other, the solutions sought, also in the field of consumption, point to a hyper-commercialization of the spheres of life and knowledge, which sets in motion new merchandise expansion mechanisms through the privatization of culture, creativity and human life itself, leading to an equivalent of the “enclosure of the commons”.

FONTES, FERNANDO* (University of Coimbra, fernando@ces.uc.pt)
SANTOS, ANA CRISTINA (Centre for Social Studies - University of Coimbra - Portugal)

Disabled Women and Sexual Violence in Portugal

When compared to the general population, disabled people present a higher risk and incidence of violence (UN, 2006; EU, 2011). National reports have highlighted the higher vulnerability of disabled women and people with learning difficulties either living in institutions or with their families (GMP, 2002; INR, 2010). Despite the great investment by Portuguese public authorities in programs designed to prevent violence there are no intersectional studies of violence in Portugal, emphasizing discrimination factors and highlighting the situation of disabled people in Portugal. Therefore, the lives of disabled people are still marked by exclusion, poverty and prejudice. In a context that is particularly disabling, masculinized and male-oriented, such as Portugal, disabled women are in a particularly vulnerable position, accumulating the inequalities based on disability and sexism.

Based on the Social Model of Disability and drawing on the research project “Disabled Intimacies: sexual and reproductive citizenship of disabled women in Portugal” (funded by the Portuguese Foundation for Science and Technology - reference PPHG/C/0005/2008) and on my post-doctoral research on disability hate crime in Portugal (funded by FCT – Reference SNRBP/BID/0059/2011) developed at the Centre for Social Studies, University of Coimbra, this paper considers the issue of sexual violence targeting disabled women in Portugal. In this paper we begin by introducing the Portuguese context in relation to citizenship rights and outlining the phenomenon of sexual violence targeting disabled women in Portugal. The data was gathered from public reports, media coverage, and original empirical data collected in biographical interviews and evidences that family and close neighborhood members constitute most of the perpetrators. We continue examining the legal dispositions already in place in Portugal in order to protect disabled women. And we conclude, assessing the effectiveness of the existing laws, and exploring the potentialities of the legal recognition of disability hate crime in Portugal.

FONTES, FERNANDO* (University of Coimbra, fernando@ces.uc.pt)

What's New about New Social Movement in a Time of Economic Crisis? Reflections about the Portuguese Disabled People's Movement

Until the 1960s, social movements were comprised mainly of workers’ movements, focused on class and economic issues, highly organised in trade unions and political parties and using strikes and demonstrations as their main action tactic. The 1960s and 1970s witnessed, however, an increased variety of social conflicts beyond the workforce, particularly in Europe and North America, and the subsequent emergence of numerous social movements around new ‘post-material’ issues. The emergence of these new social movements (NSMs) did not only push for a multitude of issues based on identity, but also the investment on civil society, as its key location, organised in non-hierarchical structures and networks and embracing direct action and protest.

As with other social groups, the failing of disabled persons by the welfare-state made them especially active since the 1960s. This was especially true of the UK and USA, where disabled people struggled “for equality and participation on an equal footing with other citizens” (Driedger, 1989: 1). This action was made possible by the creation of the Disabled People’s Movement composed of diverse organizations of disabled people. Most current debates on the Disabled People’s Movement included the discussion of whether this is a new or an old social movement.

Drawing on my PhD about social citizenship and the Disabled People’s Movement in Portugal (completed at the University of Leeds – UK), this paper investigates the ways in which this case study may contribute to the theoretical dispute between old and new social movements. I will begin by examining significant characteristics of the Portuguese Disabled People’s Movement. Then, I summarize the theoretical dispute within disability studies on whether the disabled people’s movement is an old or a new social movement. In the last part, I explore the ways in which the Portuguese case study may contribute to this theoretical dispute.

Violence Against Female International Students and the Need for "Gender Security"

Violence against women has become a pressing global concern that represents significant social and economic cost. According to the World Health Organization, more than a third of women worldwide are victims of physical or sexual violence. While some progress has been made there remains much to be done to increase the understanding and amelioration of this vast social problem. Within this context, females make up approximately half of the estimated 3.6 million international students undertaking tertiary education in a host country. Previous research has addressed issues of safety and security for international students generally with only passing mention of gender-related concerns. This paper explores the problem of gender-based violence against female international students in their host country and the pressing need for ‘gender security’. Focusing on the United States, the United Kingdom and Australia, the paper draws on empirical research into gender-based violence in international student populations. Using critical race theory as a foundation, this paper examines the complexities of gender-based violence and the mechanisms necessary to confront the concrete experiences that mould disadvantage.

Personalized Engagement in the Current 'New' Wave of Anti-Mafia Grassroots Mobilization

This paper discusses the social mechanisms set in motion by a new anti-Mafia organization called Addiopizzo (Goodbye, Pizzo) which has been able to successfully advocate for a growing number of entrepreneurs and shopkeepers to refuse to pay racket fees to local mobs in the city of Palermo, Italy. Using communication technologies that enable personalized public engagement as part of a new interpretative frame which has brought political consumerism into the repertoire of the anti-Mafia movement, Addiopizzo activists – a group of post-grad students and workers – have succeeded in creating a range of collective and selective incentives that have made it possible for local businesspeople to overcome the problems of collective action and build new social bonds of solidarity. Referring to social movements and diffusion theories, the paper discusses how a relatively small and locally based SMO succeeded in bringing about important changes by organizing itself locally as well as globally, and through Internet. Data for the analysis came from several sources of information, such as interviews with the activists themselves, participant observation, media analysis and a unique dataset reporting the answers given to a structured questionnaire with more than 70 closed questions, distributed in 2011 to 277 entrepreneurs who had joined the mobilization campaign entitled “Change your shopping habits to fight the pizzo” at various points in time.

United We Buy: Re-Embedding the Economy into Society for a Sustainable World

It is increasingly argued that the environmental and social problems that afflict industrialized societies cannot be resolved without a change in citizens’ lifestyles and consumption practices. In recent years, the inability (or unwillingness) of institutions in proposing solutions and implement policies to address these issues have stimulated the development of new social movements that, while increasing general awareness on the social effects of consumption practices, have favored the emergence and spread of forms of procurement based on the direct relationship and solidarity between consumers and producers. The paper focuses on some new grassroots initiatives promoting alternative forms of consumption as a way to protect the environment and the right of workers, which have been very successful in Italy since the late 2010s. In 1994 “Solidarity-based Purchase Groups” (or “Gruppi di Acquisto Solidale”) count today more than 900 groups. Major sandpit for selecting partners for the environment and solidarity, both among group members and with the producers. Nevertheless, such criteria are interpreted and appropriated on a strictly local basis. From many points of view, GAS are an important case study for understanding the mechanisms and decisional processes through which citizens can enter into a cooperative relationship amongst themselves and with individual producers or networks of producers, aiming for reciprocal benefit on a concrete basis, namely modifying the production processes towards a higher sustainability. The paper presents the results of two online questionnaires, filled out by 244 members of GAS in Lombardy and by 1558 families belonging to the same groups and reflects on the mechanisms that have fostered the spread of these forms of collective action, exploring both the reasons that have encouraged individuals to take part in these experiences as well as the internal organization and strategies of GAS.

Housing and Social Re-Stratification

This article looks at transformations in the role of housing in social stratification. During the ‘golden age’ with high-speed economic growth and generous government subsidies, social inequalities were mitigated by the expansion of middle class home ownership and redistributive schemes of providing social rented

* denotes a presenting author.
Abstracts are organized by first presenting author’s last name.
dwellings to lower classes. However, with the ascendancy of neoliberal prescriptions in the 'global age', new housing systems oriented towards accentuating the role of market economies in providing and financing housing have increasingly exacerbated, rather than alleviated, social disparities. There have been widening gaps between the market-included and the market-excluded in terms of housing conditions. Moreover, within market spheres, various variables such as the timing of housing purchase, the appreciation and depreciation of housing assets, the nature of housing investment, the condition of mortgage borrowing, family support in acquiring housing, intergenerational transfers of residential properties, architectural profile and location of dwellings and the number of houses owned have been becoming more definitive in creating social cleavages. In varied fields of social science, position pertaining to labor markets has been regarded as most important in explaining the formation of social classes. However, housing and property ownership have increasingly been becoming, and will be, more definitive in reshaping social inequalities. This paper will identify housing related key drivers for social re-stratification and explores housing situations in some exemplar countries such as Britain, USA and Japan in arguing the importance of housing in creating new contours of social inequalities.

**Coalition Patterns in Labour Market Policy – How Activation Policies Restructure the Political Contest in Western Europe**

Activation policies became the means of choice to address typically post-industrial unemployment rates in a context of "permanent austerity" (Pierson 1996). However, comparatively little is known about how these "novel" policy instruments influence the political contest and the coalition formation mechanisms in this policy domain.

First, in line with the debate on multidimensional modernising reforms (Bonoli and Natale 2012; Häusermann 2010; Clasen and Clegg 2011) this paper investigates the nature of the political conflict in the domain of labour market policy and addresses the question whether the political elite's preferences concern to more than one dimension.

Second, the analyses address the political elite's coalition patterns by focusing in particular on the political left testing the hypothesis whether social democratic parties address rather insider or outsiders' interests (Rueda 2007, Schwander 2012).

The empirical analyses are based on a novel elite survey which captures labour market policy preferences of all actors involved in the political decision-making process, i.e. parties, state bodies, unions, employers' and social movement organisations in three dualising (France, Germany, Italy) and in two flexicurity-oriented countries (Denmark, Switzerland). The analytical strategy relies on factor and cluster analyses of preference measures weighted by the respective issue salience (cf. Kriesi et al. 2000). The empirical findings suggest that politics is essentially shaped by policy. In other words, the political elite's preference and coalition patterns are determined foremost by the regime specific institutional legacies and are structured on a redistributive and on an activation dimension. Interestingly, the most salient and controversial issues related to policies which concern the functional repertoire of the labour market regime at stake. Finally, the results support scholars arguing that mainstream left parties support the interests of both insiders and outsiders (Schwander 2012), however, it results that the precise nature of coalitions is regime specific.

*Belonging* in The Land Down-Under: Insights from Three Methodologies

This paper considers differences in articulations of belonging in Australia generated using three different more or less innovative methodological approaches among different populations. Results from face to face interviews plus a photo voice exercise among refugee settlers are compared and contrasted with data generated in 20 focus groups with migrants and non-migrants across Australia using a set of images designed to elicit discussion around national, transnational and post-national identities. Membership Categorisation Analysis is used to interrogate the assumptions included in the prompts used to generate the data (interview questions, themes for photographs, and images for focus group discussion). The range of parameters of belonging from the political (civic and ethnic belonging) to the interpersonal (family, friends, place) are noted, as well as the limits to belonging, particularly the category work done discursively to identify insiders and outsiders. The paper concludes that each method is useful in different ways to gain access to different experiences of belonging and un-belonging.
'policy' is using the 'crisis' in responding to the youth question, how it is creating new narratives of youth and the life course and what new types of 'societal pathways' into adulthood for the young are emerging as a result of recent austerity measures in policy. The analysis will examine these developments by the use of a number of international case studies, across Austrasia, North America and Europe highlighting the political ecological framework of policy that integrates an understanding of how 'finance', 'markets' and various neoliberal policy responses to them are re-shaping the life course for the young through the implementation of austerity measures.

A Tale of Two Sorrows: Hurricane Katrina, Parenting Trouble, and the Politics of Suffering

This paper examines a set of intellectual and ethical dilemmas that stem from efforts to define and analyze suffering. Drawing from two separate studies, one on the survivors of Hurricane Katrina and the other on middle-class parents whose children have a wide array of problems, we highlight the gap between sociological and self-referential claims to suffering. How do we conceptualize the experiences of people who appear to suffer but are reluctant to identify themselves as suffering? Should studies of suffering include the experiences of privileged people whose hardships seem comparatively trivial? By addressing these questions, we call attention to the politics of suffering and scholars' participation in the construction of what constitutes "legitimate" distress. We also consider what scholars might gain from comparing the lived experiences of seemingly disparate groups of "sufferers." We argue that when scholars do not pay attention to how people make sense of their own situations, they risk dehumanizing their participants. Sociologists' adoption of psychological and psychiatric vocabularies of suffering is particularly problematic in this regard. In the end, we suggest that it is possible to conceive of suffering as part of the human condition and to embrace all forms of human distress, while at the same time making moral assertions about whose situations warrant political action. However, doing so requires scholars to be explicitly reflexive about the political assumptions that underpin their research.

Contested Landscapes: Film Narratives and the Meaning of Land Rights

In rural areas of southeastern USA, African-Americans have fought to maintain land ownership in order to protect independent farmers and maintain economic and political freedom. Struggles over property rights carry a heavy history from enslavement to contemporary racial discrimination. Landownership among African-Americans peaked around 1910, after which there has been a steady decline from enslavement to contemporary racial discrimination. Landownership among African-Americans peaked around 1910, after which there has been a steady decline since then. This paper seeks to contribute to an understanding of the legal battles and political movements that have come to define land ownership, however, are lived experiences and personal relationships that are intensively tied to landscapes. Using ethnographic film to document and present images of land and stories from rural African-Americans who claim land rights, my research examines the complex and overlapping interactions between humans and land. Land is more than an economic and political asset; for many rural African-Americans land holds meaning and memories and creates a sense of place and identity. These stories reveal that the best legal option for retaining land is not always congruent with the inherent meaning of ownership. In this paper, I use interdisciplinary modes of inquiry to examine the structure of historic land rights and the political economy of mobile technology has opened up corridors of dialogue and interaction between disparate cultures and communities in ways that are both emergent and inchoate. These new geographies of mobility strike at the heart of debates surrounding the lived experiences of globalisation: the tension between 'spaces of place' and 'spaces of flows'. These debates have a particular resonance for young people, whose lives are lived at the precarious frontier of the global economy, and the leading-edge of global consumer culture.

RC20-356.4 FREDERIKSEN, MORTEN* (Aalborg University, mfr@dps.aau.dk)
Multileveled Uncertainty: Meso-micro Linkages between Trust and Confidence

The paper seeks to conceptualize the relationship between trusting institutions and trusting people. While these two types of trust are clearly linked and share important characteristics, they are also distinctly different at a phenomenological level. This paper elucidates these similarities and differences and the ways in which the two levels interact. First, it draws on Niklas Luhmann's analysis of uncertainty and contingency along with his phenomenological distinction between trust in people and confidence in systems and institutions. Secondly, it draws on K. E. Loestrup's phenomenology of trusting as the default attitude within familiar social worlds.

Two fundamentally different ways of dealing with uncertainty are conceptualised. Trust, it is argued, is related only to alterity but depends on confidence in systems/institutions in order to bracket the contingency associated with any intersubjective encounter. Trust is possible only when preceded by a trusting orientation, a sense that whatever future is in store will not be a bad one. This orientation is it is an expectation of a more or less wide array of possible futures all within what is familiarly relevant to at specific situation, delineated by confidence. However, trust also provides the foundations for building confidence. Confidence can only be established once the issue of human agency invariable linked to institutional systems and systems has been settled the in form of trust. Consequently, confidence is learned from trusting. The contribution of this paper is two-fold. First, it brings together otherwise disparate writings on the relationship between trust in institutions and trust in people, helping to clarify this point in trust research. Second, it provides conceptual tools to describe and analyse the relations between trust in intersubjective relations and the ways that familiar institutional and organizational backdrops provide the confidence to trust the other.

RC20-351.4 FREDERIKSEN, MORTEN* (Aalborg University, mfr@dps.aau.dk)
Nordic Moral Repertoires: A Contribution To a Comparative Cultural Sociology Of Social Justice

The great values similarity between the Nordic states seems to be a fact beyond dispute (Kildal and Kuhnle 2005; Svalfors 2003; Svalfors 2006). However, since contemporary research primarily focus on the historical and socio-economical causes of these attitudes, the Nordic inhabitants reasons for having these perceptions are all but unknown. This paper seeks to contribute to an understanding of these reasons.

Identifying macro level drivers is crucial to explaining the development and continued existence of welfare states and institutions. Nonetheless, these are inadequate for understanding why people hold values and perceptions supportive of specific institutional structures: people express egalitarian ideas because this is important and meaningful to them, not because they have a working class upbringing.

The analytical framework applied in this paper is drawn from the Sociology of Valuation and Evaluation (Hall and Lamont 2013; Lamont 2012) emerging in the intersection between political sociology (Boltanski and Thévenot 2006; Wagner 1999) and comparative cultural sociology (DiMaggio 1987; Lamont and Molnar 2002). This approach suggests that perceptions of what is good and just differs between groups and nations because of differences in preferred cultural standards of valuation and evaluation.

This paper seeks addresses these research questions:

- What are the dominant standards of valuation employed in justifying the level of redistribution in the Nordic welfare states?
- Which group identities (nation, class, generation) are most salient to differences in standards of valuation?

The research project is a comparative cultural study of Sweden and Denmark focusing on issues of social justice. 60 semi-structured interviews are carried out in each country with people between 25 and 70 currently employed. The sample

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
is balanced in terms of age, gender and class. The interviews explore the four subject areas: social justice, redistribution, work, and institutional legitimacy and trust.

Sustainable Credit Guarantee Associations

Purpose of the paper
This research analyses credit guarantee associations and their contribution to financial solutions of local societies. Credit cooperatives aim to guarantee bank loans for micro, and small and medium-sized enterprises.

Research method
Qualitative data were gathered through semi-structured interviews and direct observation with organisations, public authorities, businesses and bank institutions to conduct a case study of Upper Norrlands Credit Guarantee Association (ÖNKGF), in Sweden.

Research Findings
Cooperative enterprises have been democratically owned and controlled by their members and have taken economic and social responsibility for the development of local societies and businesses for the benefits of the members and the society. The research shows that ÖNKGF creates relations with the members by communicating their value base as a cooperative organisation. They develop cooperation with local banks to support commercial business and entrepreneurs who want to start and finance their own businesses. They get advantage to attract new members by emphasising democratic management and members’ sovereignty, educate members, network with authorities and bank officials in charge of handling loans and with local and global organisations using mouth to mouth marketing. For the cooperative credit guarantee association we can see an enlargement of the market and members’ participation and also need for innovations to sustain its business. New entrepreneurial activities face difficulties because of lack of stable financial resources.

Main Contribution
The study contributes to the literature of credit cooperative financial sector, by presenting a model of successful operation of ÖNKGF. We recommend managers to develop networks with members and other stakeholders to promote cooperative collateral financial activities in the local economy to legitimate and sustain their business in the local society.

Social Memories In South America: Generational Narratives In Times Of Political Youth Activism

Social memories in South America: generational narratives in times of political youth activism
Raimundo Frei (PhD Candidate)
Humboldt Universität zu Berlin

Given the recent, extensive political youth activism in Argentina and Chile, these two post-authoritarian countries provide fertile grounds in order to explore identity boundaries and those born after the dictatorships in the Southern Cone. Against this background, the main research questions are whether and how generational narratives have emerged in the context of political democratization.

Generational narratives link life course sequences with experiences of collective events. This connection must not be regarded in terms of Mannheim’s idea of ‘participation in the same destiny’. Rather, by sharing stories of a common past, people narrate a generational identity. Put briefly, generational narratives are attempts to bestow coherence and connect biography and history.

My analysis draws on sixty narrative interviews with people born in two different age-cohorts (1965-1974 and 1985-1994) in Buenos Aires and Santiago de Chile. It will show that whereas long-standing politics of memory in Argentina have created a discursive homogeneity and continuity between generations, the cycle of youth mobilization in Chile during 2006-2011 opened up the opportunity to create new narratives through collective remembering.

My analysis will thus illustrate how ordinary members of the respective society create (or not) generational identities by narrating past and present. That is, I will show that Argentina is an extraordinary social space to observe continuity between generations which risks perpetuating historical divisions, while the Chilean youth movement has contributed to shed light on the country’s undemocratic past.

The Discussion to Implement Charging for the Use of Water Resources: Challenges in Participatory Management

The participatory institutions appear as one of the greatest innovations occurred in Brazilian democracy since the 1980’s, and have as a principle the joint action between state and civil society and the sharing of responsibilities in the design and management of public policies. São Paulo State’s Water Resources Policy has the premise that water management should be decentralized, integrated and participatory, through the Watershed Committees. One of the tasks of the Watershed Committees is to establish the charging for the use of water, the economic instrument of water resources policy, which aims to encourage the rational and sustainable use of water. This study aims to analyze the discussion for the implementation of charging for the use of water in the Basin Committee of the Upper Tietê, located at the Metropolitan Region of São Paulo, in the period 2006-2010, in order to examine how the participatory process was and how the participation of the state, municipalities and civil society occurred. This article aims to identify the specificity of the participatory process through the analysis of Watershed Committee meeting’s minutes and to compare it with a theoretical reference. The hypothesis is that the state failed to provide equalitarian conditions for the representation of participants in the Watershed Committee of the Upper Tietê in the drafting and implementation of water use charging. Furthermore, the inaction of state institutions may have contributed to the slowness of the process. The evaluation of the discussing process for water charging in the Upper Tietê Basin corroborates to the debate about the actual influence of participatory institutions in public policies and the prospects for improving the existing relationship between government and civil society and the conditions for the exercise of democracy in environmental issues.

Transparent Patients: Addressing Risk in Health Information Exchanges

In the United States (US), Health Information Exchanges (HIEs) are emergent initiatives designed to pool the personal health information of individual patients in order to facilitate care. Proponents also hope that HIEs will support diverse secondary uses of health information (e.g. biomedical research, public health
surveillance, comparative effectiveness research, etc.), thereby improving quality while also lowering care costs. Yet, while HIIs stand to transform systems care in some significant ways, they also generate new risks associated with the ubiquitous flows of personal health information. Using documentary evidence (and informed by debates in content- and discourse-analysis), this paper considers how HIIs are conceptualizing, addressing, and attempting to manage emergent risks. With particular attention to the ways that patients are rendered transparent—and focusing on how they are made responsible for managing the risks associated with flows of their personal health information—this paper critically examines potential the unintended consequences of HIIs in the US.

Solidarity (and alternative) Economy and Its Anarchist Grammar

This paper demonstrates the value of French pragmatist sociology, and particularly the methodological device of a ‘grammar’ to articulate the normative macro-elements that underpin the organizational principles of the solidarity economy movement in France. Our grammatical analysis demonstrates that the loosely coupled movement is held together by a shared libertarian imaginary. We identify as its core four principles about an alternative organization of economic activity: creativity, conviviality, self-management and political activism; and we trace their historical roots in 19th century libertarian socialism and their renaissance in radical social movements in the 1970s. Analyzing the theorization of the libertarian imaginary provided by Proudhon in the 19th and movement protagonists in the 20th century, we argue that the values of the libertarian imaginary have become recombined into a composite construct of complementary, yet potentially conflicting grammatical elements. Presenting a case of a solidarity economy organization, we illustrate how organizational practices are evaluated through a grammatical lens, but how the movement can lose its critical edge when the grammar is ‘extrapolated’. ’Extrapolation’ offers an alternative explanation for movement instrumentalization, a frequently observed and deployed phenomenon in social movements, and suggests that it takes place not by co-option of an external and conflicting value logic, but by over-emphasizing a value that is constitutive of the grammar itself.

FRERICKS, PATRICIA* (University of Hamburg, patricia.frericks@uni-hamburg.de)
Solidarity Regimes and Individualization: Institutional Change in Social Security Schemes

Since the 1990s so-called mature and upcoming welfare states have undergone fundamental reforms. These reforms are related to social, demographic and cultural changes, and they are at the same time highly influenced by a currently leading political concept: i.e. that of the self-responsible social citizen. Concurrently, it is widely assumed that welfare institutions will align and finally lead to institutional convergence, in our case to institutions based on the concept of self-responsibility.

Concepts, however, find entrance into institutions in very different ways. Actors, for instance, interpret self-responsibility in terms of individualization on the one hand, or subsidiarity how the movement can loose its critical edge when the grammar is ‘extrapolated’. ‘Extrapolation’ offers an alternative explanation for movement instrumentalization, a frequently observed and deployed phenomenon in social movements, and suggests that it takes place not by co-option of an external and conflicting value logic, but by over-emphasizing a value that is constitutive of the grammar itself.

Understanding Mobile Childhoods: Children of Migrations from the Philippines to Europe

Contemporary parental migrations have resulted in the rise of many transnational families characterized by solidarity despite family separation across geographical distances. Children of these families have attracted attention for the last twenty-five years, which reflects the existing social concern about their well-being as they grow up separated from one or both of their parents. When family reunification takes place in the receiving country of the migrant parents, children themselves become migrants. Such mobile childhood is considered atypical in both the children’s society of origin and of destination. How to capture the diversity of childhood experiences of these children migrants? In what way do their experiences present scientific challenges to the study of migrant children and their mobile childhoods? In this presentation, we explore these questions by focusing on the childhood experiences of Filipino migrants’ children who came to Belgium in the 1970s and 1980s, respectively, in the Philippines and partly in Europe, in France and in Italy. Here, we examine their experiences in terms of mobility to unlock their subjectivities and agency. The results of our ethnographic fieldwork among children of Filipino immigrants in France and in Italy demonstrate the different forms of mobility of young migrants throughout the migration process. Using mobility as an analytical lens, we attempt to move beyond nation-state borders by considering carefully the context and temporalities of mobile children’s childhoods.

FREUDEMBERG, MAREN* (Free University Berlin, freuemberg@gsnas.fu-berlin.de)
The Emerging Church Movement in the USA As a Critical Response to the Neoliberalization of Religious Organizations

The unprecedented decline in formal religious adherence and sharp increase of religiously unaffiliated Americans at the turn of the 21st century have led to critical assessments of the ways in which neoliberalized religious organizations reconfigured spiritual needs of society and the market. This paper proposes the term ‘the emerging church movement (ECM)’ to denote this phenomenon. The concept of ‘emerging church’ is shown to emerge in the late 20th century. Its followers question and critique existing religious organizations and the influence of neoliberalism on their practices and theologies. Interestingly, the ECM’s flat hierarchies and localized organization are themselves characteristic of neoliberalism, which raises the question to what extent the theologies and variations of orthopraxy represented in this group are also influenced by the spillover effects of free market ideology into the religious sphere.

This paper discusses the ECM as a manifestation of the rejection of neoliberalized religious organizations in the United States in the 21st century. It presents empirical examples of emerging church practices from the American Midwest and the West, showing how the local religious communities are claiming the manifestations and practices of the ECM.

FREUDEMBERG, MAREN* (Free University Berlin, freuemberg@gsnas.fu-berlin.de)
The Emerging Church Movement: A New Form of Religious Organization?

The last 30 years have seen an unprecedented decline in formal religious adherence in the United States and has affected a range of religious organizations. As a result, institutionalized religion has undergone heavy scrutiny regarding its abilities to respond to the spiritual needs of society in postmodernity. With the deterioration of grand narratives and absolute truths, institutionalized religion is rapidly losing its monopoly on interpreting the faith and prescribing the ways in which it is to be practiced. Instead, local religious communities are claiming the right to redefine what it means to lead a faithfully Christian life in their individual contexts.

The widespread criticism of institutionalized religion has resulted in the surge of a novel religious movement in the United States and elsewhere: the Emerging Church Movement (ECM). The ECM has no institutional structure or unified beliefs, instead spanning across a range of religious orientations from conservative to liberal, post-evangelical to neo-charismatic. It is often described as a ‘conversational’ in that its followers question and criticize existing religious traditions and theologies and experiment with alternative ways of practicing their faith. They seek to overcome polarizing labels and preconceptions and the institutional and
At The Leading Edge – Does Gender Still Matter? A Qualitative Study On Successful Coping Strategies and Prevailing Obstacles In Academia. Analysing Female Careers In Austria

At the leading edge – Does gender still matter? A qualitative study on successful coping strategies and prevailing obstacles in academia. Analysing female careers in Austria

Although academic science in Austria is still male-dominated to a great extent, recent development evidences changes especially in higher positions. Statistics on the Austrian setting show that the share of female scientists at upper levels of the career ladder is shifting slightly but steadily. This article deals with explanations for this development phase and analyses crucial biographical factors of female academic careers in leading positions. For this reason, the paper focuses on three key research questions: Which obstacles hinder successful female careers? How do successful female scientists overcome these obstacles and which long-term strategies are used to acquire or hold leading positions? The findings are based on eleven qualitative interviews with the most successful female scholars in Austria (i.e. rectors and vice-rectors). The findings are arranged in three sections: (1) The results emphasize obstacles impeding female scientific careers. The analysis reveals that informal encounters, (male-dominated) social networks and the requirement both to be geographically mobile and to handle family issues at the same time are important obstacles. (2) The analysis concentrates on the underlying mechanisms in terms of how successfully female scientists manage to overcome these obstacles. With regard to informal encounters, it appears to be important to keep the distance from one’s environment, while pursuit of change can be seen as a crucial mechanism in terms of coping with the negative effects of (male-dominated) networks. Planning and organisational skills are decisive in conciliating geographic mobility and family obligations. (3) Finally, this paper elaborates on different long-term strategies applied by women in order to achieve leading positions.

Increasing Low-Paid Employment in Germany, Austria and Switzerland Between 1995 and 2011. Who Are the Losers of Recent Labour Market Flexibilization?

Since the 1980s, Western societies have been experiencing an increasing flexibilization of their labour markets, which led to a massive expansion of non-standard jobs. Interestingly, and this is the starting point for the present paper, there has been relatively little research done on this topic in German-speaking countries such as Austria, Switzerland and Germany over the 15 years. Taking up this research desideratum, we discuss the growth of low-paid employment in these countries.

For the empirical analysis, we use GSOEP, EU-SILC and SHP data from 1995 to 2011. Besides descriptive time series analysis, we present results from logistic regression models and decomposition analysis. Our results confirm a growing trend towards low-paid work in all three countries. Compared to Austria and Switzerland, the German rates of paid workers are quite low (25% of all jobs in the labor market in 2012), indicating a substantial change in the historically dominant form of labour market regulations towards a liberal labour market regime. By contrast, Switzerland and Austria only show a moderate enlargement of the low-paid sector and therefore pursue the traditional path of strong regulation. Against this backdrop we highlight the most significant differences and similarities at a national level and display historical trajectories of regulatory processes leading to the emergence of particular regimes of precarious employment.

Moreover, our analysis shows that risks of low-wage employment are not evenly spread across the workforce. In fact, we can observe strong and increasing inequalities between and within special groups. Especially temporary work, part-time employees and workers with fixed-term contracts belong to the losers of the prevailing dynamics on the labour market in those countries. We conclude that the already disadvantaged workforce has to bear special risks produced by recent labour market changes.

Environmental Destruction and the Social Impacts of the Fukushima Nuclear Disaster

The Fukushima nuclear disaster is sometimes called as the worst environmental pollution in Japan. However, the social impact of the Fukushima nuclear disaster has particular features different from other previous environmental pollution cases such as Minamata disease. In this paper I’d like to point out the problems of the refugees from the highly radiation-contaminated area in Fukushima from the perspective on the social structure of pollution victims based on the sociological study of the cases of the ‘kogai’ or the industrial pollution in Japan.

In most cases of kogai, although it took many years for a human damage to be identified as a pollution related disease, the seriousness of the human damage was perceived. Whereas in case of the low dose exposure in the Fukushima disaster, it’s impacts to human health have not been clarified yet and still controversial. At this point, in Fukushima prefecture, more than 150 thousand of people were forced to evacuate from their community soon after the accidents. Recently the national government is trying to shift a focusing point to return and rebuild the communities.

In addition with the evacuation, even family members have to be forced the separation. For example some mothers have taken refuge far away from Fukushima with her children, left their husbands for their jobs in Fukushima. Since there is no credible health standard for the radioactive contaminations, each of them has to make very difficult decision independently. These difficulties might bring the deep cleavages in human relationships within communities as well as within families.

Social stresses of refugees and residents are related with their previous attitudes and sentiments to nuclear facilities in the area. In comparison with the study of the victims of the past ‘kogai’, I will discuss this connection and their anxiety of being neglected their damages.

Social Movements in Solution Process of Environmental Problems: From Case Studies of the Anti-Pollution Movements in Japan

In Japan, many environmental social movements arose against industrial pollution called ‘kogai’ in 1960s. However, most of them are dissolved in solution process of the current issues in 1970s. The decrease of social interests in pollution problems have been a cause of recurrences of similar problems. We can see same situations in Asian countries where the residents around the construction site for chemical factory do not know about the previous pollution problems such as Bhopal case.

In this paper I will start with two case studies of environmental movements which are related with ‘kogai’ and have continued.

I: Itai-Itai disease (or ‘ouchikogai’ disease, cadmium poisoning) is the first pollution related disease certified by national government in 1968. The grass-root movements Itai-Itai disease have continued to work for more than forty years. They have also affected the cadmium regulation policy in Japan and have support- ed the residential movements occurred in other cadmium contamination area.

They have enforced the environmental measures of the mining company which was a defendant of the trial filed by the victims of Itai-Itai disease in 1968. Recently they have succeeded to reduce the cadmium emission to nearly zero level. The long-term corporative measures between the residents and the company have attracted considerable attention from some East Asian Countries.

There are some movements to inform Asian people of the experiences of pollution problems in Japan. Asia Arsenic Network (AAN) organized after the settlement of Toroku Arsenic Poisoning low suit in 1991 is one of the most important groups in this respect. AAN supports the people who are suffering from arsenic pollution caused by natural water flow, mainly in Bangladesh.

At the final section of this paper I’ll consider the meaning of these movements, referring to the grass-roots movements following Love Canal case in the USA.

Do Increasing Attorneys Mean Increasing Poor Attorneys?

In this paper, I will analyze the income distribution of active attorneys in Japan using the decennial income survey data from 1980 to 2010 collected by the Japan Federation of Bar Associations and the Civil Association of Bar Associations of the 62nd Legal Apprenticeship Cohort (registered in 2009) conducted in 2010 and early 2014 by myself and other legal sociologists as well as the yearly tax statistics compiled by the National Tax Agency Japan. The number of Japanese attorneys is rapidly increasing, especially since Japanese style of law school was inaugurated in 2004. Not only this time, but also whenever an agenda to increase the number of attor-
neys was at stake, critics argued that the larger number of attorneys would have too much competition and yield many poor attorneys, and in turn debase the quality of legal services provided. Indeed media have repeatedly reported some new attorneys are so poor. I found that the income distribution of attorneys has not changed so much as critics argued even in the latest data available, controlling for the age and gender compositions of attorneys. However, the percentage of lower middle income attorneys are slightly larger in the 2010 survey compared to previous data. Based on these analyses, I will argue that current sentiment shared by many attorneys, like “the more lawyers are, the poorer they are,” is not strongly supported by the fact but it would be a necessary sentiment of the transitional period from the age of the litigation lawyer to that of socially permeated lawyer.

Work Motivation and Social Networking Development in Professional’s Job Change Behavior: A Comparison Between the U.S. and Japan

As professionals’ work-related knowledge is not dependent on the organization to which they are employed, professionals are thought to be able to move between organizations more easily than non-professionals. However a great number of professionals in Japan enjoy a lifetime employment system and never change organizations as many large companies in highly professional fields such as science and technology, etc. adopt internal labor market-type employment systems. Therefore, Japanese professionals tend to hope their growth in the same company, and not to change jobs even if the work is not interesting enough.

In the U.S. on the other hand, professionals in Silicon Valley, California found ventures one after another and frequently change jobs. They dislike to continue the same job for three years, because they always are anxious to the opportunity which makes them grow. They have a lot of interesting to the new projects which satisfy their curiosity. For this purpose, they are extending their network not only in the same professional area, but also with other professionals or even non-professionals to meet new idea. They are also looking for colleagues with whom to collaborate to realize such idea.

As a result, professional social networking development in Japan tends to be confined to professional groups such as affiliated companies and academic conferences, etc. Meanwhile, as professionals in Silicon Valley are in a high-risk situation with the fear of bankruptcy and dismissal lurking behind success, a wide variety of social networks consisting of former colleagues, persons in the community, PTA members, and members of the same ethnic group, etc. have developed. These differences in the social environment surrounding professionals have impacted the development of social networks; while employment in Japan divides networks into public organizational networks and private networks, Silicon Valley professionals acquire job opportunities through mixed public and private networks.

Coalition-Building Process Between Socially Heterogeneous Organizations in Japanese Biodiversity Movements

This paper explores how and why social movement organizations build coalitions from the perspective of multi-organizational fields, with a particular focus on coalitions between socially heterogeneous organizations. While researching the interaction between social movements and their opponents, most scholars tend to pay less attention to coalitions/alliances between other movement groups or organizations in different sectors, despite suggesting their importance in social movement dynamics. In this paper, existing analytical approaches toward inter-organizational coalition/alliance—namely “coalition work” (Staggenborg 1986), “mesomobilization” (Gerhards & Rucht 1992), and “resource dependence perspective” (from the sociology of the organization)—are comparatively examined and tested. In a case study, this paper attempts to reorder the determinants of coalition building proposed by these analyses.

The case study examines the environmental movements in Japan, particularly organizations involved in advocacy activities for conservation of biodiversity since the 2000s. These biodiversity issues involve many different sub-issues—for example, preservation of wildlife, sustainable development, access to genetic resources, and benefit sharing, and bio-safety of living modified organisms—whereby coalitions among many different actors have been critically important. The following specific movements are reported in this paper: (1) movements for alien fish problems in the early 2000s, in which environmental citizen groups, and fisheries associations began some confrontations against sports fishing groups (2) nongovernmental organizations’ (NGOs) alliance for the tenth meeting of the Conference of the Parties to the Convention on Biological Diversity (CBD/COP 10) in Nagoya city during 2010, in which there was coalition building between environmental groups, consumer organizations, and business companies. In discussing these cases, I focus on the interaction between framings and counter-framings, and on resources distribution among these actors.

Japanese Youth “Inward Tendency”: Analysis of Surveys of Japan Youth Study Group

This presentation aims to discuss “inward tendency” of Japanese youth based on the analysis of a social survey of 2012, and a secondary analysis of social surveys of 1992 and 2002, all of which were conducted by Japan Youth Study Group. The term “inward tendency” refers to Japanese youth attitudes that is more “domestic-oriented,” rather than “internationally-oriented” in character. However, up-to-date, its usage is not clear: it refers to both the decrease of youth travelling overseas, and the decrease of students studying overseas. Since the “inward tendency” of Japanese youth started to be considered a social issue in the beginning of 2000s, there is no previous studies, as well as statistical analysis, dealing with it. Therefore, I will review studies on youth in Japan in terms of methodology, examine some government surveys, and discuss which social factors contribute to “inward tendency.” This presentation will attempt to address the following issues in dealing with the study of youth. Though in terms of methodology, it is important to make comparison with other age cohorts in order to understand the characteristics of youth (16-29 years of age), there was no such arrangements in previous surveys. Also in order to know how changes in youth attitudes, it is necessary to carry out repeated cross-sectional surveys. Though its necessity was pointed out, the age, period and cohort were not distinguished (Fujimura 1995). Furthermore, it is assumed that “inward tendency” correlates with other attitudes, such as intimacy, conservatism, and moral issues. The analysis of data makes it possible to clarify which factors correlate to “inward tendency.” And, consequently, it will be discussed that it is not sufficient to analyze the issue of “inward tendency” just as youth attitude, but it is also necessary to consider other macro factors and policies that have an impact on society.

An Integrative Approach to Understand Resource Investment, Livelihood and Food Security Nexus in Laos

The paper draws attention to an integrative approach of studying the nexus of resource development, livelihood and food security in resource rich but economically poor developing countries. The paper illustrates an example of applying mixed method approach, which incorporates spatial analysis, community and household survey to study the links between resource development, livelihood and food security in Laos, a least developed country in the mainland Southeast Asia. The paper highlights the linkage between the declining resource base and the problem of food insecurity in Laos. The paper also highlights the inequitable effects of resource investments on people's access to food and wellbeing, and the ways in which different population groups are adapting to the changing social and natural environment.

Network Effects and Activities of University Students in a Seminar

University seminars require students to be involved in intensive activities that require cooperation with each other and also develop their own skills and abilities. In such activities, friends are also an important factor for their activities—we call these network effects. This is similar to activities pursued within modern organizations such as companies and non-profit organizations. Using Bonacich centrality we can take account of these direct and indirect network effects. The aim of this paper is to empirically examine the determinants of activities in a university seminar. In addition to network effects, we included other factors such as the “Fundamental Competencies for Working Persons” that is promoted by the Ministry of Economic Trade and Industry, “generalized trust” and students’ GPA. Results indicate that Bonacich centrality has a positive and significant effect on students’ activities and its magnitude is as the same as that of GPA. In the Fundamental Competencies for Working Persons the competency of “discipline” is both positive and significant. For generalized trust results are negative and significant and this effect is interpreted by Uslaner’s (2008) generalized trust optimism. These three significant factors are consistent with Putnam’s (1993) definition of social capital.

The Structure of the Bangladesh’s Economy

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Bangladesh is described as the “Next 11” or “Frontier 5” and it is expected that it will grow to be a key player in the world economy. Macro-economic data, such as GDP growth rate which keeps as high as 6% since 2000’s, are indicators for the potential of Bangladesh’s economy. The Ready-Made Garment (RMG) sector is the country’s most dominant industry as well as its leading industry to earn foreign currency. It plays an important role not only in domestic economy, but also international market. The thriving RMG sector accounts for approximately 80% of total exports. As a major apparel products exporter, Bangladesh is ranked in 4th place behind China, Hong Kong, and Italy in the supply of apparel goods to the world market.

Even though RMG sector in Bangladesh is making remarkable progress, the industry stands on a fragile base. The following aspects should be taken into account when evaluating the real circumstance surrounding RMG sector: (1) RMG sector is highly dependent on imported raw materials specifically from China and India; (2) RMG is divided into two categories, woven and knit, which can only self sustain in knit sector. While knit sector supply meets most demands, woven sector that make higher value add-on products is far behind at about 20%; (3) Bangladesh’s competitive advantage is found largely in lower wages among than other competing countries such as China, India, Cambodia, Vietnam and so forth. This fact is strongly linked to working condition of RMG workers, which represent current tragedies in RMG factories; (4) Sourcing countries has been changing and it depends on international market trends. The possibility of Bangladesh remaining in its current stage is uncertain due to changing conditions in the external environment.

PR or Social Movement? : Against Climate Change Campaigns in Japan

This presentation examines the national campaign against climate change in Japan through the “frame alignment process” with from the state to the public based on the frame analysis in the social movement research.

State sponsored global environmental campaigns have been blamed for its policies that hide the economic disparity and political-social inequality underlying global environmental problems and trivializing it into matters of personal effort. However, specific analysis of these campaign activities had yet to be conducted. Thus, I investigated one of the national campaigns against climate change, Team Minus 6% (2005-2010) and Challenge 25 (2010-2013), in order to clarify problems that had been focused on and values and strategies that had been adopted. The results showed an overall preference for “frame bridging” and “frame amplification” in the frame alignment process in order to hide conflicts among stakeholders. They repeatedly represented and stressed unity in the fight against climate change through “All Japan.”

In particular,
1. They focused on non-eco-friendly lifestyles as the major cause of increasing carbon dioxide emissions while lobbying efforts, against politics delaying the solution of climate change, receded into the background.
2. They presented the value of “individual environmentalism” in which the efforts of every individual adds up to a major force against climate change. As proof, they would quantify carbon dioxide reductions in accordance to numbers mobilized in a campaign or of individual actions.
3. They adopted a “personal interest strategy,” whereas individual interests and climate change issues are connected.

The Changing Gender Relations in Marriage and Fertility in Japan

The trend toward later marriage and growth in the proportion of men and women who never marry is a major cause of the Japan’s low fertility rate. Similar to some countries in East Asia, Japan is a country where traditional gender role expectations, i.e. a husband works outside home and a wife stays at home for household tasks and childrearing, have been firmly rooted in the society, despite of the high level of women’s enrollment to tertiary education. Previous studies often pointed out that the gap between women’s increasing demand or potentials for market labor and the norms of the traditional gender role attitudes leads to women’s retreat from marriage, thus causing the expansion of the non-marriage population in Japan. However, more recent studies began to show a reversed relationship between women’s socio-economic standings and marriage and fertility behaviors. For example, studies using the latest and largest panel survey which covers the first decade of the 2000s show that women with more income or higher education are more likely to marry than their less or lower counterparts in the era of 2000’s. Other study also shows that married women who have a full-time standard job or who are entitled to childcare leave are as likely as women without a job to have the first and second births. How can we interpret these changes? This study first introduces some of the old and new findings regarding to the relationship between women’s socio-economic characteristics and family and fertility transitions. Thereafter, the study seeks for the socio-demographic explanations behind the change and discusses the possible implications for the future trends of family and fertility in Japan.

Uses of the Future: The Problem of Theodicy in Nagasaki

How is it possible to construct a meaning for the collective trauma among various social groups? This paper explores how people in Nagasaki respond to the collective suffering of the atomic bomb attack through a different approach to the problem of theodicy. The paper focuses on the religious mode of theodicy which can be seen among the catholic community on one hand, and “tragic mode of theodicy” (Simko 2012) observed at the Nagasaki City Atomic Bomb Memorial Park on the other, to investigate a way to deal with collective suffering in contemporary public arena. Urakami, ground zero of the bombing, was one of the residential areas for catholic communities that historically have suffered discrimination in Nagasaki. Immediately after the bombing, religious theodicy could be seen among the community that attempts teleologically to interpret the collective suffering as a “burnt offering” by providence. Although the catholic community found solace in this theodicy at that point, it was later criticized in public not only because it acquits the responsible of the bombing but it also creates semantic conflicts among a variety of social groups that were affected. In contrast with the theodicy of the catholic community, narratives of suffering with collective suffering in contemporary public arena is implied that the secular mode of theodicy oriented toward the future is more prevalent in contemporary Japanese society than the religious mode of theodicy that justifies the past.

Social Inequality of Immigrants in Old Age: Exploring Multiple Dimensions of Social Network and Resource Flow during the Great Recession

This is a qualitative research project whose data comes from 10-month ethnographic field work at two senior centers in Phoenix, Arizona that respectively cater to Mexican-American and Chinese-American seniors. First, I examine how the ethnic minority seniors are of foreign born. The project examines the access to social support and flow of resources among the older foreign-born population relative to their ties to the community as well as to their family. The primary goal of this study is to understand how the current sociopolitical context in Arizona affects the lives of old immigrants and might channel different ways of involvement in their social networks which are shaped by their living arrangements, relationships with younger generations in family/household, participation in community activities and in the labor market, and access to social welfare and services. The project tries to capture various ways in which immigrants in old age navigate their everyday lives when faced with economic and physiological obstacles as well as opportunities, and by doing so, it seeks to understand how they not only access and utilize but also contribute to the pool of resources. The secondary goal is to understand the life course impacts of quality and quantity of social and economic resources that are available to immigrants—individually as well as collectively in each ethnic community. The project examines the factors that encourage the expansion of social networks and reciprocity throughout a life course as they impact well-being in old age. It also explores how individual experiences may cumulatively contribute to well-being of the members who share the social networks. With these goals in mind, the project seeks to investigate probable factors that are associated with persistence of social inequality in old age at community level which may be further impacted by the sociopolitical context of Arizona.

FUKUI, KOTA* (Osaka University, kfukui@law.osako-u.ac.jp)
On the Potential of the Classic Japanese Theories of Sociology of Law

After the end of the Cold War, since early 1990’s, the structure of the world society has been greatly changing under the pressure of globalization. The world society has been transformed into a politically multi-polarized, economically covered with the global market and the law becomes complex and hybrid on the global level. Every national society becomes multi-lingual and multi-cultural. Worldwide information
networks make the global transaction much easier than in former times. Legal scholars are as if on an uncertain voyage. However, against all expectations, I insist that we can find a helpful compass for the voyage in the discussion by classic Japanese socio-legal theorists. The modern Japanese law had been constituted under the pressure of the global colonialization in the second half of 19th century, since opening the country in the late Edo era. Still in the first half of 20th century, Japanese legal scholars had to be strongly conscious of the global pressure to harmonize between traditional Japanese/Asian laws and modernized Western laws. Even Japan’s defeat in World War II was regarded as a result of less attainment of the legal modernization in Japan. The pioneer theorists of sociology of law acted in that age. History repeats itself. Global legal issues similar to that of in the age of colonialization have been revived since 1990s. Current hot issues relating to the interface between the global economic laws and domestic civil laws are quite similar to that of the transplantation of western law into Japanese/Asian society. The discussion on the support for the development of laws in underdeveloped countries is also a revived issue in the colonialization age. Of course, the discussions on the polarization between traditional Japanese/Asian and modernized Western law are outdated. Nevertheless, it seems that we can extract valuable indications from the classic Japanese theories of sociology of law.

**Representation on the Experience of Suffering in Urban Space: Wall Murals in Belfast**

The purpose of this presentation is to show how hostility and empathy have been expressed in post conflict Northern Ireland society by using an analytical framework of visual data in sociology.

Visual culture has been widely argued in various disciplines. Although many disciplines have investigated visual representations, my focus here is to apply a sociological method of urban studies on the analysis of the visual representation.

My research interest is to examine the collective consciousness and memories of two communities where their identities have been in part shaped by the images and icons shared in their communities. To do so, I will deal with and discuss wall paintings in Belfast. Mural can be seen as a community medium (Rolston 1998), since the approval of the community is needed in order for a mural to exist in the community for a long time.

My focus is on production, circulation and reception of murals in the urban space. In particular, I will look at the emplacement of murals in order to assess the positioning of each image in community.

The points that have been revealed in this study are 1) Making use of images from famous pictures, murals on national histories usually express confrontation and tend to be located along main roads in the communities. 2) Remembering the dark side of the history of their communities is considered to be expressed (not covered up) in both communities, although some of them are usually seen in residential areas, 3) “Empathy” between the two communities can be seen when they deal with the experience of sufferings under the authority.

**Emerging Child Care Services in France and Japan: Public, Private or Associative?**

Early childhood education and care (ECEC) system comes to the front in three contexts today. First, quality child care services are indispensable for parents to continue working after their child birth. Second, quality child care services are important for young children to develop their sociability. Third, the quality of the child care services depends on the working conditions of child care staff. In many countries, various child care services are emerging: municipal day care center, on-site day care center, family day care, small day care, parental day care and so on. There are also some facilities such as information center for families, open space for parents, toy museum for kids and so on. Looking at the child care providers, the private sector and the associational sector are growing instead of the public sector. What are the factors of this change? How shall this change influence the quality of ECEC system? I selected two countries for comparison: France and Japan. First I will outline the historical development of the ECEC system in both countries and compare the present situation on the basis of national data. Second I will show some examples of good practices in education and care system provided by the associational sector as well as the private sector from my fieldwork in both countries. At last we will discuss about the conditions for quality child care.

**From Field To Theory and Back – The Biographical (re-) Construction Of An Unconventional Family Through A Multi-Variant Range Of Data**

By use of the case-related reconstructive method, I will show how various types of data can be integrated in the research process. The topic of interest is an unconventional family, whereby unconventional means the absence of the biological parents. Instead of the conventional family structure, the parental role is fulfilled by a homosexual female couple, who realised their wish for children with the help of a sperm donation. The central method of data collection is the family-historical interview as a core component of the ethnographical access to the families. From that, other methods of data collection were used to ensure that every case is incorporated in the analysis from various angles. This approach is based on the following principle: case reconstructions are not fulfilled in their entirety if only the transcribed interviews of the family history are considered. The set of data also consists of observational data (e.g., the constitution of interactions within context of welcoming gestures, the seating arrangements, door bell nameplates), but also family indicative documents such as family photographs. Furthermore, data is obtained concerning the family of origin and the life course. This data is collected in a genogram, which is a sort of a genealogical tree displaying the hierarchies in a generational context. This approach is based on the investigation of the „biography as a life context of the milieu“ (Richard Grathoff). The aim is to explain biographical constructs, which are limitedly accessible to the own reflection, as an act of negotiation with the family of origin. However, case-reconstructions serve as a basis for theory development. The aim is to overcome the description of a related case, I will also discuss in my lecture the interpretation of the results in the context of theory development.

**Nervous System: Media, Communications and the Fight for the City**

As urban communities confront the specter of austerity budgets, growing inequality and a diminishing public sector, the question that organizers encounter is how to shift from multiple autonomous movements in a city to one movement for the city. This paper details and analyzes the role of media and communications in the process of developing a united front of people and organizations fighting for urban social change. Specifically, we look at the practices of the Media Mobilizing Project (MMP) in Philadelphia. MMP is both a community-based media and communications network and a network of organizations across the Philadelphia region that aim to "build a movement to end poverty led by the poor and working class, united across color lines." Through MMP’s use of media and communications we argue that communication technologies can be reimagined as a community system that connects different parts of the urban social body, bringing students together with janitors, teachers, and community members fighting displacement.
In this paper we use the concept of the nervous system to analyze the manner through which media conjoints people across the fragmented political topography of the region. In this sense at the core we argue MMP utilizes an independent media and communications infrastructure to collapse isolation between groups throughout the city. The concept of a communications nervous system that serves to build a unified front politics, challenges the long held assumption that media is the arm of an already pre-existing movement, instead showing how through specific media and communication practices (social media, radio, video) new organizational forms and collective identity processes can emerge. In this sense, the paper provides a conceptual framework of how to study and understand the relationship between social movements and media in a contemporary urban setting.

From social work practice I have presented to the public sphere in the Nordic countries, although it is changing, most notably in Sweden. The media do not seem to study. The public sphere is here identified as the state, politics, the media and civil society. Is there a return of public religion in Western countries, this paper asks if this is a real or just a re-emergence of a movement. The norm in Japanese auction markets require participants to have a nervous system to analyze the manner through which media conjoints people across the fragmented political topography of the region. In this sense at the core we argue MMP utilizes an independent media and communications infrastructure to collapse isolation between groups throughout the city. The concept of a communications nervous system that serves to build a unified front politics, challenges the long held assumption that media is the arm of an already pre-existing movement, instead showing how through specific media and communication practices (social media, radio, video) new organizational forms and collective identity processes can emerge. In this sense, the paper provides a conceptual framework of how to study and understand the relationship between social movements and media in a contemporary urban setting.

Rhizomatic Resistance: Social Movement Politics from Porto Alegre to Tunis and Frankfurt

The last three decades have seen massive protests and mobilizations. From the Zapatista uprising in Chiapas in the 1990s to mass demonstrations against war and protests at virtually all gatherings of world leaders to struggles in North Africa and most recently Occupy Wall Street and anti-austerity mobilizations, protests and social movement organizing have taken place across the globe against rising inequality, war, the dispossession of rights and entitlements, democratic deficits and austerity politics.

This paper examines this arch of movement-based politics. Situating it within former frameworks of social movement organizing and relating it to shifting dynamics of capitalism, I argue that contemporary movement-based politics is relying on and enacting a distinct and novel movement logic. Different from the so-called “Old Left” of mass unions and parties and the more ideational politics of the “New Left”, contemporary movement formations are based on what I suggest to call a “Rhizomatic Logic,” forging linkages and synergies across the fractured landscape of “old” and “new” left. Thriving on multiplicity and thus lacking a dominant core or main axis, the rhizomatic logic emphasizes multi-connectivity and heterogeneity of political struggles, which has no central actor, issue, strategy, or ideology beyond opposition to neoliberalism and thus a subsequent need for thicker communicative processes. While this logic allows for unprecedented connections as well as tempering of inherent antinomies of diverse movements and groups, it simultaneously limits the degree of congealed and resilient movement building. Most recently this Rhizomatic Resistance model has found varied expressions in pro-democracy as well as occupy-type and anti-austerity protests from Tunis to New York and Athens to Frankfurt.

Return of Religion in the Public Sphere? Comparing the Nordic Countries

This paper analyses the role of religion in the public sphere in the Nordic countries during the past twenty years. While some scholars have claimed that there is a return of public religion in Western countries, this paper asks if this is a reasonable claim for the five Nordic countries. These countries harbor a combination of common and different features that make for an interesting comparative study. The public sphere is here identified as the state, politics, the media and civil society. The study is based on a wide range of quantitative and qualitative data. The data show a trend towards disestablishment, with the exception of Denmark and Iceland. Although religion is not a major issue among the political parties, it is more debated in the parliaments, except in Sweden. The media do not seem to center more on religion than before. Finally, religious communities seem to deal with the growing diversity by engaging with current political issues and dialogue initiatives. This study indicate that religion has had more of a continued role in the public sphere in the Nordic countries, although it is changing, most notably in Sweden, followed by Denmark, and Norway, and the least in Finland and Iceland.

A Socially Value to Support and Rehabilitate the Elderly

What meaning of punishment the elderly offenders, it is the only to pay for crime of them? I think that there is the socially value of support them, in the criminal policy on aged societies. From social work practice I have presented to need of support them, as a marginalized people, and I want to discuss the meanings, purposes of this practices.

FURUSE, KIMIHIRO* (Musashi University, kfurusue@cc.musashio.ac.jp)
Norns, Normacy, and Market Order: A Study of Closed Auction Markets for Antiques and Secondhand Goods

This study explores how market order emerges in Japanese closed auction markets for antiques and secondhand goods. Most auction markets for antiques and secondhand goods are exclusive to dealers in Japan. The Antique Business Act (Kobutsu Eigyo Ho) states that participants in auction markets must have a secondhand goods dealer license. Participants also need to obtain a reference from an existing member to enter the markets. Dealers belong to auction markets and associate with other merchants. In major auction markets other than pure markets, although the members compete to acquire articles at the auctions. This paper presents the norms and hierarchical relationships in closed auctions that bring order to the markets.

Norms in markets are beliefs about the expected behavior of market participants. The norms alone are not sufficient to engender market order; enforcement mechanisms are necessary. A hierarchy is a typical enforcement mechanism. Authorities observe members and then sanction those who deviate from the norms. Although markets and hierarchies have been regarded as opposing governance mechanisms, hierarchical relations emerge in markets as well as in groups. Market participants in the same marketplace differ in terms of status and power.

The norms in Japanese auction markets require participants to bid based on their own evaluation of items. Buyers who do not have much expertise on auctioned articles may try to follow experts' bidding. Such bidding is condemned by authorities because it deviates from the norms. Furthermore, the norms are enforced mainly by the top buyers who have significant influence in the markets. Their status is earned by their contribution to the markets. They make great efforts to attract dealers and goods to the markets. Participants accept their authority because they know that the markets do not function without their contributions. Although their influence will distort market competition, the hierarchical structure ensures orderly function in markets.

Youth Justice Programs in New York City

Youth justice programs have been part of the fabric of urban landscapes since Civil Rights. During the 1960s and 70s such programs were explicit in helping young people, particularly young people of color, fight oppression and participate in democratic processes. Today, some argue that the sociopolitical aims of such programs are falling by the wayside due to the focus on “youth development” which emphasizes the growth of individual young people, rather than the growth and health of urban communities (Ginwright & Cammarota, 2002). Not only can we expect young people to lead healthy, productive lives when growing up under abhorrent conditions, we believe young people can be a part of the solution for transforming their environments. Youth justice programs engage young people as active agents of change in their own lives. While the outcomes of youth justice programs have been examined (e.g., Austria, 2006; Ginwright and Cammarota, 2002; Hill, 2004), there has been a lack of analyses of the processes critical to determining how they work, how they are implemented, or why such processes are effective. The purpose of this research was to examine such processes by examining how youth workers conceptualize the inequities facing urban youth today and how those conceptions translate into practice (e.g., into methods for engaging young people in social justice). We wanted to understand the key inequities staff identify as critical in the lives of urban youth and how young people are engaged in understanding and responding to such inequities (what processes are used). We interviewed key staff from youth justice programs in the Northeast of the United States in order to obtain rich qualitative data for addressing the research questions.

Probability and Timing of Having a Second Child in Japan: Does Gender and Characteristics of the First-Born Matter?

This study examines whether gender and characteristics of the first-born child predict the probability and timing of a second birth among Japanese parents. I examine two explanations.

Daughter preference has become common among Japanese couples since the mid-1980s (National Institute of Population and Social Security Research, 2011). In 2010 69% of couples with second children had a daughter if they were to have only one child. Past research reveals that having a child of the preferred gender is associated with a higher probability of a subsequent birth and a shorter birth interval if they choose to have an additional child (e.g. Larsen et al., 1998). Therefore, given wide-
spread daughter preference, I investigate whether Japanese parents with a first-born son tend to not only have a second child but also have one sooner. Previous research shows that having a first child with socioemotional and behavioral traits that make parenting easier is associated with a second birth (e.g., Jokela, 2010). It is commonly known that young male children are more difficult to raise than females because they are more prone to illness and injury. Also, boys are considered more physically active and require parental attention. Then, parents with a first-born son may rather hesitate to transition to a second birth or postpone having another child.

Using the Longitudinal Survey of Newborns in the 21st Century, a nationally representative survey of children born in 2001 in Japan, I explore the above explanations. I use Cox regression to model the hazard of progression to a second birth among parents of first-born children surveyed. I especially focus on how gender of the first-born child and measures of parenting difficulty (i.e., occurrence of illnesses, minor accidents, perceived parenting burden/anxiety) as well as other characteristics affect parity progression. Interactions between gender and parenting difficulty on parity progression will also be considered.

Child Trafficking in the EU

The paper presents findings from an empirical study of the trafficking of Roma children into the UK, involving the establishment of the first EU wide police Joint Investigation Team (JIT) to investigate the illegal movement of humans in Europe. The paper draws on 12 months of UK-based research and four research visits to Romania and Bulgaria yielding more that 100 hours of interview data collected from interviews with senior actors within policing and justice agencies, Roma advocacy NGOs, and child protection organisations in the UK, Romania and Bulgaria. This paper addresses the problems of policing and protecting marginalised populations across different jurisdictions and how vulnerabilities are exacerbated by the diverse and often conflicting remits of the various agencies involved. The paper discusses how the impact of structural issues such as poverty and exclusion, and the resulting confinement of the criminalisation and victimisation of the Roma, has not only limited the effectiveness of available responses to child trafficking, but also served to aggravate the increasingly adverse conditions faced by Europe’s favourite scapegoat. The paper additionally seeks to progress a theoretical space by linking such analysis to sociologies of mobility, marginalisation and the pluralised rendering of criminalised and victimised ‘others’. Key here are the myriad ways in which (national and organisational) borders are imagined, governed and responded to by diverse groups of criminals, victims, criminal justice and social services agencies.

FUSSEY, PETE* (University of Essex, pfsussey@essex.ac.uk)

Security, Surveillance and Space: Contested Topologies of Anticipatory Urban Counter-Terrorist Surveillance

Drawing on data generated from ethnographic research and two years of interviews with counter-terrorism practitioners this paper analyses practices and arrangements of domestic security surveillance operations in two empirical case studies: the London Olympic security programme and, also, urban counter-terrorism surveillance measures in a British city. Particular emphasis is placed on the anticipatory turn in security practice and how collapsing distinctions between internal and external security draw multiple new actors and agencies into the dispat- ch of counter-terrorism and attendant surveillance practices. With them come diverse practices, orthodoxies, values, techniques, weightings of risk and ambitions for security and surveillance. The paper argues that topological approaches informed by Foucauldian notions of ‘security’ (2007) and biopolitics (2008) provide particular utility for understanding of these heterogeneous configurations, tech- niques and practice of surveillance. Such approaches not only provide conceptual tools to articulate the diversity, plurality, conflict and cohesion within CT practice but, also, capture how power simultaneously operates at different scales and for varying (sometimes competing) purposes. Moreover, the paper argues that such conceptualisations of security represent a move beyond territorial control and management of circulations, where subjects are left in situ, but their mobilities are monitored, delineated and assessed and, ultimately, reclaims elements of Foucauldian surveillance-focused debate from the shadow of panoptic analyses.
As religious institutions and practices continue to decline in Japan, a number of young men and women have begun traveling long distances to gather at shrines, temples, and other holy sites. In groups or alone, these pilgrims pay respects at holy altars and purchase votive tablets, protective charms, and other religious paraphernalia that have long marked religious consumption practices in Japan. At first, this seems to be a reversal of the processes of secularization that have intensified around the world under the forces of modernization and late capitalism. However, what draws these individuals is not the charisma of the gods enshrined at these sites, but rather the charisma of fictional characters who inhabit the fantasy worlds of particular manga and anime stories which take these actual holy sites as their settings. These subcultural pilgrims are part of a community of fans who pursue a multi-dimensional connection with two-dimensional, fictional storytories. While some scholars view this as the further commercialization and secularization of “traditional” religio-cultural practices, these practices reveal how both “traditional” and “modern” cultural forms—i.e., religion and the popular culture forms of anime/manga—are in fact overlapping cultural idioms of individual effort, charismatic devotion, practical reciprocity, and contingent sociality. In this paper, I analyze the kinds of personal attraction and interpersonal relations formed through participation in subcultural pilgrimages. I suggest that “anime pilgrimage” reveals how religious and secular practices in Japan are neither mutually distinct in a Kantian sense nor dialectically progressive in a Hegelian sense, but rather reciprocally shaped through cultural modes of both ethical sociability and self-advancement. This further calls into question conventional views of distinctions between “traditional” and “popular” cultural forms by revealing how new technologies and pop culture media can be reshaped into augmenting and intensifying previous cultural practices of pilgrimage, self-advancement, and sociability.
her friends to join a tent protest in Tel-Aviv on “14th July,” an initiative that spread throughout Israel with even families and elderly people joining demonstrations, marches and gatherings. Some 800,000 protestors -10% of the Israeli population (nearly 8 million) - comparatively the highest number, even internationally, participated in civilian demonstrations (Schechter, 2012). Public support was 91% (July 2011 Peace Indem). Israeli mainstream media - printed, online and electronic - supported the protests, opening live studios on main TV channels (participant observation; Schechter, 2012).

Research questions seek the modes and reciprocal relationships between activists, journalists, new and mainstream media audiences; through a combined methodology: offline and online ethnography and netnography; in-depth interviews with activists and journalists; and quantitative and qualitative text analyses.

The Great Recession Washes Across the Desert: A Study of Neighborhood Organizational Resources and Social Disorganization in the Phoenix-Mesa Urbanized Area

The Great Recession (2008-09) impacted urban communities in the U.S. in many different ways. This paper focuses on the role of organizational resources in mitigating the impact of the recession on one metropolitan community, the Phoenix-Mesa metropolitan area. Our research questions are: did areas’ organizational resources mediate the effect of the Great Recession on neighborhood outcomes? From Wilson (1987), Small and McDermott (2006), and our own research we know that some neighborhoods in the metropolitan area have considerably more organizational resources than others. Logan (2012) labels this spatial inequality. Our hypothesis is that areas that had more organizational resources prior to the recession were better able to cope with the crisis than areas with fewer resources (Sampson, 2012). These intermediate structures enabled communities to absorb the shock and stay intact. People could turn to neighborhood establishments for integrating services, amenities, health care, religious support, and social support. The counter-argument is that this recession was so severe that it destroyed organizational resources that gave some areas advantages over others. The economic crisis not only undermined the capabilities of the household sector, it also destroyed establishments. It was truly an economic tsunami.

The units of analysis are 943 census tracts in the Phoenix-Mesa urbanized area and we use spatial econometric models. We examine data for 2003, 2007, 2008, and 2009 from the U.S. Census, Dun and Bradstreet, the Urban Institute, and phone directories. These data are collected and geocoded. The dependent variable is a composite measure of social disorganization: crime (homicides), poverty rates, school dropout rates, and undergraduate births. The mediating variables are the number of youth serving organizations, schools, congregations, membership clubs, parks, and health care facilities in the census tracts. The independent variables are housing values, unemployment rates, and population change. Finally, we control for racial/ethnic composition and socioeconomic characteristics.

The Politics of Research on ‘popular’ Culture in Japan

At the beginning of the new millennium, Japan, then still the second largest economy in the world, was suffering from a decade of recession and watching as geopolitical interests shifted to east Asian neighbors. At the same time, Japanese games, cartoons and comics were circulating around the world, and business and government leaders rushed to support the creative industries. The subsequent strategy to win the hearts and minds of the youth of the world through mega-popular franchises such as Pokemon was dubbed “Cool Japan.” While the success of this strategy has been widely debated, and drawn its share of criticism, in June 2013, Japan’s Upper House sent out a statement that they were redoubling their Cool Japan efforts, giving the go ahead to the Ministry of Economy, Trade and Industry to earmark ¥50 billion for promoting the cause over the next 20 years. With Tokyo gearing up to host the Olympics in 2020, many expect the charm offensive to continue. However, with increasing interest and investment in branded popular culture, local geek subculture has become an issue of national concern. What is “cool” about Japan, and who decides? How do gamers, comic-book nerds and animation aficionados fit into that image? Is it cool to include such people in projects focused on “Japan”? What sort of research is acceptable, popular and cool within this paradigm? What research is “uncool”? What is the role of the Japan researcher in negotiating all of this during a “crisis” in the field, which is to say declining opportunities for funding and employment? This paper seeks to unpack the politics of popular culture in Japan through the case study of Akihabara, an area in Tokyo that some think is geeky and gross, and others position at the center of Cool Japan.

Missing Bodies? the Visual Landscape of Home and Its Meanings to Solo-Living People

Not only presence of other bodies, but also the absence of bodies of others has a significant effect on the contemporary experience of domesticity and belonging. In her classical study on home as a tyranny, anthropologist Mary Douglas (1991) addresses solo-living only once, mentioning that conflict between persons is just transformed into conflict of wants within one person. In that sense, the normality of home in terms of routines created via the relations of its various members is produced by the single member who has to discipline him- or herself. Goffman-esque “backstage” of home becomes a highly important “onstage” via internalized social norms or aesthetics. In our research we focused on home-centred and home generating practices performed by the occupants themselves, or between the occupants and the materiality of their dwellings and other non-human players (e.g. things, animals). In this paper, we will present the photo essay based both on 1) visual diaries, where photographs and texts were taken and written by participating dwellers focusing on mundane routines and everyday situations (of "doing nothing") as well as on the moments of significant ruptures and changes, and 2) on visual material collected by participating researchers during the research events using go-along ethnography in the dwellings. Both are then interpreted in relation to other written or oral narratives produced within different phases of the research project aiming to understand how the meaning of home is constructed by solo-living men and women, which practices they use to create, maintain, experience and imagine their homes in space and time, and how they position themselves within wider social networks, family and society. We are seeking for more fluid, open and empirically grounded concept of home based not on essentialism and normativity, but rather on performativity and it’s becoming-into-being through active bodies, dynamic meanings and mundane aesthetics.
PETROVA KAFKOVA, MARCELA (Masaryk University)
VIDOVICLOVA, LUCIE (Masaryk University)
The Perception of Leisure By Grandparents in the Era of Active Ageing: Conflicting or Complementary Roles?

Family, education and work in later life, care for grandchildren as well as the imperative of “active” and “healthy” ageing are framing and structuring the everyday life and decisions of the Czech ageing population. The paper aims to bring new insights into the problem of the role overload, i.e. “the stress generated within in a person cannot be efficiently coped with the expectations of a role or a set of roles” (Burr 1973 in Lee 1988: 776). Based on triangulation of quantitative (representative survey) and qualitative (open-ended in-depth interviews) data generated within the research project “Role overload: grandparents in the era of active ageing”, the perception of various and dynamic roles performed by the older people can be examined, focusing, for the purpose of this paper, mainly on the perception of leisure time and leisure activities in the context of the interpretation and experience of other role expectations and role performances. We perceive leisure as a specific integrating field in which the particular roles may be perceived both as complementary as well as conflicting, depending on the self-positioning, available resources and the interpretation of the grandparent’s role itself by the grandparents as well as by other relatives and members of relevant social networks. The attention, then, will be paid to the ways how the possible challenging intersection of these different levels are coped with and actively shaped and lived.

GALE, NICOLA* (University of Birmingham, n.gale@bham.ac.uk)

Knowing the Body and Embodying Knowledge - the Practice of Complementary and Alternative Medicine

Bringing together findings from several empirical studies I have conducted over ten years with students, practitioners and teachers of complementary and alternative medicine (CAM), I will define and illustrate the concept of ‘embodied knowledge’. I will argue that the concept has significant implications for practice and scholarship in the field of health care research, and give specific consideration to theories of spatial/ bodily boundaries and timescales in practice.

While health professionals of all types have been traditionally viewed as (more or less) credible brokers of knowledge about the human body in health and illness, the embodiment of the practitioner him/herself is an important counterbalance to the focus on power/knowledge of the bodies of ‘others’. The philosophies of different CAM approaches are enacted in day-to-day practice within their social context, with an impact not only on the recipients of CAM treatments but also on those delivering them. The bodies on both sides of the CAM therapeutic encounter are often not primarily constructed as medical bodies; they may be ‘energetic’, ‘emotional’, or ‘spiritual’ bodies. The ‘disease’ of biomedical becomes instead framed as ‘dis-ease’, an imbalance or disturbance of energy. In these models, biomedical timescales and spatial/bodily boundaries are not necessarily relevant. Touch can be ‘energetic’ rather than physical, and the focus is on the subjective temporal flux of illness, with the therapeutic experience can be crafted during the clinical encounter into body-stories (Gale 2011) that actively integrate personal, lay, medical and CAM concepts of aetiology and healing.

I will present an overview of the embodied pedagogies in practitioner training, the challenges of making the transition from training to professional practice and the embodied experiences and practices of being an established and expert practitioner. I will argue that the concept of ‘embodied knowledge’ is vital to our understanding of the knowledge base of healing practices internationally.

Post-Nationalism or Transformative Transnationalism: Beyond Cosmopolitanism and Narratives of Change Across Borders Among Australian Students and Volunteers in India

This paper is a case study on the possibilities of personal transformation through transnational experiences based on the narratives of Australian students and volunteers working in India. It examines the possibilities of change through transnational experiences with a focus on Australia young people and their experiences of India and challenges to commonly held ideas and understandings of the Other. The research is based on a methodology of participants telling personal stories of experiences across national borders. The paper contrasts the many different narratives exploring what contributes to a transformative experiences and the circumstances that contribute to what can be identified as post-nationalist, or an ethic of transnationalism. The paper is part of a project supported by the Australia India Council that focuses on the relationship between Australia and India through Australians involved in aid and development projects in India. The project particularly focuses non-Government aid organizations and Australian students and volunteers who have been visiting and working as volunteers in India over the past 25 years.

National Educational Systems and Academic Profession: Portuguese and Spanish Cases

The transformation by which the universities are faced now is a global phenomenon that is affecting all regions on the globe. This has led some states to unite in regional blocs to seek strategic responses to position themselves favourably in the global context increasingly competitive. In Europe there is an ongoing process of construction of the European Higher Education Space. In this regard, national political agendas are heavily influenced by what Dale’s calls globally structured agenda for education. Despite identifying processes of convergence in national policies at the time of legislating there is a hybridization of the education arrangements in higher education. Assuming that the impact of political reform are felt and asked differently by social actors in two countries (Portugal and Spain) with consequences in demands for professional competences for professoriate and with the guidance methodological perspective of comparative education, this proposal aims to examine how the European guidelines for the Construction of a European Area of Education, firstly legislated by national governments, produce changes in the ways the professor in the context of economic knowledge societies and thereby assess the importance of the national state in the process of recontextualization of these policies.

The Invisible Spring**: Internet and Political Practices in Colombian and Brazilian Mobilization

When it comes to social movements like the ‘Arab Spring’, Occupy Wall Street and the Indignados in Spain, there is widespread uncertainty about the extent of their international dimensions. But we do know that these movements penetrated borders to gain support from other contexts, where the use of internet and social networks (especially Facebook) involved the configuration of a particular model of protest and mobilization. What is the relationship between these events and the mobilizations in other contexts?

Two cases concern us: the MANE (Mesa Amplia Nacional Estudiantil) in Colombia, which deployed an unprecedented student movement in the last 40 years of national history, whose founding charter explicitly refers to the events in Tunisia, Egypt, Spain and ACAMPA SAMPA OCUPA SAMPA from the Occupy movement in Sao Paulo, born of the global call to install camps in different cities in October 2011.

This paper shows, in a transnational perspective, how the emergence of new forms of communication in the Latin American context involves a reconfiguration of political action and denotes a new politicity process. The « Invisible Spring » is the metaphor of the origin and deployment of the new movements, their actions against invisibility, and the new online collective actions and protest mobilizations.

This paper will to expose the invisibility notion concerning three dimensions: the international mass media, the political character of these mobilizations, and the connections between these movements and the three international movements (Arab Spring, Indignados, and Occupy). The analysis concerning the Latin American cases presents two foci: the motivations and discourses and the actions and organisational forms.

Overall, the Framework is a PhD research project oriented to analyse the transformations of political practices of the young people in Latin America through the use of Internet (Colombia and Brazil cases). This paper can be presented in spanish.

contexto, se hace imprescindible que los investigadores mantengan una postura ética manifiesta, entre otros valores, en la búsqueda incansable por el valor y el trabajo en colaboración, que les permita generar nuevos conocimientos y aplicarlos a los problemas complejos del mundo actual. Contrariamente al espiritu ético que tendría que guiar este quehacer científico, en los últimos años se ha incrementado el plagio académico, como una práctica no ética de los investigadores. En tanto que esta práctica fraudulenta se ha evidenciado a partir de las publicaciones, el presente trabajo busca analizar este fenómeno en tres niveles. El primero versa sobre la normatividad y políticas institucionales para promover la producción y la evaluación cuantitativas en la promoción de carrera y la obtención de mayores niveles de remuneración. El segundo se centrará en la filosofía de publicar o perecer (publish or perish philosophy) y los valores del sistema de producción académica. El tercero busca concretarlo en estudios de caso. Con estos tres niveles de análisis, se propone hacer un acercamiento a este problema de pérdida de valores en la producción académica, así como sus implicaciones en la formación de investigadores y en la generación del conocimiento necesario para la comprensión y la solución a los problemas de nuestro tiempo.

**Human Well-Being in a Media Multitasking Environment**

The paper discusses the relationship between media multitasking (MM) and human well-being.

Media multitasking (MM) is changing the way people think, talk, learn, socialize and view the world. MM has both cognitive and behavioral consequences on human beings. On the one hand, it drains the brain altering memory, linguistic ability, and learning process and, also, overwhelming humans with a huge amount of potential information, it can lead them to a feeling of being paralyzed and unable to make decisions. On the other hand, being pervasive in people's lives, MM shapes their social interactions creating new "social aliens", and let them experience a weaker capability of being connected with their own self.

Generation gap makes a big difference in the perception of how profoundly MM is affecting human well-being. And in this respect, in an evolutionary framework, does the "digital immigrant" (M. Prentky) original mould risk of disappearing to leave the place to the "digital native" new mould, shaped with new cognitive and behavioral characteristics? Are the digital natives going to create a new risk of disappearing to leave the place to the "digital immigrant" original mould? The "digital immigrant" (M. Prentky) original mould risk of disappearing to leave the place to the "digital native" new mould, shaped with new cognitive and behavioral characteristics? Are the digital natives going to create a new risk of disappearing to leave the place to the "digital immigrant" original mould? The "digital immigrant" (M. Prentky) original mould risk of disappearing to leave the place to the "digital native" new mould, shaped with new cognitive and behavioral characteristics?

The paper reviews the literature on the topic, examines the above issues and, based on some empirical results, proposes some perspectives for the future.

**The Role of the Communities of Care in Promoting the Social Reintegration of Ex-Offenders: An Account of Restorative Practices in the Philippines**

There is a growing literature on prisons and restorative justice; however, creating social groups as a restorative practice remains underresearched in the field of Sociology. This study argues that the key to successful rehabilitation is in creating communities of care (the media, the government, the business groups, the Church and the family) (Gamo, 2007) that will support and reintegrate the ex-offenders in their re-entry to free society. It employs a local-based model of rehabilitation following the concept of restorative justice – the Care System Model (Gamo, 2007). Furthermore, it utilizes a case study approach wherein data was gathered through semi-structured interviews patterned in a storytelling manner. The findings of the study reveal that a) rehabilitation should start with the community acceptance of ex-offenders; b) the Communities of Care (Gamo, 2007) functions as one in addressing the needs of ex-offenders; and c) the programs and policies created for ex-offenders should respond to their needs. This implies that community acceptance and involvement is significant in promoting the reintegration of ex-offenders as a restorative practice. The what this research reveals is that there seems to be a weak functioning on the part of the communities of care in terms of carrying out their specific functions. It recommends that further studies on ex-offenders, on recidivists and on the communities of care (Gamo, 2007) should be conducted as an addition to the growing literature existing on Prison Sociology.

**Inequality in Intergenerational Closure As a Barrier to Social Capital Formation**

Intergenerational closure – a term coined by Coleman (1988) to represent a closed social network of parents and children – is a key marker of social participation, as it serves as a basis for social capital formation. There are no financial barriers to intergenerational closure, so one may have expected to see similar levels across economic and ethnic groups. Yet there may be social barriers, especially in diverse populations where young children's friendships formed in school do not necessarily cross over to relations among their parents. This paper examines economic and ethnic differences in intergenerational closure during the course of first grade. Data come from a large-scale randomized trial in which SZ schools were randomly assigned to a family engagement program intended to boost social capital in a control group. The schools this research reveals are that there seems to be a weak functioning on the part of the communities of care in terms of carrying out their specific functions. It recommends that further studies on ex-offenders, on recidivists and on the communities of care (Gamo, 2007) should be conducted as an addition to the growing literature existing on Prison Sociology.

**The Rise of Privatization in Tertiary Education, and Its Implications for Teaching and Research in Universities**

Increasing privatization in tertiary education is a world-wide phenomenon. In many countries around the world, developed and developing, this takes the form of an expanding private university sector. In the U.S., expanded privatization occurs in the form of sub-baccalaureate for-profit institutions, on-line degree-granting institutions, and the privatization of many functions in public institutions. What do these changes mean for the future of teaching and research in universities? This paper identifies distinctive forms of privatization and discusses the implications of each. An expanded private sector is likely to increase inequality of access to prestigious universities but does not threaten their standing. Moreover, the net effect of privatization on access depends not only on whether families are able to meet tuition demands, but also on whether privatization leads to a general expansion of the tertiary sector, which could increase access overall. Privatization in the form of on-line institutions and for-profit sub-baccalaureate institutions may challenge the ability of universities to maintain their place, but quality distinctions are likely to override the challenges. Privatization within public institutions...
constitutes a more insidious challenge and may shift the balance of resources within universities so as to threaten their ability to provide a well-rounded liberal education.

Elections and Territorial Inequalities in Post-Revolutionary Tunisia

Elections and territorial inequalities in post-revolutionary Tunisia By giving a comfortable advance to the Islamist party of Ennahda (around 37% of the votes), the first free elections of independent Tunisia on the October 23, 2011 have taken by surprise most observers. In this paper, we identify the social and socio-territorial bases of major Tunisian parties through combining quantitative analyses at different scales and field surveys in specific localities. Although most interpretations have focused on the cultural modernist vs. conservative cleavage, hence obscuring the class cleavage, our analyses highlight very differentiated socio-territorial electoral bases for the main parties and indicate deep social differences in voting behavior between peripheral and core areas, as well as within cities. While allowing for a better interpretation of electoral results, our analyses also provide tools to understand possible evolutions within the Tunisian political space.

Key Words: election, democracy, Tunisia, socioeconomic inequalities

The Reputation Economy: Knowledge Workers and Freelance Networks

A decade after Richard Florida's 'creative class' manifesto we are now confronted to labour markets in the knowledge economy where professionals are increasingly independent and networked. The project-based and freelance nature of contemporary knowledge work enhances the necessity of constructing a solid reputation within a professional network, which appears to be a determinant element to build successful careers. This combines with the use of social media for professional purposes and the increasing importance of digital marketplaces where reputations become visible and, under certain conditions, potentially measurable.

Based on a doctoral research combining mixed methods within an ethnographic approach, this contribution dwells upon the networked dynamics of creative labour across both offline and online environments, to discuss the existence of a Reputation Economy whereby reputation management becomes the determinant element for the professional success of networked knowledge workers. This has implications at the level of subjectivity and hybridization of skills within highly fragmented labour markets.

Placemaking: Inequality By Accident or By Design

Placemaking: Inequality by Accident or by Design

This paper seeks to extend the literature on the neighborhood effect by examining the myriad ways through which surveillance of the past, present and future in the service of urban planning works to reproduce different types of inequality through cumulative disadvantage. We understand the "neighborhood effect" in terms of the association between poverty and disadvantage and spatially located and colloquially named places within cities. The tensions between socio-structural, cultural, and individualistic explanations for the scope and stability of these correlations are described before an analytical approach that combines all three is presented.

A key focus in this analytical strategy is the role being played by geographic information systems (GIS) in the development of plans for the transformation of urban spaces. It begins by reviewing patterns of growth in the spread of GIS technology beyond its traditional borders, in part through the popularization of tourism and professional relocation services that make use of maps, labels and index numbers to facilitate the evaluation of cities and neighborhoods in terms of characteristics commonly understood as amenities, opportunities and risks. The assessment of educational systems at the level of schools, walkability within user-determined boundaries, public safety or “dangerousness” on the basis of levels of exposure to crime, and motor vehicle accidents or pollution are just a few of the indicators to be described.

On the basis of this background review, this paper will shift its focus to the consequences for inequality that are inherent in the uses of spatial analysis as aids to public participation in the planning of neighborhood and community change, especially as they relate to an emphasis on public transportation as a feature of so-called "smart growth" initiatives.

GANGAS, SPIROS* (Deree-the American College of Greece, sgangas@acg.edu)

(Mis)Recognition, Resentment, and Dualism: Challenges for a New Sittlichkeit

In this presentation I shall argue that the category of 'recognition' (Hegel, Honneth) and its approach to social justice can be enriched if we address two major issues: a) the first problem posed for any theory of recognition is to forge a theory of social institutions embedding social justice. Following Axel Honneth's recent shift towards the work of Durkheim and Parsons, I shall defend this pattern arguing that a new theory of Sittlichkeit is indeed pressing for an adequate approach to social justice through the lens of recognition. Yet, and this is issue (b), Honneth's theory leaves largely unaddressed the issue of resentment, a powerful index of misrecognition and disrespect. I shall thus attempt to fill this void in Honneth drawing on Max Scheler's configuration of resentment. It seems that resentment is pertinent to a theory of just social institutions in many ways. For instance, I shall address Parsons' inclusion of 'sour grapes' pathology in his theory of modern society. It can contribute towards regenerating the capabilities approach sociologically, if this proposed reconstruction is plausible, then it can contribute towards regenerating the capabilities approach sociologically, reconfirming its progressive explanatory capacities, the merits of which have already been successfully tested and implemented across diverse sites, movements and organizations that promote human rights.

GANGAS, SPIROS* (Deree-the American College of Greece, sgangas@acg.edu)

Human Rights and Agency: Sociological Opportunities in the Capabilities Approach

In this article I shall argue that Amartya Sen's capability approach offers a promising renewal of sociological approaches to human rights. Sociology has only recently tilted towards the capabilities approach. I shall suggest that, on the one hand, any new normative understanding of action, like the one that Sen and Nussbaum offer, can gain from sociological theory simply because the program’s central categories have a precedent among many social theorists. Seeing this affinity as an opportunity for creative theory-building in sociology, and drawing on sociology’s accomplishments, I argue that normative components of Sen’s ideas have been prefigured primarily by Parsons and to a lesser extent by Giddens. The capability approach mediates, I shall suggest, the formal aspects of Parsons’ idea of ‘capacity’ with Giddens’ idea of ‘capability’ in the context of the latter’s theory of structuration. On the other hand, many theories of agency in sociology are normatively wanting. If configured along the tracks of capabilities, sociological categories, like agency, can signal a progressive shift in theory attentive to human rights, a core component of Sen’s research program. Compounded with capabilities, a new notion of agency can offer the appropriate normative justification to the ‘public sociology’ paradigm which re-introduces normative considerations in sociological discourses. If this proposed reconstruction is plausible, then it can contribute towards regenerating the capabilities approach sociologically, reconfirming its progressive explanatory capacities, the merits of which have already been successfully tested and implemented across diverse sites, movements and organizations that promote human rights.

The Study of Hindu Woman Problems in Morden Society

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The mother India notion of downtrodden women of India, helpless, exploited by men, worn to and early death; and the exotic sensuous women of the orient, who make maharajahs happy with their beauty and talent, are somehow in the picture too. Indian women of dignity, charm, simple beauty in all classes-form women in the village, middle-class women in the cities, government women in New Delhi-who we neither helpless and downtrodden nor absorbed in erotic gratification. Of pampered husbands. Some of these intelligent and still graceful, feminine women were in legislatures, some were running others sector.

Mother India, mother culture, goddess worship, and in a general cultural veneration of the feminine. The study of the Morden societies the Hindu women problem indenitified. The major source of data for the study is descriptive material from ten Indian informants, women graduate student in university coming from educated, urban and middle and upper-class backgrounds, representing various geographical areas.

Literary sources include translations of original Indian literature. The research paper focus if discussion of the Hindu women problem connected with the single women, older women, widow, divorce, mixed marriages, and friendship live-in-relation and NRI friendships etc. Most of these problems are related to the Morden age and its impact of traditional patterns. Some of the problems involved in modern Indian womanhood. Except for widowhood, they are related to changing times and the impact of the globalization.

The Role of NGOs in (de-)Constructing ‘Flight’ Migration at the Mediterranean Borders

Since its inception of the 1985 Schengen Agreement, internal borders within the Schengen space have been abolished. No doubt that this has bolstered the freedom of human mobility within the Schengen borers, which went hand in hand with the southbound, and more recently eastbound, EU enlargement. Observers speak of transnational mobility, commuter/shuttle migration, moving away from the presumed linear nature of migration in the study of immigration. But this is just one part of the European migration landscape: the mobility to the southeastern and southern external borders seems no less vibrant yet the entry into these has become severely hardened owing to the ever tightening border control, as widely reported by the media.

However, we still know very little about what the Mediterranean member states’ migration regimes have in common. Even lesser analyzed is the role of NGOs in supporting these migrants as well as responding to the media coverings. This analysis will be embedded in the history of the public policies (energy and other domains of consumption) and their effects on the behavioural changes. Nowadays, the energy issue returns in top of the agenda, after having known eclipses at the end of the 70s. It is built in a context of the European energy market deregulation. The result policies highlight the importance of the individual behavioural change through the “consumer” representation (energy savings, smart grids, market choice of appliances, supplier choice according to the sources of energy production, etc.). The market tools are privileged, but the French State remains the dominating actor. Within this framework, isn’t the notion of the individual behaviour partly rhetorical? Indeed, other upstream factors encourage in a decisive way the levels of households’ energy consumption (e.g. offer construction, infrastructure choices, thermal regulation, at the French and European level). Moreover, the succession of the heterogeneity of the policy devices that have partly opposite objectives may lead to conflicts in norms and contradictions in the energy practices. Our analysis will be developed through examples related to “sustainable lifestyles”, such as: energy label, low consumption bulbs, carbon tax, choice of the means of transport, waste sorting and water consumption.

Abstracts are organized by first presenting author’s last name.

Ongoing Disaster: Fukushima, Complex Technological Systems and Uncertainties

Catastrophes such as that which struck Japan early 2011, as a result of the accident in the Fukushima nuclear power plant, the most serious accident ever in the history of nuclear power plants after Chernobyl, demolish claims to extremely small risk probabilities for complex systems and upend the delicate balance between costs and benefits argued by safety experts. The Fukushima disaster demonstrated that in contemporary societies, vulnerabilities and threats are difficult to locate or predict, being both incalculable and impossible to offset. The natural tsunami that ravaged Japan was also a technological tsunami with ecological, social, economic, and political consequences. The Fukushima disaster may be thought of not just as a disaster for Japan, but for the technological order. Our analysis of the March 11th disaster begins with a simple narrative showing how a natural disaster in a country at the forefront of technological development precipitated an accident in a nuclear power plant that in turn led to a chain of calamities at multiple levels. How did we become constructors of a world such with catastrophic potential? Section two responds by considering how the nuclear threat is played down as a result of the euphoric notion that human vulnerability can gradually be overcome by the increasing ability of science, technology and probability analysis to control and predict events. The final section retrieves the idea of “foresightedness” as the basis of a political and social approach that can take on not only the uncertainties of the world, but also those generated by technical systems, in order to illuminate our choices and decisions. When faced with calamities and damages that appear to arise out of the blue but are the outcomes of our technological systems, their interactions, and our dependencies, foresightedness emerges as a response both rational and virtuous, however difficult.

Fighting Social Injustice in Spanish Cities: Social Innovation Practices Against Housing Evictions As a Response to the Current Housing Crisis

This paper analyses the aftermath of the bursting of the housing bubble in Spain, which has left thousands of families without homes and indebted for life. In the first of two parts we look at contextually specific interactions between state regulation and market-oriented projects in Spain. This country is a salient case in which an economic recession and a debt crisis follow upon a long period of growth characterized by a housing bubble and a particular urban growth model. In this part we argue that central government has played a key role in framing the interaction process (Goffmann, 1983) using a finer level of analysis: sensible probability analysis to control and predict events. The final section retrieves the idea of “foresightedness” as the basis of a political and social approach that can take on not only the uncertainties of the world, but also those generated by technical systems, in order to illuminate our choices and decisions. When faced with calamities and damages that appear to arise out of the blue but are the outcomes of our technological systems, their interactions, and our dependencies, foresightedness emerges as a response both rational and virtuous, however difficult.

A Different Path for Public Demands and Their Effects on the Processes of Democratization

En clave de la Teoría de Sistemas de Niklas Luhmann, ésta investigación plantea una explicación acerca del proceso mediante el cual la demanda histórica sobre la democratización de medios en México, retomada en mayo de 2012 por el movimiento #YoSoy132, logró instaurarse en la agenda legislativa para su posterior discusión y aprobar como reforma de ley en materia de telecomunicaciones en junio de 2013. Esto es: identificar la articulación y evolución de una demanda pública propagada principalmente por Twitter, su consolidación en el ámbito mediático y la evocación a nuevos actores, la formulación de múltiples variantes y su consecuente apropiación e implementación como política pública. Así, la relación e irrupción intersistémica que se pone en análisis permite explicar y asociar la operabilidad de diversos sistemas (político, jurídico, mediático, científico, y los movimientos de protesta), en su participación sobre dicha demanda y como fuentes de influencia y de tensión social a lo largo del proceso de decisión del Estado.

Para ello se realiza un estudio longitudinal de corte cualitativo que incorpora principalmente recursos audiovisuales de YouTube, documentos oficiales alojados en Internet, y notas de periódicos digitales. De esta manera mediante un análisis documental fundamentado en la Teoría de Sistemas, el estudio permite observar la interacción entre el núcleo de protesta y su consecuente apropiación e implementación como política pública.

Secularization in Mexico City. a Wrong Paradigm?

Secularization in Mexico City. a Wrong Paradigm?

The political situation of the world and the complicated relation of the West with Islamic countries have provided evidence that the most significant mistake in the theories of secularization is the conviction that modernization inevitably leads to the loss of the importance of religion. Thus the proposition of Berger (2001) replacing this paradigm with an analysis of the interaction between the forces of the secularization and a counter secularization is pertinent.

In a similar way, it can be said that globalization reminds us that the relationship between religion and politics as established in the Western world, that is to say the passage of the religious to the sphere of the private life, is rather an exception.

Religion in the history of Mexico is a key element in understanding the cultural roots of the country and their collective memory linked to the Catholic Church. However, the first years of this century were an undeniable setback for Catholicism. We can talk about changes in the nature of the religious that opened...
new perspectives for study. In that way studying the study of the process of secularization, its modalities and its particularities, become a pertinent subject.

Likewise, it is suitable to indicate that during the first two decades of this century the paradigm of secularization began to be questioned and the idea of a return of religion or a re-enchantment of the world began to emerge. It is possible to speculate that in large Mexican cities, especially in Mexico City, the process of secularization remains constant only in members of a middle class who can be considered carriers of an international subculture; these are people who have received a Western-style higher education, particularly in the humanities and social sciences.

Brazilian Long-Term Migrant Women in Japan. Work, Family and Subjectivities

This paper aims to present the first results of research initiated in January 2013 about Brazilian women migrant in Japan. Japan has accepted Brazilians of Japanese filiation and their spouses as labor force for over twenty years. The Brazilian community in Japan remains the third largest foreign community (population of over 210,000 in 2012) in that country. If studies of the Brazilian community in Japan focus on both causes and consequences of this migratory phenomenon, an informative analysis of gender relations in migration context is still incipient. Women’s role in the migration process is often naturalized as complementary to male migration. However, studies of social and historical approach indicate that decisions to emigrate depart often from women, married or single, breaking with the classical view of the history of migrations that has been male centered (Rogerat, 1996; Morokvasic, 2005). Thus, we would like to show women’s agency in migration process in Brazilian women’s case. What is the objective and the subjective reasons to leave the country? Secondly, once in the country, what are the specific issues that those women face daily as immigrants, in the public and private spheres? How gender arrangements are done in terms of domestic work and childhood education? How they organize their everyday life as well as their emotional aspects as (foreign) workers, wives and mothers, specially when their residence in the foreign country became durable (contrary to their initial project)? Our analysis will be based mainly on qualitative research conducted with six Brazilian women, of Japanese origin or not, who live in Japan in a long-term period (about twenty years).

GARCIA LANDA, LAURA* (Universidad Nacional Autónoma de México, garlanster@gmail.com)

Academic Language Barriers: Professional Stigma or Recognition and Success?

In the last decades, university language policies have strengthened the use of English for publishing papers, books and articles, even in non-English speaking countries such as Spain and Mexico, for example. This fact has led to a series of academic procedures or may place both academics and students at stakes with linguistic and extra-linguistic uses of codes unknown to them and their English teachers. This practice surpasses their real conditions of coping with those matters in a short term period, which triggers ill practices that place them in face threatening situations that later may become a barrier for achieving this institutional goal.

Within this context, English holds the status of the language of academic and professional communication. In this sense, it has become a privileged language in the academic and professional realm, where academic production and activities in other languages are stigmatized. We analyze implicit and explicit language policies in macro and micro school practices where language status places individuals and their (contrary to their initial project)? Our analysis will be based mainly on qualitative research conducted with six Brazilian women, of Japanese origin or not, who live in Japan in a long-term period (about twenty years).

The methodology approach consisted in the construction of a microhistory (Tomich, 2008) examining the following three space-temporalities: 1) the short term, massive layoffs and resistance struggles in Puerto Rico during 2009, 2) the medium term, the analysis of these layoffs and resistances within the context of the world economic and political crisis, from 1968-72/73 to the present, and 3) the long term, the analysis of the 2009 massive layoffs and resistance struggles within the historical crisis of capitalism.

In the short term, I described how union workers and other groups resisted the massive layoffs of 30,000 workers, a policy implemented by the Government in 2009. Typical governmental responses were to recognize the fiscal deficit, led to an unemployment rate of 16.9% in 2010. Employment rate decreased to 33% in 2011. In the medium term, the massive layoffs and resistance struggles held in 2009 were analyzed in the conjuncture context of the economic, political and social crisis from 1968/1972 to the present (Wallenstein, 2004). Considering the experiences of the people and groups who participated in these resistance struggles, six challenges are discussed for unions and other groups. The potency of these and other groups to become anti-systemic movements is discussed. These movements can contribute to create new principles and politics for work and life. These principles and politics will be discussed supporting a new world-system beyond capitalism, the long term temporality presented across the research.

Resistance Struggles and Movements in Puerto Rico: Towards a New Politics for Life and Work

This paper is a product of research conducted between 2008 and 2012. The research centers on the analyses of the resistance struggles in Puerto Rico during 2009 to confront the layoff of 30,000 public employees. As a result of these layoffs, the union movement confronted six challenges. I discuss the potential insurgencies of unions and other social movements.

2) The year 2009, and the first strike at the University of Puerto Rico in 2010, integrated the most active and prolonged struggles in our country for the last decade. In these struggles participated unions, economists, political and religious groups, feminists, students and professors. As in other important struggles, unionists were among the most important protagonists.

The objectives of this paper are: 1) Explain two significant events that took place in this period: the peoples’ assembly and the one day general work stoppage, 2) Discuss proposals of diverse groups to deal with the crisis, 3) To present a brief historical background of the fragmentation in regards to the local union movement, 4) To evaluate the main challenges and potential insurgency for union and other social movements. Among these challenges are: 1) The continuous dialogue on the meaning of work and the role of workers in this systemic crisis, 2) The importance of diversifying the activities of resistance, 3) Unions and other resistance groups should be aware and oppose the attempt of the state to criminalize their struggle. Finally, the integration of struggles and movements in South Korea, South Africa and Latin-America poses the need of new ways for international alliances between formal and informal workers. These alliances can confront the precarization of labor creating new principles and politics for life and work.

Something Is Changing: Italian Young People Between Religious Indifference and New Form of Believing

Several studies on youth and religion stress how only a very small proportion of the youth population has anything to do with organized religion. There has been, on the one hand, a growth of interest in alternative forms of spirituality and, on the other, an increasing estrangement from the various religious aspects (believing, practice, involvement in religious associations). In this framework, the paper will focus on the outcomes of the socialization process, investigating how young people debate, follow, refuse or interact with religion in the Italian scenario. Are we looking at an Italian version of religious modernity which, on one hand, reflects the typical expectations of living in a pluralistic society and, on the other, an increasing estrangement from the various religious aspects (believing, practice, involvement in religious associations). In this framework, the paper will focus on the outcomes of the socialization process, investigating how young people debate, follow, refuse or interact with religion in the Italian scenario. Are we looking at, among young people, the emerging of a generation characterized by religious incredulity? In this paper we’re going to present findings of a qualitative study carried out with 150 young people aged 18-24, in order to better understand, in the framework of socialization outcomes, what are the key determinants of belonging and not belonging among young people. As in other cases, the main reasons of their taking distance from the religion. The collected interviews allow us to define a typology, defining mainly four kinds of youths according to their religious definition and their religious practice, to their opinion on the Catholic church and to their religious socialization.
Le processus de négociation de paix actuellement en cours en Colombie entre le gouvernement et les FARC pose le problème de la participation des mouvements sociaux et de la société civile dans les négociations dans lesquelles le passage de la guerre à la paix suppose également une évolution vers des régimes plus démocratiques, par une inclusion de forces jusque là en marge de la politique institutionnelle. Or cette participation est face à un paradoxe : d’une part, elle contribue à légitimer le processus au-delà des parties négociatrices, mais de l’autre sa présence peut altérer des négociations marquées par le secret et la confidentialité. Or en Colombie le processus actuel de négociation est face à une importante mobilisation sociale, avec plusieurs expressions, d’une part des mouvements agraires et paysans, autonomes des guérillas, et de l’autre des collectifs de victimes du conflit armé. Les mobilisations s’adressent au gouvernement mais elles ont aussi un effet sur les guérillas qui négocient. Le cas colombien contemporain sera analysé au regard d’expériences similaires par le passé dans le reste de l’Amérique latine, pour le comparer avec des cas où la mobilisation collective a été écartée du processus de négociation (Salvador) et des cas où au contraire elle a été fortement associée (Guatemala). Cette réflexion visera à réhabiliter le rôle des mobilisations sociales dans les processus de démocratisation, rôle trop longtemps négligé par des approches théoriques centrées sur la négociation et les processus politiques.

Le processus de changement une légitimité autre que purement électorale.

Mouvements Sociaux Et Sociétés Civiles Dans Les Processus De Démocratisations : Le Cas De Conflits Armés Néogiciés

Le processus de négociation de paix actuellement en cours en Colombie entre le gouvernement et les FARC pose le problème de la participation des mouvements sociaux et de la société civile dans les négociations dans lesquelles le passage de la guerre à la paix suppose également une évolution vers des régimes plus démocratiques, par une inclusion de forces jusque là en marge de la politique institutionelle. Or cette participation est face à un paradoxe : d’une part, elle contribue à légitimer le processus au-delà des parties négociatrices, mais de l’autre sa présence peut altérer des négociations marquées par le secret et la confidentialité. Or en Colombie le processus actuel de négociation est face à une importante mobilisation sociale, avec plusieurs expressions, d’une part des mouvements agraires et paysans, autonomes des guérillas, et de l’autre des collectifs de victimes du conflit armé. Les mobilisations s’adressent au gouvernement mais elles ont aussi un effet sur les guérillas qui négocient. Le cas colombien contemporain sera analysé au regard d’expériences similaires par le passé dans le reste de l’Amérique latine, pour le comparer avec des cas où la mobilisation collective a été écartée du processus de négociation (Salvador) et des cas où au contraire elle a été fortement associée (Guatemala). Cette réflexion visera à réhabiliter le rôle des mobilisations sociales dans les processus de démocratisation, rôle trop longtemps négligé par des approches théoriques centrées sur la négociation et les processus politiques.

The Cas of Chilean Students and Other Mobilizations in Recent Years

The paper discuss five dimensions of recent mobilizations in LA: democratizing, neoliberal, citizenship, identitarian and foundational, according to the predominant dimension in the movements. This is done comparing with other mobilizations in the world. The main thesis is that behind the different mobilizations and social movements in recent years, underlies a foundational dimension aiming to reconstruct the relations between State and society broken after globalization, neoliberal reforms, dictatorships and democratization processes. This hypothesis is examined in the Chilean case considering three main aspects: the type of society emerging after the process of democratization that we define as a post pinochetist or post authoritarian society linked to the past by the neo liberal model and the Constitution inherited form the dictatorship, the type of mobilizations developed since 2006 and mainly since 2011 and the window opportunity for new relations between politics and civil society opened by presidential elections in 2013 and possible constitutional processes.
strategies. The roles of unionising and collectivising have therefore changed in the recent years. In many ways, the fragmented nature of the workforce weakens collective strength resulting in rampant violations of their rights. Yet, fragmentation of the workforce leads to new strategies and combinations of forces. This is mainly due to the creative and dynamic responses of those suffering its consequences in developing ways to combat these violations present hope for the local-global labour movement.

My study focuses on the work of a trade union of female workers in Mumbai's informal sector. By way of two cases, one of domestic workers and the other of home-based embroidery workers, I show that organizing in the informal sector is in fact possible. More importantly, I point out that while new-age globalisation and traditional conservatism join hands to make the employers and the institutions of the state anti-poor and anti-women, new forms of collective action bringing together different kinds of workers (engaged in various trades and from diverse backgrounds), are creating a space for making space for a dialogue between the poor and with these local and global institutions directly for demanding their rights.

Comparing Latin American Migration in Different Urban Settings: Theoretical and Epistemological Issues

This paper offers a epistemological reflection on comparing Latin American migration in different urban settings. We provide a framework of analysis that is at the same time theoretical and epistemological. Migrants are simultaneously emigrants (thus coming from a certain “society of origin”) and immigrants (that are bound by a new set of structural forces). Therefore we examine the characteristics that have to be taken into account when researching Latin American migration in different cities. Among the circumstances that configure the emigrant experience we should take into account the historical evolution of the country of origin, which originates different social spaces (in the sense of Bourdieu) and fields (ibidem.) where the migrant occupied certain positions. We also address what it means to become and immigrant, that is, a person bound to their initial resources in terms of material, cultural and symbolic legitimacy in the former US military bases in the Philippines. To invoke international support, the emigrant experience we should take into account the historical evolution of the country of origin, which originates different social spaces (in the sense of Bourdieu) and fields (ibidem.) where the migrant occupied certain positions. We also address what it means to become and immigrant, that is, a person bound by a new set of structural forces.

What does Europe mean for Europeans, of many parts of Europe or of places outside Europe where are social groups of European origin? The paper looks for to reply to these questions through a research carried out on fourteen samples of ethnic minorities and majorities of Europeans (about 2700 interviews of people), living in the Italian region of Friuli Venezia Giulia (Italians and Slovenes, Friulians), in the Slovak region of Vojvodina (Serbs and Hungarians, Slovaks), in the Ukrainian region of Kharkiv (Ukrainians and Russians, Belarussians, Jews), and in the Siberian region of Tujmen (Russians and Ukrainians, Caucasians, Tartars). To each sample the attitudes towards Europe and its meanings were requested. The main results (through attitudes) of Europe were: an area included between Atlantic Ocean and Urals, a Christian civilization, the European Union (EU), a common family, the West, the overwhelming some peoples, a common culture, a vague idea. The paper considers the intensity and the relations of these meanings between the macro-regions, between ethnic groups, and between minorities and majorities. The meaning among the macro-regions of the macro-regions, first of all, and inside each region between minorities and majorities.

Besides at the same level of macro-region also the structure of the meaning is very different. For example, the more important factor (Factor Analysis) in the Friuli Venezia Giulia is very simple (West, EU, common culture); on the contrary in Vojvodina the first factor is more complex. In the Kharkiv region the structure of the first factor is simpler, but different than the Italian content (that is: Europe is overwhelming some peoples and vague idea); so as the most important factor (first) is simple for the groups of the Tujmen region, but the structure of the meanings of Europe is composed of West and vague idea.

Abeyance Structures for an Environmental Social Movement: The Case of the US Bases Cleanup Campaign in the Philippines

This paper aims to extend the concept of abeyance structures to the case of the US bases cleanup campaign in the Philippines and US. Abeyance structures refer to various organizational arrangements that absorb the spillover of activists after a social movement declines. In this paper, I outline four routes by which former partners took after the decline of the said campaign. I use in-depth interviews (n=31), secondary data, and internet archives in drawing themes on the routes taken by core activists of the disbanded campaign. I define these routes as follows: (a) Route 1 wherein former partners were absorbed by their original affiliations prior to joining the campaign and which they have maintained while taking active part in the campaign; (b) Route 2 wherein former partners sought new affiliations with other nongovernmental organizations and networks of similar or parallel advocacy as the campaign; (c) Route 3 wherein former partners remain in the spirit of the campaign hoping to renew it in the future; and (d) Route 4 wherein a US-based partner-organization structures itself by adopting a transnational environmental justice framework of action, and cultivating an organizational culture to promote its ethnic identity as collective identity. The results offer insights on the internal dynamics of an environmental social movement. The least-resourced partner, which is the community of victims, resorted to being absorbed by other nongovernmental organizations to provide for their daily welfare. Other partners, which include mostly nongovernmental organizations and professionals, have followed different routes in pursuing their goals. The degree of their success is tied to their initial resources in terms of material, cultural and symbolic legitimacy in either the US or the Philippines. This suggests that stronger partners also fare better following the decline, which in turn raises questions on the ability of networking to overcome inequalities among partners.

Latin American Migrants in Bilingual Cities: A Comparison Between Barcelona and Brussels

This paper analyzes comparatively the language use of Latin American migrants in two bilingual cities: Barcelona (Spain) and Brussels (Belgium). Both cities share some similarities but also have some differences. Bilingualism in Barcelona is based on two cocoficial languages Spanish and Catalan. While Spanish is the official language for all Spain, Catalan it is only the official language in Catalonia (the region). Latin American migrants from most countries (with the notable exception of Brazil) are already Spanish speakers and therefore have little incentives to learn Catalan. However, nationalist policies in Catalonia and Barcelona encourage use of Catalan and give preference to those who can speak Catalan in the labour market. On the other hand, Brussels is the capital city of a country strongly divided amongst linguistic lines. In Belgium only Brussels is bilingual while the regions of Walloonia (French) and Flanders (Dutch) are monolingual. Migration policies depend on municipality, meaning that in Flemish speaking municipalities Dutch prevails while French is dominant in the French speaking. Latin American migrants in Brussels, native speakers of Spanish or Portuguese (brazilians) do not speak any of the two as mother tongue and have to learn. Choice of language learnt is related to the place of settlement and social networks. The paper concludes with a reflection on the features of Latin Americans and the likely outcome of the migrant integration in the two cities.

Meanings Of Europe For Ethnic Minorities and Majorities

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
volved in the lives of the community being advocated on. In the case study, three prominent dimensions of engaged collaboration are present. The technical/legal dimension comprises the strategic decisions on information sharing, policy advocacy, research, and litigation aspects of activism. The ethical dimension covers the moral and affective aspects of the campaign using victimization frame. Finally, the ethnic dimension caters to the collective identity of the campaign anchored on Filipino nationalist identity and the underlying colonial past that created it. Thus, this theory on engaged collaboration enriches the literature because it takes into account how the external advocates deepen their involvement in domestic affairs not only with their partner organizations and the targeted states, but more importantly with the community of victims.

Emerging Agrarian Crisis and Farmers Suicides; A Study of Telangana Region of Andhra Pradesh in South India

Changing agrarian structure and labor relations, Consequent crisis and farmer suicides is an important area for the study of social scientists in contemporary times all over India. It is a well known fact that India is mostly an Agrarian country and even today 70% of its population inhabits in rural India by depending on agriculture and its related occupations despite rapid progress in science and technology. It is a paradoxical situation which prevails only in India where large chunk of population lives even today in rural India with or without land by pursuing agriculture and its related subsidiary occupations resulting rigid social and cultural bond. This complex social structure which constitutes different layers which creates consequent inequality hierarchal structured in terms of caste, class, ethnicity and gender etc.

Further, increasing modernization in agriculture and consequent growing capitalistic mode of production coupled with an unstable returns due to change in climatic conditions resulting the farmers entering into debt traps which leads to help less condition and hopeless life unlike in the past. Lack of timely help from Kith and Kin and indigenous institutional support and constant pressure of ruthless market financiers resulting in large number of farmers to attempt suicides this phenomenon is increasing day by day particularly in the state of Andhra Pradesh in the era of post globalization.

This study aims to understand the changing agrarian structure and emerging labor relations since post liberalization era and the reasons for increasing farmer suicides and its causes and consequences. For this study Telangana region of Andhra Pradesh in South India has been chosen where large number of farmers are attempting suicides.

Telangana Movement: A Study of Problems and Prospects

Telangana movement for separate statehood is historically well known all over the world. One of the reasons for its popularity is that its peasantry revolt with arms during (1946-48) under the leadership of Communists against the Nizams autocratic rule. However the Telangana region of Hyderabad state was merged in Andhra Pradesh on 1st November 1956. But Telangana people wanted to have their own state in view distinct geographical, socio-economic, political and cultural identity. Telangana people were discriminated in every sphere by the See-manarvathy (Sociology) and the gambling concept will be an excuse to draft a reflection on the idea of poetic and philosophical reconstructions (so called comprehensive, to use Weber’s distinction) by developing the concept of utopian reconstruction. This perspective will allow to show how the narrative thinks, how to write is to argue, is to think. We will thus see that narrative categories function as conceptual categories of discovery, as argumentations, as cognitive categories, literature and science (sociology) each appearing sometimes as creation, sometimes as discovery.

Litterary Cognition and Scientific Fiction Literature As Subject of Knowledge Digressions Around the Pathic VS Epistemic Connection

This presentation aims to consider on one hand science as narrative, as fiction, and on the other hand literature as production of knowledge. We will therefore talk here of literary cognition and scientific fiction by analyzing the confrontation of two areas: literary and scientific (sociological).

The analysis will be organised around four cases (two for each area):

- For the area of literary fiction:
  
  - On one hand the case of T.-S. Kuhn who addresses this issue by the introduction of the science of Nature (so called explanatory, to use Weber’s distinction) by constructing the concept of experiment of the thought;
  
  - On the other hand the case of Jean Duignaud who addresses this issue by the introduction of the science of Culture (so called comprehensive, to use Weber’s distinction) by developing the concept of utopian reconstruction. This perspective will allow to show how the narrative thinks, how to write is to argue, is to think. We will thus see that narrative categories function as conceptual categories of discovery, as argumentations, as cognitive categories, literature and science (sociology) each appearing sometimes as creation, sometimes as discovery.

To Embark and/or be Embarked ? Emotion As Element of Method Digressions Around the Sensitive VS Intelligible Connection

“To move someone around, he has to be emotionally moved.” said Régis Debray. Sociology is above all a question of vision, perspective, lighting, angle, depth of field, focus and of course fine tuning. Do we not recurrently talk about the “sociological eye”? This issue is of course also relevant to the sociology of art and it is in this context that the question of emotion will be examined here.

Thus, along with John Dewey, we will consider that aesthetic emotion is not a form of feeling that exists independently, but an emotion that is caused by an expressive material inducing a transformation of the initial feelings. What will interest us here is how emotions are then functioning as mediations between the different actors in the process of artistic production.

To this end, the semiotic narrative analysis of a scene of the Wim Wenders film Der Himmel über Berlin will be an excuse to draft a reflection on the idea of emotional risk taking (gambling) drawing the poetic dimension into its path. We will speak here of a sociological focus method characterizing the socio-anthropological posture. Emotion does not exclude reason and to that extent we therefore cannot afford not to take into account the issue of emotion in the sociological method.

At the heart of the creation process, emotion and the gambling concept will thus enable us to recall that thinking, also in science, is working from a fictional construction of reality (itself fictional construction of the “real”) as an intra-subjective, empathic and heuristic process, where emotion, omnipresence, must necessarily be taken into account.

Political Parties and Community Organising in an Era of Membership Decline

At a time when formal party memberships are declining across advanced industrial democracies, political parties are experimenting with new ways to re-engage members and reach out to party supporters. Adapted from the experience of American party organisations and campaigns, political parties in the United Kingdom have adopted community organising techniques as a means to address the resource and linkage implications of declining party memberships and to engage supporters (and not just party members) in the community. This paper analyses the character of and motivation for these techniques, how they have been implemented by the Labour Party, the Liberal Democrats and the Conserva.

The Appearance of a Sub-Field of Medicine of Poverty in France

This paper aims to tell and analyze the processes and historical background which gave rise to a sub-field (in a Bourdieuian understanding) of medicine of poverty in France from the early 1980’s to the 2010’s. The main respondents don’t think of themselves as “cultural class” and don’t regard their lifestyle as different from life of the majority. Unstable identity of young scientists and tutors, consumer attitude to the cultural space, passivity and lack of self-organization reduce their creative potential.

Health Care Reform and Creation of an Excluded Category of Patients

The will to universalize the French health insurance system at the end of the 90’s created a new marginalized category of patients: illegal migrants. Splitting them from the other insurance holders by the establishment of a special health insurance (Aide Médicale d’État, State Medical Aid), this population was put at the edge of the health system. It led to unequal health practices and increased the difficulties to access health care providers and health insurance. These two levels of barriers have been underlined by the empirical research based on the study of a department in the French public hospital, named PASS (Permanence d’accès aux soins de santé : Departement of health care access). The PASS is specialized in taking care of patients without health care insurance which are mainly illegal migrants. The Aide Médicale d’État from the other insurances made possible for the administration and practitioners to have discriminating practices. The administration uses the processing of the applications (delaying them for example), while some practitioners exclude those patients from their practice. These barriers keep a part of this population out of the regular health care system, compelling the ‘cultural lag’ phenomenon and health care providers as the PASS. However the specialization of health practitioners in those patients generated new practices, which showed the relevance and the complementarity of combined social and medical care, networking, and recognition of the social and cultural determinants of health.

This paper is based on an ongoing Ph.D empirical study in sociology about the treatment of the social question in and by public hospitals in France through the analysis of the PASS.

Inclusion in Society through Religious Orientation? Biographies of Male Students Participating in the ‘Gülen Movement’ in Germany

The so-called ‘Gülen movement’ (Ebaugh 2009), a global network revolving around a Turkish-Islamic preacher, has become increasingly visible inside Germany. Founding private elementary and secondary schools, as well as centers for private coaching, supporting intercultural and interreligious dialogues, and separating institutions such as “Our Jihad is education”, the movement acts to render possible the educational success of children of Turkish immigrants. By referring to themselves and their practices as hizmet (service), network participants also aim to alter the common view of ‘backward Islam’, a view perpetuated by popular discourse, and to contribute to a perception of a ‘modern’ Islam, which can be synthesized with the natural sciences and with globalized multicultural meritocracies.

So, to lead a Muslim life the ‘Gülenian’ can be understood as a promise not only as a religious orientation, but also plays an important role in resolving crises among young Turkish adults. These crises result from discriminatory discourse in the public sphere in Germany against Turkish migrants and Islam, and from the construction of cultural, religious and ethnic difference in schools and
The need for assessing women's unpaid work and reproductive activity has long been discussed by economists within the context of estimation of a country's economic growth rates, as well as by sociologists within the inequality studies. The world statistical practice has acknowledged that working time budget surveys remain to be the most relevant tool to obtain reliable information on unaccounted work because such surveys allow estimating the ratio of time spent by women and men on labour market employment and on unpaid work in households.

The proposed paper is devoted to presentation of the results of a special sociological survey on assessment of women's unaccounted work realized in Ukraine. The main issues under investigation include: gender inequalities in time spent on domestic work, distribution of home duties and features of decision-making in households.

A particular emphasis is given to gender assessment of involvement to informal work, which makes a rather important problem in the region of transition economies. The role of prevailing gender stereotypes in reproduction of gender inequality is also analyzed based on data of the national sociological survey, as well as on the results of European Sociological Survey. The latter survey reveals a striking contrast between Ukraine and other countries of Europe in terms of public opinion on social gender roles and norms, in particular those related to women's priorities in harmonizing their work and family obligations.

The paper provides also some analysis of gender policies realized in the country, and subsequent conclusions and recommendations on harmonization of gender disparities in paid/unpaid work balance and general empowerment of women in the country.

**GERBAUDO, PAOLO** (King's College London, paolo.gerbaudo@kcl.ac.uk)

**Liquid Organising and Soft Leadership in the Popular Protest Wave**

In activist and academic discourse it is often claimed that contemporary protest movements, including the Arab Spring, the indignados and Occupy Wall Street are ‘leaderless’ or ‘horizontal’ movements (see for example Castells, 2012). However, looking at their internal doings and at their communications it becomes soon evident that far from being leaderless, these movements are characterised by new forms of both personal and collective leadership, in which activist clusters often numbering no more than a dozen people come to acquire much influence in the direction of social movements. What we are witnessing to is thus not the end of leadership, but the emergence of a new form of leadership which attempts to harness the communication ecology of contemporary social movements.

Drawing on my ongoing research about the popular protest wave of 2011-13 in Egypt, Spain, the US, Brazil and Turkey, and developing the argument presented in my book Tweets and the Streets (2012) I describe contemporary leadership as ‘soft leadership’. This form of leadership makes use of the interactive capabilities of social media, tapping into the imaginary of participatory culture (Jenkins, 2006).

Leadership comes to revolve around community management and facilitation, rather than outright ‘direction’ of collective action.

This paper will look at the specificity of emerging forms of leadership and their connection with the informal and ‘liquid’ practices of organising performed by contemporary movements. Specifically I point to the limits of this format of organising, arguing that while soft leadership is powerful in nurturing social movements at their inception, it also runs the risk of exacerbating contemporary movements’ well known tendency towards evanescence. Furthermore, the new forms of leadership emerging in contemporary movements raise serious risks of opacity and unaccountability because of their very liquidity.

**GERBAUDO, PAOLO** (King's College London, paolo.gerbaudo@kcl.ac.uk)

**The Squares Movements and the Resurgence of Popular Democracy**

This paper argues that the squares’ movements of 2011-12, a protest cycle comprising the indignados in Spain and Greece to Occupy Wall Street in the US and the UK marks a turn in collective action with a renewed majoritarian ambition and the aim to refound democratic institutions. I attempt to capture the nature of this new majoritarian ambition by contrasting it with the countercultural identity that dominated the anti-globalisation movement. Analysing materials originating from a long term ethnographic research, I identify two fundamental traits of the squares movements, a) majoritarianism and b) emphasis on unity, opposing them to the minoritarianism and emphasis on autonomy of the anti-globalisation movement. The squares movements appeal to the majority of the population rather than to an ideational minority, calling citizens to embrace a new ‘democracy 2.0’. Furthermore, they put much emphasis on unity, in contrast with the emphasis on internal autonomy and diversity of anti-globalisation activists. The article proceeds to gauge the significance of this popular turn and its reflection of the democratic crisis of contemporary societies. I assert that the adoption of a popular identity bespeaks the spread of social grievances amidst the global financial crisis, and the capacity of appeals to resistance to resonate with different sectors of the popula-
Globalisation, Market Value and Cultural Diversity and the Predictability of Football Leagues

Processes of globalisation have changed the nature of professional football in two different ways. Firstly, football clubs revenues from different sources have multiplied over the past decades. Today’s football clubs need to be regarded as commercialized globally operating companies. Secondly, football clubs have been attracting foreign players to sign for their teams, leaving only little room for recruiting exclusively from own national ranks. Hence, teams have become more multinational.

This paper examines the extent to which such processes impact on a team's success. 1) Due to commercialisation processes, the market value of a football club has become the decisive factor in determining their chances of success. The market value of a club is defined and measured as the sum of the market value of each individual player on the team. The higher a club’s overall market value, the more likely its success. 2) The increasing multinational composition of football teams influences their chances of success negatively, because coordination within the team might become more difficult to realise. At the same time, however, multinationality can also have positive effects on their performance because players from different contexts living new techniques and qualities that can complement the already existing ones.

We have collected and statistically analysed data from the 12 most successful European football leagues, yielding the following results: 1) A team’s market value has a very strong (positive) influence on their success rate – indeed, ‘money scores goals’. 2) Only to some degree does the multinational composition of a team determine their success. Teams that are composed of some players from different national backgrounds perform better, on average, than nationally more homogeneous teams. However, the direction of association is reversed when there are players from many different nationalities – multinationality, then, influences a team’s chances of success negatively.

Transnational Linguistic Capital. Explaining Multilingualism and English Proficiency in 27 European Countries

Since the second half of the twentieth century, the extent, frequency, and speed of exchange and interconnection between different nation states and different world regions have increased enormously, a process described in the literature as globalisation. As the world system consists of multiple nation state containers and as most nation states have different official languages participation in globalisation is among other things dependent on people's ability to speak the languages of others. Those who only speak their native language are, in contrast, tied to their home country and can only take slight advantage of the perks of a globalised world. Transnational linguistic capital therefore might become a new measure of social inequality in today's increasingly globalised world.

The question central to our study is to what degree citizens in different countries possess transnational linguistic capital and how to explain the differences in multilingualism both between and within the countries. Using a survey conducted in the 27 member countries of the European Union we analyse the respondents' proficiencies in foreign languages.

We present a general explanatory model for foreign language proficiency, create hypotheses from this model and test them empirically by using multilevel techniques. We find that the size of a country, the prevalence of a respondent's native language, the linguistic difference between one's mother tongue and the foreign language affect foreign language acquisition negatively, whereas a country's level of education has a positive influence. Using Bourdieu's theory of social class, we show that besides other factors a respondent's social class position and the level of education are important micro-level factors that help to increase a person's transnational linguistic capital.

After the Insurgency: Changing Strategies for Countering Political Inequalities in Bangladesh

To what extent so-called minority populations gain access to decision-making processes in national government structures is one of the crucial questions for understanding the causes and consequences of ethnic conflict. Especially when nation-building processes are determined by the nationalist projects of majority populations, the demand for autonomy has emerged, a strategy of “exit”, replacing “voice”. This paper argues that the strategies for tackling such political inequalities have changed recently, which goes also to the credit of more efficient transnational and global networks. Based on empirical findings from Bangladesh, it argues that “voice” has become a matter of strategic concession, which has not only caused by shifting power-relations and expressions of solidarity within the region and globally, but which is also related to social transformations within the conflict region itself: the rise of a new generation with quite diverse individual and
collective aspirations leads to social transformation at various levels. First, better educational assets and new job opportunities lead to an erosion of revolutionary ideals. Second, globalization processes have reinforced diverse mobilities; migration to metropolitan centres and new forms of knowledge giving way to alternative visions of a future society, have become more prevalent than before. These are particularly voiced by activists who are increasingly acquiring a new social status within their immediate social context as well as nationally – a process which is highly dynamic and conflictive. This paper inquires into these dimensions from an empirical perspective and discusses the social transformations in relation to the options for expressing demands within the national framework, as members of the minority population see for themselves. Finally, this leads to an examination of broader visions of society and of the scope for fostering social inclusion and an eradication of political inequality through political participation at different levels of society.

Towards a New Security Culture 2030

This paper presents results from a Real-Time Delphi Study which focuses on the following research questions: What are the important trends with high impact on public security in Germany until year 2030? What will be the most relevant risks within the next 15 years? How do security or risk research and research policies deal with these challenges? The aim of the survey is to initiate a broader discussion about the future of public security. Therefore we need to discuss the perspectives of five main expert groups: politics, science, economy, media and end-users (e.g. emergency assistants).

Theoretical and conceptual framework
Theoretical we have two perspectives on security and risk that will form the conceptual framework. Firstly, we know from risk research, that risk is often understood as the probability that something occurs combined with comprising negative outcome (e.g. Bechmann 1993, Renn et al. 2007). Even if this is criticized (because risks aren’t objectively determinable), it is relevant for security research due to the fact that arguments for political decisions are justified by these calculations. Therefore the paper secondly discusses the empirical findings in the theoretical framework of “security culture” (Daase 2012), which understands security and risk as social constructions based on norms and beliefs.

Methodology
The survey will be conducted as a Real Time Delphi Study, a foresight method that collects data from experts in iterative rounds (cf. Gordon & Pease 2005). After the first round the aggregated results are communicated to the experts immediately so that they can change their first rating. Within the presented Delphi Study 1200 experts will be invited to take part in the survey which takes place in November 2013.

Results
The results address the above stated questions and will be displayed as statistical numbers and figures.

Sustainable Agriculture and Regional Development in Western Mexico: Lessons Learned, Challenges Ahead

Globalization is an advanced process in Mexico, profoundly transforming the endogenous properties of the countryside, including its sustainability. As a consequence, many farmers can be identified who have been developing alternative development models, based on agro-ecological farming practices and the revalorization of the local territory, organization and knowledge systems.

In western Mexico, many farmers have been transiting towards agroecological farming practices. Following international trends these transition processes are based upon two main strategies. On the one hand, farmers perceive agroecology as a way for substituting external inputs for locally elaborated ones, while, on the other hand, agroecology is seen as a means for developing an ideologically-based farming style.

This presentation describes the different transition processes towards sustainable agriculture, including motivations of farmers and their perceptions of its possibilities. Furthermore, it describes the regional context of sustainable agriculture. Based on both strategies encountered in our region, recommendations are made for promoting sustainable regional development.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
We argue that public professionals might take the lead in developing appropriate standards. These can no longer be based on professionals’ expert knowledge, including ‘evidence based’ standards, technical guidelines or strict protocols classical professionals used to develop. Times are changing; the problems professionals are confronted with have become more volatile, uncertain, messy and ambiguous. Solutions less possible to handle these problems in a technical manner; problems call for more adaptive approaches. Professionals’ expertise as such is no longer sufficient; it needs to be complemented by other types of knowledge from so-called relevant outsiders, i.e. stakeholders.

Public professionals might tap into several sources of stakeholder knowledge, scientific as well as experiential, and deliberately create effective and legitimate professional action. We label this ‘open source professionalism’. In this way, public professionals open up their professionalism; with stakeholders (networks) they co-produce meaningful and legitimate standards that help them to deliver valuable and valued public services.

Incomparable Pay-Offs and Rationality - the Parallel Games Approach

The reason why sometimes people make suboptimal decisions from the point of view of not maximizing wealth has been an interesting question for researchers for a long time now. This question is apparently embedded only in a rational choice theory, but throughout time researchers have given it different answers. From the suggestion that people make suboptimal decisions because their rationality is bounded to their cognitive abilities (Simon, 1965), researchers went on to suggest that suboptimal decisions happen because people are committed to a task with long-term implications (Sen, 1977) and because they tend to be biased by the use of certain judgement heuristics which lead them to make systematic judgement errors (Kahneman and Tversky, 1979; 1981; Kahneman et al., 1982). Later on, scholars noticed that the actor’s choice is only suboptimal to the observer, while being perfectly optimal for the actor (Tsebelis, 1988; 1990; Frisch, 2001) because the actor tries to maximize the outcome of multiple situations, some developing in different “arenas” and others developing around the rules and institutions that govern each situation. Our contribution to this body of research proposes that actors make apparently suboptimal decisions because they have to decide between categories of pay-offs which are not comparable. These categories of pay-offs generally appear in parallel games, that is games played at the same time. An ultimatum game experiment conducted to reveal two parallel games and two nested games was undertaken. Results showed that the presence of a relationship exterior to the experimental game determined a suboptimal behaviour in the experimental game as well as in another game. Further analysis revealed that non-monetary pay-offs, pay-offs from obeying rules and the norm of fairness, as well as the perception of other parallel games accounted for in the design of the experiment motivated such sub-optimal behaviour.

Biographies and The Doubleness Of Inclusion and Exclusion

Most research on diversity is often showing either exclusion or inclusion prac- tices at work in the integration process. Yet biographical research provides the possibility to see the layerdness that is often involved in the process of societal participation which is rather paradoxical than straightforward. With the term of doubleness we hope to grasp these paradoxical processes in which inclusion and exclusion overlap. In this paper, we explore two paradoxes that show this doubleness: namely the language paradox and the economic integration paradox. Through biographical narratives of women with a migration background we show how the language (language inclusion) could lead to a decrease of sense of belonging (emotional exclusion) when they get access to the national discourse which is negative about migrants. The second, the economic integration paradox, demonstrates that women who were successful to integrate economi- cally (via study and work), felt excluded through everyday negative experiences with other women. Our conclusion is that belonging is more than just a label to be placed on the vector of belonging; this paradox is even more visible for women who are most eager in their quest for inclusion, willing to belong to the society. For them the level of disappointment is even higher when they are able to read and hear about the dominant percep- tion of migrants and thus feel excluded based on their growing level of participa- tion in various levels in society.

Shaping Body By the Food: Perceptions in Chileans and Mexicans Adults

The incorporation principle is the common belief that the food ingesting by humans is transforming the body and identity of the eater, and for this reason, the control of food is central in the control of the self (Fischler, 1996). Using this con- cept, this work show how people think the food like a way to shaping body and the role given to the individual and environmental factors in the control of this process. From 70 semi-structured interviews in Santiago and Mexico City, I identi- fied how people actually think that food is one of the main factors that shape the body, helping achieve an ideal body or not. The interviewees think that modera- tion in the intake and consumption of healthy foods produce slender silhouettes; on the contrary, they believe that rich food intakes and consumption of junk food make overweight bodies. I identified two opinions on the individual’s ability to control their body through food. On the one hand, who believe that the quality of ingested food depends mainly on the individual and their will because it is the individual who decides what to eat and therefore what kind of body have. On the other hand, are those who believe that individuals are limited in their decisions by factors outside the human being, as the available food supply, the resources and the food culture. The first position was more common among Mexican inter- viewees, while the second position was more usual among Chileans interviewees.

Energy Cooperation and Security In The Eastern Mediterranean and Its Future Impact To Local Political Conflicts and To EU-Integration and Enlargement

Due to recent important developments in the energy field in the Eastern Mediterra- nean over the last few years this region is becoming the focus of a growing geopolitical tectonic shift affecting all neighbouring countries, especially Turkey, Greece, and Cyprus. Important developments are, however, expected not only in the energy field as such which will put the relationship of these countries to the EU on a new track, anyway. Leaving aside merely economic impacts of en- ergy supplies from this region to the EU in the years to come one should state that additional weighing factors are currently going on in case that the background of local political and ethnic conflicts which will greatly affect the EU-in- tegration and enlargement processes as well as the EU Neighbourhood Policy ahead. Existing and future alliances as well as conflict potentials deriving from the energy strategies of all countries concerned in the Eastern Mediterranean region were of an important impact on still unsolved political-conflicts in the wid- er region such as the political problem in the still divided island of Cyprus, on the dispute over the Aegean between Turkey and Greece as well as on the long-lasting conflict between Israelis and Palestinians. The proposed paper seeks to analyse what kind of energy strategies in this fragile world region could produce structural impacts and thus additional conflict lines between states in the region and under which conditions multilateral cooperation could support regional solutions to political and ethnic conflicts thus enhancing economic prosperity in the EU and beyond.

Scientific Communities and Social Inequalities in Latin America: The Chilean Case

The presentation summarizes an ongoing research regarding scientific com- munities and social inequalities in Chile, which includes more than 50 in-depth interviews conducted with leading Chilean scientists and one digital survey re- sults, answered by nearly 350 academic and researchers from three disciplines. The presentation also describes several structures and mechanisms that are related to the market, the government and the university which, in principle, ensures the “means” to be a scientist in an emerging country such as Chile. The analysis of three communities (astronomers, molecular biologists, and so- ciologists), attempts to uncover the economic, social and cultural reasons for why these function as they do, especially in terms of their different intellectual and social characteristics. The findings indicate that these structures and mechanisms are very different than before, suggesting that there are new structures and emerging mechanisms - local and global - whose impact is still unknown. The framework of analysis and discussion centers around the idea that there is a utilitarian historical and current relationship between the University and companies, conditioned by the Neoliberal economics revolution, which prevents universities from creating a genuine scientific culture of their own. Finally, the principal sociological vari-
ables that come into play in the changes that are occurring in these communities' current processes are described. These changes include gender, age range, income, values, workplace, and use of financial opportunities to develop scientific research.

Social Relationships in Later Life: The Role of Childhood Circumstances

There is an established body of research in social epidemiology which links both health and emotional wellbeing to social relationships across the life course and in later life. However, there is surprisingly little evidence on how differences in the nature and quality of these social relationships arise. It is not known, for example, whether existing social gradients in the prevalence of social engagement, social network size or quality mirror gradients in childhood socio-economic status (SES) and/or health.

This paper investigates the long-term impact of childhood conditions on social relationships. We use data from SHARE (the Survey of Health, Aging and Retirement in Europe), a collection of nationally representative surveys of the over 50s in 13 European countries. Combining novel objective and subjective measures of current social networks with retrospective life history data on childhood health, cognition, SES and household environment we examine the long-term impact of childhood conditions on social network size, social network satisfaction and emotional closeness in older age.

Using regression techniques, we show that there is a strong but differential association between each aspect of childhood circumstance on social relationships in later life. Therefore we critique the index approach to measuring childhood conditions which gives equal weight to SES, health and social environment over time. We find that emotional closeness mediates the relationship between childhood circumstance and social network satisfaction.

Technique, Instrumental Formal Organization and the Hinge in Exercise Physiology Research

This presentation outlines results from a 12-month multi-method investigation of how exercise physiology research focused on physiological mechanisms and markers of sport performance is enhanced, curated, shaped and ultimately deployed, by broader sociological, political, historical and technological trajectories. In doing so, this presentation follows the theoretical leads of Jacques Ellul, Erving Goffman, and Norbert Elias in briefly reviewing three discrete but connected issues. First, the social and political factors that affect the conduct of lab-based research and how they shape knowledge processes from discovery to development, delivery, and use in the sports world; second, the processes of identification, construction, and resolution of bioethical problems in sport and exercise physiology research; and finally, the ways technologically mediated understandings of people developed in the lab and manifest in sporting endeavours facilitate the emergence and transmission of cultural logics and societal values. Throughout the presentation special attention is paid to the recursive relationship between biology and sociology in order to understand how people and their political, social, and moral potentialities are interwoven into historical trajectories of cultural production and societal organization of their bodies.

GIESECKE, JOHANNES* (Humboldt University Berlin, johannes.giesecke@hu-berlin.de)

HEISIG, JAN* (WZB Berlin Social Science Center, jan.heisig@wzb.eu)

SCHAFFER, MERLIN* (WZB Berlin Social Science Center, merlin.schaffer@wzb.eu)

Social scientists generally rely on three broad modelling strategies to test hypotheses about contextual effects: random intercept and slope (often simply referred to as ‘multilevel’) models, pooled OLS with cluster-robust standard errors, and two-step approaches. Econometric textbooks tell us that while random intercept and slope models are the most efficient estimator, two-step approaches offer robustness in exchange for inefficiency, and cluster-robust standard errors are situated somewhere in between. But how do these trade-offs play out in actual research settings? To address this question, we go beyond previous Monte-Carlo studies by focusing on more realistic set ups with complex data-generating processes. The leading scenario that we investigate is cross-national comparisons, which are characterized by small numbers of contexts, many observations per context and high complexity in terms of marked differences over the contexts.

In particular, we focus on four types of complexity. First, we investigate whether the different approaches are robust to the violation of equality assumptions. In particular, we examine the case where the correlations between level one variables vary across contexts. Second, we show the impact of specifying ‘simplistic’ models that ignore context specific heterogeneity. How well do the different approaches handle unspecified (random) slopes that vary over level two units? Third, we explore the consequences of Normal and Gamma distributed errors

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
at both levels one and two. Finally, we alter the number of level two units, as any simulation study on hierarchical data should.

We focus on linear models with continuous outcomes and on standard set ups as they are typically implemented in applied research papers. However, we also plan to investigate whether and when more refined versions of the three modeling approaches such as GLS with bootstrapping or multilevel SEM improve their performance.

**GIEZEN, MENDEL*** (Utrecht University, m.giezen@uu.nl)

**Talk the Talk and Walk the Walk: Analysing Changing Urban Governance Practices in response to Climate Change**

As nation-states are further lowering their climate ambitions in response to the economic crises, a neo-liberal ideology of a small state, and an ecological modernisation rationale, the challenge seems to have been picked up by lower tier governments such as cities. The C40 Cities Climate Leadership group of mega cities addressing climate change is an example of this new reality. They group indicating that the cities combined have about 4700 actions directed at mitigation and adaptation. However, the question remains whether these actions have resulted in different practices within the cities’ institutional setting. This research uses a survey of the C40 cities in order to investigate the lasting impact of participation in a global network aimed at combating climate change. We use practice theory to analyse how well embedded these new practices are in the urban governance regime. We also analyse what dimensions are particularly relevant to these changing practices. The preliminary results seem to indicate cities more at the centre of the C40 network are also impacted the most in their daily governance practice. Yet the changing practices are primarily associated with spatial departments such as transport and spatial development.

**Connected Audiences of Politics: Analyzing Twitter Conversation on Beppe Grillo and Five Star Movement Generated during Political TV Talk-Shows**

In the last two decades, characterized by an increasing crisis of traditional forms of politics, talk-shows have placed interesting challenges to the research on contemporary political communication and participation forms. Scholars of the “third age of political communication” have studied the cognitive, evaluative, affective effects of this mix of entertainment and information on the citizens/spectators. Recent analysis considered the increasing symbiotic relationship between political talk-shows and Twitter, by studying the “second-screen” practices in terms of audience dynamics generated by the generation of the public debate. Referring to this approach, our study analyzed Twitter connected audiences of all the Italian political talk-shows (1,077 episodes) on air from September 2012 to April 2013. This period covers significant political events related to the 2013 Italian General Election (24th and 25th February), from the electoral campaign to the Five Star Movement’s electoral achievement, and its institutional consequences. We aimed to understand: how much do “connected audience” of political talk-shows discuss on Twitter around MSS, in the different phases of the “permanent” electoral campaign (RQ1); is the presence of MSS, Grillo and other representatives as a topic of conversation on Twitter correlated with specific characteristics of the aired episodes (talk-show, audience, phases of the campaign, issues?) (RQ2). While significantly less frequent than conversations mentioning the right and left coalition, Tweets around MSS were present during the three phases of the campaign. Furthermore, the analysis identified significant amounts of Twitter discussions around MSS generated during the episodes dedicated to specific issues (political backstage, polemics, strategies of the MSS, scandals, anti-politics).

**GILBERT, CLAUDE*** (CNRS, claude.gilbert@msh-alpes.fr)

**Consequences of the Ambiguous Relationship Between State and Societal Actors in the Management of Risks and Crises**

In France, public policy risk prevention and crisis management still rely on the state. A role is assigned to local authorities and civil society. But only the state appears to have the ability to prevent risks and cope with exceptional situations. More disasters are considered, more state intervention is legitimate. The representatives of the state attach importance to these powers (corresponding to the “state of emergency”).

The predominance of the state in the field of risk and crisis is however being challenged. First for economic reasons: central governments no longer have resources to support alone public policy in this area. A divorce occurred between formal capacity and actual capacity of the state (in particular during disasters). Second, for political reasons: local authorities (in particular in the major cities) and a part of civil society (in particular firms) want to play a role in defining policies they help to finance. Third for “societal reasons”: disasters can no longer justify the interruption of democracy.

We begin to accept the idea that the state cannot be the only or the main actor to manage risks and crises. Reflections on resilience are intended, including by officials, to promote the involvement of other actors in society. But politicians and administrats want both transfer a part of their responsibilities while keeping control of risk and crisis management. There is an ambiguity that local authorities and other actors of civil society help to maintain: if they want to play a more important role, they do not want to assume state responsibilities.

The question central of this paper is to know what are the effects of this ambiguous situation in the effective management of risks and crises (especially from the example of pandemic influenza threats).

**GILBERT, EMILY*** (University of Toronto, emily.gilbert@utoronto.ca)

**How Much Is a Dead Soldier Worth?**

How much is a dead soldier worth? This paper will interrogate the monetary value ascribed to the death of soldiers in the 21st century, and the narratives of sacrifice and heroism that influence military fatalities. Rather than focus on public funerals and burial, I explore the more intimate (yet no less social) acts of valuation and compensation that are navigated by surviving relatives. Questions regarding the price of death are particularly interesting to consider as civilian compensation has become a regularized component of counterinsurgency strategy. Monetary payments have been made in the event of the ‘inadvertent’ death, injury or property damage of civilians in Iraq and Afghanistan, as a way to win the ‘hearts and minds’ of the population, and demonstrate the compassion of the international forces. How are the lives (and deaths) of civilians and soldiers of different countries valued differently, and for how much? What logics of compensation are articulated? And does compensation in contemporary warfare reconfigure the distinctions between soldier and civilian? These questions will be considered alongside the increasing pressure to reduce deaths, of both soldiers and civilians, as a result of the targeted and remote-controlled strikes of the revolution in military affairs. As tensions regarding death in war increase, how does this impact on how lives are valued, and on our understanding of military service in contemporary warfare?

**The Mercurial Piece of the HIV/AIDS Puzzle: ‘Stigma’ and HIV/AIDS in South Africa As a Social Scientist’s Challenge**

‘Stigma’ and its relationship to health and disease is not a new phenomenon. However, it has not been a major feature in the public discourse until the emergence of human immunodeficiency virus (HIV) and acquired immune deficiency syndrome (AIDS) in the 1980s. These infections were first identified in and among gay men in the USA but have since spread around the globe, affecting all social strata and geographical areas. Thesimultaneous spread of HIV/AIDS in South Africa, with its rapid rise in prevalence, has presented both researchers and public health officials with a significant challenge. Several prominent sociologists have written about the importance of reflecting critically on the construction of HIV/AIDS and the role of stigma in its exacerbation. This paper explores the concept of stigma in relation to HIV/AIDS in South Africa by examining the role of sociological theory and the implications of sociological knowledge on the day-to-day lives of South Africans. It concludes with a discussion on the importance of sociologists engaging in public discourse and contributing to the fight against stigma. The paper also advocates for a more critical approach to sociological research, particularly in the context of HIV/AIDS. Finally, it proposes a sociological framework for understanding stigma and its impact on the lives of those affected by HIV/AIDS in South Africa.
gence of HIV/AIDS. The range of negative responses associated with the epidemic placed ‘stigma’ on the public agenda and drew attention to its complexity as a phenomenon and concept worthy of further investigation. Despite the consensus that stigma is one of the major contributors to the rapid spread of HIV and the frequent use of the term in the media and among people in the street, the exact meaning remains ambiguous. Therefore, its conceptual complexity and its embodiment in the reality of HIV/AIDS in South Africa present a formidable challenge for social scientists who continue to grapple with the questions it raises.

The main aim of this presentation is to briefly re-visit some of the scholarly deliberations and further interrogate their relevance in light of the HIV/AIDS-related stigma evidenced in South Africa. Although it provides more nuanced understandings of the concept, most of the literature reviewed adds a level of complexity that requires further investigation and renders measuring stigma more problematic. The presentation argues that the fact that there is such an abundance of scholarly articles on the concept and its definitions is testament to the fact that they do not provide adequate explanations for the various manifestations of stigma. In addition, the explosion of studies looking at ‘measuring’ stigma and reducing its impact is evidence that ‘stigma’ exists out there and continues to be a threat to the successful implementation of public health programmes.

**Social and Economic Inequality As Deviantogenic Factor**

There is no only ‘reason’ of deviance and crime. There are many factors - economic, political, cultural, demographic and others, influencing upon state and dynamics of different forms of deviance. It is important theoretically and practically to define the specific “weight”, “power”, value of each factor in genesis of deviance and its separate types.

K. Marx, R. Merton and many others wrote about a role of an economic inequality as “reasons” of crime and others of negative (deviant) acts.

The ever-growing economic polarization of the population in Russia – is a main source of continuing social conflict. The differentiation between the incomes of the 10% least prosperous and the 10% most prosperous increased from 19:4 in 1991 up to 1:15 in 1999 and later up to 1:11.

Empirical researches of multiple-factor model of the reasons of deviance and crime are conducted in Russia by criminologists S. Ol’kov, I. Skifsky, E. Yuzikhanova. From many factors influencing crimes and suicide - extent of alcoholization, demographic structure of the population, consumption of drugs and economy inequality, the last factor it appeared the most considerable. The Gini index (i.e., index of economic inequality) in Russia increased from 0.289 in 1992 to 0.422 in 2007. According to S. Ol’kov, during 1990-1999 the index was at its maximum in 1994 (0.409) and the number of homicides was at a maximum (32,300) and suicide too (61,900); the index was at its lowest in 1990 (0.218) and the number of homicides was at a maximum (32,300) and suicide too (39,200).

According to research of I. Skifsky (dynamics of 25 years, from 1980 to 2004), the correlation coefficient between homicides and Gini index was the highest 0.9253, between violence crime and Gini index 0.843.

The catastrophic social and economic inequality serves in Russia as the main factor of deviant manifestations.

**GILINSKIY, YAKOV** (Herzen University, yakov.gilinsky@gmail.com)

**Sociology Of Deviance and Social Control (Deviantology) In Russia**

The criminology, sociology, genetics, cybernetics were forbidden by a Stalin regime. These sciences started reviving only in the period of N. Khurshchev’s “thaw”.

The first articles on sociology of deviance (Y. Gilinsky, G. Zdravomyslov) were published in 1971. The early empirical sociological studies of different deviance types were conducted from the 1970th years. It was researches of alcoholism (A. Gabian, Y. Gilinsky, B. Levin, A. Nemtsov, G. Zaigraev), prostitution (V. Afanasjev, A. Gabian, Y. Gilinsky, E. Pobegailo), suicides (A. Ambrumova, Y. Gilinsky, B. Levin, A. Nemtsov, G. Zaigraev), crime (A. Sachev, and others).

Contemporary sociology of deviance and social control is well developing branch of Russian social science. There are most known centers of a deviantology in St. Petersburg, Moscow, Kazan, Tyumen and Krasnodar. The St. Petersburg’s Center of a Deviantology has a site (http://deviantology.spb.ru), which well-known and visited colleagues of Russia, Ukraine, the Czech Republic, Poland. Deviantology is closely connected to sociology of crime.

“Sociology of Deviance and Social Control” is taught at some universities of Russia.

Russian scientists (V. Afanasjev, Y. Gilinsky, M. Rusakova and others) took part in work of Research Committee No. 29 (Deviance and Social Control) of International Sociological Association (ISA) on Congresses ISA in Bielefeld (1994), Brisbane (2002), Gothenburg (2010) and on the Sociological Congresses of Russia.

Besides, conferences on sociology of deviance are regularly held in St. Petersburg, Moscow and Krasnodar, and also in Tyumen and Nizhny Novgorod.

The topic of deviance is particularly actual for Russia, where level of violence, alcoholism, suicide is very high.

**Gender Politics, Virtuous Racism’ and Diasporic Political Resistance in Europe**

Gender politics has long been the staple of national discourse surrounding the integration of colonially diasporas in Europe, in particular in Britain and France. If during the 1970s and 1980s the male immigrant father was depicted as patriarchal and oppressive who prevented his female counterparts from integrating into the state, contemporary debates in relation to their children perpetuate similar tropes. Male diasporic citizens, now in their third and fourth generations, have come to be seen through pathological images that place exclusive focus on their supposed dysfunctional gender relations rooted in ‘other’ cultural practices.

This paper examines how dominant narratives of the patriarchal and redundant migrant and diasporic male rooted in culture depoliticise – and erase – decades-long struggles to carve their rightful places in Britain and France. De-industrialisation, joblessness, extreme right-wing racism and institutional exclusion are silenced as the driving forces for contemporaneous male political resistance (civil riots). Instead, dominant discourses pathologising ‘other’ cultures divide diasporic men and women, pitting them against one another to legitimise the intervention of the state, a process the French sociologist Nacira Guenif-Soulatmas terms ‘virtuous racism’.

The paper traces the deployment of virtuous racism in Britain and France that serve to reinforce structural inequalities through their precise erasure under the privileging of culture to ‘explain’ diasporic gender politics.

**Bringing Workers into View: The State and the Emergence of Industrial Conflict in Myanmar**

**Bringing Workers into View: The State and the Emergence of Industrial Conflict in Myanmar**

**Michael Gillan and Htwe Htwe Thein**

Abstract

This paper examines the emergence of open industrial conflict (strikes, various forms of worker protests) in Myanmar (Burma), with special reference to industrial clusters/special economic zones in the urban periphery of Yangon, the nation’s largest city. In recent years, Myanmar has shifted towards quasi-democratic governance and this has led to significant change in both external relations (i.e. the suspension of most international trade sanction measures) and internal institutional development. The paper will explain that although worker initiated protest and strike actions in various industries preceded democratic reforms, these changes have enabled more prevalent and open expressions of dissent. Indeed, the growing incidences of conflict, alongside the reformation of institutions and governance, mean that the labour ‘problem’ has for the first time in contemporary Myanmar come into view as an important area for intervention and management by the State. Arguably, however, the development of mediating labour institutions (law, dispute resolution agencies, trade unions, employer associations) has lagged behind the expression and management of conflict in the industry, leading to ambiguity as to the capacity and role of the state and workers’ conceptions of forms of collective association, citizenship and dissent.

Moreover, industry development and forms of labour regulation have emerged not only via shifting relations between the state, capital and labour at a national scale. Geopolitics and international institutional actors (ILO, Global Unions, IOs), forms of supra-national regulation (for instance, the impact of international trade sanctions) and internal institutional development. The paper will explain that although worker initiated protest and strike actions in various industries preceded democratic reforms, these changes have enabled more prevalent and open expressions of dissent. Indeed, the growing incidences of conflict, alongside the reformation of institutions and governance, mean that the labour ‘problem’ has for the first time in contemporary Myanmar come into view as an important area for intervention and management by the State. **Distinction and Identity in Later Life**

The cultural turn in the social sciences during the 1980s brought new prominence to sources of distinction based on the body, such as disability, gender, race and sexuality. We argue that many of the embodied practices associated with these newly privileged bodily distinctions were further developed, sustained and
extended by consumption and consumerism. Drawing attention to aspects of social identity that had been previously overlooked, the new social movements brought into central focus and ‘liberated’ what might be deemed marginalised identities. The identity politics and associated new social movements of the 1960s and 1970s however were situated in the counter-cultures of youth. In this paper we explore how the ‘ageing’ of those youth cultures have affected the contemporary experiences, narratives and performances of age and in the process brought new ways of thinking differently about ageing and the body. This ‘cultural turn’ is exemplified in contemporary research into ageing lifestyles, ageing and exercise, ageing and fashion, ageing and sex and more generally the performative- ities of ageing. Rather than developing a transgressive ‘age liberation’ movement however, much of this embodying performativity seeks to resist the purchase of ‘agedness’ on fashioning lifestyles oriented as much to not becoming old as to still being gendered, racialised, able-bodied/disabled, straight or gay throughout one’s adult life.

How Are Social Relations and Locality Connected? New Ambivalences in the Research on Migrant Families

Research on transnationalism is an attempt to avoid methodological nationalism by focusing on families and its members, which do settle at different places or move between these places. In this perspective not only national belonging becomes relativized, blurred and diminished, but local, regional and national attachments of individuals and social groups as well. Here questions of belonging arise anew for the first time. Such questions of belonging with others and what relevance can be given to the location where people live? Migrants and their families do often experience social interweaving relations, which are not bounded to one single national territory, but interact in a multi-local situated context. At the same time the existing boundaries of the nation-states do still influence a lot the mobility and opportunities of individuals.

The proposed paper discusses the ambivalence of social belonging and local/regional attachments under modern conditions of social fluidity and multi-local attachment in social relations. First, the paper starts with the elaboration of the theoretical framework, that explains the methodological questions related to that. Second, referring to empirical research on migrant families, the paper analyses family practices in which social and cultural boundaries are negotiated with reference to the places to which family attachments exist. Empirical findings show that there is no social belonging to a community or society without local-regional attachment(s) and it precisely the new constellation between the social belonging(s) and the local/regional attachment(s) which can be seen at the basis of ‘the migrant condition’ of human beings.

Situating the self and the family in a context of fluidity and constant change entails developing family practices in which being understood as the ambivalence of social and cultural affiliations, as well as establishing individual and collective attachments to certain places and regions of (biographical) relevance.

Limits of Complexity? – the Need of a Multilevel Approach in Migration Research

In the age of migration, cities have become heterogenic places, which strongly influence the life courses of their inhabitants. They define their framework of opportunities in the economic, educational and social fields. As heterogenic places, cities are in the production of inequality challenging the diversity of their inhabitants. In an international complementary research project on life strategies of migrant families in different local, regional and national urban contexts, the question of heterogeneity and its possibility for comparison arises. The multilevel approach is applied to different urban and political contexts in Belo Horizonte (Brazil), Berlin (Germany), and Klagenfurt (Austria). The challenge of this research is challenging, because there are not only life strategies of migrant families, which will be researched and internationally compared, but also the relevance of local, regional and national influence on life strategies will be analysed. This is particularly interesting is the question concerning the sort of orientations migrant families develop towards the location they are living in and how they are influenced by local and national factors.

By identifying and discussing the relevant contexts for multilevel analysis in our international comparison research, the paper will present methodological challenges of multilevel analysis in the international comparison research. While the multilevel framework guarantees intersubjectivity and contributes to avoiding methodological nationalism, it raises the question about the limits of complexity in the international comparative research. Based on the analysis of group discussions in all three localities, we will show how multilevel research works in practice and discuss difficulties regarding research practice and methodology.

Deliberating Alternatives to Capital: A Critical Cosmopolitanist Approach

Critical analysis of ideological divisions in the broad Global Left, via the historical, ideational and practical roots of these differences is important, for a key reason: it can help us explain the Left’s past and present shortcomings and difficulties in creating viable coherent solutions to the multiple crises of the world capitalist system. Through such a critical historical analysis of the Left, we can explore some of the key practical and intellectual dilemmas that have caused divisions; e.g. grand debates or dilemmas such as reform vs. revolution (strategy); local/national vs. world/global (scale); ecological vs. economic (value-interest); cultural vs. political (identity); individual vs. collective (agency and society).

This paper outlines the principles of a new theoretical approach to studying ‘transformative ideological visions’ and ‘regenerative social counter-currents’ that may significantly influence debate and practice around constructing new radical and democratic alternatives to existing systems of domination and hierarchy embedded in capitalist social relations. When dealing with transformative ideas and practices, a critical account of cosmopolitanism can be employed in two ways: (1) as a critical analytical framework, that helps us examine alternative ideologies to the social relations of capital, in terms of their capacity to create historical ‘moments and conditions’ for other alternatives to flourish; and (2) as a normative framework that can facilitate critical political deliberation between rival trans-formative practices and political agendas. Such a critical account of cosmopolitanism requires a ‘dialectical mode of criticism’ that needs to be self-reflexively applied to our understanding of the cosmopolitan and its history. Nascent elements of such a cosmopolitanism already exist among some synthetic contempo-rary radical ideologies, such as eco-feminism and radical economic democracy, as well as some forces amongst the global justice movements, including within the World Social Forum, the Occupy movements, and in the recent anti-austerity social movements and popular uprisings.

Design, Undesign and Redesign: Eliminating Embodied Inequality

Over the past several decades, design and branding efforts for social justice and democracy have exponentially increased. Designers have apprehended and applied market strategies to create products and images to change the world. However, to date, design and branding have not been analyzed to understand and reassess their power in creating, labeling, and affixing differential worth to bodies that are disenfranchised because they are atypical, unruly alters. This vacuum is a huge gap in intellectual development and guidance necessary to harness design and image to challenge and diminish social inequities that have prevented local through global social acceptance for the full range of bodies. In this presentation, we argue, and illustrate through a targeted analysis of embodied design, its epistemic and axiological foundations and its praxis that design and branding are tacit yet powerful influences on the creation, reification, and perpetuation of the acceptable human corpus and its opposite. We illustrate how design and its byproducts in advanced capitalist global, national and local environments are significant social influences on determining and reifying embodied worth, internalized and assigned identity of category members, social status, and comparative flourishing of members of diverse social groups. Given this understanding, we conclude with the constructs of undesign and redesign as the power tools to advance symmetry, inclusivity, and equality for diverse bodies.

Towards a Democratic and Emancipatory University: Feminist Popular Extension and New Relations Between University and Society in Brazil

Popular Extension is a key element for comprehending the relationship between society and universities in Latin America. By making possible a close col-
laboration between universities and social movements, Popular Extension is a valuable tool for pursuing the construction of a contextualized university capable of opening its walls to the social reality that surrounds it. However, little has been researched regarding the outcomes of this practice on building a real alternative to the hegemonic models of university and rationality. Recognizing the centrality of Popular Extension for universities and community development practice in Latin America, the paper looks upon the experience of the Popular Extension Project "Popular Legal Promoters" on coping with gender based violence in the outskirts of Brasilia, Brazil. Established jointly by feminist movements, the University of Brasilia and the Brazilian Public Minister, the project is based on a freirean approach to popular education on human rights focused on the formation of community leaders able to engage themselves on tackling gender based violence within their communities. By resorting to collected data regarding the project implementation and outcomes, we argue that Popular Extension Projects can be an important tool not only for coping with social issues, such as gender violence, but can also be the founding point for the emergence of an emancipatory and democratic University, marked by a production and circulation of knowledge where the surrounding community becomes an active agent of this process and a constitutive element of University itself, which assumes a more contextualized role as an important stakeholder on participatory development practices.

**GIORGINO, VINCENZO** (University of Torino, vincenzo.giorgino@unito.it)

The Contemplative Turn in Sociological Imagination

In my presentation I will address some epistemological and theoretical aspects related to the integration between sociological and contemplative methods. The latter are social practices originating from the wisdom traditions of human culture, mainly from the religious and spiritual backgrounds. Their recent secularization (going back to the 70s) enables non-experts to achieve specific knowledge in an embodied and interactional perspective, taking into account an established tradition of contemplative approach, such as the ones formulated by the OECD or the ILO in the case of self-entrepreneurship as an unemployment policy in two countries: France and Brazil. In the first place, we will consider the comparative method in terms of most different cases (for example: Gerring, 2007, Tarrow, 2010). By confronting the basic characteristics of the object to be compared in very contrasted national contexts, this methodology sheds new light on the functions of the object of comparison as well as it reveals its boundaries and its significance. Second, we will focus on the scalar dimension of the policy under scrutiny, i.e. on the power relations at the various relevant policy levels and on the vertical bounds linking the various policy scales (Scarpa 2009, Anderson, Ostrom 2008, Mahon, 2006). Finally, the focus on the transnational character of comparison shows a third dimension of the objects to be compared (Walby 2005, Dobbin, Simmons, Garrett, 2007, Hassenteufel 2005, Kettunen, Petersen, 2011, Gilardi, 2010, 2011). It demonstrates the exchanges and mutual influences between cases as well as the way specific cases integrate supranational and global recommendations, such as the ones formulated by the OECD or the ILO in the case of self-entrepreneurship as an unemployment policy.

IGNOU- Paradigm Shift for Higher Education in India

India’s higher education system is largest in terms of number of institutions and third largest in terms of enrollment next to China and United States. Total approximate number of institutions imparting higher education in India is 26,000 whereas it stands at 6,706 in USA and 4,000 in China. Despite massive expansion, there is mismatch between the demand and supply of higher educational institution in India. Gross Enrollment Ratio (GER) for higher education in the country is very low at 16.23 per cent as compared to the world average at 27.06 per cent.

Open distance learning is one of such strategy which aims at universalization of higher education, to address the barriers of higher education.

**IGNOU- Indira Gandhi National Open**

The establishment of Indira Gandhi National Open University (IGNOU) established by an Act of Parliament in 1985, has continuously striven to build an inclusive knowledge society through inclusive education. The mandate of the University is:

- Provide access to higher education
- Offer high-quality, innovative and need-based programmes
- Reach out to the disadvantaged by offering programmes at affordable costs
- Promote, coordinate and regulate the standards of education
- Adopting a variety of media and latest technology.

IGNOU, the National Resource Centre for Open and Distance Learning, with international recognition and presence, provide seamless access to sustainable and learner-centric quality education, skill up-gradation and training by using innovative technologies and methodologies and ensuring convergence of existing systems for large-scale human resource development.

IGNOU has been conferred with awards of excellence by Commonwealth of Learning (COL), Canada, several times. Recently, it was listed 12th in the webometric ranking of Indian Universities, based on the caliber of its presence on the Internet.

The University is committed to quality in teaching, research and extension activities through ODL system.

**Time Saving Account; Capitalization To Improve The Work Life Balance?**

The time saving account was introduced in 1994 in France. At first underutilized, this mechanism allowing the employees to accumulate extra working time on an individual "time account" to be utilised later, became the nodal point of the time-reduction national policy bringing legal working time from 39h to 35h a week in 1998 and 2000. While time reduction was relentlessly pointed as a central cause of French companies loss of competitiveness in regards to international competition, it remained untouched. National Policies focused on giving more flexibility for the companies to respond to the market fluctuations.

After presenting the principles and evolutions of the TSA in the last 20 years in France, this paper aims at presenting the result of a study conducted through in-depth interviews with companies' management, unions and employees of large and medium private and public entities. It focuses on the current use of TSA and on the opportunities to "save" time in order to improve the personal work-life balance.

We will show the close link between economic issues related to the company, the collective bargaining and the individual use of TSA. The fundamental questions rising form this study: is time to be saved as money over the whole working life? How the personal effort should be compensated and accompanied by security and redistribution mechanisms? What means working time capitalization for the every day life?

**Comparing Employment Policies in a Globalising World: New Challenges and New Methods**

Globalisation is an overwhelming phenomenon that transforms individual identities and social affiliations as well as it destabilizes the three basic policy-making functions traditionally associated with the nation and the nation-state: public problem formulation, public problem resolution and the definition of citizenship rights. A form of social inclusion and political participation as well as a key symbolic resource (Giraud, 2005). As such, globalisation undermines the validity of the basic assumptions of the comparative method as we have known it so far.

In the paper, we will elaborate on three complementary methodological solutions to address the formulated dilemmas, and will test and discuss them in the case of self-entrepreneurship as an unemployment policy in two countries: France and Brazil. In the first place, we will consider the comparative method in terms of most different cases (for example: Gerring, 2007, Tarrow, 2010). By confronting the basic characteristics of the object to be compared in very contrasted national contexts, this methodology sheds new light on the functions of the object of comparison as well as it reveals its boundaries and its significance. Second, we will focus on the scalar dimension of the policy under scrutiny, i.e. on the power relations at the various relevant policy levels and on the vertical bounds linking the various policy scales (Scarpa 2009, Anderson, Ostrom 2008, Mahon, 2006). Finally, the focus on the transnational character of comparison shows a third dimension of the objects to be compared (Walby 2005, Dobbin, Simmons, Garrett, 2007, Hassenteufel 2005, Kettunen, Petersen, 2011, Gilardi, 2010, 2011). It demonstrates the exchanges and mutual influences between cases as well as the way specific cases integrate supranational and global recommendations, such as the ones formulated by the OECD or the ILO in the case of self-entrepreneurship as an unemployment policy.
The aim of our paper is to analyze trajectories in hourly wages between the ages of 30 and 50 for five different birth cohorts, using the PSID data. More precisely, we focus on processes of intra-cohort stratification by tracing patterns of income as individuals age. Our analysis is informed by the cumulative dis-advantage hypothesis as a process of intra-cohort stratification. Using growth curve models, we seek to describe and explain the patterns of income stratification within and between cohorts. We hypothesize two key patterns: Simple interindividual divergence and path-dependent interindividual divergences. Simple interindividual divergence is indicated when the relation between initial hourly wage and its slope over time is positive (in contrast to convergence, where this relation is negative, and stability, where there is no relation between initial hourly wage and its slope over time). Path-dependent interindividual divergence is indicated when hourly wage differences between men and women, or between whites and non-whites, increase as individuals age. Our analyses will reveal if the patterns of wage divergence over the life course are constant across cohorts, or whether the extent and form of wage divergence is shifting over time.

An Inter-Cohort Comparison of Intra-Cohort Social Stratification: How Do Cumulative DisAdvantages Evolve Across Cohorts?

The impacts of Brazil and India’s development dialogue on poverty alleviation policies: knowledge sharing and south-south cooperation

Since the beginning of the 1990ies a South American approach to conditional cash transfers policies for poverty alleviation has been in development. Although widespread throughout the continent two main aims can be singled out as most significant for their characteristics, range and influence: the mexican Opportunidad and the Brazilian Bolsa Familia. Poverty rates have declined in Latin America during the last decade and in the Brazilian case the most intense fall is concurrent with implementation of the national CCT program. Due to the results of these policies the approach has spread beyond the continent and is currently encouraged and financed by the World Bank to alleviate poverty and brake its generational cycle. The spread of this model of poverty is currently in discussion in many south-south forums around the world like BRICS and IBSA. As part of this current discussion in 2012 the city of New Delhi started a pilot program focused on poverty reduction as a result of the on-going National Debate about Cash Transfer Policies. The Latin American experiences were important base for the Indian discussion and the results exposes challenges to the sectors and its proposed horizontal dialog.

This article presents the results of a research done in Brazil and India asking what can be learned from this south-south development dialogue. It exposes the challenges and opportunities as well as the different approaches that each country gives to the same set of policies as well as the discussions about poverty and development.

GIVENS, JENNIFER (University of Utah, jennifer.givens@soc.utah.edu)

Questioning Development: Global Integration and the Ecological Efficiency of Well-Being

The author investigates the extent to which sociological theories of global integration, including political, economic, military, and world polity theoretical orientations, help explain different countries’ carbon intensity of well-being. The carbon intensity of well-being approach provides a way to measure a country’s progress toward simultaneous environmental and social sustainability by asking how energy (or ecologically) intensely (or efficiently) a nation-state is producing well-being for its citizens. This research utilizes statistically rigorous longitudinal modeling techniques, addresses core sociological issues of inequality, human well-being, and development, and explores questions of sustainability and energy use key to environmental sociology. This is a burgeoning area of research and yet looking at the effects of political economic, military, and world society integration is relatively unexplored for this topic in the sociological literature. Results indicate that varying forms of integration have an impact on states’ abilities to provide environmental protections and well-being for citizens, and therefore unequal levels and various types of global integration are important to consider in environmental and development planning.

GLAESER, JANINA (University of Strasbourg, jplaes4@stud.uni-frankfurt.de)

Migrant Nannies In French and German Households – Insights From A Care Worker’s Point Of View

This presentation focuses on migrant nannies working in two European countries: France and Germany. The main interest of this comparative analysis is to evaluate social policies of these two nation states through biographical research with migrant care workers who take care of small children in private households on a regular basis. This is a crucial task as nowadays the industrialized countries are highly interested in finding adequate solutions to their increasing care-deficit. European countries like France and Germany are structurally close and face similar problems such as demographic aging and the pluralization of life and work forms. However, their efforts to guarantee the production of human beings themselves in a globalized and capitalised world differ remarkably. At this juncture, migrant care workers are important key actors, because they represent a significant resource. Therefore it will be interesting to analyze how dimensions of class, but also place and national belonging and racism will shape the relation to local families. The analysis of field studies illustrates not only that nannies use their labor force to fill the local care deficits, but also helps to gain new insights into the care and work realities of their employers: from a nanny’s perspective.
The study on value orientations in Russia has been conducted from the middle of the 1960s when the theoretical works by a psychologist B. G. Anan’ev, sociologists A. G. Zdravomyslov, V. A. Iadov and others appeared, as well as empirical studies. The biggest one was the sociological and social-psychological study on workers’ value orientations (including young people), carried out by Leningrad scientists under the direction of V. A. Iadov [1] in the beginning of the 1970s. During the Soviet time the study on youth value orientations to a considerable degree was directed toward the revelation of their accordance with the communist ideal, to the socialist lifestyle [2]. At the period of the Perestroika (1985–1991) the problem field was noticeably extended due to the studies on the informal youth associations (actually it was the way to the switch to study on the youth subcultures). Finally, during the last 15 years value orientations of the Russian youth have been investigated by considerable number of individual scholars and scientific groups. The situation of social order change and “re-comprehension of values” on the national scale has encouraged the scientists to interpret the transformation of value orientations of the Russians. The extensive study on dynamics of the value orientations of the Russians that was conducted under the direction of N. I. Lapin [3] is of a great scientific significance. There have been dozens of empirical studies carried out in Russia for the last 15 years, several hundreds theses defended on the problem of the youth value orientation [4]. Although quite often the scopes of such studies, their methodological correctness and opportunities for the data comparison remain to be a subject of criticism.

GNEVASHA, VERA* (Moscow University for the Humanities, vera.cos@rambler.ru)

Value Identity of Russian Younger’s

The ‘Inter-Vey’. Towards the Conversational Survey

For decades, the dilemma between open-ended and closed-ended response alternatives occupied the methodological debate. Over the years, dominant approaches in survey have reacted to this dilemma by opting for fixed response alternatives and the standardization of interviewer’s behavior. If this methodological decision has been the survey’s fortune, making it the methodology most widely used in the social sciences, however it produces a large amount of biases well known in the literature: misunderstanding of the response alternatives by the interviewees, the multiple word meanings of response alternatives due the communicative functions of quantifiers, the invented opinions (or lies) phenomenon, the influence of the response alternatives on formation of the judgment, social desirability effects, the yea-saying and response set phenomena, etc.

In order to remedy these biases an alternative proposal can be designed by re-discovering and adapting two “old” proposals: Likert's technique called “fixed questionnaire answers” (1930s), and Gobbo’s (1967) procedure named “open question/closed answer”. Both procedures are guided by the same discursive principles: make the interview into a conversation, let the interviewee answer freely in his/her own words, and thus release him/her from the researcher’s schemes, making an “interviewee-centered” survey.

These principles have been recently blended in an innovative technique for collecting survey data, which has been named “inter-vey” (Gobo and Mauceri 2014), blending in-depth and survey interview (or unstructured & structured interview). “Inter-vey” is based on the idea of the “conversationalizing survey” (Schober and Conrad 1991, Maynard and Schaffler 2000, Gobo 2011).

An experimentation (and a procedural example) of this technique will be presented.

Can ‘Religion’ Provide a Response to Today’s Climate Challenges? The Valuability of Environment in the Islamic Republic of Iran

The very recent report published by the United Nations confirms unsurprising-ly that around ninety five per cent of the current climate issues are man-made. This illustrates more than ever the significance of various dimensions of people’s everyday life, such as policy, religion and education that influence their practice of environment.

Environmental concerns are growing in Iran. Some of them are related to increasing dryness of rivers (such as Zayandeh-rood) and lakes (such as Urmieh and Hamoun) and expansion of sandstorms even to the mountainous area of north-west Iran. Having said this, intense air pollution in Tehran and other large cities is probably the most urgent concern. The main reasons for the pollution are: population growth, rural-urban migration, the poor quality fuels used by mostly old cars on the road, and industry – mainly due to the economic sanctions and the geographical location of cities – and, more importantly, a lack of awareness of the environment and of a positive attitude towards it.

Islamic government policies that have been used to deal with at least some of these concerns have not always been systematic. The Islamic government’s disregard for the environment is also reflected in the state education system. Education in general, and in particular religious education, do very little to deal with these concerns.

It is expected that ‘Islam’ informs policy, state-provided education, people’s attitudes and practices towards sustainability in Iran. This paper concludes that this is not the case and aims to provide an explanation for this. Is ‘Islam’ really incapable of tackling climate challenges in the context of Iran? A social constructionist approach of ‘Islam’ will be presented.

GODRIE, BAPTISTE* (University of Montreal, godrie.baptiste@yahoo.fr)

Shaping the Contour of Psychiatric Intervention. Peer Support’s Contribution in the at Home Project, Montreal

To what extent does the integration of peer support workers (former service users) in mental health services contribute to the renewal of clinical intervention among homeless people with severe mental health illnesses? This presentation is an analysis of the integration of three peer support workers in two intensive case management teams and one assertive community treatment (ACT) team of the At Home project, Montreal, Quebec, Canada (2009-2013). This housing first project (also conducted in four other Canadian cities) compares clinical and housing support services to conventional services. An important feature of the project is the participation of service users in the governance and the clinical intervention.

We will discuss the clinical practices developed within the teams by the peer workers in collaboration with the clinical staff, placing a particular emphasis on two of their contributions: 1) bringing their experience of severe mental illness and their broader experiential knowledge into the understanding of the service users’ situation and the thoughtful application of coercive measures, contributing to the improvement of the existing services; 2) challenging the classical definition of clinical distance with the service users, contributing to the redefinition of the clinical posture in the At Home project. These two contributions will open the debate on the professionalization of peer support workers and their ability to shake the professional psychiatric hierarchy and the traditional practices.

The qualitative data was collected during a PhD field work through observation and 40 individual and group interviews conducted during the year 2012-2013 with 25 peer support workers, clinical staff, managers and psychiatrists of the At Home project in Montreal.

GODZIK, MAREN* (Fukuoka University, godzik@fukuoka-u.ac.jp)

Changing Life Course, Changing Housing and the Housing Market

Since the 1960s, a shortage of lodging in city centers has led to high prices and the development of suburban housing estates. The problems of aging suburban populations are attracting considerable attention in Japan, a society of long longevity. The decline in mobility among elderly homeowners is a main problem in aging suburbs because an aging population and the accompanying social prob-
items have begun to threaten residential environments there. The increase in housing vacancies, which is closely connected to a lack of security, sustainability, and human bonds among residents in a community, is one example.

This study aims to examine local responses to the increasing number of vacant houses in suburbs. We pay attention to the influence of local regulations on vacant housing; several local governments, including that of Ushiku City, have enacted regulations to promote appropriate maintenance of vacant houses since the late 2000s. Then, we discuss institutional structures that have caused the problem. We also identify the generative process of housing vacancies in the To-kyo suburbs, and we examine the results of field surveys of several old housing estates in Ushiku City, Ibaraki Prefecture. Based on interview surveys of residents, we clarify the mechanism that produces housing vacancies there. We conclude by examining the attitudes of local communities toward vacancy problems.

GOERING, JOHN* (City University of New York, john.goering@baruch.cuny.edu)

Sequestering Public Housing Policy and Research

Sequestering the Poor: Budget reductions and housing policy change in the US and UK

Public housing in the United States has had a long history of both being pressured for financial solvency as well as for redressing the racial and poverty concentration of its residents. In 2013, a fiscal cut-back of substantial size occurred as the budget “sequester” took effect. In New York, for example, the loss of funding amounted to over $200million for the year (Chaban; Dawsey). Politically analogous budget cuts have also occurred in Britain as the Conservative government has pursued fiscal restraints over the social rental sector.

This paper will examine the intersection of the various formats of the US-UK fiscal crisis and its impacts on housing policy and related national housing research. A series of major housing research experiments have been recently launched in the US to learn how to better manage with less, while the ground rules of fiscal support for most forms of welfare policies are being eroded. My presentation will be upon the choices and tensions as these policy experiments are developed, in the context of on-going reductions in support for the poor.

Intergenerational Reciprocity – the idealization of the Interchangeability of Phases of Life

Among the prominent concepts used for the sociological description of intergenerational relations is the one of reciprocity. Adopted from predecessors in cultural anthropology, the term was coined by thinkers like Goubert in the perspective of exchange theory, thereby ignoring other traditions of thought. In the course of time, analyzing intergenerational relationships in terms of exchange theory got confronted with growing problems. It became clear that the “goods” exchanged between generations are not equivalent, that this exchange extends over enormous spans of time, and that donors often are not rewarded by the original recipients. Theorists reacted by introducing additional elements: the double-pole relation was extended to a three-pole relation, time was neutralized in the idea of generalized reciprocity, and models were assembled that allowed the translation of actually incommensurable goods like money, affection, or care. Thus, the initially attractively simple conception became pretty complex and confusing.

Leaving from the phenomenological school of thought, the presentation aims at breaking through to the dimension of reciprocity that lies “behind” its behavioral occurrence. Reciprocity as an action generally rests on the cognitive assumption of reciprocity, as described by Alfred Schutz in the so-called general occurrence. Reciprocation as an action generally rests on the cognitive assumption of reciprocity, as described by Alfred Schutz in the so-called general occurrence. One of their most prominent results is waiting, once defined by Thomas Luckmann as the correlate of “the incongruence of the various temporal dimensions”. In the same breath he deplored the vast ignorance displayed by scientific research concerning “this significant phenomenon”.

Pretty exactly 40 years after Luckmann’s statement, the scientific literature on the topic has expanded, but nevertheless waiting still presents a challenge for sociological theory. Is it to be described as action or rather as inaction? Are processes of waiting to be conceived exclusively as the outcome of unsuccessful synchronization or are they a constitutive part of the procedure of synchronization itself? Is waiting socially dysfunctional or functional?

Considering the existing literature on the phenomenon the presentation does not intend to give answers to these questions, but rather aims at unfolding the spectrum of aspects that have to be taken into account when answering is attempted. It reflects the fundamental difference between “long” and “short” waiting as well as various framing conditions of waiting. Specific attention is given to the aspect of interculturality, thereby criticizing the conception of the so-called FiP-rule (first in, first served) which plays a big role in studies on waiting lines.

RC01-41.5

GOFFI, EMMANUEL* (Paris Institute of Political Studies, emmanuel.goffi@intradef.gouv.fr)

Dying or Living: A Moral Dilemma for Ethical Warriors

Western countries have developed a romantic vision of soldier’s relation to death. In France, the so-called “acceptance of supreme sacrifice” is deeply rooted in both warfare ancient history and the over promotion of physical courage. Dying for France’s higher interest is considered as the core of military identity. This has been reinforced by professionalization of French forces in 1964 which initiated a professional/client relationship between service members and citizens.

With the development of modern remotely controlled weaponry, relation to lethal risks is changing raising concerns among the military about soldiers’ identities. If supreme sacrifice remains a holy concept hardly disputable, concerns are growing due to the gap between the idealized holistic way of thinking sacrifice within the military and the common reluctance to warfare casualties of individualistic western societies. The French military is experiencing a clash between the promotion of altruistic death and the promotion of egocentric life, both within and outside the forces.

Debates about the future of the French forces always focus on how to adapt the current format of the military to the new expectations and constraints it faces. I would suggest that this is the wrong way to deal with these issues. I would suggest instead that we should re-think the way we consider the military in regard to our current objectives and constraints, and not according to outdated concepts.

The proposed presentation thus aims at re-thinking the French pro patria mori to the light of the current framework in which the French military is used, getting rid of the weight of history and re-assessing our relation to death in warfare. My reflections will be supported by philosophical and sociological considerations about physical courage and the need to get rid of the idea that courage is intrinsically linked to combat.

GOGA, SAFIYAA* (Human Sciences Research Council (HSRC), gogasaf@gmail.com)

Fashioning Religious Selves: Middle Class Muslim Women in Post-Apartheid South Africa

Almost twenty years after the inauguration of a democratic dispensation, South Africa remains caught up in the paradoxical efforts of nation-building. To produce unity out of a racially fractured past, the language of ‘social cohesion’, ‘diversity and cultural integration’ (even in the setting aside of Heritage Day) is large on the Government’s agenda. Yet signs of the failure of the ‘rainbow nation’ (and hence of the multicultural project) seem ubiquitous – growing socioeconomic inequalities, rampant government corruption, social unrest and discontent among the poor, as well as arguably unchanging or hardening of veils of mistrust and racial separateness. That forms of cultural and religious authenticity arise and are ever more strongly asserted within this climate makes it crucial to ask what they might mean: more specifically for this paper, what does being middle class and Muslim in post-apartheid South Africa mean?

This paper provides some insights into the questions around nationhood and religious subjectivities through an analysis of the historical situatedness of middle class Indian Muslims in South Africa. Some preliminary thoughts will be provided on the ways in which discourses and practices around clothing and ‘proper’ dress among middle class Indian Muslim women in South Africa construct ways of dressing and ‘becoming Muslim’ as a projection of self in both of nation and nationhood. Using a combination of literatures – an extensive global literature on Muslim women and dress/fashion, the literature on Muslims and Indians in South Africa – I will explore how the expression of religious group belonging
through the visibility of the clothed body – relying on connections between the local and the global – ultimately comes to shape the local landscape.

**Consideration and Meaningfulness of the Educational Scientific Research: The Explicit or Implicit Concealment of Social Class**

The present paper is concerned both with the limits and dynamics of research tools in the specification of theory, in data categorization and in the final representation of the educational incidents or situations schematization and meaningfulness. In particular, the issue of investigation is how meaningfulness is rendered, through the single-focus on the variable of gender or nationality, to a uniform society which is typically or atypically conceptualized as a homogeneous collectivity, partially differentiated in terms either of gender or nationality. Social inequality, differentiations in economic, educational and cultural capital elevated through the categorization of individuals in the various social classes was concealed by the argumentation about the in-depth study with focus on one of these variables. There is a thorough analysis of the system which, as the dominant scientific paradigm, was gradually promoted in the capitalist, liberal structures as a model of blunting social inequalities by the projection of new collectivity schemes such as social stratification. The latter actually substituted social class by eliminating the concept of social inequality, different educational opportunities and the individuals’ different present and future based on their social class.

The exemplary implementations depict how non-reference to social class was conducive to an enfeebled theoretical approach, because social consideration, the actual social situation and the social class reproduction model were not elevated, in which the variables of gender and nationality should be co-examined by co-formulating the issue of study within the expanded schema of social class. Within a mature phase of post-consideration, the restoration of social class in the educational research and in education is suggested, being conducive to the promotion of the policy of rights, especially during an economic crisis period.

**Social Movements and Protests in Brazil in 2013-What’s New?**

Social movements and protests in Brazil in 2013-what’s new?

The paper analyzes the new cycle of demonstrations that have taken place in Brazil from June 2013, which took about one and a half million people to the streets and earned international media headlines. The text examines three relevant moments: June 2013-July 2013 and September 2013. It examines three questions: First: who are the actors who make up the demonstrations, which the movements, organizations and social collectives in action; what are your proposals and differences, what is the role of young people and the use of media and social technologies. In the second block: what are the main practices, which like feature romance of cooperation and of political confrontation; what are the social impacts and innovations produced in society and political institutions. Third block: what the character and sense of the demonstrations, what’s the point of the ongoing democratic process, what are the main ideologies present, which social theories that have been used to explain them, as these are dovetailed with similar demonstrations at the international level.

**Different Cultures - One Mandate: Integration of Military and Civilian Personnel within Defence Organizations**

Most defence organizations are comprised of both military and civilian personnel working in partnership with each other towards the realization of defence goals. Civilian personnel (i.e., civil servants) in defence organizations often work closely with their military counterparts (e.g., in headquarters, on bases, in missions, in academic settings). Although the issue of civilian-military personnel collaboration within defence organizations has not historically been explicitly considered in the context of “collaborative work arrangements,” it is indeed an important issue that affects both operational and organizational effectiveness. This presentation will present several related international initiatives to examine collaboration between military and civilian personnel across defence organizations, including a NATO Human Factors and Medicine Research Task Group (HFM RTG-226) and a cross-national survey initiative. Further, results from the Canadian Defence Team Survey will be presented. Civilian personnel in the Department of National Defence (DND) and military personnel in the Canadian Armed Forces (CAF), referred to as the Defence Team, work in partnership to meet the mandate of the CAF/DND. Together, personnel in this integrated represent a unique group dynamic allowing the DND/CAF to draw upon the expertise of military personnel who have specialized skills and knowledge in military and operational functioning, as well as upon civilian personnel trained in a variety of occupations and possessing a range of knowledge and expertise. The Defence Team Survey, presenting the results of 644 Regular Force military members and 1,149 DND personnel, was designed to examine unique issues central to the partnership between civilian and military personnel. Recommendations will be provided for developing strategies and practices for enhancing the quality of collaboration between military and civilian personnel working within defence organizations.

**Oh, Didn’t Anyone Tell You? the Importance of Intra-Organizational Information Sharing in Defence Organizations**

Organizational justice, or the extent to which people perceive organizational procedures as being fair and equitable, is a fundamental organizational value. It is widely regarded as being comprised of four dimensions: procedural, distributive, interpersonal, and informational. Informational justice is paramount to the quality of information sharing within an organization, and is fostered by the truthful, timely, and comprehensive sharing of information regarding organizational decisions that affect employees. This type of organizational fairness has been shown to impact on personnel outcomes, such as job satisfaction and commitment, and ultimately to impact organizational outcomes such as performance and retention. In the study to be reported here, based on survey data from 6,503 Canadian Armed Forces (CAF) personnel, analyses were conducted to determine members’ perceptions of informational justice within the CAF, and the role of informational justice on key outcomes of interest. Results indicated that informational justice was indeed highly related to a range of important factors, including overall perceptions of organizational justice, organizational and unit leadership, career management in the CAF, trust in the CAF, and employee perceptions of informational justice. Furthermore, informational justice was related to outcomes such as commitment and leave intentions even after controlling for other key variables such as perceptions of overall justice and satisfaction with leadership, further emphasizing the importance of informational justice. Implications for information sharing within military organizations are discussed.

**Fertility Stall and Social-Demographic Risks Of Humanitarian Disasters In Tropical Africa, and Means Of Their Prevention**

The recent decade has witnessed remarkable success in various aspects of socio-economic development in Tropical Africa. However, contrary to the “development is the best contraceptive” expectations, fertility in many countries remains stalled, frequently at very high levels of 5 and more children per woman. We will provide the explanation related to the specific patterns underlying African resistance “pro-natalism” to reveal that some of the best-recognized fertility-inhibiting aspects of development, such as female primary education and female labor participation, are far less efficient for accelerating the fertility transition in Africa than they were in the rest of the developing world. This sharpens the necessity of urgent introduction of effective measures of accelerating the fertility decline, as otherwise the rocketing population numbers will result in burgeoning youth cohorts, tremendous pressure in rural areas, hyper-urbanization, and greater risks of political violence and humanitarian catastrophes. Our analysis shows the most effective ways of accelerating the fertility transition in Tropical Africa to be the introduction of universal primary education (with particular attention to enrollment of women in their 20s and early 30s) accompanied by re-introducing family planning campaigns as a development priority.

GOLDSTONE, JACK* (George Mason University, jgoldsto@gmu.edu)
**Why the Arab Revolutions of 2011 Are True Revolutions: Implications and Prognosis**

When they began, there was hope that the Arab Revolutions of 2011 would be like the peaceful “velvet” or “color” revolutions in the USSR and Eastern Europe in 1989, or the peaceful revolution in Ukraine in 2004. Instead, with the possible exception of Tunisia, they have turned out to be more like true, classic revolutions with civil wars, counter-revolutions, high levels of violence, and extended periods of turmoil and sudden shifts in government. There are a number of reasons for this difference, including (1) the greater youth of populations in the Arab revolutions; (2) the role of ideological contenders for power – Islamists – alongside the secular liberal revolutionaries; (3) the major interventions of outside powers; and (4) greater internal regional, ethnic and tribal divisions.

**Native Languages of the Bering Strait: The Changing Conditions of Interaction and Endangerment**

A characteristic quality of the area under consideration is the variety of distinct groups inhabiting it. If one only counts broad ethnic and linguistic categories, Chukchi, Siberian Yupik (including St. Lawrence Island Yupik), Nakan Yupik, Inupiaq, and, to a lesser degree, Central Alaskan Yupik have to be considered. The native groups in question have always been in close contact, communicating with each other in both native languages, as well as in English, Russian, and pidgins, both locally designed and maritime “jargon.”

The paper presents a diachronic study (from both locally designed and maritime ‘jargon’). The native languages in question have always been in close contact, communicating with each other in both native languages, as well as in English, Russian, and pidgins, both locally designed and maritime ‘jargon.’

The presence of the team, coupled a detailed public opinion survey at each location, demonstrably raised awareness on coastal change and sowed the seeds for creating an inclusive coastal forum, engaging local stakeholders in the mission of spreading the adaptation message. The research paper will sum up the results of the CHANGE process, aiming to offer a contribution towards new models of adaptive coastal governance.

**The Entrepreneurial University: Institutional, Political and Social Factors**

The mission of the public research university is to advance excellence in research, scholarship and creative activities. Within the increasing cutbacks in government spending on science, the university should achieve a greater degree of flexibility to be more prepared to respond to the needs of a knowledge-based society. It means the greater significance to the ways in which the production of scientific knowledge and the technology transfer are organized. We think that the political sociology of science approach can be adequately applied to study the institutional matrix of the entrepreneurial sector of the public research university. We suggest that intertwining of the institutional, political and social factors gives us an opportunity to build a good explanatory model of the development of the research sector of the university. Political factors cover the state policies, programs and initiatives to engage in and support the technology transfer. Institutional factors cover direct steps undertaken by the university officials to guarantee true entrepreneurial activity. And social factors include both the relationship between the university and the public, and the dynamics of aspirations and value orientations within the community of scholars, contract researchers, project managers, technicians and other professionals who actually make theoretical and practical advancements of science a success. The conjunction of such factors involves a broad cast of actors with different goals and of different perspectives. So it is not a surprise that such factors can be multidirectional. We think that a careful study of antagonisms inherent in such factors may provide us with good insights into regional science-based economic development. To justify this, some results of a broad study of the entrepreneurial activity and the research sectors of the universities in Western Siberia will be provided.

**Climate Change and Coastal Adaptation: Planting the Seed for Adaptive Governance in Portugal**

The most recent IPCC report confirms that climate change is very likely to increase coastal risks. This means that all vulnerable coasts will be required to adopt innovative adaptation strategies. In countries such as Portugal, economic austerity may result in reduced funds for rising coastal defence expenditures. Therefore coastal management will have to confront a geomorphological and social process of creative and progressive adaptive governance if future economies and societies are to remain viable and resilient. Social scientists will be heavily involved in this challenging prospect. This was the experience of a three-year research - CHANGE – Changing Coasts, Changing Climate, Changing Communities (2010-2013). The project used climate scenarios for the coming decades to promote a meaningful dialogue between a range of interested parties and coastal managers regarding possible planning and financing options in three different coastal locations in Portugal.

The research identified a high awareness across the stakeholder spectrum of coastal risks and climate change. But it also discovered a dominant feeling of hopelessness towards future solutions for coastal protection and funding. Furthermore, all previous attempts by coastal managers to engage stakeholders are widely perceived to be failures.

These critical gaps in processes, action and communication have been analysed in a set of interactive workshops. Representatives from regional government and municipalities, private companies, universities, fishermen, among others, met together to discuss science and communication; social and economic impacts; public participation; financing and adaptation solutions.

**Brain Drain and Academic Mobility**

Emigration of high-skilled professionals from less developed countries to developed countries leaves the sending countries economies with a reduced supply of skilled people. The resulting brain drain would limit the use of educational investment in the sending countries, creating conditions for their re-use by the more developed countries. Skilled emigration has been analysed according to two contrasting models: the model of the exodus that stresses the idea that more developed countries leaves the sending countries economies with a reduced supply of skilled people. The resulting brain drain would limit the use of educational investment in the sending countries, creating conditions for their re-use by the more developed countries.

This research aims to test the comprehensive power of each of these theses referencing to the mobility of highly qualified Portuguese professionals to Europe in the last decade. Portugal is one of the European countries where the brain drain is more accentuated in the last decade. The methodology of the study cycle that leads to insert primary or secondary segments of the employment system of the receiving European countries.
Since at least the 1990s, representatives from several Ecuadorian indigenous communities have sought to obtain redress for an environmental disaster attributed to a consortium of oil concessionaires that operated in the Lago Agrio oil field of the Ecuadorian Amazon between 1964 and 1990. The alleged harm includes an unprecedented environmental degradation, and all sorts of health-related injuries to the inhabitants of those communities. The legal battle comprises a complex web of court, arbitration -both investment and commercial- and administrative proceedings in Ecuador, the US -where more than twenty courts and several administrative agencies are involved. Legal remedies have also been pursued in other countries. The centerpiece of this gargantuian battle, however, is an $18.2 billion judgment issued by an Ecuadorian court in early 2011 against Chevron. This judgment is the largest and most complex award rendered against a multinational oil company in Ecuador, and perhaps in the entire region. The Chevron saga has rekindled an interesting debate on the development of mechanisms for the protection of diffuses rights involving the environment, indigenous peoples, and human rights in general; the role of the courts in supervising compliance with judicial remedies, and their engagement in activities that go beyond their traditional role as simple adjudicators; and the role of privately-formed entities in the administration and supervision of monetary awards. My presentation will address these issues insofar they contribute to help understanding the current landscape of environmental and indigenous rights litigation in Latin America, and the interplay between the social, economic, and political factors in the development of large-scale litigation.

‘the Reinvention of the Traditional’ in the Post-Traditional Societies — an Essay on Encouragement of ‘Dependence’

The theory of reflexive modernization led by A. Giddens and U. Beck characterizes the present societies as the post-traditional societies; choices and decisions. In fact, since 1990s the norms for family, communities and jobs have been disappearing in Japan.

The expert systems as the alternative to the tradition, however, don’t fully func.

tion.

People burdened heavily are now starting to seek for the norm to support their daily lives and the groups to belong; nostalgia for the traditions, rise of exclusion nationalism, sympathy for the cults or any fundamentalistic ideas. We can’t dismiss these as reactionary and out of date. These requirements simply show that ‘free and independent lives based exclusively on choices and decisions’ are impossible. They ask for ‘the traditional’ as a reference frame of decision-making. However, we can’t let this movement slide into nostalgism. How can we respond to this requirement for ‘the reinvention of the traditional’? In this study, we take the argument over ‘care’ in Japan and discuss the logic that positively encourages ‘dependence’ on others. Rebuilding new social relationship including ‘dependence’ might be the first step to ‘the reinvention of the traditional’ in the post-traditional societies.

Transnational Articulations of Law and Inequality in Latin America: A Legal Genealogy of Inequality

Until quite recently, Latin American countries widely assumed that legal discrimination against ethno-racial groups was a practice that took place elsewhere but not in the region. Somehow, the articulations between law and racial inequality remained successfully covered for almost two centuries. By tracing how such an assumption has been both held and broken for so long, communities. The legal battle as a demand for them to strive for ‘the traditional’ in the multi-scale intercrossing of racial discourses through law. It aims to elucidate the chronologial and epistemic concurrence between different legal projections of racial stratification operating in different world areas and to expose the crucial role that law played in the racialization of society under different forms and the continuities of such role in contemporary Latin America. For this purpose, I introduce Sérgio Costa’s definition of inequality regime. This concept serves to depict transnational interconnectedness between legal texts and to place norms in the history of race in the civil law systems. The concept is also useful for the study of long periods of time, because it allows a focus on regime change (i.e. major shifts in the racial perceptions and legal standards and their effects in terms of ethno-racial inequalities). The first part of the paper introduces the legal trans-
national approach applied to conceptualize ‘race’ as transregional inequality and the central role of law in this regard. The second part presents some articulations between law and ‘race’ in Latin America as conditioning ethno-racial discourses, social hierarchies and inequalities during European rule and the most significant continuities of such articulations after independence and in subsequent regime transitions.

GONOUYA, ROBERT* (RC34 Member, r.gonouya@londonmet.ac.uk)

Double Troubled-Young People Struggling to Cope with the Conjoined Status of Neet-Youth Homelessness in Times of Austerity

Despite the established body of work in sociology illustrating the diversity of youth experiences, there are gaps in understanding the challenges faced by young people whose lives are framed by the duality of NeET-Youth homelessness, particularly in times of economic austerity. As such, the NeET youth homelessness conceptual framework developed in the mixed method study conducted in Essex, Kent and London and reported here, allows for a particular and more nuanced understanding of the nature of this onerous status, including the coping strategies and or tactics of those affected. This encompasses associated aspects such as their attitudes to work, the welfare state, family and training.

One of the central tenets of the NeET-youth homelessness framework present herein is that irrespective of the impact of micro-level factors and personal preferences in shaping young people’s lives, individual situations can only be fully understood by drawing on perspectives which also recognise the impact of broader social change and its role in structuring opportunities and choices available to young people (Russell, et al, 2011).

Importantly, the NeET-Youth homelessness conceptual framework introduced in this paper, marks a shift from the hitherto, dominant ‘silo approach’ to understanding both NeETism and youth homelessness separately, despite their acknowledged links (Smith, J. and Ravenhill, M. (2006);Quilgars et al, 2008; Jones, 2009). This paper posits that those afflicted by the conjoined status are doubly troubled as they not only struggle to cope with the challenges of living in austere times whilst yoked by external influences such as welfare state access conditionality, but also experience debilitating social exclusion linked to their severely compromised personal capacities and turbulent, liminal adulthoods.

GONTHIER, FRÉDÉRIC* (Université de Grenoble, frederic.gonthier@iepg.fr)

Public support for welfare state has been shown to be sensitive to economic conjuncture; e.g., to lower with increasing unemployment or inflation rates, and to raise with gross domestic product (Eriksen, MacKuen & Stimson, 2002).

Contrasting with the comparative welfare state literature, that usually focuses on social indicators’ annual figures or covers only short time spans, we will adopt a long period perspective and explore how social indicators’ overtime evolutions influence support for state since the 80s. We will use multilevel modeling with pooled data from the ISSP Role of Government, a survey module that has been repeated four times in an increasing number of countries since 1985. This presentation will deal mainly with global inequalities and public policies indicators. Mixed findings stem from the exploratory analysis. Strong income inequalities are found to fuel support for government, thereby expressing a growing demand for state protection. But more subtle variations appear when we consider the Gini evolution. Support for state appears to be less important in countries where the Gini has increased, suggesting a threshold effect (increasing inequalities usually lower public trust in institutions, and hence dwarf support for state intervention).

The impact of social expenses is only partly as expected. Europeans are all the more in favor of state since they live in countries with low social expenses. However, when social expenses increase, support for state also increases. It indicates that the general public tends to react when political elites answer to social demand, but does not necessarily react according to a “thermostatic” pattern (Wliezen, 1995). Thus, our findings will also raise substantial issues regarding welfare sustainability and democracy responsiveness; e.g., help to understand how public opinion is shaped by previous levels of policy outputs and how government policies answer to prior changes in mass opinion.

Comparing the Evolution of Attitudes Toward Government: Cross-Cutting Substantial and Methodological Issues

While many scholars have used cross-national data to investigate attitudes toward welfare state in a comparative perspective, this topic has seldom been explored with pooled waves of surveys. A long lasting survey module such as the ISSP Role of Government, repeated four times since 1985, permits to gauge whether causal moves of attitudes have moved since the 80s. But it is also particularly useful to question aggregate data analysis and its limitations. The goal of this presentation is to address the overtime evolution of support for State from both substantial and methodological perspectives.

First we disentangle the different dimensions of attitudes toward state, so as to compare the global trends across countries and assess the “values convergence” hypothesis (e.g., people are supposed to be less supportive of State due to globalization, individualization and postmaterialism). Hence we raise the issue of aggregate measurements of public opinion and their reliability through time and space.

Then we use multilevel modeling to look at the evolutions among subpublics; especially among middle classes and “transfer classes”, which have been found to be widely in favor of public policies. Complying with the literature showing that statist attitudes are linked to narrow personal interests, we find that demand for welfare is more important among the disadvantaged social groups. Thus we also cope with the problem of harmonized data and comparability of national contexts.

Our results finally provide evidence that support for State tends to move slowly and uniformly among subgroups and countries, thereby confirming the “parallel publics” thesis but strongly contrasting with the idea that welfare retrenchment has a direct impact on values and public opinion. Here we are faced with our last challenge: how global inequalities and public policies indicators can help to understand attitudes toward government?

Identidad Nacional, Imaginarios Sobre El Estado Nación y Procesos De Exclusión De Los Migrantes Internacionales

Argentina ha sido y es un país a través de procesos migratorios. De este modo, se fue constituyendo un imaginario social acerca de los aportes y las pérdidas de la llegada de los migrantes, que contribuyeron para la “identidad nacional”. Así, la presencia de dichos migrantes es vista como una figura “disruptiva” para el relato nacional, “ficticio”, pero no por ello menos efectivo en la construcción de la “comunidad de nacionales”. Intensificando la discusión, se quiere abordar la problemática del nacionalismo a partir de comparar las manifestaciones de los argentinos acerca de las migraciones llamadas “tradicionales” (que incluyen a las olas migratorias de fines del siglo XIX y principios del XX) y las “actuales” (desde la segunda mitad del siglo XX a la actualidad). y los modos como se construyeron las representaciones inciden en procesos de exclusión de los grupos de migrantes.

Se indagará sobre las representaciones sociales de los nativos (entendiéndose por ese término: los argentinos) acerca de la cuestión antes señalada, a partir del análisis de entrevistas en profundidad realizadas en el marco de dos Proyectos de Investigación en los cuales participo. El primero, titulado: “Exclusión, control social y diversidad articulando la relación entre el migrante externo y las instituciones educativas y judiciales” y el segundo denominado: “Diversidad etno-nacional y construcción de desigualdades en las instituciones escolar y judicial. Un desafío teórico metodológico en el abordaje de los casos del AMBA y la provincia de Méjico”. Ambos proyectos son dirigidos por Néstor Cohen y tiene su sede de trabajo en el Instituto de Investigaciones Gino Germani de la Facultad de Ciencias Sociales de la Universidad de Buenos Aires.

What Happened with Our Plans? Plans and Behaviour of First Time Dual-Earner Couples in Spain

Most studies show that the arrival of the first child produces a new gender balance within the couple, and frequently initiates long-lasting gender inequalities. This paper investigates how first-time parents deal with the reconciliation problem (combining paid and unpaid work), which are the consequences of adopting different reconciliation strategies (use of family policies, informal networks and couples’ time) on gender inequalities, and to what extent different strategies are based on individual attitudes and societal constraints in Spain. This study has two peculiarities. The first one is the sample selection. We interview couples which had a fairly egalitarian division of labour when they were expecting the first child, and we interview them again one and a half year later; when most couples have already made the decision to return to paid work. The second one is the historical moment in which the interviews were conducted, marked by a deep economic crisis and a sharp weakening of men’s working conditions. The study is based on a sample of 33 egalitarian dual-earner couples interviewed two times firstly in 2011 and secondly in 2013. Results indicate that mothers elaborate more realistic expectations during pregnancy about their chances to combine work and care. More often express dissatisfaction with work-life balance and a greater gap between ideals and reality without really feeling much remorse as they feel that their arrangements are fully justified by their job constrictions and the economic crisis. This study highlights the importance of a good policy design in order to favour gender balance over the life course, even in the worst socio-economic circumstances.

Male Homicide and Life Expectancy in Mexico

Objective. To determine the impact of homicide on male life expectancy in Mexico and its 32 states during the three-year periods 1998–2000 and 2008–2010 and the weight of the different age groups in years of life expectancy lost (YLEL) due to this cause. Methods. Based on official death and population data, abridged tables for male mortality in Mexico as a whole and its states were created for three three-year periods studied. Health-adjusted life expectancy and YLEL for men aged 15 to 75 were calculated by selected causes (homicide, diabetes mellitus, and traffic accidents) and age groups in each three-year period. Results. In the years between the 1998–2000 and 2008–2010 periods, YLEL due to homicide increased in Mexico by 1.8% (1,244). In more than 1.7% (1,244). In 2008–2010 exceeded two, with the state of Chihuahua standing out at 5.2 years. In 14 of the 18 states where health-adjusted life expectancy among men declined between the two three-year periods, the YLEL due to homicide increased. From 2008 to 2010, homicides were the leading cause of YLEL among men aged 20–44. YLEL due to homicide among those aged 15–44 increased between the two three-year

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
In several states, such as Chihuahua and Durango, this violence appears to be the main reason for the decline in life expectancy among men aged 15 to 75.

I present a case study of a negotiation process between the Colombian government and non-state agents from the system of international cooperation for development, the international human rights system, international NGOs and domestic civil society aimed at the regulation of human rights problematic in Colombia. The outcomes of this negotiation show how a political governance structure can emerge as a change in the political regulation model of this problematic at the national level.

This kind of negotiations entails the participation of plural social agents that act at different scales (national and international), with different interests and power capacity and that must solve a problem of inter-sectorial coordination (state agents and non-state agents) in order to overcome political conflicts and get at some point of agreement with regard to how regulate the problem under consideration. In this research, I used a combination of the structuration theory and the Coleman´s macro-micro-macro loop in order to explain how this governance structure emerged as a new model for addressing the monitoring and compliance problem of the human rights norm by the Colombian government.

This paper is an attempt to address Morin’s (1968) plea for a sociology of crisis, focusing particularly on the issues of the sociology of time and intellectual change from the vantage point of intellectual responses to a crisis. Most current sociology characterizes our epoch as one of incessant acceleration, which precludes social agents from being able to weave a lasting narrative where to situate their life-worlds in the context of an ever-changing society. This insight brings together thinkers as diverse as Rosa, Sennett, Bauman and Castells. Nonetheless, when moments of heightened uncertainty occur and faced with a context of pressing time – the classical definition of crisis as a turning point, from the Greek krino (to cut, to select, to judge) – narrations do frequently appear, for without a minimum of foreseeability, action is impossible and the future unearably crowning insights become fundamental. Already Gramsci had acknowledged this. Furthermore, as Morin had already argued, intellectual reactions to a crisis are in no way readily predictable, for they raise forcefully the issue of the justification of normality. This might even mean the ascent of ‘regressive’ responses to a crisis – plagued with dualisms – or a newfound sense of complexity.

From this starting point, I attempt to weave together the tension between cognitive autonomy and narration after critical events. I argue that in order to fathom intellectual change and crisis, sociology must meet at least two characteristics: first, it must understand cognitive autonomy as a relational (not absolute) characteristic of intellectual actors and second, it must be particularly attentive to the issue of time in a self-reflexive way. I.e. it must become a "temporalized" sociology.

This paper compares and contrasts the 15M movement in Spain (los indignados) with the Occupy Wall Street movement in the United States. We examine the class and social background and the grievances and concerns of the protesters in each country. We also examine the external and cross-border influences on each movement, public opinion toward each movement, and the tactical repertoire, achievements, and limitations of each movement. We ask how these movements support or contradict sociological theories about the origins, diffusion, and outcomes of movements.
demonstrates how the effects of both gender and obesity can be explained by considering them as status characteristics which have the potential to create subsequent status beliefs. Finally, the current study reports empirical findings that support obesity as a status characteristic. This study finds an effect for obesity on ratings of diffuse status, and effects for both obesity and gender on ratings of influence and persuasion.

TIRADO, RICARDO (UNAM)

Social Productivity. Advancing a Concept to Think about Contributions of Social Organizations

The paper deals with social productivity as a useful criteria for assessing the contributions of social organizations to civility, solidarity and quality of life. Commonly social organizations are evaluated with these criteria: a) results, b) the impact of their actions on the world, and c) organizational capabilities. These criteria focuses on examining contributions in a field rather intangible: values and the quality of social relations. The concept points to a poor explored field, although some notable authors wrote about it.

The social productivity concept points to consequences that are not always deliberately sought, since they are often unintended byproducts of organizations behavior. One important aspect is that the image and action of organizations is broadcasted into the civil sphere and it constitutes a role model, that is, it has an effect of social pedagogy. Another important aspect is that organizations' social performance can sometimes be negative, deteriorating social life. Social performance can be seen in these dimensions:

1) From the point of view of the objective or performance materiality and concerns to the contributions of the material and social welfare of the stakeholders. This includes the production of benefits, training of participants in joint decision making, the implementation of the decisions and setting and enforcing rules.

2) From the point of view of the factors affecting the formation of sociality, it focus on the relationship with the environment in which the organizations operate and interact, and covers the image projected by the organization, its actions and how all this stuff interacts with other institutions and actors. These are issues which impact on social connectivity, civility, the public sphere, and the construction of the meanings which are shaping society.

The Two First Paradigms of Empirical Social Research in Germany

Irmela Gorges

Abstract: The two first paradigms of empirical social research in Germany

Empirical social research in Germany evolved from the necessity to get information about the impact of the industrialization on the social conditions in Germany during the 19th century. At the example of the Association for Social Policy, founded in 1872 in Germany, it will be exemplified how the founders of the Association developed a strategy to conduct empirical social research with which they could collect data which they could use to realize their political views of a functioning society. In front of the peak of the industrial revolution, the second generation of members of the Association, among them Max and Alfred Weber, developed a different political view of a future society. As a consequence, they fought for a different strategy to gather empirical data. Because both strategies of empirical social research differed from one another not only with regard to the methods to collect data but also in view of the political goals, i.e. with regard to their epistemology and methodology as well as methods to collect data, it seems to be justified to identify the two approaches to empirical social research as two different paradigms.

GORSHKOV, MIKHAIL* (Russian Academy of Sciences, iring1-tiourina@yandex.ru)

Civil Society and Civic Culture in Modern Russia: Experience of Sociological Diagnostics

It is hard today to speak of a common and well formed civil society in Russia. Civil society exists, but it is fragmentary and divided across both horizontal and vertical sections of the population. The paper contains the results of sociological researches, including a description of the strengths and weaknesses of Russian civil society and the environment in which it develops, as well as recommendations on strengthening civil society in Russia. The author draws a complex, and in many respects inconsistent, picture. The condition of civil society in Russia is not subject to unequivocal judgments in terms of good or bad. The breadth and variety of the information allows the author to depart from simple, sometimes speculative perceptions about Russian civil society. A sincere interest in civil society can tempt to make too many a priori assumptions, but when the empirical base is rich enough, it is impossible to draw black and white conclusions. The author of the paper decided to inform international audiences not so much about his own points of view as about empirical facts and expert judgments. Certainly, the picture is not complete. As will be shown, the research tools capture different aspects of the development of civil society unevenly. Nevertheless, the data obtained are sufficient to assert with confidence that Russian civil society is in a difficult process of development, and it has considerable, if yet unrealized, potential.

TYURINA, IRINA (Russian Academy of Sciences)

Youth Studies in Russia under the context of globalization

The paper is concerned with the problem of the Russian youth, with a special emphasis on the history of the theoretical and empirical researches devoted to the youth issues. The authors attempt to provide a comprehensive account on the development of theories on youth in Russia and the thesaurus conception of youth from the early 1920s up to the present time. The research delineates the term thesaurus and its connection with the formation of modern youth's outlook. The results obtained during analytical work with the literature and empirical data will become the basis for general conclusions and recommendations regarding the development of future research in the area of youth and youth policy. In particular, they determine the main trends in research regarding Russian youth, especially in relation to the so-called «new Russian reality» of the market economy. The institutes of democracy and law-based government (demographic problems in Russia; status of Russian youth in the context of its development; description and sociological analysis of various problems related to it; educational opportunities for young people in Russia; Russian youth identities, etc.). At the same time the paper reveals some certain problems in youth studies, conducted by Russian sociologists under the context of globalization. Not the central foci of the research is social and cultural value orientations of the young Russian. The study presents a detailed analysis of impact that traditional Mass Media and information revolution plays in socialization of Russian youth, its generations, its influence on public opinion formation, etc.

Uncertainty As an Asset in Education Policy

Education policies around the world are responding to increased perceptions of risk by attempting to reduce uncertainty. They are attempting to gain clear information and identify ‘guaranteed’ solutions by finding out ‘what works’ to develop policy accordingly. They are setting up clear measures of accountability and transparency. In order to understand states of affairs and identify policy issues,
huge machineries of calculation have been mobilised. Regular surveys are used to track progress and to respond to the first sign of ‘decline’. In this sense, we could say that the complexity and uncertainties of the world are transferred to the processes of calculation, which in turn render clear and less uncertain accounts of the world in the form of numbers.

In this paper, I take the notion of ‘uncertainty’ to the statistical translations of the education world and the attempts made through these translations to erase uncertainty and ambiguity and provide clear, certain accounts. I explore how complex such operations are, and how the uncertainty and complexity of the world constantly challenge and stymie the attempts to tame it. I support my thesis with several empirical examples from my research on the Programme for International Student Assessment (PISA) and on Australia’s Education Revolution. I explore the dilemmas involved in these attempts to contain uncertainty (including through mathematical devices such as calculating ‘confidence intervals’), and the ways in which the world exceeds these attempts to contain its uncertainties.

Using Callon et al.’s (2001) notion of ‘acting in an uncertain world’, in particular their argument with regard to ‘hybrid forums’, I argue in this paper that keeping uncertainties alive can have the beneficial effect of bringing more resources and expertise forward and adding new voices into the discussion. Uncertainty can thus be an asset rather than a problem to be solved.

GOTO, MINORU* (Tokyo Institute of Technology, mgotou@jcom.home.ne.jp)

**Toward a Synergy Society: Beyond Reflexive Modernization**

The purpose of this paper is to consider the reality of synergy society criticizing the theory of reflexive modernization and third way. Though positive welfare oriented third way politics has acquired greater importance in creating active civil society and wealth, it is too Western because reflexive modernization implies the project of political and social institution concerning the ideal of the attainment. Synergy society is its collaboration beyond borders. It lies in seeking the social well-being accompanied with rethinking process of modern values. The rise of communication sector where consultant, adviser, planner and religion play an important role in empowerment is a characteristic of synergy society. Instead of public sphere, we focus on communication media such as the standard of fair trade and eco-label circulate and create the networks of social resonance. This has political, economical and cultural meaning simultaneously. Synergetic modernization is not a progressive project which has political and historical end. It just exploits the tension of what is being continuously changing and we can see it as the influence of utilitarianism and excessive individualism. Then we reevaluated the Japanese semantics of happiness (shiawase) and research the activities of Japanese Buddhism after 311. Arguing the everyday life with suffering and joy, we realize that a contextualized succession of accidental meetings build necessarily social relationships which have potential to form the networks of social resonance relating to germinating aspects of another modernity beyond the risk society. Synergy society promotes social diversity and well-being against the increasing liquidity. But fragility is unavoidable as resonance contains contingent process. Therefore we conclude that stable social commitment and sustainability are possible when institutional embedding of synergy develops to construct interactive partnerships with synergy networks of well-being.

**Re-Regulating Reproductive Bargains**

This paper proposes a framework integrating various of capitalism and transnational approaches with feminist theories of gender regimes. A road map of the varieties of capitalism literature charts conceptual building blocks for the comparative study of economic governance models and related labor regulations. Varieties of capitalism theories implicitly refer to work and social regulations designed for standard industrial work and a corresponding form of standard family life. As such, these theories neglect how gender relations are embedded in the way major institutions are organized, creating blind spots in their political-economic models. Without a systematic account of the gender dimensions of employment practices, institutions, and regulations, the varieties of capitalism approach cannot decipher the gendered patterns of nonstandard employment and its variation across countries. National variation in gendering of nonstandard employment becomes more intelligible with reference to what I call the varieties of reproductive bargaining. The bargaining constitutes embedded structures of social relations that contribute to the differential integration of women and men in the labor market. Discussing empirical trends across four advanced capitalism countries, including the United States, the United Kingdom, Germany and Japan, typically post-Fordist, and then contrasting these countries with emerging economies, the paper reveals a complex picture of the gendered character of nonstandard work in each country. I argue that the type, the density, and the interaction of labor and gender regulations over working time, both directly and indirectly, shape the conditions affecting the supply and demand for particular types of labor and the quality of these arrangements. An examination of the European Union and the International Labor Organization also suggests that supra-national institutions influence the transfer of regulatory norms. Yet, employment outcomes and workplace practices still largely depend on a country’s type of welfare state, coordination mechanisms of employment relations, and varieties of reproductive bargain.

**Climate Change Policy: The Role of the World’s Cities**

The community of nations has struggled in vain to shape a coherent and effective response to reduce the global emissions of greenhouse gases. Rather than advancing toward the modest emissions reduction target set by the 1997 Kyoto Protocol, we have witnessed a dramatic increase in global emissions.

Concurrently, climate change policies have evolved to non-governmental actors and to sub-national levels, often with far greater effectiveness. Particularly noteworthy is the role of cities in adapting to climate change. Already home to over 50% of the world population and routinely major players in the global economy, the world’s cities are primary consumers of energy and other natural resources and account for an estimated 70% of global greenhouse gas emissions -- a ratio likely to increase dramatically in the future. Moreover, many of the world’s cities are acutely vulnerable to the effects of climate change, such as rising sea levels.

In light of these profound challenges, it is hardly surprising that many cities are vanguards in reducing GHG emissions, increasing energy efficiency, and adapting to the social, economic, and social risks of climate change. Hundreds of cities around the world have successfully established and implemented climate action plans with ambitious emission reduction and energy efficiency targets, and many are taking preventive measures to cope with climate change-related risks. In light of the unparalleled challenges to urban planning and economic, social, and environmental policy posed by climate change, the articulation of a theoretical model that defines the key elements that contribute to the success of climate change policies is of utmost importance. The current study elaborates such a model and tests it empirically by examining several case studies in cities around the world.

**Towards Better Education and Less Inequality: Trends in Geographical, Generational and Gender Inequality in Education**

In our paper we provide an overview of past, current and possible future trends in disparities in education following the traditional patterns of inequality along gender, generation and geography. Magnitude and recent trends in inequality vary across regions and countries. Educational differences by generation indicate the speed of change in human capital formation over time and we identify different patterns of educational transitions that are closely connected to societal, economic and institutional contexts. We focus on pathways from female disadvantage to gender equality and new forms of inequality. The closing of gender gaps is typical mostly of developing countries, where recent gains in education are often more pronounced for women compared to men, but are not always sufficient to remove the limitation in access to education; whereas the issue of male disadvantage especially in higher (i.e. post-secondary) education emerges in developed countries of the North, as well as countries in Latin America, East and South-East Asia. It must be emphasised that gender inequalities are an important aspect of “over-education”. For the future of potentially “over-educated” societies, emphasis is given to gender differences in access to education policies.

We base our analyses on a unique global dataset on educational attainment -- encompassing the reconstruction and projection of educational attainment from 1970 to 2060 for 171 countries by age and sex -- developed at the Wittgenstein Centre for Demography and Global Human Capital.

GOULD, MARK* (Haverford College, mgould@haverford.edu)

**Natural Law, Human Rights and Sociological Theory**

Barrett has argued that the requirements of organized social life are the principles of natural law. These laws are “as fixed and unchangeable as the laws which operate in the natural world.” For Barrett, the (normative) force of natural law is found in “if-then” propositions. “If you want to achieve Y, then you ought to do Z.”

There are three dimensions of sociological theory integral to a natural law argument, which is essential in the formulation of a human rights agenda. Barnett’s characterization of the normative force of natural law requires that sociological
theory have a functional dimension, specifying propositions that are held to be valid for all social systems. Second, analyses of social relations must focus on patterns of interrelationship and these patterns will differ depending on the nature of the social structure under analysis. Social theory formulates universal-class propositions about more particular types of social structure. Third, if, for example, a functional theory enables us to say we must do X if we are to avoid social disorder, it does not suggest that we ought to do X. If we are to have hope of providing guidance about how we ought to act, we need to introduce a developmental dimension into our argument. A developmental model characterizes imminent possibilities for social and individual development, where later stages are hierarchically-ordered progressions capable of generating earlier ones, but where the reverse is not the case. The last stage in this progression may then serve as the critical standard judging earlier stages.

A characterization of the stages of social development culminates in a stage that constitutes possible social relationships. Here, Barnett's standard for cultural law is in play, and the theory that guides our selections is contestable. This theory articulates a natural law standard for human rights.

Multiplexity in Personal Networks: Comparing Three Cohorts of Portuguese

Personal networks are paramount for the wellbeing and social integration of individuals, by providing a sense of belonging though the multidimensional interdependencies that occur within configurations. These interdependencies can be symbolic and/or material, ranging from expressive support - such as daily contact or giving advice and comfort - to instrumental support, such as helping in household tasks, lending money or giving supplies. These webs of exchanges are likely to vary according to the composition of personal configurations in which individuals are surrounded. Traditionally, friends are known to be confidents and providers of emotional help, whereas relatives are more likely to exchange practical support. Our point of departure is not to consider friendship and kinship relations in a separate manner, but to look at the personal networks as a whole. A configuration can fulfill both types of support, by including persons who provide different or overlapping types of support. Moreover, these exchanges can be reciprocal or not, in a long or short term, as well as people can give one type of support and receive in another. In this sense, we hypothesize that the pluralization of personal configurations, - mixing primary kin with distant relatives, ex-kin and non kin - has receive in another. In this sense, we hypothesize that the pluralization of personal configurations, - mixing primary kin with distant relatives, ex-kin and non kin - has impact on networks’ multiplexity. Multiplexity is understood as the existence of overlapping exchanges and affiliations within a network of relationships. The pattern of interdependencies are construct within the frame of macro structures (gender, social class), but also by the diversification of life course and family statuses. Do different configurations provide different types of interdependencies? Data is drawn from a Portuguese national survey applied to cross-sectional sample of Portuguese born in three different cohorts (1935-40; 1950-55; and 1970-75) in which respondents provided information about their personal networks and mapped the exchanges of emotional support and material goods between them.

Unemployed Youth: South Africa’s ‘tickling-time bomb’ or ‘democratic dividend’

Young South African’s make up 72% of the unemployed. Organized labor’s reference to the problem as the ‘tickling-time bomb’, has become an emblem attached to young people. Political and social comment insists that there is reason for alarm and consternation. Even government planners refer to youth unemployment as the greatest threat to social cohesion and the greatest threat to social stability in South Africa.

Amidst this dark diapason, government believes that young South Africans may in fact become a ‘democratic dividend’, rather than present any immediate risk or future threat.

The paper will analyze both claims for their respective merits. It will locate the analysis within an educational and labour market framework. However, given such a framework, it is possible to say something about the role of education in preparing young people for the labour market.

The Study of Hindu Woman Problems in Modern Society

The mother India notion of downtrodden women of India, helpless, exploited by men, worn to and early death; and the exotic sensual women of the orient, who make maharajahs happy with their beauty and talent, are somehow in the picture too.

Indian women of dignity, charm, simple beauty in all classes- form women in the modern middle class- women in the cities, government women in New Delhi- women who were neither helpless and downtrodden nor absorbed in erotic gratification. Of pampered husbands. Some of these intelligent and still graceful, feminine women were in legislatures, some were running others sector.

Mother India a mother culture, goddess worship, and in a general cultural veneration of the feminine. The study of the Morden societies the Hindu women problem indentified. The major source of data for the study is descriptive material from ten Indian informants, women graduate student in university coming from educated, urban and middle and upper-class backgrounds, representing various geographical regions.

Literary sources include translations of original Indian literature. The research paper focus if discussion of the Hindu women problem connected with the single women, older women, widow, divorce, mixed marriages, and friendship live-in-relation and NRI friendships etc. Most of these problems are related to the Morden age and its impact of traditional patterns.

Some of the problems involved in modern Indian womanhood. Except for widowed, they are related to changing times and the impact of the globalisation.

Professing Hegemony: Consensus Building in the Chinese Higher Education Sector

This paper proposes that the economic, political and social transformation of the People’s Republic of China in the post-reform era is an example of ‘passive revolution’, where not the revolution of ideas, but the transformation of the material basis is the primary mover.

From the late 1970s an era of ‘cultural revolution’ seizes China. It is a period marked by the rise to new patterns of communication and culture and have great impact of the Cultural Revolution. Building upon deeply-held structural hegemonic beliefs, the leading Communist Party has, especially in the aftermath of Tiananmen, sought to build consensus to a teleological project: the rejuvenation of the Chinese nation.

Moreover, that overarching vision for the rejuvenation of China has proved to be durable and robust, changing at pace with the shifting needs of China in a time of dramatic transformation. It has grown to envelop ideas rooted in China’s ancient philosophical traditions as well as more recent historical experience and new concepts designed to characterize the post-reform era.

In doing so, this paper views contemporary China as one characterized as much by consensus as coercion; identifies the overarching vision to which consensus is sought, and defines those actors with whom consensus is sought and also the process through which such consensus can be negotiated.
phone. The use of mobile phone was relatively wider than the accessibility of the internet. The connectivity of mobile phone is spreading cutting across all caste, class and gender categories but internet connectivity is still confined to some selected sections of the mobile users.

GRABOWSKA, MIROSŁAWA* (University of Warsaw, grabomir@is.uw.edu.pl)
SZAWEJ, TADEUSZ* (University of Warsaw, szawi@uw.edu.pl)

Religion and Church in Times of Social Change

In post-communist countries, during the last quarter century two processes have overlapped: the shaping – after communism – of church-state relations and the global trend to strengthen the presence of religion in the public sphere. This is why they are important and difficult to study.

1. The communist system – for ideological and political reasons – repressed churches and believers, who remained in open or covert opposition to the system.

2. However, the countries on which a relatively uniform communist system was imposed differed in many aspects. There were different religions, denominational compositions, relationships between religious and national identities, and the power of the churches (including an assessment of their policies during WW II). That’s why communist authorities had to take into account the "local conditions": the policy towards the church(es) and the faithful had to be different in the relatively secularized Czech part of Czechoslovakia, the religiously divided Hungary and the uniform, religious, Poland.

3. With the collapse of the communist system the situation changed. Churches and believers regained autonomy and the ability and willingness to stand up for their rights, and the democratic government accepted them or even sought their support.

4. So, institutional and legal measures in selected Central and Eastern European countries will be analyzed.

5. These problems should be analyzed in the triangle: state – church – society. For this reason the position of the Church in society will be included in the analysis, as well society’s attitudes – its religiosity, opinions about state-church relations and the sensitive issues in these relations.

6. The analysis will concentrate on Central and Eastern European countries, with comparisons to selected western countries. The main data sources are the WVS and EVS data sets. (These data sets contain many indicators of religiosity, but attitudes on state-church relations and sensitive issues are not represented equally well).

RC33-582.5

GRABOWSKA, MIROSŁAWA* (University of Warsaw, grabomir@is.uw.edu.pl)
DURLIK, JANUSZ* (Public Opinion Research Center, j.durlik@cbos.pl)

Social Conditions of Survey Research

The analysis will include two aspects: (1) social conditions of conducting surveys, and (2) social conditions of obtaining meaningful, accurate and reliable answers. These first are very difficult to influence, but researchers have to analyze it to know what the situation is. When it comes to getting reliable answers to sensitive questions, a number of indirect measurement strategies have been developed. In both cases we will present the results of analyses of Public Opinion Research Centre (CBOS) data – treating them as an illustration of the broader processes rather than as a basis for more far-reaching generalizations.

Ad 1. The CBOS (along with the Institute of Sociology of the University of Warsaw) has analyzed participation in survey research and the “escape from the field of the questionnaire” (significant answer “I don’t know” is difficult to say or refusal to answer). We attempted to determine whether these responses depend on how and they depend on the questions’ issues (closer and easier, or more distant and more difficult for respondents), the characteristics of the respondent (gender, age, education and interest in politics, the place of residence), the attitude of the respondent to the interview, and finally, dependence on historical time – the analysis included a quarter century – the period 1985-2011 – including the transformation of the system.

Ad 2. Because asking questions about sensitive issues carries risks, and even a high probability of distortion of answers to comply with social norms (social desirability bias), and in Poland the abortion issue is very sensitive, so the randomized response technique was used to get to the actual experiences of abortion of women. Field work lasted six months (November 2012 – April 2013), and the research procedures included a total of 3576 Polish women. The results of this technique will be presented.

The Life Course and Individual Time Styles of Elderly People in Cross-Cultural Perspective

The life course and individual time styles of elderly people in cross-cultural perspective

Our contribution presents the conceptual framework as well as preliminary findings from a cross-cultural qualitative study, focusing on life course-related time perceptions and time-related agency of older persons in Germany and the United States. Both countries are similarly affected by demographic change, but reveal significant differences regarding life course structures and the institutionalization of old age. Our epistemological interest centers on the interaction between the wealth of everyday time and biographical time poverty in old age. A special focus is set on the relationships between experienced time sovereignty during the life course and the perception of one’s own finitude in old age, i.e. the potential tension between a more autonomous disposition of time in daily routines on the one hand and the necessity of handling the limitations and unavailability of one’s own lifetime on the other. How do both forms of time management interact with each other – and to what extent does the specific individual time style in old age relate to the internal temporal ordering of the life courses elderly people experienced in younger age? Based on problem-centered interviews including large biographical-narrative parts with retirees from various social milieus and different cohorts, we investigate individual experiences with managing ageing, lifetime and everyday time. A special focus is set on the effects of culture (e.g. regarding the relevance of autonomy values or the societal handling of death and finitude). In doing so, the common self-restriction in ageing research with its still-dominating focus on the cultural “own” is overcome. Simultaneously, we aim at gaining a deeper understanding of the peculiarities of different cultural contexts and their specific impacts on the structure of life courses and individual experiences with time and aging.

Unhappy Souls at Work: Subjective Narrations about Psychosocial Working Stress

Since the end of the last century new types of work, employment and management have caused substantial changes in contemporary subjectivity. In the meantime, an increasing social consciousness about psychosocial problems caused by working stress can be observed. In public and media discourses, the „diseases of the soul“ are increasingly linked to flexibilized working and living conditions in late capitalism. On the other hand the reality of „the exhausted self“ (Ehrenberg) is questioned – at least in Germany – on the part of psychiatrists and employers’ associations. At the same time, the „psychomediicalization of the social“ is gaining significance in almost every area of social reality.

In my research I aim to contrast these complex socio-discursive interpretation schemes with the subjective knowledge about psychosocial working stress people develop under flexibilized working conditions. I want to know how affected individuals experience and interpret the experience of emotional stress caused by work. By conducting narrative interviews with persons from different working areas (education, health, industrial production, financial services) who have been suffering from incapacity to work due to psychological strain, the interpretive patterns in which this experience is subjectively framed are investigated. The analysis shows how and to what extent psychological vocabulary and interpretation schemes frame subjective interpretations of stressful working experiences – and that they are used in multifaceted and often creative ways, oscillating for example between criticism of working conditions on the one hand and an psychologically “informed” self-ascription of causes on the other. In my contribution I will explore the types of narration and implicit knowledge individuals concerned by working

JACOBSIEN, HEIKE (Brandenburg University)
Age and Knowledge As Challenging Factors for the Energy Transition in Germany

The German federal policy for phasing out nuclear power and supporting a shift to renewable energies exerts a strong influence on energy supplying companies. They are forced to readapt their business strategies fundamentally. This is a challenging task as German energy suppliers are traditionally very stable and only step by step develop new strategies. This strategy is reflected in the extraordinary long duration of employment contracts, leading to a high average age. Thus, companies need to rearrange their business by mainly relying on personnel that embodies traditional knowledge and orientations. Furthermore, the recruitment of new, well-trained personnel is limited and it is particularly difficult as it is not quite clear what fields of knowledge and which qualifications will be required in the future. The paper explores how energy supplying companies try to find their way into a more sustainable and eco-friendly future of energy supply and use under the given conditions of an aging workforce and predominant conventional orientations and strategies. The aim is instead of developing new organizational strategies or legal and ethical decisions, to focus on the how to reorganize and restructure the existing organization and how employment structures and relationships as well as work organization and qualifications become reorganized. Our qualitative data show, that employees become grouped into newly defined categories of those that are seen as being part of the “future” of the company and those that represent the “traditional” identity of energy suppliers as conservative realms of primary sector stability and security – be it in terms of employment or in terms of infrastructure.

Eco-Innovation – a New Paradigm for Latin America?

Global phenomena of climate change on the one hand and not predictable technological risks of energy supply on the other hand are challenging not only Germany and the European Union but society, politics, science and industry worldwide. The answers to these challenges are very different. Some countries are screening their existing energy concepts and are searching ways of alternative energy, such as legislation on clean technologies, so-called eco-innovation. It is especially this shift to eco-innovation that catches our attention. It is not reserved for energy technologies. Sustainable products can also be shared in other industries, such as textile. But in the ongoing of the energy turn towards promoting renewable energies increasingly subsumed the concept (Cooke 2010). In the last decades energy policy lived a process of securitization. The connotation of energy policy with the field of security policy automatically led to a change of steering visions and strategies. Thus, the shift towards innovation therefore means not also a reorientation of concepts but also a shift of governance towards multi-level-governance (Kern und Bulkeley 2009) – so far the debate in Europe. How is this concept discussed in Latin America? While the shift towards renewable energy is a quite new debate for Europe, Brazil had already a share of 58.4% of renewables on total energy production in 1970 (Maihold und Müller 2012). Nevertheless compliance to renewable energy not always means sustainable innovation. How is the concept of eco-innovation discussed in Latin America? And how far can we observe the above described shift? In order to shed first insight on these questions we analyze the innovation plans of Argentine, Brazil, and Mexico with focus on the link between ecology, innovation and renewable energies. We use the software Atlas.ti to research the plans with a co-occurrence analysis.

GRANGER, ELVIRA* (Heidelberg University, elvira.graner@asia-europe.uni-heidelberg.de)

(Dis-)Connected Youth in Bangladesh. De-Mystifying the Digital Generation

When speaking about the current generation, there is a strong tendency to epitomise them as the "digital generation". While the overall role of communication has already been emphasized in McLuhan’s seminal publication on "Understanding Media" (1962) the more recent technical and technological changes of information technology (IT) have brought these developments to the doorsteps of countries, and their citizens, across the world. At the same time, these technological developments went hand in hand with massive internal social divisions of those who have the access, and the purchasing capacities, to access and utilise these technologies. This debate, captured as the "digital divide" has given rise to more comprehensive studies about social inclusion and exclusion. The quintessential of these studies is to elaborate on the vast disparities of access to any form of digital media, particularly in (so-called) developing countries. At the same time, these global developments pose quite a challenge for any government. In terms of national policies, the current Bangladesh government and their "Digital Bangladesh" policy places a strong emphasis on modern Information Technology services. In their Election Manifesto, they point out their past achievements, and argue that these “made it possible for Bangladesh to enter the digital age” (ibid. 2009, 2). In their “Vision 2021” they have epitomised this policy as “Digital Bangladesh”. Yet, the Bangladesh Youth Survey “Giving Youth A Voice” provides data that strongly question the success of this policy.

Democracy and Inequality in the Philippines and Latin America: Historical Patterns and Political Values

This paper explores the case of the Philippines in light of the Latin American democratization experience. Being a Catholic country, with Spanish heritage and a recent authoritarian past, the Philippines may provide a ‘hoop test’ (i.e. a test of necessary conditions) for theories on Latin American politics. Latin America’s fragility in terms of its history of external domination, as well as the reminiscences of an Iberian political culture and the effects of a statist ideology among elites. These theorized causes are present in the Filipino case as well. Located in Southeast Asia, the Philippines shares several cultural and political features with many Latin American countries, such as social and political inequality, patronage and state inefficiency. Despite such problems, the Philippines and most Latin American countries have managed to sustain a democratization process since the mid-80s. The Philippines and Latin America also face similar challenges, for instance popular dissatisfaction with political elites, high levels of unemployment and also corruption. From this comparison, we argue that the argument of case similarity, first we compare historical patterns of development in the Philippines and Latin America. Then we compare available survey data on Latin America and the Philippines in order to test whether political values are in fact compatible among them. Our main goal is to evaluate if theories on Latin American politics (specifically, inequality and democracy are often explained through the lens of historical and political factors) are also applicable to the Philippine case. If the similarity remains in our study, we may say that the Philippines in fact provides a “hoop test” for Latin America. If not, the challenge becomes to incorporate findings in our understanding of Latin America and the Philippines.

The Matthew Effects of the Canada Research Chairs Program: Do Women Enjoy the Same Benefits As Men?

In a classic 1968 paper Merton described the “Matthew Effect” as the tendency among elite scientists to accumulate advantage. As side analyses, Zuckerman and Cole (1975) documented the experiences of women scientists and found women’s productivity was routinely eclipsed by men’s. This, they argued, accounted for the propensity for men to reap disproportionate rewards over their careers. In the years since, the gendered nature of academic work has been the focus of significant attention around the world. Recently, the Council of the Canadian Academies’ Expert Panel on Women in University Research (2012) found that women continue to face obstacles in their appointment to faculty positions and their progress through the ranks. Structural and individual discrimination continue to have adverse effects on women academicians. In 2000, the Canada Research Chairs program was established to attract and retain research leaders across all disciplines. Initially, most chairs were awarded to men. More than a decade after the program was established, only 26.2% of CRCs are held by women. In this paper, we are interested in the ways in which the Matthew Effect plays out for women and men CRCs. We have previously argued that on many dimensions of professional achievement, status, and rewards, women and men CRCs enjoy similar experiences (Grant and Drakich, 2011). Yet, critical differences do exist and these centre around the gendered nature of academic work and workplaces. In this paper, we focus on measures of research productivity (specifically, research grants and publications), career advancement, and found women’s productivity was routinely eclipsed by men’s. This, they argued, accounted for the propensity for men to reap disproportionate rewards over their careers. In the years since, the gendered nature of academic work has been the focus of significant attention around the world. Recently, the Council of the Canadian Academies’ Expert Panel on Women in University Research (2012) found that women continue to face obstacles in their appointment to faculty positions and their progress through the ranks. Structural and individual discrimination continue to have adverse effects on women academicians.
that men are more likely to enjoy greater benefits. We explore the reasons for the enduring pattern of inequitable distribution of rewards amongst women and men.

Investigating Teachers’ Decision-Making about the Use of Digital Technology in Kindergarten

To secure its place in the global economy, the Australian government (2009) recognises that its citizens require highly advanced Information Communication Technology (ICT) skills to meet the demands of global ‘knowledge’ economies. Political initiatives to introduce digital technology in educational settings have seen the emergence of digital technology educational outcomes within the national early childhood curriculum, The Early Years Learning Framework for Australia (2009) and in Building Waterfalls (2nd edition, 2011) the curriculum framework used by Queensland Creche and Kindergarten teachers. Although emerging in early childhood curricula in the prior-to-school sector, digital technology is not yet visible as a policy priority with a plan for funding of digital technologies and infrastructure for support, or for teacher professional development about the integration of digital technology into classroom practice. Against this backdrop of government political imperatives to become a digitally literate nation, new digital technology curriculum accountabilities and an absence of early childhood education digital technology policy the question arises, “How do teachers make decisions about the use of digital technology in kindergarten classroom practice?”

To address my research interest in teacher decision-making about the use of digital technology in Kindergarten classrooms, this paper draws on interview data gathered from nine teachers working with 3-5 year old children in Creche and Kindergarten classrooms throughout South East Queensland, Australia. The interviews form a subset of PhD research data collected as part of the larger Australian Research Council Discovery Project “Interacting with knowledge, interacting with people: Web searching in early childhood” (Danby, Thorpe, & Davidson # 1100004180). Institutional ethnography provides a means of scrutinising how teachers use digital technology is organised and shaped by the discourses embedded in current early childhood curricula and technology policies.

GRASSI, MARZIA* (University of Lisbon, marzia.grassi@ics.ul.pt)

Places and Belongings: “Circular” Conjugality Between Angola and Portugal

In the context of contemporary studies of families and transnational lives, we study the emergence of new forms of conjugality among heterosexual couples living apart (one in Portugal, the other in Angola). Considering the importance of gender stratification when the domestic space is transnational rather than shared, we seek to understand how the construction of masculinity is reformulated in the couple when the man migrates to the other country to find work. The data gathered in my ongoing project ”Places and belongings: ‘circular’ conjugality between Angola and Portugal” (PTD/AFR/119149/2010) capture the repercussions of mobility on conjugality as well as the self-perception and representations of those involved of the domestic space – here understood in its physical, affective, and social dimensions. When a conjugal pair separates as a result of the migration of one person, fluid forms of conjugality arise, demanding realignment of gender roles. The “circular” forms of conjugality that are emerging today can also be studied from the point of view of Post-colonialism Theory – seen in the continuities and ruptures in Portugal’s colonial imagination, the gender-role building, and the migrations between the two countries. The paper contains a first lecture and analysis of the data already collected in the before mentioned project.

Clouds over Spain: Work and Family in the Age of Austerity

Purpose – This paper aims to contribute to the academic literature in two ways. Firstly, the paper will analyse the impact of the financial crisis on the level of flexibility, autonomy and stress of Spanish employees. Secondly, this study aims to identify if the impact of the economic crisis on the work-family balance differs by sex, educational level, economic sector and regions across Spain.

Design/methodology/approach – The article reviews relevant literature in work-family balance. Two databases (2005 Ad-hoc Module on work life balance; 2010 Ad-hoc module on conciliation between working life and family life) were analysed in order to characterise work-family balance before and during the economic recession.

Findings – The findings revealed that (a) economic crisis had a negative impact on the control and autonomy that Spaniards had of their jobs, (b) economic crisis diminishes the level of flexibility at work (c) economic crisis had a negative impact on the level of stress among Spanish employees.

Originality/value – Despite the explosive growth in the work-family literature, it is no work to find empirical evidence showing the relationship between financial crisis and work-family balance. Moreover, the case of Spain is very interesting given the very specific circumstances of austerity there.

Invisible Assets: What Working Fathers Learn from Their Families

Within the work-family balance literature little is known about the benefits and rewards perceived by working fathers in combining their work and family roles. As literature revealed, research on work-family balance has primarily focus on negative outcomes between work and family domain. The conflict perspective is rooted in scarcity theory (Goode, 1960; Marks, 1977), which assumes that human resources of time, energy and attention are finite. Work-family researchers (Barnett, 1998; Greenhaus and Pararasuraman, 1999) have called for an approach or theory that examines the positive side of work-family balance.

Greenhaus and Powell (2006) did an effort to fully capture the mechanism of enrichment. During the same year, Carlson et al. (2006) published a work-family enrichment scale, based on Greenhaus and Powell’s construct. The recent valid work-family enrichment scale is helping us to examine and determine whether employed parents are gaining knowledge, acquiring skills or having new perspectives in one role that can have a positive impact on the other role. However, neither the theoretical arguments nor the work-family enrichment scale are shedding light on which specific skills, knowledge, resources, values or perspectives are working parents developing or learning in one role that can be transferred in another role and vice versa. Qualitative research methods seem useful for this aim.

Thus, the purpose of this study are, first, to examine if the rewards and benefits perceived by working fathers in occupying both roles fits in the work-family enrichment construct proposed by Greenhaus and Powell (2006), second, to examine if there are differences between the rewards and benefits developed at home and benefits developed at the workplace; third, to extend the work-family enrichment theory to new samples in Catalonia.

When People Fight By Themselves. Anarchist Practices and Values In Grassroots Groups

From the early 21st century, protests in Argentina led by the slogan ‘They all must open the door to a new cycle of mobilizations, both in Latin America and other places around the world, which were led by social subjects excluded from the analyses and definitions of collective action traditionally centered on the institutional and structural dimension of protest. Recently, increasing attention to the cultural and subjective dimensions in the study of social movements has raised the academic and political visibility of grassroots groups, characterized by a social and self-managed organization and proposals where social discourses and practices of anarchism can be observed.

In this paper we wish to contribute to the comprehension of these experiences by putting forward an analysis of the anti-authoritative and self-managed practices inspired in the ethical values of anarchism, based on a piece of research work regarding movements such as NOTAV and NOMUOS in Italy, los indignados in Spain and the insurgency in Oaxaca in Mexico. We aim to highlight that the anarchist values and practices do not arise ‘abruptly’ or as the ‘ultimate’ possibility for change after the failure and the cooptation carried out by the ‘civil society’ and leftist organizations, but consist of a cultural and practical repertoire of protest that has always been present in grassroots organizations.

Based on the direct experience of more than twenty years in the anarchist movement in different countries, such as Italy, Spain, UK and Mexico, and also on ethnographic work, we will show that this interconnection between anarchism and grassroots struggles are not new. As for the anarchist subjects who make themselves present in many of these protests, whether local or national, they have always valued the space of daily practice as a room for struggle and social change.

Secondly, this study aims to identify if the impact of the economic crisis on the work-family balance differs by sex, educational level, economic sector and regions across Spain.

Design/methodology/approach – The article reviews relevant literature in work-family balance. Two databases (2005 Ad-hoc Module on work life balance; 2010 Ad-hoc module on conciliation between working life and family life) were analysed in order to characterise work-family balance before and during the economic recession.
This paper employs a feminist analysis to explore civilian military wives’ experiences of domestic abuse in the British military context. Although military families do not live their lives in complete isolation from the civilian sphere, their lives and communities are shaped to a significant extent by the gendered structures and discourses that construct military culture. Following Stark (2007), I conceptualise domestic abuse as part of a pattern of power and control in which a perpetrator attempts to entrap his/her partner in a state of “unfreedom” through the micro-regulation of his/her everyday life. I suggest that the particularities of life in the British military community reshape the tools and opportunities so, as well as the barriers to, both the perpetration of and the resistance to such a pattern of control. This has implications for help-seeking and the provision of support services.

This paper draws on interviews carried out with civilian women who have experienced abuse in marriages to British servicemen, servicemen who have perpetuated domestic abuse, and military and civilian support workers with experience of supporting either both of these client groups. I tease out the ways in which a range of factors including the material structures of military life, militarised constructions of the public and private spheres, wives’ disempowered position on the borders of the military community, and discourses around heroism, duty, protection, and precarity produce particular vulnerabilities to abuse and particular help-seeking needs. In conclusion, I explore the contributions of this paper for the provision of services to this particular group of women as well as its wider implications for understanding the challenges faced by military families in the 21st century.

RC12-230.1
GRAY, KEVIN* (American University of Sharjah, kegray@aus.edu) Systems Theory and the Constitutionalization of International Law

In this paper, I propose a critique of the Habermasian model of the legitimacy of global institutions, drawing on Luhmann to explain how legal systems multiply, recreate and maintain themselves in worldwide social system. Recently, legal theorists have drawn on Habermas work to suggest that it is possible to imagine a constitutionalization of international law and legitimation of international nation along broadly Habermasian lines (Von Bogdandy 2012; Von Bogdandy, Dann and Goldmann 2008; Von Bogdandy and Dellavalle 2009; Von Bogdandy 2011). The broad trend has been to theorize the development of legitimate international law in terms of processes of will formation outside the state that mirrors the distinction drawn by Habermas and Fraser between strong and weak publics where strong publics are parliaments and other deliberative institutions, and weak publics are those public spaces which influence parliaments and international organizations such as the EU, international courts, NGOs, etc. Similarly, the tendency is to treat the role of law in terms of the hinge theory of law as outlined in Between Facts and Norms—law is a transformer which transforms commands from the public sphere and the lifeworld into a specific language of commands for the economic and bureaucratic fields (Habermas 1994).

I will argue, against the Habermasian, in my paper that the model of international law proposed here is empirically incompatible with law making in the international arena. Luhmann and Teubner’s model of law formation does a better job of imagining a constitutionalization of international law and legitimation of international arenas. Luhmann and Teubner’s model of law formation does a better job of imagining a constitutionalization of international law and legitimation of international arenas and political conflict since 2006. The predominance of Theravada Buddhism is considered an important aspect of the Thai setting since it influences Thai people’s attitudes, thoughts, and ways of life. The purposes of this study are to explore whether the level of happiness is changed over the period and whether religiosity and spirituality has a significant relationship with happiness among Thai people.

GRAY, ROSSARIN SOOTTIPONG* (Mahidol University, rossarin.gra@mahidol.ac.th) NGOWIWATCHAI, NONGLAK (National Statistical Office, Ministry of Information and Technology) Religiosity, Spirituality and Happiness In Buddhist Thailand

Thailand, a Buddhist country in Southeast Asia, has experienced deep social division and political conflict since 2006. The predominance of Theravada Buddhism is considered an important aspect of the Thai setting since it influences Thai people’s attitudes, thoughts, and ways of life. The purposes of this study are to explore whether the level of happiness is changed over the period and whether religiosity and spirituality has a significant relationship with happiness among Thai people. The pooled data of population age 15 years and over from the National Statistical Office described in this paper illustrates the innovative characteristics of activism to promote access to patented antiretroviral drugs priced beyond the means of developing country governments, with significant success. Following its successes, however, the movement largely demobilised. The recent patent dispute between Novartis and the Indian patent office over the rejected patent application for the cancer drug imatinib (sold as Glivec)—the rejection eventually confirmed by the Indian Supreme Court in 2013—spurred existing activist networks into action for a globally-coordinated campaign in support of the rejection (especially after the United States placed India on a trade “watchlist” in response). The mobilisation described in this paper illustrates the innovative characteristics of activism to promote access to medicines in the context of globalised corporate power, as well as global trade and intellectual property rights regimes. These forms of organisation include North-South and South-South collaboration and horizontal forms of organisation that span geographic and sectoral boundaries—representing what Ferguson (2004) might have termed ‘horizontal topologies of power’—in order to deploy influence and social power at the global level. The paper further develops the ‘networks of influence’ theorisation of transnational civil society mobilisation previously described.

**Immigration and Public Opinion in Japan: Keys to Fostering Integration**

It is often hoped that efforts at integrating foreign immigrant populations on the part of both local communities and government will bring about a more favorable perception by the public at large. Yet as immigrant populations increase, public opinion tends to get stuck in the middle—whether through the case of an individual or through statistical cases, research examining public opinion on immigration in Japan is surprisingly rare. Public opposition to immigration is often unquestioningly taken as a given with little subsequent analysis, either due to language barriers or a lack of interest on the part of Western scholars. Utilizing data from nationally representative public opinion polls, this paper aims to bridge this gap. We propose to dig deeper into public opinion on immigration in Japan, arguing that while the public perception may remain negative overall, there are a number of important mitigating factors that can elicit more positive associations with immigration in the country. If communities and local policymakers hope to foster integration and improve relations with immigrant communities, this research can provide important clues as to what sort of actions can be taken.

**Criminal Careers: Discrete or Continuous CANCELLED**

Numerous empirical studies of criminal careers have made use of finite mixture modeling to analyze sequences of events such as crimes or arrests. This approach represents a set of individual event sequences with a number of discrete trajectories. Individuals are typically matched to the trajectory that is most likely, given the distinctive pattern of that individual's sequence. We use hierarchical linear modeling and individual time series techniques to test the assumption that arrest trajectories are meaningfully and usefully classified into a small number of mutually exclusive discrete classes, using data for 332 males released from the California Youth Authority in 1981 and 1986, and followed for several decades after release. In this data set we find little evidence of sharply discrete arrest trajectories.

**“What is to be Sustained?: Towards a Critical Theory of Urban Sustainability”**

We live in a time when the need for urban sustainability has become a new common sense. We daily witness confirmation of the famous prediction made by Henri Lefebvre that our planet is becoming progressively urbanized, as well as more crisis-prone (Lefebvre, 1970). Urban sustainability appears to many the “hardest form”: unilateral military intervention. From a social constructionist standpoint (in distinction from, say, a theological or metaphysical one), while human rights might be thought to involve obligations toward humanity as a whole, for every given individual in a particular political community, a human right to democracy in any sense? Did any part make the idea of a human right to democracy plausible? A right is plausible only given some connection to specific duty-holders, to financial support of domestic opposition groups, to conditions on aid packages, to the “hardest form”: unilateral military intervention. From a social constructionist standpoint (in distinction from, say, a theological or metaphorical one), while human rights might be thought to involve obligations toward humanity as a whole, for every given individual in a particular political community, a human right to democracy makes no sense, and outside intervention toward encouraging local democracy would not be warranted on human rights grounds. Still, the local vernacularization of human rights could possibly be sustained.

**JS-28.1**

**GREGG, BENJAMIN**

* (University of Texas at Austin, bgregg@austin.utexas.edu)

**The Local Construction Of a Human Right To Democracy**

Is the idea of a human right to democracy coherent? Sociologically oriented human rights studies can usefully identify civil society processes that show why and how particular societies have come to embrace, to some extent, various kinds of human rights standards. These are empirical studies in vernacularization, i.e., the translation of human rights norms into local practice. Did any part of the Arab Spring, which took place in non-democratic communities, vernacularize democracy in any sense? Did any part make the idea of a human right to democracy plausible? A right is plausible only given some connection to specific duty-holders, to financial support of domestic opposition groups, to conditions on aid packages, to the “hardest form”: unilateral military intervention. From a social constructionist standpoint (in distinction from, say, a theological or metaphysical one), while human rights might be thought to involve obligations toward humanity as a whole, for every given individual in a particular political community, a human right to democracy in any sense? Did any part make the idea of a human right to democracy plausible? A right is plausible only given some connection to specific duty-holders, to financial support of domestic opposition groups, to conditions on aid packages, to the “hardest form”: unilateral military intervention.

**WHAT COGNITIVE SOCIOLOGY CAN CONTRIBUTE TO HUMAN RIGHTS DIFFUSION**

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Because many a social construction appears parochial from standpoints outside and beyond the community of origin, one wonders: On what basis might one parochialism ever justifiably trump another? Specifically, how might particular human rights be made widely plausible from within communities in which they currently appear implausible for local cultural reasons? The words “from within” already suggest a central aspect of my thesis: a parochial idea is legitimate for the community that embraces it. Human rights can be legitimate for any community that comes to embrace them. But how can particular human rights become persuasive within cultural communities tomorrow that today regard them as alien or misguided? The conception should have critical implications: conceptual for the sociology of culture; practically for the human rights project. My approach aspires to redeem both possibilities. As theory, it combines cognitive sociology with normative philosophy. With practical intent, it would facilitate human rights diffusion through a new conceptual insight. It construes human rights as a cultural phenomenon and (3) as a social system. (6) These steps render human rights, understood in the two senses: (4) as a “cognitive community” and (5) as a social system. (6) These steps render human rights, understood in the theoretically least taxying way as merely parochial social constructions, nonetheless less spreadable across cultural and political boundaries – through a technique of “cognitive reframing.”

GREGORY, MICHELE* (City University of New York, mrgcpw@earthlink.net)

Body, Sports and Work

Organizations, from financial institutions, government bodies to hospitals are important spaces for understanding the relationship between sports, bodies and production. This relationship is particularly vital when employers use competitive sports to construct hegemonic masculinities, which sometimes affect workplace opportunities for the disabled, immigrants, working classes and ethnic, racial, gender and sexual minorities. In a recent lawsuit filed by former female employees of Goldman Sachs, one alleged that ‘golf’, ‘push-up contests’ and ‘other physical pursuits’ represented the culture of the trading floor (Lattman 2010, p. B1). Other lawsuits against banks and investment firms have involved discrimination lawsuits ($46 million) and the use of male sports was notable (Anderson 2007, p. C18). These lawsuits illustrate that competitive male sports are used by employers as a form of cultural capital, excluding women and possibly ‘others’ who have no interest in sports and who do not fit the athletic male model of fitness.

Using empirical case studies, I will apply the concept that I call ‘sportswork’ to describe and analyse how white collar professionals in non-sport organizations use sport in the workplace to engage in a range of practices, such as symbolic practices, actual practices and exclusionary practices. Sports is not devoid of power and social relations – class, disabled, gender, immigrant status, racial and sexuality (van Ingen, 2003) – therefore the paper will also illustrate how sportswork is used by employees to manage their bodies and how it shapes employees’ perceptions of their and others bodies.

On Religion and Hospitality Cultures in Economic Relations

Recently prominent scholars (as Beckford 2003, Casanova 2004, Habermas 1993) have offered an argument for integrating the sociology of religion into the landscape for the Catholic Church’s symbolic and practical role in public institutions, from financial institutions, government bodies to hospitals. This paper aims at contributing to the debate with an argument for a historical study of Copenhagen. It addresses the role of some of the intermediaries in the age of the European trading companies many of whom travelled extensively namely the merchants - with a focus on Port Jews involved in the seafaring and maritime economy (Cesaroni 2000). It studies the role of these intermediaries in disseminating the rules of the marketplace from other port cities with direct access to the Atlantic and Indian Ocean. And it takes a closer look into how these rules have structured particular ‘spaces of hospitality’ in the city of Copenhagen.

‘the Veiler and the Rapist’: Muslim Masculinity and the ‘Feminist’ French Republic

In the early 2000s in France an intense and highly emotive public debate took place around a phenomenon called ‘les tournantes’ – a slang term for gang rapes that were allegedly widespread in banlieues (poor housing estates) around Paris. What started as a sensationalised march by women of the banlieues under the banner of Ni Putes Ni Soumises(’Neither Sluts nor Submissives’) protest against violence and sexual violence was later entwined with debates about Islam, immigration and the future of the French Republic. This was further aided by another round of ‘hijab’ laws (first introduced in the late 1980s) in 2004 banning girls from wearing Muslim headscarves in public schools and various panic around an increase in radical Islam in France. This paper seeks to contextualise the popular debate in France against the backdrop of discourses of French Republican values and the colonial legacy of the banlieues. The image of the young Muslim man as a deviant Veiller and Rapist became ubiquitous in the French popular imaginary.

France is not the only country to have experienced this problematisation and pathologisation of Muslim masculinities but its particular brand of Republican political rhetoric has affected the ways in which this discourse has been constructed. This paper examines a range of texts (media, cinematic, autobiographical/testimonial literature), which sought to represent and reflect on les tournantes. In doing this, this paper seeks to contextualise the popular debate in France against the backdrop of discourses of French Republican values and the colonial legacy of the banlieues, which continue to haunt France’s relationship with its Muslim population.

Facing Secularization and Diversification: The Role of the Catholic Church in Public Institutions in Spain

Spain, together with Portugal and Italy, is part of a ‘family of nations’ (Castles, 1993) where the Catholic Church has historically had a monopolistic role in the religious field. However, rapid transformations have displaced the Church from its old hegemony and have drawn a new scenario in Southern European countries. In Spain, the constitutional disestablishment, the detachment of a great part of the population from the traditional Catholic structures and the significant increase in religious diversity have compelled the Church to reconsider its own position, role and strategy within the Spanish society. Two lines of contention delimit this readjustment: the secular/religious divide and the religious monoply/religious diversity division. In this paper we analyse the effects of the changing religious landscape for the Catholic Church’s symbolic and practical role in public institutions. The paper draws upon the fieldwork (interviews and observations) carried....
out in public institutions (hospitals and prisons), where religion meets the secular and the old religious monopoly meets religious diversification. The research has been conducted in the framework of the project The accommodation of religious diversity in hospitals and prisons in Spain funded by the National Research Programme of the Spanish Ministry of Economy and Competitiveness.

Educational Accountability, Safety, and Youth

Abstract:
Young people who feel unsafe and disconnected from their neighbourhoods are most likely to engage in violent or unsafe actions, themselves (McMurtry & Curling, 2008). Students designated as ‘unsafe’ through Ontario’s Safe Schools legislation are pushed out of their neighbourhood schools through suspension, expulsion, and proactive relocation processes. In this way, Safe Schools and other institutional processes that are designed to mediate the unsafe behaviour of particular young people also serve to exclude these youth from their neighbourhoods and neighbourhood institutions, increasing the risk that the young person will engage in further violence. During our presentation, we will describe a project that seeks to understand how young people’s transitions between programs and between systems (e.g., education and youth criminal justice) influence their own experiences of safety and unsafety and their connections to their neighbourhoods, to community-based organizations, and to mainstream institutions.

Research for this project is being conducted in collaboration with a community hub organization – Promoting Education and Community Health (PEACH). PEACH is located in a designated priority neighbourhood in Toronto. It houses a Safe and Caring Schools program for the Toronto and the Toronto Catholic District School Boards. The research – an institutional ethnography – documents and analyzes inter-institutional processes, and the project seeks to understand the contexts of young people’s experiences of safety and unsafety in the neighbourhood. Focusing on young people’s transitions within and between institutional systems, we seek to understand the contexts of young people’s experiences of safety and unsafety, and their connections to their neighbourhoods and community organizations.

Finding a Language for Mental Distress: Narrative Accounts of ECT

Electroconvulsive therapy (ECT) remains one of the most controversial treatments in mental health today. It can cause permanent loss of some personal memories. ECT if often given to people with severe depression who have not responded to other treatments or for people who have responded to ECT treatment previously but whose symptoms have recurred. The effectiveness of ECT vary from 40-70%. The decision to have ECT is viewed seriously by clinicians and ECT remains one of the most intrusive clinical practices in modern psychiatry. The issue of “capacity” to make a decision is viewed seriously by the medical establishment in the UK as the ability to (a) understand the issues and (b) to weigh them in making a decision. However under the Mental Capacity Act, a doctor can declare that it is in their best interests. Alternatively, they may be detained under a section of the Mental Health Act. If, on the other hand, they are capacitous, then their wish not to have ECT must be respected: they cannot receive ECT, even if they are detained under the Mental Health Act.

However comparatively little qualitative research has been conducted into the decision-making process, experience of ECT or a fuller narrative investigation of the effects of ECT. This paper presents this decision as located in the wider context of someone’s feelings about their mental health, their social care and support networks and their experience of mental health treatment – including their experiences of compulsory care. Through the analysis of the narratives of 30 people who have been offered ECT, and 13 carers, (collected by the Health Experiences Research Group at the University of Oxford) the broad social context of this decision is described and analysed with some surprising results.

Educational Inequalities in the Access to Higher Education at the Intersection of Gender and Migrant Background: Results from Switzerland, Germany and France

Gender inequalities as well as migrant-related inequalities in education have been profoundly analysed in sociology during the last decades. While gender inequalities were shown to have been reversed during the last decades (Buchmann et al. 2008), youth with a migrant background appeared to generally perform lower in most European educational systems (Heath et al. 2008). However if it is controlled for social origin and school performance – and in line with migrants' higher educational aspirations - many studies reveal increased transitions of migrant youths to the more demanding educational tracks available to them (Jackson et al. 2012).

In spite of these studies, the question of a possible interaction between gender and migrant background has been rarely investigated so far (e.g. Fleischmann and Kristen 2011). Given this lack of research, the paper focuses on such educational inequalities at the intersection of gender and migrant background at the transition to higher education.

In order to formulate the theoretical expectations, we refer to decision theory. As an example the analysis stands a comparison of Switzerland (datasource: TRED), Germany (HIS-Studienberechtigte 2002) and France (Panel d’élèves du second degré 1995). Multivariate regression models were run in order to investigate the research questions.

Preliminary results indicate increased transition rates to Higher Education for second-generation males from socially disadvantaged groups for Switzerland and Germany, if controlled for social origin. A deeper analysis for Switzerland thereby also reveals that such advantages are largely driven by the high occupational aspirations these males pursue.

However, the assumption that second-generation females originating from countries characterised by a rather patriarchal culture would encounter disadvantages at the transition to higher education was not backed by the data for none of the countries under consideration.

GRIGORIEVA, LUDMILA* (Krasnoyarsk State Pedagogical Univ, adonai@bk.ru)

Sociologist of Religion: Insider As a Professional Outsider. on Professional Competence and Potential Engagement

This type of research is about understanding concealed internal meanings of a religious belief and religious action from the viewpoint of Max Weber’s interpretative understanding of social action. This method helps to reveal subjective presumptions, incentives and personal foundations for religious belonging and religious service. This research requires specific conditions and specific methods: “ethnographic”, “anthropological” and phenomenological methods. Typical sociologists of religion face numerous problems when they study unknown communities as outsiders. The difficulties are about recruiting, duration and continuity of staying in a group, the difficulty of understanding the internal worlds of believers, etc.

Contemporary religious communities involve people of every social class, educational level and intellectual abilities. Sociological education per se does not always result in high quality research.

It can be argued that an ‘original insider’ cannot avoid religious engagement or that they cannot be completely objective, an important rule to observe in any research. The author explains that every society member has a greater or lesser degree of religious engagement caused by their initial attitude to any religion (Max Weber, ‘Intellectual Honesty as a Principle of Religious Cognition’). Speaking generally, each of us is ‘engaged’ by our temperament, nature, experience, beliefs, prejudices, etc. Being objective might be a theoretical objective for any researcher with a bit of self-discipline and an honest attempt to distract from their personality. A ‘professional outsider’ is not especially different from an ‘original insider’ in this respect.

The problems might be mitigated if original insiders could become professional outsiders. They could be members of a studied community by birth, education and conversion. And essentially, they would have the necessary level of intellectual culture and training. The paper discusses some methods of finding, attracting and training such researchers.

GRIMMER, SASCHA* (University of Basel, sascha.grimmer@unibas.ch)

Sociology of Corruption

Corruption under the perspective of its effect on the stability of macro-social democratic societies shall be discussed. It appears as deviation from normed functionalities in spheres of society with the aim of taking advantage for all parties involved in the corruption relationship. In the theory of differentiation this is an effect of dedifferentiation, a throwback of modernity, because their superior, functional differentiation and specialization based operation has been abandoned. Corruption appears to herein as functional equivalent of subsystem-specific function logics. It appears from the normative point of view of democratic theory and a corresponding democratic political culture as a system in jeopardy context. The reference to the political culture may be enough to highlight that corruption in everyday life and its many small, non-significant standard violations begins with each individual. The studies of Morlok and Tänzer refer to such structuralizations, which promote structural level corruption. In the sociology of domination and social theory, where corruption with respect to the functioning of organizations or subsystems have no relevant role. They operate as criminalized forms of deviant behavior and not as a functional equivalent to...
In the early 90’s of XX century Russia adopted the law on freedom of conscience and Russian people were enabled to express their religious views. Religion became an opportunity to gain inner stability in the midst of a social chaos. All that in a very short time contributed to a higher percentage of formal Orthodox Christian believers but a lower proportion of practicing believers. In this paper we analyze the social phenomenon of university students’ mixed religiosity in post-Soviet Russia. Results for our research are based on interviews conducted with 323 Russian university students, between 18 and 25 years old. Nearly 68% of the respondents stated that they believe in God, however religious faith comes second to last out of 14 most important life values. 11% of those respondents can be attributed to a ‘practicing Orthodox believers’ group. In the course of our research, we have identified three religiosity types of the university students: formally religious, actively practicing and spiritual. We argue that a significant gap between formally religious and actively practicing Orthodox students has occurred mainly because of a prevalent mixed religiosity among the students and might be explained in terms of uninstitutionalized forms of religion. Mixed religiosity is defined as a combination of different elements of traditional religious concepts and spiritual ideas and practices. The processes of secularization at macro- and meso-levels are analyzed in the article and viewed as preconditions for a mixed religiosity at the micro-level.

To sum it up, we argue that a broken religious socialization between generations is an important factor for emerging mixed religiosity among Russian university students. The attitude toward religion in the Soviet society, that affected the behavior of our respondents’ parents, continues to indirectly influence the religiosity of students in the 2010s.

**Comparing Occupy Movements: Global Mobilizing Power, Local Political Context and Dynamic**

A new wave of mass mobilization and popular struggle has spread all over the world since 2011, traveling from Tunisia and Egypt to Spain, Chile and Israel and other places. The aim of the paper is to discuss the way in which the global aging crisis gives special configurations to elderly care. To this end, an analysis of the Brazilian recent debate on transforming caregiver into a professional career that took place in the legislative arena is juxtaposed to the practical solution given to elderly in middle and low-income families in Italy. The absence of public policies directed to old age and the new needs of care reconfigure and give new meaning to women migration and to domestic paid work.

**Immigration and Elderly Care in Italy and Brazil**

This paper focuses on the migration of women from Latin America and Eastern Europe to work with home care of the elderly in Italy. Through an ethnographic approach and based on field research conducted in Bologna with caregivers and their employers, the aim of this paper is to discuss: (1) the configuration of this new growing market that responds to the rapid aging of the world’s population; (2) gender, age and nationality produce categories of differentiation and inequality; (3) how the visibility gained by the duo combining two unwanted populations -the elderly and immigrants- redefines forms dependence, gives new meaning to family relationships, to obligations of the state and to domestic life. The discussion of these topics is guided by a double comparative perspective: family relations in Brazil marked by the presence of domestic workers and the transnational sex industry and the global care industry.

**Comparing Occupy Movements: Global Mobilizing Power, Local Political Context and Dynamic**

A new wave of mass mobilization and popular struggle has spread all over the world since 2011, traveling from Tunisia and Egypt to Spain, Chile and Israel and the USA. When the wave arrived to the US the New Yorkers gave to name to the global new repertoire of resistance - occupy movement. Although the events in one place encouraged activists in other places, the content and impact of the new movements was determined by the local political conditions. It is my argument that despite all the differences and peculiarities of political context and dynamics, there is a common pattern to all movements: the need to occupy the public space in order to be recognized and to talk in the name of the people, the masses or 99%. All mobilizations are resisting the economic damage caused to middle and lower classes by the neo-liberal economic policies. Two main effects of neo-liberal policies gave rise to the occupy movement’s new repertoire: the individualism that destroys social solidarity, and the weakening of political parties as the locus of negotiations between civil society and the state. Occupying the public sphere is an innovative repertoire designed to reconstruct social solidarity and “peoplehood” that have been destroyed by the neo-liberal policies, and to make claims in its name. The paper will compare various the most salient cases of popular mobilization, and the specific political contexts that facilitate the movement, and the different political dynamics they provoke.

**Orthodox Christianity and Mixed Religiosity Among Russian University Students**

In the modern society the elimination of the problem of youth employment becomes one of the main tasks for every country despite of its level of development and income. It is absolutely clear that developing countries and countries with transition economic systems have more difficult situation and have less institutionalized conditions for providing enough possibilities for young people. One of the most perspective trend that is considered as a reliable solution to this problem in the world is the self-employment youth. Though international experience is of great help for some young current and potential entrepreneurs, the extent of its efficiency in countries like Russia is still questionable.

The author suggests a hypothesis that these difficulties can be solved by eliminating unnecessary institutional formations and correction of youth policy as a whole. The author had conducted a survey that was aimed at identifying the main obstacles to the creation of youth business. There were surveyed 800 university full-time students aged 18 to 25 years. The results of the study showed that the most significant barriers to the startup. For example “unofficial payments at the opening of business” were checked by 46.8% of respondents, while 59.2% were concerned about “additional fees to inspection bodies” though there are some ways that make possible to avoid such fees students consider them as something inevitable. This imbalance shows that there are some problems with information support of youth startups while students themselves are not too bothered by this problem (19.2%). Further analysis of the results showed that some of the essential elements of the current policy of the country are neglected. Author believes that such situation is represented in many regions and countries and offers some recommendations in order to reduce the dysfunctions of current programs for business-active youth.
Following the Constitution of an Organizational “Way of Seeing”: Intertwining Talk, Body and Materiality in Context

Many practices within organizations are centered on the visual capacities of the agents. For example, in the field of architecture (Ewenstein & White, 2007; Styrhe, 2011), construction (Nicolini, 2007), medicine (Mondada, 2003; Alac, 2008), scientific work (Daston, 2008; Vitteret, 2012; Vertesi, 2012), researchers have shown how the members share a “professional vision” (Goodwin, 1994). These studies investigated visual practices in professional communities and demonstrated their role in the production, creation of knowledge, expertise and so on. Following the work initiated by these studies, my objective is to analyze and understand how an organizational “way of seeing” is interactionally constituted and shared as a means to sustain the production of expertise. To do so, I conducted an organizational ethnography (Ybema et al., 2009) in 2012 in a firm of land surveyors. The video recording of the daily activities was privileged (Heath et al., 2010) in order to grasp the multidimensional dimension of the interactions (Mondada, 2008). I studied the survey work as a situated activity and an interactional activity based on a variety of multimodal resources such as speech, gestures and manipulation of objects or technologies. In this study, I analyzed how organizational members progressively and jointly build expertise about a property, and, in particular, how specific “practices of seeing” (Styrhe, 2010) are constituted through the daily work activities. My goal is to reveal how materiality, corporeality and language play a key role in the constitution of a collective “way of seeing” in organization. In this presentation, I would like to contribute to the discussion of the role of “socio-technical arrangements/agencements” (Callon, 2004; Latour, 2005) in processes of constituting an organizational ‘way of seeing’.

GROSS, DINAH* (University of Lausanne, Dinah.Gross@unil.ch)
Representations of Desirability and Accessibility of Jobs in the Transition to Vocational Training in Switzerland

Transition to vocational training in Switzerland is still characterized by social inequalities, in particular in terms of gender, social origin and nationality. In this paper I wish to explore how the theory of social representations can help us understand the way in which young people make in obligatory school imagine their future jobs, how they represent them, their professional aspirations and choices. In particular I wish to explore how different characteristics of an imagined job, its desirability and its accessibility, can be differently emphasized among different social groups. I will explore the factors that contribute to this different emphasis, in particular the consequences of belief/disbelief in the possibility of social mobility, of degree of self-confidence, of school results and of the representation of how difficult the studies to access a particular profession are, on evaluations of accessibility and the consequences of representations as to social prestige of jobs, as to school and acquiring new competences, as to parental expectations and as to gender roles, on evaluations of desirability. This research is based on a dataset that was gathered from over 3000 13-15 year-olds in five Swiss cantons in 2011.

GROSS, TOMA$ (University of Helsinki, toomas.gross@helsinki.fi)
Marathon Running, “Bodies for Others,” and Social Class in Post-Communist Estonia

Like many other countries, Estonia has in recent years experienced a veritable boom of recreational long-distance running. Since the turn of the millennium, the number of people running at least one marathon a year has grown nearly twenty-fold, and year-on-year growth rate of marathon runners in Estonia has been constantly over twenty percent. This paper, based on an ethnographic study, seeks to understand the corollaries of this process and links the marathon boom to wider socio-economic and value changes in the post-communist setting. The paper pays special attention to the phenomenology of the body in the context of novel ideals of health, welfare, and success in post-communist Estonia. Bourdieu’s notion of “bodies for others” is particularly helpful when trying to make sense of the runners’ perception of their bodies in the new social and economic environment. As will be argued, long-distance running as a bodily experience is related to class identity. In Estonia, a sport is more often adopted by a social class if it does not contradict that class’s relation to the body at its deepest and most unconscious level. The paper demonstrates that subscribing one’s body to regular physical strain when training for and running marathons corresponds to various class-specific ideals of self-discipline, motivation, success, and perseverance. Also, runners now increasingly subject their bodies to constant self-monitoring and measurement by means of modern technology. Such technologically enhanced and informed “optimisation of the self” constitutes a new form of bio-politics that fits with the neoliberal values of efficiency and productivity.

GROSSMANN, KATRIN* (Helmholtz Centre for Environmental Research - UFZ, kattrin.grossmann@ufz.de)

Exploring Residential Mobility As a Spatial Practice Via Qualitative Interviews, Quantitative Survey and Agent Based Modeling

The paper reports on a collaboration of sociologists and landscape ecologists in understanding future residential patterns in a medium sized shrinking city in Germany. Shrinking cities are an especially interesting case here, because numbers of inner city relocations are in general higher than in other cities (Sturm et al. 2013 for Germany). This is due to housing over-supply with more and cheaper offers being available. Like this, patterns of socio-spatial segregation can alter faster.

In a step-wise design, we included inductive and deductive steps, qualitative and quantitative approaches and finally the construction of an agent-based model to simulate future households residential mobility patterns. Firstly, we explored mobility practices by means of in-depth interviews from which we derived context-appropriate information on the orientations and decision criteria of residents. Here, space is included as the life worlds of interviewees.

Secondly, from these results, we constructed a classic questionnaire survey to achieve representative data on the decision criteria among different social and demographic groups. In this step, administrative spatial boundaries were introduced in order to standardize questionnaire responses. From the survey results, thirdly, we develop rules of behavior of households and simulate their decisions in an agent-based model (ABM) as a method to understand patterns emerging from individual behavior. Thus, ABMs use abstract spatial categories and typologies of spatial practices of agents (households in our case). In ABMs, space can be both an independent variable (thus influencing behaviour) and a dependent variable (if the space is influenced by human actions) In our case, space is an independent variable in that location choice depends on the socio-spatial structures and the images attached to certain places and neighbourhoods, on distances to work-places, social networks, infrastructure access etc. Space is a dependent variable when analyzing collective households migration patterns and the changed patterns of socio-spatial segregation.
Socio-Spatial Inequalities and Socio-Spatial Policies in Shrinking Cities

Socio-spatial segregation – the question of the uneven distribution of social groups in urban space – is a classic of urban research literature. The extensive body of literature was elaborated set against the background of growing cities all pointing to the growing spatial separation of social groups in today’s cities. Less is known about the dynamics and patterns of socio-spatial segregation in shrinking cities that is cities which loose population over a longer period of time due to a bundle of causes, ranging worldwide from de-industrialization or other economic restructuring, waves of suburbanization, political change or conflict, natural hazards or demographic change. In our paper, in a first step we analyze how urban shrinkage impacts on the process and patterns of socio-spatial segregation. These are based on empirical work in three of the case studies of the EU 7th Framework research project “Shrink Smart”: Leipzig/ Germany, Ostrava/ Czech Republic and Genoa/ Italy. The loss of inhabitants due to far reaching de-industrialization experiences, job migration, suburbanization and steep drops in fertility rates impacted on urban structures in a variety of policy fields, socio-spatial segregation being one of them. With the support of selected data, we shed some light on how urban shrinkage influences the social make up of cities. We will show that in all case studies, population decline acts as a catalyst to socio-spatial segregation leading to pockets of rapid change and decline. Set against this background, in a second step, we examine which policies are promoted to solve problems such as ethnic segregation, aging, and socio-spatial inequalities. The results show that even though shrinkage is related to increased social changes for social cohesion, the attempts of policies to tackle them still appear to be secondary priorities, sectoral rather than comprehensive, and involve a certain delay.

GROTOWSKA-LEDER, JOLANTA* (Institute for Social Initiatives, leder@interia.pl)

The Risk of Becoming NEET in Poland

The emerging phenomenon of young NEETs in recent decades has been linked to transformation processes of societies like the global processes of individualization and de-institutionalisation of a life-course and individualization of social risks (i.e. Beck, 1996). The effect of de-institutionalisation seems to be much stronger in Central and East-European EU member states, also in Poland, where the collapse of the strictly regulated old system has considerably increased flexibility and vulnerability of youth transitions if compared to the old EU members. The economic recession starting from the late 2000s has further worsened the process of young people's transitions towards independent living. Becoming NEET is the risk for a young people and for society.

The main question of the paper is on the scale and dynamic of the Polish NEET population and its heterogeneity in perspective of ways and barriers of transition to independent living of the young. I also discuss the consequences of being NEET for young people and for societies. The analysis are based on quantitative data of Polish Central Statistical Office and the Eurostat the disclosure of the scale, dynamics and differentiation of socio-economic characteristic and on qualitative data collecting of own research to show the reasons of the young belonging to NEET for their fate and the decision to remain outside the labor market and education and consequences for their fate and the situation in the society.

GROTOWSKA-LEDER, JOLANTA* (Institute of Sociology, University of Lodz, leder@interia.pl)

Why Do They Sit at Home? the Neet Youth in Poland in Perspective of UE

The paper focuses on NEET youth in Poland in the perspective of EU. The NEET is the acronym of the young who are not in education, employment or training and first emerged in the UK in the late 1980s, reflecting an alternative way of categorizing young people following changes in unemployment benefit policies. Now the interest in the NEET group has grown at EU policy level, and NEET-equivalent definitions have been discussed.

The emerging phenomenon of young NEETs in recent decades has been linked to transformation processes of societies like the global processes of individualization and de-institutionalisation of a life-course and individualization of social risks (i.e. Beck, 1996). The effect of de-institutionalisation seems to be much stronger in Central and East-European EU member states, also in Poland, where the collapse of the strictly regulated old system has considerably increased flexibility and vulnerability of youth transitions if compared to the old EU members. The economic recession starting from the late 2000s has further worsened the process of young people's transitions towards independent living.

The main question of the paper is on the scale and dynamic of the Polish NEET population and its heterogeneity in perspective of ways and barriers of transition to independent living of the young. The study are based on quantitative data of the Eurostat and Polish Central Statistical Office for the disclosure of the scale, dynamics and differentiation of socio-economic characteristic and on qualitative data collecting of own research to show the reasons of the young belonging to NEET for their fate and the decision to remain outside the labor market and education. This part of the analysis concentrate of most significant events in a young Pole’s life during the transition from childhood into independent adult life (from education to employment, leaving parental home, family formation, etc.).

GRUJIC, MARIJA* (Goethe University, marija.grujic@gmail.com)

The Ambivalence of Memory and History - the Case of Kosovo and Serbia in the Biographies of the Kosovar Serbs

The main topic of my presentation is how Serbian and Kosovar histories are discussed and negotiated in the biographies of the Kosovo Serbs living in the displacement in Serbia. I am drawing on the biographical interviews collected in Serbia in 2012, and my ongoing doctoral research on the intersectionality of national, gender and religious facets in the social and political realities of the war and belligerent nationalism caused migrations.

In particular, I want to focus on the interrelatedness between political (national) and religious dominant discourses on Kosovo as “Heart of Serbia” or “Serbian Jerusalem” in the biographies of the Kosovar Serbs. Therefore, I am looking into the period after the North Atlantic Treaty Organization (NATO) bombing of Kosovo and Serbia in 1999 (when majority of the Serbian population left Kosovo), and the social and political situating of Kosovo in the Serbian national-religious (Serbian Orthodox) memory practices relevant to this event and the wider understanding of the “Kosovo conflict”.

The question of history has emerged in my research as significant topic, and I am currently analyzing its relatedness. First, there is an ambivalences of knowledge(s) and memories on the Kosovar and Serbian histories - both on the individual and collective level, and second that the history of the former Yugoslavian conflicts and therefore ”Kosovo conflict” is often orientalized and balkanized, both in the scholarly work and the media reporting.

My findings are that personal and collective histories are intertwined in the religious and national discourses on the collective (nation, religious community) histories. Moreover, I am arguing that in the case of the wars and conflicts this entanglement becomes more visible and prevailing, leaving the individual almost hidden in the biographies.

GRUJIC, MARIJA* (Goethe University, marija.grujic@gmail.com)

Who Are Kosovars? Multifaceted Positioning of Internally Displaced Persons (IDPs) from Kosovo in Serbia

In my paper I discuss the politics of belonging and multifaceted positioning of the internally displaced persons (IDPs) from Kosovo in Serbia and the racialized images of “Kosovar”, as part of the IDP from Kosovo group, in the Serbian society. Internal displacement in Serbia is not only a political category but as well a discursive one, constructed on the basis of ethno-national, gender, class and housing arrangements. I am drawing on the biographical interviews and participant observation conducted in Serbia in 2012, and a further data analysis of my ongoing doctoral research on the intersectionality of national, gender and religious identities in the contemporary Serbia.

My argument is that the notion of a “Kosovar” carries a negative imaging and ambivalent notions of belonging to the national imaginary of the Serbians and the Serbian community as the “other kind of Serb”. In addition, the political community of belonging for the Kosovar Serbs is the Serbian community, but in the politics of belonging of the Kosovo Serbs living as IDPs in Serbia are visible significant referential and differential points as localities of belonging – in terms of language, region and ethnicity. Although, in the studies on social exclusion and boundary-making this could be described as a “classical” examples of the tensions between the “newcomers” and “locals”, or, “established” and “outsiders” leading to different aspects of marginalization, in the case of the Kosovo Serbs (IDPs ethnic majority) it is paradoxical. Namely, Kosovo-Serbia displacement/emplacement politics of belonging shows a significant gap in relation to the dominant (right wing) nationalist discourses on Serbians and Serbianhood - describing Kosovo as the most important topos of the Serbian national history, and Kosovo Serbs portrayed in as a “Serbian martyrs” while Kosovo is a Serbian Jerusalem.

NOACK, ANDREA* (Ryerson University, anock@soc.ryerson.ca)

VOSKO, LEAH* (York University, lvosko@yorku.ca)

Measuring Employment Standards Violations, Erosion and Evasion Using a Telephone Survey

This paper reports on efforts to develop a telephone survey that measures the overall prevalence of employment standards (ES) violations as well as their...
Analyses to investigate these problems.

The effective sample consists of 1000 students. Students are trained in various specialties of concern to the problems of higher education in modern Russia. Representativeness is important to ensure that the results are generalizable to the entire population of interest.

Depth interviews with experts are applied to identify central issues. The research methodology combines qualitative and quantitative methods, allowing for a comprehensive understanding of the topic.

In Eastern Germany, East German mothers regain financial independence much faster and at higher rates. More than 60% reach their pre-birth earnings within ten years. About 80% of women show earnings losses, but the rate is lower (59%) for West German mothers. We operationalize the re-attainment of economic independence upon return to employment.

Access to and Perceived Quality of Childcare (and elder care) in Europe

The reconciliation of work, family, and private life has become one of the main challenges for younger and older families in Europe today. Access to affordable and good quality childcare is essential in removing barriers to parent’s (especially working womens’) labour market participation, as it ensures effective access to affordable, quality early childhood education and care for all families that also fits into the increasingly diverse working patterns (European Commission, 2013). The same applies to elder care, which is an important service in connection with generally longer life spans, population ageing and the increasing labour market activity of women.

Our paper’s research was funded and done for the European Foundation of Living and Working Conditions in Dublin (Eurofound) and is based on Eurofound’s EQLS53 data set, a European quality of life survey which was run in 2011/12. It investigates perceived access to and perceived quality of childcare and eldercare (also known as long-term care) services in Europe as a whole and in different EU member states and how the availability of such services is related to (female) labour market participation. In order to investigate the determinants of perceived quality of childcare and elder care services, we use multi-level analysis with grand mean centering (Hox, 2010). The model takes into account not only individual but also country-related factors, thus investigating the impact of age, gender, number of children, household’s financial situation, overall life satisfaction, female employment rate, being employed, rural or urban living area, satisfaction with economic and health systems, the immigration policies, in both the parents’ countries of origin (Senegal) and the parents’ countries of destination (United States, Italy), shape the organisation of transnational families (Bryceson, Vuorela, 2002, Mazzucatto, Schans, 2008, Razy, Baby-Collin, 2011). Migrant parents examine the advantages and drawbacks of origin and destination countries, when deciding where their children should be raised. However, these children are also frequently affected by internal mobility (Vandermeersch, 2002) within Senegal in response, amongst other reasons, to parents’ work constraints, health issues, family solidarity, and educational choices. I then discuss the differences between various care-giving arrangements (internal and transnational fostering) within the extended families which have been studied.

Precariousness in Mexico: Labor Trajectories and Meanings of Work

In the context of the processes of globalization, productive restructuring and labor flexibility, data from international and national studies on the topic shows that contemporary work features a spread precariousness condition. In order to contribute to the discussion in this paper, we present the main findings of a study about work precariousness in Mexico which is based on the heterogeneity of this phenomenon. In giving account of the diversity of development of work precariousness, we compared the labor situation of women from three contrasting occupations in different regions of the country: garment workers, call center workers and orchestra musicians. Empirical research was based on a mixed methodology which allowed us reconstruing workers’ labor.
Adapting To Climate and Biodiversity Change: The Case Of Large Canadian Cities

Adaptation is generally thought of as a successful response to a changing situation. For the social sciences, adaptation is the outcome of a long series of deliberations, decisions and negotiations. One cannot take for granted that adaptation will normally follow changing conditions. Adaptation must be seen as a social process whose outcome is not known before hand by the actors and institutions. The paper starts with a critical examination of what adaptation is for sociology. A multidimensional model is proposed wherein adaptation is conceptualized as a process which is both controversial and cooperative and is the result of interacting actors and institutions which come to a common understanding of a problematic situation and of its solutions. To understand this process a combination of different theoretical approaches are necessary. The overlapping elements are the following: 1) governance process where ecological uncertainty is pervasive, and where structural and social diversity has deep implications for decision-making; 2) controversy analysis, which focuses on debate on common understanding and on the choice of courses of action; 3) cultural theory to explain how people perceive and organize the changing world (natural as well as social) they live in; 4) since some, if not all, adaptation measures are likely to be innovative solutions, an understanding of how innovations are produced, diffused and adopted, even co-produced, is important; 5) finally, one may ask to what extent models and instruments of environmental governance are sensitive to social and ecological justice. This approach will be applied to problem-definition and policy-making in adaptation to climate and biodiversity change in a selection of large Canadian cities.

On the Concept of ‘human’ and the Aporia of Social Sciences

It is to be ascertained by way of a simple juxtaposition that the set of concepts “human / human being / humanity / humanness”, which forms the very core of modern scientific production in its entirety, belongs to a category that qualitatively differs from all those morphologically, lexically, pragmatically comparable concepts. The concept of “human” does not assign any manageable features, or assessable parameters, to those phenomena subsumed by it. It belongs to a class of concepts that I provisionally call “hoax”. A concept of this category pretends to indicate a set or subset of conspecific phenomena in that one or more shared accidents are applied as differential features of the construct. The concept “human” is the best and truest of this kind. It is the epitome of “hoax”. Withal, it doubles its uniqueness by appointing itself to both the source and the guarantor of its own legitimacy and virtuousness. To top it all, one of the most significant features of “humanness” and human existence consists in the circumstance that the humanness of the concrete units of human society is determined heteronomously. The simple, but nonetheless devastating, consequence of this briefly described construction and operating principle of the concept “human” is that the whole edifice of modern social science, no matter the path taken, no matter how sublime the respective motive and objective may be, is damned to always end up in a cul-de-sac of some type of biology. Parallel to a radical critique of the central conceptual edifice of the modern social sciences, and, within the framework of a theory of ‘modified and extended semiotics’, and a qualitatively different mode of knowledge production developed on the basis of this, my paper offers a radically new line of approach to the texture and the mode of operation of human society.

Postcolonial Sociology: An Oxymoron or a Border Crossing?

Since its inception, the division established in the course of securing the disciplinary borders of the sociology field between the populations to be studied by sociologists and those who fell in the “other” group to be studied by anthropologists has been taken for granted. The remaining obstacle to the political conditions of possibility of the institutional recognition of their profession that included the labor division between sociology and anthropology. Now that the
descendants of those other populations have become the new citizens of former
empires such as France and UK, or Japan, the question of the repatriation in the
sociological repertoire of notions such as de/colonization, indigeneity, autochto-
ny, and the coloniality of power and social relations, in terms of gender, race and
ethnicity to be investigated anew. If such endeavor is upheld in various cor-
ners of the globe, the sociology has become, in places like France, where a
main sociological contribution was made, it remains a contentious topic. From
this situated sociological universalism, post-colonial studies remain the outside
of the sociological field. Whether one thinks of courses taught in an interdisciplin-
ary perspective or of research funding moving beyond the pale of deliverables,
coloniality and its contemporary expressions are unthinkable in a still ethnocy-
tric sociology climate. Acknowledging that the colonial is indeed the past and the
outside of sociologized societies and sociological routines, but also their present,
may be a first step towards a postcolonial sociology in search of its academic
locations and professional habitations. Mapping such an ongoing history may
help include, or not, France in a global dialectical field at aiming understanding
enduring inequality processes.

Reflecting/Reflexive Surface: An Ethno-Gender Othering Experience

Practicing sociology as an art of resistance offers an unusual vantage point
on what may seem to be the hidden agenda of the sociological duty: locating
the other sociologist from within. Beyond empirical and routinized practices, this
paper aims at giving an account of oneself as a sociologist at the margin or as a
minority sociologist. Recording and narrating various encounters of the othering
processes, it will explain and discuss the kind of knowledge built under such guise
and the way in which it can add some value to the sociological experience. Undo-
ing the disciplinary process still considered central to the existence of sociology is
an intellectual itinerary and a collective platform for change in times of enduring
inequalities. Reconciling the individual and intimate, here considered as a reflect-
ning/reflexive surface, with sociology as a discipline will be one of the challenges
of this paper, as it is one for sociologists in a common world of uncertain paths
to equality.

Party Members in Bulgaria, Slovakia and Czech Republic

Political parties in ECE countries are assessed to be unstable, weakly en-
trenched into the civil society, very much attached to the state (Hafner: 2001) and
with low levels of members (Brezen and all.). Political parties in ECE countries are
even described as “party with no members” (Cabaña: 2013). This is problematic for
the parties, the levels of representativeness and the levels of member appropria-
tion and the expression of different civic groups and interests. In general, parties
in ECE countries are not implementing formal rules for equal representation of
young people, woman and minorities. According to some researches the bound-
aries between statutes of formal party membership and other forms of activism
are blurred because the members don’t matter. Parties in ECE countries are also pointed as based on clientelistic net-

Control of the Bodies and Self Expression during Mealtimes in the French Nursing Homes. a Ethnographic Study

This presentation falls within the framework of my PhD research, which aim
to get to a sociological understanding of mealtimes uses in the French nursing
homes. I’m studying the social conditions of the daily lunch – when the residents
have to eat together – in spite of physical and cognitive disabilities, eating and
moving challenges, and frequent deaths. I question this social practice consider-
ing that residents often declare they do not want to live in institution, and do not
want to share mealtimes with others. Eating together is a daily rule in all types of
nursing homes – public, commercial, or associative. Eating alone is always an ex-
ception and only justified medically

Sustainability and Social Equity in Rough Economic Times

The interest for sustainability issues and the redefinition of social priorities in an
economic crisis (Schachter’s context [Schachter, 1980]) has covered, for better or for
worse, their own way in today’s societies, and the urgency of change is gaining
more and more advocates. Despite this, the holistic view of sustainability – while
promoting human welfare and preservation of the natural environment – is be-
coming a programmatic and cross dominant ideology that has shaped the gener-
ality of environmental policies, but its effective implementation has basically
been done in an evasive (Adger and Jordan, 2009), superficial (Redclift, 2005), and

In those rough economic times that we are experiencing in Europe – and de-
spite the end of the "age of irresponsibility" the EU and its infinite re-

Sustainable Adaptation Projects and Initiatives in Portuguese Municipalities

Governance for sustainability has gained greater public awareness and so-
cial significance since the late 1980s (Adger and Jordan, 2009), and it shares
basic purposes and characteristics with sustainable adaptation. Consequent-
ly, both governance for sustainability and adaptation to climate change often
overlap in policy design and implementation (Kemp, Parto and Gibson, 2005). In
the Portuguese case, despite the persistent lack of a concerted national frame-
work and/or reliable funding policies, incontrovertible advance has taken place
in recent years. However, these dynamics are still irregular, in reality some mis-
conceptions and unsustainable practices are persistent (Schmidt & Guerra, 2011).
Bearing this in mind and in the context of climate change, the overall objective of
BASE - Bottom-up Climate Adaptation Strategies for Sustainable Europe, (a FP7
funded project) is to produce knowledge to support decision making on adapta-
tion strategies and pathways, as well as related action programmes across Europe.
Based on results from an online survey applied to a representative sample of

study derives from three different sources. Firstly, the European Values Studies (EVS) conducted in 2008 offers a unique value for this research because fieldwork for the survey in Estonia coincided with the military confrontation between the Russia and Georgia on 8-14 August. EVS, among other domestic and international institutions, inquired about the level of confidence in the United Nations (UN), the European Union (EU), and the North Atlantic Treaty Organization (NATO), which serve as the dependent variables of the current study. Using propensity-score matching technique, respondents who were interviewed in a time interval before the war are designated as the control group, whereas those respondents who were interviewed after the war started, can be designated as the treatment group. Secondly, the information from this dataset is further supplemented by observations and in-depth interviews conducted in Estonia both in the period around the Russo-Georgian conflict, and after it. This will enable us to go deeper into the embedded meanings of trust that Estonians exhibit towards international organisations, and the West more generally. Thirdly, we will offer a brief review of how the 2008 conflict was framed in Estonian media at the time, and how this may have shaped the perception of the Estonian public.

(Almost) Four Decades in Punk in Portugal: A Culture Still Young?

It's been nearly four decades since the emergence of the first punk movement - in the UK and USA - and, since then, the 'movement' has deeply changed at different levels. One key aspect of this transformation of the punk has to do with how it has been globalized and differently appropriated by urban youths from different parts of the world. What were, at the beginning, the key milestones and who were the original Portuguese punk players? How the punk movement allows us to read and understand the evolution and transformation of Portuguese society over the past four decades, in their aspirations, expectations and weaknesses? Why punk still is, until nowadays, a relevant reference point for some Portuguese youths, persisting as a relevant and dynamic urban culture? And, on the other hand, how is it possible to get older in the 'scene' and still claim to be punk? Here, will be deeply analyzed a wide range of interviews conducted with dozens of participants in the Portuguese punk scene, from different generations. This approach focuses on a social theory argument – one that has been delayed, although it is a rather relevant now - around the following question: the subcultural concept is still heuristic regarding the understanding and explanation of the youth resistance ritual practices or, in the other hand, we are standing before a context of explaining opportunity of the post-subcultural theories as we emerge in a context of change, transience, neo-tribalism, bands and scenes? In times of growing economical and social exigency, we discuss here the complex processes of youth identity construction around the punk, that global mediascape. This multifaceted landscape of the musical youth cultures, made of multiple expressions and references, finds meaning in an also plural ontological landscape.

A Different Kind of Tension: Portuguese Musical Creation and Idiomatic Narratives

In this paper, we propose a discussion around the relationship between music and society. Considering that the core object of the Sociology of Arts is, at last, the music itself, the derivation of the musical object is then being analyzed, a task to be done to analyze of the identity features present in the Portuguese music editions of the years 2011 and 2012. It is important to understand the established relations between music and society: how far music expresses themes, subjects, emotions? How far those themes, subjects and emotions, as well as the social reality, reflect themselves in music? Recognizing music as a social phenomenon, sociology must accept the sound world autonomy, with its own symbols and norms without neglecting the importance of external factors that come in line with it. In this sense, this paper intends to make a plural balance of the sociological reflection on the sounds achieved around the following question: the subculture concept is still heuristic regarding the understanding and explanation of the youth resistance ritual practices? The argument developed in this paper is that behind their technical substrate and their apparent neutrality, international comparisons carry values, interests and power relations. Under the guise of rationalizing and depoliticizing decisions, international comparisons are less a tool of learning than a tool of power. Therefore, it is probably the fundamental reason for their success. First, comparisons hide that health policies choices are always value-laden. Indeed, comparisons are in themselves "scientific" and thus deliver the "truth". Furthermore, the language through which comparisons are presented (tables, histogram, etc.) create effects of truth. As a consequence comparisons rule out any debate. Moreover, international comparisons create social pressure, not least because this language is easily understandable and particularly well-suited for the mass media.

This gap between the official and unofficial role of international health comparisons can contribute to explain the tension between the apparent convergence and persistence of country-specific arrangements. This paper will develop all these points on the basis of case studies from Europe, the USA and Asia.

Redefining The Public Space Through Art and Culture Events—The Case Of Bat Yam City In Israel

I propose to examine the ways in which contested images are inscribed in the public space beyond and behind art events. The city of Bat Yam in Israel was chosen as the location of this study because, in recent years, it has been the municipal centre of the city of Bat Yam to promote diverse cultural enterprises such as the Biennale of Landscape Urbanism, and the street theatre festival that has taken place since 1996 along other art projects. According to the extensive research about the link- age of art and gentrification (Freeman and Braconi, 2004) and in keeping with the social profile of Bat-Yam—a medium—lower class city on the Mediterranean coast south of the Tel Aviv-Yafo metropolitan area—this policy evidently constitutes an explicit attempt to improve the town's prestige and attract potential new residents and investors. The groups of artists that participate in the municipal projects have a different aim: to empower residents and their identities in the public space and rehabilitate the local multicultural communities. The paper will focus on the strategies used by different actors during the three intensive days of the International Festival of Street Theatre to influence on the public space under the umbrella of top-down art events for the purpose of reinforcing their social aims.

From this perspective, the process at the festival may be viewed as a micro-cosm or a lab that allows us to examine whether and how the public space and more specifically the linguistic landscape reflects or conceals the conflict between social forces, especially between the municipality, which strives to promote
the economic and social regeneration of the area, and the groups of artists, who propose to empower residents and their identities in the public space and attain the rehabilitation of the actual community.

Trade Unions As “Contested” Legal Intermediaries ? Reflection on British Unions’ Legal Mobilisation for Equal Pay Since 1970

Since 1970, British trade unions have been involved in the obtaining of a national equal pay legislation, in the pursuing of significant claims and in the implementation of the law through collective bargaining and job evaluation schemes. This legal mobilization did not developed in a consistent manner over time and across unions though. In the 2000’s, unions have been heavily criticized for having consistently colluded with the employers to minimize the effects of equal pay legislation, while being forced to support massive litigation on behalf of their low-paid female members. To understand this contrasted story, I will use a conceptual framework that defines trade unions as “contested organisations” which highlights the disputes both between and within unions as to what constitutes the central trade unions “project”. To understand why union legal mobilization for equal pay has been very controversial within the trade union movement and challenged by lawyers, I will argue that trade unions can be characterized as “contested legal intermediaries”. Drawing on a multi-methods approach combining 34 interviews with trade unionists, legal practitioners and experts, union archives analysis and legal case study data, I will argue that union legal mobilization needs to be understood in the context of the contentious (and gendered) relations existing between members with different interests, the competing relations between union officials and their base, and the often adverse relations between trade unions and employers. I will also claim that litigation strategies need to be apprehended in their complex and sometimes constrained relationships with other types of legal mobilization such as collective bargaining. Finally I will reflect on the effects and limits of massive litigation on union agenda and practices, pointing out the potential risk of marginalization and de-politicization of pay inequalities issues.

GUILLAUME, OLIVIER* (EDF R&D, olivier.guillaume@edf.fr)

Fishing in River, Confrontations at Risks and Ambiguous Situations

The contributions dealing with industrial risks bring to light the organizational and sociological causes which provoked accidents (Perrow, 1984; Vaughan, 1996) or those who prevent them (Laporte, on 1996). They also reveal the controversies which denounce the presence of the works modifying the living environment of the local residents (Lolive, 1997), or externalities are denounced as being risks (Chataureynaud and Torny, 1999; Borraz, 2008). But what about cases where the local residents do not denounce the industrial risks and confront themselves with the risks? And what can be their incidence on the risk management?

Not feeding controversies towards the industrial works and their risks, the local residents can even develop practices of leisure near the industrial works, minimize the incurred risks and go against rules. If the theory of the perception of risks (Slovic, 1987) and the concept of classical leisure such as collective bargaining. Finally I will reflect on the effects and limits of massive litigation on union agenda and practices, pointing out the potential risk of marginalization and de-politicization of pay inequalities issues.

Children’s Participation in the Promotion of Their Right to Health: The Specialists’ View

More than 20 years after the Convention on the Rights of the Child, the right to participation is yet to become common practice. This article has analyzed the concept that scholars and NGOs specialized in child health have about the role of the children’s participation in promoting their right to health. The General Comment on Article 24 by the Committee on the Rights of the Child was organized through a requested contribution from experts, who submitted 36 comments. Among these, 19 addressed the issue of child participation with a view to have their right to health realized. Results indicate: a) a consultative participation, limited to the institutional and political reorientation of health services; b) the access to information as a prerequisite to participation in the promotion of the right to health; c) the recognition of health education as an instrument of information dissemination; and d) the domains of social interaction and intergenerational relationships in the family, school and community are not appreciated as health promotion areas. In summary, experts believe that the right to information is the sine qua non to the right to participation. Because valid opinions are conscious, participation is manifested when they are formulated. This perception does not include ‘learning by doing’, which is centered on the development of personal and social tools. One text alone mentions the importance of the children’s awareness and knowledge about their own rights, as well as that of exercising their citizenship.

Household Carers and Gender Inequalities: A Comparative Perspective on Care

Domestic services are now on the global policy agenda. In Europe, there has also been a development of varied forms of domestic work that recall periods such as the eighteenth and nineteenth centuries where domestic help spread beyond the nobility to merchants and farmers’ households. In fact, then as now, the recruitment of domestic labor is an important expression of social relations, including social class and status, as well as a means of reproducing them. Household services have also been understood as a solution to the “Great Transformation” of recent decades that involves ageing of the population, changes in family structure and gender roles, with the masculinisation of women’s employment patterns, in a context of shortage of public care services, in-migration and de-industrialization which in turn calls for the development of the services sector. This paper examines policies that and change (through fiscal policies mainly) the hiring of domestic workers thus has a political economy aspect since labor market regulations and welfare state policy legacies will influence responses to socio-demo- graphic changes. It focuses on gender inequality: Domestic workers relieve women from doing this work themselves and avoid gender conflicts over the division of domestic work but can reinforce inequalities amongst women and reproduce gender roles. Finally, domestic work is often performed by migrants or minority women from previous migration waves although some activation policies have emphasized the retraining of women native workers. Notwithstanding what is the contribution of household services and thereby on the question of global inequality? This paper focuses on political debates relating to domestic work during the last quarter of century and the policy measures adopted, their stated goals and their actual consequences in France, Belgium and at the EU level.

The Territorial Separated Marriage As a New Reality

Aim of this research is a one new form of marriage – the territorial separated marriage. Now some part of migrants have two (or more) families: the first is in the motherland and the alternative – on the migration territory. What are the reasons of this situation? How many kinds and species it has? What are the profit and problems men and women have? What about children?

Background of this research is the theory of demographic transition, theory of social stratification and social mobility, analysis of the international labor market and labor migration and the model of balance outlays/income of the generation offered by author, published in the paper of RC33 Eighth International Conference on Social Science Methodology in Sydney, July 2012 (N. P. Guliaeva. Socio-demographic problem of modern society: age structure, migration and labour force).

The research method is the analysis of the open (official) statistic data, media data (including internet source) and the results of investigating activity published by another authors and researching centers.

Results: the territorial separated marriage is a new form of marriage generated by long-time migration. Appearance a new marriage on recipient territory often does not destroyed a first marriage on the motherland. Frequently it is because of the lack of possibility or necessity removing the first family to the job land. At the same time the job of the working migrant is the main source of income to both families.

It is concluded that the territorial separated marriage is reality. As international migration is growing it is opportunity of the dissemination of this form of the marriage.

The Role of the Court-Reforms in Transforming Azerbaijani Society

Both in the judicial system and in the minds of the population, there are still problems with the past communist regime in modern Azerbaijan. The conducted survey of the character and the essence of this problem can allow us to identify the ways of improving the judicial system in the country in line with the requirements of a democratic society.

The majority of the surveyed believe that democratic transformation of society cannot be successful and private enterprises cannot develop without legal base and perfect judicial system that are capable of effective protection of private property rights, control after execution of the agreed responsibilities, protection of the rights of economical subjects, foster creation of market relations.

One of the reasons for the judicial power not to be able fully satisfies demand for the services is the fact that this demand is artificially lowered because of the distrust of the population to the judicial system. The other reason that lowers demand for the judicial services is lack of economical growth, which doesn't foster growth of the need in resolution of economical arguments.

It is evident that the observed tendency for activation of the commercial activity and successful implementation of the economical reforms will foster increase of demand for the services of the judicial system.

Some of the opinions of enterprise managers, representatives of the general population, judges and employees of the court machinery, analysis of their judgments and proposals allowed to reveal the most relevant problems related to the work of courts and render of the judicial services, to determine the paths for expansion of population's and business sector's access to the judicial services, which will help to further improve the judicial system and will become a cause of the more effective implementation of the goals of the judicial reform in Azerbaijan.
ties for women and men on a labor market, expansion of opportunities for career
growth women, appointments them on senior positions.

The state supports strengthening of social protection and protection of mother
and children, baby sitting simplification for working parents according to the rat-
ified in the Workers with Family Responsibilities Convention of the Internation-
al Labour Organization increase in number of kindergartens, and also development
of services on to family planning.

For the purpose of realization of noted directions the parliament of Azerbaijan
accepted a number of the target documents. The parliament accepted such impor-
tant documents, as “Strategy of the Azerbaijani families”, the National plan of
action on gender equality, Children's code and National children's strategy. Along
with it, in the country are created institute “Family psychologist”, the help and
shelter centers for the women who have undergone the household to violence, and
also system of monitoring of violence against women, evasion of women from
education and early marriages.

Leisure-Disabled Children & Their Welfare Measures: A Study Of
Hyderabad Karnataka Region

The study of leisure disabled children and their well-fee measure assuming an
important role in the specially developing countries of the world in gen-
eral india is in particular. The children are the most precious asset of any nation
& deserve the very best of man kind has to offer . They have not only a right to
full health, phigically development but also the right to grow to full their potential
intellectually, socially, morally, & culturally all efforts and resources mobilized to-
wards the end by any society or country are a necessary and crucial investment.
At present 80 % of disabled live in the developing countries where less than 1%
received any trained help. of the 146 million disabled children under the age of
15 year, as many as 106 million are in asia & africa. according to senses of 2011
figures, 5.7 million children in INDIA are disabled in which means 1 out of every
4 children suffering from one or the other kind disability. Hence , it is extremely
important focus on their urgent needs, allowing such children to lead a reputable
& life quality in the society recognizing their leisure rights. the present study is
aimed to know about the socioeconomic status and the effective utilization of
leisure time & wel-fare service measures of the disabled children in Hyderabad
Karnataka region of India.

This study data has collected on the basis of empirical survey & detiled in-
terview with the respondant interactive method of interpretation is adopted to
interpret qualitative as well as quantitative data.
students from diverse academic programmes and disciplines of the University of Hyderabad in India. The survey method, selected individual and focused group interviews have been conducted in order to map out the rationale behind supporting and opposing reservation based on ascribed and achieved identities. The opponents of reservations felt that reservation is nothing but the exclusion of the meritory and talented students from the higher education, employment. On the other, the reservation policy gets support as a compensatory justice mechanism for the historical exclusion and multiple forms of deprivations and discriminations against the marginal groups of the Indian Society. The study also brings the personal narratives which demonstrate how reservations enables the social mobility for the marginal caste/groups and works as a mechanism in the case of students from upper castes, male and normal students. Therefore, the paper brings debates and (dis) contents associated with preservation and suspension of reservation policy within the framework of public policy and development discourse.

Since the late 1970s, Kawashima’s approaches to Japanese law that attribute significant explanatory value to culture have been in Retreat. Recent sociollegal scholarship share a skepticism about efforts to explore Japanese law through the lens of culture, which they see as conceptually weak, undefined.

With cultural translation theory, this paper argues that the vagueness of Kawashima’s theory has consequence for the salience and scope of legal problem, by focusing on the link between legal professional, media literacy and local culture. A case study of Communicational Impact in Kawashima’s Legal consciousness theory is analyzed in two part: the first, to compare the form of Kawashima’s communicative work and discourse on public, with a paperback book called Ni-honjin no ho isshiki (The Legal consciousness of the Japanese), shows that legal profession and layman culture has different types of legal information. The second is to confirm the possibility of comparative understanding of legal theory, by following Kawashima’s Legal consciousness debate in Japanese, American, Chinese legal review from 1967 to present.

 search for a sense of belonging and defining one’s sense of self has become a complex task in this globalized world. The way we define ourselves, for instance along ethnic lines, has consequences for our understandings of others in our everyday lives. This presentation will depart from a project that uses semi-structured qualitative interviews – with 24 young women of Middle Eastern backgrounds aged 15-22 – to explore the ways in which identity can be constructed. The reason why these women’s identity is in focus is that they have been the subject of heated debates on honor related violence in the Swedish news media in recent years. Against this backdrop, questions about the implications of being regarded as ethnic ‘Others’ can be explored. In this presentation, the focus will be on social identity processes and the interplay between self- and public image, with specific regards to ethnic identity. The presentation will draw attention to the way in which understandings of Swedishness play a role in these women’s conceptualization of self. These understandings include, among others, assumptions regarding Swedish peers’ liberal approach to norms on sexuality and the informants’ relation to the Swedish society as a home, yet, not a ‘homeland’. As such, the presentation problematizes how sense of belonging and definitions of the self are constructed when identity is contested and negotiated in everyday life settings.

A series of dog-rescue actions intending to save dogs from being slaughtered and destined for restaurants have been occurring quite regularly in China in the past two years. As seen activities taking action on highways to demand dogs to be released from the trucks, interrupting traditional festival in Yulin, Guangxi Province celebrating eating dog meat, and exposing illegal slaughterhouses for dogs. In China where dog meat has been a common source of meat and where dogs have been socially and culturally regarded as lowly creatures, these activities should deserve closer examination. For one thing, do these activities indicate an emerging movement advocating animal welfare rights? Or do they reflect some broader changes in the values and practices of a new generation of Chinese growing up in post-reform affluence and what does it mean? And how has such a movement been able to expand, especially in a social milieu that is generally conservative and authoritarian?

Adopting the lens of frame theory, this research endeavors to answer these questions by inquiring into the participants and organizers of these activities and the frames they share and develop in spearheading their organization and movement. In turn, a critical analysis of the broader social, cultural and economic changes in post-reform China will be carried out.

A case study of an Animal Rescue Organization, which has organized two dog-rescue campaigns is been conducted in Kunming, while 20 depth-interviews with activists in Kunming, Beijing and Chongqing have been delivered as well.

A case study of an Animal Rescue Organization, which has organized two dog-rescue campaigns is been conducted in Kunming, while 20 depth-interviews with activists in Kunming, Beijing and Chongqing have been delivered as well.

Since the late 1970s, Kawashima’s approaches to Japanese law that attribute significant explanatory value to culture have been in Retreat. Recent sociollegal scholarship share a skepticism about efforts to explore Japanese law through the lens of culture, which they see as conceptually weak, undefined.

With cultural translation theory, this paper argues that the vagueness of Kawashima’s theory has consequence for the salience and scope of legal problem, by focusing on the link between legal professional, media literacy and local culture. A case study of Communicational Impact in Kawashima’s Legal consciousness theory is analyzed in two part: the first, to compare the form of Kawashima’s communicative work and discourse on public, with a paperback book called Ni-honjin no ho isshiki (The Legal consciousness of the Japanese), shows that legal profession and layman culture has different types of legal information. The second is to confirm the possibility of comparative understanding of legal theory, by following Kawashima’s Legal consciousness debate in Japanese, American, Chinese legal review from 1967 to present.

GUTIERREZ, FILOMIN* (University of the Philippines Dilmnan, fc.gutierrez09@gmail.com)

Brotherhood, Masculinity, and Social Capital: Fraternities At The University Of The Philippines Dilmnan

The paper is based on the study of college fraternities rooted in traditions of bond and loyalty at the University of the Philippines Dilmnan (UPD), the country’s premier state university campus. Tracing their roots in the early 1900s, UPD fraternities have built a vast network of brotherhood ties connecting various generations of men, from college students to professionals who now occupy leadership positions and status in government, private and corporate sectors in the Philippines. The study looks into the identity formation of young men, including the quest to be part of a trust-based social network to affirm masculinity, survive the competitive challenges or enjoy the adventures presented by college life, and assure paths to social capital and professional status.

The paper discusses how young men gravitate to fraternities for constructive aims such as academic excellence and socio civic service, on the one hand, and become ennobled in antisocial violent behaviors within their group or in conflict with rival fraternities on the other. Such violence in gang fights and hazing rites has claimed the lives of at least eleven, and injured hundreds of young college men in the history of the university. The concepts social capital, identity and masculinity are utilized to understand the meaning of “brotherhood”, the origin and shifts in orientation and behavior of the group and individual members over generations. The study analyzed documents supplied by fraternities, and examined the narratives of fraternity “bros” or members from various generations or cohorts since the 1950s to the present.

Ethnic Conflict and Internal Colonialism: Theoretical Reflections for the Indigenous Mobilizations of the 21st Century

This paper discusses why ethnic conflict in Latin America is not related to secession or ethno nationalism, rather it is characterized as a renewed political activism of indigenous peoples denouncing violence and threat in a context of defending territories and natural resources. The concept also implies the revision of “internal colonialism” as a theoretical guideline that inspires intellectual and political projects of ethnic mobilizations. Finally, the paper argues what are the main characteristics of ethnic conflict in Latin America: a) low tendency to rebel against the state, b) low use of violence form indigenous peoples, c) very high use of violence and threat against indigenous peoples and d) widespread social exclusion and racial discrimination.

Immigration Key for Immigrants in Spain 2013

According to our recent research study/survey, it shows that the immigrants in Spain 2013 (Romanians 19%, Morocans 18.8%, Ecuadorians 9.4%, subsaharian Africans 6.3%, Colombians 6.1%, Bolivians 9.4% and those with dual nationality 16.9%) 77.6% of them live in rental housing, 27.3% work in private labour market with temporal contracts and 21.1% with fixed or permanent contracts, while 26% are uninsured although they have worked before. 57% of them have the intention to stay definitely and in general terms, they are highly satisfied with the services. They are also highly satisfied with their interpersonal relations (88%), with their family life (80%) and at work/studies (63%). Nevertheless, only 44% of them are satisfied with the economic situation. 83.5% consider their cultural contribution as positive and 75.3% consider their economic contribution as positive and 69.8% consider their demographic contribution as positive. 50% of immigrants surveyed think that they should keep their civil traditions, specially if they can. However, 68% agree that the languages which are majority should be included in the academic curriculum and 37% agree with the headscarf ban in classrooms. Integration for 78% of the surveyed is a society issue, and those with more difficulties are the Magreb population 36.9%, the subsaharian African countries 13.8% and the Chinese 13%. We conclude with the affirmation that, according to the immigrants, 50% of them agree that the economic aids should exist for Spaniards and immigrants only from their legal or illegal administrative status and for 97% of them, they should have the right to live with their families, 95% think they should collect their unemployment benefits after paying their social security taxes, 80% think they should be able to vote in local/municipal elections and 85% think they should be able to obtain the Spanish nationality.

\textbf{Effects of Interview Mode on Self-Reported Well-Being} \\
This study explores the differential effects of face-to-face interviewing and web-survey self-interviewing on subjective well-being questions. The analysis employs individual data from traditional surveys (e.g., the World Values Survey, the European Social Survey, and other representative national surveys) and data obtained from a web survey posted at WageIndicator websites in more than 30 countries. The analysis compares respondents at a lower cost and large numbers relative to traditional surveys that are conducted via phone, mail, or on a face-to-face basis. The WageIndicator is a labor market oriented survey that also includes several subjective well-being indicators. In the first step we contrast the characteristics of samples resulting from different modes. Second, controlling for demographic characteristics, we test the hypothesis that online surveys decrease measurement error in sensitive questions created by the presence of an interviewer (e.g., the underreporting of socially undesirable behavior). We show that mostly in advanced economies respondents tend to report higher subjective well-being levels in the presence of an interviewer, whereas in developing and former communist countries the presence of an interviewer generates a downward bias in the reported well-being levels. The paper also contributes to the ongoing debate on web survey data quality, reliability, and validity for scientific use. It demonstrates how social sciences can benefit from the use of web survey data in order to overcome the limits of traditional information sources.

\textbf{Changing Identity: Istanbul Clubs during Gezi Protests} \\
Galatasaray, Fenerbahçe and Beşiktaş are the biggest sport clubs in Turkey. Even they are sport clubs their main focus located in football and football has an obsession level love and hate relation within Turkish public. But even %90 percent of Turkey’s population see themselves as fan of these 3 biggest clubs which are the oldest clubs, these Istanbul clubs have zero class affiliation throughout history. Very crudely Galatasaray represent aristocracy, Fenerbahçe bourgeoisie and Beşiktaş worker class but like we said these assumptions are very crude and can not apply to fans and general public.

At June 2013 Turkey was the headline of all press worldwide. A small peaceful protest started with environment concerns turned into a nationwide protest and rebellion against ruling party AKP (Justice and Development Party) and especially its leader Recep Tayyip Erdoğan. While police brutality against peaceful demonstrations triggered the situation it must be realized that there is a building frustration in non-conservative society for the last couple of years. At Gezi Park protest we can see mostly all political, ideological views developed in Turkey. From communists to nationalist, from Muslims to Atheists, from LGBT to football fans of these 3 biggest clubs. Of course politization of these fan groups can be described as political awakening of youth after 1980 military coup and turning it into a struggle within their passionate interest.

This paper aims to understand these fans, their change and their demands from authority.

\textbf{The Socio-Economic Implications of Kidnapping in Port Harcourt, Nigeria} \\
Kidnapping seems to be growing as an industry involving every level of the society. However, studies on it have been relatively a recent phenomenon, with much of the literature coming from Asian, American and European continents. There is very little empirical research carried out on kidnapping in Nigeria and yet there are series of media reports of daily incidence of kidnapping in the country. In port Harcourt, the commercial and oil Hub of Nigeria’s Niger Delta, kidnapping was/is generally said to be a fearful and threatening crime. While in other places, the problem is more or less an occasional thing, that of Port Harcourt is generally observed to be habitual, sporadic and spontaneous that happens almost every day. It is against this backdrop, this study examines the nature of kidnapping and the socio-economic implications of kidnapping in Port Harcourt, Nigeria. Using the multistage cluster sampling method, a sample survey of 350 boys was administered questionnaire. In addition, official crime statistics on kidnapping from the police was collected and 15 in-depth interviews (IDI) including victims, police officers, traditional rulers among others were conducted. The findings show that one, kidnapping takes a violent dimension and it has been established, operated and executed in form of business empire; two, there is the development of independent negotiator between the victim and perpetrator of kidnapping; three, there exist paucity of official reported cases; fourth, there is general behavioural modification of residents on socio-economic activities and relationships. In conclusion, the study confirms that kidnapping has negatively influenced people’s behaviors and that cases are grossly underreported to the police as government does little or nothing to stamp out the menace.

\textbf{Voluntary Commitment in Church-Based Environments As a Chance of Generating Meaning for Adolescents} \\
In analyzing the religiousness of youth, positions vary between the hypothesis that religiousness has decreased and the hypothesis that there is a specific youth religion. In my paper I will assume that the development of religious identities and convictions depends on social contexts and family environments. My paper elucidates that adolescents generate different religious interpretive patterns in order to position themselves in relation to concepts of life and meaning in societies that are marked by the pluralization of values, the secularization of social relations and the individualization of life styles.

In western Germany, church-related status passages are still part of the norm. We unpack how knowing the ‘new’ and ‘old’ is being translated and reinterpreted among the two generations. Drawing on ethnographic fieldwork I am going to
show specifically how the implicit dimensions of knowing how to use ‘new’ and ‘old’ media becomes visible and obtains agency in each of the context of the other generation.

The paper is divided in three steps. First, I will discuss the moments when members remember how to use either ‘new’ or ‘old’ media and discuss the implications for daily memory and transport practices in which the five sensual activities are engaged. Drawing on the recent developments in the realms of ‘sociology of translation’ and the ontologies of ‘urban assemblages’, this paper wishes to unpack the specific case of visual, acoustic, haptic, taste and smell related ruptures and reconstructions of body rhythms in the city. The case will be unfolded in three steps. First, I will focus on specific moments when sensory ruptures occur and reorder the body rhythm of movements through the city. I will draw on ethnographic field work in the cities of Hamburg and London introducing different moving crowds in political settings of protest, shopping related activities and transport practices in which the five sensual activities are challenged in various ways, overlap, interact and compete. The rhythmanalysis as offered by Henri Lefebvre is going to be applied in a fresh way showing how sensual translations become social makings and unmakings. In the second step, I will stress the epistemological consequences when extending the agency of observation through film and photo cameras and show how to follow the new ontologies that occur through these lenses. In the third step, I am going to argue for a sociology of sensual translations offered when taking into account the methodological agencies of film and photography in settings of urban experiences.

Unpacking Sensual Ruptures and Rhythms in the City: Methodological Devices for a Sociology of Sensual Translations

 Studying urban sensual experiences through film and photo cameras is one of the most intense settings through which an argument about the performativity of methods and their epistemological and ontological consequences can be developed. Drawing on the recent developments in the realms of a ‘sociology of translation’ and the methodological devices offered by the ontologies of ‘urban assemblages’, this paper wishes to unpack the specific case of visual, acoustic, haptic, taste and smell related ruptures and reconstructions of body rhythms in the city.

The nature of international involvement in improving the status of women in Iraq has been ironic, inconsistent and controversial. Since the initial years of the war, women’s oppression has been rhetorically used by Anglo-American coalition forces as an excuse for the military operation. Ironically, the US has been accused of trading women’s rights for cooperation from the Islamists and reports by foreign governments, the UN and human rights organizations have until recently ignored the deterioration in the status of women and the rise in gender-based violence in Iraq. The tendency within the international community is still to consider culture, underdevelopment or religion as the root cause of women’s subordination and to push for “modern” changes in society and law in compliance with a western liberal model of law and gender egalitarianism. This article investigates the nature of negotiations among international actors, governmental authorities and local politics for institutional restructuring and the implications of this international endeavor for women’s rights and solidarity in Iraq. The article argues that the implementation of specific social and legal models/refs based on the norms and systems in western liberal states, targeting disadvantaged groups such as women, in a socially and politically precarious context like Iraq might raise serious problems and contribute to social inequalities and violence if the complexities of local politics of gender are not analytically taken into consideration. The article aims to contribute to activist efforts to enhance women’s status in war-effected societies, promote women’s solidarity against ethnic polarization and empower women to be active agents in advancing peace and justice in the face of radical transformations taking place in society, economy and politics that are dominated by men at all levels including local, regional, national and international.

KAYA, ZEYNEP (London School of Economics)

Interrogating the Role of International Actors in State-(Re)Building in Iraq: Implications for Ethnic Politics, Youth Discontent and Social Justice

A significant consequence of the military intervention in Iraq has been the active involvement of international actors and agencies (e.g., foreign governments led by the US, the UN, EU and INGOs) in the institutional restructuring of the country. Substantial changes inspired by western (neo)liberal (political, economic and legal) models have been introduced to the institutional system of the country, ultimately to establish democratic institutions, encourage political participation of youth, reconstruct the economy, achieve ethnic reconciliation and implement the rule of law (e.g., Legislative Strengthening Program sponsored by USAID and UNAMI -United Nations Assistance Mission for Iraq). This international endeavor entails a rather controversial role for humanitarian actors like the UN, as their role has been to mitigate the discrepancies between the priorities of foreign agents (e.g., fiscal and security reforms, modernization, economic growth and so on) and daily injustices suffered by Iraqis. By analyzing the three significant lines of action by the international community, i.e. “ethnic reconciliation”, “youth empowerment” and “social justice” in which the UN and foreign governments are actively involved, the paper investigates the scope of international interference in Iraq, more specifically the nature of negotiations among international actors, governmental authorities and local politics in the course of state-(re)building since 2003. It argues that the discrepancy between the priorities of international state-building efforts (based on international norms, humanitarian causes and self-interest) and the complexities of national and local politics in a highly militarized multi-ethnic context like Iraq has contributed to the institutionalization of social injustices, marginalization and frustration of youth and consolidation of ethnic fragmentation between Arabs and Kurds. The paper aims to provide insights about the international involvement in domestic politics in the Middle East and contributes to the theoretical discussions on the complex repercussions of state-building and institutional design through military and humanitarian interventions.
Competition over Expert Authority in the New Field of Human IVF

HA, JUNG-OK* (Seoul National University, jungok@snu.ac.kr)

Is human IVF (in vitro fertilization) the extended version of animal IVF or is it human fertility? Such a question may seem odd today. Nevertheless, the question ignited controversy in the 1980s when the term “human IVF” first appeared, creating competition between experts.

This paper illuminates on the competition over expert authority between obstetrics and gynecology clinicians (OG clinicians) and embryology (E) scientists in the 1980s when human IVF began to take root as a new field in Korea. Here I refer to human IVF not as a discipline but as a field because IVF is “an amalgam of thoughts, a mixture of habits, an assemblage of techniques” (Mol & Berg 1998), not a coherent, prime face. The process of mixing and assembling that which is originally different is neither simple nor peaceful. The new establishment of a field inevitably requires a process of determining the “dominant professional” (Oudshoorn 1994) through competing with rivals and making the field appealing to outsiders. The human IVF field in Korea was settled down by OG clinicians who had the capabilities to motivate a wide range of resources; E scientists entered the field with the help of these first players.

This paper aims to provide insight into the human IVF field of the 1980s in light of its developmental history through analyses of academic journals, in-depth interviews with experts, and analyses of discourses over the issue, all of which reveal how the experts regarded this new field as an extended version of their own expertise.

Expert authority is not self-evident but results from social politics. This insight is gained when we consider human IVF as a social reality and when we pay attention to the construction of that reality, not regarding it as a natural object. To that end, a sociological analysis is required.

Urban Shrinkage As a Travelling Concept

RC21-370.5

HAASE, ANNEGRET* (Helmholtz Cntr Environmental Research, annegret.haase@ufz.de)

RINK, DIETER (Helmholtz Cntr Environmental Research)

KABISCH, SIGRUN (Helmholtz Centre for Environmental Research - UFZ)

WOLFF, MANUEL (Helmholtz Centre for Environmental Research - UFZ)

Urban shrinkage as a phenomenon has globalized during the last years: worldwide, including also the global South, cities have faced population decline and its manifold consequences for urban space, fabric and society. In terms of urban theory, shrinkage as a phenomenon or way of urbanization was disregarded for a long time, or shrinkage was looked at through the lens of urban growth as the basic trend of urbanization: as deviance from the norm, a bad or false development which challenges the essence of what shrinkage was hitherto be defined as.

Shrinkage as a concept was used first in the German discourse and got onto the national scientific and public agenda with the extreme population losses of East German cities during the 1990s and early 2000s. Shrinkage got accepted as an international term with the growing number of comparative studies and projects from the mid-2000s onwards.

The concept of shrinkage today faces a twofold challenge: On the one hand, it still struggles for recognition as describing a common pathway of global urbanization. On the other hand, research shows an overwhelming diversity of contexts which challenges the essence of what shrinkage was hitherto be defined as. The recent crises in the US and Europe, however, represent a context where expertise and explanations from shrinking cities might be helpful for the understanding of recent crises in the US and Europe, however, represent a context where expertise and explanations from shrinking cities might be helpful for the understanding of recent crises in the US and Europe.

This anachronistic way of legitimising the profession may bolster the self-confidence of the engineering students making it through to graduation, but it is also likely to be an obstacle to the stated objectives of engineering education systems of attracting more women to the engineering profession and of providing engineering professionals able to address challenges of a dynamic, global society.

Self-Selection and Economic Assimilation Of Immigrants: The Case Of Iranian Immigrants Arriving To Three Countries During 1979-1985

RC28-484.1

HABERFELD, YITCHAK* (Tel Aviv University, haber@post.tau.ac.il)

LUNDH, CHRISTER (University of Gothenburg)

Self-selection and economic assimilation of immigrants: the case of Iranian immigrants arriving to three countries during 1979-1985

The study is designed to evaluate the impact of the interaction between patterns of immigrants' self-selection and the context of reception at destinations on the economic assimilation of Iranian immigrants who came to the three countries during 1979-85. For that purpose we studied immigrants at the age of 22 or higher upon arrival by utilizing the 5 percent 1990 and 2000 Public Use Microdata files (PUMS) of the US census, the 20 percent demographic samples of the 1983 and 1995 Israeli censuses of population, and the 1990 and 2000 Swedish registers.

The results indicate that the "most qualified" immigrants – both on observed and unobserved variables, who left Iran right after the Islamic revolution, arrived in the US. Their positive self-selection led them to reach complete earnings assimilation with natives there. Iranian immigrants who arrived in Israel and Sweden did not achieve full earnings assimilation with natives. Of these two groups, a smaller immigrant-to-native gap in average earnings was found in Sweden, but in the US the Iranian immigrants in Israel were more positively self-selected and showed better assimilation than their counterparts in Sweden. Market structure played a certain role in immigrants' earnings assimilation mainly in Sweden.

Repositioning the Racial Gaze: Aboriginal Perspectives on Race, Race Relations and Governance

RC05-103.6

HABIBIS, DAPHNE* (University of Tasmania, D.Habibis@utas.edu.au)

TAYLOR, PENNY (Larrakia Nation Aboriginal Corporation)

WALTERS, MAGGIE (University of Tasmania)

ELDER, CATRIONA (Larrakia Nation Aboriginal Corporation)

Repositioning the Racial Gaze: Aboriginal Perspectives on Race, Race Relations and Governance

In Australia, public debate about recognition of the nation’s First Australians through constitutional change has highlighted the need to improve public understanding between Aboriginal peoples and the Euro-Australian mainstream. But the unevenness of race relations has meant Aboriginal perspectives on race relations are not well known. This is an obstacle for reconciliation which, by definition, must be a reciprocal process. It is especially problematic in regions with substantial Aboriginal populations, where their visibility make race relations a matter of everyday experience and discussion.

There has been considerable research on how mainstream Australia views Aboriginal people but little is known about how Aboriginal people view non-Aboriginal people or mainstream institutions. This paper is based on an Australian Research Council project undertaken in partnership with Larrakia Nation Aboriginal Corporation. It aims to reposition the racial gaze by investigating how Aboriginal
peoples in Darwin recognize and understand who is Euro-Australian, who is Ab- 
original, and Aboriginal views on Euro-Australian values, priorities and lifestyles. 
We argue that a necessary ingredient for improving race relations in Australia 
is for dominant cultures to understand the relative nature of their own cultural 
attachments. Through interviews, social media and survey with Aboriginal peo-
ple this research provides a basis for Euro-Australians to discover how they are 
viewed from the outside. It repositions the normativity of Euro-Australian culture 
which is a prerequisite for a truly multicultural society. 
Aboriginal disengagement from mainstream political and civil law processes 
and institutions contributes to their social exclusion but the reasons for this dis-
 traction is not well understood. Through ideas of agency, recognition and 
resistance we also explore how Aboriginal people view and understand the gap 
between Western-style governance and traditional Aboriginal approaches to de-
cision-making and the impact this has on patterns of compliance and participation.

Attitudes Towards Patriotic Education and Armed Forces among Slovenian Youth
Contemporary democratic societies are encountering many demanding challenges 
such as decreasing political participation in the democratic societal sphere. In most 
European countries one can detect an almost annual drop in citizens’ political partici-
pation. Due to the dramatic changes in political, security and societal conditions in 
Europe in the last decade, today’s youth is being brought up in a fundamentally differ-
ent spirit. By putting more participation citizens for the future, there is debate in Slovenia regarding civic and patriotic education, as well as active citizenship 
among the youth. Differing opinions may be found on how to realise this education, 
and what forms and methods should be involved. In general, two different concepts are 
at odds: a discipline of patriotic education, introduced in rather limited way into the 
Slovenian elementary schools in 2009; b) second concept attempts to cultivate a 
sense of taking responsibility and of the acceptance of democratic culture while si-
multaneously maintaining a critical stance on the very political system; this concept is 
traditionally not synced with military tradition, but was introduced into school curric-

dula in 1990s. The proposed paper will analyse attitudes of youth towards patriotic ed-
ucation, and try to ascertain, whether the concept of patriotic education is has been 
able to deliver its goals. When analysing trust of youth towards different institutions of 
state and society, which obviously has created some features of anomy . Additionally the art

A War without Images?
A “war without images”? : Secrecy, information and communication during the war in Mali
As the international operation is still under way in Mali since January 11th 2013, the French armed forces played a huge role in the defeat of the jihad’s fighters. From the first days of the French commitment (i.e Operation Serval) to the Mali presidential polls (August 11th 2013), this paper will deal first with the information and communication policy conducted by the French forces during this new “war on terror” both on the political and organizational sides (political discourses and structures), is the war in Mali a “war without images and without facts” as French and foreign reporters described it? How the French authorities dealt with this traditional dilemma: the (French) people’s right to be informed and the need of secrecy, especially on the front line? Based on the analysis of the political an instit-
tutional discourses and on interviews, this paper will explore all these questions.

RC04-95.4

HADJICOSTANDI, JOANNA* (University of Texas Permian Basin, hadjicostandi.j@utpb.edu)

Women in Minority Communities in West Texas: Negotiating Work and Family
This paper is based on the collection of oral histories and qualitative research that has been conducted in the Permian Basin, Texas, among the members of the African-American Community. The individuals interviewed provided a magnifi-
gation and values (finn, 1989). Genetics that illustrate - the disparities in the masculinity 
and femininity – are orientations that are assumed to structure attitudes, aims, 
motivations and, finally, behaviour, and are therefore also relevant for education-
al success. Analyses are based on a Swiss mixed-method study (standardised sur-
vey among 872 eighth-graders, group discussions, class room observations). Re-

results indicate that the gender gap in educational success is caused partly by boys 
being more alienated from school and preferring patriarchal gender roles. The 
impacts of these factors on educational success are mediated by school deviance. 
Further important issues emerging from this analysis are peer attitudes towards 
school and teaching style; both of them environmental factors which influence 

school alienation. In particular an authoritative teaching style can largely reduce 
school alienation.

HAGEN, MALFRID IRENE* (Previously affiliated to Buskerud University College, moliren@online.no)

Coherence; Art Content & Society
Some claim considering the content of art is a task for art critics & historians. However, this may be relevant also for sociologists, to reveal information on so-
ciety. Contemporary art is dominated by conceptual art with a broad range of art 
expressions, diverging from traditional art. Many consider this tendency to 
express democracy and art diversity; others regard it as a breakdown of rules 
classification claiming it creates art anomy. Durkheim describes how anomy appears in times 
of crisis. However, he also describes how anomaly may appear in times of sudden 
wealth, which is the case in Norway, which has grown tremendously rich during 
the last decades. Simultaneously there has been a breakdown of norms in the 
society, which obviously has created some features of anomaly. Additionally the art 

interest has increased, as well as governmental support to artists, on principals 
of democracy and freedom of speech. Today Norwegian artists have great free-

dom to create whatever they like, including controversial political art, such as a 
Norwegian artist who creates art performances in North Korea with North Korean 
artists. Although he is criticized by many, as his performances probably requires 
some connection with North Korean authorities, others defend his performanc-
es. According to Benjamin, art criticism is crucial for art development. Although 
Norwegian media often provide art articles, art criticism is rather weak and art is 
seldom criticized in a critical way. Norwegians today seems liberal to controver-
sial art, perhaps more than people outside Norway. My PhD-thesis on corporate 
art and architecture (2011), also reveal that Norwegian art collectors seem more

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
liberal to controversial art than collectors abroad. This makes me wonder; is it a coherence between art liberalism and features of anomaly in a society caused by sudden wealth? May this be reflected in the content of art in the current society?

When Art Becomes an Emotional Burden

Art influes our emotions, usually positively. However, art may also appear as offending and become a burden. Here I discuss so-called “offending art”, defined as art with improper sexual, violent or blasphemous content. I use empirical examples from my PhD-thesis (2011) and new observations. My thesis reveals different practices for corporations collecting art in four countries, including the USA and Norway. Although related cultures, the policy for collecting art diverges regarding offending art. While most of the American corporations express that they avoid art that can be experienced offending by employees and visitors, the Norwegian corporations are more liberal. Although most art in the Norwegian collections are not offending, they also contain offending artworks that creates emotional reactions among employees, who experience this art as a burden. Due to the emotional impact on employees and visitors corporations have had to remove artworks from public areas, for example a painting regarded blasphemous. An artwork still hanging contains a digital text about sexual abuse and is described by employees as depressing. The employees have got used to it and suppress their emotional reactions. Corporate collectors can easily avoid offending art, as these are in my study codetermined by the choices of other actors. Mutual interdependence creates a particularly experienced conflict is also a social dilemma because the outcome of an action is less capable of collective action. These entities are related to each other. Three main perspectives.

Institutional Change through Rational Collective Action

The paper seeks to establish an analytical framework for the study of institutional change. Its main components are drawn from sociological systems theory, rational choice and institutional theory. The distinctive theoretical maneuver is assuming that modern, functionally differentiated societies can be analyzed as communities, more or less capable of collective action. The analytical core of the framework is a concept of collective action characterized by the conflict between collective and individual rational lines of action. This subjectively experienced conflict is also a social dilemma because the outcome of an action is codetermined by the choices of other actors. Mutual interdependence creates a particular social dynamic that can be applied to the study of institutional change.

We take modern society to consist of several self-referential social systems that operate through unique social media and bound by rules. However, we also conceive of modern society in a second sense, as a kind of reflection of society in the first sense, and which regulate or condition the operations of subsystems. A modern society like the Norwegian has developed a vast number of organizations that deal with different aspects of its function systems. To an extent these belong to the political system and are the authoritative means to put political decisions into effect. However, collectively binding, both political decision-making and its instruments must be anchored in society through rational collective action.

A set of concepts, e.g. function problems, rational solidarity, collective power and collective decision-making are introduced to explain how collective action might become a rational choice that transforms societal institutions. Instead of asking what a collective (really) is we believe sociology should create ontologies of the social that enable a new understanding of these entities are related to each other. There are three main perspectives.

The tradition emerging from Weber conceives of a modern society consisting only of parts. This view is epitomized in Niklas Luhmann's theory of a modern society characterized by functional differentiation. In the tradition emerging from Durkheim, mutual interdependencies among the subsystems create a social bond of organic solidarity particular to modern society. Society is a community or even collective, because of legitimate institutions, shared social norms and a common culture. In the Marxian tradition the other subsystems are regulated by capital and power, with the market and the bourgeoisie state as the real centers of society. All three perspectives have their merits and can claim empirical confirmation either in a world society of global financial markets, art and science, or nation states as embodiments of solidarity and power.

However, all three perspectives share a common weakness: They are unable to explain how mutual interdependencies among subsystems lead to problems of performance or function that are also problems of collective action, and thus collective as a collective regarding its own cohesion or societal integration. The reason for this shortcoming is an ontology of the social based in spatial metaphors which reifies collective phenomena. When this epistemic obstacle is identified, we might create an alternative ontology that enables a new understanding of modern societies as communities or social wholes with varying capacity for collective action on local, regional and global levels.

Renewal of Organizing Strategies for Child Care Workers?: Union Responses to Neoliberal Child Care Reform and Downgraded Care Work in Japan

Child care work, mostly performed by women, is almost always poorly paid. Unionsizing child care workers is an important strategy for securing fair compensation and better working conditions for child care workers. This entails social movement that re-evaluates care work and women's work.

In Japan, certified child care teachers have been relatively well organized under the All Japan Prefectural and Municipal Workers Union (Jichiro). This is because local governments acted as major care providers at least until the 1970s, and they employed certified child care teachers as local government employees for publicly run child care centers. With their collective bargaining power as an occupational group and a women's group, organized teachers have also played a critical role in improving working conditions for child care teachers as a whole.

However, their influence has been on the decline both in the policy-making process and in the union with the arrival of neoliberal reforms such as the privatization of accredited child care centers, and the deregulation of the work force such as lifting of the limit on the number of part-time teachers per center. Certified child care teachers employed by local governments, once regarded as secure and decent jobs for women, are disappearing, and child care providers, including certified teachers, are now becoming members of the working poor.

How will unions renew their strategy to organize child care workers? How will teachers respond to lost occupational homogeneity? Furthermore, will the union's survival be compatible with sustainable care provision? This paper describes some of the history of the organization of the child care teachers and their activism, and focuses on and compares the current struggles and functions of two unions: the All Japan Prefectural and Municipal Workers Union (Jichiro) and the Craft Union for teachers and non-certified teachers affiliated on an individual basis.

Hidden Tapestries of Lived Experiences: The Commodification of Latin American Migrant Workers in Canada

This paper will explore how the complex lived experiences and plural identities of Latin American agricultural migrant workers participating in Canada's Seasonal Agricultural Worker Program (SAWP) are reduced to very narrow representations in the Canadian racial imaginary. Although our interactions with workers have revealed their lives to be rich tapestries of experience, love, fear, regret, and complex familial ties, popular perceptions of migrant workers remain negatively racialized, gendered and classed. We argue that this suppression of workers' individual histories in the Canadian imaginary is a key component in legitimizing and maintaining the commodification of migrant labour and, by extension, transnational systems of exploitation. In turn, these processes of inscription serve as hidden mechanisms of social and spatial control, shaping the ways that the Canadian public interacts with migrant workers and the degree to which migrants are considered part of the Canadian communities in which they live and work. Motivation for this project was sparked through the relationships we have built with migrant workers in our work with a grassroots migrant worker support network in the Okanagan Valley, British Columbia. This paper is also informed in part by a 2012 case study

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
of Mexican migrant workers in Canada’s largest cherry orchard conducted by Elise Hahn on behalf of the Lake Country Heritage and Cultural Society. In conjunction with our paper, ten original photographs of migrant workers in the Okanagan Valley, products of the aforementioned case study, will be presented. Together, these experiences have challenged our pre-conceived notions of who migrant workers are, the lives they lead, and their cognizance of the racialized processes to which they are subject in Canada.

HAID, CHRISTIAN* (Technical University Berlin, christian.haid@metropolitanstudies.de)
“Planning the Unplanned” - Trajectories of Managing the Informal in the Urban North

This paper will present research on how informal activities and practices in Berlin’s public spaces are tackled. The global trend of proliferating informalization in urban centers as a result of ongoing neoliberalization is not solely a contemporary reality in cities of the Global South but encroaches as well on North-Western cities. Especially in multicultural societies of reeding welfare states, many people’s possibilities have become confined to informal economic opportunities as they have been denied access to more formal spheres. As such, the street vendors and bottle collectors that are working in many of Berlin’s parks are faced with various regularization strategies in a city that otherwise is known for its “anything goes” attitude. While on the one hand tightening the possibilities for diverse informal practices to develop and proliferate, the city government on the other hand also promotes its “urban pioneers” that have informally appropriated various spaces in the city. Right after the fall of the Wall, the abundance of vacant lots and buildings has been perceived as weakness in the new urban development processes. However, today they are endorsed and proclaimed as strengths and idiosyncratic features of the urban landscape. Hence in current governmental strategies “planned informalization” is an important pillar to develop urban space that is otherwise lacking financial investment.

Overcoming the informal/formal dualism and stimulated by this debate which emanates from the Global South, the paper will show how informality and formality are intricately intertwined in the researched cases in Berlin. Furthermore, it will talk about theambiguous role of the city government that on the one hand, embdedded in the neoliberal agenda, is promoting certain kinds of activities, while on the other hand, evoked by the image of the modern and orderly city, is regularizing undesirable informal practices.

Circular Labor Mobility in the Central European Region: Job Finding and Labor Market Outcomes of Cross-Border Commuters from Hungary, Slovakia and Czech Republic in Austria

Circular labor mobility within the EU has been strongly promoted through several institutional programs since the 1990s. However, so far the given circumstances for participants in these emerging transnational labor markets have not been investigated in depth. This is especially the case for European cross-border commuters. Our paper aims to close this gap by taking the Central European region (CEN Trope) as an exemplary instance.

Therefore we investigate job-search strategies and related labor market outcomes of cross-border commuters in the regions of the Czech Republic, Slovakia and Hungary, living in Austria. Theoretically, we build upon a model developed by Aguiller and Massey on the nexus of social networks, job search methods and related labor market outcomes. Methodologically, we use a brand new longitudinal survey on employment careers of cross-border commuters conducted in 2013 (N=2,550). Empirically, the focus of our paper lies on three research questions concerning the methods of job search and labor market mobility. From cross-border commuters from Hungary, Slovakia and the Czech Republic in order to find employment in Austria (1)? What are the labor market outcomes of these job search methods in terms of wages (2)?

Our results strengthen the hypothesis that human and social capital resources serve as key factors for finding job strategies and successful labor market integration. For example, we can show that far family and friendship ties are more intensely related to job finding than near-family contacts. However, near or far social ties do not influence wages of cross-border commuters. Furthermore, there are substantial gender differences and differences related to previous occupa-
and activists engaged in environmental and human rights issues, such as Marie Byles, Natasha Jackson, Venerable Robina Courtin and Judith Snodgrass. Courtin, has frequently featured in the Australian press and been referred to as ‘unconventional’, given her forthrightness and dynamism. On October 22, 2009, four women received Theravada Bhikkhuni Ordination in Perth, in the Thai-Forest Tradition, which has generated a considerable amount of controversy. Members of the Australian Sangha Association, including prominent nuns and monks such as Rev. Chi Kwang Sunim, Ajahn Braham and Bhante Sujato have, and continue to be, at the forefront of promoting gender equity in Buddhism in Australia. This paper explores the contribution of Buddhist women and men, and also Buddhist organisations, in addressing gender disparities in Australia. It argues that stereotypes of Buddhists, and Buddhism more generally, as passive and passive, negates Buddhists’ commitment to the Bodhisattva ideal, social justice and social engagement, evident in both traditional and contemporary Buddhism.

Mortgage Households As Carry Traders: The Social Life Of The Swiss Franc In Poland

The recent innovation of mortgage credit in Poland has been rearranging property relations, stimulating construction and enabling new middle class aspirations. There are more than 1.5 million active contracts; there exists no significant population who paid off. Half of those contracts are adjustable rate mortgages denominated in Swiss francs. They draw housecos into the currency market, making for possible factoring traders, betting for how LIBOR on the francs and a favorable exchange rate between the Polish zloty and the franc. “Franc people,” as they have come to be known, enjoy the benefits of this speculation, but are also subjected to unprecedented risks. As the recent crisis attracted investors worldwide to the “safe haven” of the Swiss franc causing its strong appreciation, the mortgage payments saw a sharp plunge of equity on their houses and an increase in monthly payments. Based on ethnographic fieldwork this paper traces the dual productivity of the Swiss franc in Poland through the lens of the groupmaking effect of currency: “Franc people,” or “currency spread generation.” Economically, the franc is capable of producing independent effects that contradict the conventional wisdom that money is “just a veil” to economy. Symbolically, as a discursive site, or locus communis, the franc and its people become a vehicle for debates about postcolonialist transformation, capitalization, generation, instabilities of contemporary capitalism, and the legitimacy of speculation. What are the practices of domestic living with multiple currencies engendered through a complex long-term contract? How do charts, exchange rates, and the LIBOR index become objects of attachment both in intimate household economies and in the public discourse at large? While based on the Polish case, this paper also uses data on the social life of the Swiss franc in Croatia, Hungary, and Spain for a more comparative and theoretical perspective.

HALD, LENE* (KEA Research and Innovation Centre, lhal@kadk.dk)

Design Experiments As Intervention: How May This be Rendered Visible?

Building on empirically based visual experiments in the form of design interventions and co-designerly processes this paper seeks expand the field of visual sociology. This is done through an exemplification and discussion of how we might visualize interactive, multisensory and process based aspects within fashion and identity studies. Furthermore, the paper addresses how visual, expressive and design strategies of constructing and representing sociological insights affect our understanding.

Visual sociology is based on the notion that valid scientific understandings of our world can be attained by observing, representing, analysing and theorizing its visual manifestations through people and material artefacts of culture (Pauwels 2010). Equally, fashion, like the arts, is often considered a visual phenomenon and the creation of aesthetically appealing artefacts is frequently described as one of fashion design’s main goals.

Design disciplines (including fashion design) have, throughout their histories, actively engaged visual methods in the form of photography, moodboards, sketching etc. (Boradkar 2010). Furthermore, fashion design and the study of fashion & identity have been moving towards a broader definition than mere object making by being concerned with activism, critical and social design (von Busch 2008) - elements that historically have been the core of sociology. This points out some of the parallels between visual sociology and the study of fashion which make it prima facie plausible that visual sociology has a potential for social and cultural fashion studies.

Through visual design experiments conducted within a specific case-study concerned with troubled youths, fashion and identity, this paper seeks to investigate whether it is possible to grasp meanings of fashion beneath the visual surface and re-frame these meanings in a visual and designerly manner.

Vulnerable Workers: The Significance of Trust and Uncertainty in Coping with Workplace Hazards

Based on a qualitative study of 120 Canadian born and immigrant workers in unorganized and unionized workplaces this paper explores the different ways in which workers manage and cope with workplace safety hazards in contexts of varying forms of employment vulnerability and insecurity (Vosko, 2006). I examine the rationalizations, beliefs and identities that workers employ to dismiss or make sense of their risk-taking, while also considering the ways in which they seek to construct levels of control over hazards and security in their employment, in part through the building of knowledge and trust with other workers and supervisors. I also consider the contradictory nature of workers’ actions which are frequently in tension with each other, including taking safety risks to build employment security, as well as taking employment risks to establish limits to their acceptance of safety risks. In this latter part of the analysis, I explore the conditions and actions which limit worker compliance to certain levels and kinds of hazardous conditions, arguing that some workers are relatively successful in working either individually or with other workers to build what they see as a balanced level of safety and security.

HALL, DEREK* (Wilfrid Laurier University, dehall@wlu.ca)

Where Is Japan in the Global Land Grab Debate?

Some of the main explanations of the "global land grab" implicitly suggest that Japan should be close to the center of the phenomenon. Japan, after all, has the world's third-largest national economy, is extremely dependent on imported food and fuel, is a massive capital exporter, and has multinational corporations with vast international experience. In fact, however, the main land grab inventories show few cases originating in Japan. We also evaluate the impact of Japanese land and the land grab literature has little to say about the country. This paper seeks to explain both why direct Japanese investment in overseas land might be limited and why whatever land grab-related activity Japanese actors are engaged in may go relatively unremarked. I argue that 1) the international experience of Japanese multinationals has predisposed them to avoid large-scale overseas land acquisitions; 2) the Japanese government is prioritizing and supporting forms of international agricultural investment other than direct land acquisition by Japanese actors; 3) the avoidance of sub-Saharan Africa by private and public Japanese actors (with the major exception of the ProSAVANA project in Mozambique) lowers the visibility of Japan's actions; and 4) more generally, that little attention is paid to Japan in broader discussions of world politics. I also suggest that Japan's experience shows that there is much more to "land grabbing" than land, and that the literature needs to pay more attention to areas like investments in agriculture-related infrastructure, control over shipping, and technology transfer where the Japanese role has been quite prominent.

Internet Media and Radical Conservative Activism in Japan: The Battle Against “Anti-Japanese” Enemies

Focusing on right-wing groups in Japan, this paper addresses how radical conservative activists use internet media to build collective identity and mobilize support for their campaigns. In particular, this paper will examine the online activities of two closely affiliated “grassroots” organizations: Nihon Bunka Channel Sakura, an internet broadcaster, and Ganbare Nippon, a conservative activist group. Both organizations are involved in a wide range of activist campaigns, such as opposition to “masochistic” history teaching, opposition to voting rights for foreigners, promotion of awareness about “fascist” Chinese foreign policy, and protests against perceived bias in Japanese newspapers and television programs. Through content analysis of the organizations’ websites, videos, blogs, posts, and social media usage, I argue that they have embraced the latest forms of internet communications technology, and are skilfully employing the internet to spread their message. Their online activities have helped create a virtual community of supporters; many of whom also engage in offline forms of activism. In addition, this paper will explore how both organizations encourage the formation of a collective identity that sees Japan as a victim of powerful foreign and domestic “anti-Japanese” entities, and deprecates their campaigns a moral struggle for truth and justice.

Throwing Together Experiences of Belonging within Public Space

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This paper examines place-based belonging as a construction of thrown together experiences within the public spaces of two gentrifying neighbourhoods. It draws on Massey’s (2005) concept of throwntogetherness and Amin’s related work on situated multiplicity and collective culture (2008), to examine the manner in which such belonging can be generated through our everyday negotiations of the multiple trajectories of people, objects and symbols, that make up the contemporary city. Massey argues that because of the multiplicity of these trajectories, places should be thought of as unfixed, their meaning instead constructed within these moments of encounter. In this paper I apply this perspective to place-based belonging, in order to consider how the experience of facility college may be constructed within these negotiations. In doing so the paper also seeks to shift the focus from dichotomies of public and private, or inclusion and exclusion, that often characterise discussion of public space in gentrifying areas, to instead consider ways different practices of coming together are encouraged by these intersections.

In this paper I particularly focus on quasi-public spaces - cafes, bars, and shopping centres - where publicness is always ambiguous, and where much potential for both inclusive and exclusionary experiences resides. Drawing on qualitative research conducted within two gentrifying Australian suburbs, this paper describes the throwing together of interactions, representations, and interpretations to construct personal and collective identifications. These can work to enable belonging and create opportunities for diversifying exposure; both of which have the potential to communicate the presence of the community across time and space. In doing so this work seeks to demonstrate the ways that geographic and temporal boundaries of public space are blurred, breached and yet also reinforced, as we throw together placed-based experiences of belonging.

HALL, TOM* (Cardiff University, halla@cf.ac.uk)
City Streets, Dirty People and the Politics of Cleaning

This paper reports from empirical research on the work of urban patrol, in particular the physical work of street cleaning and the social (although similarly physical, messy and material) work of ‘outreach’ and street care. We consider a team of council employees working in one of Cardiff in the UK whose job it is to make repeated visits through the centre of the city, day and night, looking to establish contact with and minister to ‘vulnerable’ adults who may otherwise struggle on their own to access mainstream (social and healthcare) services; the street homeless make up a significant proportion of this target group, but take their place alongside assorted others, including sex workers, all of whom outreach workers aim to assist and enrol as clients. We also consider the daily patrols of teams of street cleaners, again employed by the local council to patrol the city streets – picking up litter, emptying the bins and sweeping surfaces clean.

The paper develops two lines of analysis. The first examines the ways in which street cleaners and outreach workers – the latter ‘moral’ street sweepers, of a sort – employ and engage the senses in pursuit of their tasks and are drawn, alike, to the same dirty, grimy, cluttered, smelly and unsightly places as they do. The paper’s second contribution, building on the first, considers the ways in which the expected outcomes required of street cleaners and street carers (outreach workers) are often equated with the appearance and look, and ‘feel’, of the places and people in, on and with whom they work. This linking of care and upkeep to appearance – as the desired outcome of work that tends to and mends place and people – signals a politics of repair, enacted with ‘deviant’ groups in frequently dirtied city places.

RC28-496.4

HALLDÉN, KARIN* (Stockholm University, karin.haldlen@sofi.su) Gender Differences in Academic Careers in Sweden

Gender differences to women’s disadvantage are evident in most branches of the labour market, so also within academia (Danell & Hjerm, 2012, 2013). Research on Swedish data shows that women have difficulties reaching the highest academic positions. Among other things, women’s likelihood of becoming professors is smaller compared to men (given PhD obtained in the same year). Women’s greater family responsibilities are often assumed to account for much of the observed labour market gender inequality. Nevertheless, to our knowledge no Swedish study has analyzed the impact of parental leave on academic careers in a systematic way. Hence, the current study uses Swedish register data for all teachers and researchers at Swedish universities and university colleges and matched information on individual and family related characteristics for the time period 1995 to 2011. Event history analysis is employed to analyze the effects of parental leave and temporary parental leave on gender differences in academic careers. The main results show that men have a higher likelihood of becoming professors - which is in line with previous research. However, the gender gap in academic careers gets smaller over time since obtained PhD. Parental leave and temporary parental leave have negative effects on academic careers for both men and women. When studying separately individuals with small children in the household we find that the gender gap in academic careers is significantly larger for this group compared to the gender gap in academic careers for others academics.

HALLER, MAX* (University of Graz, max.haller@uni-graz.at) Ethnic Stratification and Income Inequality Around the World

The paper starts from the assumption that inequality within countries is a very important topic for research also in the area of globalization. Data show that there exist huge differences between countries and world regions (continents) in this regard, with Latin America and Sub-Saharan Africa exhibiting extremely high, most European countries and Japan rather low income inequalities. Neither sociological nor economic research have theorized and investigated this issue systematically. The general hypothesis of the paper is: Economic inequality can only be explained if we see the close interaction between class stratification and ethnic differentiation. For a test of these hypotheses, a new aggregate data file has been produced, including characteristics about the ethnic structure and history, the socio-demographic and economic structure (population, level of development etc.), and the political system (democracy, federalism, welfare spending) of 130 countries around the globe. A regression analysis shows that both ethnic diversity and a history of slavery are significant determinants of income inequality; the same is true for land distribution, democracy and welfare spending. Some implications of these findings for policy and further research are discussed.

RC27-477.1

HALLER, MAX* (University of Graz, max.haller@uni-graz.at) Ethnic Stratification and Income Inequality, a Comparative, International Analysis

Social inequality in sport is an important topic in Sociology. Ever since modern sports were established there have been differences in the type and frequency of sports practiced by different socio-economic classes. Do these socio-economic differences in sport participation still exist today? Or are other horizontal dimensions more important in determining who is participating in which type of sport and how often? In this presentation these questions will be examined using the 2007 International Social Survey Programme (ISSP) on “sport and leisure time”. The relevance of three dimensions of vertical stratification (education, occupational position, and income) is investigated as well as of two horizontal dimensions (gender and age) for 34 countries around the world by using descriptive and causal (regression) methods of analysis. The results are surprising and even spectacular. Contrary to the widespread thesis that the vertical dimensions of stratification are losing in importance in favor of new, horizontal dimensions, we find that if anything it is the horizontal dimensions that have lost in importance. Participation in sports is much higher in rich countries than in poorer countries, also, the more affluent the country the lower the relevance of horizontal stratification. Indeed, in the most affluent countries the effects of horizontal dimension are even reversed.

HALMANN, LOEK* (Tilburg University, loek.halman@uvt.nl) Searching for European Values

Since 1981, the European Values Study group is searching for the values of the Europeans by means of surveys in an expanding number of countries. The latest wave took place in 2008 and included all 45 countries (with more than 100,000 inhabitants) on the European continent. We aim at a repeat survey in 2017.

It was attempted to identify value systems, but in general values appeared not in clustered coherent patterns, but the patterns found and values that could be identified were domain specific. It means that values could be identified with regard to various life domains and it is hard if not impossible to find overarching values.

What also was revealed in and repeatedly found since the first wave in 1981 is that Europe is far from homogenous when it comes to basic values. Despite its common Christian history, the values of the people in the European countries appear rather diverse and the European unification has not (yet) resulted in a converging of the values of the Europeans. Ideas of multiple or varieties of modernities (e.g., Eisenstadt; Schmidt) and path dependency (e.g., Inglehart) seem to be confirmed by such results.

In this paper I focus on European values in 2008 and elaborate on our efforts to find patterns in values distinguished in various value domains (religion and morality; politics and society; primary relations; work and leisure time). The data allow to identity one or two more fundamental orientations which appear to be underlying the orientations in the distinctive value domains. Perhaps such results are disappointing but they illustrate the wide variety in values that exist in contemporary Europe despite its ongoing process of unification.

"Why Independent Elderly Prefer to Continue Living in Their Home Even When They Become Frail?"

Frail old people have three options for care (informal, formal, mixed): move in with one of their family members (usually one of their children); live in a nursing home or in assisted living setting; continue to live in their home and receive private care or care services (based on the Long-Term Care (LTC) Insurance Law).

As a multicultural society, Israel serves as a natural laboratory for identifying similarities and differences between various groups. The present research compared independent Jews and Arabs aged 65+ who live in the community, on various aspects of their preferences for care.

The study included two stages, a quantitative one, in which closed-ended questions were administrated to 200 old Jews and Arabs, followed by a qualitative one, in-depth interviewing 20 respondents. The study found that Jews mostly preferred nursing or sheltered homes, whereas Arabs preferred mostly to remain in their homes. However, approximately 40% of both populations preferred "mixed care," staying in their home with a live-in worker or with one of their children.

Three main aspects were identified: a macro-level aspect of social and cultural context (collectivism vs. individualism); a mezzo level aspect of family patterns and norms (reciprocity and exchange in intergenerational relations); and a micro-level aspect of personal attributes and values (psychological meaning of family/home; dignity vs. honor). Although main aspects were in general similar between Jewish and Arab respondents, the initial meanings of these aspects were different, reflecting social contexts, past experiences, family norms and the importance of home in late life.

Results revealed the need for developing culturally sensitive and tailored programs and services that take into account these aspects. Providing such services would allow old people to continue living in their homes, even when they become frail and need care and support.

BOZONNET, JEAN-PAUL (Institut d’Etudes Politiques)

The Disconnexion Between Attitudes to Transport and Policy Choices

This proposed article explores the following paradox: whilst research on attitudes to transport and travel behaviour in European States often suggests that the negative externalities of the transport system are a significant everyday concern, decision-makers at various levels of government are reluctant to support "anti-car" measures that is, binding sustainable transport policies and policy tools such as speed limits, urban tolls or other carbon taxes. This article seeks to further explore this paradox by revisiting the public policy assumption. Political attitudes research, especially that which seeks to identify influences on voting intention, shows that transport is often relegated to a much lower level of priority. Based on successive waves of Eurobarometer surveys, our analysis suggests that attitudes to transport and travel are increasingly shaped by the politics of choice and combination of policy tools. Following the claim made by the so-called policy feedback model, we expect transport policies to shape citizen attitudes towards institutions, including policies, measured in terms of trust, causal narratives, the punishment of free-ride.

HALSA, ASTRID* (Lillehammer University College, astrid.halsa@hil.no)

At Home and Elsewhere: How to Handle Daily Life Growing up with a "Mad Mother" or "Drunk Father?"

There is a large body of research on children living in families with parental mental illness/substance abuse focusing on parental failure, adverse outcomes and risks imposed on the child. The risk and harm perspective is however less suitable to study children as participating agents. There is a gap of knowledge and risks imposed on the child. This paper focuses on children and young people's first persons accounts on growing up with parental mental illness or substance abuse by analysing children's own experience. The paper concludes with the suggestion that to grasp these children and young peoples lived- experiences the research has to look outside the families front door and include children's activities in school, leisure and community, and focus on the active and challenging identity work these young people go through in trying to keep their homes together while developing a sense of selves.

New Risks of Youth Exclusion. Nordic Policy Responses in a European Perspective

Including youth in the labour market is a major challenge facing many European countries, including the Nordic countries. Since 2007 many European countries have witnessed an increase in the rate of young adults neither in education, training nor employment (NEET) and an increase in the number of young adults registered as ‘unemployed’. Despite efforts at adopting counter-offensive to change the negative economic conjuncture through new measures to promote education, training and inclusion in the labour market the rate of inactive young adults has increased the last decade in Europe. Possibly we also see the impact of more long-term trends and structural changes making transitions from school to employment more difficult or variable.

This paper discusses how the Nordic governments have responded to diversity in the youth population and whether country differences in policy measures may account for the differences in unemployment and NEET rates in the Nordic countries. The paper demonstrates that the Nordic countries have responded differently to the concerns about the public expenditures and financial disincentives for the individual to participate in the labour market, the need for an up-to-date and relevant educational and vocational training services and social regulation of the market to ensure an inclusive labour market.

The paper argues that the challenges for the Nordic countries and concludes by identifying the policy lessons for non-Nordic countries.

Professions and Multilateral Organization: OECD

Professions and multilateral organizations. As professions globalize by creating their own international organizations, they also diversify and become more hierarchical. In this paper I focus on how professions are becoming more hierarchical through the support and prestige of multilateral organizations. The case is OECD, whose broad influence makes itself felt in areas outside its kernal economic activities is in focus. OECD gives status to some experts and professions as the cost of others.

This paper discusses how the OECD/profession - link elevates some parts of the profession to position of authority beyond the status of the general professions due to the status of the solutons and choices of OECD. And on the other hand: Are there certain combination of equation, work carriers and professional networks that manage to promote themselves through OECD? If that is the case, what consequences does this have for the professions in general as these professions now become more an more globalized?

The focus in in particular on the economist, accountants, agronomes and environmental science.

HAMADA, KUNISUKE* (Tokyo Jogakkan College, hamada@kcn.ne.jp)

Causal Relationship Between the Feeling of Alienation and Anti-foreignism in Contemporary Japan

In the last decade, anti-foreignism has emerged gradually in Japan. Grassroots right-wing organizations such as “Zaitokukai” have held anti-Korean demonstrations repeatedly. Furthermore, we can easily find many postings and articles on the internet which have hostilities toward foreign nationals and left-wings. They claim that the people who have a liberal view on migration and advocate for immigration are “traitor” to Japan and have intended to damage Japanese national interest. Although only a few people participate in these movements, quite a number of people may share the feeling of intolerance toward vulnerable and minority groups. For example, a national diet member Satsuki Katayama waged a campaign to investigate the recipient of welfare public assistance and expressed
the opinion via twitter that welfare public assistance for foreign residents should be cut off. Why has this trend emerged during recent years in Japan? Who support these speeches of anti-foreignism?

Yasuda (2011) pointed out that the people who support “Zaitokukai” have a feeling of alienation from societies and participate in activities to gain the esteem from others. On the other hand, Higuchi (2012) claimed that “Zaitokukai” have recruited “ordinary” people who have a patriotic feeling through the internet, because there are only a few organizations which fulfill the demand of conservative people. However, these discussions are based only on the qualitative research of “Zaitokukai” members and it is difficult to generalize about characteristics beyond this particular group.

The aim of this presentation is to clarify the relationship between a feeling of alienation and anti-foreignism in Japanese ordinary people. For this purpose, I analyze the data from nationwide surveys conducted in 2009 and 2013 using the method of causal analysis and structural equation modeling.
The concept “Middle Class” conventionally invoked to refer to a social class that are drivers of social change both in economic and in Political terms in the west and in developing world.

Ghana, like many African countries has had its share bit of political instabilities particularly in the aftermath of independence, in the 1960s, 1970s and 1980s. But since the return to democratic rule in 1992, it has steadily established itself as the beacon of democracy with multi party elections every four years and serves as an example for other African countries to emulate. This paper will explore if the current political stability in Ghana since the return to constitutional rule in 1992 had been a result of its middle class. It traces the Ghanaian middle class from independence, post-independence era of military rule to date and the role the middle class played especially in the 1990s and 2000s to ensure the political stability prevails. Drawing on a field work carried out in Ghana in 2012 with a varied sample from different social backgrounds to gage out who these middle class are? What classify them as middle class? To borrow Bourdieu's social classification typology: is it their economic, political, education and cultural capitals that make them middle class? And what economic or political role do they play within the Ghanaian political sphere?

Transforming Legal Professions in Scandinavia

In Scandinavia, the legal profession has been regarded as the midwives of the modern state; the legal profession was totally dominant in the most important position in society. However, with the development of the welfare state and with neo-liberal management methods in various branches of the public and private sector the legal profession has been replaced from the most prominent positions. With globalization new markets have opened for Scandinavian lawyers, the question is however, if the profession at large gains from the new opportunities or if the profession is stratified. This paper examines how different parts of the profession react to new challenges for the legal profession.

La Socialización En La Emergencia Del Científico De Bioquímica y Ciencias Sociales. Consideraciones Para El Futuro

Los procesos formativos de los doctorandos son heterogéneos, la socialización se deriva de las comunidades a las que pertenecen. La variación en los mecanismos y modalidades se relacionan con los procesos de formación, cognición y roles de identidad en distintos momentos para insertarse en la comunidad científica. La trayectoria del investigador es de un cierto shock con la realidad, y roles de identidad en distintos momentos para insertarse en la comunidad científica. La trayectoria del investigador es de un cierto shock con la realidad, and cultural capitals that make them middle class? And what economic or political role do they play within the Ghanaian political sphere?
have produced a neighborhood with socio-spatial qualities contrasting those of the dominant centralities near by. An incorporation of these differences has been initiated by local magazines, tourism agencies, and ministries: differences produced in a incremental and bottom-up process have been turned into an attraction for people beyond Shimokitaazzawa and a mainstream compatible youth culture, whereby the space is being deprived of its experienced dimension. Kitamoto in the north of the city is struggling with an aging population, economic issues as well as questions of identity, similarly to other peripheral areas. Due to this change, its dependency on the central area of Tokkyo is transforming and demanding a new consciousness for place. This is leading to the emergence of an active production of differentiating elements in the city, driven by the local authorities and inhabitants: an intended commodification of local assets, such as the natural environment, seasonal changes or local goods is aiming at creating local, socio-cultural value and identity.

By looking at the production of differences as part of a dialectical process of production of differences this paper aims at capturing the complexity of everyday life as a backbone of urban society. To achieve this, my research encompasses an open methodological approach and methods from different disciplines.

Islamic Environmental Activism in the United States and United Kingdom

Social Movement theorists have, until recently, accepted after Marx that religion is the 'spirit of the masses' and inherently opposed to social or political change. The small but growing involvement Muslims in the environmental movement in the US and UK is a challenge to this belief. The emergence of specifically 'Islamic' environmental organizations (IEOs) in both the UK and US shows the engagement of certain Muslims in the Diaspora with grassroots activism, and with the contentious politics associated with environmentalism. This paper is based on the study of four IEOs and their participants, two from the United States and two from the United Kingdom. The IEOs participate in actions and projects that are remarkably similar to their secular counterparts, and show a similar critique of the effects of capitalist economics and industry upon both the environment and a concern for social justice. However, their underlying ideology is grounded in a unique interpretation of Islamic scriptures emphasizing the role of humankind as God's representative on earth; the environment as a 'sign' from God in perfect, divinely ordained balance; and the necessity of following Islamic teachings in every day life. Utilizing Social Movement Theory and comparative analysis, this paper argues that Muslim environmentalists bring an Islamic voice into the environmental movement, calling for significant social and political change based upon Islamic principles, while sharing with secular environmental organizations methods of mobilization, organizational structure, and aspects of ideological framing.

Growing up in a One-Parent Family: Families and Child Wellbeing

Background
A large body of international literature has documented that children who grow up with both biological parents fare better on a range of outcomes when compared to children not living with both biological parents. Researchers continue to disagree as to whether the association represents a true causal effect. The association suggests that children who grow up with both biological parents fare better on a range of outcomes when compared to children not living with both biological parents. Researchers continue to disagree as to whether the association represents a true causal effect. The association suggests that children who grow up with both biological parents fare better on a range of outcomes when compared to children not living with both biological parents.

Methods
The empirical analyses are based on three waves of a nationwide representative survey conducted in Germany in the years 2001, 2006 and 2010 by the Criminological Research Institute of Lower Saxony.

Results
We introduce five different dimensions of governance, which we discuss with empirical illustrations: 1) the purpose of governance, 2) the drivers of governance change, 3) temporalities of governance, 4) extension of the modes of governance, and 5) sources of acceptance/legitimacy.

Comparing the Governance of Novel Products and Processes of Biotechnology

The emergence of novel products and processes of biotechnology in medicine, industry and agriculture has been accompanied by promises of healthier, safer and more productive lives and societies. However, biotechnology has also served as a catalyst and a purveyor of social controversy about the physical safety and social desirability of novel technologies. Such controversies have put the principles, institutions and instruments of governance, which has conventionally guided the interactions between science and society, under pressure. While researchers in science and technology studies (STS) have done extensive work on the substance and processes of such controversies, they have devoted less effort to link their work to the broader tradition in political science and political sociology, which analyses more general principles and varieties of governance in modern societies.

This paper presents an attempt to start to fill this gap and develop a conceptual framework for comparing and analysing new and emerging modes of governance affiliated with biotechnology in the light of more general approaches to governance. We aim for a framework that can facilitate comparative inquiries and learning across different contexts and applications, e.g. biomedical and agricultural applications, and across different policies and policy domains, e.g. different regional, national and supranational settings.

We introduce five different dimensions of governance, which we discuss with empirical illustrations: 1) the purpose of governance, 2) the drivers of governance change, 3) temporalities of governance, 4) extension of the modes of governance, and 5) sources of acceptance/legitimacy.

From Enclaves to Citadels: A Dynamic and Contested Transformation of Informal Settlements in Urban China

The economic reforms of the late seventies led to a massive urban expansion in China as villages were swallowed by the urban sprawl. The most striking example is Shenzhen, an area with 300,000 inhabitants grew into a metropolis of 14 million people over a couple of decades. Today only 3 million are formal residents of the city, and the rest of the people without local residency are excluded from subsidized amenities like education, health care and social housing. Most of the people that move into the city find accommodation in one of the 320 villages that have become embedded in the urban fabric. These urban villages provide rough-
ly half of the total residential floor area in Shenzhen, although they only cover 13% of the total built-up land. Over time, these multifaceted spaces of informality have shaped a landscape that is clearly different from the formal city; however, their transformation follows a logical trajectory which continuously contests societal and market-driven demands. As the city further develops and infrastructure improves, the expected economic rents of urban village land will keep on rising. For those villages, market-led redevelopments are almost inevitable. Large-scale land acquisition and redevelopment are beginning to transform urban villages into upscale private apartments, luxury hotels and malls—citadels of the rich. This process diminishes a great deal of affordable housing stock in the central city, further marginalizing the low-income groups. Moreover, this works as a domino effect where the redevelopment of one urban village drives the process for other urban villages in the proximity to follow on the same redevelopment path.

Similarly, the practice of producing scientific knowledge is no longer solely in the hands of experts, and the boundary work (Geryn, 1983) between experts and non-experts has been recently challenged. This tendency is more visible in “scientific” knowledge that is contentious, such as climate change, alternative medicine, hybrid cars, child vaccinations, and alternative and renewable energy sources. There is no “correct” knowledge, but rather what exists is contentious knowledge through its co-production among experts and laypeople. With these situations in mind, this paper examines how contentious knowledge is constructed in a social media environment, namely Wikipedia. More specifically, this study empirically investigates how the blogosphere and online diaries contribute to internet knowledge on the Fukushima Nuclear Power Plant Disaster that occurred in March 2011 in Japan as well as child vaccinations (i.e., MMR and Thiomersal). Wikipedia is an online encyclopedia with over 280 different language versions and over 4 million articles just in English. In addition to the articles that are more visible to the general public, Wikipedia provides an enormous discussion space for each article. This offers rich space for technical and societal milieus for examining how scientific knowledge is negotiated in an open online environment. This study aims to examine who is included and who is excluded in the co-production of knowledge in a social media environment and to discuss the mechanisms in which co-production of knowledge occurs. The implications of the findings are relevant to studies of scientific knowledge as well as consumers of scientific knowledge.

Unequal Housing Choices and the Residential Segregation in Urban China

The growth and transformation of cities in China continue to absorb migrants from both ends of the economic spectrum, giving rise to socially mixed cities. Concurrent is the elevated level of residential segregation owing to new forms of enclave urbanism such as gated communities and urban villages. Factors including historical legacy, land institution and property-led development have contributed to a divided residential pattern at the neighbourhood level, but the divisions are not necessarily as significant in larger spatial units. This paper, by analyzing the distribution of both urban population and housing provision in Shenzhen, explicitly unravels the spatial logic of the divided pattern of the population. As expected, migrants and local hukou holders are largely segregated by different housing choices; however, due to the relatively even distribution of a vast amount of migrant enclaves, at the sub-district level a rather low degree of segregation is manifest. This residential pattern is salutary as it maintains a spatially equitable setting which enables deprived groups to reside within short catchment areas of jobs and amenities. Nevertheless, urban renewal programmes that target urban villages and old neighbourhoods are likely to jeopardise the somewhat reasonnable provision and distribution of housing choices, aggravating segregation on a large spatial scale.

HAO, ZHIDONG* (University of Macau, zhdao@umac.mo)
Left and Right, and Organic and Critical: Understanding the Politics of China’s Intellectuals

In today’s China, intellectuals continue to play important roles in social, economic, and political development. Much has been done on the roles of the public intellectuals in China in the reform era (Cheek 2006; Goldmann 1994, 1999; Edward Gu and Merle Goldman 2004; Zhidong Hao 2003; Kelly 2006), but the intellectual scene is developing so fast with increasingly clearer demarcations between the left and right that it remains an interesting and daunting challenge to describe more accurately what those roles are and why they matter. This article is one of those efforts towards a better understanding of China’s intellectuals and their political roles.

In this article, I will first define the term “intellectuals” and their political positions and roles to play, or their subjectivities, in terms of organic, critical, and professional. Then I will define the left and right intellectuals. Thirdly, I will examine contemporary Chinese intellectuals’ political positions. We will find that the left intellectuals are more likely to be organic to the government, and the right intellectuals are more likely to be critical of it. Fourthly, I will emphasize the complexity, subjectivity, and dynamics of intellectual politics in terms of the changeability of their political roles, the organic intellectuals’ living for or off politics, and the commonality between the left and right intellectuals. Finally I will speculate on the possible future development of intellectual politics and their implications for China’s democratization.

The method of analysis in the paper is typological, i.e., I am categorizing intellectuals into left and right, and organic and critical. The representative texts I am analyzing to substantiate the typologies are mainly from the Internet and the traditional media because this is where the battle between the left (organic) and the right (critical) over the politics of the government is mainly waged.
with women's survival rates at reproductive age. (3) For women, their expanding lifespan and survival rates at reproductive age could have influenced reproductive decision making to minimize the risk of childbearing; even if the theoretical fertility rate meets the reproductive level, women's views may remain unchanged. In Japan, fertility is lower than the replacement level because women's cost-benefit imbalance for childbearing is too high.

Social Capital of Seven Countries/Areas in East Asia: From the Questionnaire Approach

The Center for Social Capital Studies of Senshu University, Japan, chaired by Professor Hiroo Harada, have made the questionnaire research about 'social capital' both in rural and urban areas of seven countries/areas; Vietnam, Cambodia, Laos, South Korea, China, Taiwan, and Thailand, and at Shinjuku Ward and Kawa- saki City in Japan, from 2010 to 2013. In this report we will focus on the research of seven countries/areas.

The hypothesis is that 'social capital' might differ from the degree of economic development and urbanization. We define 'social capital' as the index of four components; social trust, maintaining and improving livelihood, risk and social safety-net, and social rituals, consisting of 56 questions and 18 items of face sheet. We are quantitatively examining the outputs so that we have not reached the final result and conclusion, but 'social capital' differs in urban and rural areas, families, communities, and so on. This may also suggest that 'social capital' differs with the economic development, market capitalism and globalization in prevailing at the present age. We also focus the examinations on the history of the families, communities and countries/areas. These would be the qualitative analysis.

We have to carefully treat the outcome of the questionnaire, because the degree of 'social capital' does not imply the superiority or inferiority, nor the positive or negative meaning of social change. In order to understand the system of 'social capital' just declares the type of social relationship and evaluation in the society of community conditioned by the history and geography. Therefore the policy implications would be differently induced.

Civil Movements in Low-Recognized Disaster Affected Areas

We discuss how civil movements have developed to protect children from radiation pollution in local communities after the March 2011 Great East Japan Earthquake and Fukushima nuclear disaster. We focus on those areas that have not been classified as "Affected Areas" by the government, although local residents have sought to gain institutional recognition of the damage due to nuclear accidents. In this article, these areas are defined as Low-Recognized Disaster Affected Areas (LRDAAs).

It is important to pay attention to LRDAA in mega disasters. Existing research suggests that local communities with low-level impacts were peripheralized and neglected by both the government and society in the face of tremendous negative impacts as a result of the earthquake and nuclear accidents. In seeking institutional recognition, residents in LRDAAs have difficulty showing the causal relationship between the level of pollution and its impact on health. This makes it difficult for residents to justify damage claims. The level of success of social construction around radiation pollution in low-level impacted areas determines how far and to what extent the Fukushima nuclear disaster impacted communities.

As a case study, we examine a civil movement in Ibaraki, a city near Fukushima. A series of petitions were filed by dozens of newly established citizen groups against local governments and legislators, and the government of Japan. We analyze how Ibaraki local citizen groups have established their network, to which extent they have achieved their claims to gain legitimacy in social and political process, and the roles the professional experts played in those processes. We point out the establishment of the Law to Support Child Survivors of Nuclear Accidents of June 2011 in the National Diet changed the character of the local political situation by transforming the local government's attitude toward citizen groups from oppositional to cooperative.

Toward the Inclusive Resilience for Both Individuals and Community

This presentation focuses on the different kinds of social conflicts between local people/individuals and the communities/local governments arising in the process of disaster rebuilding. It seems that the cases of Hurricane Katrina and Fukushima Nuclear Power Plant Accidents are so much different, but there are a few similarities between two cases. One of them is contradiction between community resilience and individual resilience.

First, we would like to consider the case, for instance, that the poor and social minority have been excluded in the process of community rebuilding, while community prosperity are achieved to some extent and community resiliency increases in the aftermath of disaster.

The city of New Orleans after Hurricane Katrina could be considered to be one of these cases. Since Hurricane Katrina, the city of New Orleans has been seeking in attracting new industry and younger generation, so, though it lost its overall population than 2005. Over the same period, the population of African Americans is decreased the most among other racial and ethnic populations. Under New Urbanism, the role of public sector in education system, the medical and welfare services, and housing services have been drastically decreased or extinct.

In case of Fukushima, the local governments seem to have a strong and inherent demand of restoring the community as soon as possible, while some families, especially those with small children, may choose not to return with concern of health risk due to radioactive contamination. The more families choose to stay outside the hometown for their own safety, the less resilient the community will be. Contradiction between community resilience and individual resilience could happen in both natural disasters and technological disasters. We will discuss two cases in depth at the presentation.

HARAMBAM, JARON* (Erasmus University Rotterdam, jaron.harambam@gmail.com)

Conspiracists' Longings for a Pure Science

Conspiracist theories have in recent decades become a popular and widespread cultural phenomenon in the Western world. Although conspiracy theories come in all shapes and sizes, a communality can be found in the challenge they pose to the epistemic authority of science. The social sciences have, however, simply conceived of conspiracy theories as bad science, making a parody out of the respectable scientific tradition, but in their moral condemnations these scholars have left unexplained how we can actually understand these critiques. In this article I draw on the ethnographic research conducted in the Dutch “conspiracy milieu” to explore what conspiracy theorists claim about science, scientists and the knowledge they produce. On the most abstract level is modern science critiqued for its dogmatism that excludes deviant forms of knowledge and leaves many terrains of inquiry unexplored. A second line of critique is directed to the knowledge scientific experts produce which in practice is not living up to its a-social ideal of objectivity and disinterestedness. The last strand of critiques centers around the powerless social position scientific experts have established in relation to out-siders that subordinate laymen and protect their in-group. In sum, what these critiques articulate is a (particular) public understanding of science. Despite a strong critique of science, conspiracy theorists are not against science, but hold a rather ambivalent position: science is at once sacralized for its intentions but profaned for its inclusions. I conclude by suggesting how these critiques resonate with both pre- and post-modern scientific understandings of science, and argue how the frailty of modern scientific ideals of the universality and disinterestedness of science paradoxically instigates those critical longings for a pure science that characterize contemporary western conspiracy theories.

HARAMBAM, JARON* (Erasmus University Rotterdam, jaron.harambam@gmail.com)

Strategy and Identity in the “Conspiracy Milieu”

Strategy and Identity in the “Conspiracy Milieu”

Conspiracy theories have in recent decades become a popular cultural phe-

nomenon, and its discourse is now an increasingly normalized idiom for many people to account for the occurrence of (seemingly ungraspable) phenomena in contemporary societies. The social sciences have nevertheless conceived of “conspiracy theories” in rather abstract ways; they have constrained the scope of an out-
dated worldview and endanger the body politic. Although the moralism in these studies is already problematic for the sociological understanding of who these people are, what I challenge in this paper is the uniform identity these scholars construct of conspiracy theorists. I draw here on ethnographic research in the Dutch conspiracy milieu to explore what differences in beliefs and practices can be found and how they are related to dynamics of identity formation. While a communality can be found in the societal change all conspiracy theorists want to bring about, I dissect three different strategies with which people think these
changes should be accomplished: withdrawal, activism and mediation. Strongly influenced by New Age beliefs, adherents of the first strategy assume change is to come from within: by changing oneself, the world will change accordingly. The activist strategy is informed by the notion that a different world can only be established by overthrowing the old order, practices therefore take place on the barricades of the street. Practitioners at last argue that societal change can only be achieved in cooperation, adherents therefore want to bring people together by making visible societal and political problems. I conclude by showing how the identity of conspiracy theorists is much more complex and dynamic than social scientists generally assume: it is multiple and formed in relation to the general public and other conspiracy theorists alike.

HARDERING, FRIEDERICKE* (Goethe-University, f.hardering@soz.uni-frankfurt.de)

Alienation and Meaningful Work – Subjective Strategies of Ascribing Meaning to Work

This paper speaks to current debates about new expectations of meaningfulness at work and new forms of alienation pathologies (Rosa 2012). Current scholarship generally agrees that defining work as meaningful is an important strategy against the feeling of alienation. But still little is known about the mechanisms and processes that individuals themselves use to create meaningful relations to work (Rosso, Dekas & Wrzesniewski 2010). This paper investigates the mechanisms and processes of how employees ascribe meaning to their work.

The sample consists of 21 employees who had changed occupations. I conducted in-depth narrative interviews about their work biography and their work orientations. Four distinct types of ascription of meaning emerged from the data: 1) reference to basic identification with work, 2) reference to meaningful aspects of work, 3) reference to the purpose of work for a greater good, 4) reference to values beyond work. The results show that current understandings of work or job orientations need to be extended and elaborated. Furthermore, the empirical findings invite more detailed questions on alienation, for example, in how far alienation can be interpreted as a gradual phenomenon.

HOFMEISTER, HEATHER* (Goethe-University, h.hofmeister@soz.uni-frankfurt.de)

Mindful Living, Mindful Working? New Understandings of the Role of Work in Post-Growth Society

In discourses about post-industrial, post-growth societies (Paech 2012), emerging questions of the “good life” and appropriate, sustainable consumption have invited a general inquiry about new lifestyles. Two archetypes of the new lifestyles include “Lifestyles of Health and Sustainability” (LOHAS) and “Lifestyles of Voluntary Simplicity” (LOVOS). The research about these lifestyles focuses particularly on the consumption behaviors of these lifestyle groups, but questions of how these lifestyles and philosophies affect the understanding of work remain understudied. Because work and consumption are closely linked, we expect that those involved with these new lifestyle models may also have a notably different orientation to work.

We investigated the understanding of work held and articulated by members of these new lifestyle groups. We reconstruct the understanding of work using the responses from four narrative interviews, two from representatives of the LOHAS lifestyle and two from the LOVOS, collected in Germany in 2012 and 2013. These four cases are a selection from a larger sample of 21 job-changers who described the media, employment biographies. The central analytical themes of the research are health, sustainability, work-life balance, and simplicity. Our results show that the understanding of work as expressed by these new lifestyle representatives deviate strongly from common understandings of “normal work” or “occupational careers.” The respondents report that it’s very important that the work mirrors their broader values on the dimensions of self-sufficiency, deciding for themselves rather than being driven by outside forces and demands, health-consciousness, and meaningfulness.

Children's Reproduction of Power Relations in the City

This study investigates power relations in a small city in southern Sweden. It is a city where there have been radical social changes in the population structure due to a major inflow of immigrants. The social situation can best be described as filled with tension between different groups. In relation to the tension there is a strong and dominant narrative about "us" and "them", relating to the categories "Swedes" and "immigrants". The study has two aims in relation to this narrative. One is to explore how it is used to reproduce power relations in the city. The second aim is to investigate how children actively use and reformulate the narrative and the power relations within it.

The point of departure is the assumption that human beings are embedded in figurations (families, social class, ethnic groups, nations etc) containing different power ratios that are transferred from one generation to another (Ellias 2009). Socialization is thus central in the transmission of power ratios, as children acquire adult standards of behavior and social norms. However, children are from, childhood sociology's point of view, also active agents involved in creating and influencing their own and others' lives, which implies that socialization is not equal to adaptation and internalization, but also to children's negotiation, sharing and creation of culture (Allison, Jenks and Prout 1998, Corsaro 2005). In the study the children's contribution to reproduction and reformulation, in relation to the narrative of "us" and "them", is in line with William Corsaro's (2005) concept of interpretative reproduction. The term interpretative captures children's participation in their own unique peer cultures by creatively taking information from the adult world to address their own peer concerns, while the term reproduction captures the idea that children not only internalize society and culture, but actively contribute to cultural production and change.

Educational Institutions As Mating Markets

Educational institutions are important settings in which future partners meet and where inequalities in the current and next generation formed. Yet there is little research on educational institutions as mating markets, partly due to limitations with existing data. In this study, we use population register data to follow the educational histories of an entire birth cohort of Swedes, born in 1970. We are able to identify the educational institutions the members of this cohort attended, and also whether their partners overlapped in these institutions. We focus on high schools (Gymnasium) and universities. As the outcome, we focus on first births and analyze assortative mating through the characteristics of the parents. We estimate which share of our cohort members overlapped with ("met") their partner in high school or university and use contextual level information on the structure and social compositions of the high schools and universities attended to analyze the probability of meeting one's partner in these institutions, and on the probability of assortative mating according to age, ethnicity, and class background. Our preliminary results suggest that up to 40 % of tertiary educationally homogenous couples have met in university, and that the social and demographic compositions of both high schools and universities shape meeting chances and mating along demographic and social lines.

Newspaper Messages about Public and Private Health-Care Services in Australia: The Entrenchment of Unequal Choice

Media representations of health care can perpetuate stereotypes about public and private systems that unequally shape consumers' perceptions and enactment of health-care choice. For instance, recent research about Australians’ (dis) trust of public and private health care suggests that participants' concerns about long public hospital waiting lists echo prominent media messages, which might in turn contribute to the fact that one in two Australians supplement Medicare (the universal public health insurance scheme) with private insurance. As part of a larger study about health-care choice, we seek to understand ways in which the media represent both public and private health services, and their role in structuring different ‘choice’ pathways through Australia’s health-care maze.

This paper presents results from an analysis of newspaper reporting of public and private health care. The sample consists of newspaper articles and letters dealing with public and private health services, private insurance and Medicare from ‘broadsheet’ and ‘tabloid’ newspapers in three Australian states (2011-13). These texts were coded for positive, negative and neutral messages about public and private care and examined for representations of choice, trust and responsibility. In line with the theoretical framework for our study, we also focused on articles that presented different aspects of ‘health-care capital’ – economic, social, cultural, symbolic or geographic – as influencing consumers’ capacity for health-care choice. The analysis reveals variation by state, newspaper, and over time.

We found that articles in the populist tabloid papers are dominated by negative, frightening messages about the “crisis” in public health systems and, to a lesser extent, the threat of rising costs of private health insurance. The ‘quality’ broadsheets present more balanced accounts, with articles typically combining positive, negative and neutral messages. Media representations thus contribute to the differential structuring of health-care choice, potentially compromising quality of care and exacerbating inequality.
Understanding Society (UK) survey, which records people's responses to specific questions about their own and others' experiences of racism.

What emerged is that in the qualitative project, participants found it difficult to name racism and denied that quite explicit forms of racism they had experienced was 'really' racism. In the survey, respondents recorded widespread racism which they and/or people they knew had experienced. This paper considers some of the implications of these apparently divergent findings. The use of ready-structured questions is helpful in alerting us to the persisting prevalence of racism. This is facilitated when survey respondents are not actively encouraged to reflect on the personal and structural racism they experience.

The second paper by Craig HARRIS (Michigan State University) discusses the agri-food system in Monterrey, Mexico. It is structured by three segments. One segment consists of the "traditional" Mexican diet of corn, beans, rice, chicken and pork. For residents of Monterrey, these foodstuffs are usually purchased at local mercaditos from local vendors who have acquired the foods from long supply chains. The second segment consists of the rapidly growing middle class and upper class. They purchase their foods at national and transnational superstores, and they tend to consume a more international middle class diet. The third segment is framed both as an attempt to re-invigorate local culinary traditions and as an effort to separate one's consumption from the transnational agri-food system. This emphasis is then articulated in distinctive local restaurants as well as shops and markets.

Family Structure Models and Nonmarital Childbearing in the Transition to Adulthood

Nonmarital childbearing is now a common fertility event during the transition to adulthood in the America. Current estimates indicate more than forty percent of births occur to unmarried women in the U.S., however, the image of a single, unmarried mother raising a child on her own is no longer accurate. This paper uses national data from Add Health to document the relationship contexts (co-habitation, dating relationships, no relationship) in which nonmarital first births occur and model the environmental influences of family structure on nonmarital first births that women aged 24-32 have experienced by 2008-09. We focus particularly on collective socialization effects of family structure models during adolescence by exploiting Add Health's unique design to measure family structure in the multiple social contexts of adolescent life, including the family, peer group, school, and neighborhood. We analyze both traditional (prevalence of two-parent families) and contemporary (prevalence of single parent families) family structure models in these multiple social contexts during adolescence on subsequent nonmarital childbearing and the circumstances of nonmarital first births. Controlling for other economic and policy-relevant determinants of nonmarital childbearing and socioeconomic confounding factors, we find robust and significant effects of family structure models in the multiple contexts of adolescents' lives on subsequent nonmarital childbearing that are independent and additive. When the prevalence of two-parent families is low or the prevalence of single-parent families is high, young adults face higher risks of nonmarital childbearing, and these risks are additive across the family, peer group, and school or neighborhood context.

Before and Beyond Neoliberalism: The Development Of Precarity And The Emerging Alternative

In this paper we contend that, to understand what might exist beyond neoliberalism, we need to rethink processes of capitalist development before neoliberalism. We make two arguments. First, for poorer countries, processes of commodification which are highlighted as evidence of neoliberalism often predate the neoliberal era. Third World development policies tended to make social and economic life more precarious as a corollary to capital accumulation, before neoliberalism as an ideology took hold. Second, intense theoretical focus on neoliberalism obscures a recent shift in the global South towards a tendential and tangible de-commodification of social

Practices of Conviviality and Belonging Among Young People in Urban Multicultural Australia

While there is considerable anxiety about social cohesion in increasingly diverse societies, and especially young people's role in multicultural civic life, little is known about their everyday practices of conviviality and belonging. Through an analysis of research with youth in some of the most multicultural and disadvantaged neighbourhoods of 5 Australian cities, this paper explores the local spatial practices through which belonging and productive intercultural relations are negotiated. It provides an insight into the ordinary processes by which youth get along in multicultural neighbourhoods, and suggests that practices of conflict and distanciation must be part of the discussion about conviviality in order to properly capture the complexity of productive relationality in the lives of young people.
life. In fact, during the height of what is widely accepted as the period of neoliberal triumph in many countries across the global South, the relationship between work, land, and welfare has begun to transform in ways that look quite different from what the dominant paradigm leads us to expect. The most salient examples today are state-led social protection programs which have been implemented across the former Third World. For those who lament that the post-2008 crisis has produced no Polanyian double movement, we argue that these state-driven social assistance policies are precisely such a mechanism. These emerged not out of technocratic fixes from above but often out of political and social struggles from below. The rise and spread of these programs are not only in stark contrast to popular conceptions of a neoliberal reinforcement, but are specifically targeted at social strata whose precarity has been largely generated by developmental policies which predated the neoliberal era.

Our paper presents a macro-level quantitative survey of the rise and spread of social protection programs over the past two decades in the global South, and qualitative comparisons of these programs in the BICS – Brazil, India, China and South Africa – as evidence of our argument.

Two, Three, Many Middle Classes: Theorizing Middle Class Power From a Global Perspective

Analyses of the post-2008 global wave of social protest have generally celebrated the rise of educated middle classes as a driver of historical change as eagerly as early during the development of the bourgeoisie. In the global South, middle classes are analyzed as both object and subject: the goal of economic growth is a middle-class society and the middle class is assumed to be the most suitable base for political development. Yet public discussion about the middle class occurs with a set of implicit assumptions which underpin this sort of teleological thinking, many of which derive from the application of late 19th-early 20th century sociological theory to the 21st century world economy. As an intervention in contemporary debates over class and protest, in this paper I reconstruct the concept of the middle class for the purpose of analyzing the current political economy of middle-income countries. To do so, I historicize middle class formation – with particular and contextual characteristics of class formation on a world-historical scale over the past several centuries. I argue that a key secular process of the history of capitalism is the production of “middling” classes, yet these classes themselves are transformed along with the capitalist world economy. Social theory has tended to reify a particular instance of this process, the rise of the 19th century European bourgeoisie to state power, as a general theory of class formation. This Whiggish story is arguably the main cause of confusion within the debate over the post-2008 global protest wave. To analyze what is actually new about the “new middle class” of the late 20th and early 21st centuries for the global South, I create a typology of four ideal-type middle classes and identify their social position and structural power vis-a-vis the state and economy.

HARVEY, DAINA* (College of the Holy Cross, dharvey@holycross.edu)

"Disaster Capitalism", Regular Capitalism, and the Search for a Big Mac: Undermining Assumptions of "What is to Be Done" for Marginalized Communities in the Aftermath of Disasters.

In the aftermath of Hurricane Katrina and the federal levee failures the EPA declared 100% of the homes in the Lower Ninth Ward uninhabitable. Nearly five years later there was no police or fire station, no continuously operating health clinic, no grocery store, no community center, and one school where before there had been four. New homes and businesses were washed away, the deportation of New Orleans, residents of the Lower Ninth Ward were dealing with what Harvey (2013) has called “secondary violences”—social policies that have resulted in the hyper-marginalization of the community. In the midst of this abandonment and displacement residents have sought to fill the void left by the State. These non-profits have been staffed mainly by non-residents who have brought ideas on rebuilding sustainable communities and environmental justice, and who have been weary of what Klein (2007) has called “disaster capitalism”—which involves, in part, corporations (with the aid of government) using the “shock and awe” of the disaster to seize taken-for-granted rights and raid the public sphere. Rather than embracing the social justice mission of many visitors and volunteers, residents simply want their neighborhood back. In many instance these ideas and efforts have been rejected as urban experimentation. Rather than a green-grocer residents want a Wal-Mart. Many have opposed projects like rebuilding with permeable concrete and the rehabilitation of older homes. Wal-Mart and Home Depot, the widespread use of vacated lots for guerilla gardening. This paper, based on thirteen months of field-work in the Lower Ninth Ward, looks at the problems of rebuilding marginalized communities through volunteer labor in the aftermath of disasters. Ultimately, I suggest that those problems result in a process of misrecognition whereby rebuilding efforts stall.

is only bringing public works of long lines of a huge coastal levee like the Great Wall. Despite being a fisherman's village, new life will start away from the ocean and with no ocean view.

Among residents, there are a lot of clashes of interests. Within a household, we can find a generational gap between the retired elderly with a pension and the younger generation who seeks a job and is raising children. While the former wants to stay within the village, the latter hopes to move out of the village, to an inland area more convenient for getting higher income, shopping, transportation and education. The town forecasts the population aging rate of over 15% by the year 2033, from 28% before the tsunami attack. The population will decrease to less than 13,000 from 17,000. How can we support the recovering process?

**Comparison of the “Examination Hell” (JP) and "Testing Wars" (US)**

Comparison of the Examination Hell and the Testing Wars is the comparison of Japanese school examination and American school testing, mainly in the late 19th century.

Specifically, for Japanese examination, I will explain how Japanese elementary school examination had been composed during the very short years of the beginning of Meiji Era, from 1868 to about 1879. It seems to inherit the ethos of being official from the feudal ages when only some portions of the Samurai Class (ruling class) executed examinations for the sake of encouraging prudent students of the Samurai. However, it got the new “shape” or “form” from Western school examination information. Judging from the remaining foreign books of those ages, it is likely to say they came mainly from America. After Western information, Japanese examination got many rule books as well as guide books.

For American testing, William Reese’s Testing Wars in the Public Schools: A Forgotten History, (2013), tells us many about how testing in 19th century American public schools had flourished under the influence of Europe. The years, from 1868 to about 1879, when the information about the testing of this country came to Japan and utilized much, were such era that standardized testing was almost conquering all States, regardless of the good will to improve teaching by using statistics and testing; days of testing’s side effects.

My comparison would be made on both examinations’ (tests) procedure of implementation, process of execution, standards for scoring, logic and ways of its utilization and some others.

By finding out the difference of Japanese examination and American testing, we may be able to see the difference of how it could work as a social organ, and then get to the reason of how people’s understanding of assessment and evaluation of both culture differ.

**Generations and Globalization: Shifting Family Relations in a Postindustrial Society**

This presentation provides a cultural sociology of changing intergenerational relations in the face of globalization, focusing on a historized account of shifting family relations that have dramatically altered the landscape for elderly people in Japan today. The demographic and economic transformations that have impacted expectations of social welfare and the ground rules of social obligations will also be examined as part of a broader trend in postindustrial societies. Drawing on her work on comparative aging, Hashimoto will discuss how these shifts have influenced the cultural ideals of aging in the global era.

**Multi-Sensory Experiences at Aso Farmland, Kumamoto, Japan**

Aso Farmland is a multi-sensorial experience for tourists. The farm stay resort allows tourists to consume local food produced in the region at 11 restaurants, exercise in an activity zone, and enjoy a variety of onsen baths including mud baths, as well as 13 heated saunas (earth power spas) lined with different herbs and minerals as well as a cold dome. Visitors can place their feet in a pool of fish for foot care and they can visit a petting zoo. There is an agricultural production facility on site as well as a farmers' market. Tourists experience a range of aromas from sulphur baths, to perfumed and herb baths to the aroma of a variety of cuisines and the busy market place and deli. An arts and crafts centre allows tourist to make a variety of crafts including music boxes, paper crafts, candles and snow globes. Accommodation is in dome shaped rooms infused with an antioxidant (anti-aging) solution. The paper will look at attempts by the attraction to provide a stimulating environment taking visitors beyond their reliance on just sight to engage in a more holistic experience.

**The Non-Nationalized Narrative of Two Korean School Graduates**

In April 2010, the Japanese government began a tuition-waiver program for high school education. In February 2013, after many twists and turns, Korean schools (Kosogakko) were excluded because of their connection to North Korea. In the media and through popular hearsay, Korean schools have often been identified with North Korea, and Korean school students are exposed to the outside prejudice that they are “brainwashed, anti-Japanese children.”

In this paper, based on an interview about whether it was appropriate to extend Korean schools from the waiver program, I present the complicated realities of an insider’s life story. The interviewees are a couple living in a local Japanese city with their 6-month-old baby. Each member of the couple is a third-generation zainichi Korean, born in the 1970s, and attended Korean school for approximately ten years. While the interviwee is a Japanese who is an outsider to the Korean school system, I have known one of the interviewees for a long period of time. Thus, when this interviewee characterized our interview as “the occasion to put my life in order,” I could hear these insider’s life stories about Korean school without the interference of a mindset gap between insider and outsider.

Though the two interviewees’ reasons and experiences are different from each other, the opinions they arrive at in this interview are similar: 1) Because of their own difficult experiences, neither interviewee wishes to have their son attend Korean school. 2) Neither interviewee entirely denies the value of Korean school itself. 3) Both are against the exclusion of Korean schools from the tuition-waiver program.

Do these opinions run in contradiction to one another? Although it may seem so to outsiders, it is possible to understand these opinions as consistent if they are not viewed as part of a national (i.e. North Korean) framework.

**The Discursive Construction and Performance of Gendered Identity on Social Media**

This article looks at the construction and performance of gendered identity through the medium of social media. Data was collected from a sub-section of Facebook webpages belonging to the Slut Walk movement. Our analysis suggests that gender is constructed through the subjects’ participation in the ‘post-feminist masquerade’ - through which their gendered identity is defined in relation to a hegemonic masculine ideal. This situates the network of sites within a post-feminist context, characterised by the ambivalent and appropriative treatment of feminism. Acts of resistance are framed as individual, momentary ruptures of Judith Butler’s heterosexual matrix of ‘cultural intelligibility’. The online context of these ruptures is found to vest a creative potential, by removing the constraints of time and location, indicating that the impact of these ruptures may extend beyond its immediate environment.

**What Explains the Rise of Ethnic Minority Tensions in China?**

In the past few years there has been a rise of flash ethnic violence in the relatively developed areas of China such as Beijing and Shanghai, to the far-reaching Western provinces of Xinjiang and Tibet. While the state's response to ethnic unrest oscillates between 'soft' (e.g. funding ethno-cultural activities) and 'hard' (e.g. increasing security mechanisms) policies, this paper suggests that this strategy will do little to address the underlying causes behind ethnic minority tensions in the long-term. Instead, it will argue that the most culpable factor behind current ethnic tensions is socio-economically rooted: Minorities are increasingly experiencing 'ethnic penalties' in the labour market, whereby their comparable educational attainment and training, akin to the majority ethnic group, Hans, do not match similar labour market outcomes. While intuitively, overt discrimination insofar as one's physical appearance or linguistic abilities, and first generation migrant status, are often cited as prevailing reasons to explain this penalty, the findings presented in this paper will suggest that explanatory factors such as an individual's social network, a firm's working culture, and social trust in a community are equally important considerations. Moreover, the interactive role of non-cognitive skills in minority labour acquisition will be discussed. Finally, the
paper will consider the policy implications of these findings for ethnic minority management, and the lessons learned for other multi-ethnic jurisdictions.

Cooperation In Marine Governance: The Case Of Eutrophication and Over-Fishing In The Baltic Sea

Over-fishing and eutrophication caused by agricultural nutrient run-off comprise two of the most severe environmental threats to the ecological integrity of the Baltic Sea, located in Northern Europe. This article takes its theoretical point of departure in Bourdieu's work on design principles, arguing that a selection of these principles fruitfully can be scaled to serve as analytical tools at the international level. The principles of conflict resolution mechanisms, nested enterprises and monitoring are adapted to a multi-level governance situation where international conventions, EU directives, national strategies and stakeholder involvement all contribute to setting the stage for collaborative initiatives. Because of the tensions between environmental protection and natural resource use in fishery and agricultural sectors mutually acceptable agreements are especially difficult to reach and thus constitute hard cases in relation to the broader spectrum of marine environmental disturbances. Moreover, collective action problems often emerge among the Baltic Sea States where free-riding is an ever present threat. It is shown that although formal conflict resolutions largely are missing at the regional level, forums for deliberation where broad spectra of stakeholders are invited are slowly emerging as mechanisms to facilitate conflict resolution among countries as well as sector interests and other stakeholders. Furthermore, it is shown that even though different layers of institutions for regulating fisheries and agricultural runoff typically exist at local, national, regional and global scales, nestedness is often incomplete, that is, the intuitional fit between the layers are frequently not fully adequate. Finally, while monitoring is part and parcel of modern environmental management, broader models of integrated monitoring of biophysical as well as social parameters and processes in collaboration with relevant stakeholders are still in their infancy.

The Co-Construction of Identity As 'Japanese Women Living Abroad' in Interview Narratives

This paper aims to illustrate how Japanese women living in London as permanent residents co-construct and represent their identities. As a recent trend of the social science of language, narrative has been analysed as talk-in-interaction. Following this perspective, narrative should not be analysed as a mere representation of past events, but should be understood as a process of co-construction influenced by the social norms of their new/previous communities. In this presentation, the presenter will focus on aspects of co-construction in the narratives of Japanese women who were indirectly affected by the Great East Japan Earthquake in 2011. The interview narrative data collected in London in 2012 have been analysed from the perspective of positioning theory (Bamberg 1997, De Fina 2003, De Fina, Shiffrin and Bamberg 2006 and others), analytical methods of small stories (Bamberg 2004, Georgakopoulou 2007) and multimodal- ity (Goodwin 1981, Heath 1986, McNeil 1992, 2005, Kataoka 2011). Analysis of the data shows how co-construction is manifested in linguistic and other semiotic resources - final particles, supportive giving/receiving verbs, nodding, laughter, dysfluency, overlapping, gesture, eye gaze, and so on - appearing in interview narratives. This presentation will reveal that 1) how the narrative message can be conveyed by not only language, but also other semiotic resources, 2) the participants of the conversation put much value on collaboratively constructing their mutual identities in the 'here and now' situation, rather than the contents of their storytelling, 3) they inevitably encounter aspects of internal conflict derived from the fact that they represent their feelings in view of the social norms of their original and current community and the pragmatic constraints on expression in their mother tongue.

HATA, MIKAKO* (Hanazono University, hata.mikako@gmail.com)

Reading Comics with Ears

Comics is an art form of visual storytelling, which means a page of comics cannot be reduced to texts in speech balloons and narration boxes. Facial expressions of characters, onomatopoeia, emanata, and even gutters convey meanings non-verbally. Reading comics is mostly an experience of looking at and interpreting visual images drawn on a page.

Based on this understanding of comics, this paper investigates comics for people with visual impairment. Recently some volunteer groups in Japan have made speaking translation of comics catering for visually challenged people. Although translating images to voice information has been already practiced on speech translation of films, in comics-to-speech translation it is necessary to bring not only characters' behaviours and their situations but also signs used in panels, as mentioned above, to speech. Also, because comics literacy of the readers (listeners) differs, what they want in reading experience is not the same; some know comics as an art form from their former reading experiences and thus want to read comics as comics, while others have never seen pages and thus read comics as entertainment-oriented stories, in other words they are not so interested in the visual aspects such as the layout in a page. Translators try to grant these requests as far as they can, and at the same time, give sufficient consideration to authors too, not to spoil what authors place importance in their art works.

The focal points of this paper are both on translators' experiences of reproducing comics with oral language and on readers’ experiences of reading comics with ears. This paper describes how comics communicate with readers without using images, via translators’ modest intervention, and examines what for people read comics.

TG06-961.2

“We Want to Report about Everything!” How the Technologies of Results-Based Management Protect the Comfort Zone of Donors in International Development Cooperation

Donor agencies legitimize their existence by producing activity reports which show that they are making a difference. Evidence needs to be produced that links the donor to the results achieved by its partner organizations. Such evidence usually comes in the form of reports which the partners are obliged to deliver before they receive the next slice of funding.

The present paper examines this practice of exchanging funds for reports, asking how it affects the relationship between the development partners. The focus of the analysis is on how reporting requirements of Results-Based Management (RBM) structure the communication between donors and recipients and thereby organize global social relationships in asymmetrical ways, allowing donors to appropriate the credits for the work done by the recipients of their funds.

Based on a case study from donor funded HIV/AIDS work in South Africa, the analysis finds two conflicting languages: the language of results and the language of donations. The paper shows that a significant source of donor power lies in their ability to structure the communication between the partners in a results-oriented way and thereby frustrate attempts of grievances-related storytelling. However, the study also documents the urge of some community based organizations to “report about everything”, meaning: not only what the donor wants to hear. As a result, non-professional organizations sometimes find themselves in a situation in which they cannot reconcile their needs to report about all their activities, while they are simultaneously obliged to give evidence to the donor agency about the results of their work. However, the analysis shows that, based on a case study from a donor funded HIV/AIDS work in South Africa, the analysis finds two conflicting languages: the language of results and the language of donations. Consensus Decision-Making in Meetings As an Interactive Accomplishment: Silence without Silencing?

This paper starts from the observation that most of the literature on decision-making is concerned with individualism. However, it seems a decision has only be understood as the outcome of an individual decision or an aggregate thereof. Nevertheless, genuinely collective practices of decision-making are widespread across institutional and cultural settings, but the collective dimension of these decision processes is inadequately understood. We propose an approach to both reporting there is an urge to turn the indistinctness of sensory and emotive experiences into identified and accountable registrations. Bodily and affective experiences are treated as different modes, both by researchers and practitioners. Toward a Post-Hermeneutic Phenomenology

The kinds of attention that have less to do with intellectual analysis than with our senses, emotions and bodily responses to our immediate experiences are generally recognized as important among field-researchers. Still when it comes to reporting there is an urge to turn the indistinctness of sensory and emotive experiences into identified and accountable registrations. Bodily and affective reactions to the surroundings are most often perceived as something to be interpreted in order to lay bare an underlaying and absolute meaning. Thus we tend to subject the multitudinousness of lived experiences to different kinds of selection and reduction implied by that production of knowledge aiming to render the world in clarity.

Nevertheless, the blurriness of emotive and physical reactions to the world can be said to be due not to their impreciseness but rather to their richness in nuance and complexity. Hence, they may be much more precise vehicles of meaning not in spite of but on account of their indistinctness.

In this paper we ask what epistemological potentials might be revealed if we explore our lived experiences in their own right rather than try to explicate them and make them conclusive. Based on empirical research of our own, we turn our attention towards the possibilities of understanding bodily reactions during the process of research as being informative in themselves and discuss possibilities for transcending them into scientific writings that likewise invites a reading not only with the intellect but also with the senses. We propose an approach to both the making and communication of knowledge, which could be called post-hermeneutic – a phenomenology not aiming at fixing of identified significance, but at a knowing that includes and even takes advantage of the fluctuating and manifold ways we experience the world when we move in it instead of stopping to make analysis.

HORMONE DECLINE AND AGING: SOCIOLOGY OF A MEDICAL PROMISE

The promise of slowing down, stopping or even reversing the aging process is, in a sense, medicine’s hyper-promise and the ultimate victory of science over human nature. And indeed this desire has been expressed, in particular through the myth of the conservation of youth, for thousands of years and in a great many civilizations. This idea emerges regularly in the public and scientific space, from the early 20th Century attempts to transplant animal glands in order to restore the vitality of people’s youthful state to the forecasts made about “regenerative medicine in the wake of the isolation of embryonic stem cells and the cloning of Dolly the sheep.

Since the mid 1990s, research and practices aiming to fight the aging process have intensively and become more structured, with the development of so-called “anti-aging” medicine. One hypothesis played a key role in this dynamic: that of hormone replacement therapy. The underlying idea is that during life, the production of certain hormones, which are essential for many of the body’s functions, tends to decrease and that by compensating for this decrease, it is possible to tackle the very process of aging. Different hormones were targeted: melatonin, the growth hormone and DHEA (dehydroepiandrosterone). In France, it was above all the latter that was promoted as a possible “youth pill”.

This presentation will first examine the construction of DHEA’s anti-aging promise, its underlying roots, the conditions under which it emerged, and the changes it has undergone. We will then analyse the reception of this promise in France, both on the representation of the body and on anti-aging practices. A last section will show how this promise was called into question from the mid-2000s onwards but managed to survive.

HORMONE DECLINE AND AGING: SOCIOLOGY OF A MEDICAL PROMISE

Since the mid 1990s, research and practices aiming to fight the aging process have intensively and become more structured, with the development of so-called “anti-aging” medicine. One hypothesis played a key role in this dynamic: that of hormone replacement therapy. The underlying idea is that during life, the production of certain hormones, which are essential for many of the body’s functions, tends to decrease and that by compensating for this decrease, it is possible to tackle the very process of aging. Different hormones were targeted: melatonin, the growth hormone and DHEA (dehydroepiandrosterone). In France, it was above all the latter that was promoted as a possible “youth pill”.

This presentation will first examine the construction of DHEA’s anti-aging promise, its underlying roots, the conditions under which it emerged, and the changes it has undergone. We will then analyse the reception of this promise in France, both on the representation of the body and on anti-aging practices. A last section will show how this promise was called into question from the mid-2000s onwards but managed to survive.

HORMONE DECLINE AND AGING: SOCIOLOGY OF A MEDICAL PROMISE

The promise of slowing down, stopping or even reversing the aging process is, in a sense, medicine’s hyper-promise and the ultimate victory of science over human nature. And indeed this desire has been expressed, in particular through the myth of the conservation of youth, for thousands of years and in a great many civilizations. This idea emerges regularly in the public and scientific space, from the early 20th Century attempts to transplant animal glands in order to restore the vitality of people’s youthful state to the forecasts made about “regenerative medicine in the wake of the isolation of embryonic stem cells and the cloning of Dolly the sheep.

Since the mid 1990s, research and practices aiming to fight the aging process have intensively and become more structured, with the development of so-called “anti-aging” medicine. One hypothesis played a key role in this dynamic: that of hormone replacement therapy. The underlying idea is that during life, the production of certain hormones, which are essential for many of the body’s functions, tends to decrease and that by compensating for this decrease, it is possible to tackle the very process of aging. Different hormones were targeted: melatonin, the growth hormone and DHEA (dehydroepiandrosterone). In France, it was above all the latter that was promoted as a possible “youth pill”.

This presentation will first examine the construction of DHEA’s anti-aging promise, its underlying roots, the conditions under which it emerged, and the changes it has undergone. We will then analyse the reception of this promise in France, both on the representation of the body and on anti-aging practices. A last section will show how this promise was called into question from the mid-2000s onwards but managed to survive.

Across the globe, societies face pressing challenges to address the needs of their rapidly ageing populations against a background of austerity. This is particularly true of Japan, Britain and Sweden, all ageing and established welfare states, where each government has attempted to expand and diversify public care services. This has been reflected in the respective new and reformed public care systems. However, none of these countries’ systems has succeeded in meeting all care needs, and recent austerity and budget cuts have exposed further difficulties. Accordingly each government has been painstakingly exploring new and cost-effective methods of providing care. Specifically, there has been optimism that civil society organisations might step in and fill the gaps left by public provision.

This paper, drawing on empirical research involving detailed interviews and participant observation, will examine and compare successful and innovative models of civil society organisations that have developed ‘gap-filling’ services for older people in Japan, Britain and Sweden. Key findings concerning each model will be considered briefly within their national context, highlighting nation-specific features. Analysis of models at a national level will then be placed in a transnational and comparative perspective, underscoring best practice benchmarks together with the challenges encountered by organisations. For instance, while the standardised and universalist Japanese model mobilises traditional quasi-governmental community resources, the British model emphasises partnership working and recognises innovation and professionalism, and Sweden’s model is characterised by localism and sensitivity towards the employment of ‘conventional’ labour, with volunteers being discouraged. In conclusion, this paper will discuss suggestions for future care policy making and possible refinement of the care market, potentially transcending national boundaries. It will also consider how experiences and best practice from the models examined here could be utilised in other countries to pursue evidence-based sustainable care policies and promote civil society.

Integrity Management and Fantasy Planning: The San Bruno Pipeline Rupture

On 9th September, 2010, a high pressure natural gas transmission pipeline ruptured under the suburb of San Bruno, near San Francisco, California. The resultant fire lasted for two days. Eight people died, and thirty-eight homes were destroyed because a weld in the buried pipeline failed. The weld had been poorly made in 1956 when the pipeline was first constructed.

Using documentary analysis (investigation reports, transcripts of evidence and other primary source materials), in this paper we focus on the experts in this organisation who were responsible for pipeline integrity management. Clarke’s work regarding fantasy planning in the face of uncertainty explains both how and why the integrity management system had taken on a symbolic, rather than functional, role in this organization. ‘Knowing’ about the system was grounded in elaborated graphs purporting to show risk was declining, and yet this analysis was only tenuously linked to the actual level of danger. In an environment of cost cutting, expensive inspection work was tailored simply to meet available budgets. Small failures were repaired and then dismissed from the collective memory so that valuable opportunities for learning in this uncertain environment were ignored.

This professional disposition on the part of the expert engineers was embedded in a broader organisational context. The paper further argues that senior management decisions about cost cutting were divorced from the real world impact as a result of the historical restructuring of the domestic gas industry overall and the low status of relevant industry expertise at senior management levels.

We conclude that this ‘organisational accident’ provides important lessons for all organisations relying on technical expertise to prevent low frequency, but high consequence events.

Violent Natures: From Coercive Conservation to Climate Change in Africa

Since the colonial era, African natures—both external landscapes and internal human dispositions—have been constructed as violent via the parallel ideologies of wildlife conservation and climate change. Both address the human impact on, responsibility for, and stewardship of the environment through the lens of violent natures. During the colonial era in East Africa, ‘natives’ were relegated to specific areas, their lands usurped for white settlement and the conservation of dangerous wildlife. Today, conservationists continue to violently evict residents of East and Southern Africa from apparently precarious landscapes. In colonial and contemporary conservation, both ‘native’ and nature appear unru and potentially violent. Under the ideology of climate change, as well, poor, non-white populations usually bear the brunt of catastrophic natural (or unnatural) disasters at the same time that they are blamed for contributing to the underlying environmental causes of such events. African environments and peoples are therefore constructed as inherently violent and in need of external intervention via the rhetoric of both conservation and climate change.

Each system of thought employs science and technology to cast the power-striken, racialized ‘other’ in the role of the enlightened noble conservationist; evil instigator of anti-conservationist or climate change-inducing practices; or victim of the violent environments engendered by conservation and climate change. This paper takes the lead, at a basic theoretical level, on the change in the ‘native,’ nature, or both ‘native’ and nature, as violent. ‘Violent Natures’ thus explores the racialization of nature by connecting the parallel stories of conservation and climate change in Africa.

The Peace-Seeking Body in East African Pastoral Society

When approaching anthropologically to emergence of the new disease in the way that goes beyond a dichotomy between nature and culture, the phenomenological body, which enables to attach significance to experience, is often assumed. While its silent power of representation can be explicated, the social and political power is removed from consideration. To illuminate the body power in toto, the paper describes the process of embodiment of political violence with reference to local medicine and the subsistence activity for healing patients. The Karimojong, Dodoth and jie in northeastern Uganda and the Turkana in northwestern Kenya live in the dry savanna, keeping cattle, goats and sheep. Their living setting, the Uganda-Kenya international boundary, is trans-local-national multi-layered space, where armed violent conflict has occurred endlessly in the wake of the spread of automatic rifles and forcible pacification. Political violence separates herders’ bodies as grounds of cultural existence from particular place and time and creates new classification, and then each body becomes the antagonistic referent. Since 2000’s disarmament policy in the area, the epidemic chronic disease has happened later in life. Previous research has established that individuals’ health and resources in old age are strongly correlated with their health and resources in midlife, making midlife a crucial starting point for the study of old age. However, old age is often associated with a decline in resources such as health and social resources, making it plausible that this is a period of life is a time when disadvantages accumulate.

In this study, we test the association between multiple disadvantage in midlife and multiple disadvantage in old age by drawing on longitudinal, nationally representative data from Sweden from 1974 (when respondents were aged 40-59) and 2011 (age 77-96). Preliminary results go in two directions. On the one hand, results indicate that people with multiple disadvantage in midlife were likely to experience multiple disadvantage also in old age. On the other hand, around one-third of those who experienced multiple disadvantage in old age reported no multiple disadvantage in midlife. Thus, for a considerable proportion of those reporting multiple disadvantage in old age it may be a relatively recent experience, suggesting that there are different pathways into deprivation in old age. Further analyses will aim at describing the plausible pathways and target the issue whether certain pathways are associated with certain kinds of disadvantages.

From Community to Network: A Case Study in Rural Inner Mongolia in Modernization

Inner Mongolia has 118.3 km² of land, 12.3% of whole China. 70% of its area are grassland and its main industry is livestock farming. In this area where nomadism has had a history of more than 2000 years, settled breeding has arisen in 1980s, and cattle shed dairy in 2000s. The aim of this report is to clarify, 1) how the prohibition of grazing, adopted as grassland protection policy in 2003, has changed the pastoralists’ lives and community, in other words 2) how the prohibition, that included restriction of grazing, restriction of rest grazing, and restriction of rotation grazing, divided the pastoralists’ response to the prohibition in these each restrictions, and 3) how their response reconstructed their local community.

Through a case study in some life histories of women pastoralists this report concludes that their lives have been differentiated as a milk supplier, a cheese producer, and even on the same group of stock farming, and that there a new network of diversified inter-dependent subjects has arisen in place of a community of homogeneous independent pastoralists.

Multiple Disadvantage in Midlife and Old Age - Exploring the Associations

To experience multiple disadvantage – the simultaneous occurrence of disadvantages such as health problems, lack of economic resources or social isolation – implies reduced possibilities for people to manage daily life. The prevalence of multiple disadvantage has been found to be much higher among older adults (especially those older than 80) than among younger age groups. In this study, we investigate whether multiple disadvantage in old age was preceded by multiple disadvantage in midlife, or if the accumulation of disadvantages may have happened later in life.

This paper is in three parts: a brief overview of the relevance of autoethnography for transnational sociological theorizing; critical interrogation of my previous work on autoethnography; re-evaluation of their implications for transnational sociological theorizing.

The second part investigates four different interpretations of my own personal, work/employment, political, and theoretical change over time. In this, I build on previous autoethnographic work to examine how theorizing develops and changes with transnational movements and moments. The first is based on different relations to nation and nations: England, Ireland, Finland (Autobiography, nation, postcolonialism and gender, Irish Journal of Sociology, 2005). The second focuses on changing relations to children, family and household (‘The personal is work: political is theoretical: continuities and discontinuities in (profeminism, Women’s Studies, men and my selves’, NORA, 2008). The third concerns changing relations to transnationalisations, disciplinary and transinstitutional developments (‘Opening up material-discursive (trans-)forms of life … politically, theoretically, institutionally, personally’, in M. Wojtaszek and E. Just (eds.) Quilting Stories: Essays in Honor of Elzbieta H. Oleksy, 2012). And the fourth highlights the relations of men, intersectionality, organizations and proeminism in research and fieldwork in the diversity and equalities field, with a focus on gender and intersectional dynamics and research processes (Equality, Diversity and Inclusion, 2014).

In the third part I discuss more general implications of these four perspectives for the analysis of intersectionality and intellectual biographies, in terms of: the politics of location; reflexivity and its limitations; critical positionality of members of superordinate groups; the problematisation of the male “I” (‘Contradictory masculinity/men’s “I”: the rewriting of men, and the concept of gex’, Revista Canaria de Estudios Ingleses, 2013); and the relation of body and writing (Writing as intimate friends … how does writing proeminist research become methodologically challenging?, in M. Livholts (ed.) Emergent Writing Methodologies in Feminist Studies, Routledge, 2011).

Integrating Violence Against Women and State Violence Policy through Gendered Intersectionalities and Intersectional Gender: Local, National and Transnational Contexts

This paper arises from collective work within the 5-year Swedish Research Council project, “Feminist Theorizings of Intersectionality, Transversal Dialogues
HEATH, MELANIE* (McMaster University, mheath@mcmaster.ca)

Gender Equality or Religious Freedom? Testing Competing Rights in the Canadian Polygamy Trial

Constitutional provisions protecting fundamental human rights are central features of liberal democracies. However, tensions exist between the construction of rights as universal principles and their application in a fragmented political world. For example, the right to be free from discrimination based on creed or gender may be at odds with each other or with other rights, laws, and practices. The Canadian Charter of Rights and Freedoms of 1982 guarantees freedom of conscience and religion and the right to equal protection and benefit of the law without discrimination based on race, national or ethnic origin, color, religion, sex, age or mental or physical disability. The practice of polygamy by fundamentalist Mormons and Muslims presents the potential for competing rights where arguments concerning autonomy, cultural integrity, and religious freedom are pitted against the right for gender equality. In 2010, the Canadian Supreme Court of British Columbia ruled that allowing polygamy is constitutional and the Canadian immigration law that allows only one spouse per immigrant to enter Canada is unconstitutional. This decision buttresses the Canadian Charter of Rights and Freedoms. A central concern is whether polygamy perpetuates inherent harm to women, children, and society. In contrast, arguments were made that some women freely choose to enter into polygamous relationships, and that criminalizing this family form offends their right to religious freedom. In 2011, Justice Bauman ruled that, although the law violates commitments concerning autonomy, cultural integrity, and religious freedom, it is constitutional. This decision is of interest not only for Canada, but also for other countries where polygamy is practiced. The paper examines the competing rights and societal values in the Canadian Polygamy Trial case to test whether the quality of policy, for both reducing and stopping violence, and assisting those subject to violence.

Precarious Wives: Social Exclusion, ‘Décohabitation,’ and the Mobility/Immobility of African Polygamous Women in France

Migrants are commonly considered a vulnerable group due to the fact that they are not citizens of the country in which they live. Moreover, when a migrant enters another country illegally, or enters legally and subsequently loses legal immigration status, her or his susceptibility to exploitation increases. The instability of migrant status is further complicated when immigrants participate in undesirable or illegal practices in the host country. France has a particularly complicated history of immigration, and has policies that involve immigrants predominantly from Gambia, Mali, Mauritania, and Senegal. During the period following World War II, immigration to France significantly increased due to the shortage of male workers. Under the post-1993 legal framework, many are forced to live in undesirable situations with their families or in small apartments because a husband can only support the first wife and children in social housing. Drawing from in-depth interviews with women living in polygamy in France, this paper examines the ways that the legal and policy framework shapes the mobility of African polygamous wives. It uncovers the strategies these women employ to manage their precarious immigration status in France.

Global Atomic Inequalities: Marginal Work in the Nuclear Sector

This paper takes the aftermath of the Fukushima accidents as the starting point for an exploration of work and workers commonly considered marginal to nuclear systems. The paper seeks to make visible labor that – by virtue of its unexiting nature or (apparently) peripheral location – often remains hidden in our accounts of technoscientific work: ordinary maintenance, women mining. It begins with the contract workers hired to “clean up” the Fukushima meltdown, then move back in time and across oceans, to consider the subcontractors who are involved in the production of nuclear power in (and all other industries). In nuclear and other systems, subcontracting has consequences for occupational health, as well as for transnational knowledge production (about the effects of low-level radiation exposure in the nuclear case). Contemplating these consequences, in turn, takes us to another apparently peripheral part of the global nuclear industry: uranium mining. After a quick comparative consideration of knowledge production about the dangers of radon exposure in mines, the paper discusses uranium mining in Gabon. It examines labor and occupational hazards there, including the efforts of Gabonese miners to make themselves and their illnesses visible on the global technoscientific stage.

Social Order and the Genesis of Rebellion: Mutiny in the Royal Navy, 1740-1820

The possibility of rebellion is a check – sometimes the only check – on authoritarian rule. Although mutinies in which crews seized control of their vessels are rare events, they occurred throughout the age of sail. To explain the occurrence of this form of high-risk collective action, this paper provides a theory which holds that shipboard grievances – related to material deprivation, poor governance, and the inadequate provision of health and welfare – are the principal causes of mutiny. Yet such grievances can only lead to rebellion when obstacles to collective action can be overcome. Whereas seamen usually could count on an ample supply of informal organization, their ability to engage in collective action was increased by factors that facilitated coordination and provided a critical mass of ringleaders. Using a unique database drawn from extensive archival information about Royal Navy voyages from 1740 to 1820, this study employs the case-control method and random forest classification to show why shipboard social order shifts, sometimes tipping crew members toward the high risks of mutiny. The findings have implications for the role of grievances in generating rebellion and for the mechanisms by which they are transmitted.

International Networks of Banks and Industry Revisited: The Financial Crisis

What impact did the financial and economic crisis that swept the Western world have on the international network of the corporate elite? Has corporate
governance become more national or have transnational networks been robust? Here we take a first step in answering this question. We see the financial crisis as a test case for the cohesion of the transnational capitalist class (TNC). If business interests are coordinated and the TNC is resilient, we expect that the business community remains stable in times of economic downturn. A decline of the transnational business community however may indicate a fragmented elite that cannot uphold its cohesion when the financial sector is in trouble.

We investigate this issue by comparing the networks of interlocking directorates among the 176 largest corporations in the world economy in 2006 and 2013: just before the crisis unfolded and present day. We place this in the empirical context of the corporate networks in 1970, 1975 and 1996 as collected by Carroll and Fennema (2002).

The Global Corporate Elite Uncovered

The transnational orientation and organization of corporate elites has for long attracted the attention of those who expect that ongoing globalization goes hand in hand with transnational elite cohesion. The laborious nature of compiling reliable network datasets has hitherto forced scholars to focus on those arena’s where we expect transnational corporate elites to emerge, notably the largest (often stock listed) firms in the western industrialized world. This systemic bias disregards the role of non-western elites in the global regime and neglects a possible multi polar architecture of the global corporate elite. Applying art tools and techniques, we are able to overcome this burden by analyzing the entire network of interlocking directors between a set of 100,000 corporations across the globe in 2012. This allows us to uncover the extent to which western and non-western corporate elites occupy similar social circles; which firms, countries, sectors and cities serve as linchpins within the global corporate elite, and as such reveal the sites and spaces where transnational corporate elites organize themselves, both in the west and beyond.

Processes of Success Among Students in Gender Segregated VET - Qualification and Social Inclusion

The aim of this project is to explore educationally successful processes in gender segregated VET based on qualitative life story interviews. Informants will be recruited from a school based longitudinal dataset (LUNO) of young people in Oslo, and I will focus on the importance of gender segregation for changes in aspirations during VET.

High rates of drop out in vocational upper secondary education is a problem in every European country. On the one hand, about one third of students drop out of or fail to complete upper secondary school in Norway – and the drop-out rate is highest among students in VET programs. On the other hand, the Norwegian VET system, which in general provides two years in school and two years in apprenticeship, ‘leaks’ a substantial number of high achieving VET students after the second year to general education supplementary studies which qualify them for higher education. Thus, the question of how to be perceived as a ‘success’ according to the individual and national higher education attainment goals, may be seen as ‘failure’ according to policy aims regarding high quality vocational skill formation at the upper secondary level.

Theoretically, gender has been shown to be of importance for the development of identity of a learner, for failure and success in school, particularly for boys but also for girls. The key objective of this project will be to understand processes related to educational processes and changes in aspirations among students in gender-segregated VET study programmes and give a deeper understanding of the characteristics of gendered school contexts which supports or hinders the completion of VET and transition to apprenticeships. The study will be based on educational life story interviews with selected LUNO-respondents, and strategic short-term fieldwork in gender-segregated study programmes.

Dimensions, Practices and Dynamics in Cultural Adaptation Work: An Example from Norway

My paper concerns the movement of an idea and a legal system. The idea is that a product’s quality can be determined by where it comes from. The legal system is known as Geographical Indications and enables protection under law that a product’s quality can be determined by where it comes from. The legal system is known as Geographical Indications and enables protection under law.

or characteristics. In 2002 a system for GIs (Protected designations) was set up in Norway modelled on corresponding systems in the EU.

I develop a grounded conceptual framework to understand the implementation, administration and the use of protected designations in Norway. I emphasize that the movement of ideas and legal systems is dependent on actor’s adaptation practices. More specifically I describe this as Cultural Adaptation Work (CAW). My analysis shows that the actors’ work with adaptations of meaning, social organization and materiality, during implementation, administration and use of the Norwegian scheme is important. They occur because opinions, forms of cooperation and practices in food culture do not always coincide with the food-cultural conditions which the EU scheme was founded.

To identify, describe, and understand how the implementation, administration and the use of Protected designations is worked out I elaborate on the concepts of translation, reorganization and transformation, giving them a special meaning. In this regard translation refers to adaptations of meaning, reorganization refers to adaptations of social relations and transformation refers to material adaptations. These adaptation practices may furthermore be understood as elements of CAW.

I conclude that CAW takes place in the interplay between people’s translations of meaning, reorganization of social relationships and transformation of things. The interplay takes place in the tension between the global and the local, the old and the new.

The Social Construction Of Prices – The Impact Of Culture, Networks and Institutional Rules On Stock Quotations

Prices in market economies are based on supply and demand processes. I challenge this common economic sense by comparing stock price movements and their causes in the US and Germany, arguing that stock valuations also depend on the cultural and governance structures of trading and culturally constrained frames of meaning, corporate networks and institutionalized rules. Economic sociology is well aware of such social forces. Still, sociological investigation of price formation lacks both theoretical integration and empirical evidence for how different types of market conditions interact and influence prices.

Taking a sociological field theory as a starting point I combine three independent strings of price formation explanations, considering the simultaneous influence and interaction of institutional regulations, network positions and cultural frames. Empirically, I test this field theory of financial markets by comparing the setting of stock market rules and the longitudinal development of macroeconomic structures are discussed. Secondly, I investigate correlation networks of stock listed companies using social network analysis. I am particularly interested in the shifts occurring in the network ecology after the financial crisis and the subsequent changes in each systems’ stability. Finally, the change of stock repurchase laws in Germany in 1998 delivers an ‘experimental’ setting for different types of rule based information trading before and after the legislation reform. Applying Event Study methods the short- and longterm influence of repurchase plans in the US and Germany is compared.

Different patterns of stock price volatility are revealed, depending on culture, network structures and institutional rules. Briefly summarized, stock valuations depend on the cultural understanding of households invest money (market vs. bank based investments), on the network topology of stock markets (centralized vs. decentralized), and on the national particularities of firms, that foster (USA) or impede (Germany) the implementation and success of repurchase plans.

Rethinking Child Welfare Policy

Studies on children’s welfare have been pursued in a separate strand from the welfare state literature in general. Welfare state theory has been blind to children as actors and research on children’s participation has neglected welfare state theory. This should warrant us to rethink and reformulate the concept of child welfare. The point of departure is the concept of welfare as formulated in the so-called postmodern welfare frameworks. Welfare is defined as meeting the needs of people as human beings, which is particularly highlighted in the literature of children’s rights. Different patterns of stock price volatility are revealed, depending on culture, network structures and institutional rules. Briefly summarized, stock valuations depend on the cultural understanding of households invest money (market vs. bank based investments), on the network topology of stock markets (centralized vs. decentralized), and on the national particularities of firms, that foster (USA) or impede (Germany) the implementation and success of repurchase plans.

surprisingly weak in Swedish legislation, with negative implication for the welfare of vulnerable children. Signing of the UN Convention has in this respect not left any clear imprint on Swedish legislation. The findings show the need to formulate new policy strategies: We may resolve the tension between children as ‘beings’ and ‘becomings’ by recognizing that it may be necessary to invest in children’s education and child care but that this is not sufficient as long as we do not consider children’s rights to voice.

Hunting the Northern Lights

This work in process explores gendered landscapes imbuing the increased use of ‘hunt’, ‘hunters’ and ‘hunting’ in the language of northern lights tourism in Northern Norway, aimed at English speaking markets. The development of this tourism product, as winter tourism as such, started in earnest from Finmark Reiseliv’s (county DMO) winter project in 2002. The evolvement of the last decade’s hunting metaphors has become very important in the marketing of northern lights tourism in the region and is has been adapted by tourists in their blogs (trip advisor). Hunting the northern lights tours, at least in their commercialised forms are highly planned by tour operators and aimed at soft adventure tourists (Beedie and Hudson, 2003). These hunters thus do not need any skills, experiences and knowledge to take part in the hunt. Therefore the link to hunting as a symbol of masculinity (Bye, 2003) and masculine social values such as hierarchy, physical toughness, rationality, emotional distance and risk taking (Haenfler, 2004) is lacking. This paper thus discusses how commoditisation of hunting metaphors in relation to northern lights tours contributes to demasculinisation of hunting and hard adventure tourism discourses. It also explores partly overlapping discourses between big game hunt and the hunt for the northern lights. Whereas the former even today is mainly a masculine pursuit which requires preparation and courses between big game hunt and the hunt for the northern lights. Whereas the hard adventure tourism discourses. It also explores partly overlapping discourses between big game hunt and the hunt for the northern lights. Whereas the former even today is mainly a masculine pursuit which requires preparation and courses between big game hunt and the hunt for the northern lights. Winter People: Constraining and Motivating Factors for Attracting Winter Tourists to Northern Norway

Based on 116 qualitative interviews with domestic and international tourists visiting Oslo, Norway in the summer of 2013, this paper explores constraints and motivators regarding winter holidays in Northern Norway. Preliminary findings suggest that not all tourists are winter people. Perceptions of coldness and darkness, however, are positive and negative. Some tourists are excited about experiencing an arctic winter climate; in particular those interested in winter activities such as skiing and northern lights hunts. These tourists emphasise the pureness and freshness of the winter climate as well as a fascination for winter lights during the day and night. Other tourists dislike being cold on holiday and would only travel to warmer climates. Some of these tourists live in winter destinations and know how to deal with a cold climate. Others do not. In particular disinterest in winter activities, lack of appropriate clothing and old age are constraining factors. This suggests that winter tourism is for special interest tourists.

The Role of Victim Witness Testimonies for Collective Memory Formation, Recovery from Trauma and Future Reconciliation

Title: The role of victim witness testimonies for collective memory formation, recovery from trauma and future reconciliation.

In this paper the author argues that witness testimonies in war crimes and genocide trials play a crucial role even though they may not be related to the indictment of the prosecution or help to establish justice. In her book Eichmann in Jerusalem, Simon mentioned that the survivor accounts were not helpful in collecting legal evidence against Eichmann. This author thinks however that witness accounts are crucial not for legal purposes but for purposes of collective memory formation and victim trauma recovery by using the example of the wit-
Initial Teacher Education – Who Gets in and What Are the Implications for Students, Schools and Society?

Teachers Matter (OECD, 2005). Through their influence on the young (academic, personal, emotional, social) they contribute to diminishing educational disadvantage as well as broader inequities of society (Gay, 1993; Sleeter, 1996; Villegas & Lucas, 2001; Zeichner, 1993). Attracting and selecting individuals to the teaching profession who have the potential to ‘teach for social justice’, equipping them with the necessary skills during their training, and retaining them in schools is important tasks for policy makers and teacher educators.

This paper offers a critical analysis and discussion of currently administered selection criteria and procedures for initial teacher education (ITE) programmes in Ireland and internationally. It presents first findings from the Diversity Profiling: Initial Teacher Education (DITE) study which explores (i) the impact of selection criteria and procedures on the composition of student teacher cohorts as regards their socio-demographic, motivational and educational profiles and (ii) ITE applicants’ perceptions of teaching, learning and second-level education in Ireland. Researching teacher candidates’ diversity profiles is important and timely since contemporary school contexts have ignited concerns about the mismatch between the ethnic, cultural and language backgrounds of pupil and teacher populations. Furthermore, a small number of studies (King, 1993, Su, 1997) found that minority ITE candidates have clear and strong visions for social justice and for their own roles as change agents in the school and society (which differ from the motivations and conceptualisations held by mainstream students).

Issues related to equity in and equity through teacher education admission (Child et al., 2011), access and widening participation policies will be explored with the aim of opening up important debates about what types of teachers are needed in today’s schools and how policy makers and teacher educators can assure that the most committed and suitable individuals are attracted to and can enter ITE programmes.

HEINZE, EIKE* (Université de Strasbourg, ei_he@uni-bremen.de)

Distinction Practices and Socialization Of “Native” and “Foreign” Elites In Mexico

The paper summarizes the results of an empirical research project on “native” and “foreign” elites in Mexico in a comparative perspective. The focus is set on the elites’ different attitudes, socialization and distinction practices (in particular “completeness” versus “syndecodism”). Furthermore, the relations and interactions between „native“ Mexican elites and „foreign“ expatriate elites in Mexico are taken into account.

Similar to other ‘emerging market’ countries, Mexico has gone through profound changes in the last 30 years. Some Mexican enterprises have become large multinational enterprises operating on several continents and some Mexican business men are now among the wealthiest in the world with Carlos Slim Helu being the richest businessman in the world.

Simultaneously, during the economic liberalization process which culminated in the North American Free Trade Agreement in 1994, many foreign multinational enterprises have set up major operations in Mexico, resulting in ca. half of the 500 largest enterprises active in Mexico being foreign – bringing to Mexico their own foreign top-managers (expatriates), cultures and distinction practices. The question how the different attitudes and distinction practices of foreign and native elites in Mexico co-exist, interact and whether they mix, will be addressed.

It will be argued that it depends to a significant degree on the home culture, socialization and nationalities of the foreign expatriate elites whether they blend into the Mexican elite milieu. Concerning the distinction practices, it will be argued that the Mexican upper class leans heavily towards syndecodism.
This paper is based on empirical comparative and longitudinal studies of young people in times of economic crises and uncertainty in the Finnish context (Helve 2013; 2002 and 1993). It will present results of the research project “The changing lifestyles and values of temporary employed young people in the different labour markets of Finland” analyzing data from 2009 to 2011 including in-depth narrative interviews (N=20) and ethnographic observations among young people working temporarily, and the survey data gathered on-line from Finnish students in higher education (N=689). The attitude scales measured attitudes towards education, working life and society, and the future orientation and meaning of life. The paper places its focus on the research question: How uncertain employment affects attitudes, values and lifestyles of young adults? The study shows that young people working with short-term employment contracts, or who are temporary unemployed are not doing much long-term future planning. The short-term and temporary employment is changing work attitudes and values of young people. Drawing on theoretical views with the biocological model of human development through life-course (Bronfenbrenner, 1995) the paper discusses about the the impact of uncertain transitions on coping with shifts between dependency and independence as a result of prolonged transitions (c.f. Du Bois & Stauber 2005, “yoyo transition”).

Leaders’ Enhancement of Leader–Member Exchange (LMX) Relationships: An Examination of Leaders’ Cognitive Support and Knowledge Resources in Research Group

The quality of leader-follower relationships has repeatedly been associated with positive individual and organizational outcomes. But how can leaders improve on the quality of the relationships they have with their followers? We examined the effects of the Cognitive Support and Knowledge Resources that leaders provide their followers in a sample of 166 academic and commercial researchers in Sweden. Our goal was to investigate whether these two task-related variables were antecedents of followers’ perceptions of leader-member exchange (LMX) in research settings. Specifically, we investigate the effect of leader-provided Cognitive Support and Knowledge Resources in relation to the four sub-dimensions of LMX (LMX-MDM): Affect, Loyalty, Contribution, and Professional Respect. As we hypothesized, we found that both Cognitive Support and Knowledge Resources, with one exception, related to the four sub-dimensions. The exception was the failed association between Cognitive Support and Loyalty. We conclude that in creative knowledge environments, Cognitive Support and Knowledge Resources are possible means for leaders to influence the quality of their leader-member relationships.

Leaving the Parental Home and the Material Conditions of Entering Adult Life

Youth sociologists usually note different stages of transition to adulthood, which are often understood as access to autonomy and financial independence (Galland, 2009; Harnett, 2000). However, synchronization and irreversibility of these stages in the course of contemporary life have been questioned and some scholars have insisted on distinguishing autonomy from financial independence (Hamel 1999; Singly, 2000). We focus on a particular stage of the passage to adulthood – leaving parental home, which is often described as a way to gain autonomy – and we examine the impact of this emancipation process on living conditions of youths.

We use the waves 1 to 13 from the Swiss Household Panel, a representative longitudinal annual survey of the general Swiss population, to study the economic impact of leaving the parental home for several hundred young people aged 18 to 29. Several objective and subjective indicators of financial situation, as well as debt and material conditions, are used as dependent variables. Analyzes are performed controlling for a series of socio-demographic (age, sex, nationality, region) and economic characteristics (job income, occupation, education level), as well as life-events (end of training, first job, entering into a couple) of both the interviewee and his/her parents.

Much more than a portrait at a given point in time, the use of the SHP longitudinal data with appropriate analytical methods can significantly enrich the analytical perspective on young people leaving their parental home, especially by taking into consideration other context factors like life-events and information about their family background. Our preliminary analysis suggests that for a number of young people access to autonomy through leaving their parents’ household is correlated with a decrease in material well-being. In other words, for some young people in Switzerland, access to autonomy is paid for by precarious living conditions and a loss of economic independence.

Informal Activities

‘What’s in a Gauge?’ an Assessment of Self-Reported Measures of Informal Activities

The relationship between different measures of informal activities is at best unrepeatable. In theory, if one estimated the same reality, the outcome of different measures should point in the same direction. That remains unclear in the case of informal activities. This paper assesses self-reported survey measures of informal activities. If surveys measure informal activities in a reliable way, the possible applications are extensive. In comparison to national level macro-economic estimates, their potential is much bigger.

One source of bias in surveys is the respondents’ propensity to answer sensitive questions in a socially desirable way. This problem would be limited to the impact of the error terms on the condition that the bias were randomly and evenly distributed throughout the population. One possible consequential issue in questionnaire based measures of informal activities, however, is that the social desirability bias may be associated with certain group characteristics. In this contribution we will investigate the indication that the prevalence of the social desirability bias in a given population is positively associated with experiences of government interventions. The lack of rule of law or of basic individual rights should influence the willingness to honestly disclose past illegitimate actions such as tax evasion off-the-books work by respondents.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Indeed, the disturbing fact is that the gap between macro-economic and survey-based estimates of informal activities seems to be bigger in former communist regimes in Central Europe or repressive right wing governments. This paper tests the prediction that the social desirability bias in self-reported survey measures of informal economic activities depends on this institutional history. Based on the second round of the ESS, this thesis is tested with the help of comparison with other forms of (economic) deviance, the impact of generations to economic calculations and its potentially alienating effects.

“No taxation without representation!” These iconic words of tax rebels like the “Sons of Liberty” marked the birth of a new nation. Yet when they became formalized under law, neither can be fully understood without reference to race. In terms of congressional representation, Northern representatives wanted to regard slaves as much less than three-fifths a person to ensure their own political control, but when it came to taxation, these same delegates argued that slaves should be counted as more than 60 percent for a tax system based on population size. Of course Southern delegates objected to higher tax burdens and lower representation, and they assumed positions in direct opposition to their Northern brethren. On both sides of the debate, racial oppression was rationalized by elite white men to promote their own interests through discourses of alienation and estrangement—discourses ranging on a continuum from entitlement and disenfranchisement on one end to victimhood and disenfranchisement on the other. The debates spanned nearly 10 years, until finally, a compromise was achieved. Yet this compromise is not merely an artifact of the American past. It culminated into the prohibition of direct taxes by federal government, a legal clause that still stands as a major Constitutional roadblock to federal taxation on most forms of wealth in the United States. For these reasons, among others, I argue for a re-articulation of those revolutionary words as not “no taxation without representation” but “no taxation without discrimination.”

Abstracts are organized by first presenting author’s last name.
The results reveal a highly circumscribed set of ways—just eight in number—that scientists wish to be remembered. Ways of remembrance cluster on professional versus personal grounds, which constitute a contest in the politics of reputation and commemoration. In addition, responses vary by departmental tier, age, and productivity. The discussion exposes social codes of scientists, which, while purporting to be objective and contradictory, are used to project a transcendent route to remembrance, nested in the context of work values, norms, and perceptions. Anticipation of the self in memoriam is argued to constitute a principal means by which people socially construct status. The paper is fully written and complete. The presentation will discuss its major points.

Internationalization of Knowledge Work in Argentina: The Case of ‘Global Professors’

Globalization has changed the world in many aspects relevant for professionals and ‘knowledge workers’, such as professors and teachers. One of these aspects is linked with higher education and its internationalization process. The configuration of the educational sector and the increasing necessity of ‘symbolic analysts’ and other ‘knowledge workers’, who can manipulate and manage the proper codes required for production today, are part of a development that calls for permanent and higher education to foster production and social reproduction. These global processes significantly increase the need for ‘knowledge workers’ and for cross-border higher education, and subsequently this may cause conflicting interests between local education institutions and transnational providers. In addition, lifelong training is increasingly required, such as postgraduate and professional courses in a wide range of areas. Taken together, these are major reasons for a new emergent type of a ‘global professors’ in 21st century. A growing number of professors are working in different countries but without moving; moreover, as virtual tutors or professors they are teleworkers in the information society. This paper will discuss this new reality in Latin America, specifically focusing on Argentina.
Globalizing the Classroom: Innovative Approach to National and International Learning

This essay examines an innovative approach to teaching globalization and assesses a course on Globalization, Social Justice and Human Rights co-taught collaboratively by faculty from different campuses and countries since 2009. This course was created to address unmet needs in the traditional higher educational systems; the lack of cross-cultural and interdisciplinary collaboration among students, faculty, and institutions to examine recent forms of globalization. Whereas economies, policies, environments, and human societies are experiencing great connections across the globe, the educational systems continue to be modeled on Nineteenth century assumptions and structures. Faculty teach at their respective universities but use an on-line platform to allow for cross-campus communication. In addition to the classroom rooted in a physical place, a major component of students' learning involves diverse educational needs/approaches, including undertaking collaborative group work across borders. A shared core syllabus can be modified by institution to satisfy local needs. We examine the following: the logistics of this course; the obstacles and possibilities in its implementation, including the use of technology; the role of language and communication, and; mechanisms for adapting faculty participants' needs to local curricular guidelines. We also address the benefits of the course for students, such as exposure to a greater diversity of worldviews and pedagogical approaches; the development of teamwork skills, including developing a flexible mind frame; accepting and accommodating diverse educational needs/approaches, and; promoting interdisciplinary communication and collaboration. We also assess the challenges for faculty in designing and managing a course on different time zones and academic calendars, facilitating transnational group service learning projects, and the greater time demands required to coordinate and monitor students' online interactions. Our objective is to contribute to improving and innovating approaches to teaching globalization.

La Industria De La Migration En Los Flujos De Trabajadores Temporales Legales De Mexico A Estados Unidos

La produccion de la migracion internacional, ya sea como movimiento colectivo o acto individual, no solo es resultado de las grandes desigualdades economicas entre paises. La migracion tambien requiere de intermediarios que ponen en juego saberes e infraestructuras que vinculan efectiva y eficientemente a emigrantes de un lado, los trabajadores, por el otro. Definimos a este conjunto de intermediarios como la industria de la migracion. Aunque es comunmente asociada con las migraciones indocumentadas, la industria de la migracion tambien esta presente en los flujos autorizados por el estado, sean estos permanentes o temporales. En este trabajo analizamos el papel que la industria de la migracion juega en la organizacion del flujo de trabajadores mexicanos a los Estados Unidos, bajo el programa de visas temporales H2. Si bien el programa de visas H2 es un programa del gobierno norteamericano creado para suministrar trabajadores de baja calificacion a la agricultura y otras industrias intensivas de mano de obra, el manejo practico de dicho programa esta en manos privadas. La administracion practica de este programa inicia con un conjunto de agencias estadounidenses que certifican, a nombre de los empleadores, la "escasez" de mano de obra en determinada industria y region de la Union Americana. Estas mismas agencias colaboran con contratistas mexicanos y norteamericanos para anunciar, seleccionar, entrenar y transportar a los trabajadores que habran de tramitar sus visas H2 en el Consulado de los Estados Unidos en Monterrey, Mexico. Esta ciudad es el epicentro de la industria de la migracion que maneja programa H2. En este trabajo analizamos a los actores que la conforman, sus saberes y articulaciones: reclutadores, transporistas, hoteleros y tramitadores de documentos.
in the eastern and western corridors of the U.S.-Mexico border? Who are the migration entrepreneurs that facilitate and develop the infrastructures of migrant mobility? How do segments of the migration industry of migrant mobility go from being a bastard institution to become a legitimate institution? What differences and similarities exist between the industry and infrastructures of migrant mobility of the Monterrey-Texas and Tijuana-California migratory corridors and what accounts for them? We answer these research questions using data from a multi-year ethnographic and qualitative study of transportation networks on both sides of the U.S.-Mexico border.

By introducing a typology of actors that traces their careers (Becker, 1956) previous their entry to the Secretariat, this case study underlines the criteria employed for the appointments at the levels of Secretary, under-secretary and director. From this typology, an initial assumption can be made: the logics of bureaucratic appointments in the Secretariat depend not only on the appointees’ affiliation to Correa’s party, Alianza País, but also on their involvement in the social movement organizations mobilized for the migrants’ cause.

Relying on this tableau of actors, a detailed analysis will be presented shedding light on how the appointees dispose of a specific set of capitals (Bourdieu, 1972, 2004), practices and representations of the migration issue that allow them to shape the design of the nascent institution and the implementation of the Ecuadorian migration policy. It is finally through the lens of bureaucratic appointments that we will have a powerful entry point to further understand the interactions between the political and social movements spheres and their effects on the re-stabilization of the bureaucratic field during the Correa administration.

This paper is empirically based on a six-month field research at the Secretariat carried out from June to November 2011 and a series of 30 interviews with high officials of this institution.

HERRERA-VEGA, ELIANA* (University of Ottawa, ehererra@uottawa.ca)

Consequences of Newer Media of Communication within Economy As a System

In order to understand the future of economy as a social system, my research revisits a theory of media from the general perspective of communication and retraces the first accounts of generalized symbolic media in the form of money, payments and today’s nexus of exchange, as initially described by Marx and later by Adorno. Second, the piece studies how monetary economy includes risk within its internal operations in front of an increasingly complex environment. The third part of the paper describes the epistemological transformations that are required. In effect, the current development of autonomous systems asks for different methodologies and epistemological perspectives in order to observe and decrypt the new landscape arising from the way in which society has evolved.

Increased reflexivity within system’s production (Luhmann, 1995) has important consequences in respect to the communication flow in society. What are those consequences? Wilkie (2007:14) envisages the market within a variety of mechanisms to ensure coordination and cooperation. Nevertheless, disembodied media of communication may have erosive effects upon previous modalities of coordination and cooperation. In what extent the recent developments of derivatives and newer media of communication within economy renew Marxist perspectives of reification?

Concluding, a comparative analysis of the communicative power of distinct media of communication must be part of economics. This supposes an enlargement of communication as a field in order to comprehend the distinct systemic varieties of communication at stake, the diverse semantic and praxical purposes that they serve, and the possibility of overlapping communications that create further risk.

Is There a Field of Art in Russia?

A popular opinion among the international and Russian art communities is that Russian art collectors—often thought of as nouveaux riches—have no taste. Contemporary Russian art is also poorly received by both, and frequently dismissed as derivative of western art. And Russian art world insiders often complain that because of a lack of education, the general Russian public does not understand or appreciate contemporary art.

Yet Russia has long had a rich cultural history—have no taste. Con¬nouveaux riches—have no taste. Consequently, a central starting point to developing effective and progressive strategy in an increasingly networked global economy.

The Logics of Bureaucratic Appointments and the Construction of the New Ecuadorian Migration Policy

This paper explores the logics of bureaucratic appointments during the first five years of the Ecuadorian president Rafael Correa’s administration (2007-2011) through the case study of recruitments in different levels of bureaucracy in one of the government’s new emblematic institutions – the National Secretariat for Migrants. With this case study, we aim to better understand the relations between bureaucratic appointments within the Secretariat and the process of designing and implementing the new Ecuadorian migration policy.
traditional concepts of cognition is urgent. Understanding emergence takes then a central role.

The implications of my research are 1. A decertainty of the anthropic perspective to understanding complex social communication. 2. A revision of determinist views to ascertain conflicts in social systems' communications. 3. My research offers a practical approach to maximize the possibilities that direct human agency has to circumvent stabilized communications in social systems. Finally, the piece offers new venues to understand the relationship between human agency and systemic stability.

**Cosmopolitanism in a Changing Political Landscape: Making Sense of Cultural Difference and Belonging in an Australian School**

With the recent change in federal government, Australia is currently experiencing a conservative nationalist turn. Xenophobic, anti-immigration debates abound about how cultural diversity and difference will lead to the demise of 'Australian' national identity, values, social cohesion and security. Whilst this political discourse has marginalised post-national sentiments in dominant media, does this align with how culturally diverse communities orient toward cultural difference and belonging in the everyday? The City of Greater Dandenong in the outer suburbs of Melbourne is one of the fastest growing, most culturally diverse regions in Australia. Dandenong government schools, micropolitics of the wider community, are key sites where issues of race, cultural diversity and belonging are experienced. Normative cosmopolitanism offers an alternative discourse and a competing resource for the imagination through targeted educational and cultural interventions in school communities. Whilst cosmopolitanism has currency as a valuable ethical-political ideal for contemporary transnational and global ways of life, it has faced criticism as unrealistic, elitist, consumerist and western-centric. Based on fieldwork in a Dandenong high school, this paper considers how students and teachers interpret and interact with nationalist, cosmopolitan and other post-nationalist discourses in making sense of how they live, belong and get along in a complex, culturally diverse school community and their wider worlds. In light of debates over whether grassroots, vernacular forms of cosmopolitanism manifest in commonplace encounters with difference and diversity, this paper provides insight into whether students and teachers in this school create an everyday cosmopolitanism on their own terms – independent of the ever-shifting 'flavour of the month' political and institutional discourses.

**Shaping National Borders and Imagining National Belonging through the Professional Practices of Asylum**

This paper is part of an ongoing ethnographic study of the Dutch asylum process. I explore how competing professional practices of the asylum procedure shape a specific kind of national border-performance and works to produce images of national belonging.

Non-Western migrants pose a dilemma for ‘nation states’ leading to a manifold of control measurements and monitoring strategies. In part this dilemma is dealt with in and through an asylum procedure that incorporates both the compassionate promise to protect ‘authentic refugees’ and repress a complexity of differently classified non-Western migrants. In this short-temporal asylum process the asylum applicant resides in a liminal manifold of interaction, in which professional negotiations and visualizations of ‘deservingness’ unfold between legal represen...
L'entité légitime pour prêcher la bonne parole aux paysans.

Les habitants de Fuerabamba, offrent des bourses aux jeunes, proposent des formations et des ateliers, (ré)invente des traditions et des concours de danses traditionnelles et ne sont pas des étrangers, mais sur l'ensemble de la population avoisinant le projet minier. Nous voulons étudier la relation entre l'entreprise minière Suisse Xtrata, et la communauté. Une entreprise, Suerabarumba au Pérou. Installée depuis 2005 sur le territoire communal, l'entreprise développe des stratégies d'adhésion à son modèle, notamment à travers le système de Responsabilité Sociale.

Le paternalisme n'est pas, ici, uniquement la prise en charge des employés par l'entreprise dans son système intègre tous les habitants de la communauté (fidélisation, dépendance, distraction, suivi « social », sponsoring, etc.) pour le bon déroulement de son projet.

Ainsi, l'entreprise remplace l'état, créé son propre marché du travail, emploie les habitants de Fuerabamba, offre des bourses aux jeunes, propose des formations et des ateliers, (ré)invente des traditions et des concours de danses traditionnelles, promeut le développement dans la communauté et s'impose comme l'entité légitime pour prêcher la bonne parole aux paysans.

L'entreprise minière semble ainsi recycler des systèmes anciens de subordination, rappelant les relations entre Indiens et métis dans les haciendas durant plusieurs siècles ou le relations de subordination des travailleurs mineurs à l'œuvre du XIXe siècle.

Nous tâcherons donc de disséquer ce complexe rapport de domination où, a priori, chacun semble y trouver plus ou moins son compte.

HERVIK, PETER* (Aalborg University, hervik@cgs.aau.dk)

The Nexus of Scandinavian Exclusionary Thinking and the Naturalization of Difference

Studies of European political party programs, social movements, news media coverage, scores of books, and social media networks have embraced a negative dialogue towards migrants, whose identities are increasingly seen as incompatible with “Western” values and presenting a major challenge to the democracy. Sponsors of these public discourse support anti-migration and oppositionary stances to “migrant sympathizers”, who are often represented as traitors or cowards. They also fuel a process where xenophobia and zero-tolerance have become naturalized and morally accepted ways to respond to the non-Western migrants. But how do people reason reason on these issues in everyday interaction and during interviews? The aim of this paper is to discuss how negativity against migrants in Scandinavia is related to negative beliefs towards “multiculturalism”, “feminism”, and “liberals” (left-wingers) in Scandinavian popular reasoning about difference. While there is much research about different forms of exclusionary beliefs separately and against specific collectivities, there is little scientific knowledge about how one belief co-exists with another as figures in reasoning. We approach this coexistence as a “nexus of exclusionary beliefs” with its blurred relations, inherent contradictions, and taken for granted assumptions. Through interactive methods that include a variety of qualitative interviews and participant observation followed by analysis of online social media and web news commentary, we seek to understand the cultural logics of this contemporary Scandinavian reasoning about difference, and if successful we can supply some input to the discussion whether the anti-religious are related by diffusion, analogy, correlation, or competition.

Re-Membering the Past: Biblical Archaeology Between Secularization and Religionization

Secularization and religionization are concepts that continue to arouse much debate. This paper focuses on the societal level mainly in terms of institutions and norms. Our theoretical presumption is that both “religion” and “the secular” are not universal nor essentialist entities, but rather contingent dimensions of social life that are embedded in time, place, and changing historical circumstances. Moreover, they are based on continuing social processes of separation and hybridity between these social categories. This mandates examination of religious and secular institutions (such as state, science, nationality) as relative dispositions and strategies for action in historical perspective. Our case study is the changing attitudes toward the Old Testament that reveal the pendulum between secularization and religionization and, at the same time, unveil the hybrid nature of the categories of religion, secularity and nationalism.

Traditional religious appreciation of the Old Testament by the three monothestic religions was disrupted by the secular school of biblical criticism which flourished in Germany from the mid-19th century and challenged the historicity of the biblical narrative. A counter movement of biblical archaeology rose at American Divinity Schools in the early 1920s aimed at refuting the secular biblical criticism claims by excavating sites mentioned in the Old Testament and thereby testifying to the historicity of the biblical events. This approach was enthusiastically adopted by secular Israeli archaeologists in the newly established State of Israel. The collective memory of the religious biblical stories strengthened national cohesion. Since the 1990s, the pendulum has swung toward a critical view of the archaeological data. Secular scientific archaeology rejected the shackles of religion and national concerns.

Tourism in Vulnerable Coastal Areas: Towards a More Resilient Wadden Area

Coastal areas are extremely interesting regions to examine, since a large share of the world population lives in these areas, despite threats caused by climate change and sea level rise and their consequent state of vulnerability. This research aims at answering the following question: how can vulnerable coastal areas make a transition towards areas that are more resilient and better prepared to cope with unexpected ecological, social and economic changes in the future? In this paper the concepts of tourism, complex social-ecological systems, resilience and planning will be illustrated by the case of the Dutch Wadden area, which is one of the largest tidal wetlands in the world and was enlisted as UNESCO World Heritage in 2009. This paper will be organized in three parts. First, we will examine the concept of tourism and indicate where the academic gaps and shortcomings regarding tourism in vulnerable coastal areas can be found. Second, we will look into why, and in what ways, a complex adaptive systems approach - like a social-ecological systems approach - can be useful in analyzing tourism in vulnerable coastal areas in order to overcome the traditional separation between ecological and social sciences (Liu et al., 2007), to examine tourism in a more systematic way (Ruiz-Ballesberos, 2011) and to find ways to develop and protect at the same time. Third, the paper will describe governance perspectives that contribute to understanding and managing complex issues like tourism in vulnerable areas through different scales. Planning is important and has to be done carefully, since tourism can have a long-term developmental aspect, but at the same time an agent of disruption or destruction (Getz, 1986). By means of this paper, we will eventually provide theoretical lenses for looking at the Dutch Wadden area and other vulnerable coastal areas in the world.

Exile from Exile: The Political Theory of Judith N. Shklar

Judith N. Shklar was one of the most influential American political theorists between the ‘end of ideology’ debates of the 1950s to the ‘end of history’ debates in the early 1990s. Towards the end of her life Shklar suggested that the entire history of political thought could be better understood from the vantage point of exile. In my paper I will try to apply this insight to Shklar’s own work by showing that she was a particular type of refugee scholar whose experience of exile had a profound influence on her work.

Military Children: The Effects of Deployment during Operations Iraqi and Enduring Freedom on Children’s Psychosocial Well-Being

More than half of military personnel have children and nearly 2 million children are affected by the war in Afghanistan and recently terminated war in Iraq (Quigley 2009). Not only are members faced with the demanding obligations of the military, children are also challenged by the disruptions and stress of military life. Family disruptions are never an easy transition for any child. For those children whose parents served in Iraq and/or currently serving in Afghanistan, family disruptions may have a significant impact in their lives. This study is investigating the psychosocial well-being of children with a parent deployed in Iraq/Afghanistan, location categorized as hostile zones, with the psychosocial well-being of children with a parent deployed elsewhere.

Participatory Democracy and Socialism: How to Extend Participatory Democracy from the Political to the Economic Sphere

The economic and political shortcomings of representative democracy have led many to search for alternative, more direct and participatory forms of democracy. This has led, in particular, to local-level experimentation with popular control over political decision-making, via institutions such as participatory budgeting, a practice giving citizens control over local budget decisions that has spread to more than a thousand cities worldwide. This paper explores the possibility of extending participatory control from the political to the economic sphere. I argue that a radical left party with four characteristics can facilitate the construction of what I term emergent socialist hegemony. These characteristics are: internal democracy; links to popular movements; a prefigurative commitment to democratic socialism; and links to/autonomy from the national state. This argument is illustrated by examining participatory control over political and economic decision-making in Torres, which has been called “Venezuela’s first socialist city”.

Reclaiming Democracy: Popular Participation of the Left and Right in Venezuela and Bolivia

Participatory budgeting (PB), a practice that gives urban residents control over local budget decisions, has spread to hundreds of cities in Latin America and around the world since the 1990s. PB was originally closely tied to a Left political agenda; the most radical proponents of PB envisioned it as a tool that could be used form socialist revolutions. But World Bank and International Monetary Fund have championed PB. And while PB has most often been initiated by Left parties, there are a number of cases of PB in cities controlled by centrist and right-wing parties. For the most part, scholars have failed to grapple with the question of “right-wing participation”, and many scholars argue that participatory reforms, such as PB, can only succeed when a Left party is in power at the local level. Through a nested, cross-level-subsidiary comparison, based on 19 months of ethnographic research, my dissertation interrogates this assumption by looking at participatory budgeting in cities run by the Left and Right in Venezuela and Bolivia. I expected to find more success in my two Left cases, but at the same time an agent of disruption or destruction (Getz, 1986). By means of this paper, we will eventually provide theoretical lenses for looking at the Dutch Wadden area and other vulnerable coastal areas in the world.

From Social Democracy to New Nationalist Populism

Sri Lanka emerged as an incipient social democracy following independence. Progressive labor legislation, social protection for public and private sector workers, free health and education, etc. led to a steady improvement in social conditions in the country. Though some of these gains remain largely intact, economic liberalization over the last three decades has changed the socio-economic landscape in an unprecedented manner. Increasing public debts, both domestic and foreign, a widening trade gap, continuing devaluation of the local currency and the stagnant state revenue leave little room for significant state interventions in the area of social policy. Whatever measures that have been attempted have already been abandoned due to financial unsustainability. While a minority of employed people continue to enjoy some form of social protection, the vast majority engaged in informal economic activities remain exposed to the vagaries of the market in terms of both earning an income as well as meeting their basic needs, let alone the prospect for a future devoid of poverty and neglect.

It is against the above background that the dominant public discourse spearheaded by the state itself has shifted from social democracy to nationalist populism. While the former emphasized the role of the state as one guaranteeing the...
issues based on an exponential graph models while the sexual histories implement a networks, again, partitioning potential matches into those in one's local network increases. **Issues in School to Work Transition in Sri Lanka**

The transition from school to work has become more complex in recent years due to both the changes in the education system as well as the dynamics within the labor market. This paper, first provides an overview of the above changes based on secondary data drawn from various institutions and then examines how young people in Sri Lanka fit into both the education system and the labor market in the light of data drawn from the national youth survey of Sri Lanka conducted in 2009 under the direction of the author. As is evident from the survey data, the desire on the part of the youth in gen- eral for securing educational credentials remains strong, though the opting out of education at secondary level is also increasing, particularly among male chil- dren. This tendency appears to be related to labor market dynamics as well as poor prospects for employment among youth with higher levels of education. Domestic labor shortages and increasing overseas employment opportunities for people with low levels of educational attainment persuade young people to leave school early. The paper discusses the implications of the above for skill formation in a country that strive to achieve a higher level of economic development in the years to come.

**Statistical Methods and Network Simulation: The Role of Limited Information in Edge Formation**

Snijders et al. (2009, 2013) have contributed to an approach integrating agent based models and empirical network data in which instead of empirical data “valid- izing” the simulation, the simulation estimates the empirical parameters. One assumption is that agents have information about the other actors in the net- work, i.e., that any two agents could potentially form a tie. This assumption means that the model is limited to modeling relatively small empirical networks. Another potential solution is to consider how information about potential matches might be limited. In a loosely related area, Bearmann et. al. (2004) looked at the poten- tial generating mechanisms of a specific type of social network: sexual histories. They found that limiting potential matches (excluding those close ones of one’s net- work) generated social networks that closely matched empirical data.

We use agent based simulations to consider the effects of assuming full versus limited information in evolving social networks. First, we limit information in a network’s evolution based on the existing network, partitioning the list of poten- tial new friends between those within one’s local network (e.g. 3-step acquaintances) and a small sample of strangers. We test whether limiting information about potential matches generates more realistic graphs in terms of the average path length, clustering, edge distribution, and connectivity, as community size in- creases. The question of limited information is then extended to sexual history networks, again, partitioning potential matches into those in one’s local network and a small sample of the general population. The evolution of social networks is based on an exponential graph models while the sexual histories implement a Gale Shapley Matching Algorithm, as seen in the literature on the stable matching problem.

**How Can the Public Service Improve the Uncertain Transition of Youth into Adulthood? a Case Study of Educational Support Centers in Japan**

In Japan, the uncertain transition into adulthood for some young people is rec- ognized as the problem of futoko: a term that refers to youths who have been ab- sent from their school for over 30 days in a single year. A person with experience of futoko tends to have difficulty in advancing to a higher education or obtaining a job, and may become isolated from society. Futoko shares similarity with hiki- komori, as both refer to a youth’s withdrawal from the public sphere. In contrast to hikikomori, however, futoko youths are formally registered in school, and the educational administration agency therefore attempts to become involved with them.

This paper examines the governmental service for futoko adolescents, with the aim to clarify the factors constraining the transition of this age group to school or work. We focus on the Educational Support Centers (ESC) program, which is the most extensive and longest-running policy of Japanese Ministry of Education for futoko juveniles. Futoko has been a topic of interest for many Japanese sociolo- gists, however ESCs have received little attention to date. Using interview data from instructors of ESCs in four cities, we examine how the staffs approach futoko youths.

The major findings are summarized below. First, although instructors find young people lack basic social skills, such as taking a bus or train, they have dif- ficulty stepping into these youths’ private lives because of limited authority. Sec- ond, young people in the background of lacking social skills, young people are often plagued by familial problems or economic difficulties that make it harder for instructors to improve their situations.

This study demonstrates that governmental support makes the phenomenon of uncertain transition into adulthood more visible, but it confronts the dilemma of how (and to what extent) the public service can intervene in the private problems that underlie futoko.

Civil-Military Gap in Japan: Comparing the 2004 and 2013 Surveys -- CANCELLED

This paper compares two surveys conducted by the authors in 2004 and 2013 which look at the possible “civil-military gap” in Japan. These surveys, modeled after the TISS survey, were the first academic attempt to examine the attitudes of Japan Self Defense Force (SDF) officers as well as civilian elites in Japan. In the 2004 survey, we found that (1) SDF officers were more conservative than the civilian elite, (2) on US-Japan alliance issues, there were no evident gap between the officers and civilian elite, while there were signs of gap with the general public; (3) SDF officers long for a greater role in the policy making process. Events that took place between 2004 and 2013, including the SDF dispatch to Iraq, the end of the conservative party rule in Japan, and the 2011 earthquake and the disaster relief efforts by the SDF, suggest that there may be a change of attitudes among both the SDF officers and the civilian elite. A second survey is to be conducted in October 2013, and this paper will compare the 2004 and 2013 survey results to examine whether and why there may be changes in the “civil-military gap.”

Contested Spaces. Informality, Dwelling and Spatial Governance in Berlin

This paper examines the intersections between informality and the governance of place in Berlin, Germany. In particular, it examines practices of dwelling, in which permanent residency does not fit neatly into the logics of formal planning processes in order to discuss the possibilities and delimitations that people experience when living beyond the law. In Berlin, research on urban development has frequently been framed through debates on neoliberalism and a series of interdependent developments such as gentrification, urban entrepreneurialism or increasing socio-spatial inequality (Mayer 2009; Holm 2010; Bernt 2012). While these debates focus mainly on the enclosure of space, a series of postcolonial approaches have developed an analytical toolbox that helps to consider the ways in which cities are shaped through the everyday negotiations, legal incoherencies and regulatory ambiguities. Here, the urban is seen as “a site that is not just inhabited but produced through that inhabiting” (McFarlane 2011: 651), a site that is neither ossified nor stable, but open to political transformation. Drawing particularly on Bayat’s (1997, 2000) notion of ‘quiet encroachment’, which describes the quotidian and longsome advancement of the poor, these frameworks will be used to compare processes of regulatory enforcement in three urban typologies, in which people informally inhabit space: ‘Schrebergärten’ (best translated as allotment gardens), camp sites and ‘Wagenburgen’ (best translated as trailer encampments). Even though the retreat of their inhabitants into sheds, vans or camps could simply be interpreted as an indication of socio-spatial marginalization, I set out to explore, if the infiltration of planning law through their informal dwelling practices could similarly be understood as a sign of encroachment. In sum, I highlight both enabling and destabilizing aspects of these processes: While residents find opportunities to claim urban spaces and sovereignly influence their uses, their practices similarly weaken their positions within the city.

The Rules That Govern Peoplex’s Lives: Informality in Tallinn, Bafatá and Berlin

Urban research has long related informality to a lack of state capacity or a failure of institutions. This assumption not only lacks attention to the heterogeneous logics and relations through which informality is produced by multiple actors in- and outside of the state, it has also created a dividing line between states. Whereas some states are understood to manage urban development through a coherently functioning state apparatus, others presumably fail to regulate. To unmake and reframe such understandings this paper offers a theoretical exploration into the ways in which informality is infused in contemporary urban development in both the north and the south. Based on a comparison of three case studies in Tallinn (Estonia), Berlin (Germany) and Bafatá (Guinea-Bissau), our line of argumentation focuses on the ways in which local state agencies are entangled in the workings of informality. Drawing on these cases, we suggest that if we seek to account for the similarities and differences in the formalization of cities across the globe we need to reconsider the role of states. First, state institutions shape urban development through everyday negotiations, legal incoherencies and regulatory ambiguities. Second, people’s lives are not only governed by the state, but also by alternative forms of rule and institutions that exist beyond the state. It follows that allegedly informal processes can similarly be understood as a form of formality, while what appears as formal might work through multiple informal relations. Our comparison, then, aims to work towards an understanding of informality that is more attuned to the multiple roles adopted by different actors involved in urban processes and the power relations that are mobilized in this process.

Species out of Place – Investigating the Visual Framing of an Ecological Problem

Invasive species designate a recently emerged category of ecological risks: alien plants and animals, introduced by human agency, causing extinctions of native species and also diverse economic, aesthetic and human health problems. This paper has gained much socio-political and economic attention. It motivated people worldwide to participate in a vast array of organized attempts to preserve and restore local environments.

My paper investigates the frames (Goffman, Gamson) that constitute this ecological risk (Hannigan). Basically it reveals a construction of nature as differentiated in well-ordered, stable, and homogenous units (ecosystems, ecological communities). I argue that specific visual frames are crucial in establishing the problem formula in question by integrating the realms of science, media and political action. Exhibitions, flyers, documentary films, websites and databanks use maps, photographs, graphics, icons and numbers to display environments as relatively homogenous spaces, which enable clear-cut distinctions of inside and outside (native/alien). Thus specific species become perceivable as invaders and understandable as phenomena of disorder (biological pollution). Furthermore visible references of horror and science-fiction stories (aliens, zombies, monsters, etc.) reiterate factual and technical information metaphorically to more emotional realms of experience and popular imagination. By means of this forms of ecological communication (Luhmann) encourage state actors and civil society to fight against certain species.

The imagery of dangerous aliens strongly resembles notions of political conservatism, romanticism and xenophobia. Hence it aligns with certain cultural critiques of the disintegrative forces of globalization. As national, ethnic and other perceived primordial identities are feared to dissolve, so is nature. But if undoing globalization is inconceivable, and society and nature have to be understood as inseparably entangled (Latour), don’t we have to confront this nostalgic ecology of small-scale orders with a need to originate positive representations of our globalizing environments, as recent postulates of cosmopolitanism (Beck, Heise) suggest?

Language and the Geo-Politics of (dis)Location: A Study of Zimbabwean Shona and Ndebele Speakers in Johannesburg

This paper explores the language repertoires and survival strategies of Zimbabwean migrants in Johannesburg. In the aftermath of the May 2008 attacks – now widely termed xenophobic attacks – the status of African migrants in South Africa has been the subject of much critical discussion. By virtue of a multifaceted crisis in their country, Zimbabwean Shona and Ndebele speakers have a particularly marked presence in South Africa. In this paper we explore the geo-politics of ‘otherness’ with in the metropolitan boundaries of the “City of Johannesburg.” We begin with a GIS-based study of speakers designated “other” in the 2011 census; focusing particular attention on the distribution of foreign others at neighbourhood (sub-place) level. This section provides the backdrop to a more focused study of Zimbabwean migrants; drawing on ethnographic research conducted in five neighbourhoods. Using Bourdieu’s “economy of social practice” as an analytical framework, we show how each neighbourhood is a social universe of struggle that is inscribed with its own internal logic and relational matrix of recognition, and how language repertoires are adapted to fit these matrices. We discuss these patterns critically, and relate them to the wider “field of power”, a complex social economy that belies the post-1994 Constitutional enshrinement of eleven official languages.
A Tale of Three Villages: Boom and Bust Experienced at the Local Level in Rural England

The paper compares and contrasts three English, rural villages, each with different low-skilled workers and have become more responsive to their needs, i.e. the growing potential for older low-skilled workers in particular because they regularly attain low lifetime earnings, leave the labor market (much) earlier than (highly) qualified workers, and often have to claim pension benefits before reaching standard retirement age. In the paper, Germany is taken as an example of a country that, for long, practiced premature exit of older workers and had developed an “early retirement culture”. The first part describes and analyzes the pension reform trends and the employment situation of elderly low-skilled workers. The second part explores in more detail how firms part company with these workers, at what age, and whether firms’ strategies and workers’ preferences have (already) adapted to shifting institutional frameworks. This part is based on semi-structured (qualitative) interviews with human resource managers of firms (manufacturing/service sector) employing at least 50 workers of whom a disproportionate share are low-skilled. It is found that there are significant differences between the industries (mainly across the manufacturing-service axis) with regard to “normal” exit age, adopting measures that promote employability of low-skilled workers and the interest in retaining workers until standard retirement age (or even beyond). Furthermore, this research suggests that firms are indeed modifying their behavior towards older low-skilled workers and have become more responsive to their needs, i.e. the quest to stay on in the job longer in order to prevent pension cuts. Those workers who actually made it until standard retirement age are often eager to return to their former employer to increase their public pension by working temporarily or part-time.

Labor Market Exit of Older Low-Skilled Workers: German Firms’ Practices

Recent pension reforms in EU countries display two main trends: 1) early retirement pathways are closed and standard retirement age is increased; 2) the contribution-benefit link is strengthened, mainly by calculating pensions on the basis of lifetime earnings. Both developments endanger the adequacy of old-age pensions of low-skilled workers in particular because they regularly attain low lifetime earnings, leave the labor market (much) earlier than (highly) qualified workers, and often have to claim pension benefits before reaching standard retirement age. In thepaper, Germany is taken as an example of a country that, for long, practiced premature exit of older workers and had developed an “early retirement culture”. The first part describes and analyzes the pension reform trends and the employment situation of elderly low-skilled workers. The second part explores in more detail how firms part company with these workers, at what age, and whether firms’ strategies and workers’ preferences have (already) adapted to shifting institutional frameworks. This part is based on semi-structured (qualitative) interviews with human resource managers of firms (manufacturing/service sector) employing at least 50 workers of whom a disproportionate share are low-skilled. Sovereign Debt Crisis and Pension Reforms in European Countries

The „Great Recession“ and sovereign debt crises in several EU countries in the wake of the 2008 financial market crisis have triggered drastic reforms of old-age security systems. They aim at ensuring the financial viability of public pension schemes in the short and long run and/or at realizing notions of intergenerational fiscal equitability. Two main reform dynamics can be identified. First, the so-called “shift and shape” reform options are characterized by different modifications of the existing contributory formulae and by the introduction of new levies. Second, new funding rules like fi xed contributions are introduced while the ability of the fiscal system to guarantee sustainable pension benefits is increased. Both of these reform processes have been triggered by changes in the political orientation, as governments are motivated to reduce the fiscal deficit and to reduce future liabilities. These pension reform processes represent a major challenge for the future development of European pension systems and have to be seen as an integral part of the wider process of economic stabilization and economic growth. This paper will shed light on the social consequences that are already visible today.

It Takes Two to Tango: Dutch Majority Group Evaluations of Muslim Political Acculturation

Explanations of the degree to which ethnic minorities are included in a national political system typically concern either the institutional build-up of a nation (e.g. electoral systems, seats in parliament reserved for ethnic minorities), or characteristics of individual minority members (e.g. gender, education, social capital, political orientation). While these explanations are very valuable, they ignore the pivotal role played by the ethnic majority group. After all, minority groups and their individual members become politically active in the face of constraints presented by the political system – a system that is shaped by the rule of the dominant majority group. In other words: it takes two to tango. Drawing from Berry’s seminal work on cultural acculturation (Berry, 1997), we formulated different ways in which minority members can acculturate politically (e.g. integrate, assimilate, or separate). Employing representative samples of Dutch majority members (N=802 and N=928) we then conducted two vignette studies in which Muslims, the most prominent minority group in the Netherlands, were the target group. In addition, we considered the roles of perceived threat and perceived political unreliability. The results showed that majority groups’ acculturation strategy indeed affects majority group’s attitudes. Furthermore, evaluations of Muslim political participa- tivity are contingent on the level of perceived threat and political unreliability. The results are, however, not in line with expectations one would derive from cultural acculturation, indicating that the struggle for minority representation in the political domain might differ in important ways from everyday ethnic relations.
**How Does Participation in Resistance Interact with the Construction of Family Relations? West Bank Palestinians Between the First Intifada and the ‘Post-Oslo’ Period**

A large share of the Palestinian population in Gaza and the West Bank was involved in the First Intifada (1987-1993). As a mass movement against the Israeli occupation it was both, shaped by and shaping the construction of family relations and gender roles. In academic literature on Palestine, it has been widely discussed whether the involvement in civil and militant political activities against the Israeli occupation has reduced the patriarchal influence of senior males in favor of a growing influence of juveniles and women within the (extended) family resp. clan (‘hamullah’). In large parts research focused on the effects of female integration into ‘committee work’ and the increased familial authority of young Palestinian males (Petet 1994). The period after the so-called Oslo peace process (roughly after 1995) and the various transformations it entailed for Palestinian society, however, have caught much less attention in research on the Palestinian family. Based on biographical case reconstructions and participant observation, we want to discuss if the societal conditions in ‘post-Oslo’ Palestine have altered the interplay between participation in resistance against the Israeli occupation and the construction of manhood and family relations. Therefore we show the effects that the interplay of involvement in ‘resistance activities’ and family relations yields for the biographical trajectories (Schütze 2006) of young Palestinian males. Looking at the relations of family members from a biographical perspective allows us to reconstruct the changing relevance of family relations in the course of a lifetime as well as the intertwining of family relations with other biographical spheres of action. Our paper is based on fieldwork in the West Bank which is part of our PhD-projects as well as a larger Israeli-Palestinian-German research project funded by the German Research Foundation (DFG) and supervised by Prof. Gabrielle Rosenthal, University of Göttingen.

**Women’s Experience of Maternal Morbidity - a Global Meta Ethnography**

While the conditions and healthcare women experience during pregnancy and childbirth vary greatly, this meta-ethnography will explore whether there are shared health challenges, regardless of economies, healthcare resources and the social capital of women in different settings. Maternal mortality rates vary greatly around the world, 99% of all maternal deaths occurring in developing countries. Improving maternal health by reducing maternal deaths is at the heart of global health policy. Studies of near miss maternal morbidity, where a woman needs urgent life saving treatment during childbirth to save her life, have been undertaken in various settings. They are used to understand factors that lead to maternal death and improve care and outcomes for women.

**Methods:** Qualitative interview studies of near-miss maternal morbidity from around the globe (including the UK, Australia, Brazil and Burkina Faso) will be reviewed and synthesized using the meta-ethnographic method.

**Findings:**

There are considerable organizational differences in the delivery of care and social context in which women experience these emergencies; women in Australia and the United Kingdom are giving birth in more individualistic and isolated communities than their counterparts in Burkina Faso and Brazil. Does experiencing an acute health crisis in a first world country where mortality rates are very low vary greatly from experiencing it in a developing country where maternal death is still a common occurrence? How does the ‘social capital’ of women in different contexts impact on the long-term emotional and physical impact of these experiences?

**Conclusion:** This presentation will explore what can we learn from shared experiences and whether a synthesis of qualitative research can contribute to improving maternal health outcomes in diverse settings.

**The Collaps of the GDR in 1989- an Analysis of the Political Career Chances of East German Women in This Time of Change**

This abstract aimed to determine the career opportunities of East German female politicians in the time of the collapse of the GDR and consider the processes of their social and mind-making. The empirical basis are 24 biographical interviews with female MPs from East Germany. In this regard my research confirmed that “the revolution in the former GDR” has got a crucial influence on the East Germany politicians careers, especially, when it is cooperation with other categories of difference such as “gendered” role. That is why influence of the collapse of the GDR and the following transformation processes had crucial influence on career opportunities of East German female politicians. To that extent, the research aiming to show how “gender” and “gender differences” in politics are constructed. These consequences for their political careers and the political culture will be demonstrated, too. It will also demonstrate, how “gender identity” is constructed in the field of politics. The abilities which are essential for successful career are different if women in politics are discussed. Another focus is paid for the specific advantages and handicaps female politicians have got because of their “gendered” role. Besides, it will be shown if and in which way female politicians will be accepted by the male competitions and by the society. Last but not least the consequences of these projects for the political culture at the present time are also discussed.

**Movement for Justice in Labour and Environment - Post Fukushima Labour with Exposure to Radiation**

This paper focuses on labour with exposure to radiation in post-accident Fukushima. Radiation related labour includes all the work in and outside the troubled Fukushima Dai-ichi nuclear power plant as well as vast amount of decontamination work around the region. Network calling for justice in working conditions that workers face with radioactive labour has been set up and is undertaking various activities such as: helping workers in radioactive labour find and join unions and fight for better working conditions, gathering and disseminating information on radioactive labour, and exchanging information with staff members of Ministry of Health, Labour and Welfare, Ministry of Economic Trade and Industry, asking for reform in various policies, and lobbying diet members and their staffers on this issue. This movement takes place at the crosspoint of labour movement and environmental movement and thus is has many implications for these two movements and their collaboration and theoretical studies of them. This paper will address the main issues regarding radioactive labour in post-accident Fukushima and try to introduce theoretical perspectives.

Theoretical Considerations of Recent Studies of Japanese Immigration to Brazil

The paper considers that the migrant, even prior to becoming an emigrant, was transforming within his own country and within his own community/society of origin, due to his dreams, desires, and utopias, into an atopic, that is, an atopic being, without place. Among the various ethnic groups that migrated, including Japanese, those who belonged to so-called “complex genetic stock,” due to their cultural singularities that differentiated them from the supposed community/society standard accepted as nationally prevalent, faced prejudice, acts of intolerance and “racism”, in which “myths” and “historic facts” were mobilized to justify the violent actions of people, of social group, and of the receiving State itself. However, how does one remain Japanese after living outside Japan for many years? When, with the passage of time, is a new place (topus) constructed in Brazil with a complex web of family relations and professional activity? When are the children socialized and educated through schools, according to the Brazilian standards of thinking, feeling, and acting? In this context, the frame of “Brazil” appears as an unquestionable value for Brazilian Japanese descent, is an essential instrument for social and economic ascension, and is the place where the rules of civility and Brazilian active citizenship are acquired.
increase in average life expectancy, in addition to the scheduled rise in pension premiums. While these measures are expected to improve the financial sustainability of the pension system, they are also likely to aggravate the problems of inequality and poverty among the elderly. Concerns over this issue have led to policy discussions on the need for a minimum guarantee in pension benefits. The coalition government formed in 2009 and led by the Democratic Party of Japan developed a plan to introduce a minimum pension scheme, but the plan was not implemented. In light of these policy developments, this study explores the possibilities for a comprehensive but more targeted reform of old-age security to address inequality and poverty among the elderly.

First, this study analyzes citizens’ attitudes toward the pension system using national survey data. The data show that citizens tend to have high expectations of the social security system.

This study then examines the historical and institutional factors behind the problem of pension reform in Japan and the political resistance to it. It is argued here that a minimum pension scheme might not provide a feasible solution, and a comprehensive but more targeted reform of the different branches of social security is needed.

Lastly, this study analyzes the employment situations of middle-aged and older workers. It is suggested that improvements in the employment policies for these workers should be prioritized, given their high work ethic and the financial difficulties of the public pension system.

**Emploi Domestique Et Travail Du Care Dans Une Perspective Comparative**

Dans cette communication sera présenté l’apport des volets quantitatif et qualitative dans la recherche au Brésil pour discuter dans quelle mesure ils contribuent à éclairer les questions complexes relatives à la catégorisation de ces emplois. Il s’agit d’avancer dans cette catégorisation en examinant notamment la « zone grise » entre emploi domestique et métiers du care. Pour l’aspect de comparaison internationale, nous nous limiterons au volet qualitatif, puisque nous ne disposons des données chiffrées comparables pour les autres deux pays, et aux aides à domicile, laissant de côté le matériel relatif au travail du care dans les institutions, sur lequel nous avons déjà des publications. La manière dont les aides à domicile perçoivent et déclinent leur identité professionnelle sera le fil conducteur de cette deuxième partie de la communication. En conclusion, nous présenterons des pistes de travail pour approfondir l’analyse de l’évolution de l’emploi domestique et des métiers du care dans des contextes sociétaires contrastés à partir de l’hypothèse que les différences dans la conception de l’emploi domestique et des métiers du care, liées à l’histoire et à la culture, sont les clés pour comprendre les raisons de ces différences. Les limites de cette comparaison nationale et internationale seront discutées et des perspectives pour une extension de cette comparaison seront développées.

HIRATA, MARCIA S.* (Universidade de São Paulo, marciasaekohirata@gmail.com)

**Contradiction and Resistance in the Production of Space in Downtown Sao Paulo: Urban Vision on the Collectors of Recyclable Materials**

In last decades, real estate production turned into a main capitalist way of reproducing the global financial dynamics. For urban space this means impoverishment of a city notion. For social mobilization that seeks to reduce the social inequalities it leads to a perception of insignificance of small victories, even in a high level form of organization. In this way, the urban vision over society by philosopher Henri Lefebvre, not just makes clear the role of the urban for capitalization, but also gives us elements of reflection for social mobilization practices by an observation of urban social practices. That is what is shown by an urban vision on the case of resistance of recyclable materials collectors in downtown Sao Paulo.

HIRATA, MARCIA S.* (Universidade de São Paulo, marciasaekohirata@gmail.com)

**Housing Policy and Gentrification: Conflicts and Contradictions in the Inner City of Sao Paulo**

During the last decades, Neil Smith is developing a conceptual framework linking neoliberal urbanism and gentrification. In his works, the increasing role of the state as an agent of the market is underlined. Also, according to Smith, in a context of globalization and financial capital, the gentrification is thoroughly generalised as an urban strategy (Smith, 2002). This paper aims to discussing the concept and the elements of gentrification in cities of emerging economies, using as an empirical case the inner city of Sao Paulo, Brazil. Since the nineties, the central area of Sao Paulo is being subject of several urban interventions, varying from the promotion of new cultural facilities to the redevelopment of several blocks as a key to increase population in the historical neighborhoods. The most recent intervention presented is using the housing policy as an instrument to promote gentrification, by removing several buildings, today occupied by poor families that were once attracted by low rent prices, in order to make room to new developments to address the housing needs of the emerging medium class. The conflicts and contradictions that are arising from these projects are meaningful and give us strong elements to deepen the political terms of the Smith’s concept of gentrification, coloring it with the characteristics of the Brazilian uneven urban development.

**For a Happy Encounter Between a Researcher and a Participant Living in the Different Contexts of Social Organization of Gender**

In this paper I discuss how to interpret and represent individual gender biographies in transcultural research settings when a researcher meets with informants who belong to different social and historical contexts. In my experiences regarding gender biographies in transcultural research almost all informants talked about ‘their’ social norms of gender before telling their life histories, although it is very important to understand the conflicts between their biographies and social contexts. Here it is also implied that the nation-state has still a powerful meaning for informants and a researcher, even if a researcher argue ‘transnationality’ or ‘transculturality’ of the filed to be examined. In this paper I explore whether a methodological effort can help make an adequate co-production for both a researcher and an informant in case that they have different cultural and national backgrounds.

HIRAYAMA, YOSUKE (Kobe University)

FORREST, RAY* (City University of Hong Kong, safray@cityu.edu.hk)

**Housing and Social Re-Stratification**

This article looks at transformations in the role of housing in social stratification. During the ‘golden age’ with high-speed economic growth and generous government subsidies, social inequalities were mitigated by the expansion of middle class home ownership and redistributive schemes of providing social rented dwellings to lower classes. However, with the ascendance of neoliberal prescriptions in the ‘global age’, new housing systems oriented towards accentuating the role of market economies in providing and financing housing have increasingly exacerbated, rather than alleviated, social disparities. There have been widening gaps between the market-included and the market-excluded in terms of housing conditions. Moreover, within market spheres, various variables such as the timing of housing purchase, the appreciation and depreciation of housing assets, the nature of housing investment, the condition of mortgage borrowing, family support in acquiring housing, intergenerational transfers of residential properties, architectural profile and location of dwellings and the number of houses owned have been becoming more definitive in creating social cleavages.

In varied fields of social science, position pertaining to labor markets has been regarded as most important in explaining the formation of social classes. However, housing and property ownership have increasingly becoming, and will be, more definitive in reshaping social inequalities. This paper will identify housing related key drivers for social re-stratification and explores housing situations in some exemplar contexts. Here it is also implied that the nation-state has still a powerful meaning for informants and a researcher, even if a researcher argue ‘transnationality’ or ‘transculturality’ of the filed to be examined. In this paper I explore whether a methodological effort can help make an adequate co-production for both a researcher and an informant in case that they have different cultural and national backgrounds.

Reshaping the Housing System in the Context of Japan’s Post-Growth Society

Many mature economies are now entering the ‘post-growth’ era characterized by low growth in GDP, ageing of the population and increasing social stratification. Japan stands at the forefront of such transformations towards ‘post-growth societies’, where the government is increasingly being prompted to reorganize the housing system within the context of the shrinking and super-aged population, lowering marriage rates and lowest-low fertility, extremely prolonged recession, increased social inequalities, house-price volatility and housing asset deflation, and growing pressure to cut back on social spending and public subsidies. Housing studies have been debated during the postwar ‘golden age’ of social and economic development accompanied by increasing population, high-speed economic growth, expanding housing construction, and increasing rates of home ownership. Such housing debates were linked to the development of wider social theories on social stratification, the welfare state and urban transformations. With entering the ‘global age’, however, the ‘post-growth’ social context now requires a re-examination of housing debates and related theories. This presentation looks at Japan as a vivid exemplar in terms of exploring how housing is implicated in shaping ‘post-growth societies’.

Teachers Concerns and Proposals in Educational and Ethical Practices to Face Uncertainty

In Mexico, teachers that instruct in primary and secondary levels of education are increasingly being evaluated by international and national policies and organizations and are being harshly judged by different social agents, such as mass communication media, public opinion, parents and entrepreneurs. In international tests, our country has been evaluated and compared with many other countries, as we have been related with low levels of educational achievement. To attend this problem the government has proposed continual educational reforms that include diverse types of evaluation of schools, students, teachers and the institutions that are in charge for the preparation of the future teachers. Processes of actualization have not been developed simultaneously and furthermore there have been changes in labor conditions that have created uncertainty. In our research project: Professional Ethics for Professors and especially from the open question: which are the five necessary actions to prepare teachers about professional values? we found that teachers are interested in a better cognitive knowledge and actualization, an approach to norms, rules and codes in reference to values and ethical themes, the consequences of their professional decisions, the importance of teamwork and personal relationships and communication. Two key aspects are the reference to be a behavioral model to their students and to teach and research not only as a professional but as a life project. These last two answers are more articulated to subjective and individual concerns that search for diverse ways to face uncertainty.

Politics of Food (In)Security in East Asia: Insatiable Appetite for World Food and Agricultural Resources

This paper will be focused on backgrounds of and perspectives for the food (in)security politics in Japan and East Asia, and could therefore be an introduction to the session. With its rapid economic growth, East Asia is widely recognised as one of the most important regions in the world economy. Despite its significance in the globalised agrifood system, very little has been discussed in international academic communities about the realities and transformations of the agricultural sector, food systems, and rural societies in the region. Because of its consumer affluence and limited agricultural resources, the extent of the region’s heavy dependence on food imports has become too significant to be disregarded. Accoding to FAOSTAT, the region accounts for 28.9% and 64.5% of the total volume of world maize and soybeans imports, and 15.6% of the total value of world agricultural imports in 2010. This situation is unsustainable, not only for regional economies but also for the world food economy in the era of “the end of cheap food”. A heightened sense of “food crisis”, especially since the 2007/2008 world food price crisis, can be observed at every corner of political, economic and civil society in the region. Unfortunately, in the mainstream discourse, our “food security concerns” are appropriated and manipulated to justify the business-as-usual agricultural and food policy for further agricultural trade liberalisation (e.g. KORUS and TPP) and large-scale overseas farmland investment (i.e. land grabbing) in order to make food accessible in the globalised market at the expense of food sovereignty within and beyond the region.

In this paper, the development of policies and discourses on food (in)security will be critically analysed as a underlying basis for further empirical studies with a perspective for social mobilisation of food sovereignty in the region.

Policing and Autonomy of Community: Comparative Study of Japan and Indonesia

The objective of this presentation is to clarify the character of community policing in Japan and Indonesia from the viewpoint of the autonomy of community and my filed research. This presentation will be divided into three parts.

First I will examine some discussions and theories regarding the community policing, where we will see that the autonomy of community is needed to manage the way of policing practiced in community in the case of the US. Then, I will clarify the crisis of the autonomy of community with special attention to a discrimination among communities. It has been produced by the development of suburban area and individualized auto-mobility in the US.

Secondly, we will turn to the case of Japan, and I will cover weakening roll of Japanese neighborhood organizations and activation of policing by the central government. The government tries to apply “broken window theory” and discourage tradition of mutual support of community. Through the cases, I will identify the difference and similarity with the social condition of the US and clarify difficulty of the autonomy of community in Japan.

In the third part, we will look at the community policing of Indonesia in the decade after the era and evaluate a mixture between local security and tourism for community development in Bali. The police has tried to apply the community policing in order to reestablish new structure of the police and grasp vigilante groups since the collapse of centralized policy. However, in the case of Sanur area in Bali, we will see the success of the community policing with new image of tourism. Finally, through the analysis, I will clarify the advantage of the community development through the mixture of police and other creative activities.

Burmese Refugees and Ethnic Business in Japan

While Japan is said to be the country which has one of the strictest control for refugees and asylum seekers, Japanese government accept some refugees, especially from Burma. After receiving the asylum, some of Burmese run a small business in their community. How do Burmese become a refugee entrepreneur? How do they run a small business? This presentation aims to explore the factors which fosters the refugee entrepreneur from the view point of the opportunity structure theory. This presentation is based on the field work data carried out in Tokyo, Japan from 2004 to present. The data consists of interviews with Burmese refugees, refugee advocacy NGOs, Government agency, and other related personnel. Based on the opportunity structure theory, there are some types of Burmese small businesses. One type is a small business serving an ethnic community’s needs. With the help of their colleagues, they mobilized various ethnic resources: capital, labour and skills. Other type is small business servicing an open market. They try to attract non-Burmese customers in their shops. However, their businesses are not stable because of the small size of their ethnic market and the intense competition of the service industry. Following the presentation, I will discuss the economic integration of refugees in the future.

The Communion without Boundaries and Sakae Osugi’s Anarchism

The purpose of this paper is to investigate the political ideals of Sakae Osugi. Osugi argued that it was possible to establish a “society of mutual aid” based on the principle of “expansion of life”. In his view, the hierarchy meant fixing the boundary and every boundary was an expression and exercise of power. That explains why anarchism is a perpetual movement which attempts to transcend every boundary forming the hierarchy. Osugi aimed at a free and diversified federal society where life is expanded. Osugi’s influence stemmed from his articulation of the basic concerns of his generation. That generation confronted difficulties of a different order from those faced by the Meiji leadership. Osugi was attracted to the problem presented by the emerging masses: how could they be incorporated into society? He reply to this question was “mutual aid”. This paper focuses on the relation between both notions of freedom and society and analyzes it throwing a light on the principle of “expansion of life” in Osugi’s anarchism. Similarly to his contemporaries, it might be helpful to enquire into that principle, in a way that is beneficial to the relation between freedom and society.

The Determinants of Intrinsic and Extrinsic Work Motivation Among US and Norwegian High School Students

This paper investigates the work motivations of American and Norwegian high school students. It centers on types of motivation that are widely defined as either intrinsic or extrinsic to the work itself. The distinction, which has a long history in the empirical study of work values, aims to separate the motivational force of self-development through work from that of obtaining external rewards as a result of work. The paper draws on prior studies of young Americans' work motivations, and attempts to build bridges to cross-national research, which has primarily been preoccupied with the work values of adults. The paper thus aims to pave the way for more comprehensive cross-national research on young people's work motivations. While scholars have disagreed as to whether intrinsic and extrinsic values should be treated separately or as opposite poles on a common continuum, the paper underlines the benefits of not committing exclusively to one understanding, and giving both their due in empirical examination. A key benefit of this approach is that it tackles acquiescence bias, a surmountable challenge when conducting cross-national comparison of rating-based survey data. Regression analysis reveals that national context, gender and ethnicity greatly impact intrinsic and extrinsic work motivations. In the Norwegian context, intermediate variables (grades, part-time work, and particularly high school program) are also strongly linked with work motivations. Conversely, no significant effects of parental education are found in either context, signaling a break with earlier studies.

A Globalizing University Centered in Asia: State and Society Interactions in University Restructuring

A Globalizing University Centered in Asia: State and Society Interactions in University Restructuring

K.C. Ho (Sociology, NUS)

East Asia countries are late comers in international education, league tables and world class university formation. This entry was marked by a fundamental restructuring of the university system, particularly top national universities whose traditional role has been the training of the nation's elite.

My paper discusses Singapore's restructuring experience and its consequenc-es in terms of its search for international talent for professors and students, its focus on basic research rather than applied or policy research, and its increasingly ambiguous relationship with society and community. Drawing from a large representative survey of the country's two largest comprehensive universities, the paper discusses impact of the internationalization drive and its connections to Singapore's global city-state status, its implications of being unhinged from its traditional societal roots from a variety of disciplines: science and engineering, medicine, and business and management, and the reactions of different societal and community groups to this shift.

The Place of Community Practices in City Heritage Projects

The fast transforming city is faced with a systematic tension, the necessity of city building and redevelopment and yet the need for this to be respectful of the different ways of life in the city.

My paper examines two heritage projects, Pomahakan in Bangkok, Thailand and Kampong Glam in Singapore. Both sites represent contrasting ways in which local communities have been alienated from wider city-based efforts branding heritage. Set in a planned Rattanakosin historical park of old Bangkok, Pomahakan represents a case of how local heritage and ways of life are fighting for recognition and preservation alongside the royalist and religious heritage being represented in the Rattanakosin Project. Kampong Glam project, in contrast, has retained the local community icon, the Sultan Mosque as the jewel of the ethnic Arab-Muslim quarter, but is stripped of its residential and community elements.

The result is a vernacular physical form, redressed to play a larger role as tourist attraction and entertainment district.

Ultimately, successful projects require an understanding of how activities get sedimented, layered and connected, how places develop identity and meaning, and how policies should combine with market and community to create the attractive diverse spaces, transforming the city into what Lofland calls a "garden of earthly delights", comprising of the kind of places we love and want to go back to.

RC07-137.6

HO, PETULA SIK-YING* (HKU, psyho@hku.hk)

This paper addresses Chinese women's self conceptions through developing the concept of erotic justice to focus on access to life chances and opportunities for sexual expression, erotic exploration and realisation.

The erotic is conceptualized as more ambiguous, fluid and diffused than sex-oriented sexuality in that as a process it does not focus on one part of the body or one object. It is about connection between currents inside the world and spinning outside, but not limited to the interpersonal (Ho & Tsang, 2013). This erotic is expressed and experienced in the "politicization of life chances" which are not equal. Indeed, people in their movements, emo-tions, and desires are themselves made in terms of the discourses and unequal differences, of the past, present and future political economy (Foucault 1980; Bourdieu 2001). In short, erotic explorations in everyday life occur within the framework of power where they play a game with others who strategize with equal self-interest, but often with more legitimacy (Bourdieu 2001).

In-depth case studies of online narratives of Chinese women have suggested ways in which these women create new identities for themselves through a poli-tics of iconogenesis using new social media (Ho, 2006, 2011, 2013). We examined how they articulate the kinds of injustices they face in love, marriages, family and society due to their gender, age, social class, ethnicity, sexual preferences and other social variables. We also identified the strategies that they used to rectify these injustices including becoming everyday icons through their practices of self online and offline.

In creating these new identities, they envisage and locate themselves within new futures in which gender and sexual justice become possible. Their self narration includes a reflexive construction of self where the past is reshaped to fit the present and the imagined future.
built up an ideology that only domestic food is reliable and good for Korean people's body and health, no matter how those foods are produced. Regulations to enforce labeling the origins of food production enhance Korean national identity and sentiment towards their domestic products as well as nation. Fear penetrates when evolving foreign food products. Crisis of food safety thus is not only an issue about health and well beings but rather an issue in political arena. It shows the anxiety and senses of threats when South Koreans have to face other powerful countries around them such as US, China and Japan. Safety only exists inside the door. Nationality is thus not only essential for people, but also for food.

Queer Reproduction in Global Context: How Taiwan Lesbian Building an Alternative Sociotechnical Network of Assisted Reproductive Technologies

While Taiwan is the most LGBT friendly country in East Asia, it is still one of the twenty regions only "married" (heterosexual) couples can legally use assisted reproductive technologies (ARTs). Globally, East Asian countries are the second restrict region (next to Muslim countries) where assisted reproductive technologies eligibility criteria are severely based on marital status. At the same time, the first lesbian parenting social group in East Asia emerges Taiwan, the interesting contradiction between severe legal restriction and vigorous lesbian parenting desire and association bespeak a theoretically abundant case. In this paper, through more than six years field work, participation and observation in Taiwan LGBT parenting group, the author explores 15 lesbians in Taiwan how did they negotiate to get access to ARTs in spite of the legal restriction. First, the author find self-insertion is not well diffused and used in Taiwan like the United States and some other western countries, and it's due to different feminism movement context and the predominant feminist anti-natalism discourse in Taiwan. Second, lesbians in Taiwan disguise as single (with heterosexual assumption) women to fulfill legal requirement, while some physicians consider single women are more legitimate than lesbians to have children despite of both groups are illegal users. Besides, some lesbians have pseudo-marriage with gay people to get legal access to ARTs. Finally, reproductive exile also happen in Taiwan—some lesbians go to Canada and Thailand to pursue ARTs treatments. In this paper, the authors found: 1) Taiwan provide special ARTs policies to help same-sex couples, 2) These inclusionist attitudes are mostly guided by a sense of national as well as socio-economic threat associated with the need to maintain both personal and group well-being. Although asylum seekers may invoke similar threats, we expect attitudes towards them to be based in addition on other psycho-social mechanisms associated primarily with notions of universal liberal values and human rights.

In 2012, the Israeli parliament passed an amendment to the infiltration prevention law, originally passed in the 1950s as part of Israel's defense policy against security threats. The new amendment expanded the infiltration prevention law to treat any person who did not enter the country through border terminals as an 'infiltrator' entering Israel illegally. The context for the amended law was the large incoming flow of asylum seekers entering Israel between 2006 and 2012; the new law is consistent with the Israeli situation in which illegal means to systematically deprive them of their basic rights for asylum. While the official 'infiltrator' terminology is relatively new, the term 'infiltrators' has been used by policy makers to describe asylum seekers already before 2008. Thus, the association of African asylum seekers with national threats is, by now, embedded in the Israeli public discourse. This study investigates whether framing asylum seekers as infiltrators is a notion not only exclusionary policy measures, but also public support of such measures.

This study is the first to investigate the consequences of Israel's policy to view asylum seekers as illegal users. In this process, asylum seekers in Israel as posing demographic and security threats encouraged the formation of negative public attitudes towards them, and public willingness to support policies implying a withdrawal from liberal values like individual freedoms, and human rights. The study also asks whether such a withdrawal is more characteristic of specific groups within the Israeli population, and which are typically presenting more negative attitudes towards foreigners, or if it represents a more general tendency among the Jewish majority in Israel.

Starting from Unequal Positions: Patterns of Young Households Starting on the Amsterdam Housing Market

This paper takes a broad perspective regarding the success with which young people can leave their parental home and become an independent household in Amsterdam. High demand pressures on the local housing market and the financial crisis are seen to place constraints on the accessibility for young househouds. Nevertheless, paradoxically, especially the influx of young households currently contributes to Amsterdam's population growth. However – and most important to this paper – previous research suggest that inequalities between different starter groups have grown. These inequalities are often transferred from one generation to the next. Using longitudinal individual register data this paper looks at patterns of inequality between young households with different backgrounds as they make their first steps as independent households. Especially their parental background is of importance to this analysis.

Our data suggest that the number of starter households with wealthy parents and following university education entering the Amsterdam housing market is growing, whereas disadvantaged starter groups are increasingly excluded. We will analyze how socioeconomic and parental backgrounds influence young household's entrance on the Amsterdam housing market. Included elements are the age of nest-leaveing, tenure type they move into, the type of household they form, and the chance of moving back to their parental home after a brief period of independent living (boomerang kids).

Processes of gentrification have made most of Amsterdam's inner-ring neighbourhoods more expensive, the study asks enter. This results in a spatial mismatch between the demands of young households for inner-city living and the supply of relatively affordable and accessible dwellings located more peripherally. This paper looks at the spatial production and reproduction of inequalities, which have been transferred between generations. Increasingly, we see that starters with wealthy parents move to the most expensive neighbourhoods, whereas disadvantaged residents increasingly concentrate within peripheral parts of the city.

Managing the Difference Engine: A Cybernetic Analysis of Discrimination

This paper will propose, as a model, a cybernetic device, deeply embedded in human language and social processes, which produces both separation – of groups and meanings – and unity and convergence. Drawing on evidence from linguistics and sociology it will argue that both movements, of separation and convergence, must be managed by the same device. This has important implications for efforts to manage discrimination of all kinds (e.g. racism, sexism, class divisions), if these opposite outcomes are produced by altering the settings on a single system, rather than by the clash between opposing systems, one of which might exist without the other.

From cybernetic, Bateson's models for schismogenesis and for schizophrenia will provide a starting point. From linguistics especially relevant will be the work of Chomsky, Labov and the Comparative Phioligogy tradition stemming from Sir William Jones and Saussure, and empirical studies of language change and multi-culturalism will provide concepts and materials. Theories and studies of evolution and development, as in the work of Edelman. From theories of chaos and complexity, the basic framework will come from Prigogine's account of catalytic and auto-catalytic loops in biological and social life. Mandelbrot's theory of fractals will be drawn on, as will theories of artificial life.

Social Networks and Strengthening the Participation in Brazil: "Projeto Vidas Paralelas" Experience

"Projeto Vidas Paralelas" – PVP aims to reveal and give visibility to daily life, culture and work from different social groups, from the perspective of the subjects involved, by means of training processes in digital culture and articulation of social networks to strengthen social participation in the construction of public policies, health promotion and culture. It is a proposal for strengthening the social movements and struggle processes that use audiovisual training and use of new media as tools of expression, critical thinking and social organization. The project arises from a demand of workers for expanding the visibility of conditions and work processes experienced in the contemporary context and strengthening social convergence, must be managed by the same device.

This project is based on the analysis of "discrete" mutations of work, employment and trade unionism in and around the US Walmart stores. While the corporation is experiencing significant technical and organizational transformations, the rise of criticism invites us to question both the nature of mutations of work in stores and the protest records in a global service firm whose workforce is mainly made up of low paid immigrant women, holding jobs that do not require a particular degree. This communication is based on a series of interviews with employees and union activists as well as on in situ observations of meetings and walkouts organized by unions and associations conducted between 2010 and 2013 around Chicago, Los Angeles and Miami. This approach emphasizes the organizational and institutional dimensions of the difficult but ongoing emergence of protests in a global firm that in half a century has come to thwart all attempts at unionization of its workforce.

Do RRT and the Crosswise Model Produce Valid Measurements of Sensitive Items? An Online Validation Study

Social desirability and the fear of negative consequences often deter a considerable share of survey respondents from truthfully responding to sensitive items such as own norm violations (e.g., nonvoting, tax evasion, cheating). As a consequence, the prevalence of norm violations is underestimated and results are inaccurate. Indirect techniques for surveying sensitive questions such as the Randomized Response Technique (RRT, Warner 1965) or the Crosswise Model (Tian et al. 2007), a new variation of the RRT, are intended to mitigate this problem by providing complete concealment of respondents' answers.

However, it is far from clear whether these indirect techniques generally produce more valid measurements than standard direct questioning (DQ). Furthermore, most systematic evaluations so far compare a particular method's resulting prevalence estimates of sensitive behavior with DQ estimates under the "more-is-better"-assumption and lack a known true value for validation. Under the "more-is-better"-assumption higher prevalence estimates are interpreted as more valid estimates. So, it cannot be ruled out that higher prevalence estimates are a methodological artifact and not the result of a technique's superior validity. Whether or not a particular sensitive question technique truly produces more valid measurements can only be answered for certain with validation studies. But the possibilities to carry out validation studies are rare and the topics' range very restricted.

Therefore, we designed an online experiment which allows for the in-depth validation of any sensitive question technique. Inspired by Fischbacher and Heus's (2008) widely used cheating dice game we developed two dice games where respondents had an incentive to violate a norm, i.e., they could illegitimately claim a bonus payment. After the game, respondents were surveyed about their personal norm adherence, i.e., whether they cheated or not. We used different sensitive question techniques to survey this sensitive item. Resulting prevalence estimates were then validated with the true observed behavior.

Institutional Ethnography for Oppressed People

The especially oppressed people in modern society are the people with communicative, mental or social disabilities stemming from brain injuries, developmental disorders and mental illness such as schizophrenia. These people are in many ways marginalized in modern society where social and communicative skills are highly valued and sometimes requisite for achieving a position on the labor market as well as getting into social networks of modern urban subcultures. Being in such a position often makes them ultimately dependent on welfare institutions where they have difficulties in expressing their needs and demands for social relations, daily activities and means for personal development.

Since 1997 the author has been involved in several investigations into the impossible escape for these people following the ambitions of an applied institutional ethnography. That means that our point of departure was the life-world of these people and their efforts to get a coherent everyday life and a basis for personal development. With this reference we judged the total structure of insti-
Experiencing It like a “Gogo”: Intergenerational Relationships in South Africa

“Gogo” is the Zulu word (from “ugogo”) for grandmother and this paper will focus on the pivotal role of older women in the context of entrenched inequality and Japanese poverty. An estimated 1.2 million so-called HIV/AIDS orphaned children, of whom around sixty percent reside in grandparent-headed households, exacerbate this and obviously place on the research and policy agenda the continuous asymmetrical dependency and needs of younger generations on older generations. Although these grandmothers’ contributions are increasingly recognised, current explanations of the dynamics within these multi-generational networks lack a nuanced understanding of their complex and ambiguous nature. Drawing on 58 narratives from different generations (a generational sequential approach) in 20 multi-generational networks, this contribution qualitatively explores grandmotherhood in Mpumalanga, South Africa towards a deeper understanding of such inter-generational relationships. The main findings relates to the intrinsic and extrinsic vulnerability of the sacrificing older carer in resource-constrained and uncertain contexts. This has implications for them at the nexus of their individual rights and their future care outcomes.

HOENIG, BARBARA* (Innsbruck University, barbara.hoenig@uibk.ac.at)
The Emergence of the European Research Council As Supranational Funding Institution

Structural transformations in the European Union’s funding policy of the last decades have led to the historical emergence of a genuinely supranational funding institution, the European Research Council (ERC). Conceptually oriented towards an institutional approach of the sociology of science, and methodologically led by extensive documentary analyses, we empirically analyze historical evidence for the opportunity structure, social mechanisms and effects of European research funding as part of the history of the ERC as an institution. Analytically, we draw a distinction between the following levels of investigation: Firstly, the structural relationship of national and supranational dimensions of the European research policy is located at the heart of a historical interest in Europeanization processes in science. While the ERC as supranational organization can be seen as intermediate in relation to the European Commission and the international scientific community, the transnational organization structurally builds on and reflects historical predecessors at level of national science systems as well. Secondly, we try to clarify in which way we deal with integration or rather disintegrative stratiﬁcation of European research, reﬂected in cultural objectives of funding programs such as "transnational cooperation" and "scientific excellence", and researchers’ socially structured opportunities, ambiguities, and potential conﬂicts to realize these objectives. Thirdly, seen from a dynamic perspective, we investigate how and to what extent European funding policy’s goals have historically changed and been subject to self-perpetuating processes with unintended effects feeding back towards the social structure of European, and global, science as well.

Flexible Work Practices, Workplace-Related Policies and Individual Strategies for Reconciling Eldercare and Paid Employment. Findings from the European Carers@Work Project

Faced with a historically unprecedented process of demographic ageing many European societies extended the working lives of older workers, with the side-effect that working carers have to juggle the conﬂicting demands of employment and care-giving even longer. This does not only impinge on working carers’ well-being and ability to continue providing care, it also affects European enterprises’ capacity to generate growth which increasingly rely on ageing workforces.

The focus of this paper will be a cross-national comparison of ﬂexible work practices and other workplace-related company policies aimed at enabling working carers to reconcile both conﬂicting roles in four different European welfare states – Germany, Italy, Poland, and the UK – based on expert interviews with human resource managers and 240 semi-structured interviews with working carers in the four countries. It is analyzed to what extent these company-based measures are path-dependent according to the respective welfare state / care regimes, which resulted in diverging degrees of state intervention and support and, subsequently, varying levels of company-based policies. However, a key ﬁnding of the research was a trend towards converging individual reconciliation strategies in the four countries. Finally, varying degrees of gender inequality in the provision of care will be examined.

High Aims, Low Outcome: Implementing Gender Equality in Japan

Japan has ratified the Convention for the Elimination of All Forms of Discrimination Against Women (CEDAW) in 1985. Next to other measures, the Convention led to enacting the Basic Law for a Gender-equal Society in Japan (1999). This law is the most outstanding and far-reaching policy regarding gender-related issues in Japan to date. However, when it comes to gender equality in international comparison, Japan still lags far behind other countries, ranking 101 among 135 countries in the Global Gender Gap Report 2012.

This paper asks for the reasons of the discrepancy between the far-reaching aims of policies for gender equality and the low outcome. By taking the Basic Law for a Gender-equal Society as a case study, this presentation reassesses, how and to what extent the ideas of CEDAW have been implemented throughout Japan and what barriers prevent successful outcome. This question is being taken into account from different perspectives. Next to deciphering the mechanisms and strategies of implementing gender equality on the regional level of the 47 Japanese prefectures, an overview of policy change during the DPJ government (2009-2012) and the new LDP government that took over in December 2012 will be given.

The paper draws back on results of the authors Ph.D. thesis on the implementation of the DPJ government in terms of gender equality policies (which published 2013).

Tourism Studies and Conceptual Unsettlement: The Decolonisation Of The Bleached Field

Each discipline / domain should regularly examine its effectivities regarding the representation and making of the socio-historical world. In inspecting the so-called global provocations of tourism, this presentation advances the view that the increasing dominion of tourism / Tourism Studies over matters of culture, heritage, representation has not only been carried out according to eurocentric canons, but has been bolstered by theoretically feudal forms of knowing. It thereby calls for a concerted decolonisation of Tourism Studies -- that is, for a conceptual cleansing of the field to clearly identify and confront the hegemonic agency and
Tourism Studies and The Contagions Of Conformity: The Wilful Contagions Of Our Own Backyard

In 2011, Heffernan produced Wilful Blindness, a text inscribing ‘why we [in our institutions] ignore the obvious, at our peril’ as she examined the structures of logic our brains and working expectations in Europe — within our institutionalities / corporations / organisations — act with such sustained blindness and such deliberate indifference to what outsiders deem to be very large, important, or crucial matters. Thus, Heffernan’s “security of institutional connivance and organisational silence” will be distilled to generate discussion amongst RC50 delegates to critique what forms of groupthink blindnesses / wilful ignorances / under-recogised abnegations might indeed characterise ‘Tourism Studies’ / as a disciplining institution.

In this Heffernian light, Tourism Studies will be dissected to reveal (from the presenters’ working experiences to see Europe / Australasia, North America, and Asia) the sorts of structuralblindnesses that have cultivated regular forms of group derangement within the field. In offering just three of these areas of mutually reinforcing (and, sadly, restrictive) conformity, Tourism Studies will be posited as a domain that:

* is intrinsically interdisciplinary, yet offers so few bona fide interdisciplinary / multidisciplinary / transdisciplinary investigations;
* fundamentally deals with the image of places and spaces, yet rarely codifies any such mix of symbolic (or representational) impacts as it coterminously plays habitual homage to long-established economic, cultural, social, political, and environmental impacts;
* is seemingly a creative industry which selects, produces, and projects ‘differences’ about peoples / places / pasts, yet which has only the poorest of connections with other lead creative / inscriptive industries as film / the media / the arts.

In summary, RC50 delegates will be asked to reflect (i) upon the the field’s conceivable ‘purbblind addiction to received procedure’; and, (ii) upon their own individual willing subservience to such forms of unquestioned / unthought praxis.

Marginalizing of students despite official preventive efforts

Finland has a reputation of providing a good and just education for all students independent of ability and background. However, even in this kind of educational system there are students who are marginalized. We focus here on the relationship between laws and official documents regarding issues concerning social justice issues and, on the other hand, discriminatory practices. We lean on a discourse analysis of the rhetorical policy level including the national curricula. This analysis is compared to empirical findings about students’ experiences regarding social justice issues.

There are some remarkable socio-cultural differences in Finnish schools. For example, the gender differences in literacy are the largest in Finland of all the OECD countries. "Children's poverty is increasing in Finland and the gap between the poor and the wealthy is increasing. This has serious implications for teachers and teaching, but in our study we found that teacher education students do not consider social class important for their future work. In Finland the Roma children have not done very well in school. The national curriculum is very supportive of Roma children but the reality is different. The indigenous Sami population is also doing less well that the majority Finnish students. Students with immigrant background are a risk group with regard to bullying and discrimination. The group most vulnerable in school is the students with disabilities or long-term illnesses. Of this group about two-thirds have found themselves treated in hostile ways or excluded from the group. Hence, even in a system that at the policy level officially strive for equality and equity, the daily life in school can be unfair for certain groups of students. This unfairness and marginalization can have long-term consequences for welfare and achievement.

Photography As a Research Method in Exploring Bilingual Teenagers’ Language Minority Group Identifications

Using participatory photography as a research method is underutilized in sociological youth studies. Young people today are comfortable using photographs for communication. Visual research methods are increasing in overall importance, but especially the analysis and interpretation of visual data have not changed much in the last decades. Hence, the focus in this paper is on analysis and interpretation of photographs taken by 15-year old students in the comprehensive school in Finland. The importance of the researcher’s language minority habitat in interpretation is explored in relation to the habits of the language minority students.

The teenagers all belong to the Swedish speaking minority group in Finland. The purpose of this study is to explore how the Swedish language minority students position themselves with regard to belonging to the Finland-Swedish group but also how language is interplayed with the structures of authority of the industry over colonialised places / spaces and over histories / contemporaneities.

In summary, RC50 delegates will be asked to reflect (i) upon the the field’s conceivable ‘purbblind addiction to received procedure’; and, (ii) upon their own individual willing subservience to such forms of unquestioned / unthought praxis.

HOLMES, PABLO* (University of Brasilia, pabloholmes@gmail.com)

Social Inequalities in Latin American Social Thought: Beyond Culturalism and Class Theory

Since its origins in the nineteenth century, Latin American social theory has been primarily concerned with the unequal position of the region in the world society. The “Latin American condition” has been largely explained with reference to its “cultural singularity” vis-a-vis “developed societies”. In the last two decades, following a broader critique of developmentalist theories, there have been strong critiques of cultural explanations for global, regional and national inequalities in the region. In Brazil, some theoretical attempts have attracted attention. The first one, formulated in the beginning of the nineties, argued that structural forms of extreme social exclusion from modern social systems like law, politics, economy and education would have striking consequences for the institutional reproduction of these systems in the region. Accordingly, there would emerge a small sector of a socially over-integrated population, which would be in the position of using legal and political institutions for its advantage. Simultaneously, a broader sector of under-integrated population would have only an insignificant meaning for institutional operations, remaining thus excluded and being used to reproduce unequal social structures. Another well-known approach has drawn on many elements of this formulation, insisting, however, on classical categories of class theory to explain the social reproduction of inequality.

In the context of the present paper, I would like to look critically at these different interpretations. I will, thus, argue that, although one can consider the existence of social classes as an outcome of important social dynamics, any theoretical explanation of social inequalities in the Latin American context must take into account the role of legal and political institutions. The paper also argues for the necessity of taking not only institutions into account, but also for the importance of bringing back the role of transnational institutional dynamics in the debate, although without stepping back into old culturalist traps.

The Social Constitutionalization of Trade? the WTO-Trips and the Chances of a Reembedment of the Global Regime of Intellectual Property

Since the financial crisis, the consciousness has grown that increasing social inequalities can have impairing implications for the functioning of institutions and for economic efficiency. Nevertheless, the tools that were known until now to tackle inequalities still seem to be ineffective on the transnational level. Mechanisms of tax & transfer, as well as the promotion of social rights, cannot be used in the same way as they had been in national contexts. For many scholars, the only way to face these problems would be a shift towards the transnationalization of social rights. Although much talk has been seen on the necessity of “constitutionalizing” the WTO, the fact remains true that the global regime of trade remains highly fragmented. Moreover, the rules of the many regimes existing in the WTO do not seem to be interpreted under the light of the so-called “global regimes of human rights”. Rather, it seems that they reproduce extremely specialized vocabularies, each of them taking for granted specific conceptions of how to balance property and social rights. As some authors argue, if it is true that the highly specialized global regimes of governance operate in close relation to economic knowledge, maybe they could develop some sort of “responsivity” to their non-economic social environment on which they depend. In the present paper, by carefully analyzing 34 decisions of WTO dispute settlements regarding the Agreement on Trade-Related Aspects of Intellectual Property Rights, I try to assess the extent to which it is possible to identify in this regime internal elements of the constitutional semantics of social rights or possible functional equivalents of it. Hence, I will assert whether it makes sense to have any hope on transnational constitutionalization processes of trade carried out exclusively by the legal and functional mechanisms of economic global governance.

The Neo-Liberal Knowledge Regime and the Displacement of Critique

This paper will address neo-liberalism not as a theory of public policy, but as a theory of knowledge. It will argue that neo-liberalism favours the market as a mechanism for the generation of knowledge. In favouring knowledge under contract, neo-liberalism is explicitly hostile to those forms of social science that provide expertise precisely because that expertise might sanction political interventions. In this context, the forms of social science that are favoured are those that can be commercialised in the form of re-packaging ‘big data’ and ‘behavioural’ interventions. Sociology’s traditional concern with social structures is displaced by anti-social (structural).

HOLTHUS, BARBARA* (German Institute for Japanese Studies, barbaraholthus@gmail.com)

Parents Against Radiation: Strategies Towards Advocacy

To what extent do organizations within the larger anti-nuclear power movement monitor, interact with, and possibly influence (local) authorities in the policy making process? Thus in which ways, if any, do these organizations provide advocacy to their members? And how do these compare cross-culturally?

After the triple catastrophe of March 11, 2011 in Japan, as part of the upsurge of the larger anti-nuclear power movement, more than 300 citizen groups were formed throughout the country that joined forces within the “National Network of Concerned Parents to Protect Children from Radiation”. Groups within this network use different strategies: Whereas some participate in highly visible protest activities such as mass demonstrations, others belong to the “invisible” part of civil society using less aggressive tactics to influence protective measures against nuclear power, contaminated food and playgrounds.

Our study has a multi-method approach: we combine field research through participant observation with semi-structured interviews and the analysis of our survey questionnaire, conducted among members of all 23 local chapters of the “Tokyo Union to Protect Children from Radiation”, a post-3/11 network of parent social movement organizations. Using this network as case study, we analyze strategies and tactics of political participation which post-3/11 parental organizations use. In a second step, we compare these to the strategies and tactics employed by social movement organizations founded in response to the Three Mile Island nuclear incident in the US more than 30 years earlier.

For the Japanese case, our preliminary findings suggest that whereas strong social capital emerges out of the activities within the group, the impact of advocacy understood as influencing policy outcomes is much weaker. Whereas this result stands in line with existing research, we argue however that the parental groups shape their style of activities to build up sustainable relations with local authorities in the long run.

HOLTHUS, BARBARA* (German Institute for Japanese Studies, barbaraholthus@gmail.com)

Time, Money, Infrastructure: Young Parents’ Needs and (dis) Satisfaction with Family Policies in Japan

Generally, family policies can be categorized into the three pillars time, money, and infrastructure. This is equally the case in Japan. Differences between countries lie in the way a country balances these three pillars. In the case of Japan, the longest running policies can be found in the arena of infrastructure (of daycare centers), they policies like child-care allowance are newer, and time policies, such as childcare leave and work-life balance policies, have been the most recent addition.

In this paper we ask if parents of young children (up to age 6) are aware of the different policy measures, if and to what degree they use them and if and to what degree they are satisfied or dissatisfied with them. It is furthermore the question if there are significant correlations to be found with such demographic indicators as gender of the parent, their income level, employment status, regional stratification, marital status, and/or the age of their children.

Data comes from a nation-wide survey, conducted by the German Institute of Japanese Studies Tokyo (DIJ) and Benesse Corporation, 2000 mothers and fathers throughout Japan were surveyed in early 2012. The survey data brings new insights into the well-being of parents. We model parental well-being to consist of seven dimensions, one of which is the well-being or satisfaction with family policies, a so far highly understudied dimension of well-being and the focus of this presentation.
The Function and Uses of Society

Who needs society anyway? Since Weber, many sociologists have shunned the notion of society as a reified collective concept; and in the wake of the globalization debate, the critique of ‘container theories’ of society has further decreased the number of those who regard society as an essential sociological concept. But ‘society without society’ not only runs the danger of discarding an important element of social theory without a proper alternative but also fails to account for the positions of the term outside academic discourse. This paper addresses the sociological and everyday usages of the concept of society from a functional perspective. Although the function of society, as the most encompassing social system, must be conceived quite broadly, it nonetheless remains distinctive if compared with other social systems such as organizations and face-to-face interactions. Only loosely related to this functional reconstruction of the concept, ‘society’ also continues to play a role in everyday discourse. Yet what kind of society is thereby discursively constructed? The usages of the term ‘society’ in mass media and other discourses are difficult to pin down; yet a common denominator lies in the fact that ‘society’ usually refers to an anonymously constituted and therefore not directly addressable social horizon.

Reflecting on Work Practices: Possibilities for Dialogue and Collaborative Knowledge Production in Institutional Ethnography

The presentation explores ontological and epistemological issues of institutional ethnography (IE) in relation to bringing together different knowledges and epistemic commitments. More specifically, the presentation addresses the possibilities for dialogue and collaborative knowledge production between research participants, practice-oriented, experience-based ideas about their work and researchers’ academically informed concepts. The issues are explored through analysis of how participants in an IE project, namely researchers and maternity nurses, engage in reflection collaboratively on the care activities. The material analyzed are fieldnotes produced at workshops arranged for joint reflection on the nurses’ own work practices as documented on video.

The analysis shows that the possibilities for, and the difficulties of, achieving dialogue emerge from three sources. First, conflicting knowledge interests between researchers and research participants may lead to complementary projects in situations where all parties align themselves with the other’s interests. In such situations, experience-based knowledge may be co-produced through storytelling motives. Second, doing IE is about the researcher moving from one setting to another and taking up different positions accordingly. These fluid positions create constraints and possibilities for dialogue. An outsider expert/administrator position and circumstances that reinforce it are not conducive to the articulation of multiple voices. However, it is possible to shift the overall positioning so that the participants may co-produce knowledge. In my case this was done through working with videos and researchers’ provocative commentary that bore witness to the nurses quickly picked up and reflected on. Third, presenting theory-based interpretation that addressed an organizing element of care provoked accounts that addressed the organizing element from a different angle and specified how such organization is actually realized. Reframing the ongoing analysis through such dialogically produced experience-based knowledge means that theoretical concepts are used not to make generalizing statements on commonalities in the material but to put them to test.

After the Dream of Medicine As a Versatile Solution, What Comes Next?

Since ancient times, Japan has had an unusual self-care culture. Following Japan’s nineteenth-century modernization, Western medicine has prevailed in the country, and the high health awareness of lay people forms the basis for promoting medicalization. Modern Western medicine is currently the national standard in Japan’s universal health insurance coverage. Unlike self-care movements closely connected with individual rights, such as in the United States, Japanese lay people’s high level of interest in health does not exert an influence at the institutional level. Thus, medical discourse still has prime influential power. Modern Western medicine is currently the national standard in Japan’s system of universal health insurance coverage. Unlike self-care movements closely connected with individual rights, such as in the United States, Japanese lay people’s high level of interest in health does not exert an influence at the institutional level. Thus, medical discourse still has prime influential power. Modern Western medicine is currently the national standard in Japan’s system of universal health insurance coverage. Who Feels Powerless?: An Examination on Self-Attitudes of Japanese Youth

Youth labor market in Japan has changed drastically since the beginnings of 1990s. It is often pointed out that both precarity and severity of work, the risk of poverty and social isolation have increased remarkably among Japanese youth. In order to forecast the future of Japanese society and to search for clues to break its deadlock, we need to grasp the precise trajectories and attitudes of young people.

Youth Cohort Study of Japan (YCS), a five-year longitudinal quantitative survey of young people in Japan, provides us abundant information which is beneficial to the purpose mentioned above. Using the YCS data, this analysis focuses on factors which affect self-attitudes, especially the sense of powerlessness and self-esteem of Japanese youth. The reason is that these attitudes are deeply related to agency and resiliency of young people, who is expected to rebuild the stalemated social structure.

Among numbers of axes which divide young people, most influential ones are gender, family SES, trajectories of transition from school to work, educational experience, regional mobility, workplace environment and social network. Through multivariate analysis, it is found out that there are remarkable differences both of levels and of factors concerning self-attitudes between men and women. The results imply that Japanese young men, including regular workers who have been thought to be advantageous compared to non-regular workers, feels more depressed than young women. The deterioration of labor condition since the early 1990s had much graver negative impact on Japanese men than women as the change of male-breadwinner norm has been far slower than that of the actualities.

Immigrant Homeland Re-Creation and Healing in Urban Community Gardens of Los Angeles

This presentation will extend the definition of the domestic sphere to include urban community gardens, which I argue serve as critical spaces that allow undocumented Latino immigrants to sustain themselves and to re-create homeland in urban Los Angeles. I focus on undocumented immigrants, some of them indigenous and some mestizo, who hail from southern Mexico and Guatemala.

Illegality and legal violence, racism, and marginality characterize urban life in these neighborhoods. Home-making and healing practices occur in these urban community gardens, which become shared domestic space. Mexican and Central American immigrants and their families gather at these gardens to grow familiar foods that nourish them. In the process, they connect their children, some of whom are U.S.-born, with ancestral traditions, attaching them to homeland culture, and to an experience with la tierra (the earth). They are not simply feeding their families, as they are spatially re-appropriating urban Los Angeles and re-coding it with material plant life such as sugar cane, mango trees and corn stalks.

The urban community gardens are also healing spaces. The gardeners cultivate and share a range of medicinal herbs, creating informal homeland pharmacies that remedy tooth aches, nervous anxiety and indigestion. The gardens also provide palliative remedies for intimately experienced social problems, including loneliness, social isolation, and the depression and anxiety that accompanies poverty and illegality.

The domestic sphere has always been a loaded place, a site of comfort, sustenance, and belonging, but also, as feminist scholarship reminds us, a site of patriarchy and illegality.

A Special Way of Modernization ("Sonderweg") or Methodological Cosmopolitanism?

Since the IMF crisis of 1997, Beck and Beck-Gernsheim's "individualization thesis" has attracted much academic attention in Korea, for it was seen to explain the present social upheaval of Korean society. Beck's individualization theory, however, aims to explain Germany's modernization as a typical process of Western development. With the above introduction in mind, I propose to investigate the historical context between "Sonderweg" and the methodological cosmopolitanism of Beck as an initial step necessary for the analysis of the special ways of Asian modernization. I will proceed to make a further comparison between Germany's Sonderweg and Korea's path of modernization as a mean to evaluate Beck's methodological cosmopolitanism, and the implication this has for Korean sociology.

Immigrant Homeland Re-Creation and Healing in Urban Community Gardens of Los Angeles

This presentation will extend the definition of the domestic sphere to include urban community gardens, which I argue serve as critical spaces that allow undocumented Latino immigrants to sustain themselves and to re-create homeland in urban Los Angeles. I focus on undocumented immigrants, some of them indigenous and some mestizo, who hail from southern Mexico and Guatemala.

Illegality and legal violence, racism, and marginality characterize urban life in these neighborhoods. Home-making and healing practices occur in these urban community gardens, which become shared domestic space. Mexican and Central American immigrants and their families gather at these gardens to grow familiar foods that nourish them. In the process, they connect their children, some of whom are U.S.-born, with ancestral traditions, attaching them to homeland culture, and to an experience with la tierra (the earth). They are not simply feeding their families, as they are spatially re-appropriating urban Los Angeles and re-coding it with material plant life such as sugar cane, mango trees and corn stalks.

The urban community gardens are also healing spaces. The gardeners cultivate and share a range of medicinal herbs, creating informal homeland pharmacies that remedy tooth aches, nervous anxiety and indigestion. The gardens also provide palliative remedies for intimately experienced social problems, including loneliness, social isolation, and the depression and anxiety that accompanies poverty and illegality.

The domestic sphere has always been a loaded place, a site of comfort, sustenance, and belonging, but also, as feminist scholarship reminds us, a site of patriarchy and illegality.

The older age cohort was traveling less than the younger one as expected. The socio-economic differences are wide in domestic tourism and especially traveling abroad. People traveling often were also more active in other leisure activities. Respondents’ self-estimation of their health predicted the propensity of traveling. Health problems were one main reason why ageing people are not traveling (anymore) but also other factors like lack of money.

Child Investment in Youth Care Services: Dilemma’s and Consequences

Welfare states have (re-)invented family policy as a response to the notion that children are the social, cultural and economic capital of societies. Consequently, the healthy development of children is an important aim in policies regarding child care, and the role of parents in safeguarding their children’s development is stressed. For professionals working in the field of youth care this change in policy aims has had its effects on the way their profession is organized and carried out:

1. more attention is directed towards preventive and early interventions—in order to ensure the best possible developmental trajectory—as opposed to curative interventions.
2. There is a stronger emphasis on effectiveness and evidence based practices and its concurrent emphasis on protocols and guidelines. At the same time however, professionals are expected to adjust their work to the demands of parents, and to serve parental expectations and wishes.
3. In line with this, professionals find themselves balancing “distance” and “control”: working with parents presupposes that professionals can’t be directive and should refrain from being too authoritative. Yet, professionals also expected to intervene when children are at risk, and policy measures emphasize risk-assessments and inter-organizational information exchange.

The international research project “Governing New Social Risks” centers on this turn to parenting. In our paper we will discuss how these changes and dilemmas have affected the way in which professionals have organized their own profession, and their relation with parents and families. Based on interviews with (academic) parenting experts, relevant policy makers and professionals themselves, we will present our findings on how professionals give form to these policy changes. Although the turn to parenting takes place throughout welfare states, we will focus on the Netherlands as a case example. However, data from the other European countries included in this international research project, will be taken into account.

RC53-856.2

HOPMAN, MARIT* (Utrecht University, The Netherlands, m.hopman@uu.nl)

Defining Children in Youth Care Interventions

Within welfare states, attention for the development and upbringing of children is increasing. On the one hand, scientific disciplines such as developmental psychology have professionalized child development and conversely, a pro-to-professionalization of parenting has taken place. On the other hand, the same attention for development can be found in governmental policies, resulting from the influence of child investment theories. Consequently, parenting support interventions—aiming at parents in their central role as child raisers—have gained in importance. These interventions mostly respond to the child rearing questions of parents. Also, interventions are often selected based on their effectiveness. Although these issues are essential in organizing youth care, this approach fails to acknowledge how these interventions perceive and define children and childhood, and how this effects the ways in which children are raised and develop. This paper addresses two of the theme-related questions:

1. What are the dominant definitions of children’s problem’s and which ideas of social order do they respond to?
2. How do stocks of professional knowledge as well as the practices of intervention on children’s problems evolve over time?

The questions are addressed by using both quantitative and qualitative data from the international research project “Governing New Social Risks”, which centers on the turn to parenting from the 1990’s onwards. In the quantitative part, results of the analysis of parenting support interventions are presented. For example, changes in scientific theories underlying the interventions help us in understanding how children are being defined. In the qualitative part we discuss data gathered through interviews with (academic) experts and relevant decision makers about dominant views and changes in the perception of children and families and of state-family relations. We focus specifically on the Netherlands, but information from the other countries included in this research project will be addressed as well when applicable.

Gender Differences in Happiness: The Effect of Marriage, Employment, and Parenthood in 33 Countries

Happiness remains an important measure of psychological well-being. Given the current challenges of struggling global economies and political conflict and unrest, psychological well-being has never been more important. While previous studies have focused that females, the young, the unmarried, and people with lower socioeconomic status are more likely to suffer from lower psychological well-being, they fail to fully capture societal-level conditions’ impact on individual happiness. Although previous studies have focused on how societal conditions affect individuals in a given society and shape perceptions of their personal conditions, in this study I focus on gender. Utilizing hierarchical linear modeling on data from the 2002 International Social Survey Programme, I examined gender differences in happiness and how country-level gender stratification affects the relationship between happiness and family-related predictors in 33 countries. The results show that there are clear and significant gender differences not only in terms of happiness between men and women but also in the factors affecting their happiness. While, on average, women evidenced lower happiness than men, results indicated that there were gender differences in the effects of being married, not working, and the number of children individuals had on happiness. However, despite expectations of country-level gender equality and egalitarian norms, women’s happiness, the measures of gender equality and gender ideology at the country-level showed mixed results in the cross-level interaction and therefore suggestion are made for future directions in this important area of research.

« Utopie » Dans L'enclos, Ou égalité Ségreguée

Cette communication a pour but d’avoir une meilleure connaissance sur la mentalité de l’époque sur laquelle reposait la société moderne du Japon dans la première moitié du 20ème siècle et de montrer que l’on poursuivrait au niveau national un idéal d’ « égalité » non seulement dans la vie politique mais aussi dans la vie quotidienne. On connaît bien que l’égalité sur le plan politique a été partielle et mise en œuvre lors de la réforme des lois électorales qui ouvrait la porte aux scrutins universels en 1925. De l’autre côté, il n’en est pas demeuré moins que la misère et l’inégalité sociale n’étaient pas encore déracinées dans la vie quotidienne, c’est-à-dire dans celle des vulnérables comme des ouvriers, des malades, des handicapés etc. Ce sont encore des problèmes d’aujourd’hui. La résolution du problème de l’époque d’une manière ségrégative: tout en séparant les pauvres des riches, les malades et les handicapés des personnes en santé, on a mis les précédentes dans l’enclos. On voudrait donc dans cette recherche historique montrer un aspect peu étudié sur la mentalité de l’époque qu’on pourrait appeler une “utopie dans l’enclos” en jetant une lumière nouvelle sur en particulier la vie des ouvriers d’usine et des lépreux dans la léproserie avec le changement de la conscience sociale en perspectives socio-historiques.

A ‘Ritual’ of Surgical Mask Wearing in Japan: A Short History

The practice of surgical mask wearing in Japan has been adopted by a significant proportion of the national population and has become embedded in people’s everyday lives. This paper studies the practice as a ‘ritual’ and outlines its history in Japan. The notion of ritual is employed in this paper, not analytically, but historically in order to highlight the structural/functional aspect of the practice, by which individuals come to terms with invisible threats. In the 1920s, the practice of mask wearing, introduced from the West and conveying the symbolism of modern science, replaced pre-modern ‘superstitious’ rituals against flu in Japan. It started being worn by healthy individuals in order to avoid infection, and spread as a matter of social etiquette to the infected, so as not to infect others. In addition to this usage, which continues up to the present, by the 1990s masks had become widely used by elderly citizens to avoid colds, to keep others from catching them while outside, and for certain social reasons. More recently, radioactive particles from Fukushima and air pollution spreading from China have been added to the list of health risks to be minimised by wearing masks. Wearing a mask appears to provide peace of mind amidst uncertainties. Its instrumental value in reducing health risks is scientifically

The Invention of Religion Category and the Formation of the Secular in Japan

This paper examines the social construction of the categories of ‘religion’ and ‘the secular’ in Japan. This is a preliminary analysis of how the term ‘religion’ was imported into and translated in Japan, how it was indigenised, how it has been reorganised by the state to establish the secular, and how the term ‘religion’ is used strategically by people in their everyday language. The Japanese concept of ‘religion’ shûkyô was invented amid the power struggle of international diplomacy against the Western colonial powers in the mid-nineteenth century. It also played an integral role in the formation of non-religion (or the secular), more specifically, the modern Japanese nation-state. After the fall of the shogunate in 1868 and throughout the modernisation process thereafter, the invention of the religion category, in turn, demarcated the modern Japanese secular, the category of non-religion, where the centralised state legitimated its authority over the population. The secularity of the state enabled the government to mobilise various groups classified as ‘religious’ for political purposes, while suppressing so-called ‘pseudo-religious’ groups, in order to achieve the ideological goal of the Japanese nation-state. After the Second World War, these categories of ‘religion’ and the ‘secular’ were reformulated under the influence of American-style liberal democratic values and sensitivities, which delimit the post-war Japanese secular. The boundary between these two realms, however, has always been ambiguous and often contentious. This paper argues that sociological studies of religion should critically analyse the social construction of the religion-secular dichotomy, by focussing on the social process in which particular meanings of the terms ‘religion’ and ‘the secular’ have been constructed and the ways in which the two categories are demarcated from each other.

Managing Complex Organizations In A Global World

Modern business organizations are complex dynamic systems in a complex dynamic environment. This environment has the properties of an eco-system rather than those of a controlled and steered system. This holds for the economy and for its particular subsystems like the health care system, both constituting the complex and dynamic environment of internally complex organizations like hospitals. Such organizations often move at the edge of chaos and sometimes beyond. In their operations they need to be understood as actor-systems at different internal levels.

Examples from hospitals will illustrate management problems resulting from the combination of high internal and high external complexity and dynamics. This requires to clarify the concepts of both complexity and organization from a sociocybernetic perspective. A generic reference model of organizations will be used for the subsequent analysis.

Central to this is Luhmann’s ‘s2’ dictum, that only complexity can reduce complexity. It will be analyzed how this could be achieved by taking a sociocybernetic approach.

For this purpose concepts will be used like: open information, teamwork, task forces, leadership styles, subsystem autonomy, problem-orientation, staff-line organization, matrix organization, Web 2.0 leadership, organizational culture, mediation, etc.

Any activity, also informational, requires energy. Increasing the efficiency of an organization when facing complexity can be achieved by: (a) Changing objectives, (b) reorganizing structures, (c) reorganizing process, including management, (d) depleting stocks (material, financial, but also health and motivation of staff).

The strategy chosen has to be sustainable without unduly reducing the internal complexity of the organization, essential for its capacity to cope with external complexity. This both according to Luhmann and according to Ashby’s ‘Law of Requisite Variety’.

Hypotheses will be presented, how a sociocybernetic approach to managing complex organizations can help to avoid problems and failures.

Apart from this, the paper will present a sociocybernetic but non-luhmanian approach.

This paper examines individuals who convert to a new religious identity as adults and the ways in which they perceive sources of external validation to make claims to religious belonging and authenticity. This study on which this paper is drawn includes 100 in-depth interviews with converts to Judaism in three metropolitan areas representing distinct regions of the United States: New York City (Northeast), Atlanta, GA (South), and the San Francisco Bay Area (West Coast). Respondents employed various methods of making hereditary or genetic claims to Judaism, including discussing evidence of Jewish ancestry discovered in DNA tests (taken post-conversion) and telling stories of distant relatives who family members believe may have been Jewish. When paired with respondents’ belief that others often do not see them as authentically Jewish because of not being born into a Jewish family (particularly as stated by those who did not make genetic/hereditary claims), it is clear that the perceived ability to make genetic/hereditary claims is meaningful to converts, providing a sense of having the right to belong to their new religious community. I further explore how the language of politics, through in-depth, semi-structured interviews with children of inter-religious couples, allows for a comparison of traditionally recognized ethnorracial identities in the context of a racialized understanding of religious identity and belonging. By addressing the role of genetics and heredity in making claims to religious belonging, this paper sheds light on the complex intersection of race and religion as categories of identity in American society.
ology, state, modernity, family and kinship, civilizations, and human inequalities. A tentative re-interpretation of Parsons' AGIL-scheme in light of Thernborn's life-long preoccupation with the same themes ends the paper. This brings us to the present state of the discipline, its relationship to the outer world and prospects for its future.

Miracles, Giants, Dragons and Small Tigers: Beyond the Unique, Hybrid, World and Model – Asian Welfare States on the Move?

For two decades, comparative welfare state research on developments in Asia was largely confined to five or six cases: Japan, South Korea, Taiwan, Hong Kong, Singapore, and occasionally China. These welfare states have continued to be in the foreground of recent social research. However, with rise of PRC over the last decade this picture has entirely been changed. On the one hand the focus of global social policy research has shifted towards the monumental transformations going on in China also regarding welfare policy. Chinese social researchers have come to the fore in this area to an extent never seen before. In particular Western researchers have flocked to this lump of sugar and interacted with the growing stock of domestic comparative scholars in this field. So far, this stream of research has been instrumental in shifting the paradigm regarding the impact on the larger picture of comparative research. On the other hand, in the shadow of the rise of China, a fair amount of research of specific cases in particular in Southeast Asia has completely been neglected by both the comparatists of the traditional cases and contemporary Chinese developments. Recent social policy developments in countries such as Indonesia, Malaysia, the Philippines, Thailand, Vietnam and to some extent also India have become a growing concern among social welfare researchers interested in a particular case. Again, this is another stream of research still in infancy, the outcome is uncertain but there is a dire need to bring such studies into the larger picture of comparative, cross-national welfare state research.

Climate Change in Portuguese Media: Global Politics and the Vanishing National Reality

Portugal is highly exposed to risks and vulnerabilities related to climate change, such as a continuing increase of average summer temperature, more frequent and intense heat waves and a reduction of rainfall, and, as a consequence, floods, droughts, fire hazards, air pollution, erosion and changes in water quality and availability (Santos, 2006). In this context, climate change is therefore a priority for the country's future, and media debates are likely to play an important role regarding the choices that have to be made. In fact, the framing of climate change in the media guides public perceptions of reality and offers hints for thinking and acting (Funtowic 2004) from the individual to the policy-making level. In line with the COMPON research protocol, newspaper articles were selected by searching for the keywords “alterações climáticas” (climate change) in all items published in three dailies (Público, Jornal de Notícias, and Diário Económico) from 2001 to 2010. A random sample of 25% of the articles published between 2007 and 2010 by each newspaper, which was selected, and the sample was stratified by year. Results show that the Portuguese press tends to reproduce the global political agenda on climate change, mainly focusing on international events associated with global political decision-making processes, while typically reducing the debate to climate change mitigation. Adaptation's low visibility may be explained by a dependency of Portuguese newspapers on the international political agenda and by the news sources used. The lack of mobilization of national leaders for adaptation may also play a part. This type of coverage tends to obscure local and national realities and responsibilities, though they are key to addressing climate change.

Changes in ICT Usage in Times of Scarcity

The information and communication technologies (ICT) market has been showing a remarkable expansion. Considering the severe economic and financial crisis some countries are currently facing, and the restrictions in several forms of consumption due to scarcity, what changes may be affecting ICT usage in everyday life? This presentation tries to address how are individuals adapting to new challenges related to inequity of (material) access to ICT and a growing digital divide in ICT usage which may emerge and be particularly relevant in a context of scarcity such as the one Portugal is now experiencing.

The research adopts an approach based in recent theoretical developments in sociology of communication, which consists in analyzing media as practice. This perspective enables media research to move beyond a narrow focus on audience practices in order to understand the complexity of contemporary media-saturated cultures (Coudry, 2004). Studying the whole range of practices focused directly or indirectly on ICT allows understanding how ICT are embedded in everyday life and are constructive of routines (Coudry, 2004; Pink and Mackley, 2013). By focusing on social practices, attention is shifted from the individuals' agency and choice to the process as mediate structural elements such as things, technologies, physical entities), competences (skills, know-how, techniques), and meanings (symbolic, ideas, aspirations) are connected and enacted in the form of patterns of practices, thus allowing to explain the dynamics of reproduction and transformation of social practices (Shove, Pantzar, Watson, 2012).

The analysis draws upon data from in-depth interviews conducted with people from diverse social groups in terms of age, education and socio-economic status. Results show the complexity of the relations established between individuals' practices, motivations, knowledge and material conditions related to ICT use.

Bringing Science and Academia to the Population: Activities to Raise Questions and Make People Think in Vulnerable Urban Contexts

The university role in society has been increasingly framed by models aligned with the academic capitalism, institutional competition and the quantification of activities/results. These, associated to decreasing resources and public funding, are placing the integrity of the university as a social institution at risk. The roles in society that universities are expected to pursue have also multiplied and substantially increased the burden placed on these institutions. One of the new dimensions of the transformation of universities is the idea of the University as a public institution – also dubbed as the 3rd mission. This has been gaining increasing relevance in more recent years as a form to open the university to society. Yet, in most countries, this latter mission of the university is somewhat understood as a fuzzy concept, and there is a tendency to associate 3rd mission activities with commercialization of science. In this article, we argue that this may be a simplistic view of the service mission, and that this mission in fact can encompass a range of activities that can not only benefit the university – orienting it to fulfill its social mandate and consolidate its legitimacy - but also contribute directly to the benefit of populations in vulnerable urban areas. Through the use of two cases studies focused on activities voluntary developed by academics of a school of engineering in Lisbon, Portugal, we analyze two strategic activities that aimed at bringing the university to vulnerable populations and if not solve, at least raise awareness about risky phenomena and vulnerable situations. These cases represent an overview of the more narrow thinking on the service mission of the university, as they combine activities that interact public understanding of science purposes, with hands-on teaching that applies engineering theoretical principles to real life cases, while fostering interdisciplinary research.

Differentiated Rights, Segmented Labour Markets: The Emergence of New Guestworker Regimes and the Making of Marginalised Precarity in Western Europe

This paper contrasts current labour migration with post-WWII guestworker programmes and argues that hierarchical differentiation and exacerbated precariousness for some migrant groups are the main characteristics of current labour migration regimes. My main objective is to show how both low-wage and ‘elite’ migration programmes are structured by (i) the securitisation of migration and (ii) racialised boundary making. These processes are disguised by the hegemonic notion of migration management. Using the examples of the UK, Austria, and Spain, I first outline how labour market restructurings since 1975 have led to a layering of labour mobility: the concentration of labour migrants in low-paid industrial jobs has given way to a simultaneity of (i) even more precarious forms of employment mainly in agriculture, tourism, and construction and (ii) relatively privileged elite migration linked to the transnational mobility of capital and goods. These new labour mobilities are regulated by complex legal frameworks that are marked by a radical deprivation of fundamental rights for some migrants, while other groups face hardly any mobility barriers. Second, in all three case countries the establishment of these new frameworks was dependent on a securitised discursive context in which migration was mainly discussed as an existential threat to social security, cultural identity, and public order. This context was used to establish policies that would have been considered illegitimate under ‘normal’ circumstances. Third, I explore the ways in which the differentiation between migrant groups is linked to new forms of racialised boundary making, mainly in the context of EU-integration. Developments are very similar across all three countries – although they represent different “varieties of capitalism”, party systems, migration histories, and welfare regimes. Together they illustrate how the neoliberal political-economic project structures life chances of millions of migrant
This research focuses upon the institutional systems which have been constructed by the regional head-quarter managers of Japanese multinational corporations (MNCs) in Asia-pacific. Theoretical frames for dealing with these systems or conditions are notably conceptions of institutional entrepreneurship. 

The activities of Japanese multinational corporations in the Asian region are noteworthy. They have been characterized by a tradition in which managerial control has been centralized by its home base in Japan. But this has changed with the expansion of production-consumption in the Asian region. Contemporary MNCs are much more sensitive to local conditions. Such changes have brought about new organizational forms with the formation of national networks surrounding these headquarters with active and energetic horizontal exchanges. 

These institutional systems function effectively when activities in regional networks are appropriately embedded into related organizational fields. In many cases, such regional activities are initiated by heads activities of patients. A sign of social transformation of the healthcare structure, from a bureau crat-driven one to a civilian-driven one, can be seen in this study. This research, the entrepreneurial characteristics that have been shown in the construction of appropriate relations between their networks and the fields are presented in order to identify the factors which determine success and failure.

Elderly Prisoners’ Life World - Comparative Study in NZ and Japan

The Elderly Prisoners’ Life World-comparative study between NZ and Japan

In Japan and NZ the crime rate of the elderly persons (up to 65) is dramatically getting upward since 1990s. I and John Pratt(NZ) have engaged in the comparative studies to make clear the background and reasons to put the elderly persons committing crimes. Both countries did a lot of effort to prevent them from doing crime and take care for them after release from the prisons. Nevertheless, such kinds of crime policy and the welfare trials were found out ineffective for the decrease their reoffending.

Therefore we make our ideas to understand the elderly people in terms of their life world such as their life plans in childhood, dreams, hope, political needs, religious consciousness, love, alterism, family networks, crime and violence aspirations and satisfactions etc.

Based on the research findings (600 prisoners in Japan and 66 prisoners in NZ), here, we would like to construct their life worlds to get some suggestions to step forwards for them in their future without the criminal lives.

The Determinants of Cross-National Variation in Migrant Accessibility to Rights

Nation-states vary largely in the degree to which the economic, social, cultural, civil and political rights enjoyed by the native citizenry are conferred upon foreign nationals, and rarely do non-nationals fully enjoy them unless they naturalize. There is considerable cross-national variation in accessibility to the legal institution of citizenship, but extant studies on the determinants of such variation are fragmented, revealing contradictory findings. Comparative studies, though important, are largely qualitative and geographically limited to Western liberal democracies, making it difficult to make generalizable claims about other parts of the world. Furthermore, there has been limited theorization on the impact of international exogenous pressures on citizenship and nationality laws. Using the 2001 Citizenship Laws of the World dataset to obtain data on the minimum residency requirements for naturalization as a proxy measure for migrants’ access to rights, this cross-national study utilizes OLS regression to compare the explanatory power of world culture variables against domestic economic, political, and demographic variables commonly used in studies on the determinants of citizenship laws. Results show that international non-governmental organization (INGO) membership best predicts cross-national variation in the minimum residency length requirements for naturalization, thereby suggesting that extensive linkages with INGOs and the resulting diffusion of world cultural scripts on human rights into the domestic society and polity influence a state’s willingness to confer the ultimate means to legal membership and rights.
Many ‘Post-Modern Princes? Rival Cosmopolitanisms in the Global Field of Justice Movements

In this article, Hosseini reflects on the recent organizational and ideational shifts in the so-called global justice movements. While some recent studies conceptualize these movements as ideologically mature and coherent, other inquiries, highlight growing disorganizations, fragmentations, disappointments, and disputes. The former argue that underlying global solidarities are coherent cosmopolitanist or globalist values, whereas the latter claim that the global justice movements lack the necessary ideological vision for uniting the masses behind a global project for changing the world capitalist system. Alternatively, drawing on his research project (2002-2006) and examples from the post-GFC uprisings including the Occupy movements in 2012, Hosseini argues that there have been four major parallel trends of ideological changes, dividing the global field of transformative practices between rival camps in terms of their orientations towards cosmopolitanist values. There are however significant potentials for traversing the divisions between the cosmopolitanist camps. Among them is the rise of a new (meta-)ideological vision, coined here transversalism by him. Transversalism assumes the possibility of creating common grounds for dialogue, collective learning or actions among multiple progressive identities and ideological visions in the global field of resistance. It appears in two forms: (1) the extension of any of the above mentioned camps to accommodate some of the principles of the other camps, such as regional Bolivarian cooperation between socialists/populist states in Latin America and the idea of Democratic global Keynesianism that attempts to improve the conditions for democracy within societies by adopting democratically developed international regulations; (2) in the form of independent integrative projects based on pragmatic adoption and combination of transformative practices from the camps, such as Economic Democracy.

Mending the Master Programmes: An Effort to Improve Progression and Completion Rates in Graduate Education

Generally, studies of dropout and completion in higher education have been concerned with undergraduate education and little attention has been paid to graduate level.

The Bologna process has led to a introduction of reforms in higher education in several European countries. In Norway a comprehensive reform in higher education – the Quality Reform – was implemented in 2003. Two of the aims of this reform was to improve the students’ progression and completion in higher education. To achieve this, a number of changes regarding the structure and pedagogy in Norwegian higher education system were introduced.

This article addresses completion and dropout in Norwegian university graduate higher education before and after the reform, using register data consisting of one cohort before the reform was implemented (the 1999-cohort) and one after (the 2005-cohort). The aim of the article is two-fold: to investigate if there are changes over time in completion rates and dropout rates in graduate university education, and if the changes can be interpreted as an effect of the comprehensive reform in Norwegian higher education implemented in 2003. To what extent can national translations of international reforms make changes in national completion rates?

Preliminary analyses, including important independent variables such as SES and gender, indicate that there has been an improvement in completion rates after the reform, but that the dropout rate might not have changed significantly over time. This is an improvement from previous studies completing on estimated time (2 years). Moreover, the process of completing a graduate university degree in general is more rapid after the reform than before.

Social Innovation: Driving Force Of Social Change

The importance of social innovation in successfully addressing social, economic, political and environmental challenges of the 21st century as e.g. poverty and inequality is recognised not only within the Europe 2020 strategy but also on a global scale. However, despite this growing awareness of the significance of social innovation, there is still no sustained and systematic analysis of social innovation, its theories, characteristics and impacts.

Since Schumpeter, the concept of innovation has focused predominantly on economic and technical developments, whereas social sciences were particularly interested in the corresponding social processes and effects. This may explain why social sciences, to this day, have been conducting empirical work on social innovations quite comprehensively, but without labeling them as such and, with few exceptions, without a concept of social innovation informed by social theory.

In light of the increasing importance of social innovation the paper looks at the theoretical concepts, areas of empirical research and observable trends in the field of social innovation on a global scale. It gives an overview of the current situation and the perspectives of socio-scientific innovation research that have greatly contributed to the development and spread of an enlightened socio-scientific understanding of innovation.

It will present the objectives and the concept of the global research project SI-DRIVE (7. Framework programme of the European Commission) which intends to extend knowledge about social innovation (SI). Facilitating empowerment within innovation processes driving social change can and shall be a main result of social innovations. Thus, social innovations need to mobilise citizens to take an active part in innovation processes and thereby enhance society’s generic innovative capacity. This requires new models of governance in favour of self-organisation and political participation, allowing sometimes unexpected results through the involvement of stakeholders.

Food Markets of Oaxaca (southern Mexico): Culinary Heritage, Gender and the Slow Food Movement

In 2010 traditional Mexican cuisine - ancestral, ongoing community culture - was inscribed on the Representative List of the Intangible Cultural Heritage of Humanity of UNESCO. Significant element of the indigenous culinary heritage of Mexico is the pre-Hispanic institution of a food market (tianguis). The southern state of Oaxaca - characterized by its ethnic and cultural heterogeneity and rich biodiversity - is famous for its regional cuisine considered to be the most sophisticated in Mexico and well established network of traditional markets. Nowadays, those lively, highly gendered spaces are not merely tourist attraction but still form a crucial part of local economy and communal life.

On the other hand, new styles and spaces of the same time, new levels of food consumption have emerged in the region due to advances of globalization and intensified processes of human mobility (migration, tourism, growing expatriate communities etc.). One of them
is recent, western trend of ‘slow food’ markets, shops and cafes established in
geofenced urban spaces as well as middle class suburbs of the state capital.

Based on the results of fieldwork carried out in 2011 and 2014 in the central
part of the state of Oaxaca (Volles Centrales) this paper analyzes the ambiguous
relation between two seemingly similar, but heavily diversified along gender, class
d and ethnic/national lines patterns and ideologies of consumption that can be ob-
served in contemporary marketplaces of Oaxaca City: traditional, indigenous/
mestizo, peasant usage of food versus those promoted by the local branch of slow
food movement connected with new, transnational urban lifestyle. Moreover, it
points out the implications and dubious outcomes of the ongoing changes in
Ozacan urban foodways for indigenous communities and especially those who
traditionally produce, cook and sell food at local markets – Indian women.

From Environmental History to Sustainable Future? On the Taiwan Experience and Beyond

In this presentation, I will draw from the lessons of Taiwan’s local environmen-
tal history in 10 counties and cities over the past 60 years to assess the possible
future for sustainable development.

First, I will sketch the overall and particular historical trajectories of how local
environment has been affected and become deteriorated by human actions and
government policy factors such as ill planned industrialization and over urbaniza-
tion in many localities.

Second, I will look into the rise, development, and effect of green local civil
society forces in the forms of anti-pollution, nature conservation, and anti-nuclear
power protests that have tried to stop the pro-growth path and reverse the envi-
ronmental injustice in various counties and cities.

Third, I will then assess if the slow yet steady paradigm shift facilitated by the
green movements has been effective enough to change the government-business
power relationship in many localities.

The Struggle for a Sovereign Taiwanese Sociology: History and Lessons

The Struggle for a Sovereign Taiwanese Sociology: History and Critique

I. The modern political history of Taiwan and its political limits to and shaping
of Taiwanese sociology

1. Under the Japanese colonial rule: 1895-1945 (non-existence of sociology in
Taiwan)
2. Under the Chinese Nationalist authoritarian rule: 1945-1980 (suppressed
sociology of Taiwan)
3. After the political liberalization and democratization: 1980-2013 (indigeni-
ization of sociology for Taiwan)

II. The true beginning of localization of sociology of, by and for Taiwanese soci-
ty and its people

1. The moderate turn
2. The radical turn
3. The radical turn

III. Is there a self-reflecting and self-criticizing “Taiwanese theory” for the mak-
ing of Taiwanese sociology for sovereign Taiwan people?

1. Critical assessment of the limits of localised Taiwanese sociology so far
2. Critical assessment of the limits of globalized Taiwanese sociology so far
3. The struggle of solving the problematic of the sovereignty of Taiwan

IV. What can the Taiwanese experience contribute to the making of a truly
global sociology?

The Unspeaking Shame – the Politics of Memory during Cold War in Taiwan

How do political victims recall and deal with their pasts after prolonged grie-
vous state violence? This is a research aims to account for the way in which the
politically victimised ones in Taiwan look back on their pasts during the Cold War
from the present point. Whilst conducting interviews with the victimised individu-
als, as former state enemy, informants are prone to conceal their pasts as to their
treason crimes and even tend to deny the pasts in public. The attitude highlights
the impasse of transitional justice work in Taiwan, while the society has not pro-
vided the former state enemies enough rooms to voice their deeds that had once
seemed to be committed crimes. In addition, informants of the research express
an emotion of shame that they even have never voiced to the loved ones. Yet,
after the fieldwork for years, the informants disclose their unspoken shame to
researcher such as I during interviews. It is salient to denote that the emotion of
shame or political stigma has intertwined with their memories is not remnants of the state
violence or political stigma. In stark contrast, a shame was derived by the depression
of not revolting the regime successfully. As the society see these individuals as
victims, they tend to see themselves as revolutionaries instead.

The research aims to elicit the hidden context of the collective state of mind of
the former state enemy in Taiwan. With in-depth interviews and collected data,
the paper manages to analyse the subjectivities of these individuals through their
memories. By unraveling the way in which the victimised individuals remember
their life stories, the research aims to deliver another perspective of the politics
of memory in Taiwan.

“My Girlfriend Said She Won’t Live with My Mom in the Future”: Online Discussion about Relationship in Taiwan

The contemporary self-help culture raises scholars’ interest, through it to
investigate whether the discourse and imagination of intimate relationship or
biographical pattern and life decisions. However, although people still rely on
advice and counsel from self-help books and manuals written by experts and
professionals when they are troubled by issues about relationship and life, and
more and more people login to online forums to ask for advices from other ordi-
nary people. Not only in new media but in non-western context is the self-help
culture significant and prosperous, though in different ways from western societ-
yes on which most studies concentrate. Therefore, this study aims to inquire the
advise interaction about intimate relationship on an online forum (Boy-Girls) of
Taiwan’s largest virtual community (PTT).

Through a yearlong fieldwork and discourse analysis in this community, I ex-
amine the discourses about intimacy in Taiwan and compare with what have been
suggested in the previous studies based on the Western self-help literature in
print media. The online advising discussion shows different concerns and dis-
courses about intimate relationship, and has a different relationship between
advisers and advisees. First, family issues, gender difference, and ethics of relation-
ship are main themes in the discussion. Secondly, comparing to what have been
indicated in the past, the discussion in virtual forum concerns less self-centered
than ethics-centered, less value of self than equality between genders. These
discourses may promote a perspective of intimacy based on rather mutually de-
pendent partnership than ego-centered atomic individuals. Finally, the pattern of
the production of discourse in online forums is different from the way structured
in mass media which allows only one author/expert/advisor preaches their ideas/
experience/strategies to the mass audience. In this sense, the different relation-
ship between advisers and advisees in new media, I argue, is the reason resulting
in different discourses about intimate relationship and self.

innumerable different situation since they are highly correlated. These variable
contexts currently become a huge complexity than within the modern society in the
sense of Niklas Luhmann. Therefore, the aim of next society is finding a way to
transform into certainty, namely stable state or the order. Thus, using the endless
uncertainty, the uncertain state will soon

In our society, each social phenomenon leans on every new concept to clarify.
Concept of “Big Data” reveals the novel route to further illustrate our society.
Combining endless possibility in the society nowadays, connection produces
innumerable different situation since they are highly correlated. These variable
contexts currently become a huge complexity than within the modern society in the
sense of Niklas Luhmann. Therefore, the aim of next society is finding a way to
transform into certainty, namely stable state or the order. Thus, using the endless
uncertainty, the uncertain state will soon transform into certainty, namely stable state or the order. Thus, using the endless uncertainty is possible to construct the order or coexist with other systems.

The novelty of “Big Data” isn’t itself but clarify the targeted question. The paper
illustrated how Facebook reveals the solution to the problem of the next society,
computer society, as Dirk Baecker said.

Living Arrangement, Intergenerational Support, and Life Satisfaction in Japan, Mainland China and Taiwan

The unique style of coresidence in East Asia is a three-generation household. This is not only strongly endorsed by cultural values with emphasis on respect for parents, but this also forms a basis for promoting intergenerational changes between older parents and adult children. There are three main questions to be answered in this study. First, how does living arrangement influence material and instrumental support between generations? Second, does this influence vary by countries in East Asia? Finally, what are the relations between living arrangement, intergenerational support and individual life satisfaction?

In this study, we used data from 2006 of the East Asia Social Survey. Results show that coresident children in these three countries tended to provide more support to older parents and also receive more support from older parents. Older parents who lived with children tended to give more support to children; however, coresident parents in Taiwan received less support from children than parents who didn’t live with children.

Results from logistic regression models suggest that while living with own parents does not appear to affect adult children’s life satisfaction in these three countries, greater giving support to own parents was associated with a higher level of life satisfaction of female adults in Mainland China and male adults in Taiwan. Japanese males who didn’t live with father-in-law and who contributed more support to in-laws tended to be more satisfied with life. Taiwanese females who didn’t live in the same neighborhood with mother-in-law were likely to be more satisfied with life. Furthermore, males in Mainland China who lived in the same neighborhood with their adult children tended to be more satisfied with life. While living arrangement was not associated with life satisfaction of older parents in Taiwan, receiving more support from their adult children would facilitate life satisfaction of older parents.

Sociology As Social Memory: Narrative Identity and Knowledge Construction in the Study of “Chinese Modernization” in Cold War Taiwan

Man is a story-telling animal and sociologists are not an exception. Sociological works are often more informed by historical narratives that function as particular forms of collective memory than sociologists would have admitted. My article aims to show how sociology may be a major agent of collective memory and identity formation by analyzing the sociological study of “Chinese modernization,” especially the case of Kwan-hai Lung (1906-1983) as one of the major founders of sociology, in Cold War Taiwan. The study of Chinese modernization in social sciences in general and in sociology in particular were promoted mainly by scholars of Chinese Mainlander background who exiled to Taiwan, where the Japanese colonial rule just ended, after 1949 owing to the Chinese Communist Party’s victory in Chinese civil war. These scholars dominated Taiwanese sociological sciences in the Cold War era up to the 1980s. The Mainlander sociologists in exile were haunted with the bitter memory not only of their displacement, but of modern China’s cultural trauma caused by foreign oppression. Embracing Chinese nationalism and the modernization theory imported mainly from the U.S., they hoped that China could become a rich and powerful nation by modernizing itself. By integrating the metanarrative of global and Chinese modernization and the metanarrative of Cold War into their sociological works, they became a major story-teller who endeavored to narrate post-colonial Taiwan back into relationship with the Chinese nation. As an important source of public narratives, the sociological study of Chinese modernization helped in the construction of collective memory and national identity in Cold War Taiwan. Situated in the context of the political and cultural inequality between the Mainlanders and the local Taiwanese, however, their historical narrative and their study of Chinese modernization per se were ready to be co-opted into the ruling ideology of the Chinese Nationalist Party.

The Effects of Sibling Structure on Fertility Decision in Taiwan

Drawing from theories of son preference and family resources, this paper attempts to construct a sequential fertility model, and then uses it to estimate the probability of parents’ fertility decisions of their first few children by the sibling structure and to elaborate the effects of various socio-demographic factors in Taiwan. The data used in the analysis come from the PSFD (Panel Study of Family Dynamics) in which respondents were born between 1934 and 1986 in Taiwan. The main findings are as follows. Firstly, the sibling structure has a significant effect on fertility decision. Secondly, the gender-balance hypothesis is rejected, whereas the son-preference hypothesis is supported. Parents with daughters in their first three births have a great likelihood to have a next child. Thirdly, son preference and son investment have an opposite effect on fertility decision. Fourthly, the hypothesis of social stratification is rejected. Parents of different status groups make similar fertility decisions. Fifthly, the data didn’t support the cohort hypothesis, because the patterns of fertility decisions by different cohorts appear the same. Finally, the significant effect of sibling structure indicates that fertility decisions are made in a sequential decision-making process in Taiwan.

Colonial Legacy and Development in East Asia: South Korea and Taiwan Reconsidered

Conventional wisdom attributes the post-war ascent of Taiwan and South Korea to the role of the “developmental state”. Specifically, the formation of the developmental state in both countries has been attributed to similar causes: post-war geopolitics; land reform; or even, by some, to distinct forms of Japanese colonial rule. A focus on external factors assumes the impetus of post-war East Asian developmental state stems from the external big bang that shook up the existing social orders and molded two different societies into being alike.

Yet, advocates of this position have been unable to explain the different patterns of industrialization and economic organization in Taiwan and Korea despite similar external challenges. On the other hand, the literature that focuses on endogenous factors is missing in providing evaluation of the role of the conjunctural forces and becomes ahistorical. This paper joins the debate through a reinterpretation of the origins of the post-war political economies of Taiwan and South Korea. While acknowledging the importance of conjunctural forces in shaping the direction of development, I argue that the existing social structure matters: Its interaction with the state shapes and constrains state choices and thus can account for the variations in strategies.

I make three claims to explain the divergence between Taiwan and South Korea: First, I illustrate how different configuration of state-society relationships (the state-business relationship) responded differently to similar historical conjunctures. Second, I highlight the different responses from society and the dynamics of the state-society relationship in shaping industrial structures and industrialization patterns. The existing social structure played an important role in shaping and constraining state choices at the transition to industrialization. Thirdly, I illustrate how these historical events have helped to reinforce the established patterns of state-society relationship, (Korean state and large capitalists nexus versus Taiwanese state and numerous SMEs alliance), rather than flattening them out.

HSIEH, MICHELLE F.* (Academia Sinica, mhsieh17@gate.sinica.edu.tw)

Constructing a Quality Regime: The Origins of Taiwan’s Export-Led Capitalism

Two key features of East Asian capitalism are the predominant involvement of the state in the economy and success via “export building”. This paper revisits one of the original successful tigers, Taiwan, by examining the mechanisms of state involvement and the processes of integration into the world market at the firm level. The conventional explanation of East Asian development focuses on the state capacities in shifting to export-led industrialization (in contrast to the lack of such state capabilities in Latin America and India) and the emphasis on industrial policies to induce entrepreneurship. A direct implication of this interpretation is that when the state intervenes, it tends to produce large firms and encourage industrial concentration. Yet, the Taiwanese SMEs as key exporters has run against the evidence elsewhere. If export-led development is an important element in understanding East Asian capitalism, and if the state-centric is to have any explanatory power, we need to show how the East Asian states escort firms in the world market. Specifically, how has Taiwan, as an example, coordinated a system of SMEs in its quest for integration into the global economy?

Through in-depth case studies of the 1970s key export industries, this paper illustrates the patterns and ways in which the Taiwanese state coordinated and interacted with the decentralized SMEs. The linkages between the state and SMEs were through varieties of technology and export promotion programs carried out by various kinds of semi-governmental organizations with an emphasis on technical standardization (at the firm level) and ensuring quality control. These mechanisms provided the overcompliance with international standards, and establishing the trust, and they had an impact on the formation and patterns of firms’ subsequent technological learning.

This reinterpretation of Taiwan’s post-war experience is relevant to debates on models of Asian capitalism(s).

HSU, ERIC L.* (University of South Australia, eric.hsu@unisa.edu.au)
On Appropriation and Japanese Sociology: The Case of Postmodern Social Theory

What does it mean to appropriate a social theoretical approach—initially developed elsewhere—into a different social context? The aim of this paper is to interrogate this very question through the prism of contemporary Japanese sociology. While some scholars have suggested that the practice of appropriation indicates a lack of creativity, others have suggested that something more intricate and innovative has been at work in Japan (Elliott, Katagiri and Sawai 2013: 11-12). In this paper, I substantiate the latter interpretation of Japanese sociology by exploring how postmodern social theories have been used to generate insights about contemporary Japanese society in new and unconventional ways.

Although postmodern social theory is now regarded as a largely defunct—if not also unproductive—area of study in the Western world (e.g., Ryan 2007), Atsushi Sawai (2013) describes how the field continues to remain relevant in the Japanese context. This is because a Japanese scholarship on the postmodern has not remained overly fixated on the issue of epistemology, as a sizeable portion of postmodern social theory in Japan has sought to analyze various social transformations and events.

It is also crucial to note that the scholarly debate on postmodernity and postmodernism in Japan has not unfolded in the same way as it has in the West. What is unique about Japanese postmodern social theory is that it has not simply held a ‘diachronic’ view of postmodern culture (Koto 2006). Some scholars have noted that it is possible to detect postmodern features in pre-modern periods of Japanese history, and that postmodern culture may be more ‘indigenous’ to Japanese society than otherwise thought (Katarani 1985).

HSU, KAN-LIN* (Tunghai University, kanlin@thu.edu.tw)

Post-Developmental State with the “Therapeutic” Turn: The Case of Taiwan

The East Asian developmental states fell for decades due to global economic restructuring and their respective contradictions and dilemmas. Political exploration of post-developmental scenarios remains ongoing. In Taiwan, this exploration could be termed as “therapeutic turn” in three respects. First, the Taiwanese welfare state has implemented the National Health Insurance, wherein population health became a new ideology of legitimization. Second, health industry in its inclusive sense has been targeted as a promising techno-economic paradigm, along with the ascending information and communication industry, for a new mode of growth. Third, there is a ‘managerialistic-developmental’ creation of national system of innovation for promotion of the targeted industries. However, policy paradigm characteristic of marketization of healthcare system, proflization of health promotion on the one hand, and intensifying workforce regime on the other, contribute to a disjunction among current mode of growth, regulatory regime and accumulation strategy, which turning to a more far-reaching organic crisis. Writing from regulation approach, this paper argues that why the ‘welfare turn’ is in fact a political project and illustrate how the therapeutic turn of Taiwanese post-developmental state runs into crisis.

Is There a Motherhood Penalty in Taiwan? The Effect of Childcare on the Wages of Women

Does motherhood affect the wages of an employed woman? Because women generally take the major responsibility of childcare, researchers have noted the effect of childcare on the wages of women. At least three theories have been developed in the United States of America and Europe to explain the relationships between motherhood and lower wages. These theories include mainly human capital theory, neoclassical theory of compensating differentials, and statistical discrimination theory. First, scholars employing human capital theory have assumed that many women spend time at home caring for children, interrupting their job experience. This interruption is likely to reduce the accumulation of human capital such as work experience, seniority, and formal skills. Therefore, the loss of the human capital may have an influence on later wages. Second, the neoclassical theory of compensating differentials suggests that mothers may trade off higher wages for “mother-friendly” jobs that are easier to accommodate their responsibility of childcare and employment. Finally, the main argument of statistical discrimination is that employers may discriminate against women because of their motherhood status. Compared to the rich evidence of childcare wage penalty in the United States, the relationships between motherhood and the wages of women have not been well investigated in Taiwan. Therefore, this paper aims to examine the wage penalty for motherhood by using data from Panel Study of Family Dynamics with fixed-effects models. The research analyzes whether the effects vary by different marital statuses.

The Knowledge Inequity in Hidden Curriculum of Taiwanese Higher Education Under the Trend of Globalization: The Comparison Between Private General University and Technology University

The knowledge condition in higher education under the trend of globalization has been moving toward post modern universities, which is consistent with the argument of Lyotard (1984) – the rise of performativity. Under the dominance of performativity, the curriculum with practice, efficiency, performance or productivity has undoubtedly become the important strategy for universities. Moreover, the vocationalization of curriculum in higher education and the hidden curriculum on performativity also special interest in higher education.

It is worth studying whether there remains knowledge classification in terms of management and skills among students between the hidden curriculum of performativity in private general universities and those in private technology universities. The inequity as well the corresponding consequence in the workplace is the main issue of this research.

This paper aims to explore the relevant arguments about vocationalization and hidden curriculum of the higher education under in the trend of globalization. Samples for case study include two private universities, one general university and one technology university, from which the knowledge classification and the inequity in the hidden curriculum of performativity will be explored.

This is a qualitative research and the method includes text analysis and interviews. It is expected that the vocationalization of curriculum and the inequality in the hidden curriculum of performativity can be unveiled for the reflection of the undergraduate curriculum related policies in higher education.

Key words: the vocationalization of curriculum in higher education, globalization, performativity, hidden curriculum, sociology of knowledge

Social Capital, Civic Engagement, and Political Efficacy in East Asia

This study attempts to explore plausible mechanisms among social capital, trust, civic engagement, and political efficacy in East Asia. The data are from the 2012 East Asia Social Survey on Social Capital, including data from Taiwan, China, Japan, and Korea. This study differentiates social capital into individual social capital, organizational social capital, and trust. Individual social capital is measured by the diversity of accessed position-generated networks, and organizational social capital is measured by the diversity of voluntary associations people participated in. Trust is classified into three types of trust as well: trust to personal contacts, trust to public agents, and general trust. This study attempts to examine the effects of individual and organizational social capitals on three types of trust, and then furthermore examine the function of all types of social capitals in terms of civic engagement and perception to political efficacy. One dominant and universal mechanism is that there is a positive effect of position-generated social capital on all types of trust in all East Asian societies except that in China. In China, diversified social capital is vulnerable to trust which quite supports some finding on the vulnerability of weak ties in socialist society. The effects of organizational social capitals on trust to government agents and personal contacts are stronger in Korea and Japan, but the position-generated individual social capital has strong effects on trust to personal contacts and general trust in Taiwan. Both individual and organizational social capital affect civic engagement in four societies, but the effects of these two social capitals on perception to political efficacy even are stronger except for those in Korea. Trust to government agents and trust to personal contacts have direct effects on the perception of political efficacy in four societies, and trust variables also become intervening variables in Taiwan.

HU, HONG* (Utrecht University, huang_ching@hotmail.com)

Green Home for Whom? Estimating Green Housing Opportunities of Various Socio-Economic Groups in Nanjing China

Although sustainability is considered an integration of society, economy, and environment, it is criticized that the concept of sustainable city is not necessarily accessible or affordable to the majority. The improvement of the quality of life after sustainable plans leads to a significant market premium which can only be afforded by the minority rich. Take Nanjing China as an example. In the transition from an industrial to a post-industrial city, Nanjing government attempts to build a sustainable city by constructing green apartments, improving metro networks, and more universal mechanism is that there is a positive effect of position-generated social capital on all types of trust in all East Asian societies except that in China. In China, diversified social capital is vulnerable to trust which quite supports some finding on the vulnerability of weak ties in socialist society. The effects of organizational social capitals on trust to government agents and personal contacts are stronger in Korea and Japan, but the position-generated individual social capital has strong effects on trust to personal contacts and general trust in Taiwan. Both individual and organizational social capital affect civic engagement in four societies, but the effects of these two social capitals on perception to political efficacy even are stronger except for those in Korea. Trust to government agents and trust to personal contacts have direct effects on the perception of political efficacy in four societies, and trust variables also become intervening variables in Taiwan.
City, it is essential to understand the role of housing affordability playing in it. This article estimates green housing opportunities of various socio-economic groups in Nanjing China according to their affordability and housing preferences. It analyses the effects of sustainable plans on housing opportunities by comparing three urban development circumstances: the current situation, after improvement of the metro system and after relocation of heavy industry. Results indicate that in the current circumstance, the lower-middle class has slight chance to have a green home across the city. The improvement of metro network can increase the green housing chances for the lower-middle class in the central areas only if they sacrifice their housing size. The relocation of heavy industry can dramatically increase the green housing opportunities of the upper-middle class in the central urban areas, but will push the lower-middle and middle class moving to the suburbs due to the high prices. To ensure social equity in developing a sustainable city, policy makers need to consider affordability and sustainability simultaneously.

HU, SHU* (National University of Singapore, hu_shu@nus.edu.sg)

Parental Migration and Adolescents’ Transitioning to High School in Rural China

The transition from middle school to academic or vocational high school or work is a crucial period for adolescents in China. It has profound implications for both the individuals’ lifetime status and the society’s educational stratification and social inequality. Educational reforms beginning in 1980s have raised direct costs of education for individual families and widened regional disparities in education opportunities. Returns to schooling have increased in both rural and urban China. Growing opportunities of migrant work in urban China provide alternatives to economic mobility. Facing unequal opportunities and constraints of pursuing education, how do rural adolescents choose to follow different trajectories of transitioning to high school?

This paper investigates how parental labor migration influences rural adolescents’ transitioning to high school of different levels or migrant work after or even before graduation from middle school. Millions of rural children are left behind in rural China for years as their migrant parents work in the city. Parental migration may lead to increased financial resources, decreased parental supervision, more demand on children’s time and labor on housework or farming, access to parents’ information and networks on migrant work opportunities, and changes in parents’ values and attitudes about children’s education. These mechanisms will in turn affect children’s aspirations, motivations, academic performance and educational outcomes in different ways.

The data used is collected from my fieldwork following groups of students and dropouts from 3 middle schools located in a typical migrant-sending county of Central China. I used mixed methods to obtain detailed information from student participants, caregivers, teachers and the schools. Data from multiple time points and sources allow me to contextualize life circumstances for rural adolescents, and to examine who continues to high school and why. Both qualitative and quantitative analysis will be conducted.

Profesiones Sin Fronteras? Las Trayectorias Profesionales De Los Ingenieros Mexicanos Que Migran a Estados Unidos

Con los procesos de globalización, la migración calificada se ha incrementado de forma importante en las últimas décadas. Se advierte un interés notable de países desarrollados por atraer a profesionales, sobre todo ingenieros, que a su vez aparecen como protagonistas de la denominada sociedad de la información y/o sociedad del conocimiento. Aunque en México se observa un crecimiento importante de este tipo de migración, no hay muchos estudios que se ocupen del fenómeno. En este trabajo exponemos resultados acerca de las trayectorias profesionales de los ingenieros mexicanos que trabajan en Estados Unidos.

El trabajo se basa en las teorías de la migración internacional y de las profesiones utilizando dos herramientas metodológicas: La primera consiste en una revisión de las bases de datos de Estados Unidos y México con el objetivo de calcular la importancia cuantitativa del fenómeno. Sin embargo la herramienta analítica principal se fundamenta en una metodología cualitativa con entrevistas en profundidad a 30 ingenieros mexicanos.

En la ponencia se muestra la heterogeneidad de las trayectorias de los ingenieros en función de cuatro dimensiones principales: a) su capacidad de agencia a lo largo de la trayectoria b) la espacialidad en la que se desenvuelve su trayectoria c) la legitimidad de su condición de ingenieros en un país extranjero y d) la forma en que se adquieren nuevas competencias profesionales o se transforman las que había adquirido en México.

Los resultados muestran que los ingenieros mexicanos encuentran en general oportunidades de desarrollo profesional en Estados Unidos con la excepción de algunos grupos de jóvenes ingenieros con trayectorias en fases tempranas que sufren graves condiciones de precariedad. Las trayectorias con mejores condiciones laborales son las de aquellos ingenieros que estudiaron una maestría o un doctorado en Estados Unidos.

Passive Revolution: The Retreat of the Taiwanese Developmental State Since 1990s

Since the late 1980s, under the “double squeeze” of democratization and globalization, it is undeniable that the developmental state in Taiwan has undergone significant transformation along the course of economic development. Yet a nagging question remains unanswered is how to comprehend this transformation. It is to illuminate and conceptualize this transformation of the developmental state to which this paper is devoted. More substantively, based on the policy regime approach, the main research objective is to investigate the changing role of the state in fulfilling the dual and often contradictory function of accumulation and legitimation (especially since the 1990s). Three strategic research sites can be chosen: accumulation regime, welfare regime and fiscal regime. Whereas by examining the accumulation regime helps us understand how the state involves in promoting capital accumulation, the welfare regime characterizes the state’s pursuit of legitimation. And in order to decipher the tension of accumulation/legitimation nexus, the fiscal regime is accordingly examined. The main concern of fiscal politics are to discover the principles governing the volume and allocation of state finances and expenditures and the distribution of tax burden among various economic classes. Fiscal regime is therefore the linchpin among all the three policy regimes to help us identify the action of the state.

Institutional Divergence in Petrochemical Industry of Mexico and Taiwan: Combined Effect or Failure of State Intervention and Liberal Marketization?

This paper examines the shift from interventionist state to market-led growth in petrochemical industry for both Taiwan and Mexico since 1980s, which leads to the formation of mixed-market economies (MME) in these two countries. Despite the similarity, Taiwanese petrochemical industry demonstrates a backward and forward linkage in a full scale of privatization, whereas Mexico comes to a rupture in backward linkage and importing a large quantity of immediate chemical products with huge trade deficit while implementing privatized contractors.

This paper argues that despite the transition of state policy from interventionist- to neo-liberalism in the 1980s, the differences in economic performance of these two countries’ petrochemical industries are determined by the different kind of market institutions-building and state-business collaboration, a result of respective path dependence in Taiwan and Mexico.

The initial finding shows that the Mexico’s model of state-business coordination via “PEMEX and contractors” and strategic alliance have failed to create incentives for public-private partnership as well as attract investment due to state ownership of oil in the upper stream and oligopoly among big corpdoms dominated by a few business groups in the middle stream of Mexican petrochemical industry. By contrast, in Taiwan’s case the effectiveness of state intervention lies in developing a state-business co-evolution model, featuring not competing with business but rather complementing to business needs in the market. It seems that the continuity of state intervention in Taiwan has penetrated into the era of neo-liberalism, while lacking monopoly and oligopoly in Mexican case.
analyze the relationship of teacher quality with social justice in Taiwan context. Finally, this paper provides some findings and suggestions.

The Taste of Home: Food, Identity, and Community Among Chinese Marriage Migrants in Taiwan

This study aims to explore the complexities of boundary-negotiation, identity, and the sense of belonging through examining foodways in cross-border marriages between Taiwanese men and Chinese women. Analyses are based upon data collected from ethnographic research conducted in Taiwan. Food is not only a necessity in daily life, but also a contested site where gender, class, and ethnicity intersect. Chinese marriage migrants are often depicted as opportunistic gold diggers in the Taiwanese society. Not only do they suffer various forms of discrimination from the general public, but even more unbearably, within their own family. This research shows that living arrangement has a great influence on Chinese marriage migrants' agency. In a "three generation cohabitation" setting, the dining table becomes a battlefield between Chinese immigrant wives and their Taiwanese in-laws. Chinese immigrant wives' food preferences and cooking habits such as the general usage of oil, salt, MSG, and other condiments are associated with their national origin, further stigmatized as the lack of modern knowledge and inferior. In the name of a "healthier" diet, Taiwanese in-laws often despise Chinese marriage migrants cooking habits and ask them to adapt. Food consumption and cooking styles not only draws a subtle ethnic line between Chinese marriage migrants and their Taiwanese in-laws, but also serve as a marker of status and class. Facing such difficulties in the domestic sphere, Chinese marriage migrants often claim that unlike many restaurants in Taiwan, what they cook are the real "authentic" Chinese food. They develop a nationalist discourse as a means of asserting their subjectivity and the legitimacy of being a good mother. With limited agency in food consumption in their own household, Chinese marriage migrants, despite they come from different regions, have collective memories and establish a special bonding, a sense of belonging through food making and sharing.

HUANG, PAOYI* (CUNY Graduate Center, phuang@gc.cuny.edu)
"I Want to be a Breadwinner Too": Chinese Marriage Migrants’ Narratives of Gender, Identity, and Family in Taiwan

This study aims to explore the intricate gender dynamics in cross-border marriages between Taiwanese men and Chinese women. Analyses are based upon data collected from ethnographic research conducted in Taiwan. Gender is not only a major element to immigrant identity, but also a vehicle for minority groups to claim cultural superiority over the dominant group. Taiwanese men and Chinese women have very different expectations of gender roles in marriage. Taiwanese men and their parents expect these Chinese women to behave in a traditional way – be a good stay-home wife/mother/daughter-in-law. Yet Chinese women, who grew up in communist China, consider such expectations outdated. Most of these Chinese women anticipate Taiwan as a more modern and Westernized society before getting married, but only to find out that patriarchal ideology and practices still prevailing. In contrast to stereotypes portraying Chinese marriage migrants as lazy and opportunistic "gold-diggers," many of these immigrant wives, despite external immigration policies and their lack of local networks, express a strong desire to work. Being confined in the domestic sphere, these Chinese women long for part of their old identity – a financially-independent working woman. Facing stigmas in the Taiwanese society, Chinese immigrant wives criticize that their Taiwanese in-laws are under Japanese colonialism and feudal Confucianism's influence, thus they are backwards and lack of modern concepts of gender equality. This research argues that these Chinese marriage migrants develop such discourse as a strategy of resistance – a means of asserting their progressiveness. At the same time, gender dynamics in the household (private sphere) has become a public issue – the Taiwanese government launches programs to "teach" Chinese women how to be an "appropriate" Taiwanese wife/daughters-in-law. This study elaborates how the conduct of micro private life is deeply tied to macro social structures.

History and Text: A Study on the Changing Forms of Governmentality of the Communist Party of China

Following the traditions of New Historicism, this paper explores the historicity of text and the textuality of history through a case study on the changing forms of governmentality of the Communist Party of China (CPC) before and after the foundation of the People's Republic of China (PRC).

The paper focuses on two social movements initiated by CPC: Land Reform before the foundation of PRC and Patriotic Hygiene Campaign afterwards. The former movement intended to classify ‘class backgrounds’ of people in rural China in order to distribute private properties to create an egalitarian society. While the latter aimed to arouse awareness of public health so as to win an alleged germ warfare and raise people's standard of living.

The first part of the paper uses two literature texts to analyze the change of governmentality. One is Ding Shilang’s novel Sun Shines on Sang-gang River which portrays the Land Reform. The other is Clear Skywritten by renowned playwright Cao Yu which tells the story of how an American-sponsored hospital transformed during the Patriotic Hygiene Campaign. Under CPC's ideological influence, both texts served the purpose of political propaganda. While the former text reflects an individual character and storytelling, the latter portrays a shift from absolute dependence on violence to reliance on mastering and discipline of knowledge and discourse.

Second part of the paper further discusses the practice of the new form of governmentality in later years of the Patriotic Hygiene Campaign. Using news reports and official archives, the paper uncovers the changing meanings of the ideom ‘class enemy’. From American imperialism to wrong methods of economic development, and later, dissidents within the Party, the change of the designatum of the same word unveils the fact that history is more of a narrative open to various interpretations than a solid causality between events.

Framing Risk and Untrustworthiness: A Study of Anti-Nuclear Activism in Guangdong, China

This study examines frames and framing processes in the opposition to a proposed nuclear material processing plant in Guangdong, Jiangmen city, which led to the suspension of the plan. Systematic analysis of microblog posts belonging to the hashtag of “Jiangmen nuclear crisis” on Sina Weibo revealed two important oppositional frames: risk of radioactive contamination and its hazardous effects on health, and untrustworthiness of the government's handling of the crisis. The government's low level of acceptance of the sitting plan. The framing process was facilitated by the Internet and shaped by contextual factors as well as interactions between government and opponents. The sense of risk has been heightened after the Fukushima nuclear accident and frequently referred to in the framing process. Yet, unlike the previous literature emphasizing the importance of “technological fix,” the risk was framed as a social issue associated with the lack of confidence in authorities' supervision and regulatory capacity which was justified by past scandals regarding shady public projects, food safety as well as the widespread pollution problems in China. The untrustworthiness towards government was initially derived from the short consultation period, procedural unfairness, and inadequacy of information disclosure, and then further reinforced by officials' inappropriate responses, ill-prepared feedback channels, and more importantly the micro-blogging censorship. As untrustworthiness levels increased, the sense of risk was also enhanced. Besides, the Internet played an important role in revealing the procedural flaws and demonstrating the potential widespread fallout through digital mapping system; it also helped activists counter officials' discourse head-on. These findings echo previous conclusion that limited public participation in decision-making process is a significant cause of anti-nuclear activism. However, the interactive framing processes suggest that the public's perspectives on environmental issues are inevitably intertwined with government's responses and the public's general perception of the government.

The Relationships Among Ethical Ideology, Work Stress, and School Life Adjustment of Elementary School Teachers

The purpose of this study was to explore the relationships among idealism, relativism (two kinds of ethical ideology), work stress, and school life adjustment of elementary school teachers. Data were collected from a sample of 565 elementary school teachers in Kaohsiung city. The major instruments for this study included Teachers Idealism Scale, Teachers Relativism Scale, Teachers Work Stress Scale, and Teachers School Life Adjustment Scale. Structural equation modeling (SEM) was applied to make parameter estimations. Path analysis revealed the following findings: First, idealism could negatively predict work stress, whereas relativism could positively predict work stress. Second,
in the common estimation, idealism could positively predict school life adjustment, but relativism could not significantly predict school life adjustment. Third, work stress could negatively predict school life adjustment. Fourth, work stress was not the mediator among idealism, relativism and school life adjustment. The implications of this study to elementary school teachers’ human resource management in Kaoshiung and future studies were discussed.

Inclusionary Housing in China: Achievements and Challenges

Faced with a large national quota for low-income housing coupled with severe budgetary constraints, local governments in China have recently embraced inclusionary housing as a new strategy to achieve housing affordability and social and spatial inclusion. Yet, inclusionary housing in China is complicated by the strong role of the central government in housing policy, the state ownership of urban land and local governments’ right to lease land, and a private sector that historically had little role in the provision of low income housing. This paper evaluates inclusionary housing in the Chinese context, asking: 1) Has inclusionary housing achieved social and spatial inclusion? 2) What are its social, economic and political costs and benefits? 3) What kind of mechanisms needs to be in place to make it successful and sustainable? Field work in Beijing shows while inclusionary housing in China is producing a large number of new units due to the strong government mandate, it does not result in increased social and spatial inclusion. As a result, the policy further deepens patterns of spatial marginalization of low-income residents to the urban fringe, increases transportation costs and decreases access to employment opportunities. The government is the main beneficiary of inclusionary housing, while developers and residents have few benefits but face challenges in property management and daily life. We argue that that the inclusionary housing policy in China has to be reformed to be sustainable, with a better incentive system to encourage the active participation of private developers and a better policy design and implementation to facilitate social and spatial inclusion.

Where Is Home? Hukou, Non-Local Young People and New Inequalities in Relation to Housing in Contemporary Shanghai, China

In the past decade, housing prices have been skyrocketing and renting prices also have been on a rise in Shanghai. The measures taken by the governments to restrain rising housing price, together with their pursuit of gentrification of the city, when interacting with such institutional hurdle as hukou (household registration) system, ironically, have produced new inequalities between local residents with a Shanghai hukou and those without. This paper aims to unpack the complexity and examine the production of new inequalities suffered by young non-locals, who, according to the 2010 census, account for almost 60 per cent of the nine millions non-local migrants in Shanghai. It employs two cases. First, it examines a phenomenon called “group renting” (qun zu) in which existing medium- or even high-end apartments are divided into small cells and let to people. The great majority of the inhabitants are young non-local migrants who cannot afford more than a cell in the gentrified city center, where job opportunities lie. The local government has taken measures to stop ‘group renting’ which leaves many young non-locals nowhere to find a home. The second case is about a recent regulation on their housing right, in order to refrain housing prices.

Breaking the Cycle: Inequality, Social Investment, and Human Capital in Latin America

Latin America has long lagged behind the East Asian Tigers in investment in education. In particular, Latin American countries failed to invest heavily in public secondary education. This has had costs both in terms of economic growth and inequality. After some 20 years of democracy and particularly with the turn to the left, social investment in the form of increasing expenditures on education and health care and the spread of Conditional Cash Transfer Programs has received unprecedented attention. The CCTs are based on the recognition that investment in the human capital of the next generation requires that poverty in the present generation be addressed. We argue that in Latin America social investment, human capital stock and inequality and poverty are linked in a feedback causal process and present quantitative and qualitative evidence supporting our argument.

Torn Between Equality Norms and Risk-Based Governance Stimuli? Comparing the Role of Professionals in Occupational Health and Safety Regulation in Germany and the United Kingdom

Risk-based governance provides, inter alia, the means to target regulatory inter-ventions by the probability of the occurrence of ‘bads’ and their impact. For example, in 2005, the influential British Hampton Review suggested to target workplace inspections in occupational health and safety (OHS) policies in a novel manner: not the threat of injury should allocate resources, but high probability and/or spectacular injuries. However, the unequal treatment of workers in risk-based regimes raises tensions for the professional ethos of occupational physicians or safety engineers. While professions define the critical values of acceptable, tolerable and unacceptable harms and consult companies on their OHS management, their role regarding the (non)spread of risk-based regulation is still underexplored.

Based on findings from the international research project HowSAFE this paper identifies key tensions between professional dedications to treating the health and safety of all workers equally and risk-based approaches which would focus on particularly frequent and/or costly health damages as defining element of OHS regulation. To do so, we compare the OHS governance in Germany and the United Kingdom. We compare and explain their role in German and British OHS governance. We argue that variation in treatment of occupational illness across countries depends – apart from historical and legal conditions – on the organisational structure of professions (e.g. regulatory agencies vs. professional associations) within the OHS domain and nuances in professional identity. We thus explain, for example, why the ranking of diseases and risks seems relatively acceptable in the UK, while the medical profession in Germany treats each case as particular and largely rejects risk-based targeting at the professional level.

Social Movements and The Citizen-Consumer: Evidence From The Canadian Sustainable Food Movement

The proposed presentation builds on the established limitations of the citizen-consumer hybrid through a study of key actors in the sustainable food movement. While others have focused on how consumers are mobilized to purchase ethical products as an expression of citizenship or social agency, we examine the motivations of social movement actors and their tactics for engaging others. Using the case of food, we examine how movement actors seek to engage consumers through food products, while encouraging movement towards citizenship responsibilities and political change. Data are derived from a qualitative case study of 45 leaders from civil society, the state, and the market in two Canadian cities.

Findings are used to scrutinize the concept of the citizen-consumer hybrid as this entity relates to environmental social movements. While advocates of shopping for change suggest that ethical consumption creates opportunities and discursive spaces that encourage individuals to develop collective identities, the actors interviewed were not brought into the arena of social change via consumption activities. Interestingly, these individuals continue to advocate for greater consumer education and opportunities for ethical consumption as tactics to enlist greater citizen engagement. Tensions for the professional ethos of low-income actors around the need to influence the state, participants locate possibilities for citizenship in the consumer marketplace, largely eschewing the role of the state in social movements. Implications for theory and practice are discussed.
which was achieved via virtual networking with other patients and direct negotiations with healthcare professionals. This paper explores the socio-cultural context of asthma management in British South Asian families, drawing on major qualitative study of management and interventions for asthma through the UK National Institute for Health Research, Health Services Research (NIHR-HSR) Programme.

We present findings from data exploring parents'/carers'/children's and healthcare professionals' understandings of asthma and their perceptions of the barriers to effective asthma management. The paper draws upon an interpretive analysis derived from the candidacy framework for explaining inequalities in access to health services for vulnerable groups, developed by Dixon-Woods and colleagues in the UK (Dixon-Woods et al. 2006). The candidacy framework emphasises the dynamic, multi-dimensional, and contingent character of health-care access and provides an insightful interpretation of our findings in light of the social patterning of perceptions of asthma and health services. Our analyses using this conceptual framework demonstrate how a lack of alignment between the priorities and competencies of British South Asian families and the organization of health services conspire to create vulnerabilities and difficulties in effectively managing childhood asthma.

Asthma Management in British South Asian Children: An Application of the Candidacy Framework to an Understanding of Barriers to Effective and Accessible Asthma Care

Asthma is one of the commonest chronic conditions of childhood, placing a significant burden on families, communities and health services. British South Asian (Indian, Pakistani, Bangladeshi origin) children diagnosed with asthma are less likely to receive reliever and preventer medication prescriptions compared to their White British counterparts; are more likely to suffer uncontrolled symptoms; and are more likely to be admitted to hospital with acute asthma exacerbations. This paper explores the socio-cultural context of asthma management in British South Asian families, drawing on major qualitative study of management and interventions for asthma management funded by the UK National Institute for Health Research, Health Services Research (NIHR-HSR) Programme.

We present findings from data exploring parents'/carers'/children's and healthcare professionals' understandings of asthma and their perceptions of the barriers to effective asthma management. The paper draws upon an interpretive analysis derived from the candidacy framework for explaining inequalities in access to health services for vulnerable groups, developed by Dixon-Woods and colleagues in the UK (Dixon-Woods et al. 2006). effectively demonstrates both (1) how dominant white racial groups alienate non-white racial and ethnic groups and (2) how dominant white racial groups employ a discourse of alienation—through claiming an unfairly victimized status—as a political strategy to lay claim to resources and reproduce their dominant status. Still, few have employed the concept of alienation to understand how white racial identities are continually reconstructed as a site of ontological crisis that facilitates simultaneous (a) claims to superiority, (b) claims to victimhood, and (c) practices of discrimination. Through an in-depth exploration of supposedly antagonistic white racial projects positioned at different class and labor positions, we can better understand how the social expectations of white racial identity are not distractions from material inequalities, but are a central mechanism in the reproduction of inequality and domination.

**L’Innovation Contributive Au Service d’une Résilience Urbaine? Pratiques et Moyens (Numériques) de Transformation de la Ville de Détroit**

Détroit illustre aujourd’hui assez bien l’Amérique des laissés pour compte : une métropole ouvrière noire et difficile à situer sur une carte tant elle illustre les atermoiements, les échecs de l’American way of life et la mémoire d’une ségrégation blanche qui, dans les contextes urbains en failles, permet de voir se profiler le lien entre crise économique et apparence de pratiques socio-politiques alternatives mises en place par la société civile. Ces pratiques conscientes orientées vers une économie fondée sur la valeur d’usage traversent le quotidien des gens par nécessité ou par persistance de formes sociales non marchandes. Elles consistent à répondre à des attentes de partage des technologies de la communication qui révèlent à la fois une diversité de moyens modestes pour faire face à la crise économique, et un ensemble de pratiques innovantes permettant de penser la possibilité d’un mode de vie alternatif, voire anticapitaliste. Notre contribution au cœur de cette ville, renvoyerait à ces pratiques numériques visant à la réduction des inégalités d’usages et d’appropriation, à la création de nouvelles solidarités et au renforcement des communautés à l’échelle du quartier. Elle visera également à montrer comment ces initiatives mettent en lumière des questionnements relatifs aux rôles que jouent les usagers dans l’organisation et le fonctionnement matériel d’un réseau social numérique. Car, selon nous, ces moyens qui émergent dans cette ville sont effectivement à la mesure de l’organisation et du fonctionnement matériel d’un réseau social numérique.

**Exploring the Role of Labour NGOs, Rights Lawyers and Intellectuals in Workers’ Collective Actions**

In the wake of the economic crisis in 1970s, the western capital needed a new site for investment (Silver 2003). China has taken advantages of this to turn the country into a global manufacturing hub; foreign-owned factories have thus mushroomed in South China. Because of meager wages and poor working conditions, increasingly more migrant workers from these factories have taken collective actions to advance their rights (Lee 2007; C. Chan 2010; A. Chan 2011; Chen and Tang 2013). Various actors involving in migrant workers’ collective resistance have been well-examined. For example, Chen (2010) highlighted the role of the government, trade unions, employers and workers in the strike settlement. He and Su (2010) pointed out that judges were requested to go to the protest spots to find out the agential viewpoint on the juridico-political structures and the circumstances of what they are working in order to bypass it. In this vein, this study uses a resilience perspective that regards social capital as protective mechanism, which can buffer or mediate the impact of parental absence on the psychosocial development of LBCPWA. It adopts a quantitative research method, uses a cross-sectional survey design to collect information from a sample of 1000 LBCPWA and children of non-migrant families in Yanji city, China-an ethnic minorities area, where international migration is a common phenomenon. The findings and policy implications are discussed.

**The Mapping of Leisure Value in Chinese Cultural Tradition**

In the 5000-year-long history of Chinese culture, leisure culture has played an important role in passing on Confucian, Daoist, and Buddhist culture. From ancient times to the present day, leisure, as a special cultural form, has often permeated people’s lifestyles and behavioral patterns widely as a force that is direct, intimate, free, sentimental, and humanizing. Not only leisure aided human beings in a biological sense, helping them to recover their physical strength and energy, but through meaningful leisure activities people have brought forth many beautiful fruits—spiritual sublimation and the release of humanistic concern and creativity. This kind of wisdom helps us to realize that “the leisure life is not a privilege limited to the rich and the successful only, but a product of a carefree mind.”

But, China is entering a new historical stage: a stage of rapid changes when material wealth has been greatly increased, a stage when human beings are not
in harmony with Nature, a stage full of competition among people, a stage when everyone is full of many kinds of desires.

Unfortunately, Today, traditional values of leisure have in this multivariate social transformation been mutilated more and more; and the essence of these values has been more and more tainted with materialism; leisure value is either distorted or understood in too narrow, too shallow, and too vulgar a way. Most people simply identify leisure with beer and skittles, with entertainment and commercial venality. A comparative appraisal of undesirable values was also made between male and female teachers.

Generational Orders in Azerbaijan and Kyrgyzstan - Young Adults Between Independence and Interdependence

Our paper is based on field research, qualitative interviews and group discussions with young people of different social origin in Azerbaijan and Kyrgyzstan concerning their biographical plans for professional and private life. In both countries the ethnographic and interview material points to strong obligations of young people towards their families of origin, e.g. obligations to submit to parents' will, to support parents financially, to support them with care work or just with affection and attention. Such obligations are legitimated by what is meant to be tradition, by religion and as well by a generational and gendered order as they may be especially strong towards daughters. These strong expectations young adults are confronted with however conflict with educational and occupational aspirations which young adults hold for themselves or which are held by their parents for them. Educational migration is of major importance in this context. Various solutions are worked out in such conflictive constellations, some being more, some being less realistic planning, and most of them maintaining the validity of an age hierarchic order. By comparing the two countries in these countries, the paper will present a theoretical approach identifying constellations that are supportive or obstructive in regard to favorable solutions.

Point of No Return? Neoliberalism and Changing Public Opinion in New Zealand and the United Kingdom

Neoliberalism represents a significant and enduring shift in the politics shaping social policy. Although it is frequently ascribed a hegemonic, all-powerful status that focuses our attention on the coherence found in neoliberal policies, this paper is influenced by scholars highlighting variation in the neoliberal project across different policy areas, national settings and across time. Specifically, it employs Peck & Tickell's (2002) view that neoliberalism has gone through multiple phases in response to both external and internal crises as an entry point for studying neoliberalism's impact on public support for the welfare state. Drawing upon a New Zealand case study with select comparisons with the United Kingdom, the paper argues that public reactions to the early period of retrenchment ('roll-back' neoliberalism) differ from those found in the following 'roll-out' or embedding phase of neoliberalism implemented by Third Way Labour governments. This paper is based on a preliminary study to investigate the prevalence of undesirable values among the school teachers of Roopnagar district of the state of Punjab in India. Six undesirable values investigated in the study were absenteeism, dereliction of duty, lack of responsibility, discrimination, authoritarianism and commercial venality. A comparative appraisal of undesirable values was also made between male and female teachers.

HUNDAL, MANMOHANJIT* (Dept School Education, Punjab, hundal.ms@yahoo.co.in)

Lack of Universal School Education: A Potent Agent for Preservation and Propagation of Inequalities in Developing Nations

Education is said to be a social institution that eliminates inequalities through its individual (formation of social personality, social placement, social mobility etc.) and societal (social stability, division of labour, social change etc.) functions. Multifaceted educational systems in developing capitalist economies like India pose challenges to its functions and marginalise masses. States run schools with school teachers in the possession of unprofessional values catalising this phenomenon. This paper is based on a preliminary study to investigate the prevalence of unprofessional practices among school teachers. Six undesirable values investigated in the study were absenteeism, dereliction of duty, lack of responsibility, discrimination, authoritarianism and commercial venality. A comparative appraisal of undesirable values was also made between government and private school teachers.

HUNDAL, MANMOHANJIT* (Indian Sociological Society, hundal.ms@yahoo.co.in)

The School: A Nurturing PLACE for Inefficient Work Force

The health of various social institutions is based on their value system. Some values (truth, justice, equality, humanism, tolerance, peace, etc.) are necessary for the survival of the social institutions and other are desirable (excellence, commitment, studiousness, honesty, empathy, industriousness etc.). According to Emile Durkheim, the value system is passed across generation in the school and the agent of the society for this job is the school teacher. For that he/she should be in the possession of various values. Numerous reports and studies have highlighted the prevalence of undesirable values among the school teachers. Transmission of undesirable values to the generations could lead to inefficient work force. This paper is based on a preliminary study conducted to investigate the prevalence of undesirable values among the school teachers of Roopnagar district of the state of Punjab in India. Six undesirable values investigated in the study were absenteeism, dereliction of duty, lack of responsibility, discrimination, authoritarianism and commercial venality. A comparative appraisal of undesirable values was also made between male and female teachers.

Sidewalk Cafes: Formal and Informal Negotiation of Public and Private Space

Abstract

Sidewalk Cafés: Formal and Informal Negotiation of Private and Public Space in the Creation of a Parochial Social Order

Albert Hunter

Northwestern University

Abstract

Sidewalk cafés are a venue for exploring the intersection of public and private space in the urban environment. Drawing on the work of Duneier, Goffman, Hunter, Lofland, Sennett, Whyte, Zukin and others the research defines the way in which the transition between the public space of the sidewalk and the private space of a restaurant are symbolically negotiated and defined. The result is a new social order – a parochial realm – that selectively draws on and amalgamates elements of the public and private realms. In addition to the informal negotiation...
of norms defining this space among patrons, proprietors and passersby the research also explores more formal mechanisms that define it by city regulations, and zoning ordinances that are themselves seen to be another level of negotiation among public and private interests. We also trace the mutual impact of the two levels of informal and formal negotiations on the patrons and owners of nightclubs. The research explores variations in these negotiations of public and private space across local communities and neighborhoods with respect to differences in ethnicity, and inequalities of social class and power. The research is based on data from participant observation at the informal level as a “consumer” and at the formal level as a city plan commissioner.

A Reflection on Social Class Differences in Australian Mothers’ Experiences of Full-Time Employment and Family Life

In Australia, as in many other countries, a growing proportion of mothers, whether they are wealthy or poor are participating in full-time employment (AIFS, 2008). This paper will examine social class differences in mothers’ experiences of full-time employment and family life. Drawing on qualitative interviews with mothers who live in NSW, I will examine how differently classed mothers in full-time employment negotiate workplace obligations, unpaid labour in the home, parent-child relationships and romantic relationships. This paper will argue that, while mothers in white collar occupations are rich in economic and cultural capital, the increasing demands of middle-class employment create a ‘time deficit’, which may deplete women’s capacities to genuinely attain ‘the good life’, associated with their class positions. At the same time, full-time employment is rarely compatible with the ideals of ‘good motherhood’, regardless of a woman’s social class location.

Older Canadian Men’s Perceptions and Experiences of Ageism in Everyday Life

In this paper, we consider the complex and often conflicting perceptions and experiences of ageism among older Canadian men. We draw on data from in-depth interviews with 29 men, aged 65-89 (average age of 74), who were diverse in terms of their incomes and levels of education while also being largely homogeneous with respect to their marital statuses and sexual orientation (the majority were married and heterosexual).

Our analysis of the data revealed three key findings: a) perceptions that ageism was irrelevant; b) identification of ageism as something that affected others; and c) internalized ageism. Many of the men asserted that ageism was not a factor that constrained or explained their everyday lives. For some, the irrelevance of ageism was because they perceived that the prevalence of age-based discrimination had declined over time. Others reported that they had simply never experienced ageism in their everyday interactions including encounters with strangers, health care providers, peers, or family members. However, the majority of the men also suggested that ageism was something experienced by others, primarily older women (who were perceived to be under intense pressure to look young) and institutionalized elders (who were perceived to be the most likely target of maltreatment, including neglect and abuse). At the same time, most of the men expressed internalized ageism either through the distancing of themselves from those they considered old (both a moral and chronological age category), the expression of feelings toward others for young appearances or youthful personas, or the acceptance of negative stereotypes regarding later life (such as older adults as poor drivers, grumpy individuals in poor health, ‘dirty old men’, or persons unable to easily adapt to new technologies).

We discuss our findings in relation to the extant theorizing and research pertaining to ageism, masculinity, and age relatedness.

Constructing Online Identity Via Picture Sharing: Malaysian Youths’ Experience with Social Networking Sites

By taking the position that youths’ identity is fluid and dynamic, this paper aims to look at the ways in which Malaysian youths construct and manage their online identities through visuals posted on popular social networking sites. A sample of 20 youths aged between 18 to 25 years residing in urban Penang participated in this ethnographic study. Preliminary results show that these youths own severa—
Section 1 of the paper develops the theoretical argument, based on Luc Boltanski's "sociology of critique", Luc Karpik's "economy of singularities" and my own work on "familiar surprises". Section 2 demonstrates, in four historical vignettes, the slow historical development of judgment practices in the Visual Arts. Section 3 contrasts contemporary practices in the global art scene and its high-end market with recent online aggregations of common opinion in the creative industries, particularly OCRs (Online Consumer Reviews). Section 4 argues that both developments make it possible that total value generated by products of the global aesthetic experience economy will continue to grow.

The research draws from a literature review, interviews and recent conference debates on union strategy. The paper has benefited from the author's involvement in research and education programs for one of the two unions involved in the formation of the new labour organization.

Employers have been implementing lean production (LP) outside of Japan for more than 30 years. This production system has been researched, debated and contested throughout this period, while the concept has been applied well beyond the automobile industry to other work environments.

The paper critically surveys the literature with an emphasis on empirical investigations of how workers, and where they have existed, unions, have reconfigured union perspectives that can provide a counter-hegemonic political culture to that of neoliberalism. The paper contributes to theory and policy by arguing that an increase in the size and complexity of working-class organizations need not necessarily compromise democratic work relations.

The research draws from a literature review, interviews and recent conference debates on union strategy. The paper has benefited from the author's involvement in research and education programs for one of the two unions involved in the formation of the new labour organization.

This paper will present a comparative analysis of social class identity and age identity in later life in the context of gender equality. First, the paper will address gerontological approaches to class and later life alongside key theoretical approaches to identity and social change. Second, the paper will consider the methodological and data issues associated with cross-national research and review evidence, at national and cross-national levels, for a relationship between class identity and age identity. Third, the paper will present an analysis of (i) global comparative data from The International Social Survey Programme (ISSP) and (ii) changes in identity over time using the UK Citizenship Survey. Findings show relatively wide cross national differences in the salience of class and age for identity in later life. Moreover age and class identities operate independently of each other suggesting that other forms of identity and identification need to be examined. However, overall, neither appears to be a particularly important aspect of identity. There is some evidence (in Europe at least) of a relationship between GDP and class identity lending some support to Inglehart's post materialist thesis but there is no evidence of a generational effect. Analysis of UK data suggests higher levels of class and age identity among this sample of retirees raising both methodological questions and the possibility of greater variation within samples. The paper will conclude by discussing the salience of class and age identities at national and international scales.

There is increasing concern about possible widening inequalities in health amongst the older population. There is a growing body of work on the relationships between patterns of labour market participation in later life and health. However the results are equivocal and little has been done to explore socio-economic variations in the impact of retirement on health. To redress this data from 10 waves of the Health and Retirement study in the USA were used to analyse trajectories of poor health and retirement for different socio-economic groups.

However the results are equivocal and little has been done to explore socio-economic variations in the impact of retirement on health. To redress this data from 10 waves of the Health and Retirement study in the USA were used to analyse trajectories of poor health and retirement for different socio-economic groups.

Repeated-measures logistic regression with generalised estimating equations were used to analyse data up to 7 years before and 7 years after retirement from 1992 to 2010. The results show that for the sample as a whole the prevalence of sub-optimal health increases sharply in the years before retirement, from around 16% four years before retirement to 23% at retirement. Following retirement the prevalence of poor health remains high but the rate of increase slows down. Educational differences are evident throughout the period. Those with a lower levels of education have higher rates of poor health for all years and show a more rapid increase in poor health up to retirement compared to those with higher levels of education. Four years before retirement 25% (95% CI 20.0-30.0) of those with a lower education reported poor health compared to 12% (95% CI 9.8-14.1) of those with a higher education. At retirement this had risen to 36% (95% CI 31.2-41.2) and 19% (95% CI 16.7-21.3) respectively. The analyses show that poor health is a main driver of retirement in the USA. Also those with lower levels of education continue to be at greater risk of poor health following retirement which might contribute to growing health inequalities in later life.

ropean context, telework - an arrangement that enables employees work from home - has been suggested as a virtual mobility option with the potential to reduce the ‘consumption of distance’ associated with regular commuting. Giving its emphasis on the application of technology to solve environmental problems, the uncritical promotion of telework constitutes a prime example of shallow EM thinking.

Despite the prominence of EM thinking in climate policy and practice, theoretically informed empirical explorations of its implementation and impacts remain incomplete. Drawing on a multi-method investigation of telework in the Republic of Ireland, this paper finds current EM thinking amongst decision-makers to be shallow and largely reflective of neo-liberal environmentalism, contributing little to curbing the consumerist impulses of contemporary economic models and lifestyles. The environmental benefits of telework are also questioned, as is the rationale for existing teleworking schemes. This paper further asserts that actual and potential environmental gains can conflict with potentially negative implications for fairness, equity and well-being, with teleworkers shouldering a substantial social burden arising from technology-aided changes in work practices.

Smart CCTV in Contemporary Crime Control: Policies and Practices of Surveillance

I would like to address risk governance in crime control by illustrating the development and implementation of so called “smart” CCTV systems in Germany. These video surveillance systems are expected to automatically detect deviant behavior by using software algorithms. Since this technology is not based on the psychological or criminological analysis of deviant individuals, but on the analysis of situation and space classified as dangerous, it comes with an expansion of risk perception: everyone who is monitored by these systems is a potential risk. Hence smart CCTV can be seen as a signature of a new rational of crime control, described by scholars as situational crime prevention, new neo-liberal governmentality. In this new rational, smart CCTV is seen as an efficient and effective tool for security measures. In accordance with this view both, advocates and critics of this technique draw a picture of new powers of control, that stretch beyond the boundaries of police, public transport, private enterprises. Drawing from empirical research conducted for the German FMER-funded MuViT project and the EU-funded Videnskaber (police, public transport, private enterprises). These video surveillance systems are expected to automatically detect deviant behavior by using software algorithms? and the often divergent interests of prospective users (police, public transport, private enterprises). Drawing from empirical research conducted for the German FMER-funded MuViT project and the EU-funded Videnskaber project I want to show, that the development of smart CCTV is on the one hand part of a new rational of risk governance in crime control since it comes with a re-coding of risk and security. On the other hand its practical implications correlate with a multitude of social factors.

RC20-347.3
HÄNZI, DENIS* (TU Darmstadt, haenzi@ifs.tu-darmstadt.de)

A century ago, Max Weber concisely brought Switzerland’s character as a “Willschutzstaat” to the fore in a nutshell. Only one word stood in bold: a belief in the unique nature of their habits and morals, the identity of the Swiss could emerge and consolidate. Based on a mythology of rural-alpine nativeness and isolation, this “belief in commonality” entails both the construction of boundaried vis-a-vis the threatening outside world and corresponding semantics of resistance. Given the recent discussions on foreign “attacks” on the Swiss banking secrecy and the increased charismatisation of the Swiss mountain guide (an ideology of the laudable Swiss) at the present time, it becomes apparent that the architecture of “Swissiness” still provides important symbolic resources.

Yet, what about those Swiss who do not live on the very “Helvetic island” but are dispersed all over the globe? First, the paper aims at discerning how the Swiss expatriate is being drawn as a distinct social figure through which, paradoxically enough, the imago of a typical Swiss character is being reproduced, yet reinforced. Second, by means of a longitudinal comparison, it will be shown that since the mid-1970s the social construction of the Swiss expatriate is, although subject to narrative alterations, relying on one basic scheme of Swissness. The paper is based on an interpretation pattern analysis of the “Auslandschweizer” as a figure constructed within editorial writings of the magazine “Guereverein Revue” (a publication of the Organization of the Swiss Abroad and the Swiss Federal Department of Foreign Affairs). The paper can shed light on the phenomenon that, even in a period for which the term “global age” has prevailed, social constructions of expatriates stay bound to historically grown, nation-specific interpretational frameworks.

To Govern Artfully. Linking Relational Public Art to Urban Governance Toward New Forms of Civic Participation

The paper describes preliminary results of an interdisciplinary research (involving sociologists and architects), funded by the Autonomous Region of Sardinia. The analysis focuses on the experiences of relational public art (or community art), studying the strategies that artists activate to enable citizens’ engagement in the transformation of urban spaces. These strategies are able to “revitalize” models of urban governance in which participation often translates in a mere consultative practice. We are facing emergent phenomena that are not only “counter-cultures”, but could also feed into processes of policy formation and decision making. Indeed, the “new genre of public art”, represents a new way in which citizenship is practiced: artists ask the audience to become co-actors in the construction of their works, taking in charge problems/conflicts related to urban spaces, intercepting needs and experiences of people who live in these spaces, and activating citizens’ awareness of their role in the transformation of urban spaces. Starting from a background analysis of significant national and international case studies, the research focuses on Sardinian experiences activated in the urban “border areas”. The aim is to investigate – through interviews to the “citizen-artists” and the other actors involved in the artistic intervention – the practices of production and consumption (active/participatory); the shared meanings of participation, politics, community, territory; the representations of the other actors; the discourses related to objectives and results; the communication strategies; the interaction with the reference contexts. The process of analysis will conclude with the production of three outputs: a “Participatory Research Laboratory” which involves artists and other actors of the urban governance (architects, sociologists, public administrators, stakeholders); an online platform containing informations (texts, videos, image, georeferenced maps) about experiences we analysed and the modalities to activate similar participatory processes; a procedural tool for administrators, oriented towards a participatory territorial planning.

Filling up Discontinuities in the Urban Landscape: Alternatives and Strategies

The end of the so-called housing bubble with the current economic crisis is having dramatic effects in the urban landscape as construction companies have declared bankruptcy and have left many unfinished buildings and empty lots in the urban space where garbage is being accumulated, while no one seems to be responsible and neighbours suffer the consequences. Thus, it is urgent to develop initiatives and alternatives that provide an answer to the deterioration not only of the urban landscape but, more importantly, to the everyday lives of the citizens who suffer the consequences of years of speculation with the urban space.

In this paper I will show the preliminary results of the research project FUTUR (Filling Up Territorial Discontinuities in the Urban Landscape) that has been carried out in the Spanish city of Burgos with the goal of promoting citizens’ participation in the elaboration of proposals and alternatives that activate sustainable forms of participatory engagement for a better living in urban areas. This research is based on ethnographic fieldwork research with neighbours, independent artists and local authorities (participant observation, interviews, life stories, discussion groups) as well as archival research (year of construction/demolition, name of the constructor, original project). More specifically, in this paper I will discuss the following issues: (i) how neighbours perceive these empty spaces and abandoned buildings in terms of risks (garbage, physical injuries, gang activity, depreciation) and what alternative projects and uses they proposed; (ii) what are the intended projects developed by the local authorities in order to fill up these discontinuities; (iii) examples of successful projects developed from below. The presentation will also include a diagram chart where I have mapped out both these territorial discontinuities or ‘spaces-in-between’ and the alternatives suggested by neighbours and other actors of the civil society (independent artists).
Graduate programs in medicine assume the social commitment with their performance according to scientific and technical norms of discipline in the field, but it will also demand to carry out this work within the framework of certain ethical, professional, and social values. It is clear that we are faced with emergent field knowledge in higher education institutions. The inclusion of these topics in the university curricula-either as knowledge discipline or transversal axis-it is recent and even more so when it refers to specific aspects of this discipline. The research analyzes the perceptions about the professional ethics the teachers and students in medical graduate programs and pretends to know about desires for training in skills and values in public and private universities to make comparisons. In this paper we present the results of the revision, adaptation and implementation in a Mexican public university to discuss how to promote these skills and values. By a joint methodology that includes application of: the instrument validated by Hirsch (2005) from National Autonomus University of Mexico (UNAM), about professional competencies of teachers by the team coordinated by Pérez Pérez (2012), from Valencia University, Spain and conducting interviews. The above-mentioned instruments includes teachers and students that show the condition that prevails about the beneficence principle which, according with Alcubierre, originates in the Hippocratic oath, but goes beyond philanthropy which recognizes the patient as a subject of law; it talks about the expectations of benefits to justify any risk of damage or discomfort to the participants, who sometimes use there transgression to save life at the expense of an unequal relationship between the physician and the patient.

Urban Conflicts As Spaces of Politicization of Collective Action Around the City: Notes to Think the Continuities and Discontinuities of Urban Social Movements in the City of Santiago (Chile)

Over the last 40 years the city of Santiago has experienced deep transformations, which have been linked to the implementation of neoliberal policies. Also, the city has been not only the stage, but rather the protagonist of a variety of conflicts around urban issues, such as urban growth, use and appropriation of urban spaces, environmental, demand for housing. This has been the scenario in which new forms of action have emerged to propose new forms of appropriation and use of urban spaces, transforming the urban space into an object of political action. In this context, this paper aims to study the processes of politicization and depoliticization that have been developed in these frameworks of action, understanding that the politicization goes beyond the mere mobilization and involves the generation of new spaces for the production of reality, in this case realities and socio-political imaginaries around the design, management, use and appropriation of urban space and urban goods. However, preliminary data analysis on urban conflicts in the city of Santiago suggest that not all collective actions around urban issues develop the same levels and types of politicization. Therefore, in this paper I will try to address the following question: what are the factors that can explain the trajectories of the process of politicization or depoliticization of collective action around urban issues? To answer this question I will study the collective actions that have developed around the problems of access to housing, inquiring into its politicization paths from the mechanisms and strategies that develop as part of their urban struggles (configuration of their social networks, identity, organizational structure and action strategies). Finally, I will try to establish the relationship between the processes of politicization and the construction of imaginaries and collective discourses around the city and urban issues.

Culturalism: Its Circulation In East Asia, Development and ' Clash' With Nationalism

The paper examines the migration and development of culturalism, ‘a natural conviction of cultural superiority that sought no legitimation or defense outside of the culture itself’ (Duara 1996) in East Asia and its supposed ‘clash’ with nationalism as the face of modernity. Culturalism can be seen as one of models of political and cultural communities in warfare circulation in China before the advent of the modern nation-state. The idea has been developed further as a useful tool in challenging the claim that emphasises the novelty of nationalism as a form of consciousness as proof of radical discontinuity between pre-modernity and modernity suggested by leading theorists of nationalism such as Benedict Anderson (1991) and Ernest Gellner (1983). If the novelty of nationalism as a form of consciousness lies in the co-extensiveness of political and cultural communities, nationalism was not totally novel in China where culturalism providing a similar kind of totalising view of community had long existed. Culturalism, originated from China, naturally migrated to its spheres of influence including Japan, where under Tokugawa shogunate, it stimulated various intellectual responses such Kokugaku, a ‘nativist’ school of learning focusing on the study of Japanese old text which produced a vision of community that bears close resemblance to Chinese culturalism. The conventional view is that culturalism both in China and Japan then experienced a clash with nationalism, a modern idea of political communities originated from the West, and was replaced by it. The paper first outlines the idea of culturalism as developed in China and investigates the way in which it migrated to Japan and facilitated a range of new ideas under Tokugawa rule. It then questions the assumption of the nationalism’s takeover of culturalism in nineteenth- and twentieth-century Japan and China and explores possible transformation of nationalism.

The ‘Overcoming Modernity’ Symposium: Modernity, Japan and East Asia

The paper aims to address the theme of the session by using the ‘Overcoming Modernity’ symposium that took place in Japan in 1942. The symposium has conventionally been dismissed as ‘infamous’ or even ‘notorious’, not deserving serious attention, and was predominantly viewed that it was an attempt by the intellectuals of the day to legitimise the war and fascism. While the symposium’s primary function was wartime propaganda, the paper argues that it also contributed to Japanese political and cultural thought has been sporadically re-examined starting with Takeuchi Yoshim’s essay published in 1959. Takeuchi (1959=1979) dismissed the symposium as intellectually empty but argued that the event represented a historical moment when various contradicting forces in Japan, such as restoration vs innovation, the East vs the West and so on, came into a violent collision as an attempt ‘at overcoming modernity’. He appreciated the intellectuals’ concern with ‘overcoming modernity’ as a worthy endeavour as an exercise to look for solutions to the perceived social, economic and political ills but concluded the symposium failed to contribute to the development of political and cultural thoughts in Japan because of the intellectuals’ failure to recognise the double-sided nature of the Pacific War (as an anti-imperialism war against the hegemonic West and as an imperialist and colonialist war towards Asian countries) in their attempts to understand the world. The paper examines the visions of modernity that the symposium participants sought to overcome and explores the ideas suggested as alternatives to the Western-centric vision of modernity during the symposium. These alternatives were then placed in the background of competing visions of Asia and the world including pan-Asianism, the East Asia Cooperative Community and oriental religiosity.

Another Way of Modernization and Sociology: A Critical Assessment of the “Japonicist Sociology” in the 1920s and the ‘30s

During the late 1920s and the early ‘30s there was a movement among the Japanese sociologists to establish the “japonicist sociology” that should differ from the western sociology.

Concerning the social & international context in which this movement emerged, three points should be mentioned at least. First, in the 1920s social inequality and social conflict were more clearly recognized than before in Japan. In 1919 the Japanese Ministry of the Interior established the “social” section for social policies. There also arose a “social science” movement among the university students in the early 1920s. This was strongly affected by the Marx-Leninism, and therefore oppressed soon. Many Japanese sociologists tried to separate sociology from this kind of “social science”.

Secondly, the political orthodoxy in Japan shifted its orientation gradually from the westernization to the asianism. The Japanese proposal for the racial equality was rejected at the Paris Peace Conference (1919). And the new Immigration Act of USA (1924) raised antipathy among the Japanese. These experiences made Takeuchi Yoshimi’s essay published in 1959. Takeuchi (1959=1979) dismissed the symposium as intellectually empty but argued that the event represented a historical moment when various contradicting forces in Japan, such as restoration vs innovation, the East vs the West and so on, came into a violent collision as an attempt ‘at overcoming modernity’. He appreciated the intellectuals’ concern with ‘overcoming modernity’ as a worthy endeavour as an exercise to look for solutions to the perceived social, economic and political ills but concluded the symposium failed to contribute to the development of political and cultural thoughts in Japan because of the intellectuals’ failure to recognise the double-sided nature of the Pacific War (as an anti-imperialism war against the hegemonic West and as an imperialist and colonialist war towards Asian countries) in their attempts to understand the world. The paper examines the visions of modernity that the symposium participants sought to overcome and explores the ideas suggested as alternatives to the Western-centric vision of modernity during the symposium. These alternatives were then placed in the background of competing visions of Asia and the world including pan-Asianism, the East Asia Cooperative Community and oriental religiosity.

Culturalism: Its Circulation In East Asia, Development and ‘ Clash' With Nationalism

The paper examines the migration and development of culturalism, ‘a natural conviction of cultural superiority that sought no legitimation or defense outside of the culture itself’ (Duara 1996) in East Asia and its supposed ‘clash’ with nationalism as the face of modernity. Culturalism can be seen as one of models of political and cultural communities in warfare circulation in China before the advent of the modern nation-state. The idea has been developed further as a useful tool in challenging the claim that emphasises the novelty of nationalism as a form of consciousness as proof of radical discontinuity between pre-modernity and modernity suggested by leading theorists of nationalism such as Benedict Anderson (1991) and Ernest Gellner (1983). If the novelty of nationalism as a form of consciousness lies in the co-extensiveness of political and cultural communities, nationalism was not totally novel in China where culturalism providing a similar kind of totalising view of community had long existed. Culturalism, originated from China, naturally migrated to its spheres of influence including Japan, where under Tokugawa shogunate, it stimulated various intellectual responses such Kokugaku, a ‘nativist’ school of learning focusing on the study of Japanese old text which produced a vision of community that bears close resemblance to Chinese culturalism. The conventional view is that culturalism both in China and Japan then experienced a clash with nationalism, a modern idea of political communities originated from the West, and was replaced by it. The paper first outlines the idea of culturalism as developed in China and investigates the way in which it migrated to Japan and facilitated a range of new ideas under Tokugawa rule. It then questions the assumption of the nationalism’s takeover of culturalism in nineteenth- and twentieth-century Japan and China and explores possible transformation of nationalism.

The Promotion of Agency in a Conflict-Affected Context. The Social Participation of Children and Adolescents in the West Bank

One of the most challenging narratives in the past few years (and probably one of the most stimulating for the future) has been the importance of children's active participation not only in terms of having the right to say, but of the right to choose among alternatives in communication systems, i.e. in terms of practicing agency rather than simply having voice. Supporting and improving children's capabilities means promoting their participation beyond their right to speak and to be heard, to a wider concept of active citizenship, which means contributing to the structuring of social systems. In this approach, therefore, children's capabilities assume the social form of children's agency. In other words, the idea of agency emphasizes that children can condition the actions of their interlocutors in communication with them, above all in interactions and can, in this way, transform the social structures.

This presentation tries to examine how children's agency and participation can be promoted in a conflict-affected context. With this aim the chapter conducts an evaluative analysis of a project of international cooperation developed by Oxfam Italy and the Palestinian NGO DoP/PS which is aimed to promote social participation and to raise children's rights awareness among Palestinian children and adolescents.

The analysis is conducted by drawing on theoretical and methodological concepts from recent literature on social participation, sociology of childhood and Sen's capability approach, and looking at 1. the structures that promote agency in communication processes, 2. the ways in which agency modifies the structures of communication processes. The analysis of video-recorded data permitted some conclusions about social conversion processes and factors of agency, which allow social change. Our data show that social change can be enhanced through children and adults' turns, but it is determined only in the self-organisation of a communication system.
within the Kanto region, and its farmers suffered from a sharp decrease in sales following heated media coverage. Under these circumstances, I convened the ‘Round-table Meeting for ‘Kashiiwan Products for the Kashiiwan People’ towards Security and Safety’, and called for various local stakeholders—including farmers, supermarket owners, restaurant chefs and housewives within their childbearing years—to be engaged in that meeting. We deliberately and scientifically discussed some a unique radioactivity determination method on local farm products and soil, and arrived at an agreement over our own acceptable standard of radioactivity level in farm products. By measuring radioactivity and transmitting the result, we achieved the results for the recovery of the reliability of local farm products.

Our primal motivation to convene the meeting was to overcome the ‘gap within in the local community’, namely, the pointless conflict between consumers and farmers after the Fukushima accident, which was mainly derived from the asymmetric nature of ‘choice’ and ‘mobility’ between them. Redefining local consumers and farmers as Kashiiwan citizens sharing the same locality and issues, we strategically aimed to connect the local consumers, who have an attachment to the locality and wish to peacefully eat local products, with the local farmers, who intend to build personal relationships with the consumers. However, our community-oriented risk-information strategy had a critical limitation: apart from the assumed local customers, it was impossible to reach a wider range of consumers via our marketing strategy. On the basis of this practical experience in Kashiiwa, this presentation will discuss social ‘co-ordination’ and trust-building between people with opposite interests under the risk of uncertainty.

**Decision Makers and Those Affected in the Japanese Expert Community—the Fukushima Nuclear Disaster**

An aim of this presentation is to describe the great distance in risk evaluation regarding the Fukushima nuclear disaster. The people with dementia (PWD) has been promoted in Japan in 2000s and to analyze its structure and background by applying the insight on a distinction between decision makers and those affected in risk sociology of Niklas Luhmann(1993). After 3.11 in 2011 the most Japanese experts appearing in mass media followed the government report which was underestimated a seriousness of Fukushima and a possibility of spreading of radio activities. In contrast some experts such as Hiroaki Koide and Tetsuji Imanaka from Kyoto University pointed a high possibility of core meltdown in the nuclear plants and warned citizens of the great dangers of the serious nuclear disaster through local or community media from the early on. A distinction between expert opinions in Japan which is very common in the previous risk analysis might be useless to explain this distance, because it appears within the expert communities. Therefore the author focuses on the other distinction and takes into account the diagnosis of Luhmann that the serious conflicts over the perception and evaluation of future loss between decision makers and those affected who are excluded from decision making process cross into the every functional area in the society. It implies the splitting of the scientific experts into such two unintegratable positions. To analyze this tendency in the case of Fukushima the author will focus on the different mass strike actions and demonstrations including online activism. The civil resistant actions geared towards reversal of petrol pump price increase deposited certain verbal and visual means in portraying the government and its actions. Previous studies on online protest discourse in Nigeria have adopted sociolinguistic and discourse analysis approaches in examining issues of identity and self-determination with little attention paid to visual-pragma-strategies in representing people and their actions. This paper, therefore, undertakes a pragma-semiotic investigation of “Occupy Nigeria Group” online posts on the 2012 fuel subsidy removal in Nigeria with a view to examining verbal and visual modes of representing people and their actions in the event. Seventy-five online protest posts purposefully sampled from the groups‘ page are used to identify and categorize various pragma-semiotic elements and functions in the representations using insights from Méy's pragmatic act, Halliday's systemic functional linguistics and the semiotic theory. It is observed that the verbal mode complements the visual in projecting the demands and resistance of the group. The findings also reveal the use of various visual-pragma-strategies such as prayer, negative labelling, humour, mockery, abuse, passionate and fierce appeal, including photo trick. This study has established some pragma-semiotic patterns in verbal-visual posts in the Nigerian online protest contest. An awareness of the peculiar patterns and use is crucial to the understanding and interpretation of socio-political realities of such new events by online consumers.

**Mediating the Professional and the Amateur: Social Activism in a Post-Union Democracy**

Among Japanese socio-legal scholars, Michitaka Kaino (1908-1975) remains hidden abroad, though he is unique with comparative, realistic, communitarian and public qualities. Kaino covers the Emperor system/fascism, human rights, the courts, ownership, commons, family, sociology of law and pollution, which are titles of his eight collective works. He wrote many papers and articles in various journals and newspapers, which included opening essays to the monthly legal magazine called Horitsu Jihosh. Furthermore, he invoked Western legal doctrine to solve domestic problems, presided over a public book-reading circle, represented as an attorney regional peasants who insisted upon their rights of iriai, and developed the sphere of environmental law. Above-mentioned Kaino’s qualities seemed to have characterized Japanese sociology of law to some extent. A comparative law perspective has been requisite for most Japanese socio-legal scholars. Realistic view of law in confrontation with Japanese social situation has become a matter of course. Kaino’s stance to the right of iriai has been reevaluated in light of the study on the commons. In reference to the notion of “public sociology”, Kaino’s stance and works seem to fit “public sociology of law”. The methodology is a life history analysis, which tries to reconstruct Kaino’s personal experience and life from his written records such as interviews and his biography. It is expected that a relationship between one socio-legal scholar and society would be brought into relief through this approach. Thereafter, qualities, merits and limits of Kaino’s sociology of law will be considered from the point of view of global legalization.
Since the fallout of the triple disaster in March 2011, coupled with the government’s pursuit of the reactivation of nuclear plants, Japan has once again become a seedbed for grassroots political activity. Various anti-nuclear rallies and demonstrations are held across Japan, and the largest of them all, the Friday Protest rally in front of the Prime Minister’s Official Residence has been staged more than fifty times. Such contentious activities, especially among Japanese youth, has been quite inconceivable in the country for many years. How should we understand this development in relation to the three decades of relative silence after the end of student movements in the 1970s, which is said to have left a negative legacy by its violent disintegration? Building on the sociological studies of the protest cycles, this paper explores the concept of “abeyance” and demonstrates the working of “mediators” as key actors for social movement continuity in a post-union democracy.

Climate Change Policy-Making Process and Reasons of Its Stagnation: Activities and Preferences of Stakeholders in Japan

Institutional processes of making political decisions determine the range of their outcomes. The international comparative research project, the COMPON project (Disastering Climate Change Policy Networks), explores characteristics of the decision making processes in each society, based on common methods. The purpose of this presentation is to show results of the Japanese face-to-face questionnaire survey to national stakeholders and to discuss its interesting findings, especially on activities and preferences of major stakeholders. The COMPON-Japan conducted this survey based on the Japanese translated version of the common COMPON questionnaire sheets to 125 organizations in 2012 and 2013 which can exert political leverage in the field of climate change policies. 72 organizations responded and the collection rate is 57.6%.

As results of our survey, we find that almost all stakeholders share the view that the climate change really occurs and is caused by human activities, though a few stakeholders conduct natural or social science research by themselves. They can, therefore, concentrate their political resources to bring their opinions to governmental officials by attending at committees and making press releases. On preferences of domestic climate change policies, there is a cleavage over policy orientations, especially between industries and NGOs. Industries prefer a bottom-up voluntary goal setting, while NGOs prefer more institutionalized and legally goal-binding measures.

Our respondents replied the progress of climate change policies are seriously impeded by the lack of political leadership. This result can be interpreted in two ways. For one thing, they expect the government’s coordinating of the crush of interests between stakeholders. And for another, they expect stronger political leadership and media campaigns to introduce more effective climate change policies. Climate change policy-making processes in Japan are stagnated, then we need stronger international stimuli and pressures to change the situation.

Community-Based Disaster Management in Super Aging Society: How Age and Gender Interacted to Shape Disaster Response in 2011 Tohoku Disaster

This paper seeks to examine how different attitudes toward gender across generations affected disaster response and recovery in 2011 Tohoku Earthquake and Tsunami. Substantial population aging had occurred in the coastal areas of Tohoku that were devastated by the 2011 Earthquake and Tsunami. About two thirds of those killed in the 2011 disaster were older than 60 years of age. While elderly persons as a group are one of the most vulnerable population groups, they are key to community-based disaster management in Japan. Community organizations for disaster management (jishubousaikai) are conventionally established under each residents’ association (ichikai) or neighbourhood association (chounai). Men in their 60’s and 70’s, retired but active, are the main members of jishubousaikai. Women of the same generation also participate in activities of jishubousaikai, but they are seldom engaged in decision-making because of social stereotypes and age of labour that characterize this generation. Younger generations with more egalitarian gender attitudes are generally not very interested in disaster management activities.

After the disaster, jishubousaikai managed shelters and distributed relief goods in many affected areas. The national government for the first time issued requests to each affected local governments to consider diverse needs of affected women and care-giving families in shelters; however, the requests were not recognized as important in many affected areas.

This paper investigates how age and gender interacted and shaped response processes in 2011 Tohoku Disaster though the analysis of data collected in two studies: 1) interviews with people engaged in disaster response and recovery during the 2011 Tohoku Disaster, most of who were also affected by the disaster themselves and 2) an action research project with three jishubousaikai, aimed at incorporating gender and diversity sensitivity in their activities in Shizuoka Prefecture, where another gigantic Tokai Earthquake is predicted to occur.

Gender-Based Violence Following the Great East Japan Disasters

Research on gender-based violence following disasters remains limited in Japan. A team of researchers and advocates, who are members of the Women's Network for East Japan Disaster, conducted a case-finding study and compiled 82 unduplicated incidents of gender-based violence perpetrated in the aftermath of the Great East Japan Disasters. This presentation discusses the study’s results and analyzes various manifestations of gender-based violence following the disaster.

While the majority of the reported cases (n=45) pertained to intimate partner violence/domestic violence, the remaining 37 cases involved violence and harassment by individuals other than intimate partners. These incidents were diverse in their manifestations and situational contexts and included sexual assault, unwanted sexual contact, voyeurism, sexual harassment, and stalking. The majority of the perpetrators were individuals whom the victims knew, as opposed to total strangers. Some of the reported cases involved sexual assault and exploitation committed by individuals who were in the position to provide assistance and protection, such as leaders of evacuation centers. Exploitation in a sense of fear and helplessness was a tactic frequently employed by perpetrators. For example, ex-partners perpetrated violence after approaching women and offering help, and disaster response personnel/volunteers exploited disaster-affected individuals. Women of all ages and in all situations are at risk of this type of exploitative violence; however, women who are single, divorced, separated, or widowed and those who have lost a place to live, job or other sources of livelihood appear particularly vulnerable to this type of violence.

This study elucidated multiple layers of vulnerabilities of women in the wake of the triple disaster, which stem from the pre-existing social structures that disadvantage and discriminate women, and sociocultural norms that reinforce male domination and female subordination.

IKEDA, KENICHI* (Doshisha University, keikeda@mail.doshisha.ac.jp)

Does East Asian Social Capital Bring about Beneficial Effects over Its Indigenous Cultural Constraints?

East Asian social networks, as compared with North Americans’, are often colored with their emphasis on hierarchy. In tandem with network structures, East Asian cultural context also stresses that hierarchy is essential in society, which is often modeled after traditional kinship networks. As was revealed in a book by Ikeda & Richey (2011) in Japanese cultural contexts, this hierarchical nature does affect Japanese political trust, knowledge, and participation. However, we are not certain that the case is true for other East Asian cultural contexts, i.e. the generalizability of the findings. This paper will focus on this point. Using EASS 2012 dataset (East Asia Social Survey among Japan, Korea, Taiwan, and Mainland China), we will show comparative analyses of social network and its effects on social trust, social support, and political/ social participation, especially focusing on the hierarchical nature of “Asian” social networks.

The Factors of Japanese Female Workers’ Job Quitting for Childbirth/Childrearing

This presentation will show the factors why Japanese female workers quit their jobs for childbirth and childrearing. Despite the enforcement of Equal Employment Opportunity Act and Parental Leave Act 20 years ago, the female labor force participation rate by age in Japan still forms M-shape curve, because many women quit their jobs at the time of their pregnancy.

C. Hakim stresses on “preferences” between work and home to explain behaviors of female workers with family responsibilities; “work-centered”, “home-centered”, and “adaptive”. She presents the data that many of women are “adaptive” in Europe. She also points out the influences of relaxing labor market regulations

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
on increasing part-time work and on intermittent careers which are typical of adaptive women.

I suppose it is also important in Japan to focus on the structure of labor market as influential factors to explain the mass of women's behaviors. Japanese society has experienced long-term depressions during the past two decades, and firms have increased non-regular employees such as part-time and temporary workers instead of regular employees. This severe employment situation has negative influences on many female workers' job continuity, while some firms maintain female regular employees as long-term labor force. Moreover small organizations are not so positive on parental leave while large organizations promote the leave. As a result, the job continuity rate after the first childbirth is increasing only for the regular employees in large organizations.

The results of our data analysis imply that it is effective for employees in small organizations to gain knowledge of work-life balance support systems to negotiate with their organizations and avoid job quitting. And also, it is important to support female workers searching for regular employment with work-life balance systems so as not to choose non-regular jobs in order to balance work with family lives.

The Influence of Gabard Tarde on the Development of Japanese Sociology in the Early Twentieth Century

The purpose of this paper is to examine Gabard Tarde's influence on the development of Japanese sociology in the early twentieth century. In this period, Tarde was an opinion leader of French sociology with his famous opponent, Emile Durkheim. After his death in 1904, Tarde's presence in the French academic community declined gradually, while Durkheim earned a reputation with his collaborators known as "Durkheimian school." Unlike Durkheim, a professor at the Sorbonne, Tarde did not have his own students at the College de France, where lectures were open for everyone. It may be one of the main reasons for Tarde's decline, as some historians of sociology think.

However, there were many foreign sociologists in the audience of his course of modern philosophy at the College de France. One of Japanese sociologists who attended Tarde's course, Shotaro Yoneda (1873-1943), became the first professor of sociology at the Kyoto Imperial University. Yoneda established his sociological theory based on Tarde's "inter-psychology." In 1913, Yoneda co-founded the Japanese Institute of Social Science with his colleague at the Tokyo Imperial University, Tongo Takebe (1871-1945), who also attended Tarde's course. Yoneda's earliest disciple, Yasuma Takata (1883-1972), a preeminent sociologist and economist in Japan, not only borrowed Tarde's idea for his "Power theory of economics," but discussed Tarde's imitation theory for his system of formal sociology. Therefore, in this paper we propose to demonstrate that the impact of Tarde's sociology was more important in Japan than in his home country.

What Is Happening in the Northern Mozambique Under the Prosoavama Programme and Agricultural Growth Corridor: An Implication to the Large Scale Land Acquisition in the Southeast Asia

This paper intends to reveal what is happening in the Northern Mozambique under the ProSAVANA Programme and agricultural Growth Corridor, and draw implications from a field survey for peasant society in Southeast Asia. Large scale land acquisition, so-called "land grabbing," is extending in Southeast Asia as well as in Africa. Laos and Cambodia are relatively new countries in the sphere of land grabbing. Such countries are expected to promote agricultural growth corridors. Obviously, there is close relations between land grabbing and corridor projects. What impacts will such relations give on the concerned rural communities and peasant farmers?

In Mozambique, some agricultural growth corridor projects have been conducted since the mid of the 2000s. Nacala corridor project in the Northern Mozambique, which connects Nacala Port to Malawi and Zambia, is one of them. In the same area, ProSAVANA programme started in the same area in 2011 under the triangle cooperation among Mozambique, Brazil and Japan. The target area of ProSAVANA covers the Nampula, Zambezia and Niassa provinces. The UNAC (Uniao Nacional de Camponeses) and international NGOs are claiming to stop ProSAVANA because of many problems causing from ProSAVANA and its related activities of the local and the central governments, and agribusinesses. This paper highlights the process of land deals, real beneficiaries, and severe impacts on peasant communities and examines how large scale land acquisition by foreign investment infringes food sovereignty of the society.

Rural Cooperation in the Republic of Tatarstan(Russia):Ethnographic Case-Study

The results of social survey (2013) in Pestrechinsky and Kukmorsky municipal areas of the Republic of Tatarstan (Russia) of such components as self-estimate of material state of his/her own family, social activity, satisfaction with ecological situation in the area of residence, interaction with bodies of local authorities, migration moods, life ambitions, etc., drawn stable psychosocial climate of a rural area. Mutual support is a phenomenon in modern society where personal values and social structure dominate. This phenomenon is characteristic of very few rural areas of Russia and it was found in rural areas of Tatarstan. The explanation of this fact lays, in the opinion of the author, in socialistic values of rural population especially typical for the area where the proportion of old people is quite big. Social networks reflecting rural population cooperation in Pestrechinsky area are concentrated basically on mesolevel and in Kukmorsky area on microlevel. Projective trajectories of rural population towards development of all spheres of life in a rural area are connected with intergenerational continuity due to family agricultural business.

1. Specifics of a demographic portrait of population in Pestrechinsky area reflected on making facilities inside the house. At the same time home improvement in Kukmorsky area is connected with household needs outside the house. 2. Rural residents working on a family farm show high level of satisfaction of fulfillment of his/her reproductive capabilities. 3. Such form of rural residents' cooperation as social condemnation of co-residents for not taking part in life of a rural community. 4. Life of rural people living in Pestrechinsky area is concentrated on the development of a social wellbeing while in Kukmorsky area - on personal wellbeing. None of these strategies cannot be viewed acknowledged as the best for the development of a rural society because personal welfare also constitutes social capital of the whole area.

ILDARHANOVA, CHULPAN* (Academy of Sciences of the Republic of Tatarstan, ch.ildarhanova@mail.ru)

Sociological Research on Increasing Part-time Work on Intermittent Careers in Japan: A Local Dimension

Contemporary Russian rural society deteriorates rapidly such a feature of interpersonal relations as the ability of population to form a unique community and work together on the territory of its residing in order to reach one goal - public welfare. The level of losing of this significant social resource differs locally. An explanation of its losing is acknowledged by rural population itself as well as it is proved by data of social surveys. In a rural area, social networks based on the principle of simple geographic neighborhood and not tied to geographic closeness factors coincide partially so much that it is impossible to separate them from each other. In late Soviet period scientists started to connect the growing extent of network relations with institutional corruption as an inevitable effect of functioning of the economics of shortfall. Researchers of rural social networks point out that the most significant in them is 'human' dimension of interaction, not pragmatic moments, that is not from the side of benefit, equivalence of exchange. Development of a social net of familial personal ties is a feature typical for a rural resident. That is due to restricted possibilities in a rural area to have a social circle of communication. One of the types of such an interaction is residence of relatives of different generations in one rural house. Rural society has special and temporal structures. Special structure has a social dimension - the area of mutual relations of one rural resident crosses the area of manipulations of other people forming social networks. Social networks represent an institute of horizontal interaction of actors that substitutes official powerful relations in many cases. In Russia network relations have been viewed as delinquent because of attempts to go beyond the given frames in solving some personal tasks.
This paper examines the visual effects of gentrification in the historic neighbor-
hood of Galata in downtown Istanbul, Turkey. Revisiting the research I have done in 2004 and con-
ducting a new fieldwork in the neighborhood, I intend to examine the evolution of visual contrasts between physical proximity and social distance, revealing the differences and similarities concerning residential segre-
gation and neighborhood change. Galata is a historical district which was inhab-
ited by non-Muslim minorities until the first half of the twentieth century when these had to leave the country for various reasons, including the creation of the State of Israel, the events of 6-7 September 1955, the “wealth tax” in 1964 and the cancellation of the residence permit for more than eight thousand Greeks. These years also represent a significant wave of migration from underdeveloped regions of southeastern Turkey towards Istanbul. These migrants have settled in the neglected and abandoned apartments mainly in Galata. In the 70s, small fac-
tories moved into the area, usually in the ground pavements, destroying the walls in order to install machines and thus worsening the condition of the buildings. Since the 2000’s the dilapidated buildings are restored and the migrant popu-
lation is gradually displaced and replaced firstly by the middle and then upper classes. Using the concept of territoriality, enrolling in both frames of time and space, this study aims to elaborate the interpenetration of these two structures and to identify the new ways, developed by different social groups living in the district, of appropriating the same urban space.

ILIN, VLADIMIR* (St.-Petersburg state university, ivi-2002@yandex.ru)

The Focus on Everyday Life As a Turn to the Human Dimension of Social Structures

The focus on everyday life as a turn to the human dimension of social structures:

If we use the metaphor of construction, we can say that the classical sociology
mainly interested in architecture, leaving on the periphery of his attention the
problem of the nature of the materials. This was reflected in the priority of macro
sociology. Theories focusing attention to the logic of behavior not the masses
and groups, but individual, emerged but they always, first of all, were in the back-
ground, secondly, do not exert any noticeable influence on the theory of mac-
ro-level.

At the end of the twentieth century, the visible turn of social science to every-
day life had acquired a paradigmatic character (P.Sztompka). If you to use the
construction metaphor, we can say that the sociology came to understanding that
the “architectural forms” are unthinkable without careful study of the molecular
structure of materials from which they are implemented. This means that the
traditional division of macro and micro sociology has lost the meaning. Social
system predetermines the quality of used elements, and the characteristics of the
latter depends the fate of the system. In other words, the social structure is no
longer regarded as something external to the people. Firstly, the social structure is
understood as sustainable forms of social behavior (the theory of structuration
by E. Giddens). Secondly, the social structure is regarded as socially programmed
behavior of individuals (the concept of habits by P. Bourdieu). As the inter-
action of individuals generates external emergent quality in form of social and
cultural fields (situational approach by K.Lewin). Fourthly, situations of daily inter-
action acquire stable and predictable forms in the context of the action of mac-
ro-level institutions (Performance Theory).

British Muslim Response to the Post-9/11 Uncertainties

The 9/11 and 7/7 attacks in the US and UK, as well as the subsequent War on
Terror and its effects have had a tremendous sociopolitical impact on the British
Muslim polity. On the one hand the effects have fostered Islamophobia and the
securitization of Muslims. But on the other hand, which is the focus of this paper,
aforementioned events have fostered an atmosphere where sociopolitical and
religious reflexivity is taking place among British Muslims.

The paper is based on interviews and virtual ethnography and they identified
three main ways in which the Muslim community is changing. Firstly, some Mus-
lims are adopting a literalist reading of Islam, which is performance orientated
and piety conscious. Secondly, a small number of Muslims are reading Islam in
a liberal reformist way within a modern sociopolitical milieu. The group is com-
posed of born and convert Muslims and ethnically diverse. The reformists tend
to focus on human rights, women rights and the rights of the Muslim LGBT com-

Finally, an increasingly large number of young Muslims are becoming
politically assertive, confident, and organized. These Muslims in the main are con-
cerned with human rights, especially of fellow Muslims. Like the literalist group,
this group is composed born and convert Muslims and is also ethnically diverse.
This group adheres to a mixture of reformist and literalist reading of Islam and
often receives criticism from the literalists.

New Technologies, Therapeutic Zones and Islamist Groups

New Technologies, Therapeutic Zones and Islamist groups

Communication and entertainment technologies over the last decade have
transformed sociopolitical activism. Ayman Al Zawahiri, in his book Knights Under
The Prophet’s Banner states: “We must ... get our message across to the masses
and break the media siege imposed on the jihad movement ... This can be
achieved through the use of the Internet.” In most cases the new technologies
were first developed for military purposes and later modified for civilian use – in
internet, mobile phones, and military games. However over the last two decades
Islamist groups have started to use the technologies in ways that they were first
intended for – build secret communication networks, attract and train new re-
recruits. Most part of the new technological advances, especially Internet has
been well documented in academic literature, and think tank and government
reports. However, there is little written about how the aforementioned technolo-
gies are used to create psychosocial environments that act as precursors to one
joining and acting on behalf of Islamist groups.
In this paper I will detail how social networks, videos, and video games can foster and be used by Islamists to create what I call ‘therapeutic zones’, which make acquiring and acting upon extreme ideas more amenable. I consider these zones as an essential part in cultivating the desire among some individuals to acquire extreme ideas and in some cases act upon them, either with or without the involvement of Islamists. These zones are important because they are spaces where what I call militarized emotions can be cultivated and secondary trauma imparted. The emotions act as disclaimers to circumvent ethical and legal references and make Islamist explanations and solutions acceptable.

Significance of Agent-Based Simulation in Social System Theory

Since the last decade of the 20th century, agent-based simulation method has been developed and becoming a powerful tool for social science. This approach has attracted attention as a new trend, which clarifies the social dynamics and complex human relations. Especially, the following is an important advantage of this approach. This simulation is performed in bottom-up and process-traceable ways, therefore we can clarify how the macroscopic form and social order are generated from the interactions of individual agents. The agents only receive a small number of constraints, each interacting autonomously in the computer space. Then we can reproduce by simulation the manner of forming the ordered whole (social system) from individual behaviors.

The agent-based simulation lies in that we can explore the micro-macro link between individual and society by a bottom-up procedure. There has been a deep division between the methodological individualism and collectivism. To bridge this division has been the most difficult work so far. Because of the emergent property of a macro level, it has been regarded as almost impossible to derive the characteristics of macro (society) from the micro (individual). In fact, while efforts to the problem of micro-macro link have been made in sociology, meaningful results have not been achieved.

In the presentation, I argue the micro-macro problem from three aspects based on the viewpoint of agent-based simulation. First is to examine the mechanism of emergent phenomena. Second is unintended consequence of action by referring to Yamamoto’s model regarding a trap of egalitarianism in the logic of social contract. Third is methodologically unsolvable solution with reference to Axelrod’s “Tit for Tat” strategy in the iterated Prisoner’s Dilemma game.

Making Places for Identity: Urban Alleys As Places of Belonging and Displacement

This paper presents a comparative study of the roji, urban alleys in Tokyo, and urban alleys in Berlin-Mitte, which once have been part of people’s personal spatial sphere and everyday life, but which have increasingly been transformed by diverse and competing interests. Marginalized through the emergence of new forms of housing and public spaces and re-appropriated by different fields, the role of the alleyway to the alleyway is being re-interpreted. Subcultures and new social movements to fit hybrid and multiple concepts of living and lifestyles. Focusing on the comparative cases of central Tokyo, Japan and Berlin-Mitte, Germany, drawing on ethnographic data supported by a conceptual framework derived from theories of place making and identity formation processes, this paper investigates the kind of functions the alleys fulfilled in these cities in the past, and the qualities of urban life that have been lost or changed. Providing multiple narratives of change, the paper’s main purpose is to critically reflect on the recent ‘revival’ of the urban alleyway, arguing that the interstitial nature of these places can be characterized as a boundary between belonging and displacement being on the hand places which are desired and needed to express local voices, thoughts and personal opinions but also places which face different forms of occupation, transformation or destruction.

In summary, conceptualising the alleyway as a contested place and sample for assessing physical, corporate, and social relations in these processes of micro-scale place making, allows us to view the alleyway as the material expression for broader social struggles, and focus for generating, proclaiming and negotiating different cultural subjects, which are aspects of contemporary urban life. The outcomes of this study should offer more insights and alternative views to understand the potential and future of the urban alleyway in a global perspective.

Almost fifteen years have passed since the rising levels of inequality and insecurity became the social issues in Japan. One of the major reasons of this is clearly rooted in the limited social inclusion of non-regular workers within the institutionalized pattern of social security of livelihood and future prospects. Although the last several years witnessed some attempts of re-regulation of labor markets under the governance of the Democratic Party of Japan such as the revisions of Temporary Dispatching Work Law and Part-time Work Law, the processes and the outcomes of re-regulation appear to legitimize or even formalize the existing structure of inequalities and exclusion. The paper argues that the situation cannot be turned around unless the specific link between employment security and the norms that support it is properly recognized. The link is shaped as a specific type of industrial citizenship, a set of rights and duties for employers and workers that is negotiated historically between state, firm and labor. In Japan, it was negotiated by enterprise-based labor unions optimizing the employment security of workers with standard employment contract who are typically employed by large manufacturers. Social security system was designed to support these male bread-winners. Ironically, this citizenship – negotiated standard of social justice in a society – justifies triple inequalities that characterize the current labor markets in Japan: large firms over smaller firms, men over women, regular employment over non-regular employment with regard to the access to livelihood security and future prospects. The paper points out the necessity to overcome the standard employment centrism that produces the ironic consequences.

Support for Democracy and Citizens Participation in Lithuania: From Alienation Toward Active Citizenship

Democracy is rather fragile, when it is based on formal democratic institutions. Support for governmental institutions and citizen participation in the process of political governance is an essential condition for the functioning of democracy and ensuring the stability of society. Political participation essentially is expressed through a number of mechanisms of interests that determine the differences between types of citizens? What are the causes and explanations of different patterns of political participation between types of citizens?

Based on the survey conducted in Lithuania in 2010 and 60 semi-structured interviews, the paper draws conclusions that three types of citizenship (active, voters, passive) may be identified according to interest in politics, political efficacy and participation in political acts. From theoretical perspectives of active traditional and monitorial citizenship, the characteristics of identified groups are mixed, because of socioeconomic and cultural conditions in Lithuania.

Bodies-in-Design: Impairment and Embodiment in Universal Design

Bodies-in-design: impairment and embodiment in Universal Design

Designed objects and environments are often inattentive to impairment or bodily form and performance. This has resulted in a heightened awareness for a socially just design that is sensitive to the complexities of bodily actions and encounters, leading to the emergence of movements such as Universal Design. Drawing on a study on the relationships between impairment, embodiment, and design, this paper considers the diverse ways in which major exponents of universally designed products and services construct the impaired body, or the bodies for which they purport to design. Discussing data from interviews with designers in companies at the forefront of making universally designed products, we consider the ways in which the impaired body is designed into the production of various objects and environments, and how far designing for impaired corporeality is possible, and desirable, within the confines of commercially orientated organisations. As our research suggests, while Universal Design purports to design for all, the practices of designers sometimes risk falling back on reductive conceptions of the impaired body that mask the diversity of capabilities and experiences among users of designed objects and environments. We then discuss some of the reasons for such exclusions as well as outline potential ways of sensitising organisations and practitioners to the complexities of bodies-in-design.

Social Stratification and the Formation of Single Parent Household in Japan

It has been confirmed that the children who grew up in a single parenthood had many disadvantages both on educational attainment and the life course afterwards. This finding is robust in US, but recently Japanese studies have also found it repeatedly in Japan. This is to say that parental divorce limit their children’s life chance, and hence reduce their children’s intergenerational social mobility.

If we have concern with the intergenerational reproduction of poverty (or social stratification), we have to clarify the relationship between social attributes and the occurrence of the single parent households. We use the data of Longitudinal Survey of Newborns in the 21st Century (2001 Cohort) by Ministry of Health, Labour and Welfare of Japan. Respondent were randomly selected from men and women who nurture kids born either between at January 10th and 17th in 2001 or at between 10th and 17th in July 2001. Initial survey was done in 2002 and the sample size was 47,015. Afterwards, panel survey has been done for every year, except for 2007.

We set household composition at 9th survey (conducted in 2010) as basic dependent variable. As sample attrition was serious, we dealt with this sample selection bias by propensity score analysis and Heckman’s two stage estimation probit model (Heckit). We found that those who did not have college or university degree, those who had married at early ages, and those who had low household income how the impaired body is designed into the production of various objects and environments, and how far designing for impaired corporeality is possible, and desirable, within the confines of commercially orientated organisations. As our research suggests, while Universal Design purports to design for all, the practices of designers sometimes risk falling back on reductive conceptions of the impaired body that mask the diversity of capabilities and experiences among users of designed objects and environments. We then discuss some of the reasons for such exclusions as well as outline potential ways of sensitising organisations and practitioners to the complexities of bodies-in-design.

Does Trust Promote Generosity?

Both of trust and generosity have been considered as important factors to promote cooperation (Yamagishi 1998, Nesse 2001). Some researchers argue that trust plays a significant role in assessing quality and trustworthiness of unknown others. On the other hand, generosity is defined as a tendency to forgive defects or failures of partners (Exline & Baumeister 2000, McCullough 2008). However, these two cooperation promoting-traits appear to be incompatible. Trust helps us to assess partner's trustworthiness, which may lead to a withdrawal from inappropriate relationships. On the other hand, generosity helps us to forgive partner's mistakes, implying that we make a commitment in spite of partner's failures. Therefore, the question is: Are these two traits really compatible? And if so, how do we have developed these two seemingly contradicting traits?

Here, we aim to clarify the puzzling relationship between trust and generosity by using an agent-based modeling. We adopt trust game as a basic building block and then incorporate two further elements into our model. One is related to heterogeneous agents in terms of abilities to fulfill donor's expectation. The other element is related to partner choice, commitment (repeated trust game with the same partner) and an exit. Trust is thus formulated as selective strategies in the context of partner choice, whereas generosity is defined as forgiveness of partner's failures in the context of commitment relationship. We carry out the set of computer simulation experiments to assess the viability of several strategies.

Our first result is: without reasonable trustful strategies, more generous strategies cannot be viable. Furthermore, we find that as group size increases, trust level also goes up, leading to the prevention of degenerating generosity. These two results clearly indicate that trust can promote generosity. Put it differently, there exists a coevolution mechanism of trust and generosity in our social world.

Facing the Selves in the Field Research of Immigrants: From the Research Question Based on Visibility to Led through Daily Relationships

This paper aims to describe the process of constructing and transforming research questions through encounters with immigrants in the field of everyday life under the globalized environment, and to indicate two approaches to the fieldwork, based on my research around Kobe city, Japan. The first is research based on researchers’ perceptions that categorized immigrants as the “aliens” visibly in the social structure, while the researchers’ positions and power to make them other are not critically subjected. Here, encounter is not a research subject but rather a chance to inspect their presupposed research question. On the contrary, the alternative approach that constructs research question from daily relationships with immigrants focuses on the encounter itself as the process of facing the selves that occurs us another belonging and identity in the dimension of existential movement, such as Ghassan Hage proposed (Hage 2005). Based on my research, I experienced these approaches as transition from the former to the latter, that criticized the direct linkage between the notion of “aliens” and their visibility by walking away from the ethnic festivity to the daily relationships among return migrants from Peru, and by getting involved an trouble of a family that shaken researcher’s existence to remind me my family backgrounds as also return migrants from Korean Peninsula after the colonial period. This is just one of examples to research another belonging and identity between researchers and informants. However, in the field of Japanese sociologists, there is almost separatized between international sociology that focuses on structural social change and life story studies that approaches to individual meaning of life and encounters with informants so long time. This paper shows the possibility and the subject to link these studies on immigrants as one of fieldwork methodology for bridging between social theories and realities of daily life under globalization.

“Battle Hymn of Tiger Mom” As Social Capital Building

In this presentation, I explore Amy Chua’s “Battle Hymn of the Tiger Mom” as a social capital building by an ethnic generation Chinese American. I examine Chua’s account in relation to Asian immigrant experiences, social and cultural ties, and communities in U.S. race and ethnic relations. The questions asked include: How did Chua raise her children to obtain social capital and educational opportunities in U.S. society? What were the limitations and (unintended) consequences of her strategy? How can we understand the situation she put on the history of Asian American social, cultural, political, and educational experiences? Does her account overcome stereotypes against Asian Americans, or those against other racial minorities?

I situate Chua’s account of child rearing in the context of existing quantitative and qualitative educational research on educational achievement of Asian Americans to point out the almost missing perspective of building social capital from cross cultural contexts. Second, I analyze Chua’s account. Chua comes from an intellectually elite family, and she herself is also a well-connected intellectual elite. She has very distinct idea on “success,” and her children are successful so far, but Chua also suggests that the Chinese way of raising children will have some pit falls because it does not nurture some important American values such as creativity, leadership, and independence. I argue that Chua’s account, while being somewhat extreme, shares some common characteristics of the dominant discourse of Asian Americans as a model minority. I also suggest that analyzing the accounts of second-generation mothers is advantageous, as they know the ways social capital and networks work based on their foreign-born parents’ experiences and they are very conscious not to lose their children to become “American.”

INOUE, HIROKO* (University of California-Riverside, hiro.inoue@email.ucr.edu)

The comparative world-systems approach analyzes systems of societies rather than a single society. Interaction networks in world-systems comprise systems of human societies which are bounded in space and engage in regularized interaction among societies. The evolutionary growth of the connections and intensified linkages through cycles and oscillations has formed increasingly larger and integrated world-systems over time. Structural globalization is thus conceptualized as an elementary trend that prevailed in the last two centuries. While the world-systems approach explains evolutionary growth of interaction networks over time, it is conscious of historical contingencies as well as spatially and temporally specific conditions for local polities. This aspect is compatible with recently developing agent-based social science. Applying spatial agent-based simulation, the current study engages in examination of historical cases. In particular, this study focused

Reading “Battle Hymn of Tiger Mom” As an Educational Biography

In this presentation, I explore Amy Chua’s “Battle Hymn of the Tiger Mom” as a biographical account of child rearing by a second generation Chinese American. I examine Chua’s account in relation to Asian immigrant experiences in the United States. The questions asked include: How does Chua tell about the ways in which she raised her children to attain high educational achievement in U.S. society? What were the limitation and (unintended) consequences of her strategy? How can/should we situate Chua’s biographical account in the history of Asian American social, cultural, political, and educational experiences?

First, I situate Chua’s account of child rearing in the context of existing quantitative and qualitative educational research on the educational achievement of Asian Americans. I review the literature on educational attainment of Asian Americans to point out the missing area is Asian Americans’ self account of education at home, i.e., how they raise their children.

Second, I analyze Chua’s account. Chua comes from an intellectually elite family, and she herself is also an intellectually elite. She has very distinct idea on “success,” and her children are successful so far, but Chua’s account also implies that the Chinese way of raising children will have some pit falls because it does not nurture some important American values such as creativity, leadership, and independence. I argue that Chua’s account, while being somewhat extreme, shares some common characteristics of the dominant discourse of Asian Americans as a model minority. I also suggest that analyzing the biographical account of second-generation mothers is advantageous, as they know the ways their foreign-born parents raised their children and they are very conscious of how they raise their children.
Vocational Education and Gendered School-to-Work Transitions in Switzerland and Japan

The labour markets of Japan and Switzerland are significantly gender segregated. In Switzerland the seed for labour market gender segregation begins with the gendered orientations of young school leavers. Via the Vocational education and training (VET) system and the occupational linkage of education and employment, early career aspirations are transformed into gendered employment opportunities. VET is indeed very prominent in Switzerland, where seven out of ten upper secondary graduates come from vocational programs. But the case of Japan challenges the assumption that gender segregation is mainly due to gender segregated VET. Japan’s upper secondary graduation rates figures are more than reversed from those of Switzerland with three out of four graduates having enrolled in general programmes and only one out of four in VET. Within VET, however, Japan (JP) and Switzerland (CH) show a similar distribution of secondary vocational training by field of education and gender. Still, the contribution of the highly competitive academic education system to gender segregation in Japan remains unclear. Therefor the paper asks how education systems in Switzerland and Japan promote gender-typed trajectories into the labour market differently.

We use comparable youth panel data for both countries to analyse our research question (JP: Youth cohort study of Japan; CH: Transitions from Education to Employment TREU). Our dependant variable is job gender concentration as measured on industry level. We apply stepwise linear regressions to analyse our data, preliminary controlling for secondary vocational specialisation and gender. Still, the contribution of the highly competitive academic education system to gender segregation in Japan remains unclear. Therefor the paper asks how education systems in Switzerland and Japan promote gender-typed trajectories into the labour market differently.

We use comparable youth panel data for both countries to analyse our research question (JP: Youth cohort study of Japan; CH: Transitions from Education to Employment TREU). Our dependant variable is job gender concentration as measured on industry level. We apply stepwise linear regressions to analyse our data, preliminary controlling for secondary vocational specialisation and gender. Still, the contribution of the highly competitive academic education system to gender segregation in Japan remains unclear. Therefor the paper asks how education systems in Switzerland and Japan promote gender-typed trajectories into the labour market differently.

The findings allow for a critical assessment of VETs contribution to job gender segregation in different educational systems.

Female Employment and the Socioeconomic and Family Factors in Japan

This study uses nationwide panel data to identify determinants of female employment in Japan. Almost 70% of women exit the labor market during marriage or childbirth and this figure remains high, especially among higher educated women (Cabinet Office 2006).

Reports indicate that whether married women work or not is explained by “Douglas-Arisawa’s law,” which suggests that there is a higher non-core family members’ labor force participation rate in lower core income than in higher core income households. This law’s validity has been proven using panel survey data in 1997 (Kawaguchi 2002), yet some reports currently indicate that Douglas-Arisawa’s law is collapsing, especially among married women with less than a high school education (Manabe 2004). Furthermore, Takeuchi’s (2003) study used panel data from Japanese married women aged 30 years and below and found that life events such as childbirth and child-rearing serve as restraints to employment, and that wives have not reacted to changes in their husbands’ income. This study verifies the current validity of Douglas-Arisawa’s law and the determinants of women’s employment in Japan.

Data obtained from the National Family Research of Japan, 2008-2011 Panel Study (NFRJ-08 Panel) were used with a dependent variable having a job dummy, where having a job = 1 and not having a job = 0. The results of the regression analysis shows that vocational school or university graduates would probably work than high school graduates with a lower probability of wives working if their husbands’ income are higher. A short-term reduction in the husband’s income did not affect the wife’s probable employment; however, the youngest child’s age did have an effect. Results indicate little change from Takeuchi’s (2003) results and appear to maintain Douglas-Arisawa’s law.

The Street As Urban Borderland: Micro-Geographies of Inequality and Co-Existence in Manchester and Shanghai

The paper examines the micro-geographies of spatially divided but adjacentely located and coexisting social groups (defined by place of origin, ethnicity, socioeconomic status or various other criteria) in two very different cities. It is rooted in six years of fieldwork in Shanghai, China, and several months of research-based teaching (Architecture) in Manchester, UK. The study builds on ethnographic work (namely long-term observation, visual methods and in-depth interviews) in two divided neighbourhoods, where the street acts both as a border, separating difference, and as a space of conviviality, bringing together and merging. In this way, previously stark streets are established as spaces where the various barriers between the different are often patiently and persistently undone by those who live them in their everyday, just as symbolically as they are sometimes erected

---
by the powerful. Furthermore, the paper looks at how the formal and informal production, appropriation, transformation, use and management of street space in the case study areas of Manchester and Shanghai are linked and contribute to the formation and maintenance of multiple and hybrid social identities among members of distinct groups. The focus lies on the exploration of the street as a space which makes various types of inequality explicit, a space which is temporally, culturally, economically or, simply, physically in-between, and can thus be regarded as a type of urban borderland.

Widowhood Practices Among the Edo People in Nigeria: Continuity and Change

This is an empirical study involving both quantitative and qualitative approaches. It explores the widowhood practices among the Edo people in Nigeria which is a patriarchal society where majority of women especially those in the rural areas suffer from severe cultural constraints and inhibitions, creating an unequal relationship between men and women. The widowhood rites are often very dehumanizing to the extent that it erodes the self esteem, potentials and capabilities of women. They are made to suffer emotionally, physically and economically as they are often denied the essentials of life. In terms of their means of livelihood, a woman enjoys access to land for farm purposes when her husband is alive; but at death, she becomes vulnerable to the dictates of her late husband’s relations as she is seen as part of the property to be inherited by the family. The case is made worse by the fact that in the absence of a son to form a judge on her behalf ever carries any significant effect especially in the rural milieu where customary law seems to be stronger than statutory law. This is the debilitising situation facing most widows in Edo State, Nigeria, hence the need to examine the prevailing situation and proffer appropriate solutions that would help address the challenges of widowhood practices in the 21st century and beyond.

Keywords: Cultural constraints; customary law; patriarchal societies; rural areas; statutory law; widowhood practices

The Sex Lives Of Sex Researchers

The Sex Lives of Sex Researchers

As sexuality studies develops as a field, recent biographies feature some prominent figures. In addition to several texts on Alfred Kinsey, these biographies include those of Michel Foucault, Richard von Kraft-Ebing, Jeannette Foster Howard, the first librarian at the Kinsey Institute, and William Masters and Virginia Johnson. Some of this work is superb scholarship. Some might be considered “pathography,” Joyce Carol Oates term for “the technique of emphasizing the sensational underside of its subject’s life.”

Pathographies of sexuality researchers spin for perversion. For example, James Miller’s biography of Michel Foucault links Foucault’s work to a range of unconventional sexual proclivities like SM. And biographer Thomas Maier begins his book with Virginia Johnson losing her virginity, portrays her as a sexually cunning secretary and delights in exposing surprising aspects of the researchers’ sex life together. Historian James Jones biography of Kinsey perhaps most typifies the genre. Jones claims that Kinsey’s research was driven by his own “inner demons” which allegedly included homosexuality, masochism, and a range of sexual compulsions such as masturbating with objects inserted into his urethra.

This paper examines a number of biographies of sexuality scholars, and explores the dilemma biographers face in writing about the sex lives of these researchers. I suggest that, despite increased acceptance and even excitement about the academic study of sexuality, sexual stigma is a persistent theme in the stories about researchers themselves. Biographers use sex to frame the story, locating sex research in a brew of perverse desires and practices, and contending that the researcher’s deviance colors or discredits the scholarship.

Does Inequality Matter? Intergenerational Relations in European Welfare States

Intergenerational transfers of money, time and space are important features of parent-child relationships. Previous research reveals substantial differences in intergenerational solidarity, raising the question of causes and reasons for European divergences. Apart from inequality on the micro level, meso level structures (family) as well as macro level factors are important in order to understand differences in support levels of giving and taking money, time and space within and also between countries. While single types of solidarity have been predominantly analysed separately, a joint analysis is still missing.

Based on the Survey of Health, Ageing and Retirement in Europe (SHARE), 14 European countries are analysed to measure the impact of inequality structures on functional solidarity between parents and their adult children. Multilevel analyses including micro, meso and macro levels indicate that need and opportunity structures as well as variations in family composition and cultural-contextual differences between welfare state regimes matter for intergenerational relations. Children in need get more support than better situated offspring. Simultaneously, parents with better opportunity structures help more. Furthermore, we can observe that parents in low-level service states and high poverty and income inequality countries such as Poland, Italy and Spain predominantly support their adult children by providing living space, whereas in less familialistic and more generous welfare states such as the Netherlands, Denmark or Sweden parents rather provide time and monetary support. Our results moreover reveal that the provision of living space substitutes for time and financial transfers. The latter, however, do complement each other: children who receive time support from their parents often receive monetary help as well.

ISENGARD, BETTINA* (University of Zurich, isengard@soziologie.uzh.ch)

SYZDLIK, MARC* (University of Zurich, syzdlik@soziologie.uzh.ch)

Money Vs. Space? Intergenerational Transfers in a Comparative Perspective

The provision of living space as well as direct financial transfers are important elements of functional solidarity between parents and adult children. However, previous research reveals substantial discrepancies in monetary transfers and intergenerational coresidence not only within but also between countries. Against this background, the investigation addresses causes and reasons for intergenerational support in terms of money and space. We investigate (1) which parents do provide these kinds of support for their adult children, (2) whether money and space are substitutes or complements, and (3) how one can explain national differences.

Based on the Survey of Health, Ageing and Retirement in Europe (SHARE), influences of individual, familial and societal factors are analyzed for 14 countries. The empirical results, based on logistic multilevel models, indicate that especially needs of the adult child as well as opportunities of the parents are important determinants of intergenerational solidarity. In contrast, competing family members reduce support probabilities for each individual. Parents in familialistic and low-level service countries such as Poland, Italy and Spain predominantly support their adult children by providing living space, whereas in less familialistic and more generous welfare states such as the Netherlands, Denmark and Sweden parents rather offer monetary support. Furthermore, the provision of living space seems to substitute direct financial transfers.

Ukrainian New Left and Grassroots Social Protests: A Thorny Way to Hegemony

When and how the emerging radical new left in the post-Soviet societies is able to win hegemony within the rising social-economic protests mobilization? In the context of the post-Soviet ‘weak civil society’ the new left has a unique opportunity to use the ‘primacy effect’ in order to win strong position within the grassroots social protests. The prior strong position within the movement around some problem gives the privileged position compared to other political groups when the mass mobilization around it erupts. I will analyze the case of Ukrainian radical leftist student union ‘Direct Action’ organized in 2008 by ideological anarchists and libertarian Marxists which appeared to lead 20,000 student mobilization in over 15 Ukrainian cities against introduction of paid services in the universities in 2010 when established student NGOs were siding with the government or discovering they have no mobilization potential. However, the ‘primacy effect’ has its limits as not so many issues are remaining ‘vacant’ (because of the far right active intervention particularly) and not each issues has the same potential to destabilize the political regime. It means an increasing necessity for the post-Soviet new left to win and retain hegemony in the broad coalitions competing with other politicized and often hostile actors over non-politicized masses. Analyzing the case of highly successful ‘Save Old Kiev’ initiative against the privatization of public space, established in 2007 with the dominance of the new left groups coalition but where the
far right has ultimately won hegemony. I will show the process of ‘double institutionalization’: participation without systematic attempt to establish ideological influence and use of the grassroots protests for the publicity of particular political groups. If these two typical failure strategies are allowed to proceed, they lead to increasing distrust, the collapse of coalitions and isolation of the new left groups.

An Analysis of Imagined Boundary of the “Japanese”: Results from an Internet Survey in Japan

This paper aims to analyze tendencies and differences of imagined boundary and definitions of the “Japanese” among Japanese people. There is a legal definition of the Japanese, that is, the Japanese is the people having Japanese nationality. However, a personal definition to distinguish people between Japanese (or ‘real Japanese’) and non-Japanese may vary from person to person according to their experiences and social status. Especially, judging in terms of grey zone cases, for example naturalized immigrants or Japanese diaspora, is controversial and delicate issue in Japan.

For capturing people’s imagined boundary and definition of the “Japanese” in detail, I conducted an internet survey with 2,000 respondents in 2013. In this survey, I employed 16 types of vignette questionnaires which describes typical combination of conditions relevant to national identity, i.e., nationality, resident, blood, and language, and asked respondents to judge whether a person who has a certain combination of conditions is regarded as the “Japanese” or not.

By using this data, we can capture a person’s imagined boundary as a Boolean algebraic equation. In the paper, results from the survey will be demonstrated in detail. Besides, the relevance between types of imagined boundary and definitions and demographic and socio-economic status will be discussed in the paper.

Income Inequality and Relative Deprivation: A Formal Theoretic View

In a time of increase of inequality, does people’s frustration or feelings of deprivation rise? If it is yes, how do theories of relative deprivation explain these kinds of relevance between objective economic situation in a society and subjective feeling of individuals?

This paper aims to present a formal theoretic view of the relationship between income inequality and relative deprivation by applying and developing Shlomo Yitzhaki’s model. Yitzhaki (1979) defined indices of individual and societal degree of relative deprivation emerged by income comparison among reference group, and demonstrated explicit link between indices and the notion of the Gin’s inequality coefficient.

In this paper especially, I try to describe and explain two paradoxes relevant to relative deprivation occurring in the time of modernization from a formal theoretic view. First paradox regards the tendency that a disappearance of class barrier as reference groups in terms of income comparison rather results in increase of people’s relative deprivation. Second paradox is related to economic growth which tells that increase of amount of income in a society rather increases individual and societal relative deprivation under certain conditions.

A formal theoretic model will be introduced so as to solve these paradoxes. Furthermore, some implications from the model for understanding contemporary situations in advanced countries will be discussed.

Social Network and Job Change in Japanese Youth Labor Market: Embeddedness, Safety Net, and Social Closure

The purpose of this study is to examine whether and how social network affects job change behavior and the result of job change in Japanese young workers. They are faced with high risks of job turnover because of the expansion of fixed-term or part time employment, which is followed by service industrialization and long term recession since 1990’s. It is becoming an important process of career mobility that Japanese young workers find their job in the external labor market today. Social network approach is a convincing sociological framework to investigate the job search process.

There are several explanations based on social network approach. Embeddedness, safety net, and social closure arguments are examined empirically in this study. A panel survey data targeting at Japanese youth is utilized and it is tested whether and how social network affects job change and change in income after changing a job. Heckman’s two-stage sample selection model is applied.

Empirical analyses support the embeddedness argument. We have two main findings. First, social network is not related with job change behavior, but employment status is the definitive factor. Second, however, male job changers with ‘weak ties’ get higher income if they experience mobility between different industrial sectors. Social network works especially in cross-border mobility, where workers may lose their human capital and be put under uncertainty about their social career. Social network can offset these disadvantages and give them advantages in job searching. And the cross-border mobility is a process of de-embeddedness.

In previous researches in East Asia, social network’s aspects of safety net and social closure are focused. From the results of this study, however, embeddedness argument is still important to be considered.

Baseball Labor Migration: Transformation of Border Crossings of Athletes in Global Diffusion of Baseball

As the result of globalization of a sport, the border crossings of athlete are increasing explosively today.

This study proves that the border crossings of athletes have accomplished the qualitative change from the example of global diffusion of baseball, which has emphasized integration with capital.

The global diffusion of baseball can be positioned on the context of forming a global marketing and scouting network of professional baseball whose summit is the Major League Baseball as North American top league.

This network had subsumed Central America-Caribbean region by 1950s and East Asia after 1990’s, and has been expanding to the ‘Baseball Barren’, Europe, Middle East, Africa and South American Continent, after 2000s. As a result, new competition terrains, where playing level had been dropped, have emerged in some of the ‘Baseball Barren’, and new types of border crossings of athletes can be seen there.

In the past sport labor migration studies, it has been thought that economic reasons, like salary or bonus, are main factor for the athletes who cross borders, however, not a few athletes are going abroad for non-economic and mental reasons, such as self-actualization these days. These can be seen as a new phenomenon as the conclusion of globalization of sports. In this situation, border crossings of athletes can be regarded as not parts of ‘labor’, but parts of ‘consume’.

From this analysis, the word of ‘Sport Labor Migration’ is becoming no longer appropriate to represent the border crossings of athletes.

Reconstructing Relationships in a Transgender Family: The Story of Parents of Japanese Transgender Children

Raising and nurturing children is one of the most important functions of a modern family. In the emotional parallel child bond is typically strong. However, in the case of transgender children, to what extent do their gender issues impact their relationships with their parents? When discovering that their child is transgender, parents either accept them or change or reconstruct their relationship. This study discusses the process of creating new relationships and parents’ viewpoints by analyzing the narratives of parents of Japanese transgender children.

Ten in-depth interviews of parents with transgender children were conducted. The interviewees included eight mothers and three fathers. Data were collected from November 2012 to October 2013 in Kobe, Tokyo, and Fukuoka.

First, in these families, children’s problems were mainly handled by mothers because fathers had a comparatively tenuous relationship with their children and tended to avoid the topic of sexual minorities. Two types of reactions were seen on discovering that their child was transgender. The first was an “as suspected” response, while the second was extreme shock. The interviewees then began gathering more knowledge about gender issues and LGBT by reading or visiting LGBT communities to understand and generally acknowledge their child’s unique or queer gender identity. And in their life stories, parents tried to reconform or reconstruct images of their children and refortify their emotional ties with them.
workers but also because in-home long-term care support providers may lack motivation; as they do not receive subsidies for placing compatible care workers with aged persons. Yet, good chemistry between aged persons and their care workers is important because aged persons have diverse needs, which may require specific characteristics in their care workers.

To design a policy that will motivate care providers to deploy their care workers more effectively, the presenter interviewed several care workers and other support provider staff members, investigating how care support providers deploy care workers and the difficulties they face. The qualitative interview data revealed that some support providers have aged persons appoint their own care workers at their own expense. This method usually results in successful postings as it enables aged persons to choose compatible care workers and to make particular demands regarding their needs. However, because these appointments are made outside of the Long-Term Care Insurance Law, a designation fee is applicable, which some aged persons cannot afford.

These findings suggest that the government should give subsidies to support providers who appoint large numbers of care workers so that these providers can keep their designation fee low, and aged persons can continue to choose their own care workers. Such an initiative may also restrict social welfare costs in the long run because increased rates of in-home care are associated with decreased medical spending.

The Education of Young Brazilians in Japan

Currently (2011), the Brazilian population in Japan totals 210,032. Of that total 46,855 (22%) are under 20 years old, and 24,061 (11%) under 10 years old. From these data, we can conclude that many of these children attend, or have attended, school in Japan. Compared to the Japanese-Brazilian adults living in Japan, their children learn the Japanese language much more easily and quickly. Many of these children start their education in Japanese kindergartens, and then most of them continue studying in Japanese schools. Some advance to the university level. However, even if they speak the Japanese language, most of them have problems keeping up with the regular disciplines. The main reason is that they don’t have the background the other Japanese children have. Additionally, they don’t have their parents’ help with their studies at home because most of the Brazilian parents are not fluent in the Japanese language. Another issue to be considered is that in Japan, education is mandatory for children under 15 years old who are citizens, but optional for foreigners. One problem here is how Japanese society views foreigners. For the Japanese, the Japanese-Brazilians are temporary foreign workers who will leave Japan after a finite period of time. The result is that the Japanese-Brazilians are dealt with as visitors, and this feeling extends to the children. This treatment negatively affects any policy regarding the education of foreign children in Japan. The prospect for Japanese-Brazilian children in the future depends on where they settle. Lacking a higher education a large number of Brazilian children experience difficulties with stability and ascension in both Japanese and Brazilian societies. In this paper I will focus on cases of young Brazilians raised in Japan who were successful in obtaining a higher education in Japanese universities, although they are currently the minority.

Volunteerism among Mexican Youth in the US: The Role of Family Capital

This study investigates patterns of volunteerism within a rapidly growing segment of the population, Mexican immigrant and Mexican origin youth, using data from the Education Longitudinal Study of 2002 (ELS). These data show that volunteerism varies by immigrant generational status. Contradicting classical assimilation theory, first generation Mexican immigrant youth are found to be more likely to volunteer than later generation youth. These data show that volunteerism is shaped by cultural values and the internal dynamics of neoliberal capitalism remains largely unchanged. Since economic logic still reigns over ecological and social logics, the article argues that the example of the certification regimes should therefore be characterized not by ‘ecological modernization’ but by ‘modernization of ecology’. It is because through certification regimes, capitalism is not modernized in ecological lines, but ecology itself is modernized in the line of neoliberal capitalism.

A Political Ecology of Aquaculture Certification: Towards a ‘modernization of Ecology’

The article examines environmental certification regimes in the global aquaculture as an example of ecological modernization. While the fundamental tenet of ecological modernization is to shape capitalism by ecological principles, the study shows instead that through environmental certification regimes, ecology or nature itself is largely shaped, transformed and restructured to fit into, and thus serve, neoliberal governance and accumulation in a normalized manner. Certification regimes offer some avenues for a sustainable aquaculture; however, the internal dynamics of neoliberal capitalism remains largely unchanged. Since economic logic still reigns over ecological and social logics, the article argues that the example of the certification regimes should therefore be characterized not by ‘ecological modernization’ but by ‘modernization of ecology’. It is because through certification regimes, capitalism is not modernized in ecological lines, but ecology itself is modernized in the line of neoliberal capitalism.

Violence and Education in Judo Practices: A Comparison of France and Japan

In this presentation, I examine the relationship between education and violence through judo practices of children in Japan and France. Judo originated in Japan but it is not anymore popular there. While the population of judo players is less than 200 thousands in Japan, it is almost 600 thousands in France where the national population is two times less than that of Japan. In order to compare the judo practices in these two countries, first of all, I examine the recent debates in Japan on the violence related to judo and on the ideas of judo as education. The judo practices are also analyzed by the example of the certification regimes should therefore be characterized not by ‘ecological modernization’ but by ‘modernization of ecology’. It is because through certification regimes, capitalism is not modernized in ecological lines, but ecology itself is modernized in the line of neoliberal capitalism.

Habermas’ Discourse Theory and the Concept of Public Sphere

The aim of this paper is to clarify the concept of Jürgen Habermas’ public sphere in his book, Between Facts and Norms, especially focusing on his perspective and method.

In this book, discourse theory is formulated with “If just those action norms are valid to which all possibly affected persons could agree as participants in rational discourses.” However, especially in American context, there is a lot of criticism that the discourse theory is not so effective for the analysis of an actual problem because it is too formalistic. Responding to this criticism, Habermas elaborates a process model of rational political will-formation about realistic problem. Habermas has taken up the public sphere as a concept to support such political will-formation. According to Habermas, the public sphere “is a warning system with sensors that, though unspecified, are sensitive throughout society” and “can best be described as a network for communicating information and points of view.”

Some existing discussion found that Habermas succeeds to use a theoretical technique, called conversion of perspective and shift the level of a reference in The Theory of Communicative Action. However this paper points out that Habermas already uses similar techniques in Between Facts and Norms. Habermas moves to more concrete level of discussion based on his theoretical understanding of a modern democratic constitutional state. Dealing with experimental problems, such as politics and law, one of focusing point is a public sphere. Finally, we think on the feasibility of the concept of Habermas’ public sphere as an analytical tool of actual problems.

ISTVAN, ALESHA* (Texas A&M University, aistvan@tamu.edu)

Using an illustration of the relationship between the U.S. environmental movement and the U.S. wind energy industry, I develop a theory for understanding the relationship between social movements and their economic outcomes. Synthesizing the social movement theory of political process with the economic theory of social structure of accumulation, I argue that social movements become more and less important in relation to industry creation based on the intersection of their place in the cycle of contention with the industry’s position within the cycle of accumulation. Furthermore, at any given point in time, these cycles are both impacted by the larger political, economic and ideological structure of the society. I develop four distinct propositions to further clarify this theory. First, during times when economic consolidation intersects with movement diffusion, contentious actions have little, if any, relationship with industry development and technological explanations prevail. Second, during times when economic decay intersects with movement exhaustion, technological and social movement outcome explanations become less important and the macro political-economic environment provides a more robust explanation for industry changes. Third, during times when economic exploration intersects with movement radicalization/institutionalization, movement actions have an important effect on its industry counterpart. Fourth, during times when economic consolidation intersects with movement exhaustion, the economic counterpart may develop in direct contradiction to movement goals.

The Role of Japanese Public Health Nurses’ Activities As Post-Disaster Assistance

This paper will examine about the construction of disaster resilient local community based on multiple social networks through the cases of public health nurse activity in the tsunami devastated area. The questions of this paper are 1) why and how the professional ability of public health nurse are efficient at the post-disaster time and 2) how it is different from volunteer activities such as non-specialized NPOs or neighborhood disaster prevent associations at the community base.

This paper is based mainly on the findings of my own interview with public health nurses who lived in the city and worked in south of Iwate prefecture and detailed survey on the public health reports about the disaster assistance. The findings are that 1) their activities are focusing on informal care and long-term support for community re-construction as well as official nursing services in the shelter right after the disaster, 2) their professional skills were especially effective in case they conducted their research about the health status for all surviving citizens in the area by using nationwide public health nurse human-resource network. And 3) they can support efficiently the destroyed local public office because they have been long working there and knowing in detail about clients and their community. It is important significantly different from other non-professionalized volunteers that 4) they have professional skills and a long year experiences of local community based caring and they have a variety of wide networks all over Japan.

I will discuss about collaboration of public health services with other local institutions, NPOs, volunteers and organizations for disaster vulnerable people such as elderly women. Japanese public health nurse activities is one of the best examples of post-disaster assistance system which has been uniquely rooted in local communities culturally and historically.

What the Ubiquitous Network Society Brings in Japan: Influences of the Mobile Internet Devices on Teenagers

Advanced technologies sometimes corrode social institutions. “Act on Development of an Environment that Provides Safe and Secure Internet Use for Young People” is a Japanese law which binds every parent to set up mobile web filter on their mobile phone of her/his child to block “harmful” information in cyberspace. However, recent prevalence of smart phones and hotspots in Japan is spoiling this protection.

In this paper we want to describe current trends of the Internet use among Japanese schoolchildren based on several surveys we exercised in 2010 – 2013 in Gunma prefecture. The results show that many teenagers use their mobile Internet devices in a quite unguided manner. For example, 20% of high school girls answered our questionnaire that they had met someone they had come to know through the Internet.

We are convinced that, basically, teenagers are exposed to three types of different risks. The first risk is caused by the fact that they are connected directly with the outer world, where evil adults (or non-adults) are waiting for their victims. This risk contains cyber-crimes such as enticement, deception or false billing. Another risk comes from the situation in which the teenagers are connected online with themselves. Cyber-bullying, or cyber-troubles are getting serious because they happen where neither teachers nor their parents can observe. The last risk comes from the recent convenient condition of the ubiquitous network. Schoolchildren are exposed to the risk of addiction to the Internet activities, such as online games, blogs, SNSs, live-chatting or online-shopping.

We want to illustrate what Japanese teachers or parents suffer from and what we should do in order to protect schoolchildren. We don’t think we can prevent teenagers from connecting with the web, therefore, at last we have to teach them how to adapt themselves to the coming digital age.
This paper examines an abrupt expansion and stagnation of higher secondary education in Vietnam during the two decades since the beginning of 1990s. In 1986, Vietnam introduced the Doi Moi policy to shift from a centralized socialist economy to a market-based one. Influenced by this drastic transition of economy, people's aspirations for upward mobilization through achievement of a higher academic level increased significantly. The school enrollment rate of high school increased from 15% in 1990 to 55% in 2010. However, the trend of the upward mobility movement has not continued for such a long time as in other recently industrialization countries in East Asia. By analyzing educational statistics by regions, the author found that the number of enrollments in high school soon stabilized, and is even decreasing in some poor rural areas. This paper focuses on two causes that restricted the rapid expansion of higher secondary education and caused a reduction in its speed. Firstly, a privatization policy of secondary education introduced a number of private high schools with weak management bases. They provided temporary bases for people's aspiration to go to high schools, but could not be continued due to lack of strong management strategies. Secondly, the development of the labor market could not keep up with the rapid increase of the newly produced labor force, high school graduates. People began to realize that only having a secondary diploma was not enough to have a stable job in the metropolises, but was graduates. People began to realize that only having a secondary diploma was not enough to have a stable job in the metropolises, but was

In conclusion, although the theory of reflexive modernization is a useful tool to research Japanese society, we should re-theorize it from our differences.

Experiences of Difficulties Faced By Hikikomori People within Everyday-Life: From the Perspective of View of Intimacy

This paper aims to describe the experiences of difficulties faced by the withdrawal of youth from society known as hikikomori people in Japan. This paper is based on fieldwork data and narratives of hikikomori people in self-support group in Kobe. This self-support group organizes peer supporters with their experiences, and provides support to hikikomori people as the person concerned (Tojisha). This paper analyzes their narratives from the approach of life-history analysis. In Japan, hikikomori phenomenon has been problematized since the 1990s. According to research conducted by the Cabinet Office in 2010, the population of hikikomori (age range 15-39), is estimated 696 thousand (comprising 1.79% of the total population of Japan). In this survey, hikikomori is defined as "people who predominantly stay at home for more than six months, other than for household work, child-care, schizophrenia or physical illness." Therefore, hikikomori has been referred to as problems of psychology and requires psychiatric treatment. Moreover, hikikomori has been also identified as problems related to Japanese education and employment systems. However, experiences of difficulties faced by hikikomori people are more complex. In fact, on their narratives, they address the various issues which they face in their daily lives. When talking experiences by hikikomori, they talk about various categories of human relations. In particular, their narratives on difficulties are often associated with intimate relationships, gender, sexuality and the other. For example, a hikikomori parson said "I am troubled about how to interact with other people familiarly." Thus, this paper focuses on the intimacy of human relationships within their everyday-life experiences. Through this analysis, I argue that the experiences of difficulties faced by hikikomori people not only reflect instability of employment of youth but also related to the anxiety and uncertainty concerning their intimate relationships.

Embodiment Experiences of Women with Disabilities in Yogyakarta, Indonesia

Embodiment Experiences of Women with Disabilities in Yogyakarta, Indonesia

Abstract

This paper explores the changing embodiment experiences of new disabled women after the 2006 earthquake disaster in Bantul district, Yogyakarta province, Indonesia. As a consequence of the disaster, thousands of people lose their parts of their bodies and become disabled. Not only they faced psychological suffering and trauma caused by the earthquake but also they should deal with many challenges in order to survive in their subsequent lives. Their properties were vanished and the situation was exacerbated by their work inability as a result of their impairment. They have been adapting to improper environment situation such as inappropriate facilities that hinder their mobilities. This situation even worse for new women with disabilities because they have not only to struggle for daily needs, they also have to challenge multiple oppression because they are disabled, because they are women and because they are poor and do not have ability to work. They also have been experiencing changing embodiment. After the disaster they lose their dignity and have to adapt to their new embodiment experiences. They have to follow procedures of medicalization to their physical disabilities in order to close with normality and should involve in some programs such as work skills from government and NGOs. This paper deal with ethnographic approach of the personal experiences of 5 new disabled women in comparing embodiment experiences before and after become disabled. This paper also discloses the embodiment process after 5 years of disaster and how those women with disabilities exercise their bodies to mainstream disabilities in their families and neighbourhoods.

Keywords: Disaster, embodiment, women with disabilities

Tolerance Frame As a Hindrance to Effective Public/Authorities Feedback in Belarus

The report is going to consider 'tolerance' as a misconception and an ideological frame. A critical assessment will be done of tolerance on the part of Belarusian people. It is going to be shown that a) tolerance as an invariably beneficent trait of the Belarusian people is quite mistaken, b) that the 'tolerance' frame interferes with democratic government principles as accepted and practiced worldwide, c) that responses to public dissatisfaction (part and parcel of normal governance systems) in Belarus are complicated due to persistence of the 'tolerance' frame; and d) that for running sustainable democratic outcomes in Belarus, a regular public/authority feedback should be restored by getting rid of 'tolerance' as part of the ideological apparatus.

The idea of this paper concerns 'tolerance' as it enters democratic governance schemes and might be leading to their malfunction. The word tolerance is widely used in liberal democracies and is associated with positive meaning. However, it appears that tolerance is not necessarily a virtue. The word tolerance has negative connotations as it acknowledges a problem. The danger with the ideological frame 'tolerance' is that it might enter democratic government schemes where it can effectively block public responses to dissatisfaction. This way, the system is incapable of conveying public dissatisfaction, and the stimulus is removed for the authorities to improve their work. This might be evident in Belarus, where people have little opportunity to convey their dissatisfaction, given that they are considered as well as consider themselves 'tolerant'. In this case, their tolerance, being mere holding on, is a potential volcano.

Spatial and Temporal Structures of Inequality in the Super-Urbanized World. Flow-Structures of Glam-Capitalism and New Configurations of Inequality

The economy and society in networked enclaves of globality – super-urbanized areas like Los Angeles, New York, Tokyo, Hong Kong, Moscow, London, Buenos Aires etc., are considered as glam-capitalism. Preconditions for new form of capitalism have been generated by virtualization of social structures. By the 2000s intensive commoditization of images had led to overbranding and triviality of the virtualization strategy that has provoked shift of competitive advantages to hyper-virtuality of glamour. Being specific lifestyle or aesthetic form, glamour has become now rationality of newest version of capitalism. Glam-capitalism raises when producers at the hyper-competitive market place must glamour consumers and when goods must be aggressively beautiful to attract targeted groups. Value creation process now is related more to trends, than to brands, not only in fashion industry and show business but also in high-tech and financial industries.

Alternative movements like ‘copy left’, ‘open source’, ‘creative commons’, and ‘pirates’ violating ‘intellectual’ property rights challenge regime of glam-capitalism and represent the authenticity revolt against hyper-virtuality of glamour not only in economy but also in politics and culture.

After-social movements reinforce functionality and competition against image abnormalities and commoditization, and represent the authentic revolt against hyper-virtuality of glamour. Being specific lifestyle or aesthetic form, glam-capitalism were created by virtualization of social structures. Hyper-reality of simulations producing copies without original (Baudrillard) is adequate model of glam-capitalism. By the 2000s intensive commoditization of images has led to overbranding and triviality of the virtualization strategy that has provoked shift of competitive advantages to hyper-virtuality of glamour. Being specific lifestyle or aesthetic form, glamour has become now rationality of newest version of capitalism. Glam-capitalism raises when producers at the hyper-competitive market place must glamour consumers and when goods must be aggressively beautiful to attract targeted groups. Value creation process now is related more to trends, than to brands, not only in fashion industry and show business but also in high-tech and financial industries.

Alternative movements like ‘copy left’, ‘open source’, ‘creative commons’, and ‘pirates’ violating ‘intellectual’ property rights challenge regime of glam-capitalism and represent the authenticity revolt against hyper-virtuality of glamour not only in economy but also in politics and culture.

The rise of avant-gardes and authoritative social movements is initially oppression. But now glam-capitalism is drawing cultural and social protest as corporate management adopts protesters’ tactics. New management approach can be seen in practices of ‘stretching’ brands down, making ‘open source’ and ‘free access’ corporate business models, commercializing torrent files, developing guerrilla marketing etc. Creators of trends converging patterns of glam-capitalists and alter-social movements give birth to alter-capitalism as a ‘post-Baudrillard’ regime: capitalization on flow of originals without copies.
Low growth human development index are accompanied by reduced anxiety (-0.88), high level of social activity (0.81) and feeling of happiness (0.71). Negative emotions can be an important regulator of social activity. It is necessary to distinguish between the qualities of negative emotions. For example, the decrease of Facebook in depression. Anxiety is accompanied by disappearance of emotions, interests, losses, and energy reduction. Anxiety stimulates social activity, makes people more susceptible towards, first, to social innovation, and secondly, to social dysfunction. High innovative activity leads to a more rapid pace of economic and social development of the country.

*Immigration Policy, Gender, Identity and Their Implications For Sub-Saharan Africans Living In Japan*

Japan is a relatively new immigrant destination among advanced post-industrial nations. Despite increased migration since the 1980s, Japanese immigration policy provides relatively few avenues to citizenship or permanent residence and even fewer accommodations for family reunification. Furthermore, Japan has experienced a prolonged internal debate concerning the effects of migration on national identity and belonging. For the majority of migrants within Japan, the only way to regularize their status and legally remain in the host society is to marry a native-born Japanese citizen. Sub-Saharan Africans represent a novel migrant group to study in Japan because they are racially, ethnically, and culturally distinct from the majority-group (a “visible minority”) and their status as Africans is often denigrated within Japanese society. I use in-depth interviews and participant observations from a 12-month period in the Greater Tokyo metropolitan area to interrogate how Sub-Saharan male migrants negotiate their status within Japanese society. The issues of greatest interest arising from the research are: the gendered nature of citizenship in Japan, strategies for asserting masculinity in perceived emasculating settings, priorities in partner selection, and negotiating cultural and gender differences in maintaining the family structure. I argue that marriage to a Japanese national is not only the primary mode for regularizing a migrant’s legal status, but the most essential avenue for providing invaluable access to social capital and social networks.

*Marriage As a Social Resource: Distinctions Among Immigrants In Japan*

Classic studies on immigration to traditional receiving destinations describe intermarriage with native-born populations as one of the final steps towards group assimilation (Gordon 1964; Bogardus 1968; Barth 1969). Although aspects of this argument have been complicated (Alba and Golden 1986; Song 2009) or revised (Kalmin 1993; Rosenfeld, 2001), the basic premise has remained intact (Qian and Lichter 2006; Cherlin 2004; Waters and Jiménez 2005). Research on new receiving destinations, however, has been much less conclusive about the nature and sequence of native-born/immigrant intermarriage within the process of group assimilation (Kalmin 1998). Using interview and observational data gathered from the Sub-Saharan African population residing in the Greater Tokyo Metropolitan Region between July 2010 and August 2012, I show that marriage is substantially different across two distinct classes of migrants. For migrants incorporated as low-skilled or non-credentialed laborers, marriage to native-born individuals is the first step towards assimilation because it is the fastest, most readily available avenue for obtaining legal long-term residence in Japan. For migrants incorporated as high-skilled or professional laborers, stability of legal status and comparatively broad access to human capital and social networks results in a less instrumental mate-selection process and increases the likelihood of marriage to non-native-born individuals. The segmented nature of immigrant/native-born intermarriage in Japan highlights the importance context- and country-specific factors play in understanding intermarriage and the process of group assimilation.

*Who Tolerates the Use of Physical Punishment?*

In the end of December 2012, a male senior high school student killed himself after he suffered from frequent use of physical punishment by an adviser teacher of his basketball team. Since then, a large number of serious cases caused by massive wartime controlling have been reported in Japan. This is mainly because it is strongly influenced by WWII since they experienced the wartime at their active adult ages. Using 1955 and 1965 Social Stratification and Mobility surveys, this paper, first, attempts to reconstruct life history data of respondents that enable us to analyze the relations between wartime experiences and careers. The analyses of this life history data, then, reveal that there are clear age differences in wartime experiences among birth cohorts. Third, multivariate analyses of postwar occupational attainment indicate that although educational levels strongly influence patterns of occupational transitions from wartime to postwar period among people who experienced wartime mobilization in their twenties and thirties of age, factors that are more important in the transition period than before. Based on these results, this paper discusses the future possibilities of quantitative historical research.
Starting from colonial times, Brazil has a long history of racial miscegenation. How do families structure their lives with respect to a concept of a racial hierarchy? Several censuses and surveys from the Brazilian Central Statistical Office (IBGE) incorporates some ethnic enumeration with information on race/skin color of the respondent, though mostly self-reported. Alternatives are: “White”, “Black”, “Asian”, “Mixed race” and “Native Brazilian”. Though it is possible that some subjectivity is introduced to the process, temporal consistency is observable, within a 5% error margin. Analyzing census data, one can perceive a time trend towards “whitening” of the population until 1991, with a slight reversal in 2000, resuming the “whitening” trend up to 2010 (the latest census). But how do offspring of interracial marriages self-report themselves? Among possible alternatives, is the race/skin color the only determinant factor? Is this choice affected by geographical region or social status? Is there a noticeable time trend in choices made? The study analysis data from five Brazilian censuses, between 1960 and 2010, in order to identify patterns and trends among offspring of interracial marriages.

Among exogamic couples where one of the partners is “White”, this is the dominant race/skin color alternative for the offspring. When the mother is “White” the difference with respect to other alternatives is even wider, less so, when the father is “Asian”. The reported proportion of “White” children increases with social-economic status to the process, temporal consistency is observable, within a 5% error margin. Analyzing census data, one can perceive a time trend towards “whitening” of the population until 1991, with a slight reversal in 2000, resuming the “whitening” trend up to 2010 (the latest census). In previous work I have looked at the claims of indigenous groups and responses at the local, global, and international levels (Iyall Smith 2011). These cases focused on cases in the global north, including Greenland and the Makah tribe in the US. In this paper I will look particularly at cases in the global south, which may present greater opportunities for success for indigenous peoples than discovered in the global north. Again I will examine indigenous rights within global organizations (focusing on issues emerging from the global south), regional organizations (focusing on regional organizations within the global south including the Inter-American System and the African Commission), and local contexts (cases to be identified, including the Miskito one million acres land claim in Honduras). While the global south is very much a part of the neoliberal political and economic system, some areas have managed to create progressive policies that elevate human rights. The extent to which these policies are enforced is also important to consider. Previous examinations of the UNDRIP and the implications for the global south identify strong potentials for the enforcement of rights (Hall and Fenelon 2009 and Rodriguez-Pinero 2011) and also points of conflict (Murray 2011). With this paper I hope to analyze additional cases to shine more light on indigenous peoples’ potential for living human rights within the global south.
Catholic Faith-Based Filipino Organizations in Japan

This study looks into the Catholic faith-based groups of Filipino mothers in Japan. This paper argues that organizing or mobilizing such groups enabled the Filipino to cope with their situation as immigrant housewives. It explores how Filipino Catholic communities in Japan organize themselves collectively and how their activities are associated with identity affirmations both in religious and ethnic standpoints at their intercultural homes and the community in which they belong.

Discussion of this paper is partly based on an author's three year stay in Japan as a doctoral student and one of the founding members of a Catholic Church-based Filipino community known as the Kaagayap Ota Filipino Associations or KOFA. A reflexive account, this paper narrates the experiences of the organization as it tries to cultivate a “space” in a Japanese Catholic Church. The views of the author cannot be ignored in this writing as he was involved in the process of founding such a group.

Who Refuses to Answer the Question about the Income and How Can We Reduce the Item Non-Response Bias By Using the Propensity Score Adjustment?

The mail goal of this presentation is to find out whether the refuses to question of income are random or not as well as how can we eliminate the effect of item non-response in point estimation.

Firstly, using the Hungarian and Polish data set of ESS 2008, it will be demonstrated that the likelihood to refuse is not random, but rather proportional to the declared level of income. In this part of presentation I will introduce the basic principles of propensity score adjustment (PSA) as a weighting scheme (see Matsu et al. 2011). The former procedure is normally based on the assumption that the model used to match respondents is correct, but I will demonstrate the usefulness of a credit-scoring model for such purposes.

In fact it is also based on logistic regression, but it helps to choose the relevant set of predictors as well as to illustrate and understand the nature of income refusals.

Secondly, based on the data from the “Polish General Social Survey,” an assessment will be provided of whether PSW or PSA leads to lower total survey error (TSE). By removing the known values of income I will consider three patterns of missingness: (a) the random one, (b) the systematic one without 10% of the lowest income values and (c) the systematic one without 10% of the highest values.

Findings are four-fold: (1) PSA is much more effective when missingness mechanism is systematic, however PSW is slightly more effective when non-response is random; (2) PSA increases variance a little bit more than PSW, but (3) PSA decreases bias much more efficiently than PSW. Taking (2) and (3) together, it turns out that (4) PSA estimator seems to be better on the ground that it implies much smaller TSE.

Classical Sociologists on Music and Society

Music is a social phenomenon and a product of social life. There is no culture in which there would be no music. Throughout history, people have created and reproduced music, at the same time making it an important aspect of artistic, aesthetic and social life. Sociological reflection on music and society is as old as sociology itself. Music (as a part of the sociology of arts) is probably one of the most theoretically and methodologically neglected social science sub-discipline. The problem of its theoretical backwardness was stressed out by Alphons Silbermann (1962) many years ago. Its interdisciplinary character causes many theoretical, methodological, and other problems, such as incoherence and lack of consistent conceptual grid. There is also poor debate on the role and significance of classical sociology of music.

The main goal of the paper is to consider the theoretical tradition of social thought on music and society in the classical sociology, especially in such aspects as: musical practices of societies, rationalization of music (Weber), musical identity of groups (Simmel), musical roles (Elia) or musical interactions (Schutz). The

leitmotiv of the presentation is to show how theoretical assumptions of classical sociologists on music and society can be useful for contemporary sociology of music.

New Donors of Development Assistance: Theorizing the Future of the OECD Aid Apparatus

This paper explores the new role that non-OECD nations such as Brazil, India, Russia, South Africa, South Korea and, especially, China are playing in providing international development aid. While global aid flows from traditional OECD nations have remained significant to the development of global politics and what William Robinson calls the “Transnational State” (TNS) apparatus, these new aid donors are challenging the Western nations’ vision of what development means and what kind of global economy is being built. The consequences of these increasing aid flows for the global economy and for the development of aid recipient nations at this point are unclear. But it is crucial for scholars to pay close attention to the rise in official development assistance (ODA) from non-OECD nations as a key indicator of global political and economic integration. Often considered to be of secondary importance to many globalization scholars (who prefer indicators such as foreign direct investment (FDI) and international trade), ODA is perhaps the most important measure of “economic politics” (to use Bourdieu’s definition of globalization) for sociologists of development to observe. Bringing together insights from world systems theory, world polity theory, Robinson’s Transnational States perspective, and Saskia Sassen’s work on deterritoriality and denationalization, this paper will offer some theoretical analysis of the role that new donors are likely to play within the global political economy in the coming decades. Particular attention is paid to whether the so-called “South-South” aid from these new donors is really “South-South,” whether we can expect to see a counterhegemonic shift in aid practice, what kind of future conflicts between donor’s are on the horizon, what this might mean for world state formation, and finally, whether any of this amounts to the beginning of the end for the nearly 60-year old Western aid apparatus.

Multiculturalism and Minority Well-Being in Fourteen European States

Despite pronouncements of its death by leaders of key European states in 2010, multiculturalism “carries on” (to use the Guardian’s term 9/19/12) in public policy at the national and local level in these same states. Kymlicka (2012: 6) argues that “[m]ulticulturalism is part of a larger human-rights revolution involving ethnic and racial solidarity.” Using the European Social Survey (2002, 2008, 2010) for fourteen European states with scores on the Banting/Kymlicka Multiculturalism Policy Index (MPI), we operationalize well-being in terms of the Council of Europe’s (2003) specification of the eight key areas of life (cf. Jackson and Doerschler, 2012). These are employment, housing, health care, nutrition, education, information, culture, and basic public functions (which include equality, anti-discrimination and self-organization) (Jackson and Doerschler, 2012: 1). Greater well-being of minority populations is seen to result from reductions in disparities and polarizations between them and the majority population (European Parliament, 2007). Scores for the eight dimensions of multicultural policy development (Banting/Kymlicka, 2012) allow us to consider the effects that specific state policies have on targeted areas of minority well-being. We furthermore examine the possibility that the situation of minorities also improves when states turn toward multiculturalism because these policies foster economic growth and free up societal resources from security functions. Do minority group members feel safer in states that have taken a greater turn toward multiculturalism? Are minorities better educated and more likely to be employed in these states? Do minorities report greater trust in the political system where multiculturalism has taken hold? What happens to majority group members’ levels of education, employment and political trust as states implement multicultural policies? These are the questions on which this paper centers. With such information, political leaders can defend multicultural policies at the national and local level in these same states.
Multiple Discrimination, Intersectionality and Vulnerability

In its 2012 report, Amnesty International underscores the consequences of discrimination against Muslims in Europe. “Multiple discrimination” is a special focus of the European Union Agency for Fundamental Rights. Discussion of the need for a “Horizontal Directive” (EU-MIDIS, 2010 (5): 5) and the “Genderace” project of the 7th Framework Programme both highlight multiple discrimination and the “intersectionality” (Gendercare, 2010: 272) of axes of discrimination. The Genderace report (2010: 32) uses the term intersectionality “to define a situation . . . in which several grounds of discrimination interact concurrently.” This report follows the European Commission’s 2007 study, in which the problem of multiple discrimination and the significance of intersectionality on the impact of discrimination are investigated. Using the European Social Survey (2002, 2008, 2010) for fourteen European states along with scores on the Banting/Kymlicka (2012) Multicultural Policy Index and its eight dimensions (available for 1980, 2000, 2010), we examine over time both the reported discrimination faced by Muslims on the basis of their religion, race, nationality, ethnicity and gender and the impact of specific areas of state policy on the trajectory of discrimination. We give particular attention to consideration of the discrimination-reducing impact of state policy in eight areas: (1) affirmation of multiculturalism by the constitution, legislature or parliament; (2) school curriculum; (3) media—sensitivity and representation; (4) dress-code exemptions; (5) dual citizenship allowed; (6) funding of cultural activities of ethnic group organizations; (7) bilingual education; (8) affirmative action (Banting and Kymlicka, 2012: 11). On the basis of the results, we assess the policy changes warranted by the data to enable European Muslims to fully utilize their talents and abilities to the benefit of Europe and its member-states.

Sport, Symbolic Capital and Monopoly Rents: The Cultural Politics of the New Zealand All Blacks

In their bid to globalise, transnational corporations (TNC's) utilize a diverse range of strategies and synergies in order to insert into, and locate within, local/national cultures. Amongst their strategies TNC's invest in a range of powerful and innovative marketing and promotional campaigns, marketers; their confidence, in the pressure to attract consumer attention and to distinguish brands has lead to a compelling search for new images and themes where culture has become a giant mine (Goldman and Pappson, 1996) resulting in a range of political, economic and ethical questions This paper traces the promotional culture of the New Zealand All Blacks since the sport went professional in 1995. The focus is on David Harvey's concept of monopoly rent which emerges “because social actors can realize an enhanced income stream over an extended time by virtue of their exclusive control over some directly or indirectly tradable item which is in some crucial respects unique and non-replicable.” (2002: 90). The paper focuses on several specific sponsors (Adidas and AIG), and their advertising campaigns, to illustrate the cultural, political, legal and ethical/moral issues associated with the logic of monopoly rents.

Towards a Practice Theoretic Approach to Understanding Sexuality

In our book ‘Theorising Sexuality’ (2010) we re-worked the Interactionist sociological account of everyday sexual behavior drawing on the work of G H Mead (1937) and utilising the notion of sexual scripts (Gagnon and Simon 1973). We do however, accept some of the criticisms of interactionism as overly cognitive and have attempted to overcome this by developing a more embodied understanding of sexuality - using the example of orgasm (Jackson and Scott 2007 and 2010), and developing the ideas of Luyken and deora in order to enable an understanding of the ways in which sexual interactions are composed. While we have utilized the term sexual practice, and engaged to some extent with the work of Bourdieu we have not, until recently, begun to develop fully a practice theoretic approach to the sociology of sexual conduct. In this paper we will engage with the work of Watzlawick and Watzlawick’ “marriage”。We and Gagne are in order to set out the ways in which sexual conduct constitutes a practice, and to indicate to what extent this approach, if brought together with interactionist ideas, can support the development of a general sociological theory of sexuality.

Environmental Governance and Risks in Brazil

Environmental governance has advanced in Brazil since the Rio Conference. Different stakeholders have had a relevant role in the process that has permeated in a growing scale the process of decision making and formulation of new public policies. The process of environmental governance has brought into scene stakeholders representing the public and private sector and the social movements, mainly the environmental movement.

The incorporation of new social actors with differentiated demands on the management of natural resources has become more frequent as to issues on water, solid waste, biodiversity and climate. The engagement of these different actors has brought to the environmental arena, a logic of dispute and negotiation on aspects linked to natural resources, sustainability in cities, impact of degradation of water sources, loss of biodiversity, conflicts with indigenous population on land, impact of hydroelectric projects and more recently on the impacts of climate variability and its multidimensional aspects.

The paper will approach how national policies are taking place adequately or insufficiently taking into consideration the complexity of the process of environmental governance, and what this implies in terms of enlargement of the role and engagement of stakeholders in the process of decision making. The analysis will focus on the strengthening of deliberative spaces, multistakeholder networks that promote awareness and mobilization to face uncertainties and potential risks in cities and biodiverse spaces and the pressure to reduce socio-environmental and knowledge based asymmetries.

Several civil society organizations have had in the last years important role facing environmental governance and risks in Brazil, and these initiatives have promoted advancements towards democratizing access to information, besides pressuring for more transparent and participative decision making processes on environmental policies and the need to take into consideration diversities, complexities of transformations taking place in a context of global climatic uncertainties.

Developing Care-Technologies While Balancing Utopian/Dystopian Worldviews: Dimensions of Attention

Collaborating since 2005 in different interdisciplinary pre-competitive care technology research projects in Flanders (Belgium), we learned about crucial dimensions to balance the tendency of supporting utopian/dystopian views on the impact on wellbeing and quality of care due to new care technologies. The goal of these subsidized projects is to innovate in a way added value is created for its future users and valorization potentials is the collaborative companies in general the team is rather utopian on the capabilities of the information and communication technology.

Involving potential users from ideation phase towards valorization of prototypes is a primary way to bring balance in looking at both positive and negative consequences of the future care technology. Due to the involvement of social scientists, over the years we moved from a pathology-centered problem definition, over an age-focused approach towards a care dependent approach. Concurrently, we emphasized the need of a multi-stakeholder approach, grounded in the insights of Social Construction of Technology perspective (cf Bijker, Rip). These premises of human-centered design are not enough to balance the tensions and paradoxes encountered when studying the potential consequences of envisioned care solutions and their impact on care-giving.

Recurrent dimensions of empowerment and disempowerment, that are potential pitfalls, are described in this study. The topics for poster discussion and their impact on care-giving, are among the following: the well being and quality of care culture, including care delivery, the role of trust, the ethics of design, the orientation of power, etc. The conclusions for future research are given. Questions and answers are offered in the poster session.

Media Metacommentary and the Performance of Expertise

This paper considers the extent to which media metacommentary – or, the critical comparative reflection about media formats – constitutes a new form of expertise. We begin by tracing out the history of critical discourse that seeks to explore the possibilities and limitations of different cultural formats, arguing that this is linked to institutional development of critics and the larger aesthetic discourse about modernity. Next, we consider how metadiscussion has altered the conditions under which media metacommentary can be mobilized as a performance of expertise, or the display of an expert identity. Ultimately, we argue that the proliferation of new media technologies and the growth of transmedia culture have fundamentally transformed the social organization of expert discourse.

Orphans Other Deadends in the History of Sociology: Symbolic Interactionism and the Mid-20th Century American Compromise

To conceptualize deadends in the history of sociology, we examine how intellectual lineages, networks and institutional histories have been narrated in U.S. sociology. Introductory sociology textbooks are strategic research sites because they are a space where sub-disciplines, academic institutions, curriculum, individual intellectuals, and market dynamics intersect. Examining textbook narratives of the discipline, we ask: What has been narrated as central? What has been omitted and why? On this basis, we identify symbolic interactionism as an orphan – a casualty of the mid-20th century standoffs in the United States between what came to be known as the consensus, conflict, and symbolic interactionism perspectives. The three-fold model of US theory remains a central feature of introductory sociology textbooks today, a fact which explains the isolation of symbolic interactionism from the power centers of disciplinary sociology.

Conflict over Confirmation Teaching in Public School – the Impact of Neoliberal Policies on Local Political Level in Denmark

The neoliberal discourse is part of a larger shift from democratic to neoliberal policies that has been occurring over the past decades; a shift accompanied by both discursive and structural changes in society. If the neoliberal discourse is transforming the core functions of government globally, then this must also be true in the case of the close-cooperation between the Danish state and the national church in Denmark. In this paper the cases of conflict over and transformation of the position of confirmation teaching in Denmark is analyzed in order to find out if the changes is a result of neoliberal policies in Denmark or simply a matter of structural changes caused by another rational basis. In Denmark confirmation teaching is part of the public schools timetable according to the Primary Education Act. Municipalities in Denmark have according to the Primary Education Act the right to place the confirmation teaching after school but until recently it was the tradition to place the confirmations teaching with the local vicar in school. Local politicians are now beginning to alter this tradition. The basic argument used is that the changes are necessary due to efficiency improvement of the public schools (after the merging of public schools) and more efficient utilization of the public schools timetable. Confirmation teaching is by the reform politicians seen as part of the private sphere and the National Church's claim for confirmation teaching in school is seen as an ineffective tradition, which is not corresponding to the state policies efficiency requirements for teaching and efficient operation of public schools. The friction over confirmation teaching is not only about the position of confirmation teaching in or out of school but a case showing consequences of how the neoliberal discourse is transforming religious authority in Danish society.

Transdisciplinary Research on Work and Innovation: Co-Production of Knowledge on Contested Terrain

There is a long tradition of funding research to improve the organization of work according to the requirements of changing production processes and in accordance with the demands of the employees for not only damage-free but also personally and socially rewarding working situations in Germany. Background for this tradition is not at least the high relevance of qualified labour for the German diversification. This research is crossed by two potential lines of conflict: First, scientists are asked to postpone or defer their academic logics in favour of contributing to immediately relevant knowledge production on-site. This line of conflict is widely acknowledged by concepts of inter- and trans disciplinary research (node 2, triple helix, entrepreneurial university, techno science). A second line of conflict results from the social organisation of employment in capitalism. Constant re-arrangements by new ways of deploying labour and of relating work and organisations shape the forms of contradictions between interests or the ways in which action on both sides of the employment relationship. For this line of conflict the concepts of action research and, more recently, approaches to social innovation in the work place give useful instruments for analysis and methodologies. This paper examines how these two lines of conflict in trans disciplinary research and methodology are taken up in the innovative work organisation of the German Federal Ministry of Education and Research. It further investigates which solutions are chosen in the funded joint projects to turn potential conflicts productively. Data are derived from a content analysis of programs and project reports. It is shown, that leaving these conflict-lines implicit rather than differentiating between diverse approaches to research in its context of application explicitly, weakens the potential of the projects' work for stabilising the German production model and shifts balances from sociological towards micro-economic perspectives.

Long-Term Visitors’ Adaptation to the Tourism Context of Costa Blanca, Spain

Tourism and analogous phenomena have assumedly become structural elements of Costa Blanca societies, on the Mediterranean coast of Spain. The large international flows of multitudes of people have also assumedly led to blurred precints here between tourists, holidaymakers, sojourners, drifters, migrants, and residents. Particularly the most economically independent lifestyle and retirement ‘migrants’, residential tourists’ and lifestyle and health-oriented sojourners are still under-researched. On the basis of questionnaire surveys, the paper will explore self-reported adaptation features among Nordic long-term visitors, including language skills, media use and assessments of facets of local and expatriate life.

Multi-Sensory Tourist Experiences

Since the end of the twentieth century, there has been an ocular-centric affinity in tourism research, often related to studies of place images and tourists’ visual sensations. But there is more to travel than sighting: travel experiences are not just in the eye of the beholder but also in the ears, palate, nose, hands and feet. Tourist experiences are both corporeal and multisensory. Although vision is a dominant mode of consciousness in the modern world and some 90% of our perceptual intake is visual, this may not indicate an overall significance of eyesight. What one might call polysensualism is a manifestation of the increased emphasis on senses other than vision in travel experiences. Based on personal interviews, the paper will exemplify some under-researched non-visual tourist experiences related to novel themes on the research agenda.

Decent Work and Corporate Social Responsibility: Contemporary Debates about Human Rights and Paternalism in Organizations in Brazil and Portugal

The concept of decent work (ILO) has recently appeared in corporate social reporting. The social relations of corporate compliance, the types of contract for the regard for diversity and gender equity are themes emerging in business landscape. Despite international instruments for the promotion of human rights within the framework of corporate social responsibility (CSR), such as the Ruggie Report (UN), national discussions and effective practices are not homogeneous. The CSR academic debate revolves around the perspectives on what is understood about the role of social organizations. In a skeptical approach, CSR integrates a new form of authoritarian paternalism whose motor function is masking the “real intentions” of corporations in their quest for higher profits (Thomton, 1966; Wells, 2002). On the other hand, there are currents that emphasize the relationship between the company and society, and the prospects that CSR takes
to build the legitimacy of organizations in contemporary capitalism (Freeman, 1984).

The aim of this work is to investigate the influence of the guidelines of decent work in CSR in the national contexts between Brazil and Portugal, on a comparative basis. We investigated the existing regulatory guidelines for CSR through documentary research, and compared the corporate reports and comparative studies of the relevant legislation. The results demonstrate that while human rights and decent work appear as topics of CSR agendas in both countries, in Brazil, the corporate actions are voluntary, whereas in Portugal, there are laws that reinforce the communication of business practices within the CSR and decent work.

L’évolution De La COMPétence En Organisation Des Collections De Documents Numériques: Le Cas De L’entrée Dans L’enseignement Supérieur

La fracture numérique de second degré (Hargittai, 2002) pose le problème des écarts de compétences médiatiques entre les utilisateurs. Dans un contexte où de plus en plus d’informations sont disponibles (Gantz & Reinsel, 2011), où l’accès à ces informations est toujours plus fragmenté entre des contextes différents (Jones & Thornton, 2009), la dynamique sociale des objets médiatiques se complexifie, la compétence à organiser ces informations devient fondamentale. Cette compétence d’organisation correspond à la capacité à imaginer des structures pertinentes et à les implémenter à l’aide d’objets matériels ou logiciels. Dans les usages, cette compétence à organiser s’actualise aussi bien dans des activités de recherche, que de gestion des flux d’informations, ou de stockage (Jones, 2008).

Une série d’entretiens d’étudiants réalisées avant et après leur entrée à l’université fait apparaître que les plus compétents sont ceux les mieux capables de percevoir, d’adapter et de modifier les affaiblissements de (Norman, 1990) offertes par leur environnement. Trois catégories d’affaiblissements peuvent être dégagées: sociales, techniques et informationnelles. En situation, la compétence d’organisation consiste donc pour l’utilisateur à prendre parti des affaiblissements et contraintes des ouïcs adoptés afin d’aménager l’environnement technologique pour le faire correspondre à sa structure de l’activité de l’utilisateur, de sorte qu’il soutienne au mieux celle-ci (Kirsh 1995).

Trois hypothèses alternatives sont avancées quant aux facteurs de développement de cette compétence : la variété des usages sociaux dans lequel les usages se développent (Ito et al., 2009), et finalement, le rôle du stimulateur des relations sociales de l’utilisateur. Nos premières observations semblent indiquer que, plus encore que l’intensité ou la variété des usages, l’entourage des utilisateurs joue un rôle primordial dans le développement de la compétence d’organisation, en ce qu’il crée des opportunités d’échange et de confrontation de pratiques médiatiques.

JAGODZIŃSKI, ROMUALD* (European Trade Union Institute, rjagodzinski@etui.org)

The paper aims at drawing attention to proper transposition of EU directives as a challenge for ensuring effective workers’ rights to information and consultation (I&C). To this end it looks at the example of implementation of the European Works Council (EWC) directives 94/45/EC and 2009/38/EC with a special focus on enforcement provisions. The choice of implementation of EWCs’ legislation as a ‘lab case’ is relevant in several ways: a) being an EU originating institution requiring implementation into national industrial relations (IR) and legal systems; b) they have a perfect example of tension between coherence of centrally introduced rights and their national ‘conjugation’; c) the original directive 94/45/EC, substantially modified by recast directive 2009/38/EC and recently transposed provides for an apt up-to-date test-case; d) it addresses loopholes in existing research and has both a political and practical relevance for over 1000 active EWCs and over 17 mil. workers they represent.

The paper will provide comparative overview of national transpositions of specific key provisions of directive 2009/38/EC and an analysis of their coherence with the source regulation. Focusing on transposition of enforcement provisions on access to justice and sanctions it will argue that a formalistic ‘copy-paste implementation’ without consideration of the ultimate principle of effectiveness acts as impediment to coherent application of the fundamental right to I&C. To this end it will present jurisprudence of the European Court of Justice and research on the meaning of ‘effective, proportionate and dissuasive sanctions’.

The paper will also argue against the lenient approach supporting the view that differences between national IR justify cases of substantial/excessive, divergences in implementation. By means of reference to EU institutional developments and interventionism in the field of financial market and environmental regulation it will also challenge the view that the European Commission has no competence with regard to setting sanctions.

Do Equality Values Differ in Asian and Western Cultures? Results from the Social Inequality Module of the ISSP 2009

Whether certain values are unique or specific to a group, a nation, or a culture, has been a topic of lengthy debates. During the last decades the interest has shifted from smaller to larger collectives and from smaller to larger regions. The European Values Surveys was an early attempt to identify cultural values, first in West European societies, and later in Europe as a whole. Whether the goal of the enterprise has been reached remains an open question. What most European
societies really distinguish from other societies is the millennia-long Christian tradi-
tion. But has this tradition also brought forth unique values? And if so, are they
still influential in modern societies?

In the nineties a similar debate started in Asia. Asian values were initially seen
as a stronghold against Western value imperialism and against Western democra-
tization. The cultural relativist position prevailed in the empirical research on re-
ligion in Bangladesh. The existing empirical research on values in Bangladesh and
anywhere else in the Islamic world is based on the assumption that the values are
homogeneous and stable. This is not true. Varela and Jaffrelot (2004) have shown
that values have changed in the last decades. Islam has been affected both by the
failure to engage in the modernization process and by the exposure to Western
values.

The present paper proposes to study the concept of illegal people, which has
been used to describe and understand how families function and interact with
their referents. The family is a complex system of individuals interacting with one
another. The concepts of family cohesion, family adaptability and family communi-
cation are key to the functioning of family systems. Here, under the paper proposes
to study and understand the concept of illegal people, how illegal migration is being
aided by the process of globalization and how does it harm the native society and
also the ill effects of migration on the migrants.

The aim of this paper is to analyze certain changes in evangelical identities and
their religious capital in the religious field at Baja California, following the impact
of charismatic movements and the crisis of denominational models during the
1980s, and their relation to the expansion of the so-called “Christ-therapy” in Re-
habilitation Centers for drug addicts. From a general perspective, religious capital
has suffered a series of rearrangements within the referents mainly anchored in
religious, religious and social participation. In this sense, many of these churches have found that an increasing demand for rehabilitation of drug users, and the withdrawal of the Mexican State from the health sector, has opened room to replicate social change projects based
on individual conversion. To study the above, this paper analyzes some cases of
Rehabilitation Centers in Tijuana, and Ensenada, Baja California.

JAHAH, MEHRAI* (NAW, mehraj.jahan@zu.ac.ae)

Formal and Informal Female Migration: Challenges of Governance in Bangladesh

In the last three decades, Bangladesh has grown to be an important source of
migrant labor, however, has lagged far behind the male migration. Starting with a small
number, in recent years the number of Bangladeshi women has grown. Official figures put the proportion of Bangladeshi female labor migrants at 1% of the total number of migrant workers in 2003. In recent years proportion of women as total migrants is estimated at around 14%. Bangladesh female migrant workers go to the Gulf countries, Lebanon, and Singa-
apore to work as domestic workers. Many Bangladeshi women also went to work
in the textile industries in Malaysia, Mauritius and Korea. In addition to formal la-
or migration, an underemployed number of female workers go to neighboring In-
dia to do work as domestic workers as well as in entertainment industries. The issue of
Bangladesh female migrants in India has created controversies in Bangladesh-especially, in view of the harsh treatment they face as undocumented workers.

The present paper examines how the government of Bangladesh has dealt with the issue of female labor migration and what are the public policies in place to promote safe female migration to the Gulf countries and Lebanon and how concerned authorities of Bangladesh government deal with the informal female migration to India. Using interview methods and analysis of secondary data, this paper will draw attention to the Bangladeshi female migrants in the Gulf Cooperation Council (GCC) countries and Lebanon. Policy issues, especially innovation in migration policies will be examined in this paper.

JAIME-CASTILLO, ANTONIO M.* (Universidad de Málaga, amjaime@uma.es)

Inequality of Opportunities and Preferences for Social Policies

The positive relationship between democracy and equalization of income pre-
dicted by the well-known Meltzer-Richard has been highly criticized on both theo-
retical and empirical grounds. In this paper, I analyze whether inequality of oppor-
tunities (rather than outcomes) is connected with preferences for social policies
at the individual level. I focus specifically on the sources of current inequalities by
decomposing individual outcomes into a fair share, which can be attributed to personal merit and effort, and surplus outcomes, which are the results of struc-
tural barriers in the labor markets or depend on inherited factors such as social
background. To do that I rely on the methodological approach used by the grow-
ing economic literature on reference groups, in which individual income is the
product of two components: the average income of the group and an idiosyncrat-
ic factor, which is the result of individual attributes. I use data from five waves of
the European Social Survey in order to test these hypotheses. Empirical findings
prove that occupational status and individual differences with respect to refer-
ce groups (especially those caused by inherited disadvantages) have a strong and
significant impact on preferences for redistribution. In addition, educational inequal-
ity has a negative effect over preferences for redistribution at the aggregate level.

Making People Illegal: What Globalization Means for Law and Migration

It is worth examining as to why people and tribes of people are being termed
illegal, what is it that does not give them support in the country they seek shelter
and why do they leave their native land to find shelter in a foreign land. Here
under the paper proposes to study and understand the concept of illegal people,
how illegal migration is being aided by the process of globalization and how does it harm the native society and also the ill effects of migration on the migrants.

Technology and Family Leisure: Is It the Way Forward?

Families are one of the fundamental units of society and are the building blocks of
social structures and organizations in every culture. A theoretical framework that
has been used to describe and understand how families function and interact is
the Family Systems Theory (Steinglass 1987; Whitchurch & Constance 1993).

The family is a complex system of individuals interacting with one another. The concepts of family cohesion, family adaptability and family communication are key to the functioning of family systems. Over the last seventy years, researchers have consistently reported positive relationships between family leisure and positive family outcomes when examining
recreation and leisure patterns among families (Hawks 1991; Holman & Epperson
1984; Ornth & Mancini 1991). Enjoying family leisure time can be a way through which cohesion, adaptability and communication is increased within families. The perils of the modern world with its fast paced life, both parents working, emergence of nuclear families, pressures of weekend socializing, demands of curriculum on the children have all
made a serious dent in family leisure time.

The present paper proposes to examine the role of technology especially com-
unication technology in promoting family leisure time amongst urban educated
families.

Multi-Scale Analysis of the Effects of Socio-Spatial Segregation

The variable “space” is increasingly being used by scholars in the social sciences.
In this sense, the methods that use spatial analysis are becoming more known

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.

442
by social scientists. One of the most important applications of the use of spatial analysis in sociology, demography and population studies is the socio-spatial segregation. Some countries are studying the spatial concentration of the population with respect to race/color, but in others, such as Brazil, the miscegenation of the population is high, and so it makes no sense to study segregation by this variable. In this case, the income of the person can be the key variable in this process. Spatial analysis techniques, such as isolation indexes, are then used to analyze the spatial segregation according to income, translated by poverty or wealth. However, in each geographical unit (scale) used, the result of the analysis may be different. Therefore, the primary goal of this paper is to create a multi-scale analysis of the effects of segregation in terms of isolation of poverty and wealth indicators. Our assumption is that when we increase the scale of the segregation analysis, the inequalities also increase. And this is what we attempt to show with this paper, using data from census tracts of 2010 for the city of São Paulo, the most populated in Brazil.

The Changes in the Form of Japanese Integration in Brazil

The beginning of the 20th century is considered a starting point for more significant flows of international migration in the Brazilian Amazon, with the arrival of different people, especially from European countries as well as Japan, due, among other reasons, to the political instability of the period of war that the world had faced. The arrival of these migrants changed the Brazilian society in several aspects, with regard to the insertion of new cultures, traditions etc. Thus, the objective of this work is to analyze the socio-demographic profile of the Japanese migrants in Brazil by regions, including the Amazon, in terms of their date of arrival in the country, their occupation in rural or urban areas, and also of migrants who left the country. Typical Japan in an attempt to understand possible changes in the aspirations of the younger Japanese generations with respect mainly to occupation, which traditionally has been widely recognized for their contributions in the Brazilian agricultural production. In order to do that, data from the Brazilian Demographic Census of 2010 will be used to create maps of spatial concentrations and to compare the Japanese migrants with more long-standing in Brazil with those who arrived more recently to find out until what extent the younger generations are preferring other occupations and other housing locations instead the traditional ones and with this leaving aside their traditions and modifying their forms of integration in society.

Autochthony, Whiteness and Loss in Outer East London: Tracing the Collective Memories of Diaspora Space

This paper explores autochthony through the memory practices of Newham, East London. It addresses how remembering East London as the home of whiteness and traditional forms of community entails powerful forms of forgetting that feed into contemporary ideas of racialised territorial belonging. Newham's formation through migration its 'great time' has ensured that myths of indigeneity and whiteness have never stood still. Through engaging with young people's and youth workers' memory practices, the paper explores how phantasms of whiteness and class loss are traced at the same time as the migrant, a figure of racial decline, is constructed. It addresses how this tracing reveals ambivalence, porosity, and the continued allure of race. Overall, it explores how whiteness and loss develop into autochthonous forms appropriated across ethnic boundaries, and how they are mobilized to produce new forms of racial hierarchy in a 'super-diverse' place.

JANDA, VALENTIN* (Technical University of Berlin, valentin.janda@tu-berlin.de)

Bug and Future Usage – Design As Twofold Problem

My ethographic field is a design laboratory in which young German designers develop wearable textile-electronic interfaces. It can be observed here that the characteristics of the design-work are quite different compared to the work of scientists, as for example Karin Knorr Cetina or Harry Collins have put it in. In short, two types of practices can be found in the field of design: Designers talk about the use and the benefits of their conceptualized design objects systematically in meetings and informally on various other occasions. They ask themselves, what their design object is it good for and who will use it and when. In a less abstract level of their work, the designers are very concerned to create a functioning prototype. They have to arrange every material detail and technical problem of the prototype, as with the interfaces stitching, wiring, programming, de-bugging etc. According to Bruno Latour, objects are an indivisible compound of contextual meanings and materiality. My data shows that the designers work on both sides of this notion of object: They have to design both, an object's meaning and material function. These two different kinds of goals require two different types of work practices. It shows that these practices interfere heavily with one another, although they are very different in character. Whereas the work on meaning and utility is anticipatory and therefore never concluded, functional and material problems pop up in the present progression of a designer's work and have to be solved or circumvented to keep the work process going.

For analyzing the creation of new technology, it is crucial to observe the designer's anticipation of utility over the whole process. They may vary in substance and become less obvious for the ethnographer, but basically the interplay of anticipation and construction constitutes the outcome of a design process.

JANG, WONHO* (University of Seoul, wzjang@uos.ac.kr)
BYUN, MIREE (Seoul Institute)

Urban Scenes and Place Identity: The Case of Seoul

The scene perspective can help us understand cities in terms of cultural amenities. Its abstract characteristics can join Asia with the US and Europe so that social scientists, policymakers, and average citizens can coherently interpret common features of world city systems. Scenes can be defined as the specific lifestyle of a place. Thus, a scene is more than a neighborhood or its physical structures. It includes collections of people labeled by race, class, gender, etc. It also includes specific combinations of these groups and activities that join them together. With these characteristics, scenes show the specific cultural tastes of the residents, shop owners, and visitors. They show their own internal logic and dramas that, for instance, shine glamorously rather than fade into anonymity, project warmth and intimacy rather than distance and aloofness, maintain an authentic and real life rather than a phony existence.

Place identity can be formed through interactions between the physical characteristics of specific places and the people using the physical facilities. In this sense, urban scenes are closely related with place identity. Both urban scenes and place identity are considered as contributing to the creative regeneration of a city. In this paper, we present how urban scenes can contribute to developing place identity in Seoul. To do so, we will compare a Seoul scene map with a map of the migration populating of Seoul. This will lead us to incorporate characteristics of people into the facility data of the scene map in the specific place of Seoul. With this analysis, we expect to capture the dynamics of place identity and the influence of scenes on party identity.

JANKOWSKI, BARBARA* (IRSEM France, barbarajanko@yahoo.fr)

Sharing Information at the Operative Level

The information is vital in the conduct of war and the whole field of information warfare focuses on how one can achieve superiority over the enemy. Thus we will only know more about how we protect vital information, or how they are obtained than on how information is shared within a specific force. Human and interactional dimensions of war have less been studied whereas “friction” and “fog” act as much between the belligerents as within the armed forces.

My presentation will focus on information sharing, on cooperation around information. Officers are trained in staffs where they learn to plan and conduct operations. How do they train on information sharing? If the control of information is considered a factor of operational superiority, how do they learn to get it? How are they prepared to work in a multinational environment? This is even more important because in the future the national armed forces will have to cooperate in various environments: NATO, EU, ad hoc, multi and bilateral, military or not.

The paper will focus on the decision-making process: assessment of the situation, decision, order transmission, reporting. This presentation will be based on a field work that will take place in the first half of 2014, inside French joint staffs training center.

JANSSON, ANDRÉ* (Karlstad University, andre.jansson@kau.se)

Hospitality and Recognition in the Transmedia Age: Mediatization As Social Critique

Recent (trans)media innovations, such as the smartphone and social networking sites, have drastically altered the conditions of everyday life in affluent societies. Such developments have on the one hand contributed to potentially expanding lifeworlds and extended social affordances in terms of mobility and social connectivity. On the other hand, research from various disciplines has pointed to social disorders, or ‘pathologies’, related to the everyday dependency on such technologies, as well as to the socially segregating nature of these developments. Against this backdrop, the suggested paper engages with the ongoing academic debate around mediatization, generally understood as a meta-process of complex socio-cultural change, and focuses particularly on the critical potential of this concept. The argument is developed in three steps. Firstly, a general approach to social criticism is presented, based primarily on the works of Axel Honneth and media theorist Roger Silverstone. Here, the concepts of hospitality (Silverstone) and recognition (Honneth) are singled out as key (mutually dependent) facets of a socially sustainable and egalitarian (global) society. Secondly, the paper introduces a model of mediatization as a socio-spatial meta-process, based on Lefebvre’s triadic notion of social space. The combined social forces of mediatization are mediated through three regimes of dependency: “material indispensability and adaptation”, “premediation of experience” and “normalization of social practice”. These regimes are to be understood as analytical tools for advancing a critical approach to the mediatization meta-process. Finally, the paper provides an empirically grounded analysis of the current status of hospitality and recognition in mediated lifeworlds. The empirical analysis integrates qualitative interview data from two different field-work sites; (a) a small-town middle class neighborhood in Sweden and (b) an expatriate community of UN employed Scandinavians in Geneva, Switzerland. Altogether, the paper contributes to a situated and contextually sensitive critique of mediatization.

JAROSZ, EWA* (Polish Academy of Sciences, ewajarosz@yahoo.com)

Social Structure and Daily Behaviours: A Cross-Sectional Analysis of Time-Use Patterns in Poland and Armenia

Sociological and economic literature points to numerous differences across societies and social categories in their patterns of time allocation. For instance, studies of the labour force show that daily behaviours differ significantly between people of higher and lower occupational status (e.g. Kohn and Schooler, 1983), in the same time, behaviours of one social category, e.g. the unemployed, can be substantially different across different societies (e.g. Krueger, 2008). There are thus at least two dimensions that affect people’s daily time-use patterns: social norms and arrangements in a particular country, and individual place within the social structure. This study addresses both of them, analysing the influence of the macro-level setting (country) and basic social characteristics (gender, age, and employment status) on individual time-use patterns. This approach focuses on differences in the sequence structure and time allocation (e.g. unpaid work, socializing) analysed in a cross-sectional perspective. Since most of the existing reports on structural differences in behaviours come from developed Western countries, this study uses time-use data from the countries rarely included in comparative research, and no research carried out in the field. For instance, the time-use patterns of Poles and Armenians are compared in terms of how much they differ across social categories, as well as what are other lines of such differentiation in these societies. The additional benefit of the study is that it compares daily practices in the countries of Central Eastern Europe and the South Caucasus region.

RC28-481.4

JAROSZ, EWA* (Polish Academy of Sciences, ewajarosz@yahoo.com)

Stuck in the Moment? Time Perspective and Time Allocation Across Social Classes in Poland

Individual’s time perspective and everyday time-use patterns have major impact on all realms of human life. They influence the chances for upwards mobility and affect individual life trajectories. As put by Jeremy Rifkin, “those who are most present oriented are swept into the future that others have laid out for them” (Rifkin, 1987). However, time perspective is a multidimensional phenomenon and needs to be studied in relation to the actual time use patterns – in which it is supposed to be reflected. Only combining attitudinal and behavioural data can give deeper insights into socially differentiating role of temporal arrangements. This study analyses daily time allocation patterns in conjunction with temporal preferences and the possible drivers behind them – such as individual time perspective and time constraints. It focuses on the relationship between the perception of time or daily allocation of time and individual position in the social structure. Using quantitative data for Polish population aged 24-65 (n=780), it shows how temporal orientations and perception of time are related to individual social position and how they differ depending on the respondent’s genders, age, educational attainment or occupational category (ISCO-based). The study casts light on the much overlooked dimension of social inequality, including the effect of temporal perspective on status attainment, social determinants of the ability to plan long-term and delay gratification, as well as the life course-related choices and their consequences.

JASSO, GUILLERMINA* (New York University, gj1@nyu.edu)

Happiness in the New Unified Theory of Sociobehavioral Processes

This paper explores more deeply the part played by happiness in the recent attempt to unify justice, status, and power theories. Specifically, the paper does three things: First, it strengthens the foundation from Plato and Aristotle for the theory’s premise that different people seek happiness in different ways and by different means. Second, it connects those different ways and different means to the attributes and possessions that people care about, as well as to the basic outcome -- justice, status, or power -- that is activated. Third, the paper analyzes a new set of situations in justice theory, in which individuals may compare themselves to everyone who outranks them (on the salient attribute or possession), everyone who outranks them, or everyone in general. These situations lead to different outcomes both for individuals and for societies. Further, the paper shows vividly the implied effects of inequality in the distributions of attributes and possessions on average happiness and inequality in happiness.

Technologies De Communication Et inégalités D’Usage

Il est devenu quasiment impossible de se déconnecter des technologies de l’information et de la communication. Parce qu’elles sont des facteurs sujets du quotidien, synonymes d’immédiateté, de sécurité, d’ouverture et d’évasion. Se tenir informé, gérer son emploi du temps, faire ses réservations et achats, se sentir en sécurité et près des êtres chers malgré l’éloignement physique, autant de raisons nous portant vers une connexion permanente. Mais cette connexion est aussi synonyme d’informations non désirées, d’appels intempestifs, de surcharge de travail, de confusion entre urgence et importance, de nouvelles dépendances et de contrôles non autorisés.

Face à cela, des tactiques de réajustement visant à reprendre la main dans la gestion de son temps et de ses occupations apparaissent. Il s’agit de conduites de refus, non pas des technologies de l’information et de la communication elles-mêmes, mais de certaines de leurs utilisations, en particulier celles qui conduisent à des excès, au branchement continu et même à des formes de dépendance ou de contrôle. Or, il s’avère que cette capacité de maîtrise des flux informationnels à des excès, au branchement continu et même à des formes de dépendance ou de refus, non pas des technologies de l’information et de la communication elles-mêmes, mais de certaines de leurs utilisations, en particulier celles qui conduisent à des excès, au branchement continu et même à des formes de dépendance ou de contrôle.
Growing Trends in Non-Standard Employment in Nigeria: Insight from the Food and Beverage Industry

In spite of the effort of the International Labour Organization (ILO), to promote social justice and recognition of human and labour rights, decent working conditions have continued to elude workers in developing countries. Job creation has gone hand in hand with the proliferation of non-standard work contracts in Nigeria such as temporary work and part-time employment. The World of Work Report 2008 showed that the incidence of part-time and temporary employment has increased over the past two decades globally. Workers joining the labour market find it easier to secure casual employment without proper contract or access to social security and remain more vulnerable to sudden changes in market conditions. Most workers accept severe cuts in their wages when fortunes change and are less likely to take part in training. It is estimated that approximately 4.2 million job losses had been recorded in the entire sector between 1983 and January 2006. Apart from job losses, most workers are not adequately protected as most organizations are continuously at odds to comply with labour laws that abolish workers’ exploitations in any form as well as high workers’ violations concerning fundamental human rights at work as entrenched in the Labour Act of 2004. This study explores both primary and secondary data in bringing out clearly this phenomenon in the food and beverage industry in Nigeria. A total of 500 questionnaires was administered to workers in three selected organizations that have high incidence of non-standard employment as well as 20 interview session with some selected workers and union executives. The study found that this kind of employment have tremendous impact on the workers, who have continued to be voiceless at work, lay-off at will, engaged in poor quality of work, casualised, informalised, and are forced to work among others things.

Mobilizing for Immigrants’ Rights Online: Creating Symbols of Belonging to the “American” Nation

It’s no secret that being an immigrant, especially an unauthorized immigrant, is a challenge these days in the United States. Discrimination, marginalization and deportation loom large, and comprehensive and fair immigration policy seems an elusive goal. In response, the immigrants’ rights movement increasingly mobilizes online. Among these cyberactivists’ primary tools are symbolic representations of immigrants as they continue to defy labour laws that abolish workers’ exploitations in any form as well as high workers’ violations concerning fundamental human rights at work as entrenched in the Labour Act of 2004. This study explores both primary and secondary data in bringing out clearly this phenomenon in the food and beverage industry in Nigeria. A total of 500 questionnaires was administered to workers in three selected organizations that have high incidence of non-standard employment as well as 20 interview session with some selected workers and union executives. The study found that this kind of employment have tremendous impact on the workers, who have continued to be voiceless at work, lay-off at will, engaged in poor quality of work, casualised, informalised, and are forced to work among others things.
Rebuilding Memories, Projecting Utopia in Lac-Mégantic Reconstruction

On July 6th 2013, a train carrying crude oil derailed in downtown Lac-Mégantic, a town of about 6,000 located in the Estrie region. The industrial accident caused a series of explosions, killing 47 people. The fire destroyed almost half of the main street and affected the surrounding residential areas. The disaster created an acute awareness of Quebec cities vulnerability to industrial risks. On one hand, it launched a debate among planners, business groups and other decision-makers on how to design the train tracks crossing densely populated areas. On the other hand, many questions remained on how to maintain sustainable local economies that rely very much on the presence of the railroad system. Reconstruction plans were laid out within weeks of the disaster, proposing to redevelop a new commercial area, and creating a memorial ground where once stood the destroyed buildings. The community seemed absent of the debate, seen rightfully as a victim of events, and yet not perceived as an actor of the reconstruction process. The destruction of the urban fabric of Lac-Mégantic raises issues of collaborative resilience and participatory planning: cities are spaces of the every day, of belonging and of life. Studies have shown that connecting social and cultural resilience to planning and policy can generate a stronger collective capacity in decision-making. The loss of space called for an affective response that traditional Canadian planning is sometimes overlooking. This communication proposes to discuss the use of cognitive maps as a methodological tool that can be used in understanding how people perceive their environment, the lost one, the one that is being lived in and the one that will be built. It will analyse how they can highlight the construction of overlapping narratives that can contribute to the resilience process, and how it can potentially be used in the reconstruction process.

Putting Care at the Center of the Global Agenda

Since care has been usually provided in the domestic economy, in the “private sphere of life political” (as Hobbes and Schmitt would put it), research on the history of churches – both catholic and evangelic – clearly shows how the national identity and ideology influenced their institutional form. Nowadays, religious identity, which influences the political choices, is connected with the religious extremism, unwelcome lack of separation between church and state, establishing political rules due to religious norms, which leads to human rights violation. My aim is to describe opposite side of the idea of linking religion to politics and nationality. Moreover, the concept which I’ll present is intersubjectively considered to be morally right, possibly because of history.

In the times of Nazi regime every choice made was political, obviously. It made nearly everything sphere of life political (as Hobbes and Schmitt would put it). I want to show how “benevolent dictatorship” (Raymond, 1998, 1999/2004) model on one hand contradicts the a-, or anti-hierarchical ethos of Wikipedia. Through a case study of development of Jimmy Wales role in Wikipedia media community, I am going to show that, in principle, “FLOS communities only tolerate an individual’s exercise of authority over her areas of expertise” (Monteiro-Geirn & Steinmueller, 2008), with a possible exception to recognizing also organizing skills (Vo & Aylott, 2004, Carter, Chidambaram & Becker, 2000). I am also going to show that leaders in open collaboration movements have to carefully and sparingly accumulate merit and charisma (Besog, 2010), and that they can lose it overnight, after one careless blunder. I am going to seek conclusions for the pros and cons of celebrity leadership, and describe the current role of Jimmy Wales, who gained real momentum and increased his influence only after he resigned from performing most of active duties on Wikipedia. (references cut out due to exceeding word-count limit).

Incorporating the Social Investment Element into East-Asian Productivist Welfare System: Path Dependence or Path Breaking?

The critical difference between East Asian productivist welfare state and European social investment welfare state is the logic of social policy formation. East Asian productivist welfare state was designed according to the principle of ‘economic developmentalism’ to achieve economic catch-up. However, European social investment welfare state is emerging as a new policy paradigm to adapt new knowledge-based economy and deal with new social risks.

East Asia (and probably, in Southeast Asia) led East Asian governments to push investment welfare state. However, the logic of economic developmentalism in Europe is sometimes overlooking. This communication proposes to discuss the possibility of improving European social investment welfare state and to highlight the continent of discourse and rationale for this change. The political position of different actors (political parties, unions and employer organizations) toward this change will be examined. Moreover, a new social/political cleavage and possible building of effective coalition for pushing this social investment in East Asian context will be examined.

JELIN, ELIZABETH* (CIS- CONICET IDES, elijelin@gmail.com)
Putting Care at the Center of the Global Agenda

The pervasive inequalities in the world limit the prospects of masses of people – persons as well as communities – of living full and satisfying lives. The deficit in wellbeing reflects a critical deficit in care, since the core of wellbeing is to be found in caring and receiving care. All human beings have to be cared for; most human beings (notably women) are responsible for caring-of- strain during long periods of their lives. Survival depends on being cared for. Social bonds depend on and express themselves through caring.

Since care has been usually provided in the domestic economy, in the “privacy” of families and households, the deficit was and still is to a large extent invisible. Contrary to current trends in the political economy of the world implying privatizing previously public or common goods and grounds, the shift is towards conceptualizing care as a public good and as part of the collective societal responsibility. This move implies a paradigmatic shift in the way social sciences have conceived social practices and understood social inequalities – between regions of the world, between income strata, between age groups and ethnic lines, between men and women and among women themselves. Therefore, an integrated consideration of the institutions (states, markets, families) and the belief systems that regulate gender regimes, global migratory regimes, age patterns, ethnic and racial categorizations, can provide the clues that could guide public action leading to redress some of these central global injustices.

At the intellectual and scholarly level, this paradigmatic shift calls for revising and renewing conceptions of the links between micro and macro levels, of the private/public divide, of needs and emotions.

JEMIELNIAK, DARIUSZ* (Kozminski University, darek@kozminski.edu.pl)
Celebrity Leadership in Open Collaboration Movement

As Coleman observes (2011), open collaboration communities can rely on two diametrically different leadership philosophies: with a charismatic, celebrity leader (Wikipedia, Linux, to some extent Linux) or with no clear leader at all, or leadership passed from person to person (the Anonymous, Debian).

I would like to present the results of a long-term, participative, ethnographic study of Wikipedia community, and the role of Jimmy Wales in organizational cultural development. I want to show how “benevolent dictatorship” (Raymond, 1998, 1999/2004) model on one hand contradicts the a-, or anti-hierarchical ethos of Wikipedia. Through a case study of Jimmy Wales role in Wikipedia community, I am going to show that, in principle, “FLOS communities only tolerate an individual’s exercise of authority over her areas of expertise” (Monteiro-Geirn & Steinmueller, 2008), with a possible exception to recognizing also organizing skills (Vo & Aylott, 2004, Carter, Chidambaram & Becker, 2000). I am also going to show that leaders in open collaboration movements have to carefully and sparingly accumulate merit and charisma (Besog, 2010), and that they can lose it overnight, after one careless blunder. I am going to seek conclusions for the pros and cons of celebrity leadership, and describe the current role of Jimmy Wales, who gained real momentum and increased his influence only after he resigned from performing most of active duties on Wikipedia. JEN-DER LUE, PETER JEN-DER* (National Chung-Cheng University, jenderlue@gmail.com)
Incorporating the Social Investment Element into East-Asian Productivist Welfare System: Path Dependence or Path Breaking?

The critical difference between East Asian productivist welfare state and European social investment welfare state is the logic of social policy formation. East Asian productivist welfare state was designed according to the principle of ‘economic developmentalism’ to achieve economic catch-up. However, European social investment welfare state is emerging as a new policy paradigm to adapt new knowledge-based economy and deal with new social risks.

East Asia (and probably, in Southeast Asia) led East Asian governments to push investment welfare state. However, the logic of economic developmentalism in East Asia (and probably, in Southeast Asia) led East Asian governments to push investment welfare state. Third, one of the critical features of the social investment welfare state is the focus being placed more on the life course and on the future than on equality of outcomes in the present. Last but not least, the concept of citizenship in East Asian productivist welfare state and European social investment welfare state is different.

Given the differences of the East Asian productivist welfare regime with the European social investment welfare state, the logic of economic developmentalism in European social investment welfare state, but not in East Asian productivist welfare state. Third, one of the critical features of the social investment welfare state is the focus being placed more on the life course and on the future than on equality of outcomes in the present. Last but not least, the concept of citizenship in East Asian productivist welfare state and European social investment welfare state is different.

Given the differences of the East Asian productivist welfare regime with the social investment strategy in Europe, some ‘active’ components and mode of welfare delivery have changed recently in East-Asian countries, particularly Japan, Korea and Taiwan. This article aims to highlight the continent of discourse and rationale for this change. The political position of different actors (political parties, unions and employer organizations) toward this change will be examined. Moreover, a new social/political cleavage and possible building of effective coalition for pushing this social investment in East Asian context will be examined.
For parents of intersex children, from the moment of birth, if not before, the announcement of sex is replaced with an announcement of a different kind: that of a medical and social emergency. A body that is not clearly male or female as a result of its chromosomal makeup, hormonal balance or external genitalia, is given the diagnosis of 'indeterminate sex' (ICD-9-CM code 752.7). But this diagnosis is the starting point for a further diagnostic pathway where implicitly diagnosing sex en route to treatment recommendations. In this paper, we examine the diagnosis of intersex as a site that renders visible the process of social diagnosis (Brown, Lyson, Jenkins 2011). As argued in the framework, diagnosis is social because of both the variety of social actors involved in diagnosis and because it diagnoses social structures that contribute to health and illness. In this vein, we (1) show how multiple social actors (e.g. parents, doctors, technol- ogy, legal and cultural institutions) contribute to diagnosing the individual’s ‘true sex,’ which, once determined, can be ‘restored’ medically. We then (2) set out to diagnose the social structures that make intersex a medical and social problem. In line with other scholars (e.g. Fausto-Sterling), we view sex in a multi-dimensional space, with male and female representing only two points. It follows that a system that diagnoses intersex, in effect, also diagnoses sex. We argue that since most cases of intersex do not involve physical dysfunction, it is this social compulsion to categorize sex that make intersex individuals ‘sick’ – not their chromosomes or organs.

The Myth of Meritocracy in the American Medical Profession

JENKINS, TANIA* (Brown University, tania.jenkins@brown.edu)

The United States currently graduates approximately 40% fewer physicians than are needed to fill postgraduate residency positions. The remaining positions are filled by American graduates of foreign universities, foreign medical graduates and osteopaths. The result is that US medical graduates (USMGs) are the most competitive candidates for residency, getting priority access to the most desirable positions. Last year, for example, over 90% of spots in plastic and orthopedic surgery were filled by USMGs. In contrast, non-USMGs fill lower-prestige residency positions in less desirable geographical locations and specialties (like internal medicine). In some cases, this has resulted in very polarized training envi- ronments – social and friendly programs staffing only non-USMGs, and highly prestigious ‘traditional’ programs training only USMGs. Because of major differ- ences in resources and medical service offerings, these programs have vastly dif- ferent approaches to teaching which can affect residents’ opportunity structure post-residency, especially in subspecialty training.

This paper explores why this arrangement persists, in spite of its implications for inequality. What are the social forces and beliefs that sustain this system of stratification among internal medicine residents? Drawing on two years of eth- nographic observation and interviewing at one such ‘friendly’ hospital, this paper presents evidence for a ‘myth of meritocracy’ among residents. Doctors feel they are individually responsible for their own success, and conversely, that they are to be individually blamed for not reaching certain goals, such as getting into competitive residency and fellowship programs. They also deploy examples of non-USMGs successfully achieving these goals as evidence for this belief, rather than using identifiable structural barriers (i.e. systemic barriers) to explain their success. This results in constraining opportunities for non-USMGs. By elaborating local understandings of social mobility and advantage among medical residents, the paper reveals the power of this myth of meritocracy in obscuring, sustaining, and perpetuating the role of significant social and institutional constraint.

Horizontal Knowledge Dynamics and the Initiation of Students in Expert Cultures: Investigations into Profession-Oriented Programs in Higher Education

JENSEN, KAREN* (University of Oslo, karen.jensen@iped.uio.no)

ENQVIST-JENSEN, CECILIE* (PhD, cecilie.enqvist-jensen@iped.uio.no)

NERLAND, MONIKA* (University of Oslo, monika.nerland@iped.uio.no)

The aim of this paper is to discuss relevant approaches for studying how students get introduced to their expert culture during an intensive, inquiry-orient- ed professional problem in a structured way constitute a key mechanism of induc- tion. By examining and integrating different sources of knowledge while working systematically on a complex problem, the students get introduced to the wider machinery of knowledge construction that constitutes the field of law.

Together with other findings, the study contributes to the field of higher ed- ucation by developing new insights in the way expert knowledge evolves across the research-education-work divide. By revealing the role epistemic practices and their methodological principles play in connecting different sites in the expert cul- ture, this study may also inform current efforts to bridge education and knowl- edge policies.

Factors Conditioning Female Labor Force Participation

JENSEN, PER H.* (Aalborg University, perh@dps.aau.dk)

The aim of this paper is to contribute to a better, more comprehensive under- standing of the factors which explain variations in female labor force participation in different European localities. The major research question thus becomes: how has the interplay between supply side, demand side and cultural factors structured the level and character of female employment in different European local- ities?

Studies of female labor force participation have so far primarily focused on supply-side factors, i.e. factors that may support or impede women’s ‘free choice’ to participate – or not. Factors supporting female labor force participation have been identified as e.g. women’s wages (relative to men), as it is expected that the higher the wages the higher the utility of paid employment. Factors impeding female labor force participation have been identified as lack of child/elder care institutions, the qualifications of women (calling for re-education and lifelong learning) etc.

What has been under researched is the impact of (1) demand side and (2) cul- tural factors on decision making of women. Demand side factors refer to the lo- cal production system; e.g. traditional male dominated manufacturing in a given locality may leave very little room for female employment opportunities. As to culture, it should be rather obvious that women are most probably not disposi- tioned to make use of public care institutions in as much as the cultural system inclines agents to support the idea that good mothers should take care of their children for only noxes.

The aim of this paper is to contribute to a better, more comprehensive under- standing of the factors which explain variations in female labor force participation in different European localities. The major research question thus becomes: how has the interplay between supply side, demand side and cultural factors struc- tured the level and character of female employment in different European local- ities?

The paper draws on comprehensive register data as well as survey data collected for the purpose of this study. Data are analyzed by means of quantitative methods.
JEONG, YOUNG SIN* (SSK Research Team, freecity7@hanmail.net)
The Organizational Evolution and Innovation of Korean Anti-BASE Movement

The organizational evolution and innovation of Korean Anti-BASE Movement – focused on the dynamics of multi-layered solidarity network. It is a main feature of Korean Anti-BASE Movement (KABM) that it has been affected by the historical tradition and culture of democracy movement. First, KABM started in 1988, directly after the June democracy movement in 1987. Second, democracy movement organizations paid attention to local issues in the 1990s and built the local organizations of KABM as solidarity ones. Third, the activity networks of democracy movement was a main factor of the building of national solidarity network and massive nationwide mobilization. Some factors of successful Maehyang-ri struggle can be explained by these.

But in the early 2000s, a new phase of political change and social dynamics were measured. The political situation in South Korea was affected by Neo-conservative government, and the members of KABM worked for the development of a different kind of politics. The supplementation of three scale movements is important factor of the KABM. First, the activist democracy movement organizations paid attention to local issues in the 1990s started in 1988, directly after the June democracy movement in 1987. Second, because of the historical tradition and culture of democracy movement is affected by the multi-layered solidarity network. And the results are as in the following: (a) temporary position have a positive effect on fairness-awareness level of distribution. This direction is reinforced by younger age and (c) low level of education. There is no effect between fairness-awareness level of procedural and Form of Employment of travel which would have appeared highly improbable prior to the commodity boom. I use Qualitative Comparative Analysis (QCA) with a set of 30 Southern states as cases to demonstrate that a high export concentration in hard commodities demanded by China is a necessary but not sufficient condition for a break with neoliberalisation. I find that domestic class structure and (traditional) domestic dependence are also causally significant and that particular configurations of these conditions can be related to distinct types of post-neoliberal political-economic formation. In world-historical terms, these may tentatively point towards emerging regimes of accumulation centred around a new phase of material-based growth in the global capitalist economy.

JEONSEO, HYUNKYEOL* (Yonsei University, bky776@gmail.com)
Fairness-Awareness Difference Depending on Form of Employment: The Case of South Korea

The main purpose of this study is to examine the relationship between the levels of Fairness-awareness and Forms of employment using data from 2009 Korea General Social Survey (KSGS) survey. In the field of Sociology, only few works has been dealing with fairness-awareness itself as a unit of analysis, despite numerous attempts to consider inequality in connection with social status, class, resource allocation and distribution process etc. even that earlier researches have limitations that many studies construe which variable affect Fairness-awareness of organization or they only concentrate positive influence of fairness-awareness affect to organization. Grounded on this, I analyze the data concentrating upon the Main Hypothesis which is “there are existing Fairness-awareness difference depending on Form of Employment (Permanent/Temporary)” and demographic variables as a Moderator. And the results are as in the following: (a) Temporary position have an positive effect on Fairness-awareness level of distribution. This direction is reinforced by younger age and (c) low level of education. There is no effect between Fairness-awareness level of procedural and Form of Employment.

JEONG, YOUNG SIN* (SSK Research Team, freecity7@hanmail.net)
How Integration Took over the Immigration Agenda - from ‘bad Idea’ to ‘best Practice’

Over the last 20 years, European States have seen a drastic change in their approach to immigrant integration. From a rights based vision founded on the (legal) empowerment of the individual immigrant, with close-to equal rights as the best practice regarding integration; Europe has moved to a situation where integration is seen as a string of formal acts immigrants have to perform in order to obtain rights. Equal rights or naturalization is regarded as the final step of integration rather than its beginning. From an essential tool for integration, rights have developed to a reward for achieving formal integration requirements. This is problematic because legalistic, and formal integration requirements, such as passing a language or knowledge of host society exam, say nothing about real, i.e. social, integration of newcomers. Also, such formalistic approach to integration disregards that the host society also has a role in the integration of migrants. Nevertheless, the formalized approach to integration is regarded as best practice in many EU member states, including new destinations of or immigrants, such as Spain, Greece, or Italy.

This paper will (1) map the paradigm change from a rights based approach to integration to a reward driven formalistic approach to integration in Europe over the last 20 years; (2) display the detrimental effects of these changes on the integration process; (3) suggest whether it is time to move back to a more rights based approach to integration for the sake of more chances to inclusion for immigrants.

JEONSEO, HYUNKYEOL* (Yonsei University, bky776@gmail.com)
The Incredible Message of Integration Requirements for Migrants - an Articulation of Ethnicity, Race and Nationhood?

The Incredible Message of Integration Requirements for Migrants - an Articulation of Ethnicity, Race and Nationhood?

In the field of Sociology, only few works has been dealing with fairness-awareness itself as a unit of analysis, despite numerous attempts to consider inequality in connection with social status, class, resource allocation and distribution process etc. even that earlier researches have limitations that many studies construe which variable affect Fairness-awareness of organization or they only concentrate positive influence of fairness-awareness affect to organization. Grounded on this, I analyze the data concentrating upon the Main Hypothesis which is “there are existing Fairness-awareness difference depending on Form of Employment (Permanent/Temporary)” and demographic variables as a Moderator. And the results are as in the following: (a) Temporary position have an positive effect on Fairness-awareness level of distribution. This direction is reinforced by younger age and (c) low level of education. There is no effect between Fairness-awareness level of procedural and Form of Employment.
gration requirements are formal requirements, immigrants have to do in order to prove that they are capable of living in the host societies in an integrated way. One could think of language courses or language tests as typical integration requirements. However, more and more, one also finds requirements which allegedly help immigrants finding their way in the society of the host states. A typical requirement would be the integration tests in the Netherlands or Germany as well as the ‘knowledge of life in the UK’ test required by British immigration regulation. The discussion whether such integration requirements are good tools to foster the inclusion of migrants aside - seen from a different angle, integration tests and the various requirements, and customs they force immigrants to master are a formidable way to destill how societies putting such measures in place see themselves. What is the selfe image that these tests seek to transfer? What are the core issues policy makers think of when designing integration tests, which reflect the State of destination the best? Are these tests reflecting reality or only a biased selfe image of society?

These are the questions the paper will seek to answer. Relying on national immigration regulation in the EU and its Member States, such as the UK, Germany, Belgium, or the Netherlands, but also looking at Canada or Australia, the paper will try to (1) describe the ideal image of societies reflected in societies, (2) assess the excluding features of these test and whether they build / create cultural boundaries, and (3) investigate in how far these tests reflect reality.

OLSON, PAUL (Ontario Institute for Studies in Education at the University of Toronto)  

Sociological Problems and Educational Divergence  
This talk focuses on the relationship between education and social structure through applying Anthony Giddens' structuration theory to rural Tibetan society in China. In this, we analyse the dialectical relationship among local social structures and three forms of education in Tibetan society in China. The talk also looks at how myth and symbol have parallel and relationship to the social and cultural linkages in the construction of this identity and are reflected in stories, views of nature, the dialectical relationships of world and social beings.

The paper also examines how the use of myth and symbol have helped to reinforce the existing and practical understandings of culture and understanding in Tibetan rural society and specifically the evolutionary role of works like Gesar of Ling in the integration of the social order and the practical understanding in day to day life of what structuration means.

JIA, WENJUAN* (Shanghai University, jiawenjuan19860119@126.com)  

Dualistic Production Regime and Dualistic Peripheral Workers - The Changing Labor Process and Power Relations In a Chinese State-Owned-Enterprise In The New Era Of Globalization  
This article explores the changing labor process and power relations in Chinese State-Owned-Enterprise under the influence of the global economy recession and Chinese newly issued Labor Contract Law. It depicts the everyday working life of two groups of workers and the dynamics of workplace conflict based on author’s intensive fieldwork during 2010 - 2011 at an old machinery factory, which located in Guangzhou city. The research finds that, after the contractor teams were invited into the workshop, a new model of labor control - the dualistic production regime - has emerged in a Chinese SOE. The structural positions of different workers were utilized by the managers under this regime. With relative high age and outdated skill, the formal contract workers were disadvantageous in the labor market, so the stratified management or control were established for them. Because of the economic development, basic benefit, but insecure low wage. Without city Hukou and legal contract, the temporary workers from contractor teams were threatened by the second-class position in city, and the foreman control were imposed on them based on insecure wage but unsecure employment. The disparity between core workers and peripheral workers were blurred, both groups of workers were in the similar disadvantage position, and the dualistic peripheral workers were generated in the workplace. Finally, different workers' expression and reflection were the important elements which reshaped the dualistic production regime. Resistance of the formal contract workers intensified managers' reliance on the contractual teams, while the toleration of the temporary workers placed themselves in the more marginal position.

From this study, people can better understand the potential and limit of Chinese SOE workers and the likely role they may play in the evolution of labor relations under China's changing environment.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Preliminary results provide striking evidence for the critical role of proximity to secondary schools (the number of schools within commuting distance), viz., the gateway to college. Gateway proximity, not college proximity, enhances college attendance. This finding contrasts starkly with the focus on college proximity by the recent U.S. literature on the geography of access to higher education. To further identify the possible mechanisms underlying the gateway proximity effect, we will also conduct a detailed examination of alternative measures of proximity.

**Jiang, Jin**: (The Chinese University of Hong Kong, jiangjin.gm@gmail.com)

**Temporal and Spatial Patterns of Secondary Education Expansion in China, 1980-2010**

China has experienced unprecedented educational expansion in secondary education since 1980s while there are substantial spatial disparities across provincial level divisions. This study does not only document the evolution of secondary education enrollment over the last three decades and across 31 provincial level divisions, but also examines how well the key factors of modernization theory-industrialization and economic development are associated with the temporal and spatial patterns of the expansion in lower secondary education and upper secondary education.

Based on pooled cross-sectional and time-series data for 31 provincial level divisions over a 30-year period, results show that the overall secondary education enrollment rate increased dramatically, while the spatial disparities are substantial. Additional analyses find that the expansion of secondary education corresponds closely to the economic development and industrialization. Within provinces, more than 60% temporal variation of lower secondary education is explained by the changes of economic development and industrialization. Across provincial divisions, around 70% variation in upper secondary education is explained by the changes of economic development and industrialization factors.

This study provides greater precision in evidence for modernization theory by explicitly measuring industrialization, economic development, and educational expansion of secondary education. In addition, it differentiates spatial and temporal variations between expansion of lower secondary education and upper secondary education to determine whether and how industrialization and economic development correlates in these two patterns.

**Sustaining Global Skills Inequality? Skills Transfer and Skills Protectionism in the Nigerian Multinational Corporate Sector**

While the vital role of skills in the socio-economic transformation of nations is well espoused in the literature, little scholarly attention has been paid to the international dichotomies in skills and the dynamics that underpin them. In many countries in the global South, there is a plethora of liberal policies that seek to attract industrial investments by corporations in the global North, the hope often being that the transfer of vital skills – and eventual national socio-economic transformation - will result from such investments. Yet, studies have shown that in many developing countries, years of active multinational involvement by multinational corporations in the local economy have not had the desired effects: anticipated socio-economic transformation in the developing countries have not occurred. It is against this backdrop that this paper examines the skills development programmes and strategies in Nigeria’s multinational corporate sector vis-à-vis the dominant national discourses on skills development in Nigeria. The key focus is on the extent to which multinational corporations operating in Nigeria have facilitated the acquisition, by Nigerians, of vital skills. From interviews conducted in key Nigerian national manpower policy agencies and two multinational companies, each with over half a century of active industrial operations in Nigeria, the paper argues that despite the long period of involvement, multinational companies operating in Nigeria still source vital skills from their home countries. Besides, the levels of investment in skills development in the local economy suggest a possibility of skills protectionism – an active or unwitting process of hoarding vital skills rather than transfer them to local employees. The paper thus highlights the challenges and contradictions of aligning the economic calculations and objectives of corporations to national human capital development imperatives, and one of the subtle ways in which global skills inequality is sustained.

**Jinna, Zancheer**: (University of the Witwatersrand, zancheer.jinna@wits.ac.za)

**Invisibility As Strategy? Understanding the Perceptions Toward Organising Amongst Foreign Farm Workers in Musina, South Africa**

In this paper I explore issues of self representation and mobilisation amongst foreign farm workers in Musina, Limpopo. Based on original empirical research on the commercial privately owned farms in Musina, this paper reveals a number of human rights violations against this group, and points to a lack of capacity and authority by civil society organisations and government departments to effectively address these problems. Drawing on this context, I make two interconnected arguments: first that the political economy of Musina has created and sustained an informal-formal system through which these conditions can be perpetuated; and second that farm workers adopt tactics of invisibility as a strategy to operate within this system. By this I refer to the range of sustained strategies that workers- and second that farm workers adopt tactics of ‘invisibleness’ to operate within
This paper examines affiliation divestiture process of Korean business groups, chaebol, in 1989-2010. One of the characteristics of chaebol is that its head and his/her family members rule the structure, the whole group network, despite their little shares. It is possible because they are major shareholders of the group network’s holding company. Thereupon, the corporate network, composed of individual legal corporations, is the group owner family’s privately owned social structure and succession of ruling right is regarded as if a private property. Consequently, some Korean conglomerates have divided itself for succession from group owner to his family members. This affiliation divestiture process differs from a firm’s typical spin-off because it results separation and survival of the business group network. This research, hence, analyzes the process based on three points: how each structure is cohered; how major human agents locate within each structure; and what happens in the structure’s network across time. The result is as follows. First, group network’s cohesiveness is an important factor of making affiliate divestiture. Next, separation experience works as a path-dependency by becoming a ‘logic of succession.’ Third, business groups which have not made affiliate divestiture as a detour for succession - in Case of Korean Business Groups, 1989-2010.

Radiation Risks and the Hermeneutics of Low-Doses: A Chronic Disaster?

The Fukushima nuclear disaster (hereafter “3.11”) has reactivated the controversy over the hazardous consequences for human health of low-dose radiation, an issue dating back to the mid-1950s. Following on Miwao Matsumoto’s notion of “structural disaster” and the sociology of nuclear labor as pioneered by Gabrielle Hecht, I will first address the chronic dimension of 3.11, or the disaster before the disaster. By the multiplied levels of contamination and the frequent camouflage of radiation doses, the labor organization of the nuclear industry in Japan and other countries (Taiwan, France…) have made invisible the major part of occupational hazards. This invisibility of local and chronic hazards has also alimented and biased a global production of scientific knowledge and ignorance, which is only one but fascinating part of the long controversy on “low-doses.” I will examine to what extent has 3.11 created a new context that could lead to the further modification of current standards of radiation protection. Here I will present how Japanese labor and environmental activists build their criticism of existing safety standards by borrowing from classical Marxism. I will further address the criticism on minor mode that has rose within the nuclear establishment (the “nuclear village”) in Japan and among the international “community” of epidemiologists and radiation specialists. The conflicts of interpretation (i.e. hermeneutics) between Japanese government experts and activists thus reflect a larger debate, at a global level, within the community of epidemiologists and radiation specialists. This description will lead me to discuss the limits of the classical opposition between the positivist paradigm and the social constructivist paradigm.

This research follows up on a study I started in 2002 on Japanese nuclear contract workers. Further observation and interviews have been conducted since 3.11, in Japan and in Europe, among cleanup workers, government experts, activists and epidemiologists.

“We Are All Sri Lankans”: Sri Lankan Muslim Organization’s Reaction Towards Islamophobia

The civil war in Sri Lanka between the Tamil Tigers and the Sri Lankan government ended in 2009. In this ethnic conflict there was a third group whose ‘own’ identity was strengthened by the war, this was the minority Muslim population. Nevertheless very little research has pointed out women participation in their local schools. After then, we will try to present an alternative option to the present situation of the segmented labor market.

Disaster, Organization and Temporariness

One intersection between studies of organization and of disaster, that is seldom theoretically explored, is temporal delimitation. The well-known before–after trichotomisation of disaster studies is an indication of the inherent temporariness of disasters. Organization, on the other hand, is usually associated with stability and continuity. However, temporary aspects of organization have during recent decades attracted increased attention from researchers. In this paper, disaster management is regarded as a form of temporary organization. The aim of the paper is to provide a categorisation of different forms of temporary organizations which differed aspects of disaster management can be placed. In connection with a recent discussion in organizational sociology, “organization” is here regarded as a form of social order (comparable with other social orders, like institution and network) rather than as a formal social structure; a phenomenon
can be organized to different degrees, and some phenomena are only partially organized. The least common denominator of organization is that it is a decided order. Without a decision, no organization, not even a partial one. Here, a distinction is made between full organization and different forms of partial organization, the latter consisting of mixes of organization and other social orders; a phenomenon may be a mix of organization and institution (if, e.g., rests heavily on rules, norms and beliefs) or a mix of organization and network (if it lacks a clear formal hierarchy). Organization is a widespread form of social order. Many such phenomena are temporally delimited. Here a distinction is made, regarding the nature of temporalities between known and unknown time-frames. The latter (when it is not known when a phenomenon will take place) is characterised by a higher degree of uncertainty. Disaster management belong to this category. Different aspects of disaster management are analysed with this theoretical framework.

Change in Daily Eating Habits – Organization and Arrangement of Nutrition Patterns in the Context of Family and Public Compared Between Germany and Japan

Instead of looking at unknown social arrangements far away, comparative sociological research should investigate the alien within the known following suit the ethnographic research of modern industrial society. While comparing the development of western industrial states, sociology can get insights in the meaning of social problems, its circumstances and consequences.

This perspective will be presented by an on-going project comparing eating habits of everyday life between Japan and Germany. The stark contrast between European and Asian nutrition habits illustrated by the German-Japanese comparison is examined to discuss the correlation of malnutrition, change of family structures, gendered responsibilities, and daily eating habits in regard to cultural differences as well as to numerous similar characteristics in the current social change. Thereby, the focus is to be laid on specific and comparative analyses as to how the diagnose of “malnutrition” is made, which shape it assumes and which causes are being named. Ultimately, it has to be questioned what kind of regional country-specific solutions of the stated problem take root and which family-suited components of the social nutrition can be taken by extra-familial agents of socialization in order to teach nutrition skills. Afterwards, different national approaches to a solution of the respective problems of how to arrange daily nutrition in the area of tension between private and public nutrition supply as well as their transnational learning potentials can be discussed.

To compare developed countries with each other in regard to particular problems will not only result in new knowledge about the research objectives but will also help to evaluate and develop the theory of World Society, whether the world is differentiating into a multiplicity of societies or unifies in a way which takes a segmental, regional differentiation into account.

Pedagogies and Practices in the Modern and Postmodern

There is a paradigmatic shift in how pedagogy is conceived and practiced in contemporary discourses. In this paper, I focus on the discourses that arise out of the fragmentation of the project of modernity. I attempt to make a distinction between modernist and postmodernist educational theory, their languages and vocabulary and their tools of measurement. Furthermore I show that issues related to change, crisis, difference, diversity and fragmentation of identity, and of knowledge and power are important aspects of the emerging conceptualization within pedagogy. I try to describe some pedagogies such as the notion of “border pedagogy” etc. have emerged from critical pedagogies who locate themselves within the postmodern. Pedagogies that give students an opportunity to engage in multiple reference points that constitute different cultural codes. Finally I raise the problems that the radical critique of postmodernism pose for education that is central to post-Enlightenment, emancipatory, liberal humanist project of modernism.

JOHN MEYNERT, MARIAM* (Center for Education, meynert.mariam3@gmail.com)

Sociology and The Critique Of Neo-Liberalism

Sociology and the Critique of Neo-liberalism

On all sides we’re hearing that social critique is in trouble. Nancy Fraser’s remarks about a ‘crisis of critique’ confirm Axel Honneth’s account of critique’s ‘perplexing predicament’. Peter Wagner too observes that contemporary capitalism is ‘no longer to be thought of as crisis’. What is alarming everybody is the supposition that the project of immanent critique has been undermined by what Honneth calls the ‘neo-liberal revolution’. Immanent critique, Michael Walzer tells us, judges the present with reference to ideals that are purely internal to a particular socio-cultural context. Immanent critique is having a hard time because the normative principles and ideals internal to our social and institutional practices appear to have been resigned in capitalist friendly terms by a triumphant neo-liberalism. So neo-liberalism issues a peculiar challenge to social critique. The distortions and cultural costs of its strategy of appropriations and resignifications demand to be therapeutized. But even if modernist educational theory offers a new start from the scientific, the critical sociologist struggles to meet these demands. So what, then, of Wagner’s claims about sociology’s vital contribution to a critical consciousness of modernity? My paper will briefly reconstruct his programme for a critical sociology of modernity and will argue that it falls short of the distinctive elucidation of what is meant by a theory of ‘critique’. I propose to excavate normative investments that are implicit in this programme that might be marshaled to a guide a critique that weighs up the cultural costs and damages in neo-liberalism’s re-working of our normative principles and ideals.

The Streets of Papunya: Walter Benjamin and Art History

For Indigenous artists from Australia's Central and Western Deserts, ancestral power inheres in the landscape from past events and is transmissible to the protagonists' descendants as political (and also social and cultural) power. They have made this power, known as 'Dreamings', the subject of their art. In doing so, they have turned their faces to the past seeking, like Benjamin's angel of history, to “awaken the dead, and make whole what has been smashed” by the “single catastrophe”(1) of colonisation.

The artists of the Papunya community have another legacy from their forefathers' actions at this site: the artistic lineage founded here by their fathers and grandfathers. These men made Papunya famous as the birthplace of an Indigeneous art movement that has revolutionised Australian culture, overturning the modernist dichotomy of indigenousness and contemporaneity that once signified Aboriginality as the eternal past of the ethnographic present. This paper will examine the political struggle in which the current painters of Papunya are engaged to recover that legacy after a period of decline set off by complex factors, including a thoroughly postmodern 'identity theft'. Denied their birthright and history as a site of artistic production, the Papunya painters are combining both ancestral and artistic legacies to wrest back the power to shape their own destiny, thereby effecting a Benjamin-style 'opening-up' of history. They are using the street signs, provided by colonisers hoping to turn their community into a 'normal Australian suburb', to proclaim their cultural and artistic heroes. Over-turning cultural protocols against speaking the names of the dead, they announce that this future will be built on their own achievements and the ancient ongoing power of place. Disaster Warnings on Remote Islands: From the Traditional to the Contemporary

Natural disasters such as tropical cyclones are commonplace in South Pacific island nations, including on remote islands within these remote countries. During a project on disaster risk in a changing climate, warning signs and related practices to them in remote island communities in Fiji and Tonga were investigated. On remote islands, people are well connected with their land and environment, and local ecological warning signs have existed and been relied upon traditionally. Knowledge about such traditional warning signs is still alive today, but diminishing as technology takes hold. Traditional warning signs are being overtaken by a reliance on warnings from the meteorological service on the radio. Many of the older people who hold most of the traditional knowledge perceive a lack of interest from young people in learning about those signs, because of the radio. However, the young people who are using the radio are in changing, which may make this form of warning message distribution less effective in the future. There are moves toward the use of mobile phone technology, especially in Tonga, for distribution of disaster warnings. In remote areas where mobile phone reception is less about being in the right general area than standing under the right tree, methods of locally spreading the news of any warning will remain vital. This presentation outlines knowledge of different types of warnings, their perceived reliability, how these are changing, and the responses to the warnings, on two remote island communities where sufficient warning is considered more important than the severity of an extreme weather event.

Organising the 'Invisible' Sector: A Case Study on Household Workers in Lima

This paper examines the organisation of household workers in Lima. Household services is one of the biggest employers of female workers in Peru, and roughly a half of all household workers live in the capital Lima. Among other informal workers, household workers are regarded as one of the most precarious and marginalised group of workers in the labour markets. The lack of recognition, and the fact that the work is done in private households, makes the household sector 'invisible' and thus the workers' rights, including working hours, wages and access to social security, are poorly controlled. Lima provides an interesting case for studying household workers' movement. In recent years, household workers have increasingly mobilised on local, national as well as international level and formed new networks to promote their rights as citizens but most importantly, as workers. In 2011, the international labour conference accepted a convention for Domestic workers, setting labour standards for persons working in household services. Peru has not yet ratified the convention, but especially the local household workers' organisations have been actively campaigning for the ratification. This paper investigates the various forms of organising household workers in Lima. Special focus is given on household workers' organisations and their networks, and the ways these promote decent work and job quality for workers in household services. Since informality in the sector is high and less than 1% of household workers in Peru are unionised, non-governmental organisations play a significant role in advancing the position of household workers in the labour markets and in the society.

Women Human Rights Defenders: Promoting Women's (Human) Rights in Honduras

This paper explores the recent developments in women's human rights activism in Honduras. In the past years, political and economic instability, culminating in the coup d'état in 2009, has led to extensive protests and mobilization among a variety of civil society actors, particularly among women's groups. While promoting gender equality and organizing against militarism, neo-liberal practices and human rights violations, Honduran women activists positioned themselves as embedded in the notion of human rights in their claims. Moreover, a wide variety of women's groups including feminists, teachers, community leaders, labour union members and LGBT activists, among others, have met challenges collectively as 'women human rights defenders'. I suggest that as a consequence, the discourse on women's human rights has moved from academic spaces and a 'feminist project' to the everyday understandings of a large number of women's groups and most importantly, a new framing of women's agency. In doing so, activists have, moreover, enhanced their alliances with supportive women's groups beyond national borders and entered new regional and international arenas of advocacy. Drawing mainly on social movement theories, this paper seeks to explore 1) the factors that have contributed to the shift in women's rights framing among women activists in Honduras and 2) the possibilities and challenges arising from the strategic usage of human rights frames for the activists' work and the women's movement in Honduras generally.

Sustainable Consumption and the Enactment of the Fairtrade Market in Vienna

Since the current discussion about the extent and manifestation of an environmental crisis, norms and values as integral part of economic markets gain public attention. According to contemporary findings within economic and consumer research, a range of markets are currently undergoing a fundamental transformation. My contribution is based on these considerations: on the basis of a praxeological research approach I ask how and in relation to which practices the so-called „fairtrade” market enacted and, in doing so, moves in a tension between a moralisation of markets and the economic colonialisation of morals. I consider these questions with reference to empirical research; starting in a fairtrade district in Vieno, the capital of Austria, I focus primarily on the constitution practices and settings in which the fairtrade market is enacted. In doing so I address especially the questions how citizen consumers are able to learn about social and environmental risks and to what extent consumption of fair and sustainable products are driven by practices as well as respective sociomaterial orders.
newed plans to mine extensively on what they thought was an area secure from future extraction.

How do older people react to the loss of their familiar environment? How does the necessity of resettlement affect their health, spiritual well-being, as well as their sense of security in old age? What strategies do they develop to face the impending physical and mental effects of the threatened displacement? The variety of responses to these questions – based on my research interviews carried out from 2010 in the region – is formulated in my presentation.

JONES, BRYN* (University of Bath, hssbj@bath.ac.uk)

2011 and 2016: Transnational Crisis - Transnational Social Movements?

The Arab Spring revolts, the Indignados and international Occupy! protests were perceived as harbingers of an international, even transnational, movement capable of displacing political elites’ neo-liberal agendas and politically and economically repressive regimes which. Clues for the feasibility of this transformative potential can be derived from comparisons with the protest movements closest in scale and character: those of the late 1960s. The two upsurges are similar in their lateral, non-hierarchical mobilisation and organisation, rejection of conventional ‘system’ politics, direct, deliberative democracy practices, and equality of participation through personal commitment, initiative and action. Yet sixties’ tests failed to transform or even modify capitalist economic relationships, which assumed even more elemental market forms. Sixties’ campaigners’ radical alternatives to the system or managed democracy were isolated or subverted. The reversal of their tantalising vision of substantive equality, into nineteenth-century levels of economic inequality, suggests that contemporary movements need transnational, radical alternatives to today’s transnational economic crisis. What lessons do the failures of sixties radicalism in these shared, and similar perspectives and programmes only through a transnational, but ultimately unworkable ideological paradigms. Yet comparison, with the newer vehicles of global and social media and practices such as Occupy? Suggests these need, but lack, the meaningful and coherent discourse(s) to achieve the transnational force for political change.

Measuring Corporate Social Responsibility for Consumers: Lessons Learned from Seven Years in the Field

Which company is more sustainable: Coca Cola or Pepsi? Apple or Microsoft? GE or LG? Or none of the above? While data clearly indicate that one must significantly reduce our overall quantity of consumption, sustainable consumers face a wide range of obstacles when attempting to enhance the quality (responsibility) of their consumption. Reliable data is not readily available, and the practice of “greenwashing” – or deceptive marketing that makes corporations appear socially responsible – conceals legacies of unethical conduct. How can citizen consumers effectively navigate the muddy waters of corporate social responsibility?

Drawing from a seven-year public sociology research project that uses independent, third party data to evaluate corporate practices, this presentation examines the art and science of measuring corporate social responsibility. More specifically, it explores five tensions inherent in the development of a comprehensive and accessible system of measurement.

1. The Data Integrity Problem: Including all reliable data, on the one hand, while excluding overly-biased data (or data that is the product of greenwashing), on the other.
2. The Data Quantity Problem: Uncovering too little data on some companies and too much (potentially overlapping) data on others.
3. The Past/Present Problem: Weighing companies’ legacy of positive or negative conduct against more recent indications of change.
4. The Multidimensional Problem: Determining the comparative value of different dimensions of social responsibility (e.g. human rights, the environment, political lobbying).
5. The Simplicity/Complexity Problem: Creating a system that is simple enough for consumers to use while being complex enough to accurately capture the many facets of corporate conduct.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The author offers working solutions to these tensions and explores the strengths and weaknesses of his methodology. More broadly, this inquiry underscoring how, in order to be effective, more sustainable consumption requires increased corporate transparency and better public sources of data on corporate social responsibility.

JONES, ELLIS* (College of the Holy Cross, ejones@holycross.edu)

Reclaiming Corporate Social Responsibility for Activists and Academics: An Analysis of International CSR Ranking Systems

Is it possible for activists and ethical consumers to reclaim corporate social responsibility (CSR) from its current, largely greenwashed, state that seems to merely strengthen much of the same neoliberal agenda it was meant to address? While CSR research in general is expanding rapidly, there is relatively little research being done on CSR measurement, and almost all of this sub-category of study focuses on corporate self-reporting rather than 3rd party tracking of corporate behavior. The solution may be found in nonprofit and academic efforts to develop valid measures of CSR for a public audience. This research project examines four CSR measurement systems created specifically for consumers in the US, UK and Australia in order to understand the current level of consensus/diversity in: 1) definitions, 2) methodologies, and 3) outcomes. Utilizing a combination of text analysis and standard statistical tools, these questions are answered with some surprising results. The rankings of 106 global corporations are compared across all four systems to reveal where consensus can be determined despite significant differences. CSR rankings results are reassessed in light of some of the most recent publications from Transnational Institute ("State of Power 2013") and Asia Monitor Resource Center (The Reality of Corporate Social Responsibility) to determine where blind spots may be in each of the systems. Final recommendations include a call for increased research in the area of empirically measuring overall CSR behavior (with an emphasis on indicator validity) rather than generating additional research on CSR reporting, reputation indices, correlations with corporate profitability, or hyper-specific, non-comparable corporate efforts along particular lines of social or environmental responsibility. The argument presented includes a call for resistance movements to help transform capitalism rather than的道路 economic exist to neoliberal ideologies while focusing on social change efforts in other arenas.

Youth Work in England: An Uncertain Future?

It is easy to paint a pessimistic picture of how young people are affected by the current economic situation. In Britain, almost 20% of 16-24 year olds are 'NEET', the acronym for young people who are not in education, training or employment. The Education Maintenance Allowance, paid to 16-18 year olds to encourage them to stay in education by paying them a small weekly grant to help with fares and other overheads, was removed in 2011. Perhaps it is not surprising that UNICEF (2007) found the UK’s children and young people to be the unhappiest out of those living in 21 developed countries. Aspects of the result included attitudes to education, personal well-being, home and family life and general satisfaction with their lives. The OECD (2013) has found that young people are most likely to suffer from governmental austerity packages; they suffer most from cuts. Youth workers have always tended to look back to a golden age. Currently, the period when government funding was channeled into work with young people via local authorities and third sector/voluntary organizations provides the touchstone. In April 2013, the UK's magazine Children and Young People Now published an article entitled, 'Youth sector on a "knife-edge" as third of organizations at risk'. It presented a depressing overview of reductions in expenditure and a pessimistic prediction of the future. Youth services have been subject to swingeing cuts accompanied by amalgamation with targeted and acute services. This paper identifies the aspects of young people's lives which have been affected by different cuts and other policy changes. Where possible, examples of innovative practice will be discussed. These present exciting ideas which have potential to be replicated if funds are found: although the future is uncertain, we owe the country's young people a more optimistic future.

Class and Health Inequalities in Later Life

For over sixty years significant research activity has addressed the extent to which the effects of social class over the life-course have determined or contributed to an individual’s economic and social fate in old age. This has led to the elaboration and discussion of a whole host of conceptual and measurement is-
The Vulnerable Man-Machine: Human Actors As Productive Parts in Work-Networks

As parts of heterogeneous work-networks, human actors need to manage their vulnerability by finding ways of fitting neatly into the network and become reliable man-machines. They also have to learn how to manipulate the network so that they remain a position in it. From a posthuman- and ANT-based perspective, this presentation explores human vulnerability in a male dominated, internationally successful company. Vulnerability is understood as a consequence of various material-semiotic processes, where individuals are or are perceived as unable to perform certain tasks, relearn, commit and so on. Being or being seen as able can result in vulnerability as well, as this may propel the actor in unknown or even unwanted directions.

Working at “Techno,” human actors help form a work-network put together for increasing productivity and, in the end, profit. They are protected by laws, policies and helmets. But in this network they necessarily remain some of the softest parts with different (dis)abilities and utilities. The analysis of ethnographic data from “Techno” suggests that technology and vulnerability is closely linked. The white-collar-domain of the network results in one set of human vulnerabilities and the blue-collar in, to some extent, another, but the real difference lies in the actor’s possibility to manipulate the network. Depending on your formal position, who you know, how you are categorized (in terms of age, education etc.), and how well you fit into the network, you will be able to tinker with work schedules and the ordering of new machinery or software to different degrees. Being able to manipulate the network partly results from the utilities women has, significantly increased within the SE. Their manipulation-strategies differ depending on what resources they possess and how closely they are monitored by management and co-workers.

Finding New Opportunities in Shrinking Cities: Local Citizens, Artists, and the State in Urban Revitalization Projects

South Korea is one of many countries now facing the problem of inter-urban inequality. While Seoul and the capital region have nearly 50% of the national population, many other cities, which developed as the country rapidly industrialized during the latter half of the 20th century, are quickly losing their industries to newly emerging economies, such as China and Southeast Asian countries. In short, a number of Korean cities, once noted for their speedy urban transformation and growth, now face reversed difficult challenges of shrinkage. A good example is Busan, which had been the center of the southeastern industrial core, but is now struggling, with a shrinking economy and population. This paper examines two urban revitalization projects that took place in Busan’s dilapidated old downtown, the Cheonggyecheon Stream Redevelopment and Sebitdungdungseom (a small island). The former, which had been more of a developmentalist city, dependent on state-driven top-down approaches with a goal of supporting private capital accumulation, these two projects set themselves apart by relying on the active participation of local residents and artists to bring bottom-up changes that are strongly connected to the local history and social life. Through the two cases, I explore how the changed circumstances necessitated scaling back the roles of the state and capital, and permitted newly emergent civic actors to take much greater roles in the development projects, leading to unexpectedly successful outcomes. Additionally, the paper points out how the visible decline provided an opportunity to change the mindset of the society, which had been rather firmly embedded in development-oriented ideologies, and to seek alternative possibilities amid the shrinkage. Perhaps, with the arrival of more socially aware and inclusive development approaches and goals, shrinking cities may find new opportunities to build more resilient and livable cities.

JONSSON, EMMA* (Swedish National Defence College, emma.jonsson@fhs.se)

Recruitment of Women and Persons Born Abroad to the Swedish All-Volunteer Force

This presentation examines the recruitment base to the Swedish all-volunteer force; the applicants for basic military training. So far the recruitment to the all-volunteer force has been satisfactory in respect of qualitative terms; both regarding psychological and physical capabilities. The capabilities of those selected for basic military training have been as good as or better in comparison to previous years with conscription. Despite good quality among the recruitment base there have been vacancies, and the future need of personnel will increase. To increase the recruitment base and to ensure diversity among the personnel, the Swedish Armed Forces are working to promote and increase the proportion of women and employees with different ethnic background. Although the all-volunteer force provides a more heterogenic recruitment base in some aspects than the conscript based force, the all-volunteer force in Sweden mainly attracts young men that are born and raised in Sweden. A significant proportion of women has significantly increased within the SE with conscription. However there are no well-known changes in the amount of persons born abroad. Studies have revealed that the proportion of applicants for the basic military training born in another country than Sweden decline in each step of the selection process. This presentation will focus on the recruitment of women and persons born abroad in the selection process to the Swedish Armed Forces.

Identities, Culture and Transnational Learning: Being Malaysian Women Medical Researchers

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
In spite of being half of the population of the world, having increased access to education and increased labour force participation, women continue to dominate traditional fields in education, health and welfare, social sciences, business and law, and humanities and arts (OECD 2011; UN, 2010) and are still severely underrepresented in science, engineering, technology and emergent industries, accounting for only slightly more than a quarter of all scientific researchers (Hawkins & Ronchi, 2008; OECD, 2011). There is loss of productivity and human capital, and monetary loss when women’s potential is fully harnessed. This paper is based on a pilot study looking on the intersectionality of culture, global networks and innovation, investigates the identity practices of a group of Malaysian women medical researchers. It examines the ways in which ethnicity, social relations and power dynamics within the medical research sector shapes this group of highly skilled Malaysian women’s identities working in this research sector and their access to resources and opportunities. The findings will contribute to an initial framework about the structural identities and transnational learning in knowledge-intensive industries. The discussion also considers an initial framework for understanding socio-cultural and scientific dimensions of new industries, and higher level skills vital for women’s successful participation in the global economy.

**Studying Selected Youth Transition Studies Between the Global North and South: A Conceptual & Methodological Analysis**

This paper examines selected youth transition statistics and studies between the Global North and South, and focuses at understanding how conceptually and methodologically these studies may be related and conceptualized to researching “transition crisis” in the Philippines. It focuses at assessing unemployment and education performance indexes from selected countries, and identifies how these statistical variations reflect similarities and differences along work-education nexus across cultures. Methodologically, the paper evaluates empirical designs of selected studies to recognize what good measure of youth transition estimate may be applicable to Global South countries like the Philippines. In the end, the paper draws insights from youth statistics and content analysis of studies to inform the design and texture of conducting local youth transition research in the Philippines.

**Theoretical Consistence Between Goffman and Luhmann**

At first glance, it could cause doubts when one tries to put Erving Goffman and Niklas Luhmann together. Their thoughts will probably be treated as two different, even opposing approaches. This article attempts to offer another perspective by pointing out the theoretical consistence between Goffman and Luhmann. Furthermore, it hopes to make Goffman and Luhmann more understandable by pointing out the theoretical consistence between Goffman and Luhmann. This article attempts to offer another perspective by pointing out the theoretical consistence between Goffman and Luhmann.

**JUKKALA, TANYA** (University of Skövde, tanya.jukkala@sh.se)

**Overcoming Alienation: A Luhmannian Perspective**

The concept of alienation can be found in micro- as well as macro-level sociological discussions. The present discussion seeks an understanding of alienation, and possible ways to overcome it, in relation to Niklas Luhmann’s theoretical perspective, which, given its non-hierarchical structure, may provide a possibility of conceptualizing alienation from “both sides”. In Luhmann’s theory of social systems, individuals (i.e. psychic systems) are seen as residing in the environment (social systems) and thus not constituting a part of it. It is argued, on the one hand, that this results in an essential, and alienating, differentiation of psychic systems from social systems. On the other hand, the differentiation of systems from their environment (and other systems in it) provides systems with a particular “freedom” in terms of acting according to their own, non-alienating, system logic (i.e. functionally). Nevertheless, psychic systems want to participate in the communication of social systems and this is possible only through access to system-specific media of communication, which are defined by social systems. In relation to this, psychic systems appear to be condemned to act according to the logic of social systems, which consequently would emphasize the alienating process of social participation and reduce the “freedom” of psychic systems. However, media of communication may be defined in one way in social systems while, from the perspective of psychic systems, alternative ways to access system media through various creative and unexpected processes may be possible. The equal “freedom” of psychic systems in relation to social systems would seem to emphasize such a possibility. It is thus argued that Luhmann’s theoretical perspective provides a possibility for psychic systems of social participation according to their own logic, and that this possibility may provide a key for understanding how the alienation of social participation can be overcome.

**Addictive Gaming: Self-Addictions of Analysis and the Biographical Context. Life Story Interviews with Video Game Addicts**

Since the 1990ties computer and video games are discussed as being addictive. In media and research the phenomenon has gained great attention and with the appearance of internet gaming disorders research diagnosis in the appendix of the recently published fifth edition of the Diagnostic and Statistical Manual of Mental Disorders (DSM V) addictive gaming made a further step towards official recognition. Looked at addictive gaming from a social science perspective one could say that it is considered a social problem. But how do affected gamers perceive and interpret their gaming behaviour themselves?

This presentation tries to give an answer presenting biographical narrative interviews with German male and female gamers who are or were at some point classically defined as being “addicted” or “caught” in a cycle of gaming according to a psychological screening instrument (CAS II) (Rehbein et al. 2010) and/or self-analysis. The main objective is to take the subjective perspectives of the video gamers seriously and to reconstruct their self-analysis within their complex interrelationship between everyday life and the biography and the virtual world. By presenting exemplary cases it will be shown, without idealising or pathologising from the outset, which everyday and lifestyle problems can be solved using the virtual practices and which dysfunctions and follow-on problems this is potentially linked to.

The project follows Grounded Theory and in the analysis also uses the method of Objective Hermeneutics.

**From Protest Event to Protest Wave: A Theoretical Appraisal on the World-Historical Perspective**

For a long time social movement studies are strongly influenced by the geographical and historical points of reference. Empirically, most social movement theories have been generated from case studies of short-term mobilization activity in the global North. Methodologically, the study of social movements is overwhelmingly characterized by case-oriented studies. However, one of the most fundamental characteristics about social movement is the ‘connectedness’, both temporally and spatially, of collective actions with other each. This leads us to draw on a theoretical approach that attempts to identify similar processes and dynamics that operate in diverse cases of contention. “Protest waves” as understood in this manner offer us the possibility of constructing a systemic analysis that could identify and then particularly explain contention processes in the
global South as a whole. The strength and diversity of participating groups in a protest wave are apparently shaped by a country's specific characteristics and its location in the world-economy structure. These kinds of linkages allow us to pinpoint shared political-economic attributes and structures that are conducive to the outbreak of popular contention by large numbers of people in the global South. Examining contentious protests within the world-historical perspective offers a path to understanding the continuation of struggles and how periods of contention may be just the one wave in a larger sea of long-term resistance. What is particularly crucial to determine is how diverse social movements affect each other and interact with the structures that they are decomposing and transforming. This heuristic characteristic of collective action has an evident affinity with the concept of protest wave, which points out the connectedness of each protest cross over time and space in the global South.

Information Management, Collective Intelligence and Knowledge Management within The Context Of Crisis Resolution - Going Global

Information Management, Collective Intelligence and Knowledge Management within the context of Crisis Resolution - going global. Crisis Resolution from an international perspective is to be embedded into the problem of escalation and de-escalation of irregular war. Experts during many decades of Cold War had been focusing in research on interstate wars. But Civil war today is the most common form of armed conflict and “hotbeds of wars” are concurrently going global. Therefore it is more than normal to implement those procedures of collective intelligence and knowledge processing into the broader domain of security management and crisis resolution. The international community and the international alliances are affected by their enforced austerity programs, this gave birth to the idea of “crisis resolution” as a new paradigm to overcome crisis situations. It is useful to look at the cultural and psycho-sociological foundations of collective intelligence and knowledge management for to find incentives but also barriers for pooling and sharing in the military-civil security domain. Collective intelligence and knowledge Management is based on accepted values: - sharing - responsibility - respect

So Pooling and sharing of logistic resources may be successful in this respect, but what about the vast field of pooling and sharing of information, scientific ideas? The processing agencies very often are competitors in this field.

Saving the Environment? Environmental Policies of Japanese Firms and Their Effectiveness

In the past decade, a new framework has gained popularity that firms, which aim to make profits, should also address broader social issues, such as environmental protection, human rights, and labor standards. It is no coincidence that this framework of corporate social responsibility (CSR) has become popular under the anti-regulation logic of neoliberalism. Instead of bringing the state back in, the CSR framework grants corporations a way to pre-empt state regulations, by claiming that market mechanisms through corporate voluntarism is more effective in resolving social issues than state mechanisms through bureaucratic supervision. Thanks in part to the promotion by international organizations (e.g., the United Nations), various CSR policies have been widely adopted across advanced industrial societies. Their effectiveness, however, has been largely unknown, raising serious concerns that adoption of such policies amounts to mere symbolism. In this paper, we examine environmental policies of major Japanese firms and their impact on these actors of environmental performance, using data drawn from Japanese firms between 2006 and 2013. During the period, under the increased global institutional pressures for CSR, Japanese firms have adopted a broad range of environmental initiatives, such as environmental auditing and labeling. But there is little research on whether and under what conditions such initiatives lead to substantive changes. Our findings suggest that without other complementary mechanisms such as government regulations or other third party monitoring, corporate voluntarism alone is unlikely to achieve corporate environmental responsibility and may instead result in corporate carte-blanche.

Transnationalism and Religion; A Study on Biographies of Immigrant Women in Germany

This study research into the biographies of South Korean nurses who left Korea in early adulthood and have remained in Germany until now. Between 1963 and 1978, around 11,000 Korean nurses left for Germany as working migrants. Korean nurses were hired under a restricted three-year time period for migration. After the expiration of the contract, many returned to South Korea or chose to immigrate to another country such as Canada and the U.S. But other nurses did not return to Korea but instead chose to remain in Germany. They have formed Korean Communities and organized various Korean immigrant associations in Germany. After deciding to remain in Germany, they established their life over more than normal to implement those procedures of collective intelligence and knowledge processing into the broader domain of security management and crisis resolution. The international community and the international alliances are affected by their enforced austerity programs, this gave birth to the idea of “crisis resolution” as a new paradigm to overcome crisis situations. It is useful to look at the cultural and psycho-sociological foundations of collective intelligence and knowledge management for to find incentives but also barriers for pooling and sharing in the military-civil security domain. Civil Awareness: A Comparison of the 2011 Occupy Wall Street Movement in the United States and the 2008 Mad Cow Disease Protests in Korea

The Occupy Wall Street protest that swept the United States in 2011 and the mad cow disease protests that embroiled Seoul in 2008 seemingly occurred in different political and cultural contexts concerning different issues. In fact, although the details of these two protests differ, the protests are similar in that the initial protest took on a larger symbolic significance that captured the imagination of other groups and encapsulated some essential truth about society. Both the Occup- y Wall Street movement in the United States and mad cow disease protests in Korea demonstrated how spontaneous protests can strike a chord with the larger population and create a powerful dialectic between the protesters and the public wherein the protesters articulate a theme resonant for the larger population and have immense impact on groups at a distance from the original protest. The very successful performance of protests as intense fusion between protest- ers and the public display similarities in a broader sense symbolically, and these similarities emerge in the motives of individual actors and shared inner meanings of the respective protests. It is worthwhile examining the motivations of these two different protests, the ways the discourses were made up among protesters, and interpreted in the mass media, and how the general public responded. The comparison of the two cases offers insights into the process by which a small group can create movement that transfers to other groups that do not share the same interests, discussing how the themes were articulated and how meanings are created beyond a national level.

Airports As High Reliability Networks and the Inherent Emerging of Security and Safety Threats

The theory of High Reliability Organizations tries to explain why organizations or its units can achieve error-free results in complex and error-prone environments. After the application in the fields of nuclear power plant, traffic control, etc. the theory was deployed to airport security screening procedures after 9/11 (Frederickson/LaPorte 2002). It is argued, that under the vital impression of 9/11 the security regime became enforced and prone to produce more false positives (error type I) rather than false negatives (error type II). Therefore, these false positives may become an argument to reduce security in favor of efficiency. To avoid cutbacks in security it is – according to the authors – essential, that airport screening organizations become high-reliability organizations.
We will argue that the focus on high reliable screening organizations is too narrow – instead the whole airport needs to function as a high reliability network of organizations. Since airports do not solely consist of security producing organizations but rather need to be understood as complex systems of heterogeneous actors such as airlines, airport management, retailers, etc., security regulations often can conflict with their standard procedures and organizational logistics. To maintain the processes that are vital for these actors adaptive strategies evolve constantly and are passed on. These adjustments are often not formalized but remain informal since they transgress the rules of the security system. They are therefore nowadays increasingly affected in the predominant security regime as they are not intended and the regime builds on idealized assumptions of compliance. Consequently, new safety threats for the airport system can arise due to the attempt to increase the security regulations in this critical infrastructure. The presentation builds on findings of a research project on the social production of (in)security on airports in Germany.

JUNISBAI, AZAMAT* (Pitzer College, aunisba@pitzer.edu) JUNISBAI, BARBARA (Pitzer College)

In this paper, we examine attitudes about the desirability of democracy versus dictatorship in Kazakhstan and Kyrgyzstan, two of the most pro-market economies in post-Soviet Eurasia. Drawing on original data collected in late 2012, we raise a series of fundamental questions about the link between market economics and democratic political culture. Are some social groups more receptive to democratic ideals than others? Are the middle classes, following expansion market reforms and a shrinking of the welfare state, as hungry for political change and as hostile to dictatorship as democratic theorists posit? How do individual experiences with the transition to capitalism affect not only perceptions of current government performance, but preferences for the political future? To uncover answers, we systematically test the effects of a host of demographic and individual-level characteristics using a nationally representative dataset of 3000 respondents (1500 in each country). We look at minority versus titular status, household income, educational attainment, area of residence, and religiosity, as well as individual trajectories in the labor market, understandings of the roots of social inequality, and one's satisfaction with current political institutions and practices. We find that, more than two decades since the onset of independence, post-communist citizens remain divided over basic questions of governance, and this division is especially pronounced in Kyrgyzstan. In addition, surprising patterns of group and individual-level preferences emerge, challenging a number of conventional theoretical expectations.

Transformation of Gender Roles in Lithuanian Society

In 1990 after regaining Lithuanian independence, women organizations started to establish their active performance. The majority of these organizations summoned re-constructive congresses, for example Lithuanian Women Catholic organization which was forbidden in the 1940s when the Soviet Union occupied Lithuania. At the beginning of 1990 the first democratic election to the Supreme Council of Lithuanian Soviet Socialist Republic was held. In 1990 there were 14 women who made up 10% of the elected in the Seimas (Parliament). Constitution of the Republic of Lithuania of 1992 consolidates the equality of men and women.

A legal measure to eliminate gender discrimination is the Law of Equal Opportunities which was passed in 1999. This law was the first of its kind in Central and Eastern Europe. On September 29, 2008 the Seimas signed National agreement on realizing women and men's equal rights and opportunities. The agreement was initiated by the National women's consulting forum striving to enforce equal opportunities of genders in reality.

After Lithuanian society entered the 21st-century, with changes in economic and social intercourse, women have become more active while looking for well-paid jobs regarding their specialties. Though tenacious stereotypes about male and female jobs still remain.

Facts of public opinion poll and social inquiries prove that patriarchal attitude, which is based on a traditional understanding of manliness and womanhood, are still popular in Lithuania. It is often stressed that it is men who should take a more important place in labour market and social life. Women's opportunities to seek for professional career or stay in a leading position are perceived sceptically. Though in Lithuania changes in labour market are present, a number of unsolved problems still remain. A problem of women - mothers' discrimination still exists.

However, an important question is open: why women electorate do not vote for women candidates?
chain from food producers to retail and consumers have access to this transformatve food chain management. In our paper, we discuss the transformative food chains in climatic conditions of Finland. Our paper is based on a case study, which was conducted in Finland in 2012. The primary data were collected through thematic interviews with 16 different food chain stakeholders, from three regions in Finland: Central Finland, Pirkanmaa and Southern Savo. The interviewed stakeholders comprised mainly of food entrepreneurs, with additional representatives consisting of farmers, trade unions and retailers chains. Qualitative content analysis was used for data analysis. Our preliminary results indicate that there is a need for a more decentralized food system. Local food chains may act effectively as adaptive strategy. Food enterprises are simultaneously facing other increased challenges, such as increased bureaucracy and market competition which limits their efforts in climate change adaptation.

URLHILL, JAN INGE* (Örebro University, jan.i.jonhill@oru.se)

The Paradox of Managing Diversity, Observations of a Personnel Management Strategy in Mass Media Organizations from a Systems Theoretical Perspective

On the background of “anti-racism” legislation, of ideas of cultural diversity and incentives of the marked economy, the management strategy of diversity management was developed in the early 1990s. It has since then made success globally as a “new paradigm for management”. - The aim of this paper is to present some results from a research project on diversity management in mass media organisations in Sweden.

The project applies Luhmann’s systems theory as main approach for several reasons. In this case (1) as it allows analyses from different observer perspectives, (2) as the functional and structural conditions of society and its organisations and (3) as well the complexity of the issue must be taken into account, and (4) as the distinction between acting and performing becomes apparent in this communication-based theory.

Social changes in direction of (more) equal opportunity and inclusion chances as to cultural diversity have occurred in the studied media organizations. In a previous study one of my findings was that it is reasonable to assume that diversity management is more adequate than other modes of managing issues of cultural background of journalists, such as quota and also a high confidence as to legal regulations.

Among my findings are that diversity management makes a difference due to a recent professionalization of personnel managing in the media companies. Competence-based assessment as a principle generates a prerequisite for journalists with migrant background to achieve equality in opportunity, when e.g. applying for a position or by team building. The study, thus, shows that focusing on the matter of competence and not focusing on person’s cultural background (but being aware of the social matter of disfavour), paradoxically, is likely to be a functioning or even successful path of managing this issue.

JÖNSSON, INGRID* (Lund University, ingrid.jonsson@soc.lu.se)

Ingrid Jönsson and Yuegen Xiong: Changing Intergenerational Relationships in Contemporary China and Sweden: Consequences for Eldercare

Changing intergenerational relationships in contemporary China and Sweden: consequences for eldercare.

Although China and Sweden represent different stages of economic, social and demographic development, currently eldercare is an important social policy issue in both countries due to changing social and generational contracts. The paper aims at analysing recent developments of eldercare with regard to marketisation and de-refamiliarisation departing from the frame of analysis suggested by Daly & Lewis (2000:287). Empirically it means that the division of responsibilities between the state, market, family or community at the macro level will be analysed while at the micro level this will be identified by who performs the caring, who receives benefits and available services, how does the relationship between caregiver and receiver look like, under what economic, social and normative conditions care is carried out and the rate of female labour market participation. This frame of analysis enables us to identify recent changes and point to similarities and differences of how social care for ageing populations is handled in different economic, social and demographic contexts. China and Sweden are chosen for the comparison as they traditionally represent a strong generational and a strong social contract respectively. The paper starts with historical reviews of the organisation of eldercare followed by a presentation of recent changes related to economic, social, cultural and demographic circumstances (e.g. migration, changing filial piety, family structure, size etc.) with consequences for generational and social contracts. Eldercare in everyday life will be discussed in relation to Daly & Lewis’s frame of analysis as well as in relation to the concept ‘care packages’ (used by Knijn, Jönsson, Klammer, 2005 compare income packaging used by Rainwater, Rein and Schwartz, 1986), i.e. which resources are used when caring for elder-

Gender Inequality and Occupational Segregation: A Study of Women Labourers in Areca Nut Processing Units in Karnataka, India

Despite remarkable progresses in many spheres, the gender inequality still persists in India. Waged work is Segregated and Marginalized on the basis of Gender. Employed women in work place are horizontally and vertically segregated and there is a clear distinction between men’s work and women’s work. Women’s work is characterized by lower wages, low status and lower rung on the skill ladder, involved in less interest, more repetitive, monotonous and low status activities. Such pattern of Gender Segregation is exhibited in Areca nut processing units.

Areca nut is a cash crop which has contributed more than Rs.250 corers towards the National income in India. It is largely cultivated in Malenadu region of Karnataka State. The process of cutting, de-husking and drying of nuts is entirely dependent on hand labour. Women are employed in this process. The present paper discusses the Gender Inequality, Segregation and marginalization of women labourers working in an unorganized sector. The main objectives of the paper are (1) to examine the vertical Occupational Segregation of Women labourers in Areca nut processing units. (2) To study the factors influencing Gender inequality, and (3) to overview the implications of Inequality and Marginalization of women in areca nut processing units. The study is based on the primary data collected through interview technique. The study highlights that, there is Gender inequality and Marginalization in functioning and the payment of wages. There is job insecurity and violation of labour legislations. The study helps to identify the nature and structure of Gender inequalities, Segregation and Marginalization. Further, the paper tries to justify the need for empowering women to bring Gender equality and enhancing their status.

Gender Inequality in Family and Work-PLACE: An Empirical Study in Three Urban Centres in Karnataka, India

Gender inequality refers to unequal treatment or perception of individuals based on their sex. It reflects and manifests in numerous dimensions of our life. Gender inequality and resultant discrimination in varying degrees on the grounds of sex are commonly witnessed, admitted and even justified in India. Despite the policy measures to overcome gender discrimination, gender inequalities within the family and at work place still exist. Most of the forms of discrimination against women have their roots in patriarchal system and its values. Women are dominated over by their male members in their own family. They have little power in making decisions.

The present paper proposes to examine the nature and extent of gender inequality in the family and work place. The main objectives of the study are to analyse the power dimensions of women in family and work place and to examine their participation in decision-making process. This empirical study is based on field data conducted in three urban centres of Karnataka State, India. The data are collected from 500 working women. The findings of the study proved that, the power dimension splits vertically; women are discriminated by the male members in their own family and work place, they are marginalised on the bases of gender. It is suggested that progress towards Gender equality requires empowerment of women which will lead to notable changes in gender relations.

KAASCH, ALEXANDRA* (University of Bremen, mail@alexandra-kaasch.de)

Global Social Governance As Inter- and Inner-Organisational Relations Between Actors

This paper is concerned with the conceptualisation of global social governance as a matter of inter- and inner-organisational relations between global policy actors. Global social governance is commonly characterised as a complex and multi-ac-tored process, driven by more or less powerful and legitimate actors. There are significant overlaps in their agencies, as well as they are bound in various (sometimes) overlapping networks and alliances that cross-cut organisational borders. While global social policy actors differ in terms of types and functions, they do not unfold their respective power in isolation from each other. They relate to each other, part of what they do is driven by what others do.

The global social policy literature has discussed a number of examples how different global social policy actors, often international organisations, are involved in fighting over ideas; a process that happens both between and within organisations. This paper engages in a rather theoretical discussion about different ways of how the inter- and inner-organisational relationships can be conceptualised and how related interactions can be understood by drawing on a number of disciplinaries. The paper will reflect on some insight that can be drawn from sociological, organisational and psychological theory to better understand such relationships.

Urban Green Space Provisioning in Berlin, Germany. Environmental Justice in Sustainable Urban Green Space Planning

The city of Berlin, Germany, tries to integrate the ecological, social and economic dimensions of sustainability in all fields of policy action since some years. The main aim is to increase quality of life for all residents in an equal way. However, Berlin is facing further immigration which will lead to nearly 250,000 additional residents in the next 20 years. This population growth combined with urban planning policies of (re)development will certainly drive the conversion of urban green spaces into residential land. This development might result in an unsustainable city development which would raise concerns of environmental justice, too.

Set against this background, we present an analysis of urban green space provisioning in Berlin in order to identify distributional inequities between urban green spaces and population. The relation is discussed in light of variations in user preferences associated with age and immigrant status. Publicly available land use and socio-demographic data at sub-district level are applied in a GIS, dissimilarity index and cluster analysis approach. Our results show that although most areas are supplied with more UGS compared to the per capita target value of 6m², there is considerable dissimilarity by immigrant status and age. Environmental justice is further discussed on a site-specific case in Berlin – the park and former city airport Berlin-Tempelhof. Visitor profiles and preferences are analysed. Results from questionnaire surveys indicate that the identified dissimilarities on sub-district level are not the same as environmental injustice in Tempelhof, but point to a trend of urban green space and user preferences.

We conclude that, if a city claims to follow the sustainability paradigm, successful urban green space planning should consider the match between quality of a park and specific cultural and age-dependent user needs while providing equal access to high quality green spaces for all residents.

RC01-29.6

KACHTAN, DANA* (The Open University of Israel, dana@openu.ac.il)

From Bottom-up – a Micro-Methodological Examination of the Military

The aim of this paper is to deepen the discussion of micro-methodological examination of the military, research on the military focuses largely on a macro perspective, examining mechanisms, structure and policies. In this paper I wish to emphasize the importance and contribution of micro research, which focuses on the individuals rather than the institution; examining their experiences, understanding and interpretations.

Based on a qualitative research study, utilizing a semiotic-interpretative approach which is well-suited to examining the subjective point of view, I argue that the interpretations and experiences of the soldiers are a central means for understanding the structure, the mechanisms and processes in the military.

By focusing on interviews with 60 combat soldiers who served in two infantry brigades in the IDF (Israel Defense Force), I wish to illustrate the role of individuals in creating and perpetuating the structure, culture and mechanisms of the military as well as in challenging them. Focus on the role of the individuals, rather than the institution, enables us to examine not only how structure and culture are maintained and reproduced through formal policy, but also how they are created and formed by the soldiers, through their practices, without the external supervision of the army.

The contribution of a micro perspective is, first, to stress that mechanisms operate not just top-down but also bottom-up. Furthermore, the study illustrates how social categories, such as ethnicity and gender, are preserved and perpetuat-ed not only by institutional mechanisms, policy and structure, but also by individuals through the ways they perform. Finally, by emphasizing a micro perspective I do not ignore the important role of the organization, but rather emphasize an additional point of view in military methodology.
Children's Leisure Pursuits: A Test of the "Homology" Versus "Omnivore-Univore" Hypotheses Debate – CANCELLED

Recently in the UK academic milieu, there has been a debate as to whether the link between socio-economic status (SES) and adults' participation in cultural activities conforms to a "structural homology" rule (Bourdieu, 1984), or present a pattern best characterised as an "omnivore-univore" distinction (Peterson, 1992). The dispute surrounded the issue of whether in contemporary British society, cultural participation (and consumption) still signifies social-class, and in what ways. However, researchers have yet to analyse class-based patterns of cultural participation and leisure pursuits in children.

The present paper addresses this gap in knowledge by exploring the associations between SES (measured by parental education and occupation levels and by familial incomes) and children's participation in three leisure domains: social-group activities, commercial-public activities, and home-centred activities. Within each of these domains, activities from across the "highbrow-lowbrow" cultural capital spectrum are examined.

The results are used to discuss the debate on the "homology" vs. "omnivore-univore" hypotheses in the context of cultural socialisation and cultural capital acquisition in the middle childhood years.

The paper relies on quantitative analyses of data drawn from the British "Millennium Cohort Study" (MCS), a survey of around 19,000 babies, all born between 2000-2002. The current analyses focus on data taken from the third and fourth sweeps of the MCS when the children were aged around 5 and 7, respectively.

The findings indicate that children's leisure pursuits are stratified by SES: children in high-SES groups are more likely than peers in low-SES groups to participate in a range of leisure activities across the highbrow-lowbrow spectrum. This pattern of leisure participation is consistent with the "omnivore-univore" hypothesis. Yet, the results also show that the associations between SES and children's leisure pursuits are stronger for highbrow and midbrow activities than for lowbrow activities, a finding that lends support to the "homology" argument.

The Provision and Expansion of High School Education in Post-War Japan

This study aims to clarify the mechanisms of high school educational expansion and regional variations in postwar Japan regarding the kinds of opportunities that were provided. We focus on education providers and the programs offered by high schools. High school education expanded rapidly in the 1960s when the first baby boomers became high school students. To understand how this extraordinary expansion was made possible and how the opportunities for high school education were provided, we must consider the relationships between public and private institutions and the roles of the private ones. The proportion of students attending private high schools is now around 30%. This proportion became higher during the 1960s. This means it was impossible for high schools to expand if only public schools supplied education. Also, as Ichikawa (1991) points out, a distinctive feature of the Japanese educational system is a preference for general education under a single-track system. The same holds true for high schools. Although Japanese high schools offer both academic (general) and vocational/specialized programs, the ratio of students enrolled in academic programs continues to rise, accounting for more than 70% in 2010. These features characterize high school education in Japan. At the same time, there have been regional variations in provision of high school education regarding above mentioned points. How and why was each prefecture different in providing high school education?

To answer these questions, we first classify prefectures into groups using cluster analysis then clarify determinants of regional variations. In conclusion, we discuss how these variations may affect provision of high school education in the near future, in depopulating society.

Lay Judge System and Social Bias

Should Court respect the judgment of lay judges when the lay judges had not enough knowledge concerning to a specific psychological conditions or a disorder caused by mental disabilities?

This presentation aims to clarify the necessity to overcome prejudices of lay judges and to suggest the importance of supports of lay judges in order to avoid a social-based decision.
findings of school choice, attitudes towards comprehensive school system and social class (based on family survey, conducted in 5 Finnish cities, n=2617).

Our interpretation is that the lower classes are relatively excluded from the Finnish version of school choice, which grounds on aptitude tests, and urge for more open enrolment in general. Whereas middle classes on one hand, more commonly exercise parental choice in practice, and, on the other hand, are more aware of the segregative effects of free parental choice. Nevertheless, new cleavages, based on occupational status within the middle class have emerged with different emphases on freedom to choose and universal education system.

From the Educational Policy about Gender Equality to Its Testing in the Labor Market during the Greek Economic Crisis

In the present paper the effects of the Greek economic crisis to the Greek society are comparatively scrutinized with concentration on both male and female access to the labor market. In particular, the issues under investigation throughout 2008-2013 are: a) the unemployment percentage both of men and women, b) men and women part-time employment and c) the correlation between studies and labor. Besides, the variable of gender is studied in combination and in relation to age and years of studies.

Through quantitative researches an evaluation is pursued whether education about gender equality, being the aim of the educational policy, was productive; in other words, whether a differentiation based on gender was statistically significant. Additionally, the years of studies are correlated with unemployment or part-time job of men and women so that the question whether the prolonged education is conducive to the reinforcement of gender equality is investigated, resulting in the same access possibilities to labor market both by equally qualified male and female subjects.

The economic crisis period is regarded by the present paper as a testing phase for the educational policy implemented towards gender equality. It is estimated that in this ordeal with a limited number of working positions and the reorganization of the labor market the evidence will be apparent. In this respect the outcome of a policy about gender equality will be evaluated and the educational structures will be within a policy of reinforcing gender equality aligning with a broader policy about equality conducive to the unification of vindication schemata for both genders.

Employee Driven Innovation - an Organisational Challenge

Employee Driven Innovation - An organizational challenge

The Nordic countries are about to open those eyes for that employees in all sort of workplaces is an important and untapped potential of resources for innovation. But many politicians, bureaucrats and top managers lack the understanding of what it is and how to do it.

During the last decades the technological paradox has influenced industry and innovation policies. Succeeding innovation strategies seems to base the rather one sided notion that essential ideas occur in laboratories and research departments. However a paradigm shift is in the process of getting approval. Major social challenges, rather than more dispersed product priorities, have become evident, also in EU and OECD policies. The value of holistic approaches to innovation is emphasized, rather than a purely scientific and technological focus. And the importance of innovation in services, production and work processes is lifted up. This happens at the same time as the general level of education are rising, and businesses are hiring more people with skills to see and understand the wider implications of interactions between religious and secular institutions and discusses theoretical consequences of changing ways of interaction in different social and religious contexts.

Disentangling Greek Xenophobia during Recession

In the recent recession, the most severe one since the Great Depression, Greece has been considered the Achilles heel of Eurozone’s economies. Since 2008 the country has experienced an economic turmoil as well as an unprecedented social and political collapse. Due to the devastating economic conditions, the political landscape in Greece has changed. The economic crisis, combined with xenophobia and secure in an anti-immigrant society, has been a way of coping with unemployment, financial stagnation, and insecurity. This has been pointed out by many scholars, such as Daron Acemoglu, who has argued that economic crises can lead to a rise in xenophobia.

The study aims to explore how the economic crisis and the rise of anti-immigrant sentiment have affected the attitudes of Greek citizens towards foreigners. The research was conducted in three regions in Greece: Athens, Thessaloniki, and Corfu. The study used a combination of qualitative and quantitative methods, including interviews and surveys. The interviews were conducted with community leaders, business owners, and local residents, while the surveys were administered to a representative sample of the population.

The results of the study indicate that the economic crisis has significantly increased xenophobia in Greece. The findings suggest that the crisis has contributed to increased social anxiety, fear of the unknown, and a sense of vulnerability. These factors have contributed to a rise in anti-immigrant sentiment, which has been exacerbated by the economic downturn.

left-right scale become the core of investigation. During an era of economic and political crisis, DK responses may reflect individuals’ perceptions of weakening of democratic institutions, their distrust in political parties to revive the economic growth, their condemnation of the political system and their focus on alternative forms of governing to confront the socio-economic woes. Using data from the European Social Survey, this paper aims to examine the changes in DK responses in the left-right scale before and during the economic crisis. The analyses unearth specific patterns of DK responses whereas the greatest changes are detected in two countries severely affected by the recession, i.e. Greece and Spain. Multiple logistic regression analyses unveil the difference in impacts of political and civic participation, trust in democratic institutions and political parties in elucidating DK responses in respondents’ left-right orientation during a period of economic downturn and political turmoil.

Medical Marijuana Laws and Substance Induced Deaths: Evidence from the U.S.

This paper explores the relationship between medical marijuana laws and substance induced deaths. The relationship between marijuana and alcohol empirically remains unclear; one strand of the literature shows the substitute relationship while another reveals the complementary relationship. In a similar vein, gateway drug hypothesis (i.e., marijuana consumption results in more harmful drug use) has been subject to empirical analyses, and yet proponents and opponents of the hypothesis have been often unclear about what policies it entails. That is, it is argued that a policy aims to reduce the risk of exposure to marijuana in order to prevent the use of other illicit drugs. On the other hand, one would claim that the problem lies in the nature of the illicit drug market where marijuana and other illicit drugs are simultaneously provided and supplied. Using state level panel data from Centers for Disease Control and Prevention and other data sources (1999-2010), I estimate the effects of medical marijuana laws on alcohol-induced deaths and cocaine-induced deaths. Empirical results show that medical marijuana laws result in an increase in alcohol-induced deaths, suggesting that there is a complementary relationship between marijuana and alcohol. In contrast, medical marijuana does not result in a reduction in cocaine-induced deaths. The results shed light on understanding the complicated relationship between marijuana and substances in the sense that availability of substances plays a critical role in the gateway drug hypothesis. Alcohol is provided in a formal/legal market whereas cocaine can be only supplied in an informal/illicit market. It is therefore suggested that if such drug related policies change the way drug markets function and results in drug market separation, illicit drug induced deaths can be reduced.

Attitudes Toward Non-Normative Sexualities Among University Students in Japan: Quantitative Analysis (Part 2)

Following the presentation by Kazama, et al., we will present the results of a preliminary analysis of attitudes toward homosexuality, transgenderism and other non-normative sexualities among university students in Japan, focusing on the mechanisms through which gender, other attributes and personal experiences might shape their attitudes. A definite and sizable body of literature on attitudes toward LGBT issues has been accumulated in the Euro-American context. Such studies are limited, however, in Asian countries. Therefore, this informative ethnographic study on the themes in several Asian societies, and yet, without the data based on large-scale surveys, it is difficult to comprehend the environment in which people live or to reveal how non-normative sexualities are situated. As the first step toward filling such a gap, we conducted a survey at three private universities in 2012 and 2013. The questionnaire include knowledge and awareness of, as well as attitudes toward sexual minorities (discomfort, judgment, perception of what is “normal”) and also experiences of contact, including personal, media, educational, of such people/issues.

A preliminary analysis of the data of more than 700 cases shows that in many of the attributes/variables, women tend to show more liberal attitudes compared to their male counterparts. Personally knowing someone who is homosexual and/or transsexual also tends to make one more accepting of variant sexualities compared to students who do not have such connections. In the presentation, we will provide a comprehensive picture based on further analysis of the data, including how such attitudes relate to attitudes toward other issues, such as gender, family and nationalism. We hope to draw implications on how heteronormativity, homophobia, sexism and binary thinking of men and women constitute the experiences of young generation in the Japanese context.

Social Contribution through Student’s Participation in Village Festival  

Kanazawa University embarked on the new project on social contribution in 2010 through promoting students to participate in traditional festivals held in severely depopulated rural villages. This project aims to provide opportunities for
students to lean the everyday lives of rural Japan, and also to take a leadership role of university in revitalizing the rural communities. This paper explores the reason why Kanazawa University set up this project, and show to what extent this project goal has achieved its initial goal.

In 2004, central government enacted the low to reform the national universities to quality and autonomous bodies. Thereafter, many national universities including Kanazawa University set up the charters. In Kanazawa University Charter, social contribution is declared as one of the principal missions of the university. Kanazawa University has established Center for Regional Collaboration in 2002. “Matsuri Project” started in 2010 as one of the University’s social contribution activities. Over one hundred of overseas and Japanese students joined the project every year. During the summer, almost every village in Noto region held traditional summer festival, called “Kiriko festival”. Within the last decade, due to aging and depopulation, many villages are now faced with manpower shortage to maintain the villages and festivals. Young students are pleased to joint the festival and walk around with shouldering heavy Kiriko with village people. Before the festival began, gorgeous dinner are sometimes served to students.

For the students, joining Kiriko tour is a good chance to go inside the village and to talk with local people. Planned and arranged by university staff, overseas students can experience the actual lives of rural villagers. So far “Matsuri Project” has weak relationship with student education and academic research by faculty members, local people well acknowledges the leadership of the university for revitalizing the rural communities.

KAMIYA, YASHUHIKO* (Nagasaki University, yokami@teke.att.ne.jp)
Rethinking the Body through its Disability

A person with physical disability has uncontrollable body. The body’s passive-ness and disability go beyond, its actions and capability. Disability studies associated with sociology of the body examine disability as a social, cultural, and political phenomenon in contrast to medical perspectives, focusing on how disability is defined and represented in society. Both of them have been positioned against medical science; they approach to the body from the society and context while medical science approaches from biology and diseases. But they may be accomplish in the sense that they often ignore persons and their daily lives. Pluralism to which sociology of the body and disability studies owe much emphasizes diversity of human behavior and culture regarding health and illness based on binary comparison such as health vs. disease, and the uniqueness of nature vs. the diversity of human cultures. Nevertheless, post-pluralism relativizes pluralism discourse by suggesting plurality of natures and sciences, and their mutual construction of human cultures. Nevertheless, post-pluralism relativizes pluralism discourse by suggesting plurality of natures and sciences, and their mutual construction with society and culture. Persons with disability are now assumed to increase in number as overall disease incidences have not been as decreased as the mortality. The geographic areas that are larger than the gap in non-disabled. Disabled persons from poor families living in rural areas have greatest needs but receive least medical and social care. In developing countries, persons with physical disability have greater handicap than those with intellectual disability, which is opposite from developed countries. Physical disability in a person sometimes leads to body impairment such as lumbago in other family members. Physical abuse to disabled persons has weak relationship with student education and academic research by faculty members, local people well acknowledges the leadership of the university for revitalizing the rural communities.

Stabilization of the World Due to the Expansion of a Western State System: Explanation Using Game Theory

Stabilization of the world due to the expansion of a Western state system: Explanation using game theory

Dr. David Strang explained the stabilization of modern global society from the perspective of the (sociological) new institutional theory while criticizing the explanations given by realists in highly original research ("Anomaly and Commonplace in European Realism: Realist vs. Institutional Accounts.") He states that global society has been stabilized as a result of the expansion of the “institutionalization” of a Western state system that respects the sovereignty of each country, rather than as a result of the balance of power of countries that reasonably maximize their utility. However, his explanation is still insufficient when we ask questions such as: why and how such an expansion took place, and why such an expansion stabilizes global society.

The answer can be derived from the fact of historical conflicts between dependencies and sovereignties. The form of the dynamic game between resisting/non-resisting dependencies and oppressing/non-oppressing sovereignties is analogous to that of the well-known chainstore game. This dynamic game has two Nash equilibriums. Based on the replicator dynamics of this game, we can interpret the historical changes in global society.

Initially, in a path-dependent manner, the world heads for an equilibrium that includes “dependencies that do not resist oppressive sovereignties.” During this period, empires vie for supremacy. Subsequently, global political discourse requires sovereignties to comply with a “commitment” to non-oppressiveness. The world then heads for a subgame perfect equilibrium in which “sovereignties do not oppress resistance from dependencies.” Thus, when the sovereign authority of many countries becomes established, “cooperation” will be selected in the repeated N-person dilemma game, resulting in a more stabilized global society. The term “institution” referred to by institutionalists can be understood as “commitment” or “equilibrium” in the game theory.

KAMMERBAUER, MARK* (Technische Hochschule Nürnberg, info@transarchitecture.org)
Capacity for Urban Recovery in Southern Germany after the 2013 European Floods

This proposed contribution deals with the impact of natural disaster on the recovery of urban settlements. In the 2013 European floods, settlement space in the South and East of Germany was severely impacted, including the Bavarian city of Deggendorf situated along the Danube river. Reports point out that early damage appraisals in combination with environmental degradation may shift the 21st Century individual towards environmental disaster risk. This study matter. A case study of South and East Germany, where the Kirikojima and urban studies serves to analyze these aspects in relation to vulnerabilities as well as institutional planning and programs for recovery. This permits a multidimensional discussion on ongoing processes of adaptation to disaster and its impact in urbanized regions, while enabling disciplines in spatial production access to this social and political matter. A case study in urban Germany serves to recovery and the needs of impacted populations may impede the capacity of cities to adapt. The approach is intended for application to other cases of urban recovery planning after disaster.

KAMO, YOSHIHINORI* (Louisiana State University, kamo@lsu.edu)
KAMESAKA, AKIKO (Aoyama Gakuin University)
Examining the Structure of Happiness and Life Satisfaction in Japan Utilizing a Large Scale National Survey

Using data from “The Study on the Quality of Life” collected by the Cabinet Office in March 2012, we examined the structures and factors affecting the happiness and general life satisfaction among Japanese.

Both measures are calculated with single questions, and the mean score for happiness (6.64 for the scale of 0-10) is higher than life satisfaction (5.98).

Of all satisfactions with various aspects of our life (e.g. housing, childcare, healthcare, etc.), the satisfaction with family is most strongly related to happiness and life satisfaction except for the satisfaction with work to life satisfaction among males.

Multiple regression analyses indicate that the respondent’s age shows a U-shaped effect on the life satisfaction (lowest at age 40 through 50). The happiness is positively affected by the respondent’s education and being married, both of which seem to indicate more psychological, internal state of our life.

We also took an exploratory approach and regressed both variables on various psychological, attitudinal variables. We found that our happiness was more strongly related to the happiness of family members than any others including our own life satisfaction. Other factors related to happiness but not life satisfaction include tolerance, peace of mind, tenderness, and feeling accomplishment often, which all indicate autonomous and psychological fulfillment, somewhat similar to the concept of Eudaimonion in Greek philosophy.

On the other hand, factors related to satisfaction but not happiness include doing as well people around myself, feeling appreciated by others, feeling confident that I am as successful as others, and often thinking of myself first, which all indicate utilitarian and competitive drives.

The present study is based on one of the first and most comprehensive data sets on subjective well-being in Japan with a national sample. As such, it offers a contemporary and comprehensive overview of subjective well-being in Japan.
Domestic Division of Labour and Marital Satisfaction in China

This paper analyses data of the Chinese Women’s Status Survey 2000, a national survey in China, to examine the association between household participation and marital satisfaction in urban and rural families. Married women’s housework time is 2.8 times that of married men. Yet their level of marital satisfaction is on a par with men’s. We hypothesize that this is partly due to gender difference in the preference about domestic roles versus work roles. We first test if household time forms a migration as a transitory state, whose final objective is the return for men (i.e., Do women dislike housework less than men?). We also test if work time has a stronger negative relationship with women’s level of satisfaction than men’s (i.e., Do women dislike paid work more than men?). Furthermore, we test whether elderly parents’ help in housework mainly alleviate women’s domestic burden rather than men’s. We find supportive findings for these hypotheses in our preliminary analyses. We will employ Structural Equation Modelling to investigate the patterns of associations among different forms of marital satisfaction (including satisfaction with the domestic division of labour, satisfaction with marital life, and satisfaction with status in the family), the domestic division of labour and co-residence living arrangement with elderly parents.

Transnationalism and Schooling: The Case Study of a Brazilian Ethnic School in Japan

This paper aims at analyzing the relation between migration and education through the case study of a Brazilian ethnic school in Japan. The hypothesis which underlies this work is that the conception of Brazilian schools is related to the logic which drives the migratory flow to Japan: many Brazilian migrants living in Japan experience in their home country as a transitory state, whose final objective is the return to their country. The experience as a temporary high school teacher in a Brazilian school has shown that the ethnic school tends to reproduce this reasoning: the curriculum is the same as that studied in Brazil; the textbooks are imported from education companies, whose educational view is strictly utilitarian; classes are taught in Portuguese and the pedagogical objective is to prepare the students to their return, allowing them to continue their studies in Brazil later on.

The fieldwork highlighted three points to be analyzed: first, given that the curriculum focuses solely on the study of Brazil, the daily life and the migratory experience in Japan is set aside—the content of the imported textbooks does not fit to the social reality lived by those children. Second, Brazilian schools are target of severe criticism and receive a suspicious look by the Brazilian community itself. Common criticisms denounce poor infrastructure, lack of skilled professionals, corporate mindset that disrupts the schooling and high tuition fees. Third, most of those ethnic schools are supported neither by the Brazilian government nor by the Japanese government. Arguably, all these factors contribute to a poor quality of education, hindering the chances for upward mobility either in Japan or in Brazil. Although the ethnic schools face many obstacles, there is still a demand for them.

Urban Cultural Strategy and Japanese Animation in Nerima

Culture is now implemented for urban economic development in many advanced countries. Urban cultural strategy, trying to attract investment and human capital, became popular in Western cities from 1980s. At that time, former industrial cities suffered from economic decline. In contrast, Japanese cities had enjoyed economic prosperity because of industrial growth, especially the R&D and hi-tech industry. But from mid 1990s most Japanese cities including Tokyo began to gradually lose the industrial base because new international division of labor had deepened. So new plans for economic development were needed in those places. This study analyses the association between culture and commerce. It affects policy formation and inter-organizational relationship in Nerima.

What Kind of Trust Do We Measure Using the Generalized Trust Question?: An Approach Based on Latent Class Model

Despite the importance in social capital research, empirical studies on generalized trust show inconsistent results. For example, trust studies have not shown clear results with respect to the relationship between group participation and respondents’ level of generalized trust. This study shows that a part of inconsistency is due to the measurement of generalized trust. Generalized trust is measured by such questions as “Generally speaking, would you say that most people can be trusted, or that you can’t be too careful in dealing with people?” This kind of question is employed in major social surveys such as World Values Survey (WVS). This study hypothesizes that respondents think some different kinds of trust when they answer the generalized trust question. This study extracts heterogeneity of trust responses by latent class analysis (McCutcheon 1987), using Japanese dataset (Social Survey of Residents’ Networks and Health). As a result, this study extracts four types of trustors; (a) active trustors (27.6%), who show higher levels of generalized trust and participate all kinds of social groups, (b) inactive trustors (31.3%), who show higher levels of generalized trust but do not participate any kinds of social groups, (c) parochial trustors (19.6%), who show lower levels of generalized trust but participate local groups only, (d) distrusters (21.4%), who show lower levels of generalized trust and do not participate any kind of social group. This result shows that respondents think four different kinds of trust when they answer the generalized trust question. Inconsistent results in previous studies may be caused by the difference of group participation between high trustors.

Gender Difference in the Influence of Non-Regular Employment on Mental Health: The Case of Japan

1. Aim

Studies on the relationship between non-regular employment (NRE; such as temporary or precarious employment) and health have been increasing since the 2000s. Most of the studies reported that NRE has a negative effect on various health outcomes (including mental health). The purpose of this study is to investigate the gender difference in the relationship between NRE and mental health in Japan. The number of NRE workers in Japan has been increasing since the 1970s, and this trend is likely to continue in the future. However, the impact of NRE on mental health in Japan is not fully understood. This study aims to investigate the gender difference in the relationship between NRE and mental health in Japan.

2. Data

The “Japanese National Survey of Stratification, Health, Income, and Neighborhood” (J-SHINE) survey data is used. This is a computer-assisted personal interview survey that was administered in Tokyo and four suburban cities in 2010 (N=4381, age range of 25 to 50 years).

3. Findings and Discussion

In this study, I use three mental health outcomes as dependent variables: depression (K6), mental component summary score (SF8) and suicidal ideation. The results of preliminary analyses are summarized as follows.

First, NRE has significant negative effects on three outcomes in the case of men. In contrast, NRE has no effects in the case of women. Second, after controlling for covariates, the effects of NRE are disappeared: marital status (married) and subjective SES have significant effects on mental health.

4. Discussions

This study is the first to investigate the gender difference in the relationship between NRE and mental health in Japan. The number of NRE workers in Japan has been increasing since the 1970s, and this trend is likely to continue in the future. However, the impact of NRE on mental health in Japan is not fully understood. This study aims to investigate the gender difference in the relationship between NRE and mental health in Japan.

Policies of Correcting the Physician’s Geographical Uneven Distribution in Japan

Japan has adopted the universal health care insurance system since 1961. It means that the government has to guarantee the access to health resources to all Japanese cities around the end of the 1990s and culture became to be recognized as a resource for urban competitiveness. In this presentation, I will show detailed cases of Nerima Ward, Tokyo. Because many animation companies in Nerima ward, the local government is encouraging animation industries and trying to reconstruct Nerima’s image as Anime Town. It is based on a partnership with Nerima Animation Association, the trade association of anime companies in Nerima, to explain how and why this partnership is formed and policy measures are implemented. Therefore, it is needed to focus on the flow of event that affects the recent situation. It is shown that a civil group that aims to construct a museum for Japanese animation and chamber of commerce played major role to prepare institutional base for recent policies from the mid-1990s. Although they cooperated to lobby for public supports for animation and achieve significant results, they dissolved their partnership. I point there is a tension between culture and commerce. It affects policy formation and inter-organizational relationship in Nerima.

What Kind of Trust Do We Measure Using the Generalized Trust Question?: An Approach Based on Latent Class Model

Despite the importance in social capital research, empirical studies on generalized trust show inconsistent results. For example, trust studies have not shown clear results with respect to the relationship between group participation and respondents’ level of generalized trust. This study shows that a part of inconsistency is due to the measurement of generalized trust. Generalized trust is measured by such questions as “Generally speaking, would you say that most people can be trusted, or that you can’t be too careful in dealing with people?” This kind of question is employed in major social surveys such as World Values Survey (WVS). This study hypothesizes that respondents think some different kinds of trust when they answer the generalized trust question. This study extracts heterogeneity of trust responses by latent class analysis (McCutcheon 1987), using Japanese dataset (Social Survey of Residents’ Networks and Health). As a result, this study extracts four types of trustors; (a) active trustors (27.6%), who show higher levels of generalized trust and participate all kinds of social groups, (b) inactive trustors (31.3%), who show higher levels of generalized trust but do not participate any kinds of social groups, (c) parochial trustors (19.6%), who show lower levels of generalized trust but participate local groups only, (d) distrusters (21.4%), who show lower levels of generalized trust and do not participate any kind of social group. This result shows that respondents think four different kinds of trust when they answer the generalized trust question. Inconsistent results in previous studies may be caused by the difference of group participation between high trustors.

Gender Difference in the Influence of Non-Regular Employment on Mental Health: The Case of Japan

1. Aim

Studies on the relationship between non-regular employment (NRE; such as temporary or precarious employment) and health have been increasing since the 2000s. Most of the studies reported that NRE has a negative effect on various health outcomes (including mental health). The purpose of this study is to investigate the gender difference in the relationship between NRE and mental health in Japan. The number of NRE workers in Japan has been increasing since the 1970s, and this trend is likely to continue in the future. However, the impact of NRE on mental health in Japan is not fully understood. This study aims to investigate the gender difference in the relationship between NRE and mental health in Japan.

2. Data

The “Japanese National Survey of Stratification, Health, Income, and Neighborhood” (J-SHINE) survey data is used. This is a computer-assisted personal interview survey that was administered in Tokyo and four suburban cities in 2010 (N=4381, age range of 25 to 50 years).

3. Findings and Discussion

In this study, I use three mental health outcomes as dependent variables: depression (K6), mental component summary score (SF8) and suicidal ideation. The results of preliminary analyses are summarized as follows. First, NRE has significant negative effects on three outcomes in the case of men. In contrast, NRE has no effects in the case of women. 4. Discussions

This study is the first to investigate the gender difference in the relationship between NRE and mental health in Japan. The number of NRE workers in Japan has been increasing since the 1970s, and this trend is likely to continue in the future. However, the impact of NRE on mental health in Japan is not fully understood. This study aims to investigate the gender difference in the relationship between NRE and mental health in Japan.

Policies of Correcting the Physician’s Geographical Uneven Distribution in Japan

Japan has adopted the universal health care insurance system since 1961. It means that the government has to guarantee the access to health resources to

International Organizations in a Global Social Inequality

Economic globalization caused the fast growth of market economy throughout the world. But it also caused the worsening of social differentiation and growth of social tension. The principle of free movement of capital maintained during the last three decades provoked a mass permutation of social-economic space.

National governments are in a permanent search for new models of economic growth, understanding that previous strategy of growth has lead to market’s destabilization. International and regional organizations in this situation need to elaborate common rules, norms and values that can possibly lead the world or region out the the dangerous way of perpetual crisis. Many global actors, both national and international, agree that rules of the game must be changed, but this strategy faces a serious conservative opposition.

Current analysis is directed towards the reasons and consequences of the global social breakdown through the lens of three regions: European Union, Middle and Near East and Latin America. European Union, being the most powerful international organization in the world, is not only the example of wrong fiscal policies. Founders of the EU considered that the creation of the free trade zone and common currency would bring an end to monetary imbalance. But, on the contrary, it resulted in social imbalance and growing split between the states. The social and political disruption on the Middle and Near East is also caused primarily by national and supranational financial and economic imbalance between the rich and poor countries and the rest. It, in turn, influences and strengthens the ethnic, religious and geopolitical contradictions. Latin America is rightfully considered by many today as one of the grand social laboratories. Successfully cooperating through regional organizations, national governments have managed to propose innovative social-liberal policies throughout the continent, renewing but not repeating the continental European economic policies of the 1960-70-ies.

Do Social Networks and Sns Function As Social Capital for Social Engagement?

This paper examines what types of social networks are facilitated by online networking activities and function as social capital for social engagement in South Korea. East Asian Social Survey (EASS) Module in 2012 Korean General Social Survey (KGSS) provides measures for social networks and social engagement whereas KGSS has a unique module for Internet/SNS activities. Analysis focuses on social eating/social and neighbors' social support as social networks, local participation, voluntary activities, and political interests as social engagement, and the presence of internet and/or SNS activities as online networking. Analyses of 2012 KGSS and EASS Module observe that online networking activities facilitate social eating/social drinking, but not neighbors' social support. Correcting for possible bias by counterfactual analysis, it is SNS activities, not internet activities per se, that facilitate social eating/social drinking. It is also observed that both social eating/social drinking and neighbors' support function as social capital for both types of social engagements: local participation and voluntary activities. SNS activities do not directly affect those social engagements but promote political interests, whose effect is robust after counterfactual analysis. Concerning personality traits, more conscientious and open people engage in social matters more actively while less conscientious but more open people are more likely to use SNSs. In summary, this paper finds that (1) both neighborhood-based strong ties and socially outreach weak ties encourage social engagements for local and public interests; (2) SNS activities mainly help social outreachs and promote political interests, but not actions yet; and (3) SNS activities have affinity with specific types of personality and exercise distinctive impacts on social networks and engagements beyond those of internet activities.

Measuring Community Resilience to Natural Disasters: Implications for Disaster Management and Reduction in Korea

Building a resilient community to disasters has become one of the main goals of disaster management to absorb and mitigate negative disaster impacts. More disaster resilient community often experiences less disaster impact and reduces long recovery periods after a disaster. In this paper, we present the methodology that we constructed a set of indicators to measure community's disaster resilience (CDRI) in terms of human, social, economic, environmental, and physical factors. Moreover, this study develops a methodology to aggregate constructed disaster resilience index of local communities in Korea. 229 local municipalities are examined to measure the degree of community's resilience to natural disasters. Geographic Information System (GIS) is used to analyze and visualize spatial distribution of disaster resilience. Moreover, this study examined a relationship between the aggregated community disaster resilience index (CDRI) and disaster losses using a geographically weighted regression (GWR) method. Identifying the extent of community resilience to natural disasters would provide disaster management officials or decision-makers with strategic directions how to improve local communities' resilience to natural disasters and to reduce the negative disaster impacts.

Revisiting the Digital Divide: Contributions from Older Internet Users

One among the most prominent current debates regarding digitalization and social inequality is the one pertaining to the “digital divide”. Research shows that this divide is a social rather than technologically driven phenomenon since socio-economic inequalities are the main determinants of it. Since the internet and new technologies are increasingly woven into the fabric of everyday lives the divide is a reality even in the most developed economies. The debate brings attention to particularly socially vulnerable groups such as older people. This paper draws from focus group data (n=30) and focuses on older people (60+) who are active internet users in Sweden, a country that tops the lists of the most developed countries when it comes to Network Readiness Index (NRI). The paper points to the various patterns of internet usage that structure older users’ everyday life pertaining to the access and skills necessary to obtain different forms of information and to the maintenance of their social networks. We argue that these usage patterns can be perceived as contributors to the reproduction of already existing inequalities based on socio-economic factors. Argued hereby is also that as long as one is capable to conform to the imperatives that digitalization builds upon then old age need not be perceived as an obstacle to participation in the increasingly digitalized society.

KANNA, KALPANA* (Council for Social Development, kalpana.kannabiran@gmail.com)
Kalpana Kannabiran: Tools of Justice: Non-Discrimination and the Indian Constitution

In the years since independence, the Indian subcontinent has witnessed an alarming rise in violence against marginalized communities, with an increasing number of groups pushed to (and outside) the margins of the democratic order. Against this background of violence, injustice and the abuse of rights, Tools of Justice: Non Discrimination and the Indian Constitution explores the critical, ‘insurgent’ possibilities of constitutionalism as a means of reimagining citizenship, dignity and equality. The book draws upon the rich discourse of the Constitution of India, the existing recognition of “atrocity” in the Indian Constitution (Articles 12 and 21), the potential for reimagining the role of courts in the protection of specific forms of non-discrimination, and the constitutional articulation of non-discrimination.

The book plots the possibilities of popular constitutionalism and constitutional morality, inside and outside courts in an attempt to project these as the other, the mirror, in which the existing constitution must validate itself. The construction itself is not a fixed legal text, but a vision that shapes and is shaped by peoples through daily struggles and upheavals.

This is a Man’s World? Changes in Disposable Income Predict Sex Ratio at Birth

The human sex ratio at birth (SRB) is long known to be relatively constant at around every 100 girls. Recent studies evidence has been found that SRB might vary according to exposure to chemicals and socioeconomic conditions. SRB has also been declining after World War II in several industrial countries – a phenomenon that remains unexplained. Here we show that changes in disposable income are associated with birth sex ratios in OECD countries. Positive changes in disposable income are associated with higher proportion of male infants. We apply panel regressions to OECD data that spans the years 1971 to 2011 for 35 countries and UN fertility data in an unbalanced panel. Findings not only partly explain the rises and declines in the sex ratio in OECD countries, but also first time provides evidence of the influence of economic and social forces on SRB that can be even seen in macro level analysis. This opens up radically new research directions in social sciences, where the emphasis on the biological factors has traditionally been on how biological determinants shape social life and in the interaction of the two, not on how social and economic determinants might affect biological facts such as the sex of an infant. This furthermore contributes to debates of gender equality. Our findings suggest that the equality of opportunity differs for genders as the sex ratio depends on the underlying economic conditions: men seem to be born into better economic conditions.

Experiences of Fatherhood in Lithuania: Persistence and Changes

Men’s studies is an emerging research area in many post-communist societies. There is a little evidence on the impact of the rapidly changing political and socio-economic context on the normative masculinity model and male identity. The paper is directed towards a study of how men become fathers (their perception of a family and man’s familial roles, motivations to have children, family planning practices) and what are the experiences of “being a father” (paternal involvement in childcare; communication and emotional ties with children; bread-winning and combining the professional and family roles). These issues are explored basing on the quantitative and qualitative Lithuanian data - the results of the questionnaire survey carried out at the end of 2011 - beginning of 2012 (a sample - 2010 respondents, representing national population born respectively in 1950-1955, 1960-1965, 1970-1975 and 1980-1985) and the findings of the in-depth interviews with 23 fathers (representing of the same birth cohorts), conducted in summer of 2012 in the six regions of Lithuania. The investigations were accomplished in a frame of the four years research project „Trajectories of family models and social networks: intergenerational dimension“, financed by the European Social Fund (ESF).

One of the research objectives is to follow the changes in men’s family and paternal roles by comparing the experiences and attitudes of generations socialized in two different historic periods – the soviet time and in the years of societal transformation after the collapse of communist regime.

Anti-Nuclear Movement in Taiwan: Fukushima Disaster Prompts the Case for Citizen Participation in Democratization of Energy Policy

The anti-nuclear power movement in Taiwan has a history of more than two decades, where the conflict has never been just a question of science, but because of uncertainty and complicated interactions of socio-technical systems, has been about interconnected economic, environmental and social concerns. In the aftermath of the neighboring 2011 Fukushima nuclear disaster, intensive media coverage and synergy among Taiwanese civil society groups and Japanese environmental activists in several national and local rallies resulted in greater public awareness of possible catastrophe from nuclear power disasters among both Taiwanese and Japanese citizens. Despite the strong civic questioning of current energy policy, the Taiwanese government, however, does not only retain its strong support of nuclear energy in guaranteeing the safety of the three current nuclear power plants, but also maintained that diminishing the fourth nuclear power plant would result in costly economic decline for Taiwan. Against that background, this paper aims to investigate how has the anti-nuclear movements in Taiwan been transformed during the past three years and to inquire reasons why it could draw varied constituencies to participate in this collectivism with unprecedented scale.

In addition, this paper also analyzes how civil society through varied collective activism has challenged current energy policy and moved towards democratization of energy policy. Employing a qualitative approach along with discourse analysis and interviewing actors from the various social movement groups, the author attempts to answer questions above in five arguments – a feeling of close cultural and geographical proximity to the Japanese, increasing distrust in safety of the controversial fourth nuclear power plant, cyber communities as mobilization networks, advocacy of elite and celebrity, activism alliances across varied social movement organizations. Finally, deriving from these empirical findings, the author discusses how democratization of energy policy could take place in also recognizing key barriers.

Democratizing Expertise and Enhancing Public Participation in Deliberative Risk Governance: EMF Case in Taiwan

This paper contributes to ongoing discussions on democratizing expertise and building public capacities for deliberative / participatory risk governance of science and technology through an investigation of public participations in risk governance concerning the controversies of electromagnetic fields (EMF) in Taiwan. The author utilizes a qualitative approach, drawing from documentary data and data from two focus groups, as well as in-depth interviews with key actors in this controversy to critically investigate this Taiwan case. This paper reflects on the politics of expert authority permeating practices of public participation, Employing interviews from the sociology of scientific knowledge and STS, the author discovers that extensive tensions taking the form of contestation have arisen from discussing a common problem, such as accuracy of scientific literature translation, to what extent EMF exposure is acceptable, versus containing conflicts around how to define the problem under scientific uncertainty and complexity. In addition, the failure of expert authority reflection on their social value positions has played a key role to understand their less-than-successful defence in the citizen perspective. From this perspective, the author discusses some challenges for democratizing expertise in this Taiwan case and then provide suggestions for better public participation in EMF risk governance.

Do Social Networks Help you to ‘Get Help’? Usage of Mental Health Services Amongst Women of Different Ethnic Groups in England, UK

The way in which people seek help and access mental health services is a complicated and varied process. Contact with, and usage of, services may occur through individual efforts, GP referrals, or informal contacts. Typically, in the UK, mental health service use has been researched within a largely individualistic paradigm, with Dixon-Woods’ candidacy model gaining increasing popularity. There has been much less consideration of the social processes involved in help-seeking. More specifically, the way in which the resources available in social networks affect usage of services (as theorised by Pescosolido in the Network Episode Model) has not been explored in the UK context.

Pakistani women in England have lower rates of usage of outpatient mental health services compared with women from White ethnic groups. Although there has been an indication that social networks may have a role to play in the usage of services, there is little robust evidence. Previous qualitative studies show that Pakistani women’s social networks can be lacking in social support, leaving women feeling socially isolated. Further, it is evident that Pakistani women’s social networks may not contain network members that facilitate or encourage access to mental health services.

This paper addresses previously unanswered questions of how the content and function of networks are each associated with the access and usage of mental health services, and how these associations may vary among women of different ethnic groups. Using quantitative data from an English community survey (Ethnic Minority Psychiatric Illness Rates in the Community, 2000) this paper presents statistical models of the effects of social networks on access and usage of services, and discusses how these vary between Pakistani women and women from other ethnic groups. The findings are discussed in relation to the lack of current UK mental health policies to address ethnic inequalities in service use.

New Age, New Economy, New Middle Class: The Case of Jewish New Age in Israel

Albeit the extreme individualization of late modernity, social class still is important in all aspects of our life. Yet, class, as a social category, remains largely ignored in contemporary religious studies. Based on ethnographic data, this paper sets out to explore the central yet understudied ways in which class sustains social, cultural, and religious distinctions. In particular, by focusing on New Religious Movements and on New Age spirituality, it aims to explicate how class is determining religious affiliations and practices.

Sociologists of religion have recently pointed to that New Age has become part of the cultural repertoire of the new middle class. However, only rarely have they explored New Age as a leisure practice manifesting class-based tastes. Our paper examines the emergence of a New Ageist in the Jewish cultural-religious field in Israel, asking why has New Age Judaism become so appealing particularly to the burgeoning cosmopolitan post-materialist, secular new middle class.

Drawing on post-Bourdieuian cultural sociology, we start by describing the theoretical and experiential hybrid nature of Jewish New Age, and show how these elements were enthusiastically embraced by new middle class followers. We argue that by partaking in Jewish New Age communities, middle class new agers express and further accumulate high levels of omnivorous cultural capital. In line with recent work on cultural cosmopolitization and class privilege, we conclude by claiming that in the Israeli context, high cultural capital is manifested, inter alia and rather surprisingly, in the ability to re-appropriate local religious forms, and to cosmopolitise them via New Age culture.

Well-Being of Bosnian Refugees

The estimated 70,000 Bosnian refugees in St. Louis suffered trauma, often including torture, during the 1992-1995 Bosnian war, with serious consequences for their well-being. The link between refugee status and poor mental health is well documented and many studies have assessed how post traumatic stress disorder (PTSD) is related to variables such as unemployment, welfare dependency, disability, social isolation and daily activity level. This paper extends the past research by exploring the relationship among mental health and several other variables that have been shown to be important in the literature looking at refugee resettlement and adaptation to a host country. Specifically, this paper examines the relationship among psychological symptom dimensions (somatization, phobic anxiety, depression, anxiety and paranoia), self-esteem, host language competency, and ethnic and host culture identity.

The study used data (n=305) from a mental health needs assessment conducted to identify and quantify the needs of the Bosnian refugee community in St. Louis, MO, USA. To examine the relationship among the above variables, Pearson correlation analyses were run. Results showed a significant negative relationship among all symptom dimensions and self-esteem and host language competency. No relationship was found among the four symptom dimensions and ethnic and host culture identity. Results suggest that self-esteem and host language competency may play a particularly important role in refugees' mental well-being.

The results have implications for those interested in improving the well-being of refugees during their resettlement in a new homeland, mental health providers serving Bosnian and other refugee groups, and those who teach English as Second Language.

Normalcy after Stroke: Spousal Caregiving and Management of Uncertainties

Stroke is usually characterised by sudden onset, and what follows may be a fluctuating and long-term recovery trajectory marked by uncertainties. In particular, which is commonly considered a disease of old age, may pose various risks and uncertainties in the life course and biography of working age patients and their carers, who are often spouses. While chronic illnesses such as stroke have been widely conceptualised as 'biographical disruption' (Bury, 1982) for both patients and carers, this notion has also been contested on the basis that not all experience of chronic illness can be seen exclusively as 'disruption'. In this paper, I explore experiences of spousal carers of people who have had a stroke whilst in their working age (25-55). Drawing on qualitative data collected through 17 ethnographic in-depth interviews with spousal carers in Victoria, Australia, this paper demonstrates that their responses to stroke and the caregiving role vary across different social positions and contexts. Some participants were striving to regain a sense of normalcy, others somewhat reluctantly accepted the 'new normal', while yet others embraced the 'new normal'. Departing from conceptualising carers as agentively mobilising resources and navigating a biographically uncertain trajectory in an attempt to regain normalcy, I argue that their responses are better understood as a course of action enacted by a network of individual, medical and healthcare, social, and political actors. In this respect, I suggest that responsibility as necessarily distributed, and challenge the increasingly common construction in policy and healthcare settings of informal carers as choice-making service users. By doing so, this paper seeks to generate a basis on which service providers, healthcare practitioners, policy makers and members of the wider society can engage in a constructive and critical discussion towards creating a 'caring society'.

Financialization, Crises and the Changes in the Global Income Inequality, 1820-2010

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This paper discusses the global income inequality and stratification of the world economy from 1820 to 2012 with a focus on the transformations that take place during periods of financialization and hegemonic transitions. We argue that in periods of financial expansion and hegemonic transitions, intensification of economic crises, inter-state competition and emergence of new developmental strategies transform existing structures of world-income hierarchy. Hence, historical development of world income hierarchy and between-income inequalities cannot be explained merely by the orthodox interpretations of the modernization, dependency and world-systems theories. Through a combination of quantitative and historical-comparative analysis, we discuss the continuities and ruptures observed in patterns of global income inequality in reference to existing theoretical frameworks provided by modernization, dependency and world-systems theories. Our analysis suggests that (1) global income inequality moved from a bimodal to trimodal distribution during the British-led financial expansion period and (2) the transformation has been going through another transformation in the contemporary era of financialization. By analyzing the transformation of the global income inequality from 1820 to 2012, changes in the position of individual states/regions within global income hierarchy across time, and conducting a historical-comparative analysis of both periods of financialization, we discuss the prospects and limits of the existing theoretical-conceptual frameworks. Our analysis (1) highlights the transformative role of systemic crises, inter-state rivalries and emergence of alternative “developmental” patterns during periods of financialization and hegemonic crisis, and (2) calls for a new conceptual theoretical framework for explaining dynamics of global income inequality which pays equal attention to continuities and ruptures.

Gezi Uprising in a Macro-Comparative Perspective

This paper examines the class structure of the 2013 Gezi uprising in Turkey in comparison with the 2011 wave of global social unrest. Although the Occupy-type movements that took place primarily in North America and Europe were important segments of the movements which created the 2011 wave of social unrest, they were not the first. For instance, the collection of movements known as the “Arab Spring”, or worker struggles in new zones of global production in South, Southeast and East Asia were also parts of the 2011 wave of unrest. Many studies which discuss the class composition of the 2011 revolutions, however, often rely on single-country and single-sector flows of North American and European protests. Arguing that single analytical models will fail to address the complexity of the contemporary wave of social unrest, in this paper we discuss the class composition and social base of the 2013 Gezi uprising in Turkey in comparison with different segments of the 2011 wave of global social protest. In the first half of our paper, based on a database of newspaper reports on social protests from 1990 to 2012, we provide a global survey of the class structures of movements which constituted the 2011 wave of social unrest. In the second part of the paper, we discuss the class structure of 2013 Gezi uprising in respect to discussion of diverse class compositions of social protests across the world. Within this respect, the former define neo-nationalist discourses being articulated from an “institutional power base”, “tactics” are typically encountered among the subaltern who do not control such spaces of power and nonetheless manage to temporarily and discursively slip through the “webs of power” that surround and constrain them.

KARNER, TRACY XAVIA* (University of Houston, txkarner@uh.edu)

Poetics, Politics, and Possibilities: Visualizing Our Humanity

At the turn of the 21st century, sociologist Robert Putnam warned that bedrock of community–our social connections to each other were disintegrating and leaving our lives and communities impoverished. He found that we were losing touch with our humanity, our sense of belonging, and our ability to care about, and be cared for, by others. Since this alarm was sounded there has been an explosion of research into the neurological basis of social connections. In this quest, scientists have focused on the role of emotions, especially empathy, in moral and political action. This research into the workings of oxytocin, mirror neurons, and social cognition may also offer a means to understand the enduring power of photography to evoke an emotional response. Moreover, it offers interesting interpretations as to why viewers respond strongly to some images and not to others. As visual scholars, these findings can also point to possibilities for more self aware image making in our visual methods. Photography can be a transformative act for the image maker, the viewer and the community. As a medium of communication and connection, images rely on empathic impulses to go beyond social differences and engender understanding. Empathy may be in the eye of the beholder but it can also be at the heart of the photographic act. The camera, like Janus, looks both ways offering a glimpse of the maker as well as the subject. In this way, every image can be seen as a self portrait, reflecting the values and vanities of the photographer. If the neurological research is sound, empathic photographers will create images more likely to resonate strongly with others, thus re-engaging those lost social connections -- one compelling image at a time.
Facebook as the most widely used social media site in the world has lead the way in using interface technologies to shape user behavior by turning online interaction into algorithms that engineer specific kinds of performances and render others invisible. Like Foucault's Panoptican, the Facebook Gaze is deployed through the architecture of the site itself. Facebook has created an online space that allows users to enter their information into generic templates which make managing and mining large amounts of data easier but constrains the user participation to those things allowed by the template. Creating a uniform normality through the technical structuring of a way of being, users must adjust their behavior accordingly in order to participate. Edgework, Facebook’s algorithm for structuring the flow and visibility of information and communication, further disciplines user behavior by through the threat of invisibility (Bucher 2012). Photography plays a key role in social media identity staging and interaction as images are a prime means of increasing your Edgework score. Similar to the hermeneutic circle of Edward (1900) which disciplines performative travel through photography, this same dynamic is at work on Facebook as users learn to construct images that echo those shared and positively received by others. Images that generate a large number of responses provide a model for expected and accepted contributions. Neuroscientists have also found that receiving ‘likes’ activates the reward center in the brain and these approval responses predict future Facebook use (Mehri et al. 2013). This informal, but immediate, feedback lets the individual know how well their performances are being received and assists them perfecting and refining their presentation to remain visible and included in this new form of society.

Job Is Not Everything. The Case of Return Migration from the UK to Poland in the Wake of the 2008 Economic Crisis

The human capital approach, which is dominant in the EU migration policy, suggests that migratory experience and resources are likely to improve returnees’ competitiveness and foster their successful adaptation on the home country labour market. Based on the analysis of the return migration from the UK to Poland in the context of the economic crisis in 2008, this paper critically examines this assumption.

It is estimated that within 8 years after the EU enlargement in 2004 about 0.7 million Poles went to work in the United Kingdom. At the same time it is suggested that about 250 thousand Polish immigrants in Britain decided to come back to their home country. The financial crisis did not significantly influence the number of return migrants. It rather slowed down the new emigration and those who stayed in the UK employed wait-and-see strategy (Barcevičius et al.). The quantitative data on Polish returnees (Bieńkowska et al.) suggest that return migrants are more likely than the non-migrants to be unemployed (especially women). Si-

Cooperation Between Strangers of Unequal Status

Recent studies of trust and cooperation in social dilemma situations focus on explaining how social identity processes - triggered by differentiation based on a nominal characteristic – affect cooperative behaviors among strangers. Few studies, however, predict and explain whether and how much cooperation occurs among strangers who vary by characteristics that have status value attached – i.e., characteristics that cause actors possessing one state of a given characteristic to be perceived as more worthy than actors possessing another state of that same characteristic. Even studies that incorporate the status hierarchies’ effects into social dilemma models focus on groups’ effectiveness in producing collective goods, rather than on the simplest trust-game type interactions. This might be defensible insofar as game theory predicts that status differences will have no effect on cooperation among strangers. Our paper takes a different approach: Using status characteristics theory, we predict that in a prisoner’s dilemma (PD) where actors are differentiated by salient status characteristics, the rate of cooperation will vary by the partner’s status relative to that of the focal actor, as well as by whether it is a sequential or sequential game. We report experimental results from a one-shot, two-person PD, before which subject pairs worked on tasks intended to manipulate the status of subject and partner. We test the following hypotheses: (1) in a sequential PD, if actors are differentiated by salient status, the rate of cooperation is higher when the low-status actor initiates the game than when the high-status actor does so; (2) regardless of the nature of the game, the cooperation rate among high-status actors is higher than that among low-status actors; and (3) in simultaneous PDs, the level of cooperation among status differentiated actors is at the same level as it would have been if they were all high-status partners.

Contemporary Capitalism As An Economics of Seduction: Ethics and Justice Defined By An Aesthetic Principle of Pleasure

In neoliberal society, aesthetic seduction has become an important operator in economics. Commodities are successful only if they lure consumers. From an economics oriented towards practical and functional needs, there’s a shift to multiplied fields of aesthetic productions. Aesthetic refinement has become the inner rationality and power element of neoliberal or post-neoliberal society.

The search for the cultural logic of neoliberalism must take into account, the aesthetic powers of attraction, seriously. In this paper I will argue that the long-term commodification process has not only written the aesthetic principle of pleasure under producers’ and consumers’ skin but it may also be seen in ethical standards or even in legal proceedings. What it means to human culture and basic question of equality if ethics and justice are understood under market-based terms and values?

Gerhard Schulze has discussed of “the experience society”, and Pine and Gilmore in their business theory of “the experience economy”. Consumers are known to find experiences and emotions through services and commodities, but this theory could be developed forwards, by activating mental concepts, like experience or emotion, with more primal bodily connections and conceptualizations. Zygmunt Bauman has moved into this direction, by speaking of “the aesthetic of consumption”, and of consumers as divided into the seduced and the repressed. Are there any space for controversial or critical voices under the hegemony of seduction markets? The question is analyzed by taking a recent art censorship case, in which the court sentenced different terms for market and art referring it; business actions in porn industry were taken as legal, while art criticizing the same field was understood as a crime. Does the neoliberal ethics already demand that acts of anti-seduction – like market-critical art – can be interpreted as crimes?

Development Interventions, Livelihoods Security and Sustainability of Resources Among Tribal Communities of the South: A Case of Sugali Tribe

There is a direct link between livelihoods security and development interventions by different agencies and sustainability of the resources among the tribal communities of the global South in general and India in particular. The link between them is crucial to achieve the desired results of both sustainability of resources and livelihoods. It reduces the risks and paves the way for poverty reduction among the marginal communities of the South. To achieve the livelihood security, the donor agencies and also the State must take cognizance of and balance the existing local resources. This paper tries to address the interface between the poverty reduction strategies and to attain the goal of sustainable development in managing the natural resource base among the tribal communities of Andhra Pradesh, South India. Further, it also tries to address the role of international donor agencies in bridging the gap between the haves and have nots, which is drastically increasing year by year without any change.

Objectives:

2. To examine the livelihood security and natural resource base
3. To understand the link between livelihoods security and poverty reduction
4. To assess the impact of developmental interventions in the tribal communities
4. To address the donor agencies or NGO’s role in sustainable development of tribal communities

Sources of Data:

Paper largely depends on the primary data collected from the field site among the Sugali tribe of Andhra Pradesh, south India. It also bases its inferences based on the data gathered from official reports and records, Census records, published as well as unpublished research reports, papers, etc., with reference to India. Besides, it also draws its inferences from the studies made by the authors and other scholars in Andhra Pradesh, India. It also takes into account the studies made in other parts of South Asia.
People's Politics and Governance in the Countryside: An Ethnographic Profile of Emerging Leaders from the Countryside of South India

The government initiatives to enhance the situation of the rural mass, especially rural women, have paved the way to Integrated Rural Development Programmes (IRDP) in India. As part of the IRDP, the Government initiated the formation of groups in the villages of rural India with the name as DWCRA or Self Help Groups (SHGs). With the help of the Government as well as donor agencies, the programme became successful in some parts of rural India and here are the cases where these groups became the symbol of success to neighbouring areas in the rural areas of Andhra Pradesh.

The present cases are situated in three backward areas of the Rayalaseema region of Andhra Pradesh, India. These three cases are different from each other but the ultimate goal of the three cases is the same as enhancement of lives and livelihoods of the rural masses. The present paper tries to explain how the members of these groups have emerged as leaders in their respective areas and enhanced the lives and livelihoods of the people in general and women in particular in Andhra Pradesh. Three cases are Rythu Sangam (Farmers Club, Chittoor), Dalit Horticulture Club (Anantapur), and Village Organization (Anantapur) which have studied and regarded as the backbone of rural masses in the two districts of Andhra Pradesh.

The three initiatives have shown that people, rural women, have improved their awareness and enhanced their lifestyle. Further, it also explains how they have strengthened these groups by acting as pressure groups in their localities which is benefited them to a large extent. To conclude, the paper has shown the importance of emerging leaders, rural women, in the rural areas of Andhra Pradesh.

So Close and Yet so Far Away: Migrants and Nationals in Greek Agriculture before and after the Economic Crisis

In Greece the structure of rural society has changed profoundly since the 1960s. Rural exodus and consequent demographic ageing, restructuring towards intensive seasonal farming and social rejection of wage labour in agriculture and living in rural areas created labour deficits.

The arrival of international migrants following the collapse of the neighbouring socialist regimes in Albania, Bulgaria and Romania meant new opportunities for the struggling Greek agriculture. The mass availability of flexible, cheap wage labour gave agriculture and rural areas an impetus of development and demographic regeneration.

The employment of these migrants was rather complementary than antagonistic to family labour often freeing family members to undertake other jobs outside agriculture and rural areas. The segmentation of labour markets between the informal and formal implied their smooth operation for the ‘benefit’ of both populations.

However, the economic crisis variously affected the situation and the convergence of the labour markets. The crisis was now expected to bring closer the informal and formal markets leading to a stronger competition for the jobs in both populations.

Drawing from research material collected in a rural area where the intensive cultivation of strawberries was concentrated, the paper analyses labour relations and living conditions developed between older and newcomer migrant workers in the region of Elia in western Peloponessia.

The cultivation of strawberries is a typical example of an export driven industrial product while the employment of international migrant labour reflects the externalisation of reproduction costs and the demand led character of the labour market. It becomes evident therefore that control over labour costs and labour relations is a critical issue for the competitiveness of the product. Thus, ethnicity, exploitation, racism production relations, irregularity of residence status and arduous working and living conditions are examined in the paper as part of this production model.

The Meaning and the Role of Clothing for Elderly Women

The aim of this research is to explore the meaning and the role of clothing for old women by analyzing their life stories. This means to investigate not only psychological but also sociological effects.

In general almost all elderly women have plural diseases in various levels. For example some old women need to be cared in nursing home or hospital, and the others don’t need but often go to hospitals from their own houses. We call the former type “dependent elders” such as dementia or bedridden people because of not having professional care and cure, conversely the latter one “independent elders” because of ability of social contribution as the volunteers in many kinds of fields.

But even if which type they are categorized, it would be desirable to wear their favorite clothing. The reason is that it would be helpful for them to maintain their Quality of Life (QOL) as a result of thinking positive and continuing to engage their enjoyable activities. To investigate this issue, this research would emphasize the subjective recognition and experiences of their own clothing, and not the objective beauty of appearance and fashion trends.

Intensive data were collected as life stories of 7 elderly women including both types, “dependent elderly women” in nursing home and “independent” who had engaged the volunteer at medical agency. The interviewer asked all the interviewees to arrange some favorite pictures during their lives. These pictures helped to remember their clothing including some episodes and memories in their youth. As a result of content analysis, it is clear that “the meanings of clothing” and “the role of clothing,” for dependent and independent elderly women, are “Self-expression” and “the switch of identity”. It appears that the satisfied and favorite clothing as social body assist their lives when they confront some hardships.

The Polemic of Sea Level Rise: Unlocking the Potential of Social Learning for Improved Climate Risk Governance in Local Governments of Australia

Sea level rise is one of the most critical climate change impacts that could exacerbate shoreline erosion, storm surge and flooding. As it represents complex, uncertain and significant environmental, financial, social and legal risks to coastal populations, it demands a rethink of institutional arrangements for risk governance in the whole system of Australian coastline (Abel et al., 2011; Ryan et al., 2011; Leech and Robinson, 2012). However there are challenges like conflicting expectations and normative judgements of values, contradictory perspectives of evidences and knowledge to deal with (Leitch and Robinson, 2012). Accordingly, the government will have to balance the aspiration, expectations and values of coastal communities by taking into account the social interactions which hold a vital role in the ability of local authorities to shift to new governance and practices (Leitch and Robinson, 2012; Taylor et al., 2012; Susskind, 2013). Failure to realize this may jeopardize the objectives of building trust, legitimacy and cooperation in risk management and impair the ideas of deliberation and inclusion. This study tests if the improved risk governance, thus to practical strategies is of paramount. This study aims to explore sociologically-informed approaches to risk governance through deep investigation and understanding of how social learning underpins risk perception, communication and decision making through negotiation and compromises and that it holds potentials to improve risk governance. Theories orientations for the research derived from Luhman’s System Theory and Social Amplification of Risk Framework (SARF). This study embarks on interpretative case study involving local governments in Australia with local government officers and local communities as unit of analysis. The findings that revealed the implications and explicit attention of social learning in risk decision making will be the basis of practical intervention for future risk policy making as well as extending the current sociological theories of risk.
the lecture, Adorno says that sociology needs Chimerism and Quixotic attempts. Culture critique is as important work as social critical theory in Adorno's thought, and these two aspects in his works are related. Adorno makes methods of modern art or modern music references for creating his style of thought, for instance, collage, dodecaphony, etc. And art works are regarded ideal model for social relationship because these have multiple elements with reconciliation. In this presentation, I consider relationship between modernity and critique by analyzing Adorno's singular style of critical social thought.

KATAKAMI, HEIJIRO* (Rikkyo University, hglo2hl0@yb.b.ne.jp)

Between "Munesuke Mita" and "Yusuke Maki" - on the Possibilities of Fictional Construction By Sociology.

"Yusuke Maki" is the pseudonym of the Japanese sociologist Munesuke Mita. Mita uses the name "Maki" for creating a new style of sociology. Mita says that the name of "Mita" is used for works within the modern society and the name of "Maki" is used for works beyond the modern rationality. It is remarkable that one person has two names as sociologist, and he uses them for different purposes. Mita uses the fictional sociologist "Maki" for alternative images of sociology. The purpose of this presentation is to consider the possibilities of fictional construction by sociology from Mita's project "Maki." Maki often uses the word "clarity" affirmatively, and there are two aspects of this word in his works. The first connotation is the clarity and the thoroughness of a theoretical structure. Generally speaking, the social figure of sociological theory is different from that in real society, as in the example of Max Weber's "ideal types." But such a fictional character in sociological theory enables us to have a theoretical "clarity." The second connotation of "clarity" is unmediated interaction between people in society. Maki's definition of "Gemeinschaft" uses this aspect of "clarity." The fictional sociologist "Maki" creates the image of a not yet existent utopia by combining these two aspects of "clarity." Here is a fictional possibility of sociology. Maki's social theory intends to create a sociology beyond the modern rationality. But it doesn't ignore or deny the potential of modernity. He seeks to change the direction of modern rationality. The early works of Mita and Maki largely depend on modern Western social theories, and in the later works Maki creates his original perspective of "comparative sociology" which relativizes the modern western modernity. A consideration of Maki's social theory probably links to a consideration of social theories in a non-western world.

Strong Family Ties and Demographic Behavior in Japan

This study investigates the effects of intergenerational family ties on demographic behavior such as marriage, divorce, marital fertility, and women's labor force participation during the child rearing period, using retrospective life history data from a nationally representative survey in Japan. Although Japan is still one of the strongest family countries, intergenerational ties have gradually weakened relative to the past in terms of living arrangements: the shift from intergenerational co-residence upon marriage to delayed co-residence and/or proximity have strong positive effects on marital stability, using retrospective life history data from a nationally representative survey in Japan. Although Japan is still one of the strongest family countries, intergenerational ties have gradually weakened relative to the past in terms of living arrangements: the shift from intergenerational co-residence upon marriage to delayed co-residence and/or proximity have strong positive effects on marital stability, using retrospective life history data from a nationally representative survey in Japan. Wolf, Extinction and Fukushima

Itate, Fukushima is a village designated as ‘whole village evacuation’ since April, 2011 despite being located over 30km from the Fukushima Daiichi Plant. The village had maintained its traditional rural landscape as one of the “The most beautiful villages in Japan”, and was renowned for its high quality beef and dairy products. The farming community’s spiritual wellbeing is deeply ingrained in their land, both of which are under threat of being lost in the serious contamination and the prolonged evacuation.

In Iitate, there is a shrine devoted to the local community of the ancient wolf worshipped at Yamatsumi-jinja. The shrine’s guardian or holy messenger is a wolf considered to protect farming villages from pest animals such as deer, boar and monkeys. The wolf’s mighty power is also considered to deter disasters, illness, fire and theft, and there is a record that at the end of Edo in Ansei period, wolf worship flourished, as a series of disasters and unsettling events overwhelmed Japan. Yamatsumi-jinja, known for its 237 ceiling paintings depicting the wolf as its holy messenger, kept its door open to the evacuated community in much the same way as the wolf worship supported the community in Edo. Tragically however the shrine burnt down in April this year.

This paper reports on an ongoing project that attempts to record the significance of local beliefs interwoven in the natural environment and restore the legacy of one significant belief of the village people, namely the wolf paintings. It is argued that attending to the spiritual wellbeing of the community deeply ingrained in the ‘spirit of the place’ is critical in the ‘reconstruction’, even if the community may not return to the village fully in near future. Clearly the project has an anti-nuclear message though it does not take an overt ‘anti-nuclear’ action.
older people face is also complex; often based on two or more factors, such as age and gender, ethnic origin, where they live, disability, poverty, sexuality, HIV status or literacy levels. Older people without any source of income are particularly vulnerable to discrimination based on both age and dependency. This article focuses on the sociological conditions responsible for elderly vulnerability in Kerala. It also seeks to identify primary abusers within families besides the elders’ perception of abuse. This paper focuses on the extent to which the elders depend on family members for care, as well as the type and level of care they need. An empirical study comprising 300 elderly people were made in the state of Kerala.

Effectiveness of Social Welfare Schemes for the Elderly in RURAL Kerala, India

By 2050, India will be home to one out of every six elderly persons in the world. While life expectancy has improved, the changed socio-economic conditions have drastically altered the living conditions of the elderly in India. In this changed social set-up, old people face increasing incidence of age-related discrimination, ageism, elder abuse, and mistreatment, which militates against the norms of a civilized society. The least noticed of the destitute in India are the elderly. Most elderly struggle with low incomes and poor health. As income inequalities increase, it is noticed that senior citizens are getting poorer and poorer. Social security thus becomes necessary. Further, inadequate public healthcare facilities and expensive private healthcare heighten the relevance of social security. In recent years, the social and economic policies of developed and developing countries are attempting to address social security needs. The need for social security during old age quite early. The Indian Constitution guarantees social security in old age under its Article 41. But ideals have rarely translated into reality at the grassroots level.

Kerala has the most comprehensive safety net among Indian states for vulnerable sections in society. The Kerala Government’s social security schemes primarily target poor families. The elderly in Kerala suffer either by not receiving sufficient economic and/or physical support. The rising cost of living, minimal or no reliable employment opportunities and nuclear families are the culprits. Age-based provisions for social security are now firmly embedded. There are more than 35 social security and assistance schemes that have been implemented in India. Therefore impact and effectiveness of social welfare programmes on senior citizens is assessed to sensitise the government and the policy planners for their mid-term corrections. This data was collected from 320 elderly persons in Trivandrum district in Kerala.

Informal Caregivers’ Expectations and Experiences of Hospital Admission of a Relative with Dementia

This paper describes findings from a two-phase study undertaken in the UK by a multi-disciplinary research team. 111 pairs of people with dementia (PWD) and their family caregivers were recruited from patients referred to a specialist psychiatric liaison service in two English general hospitals. Data was obtained about their quality of life (QOL-AD and EQS-DL), severity of dementia (MMSE), carer stress (GHQ), activities of daily living (I-ADL) physical illness and depressive symptoms (GDS), and economic data on care services and resources (Sheehan et al 2012). These measures were repeated at six months and at twelve months where feasible. In the second phase caregivers whose relative was planned to be discharged to a long term facility were interviewed several times, the final interview took place about four months after the admission of the PWD to the facility (Katz et al 2013). This paper focuses on a) caregivers’ observations whilst the PWD was in hospital and b) the process of choosing a facility.

Concurrently and retrospectively family caregivers gave detailed accounts of their relative’s care in hospital. They varied considerably in their assessment of the quality of care received, but many focused on the patient's physical and mental deterioration during the hospital admission. Caregivers noted how their roles vis a vis their relative changed, and described their emotional and practical reactions to what they observed. Most recounted a difficult process of being an ‘outsider’ to the care of their relative and feeling guilty and remorseful.

Caregivers described their experiences of having to choose a long term facility (often at short notice) with relatively little guidance from hospital or social services. This paper focuses on their perceptions of the conflicts caregivers face in endeavouring to provide protection for their relative whilst simultaneously carrying out their (filial) responsibilities.
logic of wealth distribution in a society of scarcity to the logic of risk distribution in late modernity”. Thus he pointed out the appearance of risk society “in contrast to class society”.

However, Beck's thesis has been criticized in several researches by showing the continuity of class relevance. Such as Hans-Peter Müller (Müller 1992) or Rainer Geißler (Geißler 1996). Then how can we understand social inequality covering the relevance of risk and class. The issue is to integrate the relevance of risk and class to understand contemporary social inequality. And we need a concept which integrates class elements and risk elements.

This presentation attempts to figure out the issue to integrate class and risk concept focusing on 1980's individualization dispute in Germany.

Acceptance of Foreign Nurses Based on the EPA in Japan and Future Challenges

Objectives: The acceptance of foreign nurses started in Japan from 2008 under the Economic Partnership Agreements. Over 400 nurses have come to Japan from Indonesia and the Philippines thus far. If they do not pass the exam within 3 years, they basically have to return to their countries. They can work in Japan as nurses if they pass the Japanese national board exam for nurses within 3 years after coming to Japan and they will be paid the same or more as Japanese nurses. Passing the national board exam for nurses is the main issue for the foreign nurse candidates. So far, the rates of foreign candidate nurses passing the national board exam were 0% in 2009, 1.2% in 2010, 4.0% in 2011, 11.3% in 2012 and 9.6% in 2013. Though the pass rate is gradually increasing, realistically, passing the exam is very challenging for them considering the fact that the overall pass rate for Japanese applicants is approximately 90%.

Methods: We conducted a study on the practice national board exam targeting Filipino nurse candidates in Japan and Indonesian nursing students in Indonesia. We requested them to take the Japanese national board exam translated into English and Indonesian and analyzed the exam results.

Results: The percentage of correct answers was low even though the practice national board exam was written in English or Indonesian.

Conclusions: Because the percentage of correct answers was low even in the study on the practice national board exam for nurses, we believe that there is a difference in the nursing training curriculums and nursing itself in each country. It is necessary to compare and study the differences in nursing training curriculums in each country as soon as possible.

On Hannah Arendt's Understanding of the Society or the Social: Resisting Unprecedented Crises

Hannah Arendt stated in The Human Condition her intention to understand society or the social as well as provide criticism on society and salvage the political to promote appreciation of and resistance against unprecedented crises. In her pursuing an understanding of society, she has adapted a unique method tracing back to the distinction between the public and the private in ancient Greece as the origin of society, and then referring to the history of theories on society presented by John Locke, Adam Smith, Karl Marx, and sociologists Auguste Comte and Herbert Spencer.

In this paper, I will interpret her understanding of society based on the above method and argue that society is fundamentally ruled by the biological life process. Therefore, human life and activities in society are regulated based on whether each person contributes to the sustenance of the life process and multiplication of lives. This interpretation can link Arendt's understanding of society in The Human Condition with her descriptions on unprecedented crises in her other writings, especially The Origins of Totalitarianism. Arendt has stated that when people are extremely forced to contribute to a function of the life process, an ideology forms out of ideas of race, body, and other biological things contributable to such a function. By rise of such an ideology, People not contributable to the function have been removed to a condition of complete rightlessness in imperialism and concentration camps in totalitarianism. Moreover, to accelerate the function of the life process, human and industrial nuclear power at the risk of irreversible danger, “to act into nature”.

In addition, this paper outlines my attempt to search for a normative theory in her arguments on resisting unprecedented crises by focusing on her concepts of forgiveness and promise.

“I Don’t Want to be a Burden”: Japanese Immigrant Acculturation and Their Attitudes Toward Non-Family-Based Elder Care

Elder care remains in the family sphere in Japan while elderly Japanese immigrants in the U.S. are actively planning to utilize formal care services. Although social structural conditions may explain these differences, they do not fully explain “how” Japanese immigrants have developed norms of independent living and utilization of formal care services. This paper will focus on how Japanese immigrant women’s value acculturation leads to their cultural preference for non-family-based care. They seem to accept the U.S. norms of the independent parent-child relationship and see their children as “other” individuals rather than “inseparable” family members who are obligated to fulfill their filial duty. This value acculturation may manifest in their preference for independent living, friend-based support, and utilization of formal care services. This ensures their middle aged children’s freedom from filial care duty by showing no expectation of it at all.

The Reception of “Art for art’s sake” in Japan: Case Study of a Classical Music Festival Audience

The purpose of this paper is to examine how the idea of “Art for art’s sake” is received in contemporary Japan from the perspective of music and the human body. The concepts art and artist are typically described as relatively new conceptions that originated in modern European societies. In pre-modern societies, musicians were usually not regarded as artists, but rather as artisans who produced their work based on orders received from patrons. Therefore, their work was not regarded as art but as extensions of rituals or worship practices. However, during the modern period, a movement started that viewed these as art. It appears that the ideal of Art for art’s sake provided impetus to this movement. In this study, we therefore attempted to determine the reception of Art for art’s sake in contemporary Japan. Research data were collected using a survey of the Saito Kinen Festival Matsumoto, which is one of the most famous music festivals in Japan.

The analysis focused on factors that oriented people toward the ideal of Art for art’s sake, and the results demonstrated the following major findings. First, people who attended the festival because of their relationships rather music interest tended to demonstrate an orientation toward Art for art’s sake. Second, participants who were closely involved with classical music indicated a strong orientation toward Art for art’s sake. Third, people who were introduced to classical

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
music by listening to it with media, such as televisions or radios also indicated a strong orientation toward Art for art’s sake. The results indicate that as people consume music through media rather than their bodies (e.g. playing musical instruments or attending music concerts), their musical consumption become individualized and their perspective on the ideals of art more purified.

From Clinton’s Anti-“New Terrorism” Policy to Bush’s “War on Terror”: Presidential Transition in the Anti-Terrorism Policy of the United States

This paper aims to tackle the question of why the United States came to launch the war against Afghanistan and Iraq under the name of “Global War on Terror.” To clarify this problem, I examine the historical usage of the concept of “terrorism” by the two U.S. administrations surrounding the 9/11 attacks in 2001. It is notable that some terrorist scholars were able to “predict” the emerging threat of the religiously motivated terrorism as “New Terrorism” shortly before the 9/11th attack on the World Trade Center. Scholars such as Daniel Benjamin and Steve Simon argued in the paper published in Survival that more lethal and dangerous threat of the religious terrorism was increasing. This poses a serious puzzle; because even those scholars themselves admitted that there were no dramatic statistics or evidence before the 9/11 attacks. To answer this question, I focus on the concept of the “religious motivation” in those scholar’s arguments, and perform a conceptual analysis. By doing so, I argue that the advocates of the “new terrorism” did not insist the newness of the “new terrorism” based on the empirical data of the lethality of terrorist attacks at the time, but in fact they de-define the conceptual dichotomy of “religious/ secular” based on the standard of negotiability, by which the “new terrorists” were characterized as non-negotiable and irrational jihadists. This new concept of “religious motivated terrorists” made possible the political pressure of “war on terror” of the Bush Doctrine, which justifies the preemptive attack to those new terrorists and the “rogue states” which were supposed to harbor those terrorists.

Power Transition in the Legitimation Mechanism of Fashion Designers

Prior to the advent of the Internet and social media, fashion designers’ reputations were legitimized by industry professionals who attended biannual fashion show events that took place in the major fashion cities, such as Paris, New York and Milan. It was their prerogative and privilege to be part of the by-invitation-only insider circle. Consumers and the general public eagerly awaited for the press coverage in newspapers and magazines to see what is going to be in trend the next season. It was an exclusive status to be a member of the industry and the sociological meanings compared with the two cities. (227 words)

New Middle Class in Singapore As a Global Creative City

I would like to present a new middle class and cultural development in Singapore as a global creative city, particularly focused in the following two points. One is taken in Singapore case and I would deal with the detail content developed during these 20 years. It is very interesting case, because Singapore government has successfully accomplished the cultural institutions. As a result, there have occurred some intentions or class discrepancy among Singaporean people themselves, additionally a famous conflict between foreign workers and Singaporean workers. I introduce the concrete cases and analyze them. During 20 years Singapore government considerably planned and systematically managed some artistic areas including artistic participation, art education, and artistic outreach activities. And it will be included a famous ethnic public policy in Singapore. I would like to present the transformation and analyze the sociological meanings. Specifically, I would compare with Singaporean case and Korean case. Both Asian cases would take both Shanghai and Tokyo. Both cities are also global creative cities just the same as Singapore. Of course each city has had its original history and has making its unique type by itself. But there exists Asian Share-ness among the three cases. I would point out the relationship between national/city government and people. Particularly I would discuss the future of the new class conflict in Singapore and the sociological meanings compared with the two cities. (227 words)

KAWANAMI, HIROKO* (Lancaster University, h.kawanami@lancaster.ac.uk)

Buddhism, Collective Memories, and Political Process in Myanmar (Burma)

Buddhism as a majority religion in Myanmar (Burma) has been a powerful symbol for the Burmese population and long affected the socio-political dynamics in a traditional country. Despite the romantic reading of Buddhism prevalent in the West and among neo-liberal commentators, Buddhism has manifested the potential to become a contentious public symbol when appropriated to oppress the ‘enemy’, while simultaneously justifying its position and winning public support.

The sangha historically maintained a close relationship with the Buddhist kingdom and a symbiotic relationship between them underpinned the stability of the country until the last king was dethroned in 1885. The desacralization of Buddhism by Europeans and the violation of its symbols remain deep in the collective memories of the people. I discuss the political activism of Buddhist monks that started during the British colonial rule and highlight the patterns in which monks respond to different crisis points in modern history, deriving from a deep sense of anxiety that their Buddhist tradition is threatened.

Myanmar (Burma) witnessed intense communal violence during the democratization period after independence in 1948. Prime Minister U Nu was hampered by monks making incessant demands to give preferential treatment to Buddhism and eventually succumbed to make Buddhism the state religion. Buddhist monks today comprise almost half a million of the population and profess themselves to be the custodians of the sāsana (the Buddha’s dispensation). They are increasingly attempting to appropriate the authority to protect the sāsana in the age of moral decline, which they see as coming from Islam. This paper attempts to unravel the collective trauma that prompts monks to manifest a similar pattern of both self-defense and aggression, and understand the cultural and religious undercurrent that continues to influence people’s aspirations and worldview.

Family Support and Mental Health Care for the Japan Self-Defense Force Personnel

Since 1992, Japan Self-Defense Forces (JSDF) has engaged in various types of new missions overseas, stretching globally from Haiti to Golan Heights, Iraq, Sudan and Gulf of Aden. The 3.11 East Japan Great Earthquake in 2011, subsequent tsunami, and nuclear power plant disaster in Fukushima, resulted in the largest-ever domestic disaster relief operation in the JSDF history, mobilizing more than 190,000 personnel. In particular, JSDF have tried to improve institutional family support and mental health care programs. This paper describes how the social-psychological support programs have developed, focusing on the Japan Ground Self-Defense Force (JGSDF). In particular, I examine the institutional programs of the Family Support Center, Mental Support Center, and a “Mobile Counseling”, or outreach program, to provide mental health care to JGSDF personnel and their families in the Hokkaido area. Also, the effectiveness of the institutional programs from the soldiers and their families’ perspective will be examined, based on both quantitative and qualitative data, including interviews of military families. In conclusion, relevance of “community capacity” model will be discussed in terms of enhancement of social support networks for the JSDF families.

New Middle Class in Singapore As a Global Creative City

I would like to present a new middle class and cultural development in Singapore as a global creative city, particularly focused in the following two points. One is taken in Singapore case and I would deal with the detail content developed during these 20 years. It is very interesting case, because Singapore government has accomplished the cultural institutions. As a result, there have occurred some intentions or class discrepancy among Singaporean people themselves, additionally a famous conflict between foreign workers and Singaporean workers. I introduce the concrete cases and analyze them. During 20 years Singapore government considerably planned and systematically managed some artistic areas including artistic participation, art education, and artistic outreach activities. And it will be included a famous ethnic public policy in Singapore. I would like to present the transformation and analyze the sociological meanings. Specifically, I would compare with Singaporean case and Korean case. Both Asian cases would take both Shanghai and Tokyo. Both cities are also global creative cities just the same as Singapore. Of course each city has had its original history and has making its unique type by itself. But there exists Asian Share-ness among the three cases. Mainly I would point out the relationship between national/city government and people. Particularly I would discuss the future of the new class conflict in Singapore and the sociological meanings compared with the two cities. (227 words)

Social Friction in the Community Hosting Evacuees of Nuclear-Disaster in Fukushima: A Case Study of Iwaki City

The Fukushima Nuclear disaster has brought various and complex social dile, not only to those communities forced to evacuate but also to the communities hosing evacuees. Iwaki-City, Fukushima Pref., is currently hosting about 24,000 evacuees from several municipalities, which is the largest evacuee-hosting

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
municipality in Japan. One of the issues in the aftermath of the disaster in Iwaki-City is the frustration of its residents to host evacuees and the social friction between evacuees and residents.

The aim of this research is to examine the structural problem of the social friction, based on the data taken by the interviews to the evacuees and the hosting residents and supporters in Iwaki City. The cause of friction can be categorized as (1) the drastic social change and inconvenience of daily life due to the rapid population growth, (2) the relative deprivation constructed by the compensation for mental damage and the sense of risk to radiation and (3) the structural issues of disaster relief assistance for evacuees and to create an environment for the evacuees and residents to interact.

Especially regarding the third issue, as evacuees are widely dispersed, the formal assistance for disaster relief, which differ according to municipalities, have not necessarily fulfilled the needs of their current daily life, and informal self-help groups of evacuees have emerged to reconstruct their existing social network in order to obtain an access to social resources. However, in this situation, the sense and need of belonging to each municipality is emphasized and these differences eventually seem to function as ethnic differences and deepen the gap between them. This issue illustrates the social and economic gap constructed in the process of disaster, the difficulties to organize a disaster relief assistance for evacuees in this nuclear disaster and the need of coordination assistance between evacuees and residents.

Negotiating the Risk of Being Murdered in Turkey: Femicide in Everyday Life

Existing literature on femicide frequently focuses on certain patterns of femicide, characteristics of perpetrators and/or victims as well as some other institutional aspects such as policy orientations to reduce incidence and social changes (like globalization, migration and transformation of family structures and gender order) that would possibly have an influence. However, very little study sheds light on how femicide is perceived in the everyday life. This study brings forward women's perceptions, and their negotiations with rising phenomenon of femicide in Turkey. For this purpose, this study reveals different aspects of femicide in Turkey at two levels. At a macro level, we aim to figure out violence against women, and femicide as an extreme practice of violence through interrelationality with social and economic changes in Turkey. On the other hand, at a micro level, based on interviews with women of risk groups defined through some demographic factors like marital status, belonging to migrant communities and class positioning, this study analyses women's emotional attachments to femicide and their strategies to challenge risk of being murdered. Accordingly, we aim to reveal how public visibility of femicide shape women's practices in everyday life and re-constitutional of social and cultural demarcations between appropriate and inappropriate gender performativities. Moreover, this study would give us an opportunity to understand potentials and/or limitations of women's agency across increasing phenomenon of femicide and how it is differentiated in terms of class, cultural and regional differences.

Turkish Sociology's Footprint in the History of Sociology

A simple glance at the classical or contemporary sociological theory books is enough to recognize the general tendency of limiting the history of sociology to the West in general without even mentioning the existence of other sociological traditions. The said situation has also a strong relation with the tendency of considering Western history as the main and only source of sociology.

The purpose is to show that history of sociology cannot be limited to Western traditions only. In that term emergence of sociology in Turkey and its establishment as an academic discipline at higher education institutions is a good example.

As the need for knowledge and practice of sociology in Turkey was different from the countries the West was facing, development of sociology had its own unique way in Turkey. Sociology as an academic discipline was first taught in Daruf-funun (House of Sciences) which was a higher education institution in the Ottoman Empire period. After the collapse of the Ottoman Empire and with the emergence of the new Turkish Republic, new reforms took place in higher education. In 1928, in Daruf-funun which was founded Istanbul University, and then up until now lots of sociology departments have been established at various Turkish universities.

One of the assertions of this paper is that while sociology is considered as a mere Western heritage, the history of sociology's emergence and involvement in higher education in Turkey also show that particular social and historical contexts of Turkey have created different needs for and relations with it as a science resulting in different approaches and traditions which are also scientific and historical contributions and which should not be overlooked.

Attitudes Toward Non-Normative Sexualities Among University Students in Japan: Quantitative Analysis (Part1)

Purpose: Although there is a sizeable body of social research on gender inequality in Japan, biases against sexual minority groups have remained largely uninvestigated. Through surveying university students, we examined the feelings of heterosexual people towards sexual minorities.

Method: We conducted questionnaire surveys at three universities (n=724). Members of sexual minority groups in the sample were excluded from the analysis. We used t-test to compare the negative emotions towards different sexual minorities.

Results: We compared feelings towards female homosexuality, male homosexuality, bisexuality, having ambiguous (neither male nor female) gender identity, and undergoing sex reassignment surgery (SRS). Firstly, among five items, feeling towards ambiguous gender identity is the most negative and SRS is the most positive. Among three sexual orientations, male homosexuality is the most negative, and female homosexuality is the most positive. Then we compared the averages among feelings towards sexual activity between women, becoming friends with lesbians, having romantic feelings between women, and holding hands between women. The feeling towards sexual activity is the most negative. Finally, we compared the averages among feelings towards sexual activity between men, becoming friends with gay men, having romantic feeling between men, and holding hands between men. The analysis shows that the feelings towards sexual activity and holding hands are the most negative, and romantic feeling the most positive.

Discussion: The findings that feeling towards ambiguous gender identity is the most negative and SRS is the most positive suggest that transgender people that had SRS are accepted due to their fitting into the gender binary, whereas people who have ambiguous gender identity aren’t accepted due to their failing to fit into the binary. Although the feeling of rejection towards male homosexuality is stronger than that towards female homosexuality, it also suggests that gay men tend to be associated more with sexual matters than lesbians.

Social Security and Orphans in Foster Care: The Experiences of Social Workers and Home Based Care Workers in the South African State’s Provision of the Foster Care Grant

South Africa’s HIV epidemic remains the largest in the world. It is estimated that there were 5.6 million people living with HIV in 2009 (WHO, 2011: 24). South Africa had an estimated 1.9 million children who had been orphaned by AIDS by 2009 (SAHRC, 2011: 57) and this figure is expected to increase to an estimated 4 million children (approximately 10% of the entire population) by 2015 (Whiteside and Smiter in Madhavan, 2004: 1443). The South African state has a well-developed system of social security. The state introduced a foster care grant, which is unique to it, in response to the HIV and AIDS pandemic (Hearle and Ruwanpura, 2009: 427). For the state to get the foster care grant to the orphans there are a number of actors that play a mediating role between the state and the orphans in foster care. This paper pays particular attention at the experiences of social workers and home based care workers in the South African state’s provision of the foster care grant.

Detecting ‘Ripple Effects’ Of The Canterbury Earthquakes in a National Longitudinal Study Of Aging

The timing of the 2010 and 2012 surveys conducted by the New Zealand Longitudinal Study of Aging provides a clear “before and after” dimension to the exploration of the impacts of the Canterbury earthquakes, on the study population of older people. Our data shows some effects (after controlling for baseline differences) on self-reported physical and mental health, according to location, and degrees of recorded direct and indirect exposure to the Canterbury earthquakes. In particular, the aspects of control and self-realisation within the quality of life measure show different trends based on location and exposure to earthquake effects. Other psychosocial measures of loneliness and depression also show regional differences. These differences are not unidirectional or consistently negative, to the extent that some exposure suggests positive outcomes on some measures. The relevance and value of these findings in terms of policy will be further enhanced by our future ability to continue to track such effects over the longer term, in light of the scale and duration of the Canterbury recovery process, and of other emerging phases of this country’s exposure to a potentially hazardous seismic environment.

Health, Work, Caregiving and Retirement in the New Zealand Context

Several features of the New Zealand policy context provide an interesting comparative perspective on the relationships between caregiving, paid work and health status in the fifth wave survey of a national sample of participants aged over 55 years, described initially in 2006 from both the general and the Maori electoral roll. Relatively high workforce participation rates for those aged over 65 years, followed the final removal of mandatory retirement in 1999, and a universal national superannuation system has been retained alongside the development of a voluntary contributory fund, known as KiwiSaver (introduced in 2007). Legislation which opened up the right for caregivers to request flexible working arrangements was reviewed five years later in 2013, with a recommendation that this right be available to any employee, irrespective of needs relating to family arrangements was reviewed five years later in 2013, with a recommendation that this right be available to any employee, irrespective of needs relating to family caregiving.

In this context of arguably mixed policy messages, survey data provided by the participants in the 2013 Independence, Contributions and Connections study will be presented. As well as considering trends over the five waves from 2006, the 2013 survey offered a supplementary opportunity for caregivers to describe their caregiving roles, their sources of additional support, their views on workplace and caregiving interactions, and plans for the future.

The Question of Internet Filtering: Negotiating Discourses of ‘moral Panic’ and ‘risk’ in the Australian and British Policy Debates

The implementation of internet filtering systems is becoming an increasingly established means of regulating the internet in many countries. The availability of pornography involving child sexual abuse is understandably an emotive concern, which makes public opinion in liberal democratic countries more accepting of internet filtering of such content. However, the exposure of children to inappropriately online content and their increasingly autonomous activities online produce further societal anxieties. In the cases of Australia and the United Kingdom, the objectives of child protection and crime prevention inspired proposals for online filtering, but these schemes proved controversial because of concerns about their potential to (intentionally or unintentionally) prohibit a wider range of materials if they were ever to be implemented. The Australian proposal, which was set aside in 2012 after a complex five year long debate, would have applied filtering to block a range of materials deemed ‘harmful’, ‘offensive’ or ‘objectionable’ (both illegal and legal). More recently, the UK government has made calls for Internet Service Providers (ISPs) to provide a ‘default on’ filter to address anxieties about internet pornography and this has provoked renewed debate. These debates have involved many experts from the internet industry, filtering vendors, academic researchers, child advocacy NGOs, civil liberties groups and adult industry representatives arguing for and against the idea that the state can (or should) engage in the regulation of internet content. Drawing on comparisons from both the Australian and British examples, this paper explores how the rhetoric of ‘moral panic’ and ‘risk’ are variously used as discursive strategies in recurring policy debates about filtering pornography on the internet.

Ibn Khaldun – Assessing His Influence in the Foundation of Modern European Sociologies

In the course of recent debates around decolonizing and plurality in the history of our discipline, Ibn Khaldun has been (re-)claimed not as a precursor, but as one of the “founding fathers” of sociology. Suspicions have been voiced that his lack of a rigorous, especially his Muqaddima, as an important reference in the foundational phase of modern European sociology, has been sidelined with the construction of the sociological canon and thus remains today an unacknowledged source. This paper systematically assesses the presence of Ibn Khaldun as a reference in early sociology texts. Starting from a representative corpus of German-language sociological monographs published between 1900 and 1934 (bibliography provided in Käslar, 1984), this study reconstructs the circulation of Ibn Khaldun’s works within the German-language and wider European community of scholars. While the overall presence of Ibn Khaldun is quantitatively low, it is indeed qualitative. A preliminary analysis hints to three potential “entry points” into modern sociology: Spanish history of ideas that refers to Ibn Khaldun’s heritage; debates between organismic and historical sociologists at the Institut International de Sociologie; as well as Vienna as a place of debate around Ibn Khaldun, possibly through the influence of Ottoman social thinkers. The paper then provides more detailed textual analysis of the reception of the Muqaddima by two important early sociologists, L. Gumplovicz and F. Oppenheimer, with regard to their “sociological theory of the state”. The way in which they mobilise Ibn Khaldun as a reference is particularly interesting with regard to the question in how far sociological theory is context-bound as opposed to generally true.

Stressors and Resilience Resources: Explaining the Significance of Subjective Social Status and Objective Social Status for Depressive Symptoms Among African American and Afro-Caribbean Women Residing in the U.S

Studies in the U.S. often find that black women report more subclinical depression and psychological distress than whites or black males. Scholars argue that these disparities arise from the intersection of race, gender, and social class that converge in unique ways to place Black women at higher risk of poverty and its associated stressors that challenge their emotional well-being. Stress research indicates that the strong inverse relationship observed between objective measures of social standing (e.g., education and income) and mental health arises from greater exposure to stressors and/or the lack of coping resources among the economically disadvantaged. Recent research suggests that subjective rankings relative to others may be even more influential. This study used data from the National Survey of American Life to investigate the association between objective and subjective social status and depressive symptoms among black women residing in the U.S. Using regression analyses, we investigated the extent to which two chronic stressors—perceived discrimination and financial strain—and four resilience resources—religion, community support from family, and racial/ethnic group evaluation—mediated or moderated the association between status and symptoms. Findings revealed a strong negative relationship between subjective status and symptoms for both groups of women and a less robust relationship between education and symptoms for women and a less robust relationship between education and symptoms for
African American women. Family support and economic strain mediated this relationship for Afro-Caribbean women, while discrimination, economic strain, friends, family, and group evaluation did so for African American women. Our findings speak to the paradox of inclusion. Although the experience of subjective social status is similar for both African American and Afro-Caribbean women, the differences in education, perceived discrimination and group evaluation suggest the need to avoid homogenization of the life experiences of women of color when examining disparities in mental health.

KEIZER, RENSEK* (Erasmus University Rotterdam, keizer@fsw.eur.nl)

Father-Child Relationship Quality in Living Arrangements after Divorce

Based on multi-actor data from the Divorce In Flanders survey conducted in 2010, this study examines to what extent the quality of father-child relationships is higher for children in families with joint physical custody arrangements compared to children who live solely or mainly with their mother. We focus on two mechanisms that may explain the association between living arrangements and the quality of the father-child relationship: (1) the level of father involvement and (2) the quality of the co-parental relationship. In addition, we examine whether gender of the child and conflicts between the ex-spouses moderate the association between living arrangements and the quality of the father-child relationship.

Our results reveal that children who live in families with joint physical custody have indeed higher quality relationships with their fathers, compared to children who live solely with their mothers, but not compared to children who live mainly with their mother. In addition, our findings reveal that children in joint physical custody report higher quality relationships with their father compared to children who live solely with their mother because in the former families fathers are more actively involved with their children and the ex-spouses have better co-parental relationships. No significant moderating effects from child's gender or conflicts between the ex-spouses were found. Contrary to what is often thought, our results suggest that it is the fact whether or not children live with their father, and not so much the amount of time they live with them that is important for the quality of the father-child relationship.

The Impact of Gender Role Ideology on Direct and Indirect Paternal Involvement: A Focus on Men Who Make the Transition to Parenthood

Using data from the first two waves of the Netherlands Kinship Panel Study, I examine to what extent men's gender role attitudes explain men's paternal involvement after the transition into parenthood. I extend previous work in two ways. First, I incorporate multiple dimensions of paternal involvement. Although father's role of providing is highly important, there is scant research that directly examines the rapid development of transport and communications technologies have contributed to the exchange of information and resources along with multiple re-connection of diasporic/transnational populations with a mediated homeland. In this paper, we will explore the linkages between nationalism, media and the role of the Kurdish transnational media in articulating different cultural and political identities of Migrants. It will focus on the development of Kurdish media in Turkey/Kurdistan and in Europe and the way in which they have been connected, constructed a determinant imagined Kurdish political community. This paper will be based on 30 in-depth interviews with Kurdish journalists and migrants of diverse age, gender, political affiliation, occupation and length of migration in London, Berlin and Stockholm.

Re-Invention of the Kurdishness through the Transnational Kurdish Media

Re-Invention of the Kurdishness through the transnational Kurdish media

The rapid development of transport and communications technologies have contributed to the exchange of information and resources along with multiple participation in socio-cultural and political activities across the borders of national states. Transnational ethnic media has played a key part in this by enabling a re-connection of diasporic/transnational populations with a mediated homeland. In this sense, this paper will explore the linkages between nationalism, media and the role of the Kurdish transnational media in articulating different cultural and political identities for Kurdish Migrants. It will focus on the development of Kurdish media in Turkey/Kurdistan and in Europe and the way in which they have been connected, constructed a determined imagined Kurdish political community. This paper will be based on 30 in-depth interviews with Kurdish journalists and migrants of diverse age, gender, political affiliation, occupation and length of migration in London, Berlin and Stockholm.

Getting Better All the Time? Selective Mortality, Attrition, and Compositional Changes in Longitudinal Studies on Ageing

By default, life-course studies on ageing include selection processes. Selective mortality changes the composition of samples as people age. In addition, in longitudinal studies, this selection process may be compounded by selective attrition. Consequently, the distribution of important social attributes, such as education and social class, is likely to change over time in any given study cohort. The aim of this study is to explore changes in the distribution of baseline sample characteristics due to i) selective mortality and ii) attrition in an ageing panel sample (born 1914–1934) throughout the follow-up waves (1968, 1974, 1981, 1993, 1999, 2002/2003, 2011). The study is based on nationally representative longitudinal survey data from Sweden (Swedish level of living survey – LNU and The Swedish panel study of living conditions of the oldest old – SWEOLD). After 12 years of follow-up, 67% of the total sample (N = 2335) had died, and an additional 16% had been excluded because of non-response in at least one follow-up wave. The proportion women in the sample increased from 50% to 60% because of selective mortality. The mean level of education increased among both men and women. Similarly, changes in class structure were observed for both sexes. In particular, the proportion of manual workers decreased and the proportion of non-manual workers in the sample increased over time. In both women and men, the changes in class structure were compounded by attrition. In men but not women, selective attrition also compounded changes in education.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Finally, the proportion of the sample that experienced poor childhood conditions, financial hardship, or had received social benefits at baseline was successively reduced during follow-up.

The impact of selection processes throughout the life course is commonly discussed in ageing research. However, few studies have explored how these processes change the social composition of longitudinal samples over time.

*Eat the Rich, Ignore the Poor: The Welfare State and Income Inequality in 46 Societies*

The emergence of the welfare state provided a countervailing force against the social ills of industrial production and capital markets, namely economic inequality. However, issues of legitimate pay and income inequality regularly spark bitter polarizations, debates and protests. In this paper, we investigate the possibility that these attitudinal phenomena are shaped by the welfare state. We test hypotheses that push beyond material self-interest or country-level development in explaining individual attitudes. Namely we use the breadth of welfare state institutions (welfarism) as a way to cross-nationally identify what leads individuals in explaining individual attitudes. Namely we use the breadth of welfare state institutions (welfarism) as a way to cross-nationally identify what leads individuals to have high incomes. Using ISSP data, this finding is true in the broadest range of countries investigated to date in either of the legitimate pay and welfare state research traditions (46 countries; 112 country-time points; 120k individuals). We conclude that resource acquisition as opposed to equality or social cohesion drives the impact of welfare state institutions on individual attitudes.

KEMP, ADRIANA* (Tel Aviv University, akemp@post.tau.ac.il)

*Between State Bio-Power and Social Bio-Politics: Documented and Undocumented Migrant Care-Workers in Israel*

The paper deals with tensions emerging between high demand for migrant care-workers in affluent economies and their simultaneous construction as a demographic threat to the nation’s political body. Drawing on the empirical analysis of the Israeli case, an ethnically defined nation state and a major ‘insouciant’ of labor migration, the article examines how these tensions are put in display in the topical realm of migrants’ family formation and unity within host countries. It argues that while contradictions between the reproductive labor of migrant care-workers and their reproducing bodies are closely connected to gendered state policies on labor migration, they manifest differently along the legal/illegal continuum of migration status. Thus whereas documented care-workers are subjected to the regulation of their employment conditions and protected by labor laws, they are also directly exposed to state and employers’ control on family formation. Paradoxically, undocumented domestic migrants who are forsaken to unfettered dynamics of informality and risk of deportation, gain space for greater maneuver over the creation and maintenance of family life in host countries. Moreover, difference in the management of the reproductive-reproductive dyad around care workers according to their legal status, shape the repertoires of contention available to civil society organizations and networks as they try to assert migrants’ rights to family life in the context of global feminization of migration and stringent control policies.

*Socioeconomic Influences on Inequalities of Wellbeing in Later Life: A Study of Australian Baby Boomers*

Promoting health and wellbeing in individuals across the life course has become a priority for many governments and policy makers around the world. There is increasing recognition of the value of subjective measures of wellbeing as a complement to the more traditional, objective measures of health and wealth. In Australia there is a widespread view that the early post WWII birth cohort has been advantaged relative to later cohorts but there has been little attention to the origins of inequalities arising from earlier life experiences within the cohort.

This paper begins to address this gap by examining the influence of earlier life course exposures on subjective wellbeing among a sample of Australian baby boomers aged 60 to 64 years from the 2011-12 Life Histories and Health (LHH) survey (a sub-study of the NSW 45 and Up Study). Inequalities in childhood social position – notably parental social class and education – were found to have small but significant effects on later life wellbeing. The childhood influences operated mainly through their relationships to adult attainment of socioeconomic position such as highest education, occupational class and household income. Differences in childhood health also impacted on later life wellbeing through associations with adult health and physical capacities. Overall, there was evidence that advantages or disadvantages experienced in both childhood and adulthood had a cumulative effect on wellbeing on entry to later life. These findings underscore the value of examining not only proximal, but also earlier, distal life course determinants of wellbeing and the importance of reducing inequalities in health and wellbeing across all stages of life. Comparisons to English Longitudinal Survey on Ageing will indicate the influence of societal differences in socioeconomic development and public policies on wellbeing outcome.

*Insights from the Past: Disaster Research and the Second Environmental Crisis*

We are living in a time of accumulating hazards that form a universal risk milieu: a concentration of potential dangers across natural, technical, and social systems. Intensifying urbanization, climate change, aging infrastructure, and global economic difficulties combine to create a complex of perplexing hazards for which scientific discovery and policy guidance are both needed and elusive. Yet another type of environmental crisis occurred in the United States in the 1960s: a realization of threats to the natural environment that were publicized in iconic works such as Silent Spring and that inaugurated a movement of activists, musicians, actors, public officials, and legislators to enact widening laws and regulations to lessen environmental pollution. In less than a decade, the Clean Air Act, the Clean Water Act, and the National Environmental Protection Agency were created to tackle toxic challenges to health and wellbeing. This was a time of both rapid policy innovation and moral transformation regarding human interaction with the environment. In this paper, we consider how the experiences of that earlier era can inform needed change now.

*Consumption Behavior and Disaster Recovery: Insights From Eight Years In A Living Laboratory*

On August 29, 2005, Hurricane Katrina came ashore along the United States Gulf Coast resulting in unprecedented damage and presenting long-term struggles for residents. Since that date, the region has been impacted by other natural disasters, most notably Hurricanes Rita and Isaac, resulting in a rich laboratory for investigating the impact of these large-scale, shared life events on various behaviors. Utilizing data collected over 8 years by several research teams and drawing from extant research in marketing, sociology and psychology, this book of work investigates the short- and long-term effects of these natural disasters on consumers’ consumption behaviors and how these behaviors aid in the individual and community recovery process. Several themes are explored in this research. In addition to discussing methodological challenges and best practices when collecting timely information pre- and post-natural disaster, the role of consumer behavior as it relates to the various stages in the disaster recovery model is examined. Using data collected from 318 individuals, the role of consumption as a tool to regulate emotions is explored as a means to cope with an impending threat. Further, depth interviews and online surveying (n=448) conducted in the weeks and months after impact shed light on the collective stress and resulting positive and negative consumption behaviors and attitudes (i.e., impulsive and compulsive buying and evolving views of possession). Follow-up surveying (n=176) four years after a natural disaster illuminates the role of consumption behaviors in restoration, reconstruction and recovery. The ethical and social responsibility implications for public policy makers are discussed along with future opportunities for social science researchers.
This paper presents findings from research in six branches of a Wal-Mart owned food chain in Johannesburg, South Africa. Wal-Mart entered South Africa in a newsmaking majority share owner buy-out of South African listed Massmart, in 2012. This paper explores the results of research with shop floor workers. It details labour conditions and worker frustration with company and unions alike. It examines worker politics in these stores as they struggle to combat the erosion of existing conditions, and as they struggle to be heard by their union. It discusses union efforts to support this workforce and to build an All-Africa Alliance of Wal-Mart workers. It grapples with the gap between worker experiences of precariousness in their jobs and union battles to confront this multinational on its home turf.

Precarity and the Law: Regulating Casual and Contract Labour in the South Africa Retail Sector
This paper explores the history of legislation around forms of casual, part-time and contract labour in South Africa since the 1930s. Building on my previous work on casual and part-time labour regulation in the retail sector (Kenny 2009), this paper expands the discussion to explore the legal lineages which helped to define these forms of labour within this retail and distribution sector. It seeks to examine the relationship between the law as disciplinary apparatus, transnational importation of law and norm, and socio-political contexts and worker and union politics in explaining changing legal provisions over time. In so doing, I hope also to examine the boundary between these forms of employment law and the influences of Masters and Servants legislation as limit for black workers in South Africa in relation to the sector.

KENTOR, JEFFREY* (Eastern Michigan University, jkentor@emich.edu)
Shifting Power Relationships in the World Economy: A Long Term Perspective
It is argued by many that position in the world economy is, for the most part, highly stable and resistant to change, at least across the macro-level “zones” that form a key element of world-systems theory. I suggest that this apparent stability actually masks a considerable amount of change and discontinuity within the global economy. This paper takes a different perspective, focusing on position rather than power, to explore the extent to which shifting relationships between military and economic power, both within and across countries, reflects a changing dynamic with significant implications for the global economy. Following Kentor (2013), the balance of economic and military power within countries is charted at 10 year intervals from 1850 to the present, and I then explore the impact of this changing balance of power on movement in the world economy.

RC02-58.1
KENTOR, JEFFREY* (Eastern Michigan University, jkentor@emich.edu)
The Structure of the Global Economy 1850-2000
This research develops a new typology of the structure of the world economy, based upon Charles Tilly’s (1994) theorization of the emergence of the modern nation-state system. Following Tilly, this research conceptualizes the world economy as a four dimensional space of economic and military power. These dimensions include 1) size of the economy 2) capital intensiveness of the economy 3) size of the military and 4) capital intensiveness of the military. A typology is constructed that locates countries within this multidimensional space from 1850 to the present, utilizing fuzzy set methodology. This typology allows us to better understand the shifting relationships among countries at any given point in time as well as changes over time, and provides new insights into the dynamics of the world economy such as economic development, inequality, and hegemony.

Insert Coin for the Next Level! Digital Games and the Idea of Regional Development for Less Developed Regions: The Case of Ankara Gaming Cluster
Digital Gaming sector is one of the fastest growing sectors in the world. It is estimated that the growth of the gaming market will reach to 85 billion USD which doubles the cinema and music. In Turkey, Gaming sector has boosted in Turkey with the beginning of new millennium. It looks very new and baby born sector. But, its development pace has been incredible.

The idea of regional development is now crucial concept for the developing countries in highly globalized world in which the competition has increased day by day. Obviously, the developing countries cannot catch the big ones in every field of development. Somehow, they have to develop their production capacities, productivity and knowledge level in specific fields.

Even if economic development processes are highly localised not all ‘locations’ are equally able to succeed in the global competitive environment. In fact, regardless the sector, the success of innovative activities requires a convenient environment which comprise of local social, political and institutional actors.

In the case of digital gaming sector, the only cluster is founded in ODÜT Tekkokent which is the biggest science park of Turkey. More than 15 enterprises are located in the same region. Besides almost all the stakeholders are located in the same region such as two big universities having M.S: Programme on Gaming and also public institutions funding gaming projects.

In this paper, the digital games sector will be discussed specifically. One of the main questions is that: Can digital games can be a proper factor which contributes to both regional and national development in developing countries like Turkey? Or in what sense such a growing sector can increase the socio-economic level of the country? The gaming cluster of Ankara is used as a case.

Globalization, Uneven Economic Development, Inequality, and Poverty: The Interactive Affects between Position in the Modern World System and Domestic Stratification Systems
Various data sources indicate that in the last decade(s) world poverty has decreased and global inequality between nations has diminished. However, within many less developed countries and even among some of the richest countries, primarily in the USA, inequality has increased dramatically while poverty has not gone down, or at times increased. From the 1970s, research focused on less developed nations, following the modern world system perspective, has shown that globalization has mostly led to increasing inequality and less long term economic development in most nations, and in some cases even higher poverty. There is increasing evidence that a large part of the increasing inequality in the USA, in contrast to many EU countries, is related to economic globalization.

Recent evidence has suggested that the impact of economic globalization has complicated the affects through factors such as inequality and poverty. Other data show that less developed countries in Asia, in contrast to African and Latin America, are more likely to have more economic development, less poverty, and less growth in inequality from increasing ties to the global economy.

The paper summarizes some differences between the USA and EU nations that have led to the different outcomes of globalization. It focuses on data and several years of fieldwork in four Buddhist countries in Southeast Asia (Thailand, Vietnam, Laos, Cambodia) to identify some of the causes of the impact of ties to the global economy which vary even within Asian countries, showing some Southeast Asian countries (such as Cambodia) share more characteristics with African or Latin American countries that are less related to very uneven economic development, rapidly increasing inequality, and no poverty reduction.

This paper suggests how differences in domestic stratification systems are the key to understanding the varied impacts of economic globalization in both rich and less developed nations around the world.

Literacy Leadership and Accountability Practices: Holding Onto Ethics in Ways That Count
Despite the rhetoric of schools serving the needs of specific communities, it is evident that the work of teachers and principals is shaped by government imperatives to demonstrate success according to a set of standard ‘benchmarks’. In this paper, we draw from our current study of new forms of educational leadership that are emerging in some South Australian public primary schools to explore the ways in which mandated accountability requirements are being mediated by principals in schools that serve high poverty communities.

Taking an institutional ethnography approach, we focus on the intersection of trans-local policy and the everyday work of one principal to show the nature of the impact that standards-based reforms are having on practices of literacy leadership, and how principals’ work is increasingly constructed by attempts to classify and measure their professional responsibilities. Institutional ethnography explores the complexity of such coordination in its emphasis on actions of people as they engage with the ordinary, usually textually organised, routines of their local work organisation. School reviews in the form of ‘validation days’, and ‘liter-
acy chats' between a literacy leader and classroom teacher, are examples of such
textually organised actions. We elaborate on these inescapable textual framings
and tasks faced by the principal and literacy leader, and those that they create
and modify in order to 'hold on to ethics'.

We argue that while leaders' and teachers' everyday work is regulated by 'ruling
relations' (Smith, 1999, it is also organic and responsive to the local context. We
conclude with a reflection on the important situated work that school leaders do
in mediating trans-local policies that might otherwise close down possibilities for
engaging ethically with students and their learning in a particular school.

"Rules of Play at Work: The Active and Occurring Text in the
Everyday Life of a Local School"

In Australia, as in many western education systems over the last two decades,
discourses of accountability, transparency and performance have reshaped edu-
cation policy in a form that has reconceived the work of school leaders and teachers.
Increasing attention to the production, analysis and display of student achieve-
ment data has been one of the effects of this reconceptualisation.

This paper presents some of the work undertaken by school leaders and teach-
ers in a small religious school whose NAPLAN results suggest that it is succeeding
in improving outcomes. We frame our analysis of these data with the question of
how the decision to reorganise school leaders and teachers, their everyday prac-
tices and the availability of student achievement data has been one of the
effects of this reconceptualisation.

The paper examines how intersecting layers of national, state and sector pol-
licies connect with and coordinate school leaders' and teachers' everyday prac-
tices. We trace the ways in which translocal 'ruling relations' (Smith, 1999; 2006)
of a globalized education system reach into and regulate the activities of people
in local everyday settings. Our analysis uses the concept of the 'active text', the
"activating and occurring" in a specific place and time and at the same time
"coordinating and ruling" from a distance. We examine in detail a sequence of the
production and reading of assessment data by educators in one school and con-
sider how this condiﬁes students and their learning experiences and articulates
with and coordinates teachers' actual practices. In this process we begin to learn
from those involved how their everyday work brings into being institutional
processes that produce a particular institution's standard sequences, its decisions,
policies and outcomes.

Opening and Closure in the Reproduction of Social Movements
and Organizations

This study examines the social mechanisms behind the reproduction of so-
cial movements and organizations based on Max Weber's distinction of open
and closed relationships.

Max Weber's concept of social closure played an important role in the aca-
demic discourse about Marxist class theory in the 1970s and 1980s (Parkin 1972,
1979). Accordingly, the formation of classes is closely related to processes of so-
cial closure where a group of privileged actors monopolizes their access to cer-
tain resources (Murphy 1986, 1988). In this sense, the concept refers to a central
mechanism behind the formation of social collectivities. In the context of the dis-
cussion about the production of social capital, the distinction between opening
and closure was further developed and reﬁned in the ﬁeld of social network anal-
ysis. Burt (2000, 2005) demonstrated in several studies how processes of opening
(brokerage) and closure affect the innovative capacities of social networks.

This presentation aims at transferring the ﬁndings of past research on social
classes and networks to formal organizations and social movements. In the ﬁrst
part, I will discuss the social mechanisms that produce closure: While the closure
of formal organizations typically depends on a continual process of decision-mak-
ing (Luhmann 1998), social movements reproduce the boundary between "us" and
"them" through ongoing mobilization. In the second part, I will draw on net-
work analytical concepts in order to operationalize the opening and closure of
social structures. In the third part, I will show on the case of the energy market
in Germany how the mobilization of the environmental movement affected the
balance of opening and closure between electric power companies.

Back Home: The Reintegration of Return Albanian Migrants in a 'Foreign' Environment

In this paper we explore the Albanian return migration from Greece. Albanian
return migration is a neglected ﬁeld of study and there is little empirical evidence
related to it.

In the beginning of the 90s, after the fall of communism in Albania and else-
where in South Eastern Europe the Albanian diaspora was the biggest exporter of migrants in the Eastern Block, judging
by its proportion to the general population. Over one fourth of the country has
lived or is living in a foreign country. Their main destination was Italy and Greece,
because of their geographic proximity.

Recently, there is a growing number of migrants that have returned home. Our
research is focused on the reasons of their return, the Greek debt crisis being one
of them. We mainly explore the difﬁculties of their re-integration in Albania, and
how they perceive themselves in the Albanian society. We call it a 're-integration'
because Albania is not the country that they left behind when they ﬁrst migrated.
It has changed, pretty much the same way as other closed societies have done
after they opened their borders.

We also explore what was the reaction of their family in Albania and their
children with regard to their decision to return. What role did their family, their
friends, and in general the Albanian government, play during the process of their
return? What role did include the role of the Albanian government because it has
been advertising itself as a facilitator and accommodation for their smooth ad-
aptation.

All Change: The Social Life of Change Management in the UK
National Health Service

The UK NHS is going through what is typically referred to as an unprecedented
period of change, marked by key priorities of patient choice, innovation, quality,
innovation and the minimisation of bureaucracy. These processes are associated
with a plethora of paradigms, initiatives and tools designed to support the man-
agement of change, including strategies for developing the learning organisation
and the role of change agents, predictive change tools, models and processes of
personal change, and the rejection of 'style paternalistic' theories of organisa-
tion and culture.

This paper will explore the rise of the change management agenda in the NHS,
and the organisational and psychosocial theories and values which underpin it,
before moving on to consider how and why we might trace its articulation in
the practices of NHS managers, drawing on preliminary data from exploratory
discussions and observations with NHS managers working in a large soon to be
Foundation Trust Hospital in the North of England. We consider how and why we
might go about understanding the social life of change management in organisa-
tions by focusing upon manager's practices and accounts of their experiences of
and rationale for change, especially the productive character of change mantras and
devices. We end with some critical reflections on the importance and the difﬁ-
culties of tracking, understanding and articulating the activities and the actants
of change in organisations-in-ﬂux and in managing the ways in which we ourselves
as researchers are enrolled in the processes of change we seek to study.

Graffiti with Chinese Characteristics: A Longitudinal Study
of Campus Graffiti in Northwest China

The current paper, utilizing an original data source of approximately 400 graffi-
ti tags collected over a six-month period from a single location in Northwest China taken in 2012 and 2013, is
a longitudinal content analysis study. The markings were collected from a co high school/university campus in a predominantly Muslim region of China. The paper engages in a descriptive summation of dominant themes found in the markings and changes in these themes between the collection of original marking in 2012, and the markings that were appearing in 2013. Analysis indicates that themes are consistent with emotional issues experienced by youth embedded in transitional and temporary social networks. Beyond a pure descriptive summation, the paper further explores differences in themes appearing in its data compared to that appearing in documented studies in other parts of China and in other parts of the world.

KERSTEN, JOACHIM* (German Police University, joachim.kersten@dphol.de)  
Policing of Minorities and Police Accountability  

In the European Union organizational structures, traditions and citizens' trust in police differ substantially among the member states. While numbers of police per 100,000 population fluctuate between less than 150 to nearly 500, trust in police indicates an opposed relationship: the lower the numbers and the less money spend on police / security the higher is trust in police (Kääriäinen 2013). Despite of all the variety there is a common challenge to police in Europe which is the relationship between police and minorities. Whether working migrants and their descendants (e.g. Turks in Germany), traditional resident minorities (e.g. Roma in Hungary) or asylum seekers / refugees from civil war regions (e.g. Sub-Saharan Africans in Austria), survey results indicate that minority men and women are more frequently subjected to police controls than majority citizens. More often than majority citizens, persons from a minority background feel treated unfairly by officers during encounters with police. At the same time, the victimization rates of minorities are significantly higher while their levels of reporting to police is lower, and this includes instances when they become victims of hate crimes (Goodey 2013).

The European Union has commissioned research aimed at an assessment and an improvement of police-minority relations in the EU member states. The presentation will report findings of such a project www.corepol.eu. This research project investigates police minority problems and best practice conflict resolution in a wider perspective of restorative justice approaches in Germany, Austria and Hungary.

'Crisis of Multiculturalism', Neoliberalism and Possibilities for Creating Alternative Narratives in Activism  

During the last decade the ‘crisis of multiculturalism’ discourse has characterized media and political discussions in many European countries. Especially Muslims and non-western minorities have been framed as problematic outsiders that are challenging the liberal cultures, followed by demands on stronger integration and assimilative measures. Notions of gender equality and sexual freedom have played a significant role in such debates not the least in the Nordic countries that build their national identities on being world-champions in achievements in gender equality. Building on interview and media data gathered in Denmark, this presentation focuses on how activists who belong (or are categorized as belonging) to racialised groups (Muslims, non-western minorities) seek to provide alternative narratives and question these hegemonic discourses about migrant/minority families and communities. Public debates on gendered violence in Muslim families, especially forced marriages and honour-related violence, have been on the agenda in Danish media and politics since the 1990s. The othering images of the subordinated, victimized Muslim woman and the threatening, patriarchal Muslim man have circulated in the media for more than a decade, with consequences also for the everyday lives of the racialized subjects. My paper will analyze how activists create spaces to challenge such images and discourses, as well as to produce alternative narratives and imaginaries. Moreover, it will be discussed how such spaces are shaped by neoliberal rationality that emphasizes individualization and entrepreneurialism. It will be analyzed how governmental ‘role model’ projects, mentor networks for migrant/minority children and public debates on gendered violence in Muslim families, especially forced marriages and honour-related violence, have been on the agenda in Danish media and politics since the 1990s. The othering images of the subordinated, victimized Muslim woman and the threatening, patriarchal Muslim man have circulated in the media for more than a decade, with consequences also for the everyday lives of the racialized subjects. Learning Communities – a New Paradigm for Education  

Education is by its nature a normative enterprise and therefore guided by certain aspirations, cultural and ethical beliefs. It is no wonder that the educational systems of different countries reflect the local ideas of nation, the established ways of perceiving knowledge, ways of production, as well as religious and other normative ideas. In western countries educational thinking has been generally related to the scientific worldview that is based on Cartesian and Newtonian inquisitiveness. Yet this approach has been thoroughly called into question – after that is done, the whole is constructed again. This kind of thinking has its emphasis on things like analytical thinking, determinism, and reductionism, but it cannot cope with phenomena such as complexity, purpose, intention, uncertainty and ambiguity, to name a few. The arts are, however, often mentioned to possess capacities and methodologies to deal with these latter issues. Is this really true is a question well worth to be investigated. The theory of learning communities (Wenger, 2004) offers us plausible framework, from which the premises for the role of arts in education can be outlined. However, at the same time the theory reveals also the limitations of the current structures and predominant ideas within the field. Combining the theory of situated cognition with analyses of the on-going change in modern society, the new paradigm can be both grounded and justified that means also changes in educational designs.

KEETE, SVEN* (Bielefeld University, sven.ekte@uni-bw.de)  
From Topic to Problem. Organizational Mechanisms of Constructing Demographic Change  

By referring to organizational theorists like Karl E. Weick and Niklas Luhmann, the proposed contribution starts from the assumption that for organizations demographic change is not a clear and unambiguous given problem, but rather a topic which might be regarded (i.e. constructed) as a problem or not. Consequently, demographic change is understood as a non-instructive problem, which can be framed in different ways (e.g. risk, catastrophe, or standard problem). Based on the analysis of qualitative expert interviews that has been conducted in organizations of various types (e.g. business firms, health insurer, local government, social welfare organizations), I want to present preliminary results on the question: Which structural elements and which mechanisms are crucial for the organizational construction of demographic change as a problem?

More specifically, the proposed contribution wants to shed light on two aspects: first, it is asked as what kind of problem the demographic change is constructed by organizations. This refers to the organizational construct of demographic change itself and aims at identifying different types of constructs. Second, it is asked how the demographic change is constructed as a relevant problem. This refers to the process of constructing/demographic change as a certain type of problem and aims at identifying crucial structural elements certain types of constructs depend on. Obviously, this approach does not refer to a shifted objective and real social structural reality and its related challenges for organizations. Instead, it asks for the reorientation of the theoretical questions. My aim is to show that the way organizations deal with demographic change is strongly determined by how they understand the term demographic change itself and aims at identifying different types of constructs. This refers to the organizational construct of demographic change itself and aims at identifying different types of constructs. Second, it is asked how the demographic change is constructed as a relevant problem. This refers to the process of constructing/demographic change as a certain type of problem and aims at identifying crucial structural elements certain types of constructs depend on. Leisure and Life Satisfaction and Adjustment in Elderly People  

LEISURE AND LIFE SATISFACTION AND ADJUSTMENT IN ELDERLY PEOPLE  

Today, everyone is busy in his business. Every PEOPLE needs leisure to maintain his quality of life and satisfaction. Leisure helps the person to maintain his health. After retirement people have leisure. In old age the people feels rejected and inferior as his physical and mental abilities deteriorate. The purpose of this study is to find out the relationship among leisure and life satisfaction, leisure and adjustment of elderly people in the context with socio-economic status and status. In old age people have leisure but they may not have satisfaction because of poor economic conditions, lack of social support. In family people has social and emotional support but in old age home the get material support not emotional support. So it affects the person's life satisfaction. Life satisfaction is very important for adjustment.

20 elderly people selected from old age home and family who are busy and 120 elderly people selected from the same population but have leisure. They have been administered life satisfaction scale and adjustment inventory.
The present paper would like to focus on 1) to assess life satisfaction within low, middle and high socio-economic status; 2) to compare life satisfaction of elderly people living in old age home and in family 3) to assess adjustment of elderly people within low, middle and high socio-economic status. 4) to compare the adjustment of elderly people living in old age home and in family. 5) to compare leisure and life satisfaction of elderly people living in old age home and in family. 6) to compare leisure and adjustment of elderly people living in old age home and in family. 

**Key words:** Leisure, life satisfaction, adjustment, support system

**Use of Facebook As a Source of Political Participation Among University Students of Pakistan**

Use of Facebook as a Source of Political Participation among University Students of Pakistan. The Internet has brought about remarkable changes in contemporary societies by increasing access to the information and allowing users to freely express their views to others. Various scholars consider the Internet as a new source of political socialization and a way to bring young people closer to the political process. The Internet facilitates this process in various forms. The use of Social Networking Sites (SNSs) is viewed significant in this regard. SNSs have stimulated the political debate among less democratized societies particularly after the event of Arab Spring. However, there is dearth of scientific evidence that how SNSs are linked with democratic and political participation among the users of developing countries. The following study intends to see that how Facebook, most accessed social networking site in the world, is being utilized by its users in Pakistan for political purposes and influenced its young users to participate in political process. For this purpose, an online survey has been conducted with students of various universities in Pakistan to find out the relationship, if any, between Facebook use and their civic and political participation. The preliminary analysis shows that there is an association between Facebook use and online and offline political participation. However, further inquiry is in process to see the effect of intervening variables to validate this relationship. The study will provide deep insights regarding the political use of Facebook and its influence on civic and political participation.

**Islam and the Arab Muslim Refugees in United States**

The studies of Arab Muslim refugees in the United States are just in the beginning; research is needed on wellbeing of families. Refugees have more challenges than many other immigrants because of what they have experienced before and after they arrive to United States, Politics, religion, and culture overlap to shape these refugees’ lives. Islam is one of the main factors that influence refugees’ resettlement and adaptation in their new home. New opportunities challenge traditional ways of living. The paper will draw on some of the findings of an ongoing research study exploring refugees’ religion continuity and change: fate, rituals, and practices, the role of religion in refugees’ resettlement, adaptation, and emotional support, types of challenges faced for being Muslim, and the role of Muslim communities in refugees’ resettlement. A qualitative approach was used to investigate the perceptions and experiences of female Arab refugees. Semi-structured interviews were conducted with refugees in the middle Atlantc area. Grounded theory was used to build useful theory about Arab Muslim refugees’ religion continuity. Findings emphasize the importance of taking a holistic approach in understanding Arab Muslim refugees’ needs which can lead to successful integration into the American society. Islam is more than religion; it represents a strong emotional support that ties the family together and helps them to assimilate to the new culture, and passing their religious values to their children is one of their priorities. In addition, it appears important for the well-being of refugees that they maintain their religious rituals while encouraged to integrate to the new culture. Social ties play an important role on family’s wellbeing and emotional support represented on other refugee friends, relatives, and American friends.

**KHAN, SULTAN** (University of KwaZulu-Natal, khans@ukzn.ac.za)

**South Africa’s Development Public Policies, Emerging Contradictions and Prospects in the Brics Partnership**

After almost three and half centuries of economic exploitation through international capitalist pursuits through colonialism and apartheid, South Africa has emerged as a democratic country. The liberation mandate for South Africa’s post-apartheid reconstruction and development was translated into a popular development policy called the Reconstruction and Development Programme (RDP) based on redistributive ideals framed in the historical document – the Freedom Charter. Such an ideal was constrained within two paradoxes: the reality of eradicating high levels of under-development amongst the vast majority of the previously disenfranchised Black populace became contingent on growth and development programmes that will create opportunities for their socio-economic advancement. Adoption of a neo-liberal economic development policy called Growth Employment and Redistribution (GEAR) was considered the most strategic approach for the state to deliver on its development mandate through participation in the international market driven economy. However, such an economic approach to development has been proven to come with a wide range of contradictions perceived to be the source of slow and unsustainable pace of delivery challenged by a restless civil society. In being afforded entry to BRICS in 2010 it has committed to new sets of multilateral agreements to solidify its south-south strengths so that it will enjoy mutual benefits from such an arrangement to meet its development challenges. It is against this context that this paper tests out South Africa’s relative position and status within BRICS as a new entrant, highlighting some potential contradictions followed by prospects for engagement on a diverse set of development oriented programmes and projects within this multilateral arrangement.

**Youth in Conflict with the Law - a Study of South African Youth in Detention at the Westville Youth Centre Durban, South Africa**

“The government must stop focusing on building a future for the youth but start building youth for the future”. The history of South African youth, especially those from disenfranchised backgrounds has been characterised by a struggle to become meaningful social actors. Many sacrificed their lives as foot soldiers of the liberation struggle so that the generation to follow will be contributing members of society so they may reap the benefits of their ultimate sacrifice for freedom. In recognition of the youth contribution to liberation in the country, South Africa earmarked a public holiday called the National Youth Day. As part of its post-apartheid reconstruction policy, a National Youth Development plan is in place to further their aspirations and social mobility in a rapidly transforming country. Despite such socio-historical context and policy initiatives for youth development, a large section of the populace are marginalised and excluded by a myriad number of socio-political and economic factors placing them at risk. This paper attempts to investigate the underlying nature and causes of South African youth who have come into conflict with the law. It draws from a situational analysis of 77 youth who are incarcerated at a youth detention centre in the Metropolitan Area of Durban for various forms of crime. The paper seeks to provide possible proactive measures drawn from the social reality of incarcerated youth on how intervention at a micro, meso and macro level can serve as a safety net preventing youth coming into conflict with the law.
Participatory Water Governance through Gender Sensitiveisation in the Indian Context

Equity in water, through gender-sensitization of developmental projects in the sector, is now recognized as an international agenda, owing to the commitments made in the Johannesburg Plan of Implementation, and declaration of ‘Water for Health’ as a human right. However, governments in developing countries have been found to be limited by social fabric existing at the community level, strongly held together by long standing traditions and social structures. The study discusses issues and concerns with respect to effective participation of women in governance of water projects, and provides case studies/ examples to illustrate the practical implications of success(ess) and failure(ess) to engage women for decision-making.

The study concludes that efforts that penetrate into the existing social structure to build opportunities for a re-allocation of power amongst different groups of people are required. Participatory appraisal of projects, inclusive of women, is a key for identification of appropriate entry points for achieving the above objective in water sector. Several intra-gender differences however, impede success of programmes that consider women as a homogenous group.

Inclusion in Continuing Education and Its Unequal Accessibility: An Empirical Analysis for Able to Work Young People in Siberian Region

The data of two surveys conducted by us in Novosibirsk Oblast (in 2012 the economically active inhabitants of semi-urban settlements from 16 to 45 years old were interviewed, N=35); in 2006-2009 it concerned young workers of urban, semi-urban and rural settlements, N=778) demonstrate that in whole a mass demand for further education among the adults has been observed. There is a special need in higher and secondary education, as well as in the courses/programs of supplementary professional education (SPE). The largest need in additional education, professional training and retraining were revealed among those employees whose work is connected with information use or innovative activities (as well as interest in them).

Anyway among all young workers educational activity of different kinds (real or projected) is realized as the most productive means for achievement of fuller self-realization in work. So, for this purpose they prefer increasing of their educational and qualification level in the major profession (41% of answered), also increasing of the general educational level and mental outlook (28,7%), than change of a place of work (8,8%), change of profession or kind of activity (9,8%) or even widening of an area of independent decision-making (15,6%). However the discovered educational needs essentially surpass real involvement of the adult population in the continuing education. It was revealed the unequal accessibility to SPE services. Thus there is noticeable part of employees (42,2%) and the unemployed (69%) who never passed before through professional training or retraining. The employees who are available to use a branch system of SPE often have experience of numerous cases of professional development. While the employees of enterprises without corporate SPE system, become only casual participants of such programs. So it leads to unequal “accumulation” of knowledge among different groups of able to work people.

Artistic Communities: Strategies and Tactics of Creative Products Promotion in Petersburg Market of Contemporary Art

This paper considers the strategies and tactics that young Petersburg artists use to promote their artworks and provide communicative resonance among them. It presents the results of a research project conducted in accordance with the strategy of multiple case-studies: four artistic communities of different scale, structure, integration grounds, ideological orientation, professional background, forms of spatial embeddedness and artistic style were selected for analysis. In the course of data collection, a wide range of field research techniques such as
in-depth interviews, participant observation and qualitative analysis of texts was applied. The empirical data show that under the conditions of deficient sponsorship and information support, artistic success in Petersburg largely depends on the artists’ constant self-promotion efforts (participation in competitions and collective projects, applications submission, dissemination in Internet). By accumulating material, informational and reputational resources of their members, art-communities make convenient platforms for artistic self-presentation and development both in and beyond the local market. Responding to the specific noneconomic logic of the art market, symbolic recognition before commercial success, communities produce unique strategies of defining target audiences, embedding creative process in urban contexts, choosing legitimate exhibition sites, opposing themselves to other artists and art-groups. Community membership helps artists cope with the risks of disintegration, isolation and insufficient information exchange indispensable for the survival and highly competitive market of contemporary art in St. Petersburg and balance between the margins of creative products unoriginality and unrecognizability. Thus, artistic communities can increase symbolic capitals of individual artists serving as a peculiar kind of social lift and constituting one of the major forces of the social construction of artistic reputations.

**Social Effects of Neoliberal Policy in a Post-Soviet City: Urban Space Contestation Revisited**

With the transition from Soviet state-planned economy to post-Soviet market economy, neoliberal city policy has become central for urban planning and (re)development in Russia. Subject to this policy, contemporary St. Petersburg experiences impetuous commodification and aestheticization of urban space and, consequently, its rapid gentrification. Alternative views on how urban space should be organized make citizens consolidate and buck against the decisions of elites. This paper considers the processes of urban space contestation by strong and weak advocacy groups in a neoliberal post-Soviet city. It focuses on six research cases embracing struggles of local communities against aggressive urban (re)development in St. Petersburg (spot construction, demolition, renovation of historical areas). To analyze the decisions on urban futures taken by city administrations and developers, we use the theories of urban political regimes (Stone, Molotch, Logan). To describe the resistance of citizens to imposed urban transformations, we apply theoretical frameworks developed by Levebvre, Scott and Certeau. However, our empirical data show that the abovementioned theoretical backgrounds have to be adapted to the local context of St. Petersburg where struggles over urban space unfold under the conditions of total uncertainty: coexistence of multiple property regimes, constant adjustment of legislative frameworks, insurrections in St. Petersburg (spot construction, demolition, renovation of historical areas). To analyze decisions and actions performed by regulatory authorities and investors. For instance, pursuant to growth machines theory, coalitions of authorities and developer companies are fashioned in Petersburg, but it is only true for big businesses whereas smaller enterprises often suffer damage from inconsistent authoritative decisions. Meanwhile, local communities always suspect developers’ motive in aggressive urban development practices. To counteract these threats, local communities have developed collective actions, applying both legal and informal strategies. By accumulating symbolic capitals, local communities produce unique strategies of defining target audiences, embedding creative process in urban contexts, choosing legitimate exhibition sites, opposing themselves to other artists and art-groups. Community membership helps artists cope with the risks of disintegration, isolation and insufficient information exchange indispensable for the survival and highly competitive market of contemporary art in St. Petersburg and balance between the margins of creative products unoriginality and unrecognizability. Thus, artistic communities can increase symbolic capitals of individual artists serving as a peculiar kind of social lift and constituting one of the major forces of the social construction of artistic reputations.

**Gender Research in Japanese Sociology: Complicit or Critical?**

The impact of feminism in sociology has been examined quite thoroughly in the US and Britain but comparable analysis has not been undertaken in Japanese sociology. The present paper endeavors to fill this gap, but less to assess the impact of which feminist research is represented Japanese sociology than to examine the type of gender research published in a mainstream sociology journal, to obtain a picture of the nature of gender knowledge that is produced in sociology, and specifically, whether gender research in sociology raises questions about the way sociology is practiced. I analyzed all four issues per year from Volume 40 (1989-1990) to Volume 61 (2010) of the official general sociological journal published by the Japan Sociological Society, Japanese Sociological Review (Shakai-gakushi Ronshu), with a total of 558 theoretical and empirical articles. All articles were coded for topic/area, geographic focus, if relevant, methodology, and also gender, affiliation, and professional status of the author(s). In addition, the text of the gender-related articles were read and coded for major claims or findings and reference sources. Preliminarily, the analysis shows that most gender-related articles are on the topic of family and marriage, body and norms, intimacy and sexuality, and social stratification. The next popular topics are labor, employment and organization, and social network. Only two such topics are central to sociology represented by this journal and indicated by the number of publications. While 59 articles out of 558 articles may represent a fair number from any subfield in a highly diversified discipline, a closer look reveals a different picture, one that could suggest a marginal status. Results of further analysis will be presented at the ISA.
Effects of Women Employment on Family Integrity (Case study: Comparative Teachers with Housewife in North of Iran)

Identifying the effects of women's employment has contributed to the strength and health of the family, and the research in the effects of women's employment has high scientific and social importance and necessity. The purpose of this study is to identify the effect of women's employment in Integrity of the families. The research method in this study is survey. Population includes of 400 people of employees (teachers) from 25 to 49 years as a test group, as compared with the same number of housewives as control group. Sample size which were determined by using Cochran formula is 200 that includes 100 of the employed women and 100 of similar housewives women. Samples selection is down, using random sampling method in stratified way in employed group and stratified method appropriate to unemployed groups. The tools of data collection was questionnaire and its validity was using a content validity of face validity, using and reliability using Cronbach's alpha coefficient (0/84) has been approved. For data processing spss software and for data analyzing statistical analysis appropriate in level of variables measurement such as Pearson, Spearman, the mean comparison (t-test) and analysis of variance (ANOVA) was used. The results of the research showed that the Integrity of family among housewives women is higher than the employment groups. More results show that whereas the income has positive relations to the integrity of the family; the education have negative effect on Family Integrity. Discuss show that the result of this study have been protect with the result of Alaeddini (1993), and André Michael (2003).

Micro-credit (Self Help group), Dalit Women Inclusive Growth and Development

In last three decades, the gospel of micro credit through Gramin Bank model have become part of global legends of development in South Asian countries including India for poverty alleviation, especially for dalit. Historically, the main basis of dalits' backwardness is effect of capital deficiency, in India's eleven five-year plan, an agenda of inclusive growth is prioritized through household saving and productive investment for capital formation and economic development. Homogenous women group formation following approach of equity, consensus, democratic culture and voluntary spirit in line of Bangladesh model of Self Help Group(SHG) is encouraged as an ideal, to promote financial self sufficiency, poverty alleviation, social, economic and political empowerment. SHG is linked to Government, NGO, Commercial Bank and private Microfinance agency for financial support, entrepreneurs, subsidiaries, training for capacity building etc., for creating the culture of an alternative sustainable development of the poor. An in depth study is conducted on most vulnerable Dalit women' SHGs members in eight taluks of Nanded district located in backward Marathwada region of Maharashtra. The objectives proposed to understand the extent of financial inclusion in generation of employment, income, improvement quality of life, solution of own values. Microfinance. Ral Kur, Max and Karl Marx are the three main methodological perspectives of capital accumulation and protestants-ethics of capitalism used in comprehending ethics of saving and credit of SHG phenomenon in context of development of Dalits. Ground reality of SHGs outcome reveals alarming; almost negating the goals it set, like over mental stress, raising under debt trap, pressure for over work, even less wages at cost of own freedom. The consolation is liberation from family restriction and opportunity of involvement in different social issues having no financial implications in improving living standard. Prof. Suprava Khuntia

Inequitable Access to Citizenship: Gendered Social Policies and Unattainable Democratic Ideals

Although gender equality is central to the attainment of democracy, its realisation in conceptions of citizenship in democratic states has been marred with complications. Access to citizenship rights is most often unequally experienced due to unequal power dynamics emanating from racial, gendered and socio-economic factors. As a result of these factors women and men's experiences of democratic citizenship is a site of struggle and constant negotiation. This paper seeks to interrogate how and men's ability to access the fundamental rights guaranteed in democratic countries. This examination is undertaken through an analysis of social policies in Southern Africa. The paper argues that gendered, racial and class factors hinders equitable access to citizenship rights, so does the iniquitous valuing of social, economic and political rights in defining citizenship. In conclusion the paper shows that the inequalities limit the attainment of full democratic citizenship for most of those who have been historically excluded in terms of gender, race and class.

Micro-credit (Self Help group), Dalit women Inclusive growth and Development

Efficient Participatory Democracy: Real Utopia Model

In many societies of semiperiphery and periphery ordinary citizens face unsatisfactory conditions of work, low salaries, generated by exploitation processes

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
in the capitalist world-system. No wonder, many people distrust authorities and rarely participate in civil actions. Thus, there is a huge gap between awareness of unbearable situation and passive approach. Yet, people should know that there is an alternative: an emancipatory social science, which calls on active participation for implementation of desired change. In the real utopias approach of E.O. Wright that society has real alternatives should be desirable, viable, and achievable. And civil activists who plan changes actually need and lack knowledge about possible models of empowered democracy and techniques of implementation, which proved to be efficient in real utopia cases around the world. And this study is aimed to provide such knowledge. As far as democratic initiatives implemented by authorities have a profound influence on society as a whole, it is reasonable to give priority to civil activism in political realm through symbiotic transformations using the state. Therefore, the research question is the following: what would be a comprehensive real utopia model of desirable, viable, and achievable participatory democracy? This study aims to provide grounds for an integral real utopia model of efficient participatory democracy, relevant for communities and even larger societies. So far, the perspective change in democratic governance should include local community initiatives, participatory budgeting; referenda, free and fair elections, citizen assemblies, electronic democracy, and efficient control of work of authorities. For implementation civil activists should be guided by their emancipatory values and objectives, take into account theoretical implications, consider experience of the existing real utopias, mechanisms of implementation, effects of contexts, collateral institutions, unintended consequences, positive and negative feedback processes, and intermedi-ate reforms. The findings are applicable to semiperipheral, peripheral, and even core societies.

World-Systems Approach to Global Processes in Effects of Proactive Individualism on Subjective Well-Being

The world is experiencing global crisis, yet proactive individuals can promote social change. Still, opportunities for activism and its impact are unequal in the modern stratified world-system. Therefore the following research question arises: what are the differences in degrees of causal influences among proactive orien-tation, individual activism, personal achievement, and subjective well-being between countries of core, semiperiphery, and periphery? The preceding theoretical implications and empirical findings by M. Kohn, S.K. Parker and C.G. Collins, M. Se-ligman, M. Argyle, C. Webel and R. Ingelhart, L. Beer and T. Boswel, were considered. The posed hypothesis is the following: degrees of causal influences among proactive orientation, individual activism, personal achievement and subjective well-being are higher in core societies than in semi-peripheral societies, and in semi-peripheral societies are higher than in peripheral societies. The data obtained by World Values Survey 5th wave (2005-2008) with the sample of 49 countries with up to 69,381 respondents were used. Structural equation modeling and multiple group analysis in MPlus has been performed. In fact, the hypothesis was confirmed partially. It was proven that positive influence of person’s individual activism on subjective well-being is the strongest in the core, is weaker in the semiperiphery, and is even negative in the periphery. However, it was found that there are relatively small differences between degrees of influence of individual activism on personal achievement. This findings signifies that overall human ac-tions do lead to accomplishments, regardless of structural conditions. Moreover, it was revealed that the degrees of influence of all other constructs are surprising-ly reverse: they are stronger either in the semiperiphery or the periphery and are the weakest in the core. The highest degree of influence of proactive orientation on individual activism and personal achievement in the semiperiphery testify that people with proactive orientation do can bring change there.

The Variant Actuality of Young People in Precarious Transitions in Late Modern Japan—Based on the Interviews with 51 Young People

In recent Japan, young people have experienced prolonged and complex trans-itions from school to work, have been forced to work in precarious jobs, or faced the risk of unemployment, poverty, and social exclusion. The Youth Cohort Study Japan (YCSJ), conducted by The Japanese Educational Research Association is a five-year panel survey that contains 1687 samples aged 20 (first wave in 2007) and 891 aged 24 (fifth wave in 2011). Our analyses of YCSJ data have indicated the characteristics of the transition from school to work in recent years, especially its precarious processes and the factors (familial and educational background, social capitals, gender bias, etc.) which have influence on the differentiation of transitional trajectories. Then we have tried to describe the actuality of youth in precarity based on qualitative analyses of interviews with those young people who have participated in our five all waves and assent to be our interviewees (we interviewed with fifty one cases). Through these analyses, we aim to show some variant types of precarious transitions. And we also suggest how young people overcome or negotiate their difficulties.

Racial Identity and Psychological Well-Being Among African Americans and Whites

Research over the past few decades finds that African Americans have per-sistently poorer psychological well-being than whites. African Americans score lower than whites on happiness, life satisfaction, and trust in people. In contrast, African Americans’ mental health (e.g., as measured by depressive symptoms) is comparable to or better than whites’, despite African Americans’ lower socioeconomic status and greater exposure to stressors. Scholars have speculated that a strong, positive racial identity may help explain African Americans’ good mental health, based on findings that the two are associated. If so, it means that racial identity may be both stronger or more beneficial for African Americans than whites. We addressed these questions using data on African Americans and whites from the 1996-2012 General Social Surveys. We investigated how racial identity is related to psychological well-being (happiness, life satisfaction, and trust in people). Based on social identity theory, we examined two identity dimen-sions—identification with (closeness to) one’s racial group and ingroup biases (motivations to make evaluations of ingroup versus outgroup members). On average, African Americans identified with their group more than whites did, but whites evaluated their group as relatively more intelligent and hardworking than African Americans did. Stronger racial identification was associated with greater happiness, life satisfaction, and trust in people, equally for African Americans and whites. Contrary to prediction by social identity theory, favorable ingroup evaluations at an outgroup’s expense were sometimes associated with poorer psychological well-being. These effects of ingroup bias did not differ by race. We discuss what the findings imply for social identity theory and for how racial inequality influen-ces psychological well-being.

The Role Of Risk In Child Mobility Decisions -- Empirical Evidence From Benin

Child mobility is still common throughout the West African region. This has been academically approached under the headings of child fostering, child migra-tion, child labor and trafficking. Poverty is considered a main driver, alongside social networking and skills matching. Recent empirical work looks at the role of shocks to child mobility. Yet, it has been hypothesized that vulnerable families do not necessarily wait for a shock to occur, but might relocate children as an ex-ante strategy.

The proposed paper looks at the role of risk in the child mobility decision with data from a fertility based survey of 3000 rural households in Benin, a country known for high child mobility rates. The survey allows for registering children living away from parents, their schooling status and purpose of leaving. The 2012-survey covers three important areas: poverty, exposure to the massive floods of 2010 (shock), and the household head’s level of worry about not being able to provide for his family the next 12 months (risk). The regressions show (controlling for social and demographic factors), that perceived risk correlates substantially and systematically with child mobility. Poverty and shock, on the other hand, do not correlate at a statistically significant level. This interestingly contrasts with the correlates of the schooling decision. While poverty, as previously established, correlates negatively with schooling, risk and shock do not. Focusing only on children who have left and are not in school, both risk and poverty correlate with the mobility outcome.

The results support the notion that child mobility forms part of an ex-ante risk management strategy for families at risk. At the policy level this supports cash-transfer type social policy interventions, supporting findings from South-Af-rica where even small - but predictable incomes - like pensions and child benefits - have produced positive effects on child outcomes.

Normalizing Precarity? Youth Unemployment and Employment Instability in Poland

In the last decades, there has been a heated debate concerning the consequences of employment flexibility in many European countries. Concerns have been raised that flexible employment may not foster a stable labour market, where highly protected jobs coexist with unstable employment, offering inferior working conditions. Substandard employment is concentrated among young school leavers. In this context, Poland is an interesting case: although the Polish economy has done quite well throughout the current economic crisis, the rates of youth unemployment and temporary employment remain disturbingly high. Precarity for young workers appears to have become the norm, with more than 25% of economically active 15-24-year-olds in unemployment, and 66% of employees working fixed-term (EUROSTAT, 2012). This paper presents the results of an analysis of the distribution of various aspects of labour market precarity for the Polish youth: not only unemployment and temporary employment, but also unstable employment histories signifying a weak attachment to the job market. The quantitative analyses are conducted on subsamples of the youngest cohorts of respondents (aged 21-25) from two most recent waves of the Polish Panel Survey (POLPAN, 2008 and 2013). POLPAN data include detailed information on the respondents’ employment history, enabling a dynamic analysis of young people’s early labour market trajectories. The quantitative results are supplemented by a qualitative analysis of in-depth interviews, reconstructing the ways in which the young define their own experiences of unemployment and precarity. Paradoxically, it appears that even in young age, Polish youth may have a gender perspective towards regard itself as a reality of their female counterparts. For instance, a recent national survey on elderly abuse reports that women are more prone to the abuse due to their gender. However, the profile of family caregivers has been traditionally the responsibility of the family; the wives of eldest sons, or daughters-in-law of the elderly, typically provided care for elderly parents. However, the profile of family caregivers has been changing in the past few decades. One of the major changes is the increase in the number of elderly caregivers. Presently, about 30% of primary caregivers are sons or husbands of the impaired elderly. A growing concern is that these male caregivers may have different types of difficulties or stress from caregiving, compared with their female counterparts. For instance, a recent national survey on elderly abuse reported that more than half of the abusers are male caregivers. Evidence suggests the possibility of gender differences in stress processes. However, most previous studies are on female caregivers, and research on gender differences in stress processes is very limited in Japan. Are there gender differences in the stress processes? This study seeks to address this question by drawing on stress process theory (Pearlin et al. 1990). I analyzed data from a survey conducted in 2011 on son and daughter caregivers aged 40 to 64 years old, who take care of their elderly parents at home as primary caregivers. The analysis results show that the stress proliferation processes of son and daughter caregivers share many similarities in terms of pattern, whereas certain differences appear to reflect the gendered nature of Japanese society.

**Alternative Food Consumption and Sustainability in South Korea**

Under the neo-liberal regime of South Korea, large supermarkets dominate Korean food market. Yet, there has been growing effort to find some alternatives such as local food. There has been relatively little researches done on East Asian alternative food consumption. Our paper attempts to fill this gap by investigating the attitudes and behaviors of Korean food consumers. We attempt to (1) conceptualize the ‘alternity’ in food consumption in the Korean context, (2) develop typology of alternative consumption patterns among Korean consumers, and (3) find the main factors affecting the alternative food consumption.

We have found the followings based on historical analysis and national survey of Korean consumers. First, Korean food system is characterized by low food self-sufficiency rate and alternative food discourse is strongly influenced by political ideology and nationalism. In order to reflect this historical particularity, we have conceptualized alternative food consumption by combining food consumption attitude/values and political orientations. Second, in our typology of food consumers, two types of consumers are most visible, i.e., “consumers without consciousness” and “conscious consumers without consumption.” The former consumers actually purchase organic/local food while they do not have alternative values. In general, these are consumers with high income. The latter have greater consciousness and interest in alternative foods, yet they do/con not consume organic and local foods. Third, among the total consumers, the percentage of consumers with high consciousness without consumption is higher. This might be interpreted as potential for the future of food politics for alternative food system in Korea as these consumers are likely to change their food consumption behavior in accordance with how they think. It remains to be seen whether this potential can fully develop into a social program to build a more sustainable food system in the future.

**Different Manifestations of the Public Sphere in Japan and Korea**

This paper examines the heterogeneous trajectory of the public sphere in Japan and Korea, especially how it is differently represented by NGOs in the two countries. The state has long been argued to safeguard the public ever since Anstotle laid the foundation for the intellectual tradition in which the state was considered as an agent of the universal interest. In contemporary sociology, however, this was challenged by a new tradition that emphasized the distinctive characteristics of modern state that concentrated on the reproduction of political power by the power elite, without paying due attention to the interest of the public. The emergence of the public sphere in East Asia, more specifically in Japan and Korea, was rather hampered by the overdevelopment of the strong state during the process of economic development. Once the people in the two countries realized the necessity to protect their own interest as well as the public interest, however, NGOs were institutionalized and took a central position in civil society. These organizations tried hard to advocate the public interest in diverse aspects of everyday lives of ordinary citizens. Despite these similarities, however, the ways they represented the public interest were very heterogeneous. Their manifestations of the public interest are not only different in their organizational strategies, but also the issues they are concerned with. Generally speaking, NGOs in Japan have small-scale organizations and more voluntary participations, being more concerned with the enhancement of everyday lives of citizens. In contrast, NGOs in Korea have large-scale organizations and are more concerned with the political issues, frequently initiating massive protests against the state.

**Gender, Law and Legal Professions in Korea**

Gender, Law and Legal Professions in Korea

Since 1945 Korea has gone from colony to dictatorship to democracy. Educational opportunities for women have exploded in quantity and quality. The legal professions, once reserved only for men, have opened up to more balanced gender representation especially in the past few years, and the legal system of education has undergone a paradigm shift that many have predicted will be a boon for women entering the professions of law. At the same time, new laws protecting the place of women in society have been passed and seem to be working for the benefit of gender equity and equal rights. Women judges, legislators and business executives have become common forces often fighting for a more gender-balanced system.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.

This paper explores the changes that have occurred for women in the legal professions in Korea since women first became lawyers to the present day. This paper seeks to delineate these changes and to offer a socio-historical analysis of how this took place as well as where it might lead.

**Social Capital, Social Integration, and Suicidal Thoughts Among Korean Youths**

Social Capital, Social Integration and Suicidal Thoughts among Korean Youths

Abstract

The focus of this research is to examine some of the key factors that influence suicidal tendencies among youths in Korea. The teenage suicide rate in Korea has been one of the highest among all OECD nations, attracting the attention of scholars and policy makers alike. In this study, we examine in particular how and to what extent measures of social capital are associated with having suicidal thoughts. Ceteris paribus, in a Durkheimian tradition, medical sociologists and social epidemiologists have increasingly relied on the concept of social capital in explaining individual and cross-national health inequality. Much of the extant scholarship focuses on adult populations in the context of Western developed economies. Based on the analysis of the Korean Youth Panel Study, a government-funded multi-year research project, we shift the analytical angle toward a vulnerable population that has not received much academic attention. A number of social capital indicators are conceptualized and measured in analyzing the roots of suicidal tendencies among Korean youths, specifically participation in volun-

tary actions, networks, and friendship networks. While controlling for a host of socioeconomic and demographic variables, we find that voluntary organs-

tization membership, intimacy with parents, and neighborhood trust/fear. Hierarchical linear modeling is used to examine the psychological health effects of social capital simultaneously at individual and contextual (neighborhood) levels. While controlling for a host of socioeconomic and demographic variables, we find that voluntary organization membership, intimacy with parents, and neighborhood trust/fear are significantly related to having suicidal thoughts. We offer broad theoretical discussions and implications for the social capital literature based on our findings.

**Understanding Civic Engagement in Asia: The Role of Social Capital**

Understanding Civic Engagement in Asia: The Role of Social Capital

The question of “who participates” has received a great deal of scholarly attention among political sociologists. Increasingly, students of political participation, both formal and informal, have relied on the concept of social capital—defined in terms of trust, networks, norms of reciprocity, and organizational membership (Putnam 1993)—in analyzing the conditions under which people choose to engage in civic activities instead of opting to ride free on the efforts of others. Jacobs and Skocpol (2005) point out in *Inequality and American Democracy*, equal political voice and democratically responsive governments are under increasing threat due to the declining level of political interest and participation on the part of individual citizens. Understanding why some people decide to engage in politics formally and informally, therefore, is of paramount importance not only for the US but for any democratic nation. This study proposes to investigate this topic in the context of Asian countries. Based on the multilevel analysis of the Asian Barometer Survey of Democracy, Governance and Development (2006), which consists of data on 13 countries in Asia, it examines how and to what extent various social capital indicators (i.e., generalized and institutional trust, participation in voluntary associations, and network size) influence the likelihood of engaging in political activities, while controlling for key socio-demographic factors (i.e., income, gender, education, age, and religion). Four outcome variables are examined: two formal (voting and contacting an elected official) and two informal (attending a lawful demonstration and discussing politics in social settings). Findings from hierarchical linear modeling reveal that social capital is associated with different political outcomes in complex ways, at both individual and contextual (neighborhood) levels. Theoretical implications of the quantitative results are discussed in relation to earlier findings in the extant literature.

Biopolitics of Depression in Korea

Abstract

Biopolitics of Depression in Korea

As Korea has experienced rapid modernization, patients of depression have dramatically increased for the last 50 years. This has led, tragically, to a rapid increase in the rate of suicides. This study attempts to understand the reasons
why Korea as one of the most successful countries in modernization has shown such high rates of depression and suicide. It also attempts to analyze the process of medicalization of depression in Korea and how the doctors and patients accept anti-depressants as a cure for depression.

Neoliberal Individualization and the Modified Familism of Korea: The Case of Unmarrieds in Their 30s

As one of countries with the record low fertility rate Korea has the sharp concern in the unmarried among youth. The explanations on the issue has been given to the causes such as economic condition or individualism among them, which seem to be insufficient. This article aims to analyze the marriage attitude among the unmarried people in their late thirties focusing on the complexity of their family value. That purpose is to explain the characteristics of the individualization in intimacy in the times of the late modernity relating with the strong familism and the kinship system of the patriilineal privileging the first son. The analysis on the life course is also the main theme in this research. The economic crisis of Korea under the IMF-led bailout programs started to be intensified from the year of 1998 when the cohort group of birth in 1975 started to graduate from the universities. So this article selected 19 unmarried men and women from the target group, who were thirty eight years old.

The results show the great gender differences in the narratives of family value. Men interviewees tend to tell the sons' responsibility of the care for the parents and the role of the male provider, while the women co-well as their consumers by directing the self and making the lives of their own. But the sexual lives of both seemed very limited, and their emotional ties were commonly connected with their parents, especially with mothers. Their living arrangements were never separated from their parents. So we can call the recent changes among them as ‘the family-oriented individualization’

Korean Wave As a Hybrid Subculture

The Korean wave (Hallyu) refers to the significantly increased popularity of Korean drama and music around the world. Hallyu swept through Japan, China, Taiwan, Vietnam, Philippines, Thailand and other Southeast Asian countries, and then to all over the world. Now, Hallyu has expanded to include the popularity of any Korean subculture including cuisine, clothes, cosmetics and language, etc. ‘Gangnam style’ by Korean singer PSY has recently acquired more than 1.7 billion views on Y-Tube in the world within a year.

This paper is dealing with the rise of the Korean wave (Hallyu), reasons of success and the current situation of the Korean wave both in the positive and negative aspects, and then it concludes with some sociological implications for a hybridization of East Asian culture. This study claims that Hallyu is the fruit of hybridization through digesting the influx of culture from Western and Asian sources in Korea. Hallyu in turn builds a hybrid subculture that appeals in Asia based on a long tradition of cultural interactions among other countries.

Organizing Independent Contractors in South Korea: A Case of Insurance Agents Unionizing

The purpose of this study is to understand limitations and possibilities of organizing independent contractors by focusing on insurance agents in South Korea. Among various types of precarious employment, insurance agents are an exemplary case of independent contractor jobs. Since the 1997 crisis, the private insurance industry has shifted market risk on to workers by employment externalization in the form of independent contracting as well as to consumers by introduction of variable insurance scheme. The labor standard law does not treat insurance agents as workers and most of insurance agents are not affiliated with labor unions. As a result, insurance agents are outside labor protections. Under this context, insurance agents attempted to organize their own union, Korean Insurance Agents Union (KIAU), in early 2000s, and form a branch of Korean Finance and Service Workers' Union (KFSWU) in 2004. However, the KIAU lost rapidly its membership since the mid-2000s and have failed to revitalize itself until now. This failure might be attributed to some external and internal factors. External factors include the denial of worker status by the courts, the absence of labor market regulation by the government, and crackdown on union activities by major insurance companies like Samsung. Internal factors include the absence of strategic approach on the side of the industrial union (KFSWU), individualized job characteristics of insurance agents, heterogeneity of the working conditions between regular workers of insurance companies and insurance agents. In recent attempts to re-organize insurance agents, the role of industrial union is crucial factor. Some programs turning non-regular workers into regular jobs are implemented by the KFSWU through collective agreements; however, the union focused on directly employed non-regular workers, like fixed-term workers. Moreover, the KFSWU's strategic and long-term support was not given to insurance agents, because of its internal constraints and the lack of preparation.

Selecting Between Chosenjin and Zainichi: Analysis on the Zainichization Processes of Koreans in Japan

The Zainichi Koreans were brought to Japan during the colonial period and so this foreign group has the longest history of foreign residence in Japan. But success of ethnic identity formation is not easy in a country that determines nationality by jus sanguinis and so many third- or fourth-generation of Zainichi-Koreans have some trouble living as a ‘Korean.’ Even though there are lots of studies that address their ethnic identity troubles, many of these focus on the discourse of intergenerational diversification.

Based on Constructivism of Cornell & Hartmann(2007), this paper focuses on the media environment as a field of constructing ethnic identity. Analyzing the influences of exposure to the ‘Korean Wave’ and ‘abductions by North Korea’, this paper focus in the Zainichi Koreans’ identity but also on how factors, like as Zainichization, affect changing ethnic identity in host society.

South Korea's Developmentalist Worldview and Debates about Its Modernity

South Koreans make a Eurocentric hierarchy between countries according to the criteria of their developmental discourse, the discourse of seonjinguk (advanced country). In this discursive framework, the identity of South Korea tends to be constructed as a country near seonjinguk or “on the threshold of seonjinguk” (“seonjinguk munteok”), which provides both senses of superiority over hujinguk (backward country) and of inferiority over seonjinguk. With this intermediate identity, Korea is still under the project of modernization, actively pursuing the status of seonjinguk as its historical national mission. This paper aims to provide a critical review of the debates about Korea's modernity in the light of its dominant developmentalist worldview, the discourse of seonjinguk.

International Policy-Translation Among Precarious Women Workers Organizations in Japan and Korea in Comparison

It was Japan that established the women-only labor union, which was influenced on learning and adopting the main idea of organizing precarious, non-standard women workers from the model of SEWA (Self-Employed Women's Association) in India, on the one hand, and from the cases of community labor movement in Japan, on the other hand. Korean Women Workers Association (KWWA) learned the experiences of Women's Union Tokyo (WUT) in Japan, and established a women-only labor union, which is Korean Women's Trade Union (KWTU) later. On the contrary, Women's Union Tokyo learned the way of organizing and its role of KWWA, and applied to establishing the Action Center for Working Women (ACW2). Yet, the organizational performance and political impact of the KWTU and KWWA overwhelm those of the Japanese, WUT and ACW2, in a decade.

By introducing the concept of policy translation, this study searches for understanding the different strategies and results in organizing and reflecting interests of precarious women workers in Japan and Korea. The term of policy translation will be introduced as describing the process of moving policies, programme, ideas or institutions from one time and space to another. Policy ideas may travel via individuals and organizations. It helps to capture the travel of ideas and their modification at the organizational level and helps to analyze the history of women's organization, the labor movement discourse, and the drivers in the process of policy influence.

The effective performance of KWTU and KWWA attributes to the organizational strategy of the movement leaders, the solidarity condition within the civil society, and the rise of the new cultural context emphasizing the women rights in the society. These experiences of the two countries show that policy-translation can occur

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
and matter within labor movement, and that its effectiveness can vary according to the strategy, environment and context.

Implications of Work-Family Policies and Anti-Discrimination Policies on Gender Occupational Inequality: A Cross-National Study

Whereas the impact of the welfare state on the quantity and quality of women’s employment is widely studied, little research has further investigated the ways other (non-welfare) types of policies affect women’s occupational opportunities. In this paper, I attempt to explain the level of gender occupational inequality in 2004 in 32 countries through cross-national variations in particular state policies in 1984. I create an original indicator of two types of policies: laws designed to help women combine employment and childrearing responsibilities (measured by a paid maternity leave policy) and laws that promote non-discrimination (measured by policies that guarantee equal access to all occupations and a policy that guarantees equal remuneration). My data thus include three policies altogether: maternity-leave policies and two distinct forms of anti-discrimination policies. I find that state policies are the strongest determinants, compared to global and female human capital factors, of the gender occupational inequality but different types of policies have different impacts. Specifically, maternity leave is associated with a greater level of occupational gender inequality while anti-discrimination legislation is associated with less occupational inequality within countries. Although a panel analysis for a relatively small number of countries should not be overgeneralized, the results do introduce new information about policy-specific consequences for gender occupational inequality and provide a solid foundation for future research.

New Media and The Social Reconstruction Of Reality

Social constitutive power of media has been increasing continuously as we enter the era of new media driven by digital technology. As a result, media is no longer a simple means of living but a life itself. Building on Peter Berger and Thomas Luckmann’s phenomenological proposition ‘Reality is socially constructed’, this study first applies said proposition to our current social reality and discusses the changing life-world of the digital age under the theme of “social reconstruction of reality.” Next, referring to the results from 2011’s survey of 1027 netizens on happiness, the constituting mechanisms of online and offline life-worlds are compared. Finally, based on aforementioned theoretical and empirical discussions, qualitative differences in online and offline life-worlds are further explored.

Upon analyzing survey results, the rise of online life-world, as opposed to offline life-world, is witnessed. Online life-world can now be considered a very effective functional alternative to offline life-world. While citizens, the members of offline life-world tend to follow reality principle, netizens of online life-world appear to favor fantasy principle. If causal logic is inherently emphasized in explaining the behaviors of citizens, narrative logic seems more salient for understanding netizen’s behaviors.

Compared to our conventional offline everyday-life which has been existing from the outset of agricultural age, online everyday-life, used to be generally looked down as ‘mock reality’ devoid of substance. However, empowered online virtual reality is now elevated to an alternative life-world capable of competing against offline actual reality. Moreover, owing to its hyper-real characteristics, online virtual reality appears to reinforce itself up to a point where the possibility of colonizing offline everyday-life cannot be ignored.

South Korean Values: Understanding Who Koreans Are

Attempts at understanding what people think and feel has been one of the major themes in the realm of academia. From motivations to strategies, various studies seek to venture into the unknown. Because human mind belongs to the inner workings of human psyche, it transforms itself depending on the situation, and can be concealed at the face of social taboos. Koreans, by the look from outside seems to be multifaceted, and it is not easy for us to get a grasp on the overall mind map. However, behaviors are governed by motivations and motivations are the reflection of what people value. Identity, when applied to inner-workings of people in general, as the starting point, identity, motivation, and core values are expected to guide us in comprehending who Koreans are.

This study seeks to develop an understanding of who South Koreans are. Following the logic of “magic of numbers” and fully utilizing the power of empirical generalization, overall mind map of South Koreans is drawn. Data gathered from 47 separate assessments by psychoanalysts is used. It could be generalized that South Korean mind map consists of following three main branches: 1) Relationalism, 2) Inner-Worldliness, and 3) Returnism. These tendencies are all intertwined and form secular trinity in the sense of supreme bliss. As aforementioned tendencies went through significant alterations, the sense of supreme bliss’ sought after differs from that of traditional Korean society. The kind of bliss so many Koreans yearn for nowadays is more of a fortune than happiness. Disenchanted Koreans today seek the sense of supreme bliss by means of meaningful and beneficial personal connections. What we are witnessing is the reflection of distrust toward ruling ideology and social leadership, resistance to the opportunity structure where fairness is ignored, and remorse over competitive life where winner takes all.

Inequalities in Life Expectancy and Healthy Life Expectancy in Korea: Gender and Educational Disparity

Health inequality is considered as a sensitive barometer of social inequality. Over the last decade, social inequality in Korea has become intensified in multiple dimensions and its impact on distribution of population health.

Based on life expectancy (LE) and healthy life expectancy (HLE), we examined the health inequality cross social groups by gender and education over time. LE is the expected number of years of life remaining at a given age, derived from the current age-specific mortality rates. HLE is a composite measure of LE and morbidity, to imply remaining years that a person of a certain age is expected to live without disability or in good health status. Through data linkage (death registration, population census, and nationwide sample survey for morbidity status), we calculated LE and HLE by abridged life table method and Sullivan method, respectively.

From 2000 to 2010, LE at birth of men and women increased from 67.9 to 74.3 years and from 77.4 to 82.2 years, respectively. As of 2010, women live 7.9 years more than men. However, gender gap in HLE was negligible; HLE at birth was 62.8 years for women and 62.7 years for men, respectively. Also, education disparity was apparent in 2010, for men with less than high school education, LE at 30 years old was 37 years, while that was 49 years for college graduated men. Similar pattern was observed among women; 49 years vs. 55 years. Such gap did not become narrower over the last decade in both genders.

These results imply differential experiences of morbidity and mortality across gender and socioeconomic groups. Social determinants beyond individual biological traits, and biological process of social influence within individuals should be explored.

Developmental Multiculturalism In The East and Liberal Multiculturalism In The West?

While multiculturalism is losing its popularity among Western European countries, multiculturalism has gained popularity and continued to play an important role in East Asian countries. This paper examines the extent to which multiculturalism is immigrant multiculturalism or a mode of immigrant incorporation. I argue that at the level of practices and policy instruments, Western multiculturalism and Eastern developmental multiculturalism are similar; both segment and stratify immigrants on the basis of their willingness and ability to assimilate to a host country. But, at the level of discourse, Western and Eastern multiculturalism diverge. Western multiculturalism treats tolerance as a property of liberal West and construes the immigrant others “illiberal, object of tolerance”. On the contrary, Eastern multiculturalism presents multicultural tolerance as a necessity for their countries to become advanced liberal democracy. For this reason, I call multiculturalism in the East “developmental multiculturalism”. The key difference in the Western liberal multiculturalism and Eastern developmental multiculturalism centers on who has the responsibility to learn the value of tolerance. In the West, it is the immigrant minorities; while in the East, it is the non-immigrant majorities.

The difference in Western liberal multiculturalism and Eastern developmental multiculturalism may suggest one possible reason why the popularity of multiculturalism has declined in the West while it is still in vogue in the East. In the West, multiculturalism is constructed in a way that its failure is blamed on immigrant minorities. In Eastern developmental multiculturalism, multicultural tolerance is constructed as a virtue of advanced, more developed [Western] countries and achieving multicultural tolerance is the role of non-immigrant majorities for their country to become more like the developed countries.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.

The notion of race and ethnicity is central to contemporary immigration scholarship. Researchers routinely compare groups of different origins to assess their immigration trajectories and respective degrees of socio-economic integration. Much less attention, however, has been paid to the historical origins of the classification and categorization in immigration. This paper argues that Dillingham Commission Report (1911) marks the pivotal moment, at least in the United States. Responding to the surge of nativism and increase in the number of immigrants and from southern and eastern Europe at the end of 19th century, the leading politicians and intellectuals of the time engaged in the task of classifying and categorizing immigrants: vast amount of statistical data on social and economic characteristics of immigrants within the U.S. were collected to promote a scientifically informed measure of immigration control.

Focusing on the data from the report concerning crime, welfare, and education of immigrants, this paper will display how racial and ethnic categories emerge out of raw data. The initial statistics conveys an extremely complex portrayal of the immigrants provided by the Commission. As the report progresses to the synthesis and recommendation, however, the notions of “desirable” and “undesirable” immigrants emerge as an overarching principle of categorization, and the ensuing recommendation of promoting positive immigration leads to reaffirmation of the pervasive understandings of racial hierarchy. Endless stream of numbers and crosstables align behind this hierarchy to provide substances to racial categorization, and immigration policy follows this blueprint to shape national identity of the U.S. by implementing the national quota restrictions of 1924.

Drawing from original archival evidences, I show how race, ethnicity, and national identity emerge out of statistical data, both through scientific reasoning and political struggle.

Attitudinal Correlates of Cohabitation in Japan

What are the attitudinal correlates of cohabitation in Japan? Cohabitation has been growing more prevalent among young cohorts in Japan, and yet little is known about its relationship with liberal attitudes on family and gender. Exploring this issue is important for testing the Second Demographic Transition theory that predicts ideational secularization as driving force for non-traditional unions like cohabitation. In this article I examine attitudes on family and gender norms that are correlated with current or past cohabitation experience. For this analysis I use the 2009 National Survey on Family and Economic Conditions (NS-FEC), a national, two-stage stratified probability sample of 3,112 Japanese men and women ages 20-49. Individuals with more liberal attitudes toward pre-marital sex and out-of-wedlock birth were more likely to have cohabited relative to those with conventional views. Also, those who disagreed with forgoing divorce for the sake of children were also more likely to have cohabited. On the other hand, differences in attitudes on other gender issues did not significantly change the likelihoods of cohabitation. The results show that liberalism in only narrow range of family issues are associated with cohabitation in Japan, showing only partial support for the Second Demographic Transition. Also, the results suggest that cohabitors in Japan would be expected to have higher rates of divorce once they enter marriage compared to non-cohabiters.

Care, Welfare State and Multidimensional Social Citizenship: The Case of South Korea from a Comparative Perspective

This study aims to investigate the peculiarities and changes of the childcare in South Korea by applying a theoretical framework of multidimensional social citizenship. To embrace the affluent theoretical arguments on gender, family and welfare states, this study suggests the concept of ‘multidimensional social citizenship’ consisting of decommodification (state intervention), defamilialization (family role), and degenderization (gender equality) in analyzing care. Using OECD data and Time-Use data, the childcare of South Korea in 2000s were analyzed according to the three-dimensional social citizenship. The main findings are as follows. First, the social citizenship has developed dramatically in the dimensions of de-commodification and defamilialization, but not much in that of degenderization in childcare of South Korea. Second, in terms of outcome, the development of childcare policy has hardly contributed to improve women’s labor market participation in South Korea. Finally, the classification of childcare across the welfare states according to three dimensions suggests the existence of East Asian care regime.

This study aims to introduce a new generational politics model, and to apply it in explaining the welfare policies in South Korea where social investment strategy has recently been pursued. So far, social investment perspective underscoring policies for the early stage of life such as policies for older age has overlooked welfare policies, whereas existing theories on welfare policies have failed to organize generational interests theoretically. To fill this theoretical gap, this study suggests three generations model which establishes older generation, working generation, and future generation as key stakeholders having welfare status in the welfare state. Applying this model, this study explains how public pension for older generation has reformed, and how social investment policies for future generation have expanded in South Korea since the late 2000s. The main results are as follows: First, the findings in analyzing pension reform show that generational cleavages were stronger than the class cleavages of labor-capital or insider-outsider. Furthermore, future generation has been considered as a main stakeholder even without visible representation in decision making. Second, development of childcare policy has been pursued in the context of social investment in South Korea. The complete expansion of childcare support has been made possible as the interests of current working generation and of future generation were considered almost incommensurable. In addition, investment on future generation has been considered as the compensation for generational equality in the era of ageing society. Theoretically, this study confirms that these generations model has an effective explanatory power in understanding welfare politics of social investment.
The notion of race and ethnicity is central to contemporary immigration scholarship. Researchers routinely compare groups of different origins to assess their immigration trajectories and respective degrees of socio-economic integration. Less attention, however, has been paid to the historical origins of the classification and categorization in immigration. This paper argues that Dillingham Commission Report in 1891 marked the pivotal moment, at least in the United States. Responding to the surge of nativism and increase in the number of immigrants and from Southern and Eastern Europe at the end of 19th century, the leading politicians and intellectuals of the time engaged in the task of classifying and categorizing immigrants: vast amount of statistical data on social and economic characteristics of immigrants within the U.S. were collected to promote a scientifically informed measure of immigration control.

Focusing on the data from the report concerning crime, welfare, and education of immigrants, this paper will display how racial and ethnic categories emerge out of these statistics. The initial statistics comprise an extremely complex portrayal of immigrants, often divided by esoteric categories (such as "black Russians") that are remote from our contemporary understanding of race and ethnicity. As report progresses to the synthesis and recommendation, however, the notions of "desirable" and "undesirable" immigrants emerge as an overarching principle of categorization, and the recommendation of promoting positive immigration leads to reaffirmation of the pervasive understandings of racial hierarchy. Endless stream of numbers and crosstables align behind this hierarchy to provide substances to racial categorization, and immigration policy follows this blueprint to shape national identity of the U.S. by implementing the national quota restrictions of 1924.

Drawing from original archival evidences, I show how race, ethnicity, and national identity emerge out of statistical data, both through scientific reasoning and political struggle.

Responding to Knowledge Gaps in Food Safety Issues: Citizen Science after 3.11 in Japan

The 3.11 nuclear accident resulted in concerns about food contamination. The government released little data and citizen groups took the issue into their own hands to fulfill knowledge gaps on food safety issues, establishing organizations to test their own food. Based on qualitative interviews and a survey of these "citizen labs," the paper examines how the lay people's testing efforts were structured in response to food safety threats. Who led the initiatives, what were their motivations, and how did they test food in a different/same manner as the "official" experts in the government? Furthermore, to what extent, was their "science-doing" linked to a larger political mobilization, or did it simply remain as a personal strategy to ensure well-being of their own and their families? Drawing on theories of citizen science, the paper examines politics of knowledge gap in the aftermath of nuclear accident and citizen responses and their potential for politicization.

Charm As the Capital in Japanese Youth Culture

The purpose of this presentation is to examine the type of capital an individual possesses to attract others using quantitative data from the 2012 survey conducted by the Japan Youth Study Group. Z. Bauman (2000, Liquid Modernity) has pointed out that with professions and families becoming more and more fluid, one's own body has become one of the means of confirming one's identity (Details of the book is omitted in this abstract). Then, what does this 'body' refer to? Attractive looks can be one of them. But this is not enough. C. Hakim (2011, Honey money: the Power of Erotic Capital) has offered an interesting insight on this point. That is, in addition to economic capital, cultural capital and social capital identified by Bourdieu (1986, "Forms of Capital"), she has proposed the fourth capital, 'erotic capital'. She also suggests that the benefits yielded from erotic capital, which is made up of looks and interpersonal charm, are huge and increasingly important. Nonetheless, conventional sociological studies have not paid enough attention to people's attractiveness. In particular, in the study of feminism, femininity, which is one of the attractive characteristics of a female, has been denied. Therefore, we are to examine the different meanings and those without, and benefits that are gained in this regard. The presentation first examines constitutive elements of erotic capital in Japanese youth culture. Secondly, it examines the ways in which erotic capital differs from 'social capital', a concept which is increasingly receiving attention.

Language Rights and Disability Studies

Language rights discourses have rapidly evolved in Japan during the last decade. From an almost unknown term, it has advanced to a frequently used concept to address linguistic inequality. By foregrounding fairness in language matters, this discourse has expanded the scope of moral arguments on language diversity in Japan.

With the initially being heavily influenced by international academic and political discourses, the Japanese discussion on language rights has gradually undergone some specific evolutions. For example, it is probably unique to Japan that the struggle for the recognition of the sign language has been one of the leading forces advancing language rights. Related to this is the most striking characteristic: the enwovement of language rights with the discourse of disability studies. The so-called social model in disability studies, which sees the cause of disability not in the body of the individual but in the society, has ostensible affinity to the idea of language rights which also focuses on injustices rooted in sociolinguistic conditions. The approach to add options rather than just change the dominant regime, or the emphasis on improving the legal framework are also features common to both discourses.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The concept of communication rights which came out of this synthesis seems to have the potential to overcome the limits of the internationally contested concept of language rights which typically seeks to provide a certain status to a certain defined language.

After a short overview of the language rights discourse in Japan, the paper compares this discourse with recent international discussions on the matter in order to assess whether and how the Japanese way of conceptualizing language rights can contribute to put forward the international discussion on inequality related to language.

Education, Employment, and Gender Role Attitudes Of Japanese Married Women In The 21st Century: Declining Significance Of Rational Choice and Cognitive Dissonance Reduction?

Several students of attitude change have utilized models that combine rational choice with cognitive dissonance. Kimura (2007) proposed a hypothesis of “rational choice and cognitive dissonance under the constraint of the segmented labor market” in order to explain the apparently paradoxical associations among education, employment, and gender role attitudes found in the data of Japanese married women in 1980s and 1990s. There was a negative relationship between educational attainment and attitudes towards the gender division of labor, a negative association between these attitudes and employment, and also a negative association between educational attainment and employment. If we analyze the data in the early 21st century, however, we can find that all of these associations are weaker than before. Although this seems to reduce the explanatory power of the hypothesis that postulates rational choice and cognitive dissonance reduction, I will examine the factors that may have contributed to these changes form a rational choice perspective. On the one hand, surveys on gender role attitudes, as well as media reports on these surveys, have pervaded Japan so that respondents might have come to regard a negative attitude towards the gender division of labor as a socially desirable response. On the other hand, protracted recession have reduced the size of the fulltime labor market as well as the husband’s income so that even highly educated wives might have become unable to resist working as part-time or dispatched workers. The former implies that another kind of rationality plays a part while the latter implies that structural constraints on rationality are significant.

Who Support the Death Penalty in Japan?

One of the most powerful reason for retaining the death penalty in Japan is the widespread public supports for it (86% as of 2009). However, it is often criticised that the governmental survey contains a wording misleading the public into retentionists, and it remains uncertain who support the death penalty. Based on the online quota sampling survey conducted in 2013, the presentation clarifies what distinguishing attitudes are found in the retentionists. Although recent criminologist studies show that people’s misperception of unsafer society despite the counter evidences, no significant difference in this point is found between retentionists and abolitionists. Rather the gaps are found in their knowledge and perceptions of social factors of crimes, deterrence of criminal punishments, rehabilitation of criminals, international trends, and the principle of the presumption of innocence.

Branding of an Industrial Heritage and Practice of Local People: The Case Study of Gunkan-Jima

This study examines how the branding and the commodification of an ex-industrial area proceed and how they affect everyday practices and historical identities of local people. Nagasaki is a global harbor city located in southwest Japan. Less than fifteen kilometers away from the port of Nagasaki, there is Gunkan-jima island. The island was used as a coal-mining station between 1887 and 1974, contributing to the industrial modernization of Japan. In 1890, the Mitsubishi Company bought the island and set about gaining coal from the bottom of the sea. Subsequently, the company built up the island’s infrastructure as well as living quarters (such as large concrete buildings, apartments) to accommodate its workers. However, in 1974, the mines were forced to close due to an abrupt shift in energy use, which made the whole population move out of the island. Since then, Gunkan-jima has been totally uninhabited. However recently, the island started to arouse attention as a symbolic site of industrial modernization of Japan. Nagasaki City is now attempting to re-evaluate this abandoned island as an “industrial heritage” and utilizing it as a tourism resource for regenerating the declining industrial areas. There has even been a movement to make the island a world heritage site, while tours around Gunkan-jima are also becoming more and more popular.

Using data based on fieldwork conducted in Nagasaki City and semi-structured interviews with several actors related to Gunkan-jima, I found that the branding and the commodification of the ex-industrial island have been drastically promoted by the municipal merger and the “locality” as the basis of the legitimacy to represent the island has been totally changed. These findings can be utilized in the future studies that examine the mechanism of urban regeneration projects.

KIMURA, TADAFUMI* (Yes, t.kimura@m.tohoku.ac.jp)

Situational Approach to “individuality”— from the Perspective of Frame Analysis——

The purpose of this study is to examine the concept of “individuality” from the perspective of the definition of the situation and Goffman’s discussion in his Frame Analysis. Symbolic interactionists focus individual interpretation process about social reality. They postulate the great influences of the individuality upon constructing social reality. However, can we construct social reality freely? How can we explain the steady coincidence of our definition of the situation?

In Frame Analysis, he investigates the acquisition process of social reality based on his “interaction order theory.” He indicates people’s impressions for others depends on the definition of the situation. When he engages in this problem, he focuses on the correlation between impressions for the role behaviors and these for the individualities.

Imagine an interaction in an operation room. Some surgeons say jokes or give some nicknames to surgical instruments during an operation. If a patient watches their ridiculous attitude, s/he guesses they might be queer or incompetent. However, according to Goffman, they try to reduce stresses or tensions of other operation staffs and lead the operation to succeed by doing so. From the standpoint of the operation staffs, such behaviors by surgeons do not convey any odd impression about their personalities. In the American hospital culture, these behaviors are accepted as conventional role behaviors of surgeons. As shown in the above example, how people interpret the behaviors of surgeons and their individualities is dependent on their definition of the situation. According to Goffman, it depends on what kind of kind of a frame they apply to social reality. The frame in this context is a cultural cognitive pattern of social reality. Whether a behavior is interpreted as a typical role behavior or a unique behavior indicating her/his character depends on the frame of the interpreter.

It’s a Girl Thing: Tween Queens and the Commodification of Girlhood

This submission is a 58 minute documentary film to be shown either in a roundtable session followed by a Q&A or as part of a social event.

Description:

Since the birth of Mary-Kate and Ashley Olsen in 1986, the girls’ tween market has evolved from almost non-existent into a multi-billion-dollar money-making machine.

Framed by the structure of a faux interactive website for tween girls, It’s a Girl Thing speaks with consumer critics, tween brand marketers, girls, moms, and educators to explore the seemingly benign cultural universe of candy-coated, pastel-colored, hyper-commercialized girl culture (and the tween queen phenomenon) to reveal the complex and contradictory messages directed at today’s young girls.

Historical research, playful reenactments and found footage allow the film to look closely and critically at the global tween market’s evolution and the role of Disney and Nickelodeon’s tween queens (Mary-Kate and Ashley Olsen, Britney Spears, Hilary Duff, Miley Cyrus, Miranda Cosgrove, Kiki Palmer, Selena Gomez, and Miley Cyrus) in the market’s evolution.

Sensing the Right Person. Finnish Recruitment Consultants and Outline of the Ideal Working Body in the Recruitment Interviews

The body's aesthetic and emotional capital in the post-industrial working life has eagerly been examined in recent years (e.g. Hassard et al. 2000; McKee & Watson 2000). The discussion has pointed out that the bodily performances of the employee can help in communication skills and the ability to brand oneself in the current labour market as the CV advantage has been displaced by the tyranny of the right person. Feminist scholars (e.g. Acker 1990; Bordo 1993; McDowell 2009) have already shown how different corporeal characteristics in terms of sex/gender become categorized as suitable or unsuitable to conduct different kinds of work tasks. However, we still know too little about how the ideal working body, i.e. representing the wanted personality, is concretely performed in recruitment processes. The paper is based on the interviews of Finnish recruitment consultants. It illuminates their role in assessing and defining the ideal employee when their client companies have mandated them to choose and interview the proper candidates. The paper shows how the candidates should first convince the recruitment consultants in the interviews by stylized bodily performances and communication skills in order to get the job. Recruitment consultants use their own embodied knowledge in determining which candidates would fit in with different working teams and environments. In order to fill in their clients' expectations, the consultants not only attempt to read the bodily performances of the employee candidates. In addition, due to the employment discrimination law, the consultants not only attempt to read the bodily performances of the employee candidates and environments. In order to fill in their clients' expectations, the consultants not only attempt to read the bodily performances of the employee candidates, prone to change, often subject to reasonable disagreement, and yet still a compelling force within an industry that remains ambivalent about producing generic work. The quoted phrase is an old Finnish saying which represents the traditional virtue of managing alone. The "lap" is not only a metaphorical expression; instead, it refers to the widely shared attitude to the sense of touch in human relationships. In Finland, the touch is saturated with prohibitions, fears and taboos, even in childcare. This was noticed in touch life narratives written by Finns of different generations who were gathered for the project under discussion. In particular, writers born just before or during the war years in 1939-1945, hardly remember to have experienced any caring touch by their parents. Many of them had suffered from the lack of caressing and loving touch throughout their lives. The paper asks whether the touch as the most archaic human sense and vitally important for the child's development is inevitable for the human love bonds (cf. Ashley Montagu 1979). How could "love" excluded from touch even be conceptualized (cf. Luce Irigaray 1996)? How is the inevitability of touch reconciled with the fact that they had been located in the poverty group, there has been a tendency, in the discursive space of 'comfort women issue,' that those women are not recognized as 'Victims.' Moreover, those women have often been represented that they devoted themselves to the nation by performing comfort women. As a matter of fact, Japanese comfort women survivors' voices have not been heard enough. Presenter introduces some cases that were known by members of civic movements on this issue as Japanese survivors' claims but were not treated as the matter for the movement groups to make their victimhood known widely in the early 1990s.

To restore Japanese comfort women survivors' history, it is indispensable to describe the aspects that on the one hand those women have been included in the members of a perpetrating country, and on the other hand excluded from the compassion among local community. Being related to that, this presentation explores otherwise and postcolonial context over victims/survivors in the country of the perpetrators from feminist perspective and nationalism theory. In doing so, it aims to re-articulate their experiences.
aims to reveal and reflect upon the role of these underlying social theories in the construction of future visions in backcasting practices. In the first part of the paper we will present four different ways to think about society and social change. These are structural functionalism, conflict theory, symbolic interactionism and actor-network-theory. We argue that these are not only presented in academic papers but also can be thought about as general ways of thinking about society. Furthermore, these underlying models of society also affect the various ways future is presented in public discourses.

The second part of the paper especially focuses on the various methodological approaches to involve social theories in the elaboration of future visions in backcasting practices. Methodologies such as functional analysis of institutions, stakeholder mapping, living labs, narrative approaches and system mapping will be discussed both in relation to the above-mentioned social theories and the future vision which can be created by utilizing such methodological approaches. We argue that by considering upon both the theoretical and methodological issues in thinking about the future can enhance the quality of the normative future visions created in backcasting practices.

Emotions As Reason, Rationale and Result of Urban Artist Areas

For the last two decades urban arts and cultural districts, arts neighborhoods, and artist housing and studios have become the focus of social scientists studying the interaction of urban and arts sociology. I will analyze the emotional forms and functions of this type of urban cohabitation. Certain smaller areas have been, from the bottom up, transformed by artists NOT for external political or economic purposes BUT for self-utilitarian - and often emotional - purposes internal to the participating artists and their community. The latter purposes are objectives directly and emotionally pursued by the participating artists. These artist areas are “reserves” that serve as catalyst for the internal socio-spatial emotional enjoyment of artists, performing and propagating a “liberty of delectableness” not offered outside these specific areas. As a theoretical starting point I interpret texts such as Zukin’s “Loft Living” (1982), Bourdieu’s “Rules of Art” (1992) and Ehrenreich’s “Downsizing the Streets” (2006), plus the literature on the notion of “cultural sustainability” that alludes to emotional values (e.g., Kirchberg & Kagan, Brochi, Duxbury, Thrasyb). There is a variety of emotional benefits that can be paraphrased and typologized as “artistic community identity”, “alternative com-patriotism”, “lifestyle experimentation” and “bohemian sociality” – to name just a few. Furthermore, these emotional benefits will be analyzed applying the extensive literature on the “affective turn” (Clough 2007, Gregg & Seighworth 2010). Empirical illustrations will be provided by my own research in urban artist areas in Baltimore, Maryland, and Hamburg, Germany, plus further collated evidence from Phoenix, Arizona, Minneapolis, Minnesota, and other cities.

KIRCHNER, CORINNE* (Columbia University, ck12@columbia.edu)

Agism and Language in Old-Age Inequality

Nikolas Coupland (2007) has focused on “style” as a productive dimension of linguistic material. He highlights that sociolinguists have not adequately appreciated variation in style as a tool for conveying meaning in social interaction. Coup- lard shows that the common sociolinguistic reduction of style to social structural affiliations entails a cost to understanding how users agenticly create meaning through choices of style.

Separately, Coupland bemoans that linguists have insufficiently studied discursive communication by and involving old people, disregarding a long tradition of largely psycho-cognitive studies of language practises by and toward old people (Coupland et al., 1995, Sankoff & Blondeau, 2007). Excepting gerontologists, social scientists also tend to omit old people from research. General discourse rarely associates old age with matters of style, as if style-based variation is of no interest or awareness after a certain age.

Aging of the global population has been widely publicized, generally expressing fears about negative effects on society-at-large – i.e., on younger generations - underlying pervasive public attitudes of agism and disciplinary research inequality.

That agism is embedded in language, and detrimentally affects aging identity-formation often through linguistic practices, has been recognized (Minciello et al., 2011) and minimally examined, with little serious attempt at proposing feasible correction. This theoretically Social Constructivist paper is motivated by the under-appreciated success of a similar, salient situation regarding “ableist” language and the stigmatized identity of disability. The Disability Rights Move- ment offers a model, led by disabled activists, eventually involving rehabilitation and other “helping professionals” and governmental policymakers. Long-term resistance by Aging and Disability field leaders to making that connection is now weakening. For data, I analyze style in online recruitment language from key dis- ability activist versus aging service organizations showing agentic linguistic style changes that can undermine negative effects of agism.

Methodological Individualism Vs. Methodological Individualism
As a Core Principle in Alternative Social Theories of Second Modernity

Modern dominant Western social theories are based largely upon method- ological individualism principle. Attempts to overcome its confines are undertak- ing constantly in different analytical programs and approaches (A. Giddens, M. Archer, P. Sztompka, P. Bourdieu, J. Alexander, J. Ritzer, V. Yavod etc). But in fact all these approaches assume an explanation of the social and economic phenomena in terms of individual behavior and follow methodological individualism principle (S. Lipset, J. Hol- logen.) In the paper the capabilities and limitations of methodologi- cal individualism as a core principle of mainstream sociology and economics are explored. The recent debate dealing with methodological individualism in Rus- sian and foreign sociology and economics is considered. Institutional individu- alism principle (A. Agassi, F. Toboso) is tested. As a challenging view, premises for methodological institutionalism (P. Keizer, S. Kirdina) are offered and consid- ered as an alternative and complimentary precondition of the different vision for alternative social theory of second modernity. It is shown that methodological individualism and methodological institutionalism express two epistemological purposes (methodological precondition and methodological institutionalism principle in methodological approaches) that are of particular interest. Moderning is considered as an alternative and complimentary precondition of the different vision for alternative social theory of second modernity. It is shown that methodological individualism and methodological institutionalism express two epistemological purposes (methodological precondition and methodological institutionalism principle in methodological approaches) that are of particular interest. The Process Of Urban Change In Osaka City After The Collapse Of The Economic Bubble: The Case Of Horie, Nishi Ward

For the last 30 years, cities everywhere have followed the neoliberal path, including a shift to a service economy, consumerism as a way of life, homogenization of urban spaces, socio-spatial polarization, and urban entrepreneurialism. Japan, with a liberal political economic history but also its own regulatory mechanisms, became a leader of the neoliberal urban policies after the asset price bubble collapse in the early 1990s. Since then, the emphasis on Tokyo as Japan’s sole global city to the neglect of other large cities in Japan has accelerated the further adoption of the neoliberal urban policies. Having lost its previous status due to uneven development, Osaka has nevertheless recently been forced to engage in this change by its mayor, Toyo Hashimori, who sees it as the way out of post-bubble economic and demographic stagnation. The contrast of mushrooming fancy mansions and many homeless in the city renders this policy turn questionable.

In this urban sociological research, I aim to comprehend the process of neoliberalization in Osaka City, observing this change process over the last 30 years in detail at the level of a downtown neighborhood called Horie, located in the Nishi Ward. With reference to the concepts of post-industrial city, gentrification and neoliberal urbanism, the study comprises of an analysis of visual materials and narratives of the long-time residents in the area. Despite being very close to the central business district of Osaka City, Horie has a more residential character and is interesting in terms of the regeneration of its old shopping street of furniture stores during the 1990s. Its current atmosphere is visually similar to the western examples of neoliberalized gentrified neighborhoods, with its up-market mansions, western style cafes, specialty stores claiming to do fair trade, trendy people strolling around, and some small crime like purse-snatching.

How Can Trade Unions Improve Quality of Work in Low-Wage Services in Europe?

In 2010 the European Union adopted the Europe 2020 strategy, emphasising the need for increasing labour market participation with more and better jobs as essential elements of Europe’s socioeconomic model. But there is evidence that quality of work in many of the low-waged sectors in Europe is still problematic (Holman 2012) and problematic configurations produce various forms of precariousness, low-wage work, problems of social inclusion and violence at work (Kalleberg 2009). Increasingly, employment at the lower end of the spectrum of skills and wages in Europe is dominated by services that are spatially distributed and often employ vulnerable groups of employees (e.g. contract catering, office cleaning, waste collection, etc.). In these sectors, work is often outsourced from the public sector or other private sector companies and taken over by private sector service providers (large service multinationals or SMEs). The outcomes for employees often are insecure and problematic working conditions and little representation. This results from companies’ cost-cutting strategies, enhanced by changing regulations, the practices of contract awarding and public procurement, the role of the client, conditions that are likely to be exacerbated by austerity measures in the framework of the current crisis, etc. The continuous debate about the specifics of service work has brought significant evidence about the importance of the triangle between employers, employees and customers (Korczynski 2009). The paper investigates how trade unions address those challenges at EU level and in selected European countries. It is based on the recent research done in the framework of a European comparative project WALQING (www.walqinge.eu). The findings presented in the paper are mainly results of the analysis of interviews with social partner representatives in those sectors as well as from company case studies carried out in the examined countries.

Discourses of Internal Migration and Belonging: The Case of Some Communities in Ghana

Ghana, whose geographical position is along the west coast of Africa, has a population of approximately 20 million people. It is estimated that 45-60 local languages and dialects are spoken in Ghana (Dzameshi 1988). English is the official language in Ghana, and is used as a medium of instruction in educational institutions, commerce and government. A large population of Ghanaians are multilingual but use English as a common language for communication with speakers of other languages in society and with people from other parts of Ghana. Each of the nine regions in Ghana has a dominant language that is also taught as a subject to school going children. Of all the languages spoken in Ghana, the Akan language is the most dominant of all. About 44% of Ghanaians understand and speak the Akan language (Osam 2003), though not all of them can speak it fluently.

This paper examines how highly proficient adults from Southern Ghana construct and negotiate social belonging and exclusion in Northern Ghana. The data comes from interviews of individuals who migrated to Northern Ghana as adults and spent a significant portion of their lives in Northern Ghana. How do they negotiate their identity in this context? To what extent do successful migrants succeed in this identity negotiation?

Personality and English Learning: The Case Of Some Students In Ghana

This paper focuses on understanding the role personality plays in English learning among some students in the Eastern Region of Ghana. Personality as defined by Ortega (2009), are qualities in a person or prepositions that have been learned through social experience. The personality aspects examined are learner beliefs, motivation and self-esteem because they are linked to learner ability and success. To what extent do these aspects of personality support English learning? Is a question we hope to answer. Cook (1991) argues that learners have fully formed personalities and mind when they start learning a second language, and these have profound effects on their ways of learning and on how successful they become. Their capacity to perform as individuals, which requires mental and physical effort, is influenced in one way or another by their fully formed personalities, which in turn is influenced by the environment in which they find themselves. This implies that students who come to class will bring along attitudes from the society they live in, which in turn affects their motivation and subsequently their performance. These attitudes developed over years, could be either positive or somewhat negative. Data was collected from a sample size of 1444 Senior High School students in the Eastern Region.

Frequency of Incarceration, Criminal Thinking, and Sense of Coherence Among Male Japanese Criminals in Offender Rehabilitation Facilities

For former convicts, reintegration into society is complicated by psychological factors, such as mental strains and personality traits, and socioeconomic factors, such as unstable employment. The aim of this study was to investigate the relationship between the frequency of incarceration (at children’s self-reliance support facilities, juvenile reformatories, juvenile penitentiaries, and prisons) and the personality factors of criminal thinking and sense of coherence (SOC).

This study was conducted at two metropolitan area offender rehabilitation facilities and participants were 116 Japanese men who had been placed under parole/probationary supervision or had been recently released from prison. The participants completed a questionnaire survey that contained the Japanese
version of the 13-item SOC scale, the Japanese criminogenic thinking inventory (JCTI), and self-reported demographic items. The SOC scale consists of the three subscales of comprehensibility, manageability, and meaningfulness. The JCTI contains four subscales including discontinuity, “cut off” thinking, self-deception, and problem avoidance. Spearman’s rank correlation coefficients were calculated to assess the relationship between the frequency of incarceration and each personality factor. In addition, the Man-Whitney U test and Kruskal-Wallis test were performed to analyze the relationship between the frequency of incarceration and demographic variables including age, dwelling environment, education, marital status, job history, and the latest charged offense.

The results revealed negative correlations between the frequency of incarceration and the total SOC score and the scores on the comprehensibility and manageability subscales. A positive correlation was observed between the frequency of incarceration and the JCTI subscale of “cut off” thinking. The frequency of imprisonment (at prison only) and the demographic variables of marital status and the latest charged offense were found to be significantly correlated.

Improving offenders’ SOC and criminal thinking might mitigate the risk of recidivism and facilitate their reentry into society. Our findings will be discussed further in our presentation.

Young People’s Practical Agency: Transitions From FE College To Work In London

This paper presents findings from the Changing Youth Labour Markets and School to Work Transitions in Modern Britain project. The project examined young people’s experiences and perceptions about study, work and the future while going through transitions. Our findings demonstrate a complex picture of potentialities, vulnerabilities and resilience of young people in transition. The target group was young people aged between 18 and 24, who were on vocational courses at Further Education (FE) colleges in London. This group is an under-researched ‘missing middle’ (Roberts 2011) group, who are neither NEET nor following ‘tidy’ pathways. Drawing on the individualisation theory and agency theories, we explore how diverse and complex transition experiences of the missing middle can be categorised. We apply the conceptual framework of temporal orientations of agency, originally proposed by Emirbayer and Mische (1998). The missing middle group shows a number of potentialities, but they are vulnerable under current circumstances of youth labour markets. The young people do exercise agency in making decisions based on practical and realistic options available to them at ‘the present,’ and thus they develop resilience. We suggest that agency is situated and discussed the interplay between young people’s agency and the contexts in which they live, particularly in relation to youth labour market conditions.

Deteriorralising Teaching and Research through Information Technology and Capitalism

Allegedly there is a gap measured in astronomical units between the ways in which the contemporary youths and universities work with knowledge. And thus the universities at least in Finland should gird their organisational loins and adapt accordingly. In this paper I investigate one such attempt to deteriorralising teaching, learning and research to better suit the future the involved parties have envisioned or wish to create. I do this by concentrating on the use of the concept of Knowledge Practices in expressing and explaining this vision. Deteriorralisation is used here in two senses: Firstly as travelling to new places and secondly as the parameter defining the state of the boundaries and relative internal heterogeneity of an assemblage. With these concepts I try to map out the envisioned future relationship between universities and society by tracing the relationships of different components of a particular assemblage called Minerva Plaza expressed in material form or through language.

This is a work in progress but Knowledge Practices seems to be effective in making various boundaries less fixed and solid by being somewhat amorphous and scalable. It spans recurring everyday activities (practices) from individual to societal level line linking educational sciences, psychology and cultural-historical activity theory. Furthermore information technology is deemed to have the general capacity of enhancing the joint knowledge creation of humans in conjunction with it. Is the future role of universities to provide such easily adaptable concepts which facilitate bringing in corporate partners by avoiding excessive clarity? Would this contribute to the techno-political utopia of virtual online communities developing the roles of the state and combating transnational corporations as Taul Harper suggests in ‘Smash the Stratford’?

No Wires Attached? Displacement of Power through Information Technology

What we have learned so far is that there is nothing without the Wireless Network. This perspective expresses this very sentence in terms of translating two scientific models into material form. It was uttered as a summary of using Minerva Plaza, a set of facilities built within the University of Helsinki in order to utilise the supposed digital nativity of the students. The stated goal of Minerva Plaza is to weave together collective knowledge construction emerging communication technologies and inclusion into the scientific community in order to prepare especially future teachers for the challenges they are predicted to meet during their careers. These goals have been somewhat incongruent with The University’s ICT policies and the capacities of the selected soft- and hardware.

The collection of assembled and interconnected components of Minerva Plaza can be aptly described as volatile. They can facilitate very fast transitions from one state or point of interest to another but also being difficult to hold permanently. Some of this explicitly intended in the design. On the other hand the Wireless Local Area Network has managed to hold its position as an unintended obligatory passage point for the sets of translations of using the Plaza as planned. This paper presents an analysis how dependency on ICT and project funding has displaced the power to decide who participates and how away from the users. This seems to resonate with David R. Johnson’s depiction of technological change as a cause of diminishing professional control within the professoriate. Unlike Johnson I argue this is caused by the volatile nature of the whole assemblage also in cases where the technology use is initiated and endorsed by the teaching professionals.

Old and New Inequalities of Educational Opportunity by Gender and Family Background in Finland

What comes to equality of educational opportunity, in the sociology of education enduring themes have been, for instance, the Bourdieuan thesis of strong reproduction and the persistency of inequality à la Shavit and Blossfeld as comes to relations between parents’ socioeconomic position and their offspring’s educational achievements. Empirical studies from various countries have started to report decline in educational inequality. Our own previous studies based on Finnish longitudinal data have shown that the equality of educational opportunities, as measured by differences in participation in university studies by gender and family background (parents’ education academic vs. non-academic) has clearly improved and differences narrowed up till the end of 20th century. Gender relations belong to the core interests of sociology of education, too. For long there has been discussion on the persistent gender segregation in higher education, which according to Carlo Barone (2011) is a key in understanding inequality in the labour market.

In this paper we explore equality of educational opportunity and labour market effects related to educational expansion in Finland. Our updated longitudinal register data covers five age groups of higher education students and graduates from baby boomers to recent small age groups, including for the first time also students of the universities of applied sciences. We ask to what extent expanding education improves the odds of participation in university studies when analyzed by gender and family background. We also study how the female/male relation, situation and family background and labour market placements of university graduates in different fields change along with higher education expansion. Shortly, we examine the ways in which changing gender relations in university education manifest on the labour market in the earnings of male and female graduates of various fields and family backgrounds.

PIROFINEN, TERO (University of Turku)
Toward a Sociological Understanding of Evolutionary Time in Human Development

There is no doubt that social sciences would benefit from opening up more toward Darwinian ideas; most crucially, it would enable a more accurate grasp of the vast time periods involved in the development of our humanity and social life. As known, sociologists have had a complicated relationship with Darwinism – perhaps haunted by the specters of “Social Darwinism”, the threat of “socio-biological reductionism, or other dramatic past experiences. This presentation seeks steps toward evolutionary sociology by examining, (1) the lessons taught.
by the currently popular “evolutionary psychology” (Tooby and Cosmides, Pinker) regarding the human nature; (2) the “Homo economicus criticisms” of evolutionary economists in the spirit of A Cooperative Species: Human Reciprocity and its Evolution (Bowles and Gintis); (3) Geoffrey Hodgson’s version of “Generalized Darwinism”; and (4) “niches-construction” approach to human “gene–culture coevolution” (Deacon, Dennett, Laland, Odling-Smee), with its evolution-historical studies on social learning and language evolution.

While evolutionary psychology offers insights into humanity in a long enough timeframe, it unfortunately involves a leap from the face-to-face groups of Pleistocene era straight to modern societies, over all sociologically interesting institutional developments. Bowles and Gintis discuss the evolution of altruism against the idea of selfish individual, providing solutions to “the problem of social order” – timely in economics but familiar to sociologists already since Talcott Parsons. Hodgson’s model in turn utilizes pragmatist conceptual tools well, but its level-onontology and contraction of principles of evolution remain less convincing. This paper seeks to pick out the best lessons of these three approaches and synthesize them with the fourth, niche-construction approach. The resulting organism-environment-transaction model opens the brain–consciousness–language–society continuum “outside–in” rather than “inside–out” and allows understanding in the realm of localized organism–environment transactions by means of which evolution can in fact only be understood.

Did Japanese Women Writing on Cultural Issues in Post War Japan Create Solidarity Among Themselves? a Case Study of the “Kusanoami Kai” (Kusanoami association)

In post-war Japan, many Japanese women have been writing about their everyday lives, their opinions on social problems, or politics in major newspapers. These readers’ columns helped in founding the “Kusanoami Kai” (Kusanoami association), an association of writers and readers, in 1955.

In my presentation, I will examine how and why a community of writers was created between 1955 and 1958. First, I will explain why they founded the communication association and made it their primary media. Back in the 1950s, women often found it difficult to get their opinions published in major newspapers, since some editors refused to see that women inferior to men and consequently criticized women’s opinions that appeared in the readers’ columns. To avoid being criticized, some women made “Kusanoami Kai” their primary media to communicate amongst themselves.

Second, I will discuss the practice of writing followed by the “Kusanoami Kai” members and the use of media studies. Those days, most women had little experience of making a speech in front of an audience. However, as they were good at writing, they used the skill for expressing their opinions about gender or social problems and read them out as they appeared in print. To do this, they would go to a meeting of “Kusanoami Kai” and talk about their writing in the media.

Third, I will outline the profile of the women who participated in the “Kusanoami Kai” and the categories of members in the association. The association was made up of not just housewives but also a few working women. They wrote about their opinion on issues that mattered and discussed them with each other in the group meetings. In this way, they developed a sense of intimacy and built their collective identity, not as “housewives” but as “women.”

We Are The People! Street Demonstrations As a Means Of Communication

We are the people! Street demonstrations as means of communication Over the last decades we have witnessed a dramatic rise in the occurrence of street demonstrations. Increasingly, citizens chose street demonstrations as a means of communication. “We are the people!” or more recently “We are the 99%!” are appeals to politicians to listen to the people and to take their claims serious. Movement politics have become the natural counterpart of party politics. Employing a unique dataset of over 80 demonstrations that occurred between 2009 and 2013 in 9 different European countries, we give voice to the citizens who populated these protest events. Some of these demonstrations were people protest the austerity measures they were suffering from. For instance, students protesting a raise of tuition fees or public health workers fighting budget cuts. Other were people demonstrating against the way democracy was practiced in their country. Democracy, as we know it for decades, no longer satisfies many a citizen. Not only in post-communist and authoritarian regimes but also in majority democracies people challenges democracy as it is done. Occupy-London or Amsterdam, or the 19 “of May in Spain are examples. We will compare the participants in these two types of demonstrations. What were their grievances? How did they evaluate democracy in their country? Did they trust state institutions? What did they expect from their participation? Did they participate in party politics next to movement politics had they given up party politics? How were they embedded in the multi-organizational field?

We maintain that movement politics is a necessary complement of party politics. The democracism of a country is defined by the quality of both movement and party politics.

Scenes of Street Art in Montevideo: City and Creative Processes

La presente ponencia es punto de partida de la actual investigación que desarrolló en el marco del Doctorado en Gestión de la Cultura y el Patrimonio (Universidad de Barcelona).

El objetivo de esta presentación es visualizar algunas líneas claves sobre el papel que atesora el Street art en su diálogo con Montevideo, más precisamente, con respecto a la ciudad, su espacio público y los procesos creativos que se dan en las interacciones generadas entre los propios artistas urbanos (ya sea en su carácter individual o colectivo - crew).

Montevideo es una pequeña ciudad, capital del país más pequeño de América del Sur. Sus características propias de cercanías permite interacciones entre artistas urbanos, artistas, etc., generando un crisol heterogéneo de formas creativas en un territorio sumamente acotado.

Asimismo, estos agentes trazan lógicas horizontales en las tareas que realizan, eligen democráticamente y generan fuertes lazos de solidaridad en las tomas de decisiones al momento de “marcar” el territorio de la ciudad. La elección por el espacio público se trata de implicar e involucrar al habitante de la ciudad con el grafitti u otras formas de arte urbano, “rompiendo” con su espacio cotidiano, con su familiaridad con la ciudad.

La ciudad se reinterpreta poniéndola en cuestión a través de sus formas, sus instituciones, su arquitectura, etc., desmarcando los espacios sociales donde se presentan las producciones artísticas, ejerciendo su derecho a la ciudad, buscando reconocimiento en la distancia invisible.

Los procesos creativos son múltiples, y las formas de trabajo creativo también. Las estrategias de generación de arte en ese gran lienzo blanco llamado ciudad permiten construcciones compartidas entre los artistas como puntos de tensión y normas internas de respeto y convivencia.

En definitiva, Montevideo es un pequeño lienzo con multiplicidad de artistas e interacciones creativas que se visualizan y complejizan en territorios locales acotados.

Exploiting Untouched Nature? the Social Production of Nature As a Resource at Nakai-Nam Theun Npa (NNT), Lao PDR

The presentation argues that nature conservation is an effect of power differentials, so the extraction it invites or necessitates one current socio-economic realities in Laos, and as such in Germany in between 1977 and 2010.

In Germany, gender segregation in the system of vocational training and education (VET) is a resource, in a process of socially structured practice, it is more appropriate. This practice transcends, undermines, ignores or complies with the laws of a PA according to social differentiation. In this tangled and ambiguous way a PA and its productivity is realized.

These issues are discussed with regard mainly to NNT in Lao PDR. The presentation is based on the extensive research carried out by a variety of experts and scholars due to the involvement of the World Bank in the Nam Theun 2 dam project, as well as on my first-hand research in villages of the PA.

But inequality defined merely by access to and use of the resources within a certain protected area (PA) is a very limited, and in fact ideological, notion of social inequality. The yardstick should rather be the distribution of the general social resources of the country and beyond. Otherwise, there is the risk of naturalizing “stakeholders” as stewards and custodians of biological diversity. Such essentialism, present in the everyday practice of sustainable development, largely misses locally lived realities and aspirations, and with these the systemic and productive relation between nature conservation and exploitation, in Laos at least. Instead, a view where nature reserves are not passive reservoirs but rather “factories” that produce a particular goods as a result of socially structured practice, is more appropriate. This practice transcends, undermines, ignores or complies with the laws of a PA according to social differentiation. In this tangled and ambiguous way a PA and its productivity is realized.

These issues are discussed with regard mainly to NNT in Lao PDR. The presentation is based on the extensive research carried out by a variety of experts and scholars due to the involvement of the World Bank in the Nam Theun 2 dam project, as well as on my first-hand research in villages of the PA.

In recent decades, the labor market has undergone major structural changes. In Germany, gender segregation in the system of vocational training and education (VET) is a resource, in a process of socially structured practice, it is more appropriate. This practice transcends, undermines, ignores or complies with the laws of a PA according to social differentiation. In this tangled and ambiguous way a PA and its productivity is realized.

Developing Home? Transnational and Translocal Return Migration To Ghana

Since the late 1990s a number of Ghanaian migrants living in Western countries have returned to Ghana for shorter or longer periods of time. Return migrants are widely regarded as having potential – and responsibility – for contributing to development in Ghana and are courted as development agents by the Ghanaian government and other policy makers. This perception is shared by some returnees who see themselves as having obtained knowledge and resources through their experiences abroad. However there are different types of returnees and they perceive themselves and are received in different ways.

This paper presents a case study of return migrants from Europe to Ghana, examining three different types of returnees: recent returnees who have returned because of economic turmoil in Europe since 2008; voluntary returnees who have been in Ghana for more than ten years; and involuntary returnees such as deportees. Its aim is to analyze what the modes of return mean for how returnees articulate their return; how they are received locally; how they engage themselves socially, politically and economically; and finally, the responsibilities and challenges they face when returned.

It shows that in many ways the position and engagement of ‘successful’ transnational returnees resemble that of the local elite who have made it in the capital or other towns; migrants who are (are perceived to be) successful are expected to contribute to their families and hometown communities no matter whether they have migrated to Europe, other places in Africa, or inside Ghana. The reception of migrants who have received because of deportation or economic problems, however, is more ambivalent and depend on a large degree on what return migrants have managed to remit back during their migration or when returning.

Polyamory and Political Economy: A Note on Socio-Economic Inequalities

Academic research and popular writing on nonmonogamy and polyamory have so far paid insufficient attention to class divisions and questions of political economy. This is striking since research indicates the concentration of significant amounts of time and other costly polyamorous commitments. This paper highlights the economic conditionality of polyamorous relationships and families. Theorising polyamory from a materialist point of view allows for a more adequate understanding of the contradictions which riddle poly communities in advanced industrialized societies and confine the reach of this particular identity to predominantly white middle class circles. The insertion of poly cultures into an economic and cultural nexus shaped by neoliberal capitalism helps to circumscribe the material and discursive spaces from within which poly relationships and kinship formations are enacted. In this paper, the author is particularly interested in how the construction of polyamory as a political identity of enhancement for certain classes and family intimacies which is more attactive to class and socio-economic inequalities.

Employment Preferences or Family Values - Where Are the Pitfalls for Women's Labour Participation?

A better reconciliation of work and family life is one important issue on the political agenda in many areas of the world. In West-Germany, the male-breadwinner family model is still well established. Only recently, the development of child-care for children less than three years of age offers mothers the possibility to re-enter the labour market early. Apart from such important structural restrictions, family values and gender attitudes play an important part for explaining labour force participation of mothers. With regard to family values, the family-home plays a decisive role. In West-Germany there is a widespread believe that children should grow up in sub-urban or rural as a bourgeois, so that moving to a child-friendly home can be seen as a proxy for a strong value orientation towards family life. Such moves normally add space between the family home and the workplace, which results in the necessity of long-distance commuting. Hence, an early re-entrance in the labour market might become un-attractive for women, although they had a strong labour market orientation before the move. The goal of this contribution is to estimate the influence of family-oriented relocations on the re-entry in the labour market of mothers, controlling for employment preferences and gender attitudes.

The data comes from the German Socio-Economic-Panel Study (GSOEP). The sample consists of 900 women who had a partner and a first birth between 2001 and 2010, and event-history models are applied. Preliminary results show that a child-oriented move indeed impacts mostly negatively on the re-entry of mothers in the labour market, whereas employment preferences have positive influences. Other important influences like marital status, that are partly interacted with the family values and employment preferences, support the view that both concepts are useful for enhancing our understanding of the underlying processes.

The Challenge of Female Commuting for Partnership Stability

In modern societies, demands for spatial flexibility are omnipresent. In Germany, as in other European countries, commuting between home and the workplace is widespread. Women often neglect mobility demands when they have a partner and/or children because commuting adds an extra burden to those who are mainly responsible for the household. But of course there are women who also commute, and some of them are mothers that commuting is as harmful as often feared. Recent findings about the impact of job related mobility on partnership stability show that long distance commuting of women increases the risk of separation for couples in Germany. The goal of this contribution is to get a deeper empirical insight in this coincidence and to explain the mechanisms behind this harmful effect.

This is possible by using the German family panel study (pairfam) which provides rich information on couples’ dynamics and spatial mobility. Our contribution makes use of the first three waves of the panel. The sample consists of 2,500 women with partner aged 25 to 28 years and 35 to 38 years in the first wave. Using event-history models harmful effects of female long-distance commuting on partnership stability are replicated. In the next step, the data of the pairfam study concerning gender attitudes, employment and family preferences, and other psychological and relationship aspects are used to explain this effect. It is shown that commuting, employed to reconcile the new roles of women and men in family and working life, destabilizes couples’ relationships under certain circumstances. The societal consequences and possible policy recommendations are discussed.

**Attitudes About Success: Is It Rational To Be Dishonest During Economic Transition?**

Success or becoming successful is quite often identified as a goal by many cultures in the world. As former Soviet states gained their independence and opened to the rest of the world, the notion of success, especially economic success, became very popular even for children. It is important to note that as economic achievement becomes imperative it is unclear whether the transitional economies are able to provide their citizens with the legitimate means of achieving this coveted success.

Here we propose to compare attitudes of Ukrainian students to success and the means of its achievement to those of American students by conducting a pilot survey in American colleges and Ukrainian schools. The survey questions include the definitions of one's success, necessary elements of success and the possibility of breaking the law, being dishonest and corrupt to achieve the success. One can hypothesize that the established economy with well-developed democratic institutions (like those of the US) will produce citizens who are less inclined to choose the illegal or dishonest path to achievement. Ukraine, on the other hand, with its relatively high level of corruption (according to TI index) and unstable economy might be more likely to influence the population to acquire quite different values and attitudes, more suitable to 'cut-throat' conditions of the market. Is the Ukrainian population's willingness to ignore the law and basic notions of honesty an indicator of a rational adaptation?

**Good without God: Atheists Facing Moral Questions and the Question of Morality**

Religious books and stories are a compendium of rules and parables that cause people to consider ethics and behavior, even when many of the rules are questioned in a modern and diverse society. These guidelines remain the major source of morality for many believers; while some consider only their own religion legitimate, others accept all varieties of religion. But to reject a higher power altogether is perceived to be without an ethical basis, and thus immoral.

Based on a research project incorporating over 70 qualitative interviews with both believers and atheists in the U.S, this lecture will examine the concepts behind this accusation, how atheists react to it, what kind of morality they bring into play and what they think about religious morality.

In what ways do questions of ethics and equality matter to atheists, and what kind of topics do atheists choose for their social and political charity and activism? How is this related to both their status as a social minority and to non-religion itself?

Social inequality is a key focus of many of these moral debates. While many believers associate atheism, directly or implicitly, with communism, there are in both believers and atheists in the U.S, this lecture will examine the concepts be-

**Intelligentsia in Modern Russia: Social Status Change**

Humanitarian intelligentsia is a specific social group. Throughout its history it is not only developed non-material culture of society, but also played the leading role as civil asset of the nation, its “conscience”. During two past decades transformation in social life put the group in necessity of social adaptation, and so far the social position of the group and its role in the new social relations became unclear.

The paper is aimed to determine the current status of humanitarian intelligentsia in socio-economic, socio-political and professional fields and seek ways to improve its civil and professional positions. The analysis is based on the theoretical and methodological approaches that take into consideration the stratification of Russian society, differences in territorial conditions and professional fields. The study was divided in two phases. Initially, a wave of semi-structured interviews (n = 100) were conducted. After that, quantitative data were collected from questionnaires (n = 1150).

Results identify the strategies of socio-professional behavior, the current socio-political position of the group and its social adaptation level. The factors of status change present different levels: macro - level (socio-economic, political, socio-cultural change in the country), meso - level (the development of the region and current professional sphere), micro - level ( individual knowledge, attitude and behavioral strategies).

Consent to Data Linkage: A Focus on the Interviewer Respondent Interaction

Linkage of survey and administrative records is increasingly popular. The survey respondent’s informed consent is required to perform linkages and a number of studies have documented interviewer effects in the decision to consent. Whilst studies found that 28-34% of the variance in consent outcomes is attributable to interviewer characteristics, many of the characteristics were unobserved. We use experimental data on consent to data linkage collected in wave 4 of the Innovation Panel (IP4) to examine the role of the interviewer-respondent interaction in the decision to consent to data linkage. IP4 included a number of experiments around the way in which consent is asked and respondents were asked for consent to record their interview, see Sala, Knoth and Burton (2013). We report results from multilevel models on selectivity in consent using information gathered from coding the interviewer-respondent interaction around the data linkage request. The code frame considered whether the interviewer read out the question as scripted, with minor or major deviations. Deviations from the script considered whether the change in wording may be viewed as biased toward a particular decision. We coded the interviewer-respondent behaviour for all available interviews which allows us not only to examine the prevalence and effect of non-standard interviewer behaviour and how it affects the consent outcome, but also whether these vary across experimental treatment groups in a nationally representative study. Results will contribute to elaborate on Groves and Couper (1998)’s model of survey response into building a theoretical model that explains better the complex processes that lead respondents to consent.

Uncertain Landings and Slippery Cities

This paper probes the connective tissue of globalisation through the lens of a simple object, in a pair of plastic sandals. As we follow the flip-flop trail from the oil wells in Kuwait from which plastics originate, to the garbage dumps on the edge of cities like Addis Ababa (a big emerging market for Chinese plastics) to which they are finally consigned, through the larger resonance of a small object it will become clear that globalisation is not what we understand it to be. And neither are the cities it promises to connect. The cities on the trail – cross cut by people insisting on trail of objects and social objects – were both flip-flops and slippery. While it looked from a distance as if the trail passed through particular cities, closer examination often proved otherwise, as the trail strayed into particular neighbourhoods, urban zones, exurbs, suburbs, and borders between nation-states as sites of unregistered provisions of a traill through a city, flip-flops reveal it from an unusual angle: from the little considered vantage points of feet, streams of commerce passing through markets and garages. It concludes that in the light of this kind of mobile, trans-local, object-led research we need to rethink cities in ways that admit both this slipperiness and streams of everyday life, as well as rethinking globalisation so as to acknowledge its ad hoc, shifting and unstable character.

Techno-Materiality, Culture, and Climate Change: Japan and the Bilateral Carbon Offsetting Mechanism

Across the Asia-Pacific countries including China, South Korea, Singapore, Australia and New Zealand are embracing emissions trading and establishing their own national systems. Japan is a notable exception. After several failed attempts to develop an emissions trading system, Japan is developing a unique program that uses bilateral offsetting. This paper reconsiders the program, especially the bilateral offsetting mechanism (also known as the Joint Crediting Mechanism). Through this program Japanese companies directly trade technology for emissions offsets from developing country partners. Japan’s refusal to engage in emissions trading is part structured by its heavy reliance on fossil fuels, as well as its need to reconstitute its energy supply mix. In the aftermath of the Fukushima crisis securing energy supply is of critical importance. Broad public contestation of the continued use of nuclear energy to meet Japan’s demand increases pressure to use more fossil fuels. To an extent that has placed security energy supply in direct conflict with reducing greenhouse gas emissions. However the bilateral offsetting mechanism also reflects interesting aspects of Japan’s refusal to engage with more speculative forms of finance. The program emphasizes material outcomes and has the potential to make a bold policy statement in the Asia-Pacific especially as the Clean Development Mechanism fades in significance. This article explores the unique Japanese approach to climate policy, the role of both private and public sector in shaping the program, as well as the cultural elements that are reflected in its aims and instrumentalization. The program is particularly evaluated from the perspective of sustainability. Japan’s approach to emissions reduction manifests under-studied in cultural political and sociocultural institutions. However, the emphasis on materiality and tangible outcomes, as well as longer rates of investment may demonstrate a more sustainable approach to emissions reduction than those advanced by Japan’s neighbors in the Asia-Pacific.

From Hegel to Weber: The Peculiar Relationship Between German Historiography and Sociology in the Long 19th Century

From Hegel to Weber: The peculiar relationship between German historiography and sociology in the long 19th century

(Prof. Dr. Wolfgang Knöbl, Institut für Soziologie, University of Goettingen, Germany)
The first part of the paper focuses on the period when influential German historians tried to emancipate themselves from Hegel's philosophy of history in order to create a truly empirical science – and failed! The problem was that they couldn't solve the problem of relativism which comes up in any historical account that distances itself from Hegel's teleological perspective. Thus, historians such as Ranke and Droysen from multi-modal and against the writing of the most important Neo-Kantians, who influenced Max Weber. Weber clearly saw the problem and deliberately tried to cut off all links leading to a philosophy of history. This was accompanied by some costs and Weber's particular conceptual move - the coining of highly robust processual terms which seemingly could not be doubted (and thus could not be relativized) - and on their analytical usefulness - was not a necessary one as contemporary developments in other philosophical traditions show. But it was Weber's theoretical apparatus which became most influential so that sociology followed his lines of argument and continued to base its narratives of social change on the assumption that social reality is to be understood as a cosmos driven by robust processes like "bureaucratization", "rationalization", "secularization", etc. This move, so it is argued, might have been convincing in Weber's days, but it is not any longer.

**KO, JHY-JER ROGER** (National Taiwan University, jikko@ntu.edu.tw)

**Differences in Job and Work Mobility of Labor Market Insiders and Outsiders in Taiwan**

One emerging issue of research on work and labor market is to study the segmentation trend in job and work mobility in labor markets, and mechanisms behind segmentation processes. Recently, some researchers argued further that the division between standard and nonstandard workers has acted as an additional segmentation of labor market. This approach also paved the way to understanding of the link between precarious work and social inequalities. Considering the significant impacts and labor market policy implication of this possible segmentation, detailed research on patterns of job and work mobility between standard and nonstandard workers, and also study if these differences have caused segmentation in labor markets of Taiwan.

Existential literatures provide two strands of arguments regarding consequences of nonstandard work arrangement: the stepping-stone hypothesis and the entrapment hypothesis. The stepping-stone hypothesis claims that nonstandard work provides a stepping stone to a standard job and is regarded as a means to flexibilize the rigid labor market. On the other hand, the entrapment hypothesis, which is derived from labor market segmentation theory, assumes that nonstandard work has long-lasting negative consequences on job mobility because it makes nonstandard workers "trapped" in the secondary labor market segment, or leads to unemployment. To investigate which hypothesis is correct in Taiwanese labor markets, I use "Manpower Utilization Quasi-Longitudinal Survey" (2008-2011) to examine job and work mobility between standard and nonstandard workers. As a result, this study shows that multi-modal logistic regression model supports the entrapment hypothesis. Segmentation of labor market is reflected in difference of mobility pattern between standard and nonstandard workers.

**Determinants of Social Activities Among Older People in China: An Analysis of Family Factors and Community Factors**

**Objectives:** The study investigates the extent of family factors and community factors affecting engagement in social activities (non-market productive activities and leisure activities) by older people in China.

**Conceptual framework:** Given filial piety and Chinese "quanxi" value the importance of family in Chinese culture, family factors, including older people's household size, composition and number of financial supporters are tested. In line with opportunity structure arguments, the impacts of community factors (public facilities, community offices and urban/rural communities) on the likelihood of social activities are examined. Research hypotheses are summarized here:

**H1:** Older people living with more family members are less likely to engage in social activities than are older people living with few or no family members.

**H2:** Older people living alone are less likely to engage in social activities than are older people living with partners.

**H3:** Older people with more financial supporters from within their family are less likely to engage in social activities than are older people with few or no financial supporters from within their family.

**H4:** A community with more public facilities increases individuals' propensity to participate in social activities.

**H5:** A community with a longer office increases individuals' propensity to participate in social activities.

**H6:** Individuals living in an urban community have a higher propensity to participate in social activities than do individuals living in a rural community.

**Methods and data:** The first wave of the China Health and Retirement Longitudinal Study (CHARLS) is used. The analytic sample is composed of respondents above 30 years old (n=7,813). Multilevel models for dichotomous data are employed (first level: individual characteristics and family factors; second level: community factors).

**Transnational Families and Newcomer Children in Japan**

In the 1980s, because of the economic boom in Japan, many workers came to Japan from other Asian countries. In the 1990s, the Japanese government revised the Immigration Law, resulting in workers coming from Latin America. Since then, the number of foreign laborers has continued to increase.

The number of foreign workers' children has also grown. They face difficulties keeping up with academics in school because of insufficient Japanese language and poor school support. Teachers also face challenges in instructing diverse students whose native languages are Chinese, Tagalog, Portuguese, Spanish, and others.

In Kanagawa prefecture neighboring Tokyo, the number of newcomer children is relatively large. Four public high schools began providing special services for foreign students in 2007, and the number of such schools increased to 16 in 2013. Those schools provide a variety of services including native language classes, Japanese as a second-language classes, and special instruction classes for academic subjects.

The authors identified the challenges and needs of newcomer students. The data derived from interviews with 85 children at a high school in Kanagawa prefecture from 2007 to 2013. The findings and interpretations indicate that (1) some newcomer children have poor academic achievement and face difficulty going on to college because of scarce resources and support even though they desire more education; (2) many families experience separation due to migration for jobs or women marrying Japanese men and leaving their children in their own country. These are the “multinuclear households” often seen in countries with long accepted immigrants; (3) those families that live apart for many years have difficulty reestablishing their ties. We argue that special educational and social attention should be given to these families and their children.

**Mobile Social Dilemmas in an Experiment: Mobility Accelerates the Cycle, but Does Not Change Cooperation**

**1. Problem**

This paper sheds light on the role of mobility on cyclic processes in mobile social dilemmas. Olson argues that rational actors will free-ride in large groups. Erhart and Keser's experiment revealed that people formed clockwise cycles of group size and cooperation when they can change groups. But they did not compare various levels of mobility. Thus, our research question is how mobility affects the cycle and the cooperative behaviors.

**2. Methods**

We conducted a laboratory experiment (with 168 participants in 40 groups in 10 sessions). Three conditions (treatments) were introduced (immobile, high mobility costs, and low mobility costs conditions).

**3. Results**

We show the following findings. (i) Mobility did not change effects of size on cooperation (N=339 group-rounds). (ii) Still, mobility accelerated effects of cooperation on size (N=360 group-rounds). As people moved more easily, cooperative groups were more likely to expand. (iii) As a result, intergroup mobility accelerated and had a positive effect on cooperation (N=40 groups). Groups rotated faster when people moved more easily. (iv) However, mobility did not raise nor decline cooperation levels (N=40 groups).

**4. Conclusion**

We observed negative effects of size on cooperation. This was consistent with the literature, both on mobile and immobile social dilemmas. We observed cyclic dynamics. This reconfirmed Erhart and Keser. We observed identical cooperation at various mobility levels. This was inconsistent with Tiebout's prospect. The literature overlooked that free-riders can invade cooperative groups. To foster cooperation among rational actors, first increase mobility to free-riders. Then, restrict mobility to exclude free-riders.

Media Representation and the Cultural Politics of Zainichi (Residing-in-Japan) Korean Athletes: A Preliminary Conceptual Analysis

This paper examines how zainichi (residing-in-Japan) Korean athletes have been represented in the media and mobilised in relation to the cultural politics of Japan. Zainichi Koreans have been the largest ethnic minority in Japan largely due to forced migration during the era of Japanese colonialism. Second and later generations of zainichi Koreans have often strategically hid their Korean citizenship and identity by speaking Japanese and adopting Japanese names in order to avoid daily conflicts with, and discrimination from, Japanese society. Sport is one of the sites where the politico-historical issues of zainichi Koreans are brought to the fore in public consciousness and popular discourse. From the legendary professional wrestler—Rikidozan—to the naturalised Japanese football player—Tadanari Lee, zainichi Korean athletes have been represented in an ambivalent manner—both as ‘Japanese’ and ‘the Other’. This ambivalence of representation is linked to how they self-identify, the role of the media and the context of cultural politics at the time. By examining how representation and perception of zainichi Korean athletes have been maintained or changed over time, the paper highlights the key events and sport stars that have contributed to the re-positioning of zainichi Koreans in Japanese society. Research on zainichi Koreans has been rarely conducted yet deserves attention because it challenges the homogeneous construction of ethnic essentialism and sport nationalism in Japan and reveals the postcolonial politics within a wider context of East Asia. Overall, this paper serves as a preliminary analysis of zainichi Korean athletes with respect to how they might be studied both theoretically and methodologically.

Taking Japan Seriously Again: The Cultural Economy of Glocalisation and Self-Orientalisation

Although Japan’s economic presence has declined over the past two decades, the legacy of Japanese cultural-economic contributions to the global process has not been adequately addressed. This paper identifies the pioneering role of Japan in developing, and globally disseminating, two key commercial processes of ‘glocalisation’ (Robertson, 1995) and ‘self-Orientalisation’ (Dirlik, 1996; Iwabuchi, 1994). By delineating the links between the two interrelated processes, it is argued that Japan’s contributions to the making of the global cultural economy have dramatically altered the mode of domination by transnational corporations—from economic rationalisation to cultural differentiation. This was triggered, as I contend, by the formation of strategic alliance of Japanese corporations with Western marketers and advertising agencies when they globalised their products and business operations in the 1970s and 1980s. Drawing on case studies of global sport brands, this paper demonstrates the ways in which Japanese workers and corporate managers have strategically built a new form of global domination through their practices of globalisation and self-Orientalisation. Overall, this re-thinking of Japan’s cultural-economic contributions counters the view of seemingly unilinear development of neoliberal capitalism that has been prevalent in theorising of global consciousness and connectivity.

Self-Rated Ability of Reading the Atmosphere and Correlated Factors Among College Students

Inaccurate understanding of someone’s needs and feelings accurately, and communicating with people smoothly is represented as “reading the atmosphere”, and it has been treasured in Japanese tradition. Recent young Japanese adults prefer being accommodating, and setting themselves apart from their peers can lead to worsening of their mental health. The present study was a questionnaire study that affects the self-rated ability to read the atmosphere for 703 students at two universities in 2011. Among them, 3.2% were self-rated as “cannot read the atmosphere at all (Group 1)”, 19.4% “cannot read the atmosphere very much (Group 2)”, 46.8% “can read the atmosphere a little (Group 3)”, 25.4% “can read the atmosphere very much (Group 4)”, and 5.3% “can read the atmosphere too much (Group 5)”. Also, logistic regression analysis showed that the self-rated abilities of reading the atmosphere were not related to age, sex, and the presence or absence of siblings, and collectivism scale. However, they were significantly related to the self-monitoring scale. The results indicated that self-monitoring is a crucial factor for the proper functioning of abilities to read the atmosphere. Also, people read the atmosphere not because they put the priority of group goals over individual goals.

KOC, MUSTAFA* (Ryerson University, mkoc@ryerson.ca)

Dark Side Of The Miracle: Hunger and Food Insecurity In Turkey

Turkey has been praised as a remarkable success story among the developing economies as many countries in the Southern Mediterranean, the Middle East and North Africa suffered the impacts of global financial crisis during the first decade of the 21st Century. The economy grew by 5% per year on average from 2002 to 2012 and per capita income increased up to 10,500 USD in 2011, from the modest 3,500 thousand dollars in 2002. As of 2012, Turkey was listed as the 17th largest economy in the world with a GDP of about 800 billion dollars.

This paper explores the nature of progress towards poverty and hunger alleviation in the country during the same period. It shows that behind the neo-liberal miracle of growth, there is escalation tendency for de-peasantization, increase in urban poverty, decline in collective bargaining rights of labour unions, widening income inequality between rich and poor, worsening of working conditions, and increase in the percentage of workers working for the minimum wage and high levels of youth unemployment. Despite these socially unfavourable social factors, official figures celebrate success in terms of food security and fight against hunger.

This paper will provide insights as to the causes and consequences of such “success” in food security while critically assessing the analytical and methodological utility of the concept.

Koch, Florian* (Universidad del Norte, fkoch@uninorte.edu.co)

Arranged Urbanism: Modes of Informality and Governance Structures in Barranquilla, Colombia

During the last several years a dynamic transformation has been taking place at the national level fringe of Barranquilla, Colombia: Shopping Malls, Gated Communities and Gated Tower Buildings have been built - a process very similar to other Latin American cities. The aim of my presentation is to reveal the underlying planning approaches and explain the role and influence of the private and public actors involved. The presentation contributes to the discussion on formal and informal practices of urban development in the Global South and shows the blurring borders between the ‘formal’ and the ‘informal’. The main finding of the analysis is the analogy between the interests of private actors, official documents and the spatial transformation which is taking place. This analogy was made through the massive influence of private interests in public planning and a multitude of different agreements between the land owner and the public authorities. This form of urban development is described as ‘arranged urbanism’ and stands in a tradition of similar processes of spatial, economic and political development in Latin America, nevertheless, the pace and shape has changed. In addition, forms of ‘arranged urbanism’ can also be found outside of the Latin American context and thus present a new mode of planning governance in Cities in the Global South and the Global North.

Koch, Florian* (Universidad del Norte, fkoch@uninorte.edu.co)

Governance of Climate Adaptation through Urban Regimes: The Cases Bogotá and Frankfurt

Climate adaptation strategies have gained importance both in cities in the Global South and the Global North (Birkmann et al 2010). A crucial aspect of these strategies are so-called climate adaptation plans. These plans show the actions that should be taken in order to reduce the negative effects of climate change on urban population. My presentation analyzes the climate adaptation plans of Bogotá, Colombia and Frankfurt (Main) Germany and evaluates the political processes beyond these plans. Even though the context of both cities is very different, similar results can be traced: In both cities, “climate adaptation urban regimes” have been formed. These regimes do not have a concrete form although they provide strong support for actions and thus present a new mode of planning governance in Cities in the Global South and the Global North.
view my presentation tries to provide insights on the construction of capacity to act regarding climate change on an urban level: How are climate adaptation plans elaborated, who participates in their elaboration and who not?

Women’s Health and Gender Discrimination In India

Abstract

The greatest revolution in any country is the one that affects positively the lives of women, and there is no doubt that, if women are encouraged to realise their potential, that it’s not only their life which would be affected but the life and situation of the whole household which is the basic unit of our national economy.

Women's health in India can be examined in terms of multiple indicators, which vary by geography, socio-economic standing and culture.

Women’s condition is an indicator of the state of the society. Women's health and gender inequality is one of the reasons that play a major role in the health outcomes of women in India. Human development Report (United Nations report, 2011) indicates that India is one of the worst countries in the world and ranked 132 out of 187 in terms of gender inequality. In 2005 India enacted the National Rural Health Mission (NRHM) with a clear set of measurable objectives, like Maternal Mortality Ratio (MMR), Infant Mortality Rate (IMR), Total Fertility Rate (TFR), and targets for National Disease Control Programmes (NDCP) in addition to create universal access to public health services and also balance the gender ratio.

The present paper focuses on the achievements of Odisha through NRHM by presenting the primary data (Bolangir; Odisha, India). There is a significant improvement in rate of decline of IMR, MMR and TFR. In addition the present study also examines gender disparities in nutritional status and concludes that women are more malnourished than male.

Finding Shelter in Denver: Multiple Regimes of Spatial Order and Multiple Coping Strategies

From a homeless person's perspective, the neoliberal city seems like a virtual minimum-security prison. In order to work, eat and rest, they must negotiate multiple and layered ordinances regulating their activity and movement. For the homeless, simply occupying public space is already problematic. Certain municipalities allow begging, others do not. Scrapping metal often violates land use codes. In seeking services, the homeless must conform to the requirements of state and charitable service providers. Obviously, neoliberal spatial control of homelessness does not germinate from a single control center. Peck (2010) argues that the mongrel phenomenon of the neoliberal state is relationally constituted. His notion aligns with Staeheili and Mitchel (2008) claim that public space regulation does not emanate from a single ideological or practical nexus, but consists many separate interpenetrating property regimes.

In attempting to understand how homeless individuals negotiate a growing phalanx of codes and ordinances variously intended to move them toward service providers and into shelters we utilized ethnographic methods. Talking to homeless injection drug users in Denver, CO, a city wherein sleeping with any protection against the elements in public has recently been outlawed, we found that shelters, due to mandated durations of stay and strictly enforced conditions of confinement were often considered undesirable places to be. Understanding this, it is unsurprising that homeless people resist this degree of control by continuing to use alternative and often illegal places for shelter and attending to personal hygiene. Other findings prove both ironic and tragic. We learned that as part of an overall strategy for negotiating Denver’s regimes of spatial confinement often leads to increased drug use. A heavy load nuns heroin users from the cold and rain. And methamphetamine addicts frequently increase dosages and usage in order to avoid the need for sleep altogether.

Does Inclusion Mean Everyone Every Time?! - Critical Reflection on a Popular Concept

It seems that inclusion is being discussed everywhere you turn; organisations, institutions, government services all claim to be places of inclusion. What does this really mean? Does it mean that every location will be designed so that anyone can access and act in it? Is it enough to declare your intention to work together to be inclusive? Will this concept be able to remove the subtile (and not so subtile) forms of exclusion that have developed over the years in our society? Is it really intended that each person in it’s unique way of being should be acknowledged and accepted as an active participant? How can such processes of change be carried out and supported? My presentation will focus on the inclusion of children with handicaps in public schools; I will reflect on the questions above and consequent topics.

martin.kohli@eui.eu)

Cleavages and Conflicts in Aging Societies: Generation, Age, Class?

Fifty years ago, inequality in developed societies disadvantaged the elderly. Becoming old could mean falling into poverty, and some sociologists interpreted retirement as a form of social exclusion and alienation. Today, the tide has turned: the elderly have benefited from the expansion of the welfare state, and some sociologists paint the bleak picture of a coming gerontocracy. The discourse on “aging and social exclusion” faults the elderly for monopolizing resources and endangering our future.

However, it remains essential to assess the extent of the generational cleavage per se and the extent to which it masks the continued existence of the “old” class cleavage between wealthy and poor (or owners and workers). There are more over “new” cleavages such as those of gender and ethnicity (or “race”). Emphasizing the generational conflict tends to downplay other inequalities, and by this, risks being ideological.

I will briefly retrace the stages of this discourse, and then examine the current extent of cleavages among generations to help groups in terms of economic well-being and social inclusion. How these cleavages turn into conflicts depends on their potential for mobilization, which I will assess by examining political attitudes, participation and voting. The result is that the salience of generational conflicts is (so far) low, which I attribute to the mediating function of political institutions and of generational relations and transfers in families.

Class inequalities cumulate in old age, and class cleavages may thus deepen in future aging societies, but the potential for class mobilization seems to fade away. Generational cleavages may also deepen, not least through the current trends towards welfare state retrenchment. Whether they will lead to generational mobilization depends on the continued viability of the mediating institutions in politics and the family.

ALBERTINI, MARCO* (University of Bologna,
marco.albertini2@unibo.it)

Parents’ Home Ownership and Support for Adult Children Across Europe

The degree to which economic well-being depends on the support provided by the family of origin varies considerably across welfare regimes. Thus, while Scandinavian countries are characterised by a high level of defamilialization, Continental Europe follows a model of supported familialism. The Mediterranean countries are best described as adopting a model of familialism by default. In our previous research, we have shown that what changes from one model to the other is not only the relevance and strength of the family ties, but also the strategies adopted by parents to support their adult children’s own family projects.

The present paper, based on data from SHARE and SHARELIFE, examines how parents’ housing careers are related to the transmission of economic resources from parents to children, and how this varies across different welfare contexts. First, we will analyse the extent to which parent’s home ownership status affects the likelihood that children co-reside with their family of origin. Our preliminary results suggest that, ceteris paribus, parents who rent their home are less likely to support their adult children through co-residence. Secondly, we want to analyse how parents’ own housing experience affects the strategy that they adopt to support their adult children. For instance, does the fact that parents received support in their present home lead them to help their children in turn? Also, a number of other experiences – such as ownership status of one’s first home after the exit from the parental home, age when establishing one’s own household, or special events in one’s housing history – are likely to affect the strategy that parents adopt in supporting their adult children. Most importantly, the role played by parents’ housing experience is likely to vary across different welfare contexts.

Friends, Comrades and The Aesthetic Melting Pot: Instagram As a Tool Of Propaganda

This paper examines the ways through which the aesthetic mechanism of Instagram, a social network application designed for media sharing, is used as an
emotive tool in institutional propaganda. My case study is Instagram photographs which were uploaded to the official Instagram site of Israeli Defense Force between 2012-2013. I also examined random Instagram photographs which were tagged IDF and Zahal (IDF in Hebrew).

I will suggest that the site administrators attempt to form a conceptual frame embedded in ideological, and how do emotional norms shared by the users (Chandler & Livingston, 2012). This frame of values is understood as a common ground for the Israeli users, who were raised on myths about the army and the value of deep friendship among warriors. The same frame of values serves them simultaneously as members of a social network which is based on fixed aesthetic norms such as chosen filters and the "artistic" square shape, which its similarity to Kodak Instamatic and Polaroid images makes the photographs "sentimentally beautiful" (Enquist, Magnus and Arak, 1994).

Also common are values of sharing, the meaningful dual concept of "friends", and the value of actual positive motivating, may it be the army's hierarchic system or the social network's "likes".

I will look into the ways through which the use of Instagram helps the sites' administrators and private users to activate a unified code of symbols, which blends individuality and nationality, the beauty of nature, the aesthetic standards of the application and the admiration of armed forces (Friedlander, 1984).

And last, seeing Instagram as a platform for individuals to perform and share their artistic creativity (Gye, 2007), goes along with another Israeli myth, which praises soldiers as sensitive individuals who fulfill their national duty, while being young "fighters and dreamers", who express their feelings in various forms of art.

KOIKKALAINEN, SAARA* (University of Lapland, skoikkal@ulapland.fi)

Free Movement and Serial Migration: Exploring the Lives and Motivations of Highly Skilled Finns Living Abroad

The European Union (EU) is a globally unique area, where it is possible for the majority of Europeans to study, work or retire in any of the 28 EU member states, as well Switzerland, Iceland, Norway, and Liechtenstein (Koikkalainen 2011). European citizens have more legal, transnational mobility rights than any other migrant group in the world and the ease of mobility across intra-European borders has created a common labour market for those willing to be mobile. The presentation discusses the intra-European mobility regime from the perspective of highly skilled migrants: how young, educated Europeans experiment with living abroad, move between European capitals and take up job offers in various countries without the need to worry about visas, work permits, or integration requirements. For these privileged migrants, Eurostars (Favell 2008), onward migration may be as easy as buying a low-fare airline ticket or hopping on a fast train. The paper draws on the Working in Europe Study (2008-2011) which collected the experiences of 364 Finns working in 12 European countries. Special attention is paid to the experience, qualities, and motivations of the serial migrants, those who have lived abroad in at least two different countries. Why did they move abroad in the first place, and why did they move again? Do they display a particularly European identity, continue to identify with their original home country, or see themselves as global citizens (Koikkalainen 2013)? And does the ease of mobility increase the likelihood of remigration?

KOIKKALAINEN, SAARA* (University of Lapland, skoikkal@ulapland.fi)

Mobile Workers, Mobile Lives: Tourism Workers in London and Lapland

This conference paper focuses on two European tourism destinations that thrive on seasonal labor often performed by circular migrants: London, UK and Lapland, Finland. London is an important urban tourism destination in Europe attracting more than 30 million tourists each year. Lapland is a major tourism destination at a smaller scale: the land of ice and snow, the aurora borealis and reindeer safaris attracts just below one million tourists each year. While the profiles of these two places are very different, they do share important similarities in terms of labour demand. In London the pubs, hotels, shops, and amusement parks rely on seasonal labour, often performed by young people originating from other European countries. In Lapland the hotels, ski resorts, wilderness safaris, other tourism-related services also require flexible, seasonal workers who return to their countries of origin or to Southern Finland for the off-season. A look at this unlikely pair of case studies can increase our understanding of the migration–tourism nexus, and provide an insight into the differences between the tourist experience and the mobile worker experience. Drawing from the tourism research and migration research literatures the presentation explores how the experiences of tourists and migrant workers differ from each other. Is working at a tourism destination in fact a form of lifestyle or a temporary job? How do tourism workers form workplace communities, develop place attachment, and bond with the local community, if they know that their own stay at the tourism destination is only temporary?

Correlates of Work Behaviors Among Muslim Migrants in Japan, South Korea and Taiwan

This study analyzes correlates of work behaviors among male Muslim migrants in Tokyo, Seoul and Taipei Metropolitan Areas, applying logit models to the micro-data from the Survey of Foreign Muslims in Japan (2005-2006), the Survey of Muslims in South Korea (2011) and Exploratory Study on the Taiwanese Muslims (2012-2013).

The results of logit analysis for the correlates of employment status show that ages 35+, entry before 1990, South Asian origin, intermarriage with a local woman and high school education have positive effects on self-employment but South Asian origin has a negative effect. In Taiwan ages 15-24 and 30-34, entry before 2007, marriage with a local woman or a conscript, high school, junior college and polytechnic education, and speaking proficiency in Chinese have positive effects. Therefore, the positive effects of high school education are shared by the three societies, while the effects age, year of entry, national origin and the nationality of spouse do not have consistent effects.

For being an employee, ages 35+ and entry before 1990 have positive effects, in Japan while ages 35+ entry before 2007, Indonesian origin and high school education have positive effects in South Korea and ages 35+, entry before 2007, high school, junior college and polytechnic education, and speaking proficiency in Chinese have positive effects in Taiwan. Therefore, the positive effects of high school education are shared by the three societies. The results for employment type and job hunting method will be also presented.

In sum, there are some variables which have opposing effects in different societies. They seem to reflect the differences in the population composition of Muslim migrants as well as the composition of economically active population in each society.

KOJIMA, HIROSHI* (Waseda University, kojima@waseda.jp)

Halal Food Consumption Among Muslim Immigrants in Tokyo, Seoul and Taipei: A Comparative Analysis of Correlates

This study aims at clarifying the similarities and differences in immigrant integration from the perspective of religiously regulated food consumption in new immigration countries in East Asia. It analyzes correlates of halal food (which Muslims are allowed to eat) consumption behaviors among male Muslim migrants in Tokyo, Seoul and Taipei Metropolitan Areas, applying logit models to the micro-data from the Survey of Foreign Muslims in Japan (2005-2006), the Survey of Muslims in South Korea (2011) and Exploratory Study on the Taiwanese Muslims (2012-2013). It broadly draws on the analytical framework proposed by Bonne et al. (2007). The dependent variables include the frequency of visits to halal shops and that of visits to halal restaurants.

The frequency of visits to halal shops and restaurants tends to be low in Japan and high in South Korea. The logit analysis for Tokyo shows that white-collar employment, strengthened religiosity and concerns for local customs have positive effects on the visit to halal shops and that other origins and high-school or less education have negative effects. The logit analysis for Seoul shows that the entry in 2005-2006 or 2009-2011, South Asian origin, very strict observance of Islamic rules have positive effects on the visit to halal shops and that other origins and high-school or less education have negative effects. The logit analysis for Taipei shows that living in owned housing and very strict observance of Islamic rules have positive effects on the visit to halal shops and that other origins, white-collar employment, non-strict observance of Islamic rules have positive effects on the visit to halal restaurants.

The dependent variables include the frequency of visits to halal shops and restaurants.

KOJIMA, SHINJI* (University of Hawaii at Manoa, skoijima@hawaii.edu)
“Alternative Unions” and Their Involvement in the Post-3.11 Disaster Politics

Labor unions call alternative unions are increasingly becoming a noteworthy presence in the contemporary Japanese social movements scene. These are individual membership-based unions, such as general unions and community unions. I call them alternative because from the standpoint of nonstandard workers, they serve as an alternative to enterprise unions from which non-standard workers are usually excluded. This paper examines the ways in which these alternative unions, who have made themselves into prominent figures engaged in nonstandard employment politics, became involved in the post-3.11 disaster politics. This study uses ethnographic and archival data gathered during fieldwork in Japan from April 2008 to September 2009 in addition to follow up research conducted in 2010 through 2013. I demonstrate that alternative unions live enmeshed in a complex web of individual and organizational ties, and they thrive by building new ties as they respond to emerging crises. From the standpoint of individuals who are involved in labor disputes through these unions, they come to be enmeshed in a dense network through union affiliation. They develop new bonds and ties with individuals they meet anew. As a consequence of this organizational social capital being transferred to the individual, some come to participate in social movement activities on their own, separate from union affiliation. The network transfer sometimes leads in the long run to nurturing new activists who respond and engage in emergent crises. I argue that alternative unions serve a double role in the field of social movements in Japan. First, they actively engage in emerging crises by working with other unions and civil societies. Secondly, these unions serve to connect individuals through these activities, which sometimes lead individuals to participate in movements on the newly emerging crisis.

Depression, Work and Identity in a Neoliberal World: Perspectives from Australia and the UK

Since the 1980s, job markets in economies such as the United Kingdom (UK) and Australia have been shaped by neoliberal policies directed at increasing competitiveness and productivity. While different national policies and institutions are at play, workers in these countries have been affected by some common trends, including decreased union membership, restructuring, outsourcing, off-shoring, increased workload pressures, short-term contracts, and redundancies, contributing to greater job insecurity and workplace stress. During the same period, the prevalence of depression diagnoses has increased worldwide, with the World Health Organisation estimating that over 100 million people are currently living with depression. Recently, sociologists have theorised about the possible connections between these two trends, suggesting that the increasing demand for workers to be flexible and enterprising has contributed to them feeling stressed, with implications for depression (Rose 2007, Ehrenberg 2010). Yet relatively few qualitative studies have empirically explored the relationship between work, depression and identity. This paper elucidates the connections between work and personal narratives of depression using 77 in-depth interviews with people living with depression in Australia and the UK. Interviews were conducted between 2003 and 2010. In this paper, we provide a secondary analysis of interview transcripts (with original researchers involved), using thematic analysis to explore how people talk about their experiences of work in the context of their illness narratives. We will uncover how people living with depression experience work, including how work and workplace policies (e.g. antidiscrimination, sick leave) can both contribute to emotional distress and protect against it. We want to focus on people who have experienced major life changes or transitions due to illness or other circumstances.

Development and the Transformation of Women’s Capabilities. – Sociological Study of Household Footwear Cluster in India

Giriyappa Kollannavar, N Vasagam, Jagathnath Krishna and A B Mondal

Key words: Leather industry, household footwear sector, women workers, institutional support, division of labour

Indian leather industry has grown in household sector and part of it is in the process of mechanization today. Footwear is major product produced both in household and factory sectors to meet the export and domestic demand. The Indian leather industry is supporting livelihood to millions of artisans who follows the traditional labour system of footwear production activity at the household level. Men and women have specialization in each operation in the footwear production activity. The household sector contributes almost 70 percent of the total footwear needs of the country. The post liberalization era brought huge quantity of cheap and non leather footwear to Indian market that affected mostly the household sector. Outdated technology and low scale of production system and primitive designs of the footwear are the major reasons for the household footwear sector that unable to hold their market share. Faced with the emerging competition and challenges, many of the household units closed down their production system. A few units particularly in clusters are surviving with limited market support of traditional buyers. Women play major role in sustaining the footwear activity in these clusters. The institutional intervention focusing on women workers has empowered them with new production skills and technical training. Central Leather Research Institute (CLRI) has taken up the task of footwear cluster development programme with women specific empowering goal has had significant impact on women artisans in household footwear sector. The study has brought out interesting facts and findings on the women empowerment with decision making through institutional support.

Preschool Teachers in a Changing Institutional Context: Reforms and Prospect of Professional Group

Results of this research are the initial stage of the “Processes of the Actual Russian Market of Preschool Education” project and allow to allocate the following main points of a situation of preschool teachers in the period of institute reforming. Difficult situation of preschool teachers is caused by increase of demand for this service, on the one hand, and an obvious suspense of an array of problems of the sector, defining state positions of groups, on the other hand. The cultural resource of occupation is very poorly popularized that making uncertain the symbolic capital of group in the opinion of clients (parents and educational government officials). In this situation private sector is essentially interested in advance of the cultural capital of occupation as the power of authority and expertise of a profession as a basis to increase the status indicators of the group.

At institutional level monopolization by the state of administrative functions admission. The professional organizations in estimate of experts received different treatment. Informants of the “pro-state” sector associated them only with labor unions, taking into account absence at them serious opportunities of change of professional group position. Experts of “pro-market” organizations showed interest in professional associations and the organizations of public control. The preference of a type of expert associations focused on advance of the cultural capital of group and classical “not bureaucratic” ideas of professional independence, testifies higher interest in development of power resource and group ascending mobility.

The current changes in an institutional context can potentially modify structure of professional group, promote legalization and expansion of its private sector and increase of its status indicators.
In the field of environmental education, several previous studies mentioned experiences in nature as the factor to prompt pro-environmental behaviors and in the field of environmental sociology, they say environmental awareness and knowledge about environmental issues are the factors to do environmentally appropriate behaviors. The purpose of this study is to examine the effects of those three factors as the determinants of prompting pro-environmental behaviors. In November 2010, we conducted a survey in Minamata, Japan. Respondents are all the 3rd grade junior high school students and their parents in that city.

Results are as follows: 1) Both students and parents who try to share knowledge about environmental issues with their family members tend to do pro-environmental behaviors, 2) Experiences in nature are in correlation with only students’ pro-environmental behaviors, not with parents’ behaviors, 3) As for students and fathers, awareness of personal responsibilities for and effectiveness of doing environmentally appropriate behaviors have correlation with their pro-environmental behaviors, doing environmentally appropriate behaviors have correlation with their pro-environmental behaviors.

The “Classical” Concept of Alienation in the Light of Post-Structural Social Theory: Trans-Alienation and Hypo-Subjectivity of Working Man

In general, the studies of alienation can be divided into two strata: 1) processes of alienation in the “developed countries” due to formation of mass consumer society, 2) dynamics of alienation in “developing countries” that takes place in classic totalitarian states and post-totalitarian states. In the globalizing world can we clearly distinguished types of alienation? Probably today we should talk about rhizome (Deleuze, 1980) of different dimensions of alienation. Using the concepts of diverse trans-phenomenon (trans-politics, trans-economics etc.) of French post-structuralist Jean Baudrillard (2006) I’m representing the concept of «trans-alienation» which is a hybrid of “new” Western and “old” Soviet forms of alienation which are products of the different types of social spectacle (Guy Debord, 2004). The “democratic” Western countries are more inclined to the methods of state regulation of the economy, whereas in developing countries there is still a tendency to anomie and imposing values of the market and the consumer society. Thus, the modern individual is represented as totally alienated, in other words, as a “dead subject”: a vicious circle: alienated labor ↔ alienated consumption. Is there still hope today to reanimate the subject that is not more crushed by the discourses of power, labor, consumption and capital? If the early works of postmodernists abounded statements and attitudes regarding the death of the subject, some of their more recent works show revision of the terms “subject” and “subjectivity” and indicate the possibility of resuscitation active social agent as a full-fledged subject of power, of his will, intentions and desires. This paper is possible by the development of new ideas about the properties of the social environment (consciousness): a flexible, non-linear, post-bureaucratic, rhizomatic (Deleuze, Guattari).

The Socio-Political Foundations of the Zionist Banking System in British Mandatory Palestine and Its Institutional Change in the Political Economy of Israel

Tracing the actors and focusing on the institutional dynamics, the purpose of this paper is twofold: to explain the evolution of the Jewish Zionist banking in British Mandatory Palestine and to analyze the extensive transformation of the financial system during the first decades after the Israel independence.

In 1948, when Israel was established, there were more than twenty banks and a hundred of credit cooperatives. This was the legacy of the pre-state period in which this fragmented Jewish banking system was formed by the British liberal legal framework, social and business networks among German origin Jewish bankers, power struggle between different political factions while the Zionist ideology unites them all.

Thirty years later, in the end of the 1970s, the landscape of the Israeli banking was completely different: it was dominated by only three powerful banking groups which have become almost exclusive actors in the financial and real markets. The government has decided to create a ‘state-led’ financial system (similar to France) and brought about an extreme consolidation in the banking sector, in order to control the monetary system and optimize the channeling of capital for achieving industrialization. Through ordinances and informal means, embedded in institutional arrangements, politicians and state bureaucrats adopted and simultaneously applied a triangular policy: giving institutional preference to three specific banks; imposing discrimination against the rest; and prompting mergers in the field. The regulatory authorities also allowed the three largest banks to become ‘universal’ (similar to Germany), what made the implementation of the
Older workers are at the center of many current policies. These workers’ activity is essential for maintaining a sufficiently large and well-qualified workforce, and for ensuring a sound financial basis of pension schemes. Therefore, policymakers encourage older people to work. However, policies to this aim meet some challenges because older people are not only influenced by current development. Instead, they are also subject to life-course influences, meaning the on-going effects of past experiences. This presentation explores the life-course effects of World War II (WWII) experiences on older workers. These experiences are, e.g., a soldier or a prisoner of war during WWII. The life-course effects of WWII-experiences can function through three main mechanisms. First, the career interruption created by WWII may have a scarring effect similar to the one of unemployment spells, and thus influence the further career progression. Second, generational membership influenced how individuals experienced WWII, and it also influenced which historical developments of the labor market people participated in. Third, WWII-experiences can influence health status, personality and world view, which in turn, influence the decision on when to retire. This presentation answers two questions: Do WWII-experiences affect workforce participation in old age? Does the effect depend on the timing of these experiences within the life-course? I conduct a sequence analysis with data from the “Survey of Health, Ageing, and Retirement in Europe” and the “English Longitudinal Study of Ageing“. The analysis determines life-course differences according to, e.g., gender, and generational membership. Moreover, the analysis explores how labor market structures and retirement policies modify life-course effects by comparing countries: Germany, Finland, Poland, Sweden, and the United Kingdom. Findings help to refine theories on old age, life-courses, and the labour market. Moreover, they help policymakers in countries that recently participated in a war to design more effective policies for older workers.
are a desiring subject with 'sexual, material, and affective self-interest'. They have a wide range of aspirations, needs and longings for love, sex and relationship. Some are proud of paying for rather impersonal sex with as many women as they wish (McDonaldization of sex, or McSex) while others passionately seek intense emotional intimacy with female sex workers and refer themselves as a member of a 'sunkern boat' or Titanic, the local parlance for male clients who fall in love with sex workers. It is through these different engagements with female sex workers that we can understand the emerging Chinese masculinities in Hong Kong.

Through a sociological analysis of men's commercial sexual experiences in Hong Kong, this research joins the current international debate to rethink masculinity in relation to the changing gender order between the sexes under the new urban sexual culture of post-industrial capitalism. 

The Collective As an Ideational Entity

As actors in a social world, we are well aware of the existence of collectives. Families, communities, organizations, social and political movements, businesses, states and so on can be considered collectives. We know that various social entities in our social world are not mere aggregates of individuals; they are more than the sum of their parts and transcend the individuals who form them. These entities act like other individual actors, welcome or reject us, ask us to act for them, and give meaning and a sense of direction to our lives. In this regard, we can make the following distinction.

How can we reconcile these two perspectives? This paper argues that such a reconciliation is possible by revisiting the meaning of our social world, which is essentially a field of meanings. In this field, collectives exist as ‘ideational entities’ in the words of Japanese sociologist Seijyama Kazuo. They do not exist in the same way as a material entity exists; instead, they exist as elements in a particular field of meanings. To the extent that this field is intersubjective, the collective acquires a unique ontological status for those sharing it. Thus, collectives are ideational but, nonetheless, real.

Diversity in Leisure and Leisure Research for Social Justice in Japan: Seeking International Conversations

Although Japanese leisure research literature has grown over the past four decades, it has not been well recognized at the global level largely because of the language barrier. Given the considered patterns that our leisure-like phenomena are closely intertwined with each other particularly in non-Western contexts (Fox & Klaidner, 2006; Iswaksni, Nishino, Onda, & Bowling, 2007), the acknowledgement of the existing Japanese leisure literature appears necessary to initiate constructive conversations on leisure and leisure research in Japan among international researchers. Therefore, a critical review of literature on leisure in Japan written by Japanese researchers in Japanese language was conducted. Four major challenges were subsequently identified: leisure research as historical description, the weak linkage between empirical and theoretical research, the persistent influence of a work-leisure binary perspective, and the ambiguity of the use of leisure research to contemporary social contexts. To tackle these challenges, I propose that diversity and social justice perspectives (Parry, Johnson, & Stewart, 2013) can facilitate researchers’ conceptualizing leisure as active and multi-faceted phenomena reflecting social diversity, enhancing the linkage between empirical and theoretical aspects of research, increasing self-reflexivity, and pro-actively addressing social inequalities and social discourses. Rather than simply

KONIECZY, PIOTR* (Hanyang University, piokon@post.nl)

This paper contributes to the discussion on Internet mobilization and on international social movements’ ability to influence national policy, by analyzing the motivations and the participation levels of Wikipedia volunteer editors (Wikipedians). The events of the first Internet strike of 18th January 2012 against the SOPA legislation proposed in the US. Wikipedians from around the world took part in the vote concerning whether Wikipedia should undertake a protest action aimed at influencing American policymakers. Wikipedians are shown to share values of the international free culture movement, through experienced Wikipedians were also likely to be conflicted about whether taking part in a protest action is violating the site’s principle of encyclopedic neutrality. Wikipedia’s participation in this protest action allowed internationally-based netizens to have a visible impact on the US national legislation. As such, Wikipedia can be seen as an international social movement organization, whose participation (24 hour site’s blackout) was a major factor that led to a creation of an international political opportunity structure (worldwide awareness of and protests against a proposed American legislation) enabling a national political opportunity structure (American citizens who otherwise would not be aware of the issue became so and became politically active)

Social Stratification of Changing Family Life Courses – Results from Sequence Analyses for Seven European Countries

A major shift of life course patterns occurred in Europe throughout the second half of the 20th century. The post-war period of economic growth and mass prosperity fostered highly standardized life courses, characterized by continuous employment patterns (among men), nuclear family patterns with early and stable marriages, accompanied by medium levels of fertility. Research has proven, that living arrangements have pluralized and become more heterogeneous since the 1970s, while life courses destandardized. Value change, individualization and increasing economic insecurity are assumed to have stimulated these changes. We add to the discussion of the causes of destandardization by investigating which social strata are driving the process. We examine differences in destandardization of family formation between higher and lower educated strata in seven European countries with distinct socio-political systems and economic development. We use representative data from the Generations and Gender Surveys (GGS) for Norway, France, Italy, Russia, Estonia, Hungary and from the National Educational Panel Survey (NEPS) for Germany (n = 70228 respondents). We compare cohort-specific patterns of family formation between the respondents’ 15th and 35th birthday using sequence analysis, which allows examining complex life course patterns.

The empirical results show for all countries that a) traditional sequences of family formation are diminishing and b) life courses of the lower educated have become more destandardized than those of the higher educated strata. This is the case for both marriage and cohabitation. The lower educated are postponing marriage and having children later in life. As a consequence, the number of lone parents is increasing. The lower educated are more likely to cohabit and have children out of marriage, which leads to an increase in single parenthood. The lower educated are also more likely to experience broken families.

importing Western perspectives, this paper argues for scholarly analysis cognizant of Japanese history, culture, and contemporary social issues, particularly family issues. I argue that a culturally-adapted communitarian model of diversity perspective on contemporary Japanese family settings will open space for a just research of diverse family issues, including the rapid rise of one-/two-person households and the so-called “invisible family” that do not necessarily fit the conventional idea of Japanese nuclear family. This study examines specifically gender and age issues in the contexts of such postmodern family configurations. Given the effects of globalizations on all nations, further international conversations are necessary to advance our knowledge on the subject.

Expansion Of Higher Education: Demand, Supply and Differentiation Of Universities

Russian experience of expansion of higher education offers to understand the specific lessons. Demand and supply were drivers of changes.

Part of the national economy has formed a demand for knowledge, qualifications. On the other hand, the mass demand has been formed by employers on a more or less socialized young people whose core competency is the relative ability to learn new subjects and skills of communication. This demand has brought primarily by the service sector and trade, which began to develop explosively now. Mentioned qualities became seen as a result of staying in higher educational institution. Specialty, for which there was teaching is not important for the employer, a possession of a high education as a diploma is essential as a certificate of appropriate training. Seller of clothes, for example, should not have a diploma of trade manager, he may have engineer or teacher degree, but availability of a diploma is mandatory.

Demand (both kinds) of the labor market was transmitted into families. The educational system has responded by supply adequate to the families' demand. Now the increment of human capital is developed in some universities; implementation of the signal function, the production of certificates about staying in educational institution take place in other universities.

A second kind demand has led to growth of correspondence departments. There are lower requirements to students at those departments; learning there requires less time and efforts. Thus, it is easier to get a diploma. So enrolment in those departments became set equal to enrolment in full-time departments and surpassed it. Expansion of higher education turned out mainly expansion of the correspondence education.

World Civil Society and Activist Identity in Japanese Environmental Smog

Globalization can standardize the way people interpret their social worlds and act in them. Norms such as environmental protection, human rights and democracy have become more widely accepted. The concept of World Civil Society describes how increased civic communication across boundaries generates political opportunities for citizen groups by creating pressure towards national governments to abide by international norms in a variety of fields.

In this paper, the formation of activist identities within the Japanese Environmental SMOs is studied against the backdrop of global diffusion of norms, ideas and forms of action as well as Japan's role in the international community. Globalization supports activist identity in Japan: Japan's wish to become a recognized global player increases the number of young people entering the social movement sector. The pressure to formalize activist identities in global movements is also changing the local perspective on activist identity.

As Japanese social movement organizations have traditionally derived their strength from their unique ties with the local communities, it is important to ask how the activists interact in the processes of civic mobilization and formation of activist identities. Are we observing increased globalization, or the development of genuinely cosmopolitan ethos and global mentalities?

Awareness of global environmental problems transformed significantly during the so-called environmental boom of late 80s and early 90s. The 1990s have at the same time been called the era of the emergence of Japanese civil society. My paper discusses how the Western-style environmentalism influenced the Japanese environmental movement at two points of time: the environmental boom of the 90s, and post-3/11 era-and how it interacted with the indigenous elements therein. The approach is micro-sociological: I study how environmental activists represent themselves and their role in society in life-story interviews. What role does the juxtaposition of Japaneseness and foreignness have in these discourses? Is there room for cosmopolitan identities?

Expansion of Vocational Education and the Social Reproduction of Working Class in China

In post-reform China, the value of education is heightened in the country's development of a market economy. Driven by a neoliberal ideology of human capital accumulation, China has transformed education as a motor of economic growth and has implemented a series of education reforms. In parallel to the adoption of an export-oriented growth model, the role of vocational education is emphasized in the past two decades – to train secondary school graduates with skills to match the needs of the developing industrial sectors. This paper describes how the expansion of vocational education in China responds to the neoliberal idea of human capital development. It also investigates its impact on the life chances of students with rural background, who previously had limited chance for post-compulsory education. Based on the fieldwork data collected in three vocational schools in Chongqing, we find the students have an urge to craft marketable credentials through the process of acquiring educational credentials. Earning degrees in vocational schools is motivated by their aspiration for upward mobility. However, many students show their pessimism after working side-by-side with other factory workers on the production lines during their internship. This paper argues that under the developmental mode in a globalized market, China relies heavily on labour intensive manufacturing-based economy. The state-capital alliance has already shaped and structured the types of jobs that available in the labour market. The expansion of vocational schooling operates in the guise of training and skill development; but, in reality, these educated youth only becomes members of the new generation of migrant workers for the use of the export-led industrialization. The human capital argument for national development has failed to deliver on its promise.

Governance Matters?: Social Concertation and Macro-Economic Outcomes

The contemporary labor market and welfare state has undergone dramatic changes since the 1980s. In most countries, governments have been facing the declining economic growth, higher level of unemployment, rising inequality, and tighter fiscal constraints. Just as the context of labor market and welfare state has changed, the patterns of governance coping with the problems have also changed significantly.

Previous literature shows that the macro-economic outcomes such as unemployment and inequality have something to do with the different patterns of governance. This study seeks to examine the relationship between governance patterns and macro-economic outcomes by analyzing the 30 year trajectories of labor market and welfare reforms and policy-making systems in 20 advanced countries. We do so by proceeding as follows.

First, using the optimal matching technique, we identify different trajectories of labor market and welfare reforms and policy-making systems in the three decades from 1980 to 2009. Second, we group the countries based on the similarities in reform trajectories and policy-making systems changes. Third, we compare the levels of unemployment rate and inequality across the groups. The results show that countries characterized as closed, conservative and market economy have developed new social welfare and active labor market programs relatively early and have relied on more consensus-based policy-making systems, which require the cooperation between government and organized interests for coordinating macro-economic objectives. The results also reveal that those countries following higher expenditure on new social risks and concertative policy-making trajectory perform better in terms of reducing unemployment and inequality. We discuss the implications of these findings for the development of new governance model in Korea.

Conservative Movements and Political Threat Structure: Focusing on History Issues Related Groups in Post-Cold War Japan

Since the 1990s, a growing set of conservative movements has become conspicuous in Japan. Major movements that have brought media’s attention and political and diplomatic struggles have emerged starting from history-revising movements led by the Atarashii Rekishi Kyokasho o Tsukurukai up to Xenophobia movements led by the Zaitokukai in recent years. Taking these movements into account, this paper asks: what triggers conservative(or right wing) movements in post-Cold War Japan?

Social movement scholars have argued that mobilization is incured from political opportunity structure(POS), which simply put, when political opportunities open, people gather together for contention. However, although POS theory has provided a great deal of explanatory power, it also exposes its explanatory weak-
ness: where a movement occurs when POS closes. This leads to shed a new light on political theory, political ideology, political power, and political action in terms of political experience. In this paper, we present a new method of analyzing political movements, based on the theory of political economy. The method is illustrated through an analysis of the relationship between political movements and economic outcomes.

In order to support the argument, this paper first addresses the relations between POS and PTS and what constitutes PTS: threatening Cabinet's ideology and formal speeches like the Murayama Speech, unfavorable remarks and behaviors by politicians. Next, by selecting three "major" conservative civic groups and through discourse analysis of these groups, it explores how they were mobilized under PTS. Lastly, this paper attempts to find whether certain combination of PTS factors exist to stimulate movements. This paper intends to contribute to understating the mobilization of conservative movements - Japanese in particular - and to the academic discourse of the relation between POS/PTS and movements.

Immigrant Occupational Attainment in Japan and Its Determinants; Is it a "Structured Settlement"?

Japan as a "post-transitional society" has recently shifted into a "new" country of immigration as southern European countries. However there are few studies on the integration of immigrants in the Japanese labor market. The present study aims to reveal immigrant occupational attainment in Japan and its determinants by comparing their occupational distributions to those of the Japanese counterparts with the Japanese census micro-data conducted in 2010. As a result, the following findings are revealed: to the first question, we answered that socioeconomic compositional differences cannot explain the differences in the occupational distribution between immigrants and the Japanese, meaning that a migrant might have a different probability of occupational attainment from the Japanese who has an equivalent feature. On the second question, it is revealed that a return to immigrant educational attainments is higher than that of the Japanese, when a migrant is a highly-skilled or a long-term resident such as Vietnamese Refugees or Mexican Indians. In addition, there is a gender gap in a return of educational attainment, which tends to be smaller for females than for males. To the third question, we argue that the extension of residency in Japan mostly has a positive effect for migrants except highly-skilled ones. To the fourth question, the outcome of occupational attainments shows mosaic situation, implying that the same characteristic plays a different role in their occupational attainment depending on their mode of incorporation. Taken together, it is clarified that selection on human capital, duration of residency and gender difference are important for immigrant occupational attainment. Actually, the relations between those determinants are similar to findings in previous studies in western developed countries. However, it is also revealed that Japan has experienced multiple mode of immigrations of corporatists simultaneously, or a "structured settlement" as a feature of "new" country of immigration.

Refugee Returns - Experiences of Inclusion Here and There

My doctoral study looks at refugee returns applying Rosenthal’s biographic-narrative research as the "ancient Turkic" population of Sumerians. While not fully ridiculing the basic tenets of collective memory. Relentlessly, the supporters of secular Republicism believe that Islam’s political role is not to maintain the status quo, but to reform it and make it more democratic and liberal. This leads to shed a new light on the relationship between political Islam and political history.

The Turkish Dilemma: How Should Islam Relate To Republican Era Collective Memory?

This paper scrutinizes how the Turkish collective memory of the past can be understood within the political context of the present. The paper argues that the collective memory of the past plays a crucial role in understanding current political developments. The paper uses the example of the Atatürk Revolution to illustrate this point. The Atatürk Revolution is often seen as a turning point in Turkish history, marking the end of the Ottoman Empire and the beginning of the modern Turkish Republic. However, the Atatürk Revolution is also seen as a moment of transition, when Turkey was moving from a traditional society to a modern one. The paper argues that the Atatürk Revolution is a moment of transition, when Turkey was moving from a traditional society to a modern one.
tions, and various illegal drugs. At the same time drugs in pills or plasters are in favor. We can speak of marijuana); at the moment the po-i legal part of modern youth entertainment and club subculture. Drug choices are based on quantitative data (n=400 in 2000, n=600 in 2008 and n=800 in 2012) support this conclusion. Over the last 12 years, changes in the models of alcohol and illicit drug use were identified: young people try these substances at very young age, the drugs distribution market is very saturated and offers wide variety of substances, including legal highs. At the moment the poly-use model is dominating, i.e., using several substances simultaneously (alcohol, legal and illegal drugs). Our analysis of the spread of drug use and affecting factors is based on quantitative data (n=400 in 2000, n=600 in 2008 and n=800 in 2012) and semi-structured interviews with field experts and owners of entertainment venues.

The results show that young people admit the fact that drugs became an integral part of modern youth entertainment and club subculture. Drug choices are made to suit particular entertainment purposes and driven by desires of achieving known effects. In order to minimise risks young people avoid injecting drugs and prefer not to use substances with distinct and strong smell (for instance, marijuana); at the same time drugs in pills or plasters are in favor. We can speak as about the prevalence of substances with stimulant effect that offer effect appreciated by some users: catching unexpected energy, feelings of parallel realities etc. Another alarming trend is poly-use that increases the risk of overdose and intoxication. Poly-use combinations can include alcohol, legal medications, and various illegal drugs.

Patterns of Substance Use in Entertainment Venues in Latvia: A number of surveys in Europe, including Latvia, show that the level of drug use among young people in entertainment venues is significantly higher than among youth in general (according to EMCDDA). Monitoring surveys carried-out in Latvia in 2000, 2008 and 2012 support this conclusion. Over the last 12 years, changes in the models of alcohol and illicit drug use were identified: young people try these substances at very young age, the drugs distribution market is very saturated and offers wide variety of substances, including legal highs. At the moment the poly-use model is dominating, i.e., using several substances simultaneously (alcohol, legal and illegal drugs). Our analysis of the spread of drug use and affecting factors is based on quantitative data (n=400 in 2000, n=600 in 2008 and n=800 in 2012) and semi-structured interviews with field experts and owners of entertainment venues.

The results show that young people admit the fact that drugs became an integral part of modern youth entertainment and club subculture. Drug choices are made to suit particular entertainment purposes and driven by desires of achieving known effects. A World-Systems Methodology for the Study of Inequality

Drawing on historical data on inequality within and between regions of the world-economy, we indicate that inequality within regions in both the core and the semiperiphery of the world-economy tended to rise over a long period extending from the sixteenth to sometime in the nineteenth century. During this same period, inequality between regions of the world-economy remained considerably less pronounced and stable. Beginning during the nineteenth century, however, the trends shifted in significant ways: inequality within many core areas began to decline (as opposed to many peripheral and semiperipheral areas where inequality remained very high), and inequality between these areas underwent a rapid increase. We link these transformations to social forces that acted to expand various rights (e.g., those of citizens and of workers as wage laborers) under the aegis of the modern nation-state, with uneven and linked effects in core, semiperipheral and peripheral areas of the world-economy.

Our data allow us to provide a stylized depiction of within- and between-country income distributions to show a multiple and overlapping matrix of distributio n arrays –a global income distribution that is both systemic and historical— that has shaped the geography of winners and losers both over the long term and in more recent decades. This depiction suggests that (i) Schumpeterian cycles of innovation and creative destruction in the global production of goods and services have been key to shifting patterns of within- and between-country inequality, as these innovations have included (ii) the deployment of shifting and unevenly successful institutional strategies aiming to facilitate mobility and change for specific regions and/or nations within the world-economy. This exercise allows us to raise novel research questions about the centrality of empirical and methodological innovations to better advance future social science inquiry on inequality.

KOSIARA-PEDERSEN, KARINA* (University of Copenhagen, kpg@ifs.ku.dk)
Multifaceted Party Membership
Party membership is in general in decline; however, both the trends and the membership figures vary among parties, and the meaning of party membership varies among members. Both the degree, type and quality of party member participation vary among party members. Hence, in order to understand how the concept of party membership is filled out by party members, it is necessary to take into account what formal members are actually (not) doing within or for their parties. On the basis of a party member survey in nine Danish parties across the political spectrum, first, party members are grouped into types of party members. Second, the characteristics of these party member types are shown. Third, the distribution of party member types across parties is explained on the basis of party-level variables, such as level of intra-party democracy, party culture and campaigning strategy. Finally, the party member types are discussed and compared to other newer forms of party ‘supportership’, and the democratic implications of party membership figures are put into perspective.
work practices in welfare services in many ways. So far the effects have only in a limited way been in the focus for critical and constructive interdisciplinary research. In welfare services there is a need to communicate the essence of work especially among professionals planning, purchasing and using ICT. This presentation is based on an empirical research plan. The research concentrates in studying the development and use of ICT in child welfare units in Finland. The aim of the research is to find out how functional the client data systems are that are used in Finnish municipalities. The question of functionality focuses on how appropriate these systems are in relation to the basic task in child welfare. The research plan has its origin in a small case study in the city of Helsinki. The results of this action research indicate that the use of client data systems may have negative effects on the basic task in child welfare in case there are not enough human resources using the systems. The theoretical frame of the research comes from the actor-network-theory (ANT) and its critic. In order to communicate the findings within disciplines, the researcher plans to make use of Actor Relational Approach (ARA). In this sense the presentation investigates further whether Actor Relational Approach can be combined with Institutional Ethnography in a fruitful way in this research.

KOSMINSKY, ETHEL* (Queens College/CUNY, ethelkos@hotmail.com)

Mayume's Life History: Between Japan and Brazil

Although Mayume is from mixing ancestry, her mother is non-Japanese Brazilian and her father is Japanese-Brazilian, her Japanese side is similar to a girl from a small town in Japan. At the time of the interview she was eighteen years old. When she was at four years of age, and her brother one year, her mother decided to join her father who was already working in Japan. She attended kindergarten, although she didn't understand what they were talking. However, she adjusted very well in the Japanese school and life style. But, six years ago her mother decided to return to Bastos, Brazil, to see her parents. That's when Mayume faced a difficult adjustment: "I wanted to come here to see the town. I didn't want to remain. I wanted to go back, I wanted until today... because there is enjoyable at least for myself." She compares the Japanese town where she lived to Bastos: "Ja-pan is a divided society, it looks like Sao Paulo, and I thought that here it would be the same. When I arrived here, I said: that's too much land!" Mayume faced a lot of problems at the Brazilian school. She compares the organization and the cleanliness of the Japanese public school, the respect from her classmates toward their teacher, and among themselves to the Brazilian public school and its poor building, lack of respect toward the teacher, lack of discipline. Mayume's dream is to return to Japan and attend college there. Mayume and other children face ruptures in their socialization process due to their parents' labor migration. However, children as social agents can struggle to change their lives and make the decisions that sound better to them.

Pension System Based on Sharecropping and Economic Security of Families

Decisions about giving birth and upbringing of children imply consent to financial the public good. These decisions are generally individually adverse from the point of view of both short- and long-term economic security of families. The way to change this appraisal is to modify the structure of the pension system. The idea of the new solution is based on the sharecropping – one of schemes of incentive system under uncertainty and information asymmetry. The concept underlying this approach assumes that parents and the state, involved in upbringing the children, share both costs and benefits, what results in sharing the risk. The main advantage of the proposed solution is a convergence of interest of the parents and the state. The practical implementation of such a system would be based on division of pension insurance contributions, paid by a working individual, between the two pillars of the new system, in proportion to the expenditure incurred on his (her) upbringing by the state and the parents in the past. The first part would be spent on financial development and contributions granted to all present pensioners on the basis of their contributions made in the past, during the professional activity. The second part of the contribution, the so-called second pillar, would be transferred directly to the parents of this person – increasing their pension capital (if they are still working) or in the form of direct payments (if they are already retired). Additional, capital pillar could be established to improve long-term economic security for those without children or provide an extra protection for individuals involved in the first and second pillar.

The empirical part of the analysis will be done for the pension system in Poland, in the context of its planned restructuration.

Towards Usages of Europe By Patient Representatives at National Level?

Following a series of landmark rulings of the European Court of Justice (ECJ) on cross-border healthcare, the access to healthcare has been facilitated for European patients. After ten years of negotiations these rulings have been codified in the EU's Directive on the application of patients' rights. Europe thus now offers national actors various resources to pursue their interests beyond the opportunities of their national healthcare system including challenges and resources for patient representatives at member state level. Do these actors use those European resources inside their national healthcare system? Based on semi-directive interviews, this paper thus investigates if and how patient ombudsmen in the Austrian healthcare system include usages of Europe into their institutionalised routines and which are the national institutional limits to those usages. The paper argues that while Europe has reached the national institutional boundaries of healthcare systems porous, control over patient flows is kept intact and that there is only limited room for manoeuvre for patient ombudsmen to use Europe at national level.
Risking It? Upper Social Class and School Choice in Finland

The uncertainties and risks families are facing concerning educational choice have both, local and global influences. The neo-liberal market mechanisms promoting educational choice in educational systems move the responsibility of successful choice increasingly on individuals. The individualized responsibility is partly displacing the ‘collective assurance against risk’, and as it increases individual risk, it might lead to social closure and enabling the strengthening of the ‘lines of social differentiation’. In the context of value-based choice this touches upon the discourse around choice and distinction between social classes. Despite the privileged educational trajectories can still be obtained by context-relevant use of economic, social and cultural capital, the changes in the educational pro-vision and basis of selection to prestigious institutions produce new arenas for competition. This challenges the privileged position of upper-class children in the competition of the best education available, and makes examining their educational choices relevant.

The aim was to examine the educational discourse of the upper-class parents of children of seventh grade of an ordinary school, and investigate how their views and fears regarding their children’s education intertwine both with the considered risks and their trust in the Finnish education system. The data consist of semi-structured interviews conducted in Finland and France (Vantaa, Espoo, Paris) with parents (n=19) who have experience on educational policies and practices in Finland and their contact with schools in the countries, individual interviews with parents with no such international experience (n=78). The interviews were analysed by using qualitative content analyses. Preliminary results show that parents trust and value Finnish education and especially the value-base behind it. Still, their conceptions regarding competition, uncertainties, risk and the definitive nature of educational choices seem to have absorbed some ‘international fears’. This contributes to the construction of the social reality and subtle social distinctions in the Finnish school choice space.

Expressing the Inexpressible. Japanese Artists about the March 2011 Tragedy

The number of “Shinchō” a monthly Japanese literary magazine, issued in March 2012, published short diaries written by 52 Japanese artists to commemo-rate the tragic events of the Greatanto-quake and Tsunami, which happened the year before. Artists representing various genres of art such as literature, music, photography or visual arts were requested to describe these 2 weeks of their life and the process of artistic creativity after the disaster. In the society, where speaking about one’s inner thoughts and emotions is not culturally approved, writing as a social work seems to be one of the most important, if not the sole, vehicles bringing up the vox populi to a broader attention. It can be said that it is thorough art that the social phenomena are reflected in the public discourse.

It is art that collects individual experiences of the disaster in a diary of collective memory. In this sense becomes also a political tool, as Jacques Ranciere would say, which has the power to express the inexpressible, to render visible what from various reasons could not be revealed.

In my presentation I will analyze the content of the diaries to see what aspects of the events, which took place in the aftermath of the Earthquake and Tsunami disaster, were described by the artists and what was the purpose of casting light on these particular problems. Another issue I would like to raise is the question about whether the image of the tragedy as recreated from the artistic diaries is compatible with the one presented in the official discourse.

Living Between Tongues. Elements of Evocative Autoethnography in Tawada Yōko’s Writings

Autoethnography can be described as an approach to research and writing that seeks to describe and systematically analyze (graphy) personal experience (auto) in order to understand cultural experience (ethno) (Ellis, Adams, Bochner 2011). The value of autoethnographic method lies in the possibility, it offers, of having an access to an inner (emotional reactions, feelings and thoughts of a respondent not revealed otherwise) insight into an analyzed problem. Consequently, this methodological paradigm recognizes forms of writing research – amongst which also literary works such as biographies etc. – which are consciously value-centered, where the searching subject is visibly present and her/his voice is of equal importance in forming statements about the social reality. If a literature is to be considered an object of sociological interest, an autoethnography, especially its evocative genre, entrusts it with playing a significant part in describing the social world.

Given the above, in my presentation I would like to discuss elements of evocative autoethnography in literary works of the Japanese writer Tawada Yōko to see how the knowledge, which is acquired from literature, can be applied to an analysis of a social phenomenon, here: a professional career of a migrant writer, who works and lives between two languages: Japanese and German. Tawada Yōko left Japan at the age of 22 and at that time her knowledge of German was limited to grammatical rules. Ever since, she successfully writes and publishes in both languages, experimenting with the borders of language and public discourse. She is associated with the term “exophony”, which may be defined as a voice from the outside resonading in the world of literary culture in a given country. In my presentation I will focus on the social condition of the writer in exile, while questioning the universality of the notion of artistic genius (Elias 1994).

Functional Differentiation and the Public Sphere: An Attempt in Theoretical Formalization for Historical and Comparative Research

This study elaborates on the concept of functional differentiation as a structur-al feature of modern society. Methodological criteria to judge whether society is differentiated functionally remain elusive, although these must be presupposed when the concept of functional differentiation is applied to other societies. Certainly, a society is not functionally differentiated if judicial decision, for example, is always dependent on external conditions, whether power or wealth of parties, and hence, the legal system cannot operate according to its own logic. However, the autonomy and independence of a functional system never imply the functional differentiation of society as a whole because the case where other functional logics can be violated directly by political or monetary power is not completely excluded. The existence of some functional institutions, for example, the parliament, bureaucracy, court, market, and educational system, does not guarantee a functionally differentiated structure. To exploit

This page contains a variety of abstracts from a sociological conference. The abstracts discuss topics related to aging, prisoners, and modernity. One abstract highlights the experiences of 80-year-old Japanese seniors, noting that seniors have become younger and that personal computer and/or mobile phone use is common. Another abstract examines the role of values in social systems, focusing on secular and religious higher education institutions. A third abstract discusses the role of values in social systems, focusing on secular and religious higher education institutions. The abstracts provide insights into contemporary social dynamics and the intersection of technology, values, and modernity.
active labor force and in particular is reduced. Employment in the industry falls especially in the small cities and provincial locality. The main issue for the farmers is an access of its products to local market and a large labor costs. Therefore it is developing the traditional type of economy, which is dominated by monocultural economy of the farm (horticulture, animal husbandry, small-scale construction, transport services, temporary employment) and commercial businesses. Modernization potential of the rural “backs” in particular in South region of Russia is diverse. The rural population is aging and decreasing. However, there is a surplus of labor force against the backdrop of falling employment. This dissonance is typical for the Black East region. Lack of investment, jobs, degradation of industrial and agricultural spheres pushes people to the development of the service industry and trade, to labor migration to the big cities, and social mobility. It is sufficient to note the high level of social and economic infrastructure: electricity, gas, roads, fiber optic lines, public transport, landscaping. There is a stable mobile communication, satellite TV, Internet access. However, rural inhabitants are experiencing social fatigue. They complain constantly about the lack of funds, the futility of life in rural areas. Many inhabitants are focused on internal migration, employment, education, and career in the middle and big cities. Key resources are upgrading a new economic policy of the local authorities, effective budget and private investments, solidarity of local communities, and of course, the willingness of local people to the medium-and long-term investment in yourself and in the development of their area.

Creating an image of «Victim» As a Way of Creating Controlled Conflict Situation

For creating controlled conflict situation and for finding (appointing) an “enemy” often an image of “victim” is being created, meeting goals and tasks of its creators.

An image of “victim” may be classified on the follow types: “victim-hero”, “victim-loss”, “victim as belonging”, “victim-tragedy”, “victim-country”, “victim-nation”, “multifunctioning victim” and other.

Constructed “victim” has to meet such characteristics of real victim as innocence and defenselessness. Therefore innocent children, old people, and women are appointed to the role of “victim”. Violence towards them provokes the tension of passions and promotes desired public opinion.

Process of construction an image of “victim” includes the following steps: actualization, “privatization”, heroisation, humanisation, institutionalization, historicisation (mythologisation), objectivisation, legitimization, sacralization, realization of “victim’s” image in the social and political practices.

Generated image of “victim” presuppose execution following functions in the real and potential conflicts:
- identification of people on the base of their attitude to the “victim”;
- creation of enemy image who is guilty attacking “victim”;
- consolidation of people to fight identified “enemy”;
- upbringing of “new heroes”;
- determination of people behavior in critical situation;
- image of “victim” is becoming the elements of culture.

Deliberately thrusting of “victim” problem generates disadvantageous situation for alleged “enemy”. Direct of potential oppressor’s image constructed, with necessity to oppose or annihilate it. The most important “enemy” characteristic is its moral threat for person, group and society. Next distinguisher of “enemy” is dehumanization.

Special role in the process of both “victim” and “enemy” image construction belongs to mass media and first of all a television.

Generated image of “victim” may be used as motive for intervention of “third party”, for deliver a “retribution blow” on a real or an appointed enemy.

Towards Emancipatory Ecological Cosmopolitan Commonism Via Positive Ecology in Tasmania, Australia

Adopting earth stewardship appears to be the fate of the human species; it is how we adapt to this challenge that will determine our survival and level of thriving. This paper will outline four areas of an approach to the challenge of earth stewardship. The first is to identify the emergence of a capacity for intentional cultural evolution, for which there exists a variety of indicators across the globe. The second is to sketch a theory of negative ecology, based on the process of dominance that has evolved over history, resulting in the failure of successive systems to equitably meet basic human and environmental needs. This has led to ever increasing social and environmental costs, and indicates the need for radical degrowth. The third is to outline a theory of positive ecology to guide progress towards what is tentatively called “emancipatory ecological cosmopolitan commonism (EECC)”, aimed at ending repressive domination. The equitable meeting of needs is given priority, based on “synergistic satisfiers”, with global cooperation the ultimate goal. The fourth area discusses community-based exchange initiatives (CBEIs) as bottom-up initiatives towards advancing positive ecology in the here and now. Analysis of the potential of some CBEIs currently underway in Tasmania, Australia to progress towards positive ecology and EECC will comprise the final part of this paper.

Women’s Overqualification: Why It Is Necessary to Account for Additional Individual Characteristics

Women’s labor market participation has been rising in the last years, the proportion of female university graduates increases constantly and ever more women are in executive positions. However, there is also evidence that women are more likely to be overqualified then men.

If a person is overqualified, in the sense that an employee’s level of training exceeds the job requirements, parts of the human capital lie idle. This could not only have negative consequences on the individual level, but also be costly on the social level. Current research on overeducation focuses mainly on its magnitude and structure; oftten the discussions on explanatory factors are limited to only one dimension - such as gender or migration status. But in light of economical, political and cultural globalization that increases societal heterogeneity, it is obvious that the emergence and reproduction of social inequalities cannot be reduced to only one dimension. In the study of social inequalities it is important to consider that people are always part of several social groups at the same time. Therefore, it can be supposed that for instance female immigrants face different risks of being overqualified than male immigrants.

In the presentation I will focus on this research gap. Based on the concept of intersectionality I will discuss the mechanisms of interaction of gender, migration status and social background in the context of overqualification theoretically.

Using data from the German Socio Economic Panel, a nationally representative household panel study, I show the effect of gender on the risk of being overqualified as itself and in interaction with the other individual characteristics. I will respond to the question how gender inequality on overqualification varies with other social categories.

Construction of Knowledge Around Risk and Regulatory Practices Among Pipeline Industries in Australia

This research assesses the gas pipeline industry in Australia in relation to risk, regulatory practices and its comparatively strong safety record. It may be held as an exemplar to examine: how is knowledge of industrial risk in the Australian pipeline industry constructed and performed by regulators? In tackling the question, this research takes discourse analysis combined with a semiotics of materiality Actor-Network Theory approach; giving new emphasis to non-human entities (e.g. gas, risks, techno-measuring devices and regulatory apparatus) interacting with actors (e.g. regulators, company safety officers, workers and communities) in generating knowledge-power and actions around the regulatory process of governing industrial risks from hazardous industries. The entry point is technical-informational regulators, assumed to have good risk-management knowledge. The research explores three relationships among these entities. First, relationships between regulators and non-human entities: e.g. how regulators develop their knowledge-power and take their actions influenced by a legal concept (as low as reasonably practicable – ALARP); and how regulators interpret their responsibility in the process of hazard identification and assessment? Second, relationships among regulators, companies and non-human entities (e.g. a concept of responsive regulation) are considered: how do regulators exercise their discretion either to support or command the companies? Third, relationships among regulators, companies, workers, the public and non-human entities are assessed; e.g. how do regulators perceive the roles and participatory actions of workers and the public in breaking regulatory capture, balancing power, and managing industrial risks? The findings may reveal inconsistencies hidden in processes, leading to a better understanding of how to manage, govern and mitigate risks and improve regulatory practices and effectiveness.

Organization, Identity, and Transnational Citizenship: Mexican Indigenous Migrants in the United States

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Transnational migration challenges the congruency of identity, citizenship, and state territory, because transmigrants identify with their communities in countries of destination as well as origin, and practice citizenship across national borders. The question of transnational identity and citizenship is all the more important when migration involves members of indigenous groups who are ethnically discriminated against politically and economically marginalized in countries of origin and in their adopted countries. How do indigenous migrants negotiate transnational citizenship? Based on the data collected from my ethnographic research in Los Angeles, I argue that indigenous migrants from Mexico’s Southern state of Oaxaca negotiate citizenship through a diverse network of migrant organizations which open wide transnational social spaces to reconstruct the boundaries of ethnic and local membership and belonging. In contrast to Mexican mestizo migrants, they established issue-based migrant organizations in Los Angeles – such as business, religious, or educational organizations – above the level of hometown associations and state-based federations to claim precise rights for indigenous people as workers, believers, or students. In doing so, they collaborate with various political institutions, businesses, churches, and other organizations on different levels – local, state as well as national – in the United States and in Mexico. In other words, pan-indigenous identity and transnational citizenship emerge not only in political response to ethnic discrimination and social hostility, but also cooperation and support in transnational spaces.

Challenges for Teachers and Pupils on a Vocational Program

This paper analyzes teachers’ views on how a good mechanic should be, and how the teachers are mobilizing students to become mechanics through instruction and practice. In another social landscape – before marketization, post-industrial transformation and neo-liberal forms of governance has become a part of the public educational system – a common practice were that students established a kind of counter-culture in schools; Why should I study while I am going to be an auto mechanic? Today teachers in the vehicle and transport program partly face a new school logic where they have to deal with pupils that have another approach to education. - Why should I study, I’ll still do not want to be an auto mechanic? Previously the students were to a high extent culturally self-motivated, but nowadays the teachers has to become a car mechanic seem to have changed.

My PhD project is linked to a larger research project that deals with issues of multicultural incorporation and school achievement. My contribution to the project concerns an ethnographic study in a vocational high school on a vehicle program, where there are mainly boys with immigrant backgrounds from heavily segregated areas, present in the classroom.

The paper contains an analysis of the symbolic boundaries that structure the auto mechanic profession and how these boundaries are expressed by teachers and industry representatives. It also describes how teachers in the vehicle and transport program mobilize students to the mechanic profession both by their teaching/pedagogy and use of social networks within the car industry.

Social Transformation and the Memory in a Postwar Society: the Case of Kosovo

This paper is based on two qualitative research projects conducted ten years after Kosovo exodus, and the dramatic changes related to the war, social organization, environment, daily life, and value system. The first one is “Memory vs. Forgetting” (2009), and the second one is “Socio-cultural Changes in Postwar Kosovo” (2010). Both conducted by the Department of Sociology in the University of Pristina. The data show very interesting aspects of collective memory and human experiences during the dramatic events and the general social transformations. The way how people remember the past, how do they perceive the present, and what they are expecting from the future is important not only for Kosovo society, but for the entire humanity.

The focus of our research is the period after 1999. This period is important in two senses. First, in terms of social change, this period is important because three international missions were deployed in Kosovo and the country has declared its independence since. Second, from the aspect of social organization, it is the period of creation of the self-administered institutions, and the development of the overall transition. The structural changes affected the culture, and the system of values in Kosovo society to a great extent. This period is of a particular importance, because it signifies great changes in lifestyle, the transformation of values and memory patterns and practices.

Research in the field of collective memory and social transformations requires very precise methodological approach. Each of the research projects has included 50 in-depth-interviews, and visual elements collected in the field, such as pictures and video materials. The data show that people’s relationship are very strong not only to the family and the homeland, but also to physical objects, tools, pictures, books, souvenirs, symbolic values, plants, animals and the environment.

Explaining Differences in Fertility and Marriage Expectations of Adolescents of Native and Immigrant Origin in Spain. The Role of Socioeconomic Status and Ethnicity

This paper aims to examine aspirations and expectations of adolescents in Spain with regard to family formation patterns, using survey data collected in secondary schools in Madrid. We are interested in the variability of these preferences across generations and between children of immigrants and their native peers. We look at fertility and marriage expectations to account for varying cultural backgrounds and for acculturation and/or integration processes. Furthermore, differentiated expectations of fertility and marriage tempo and quantum among children of immigrants and natives might be an indicator for segmented assimilation with regard to their or their parents’ socio-economic status.

For the empirical analysis of this paper we use survey data of some 2,600 adolescent pupils and 1,150 parents. About half of the students and parents are of immigrant origin. Besides aspirations and expectations linked to family formation processes, the survey provides information about parents’ labor situation and their educational levels, variables that are used as a proxy for their socio-economic status. To complement the survey, contextual data will be included, adding information on origin countries’ actual fertility and marriage behaviors and the ethnic composition of the neighborhoods in Madrid where the youths live.

Multilevel models are computed in order to account for variations within schools and between schools and to disentangle the complex causal process that determines adolescents’ aspirations and expectations. First descriptive results indicate that adolescents’ expectations reflect actual cross-country differences in age at first marriage and first birth.

Most theoretical approaches and empirical studies in this field concentrate on the U.S. Focusing on Spain as a relatively new immigration country can give important new insights into another migratory setting, which may be valid also for other (European) immigrant-receiving countries.

Producing the Collective Subject: Anarchist Practices at the People’s High School in Buenos Aires

This paper analyzes the experience of a “people’s high school” in Buenos Aires, Argentina, and the ways that it engages with anarchist-inspired practices and ideas. In 2001, Argentina experienced a political and economic crisis that gave rise to hundreds of social movements opposing the neoliberal status quo, including “movements of unemployed workers” (MTDs) and factory takeovers. These 2001 movements encompassed much experimentation with the idea of social movement itself, as they abandoned the old political party structures and incorporated social relationships into their political agendas. While many such movements have since dropped their autonomist orientations in favor of aligning themselves with Kirchnerism and the presidential administrations since 2003, other movements remain staunchly independent and committed to alternative models of social change (referring to themselves as part of the “independent left”). One such organization, the people’s high school (bachillerato popular) of the MTD Barracas, uses a non-hierarchical structure and consensus-based decision-making as one of the primary vehicles for organizing grassroots social change within the movement and the neighborhood. Based on a year of participant observation, I examine how the movement enacts these anarchist organizational forms. I argue that the successful outcome of such organizational practices is the creation of a collective subject, which is only produced at the school when these structures are combined with meaningful emotional interactions among activists. Thus this paper sheds new light on how and why some uses of consensus seem to fall flat or collapse into frustrating bureaucratic formulae, while other movements succeed in using such anarchist principles to meaningfully integrate participants into decision-making processes. Within a context of marginalization and oppression in Argentina’s shantytown, the people’s high school is using anarchist practices to create alternatives to neoliberal capitalism.
Human Rights and Humanitarian Relief: The Organizational Mediation Of Ideas In The Global Arena

In talk of the “international community”, many commentators assume that human rights work and humanitarian relief are pulling in the same direction. Others see human rights and humanitarian relief as two fundamentally different modes of engagement. What both of these approaches share is a focus on the content of ideas. This paper examines the relationship between human rights and humanitarian relief in the international arena from the perspective of the sociology of practice and the sociology of organizational fields. Since the 1970s two separate trajectories of practice have emerged – one centred around human rights and one centred around human rights. Based on interview research and document analysis, I examine how professionals in humanitarian relief organizations use the concept of human rights. In the past 15 years, they have used the language of human rights more and more, but the impact this language has had in humanitarian work has been mediated by the practical constraints and incentives of the humanitarian field.

Rethinking the Theory of Social Becoming: For a Humanistic Turn

According to P. Sztompka (Society in Action: A Theory of Social Becoming, Cambridge, 1991), the modern world is in a state of becoming that occurs in the context of unfinished structural and functional development. As a result social and cultural progress of different ambivalences within a culture. He worked out a new type of sociological imagination the essence of which is reflexive thinking about social becoming.

Since that time the socium has become even hypercomplex: there appeared “normal accidents” (Ch. Perrow), climate change as well as new risks, vulnerabilities and social turbulences produced by human agency (J. Urry, U. Beck). Taking into consideration these realities of new catastrophism I argue for a “humanistic turn” in sociology, whereby societies should be examined through the patterns and character of their complexity-dependence and human agency-consequences. This implies still a newer type of sociological imagination based on the synthesis of social, hard and humane sciences. The methodological instruments of this type of sociological imagination include both non-linear and humanistic aspects. Thus, I propose a non-linear and humanistic sociological imagination that deals with the acceleration of socio-cultural dynamics and globalization (R. Robert-son), synergetically takes into consideration paradoxes, risks, and dispersions of socium, searching for new forms of humanism, based on men’s existential needs.

The notion ‘praxis’ should be rediscovered: it should mean humane praxis - humanistic creative agency, the main aim of which is to preserve the human capital of all the generations and to maintain the balance between scientific, technologi-cal and humanitarian work as two fundamentally different ways to deal with human capital. The main aim of which is to preserve the human capital of all the generations and to maintain the balance between scientific, technologi-cal and humanitarian work as two fundamentally different ways to deal with human capital.

Taking into consideration these realities we have proposed a network model of the human capital that is adequate to the urgent need of a humanistic component in the human capital.

There appeared new vulnerabilities to the network human capital. Until recent-ly in the history of mankind in the implementation of modernization the ques-tion about the humanistic ways and means to achieve the goals was not even discussed. Any pragmatic and rational intentions by themselves do not lead to prosperity, harmony, peace, if they do not provide the production of humanism, its penetration into social institutions. The network human capital should be managed on the basis of some fundamental requirements: management should be based on the form of a civilized and humane way of the interactions people; it should take into account the non-linearity of the human capital formation, dynamically complex causal relationships, the factor of social and climate turbulences; we should mind the latency of the formation of the human capital, that is - unforeseen and unintended traumas lead to different ambivalences in the action of human agency. It is necessary to consider the delayed hazard as derived from the scientific research and innovation: the effect of “normal accidents” should be extended not only on scientific and technological innovations but also on economic and political spheres, as well as on the processes of medicalization, urban design, new information technologies, tourism, fashion, diet etc.

WG01-895.1

KRAVCHENKO, SERGEY* (Moscow State University of International Relations, social7@yandex.ru)

Vulnerabilities to the Network Human Capital

The content and, therefore, the conceptual interpretation of the human capital is multifaceted and many-sided, depends on the historical time, cultural space, nowadays mainly - on the conditions of becoming complex socium, its “normal acci-dents” (Ch. Perrow), social and climate turbulences produced by human agency. Taking into consideration these realities we have proposed a network model of the human capital that is adequate to the urgent need of a humanistic component in the human capital.

There appeared new vulnerabilities to the network human capital. Until recent-ly in the history of mankind in the implementation of modernization the ques-tion about the humanistic ways and means to achieve the goals was not even discussed. Any pragmatic and rational intentions by themselves do not lead to prosperity, harmony, peace, if they do not provide the production of humanism, its penetration into social institutions. The network human capital should be managed on the basis of some fundamental requirements: management should be based on the form of a civilized and humane way of the interactions people; it should take into account the non-linearity of the human capital formation, dynamically complex causal relationships, the factor of social and climate turbulences; we should mind the latency of the formation of the human capital, that is - unforeseen and unintended traumas lead to different ambivalences in the action of human agency. It is necessary to consider the delayed hazard as derived from the scientific research and innovation: the effect of “normal accidents” should be extended not only on scientific and technological innovations but also on economic and political spheres, as well as on the processes of medicalization, urban design, new information technologies, tourism, fashion, diet etc.

Bargaining the „Human Rights“ of „Human Resources“ – Unions and NGO-Networks Advocating Precarious Migrant Workers’ Interests in Japan

Taking the debate concerning recent immigration policy changes, focusing on the so-called Technical Intern Training Program (TITP), as case study, this paper challenges the assumptions about the labor market and the labor movement in Japan. While civil society in Japan has often been portrayed as apolitical and service oriented, being strong in producing local “social capital” but weak in generating “advocacy” on the national level, the labor movement has been described as politically domesticated and oriented towards balancing interests of big companies and their core staff, organized in enterprise unions. As these generalizations are grounded for a great part of the scene, they still ask for qualification, because they obscure a relatively small but growing and significant portion of organization of and bargaining for workers interests in Japan. Irregular employment and migrant labor is especially prominent in Japan’s many small and medium sized enterprises (SME). The unionization of employees in SME through individual membership unions, that has been fostered in the 1970 by the former national union center Sōhyō, has since the 1990s formed the basis for migrant and irregular workers organization in unions in Japan, and as further become the core of new constellations and alliances in civil society, which played an active role in discussions leading to immigration policy reforms. Thus it was not the Japanese civil code or the so-called NGO-law, but the Labor Standards Act (LSA) and the Labor Union Act (LUA), which formed the legal framework for a vibrant civil society in Japan, by providing rights of organization and collective bargaining for precarious migrant workers, and thus enabled political advocacy.

Not No Place: Fragments of Johannesburg

Not No Place is a collage of visual and written fragments on Johannesburg’s historical, archivial, found and self-generated. The book is the result of documenting and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, weaves fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of U-topia). A montage combining photographs, drawings, archival material and texts, it alternates between the mode of collector, witness, observer and author, taking into account the numerous representations of the city in historical writing, urban theory, film, media and fiction. Not No Place presents a collection of moments in the city’s complex history, its contemporary spatial realities as well as its future projections.

Bettina Malcomess and Dorothée Kreutzfeldt speak to their visual processes and practices informing their book-length investigation into Johannesburg, Not no Place: Johannesburg, Fragments of Spaces and Times. This intriguing and beautiful book is by no means an official biography of the city – it reads more like a richly illustrated scrapbook of ideas and reflections part made up of quotes from a multitude of sources and part made up of the authors’ personal narratives and ruminations on topics; the subheading Fragments of Spaces and Times captures it well. It is a peripatetic amber through the history and physicality of Johannesburg, stumbling into recurring characters such as the Carlton Hotel and Nongoloza.

Study of Language Use and Language Planning in Education in the South Asian Multilingual Context from the Point of View of Educational Linguistics

Language Problems of multilingual countries, especially those in South Asia differ only in quantity rather than quality (Ferguson et al, 1969). Due to the heavy impact of colonization and political power imperialism of the colonial powers – the role of languages in these nations starting from the 15-16th centuries showed drastic changes especially in the areas of education and that too in the use of languages as media of instruction.

Although there were a number of problem due to language use in general, the problems in the domain of education were considered as more crucial and needed to be tackled in order to achieve literacy standard, formal schooling and still later higher and technical education.

Most of the nations in this region are multilingual on the hand and termed as different languages on the other. Languages like English due to the power and dominance started playing a major role at the national / international though they were bilingual or multilingual in actual practice, there existed only a monolingual supremacy in education.

In many of these nations local / nature languages were not given any importance at the national international. They were treated under the banner ‘vernacular languages’, and never used as first languages or medium of instruction even at the international level of school education. This kind of dominance controlled the uses of native languages in education and thus the natural choice was only the colonial languages of power and supremacy. Even after the independence of these nations, the situation prevailed then favored the colonial languages like English.
pleated) and thematic interviews (17 hours of recorded materials). We argue that the power dimension of the linguistic choices among EU bureaucrats is especially important, since as Mamadouh (2002) observes: Language(s) regulate access to political, economic, and cultural resources. Language matters to access the supranational political arena (for example, to acquire a position in an EU institution or a policy network), as well as to control political representatives and civil servants at the EU level.

The findings indicate that although multilingualism appears on various levels in the different social contexts investigated, all of these contexts are heavily dominated by French and English. It also appears that in their professional life, our respondents are highly aware of the relationship of language(s) to power and they prefer the usage of more power-neutral language policies even if this comes with the cost of mutual intelligibility. It also seems that the current availability of some of the alternative languages used in the Brussels context might be somewhat more diverse as compared with political status/historical reasons than with practical considerations. Yet, the findings imply that multilingualism plays a less significant role in the social and working lives of Brussels based civil servants and lobbyists than previously assumed. Furthermore, the respondents' social identities are rather influenced by new signifiers related to economic globalization and competition and their institutional positions rather than their linguistic backgrounds or the multilingual practices they take part in.

“I Hope to Muddle through until the Retirement” - the Aging Workforce in Demanding and Dangerous Jobs

The paper discusses the increase of physical and mental challenges for older workers in various exceedingly demanding and dangerous occupations, typically in police and military force, fire brigades and prisons (wardress) but also in aviation (pilots) and transport in general (bus drivers, machine-minders, traffic controllers, railway operators) as well as in heavy industry (mining) and - though it may seems strange - in performing arts (ballerinas). Slovenia, an ex-socialist country that has joined European Union in 2004 is taken as the case.

Firstly, the challenges are identified through combination of interviews, group discussions, and questionnaire with relevant workforce representatives. Secondly, the obtained testimonies are compared among professions and between generations who underwent socialist and transitional (manly market driven) period respectively, to identify similarities and differences in challenges. Thirdly, the problem is approached from social policy point of view to demonstrate the inefficiency of the latest changes in the Slovenian pension system regarding demanding and dangerous jobs. Finally, the state of affairs is addressed in the framework of changes the society underwent in the last twenty-five years, including liberalization of economic and political system, privatisation, Europeanisation and globalization, as well as the influence of global economic crisis and austerity measures, that altogether lead to redefinition of workforce position in general, to chaotic and eclectic transfer of responsibilities regarding retirement security from state, state and companies to individuals. The individualisation of risks has serious consequences for quality of work and working conditions of workers whose responsibilities for decent retirement and satisfactory pensions are severely reduced.

*Testimonies and evidence were collected as a part of a research project, commissioned by consortium of Slovenian Unions Associations (Alternative and Free Trade Unions), Ministry of Labour, Family, Social Affairs and Equal Opportunities, Chamber of Commerce and Norway Grants found.

Korean Environmental Sociology: History and Characteristics

This article aims to analyze the history and characteristics of Korean environmental sociology since the 1990s. Korean environmental sociology has been developed since the 1990s when environmental movements and environmental awareness started to proliferate nationwide. The Korean Association for Environment Sociology which was founded in 2000 has organized theoretical and empirical research and has published Academic Journal ECO since 2001. Seo-jae Lee summarized that Korean environmental sociology is participation, problem solving, and field research oriented. Sun-jin Yun analyzed that sustainable development, ecological democracy, oil-spill disaster, nuclear waste dump site, environmental justice, and so on are key issues in Korean environmental Sociology.

Korean environmental sociology has the following theoretical and empirical achievements. Firstly, it introduced ecological paradigm and tackled the limitations of anthropocentric sociology. Secondly, environmental sociologists raised environmental justice and inequality issues and accumulated research of environmental and ecological movements. Thirdly, they tried to develop theory and policies of ecological democracy beyond anthropocentric democracy. Fourthly, they tackled the limitation of nation state and economic growth model and tried to develop alternative state, local community, global governance and development model. Korean environmental sociologists have focused on not only analyzing environmental problems, awareness, movements, and policies status quo but also suggesting new theoretical framework and alternative society model.

An Inter-Cohort Comparison of Intra-Cohort Social Stratification: How Do Cumulative Dis/Advantages Evolve Across Cohorts?

The aim of our paper is to analyze trajectories in hourly wages between the ages of 30 and 50 for five different birth cohorts, using the PSID data. More precisely, we focus on processes of intra-cohort stratification by tracing patterns of income as individuals age. Our analysis is informed by the cumulative dis/advantage hypothesis as a process of intra-cohort stratification. Using growth curve models, we seek to describe and explain the patterns of income stratification within and between cohorts. We hypothesize two key patterns: Simple inter-individual and path-dependent post-individual divergences. Simple inter-individual divergence is indicated when the relation between initial hourly wage and its slope over time is positive (in contrast to convergence, where this relation is negative, and stability, where there is no relation between initial hourly wage and its slope over time). Path-dependent inter-individual divergence is indicated when hourly wage differences between men and women, or between whites and non-whites, increase as individuals age. Our analyses will reveal if the patterns of
wage divergence over the life course are constant across cohorts, or whether the extent and form of wage divergence is shifting over time.

The Joint Impact of Paternal and Maternal Parenting Styles on Children’s High-School Academic Achievement in Taiwan

The present research used data gathered by Taiwan Education Panel Survey (TEPS) in 2001 and 2003 to explore how fathers’ and mothers’ parenting styles jointly influenced their children’s academic achievement in junior high. Using latent class analysis (LCA), the research uncovered the same four parenting styles for both Taiwanese fathers and mothers. These four parenting styles are consistent with parenting typology often discussed in the literature and can be labeled as authoritarian, authoritative, permissive, and neglectful. Since the majority of Taiwanese children lived with both biological parents and not much research has been done to understand how both father’s and mother’s parenting styles jointly influenced their children’s development, the research further used LCA to construct 16 joint parenting styles to investigate how these styles were related to children’s academic achievement. The research found that children with both parents adopting the permissive style would have the best academic performance in junior high. Past studies have indicated that authoritative parenting would be conducive to good academic achievement. The present research showed that when one of the parents was authoritative, for their children to perform well in junior high, the other parent should be more permissive. In other words, in the traditional Chinese view of parenting, there should be a combination of being “yan” (strict) and being “tsr” (kind). The research further found that if paternal parenting was authoritative and maternal parenting was neglectful, this type of joint parenting style would have the most negative impact on their children’s academic achievement. In short, the findings of present research clearly demonstrate the importance of understanding the joint impact of paternal and maternal parenting on their adolescent children’s development in Taiwan.

Renaisance of Ethnicity? Self-Identifications of the Second and Third Generation of Algerian Immigrants in France

The paper presents the results of an empirical research on the self-identifications of people belonging to the second and third generation of Algerian immigrants in France. The aim of the research was to investigate in which situations the Frenchmen of Algerian origin (FAO) feel included and in which excluded from the various collectivities, eg., collectivity of the Frenchmen, of the Algerians or of the people belonging to the other important social (not only ethnic or national) categories. The choice of FAO stemmed from the fact of their strong, connected with national economic advancement, ideas about English in globalization and English is indeed observed in globalized marketplaces and transnational companies who were assigned to work in China, Korea, or Thailand. Semi-structured interviews revealed that for workplace communication, Japanese was predominately used in China and exclusively in Korea, whereas English was exclusively used in Thailand. Almost all interviewees developed translative competence and use was conceptualized as a local practice in order to fulfill daily survival needs (Blommaert, 2010), whereas a couple of workers developed a professional level of Mandarin and used it extensively for work.

Tokyo as No. 4: A perspective from World City Ranking

Tokyo has the fourth largest GDP in the world and is the second most populous worldwide. It is also the world’s third largest financial hub. However, this impressive growth did not last long. When Tanase studied abroad in 1970’s, he majored in sociology and was mentored by Parsons. So Tanase was clearly influenced by Parsons in his early works and tried to develop or modify Parsons’ theory. But after that he rarely mentioned Parsons and repeatedly referred to normative theories such as critical legal studies. So lately Tanase has been considered a postmodern theorist in Japan.

Local Responses to Increasing Vacant Houses in Tokyo

Since the 1960s, a shortage of lodging in city centers has led to high prices and the development of suburban housing estates. The problems of aging suburban populations are attracting considerable attention in Japan, a society of great longevity. The decline in mobility among elderly homeowners is a main problem in aging suburbs because an aging population and the accompanying social problems have been an area of concern. Housing in Tokyo suburban areas is predominantly single-family houses in suburbs. We pay attention to the influence of local regulations and their ambivalent attitude towards the suburbs of the French cities which they are very often identified with in the context of riots erupting there every few years. The research further found that if paternal parenting was authoritative and maternal parenting was neglectful, this type of joint parenting style would have the most negative impact on their children’s academic achievement.
These findings demonstrate historical and linguistic relations of power that intersect with practical considerations. Specifically, the language choice seems to be implicated in a colonial legacy reflected in the linguistic hierarchy (e.g., Japanese vs. Korean or Chinese) and the commodity value attached to Japanese as well as pragmatic factors related to linguistic and orthographical proximity. Moreover, the fact that the interviewees were selected by each company reveals a particular entrepreneurial habitus or lingua-cultural dispositions expected for transnational workers. The study problematizes the neoliberal ideology of the promise of English and provides educational implications.

Conflict Management in Prostitution (性活=s"Seikatsu") — the Structure and Meaning of Pluralistic Justice

"Conflict management in prostitution" have some meanings especially from the perspective of law. They are also concerned with their own viewing. In Kyushu, there are also different ideas depending on the situations. The meaning for female who are working as a prostitute (I call them normally as "性活=s"Seikatsu-syaa", sex-practical use person) is protection or any system which will help them.

This presentation will try to make clear the "real" situation of conflict management in prostitution (I call it normally as "性活=s"Seikatsu", sex-practical use) . For it, I had researched for 101 prostitutes by interview directly in 2010 to 2013 in Nairobi, Mombasa, Malindi, Nakuru, Kisumu and Meru. The average time of interviews is 1 hour 30 min. And I did the research more than 500 for non-regular women and men as customer by questionnaire.

The research for prostitute have more than 100 questions divided into 5 sections, Experiences, Ideas, Ways, STI, and Personal Matters. I will describe here how prostitutes think about and get on with "law" even "living law" in prostitution. And more, I will try to find what is the way and meaning of conflict management for them through my research in Kenya. We can find the idea of original conflict management in prostitution through confrontation against "law" finally.

Actually, justice, even law is pluralistic in the field of prostitution. When we think the structure of prostitution from the perspective of conflict management, we feel something poor or strange to the normal-idea in prostitution field like that is legal or illegal. Because the "law" must be different for each in multiter prostitution structure. We need to understand the situation without any bias in first and discuss to pure structure of prostitution later. The idea of strategy of conflict management in prostitution will help it.

Sexuality and Refugee Status: Narrative Construction of Sexual Minority Asylum Seekers in the United States

Since the 1990s, sexual minority status has been recognized as a basis for refugee/asylum claims in certain countries. In the United States, as seen from the recent governmental guidelines for those specific cases, the so-called LGBT asylum is now drawing attention. This study attempts to analyze the issues of gays, lesbians, and transgenders who are seeking asylum in the U.S. from the perspective of narrative construction regarding to the dominant notion of sexuality in the host society appearing in legal procedures. Previous studies have shown that since the credibility and objectivity of those claims are legitimized within a US-centered notion of homosexuality, it marginalizes those individuals who fall outside of this paradigm. However, studies based mainly on legal documents have yet to develop an understanding of sexual minority asylum seekers' experiences and of the degree to which they follow the dominant picture of sexuality.

To further understand this phenomenon, interview research was conducted in New York City and the San Francisco Bay Area. In order to define asylum seeking process as a system which connects the concept of sexuality to past events in the narrative construction, this study explores the experience and perspectives of the asylum seekers themselves. Although, in most cases applying for asylum is taken as an option they find as a choice to legalize their status, a comparison of two different areas tells us that the strategies and discourse of their advocates and case-workers, lawyers, and ethnic communities, and practices of border crossing have impacts on how they form the narratives. For example, the asylum seekers in New York City tend to use human rights discourse while those in the San Francisco Bay Area do not. Instead, a common practice of multiple border crossing characterizes the latter as an actor within the asylum-migration nexus.

Gendered Innovations In Hospital Workforce Management: A Scoping Study

An increasing scarcity of health human resources in Europe calls for innovations in hospital management and workforce governance, yet policy interventions and measurements are mainly concerned with costs. In this paper we introduce an approach of 'gendered innovations' that brings both the gendered nature of the professional groups and their importance as the backbone of healthcare system into perspective. The aim is to explore gender-sensitive forms of managing the clinical workforce, especially medicine, and how this may contribute to both gender equality and sustainable health human resources. In terms of method, we draw on a scoping review of the literature and findings from a pilot study in a large German hospital. Here, the focus is on hospital doctors with particular interest in the situation during specialisation. The case study applied comprises data analysis of hospital statistics, expert interviews and four focus groups with (male and female) doctors working in different specialties and departments. We develop a conceptual approach that systematically links three strands, namely privatisation and organisational restructuring of hospitals, health human resources management, and gendered professional careers. There is increasing evidence that improving gender-sensitive work and career conditions and linking organisational and professional governance issues may help improving competition of hospitals for qualified doctors. At the same time, the opportunities of gendered innovations are far from being effectively in hospital management, despite an increasingly competitive hospital sector. Drawing on these findings and organisational settings, we suggest ways of translating gendered innovations into the day-to-day practice of hospital workforce management, thus furthering more efficient and sustainable workforce management and sustainability.

Mapping The Governance Of Care and Professional Development: A European Comparative Study

This article investigates the care sector through the lens of the sociology of professions. We introduce a dynamic approach that systematically links changes in the nursing professions and society at large with new modes of governance in healthcare. The aim is to explore institutional conditions that contribute to the development of an integrated professionalism and efficient health human resource management in the care sector. A novel contribution is the cross-sector and profession-minded approach that connects professional developments in nursing in hospital, primary and long-term care with governance arrangements. A comparative case study design is applied that focuses on western European countries using England, Finland, and Germany for an in-depth analysis. In terms of methods, we draw on public statistics, document analysis and other secondary sources. Three emergent patterns can be identified: (1) ‘constrained professional development’ was observed in the German corporatist and federalist/fragmented system.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
with overall high density and quality of healthcare services and concentration in the middle-range professions with a lack of upward institutional pathways; (2) ‘elitist professional development’ was found in the most central and lower segments; and (3) ‘integrative professional development’ emerges in the context of decentralist and universal governance arrangements in Finland, that foster expansions in both high-status segments and low and unqualified segments of nursing. In summary, the findings highlight connections between professional development and governance. This study that less skewed (African) level of professions, in order to achieve transformative potential, must be connected and backed up by (macro-level) health and social policy interventions.

Before we can even discuss democratic consolidation, at least three minimal conditions must be fulfilled, according to Linz and Stepan (1996). Beside those consolidated democracies should also fulfill several other conditions that have in scientific analyses not attracted such high attention than those minimal conditions. Among other conditions Linz and Stepan specifically stress the importance of economic consolidation. The proposed paper is going to analyze the challenges of democratic consolidation in the Central and Eastern Europe from the beginning of 1990s, when democratic transition began to take place, to most recent period, when consequences of global economic crisis hit the region. It is clearly evident from existing studies on beauty ideals that most former socialist countries have reached level of consolidated democracies; authors are testing the thesis that one of the reasons for that was also successful economic consolidation, which is in recent period suffering under heavy pressure of global economic crisis. The consequences of that can already be seen in various democratic consolidation measurements, like Nations in Transit or Human Development Index (HDI), where most CEE countries are regressing in last few years.

KUHONTA, ERICK* (McGill University, erik.kuhontac@mcgill.ca)

Is The Middle Class a Harbinger Of Democracy? Evidence From Southeast Asia

A vast body of literature claims that the middle class is a critical force for democratic transitions, democratic consolidation, and political stability. Yet, recent events in Thailand and in other Southeast Asian newly-industrializing countries (NICs), indicate that the middle class often challenges democratic regimes or supports authoritarian juntas. How should we reconcile these divergent views of the middle class? This article argues that an explanation for the behavior of the middle class in relation to regime-type must begin by looking at the state’s role in addressing the interests of the middle class. Where a state addresses the key concerns of the middle class – rule of law, economic development, and political stability – this class is unlikely to rebel against the state. Institutionalized states are most likely to satisfy middle-class interests, while paramilitary or clientelistic states are particularly vulnerable to middle-class rebellion precisely because they are unable to satisfy middle-class interests and values. A comparison of four South-east Asian NICs will thus show that middle-class support for democracy is highly contingent on the structural conditions in which they find themselves embedded.

Judging Bodies in Europe: Examining the Variety of Repertoires for Evaluating the Beauty of Male and Female Bodies in Six European Countries Using Visual Q-Methodology

Being perceived as beautiful is associated with many social and economic benefits, including advantages in dating and labour markets. In post-industrial European societies, “physical capital” is increasingly becoming a valuable asset, for men as well as women. Yet little systematic and inductive cross-national comparative research has been done on what is perceived as physical capital by people of different social backgrounds, genders and age groups. As a result, most existing studies on beauty ideals emphasize universal criteria of beauty evaluation inherent in human evolutionary psychology, or the homogenizing effects of beauty standards propagated by transnational media imagery and a transnational beauty industry.

In our study, using a structured sampling method, a total of 180 respondents in six European countries are asked to sort picture sets of a wide variety of both male and female bodies according to their own tastes. This is done in the context of semi-structured interviews in which respondents are asked about their ideas on beauty and the role it plays in their lives and social interactions. Through factor analysis, separate “taste groups” are identified on the basis of their sorting patterns, and their particular criteria for evaluating beauty interpreted with the help of their own comments.

The effects of gender, education, age and nationality on ideals of bodily beauty, are ascertained through regression analyses with factor scores, and systematic coding of the interview material. Furthermore, we investigate to what extent bodily beauty ideals are informed by moral or symbolic, rather than purely aesthetic, considerations. We predict, on the basis of the theories of Elias and Bourdieu, that less skewed level of professions, in order to achieve transformative potential, must be connected and backed up by (macro-level) health and social policy interventions.

KULCZYCKI, ANDRZEJ* (University of Alabama, andrzej@uab.edu)

Abortion Policies and Health Outcomes in Latin America: What Are the Relevant Lessons for Africa?

Both Latin America and sub-Saharan Africa have high abortion rates (generally above 30/1,000 women aged 15-44) despite overwhelmingly restrictive moral, legal, and social sanctions. Although data are limited, enough is known to examine how Latin American countries are making progress in negotiating the challenges posed by abortion and compare it with the situation in sub-Saharan Africa. This allows identification of relevant lessons for improving health and social outcomes in much of Africa.

Several decades ago, many Latin American countries had economic levels seen in many African nations today. They have since achieved better contraceptive practice and social outcomes, and are now witnessing declining rates of abortion, unsafe procedures, and related deaths. In contrast, Africa accounts for over half the world’s unsafe abortion-related deaths and abortion rates will increase unless unmet needs are more strongly addressed. We explore several promising steps for catalyzing present and future dilemmas.

We review how abortion policies have been changed recently in Colombia, Mexico City and Uruguay, their implementation and effects. Also, we investigate the effects of improved contraceptive practice and the social diffusion of simple interventions (including emergency contraception and misoprostol) across much of Latin America to reduce abortion.

These interventions are being sustained in the absence of legal change and strong social movements, and could potentially be implemented to strengthen the performance of African health systems. This could help overcome scarce resources and confusion about how to deal with abortion, as well as reduce inequalities in health and health care. We stress the importance of strengthening the evidence base, research-policy connections, health systems, and issue networks to articulate reproductive and human rights, health rationales, and to exploit policy windows. Such a coordinated strategic incremental approach may secure social change, support a stronger policy reform, and better outcomes in this deeply controversial policy arena.

State Family Planning Policies in the Islamic and Arab Demographic Giants: Does Indonesia Offer a Path for Egypt to Achieve below-Replacement-Level Fertility to the Benefit or Detriment of Women?

Indonesia is the world’s most populous Muslim-majority nation and Egypt has its largest Arab population. Both countries have similar overall and any modern-method contraceptive prevalence rates (61% and 58%) and levels of unmet need (12-13%). Fertility decline presently stall in both countries, but at a lower level in Indonesia than in Egypt (2.6 and 3.0 births/woman, respectively). In the mid-1960s, both countries established clinic-oriented national family planning programs with strong bureaucratic and financial support. However, state policies led to skewed method choice with each country relying heavily on a single reversibly-implantable intervention that accounts for 90% of contraceptive use, reducing choices for women. Also, each program each has recently hit trouble. Indonesian politicians have shifted their attention and resources away from family planning. Injections are increasingly offered by local midwives with strong incentives and by more private providers. Indonesia now has the world’s highest injectable use rate (32%), but reliance on long-acting contraception is weak. The Egyptian program has poorer informed choice, higher discontinuation rates, and heavier reliance on public sector sources now undermined by ongoing political turmoil. The IUD remains the most widely used method (36%), but 7% of women now use injectables, more than in other Arab states and possibly soon usurping pills as the second
most common method. We use survey data, documentary evidence, and key in-
formant interviews to examine these developments further. With certain caveats, the
Indonesian experience offers lessons for instituting more solidly founded con-
traceptive and population policies and for accelerating the path toward replace-
ment-level fertility in Egypt, notwithstanding its major societal turmoil. Increasing
injectable use can help meet demands on the fragile state health system, make
use of Egypt’s underdeveloped community-based channels, and may serve as a
catalyst for other Arab states to help them reach more sustainable population
and development trajectories.

Depression, Suicidal Ideation and High-Risk Behaviors Among
Underserved Youths in Central Mexico

Background: The staggering cost of depressive disorders and suicide on the
quality of life of patients and families, the increased mortality risk, and the high
economic burden demand our attention. There is evidence suggesting that en-
gagement in risky behaviors, development of negative habits such as using alco-
hol, tobacco, and drugs, and depressive disorders all begin during adolescence.
Further, substance use, in particular smoking and drinking, has been linked to
depression and suicide risk. The study aim was to evaluate the prevalence of de-
pression and suicidal ideation and identify predictors that could inform a preven-
tion program.

Method: Using a cross-sectional study design with a probability sample, 702
adolescents attended 13 urban high-income, 5 low-income, rural high school students in the cen-
tral Mexican state of Guanajuato were surveyed.

Results: Almost half (49.2%) of participants showed some level of depression
(CES-D >16), with 23.6% identified as suffering severe depression (CES-D >25). Lo-
gistic regression analyses indicated that controlling for financial status, symptoms of
depression were predicted by female sex, low self-esteem, risky behaviors, con-
fictive parent-teen relationships, and binge alcohol drinking. The same variables
with the exception of binge drinking predicted severe depression. In turn, suicidal
ideation was associated with depression, low self-esteem, high-risk behaviors, and
conflictive relationships with parents. A similar pattern of clustered behaviors
among teenagers has been reported.

Conclusions: Predicting and ultimately preventing depression is of enormous
public health significance. The findings can inform the design of interventions
to prevent this early pattern of depressive disorders and associated risk factors
among low-income, rural youth in Mexico and possibly in other contexts.

Urban American Indian Youth Religion, Native Spirituality, and
Well-Being: A Latent Class Analysis

Most American Indians (AI) in the United States now live in urban rather than
tribal areas yet little is known about their interconnected spiritual, religious and
cultural worlds. This presentation documents ways that urban AI middle school
students were involved with religious institutions and Native spiritual and cultural
practices, and assessed how these differences related to cultural identities and
risk and protective behaviors. Data come from AI youth (n=205, mean age 12) in
five urban middle schools in a southwestern USA metropolis. Latent class analy-
sis identified distinctive groups of youth according to religious affiliations, atten-
dance at religious services, adherence to Christian and traditional spiritual beliefs,
sense of Native spirituality, and involvement with spiritually significant Native
cultural practices. Five classes emerged. There were two Christian groups, one
attending Christian churches and following Christian beliefs, but uninvolved with
Native beliefs, spirituality, or cultural practices, and a nominal Christian group af-
filiated with but not attending church, and relatively unattached to belief systems.
Two groups followed Native beliefs and spiritual practices, one affiliated with the
Native American Church (NAC) and another unaffiliated with any church. The fifth,
non-religious group, was unaffiliated, followed neither Christian nor traditional
beliefs, and was uninvolved in Native spirituality and cultural practices. ANOVA
indicated that the two Christian groups were higher in SES, had lived longer in the urban
area, had higher academic behaviors and better discipline, but also the most substance
use with friends. The two groups embracing AI spirituality (NAC, and non-NAC) had better school grades, more enculturation in tribal
language and strong AI ethnic ID, and the strongest bicultural orientations. The
non-religious group had the lowest scores on parental monitoring, closeness, and
supportive behaviors. Findings indicate the different pathways by which these AI youth blend Native and Christian religious beliefs and spiritual practices, and their consequences for well-being.

Marginalized or Empowered? Conflict Induced Internally Displaced
Kurdish Women’s Experiences in Turkey

This study is focusing on the conflict-induced internally displaced Kurdish
women’s experiences. There has been an ongoing internal armed conflict in Tur-
key since 1984 and one of the consequences of this conflict is the internal dis-
placement that occurred in 1990s. In the displacement process, women and other
family members were victimized. They did not only lose their homelands, but
they also had to struggle in the city centers with poverty and discrimination.
After they started to live in the city centers, women may become both mar-
ginalized and empowered. The aim of the study is to understand the situations
that lead Kurdish women to be marginalized and/or empowered in the cities to
which they have been forced to migrate. After the displacement process, which
is one of the major victimization processes for these women, some of them
may be trapped in ethnic and gender-based discrimination and may become more
marginalized in the city centers. But marginalization and empowerment are not
fixed categories and there is always a possibility for these women to transform their
marginalized position into empowerment. By political engagement, working
outside home and/or being head of the household these women may break the
cycle of their marginalization and becomes empowered in the city centers.
The future.

The current demographic shifts and population aging are two of the most critical factors affecting the quality of life of its participants. This paper is analyzing how these car festivals provide leisure to its participants which further improve the quality of their life through mental well-being. Being Nag Nathi Pur Pi Ra Tron (Orissa, India), Mysor Rath Mahotsav Yatra, Mysor (Karnataka, India), and Nan-Da Devi Raj-Jat Yatra in Uttarakhand, India etc. are some of the famous religious car festivals in India. Thousands of people participate in these religious car festivals to get relaxed from day to day stress. Nan-Da Devi Raj-Jat Yatra is one of the most celebrated car festivals of Uttarakhand in India, taking place once in every 12 years during August-September for 19 days. A trek of 280 km remains jam-packed with the experience of nature, flora and fauna, fabulous culture and let one have a glimpse of the Utrakhand Himalayas. Last car festival was taken place in the year 2000 and more than 50,000 people had been found taking this car festival.

Well established indicators of quality of life are used to explain the results in this study. Simple statistical and participatory tools are used to analyze the information and data gathered from different primary and secondary sources. Case studies are also used to explain the experiences of the participants of the car festivals.

Car Festivals (Religious Yatras) in India: A Dimension of Leisure Tourism (A Case Of 'Nan Da Devi Raj-Jat Yatra' In Uttarakhand, India)

This paper is about the car festivals (Religious Yatras) organized in different parts of India and their impact on the quality of life of its participants. This paper is analyzing how these car festivals provide leisure to its participants which further improve the quality of their life through mental well-being. Being Nag Nathi Pur Pi Ra Tron (Orissa, India), Mysor Rath Mahotsav Yatra, Mysor (Karnataka, India), and Nan-Da Devi Raj-Jat Yatra in Uttarakhand, India etc. are some of the famous religious car festivals in India. Thousands of people participate in these religious car festivals to get relaxed from day to day stress. Nan-Da Devi Raj-Jat Yatra is one of the most celebrated car festivals of Uttarakhand in India, taking place once in every 12 years during August-September for 19 days. A trek of 280 km remains jam-packed with the experience of nature, flora and fauna, fabulous culture and let one have a glimpse of the Utrakhand Himalayas. Last car festival was taken place in the year 2000 and more than 50,000 people had been found taking this car festival.

Well established indicators of quality of life are used to explain the results in this study. Simple statistical and participatory tools are used to analyze the information and data gathered from different primary and secondary sources. Case studies are also used to explain the experiences of the participants of the car festivals.
Findings of the study reveal that leisure tourism enhances quality of life by increasing feelings of competency and relaxation, distracting from difficulties, as well as enhancing social inclusiveness and support. Leisure tourism also results in improved mental wellbeing through associated meaningful engagement, self-expression and creativity. Participation in it is considered as a life time experience. This experience not only provides leisure during the event but also provide happiness in memories.

The protests against the politics of crisis in both the US and Germany are structured along similar patterns: The Tea Party Movement in the US and the right-wing Euro-criticism in Germany stand in opposition to the Occupy Movement on both sides of the Atlantic. These polarized spectra not only deploy parallels in their political messaging, but also in their socio-demographic composition. Beyond this opposition, all four poles seem to be united by a deep mistrust towards their national governments with a focus on domestic socio-economic issues.

The paper uses the concept of the socio-spatially determined Habitus, bridging the gap between agency and structure: resonating with the messaging of the respective protest-mobilizations, but in turn also structuring and shaping the development of these very movements. Participant observations in meetings and protests, group discussions and interviews conducted with participants in all four movements are analyzed relying mainly on the hermeneutics of the sociology of knowledge to reconstruct the Habitus as a sedimented body of practical knowledge shared by the participants.

The paper seeks to contribute to the understanding of the development of the movements and the different inner and outer limits they encountered. Why did the Occupy Movement in different parts of the US and other countries follow such different trajectories after 2011? Why did the German counterpart to the Tea Party never gain comparable traction - despite numerous attempts and significant resonance in the media?

The analysis shows that the polarization of the national protests can be understood as resulting from the different ways in which social classes interpret the social contradictions sharpening in the recent years. While this dispositional schism is mirrored on both sides of the Atlantic, the diverging paths the movements took express the different ways in which the crisis affected the national economies.

Sowing the Seeds of Change: Shifting from Traditional Cropping to Cash Cropping-Some Illustrations from Western Himalayas

Around 10,000 years ago human being had started domestication of plants and animals, even before this period, people had been altering plants and animal for their own benefit by using other means such as fire-stick farming. With the changes in almost every sphere of life, agriculture has also undergone change particularly in developed and developing world, and has been characterized by enhanced productivity, the replacement of human labour to mechanization and the introduction of synthetic fertilizers and pesticides, selective breeding has changed the fate of agriculture round the globe and Himalayan states are not exception.

Present paper is based on primary study conducted in Chamba and Kangra districts of Himachal Pradesh. In the state agriculture contributes nearly 45% to the net state domestic product and about 93% of the state population depends directly or indirectly upon agriculture, moreover it is main source of income as well as employment.

The paper is an attempt to analyse the shift from traditional crops to cash crops which is based on primary data based research collected from two study districts from the state of Himachal Pradesh in India dividing two districts in four sub-districts and further in 30 panchayats (lowest administrative unit) and 73 villages and at least selecting three respondents from each village, 200 respondents have been interviewed to arrive at desirable results. People have shifted from traditional crops to vegetables, semi-culture and horticulture and earning very good income and experienced change in the amenities available in the household as well as their providing better living conditions. Study concluded with observation that at present, the seeds of change has sown and now the change is visible and people of the hilly region are changing traditional crops and shifting to cash crops.

KUMAZAWA, TAKUYA* (Japan Society of Sport Sociology, sd131012@g.hit-u.ac.jp)

The Diffusion of American Football in Japan from 1930's to 1950's

This research examines the diffusion of American football in Japan from 1930's to 1950's from the sociological perspective. The research question is why and how it diffused in Japan during the time. In general, Japanese-American relations during the time was tense because of Immigration Act of 1924, Manchurian Incident in 1931, Second Sino-Japanese War in 1937-1945, Pacific War in 1941-1945 and the occupation of Japan by GHQ in 1945-1952. American football diffused in Japan in these situations although it is one of the most conspicuous American cultures. Why and how did this happen? In my opinion, there are four main reasons. Firstly, at the beginning of 1930's, Nisei students from Hawaii and the west coast of America began to come and study in Japanese universities, and they started to play American football. Secondly, some Japanese politicians, diplomats, business people and the American Embassy staff in Japan supported Nisei students to play American football because they thought that it was useful for promoting friendly relations between Japan and America, or at least, for preventing Japanese-American relations from getting worse any more. Thirdly, the media like newspapers publishing companies also supported Nisei students to play American football because they thought that it had a potential to become popular content like baseball and help to sell their newspapers or magazines more. Lastly, because many Japanese people saw American football through American movies from the beginning of 1930s, American football had a grounding to be diffused. For example, about 20,000 people came and watch the first official game in Japan on November 29, 1934. In conclusion, American football diffused in Japan from 1930's to 1950's because four different actors shared their different interests through American football.

The Geographies Of Discontent

Majority of societies passed through various conflicts in their history. Horn of African societies entered new types of violent conflicts starting at the end of 19th century, which is continuing until today under different forms. Exceptionality of Horn of Africa is that Abyssinia (Ethiopia) was the only African Empire state, which participated in the colonization of Africa with Western European states at the end of 19th century. Compared to all participants of colonial powers of this part of Horn of Africa: Abyssinian conquest war was the longest and the bloodiest violent conflict according to historical empirical data. The territories of many nations were divided and became part of different colonial territories and different nations were forced to be part of the same colonial territory. The paper will discuss conflicts at different levels in the Horn of Africa: the conflict between state and ethnic-national identity in the Sudan and Ethiopia. The Ethiopian empire colonial character from the view of non-Abyssinia peoples, the problem of interference of the state in religion affairs of some groups in Ethiopia (e.g., Islam and Waaqefana (Oromo indigenous religion), geopolitical interests of foreign powers in the region will be the main points of the discussion. The role of Ethiopian state interest in Somali conflict will be one of the points of discussion of the paper.
Sociocultural Shocks In Cross-Border Marriages: A Comparison Between Chinese and Southeast Asian Wives In Taiwan

Along with the expansion of international trade between Taiwan and Southeast Asia, inter-ethnic marriages between Taiwanese men and Southeast Asian women have started from the late 1970s. Cross-border marriages between Taiwanese men and Chinese women have dramatically increased starting from the late 1980s after the Taiwanese government has changed the national policy. These new marriage patterns make cross-border marriages a significant phenomenon in Taiwan.

Based on the in-depth interviews with marriage immigrants from China and Southeast Asia, the author delineates their daily lives in Taiwanese families after they married. It is clearly that all these marriage immigrants experience sociocultural shocks when they have started their lives in Taiwan. The author notices that both Chinese and Southeast Asian wives wish to work on the job market and be economically independent but are restrained by the government policy. Both of them feel strange about the common arrangement in Taiwan to live with-in-laws. They also experience the unreasonable underestimation of their natal family's SES by their in-laws.

Only Chinese wives complain that their husbands never helped with household chores, and their mothers-in-law seldom helped either, and so they have to work like a household servant. Moreover, they are often in conflict with their mothers-in-law or husbands on the issue of child rearing. They are also fussy about Taiwan's limited living space. Most Southeast Asian wives, on the other hand, emphasize personal privacy and sanitation of living environment, but the real situations often contradict with what they expect. They also frown at the special diet their mothers-in-law prepared for them after they have delivered babies. They are especially angry about their natal mothers being looked down upon by their in-laws.

All the above mentioned sociocultural shocks in turn affect whether or not these foreign wives identify with their families in Taiwan.

The Movement of People's Politics in Democratisation Process in Thailand

This paper aims to explore the concept of people's politics and its application to the Thai democratic movement. Although Thailand became a democratic country more than 80 years ago (1932), the problems of inactive participation, political conflicts and political unconsciousness are still clearly seen today. The attempts to bring top down into bottom up democracy became a new approach in the new Thai Constitution (2007). Both the political development council and local organization council Acts have been established to support people's active involvement. People's participation has also been launched throughout the country. Both the best practices of people's politics in the political movement towards democracy will be examined in the paper. The grassroots' movement for human security, equity and opportunity will be studied as an example of the strengthening of people's politics in terms of deliberative democracy, civic education and public awareness. The roles of the people's politics movement through the works of Center for People's Political Development Center supported by King Prajadhipok's Institute in 48 centers/provinces during the last decade will be reviewed and investigated for the success of people's politics development in the future.

Constructing the Assessment Framework for Local Disaster Management Capability

Due to the increased magnitude and frequency of extreme climate events, increased population density and land-use intensity, disaster impact that humans need to face in the future can be foreseen as more severe and complicated. Disaster risk is typically conceptualized as a composite factor influenced by numerous natural and socio-economic factors. Coping capability is a key factor that influences not only the society's acceptance to disaster risk but also its potential to take related measures. It is important for a society (especially those vulnerable communities at local levels) to prepare itself so it is capable of responding to these natural, technological, and emergent threats more effectively. While there have been numerous studies and practices on assessing social vulnerability, few studies are emphasized on assessing a system's ability to manage disastrous incidents. Hence, one worthwhile inquiry is to explore the characterization and measurement of disaster management capability at local levels.

Structure and Specificity TRUST of E-Zines

Nowadays the Internet has globally changed mass communication. As a result 'civil journalism' has emerged. The urgent problem of trust in networking has become more actual. Media-trust defines relations in mass media communication with the using of material objects including electronic media and devices. Media-trust is a multilateral phenomenon. Its components: trust of the audience to mass media, trust of the mass media (team of journalists or one journalist) to his audience, or to a concrete reader (a viewer, a listener, a user). The user's status (regular, random, prospective and etc.) is an important factor of Media-trust. Media-trust is a function of the characteristics of mass media audience, characteristics of the audience and the characteristics of the communication process. The peculiarities social media is the social context ('the ideology of the time'), the form and type of information. In particular, the Media-trust importance as a whole and its components depends on the usefulness or uselessness of the information, of connection information to one or another area of subject's life and etc. Users' trust in e-zines is one of particular cases of media-trust, which is a result of three basic components integrated: trust to information, trust to journalist and trust to journalist. The integration of the referred components is constant and absolute, as trust in social information is impossible without trust in its source. The triad of these types of the interrelated trust has three aspects: information, perceptive and interactive. The validity of the conceptual model and the relationship of many media-trust characteristics have been confirmed in empirical study of Russian youth. The relationship trust to e-zines and intellectual, emotional and communicative respondent's characteristics has identified.

Trust, Loyalty, and Culture in Organizations

The trend in business is based on the idea that an employee is the primary resource of any organization, that sincerity, benevolence, trust and loyalty of employees is a major competitive advantage. The purpose of the study was to examine relationship between different psychological organizational phenomena, such as trust, loyalty, and organizational culture in organizations with different spheres of activity. Hypotheses were tested using survey data different organizations: publishing, nanotechnology, banking, PR, marketing. The results of comparative and causal analysis of different types of organizational culture have given evidence of all hypotheses. The results suggested that separate components of trust, loyalty and culture are related between each other. Organizational culture is related to organizational trust and employees' loyalty, i.e. different types of culture require particular combination of trust and loyalty indicators. Organizational trust is related to employees' loyalty, i.e. each component of organizational culture will be determined by the specific rate of each type of loyalty (organizational, professional, labor). Moreover differences of preferred and actual culture indexes are inversely related to overall level of trust and loyalty. The study carried out in a unique context of poor explored Russian market could provide further practical and theoretical insights and contributed to the understanding of the nature, development, and maintenance of trust, loyalty and culture in organizations. Yet, this understanding has not been fully translated to the business community in a way that encouraged the actions necessary to reduce the growing trust deficit. In-depth analysis of these efforts to build better practices for communication and employee involvement, along with strategies for reducing employee vulnerability and dependence. These efforts should be integrated into the cultural norms of the organization, where trust is a part of every interaction between employees.

The Sportification of Tai Chi and the Hegemony of Vision

The purpose of this paper is to enable a deeper understanding of modern sport through an examination of the sportification of tai chi (taijiquan) – its transformation from a folk tradition specific to local communities into a modern sport with global competition. While there is considerable literature on the sportification of tai chi (Li, 2008; Ryan, 2008; Zhang, 2010), this paper proposes to understand sportification as hegemony of vision (Levin, 1995) – the prioritization of the visible as the most important source of socially relevant meaning over what is perceived by other bodily senses. This was first made possible by the creation of the Simplified 24 Form in 1956 under the initiative of the New Chinese Government. Whereas traditional tai chi was, and still is, a martial art combined with internal “chi” cultivation techniques impregnated with Daoist philosophy, the Simplified 24 Form is sterilized of the martial, internal and philosophical aspects; it was rendered a standardized, easy-to-learn health exercise for the masses, demanding only the correctness of visible movements. This prioritization of vision enabled objective rules for competition, which systematically allocated social meaning to the visible body. While competition has contributed to the global popularity of tai chi, it has in turn also led to the neglect of aspects that were not subject to visual appreciation, such as the internal cultivation of “chi” and its philosophical implications. By drawing on data gathered by fieldwork in a tai chi class in Xinxiang City, China, light will be shed on the rich sensory experience that traditional tai chi affords. This relativizes not only sportified tai chi, but also modern sport itself, as an activity obsessed with the externally visible out of the whole of human sensory experience.

The Relations Between National and Global in Ukrainian University Rankings

In my presentation I want to analyze how national and global components are presented in the leading Ukrainian university rankings TOP 200 and COMPASS and, in manifest or latent ways, influence the contemporary vision of university mission. Being initially national educational institutions (with a certain specific internationalization of “national” during times of Russian Empire and Soviet time), after 1991 Ukrainian universities faced a kind of “double pressure” from the idea of nationalism and influences of globalization. How intersection between “national” and “international” is presented in the main criteria and indicators of these university rankings? Do rankings help to create new academic hierarchy in Ukrainian university education? How effective are university rankings as a tool for internationalization of our system of education? These are the main questions for my future presentation.

Emotional Infrastructure of Reconciliation

Analysis of several institutionalized reconciliatory actions in relation between Central and Eastern European nations - German, Polish, Ukrainian, Jewish, Lithuanian, Czech and Russian – is aimed making at excavating the basic emotional components underlying the success of reconciliation. This involves the discussion of emotions like guilt, hatred, forgiveness, penitence and love. The tolerance is usually assumed as minimal precondition for reconciliation but the ideal reconciliation is linked with the proactive approach, that involves the love of the neighbor. The failed attempts at reconciliation provide the cues for the answer as what is the form of love and dynamic of the hatred complex. This is then linked with the analysis of the rituals of reconciliation where the emotions are publicly communicated and displayed in the public spectacles. The basic contradiction is pointed as the ritualized reconciliation demands display of love emotion, the working infrastructure of tolerance is not emotional neither ritualized.

Contextualizing “Individuality”: Searching for More Flexible Definition

This presentation focuses on a concept of Kanjin (the contextual) coined by a Japanese sociologist Eshun Hamaguchi. Hamaguchi introduced this concept of Kanjin to overcome a commonly accepted view that Japanese are collectivists lacking in individuality. In such view, Japanese are described as self-sacrificing and group-oriented agents unable to act autonomously. According to Hamaguchi, however, such view of Japanese is helpsely biased because it sees Japanese society within the framework based on a narrowly defined concept of the individual. Hamaguchi insisted that the concept of the individual is so westernized that it cannot be applied to the different cultural contexts like in Japan. Therefore, he argued, Kanjin as a more flexible model of agent is needed. Now, what is Kanjin? Hamaguchi translates it into “the contextual” and defines it as a “relatum”. However, today, the contextualism and relationalism can be seen in various forms in the sociological discipline. Then, is the concept of Kanjin different from them? If so, how is it different? Through elaborating these points, this presentation would contribute to the attempt to challenge the classical perspectives on “individuality”.

Ready or Not? California’s Early Assessment Program and the Transition to College

Nearly one in three first-time freshmen in the U.S. are enrolled in some remedial/developmental course in English or math at their college or university (U.S. Department of Education, 2003). Rates of remedial course enrollment vary substantially across U.S. colleges and universities, with some institutions not offering any and others enrolling upwards of 80 percent of their incoming students in remedial classes. Part of the explanation for the large share of remedial students in American colleges and universities may be limited information. Students are often ill informed about what they need to do to succeed in college and subject to the (arguably) mistaken perception that everyone must at least attend, if not complete, college in order to succeed in the labor market. A majority of high school students, regardless of their academic performance, report that they will attend college (Rosenthal, 2001). In fact, academic performance accounts for little of the variance in students’ expected levels of educational attainment. Despite the pressing need to ensure that more students obtain a postsecondary degree, we know surprisingly little about what leads to college readiness and degree completion.

This study focuses on California’s efforts to improve college readiness through the Early Assessment Program (EAP). The EAP is an intervention designed to increase the quality of information about academic preparedness available to high school students. We aim to understand how an increase in information about college readiness affects students’ needs for remediation once enrolled, and whether the effect of this information varies for different types of students (by gender, race/ethnicity, and academic background). Although several studies have demonstrated that many students are relatively uninformed about what it takes to succeed in college, the question of how we might effectively enrich the information on which students base their postsecondary decisions remains largely unexplored.

White Trash!, Working Class or Just Your Average Guy? the Changing Face of a British Far Right Supporter

In the wake of a lively academic debate of the past decade and against the background of yet another decline in fortunes of the British Far Right, the paper investigates the sources of its political power. It was long considered to lie in the working class neighborhoods, to the point of current BNP leader comparing his experience of living in area with actual minority population influence the support for the Far Right and what are their preferences in cross-party perspective.

Based on aggregate electoral and socio-economic data, I would argue that there is a shift in the supporting base of the Far Right, from the working class neighborhoods to the upper middle class. In parallel, the paper investigates the sources of its political power. It was long considered to lie in the English Defence League), the transiency trend is set to increase.

The Disparity in Rate of Deductible of Social Health Insurance with Respect to Age and Gender and Its Resolution in Post-War Japan: Whether It Has Influenced Healthcare Utilization and Longevity?

In post-war Japan, healthcare system has been constructed so that every Japanese could utilize health service of modern medicine free of charge or at low cost. However, the East Asia and Pacific region continues to be an engine of global growth, contributing around 40 percent of global growth in 2012. Driven by strong domestic demand, the region grew at 7.5 percent in 2012 – higher than any other region in the world. Economic interdependence in the countries of Northeast Asia is getting stronger. Needless to say, the center of economic development is China. For Japan, economic importance of China has increased every year. China is the largest trading partner for Japan now. Japanese population who live in Shanghai is estimated to 100,000, which is greater than New York. Chinese has become the biggest bloc of foreign residents in Japan in 2007, overtaking Koreans, which has been the biggest bloc in Japan in the postwar period. In rural and remote areas, Chinese workers called Foreign Trainees and Technical Intern are an essential labor force to support the local economy since the 1990s.

Although North Western countries share common economic interests, political tension both between Japan and China, and between Japan and Korea frequently occur in the 2000s. Japan and China are strongly opposed to each other over the territorial problem. Japan and Korea are opposed to each other over the territorial problem and the understanding of history. In the near-to-mid term, it seems that there is no hope for building the East Asian Community.

Japan and China’s relationship is often described as comprising “Cold politics and hot economics”. It can be said the same for Japan and Korea’s relationship. The problem is that violation of human rights may be prone to happen upon foreign residents from North Eastern countries under the situation of “Cold politics and hot economics”, as is recently observed in hate speech against foreigners from Korea.

Financial Support for Families with Children and Its Trade-Offs: Balancing Redistribution and Parental Work Incentives to Increase Well-Being of Families

Financial support for families with children implies inherent trade-offs some of which are less obvious than others. In the end these trade-offs determine the effectiveness of policy with respect to the material situation of families and employment of parents - two crucial elements for the well-being of families. We analyse several kinds of trade-offs involved using a careful selection of potential changes to the system of financial support for families with children. We focus on: 1) the trade-off between redistribution of income to poorer households and improving work incentives, 2) the trade-off between improving work incentives for better off and poorer households, 3) the trade-off between improving work incentives for first and for second earners in couples. The exercise is conducted on data from Poland, a country characterized by high levels of child poverty, low female employment and one of the lowest fertility rates in Europe. We demonstrate the complexity of potential consequences of family support policy and stress the need for well-defined policy goals and careful analysis ahead of any reform.

Supporting or Hindering Maternal Employment? Comparing Financial Incentives within Family Policies in CEE Countries

The Central and Eastern European (CEE) countries have often been treated as a monolith in comparative social policy analyses. While there are moderate differences in gender employment gaps of childless men and women in these countries, the picture of employment among parents of young children is completely different. The employment rates of fathers of preschool children are very high in all countries, ranging between 86% and 94%, but the employment of mothers diverges from 36% in Czech Republic to 81% in Slovenia. Previous research has showed that there are different cultural, structural and economic factors influencing
ing the gender employment gap in the group of parents of young children. Also the institutional context (work-family policy) plays an important role. However, there are also financial incentives that lie in the rules of family benefits and child tax credits systems, often neglected in comparative research, but influencing maternal decisions whether to work. In my research I compare these rules in the CEE countries looking for incentives that support or hinder maternal employment. I focus particularly on such pairs of countries that share similar socio-economic and cultural contexts for maternal employment, but differ in financial incentives that lie in the tax-benefit systems and in employment outcomes for mothers of young children. One of such examples is a pair of two, small Baltic States: Estonia and Lithuania. I show that while socio-cultural and structural contexts are more favorable for maternal employment in Estonia than in Lithuania, more generous maternity/parental leave-benefit provisions in Estonia form a strong negative economic disincentive for mothers to work when their youngest child is still in its nursery age. In contrast, the income support of mothers of very young children in Estonia (nursery age) is much lower in Estonia than in Lithuania, whereas employment of mothers of older children follows the opposite pattern.

Role of Local Governments in Immigrant Integration: Cases from Thailand and Japan

There are much discussion on immigration at the national state level, focusing on their immigration and citizenship status. However, it is at the same time recognized that there are many migrants who do not go through the official procedure of immigration and come to live in the country. Local governments need to face these migrants on a day-to-day basis, since these migrants live there as residents. We focus on this vacuum of migration policy at the local level. How are the local governments coping with migrants and how are they balancing their accountability to local residents and their accountability to national state regarding migration policies? We will take cases from Thailand (Tak and Samut Prakan) and Japan (Yokohama city) to explore the struggles of local governments and communities.

Vulnerabilities to Cyclonic Disasters in Bangladesh

This paper aims at exploring the vulnerability factors affecting cyclone impacts in the southern coastal regions of Bangladesh based on empirical investigations. The primary data for the present analysis has been collected from over hundred respondents, who sustained repeated cyclonic disasters, based on semi-structured interviews conducted during last several years in the study areas. The findings suggest that the prevailing socio-cultural conditions significantly underpin the vulnerable society's evacuation behavior and rapid response during crises and emergencies. Moreover, a comparative analysis of 1991, 2007 and 2009 cyclones, marked as the most severe in recent history, reveals a significant decline in life casualties of 0.5 million, 0.14 million and 4 thousand respectively. The paper identifies three major reasons behind this damage reduction. First, disaster preparedness measures have gradually become effective and the information dissemination technology and early warning systems got improved over the years. The widespread of cell phone technologies in rural areas of Bangladesh played key role in effective early warning dissemination and reducing life casualties between 1991 and 2007 cyclones. The second reason is the unequal population density of the landfall areas of these three cyclones. The 1991 cyclone made landfall near Chittagong city, the second largest city in Bangladesh, causing maximum damage to lives and livelihoods. The third reason suggests that the 1991 cyclone had attacked during high tide, causing high storm surge accompanied with severe inland overwash and land damages.
Identity Problems in Global-Local Relations

The categories of identity, identification, state, civil, national, and ethnic identity are being widely used in sociology and other disciplines. These concepts are rather new to Kyrgyzstan's public domain and scientific rhetoric where the interpretation of a nation as citizens of the state started entering political and academic discourse. According to Habermas, post-traditional, post-national identity is “a more sober political identity” that separates itself from the background of the past centered around ethnic history. Modern civil nation is not made spontaneously and at one stop. It evolves as a result of efforts aimed at consolidation of civil society and its institutes in their interaction with the state.

Modernization of post-Soviet Kyrgyzstan in the context of local-global relations of post-traditional world will be successful only when traditionalism is overcome based on the choice of civil-oriented Demokrasi. Dominant ethnicity and religious identities is a feature of traditional societies in which ideology, ethnicity, and religious traditions are main social values. In post-traditional world the values of civil nations are asserted that integrate multi-ethnic communities and assert cultural pluralism as a main vector of collective identifications. A “civil nation” is not developed by chance, but emerges as a result of the efforts to strengthen civil society and its institutes and their interaction with the state.

The overall problem of the Kyrgyzstan's identity is a mismatch between its basic elements such as national, ethnic, religious, cultural and political ones. There is a trend for new interpretation of these elements’ composition. While the Soviet identity was ”mobile home lifestyle” in the US southern regions which promises a pleasing climate, mobile home is generally more affordable than living in a site-built home, many people in the Sunbelt states of the US: the mobile home park. While living in a mobile home is generally more affordable than living in a site-built home, many seniors actively seek, and even move across the country, to participate in the “mobile home lifestyle” in the US southern regions which promises a pleasing climate, homeownership, leisure activities, community, and friendship to White middle and working class seniors. My paper examines to which extent these expectations by seniors are fulfilled in which kinds of communities, and how social differences, economic struggles, as well as health and personal issues can compromise them over time.

The paper is based on an analysis of 150 qualitative interviews conducted with residents in the Gulf Coast of Florida between 2005 and 2009, where more mobile home parks are more numerous than anywhere else in the US. Just over half of the interview participants were 55 years or older; roughly one fourth resided in so-called senior parks which restrict residency to persons over the age of 55, while the other half lived in communities that also accommodate middle aged residents and children. Even though it is not an entirely urban phenomenon, the senior mobile home lifestyle is influenced by urban experiences and cultural imagery, such as fear of crime or racial/ethnic conflict, often creating a longing for simpler, more neighborly and homogeneous communities which can, however, turn out to be less affordable, and personally fulfilling for older people than originally anticipated.

This research has been conducted regarding the business case for labour brokerage and the growth of waged occupations created in temporary jobs and casual positions. South Africa is currently dealing with the rising use by companies of temporary employment agencies, also known as labour brokers, who apparently facilitate this labour market flexibility. Labour brokerage has stirred up a lot of controversy in South Africa through the media, unions and many movements to the point where labour brokerage has been labelled as a new form of slavery that further fuels work-er exploitation. Certain abuses have been associated with the practice of labour brokerage in relation to ensuring decent jobs in South Africa’s globalizing capitalism. This research has been conducted regarding the business case for labour brokerage and subjecting it to an assessment alongside the notion of decent work as advocated by the International Labour Organisation (ILO). The research solicits the opinions of the labour broker so they can directly address, justify and/or clarify the accusations against them as being against the four pillars of decent work. This research provides a platform for the labour brokers to be able to defend the role they play in what has been labelled as an inhumane, insensitive, detached system and strategy.

This paper focuses on meanings and practices of home among residents of a predominantly Latino mobile home park in Florida. It is based on an analysis of 30 qualitative interviews conducted with sixteen Latino/a, twelve White, and two African American community residents, follow up walks with fifteen interview participants, and ethnographic fieldnotes written by a Latino student researcher and community resident during 2008-2009. This research was part of a larger study investigating the communities and disaster vulnerabilities of working class families who lived in mobile home communities in Florida, during the unfolding of the last U.S. economic crisis.

The paper specifically discusses the meanings and emotions of home for the Latino/as, who were predominantly immigrants, and emphasizes differences with how white residents thought and felt about their places. Latino/as generally displayed great pride in their neatly decorated and customized mobile homes. They emphasized (various) achievement of homeownership, the neighboring community, and the park’s safety and tranquility (especially when compared with surrounding areas) in their descriptions, which functioned as markers of decency, upward mobility, and personal identity. Whites, on the other hand, had less positive feelings regarding their homes and community overall, and at times struggled with negative public perceptions of “trailer” residents, as well as a sense of economic decline or failure.

In sum, the paper shows how residents of the same neighborhood in similar housing can, figuratively, live in very different places, based on culturally framed social locations and contextualized within the larger stories immigrants and natives tell about our lives.

The massive process of reislamization of society that started to develop after the time of ‘Reformasi’ in 1998 has brought many social changes in everyday practice of social life in Indonesia. Today, Indonesia has to face almost everyday the problems related with the disruption of harmony of living-together. Besides religious-fundamentalism and terrorism, the intolerance among religious groups, violence against minorities and the demise of cultural diversity respect value have become a serious problem in society. Concerned with that situation, many young people in Yogyakarta in Central Java have built movements for bringing back social tolerance in Indonesian public sphere. As counter-actions and count-er-discourses, the movement has successfully gained the public support and built larger networks in local and national levels. The movements also have become the source of ideas and inspiration for wider discourses on diversity in a global

**Russian Youth: Mobilities, Inequalities and Life Chances**

Due to the influence of the global social transformations of XXI century there have appeared new forms of inequality (access to mobilities, networks, education, spare time and information, guarantees of security) as well as the "old" inequalities concerning income, wealth, prestige are being changed in the direction of increasing. Russian youth has been particularly affected by the rapid social, political, economic and cultural changes and discrepancies. Furthermore, the breakdown of the USSR has led to the drastic social conversion. These multiple structural factors not only determine but shape the life of youth in Russia. Faced with these uncertainties and turbulences the young people have to make their own decisions and to pattern their behavior on the current “liquid modernity” (Z. Bauman) which possess a lot of seeming life chances and choices.

Our paper addresses the growing phenomenon of social mobility which has become a core motif of the modern society and numerous “new” and “old” inequalities forming the social structure of the Russian society. The theoretical grounds of the research are the classical and the modern social theories concerning social inequality and mobility. We elaborate the “integral” approach to the social inequality which appeals simultaneously the objective characteristics and to the person's perception of his social position and the inequality phenomenon.

The paper is based on the desk study of the Russian youth, its problems, choices, social identification, ways of life and on the data of the author's sociological on-line survey of 400 young people at the age of 18-35 years old. I'll present the results of the research showing the influence of the becoming of non-linear inequality on the social mobility and life chances of youth in Russia.

**Life Expectancy and Retirement Age: Policy Options and Practise**

The trend to early retirement that has been observed in many industrialized countries (e.g., Kohli et al. 1991) seems to have come to an end. The steady increase in life expectancy has led to changes in retirement age regulations, what in turn accelerates the aging of the workforces. For example, the Czech Republic and Poland increase their retirement age by the amount of the projected increase in life expectancy, what statistically keeps the mean duration of the retirement phase in the life course constant, while the mean working phase in the life course extends. Others countries like Germany rise the retirement age in a way that both the retirement and the working phase increase. Regardless of the amount, these changes affect inequality and redistribution by the social security systems as life expectancy is distributed unequally in these societies: For example, better education and higher income result in higher life expectancy. The paper discusses opportunities to change the current three-parted (and dominantly male-oriented) life course regime in a way that both increased mean productivity of the aging workforce and reduced inequalities can be reached at the same time by reorganizing the life course, namely by redistributing education, work, and retirement phases in the life course. By improving productivity, the problems of ageing societies can be tackled at the societal level (e.g., increasing contributions for social security) as well as both the level of employers (e.g., improved skills of the aging workforce) and employees (e.g., Improved health). Discussing such opportunities, other than simply rising retirement age, widens the scope for designing growth friendly social security that help to reduce existing social inequalities.

**The Politics of Social Policy in Kenya**

Since the introduction of the multi-party system in 1992, Kenyan political parties generally had a low programmatic profile and were clearly personalized. Voting was more based on ethnic and regional affiliation than on policies. The glorious climax was the violence after the presidential elections in 2007 when more than 1'000 people were killed and over 300'000 displaced. It was thus remarkable when the newly aligned major political camps released programmatic manifestos for the 2013 elections. They included some claims in the field of education (e.g., ensuring better learning outcomes) and in the field of health care (e.g., improving access to health care). The financial feasibility of these grand pledges was strongly doubted by Kenyans, as was the winning coalitions' interest and capacity in implementing them.

However, barely three months after the election, President Kenyatta declared free public maternity services, a first step towards free primary healthcare as designated by the Jubilee coalition manifesto. Considering the human and financial resources, there is still ample ground for scepticism concerning the long-term viability of this policy. Nevertheless, this is a significant development in a rather sclerotic social welfare system.

What are the determinants of this social policy change? Functionalist, institutionalist, economic determinist, modernisation or power theories have limitations in explanatory power. Preliminary evidence from interviews with stakeholders in Kenya and other sources point towards the importance of politics. The recent post-election violence questioned both domestic and international legitimacy. Including free maternity care in the manifesto and implementing it quickly is on one side an attempt to restore international legitimacy, as maternal health is an important issue on the international agenda (MDGS). Given the neck-and-neck electoral race of the two big coalitions, it on the other hand also attempted winning the support of smaller electoral groups and thus domestic legitimacy. Hence, catalysed by a serious electoral crisis, politics finally resulted in policies.

**Faces of Uncertain Transitions to Adulthood – in Different Fields of Education**

The faces of uncertain transitions to adulthood vary between different countries. But they also differ within countries. Germany and its manifold fields of education are ideal cases for studying the phenomena in question.

Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will carve out different patterns of uncertain transitions to adulthood.

In our presentation we will:

(a) show how the transition to adulthood is structured in different fields of education (e.g., in a paternalistic apprenticeship based on an old master-pupil model; in an art academy which offers independence but uncertain job chances);

(b) differentiate between forms of uncertainty (e.g., to secure the livelihood in the long term, to find the scope for self-realisation, to live alone);

(c) discuss how the adolescents cope with uncertainty, how they design their future and their self.

The sample of our study contains trainees in vocational training (hairdressers, painters), and university students (art, teaching/engineering). The sample composition allows a comparison of adolescents in different fields of education in Germany.

There are different theoretical options and viewpoints to get a perspective on transitions to adulthood. In forms of our research project, we link theories of interactionism (e.g., Meads processual concept of “self”; Strauss’ concept of “status passage”) with Bourdieu’s theory of social inequality (and his concept of “field”) to understand the strategies and orientations of adolescents at the threshold to adulthood.

**RC04-80.9**

**KÖNIG, ALEXANDRA** (University of Wuppertal, akoenig@uni-wuppertal.de)

**Orientations and Strategies of Less Privileged Students**

In Germany, like in many other countries, the proportion of adolescents with university entrance exam increases and the absolute number of students is higher than ever before. Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will shed light into the way less privileged adolescents make their choices and shape their self-project. We use the term “self-project” (in reference to Mead and Strauss) to indicate that the decision for a university program is (a) part of a more encompassing “self-project”, that allows identification and this means ascription to a unique self; (b) it is a decision-process (with evaluations, modifications, revisions); and it is (c) embedded in an interactive process with generalized and significant others. The sample of our study contains three subsamples: students of art, of teaching, and of engineering. We want to discuss the following points:

- The structuredness of choices: Choices are structured because requirements and expectations differ depending on the social position. For instance, the less privileged adolescents choose more often university programs offering good job chances (like teaching or engineering).
- The access to different fields of education: While the criteria for access to university are universal and transparent (school grades), access to an academy of arts is unpredictable. A committee of the academy identifies a specific “artistic”, incorporated capital. Mass participation to education at an academy does not exist.
- The relevance of significant others: The quantitative interviews show that students from lower classes more often feel parental misgivings concerning their personal ability. The qualitative interviews allow to deepen the analysis about the role of significant others.

**KÖNIG, RONNY** (University of Zurich, koenig@soziologie.uzh.ch)
**Educational Inequality and Welfare State Patterns**

Previous research on social stratification reveals that social inequalities in educational and thus occupational opportunities are still very relevant features of modern societies. Against this background the study focuses on the intergenerational reproduction of educational inequalities and how this reproduction is affected by specific welfare state patterns in 13 European countries (Australia, Belgium, Denmark, France, Germany, Greece, Ireland, Italy, the Netherlands, Portugal, Spain, Sweden and Switzerland). For the analyses micro-data from the Survey of Health, Ageing and Retirement in Europe (SHARE) and macro-data from several sources (e.g. Eurostat, OECD and UNESCO) are used. With this approach it is possible to combine a multi-level perspective in a two-level model. A broad comparative perspective allows the identification of different institutional influences, namely direct or indirect governmental investments in education, national specific shifts in the labour market as well as demographic changes. In general, multi-level estimates on 33,346 individuals – born between 1950 and 1984 – show the perpetual importance of the family of origin and the reproduction of educational inequalities over generations. Furthermore, the overall hypothesis that both welfare state arrangements and labour market indicators have an influence on the educational attainment is confirmed. In addition, contextual characteristics can partly counter the influence of social origin and therefore reduce the intergenerational transmission of educational opportunities.

*The influence of generational support on housing pathways: Evidence from the British Household Panel Study (BHPS)*

The family home is the single most valuable asset for most individuals and households. In addition, people have strong emotional attachments to their family home, when it is passed on as the idealised housing pathway has become more and more complex. Young people are increasingly depending on their parents, both financially (deposit) and in-kind (guarantor, living rent free at parental home), to acquire their first home. Qualitative evidence shows that middle aged children support their less well-off parents to purchase their own flats via the right-to-buy scheme. This paper contributes to this debate by investigating the influence of bequests and in-kind generational transfers on homeownership. Based on the British Household Panel Study (BHPS) we investigate how housing pathways are influenced by receiving an inheritance and in-kind support by offering rent-free accommodation. Estimates suggest that inheritance seems irrelevant compared to other socio-demographic control variables. Based on the results the timing of such windfalls seems to be crucial. Most individuals receive an inheritance at the end of their work-life and often share the amount of the windfall with their siblings. Hence, at this stage in life few people move into their family home as owners or use the windfall to purchase their own home. However, rent free accommodation seems to have an effect on housing pathways. Young people who are living with their parents are benefiting from this in-kind support and are able to purchase their first home earlier than independent mortgagees who are saving up for a deposit while renting. These results are discussed in the wider context of housing policy, welfare and generational support.

**SANDOVAL, GERARDO** (Social Weather Stations)

*Gender, Work and Family: The Situation in the Philippines*

Using three waves of data from the International Social Survey Programme (ISSP) survey modules on Work Orientations, and on Family, Work and Gender Roles, the paper will explore the current situation and the changing trends on how the work-family nexus is structured by gender in the Philippines. At the macro-level, Filipino women have gained greater equality with Filipino men than its Southeast Asian neighbors. The Philippines was one of the first countries in Asia to have recognized the important role of women as an essential component in nation-building. There are laws enacted laws and policies instituted to ensure the empowerment of women. The Philippines has had two women Presidents, a woman Chief Justice of the Supreme Court, and women in high-level elected positions. Women have much access as men to establish their own businesses. But what happens when men and women go home from work? Despite the increasing the role of women in the public sphere, the Philippines remains a conservative, largely Catholic society that puts importance on the family. The paper will first examine the gender differences in the domestic division of labor, traditionally the women’s domain as “homemakers”. Then the paper will examine the possible impacts of gendered domestic division of labor on the work sphere, as measured by potential work-family conflict, and attitudes/behavior on female employment over the life-cycle. Finally, the paper will examine the possible linkages of domestic division of labor and well-being of couples, including satisfaction with family life, happiness and satisfaction with life. Using the data from ISSP surveys conducted in 1994, 2002 and 2012 will allow the paper to examine the trends in gender, work and family in the Philippines within the context of the changes in the Philippine economic conditions across three decades and the accompanying socio-cultural changes it brought.

*Ambivalent Transnationalism. Understanding the Long Distance Engagements of Hometown Organisations*

Collective remittances undertaken by hometown organisations for the benefit of their origin area is a well-known illustration of migrant transnationalism. This paper unravels the rationale for these hometowns to engage (or dis-engage) into long distance development practices. The latest evolutions of transnational theory focuses on the spatial extensions of transnationalism embedded into neo-liberal globalization but fails to address the micro level drivers of transnational engagement. It is contended that a revised conception of structure and...
agency approach to transnational phenomena is likely to shed a new light on actors’ transnational engagements and on the role of transnational social institutions such as hometown organisations. This S/A approach presented in this paper draws on ambivalence theory as well as Habermas communicative action theory. The paper also argues that such an approach would open the possibility to open a cross fertilizing dialogue between transnational theory, migration theory and general social theory.

The different steps of the demonstration will be illustrated by personal research on hometown organisations in France and the UK. Arguably, integration adds layers migrants’ identity. Their identification with the place of settlement and their new associated obligations undermine their “raison d’être” as a villager. The life experience and socialisation of migrants in alternative social fields enriches their lifeworld with new references and fosters ambivalent perceptions of the world. But, in term, this multi-polarisation questions people sense of belonging, in this sense, it needs to be constantly reassessed. In this perspective, the surge of engagement into long distance development initiatives observed among hometown organisations is the result of this necessity to reassert “villageness”.

Transnational Volunteering and Immigrant Incorporation: The Case of Moroccans in France

This paper analyses the recent evolution of Moroccan organizations in France. The analysis of the journal official, a registry of all associations created in France, shows a recent decline of hostland oriented organizations such as civic or socio-cultural associations and whose aim is traditionally dedicated to insertion of immigrant communities in France. In parallel, the number of creation of homeland oriented organizations is on the rise and surpassed hostland oriented organizations in 2002. These transnational associations are mostly NGO’s engaged into development in a transnational action.

What are the relationships between this reorientation of Moroccan volunteerism and integration? Is the growing importance of the transnational referent synonymous with a weakening of the integration dynamics in the host society? The analysis of the INED survey “Trajectoires et Origines” including a sample of 10,000 people and focusing on both immigrant integration and transnational practice shows that it is far from being the case. This reorientation parallels the emergence of a Moroccan middle class in France. This data survey analysis is complemented by a field study that informs the dual embedding “here and there” of immigrant transnational organizations.

Ming-Chang Tsai, National Taipei University, Taipei, Taiwan

Nationalism and Attitudes Towards Immigrants: Canada and Taiwan Compared

Canada and Taiwan are both developed societies with a full range of class cleavages and “home societies” that grew out of waves of settlement from elsewhere. Both have a complex internal ethnic structure, with two large majorities, aboriginal minorities, and waves of more recent immigrants. In recent decades, both societies have experienced important re-deﬁnitions of the relationship between the aboriginal segments and the larger society. In Taiwan, the cleavage between the long-established Taiwanese and Mainlanders is an overarching one that has ramifications in many areas of political life. This parallels Canada’s linguistic dualism. In Canada the history of dual European settlement has led to the creation of separate French-language institutions centred in Quebec, and the language cleavage is an overarching one. Both societies are also immigrant societies with ongoing debates on various aspects of immigrant integration. National identities are complex and evolving in both societies, and relations with a larger neighbor (USA, PRC) play an important role in each setting. This paper will summarize and juxtapose some findings from Canada and Taiwan from the International Social Survey Programme (ISSP) data set on national identities in 34 countries. In both societies, civic and ethnic deﬁnitions of nationhood co-exist in tension, and attitudes towards immigration are mixed and contradictory.

CONDON, STEPHANIE* (Ined (French National Demographic Studies Institute) and CRESPPA-GTM, condon@ined.fr)

Changing Care and Migrations Regimes: New Contrasting Regulations and Their Impacts on Employment and Working Conditions of Care Workers. an Intersectional Perspective

Since the beginning of the 2000, the French care/domestic service sector, like other countries in Europe, has been undergoing considerable reorganisation. These changes in terms of commodification have had consequences on the mobilization of care workers. The transformation of the labour market and the increase of precariousness in the sector is a consequence of the development of a wider social economy of care (private, public and private care). These transformations have had a strong influence on the employment/working conditions and training of women care/domestic workers. Thus, despite professionalization policies and the implementation of new rights, precariousness is a persistent feature of this sector.

However “local indicators” as well as considerations on “who cares?” have to be taken into account. Indeed, this sector constitutes a working universe that is extremely complex to grasp, due to the multiple actors involved, the levels of intervention (local and national)... For example, when the sector comes to professionals, the progress of training policy in France has not taken place evenly or at the same time across all segments of the sector.

At the same time, these new regulations have taken place against a background of changes in migration policies and the dynamics of migration.

In this context, this paper aims at analysing the effects of these trends and contrasts on employment and working conditions of care/domestic workers (elderly and child care), in an intersectional perspective. We will discuss in which ways these consequences are similar or not for migrant and non migrant domestic/care workers and if not, why and how.

A European research project coordinated by the ILO has been instrumental in foregrounding issues relating to the role and working conditions of migrants as caregivers. This paper will present results from the French case as an example of mixed care regimes. Data sources include LFS data, policy reports, interviews with union representatives, government departments, NGOs and migrants working in the sector (50).

L’action Et Les Politiques Syndicales À L’Épargne De L’aide Et Des Services À Domicile En France. Le Cas De La France

En France, comme pour d’autres pays européens, l’aide et les services à domicile sont le lieu, depuis plusieurs décennies d’expérimentations discrètes en matière d’émergence de nouvelles formes d’emploi et de précarisation du travail. Dans le même temps, les avancées certaines mais fragiles ont aussi eu lieu et ce, depuis plusieurs décennies.

Depuis le milieu des années 2000, on assiste toutefois à des mutations importantes. Les nouvelles régulations engagées par les Pouvoirs publics impactent très fortement les conditions de travail et d’emploi ainsi que les politiques et pratiques des employeurs en matière de management et d’encadrement du personnel. L’essor d’un processus de gouvernance des relations sociales à l’emploi et dans le secteur de l’aide et des services à domicile, tel qu’il est observable depuis une vingtaine d’années, a conduit à la mise en place de nombreuses initiatives pluridisciplinaires, réglementaires et institutionnelles, dont l’objectif est de favoriser la permanence et l’autonomie des employés de l’aide à domicile.

Cette communication propose de s’intéresser aux formes des politiques et de l’action syndicales dans l’aide et les services à domicile en France, en articulant les différentes échelles de l’action syndicale et en revenant sur les contradictions à l’œuvre. L’analyse documentaire, d’entretiens réalisés auprès d’acteurs syndicaux et institutionnels, ainsi que des observations de permanences syndicales permettront de discuter des stratégies à l’œuvre et de la façon dont elles peuvent peser pour changer le travail, qu’il s’agisse d’actions au quotidien ou de formes d’intervention dans des instances internationales. Les données sont extraites d’une recherche européenne (Belgique, Italie, Espagne, France) coordonnée par le IFIP (Fédération européenne) menée au moment de l’application de la Convention internationale 189. Une mise en perspective avec les autres pays étudiés sera proposée.

The Egypt-Sufism Movements in the Aftermath of 2011 Revolution. Critical Study

Abstract:

Experts on Sufi movements often assume a potentially significant position for Sufism in forming the political map for change in Arab countries following the Arab Spring. This is particularly true for one of the most vibrant Sufi capitals of the Muslim world; Egypt, holding a record of more than ten million Sufi members. In the Arab Spring. This is particularly true for one of the most vibrant Sufi capitals of the Muslim world; Egypt, holding a record of more than ten million Sufi members. In spite of this, one year after the Egyptian Revolution, political developments began to exhibit the failure of Sufism to gain political ground in the post-Mubarak political scene. This paper discusses the problematic issues of Sufism with respect to politics in Egypt, with particular focus on the political experience of the Sufis in
Egit, it seeks to examine the Sufi experience in the process of political struggle, in addition to their contributions in the election held in November 2011 in an attempt to understand the factors which culminated in their gaining remarkably insignificant political support in spite of their massive membership base; and officially favored state support, both internally and externally. This study concludes that the nature of the Sufis practice itself has played a key role in restraining their political presence, in addition to their lack of political awareness as well as poor organization and populism; all of which have had a significant impact on the failure of the political experience of Sufi orders in Egypt.

problems, and finally it is the percentage of immigrants and their cultural distance expected difficulties to integrate foreigners developed over time and to what extent the countries the immigrants come from render integration more difficult. We expect problems to integrate foreigners to be higher in larger municipalities especially if they are short of financial resources, we believe that municipalities with a more liberal and more left wing oriented voting behavior encounter less problems, and finally it is the percentage of immigrants and their cultural distance which also play an important role.

How Well Do Municipalities Cope with Immigration – System Capacity Versus Cultural Reclusiveness

Switzerland is a country with a relatively high rate of immigration. This puts the municipalities under considerable pressure when it comes to measures to integrate the non-Swiss residents. In about 40 per cent of the municipalities top level officials claim that their municipality encounters difficulties to cope with integration problems. On the grounds of our regular surveys among all Swiss municipalities we are not only able to show, which types of municipalities are more successful in integrating residents from other countries, whether this depends, for example, on the size and on the financial situation of the municipality (system capacity, Dahl and Tufts 1973), and to what extent this depends on cultural and political differences between the municipalities. We can also show how the perceived difficulties to integrate foreigners developed over time and to what extent the countries the immigrants come from render integration more difficult. We expect problems to integrate foreigners to be higher in larger municipalities especially if they are short of financial resources, we believe that municipalities with a more liberal and more left wing oriented voting behavior encounter less problems, and finally it is the percentage of immigrants and their cultural distance which also play an important role.

Exploring the Role of Listening in Participation. -- CANCELLED

This paper will review the work on listening as a democratic skill in participation, particularly online participation. Crawford, writing in the context of the applying listening in the context of online activity, draws on the work of Jonathan Cray who observes there is in our times ‘an ongoing crisis of attentiveness’. Crawford proposes that emphasizing listening as an approach offers a counterpoint to this. So too listening theorist Beard has written that there may well be “an ethical listening subject.” He argues this subject will make “the choice to listen selectively.” This does not mean Beard explains to only those points at which we feel “safe” but rather to think about why and how we listen and to seek out listening points rather than being passive receivers of endless information. Having explored elements of listening theory drawing on Kennedy and Beard this is then applied in the context of environmental issues. The recent work of Hoffield will also be reviewed; this work argues that listening and ecology have a relationship. Drawing on quite different theoretical foundations nevertheless Beard and Hoffield argue this listening then in turn creates the “self”. The listening approach to online participation therefore has value in contributing to cosmopolitan ideas. While it does not create a theory of cosmopolitanism it does deal with common themes from cosmopolitan thinkers who grapple with the universal, the voices of all, and the self. Listening writers therefore offer an important perspective to the project of enhancing democracy.

Social Disorganization and Terrorist Attacks in the United States before and after 9/11

Despite much rhetoric regarding terrorism in recent years, little empirical research has examined patterns and predictors of terrorist attacks in the United States. We use newly available data on terrorist attacks in U.S. countries from 1990 to 2010 to test a set of hypotheses informed by a social disorganization framework. Given the historic impact of the coordinated attacks of September 11, 2001, we also examine whether the determinants of terrorism changed after this iconic event. In particular, we hypothesize that the unprecedented increase in anti-terrorism policing following 9/11 not only reduced terrorist attacks but also produced the greatest reductions in terrorism in communities where policing is traditionally most successful—those with low population heterogeneity. Across the two decades spanned by the data, results show that terrorist attacks were more common in counties characterized by greater language diversity, a higher proportion of foreign born residents and greater residential instability. Moreover, while total attacks declined significantly after the 9/11 attacks, results show that the decline was less dramatic in areas characterized by high levels of population heterogeneity. We discuss the implications of the results for theory, future research and policy.

3D printing or ‘personal fabrication’, as a newly emerged technology, has now been widely considered as the most significant technological breakthrough of the twenty-first century. Drawing upon complexity theory, actor-network theory and field theory, this paper considers 3D printing as a newly emerged technology and examine its translation into one specific culture field—museum field. Museum field, the guardian of authentic material cultures, instead of worrying the widespread of hyper-real reproduction culture caused by 3D printing, showing enthusiastic embracement of this new technology that brings back materiality to the society. This paper thus discusses how 3D printing associates into the museum assembly and creates the new heterogeneity and novel competition transforming the museum field. It not only emphasizes on the museum’s aftermath of digitalization and its new hybrid material turns by 3D printing whirls, but also examines new dynamics engaging into the competition in the global museum field.

Based on 3D printing’s current engagements and appropriation in the museum field shown in news and exhibitions as well as scenario analysis of future studies, this paper examines their performances in terms of ‘forms of museum capital: Firstly, it analyzes current museums’ acquisition of 3D printing collection and their creative projects with artists and designers as well as its application in collection’s restoration; secondly, it analyzes the future presentation techniques in exhibitions with newly emergent materiality and spatial design; thirdly, it deals with how 3D printing ‘engaged in museums’ interactive education programs and their future development; thirdly, it discusses bringing 3D printing back home for on-line visitors and souvenir-making in the age of (im)mobility. Some scenarios analysis of the 3D printing’s general future impacts and the consequence of unequal development of global museum field will also be laid out as the conclusion.

Back to the Future? How 3D Printing Technology Reassembles Museums’ Materiality with Scenarios Analysis

China has undergone an expansion of higher education in the 1990s. The crude university enrollment rate jumped from 1.6% in 1978 to 24.2% in 2009. The university enrollment rate among high school graduates increased from 27.3% in 1990 to 83.6% in 2010. At the same time, Chinese universities are stratified into key universities and non-key universities, which differ significantly in resource input and prestige. Researchers argue that in the era of mass education, the focus on educational inequality should move from quantitative to qualitative differences. Class inequality in the US is found to be maintained through family practices in competition for prestigious universities rather than mere educational attainment. Moreover, when it comes to labor market stratification, both university prestige and extracurricular activities are screening devices adopted by employers.

Educational Inequality in China -- Preliminary Findings from Recent High School Graduates in Urban Nanjing

China has undergone an expansion of higher education in the 1990s. The crude university enrollment rate jumped from 1.6% in 1978 to 24.2% in 2009. The university enrollment rate among high school graduates increased from 27.3% in 1990 to 83.6% in 2010. At the same time, Chinese universities are stratified into key universities and non-key universities, which differ significantly in resource input and prestige. Researchers argue that in the era of mass education, the focus on educational inequality should move from quantitative to qualitative differences. Class inequality in the US is found to be maintained through family practices in competition for prestigious universities rather than mere educational attainment. Moreover, when it comes to labor market stratification, both university prestige and extracurricular activities are screening devices adopted by employers.

Educational inequality in China has attracted much research attention in the past decade. However, little is understood about educational inequality in China in the qualitative terms. The present study thus explores the relationship between family origin and inequality in university education in terms of institutional prestige and participation in extracurricular activities. Data come from a panel survey of 759 recent high school graduates in urban Nanjing. A vast majority of these students (98.4%) were enrolled in post-secondary education in 2012, among whom 96.6% attended universities or colleges in China. The analyses are restricted to the in-school subsample.

Preliminary findings reveal that 21.5% of the respondents go to key universities. Students with university-educated fathers, students coming from prestigious high schools, and students with better self-reported academic performance are more likely than their counterparts to enter key universities. Father’s education, high-school prestige, and key university are significant correlates of social participation and occupancy of leadership position. Implications of the findings will be discussed.

Educational Transition and Social Networks – Preliminary Findings from Recent High School Graduates in Urban Nanjing

The formation of social networks is not a random process. It is a result of the combined forces of macrostructural conditions, which provide differential opportunities to meet members of different social groups, and the tendency of people forming social relations with similar others. The macrostructural conditions are often presented in the form of social organizations. School is a major social organization in contemporary societies; there many individuals spend an extended period of time on acquiring knowledge and skills. During the course of schooling, individuals often move from one educational institution to another. A change of educational institutions would then lead to a change of macrostructural settings for social network formation. Existing studies have mainly focused the correlates of social network formation at one time point or social network changes across different time points. Little is understood about the network impact of macrostructural changes associated with life course transitions. The present paper investigates the relationship between educational transition and social networks in China. Data come from a two-wave panel study of 759 recent high school graduates in urban Nanjing, a vast majority of whom (98.4%) were enrolled in post-secondary education in 2012. Two research questions are addressed. First, what is the network impact of transition to higher education? Chinese youth are frequent social networkers (Laine, 2008) as are young Tunisian civil society actors. Differences in network changes between these two types of universities are compared. Second, how may participation in extracurricular activities and part-time employment affect the social network structure? Changes in network size and diversity are measured. Preliminary findings show that transition to key university, extracurricular activities, and part-time employment are related to an expanded social network and increase in network diversity. Implications of the findings will be discussed.

Creating Agora Chronotopes on Young People’s Political Participation in Transnational Meetings

This paper deals with young people’s political participation in transnational meetings. Methodologically the study aims to shed light on multi-stered global ethnography. Young people are viewed here as a social age group sensitive to critical, alternative and even radical political participation. The diversity of the young actors and their actions is captured by using several different methods. The research sites are the EU Presidency Youth Event (2006 Hyyinkää, Finland), the Global Young Social Forum (2008 Malmö, Sweden) and three World Social Forums (2006 Bamako, Mali; 2007 Nairobi Kenya and 2009 Belém, Brazil). The data consists of participant observation, documents and media articles of the meetings, interviews, photos, video, and internet data. In this paper the diverse field of youth political participation in transnational agoras is studied by using a cross-table of cosmopolitan resources (or the lack of them) and everyday-makers – expert citizen dichotomy. First, the young participants of the EU Presidency youth event are studied as an example of expert citizens with cosmopolitan resources (these resources include, for example, language skills, higher education and international social network). Second, the paper analyses those everyday-makers who use performative politics to demonstrate their political missions here and now. But in order to make the social movement global they need cosmopolitan resources to be able to use the social media tools and work globally. Third, the paper reflects upon the difficulties of reaching those actors who lack cosmopolitan resources, either everyday-makers or expert citizens. The go-along method and the use of the interpreters are shown as ways to reach these young people’s political missions. Fourth, the paper underlines the importance of ‘contact zones’ for deeper democracy and for boost ed dialogue between different kinds of participants.

Spaces of Dialogue? the Case of the Wsf Tunis 2013 from the Perspective of Local Youth and Volunteers

The paper focuses on the World Social Forum (the WSF) held in Tunis 26-30 March 2013 from the local youth perspective. The WSF Tunis brought together 60,000 participants from formal and informal social movements and networks all over the world for five days. The authors distinguish the young WSF volunteers from other Tunisian youth who participated in the forum. The data drives from participatory ethnography and action research. Around 15 WSF volunteers and 20 young Tunisian civil society actors involved in the WSF Tunis were interviewed during and right after the forum. The research questions focus empirically on the dialogue/non-dialogue from the young Tunisian participants points-of-view: 1) what kind of local (Tunisian) dialogue took place; and 2) what kind of global dialogue (esp. together with non-Tunisian participants) took place – inside and outside workshops and sessions. These questions intertwine with the questions of why the WSF came to Tunisia and what affect it had to the local civil-society from the young informant’s perspective. The paper also studies the roles and effects of the local youth in the WSF as well as the success and shortcomings of the WSF Tunis from the perspectives of the young volunteers and young Tunisian civil society actors.

The Tunisian author of the paper (Jabberi) was the volunteer coordinator in the WSF Tunis for around 1,200 volunteers (applying action-research and auto-ethnography), the Finnish author (Laine) was carrying out her post-doctoral research in the forum (and conducting interviews as part of her ethnography). Therefore, the academic dialogue between the global South and North takes also place in the setting of co-authors, carefully reflected in the paper.

Producing Knowledge about Post-Separation Stalking from Children’s Point of View - Children As Social Actors?

In this presentation, the post-separation stalking is understood as gendered violence from the children’s point of view. The post-separation stalking - as a sensitive, morally laden issue - creates a psychosocial and physical threat for children's and their mothers' wellbeing. Stalking is defined as a repetitive, multi-dimensional, and a systematic process of violence. Even though the mother is the main target of the stalking, the children are often used as a means to carry out stalking, as targets of revenge and as abused informants. The sensitive nature of the phenomenon emphasizes the ethical demands in the knowledge production. The presentation is based on the ongoing research project “The Invisible Children – Supporting the Survival of Children and Adolescents in the Everyday Life Shadowed by Post-Separation Stalking” funded by Alii Paasikivi Foundation. The aim of the project is to analyze the stalking in the everyday life of Finnish children. The principle has been to enable safety spaces for children’s voices. The children’s knowledge is approached from different angles in order to reach their everyday experiences. The knowledge is produced together with the mothers and professionals (the Federation of Mother and Child Homes and Shelters) who work with the victims.

The basis of the data collection has been to encourage and strengthen the possibilities for children's narration. The data is collected by children's groups based on action and interviews conducted with children as individuals and together with their siblings. The knowledge produced in different forms and relations has supported children as social actors and knowledge producers. The tentative analysis shows that children are able to break the beliefs and taboos concerning the understanding about the family, parenthood, violence, and the best interest of the child. Therefore the question is do we take into account children as agencies who can redefine these issues?

The Realpolitik of Sexual Assault: Cartographies of Gender, Consent, Standpoint and University “Hookup Cultures”

There is significant media attention, especially in North America and the UK, to a so-called “hookup culture” among adolescents, particularly those enrolled in university. Characterization of young people as indiscriminately promiscuous may be reductionist hyperbole and/or cliché, but in any case the value-laden, gendered, classed and raced threads within such discourse obscure a regime of institutional reification requiring interrogation. The current technological phenomena of social media, texting, and camera phones bring with them a culture of immediacy, self-disclosure, and voyeurism that add complexity to these issues and their lived experiences. In this era of rapidly developing technologies, the quality of sexual and platonic relationships is accelerated and accelerated changes. Research is challenged to keep pace with new realities associated with experiences and definitions of abstinence, sex, and dating. Moreover, consent and coercion are under-theorized in the literature, interfering with deployment of effective strategies to prevent or respond to instances of gendered sexual violence and non-consensual or coerced sexual encounters. Political, ethical and moral sensibilities mitigate efforts to nuance, trouble, and frame discourse on this subject, rigidifying a project of patriarchal social reproduction.

This paper offers a theoretical framework for engaging issues of sexual coercion and consent, reconciling laws, policies and practices with RealPolitics of...
Can Sri Lankan Teachers Afford to Spare the Rod?: Teacher Attitudes Towards Corporal Punishment in School

The main objective of the study is to understand the attitudes held by teachers in the Government schools in Sri Lanka regarding the administration of Corporal Punishment (CP) in school and to examine the justifications they have for resorting to CP. The study is a response to a concern raised by the authors in 2012 about the need for more in-depth exploration on the topic.

The purposive sample of teachers who participated in the study was from four Government schools in Colombo. One school was a boys’ school while the remaining three were coeducational schools. 28 teachers were chosen for study based on their gender and years of experience in the teaching profession. Data was gathered through in-depth interviews with the teachers.

It was found that a majority of teachers in the sample have resorted to some form of CP at some point in their career as teachers. Given the teaching-learning culture teachers have been exposed to as children and the authority traditionally attributed to teachers in Sri Lanka, they were of the opinion that CP can have positive impacts on children and their future success. Teachers did not seem hostile to the idea of CP per se but the “form” and “severity” of CP administered on students.

Many were of the opinion that CP was “a fine means of disciplining students” as long as it is administered with the ‘correct’ intent of guiding students. They also thought that CP becomes an “issue” only when teachers use it in brutal/inhuman manner with vindictive intents and as a means of stress release.

High levels of work related stress and weaknesses in the mechanism of appointing individuals to the teaching profession were highlighted as resulting in situations of “brutal/ inhuman beating” in schools. These views expressed by teachers raise important policy implications.

The Conflict over Mining in the Heart of the Universe

Mining is progressing over indigenous people’s land in Mexico. One of the holiest sites of Wixárika people, Wirikuta, has been conceded to mining companies seeking to revive mining in the region. This has caused a conflict involving different groups of actors by construction, ownership and control of that territory.

This paper presents an ethnographic study of the conflict based on actor-network perspective. Information was obtained during fieldwork conducted during August to December 2012. The main purpose of this work is to analyze the conflict from a relational perspective, I also seek to highlight the importance of nonhuman actants which participate in conflict. Nonhuman actors have been invisible or objectified in sociological analysis of conflicts over the spread of extractive mining, however at least in the case we are studying, nonhuman actants are central to explaining and understanding the dynamic of the conflict by the construction, ownership and control of the territory in the Natural Protected Area Wirikuta.

Conditional Cash Transfers, Job Markets and Capabilities in Latin-America: A Missing Link

The paper is part of an on-going joint project between the National University of Colombia and the Universidad de Buenos Aires that is re-examining the achievements of conditional cash transfer programmes (CCTs) in the region. Within the acknowledgment of their diversity in terms of targeting, modalities and composition, CCTs have been mostly praised by international co-operation agencies, Latin-American governments and the academia. Nonetheless, there seems to be a missing link. Social policy presents a strong relationship with how societies deal with dilemmas concerning social inclusion and justice within an increasingly complex world articulating local and global dynamics. Beyond technical debates related to CCTs financing and implementation there lays a key interrogative: do CCTs increase people’s capabilities and reduce key individual and household-related vulnerabilities? Do they provide access to a key asset such as greater job and income security? In 2012 the research project started to analyse six national CCT programmes in the region (Argentina, Brazil, Chile, Colombia, Honduras, Mexico and Nicaragua) and two regional job markets (Argentina and Colombia).

The paper present two interesting insights: a) so far the great majority of CCTs evaluations have been unable to present any solid result about medium or long-term improvements in the security of people’s livelihoods and capabilities, b) in the face of substantially unaltered rates of unemployment and informality, CCTs do not seem to have improved the participation of beneficiaries in the job market. These results are based both on the analysis of national and capital cities-based household’s surveys, and on programmes assessments and internally available data through the presentation of quantitative and qualitative the paper aims to contribute to the challenging of mainstream wisdoms on CCTs and to an already renewing debate in the region.
