Despite young people’s above-average risks of unemployment in most countries, the evidence to date suggests that young people’s leisure has remained largely austerity-free. This is explained not in terms of historically novel features of the recession itself, but in terms of changes in youth’s leisure that occurred in preceding decades with the lengthening of the youth life stage, the advent of new leisure industries based on the latest information and communication technologies, and changes in the pattern of class inequalities. The evidence indicates that it is child-rearing households whose leisure has proved most vulnerable during the recession, which has implications for leisure socialisation during childhood, which will have lifelong consequences.

Focus On Fukushima: The Iaea’s Response To Fukushima As a Focusing Event

What does it mean for the Fukushima disasters to be a “focusing event”? A focusing event provides a “little push” to bring a problem onto the policy agenda. It acquires its power by aggregating harms in a short timespan and large number (Kingdon 2003; Birklend 1997; Downs 1972). Some scholars use the term to describe the event itself, while others locate causal power in the symbol surrounding the event. For instance, it is the way harms are suddenly, relatively rare, and bring aggregated harms to public view through the media, and yet not all such events lead to policy change. How the IAEA responded to Fukushima promises to shed light on why some focusing events lead to only very limited change. Birklend and others (Walgrave and Verhulst 2009) find that nuclear power is a domain where advocacy coalitions (roughly pro-industry versus pro-environment) are in competition and therefore policy change after a focusing event is not likely. Yet the IAEA had similarly divided advocacy coalitions in safeguards and security, and these policy areas still underwent dramatic policy change after a focusing event. My paper investigates to what degree policy change occurred in IAEA’s safety responsibilities in response to Fukushima. Preliminary research shows that some change did occur, especially relative the IAEA’s limited power compared to states. My paper will also examine how and why change occurred, paying attention to the advocacy coalitions in competition hypothesis, theories of framing, as well as to internal bureaucratic competition and the technical limits on what the IAEA can accomplish. The IAEA’s response to Fukushima may show that managers are able to shape the effects of some focusing events as much the literature suggests the media and policy entrepreneurs can do in other contexts.

Virtual, Augmented or Real? Ageing Research in an Era of Spatial Technologies

Population ageing has become the demographic phenomenon of the twenty-first century. Developed and developing countries are experiencing significant growth in the total number and proportion of their populations who now qualify as ‘aged’. The rise and rise of ageing as the new ‘crisis’ in population theory and policy should not be a surprise since it is the inevitable result of more than a century of active policy interventions on the object we know as ‘population’. Consequently we are experiencing a lag between the phenomenon of ageing and our conceptual and analytical understanding of ageing across multiple knowledge domains. The science of ageing remains highly developmental ranging from key
concepts (what are age and ageing?) through to the aetiology of the dementias and their impacts on aged care resourcing. Our societies are struggling to catch up with the consequences of two centuries of efforts to manage population. While spatial studies of ageing have been researched for several decades, these have largely remained particular to geography and to some interdisciplinary crossovers such as geographical gerontology. In the meantime, spatial technologies have developed at a staggering pace. Goodchild coined the term ‘giscience’ in 1992 to flag the fact that many disparate spatial endeavours now constituted a shared scientific domain of activities, practices and theories. We now take for granted the capacity to spatially enable quantitative and qualitative data and to visualize map, describe and inquire on outputs. We address the implications of the digital paradigm by investigating how ageing research will be altered through four key constructs of the digital era: simulation; visualisation; spatialisation and; representation. We illustrate these emerging issues using work we have conducted on population ageing phenomena in Australia and internationally which utilise spatial technology to engage with ageing in augmented, virtual and ‘real’ research encounters.

ROBINSON, KERRY* (University of Western Sydney, k.robinson@uws.edu.au)

Schooling the ‘vulnerable’ Child

Based on qualitative research with children (aged 4-11), parents, and educators, as well as historical socio-cultural discourses, this paper explores the relationship between ‘good innocence’, children's highly regulated access to knowledge of sexuality and the constitution of children as ‘vulnerable’ subjects. Incorporating a post-developmental framework and drawing on Foucault's concepts of governmentality and power/knowledge, this presentation highlights how censorship and moral panic, reinforced through discourses of childhood innocence, operate in communities, families, schooling, and within children's peer groups, to define and regulate ‘normative’ childhood narratives and subjectivities. I argue that regulating children's access to knowledge and knowledge production – associated with sexuality in particular – essentially in the name of protecting ‘childhood innocence’, operates to inscribe children as ‘vulnerable’ subjects.

This discussion frames within an examination of children's sexual subjectivities – how children have been discursively constructed as sexual subjects, how children view and constitute themselves as sexual subjects and how children regulate the sexual subjectivities of their peers. Children actively engage in making meanings about sexuality and relationships from the limited information (often misinformation, stereotypes and myths) that they receive – bits and pieces of information of which they try to make sense. In order to help counteract children's vulnerabilities and to build strong ethical and respectful relationships early in life, children's access to knowledge, to open and frank conversations about sexual subjectivity, and the nurturing of children's agency are critical.

Everyday Life and News Forms of Production Knowledge on Nuclear Power: A Study of Case in Caetité – Bahia

The nuclear issue in Brazil is not a recent problem. Since the first half of the 20th century the country has conducted research related to energy production based on the model of nuclear fission and the location of the first uranium reserves in Brazilian territory date this same period. The construction of reactors for energy production based on this technology was realized with the construction of Angra I, located in the State of Rio de Janeiro. The two nuclear power plants, Angra I and Angra II, started construction even in dictatorial government and its operation only after the process of political liberalization in the country when it was agreed and guaranteed by the Federal Constitution that the country would not produce nuclear weapons. The uranium needed for nuclear power production was withdrawn from prospecting in Minas Gerais, in the city of Pocos de Caldas. In 1995 the Nuclear Industries of Brazil began beta testing and implementation of mine near the city of Caetité, Bahia, being operated for commercial purposes only in late 1999. The District of Lagoa Real is the only operating in the region. In the research phase, this work aims to investigate the ways in which residents living near uranium mine producing knowledge on the uncertainties generated by the presence of the mine. From a perspective of actor-network-theory seeks to understand the heterogeneous networks that make up before the presence of the mine in the region.

Everyday Masculinities and Extreme Sport-Re-Thinking Methodologies

Everyday Masculinities and Extreme Sport: Re-Thinking Methodologies

Victoria Robinson

This paper considers the taken-for-grantedness of everyday masculinity in relation to a UK research project on sporting masculinities (Robinson, 2008 and 2013). In this study of rock climbers some participants found it hard to reflect on their experiences in gendered terms. However, some participants were able to be open about and critically engage with such processes, which can be seen to constitute ‘masculinity’ or ‘masculinities’. This was partially due to the ‘extreme’ nature of many aspects of the embodied and emotional rock climbing experience, as extraordinary as death of a climbing partner or the need to trust another man, sometimes literally, with their life, entailed that taken-for-granted aspects of masculinity had to be renegotiated or rethought in the aftermath of moments of great sporting intensity or crisis. This paper will reflect upon such patterns and, in so doing, re-explore some general methodological issues, for example, on the insider/outsider status of the researcher. The paper will also be informed by a consideration of the author and her auto-biographical position to patterns and, in so doing, re-visit some general methodological issues, for example, on the insider/outsider status of the researcher. The paper will also be informed by a consideration of the author and her auto-biographical position to patterns and, in so doing, re-visit some general methodological issues.

The Impact of Drug Trafficking in the Dynamics of Homicides and Robberies: Causal Relations in 32 Metropolitan Areas in Latin America

This paper presents an empirical verification of the influence of narcotics trafficking in the crimes of murder and robbery in 32 cities in Latin America, through the analysis of crimes reported by newspapers of those cities in the years 2006 and 2011. The aim of this study was to measure the impact at a continental level of illegal drug trade in prevalence to other crimes, taking also into account contextual variables. From the understanding that urban crime has a strong endogenous component, the central hypothesis was that drug trafficking was the main factor of the outbreak of violence experienced in this region of the planet. To measure the weight of this illegal activity on other crimes, we used a quantitative methodology. Through multivariate statistical analysis, the rates of the three offenses were tested with control variables exogenous in relation to the dynamics of drug use in the two crimes. In the case of robberies, the relation between crime rates was positive and strong in both periods studied. Homicides, however, were influenced by the drug trafficking only in the first period of time researched. In the second period researched, the rate of robberies (influenced by drug dealing) was the variable that impacted most in the prevalence of murders at a continental level.

ROCHA FRANCO, SÉRGIO HENRIQUE* (UNIVERSITY OF BARCELONA, francoshr@yahoo.com.br)

Unemployment and Precarious Occupational Integration: The Unequal Distribution of Risk. the Case of Switzerland

Labor relations have undergone significant changes over the last decades. Job precariousness and work precariousness weaken assured and stable occupational integrations. These changes challenge rigid, continuous and foreseeable concepts of occupational career (the choice of a profession, training, labor market integration, promotion and retirement), and question both material and symbolic recognition that are linked to professional activities. Facing this rise of uncertainties, we first analyze how unemployment periods impact job recovery in terms of 1) level of individual and household income 2) job quality (job and work precariousness) 3) social mobility (using social stratification schemas: CAMSIS and CSP-CH) in order to determine if people know stability, improvement or deterioration of their situation. We then identify how particular groups of people are unequally exposed to these three potential forms of changes, and particularly in terms of nationality, sex, education, age and presence of children in the household. The relation between these variables and the observed effects are analyzed with a logistic regression that includes interactions between the dependent variables.

We use longitudinal data from the Swiss Household Panel (SHP) between 1999 and 2012. The SHP is a yearly conducted centralized CATI panel survey which started in 1999 with slightly more than 5,000 households, representative for the Swiss resident population.

RODRIGUEZ, LENA* (University of Newcastle, Lena.Rodriguez@newcastle.edu.au)

Constructing Transnational Polynesian Identities: Soldiers, Sportsmen and Illegitimate Masculinities

For the small Polynesian island states of Tonga and Independent Samoa, their biggest export is labour – their people. Six out of ten Tongans and Samoans are born outside their home countries. In a climate of transmigration and globalization Polynesian men are sought out as sportsmen, heavy manual workers and standover men. They also have the highest over-representation of any racial group in the US military. This paper argues that contemporary Polynesian masculinity has been externally constructed through the physicality of Warrior in a colonial and post-colonial context and questions whether internalization of this representation as a “regime of truth” leads to an embodiment of race, class and cultural identity that is inherently informed by the physical. Through this lens of heightened and exaggerated physicality, acceptable expressions of Polynesian masculinity are readily acknowledged through work and sport. However, its illegitimate expression - as gang member - is less understood. Polynesian gangs have an extremely high profile in New Zealand and are now the fastest growing ethnically-identified gang population in the United States. Proportionally, this population group is progressively over-represented in the penal systems of many countries. This paper will explore how this narrow range of acceptable masculinities, when combined with increasing socio-economic marginality, contributes to low civic engagement and greater interface with agencies of law and order. As conventional employment opportunities are reduced for unskilled labour, more young Polynesian men are at risk of being drawn into gangs and are likely to engage in other forms of criminal behaviour. This paper will therefore discuss how popular perceptions of Polynesian strength and aggression, so valuable as sporting commodities, are regarded as threatening and violent outside of sporting domains. Interviews were conducted with 48 Polynesian men aged 18-60 in two studies.

RODRIGUEZ MORATO, ARTURO* (university of barcelona, rodriguez.morato@ub.edu)

Assessing the Value of Art in the Culture Society

Nowadays it is widely recognized that due to the great expansion of the arts sphere during the XIX century and the concomitant increase of the influence that the art paradigm exerts into other fields of practice culture and the arts have taken on a central strategic role in contemporary society. This is particularly visible in big cities today, to the extent that there we can speak of a culture society in the making, a new social configuration structurally dominated by culture (Rodriguez Morato 2012). As a result of these changes, since the late nineties and during the first decade of the new century the idea of creativity, which is closely linked to the arts from its origin, has gained a lot of prominence in the urban discourse, both political and academical, all over the world. From different perspectives and through different concepts, such as creative city, creative economy, creative class, or creative cluster, this attention to creativity has implied a new view on the relationship between the arts and society, and at the same time a renewed interest in assessing the value(s) of art for society. In this paper we will consider the ways in which this assessment is currently being carried out, through the aforementioned concepts and others, as well as through specific analytical strategies used in the grey and academic literatures, and the data, statistical or otherwise, produced for that matter.

RODRIGUEZ PLEASENCIA, GIRARDO* (Ritsumeikan Asia Pacific University, plasro10@apu.ac.jp)

Fasting Centers in Contemporary Japan As an Expression of Alternative Medical Care

Along with the modernization process in the Meiji era, Japan adopted the Western modern medical system. Although this remains the dominant paradigm in contemporary Japanese medical science, traditional health methods like (japanized) Chinese medicine and martial arts physical therapies that existed prior to the introduction and prevalence of Western medicine have continued to be practiced to different degrees. In addition, new alternative healing practices from other cultures have also been introduced in the country, and the The Japanese Society for Complementary and Alternative Medicine is functioning since the late 1990s. From this diversity, new forms have developed which combine traditional notions of health, Western modern medicine and imported CAM methods. This presentation will introduce the case of fasting centers, providing a description of their notions and practices. Next, the discussion will situate the development of these alternative facilities in social context. It will also point to changes in the representation of their therapeutic proposals, reflecting the dynamics of globalization (such as the spread of CAM and new spiritualities), as well as the impact of local factors (like the Aum Shinrikyo affair).

Desafíos De La Adaptaion Para La Prevenion De Desastres En México

La vulnerabilidad social se incrementa en condiciones de variabilidad climática asociada con el cambio climático antropogénico; los desastres asociados a fenómenos hidrometeorológicos ocurridos durante el siglo XXI en México nos dan la oportunidad de cuestionar teóricamente conceptos tales como "eventos extremos", "lluvias atípicas", pero principalmente “desastres naturales”, que de- forman la realidad desde las ideologías tecnocrática y naturalista.

El fracaso del desarrollo sustentable, dio lugar a la irrupción del cambio climático como uno de los efectos más perjudiciales para la humanidad, sobre todo para los sectores excluidos, sobrevivientes de la pobreza, en los territorios donde la vulnerabilidad social es una característica de la realidad de los más marginados.

Con base en los postulados internacionales de adaptación y reducción de riesgos de desastres el gobierno mexicano ha asumido formalmente compromisos para diseñar y ejecutar políticas y programas orientados a fortalecer la resiliencia comunitaria, sin embargo las decisiones privilegian la resiliencia institucional, con énfasis en la política de protección civil, orientada a la atención cuyuntural de emergencias, desatendiendo la prevención de desastres como eje de política pública. Recientemente el Plan Nacional de Desarrollo 2013-2018 define los lineamientos programáticos en materia de cambio climático, sin incluir la adaptación y la crisis de vulnerabilidad nacional.

Los desastres plantean el desafío de reducir la desigualdad social como premisa para también reducir la vulnerabilidad y los riesgos a la población. Se propone trabajar investigaciones futuras con las experiencias populares de autogestión social y comunitaria, mismas que requieren apoyos institucionales y académicos para consolidar procesos de planeación popular del territorio, fortaleciendo las capacidades locales para mejorar la calidad de vida y la preparación colectiva frente a los riesgos asociados a cambio climático, con experiencias en comunidades de los estados de Tabasco, Chiapas, Veracruz y Guerrero.

ROELSGAARD OBLING, ANNE* (Copenhagen Business School, gr.ioa@cbs.dk)

The Insecure Attachment of the Organization Theorist: Present Day and Past Responses to Health Care Scandals in the NHS

In this paper I present a dramatic health care system collapse and scandal in the UK. I analyse the story about appalling suffering of a large amount of patients at Mid Staffordshire NHS foundation trust between 2005 and 2008, and the subsequent public inquiry in 2013 of the Stafford hospital and the trust's professional staff and directors. On this background, I discuss present day response to the scandal and show how this response departures from a preoccupation with operational truths, such as world-class management, regulatory transparency and openness, and culture of compassion. I argue that organization studies and work that critically reflect upon the context in which clinical malpractice occurs have been largely absent from this discussion. This is peculiar since the scandal seems to be an open invitation to organization theory and organization concepts to take on a life and role in the discussion. In addition to this, I argue, the scandal invites organization theorists to contribute to a discussion of how we choose to organize treatment and care of vulnerable citizens in our society. To follow this line of thought, I revisit the work of Isabel Menzies Lyth (1959, 1988) and central analyses of The Tavistock Institute of Human Relations (Jaques, 1951; Trist and Bamforth, 1951; Rice, 1958; Winnicott, 1958). I scrutinize whether, in light of the hospital scandal and the numerous failures of care, these classical endeavours add something to present day theorizing on organizations and how we think about and approach the activities and relations of organisations. To conclude, I argue that classical organization theory in the early Tavistock tradition provides us with old, new ways of thinking about and acting upon contemporary scandals in the NHS.

ROGERS, PETER* (Macquarie University, Peter.rogers@mq.edu.au)

Transparency & Visible (Dis)Order: Surveillance and the Riots

This paper links the UK riots of August 2011 to citizenship and the subject through the lens of risk and resilience. It suggests that the rhetoric of respon-
sibilisation and observational techniques/tactics in response to the riots reveal a moral ordering of the ‘legitimate’ citizen/subject at odds with the rhetoric of inclusive resilience. The visibility of the disorderly citizen was used to objectify the ‘risky subject’; turning the riots from a societal reaction (to the negative impacts of neoliberalization) into wanton criminality inherent to the ‘worst 100,000 families’ in Britain. This paper situates the disorderly and ‘risky’ citizen/subject within a critical reflection on risk, order and surveillance. It is argued that a complex interplay of thinking, doing and acting out citizenship forms tendential links between risk and surveillance that scholars need to investigate further.

ROHDE, CATERINA* (University of Bielefeld, caterina.rohde@arcor.de)

Being a Housewife – Is It a Traditional or Progressive Female Gender Role? Understanding Gender Role Constructions in a Transcultural Russian-German Research Setting

This paper is based on a PhD project investigating the au pair migration from young Russian women to Germany. Two aspects of this project will be discussed: 1) What kind of biographical research design may be employed in a transcultural research context and 2) how does this design help to reconstruct the socio-cultural constructiveness of social categories such as gender. The methodological design of the research project consisted of data collection with biographical narrative interviews mainly done in German language (to lesser extent in English or Russian with interpretation). Data were analysed by the method of sequential analysis with a group of researchers, who belong to German and Russian backgrounds, enabling the reconstruction of cultural specific social categories. Concerning the question of gender this project depicts how this category not only in everyday knowledge but also in research is formed by socio-cultural and historically shaped contexts.

ROHDE, CATERINA* (University of Bielefeld, caterina.rohde@arcor.de)

The Male Au Pair: Migrant Men Providing Domestic and Care Services In Au Pair Jobs

Research on migrants working in low income jobs show a gender logic according to which female migrants typically work in domestic and care work, while male migrants hold jobs in the industrial sector. The increasing popularity of male au pairs offers a unique opportunity to research a specific case of migrants’ labor market position contradictory to this logic. Since there do not exist any studies and statistics on male au pairs yet, I propose an explorative research project on male au pairs in Germany. It is based on 3 in-depth interviews with male au pairs, data from online forums, journalistic articles, advertising materials of au pair agencies as well as interviews with agency staff. Au pair work is a specific type of reproductive labor because the working relation between au pair and the employing family is only very poorly regulated. Thus, every case shows which specific tasks are delegated to the au pair and which according competencies are expected of the au pair. At the intersection of ethnicity/nationality and masculinity the male au pair is constructed as a suitable worker for families with sons. Aligned the broad discussion about the importance of men for socializing male children, male au pairs are hired when the male parent is absent and is expected to fulfill the position of a male role model. The foreignness of the au pair is portrayed as a value of intercultural education. At the same time offering low waged work within the own household is legitimized as providing life chances to a young person from a less developed country. Biographical interviews show that male au pairs often feel overburdened by the expectation to be a male role model and report to feel pressured into adjusting to the families’ cultural/individual routines instead of pursuing their own lifestyle.

ROJO, RAUL-ENRIQUE* (Federal University of Rio Grande do Sul, raulojo@ufrgs.br)

Les Embûches De La Mémoire. “L’Éternauta” Comme Metaphore Anticipatoire De La Dictature Argentine Et Relecture De Ses Séquelles

Cette contribution porte sur les politiques contemporaines d’assistance au Chili. Plus spécifiquement, sur l’analyse des pratiques d’accompagnement psychosocial à familles vulnérables. Ce travail est le résultat d’une enquête ethnographique réalisée au cours de 3 mois de résidence de visiteurs en 2013 à Santiago. J’interroge les enjeux de la pratique assistentielle contemporaine ainsi que les limites d’action tant des intervenants que des sujets assistés dans un contexte d’intervention précaire et précarisée. Cette politique a été associée à la nouvelle vague de politiques sociales inspirée dans l’appareil de la Banque Mondial : « la gestion du risque social ». Elle aspire à articuler des mécanismes de transferts monétaires conditionnés (« Conditional Cash Transfers Programs ») avec des pratiques de traitement de type assistantiels et promotionnels. À partir d’un approche de genre, l’analyse va se concentrer sur la gestion et le gouvernement du social au niveau local, notamment, à partir de la configuration sociologique des rapports assistentiels (entre assistants et assistés). Je propose discuter des formes de circulation et de transference des contraintes liées à la gestion assistentielle (bureaucratiques, administratives, financières) entre les familles et les intervenants et voir comment ces mécanismes d’adaptation des uns, mettent en tension temaing réticences des autres. Enfin, je vais tenter de montrer comment la nouvelle logique de gestion du social s’appuie sur une intervention à double cible qui traite et qui met sous contraintes tant aux pauvres comme aux intervenants.

ROJAS LASCH, CAROLINA* (Pontificia Universidad Católica, crojaslasch@gmail.com)

Protest, Conflict, and Class Struggle in South Korea: Two Cases of Urban Redevelopment in Incheon

South Korea has suffered from major economic dislocations under the pressures of globalization, marketization, and economic restructuring particularly since the Asian Financial Crisis of 1997-98. Labor responded in the last decade with a wave of labor militancy that receded with the decline of the labor movement and a period of labor peace during the recent economic crisis. At the meantime the public has asked for more welfare spending. Throughout the period, though, there has been sustained resistance to capital in the form of protests against urban redevelopment. In recent years, urban protests have even taken a similar form to labor protests, with both involving sustained occupations and a common protest culture. This study reviews the recent trends in resistance against domestic (and foreign) capital and then looks at the specific cases of housing protests in the Kajwa and Dohwa neighborhoods of Incheon. In both cases, a lower-income community was displaced by landlords seeking profit by building more expensive housing in a pattern common throughout Korea despite plenty of housing stock that could be rehabilitated at lower cost. The capital drive to redevelop has led to in spite of a collapse in the luxury housing market, and a lack of affordable housing. The course of the occupations and protests are reviewed and linked to broader issues of class conflict in Incheon and South Korea.
This paper explores the writings of G.W.F. Hegel, Friedrich Nietzsche and Frantz Fanon on the dynamics within relationships of domination and subordination. Although the three authors held quite different political perspectives, there are commonalities, as well as differences, in their discussions of this dynamic. All explore the subordinate as an object, the importance of the Other, and the effects on the margin of those involved in such relationships. Nietzsche and Fanon also discuss the role of resentment and the importance of physical coercion and repression in maintaining and then undermining domination. Hegel considers the labor of the subordinate significant. Despite their differing views of the processes by which an outcome is reached and the desirability of that outcome, the three writers concur that the destruction of the inequality is an inevitability.

The Financialization of Housing and Spatial Segregation: New Frontiers in Brazilian Cities

Urban space plays a crucial role in the contemporary processes of capital accumulation, which is essential to analyse transformations on social housing policies and their impacts on patterns of socio-spatial segregation in the cities. More than mere effects of the financialization of the world economy, changes in the production and consumption of urban space have figured as driving forces of a new economic order, characterized by deep connections between financial markets and real estate.

Cities in general and the housing sector in particular have not only become fertile fields for commodification of social needs and expansion of market relations, but have been mobilized as a guarantee for financial assets. Social housing was not the sub-sector to be affected firstly by such phenomena, which has gone further where the expected rates of return are higher such as corporate buildings or luxury residences. However, it stands as a terrain of strategic relevance for business due to its large scale.

In this context, rather than ways of providing social rights, housing policies have been progressively conceived as means of opening new frontiers of financialization in low income residential markets. Like in many other countries, this is the case of “Minha Casa Minha Vida” program, the main housing policy implemented in Brazil, which subsidize homeownership to low income households.

With the protagonist role of private developers in the formulation of social housing projects, their spatial dimension are conditioned by cost calculations made by economic agents seeking to maximize profits. Without taking into account urban policy goals, the definition of the projects’ location is mainly guided by the criteria of the cheapest land available - generally also the most precarious places. As a consequence, social housing projects are reinforcing historical trends of segregation and ghettoification of the poor in Brazilian cities.

Lone Mothers and Long Hours. Work-Family Conflict In The Everyday Lives Of Lone Mothers In Sweden

The gendered nature of the struggle to integrate caring, family and paid work has been repeatedly demonstrated. Most research, however, has focused on dual parent families. This paper discusses work-family conflict in the everyday lives of lone mothers in Sweden. We use an agency-centered framework inspired by the capabilities approach, which emphasizes that the options of an individual depend greatly on institutions and relations with others. Drawing on 38 in-depth interviews with lone mothers from different social backgrounds we explore i) how the proper balance between care, motherhood and paid work is conceived of, ii) the institutional and relational factors that influence lone mothers’ opportunities to attain work-life balance, and iii) the strategies employed in negotiating paid work and family. Results show that paid work is integral to good motherhood and paid work is perceived of, iii) the institutional and relational factors that influence lone mothers’ opportunities to attain work-life balance, and iii) the strategies employed in negotiating paid work and family. Results show that paid work is integral to good motherhood and paid work is perceived of, iii) the institutional and relational factors that influence lone mothers’ opportunities to attain work-life balance, and iii) the strategies employed in negotiating paid work and family. The analysis addressed in the presentation will show the situation of the older workers from the perspective of their minority status, namely belonging to the group of migrants, as well as from the perspective of gender. We will present the problem of the accumulation of certain advantages and disadvantages during the life-course of individuals with regard also to their socio-demographic characteristics. The questions this presentation will answer are the following: Are there significant differences in labour market outcomes between the workers with migration background and the workers without migration background? Do these differences increase with age? What is the impact of those two dimensions – age and migration status – on one of the labour market outcomes, namely the wages? And finally, what is the role of gender in determining the changes in employment status?

The analyses in this paper draw on data from the SOEP (German Socio-Economic Panel) which is a representative, interdisciplinary, and longitudinal survey of the German population. For our analyses we apply the SOEP data from 1991 to 2011, distinguishing between population with and without migration background. To investigate wage differences between individuals we use the methodology developed by Oaxaca and Blinder (1973).

In the empirical analysis we have found that initial disadvantages in education of men with migration background cumulate across the life span resulting in large differences in labour market outcomes. Women with a migration background do not show these increasing differences but mainly because both women with and without migration background have a pronounced negative development. Furthermore, the wage analysis reflects that wage differences between individuals with and without migration background are due to their different endowments and not an effect of direct discrimination.

System Trust and Cooperation: The Case of Recycling Behavior

In this paper, I develop and test the hypothesis that system trust – trust in the reliability, effectiveness, and legitimacy of social institutions – promotes cooperation in social dilemmas and the provision of public goods, focusing here on the example of recycling. I discuss three models that can explain recycling behavior (rational choice, low-cost hypothesis, dual-process theory) and show how they link incentives and attitudes. All three models claim that incentives are an important factor mediating the attitude-behavior link, but they develop contradicting hypotheses about the direction of this effect. I use survey data collected by Sønderskov and Daugbjerg (2011) to advance an empirical test. I find a positive and significant interaction between the attitude of system trust and recycling costs, as well as a negative and significant interaction between system trust and recycling benefits. The data rule out the rational choice and low-cost hypothesis explanation of recycling behavior. Instead, they indicate that attitudes moderate the impact of the incentive structure, increasing cooperation in collective action dilemmas irrespective of the costs associated with compliance.

Trust and Adapative Rationality: Towards a Causal Explanation of Conditional and Unconditional Trust

This paper provides a theoretical framework to reductively explain conditional and unconditional trust; it also presents an experimental test of the correspondingly integrative model and its predictions. Trust research has neglected the importance of (1) an actor’s context-dependent definition of the situation and (2) individual-level adaptative rationality. The diversity and fragmentation of trust research is guided by a flexible and dynamic degree of information processing: trust is as “multi-faceted” as there are cognitive routes that take us to the choice of a trusting act. The degree of rationality involved in interpretation and choice is a fundamental aspect of trust. However, adaptative rationality has not been treated as an independent and orthogonal dimension of the typological space of trust. By allowing for both automatic and rational modes of information processing, the model demonstrates the impact of a flexible and dynamic degree of rationality in interpretation and choice on trust. It describes a finite set of parameters that guide the selection of the processing mode and provides a causal link between an actor’s definition of the situation, individual-level adaptative rationality, and the behavioral outcome of trust. I predict a closed set of admissible interaction patterns in an experimental context using a measure of chronic norm accessibility (interpersonal trust scale) and two situational parameters. In a 2x2 factorial design, I vary the context and initial endowments in a standard investment game. The data show that negative incentive effects on trust in high-cost situations (5€ vs. 50€ real initial endowments) can be mediated by high norm accessibility or a positive social context. Decision-times analyses reveal a consistent pattern of interactions.

Consumer Credit, Social Inequalities and the State in Postcommunist Central and Eastern Europe

From the end of the 1980s, consumer credit grew quickly all over the developed capitalist world as the expanded access to consumer credit has come to be seen as a way to spur consumption and cushion the pains of growing income inequality as a result of the contraction of the welfare state (Crouch 2009; Prasad 2010; Krippner 2010; Trumbull in press; Kus 2013). The postcommunist region followed this trend in the from the late 1990s as the neoliberal logic predominant in their economic policy thinking of that time shaped the course of the economic transformation. As the former socialist welfare states have been rethinking central policies for their citizens from cradle to grave, privatization, commodification and access to credit were ushered in to replace the state’s obligations for free housing, higher education and rationed provision of deficit consumer durables. The expansion of consumer credit in East and Central Europe was achieved primarily through the enormous growth of formalized lending by retail banks but other alternative venues of lending have also sprung up. The paper investigates the effects of consumer credit on inequalities in Central and Eastern Europe and addresses the effects of the financial crisis on this new system of redistribution with special attention to Russia and Hungary.
analyses of parties and voters in 15 Western European countries, it is assessed manifestos with the European Social Survey (2002-2010). By means of multi-level (corruption, social inequality, party system polarization and the electoral system).

I focus on both micro-level explanations (socio-demographic char-
do citizens vote for parties that employ a populist discourse? In order to answer that question, I focus on both micro-level explanations (socio-demographic characteristics and political attitudes on the individual level), and macro-level variables (corruption, social inequality, party system polarization and the electoral system).

The paper combines the results of a computer-based content analysis of election manifestos with the European Social Survey (2002-2010). By means of multi-level analyses, it is assessed how the success of parties that employ a populist discourse can be explained.

This paper identifies the ethical and methodological significance of this project and discusses the productive blurring of the overlap between arts and visual research practice.

Skills Exchange: Urban Transformation and the Politics of Care was a collaborative art and social research project that took place over 6 years. It investigated the elderly in the city, relations of care and the civil spaces available for older people to participate in. The project from a notion that artists, researchers, older people, care-workers and others might exchange their skills, and, in this process, alter roles and relations. As a result, the focus was on the role of narratives in shaping identity and agency.

This research methodology had questions of ethics, visibility and representation as central concerns. Well-rehearsed relations that risk being ossified in the framing of older people as the objects of research were challenged.

The openness, conflictual responsiveness and reflexivity of all were integral to the development of the projects from artistic, research, and social perspectives. The distinction between art and social research was challenged as aspects of the research overlapped directly and contributed to the artistic processes. The research archive includes art works and social initiatives, opening events and manifests in addition to interview transcripts and social mappings, each oriented towards the cultural and socio-political changes groups hoped to enact.

This paper argues that ‘evaluation’ is a term which has been abused in the recent scramble to systematically measure the economic value of the arts. In considering the relationship between arts policy, cultural theory and arts and evaluation practice this paper offers a critical perspective on the ‘norms’ and ‘forms’ of evaluation. The histories of and motivations for evaluation include a governmentality and a role of policy culture as a resource that can be used to work across disciplines and political interests through processes of creative exchange. Skills Exchange challenged stereotypes of older people, and their capacity for critical thinking and interaction, the kinds of art they like, and the audiences for this kind of work. The resultant powerful evocations and artistic responses often exceeded the expectations of the institutions involved.

A Participatory Action Research (PAR) methodology, was combined with visual ethnography which employed methods of mapping, photographing, interviews, and research diaries. These methods were oriented towards exploring questions about the distribution of power and voice, both within the research process and the wider society. This research methodology had questions of ethics, visibility and representation as central concerns. Well-rehearsed relations that risk being ossified in the framing of older people as the objects of research were challenged.

Work after Retirement or Work Instead of Retirement?

Work after retirement or work instead of retirement?

In Europe the problem of population aging has aroused much worry. The debates on aging populations in need of care, consuming lots of resources, have been common. Consequently, the raising of the retirement age has been one of the themes in the discussion. There is strong opposition against increases in the retirement age. Therefore, alternatives are needed. There are also spontaneous developments which affect the retirement age debate. One alternative which has been tested is the elimination or raise in the upper age limit for retirement. In Finland people may retire already at 63 or 65, but they have to retire at 67 or 68. This upper limit could be raised to 70 without much protest, or eliminated completely.

Another new development is the combination of retirement and (paid) work. This is considered very quickly in the developed countries. One explanation is low pensions and need for good health coverage. But in countries where the level of pensions is decent, the reasons for working are mainly on the pull side. The retirees are healthy and wish to stay in the work life. This means that they do not wish to work full time, but on the other hand are not primarily interested in remuneration. In fact, there seems to be also an increase in the unpaid work, which is difficult to follow statistically.

In our Finnish Generational Transfers study we follow the Finnish baby boomers (born 1945-1950) and their activities. From our data we can see that working when retired is quite common and has interesting correlations with education, income, happiness etc. The paper will present these results and compare them to data from other European countries. On the basis of these results some recommendations about retirement policies are made.

Race/Ethnicity and Health Information Seeking and Use Outside of the Medical Encounter: Is It Associated with Chronic Conditions?

Increasingly, adults in the United States of America (USA) are seeking and using health information (HI) within and outside their medical encounters. Patients actively involved in their self-care are more likely to manage chronic conditions (CC) effectively. But, HI use trends are unclear for those with CC, who use health care and are associated with aging. One study on older, racially/ethnic minority adults found HI seeking could change their eating, exercise, and illness treatments but did not lead to changes in health promotion/prevention or healthcare providers. The theory of uncertainty management suggests that patients reduce healthcare uncertainty by increasing their understanding of disease etiology or treatment options, improving patient-doctor communication, and enhancing disease self-management knowledge through HI seeking. My prior research found African Americans and Whites were similar in seeking and using HI when they talked with their doctors, but Latinos were significantly less likely to do so. How-however, African Americans and Latinos were significantly more likely than Whites to seek and use HI to change their approach to maintaining their health and better understand how to treat illnesses. We examine if race/ethnicity is related to HI use outside of medical encounters by CC. We use data from the 2007 USA Health Tracking Household survey, a nationally-representative survey of civilian, non-institutionalized Americans (N=12,549). Descriptive analysis showed Whites were more likely to seek HI from the Internet (35.7%), while a higher percentage of African Americans sought HI from books or magazines (33.3%) and friends or relatives (32.3%). Latinos were more likely to get HI from friends or relatives (24.0%) and books or magazines (23.1%). Logistic regression models using a knowledge/beliefs scale about care for CC, and alternatively stratifying by any CC or not, will aid our understanding of the self-care practices and needs of racial/ethnic adults with CC as they age.

This Is Not a Toolkit: Reclaiming Critical Evaluation of Participatory Arts

This paper argues that ‘evaluation’ is a term which has been abused in the recent scramble to systematically measure the economic value of the arts. In considering the relationship between arts policy, cultural theory and arts and evaluation practice this paper offers a critical perspective on the ‘norms’ and ‘forms’ of evaluation. The histories of and motivations for evaluation include a governmentality and a role of policy culture as a resource that can be used to work as part of a wider global project of managing social change (Yudice 2003, Bennett 1995) and a genuine desire to learn from and improve the effectiveness and possibilities of arts-based social interventions. This paper argues that in the current policy context evaluation has become a technocratic ‘hoop’ for arts organisations to jump through in well-rehearsed relations through processes of creative exchange. Skills Exchange challenged stereotypes of older people, and their capacity for critical thinking and interaction, the kinds of art they like, and the audiences for this kind of work. The resultant powerful evocations and artistic responses often exceeded the expectations of the institutions involved.

A Participatory Action Research (PAR) methodology, was combined with visual ethnography which employed methods of mapping, photographing, interviews, and research diaries. Between Rhetoric and Reality: Shar'i'a and Neo-Liberal Multiculturalism in Australia

Abstract

The past decade has been characterized by attacks upon and critiques of multicultur-ism. This has been particularly the case in Europe, where in the context of the European sovereign debt crisis a politically driven, anti-multicultural con- tention has spread at rapid pace. It is clear that multiculturalism in Europe faces

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
immense political challenges from its opponents, many of whom currently constitute ruling governments. Leaders and opposition parties in Switzerland, Germany, The United Kingdom, France and the Netherlands have made strong public statements against multiculturalism and linked this rejection to the presence of Muslim populations. Banting and Kymlicka note that even though multicultural policies remain in place in many of these nations, the delegitimization of the word multiculturalism is not just a change in discourse, but jeopardises the very conditions under which multicultural policies can actually work. It would be easy to consider that in this context, multiculturalism has a dim future.

This paper, based upon extensive research conducted for an Australian Research Council-funded study examining sharia’s legal pluralism and Islamic finance. It offers important insights into the dimensions of a new neoliberal multiculturalism in Australia.

**Biography**

Joshua M. Roose (J.Roose@uws.edu.au) is a senior research officer of the Religion and Society Research Centre at the University of Western Sydney, Australia working on an Australian Research Council-funded study examining sharia and legal pluralism in Australia and the United States. In 2013, he served as a visiting scholar and researcher on the same project (with Professor Bryan Turner) at the Committee for the Study of Religion at City University of New York. He is also a co-convenor of The Australian Sociological Association (TASA) “Ethnicity, Migration and Multiculturalism” thematic group with a focus on religion and multiculturalism.

**Muslim Elites in the Neo-Liberal Sphere: Implications for Citizenship and the Future of Islam in the West**

In recent years there has been a vast array of studies examining Muslims in Western contexts at the level of rationalisation, impacts of negative representations and civic engagement. However, little research has examined the emergence of Western born Muslims into the elite professions that are central to the operation of the neo-liberal free market and that serve as a central location of economic and political power. Less research still has examined how this ‘new Muslim elite’ is shaping citizenship amongst Muslims and the future of Islam in the West (and the tensions this produces with traditional Muslim community leadership). This study aims to reveal important empirical and theoretical insights into these developments. Significantly, this study shifts the focus from the ‘Muslim question’ to how Muslims are actively contributing to a ‘Muslim Solution’.

This paper is based on findings from a three year project (2012-2014) funded by the Australian Research Council and conducted by a multidisciplinary team (Law, Sociology, Criminology and Political Science) from the University of Western Sydney (UWS) and City University of New York (CUNY). Empirical research was conducted in the global cities of Sydney and New York with Muslim attorneys, Islamic finance specialists, Imams and community leaders. The study aims to explore the intersection of sharia and the secular legal system, as well as gaining a broader insight into how sharia’s shapes the everyday lives of observant Muslims.

**The Temporality of the Good Life: Resonance As a Key-Concept in Critical Theory**

The modern reality of ethical pluralism implies that we cannot define the substance or content of a good life. However, perhaps it is possible to identify the temporality, or at least some of the crucial temporal aspects of a good life? The paper sets out to explore just this. In the first part, it identifies three time-levels that have to be brought in ‘resonance’ or coherence within a life: The temporality of everyday life, the temporality of a life-time (or biographical time), and the temporality of one’s age or epoch (historical time). In its second part, the paper seeks to establish the argument that the good life is achieved through a mediation between singular ‘moments of resonance’ (as opposed to situations of alienation) and stable ‘axes of resonance’ that allow for such moments. The crucial point here is the interplay and preservation of such axes of resonance, thus ensuring a certain level of security and stability that is potentially threatened or undermined in an era of incessant social acceleration.

While moments of resonance are rare and short-lived, what subjects need are stable and reliable ‘Axes of Resonance’ which give access to such experiences. In modern society, such axes can be love and the family, work, but also nature, art and religion. I will explore these ‘Spheres of Resonance’ by contrasting them to ‘Spheres of Alienation’ which mirror the former and might be on the rise in a late-modern world governed by the imperatives of speed and competition.

**Can International Framework Agreements Facilitate Transnational Labor Cooperation?**

Marx & Engels predicted that globalization would lead workers of the world to unite. Indeed, the world economy is today “global.” However, globalization seems to have hurt workers’ organization as labor unions have lost membership and influence almost across the board. But in the past decade global unions have even been able to persuade more than 100 multinational corporations employing over 8 million workers to sign so-called international framework agreements (“IFAs”). At a minimum, all IFAs must commit to the “core labor rights” of the International Labor Organization (“ILO”), to wit, the right of freedom of association and effective collective bargaining, the right to be free from discrimination at work, the right against compulsory labor and the right against the worst forms of child labor. Could Marx & Engels have been correct, after all, about an international formation of workers acting in a class-conscious way for fundamental social change around the world? After doing empirical field research for about 6 months in Europe and the U.S.A., I do not think that IFAs yet signal a significant and new labor upsurge. First, I found out that the mostly German, Nordic, and French labor organizations seem to determine the specific meanings of the IFAs. These specific national labor organizations broker the IFAs and the relations that give IFAs meaning and life. In this sense IFAs are not truly “global.” They have important national roots. Second, unions across economic sectors seem to have conflicting interests. No brokerage seems to mend those ruptures, leading some global unions and their IFAs to clash with others. The paper concludes by arguing that the ILO may help to broker these conflicts to propel IFAs forward.

**Communicating the Challenges of Climate Change Adaptation in the International Red Cross and Red Crescent Movement**

The paradigm of climate change adaptation (CCA) plays an increasingly important role in various types of civil society organizations (ICRC, 2012; Hall 2013). The International Red Cross and Red Crescent Movement discussed the topic of climate change as a humanitarian challenge for the first time in 1999. The Foundation of the Red Cross/Red Crescent Climate Centre (RCC) in Den Haag in 2002 institutionalized this new organizational commitment to address climate change induced challenges in disaster preparedness and the securing of livelihoods. Today, CCA is being discussed as a cross-cutting issue in humanitarian...
projects across the 187 national Red Cross/Red Crescent societies. The communication of climate risks to reach various target audiences from local communities to national stakeholders and volunteers to donors at the institutional and individual level has become a key challenge in the process of organizational change. This paper comparatively analyzes three different methods of communication that address CCA issues in the Red Cross/Red Crescent movement. First, the different visualization tools of the vulnerability and capacity assessment are analyzed with a focus on community based perceptions of climate change (RCCl 2010). Second, participatory games that model complex dynamic systems and that are facilitated by the Red Cross/Red Crescent Societies are discussed as a tool to foster awareness on the complexity of climate change impacts for local livelihoods and disaster preparedness at the level of donors and practitioners. Third, the climate change campaign of the German Youth Red Cross is analyzed with regards to its approach to motivate young people and the general public to address a complex issue in a more simple and understandable way. These case studies illustrate the need to find innovative ways to communicate and simplify the complexities and uncertainties that are linked to changing environmental factors.

Innovative Strategies to Cope with Climate Change Across Time and Space - Local Preparedness As a Humanitarian Challenge?

This paper addresses an innovative climate change adaptation strategy in the area of disaster preparedness developed by the German Red Cross in cooperation with local partners in Africa such as the Ugandan and the Togolese Red Cross. Discussing the concept of “early warning/early action” and its practical implementation, this paper addresses organizational learning processes in transnational organizations from an actor centered perspective. By looking at a new project approach in the area of indicator based disaster preparedness systems, the importance of knowledge creation and transformation across time and space is highlighted. Time is important to respond adequately before a disaster strikes which requires new forms of institutionalized cooperation (for example, with meteorological departments and other stakeholders), while the spatial dimension refers to processes of organizational learning across borders and hierarchies from the local to the regional and transnational level. The role of both local communities and organizational change agents, meaning key persons within and outside the organizations, is addressed systematically to analyze the possibilities to foster climate change adaptation projects and their successful implementation in the long run.

Talking about Sexuality in Order to Deal with Discrimination? Gay Men in Palestine

In the context of a German-Israeli-Palestinian research project, we conducted biographical-narrative interviews with Palestinians in the West Bank and Jerusalem. We asked our interviewees to tell us their family and life histories without suggesting any other topic during the first (and main) part of the interview. In all our research settings we had several interviews with men who define themselves as homosexual or who experienced serious discrimination because of being defined as homosexuals. It became obvious that these men wanted to speak with us because we represent, from their perspective, the so-called Western culture that they associate with more sexual liberty and because they felt a need to speak about their suffering from discrimination. In order to understand and explain the interaction “researcher-interviewee” it is crucial to understand their specific definitions of the concrete relationship to the male interviewers from Germany.

These biographical self-presentations are marked by talking about experiences of discrimination and about struggling with their self-definition (Am I gay, transgender or heterosexual?). Thereby they touch on the issue of homosexuality being a ‘Western’ concept.

In our paper we will present our assumptions, that are based on several case studies, about the interrelation of these self-presentations and self-deﬁnitions with the hegemonic discourse about male homosexuality, or non-normative sexualities respectively. Furthermore we will discuss (and assumption) that these interviewees, who are in a position of outsiders (in the sense of Norbert Elias) in Palestinian society, are talking more openly about internal conﬂicts inside the Palestinian community than other interviewees.

PEARCE, REBECCA (University of NSW)

Climate Uprise: An Ethnography of the Climate Movement

In this paper we report on a project analysing the emergence of a grassroots social movement dedicated to direct action against the root causes of climate change. The project investigates the dramatic turn in climate politics that occurred in the mid-2000s. Engendered by mounting evidence of climate change, and by the rise of international level political negotiations under the United Nations Framework Convention on Climate Change, and rejecting the pragmatism of professionalised non-government environmental organisations, this grassroots-based political movement launched a radical programme for climate action from below. Through public protests, civil disobedience involving direct actions, counter summits, and deliberative events that created a sense of community, solidarity and personal political agency, climate activists sought to translate climate science into politics.

The climate movement sought to build a political vision and the political capacity to challenge the elite politics of climate change, the ‘climate pragmatism’ that had dominated climate politics from the 1990s, and the legitimacy of the carbon-intensive economy. The paper explores this significant moment, when a radical climate politics introduced a new dynamic to the landscape. The authors are to publish this work in 2013 as an ethnography of the search for climate agency, based on the authors’ involvements in the climate movement and in-depth interviews with climate activists from 2007 to 2010. Focusing particularly on the climate movement in Australia, a country reaping the economic benefits of the coal and gas boom, the book charts both the possibilities and pitfalls revealed by the upsurge, interpreting it as a pre-figurative moment for an anti-systemic climate agency.

Imperialism In a Wool Blanket: Aboriginal Iconography, Denomination and Canadian Paper Monies

Imperialism in a Wool Blanket: Aboriginal Iconography, Denomination and Canadian Paper Monies

National currencies, especially paper notes, are emblems of the nation-state and its power. This paper builds on these literatures to explore iconic representations of Canada’s Aboriginal Peoples in its monies, using examples of colonial and post-colonial (ostensibly) post-colonial notes. Research on images of imperialism and nationalism in African colonial and African and East Asian post-colonial monies and stamps is a well-established field. However, Canada’s imperialist, colonialist legacy is a neglected, sometimes denied, history, and its monies are barely studied from critical, social science perspectives.

Beginning with an 1870 Dominion of Canada $2 bill, and culminating in the 2004 Canadian Journey series $20 bill, this paper asks whether Canada’s claim of multi-culturalism vis-a-vis First Nations Peoples is indeed supported by nation-building imagery on its own currency. Hudson’s Bay Point Blankets were traded between colonisers and First Nations in 19th century Canada. These wool blankets were re-purposed by Aboriginal peoples as garments, ceremonial exchange and prestige goods. On the 1870 $2 bill, the blanket draped across an Aboriginal man’s body is an imperialist icon of le doux commerce that ‘tames’ the ‘noble savage’. In the 2004 $20 bill, First Nations are represented by a modern sculpture by a Haida artist, Bill Reid, depicting the creation of mankind, ‘Raven and the First Mer’. But on this bill is contemporary Aboriginal art and ‘traditional culture’ – the sculpture depicts a key event in Haida cosmology – presented as truly valuable?

When 150 Becomes 100: Conversions and Denominations In Grocery Shopping

When 150 becomes 100: Conversions and Denominations In Grocery Shopping

This paper explores two aspects of expatriate money practices with Russian rubles, focusing on everyday shopping: conversion rules of thumb and denominations. The Russian ruble is a currency whose base denomination is one hundred (100) rather than one (1). Many expatriates living in Moscow are accustomed to currencys like the United States dollar, the Euro or British pounds sterling, whose base denominations are one not one hundred. Conversion becomes a way of managing ‘sticker shock’, a means of making sense of how a can of coffee can cost 800 currency units (rubles in this case), and coming to understand new regimes of value and price for everyday goods. Yet even expatriates from countries with a currency whose base unit is 100 – Japanese yen, South Korean won, Swedish kronor – talk of curious conversion conversations under a rule of thumb that 150 of one unit equals 100 of another eventually becomes a 1:1 ratio. Learning to use rubles, especially in buying daily necessities, means not only developing a handy conversion to assess prices, but also adjusting to new arithmetic based on

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
different monetary denominations, even when the base unit may be the same. I will argue that conversions are slowly adjusted to better match not official rates of currency conversion, but notions of worth and value that are linked to available denominations of money at ‘home’ and abroad.

*Ethnographic Studies Approaching Violence and the Transaction of Illegal Drugs in Montevideo, Uruguay*

The present work is a result of a process of ethnographic investigation that took place in three different social locations: the downtown area (with a population conformed by homeless teenagers and young adults); a peripheral suburb location in Montevideo (focusing on consumers of cocaine paste base); and, prison (within a system created for people with no criminal records). The focus of this study discusses the social interrelations and the transactions of illegal drugs. Given the general assumption that the foundation of social interrelations is exchange itself, the case of an exchange that occurs within an outlawed background will be debated— an illegal market which is necessarily (re)producing violence; a market that is illegal due to the fact that those merchandise are considered non-legal by national and international normatives. The present investigation was held during the debate that arose in Uruguay on the topic of the legalization of one illicit drug (cannabis), a critical debate to which attention is paid along this work: while the debate that arose in Uruguay on the topic of the legalization of one illicit drug was illegal due to the fact that those merchandises are considered non-legal by national and international normatives. The present investigation was held during the debate that arose in Uruguay on the topic of the legalization of one illicit drug (cannabis), a critical debate to which attention is paid along this work: while the debate that arose in Uruguay on the topic of the legalization of one illicit drug (cannabis), a critical debate to which attention is paid along this work: while the debate that arose in Uruguay on the topic of the legalization of one illicit drug (cannabis), a critical debate to which attention is paid along this work: while the debate that arose in Uruguay on the topic of the legalization of one illicit drug was illegal due to the fact that those merchandises are considered non-legal by national and international normatives.

*In and out of the Mass Media System: Crisis Microblogging in a Social System Theory Perspective*

The large diffusion of social media platforms, togheter with the diffusion of mobile connectivity, has generated, during the last few years, a growing amount of real time production of user generated content. This broad phenomenon is even more intense when it comes to crisis related communication. During crisis events traditional mass media communications might be slower less efficient and less accurate than user-generated information. This is why, over the last few years, we are seeing a growing number of research projects aiming at using these data for rescue operations or other civil protection activities. We are facing this kind of data from a different perspective. Within this paper we will claim that—within specific circumstances—user generated communication will act surrogating the traditional Mass Media System in its function of self observation of the Social System (Luhmann 2000) by applying the same operational selection between information and non-information. In addition we will claim that, as soon as the initial conditions disappear, user generated communication will evolve into a new—and still largely unexplored social function.

To support our thesis we will use Twitter data collected during the first five hours after the earthquake that struck Emilia Romagna region in Italy on May 20th 2012 monitoring the #terremoto hashtag. By focusing on the first 5 hours of the Twitter stream we have been able to detect the early user-led phase of the phenomenon, showing which type of users has been the first to fill the information gap and, by then, what happened until the early morning when traditional media came on stage. We will show how in this time span it is possible to observe how specific social network analysis metrics (Bruno, Stiegitz 2012) evolve from a specific mass media like structure toward a more conversational structure.

ROSTGAARD, TINE* (Aalborg University, tr@dps.aau.dk)

*Ageing and the Development of Community Care in East Asia – What Way Forward?*

With the ageing of societies, there is growing interest among also East Asian countries to implement new policies of long term care. Home care arrangements now predominate in OECD countries, reflecting older people’s preferences for home based help and care but also as an attempt to reduce reliance on expensive institutional care, particularly for recipients with lower levels of disability (OECD, 2005). Countries without extensive formal community-based care systems such as the East Asian countries are in a demographic situation which requires them to consider how to organize and provide adequate, affordable and quality community-based care, in both urban and rural settings, and in a financially sustainable and culturally diverse way. They can draw on the lessons learned from other countries in the development of national community-based care models, but new models of community care must develop according to their respective cultural, political and social background and taking into account financial and systemic capabilities. This paper investigates what models of community care have been implemented or is under way in 9 East Asian countries, outlining their characteristics and the challenges forward.

*The Gendering of Internet-Based ICTs in Everyday Life*

Dealing with the implications of ICTs for social inequality requires taking the everyday processes and actual situations into account in which ICTs are used and where participation is negotiated and constituted.

Relating to Cultural Studies the domestication approach argues that everyday life especially in the domestic sphere can be seen as a microcosm of society, where institutional and discursive inequalities are reflected as well as being reproduced. Within the domestication process ICTs are actively integrated into daily routines, social interactions and spatiotemporal structures of the households revealing processes of inclusion and exclusion.

The present paper presents findings from the ethnographic-oriented, interview-based long-term study “The Mediatized Home” analyzing the integration of the different internet-based ICTs into the everyday lives of 25 (heterosexual) couples over a period of over 5 years. The findings show that due to a technological framing, inequalities in internet use and skills are especially tied to gender roles and practices. Although the technological framing and thereby these inequalities diminish during the process of integrating the internet into everyday life, they do not dissolve entirely, but prove to be resilient to its changing surroundings. Causes for the persistence of these inequalities can be identified on an institutional and discursive level as well as within the interaction of the couples. Various aspects on these different levels lead to a gendered division of labor within the relationships of the couples, which is evidently affecting the use of internet-based ICTs.

In order to understand the ways in which internet-based ICTs interact with questions of social inequality, it is crucial to ask for its latent implications. Our study shows that looking at everyday life from a domestication perspective allows us to not only identify latent implications of internet-based ICTs, but also to understand how they unfold their effects on social inequality.

ROTH, ULRIKE* (University of Münster, ulrike.roth@uni-muenster.de)

*Where Participation is Negotiated: New Media in Everyday Life*

Addressing the intersection between New Media and social inequality requires taking the everyday processes and actual situations into account in which New Media is used and where participation in New Media is negotiated and constituted.

Relating to Cultural Studies the domestication approach argues that everyday life especially in the domestic sphere can be seen as a microcosm of society, where institutional and discursive inequalities are reflected as well as being reproduced. Within the domestication process New Media Technologies are actively integrated into daily routines, social interactions and spatiotemporal structures of the households revealing processes of inclusion and exclusion.

The present paper presents findings from the ethnographic-oriented, interview-based long-term study “The Mediatized Home” analyzing the integration of the different New Media Technologies into the everyday lives of 25 (heterosexual) couples over a period of over 5 years. The findings show that inequalities in internet use and skills are especially tied to gender roles and practices. Although these inequalities diminish during the process of integrating the internet into everyday life, they do not dissolve entirely, but prove to be resilient to its changing surroundings. Causes for the persistence of these inequalities can be identified on an institutional and discursive level as well as within the interaction of the couples. Various aspects on these different levels lead to a gendered division of labor within the relationships of the couples involving a gendered construction of New Media expertise, which is evidently affecting the use of New Media.

In order to understand the ways in which New Media can open up possibilities to participation, it is crucial to ask whether people are equally taking part in New Media or not. Our study helps explaining processes of inclusion as well as exclusion showing how participation in New Media is negotiated in everyday life.

*Unions and Childbearing: Converging Gender Roles in Finland*

Abstracts are organized by first presenting author's last name. * denotes a presenting author.
One distinguishing trait of Finnish fertility during the last decades is the increase in the proportion of families having three or four children. We study how socio-economic status (SES) and numbers of unions relate to average (3+) parities among Finnish men and women across age cohorts. In previous studies of wealthy low-fertility countries, both male SES and number of unions has often been shown to increase fertility, while their effect on women is mixed or negative. We use the FINNUNION data, a 11% sample of all Finnish-born persons resident in Finland during 1970–2010 and covering the fertility of age cohorts 1930–1960. It includes data on co-residential unions and marriages, childbirth and central socio-demographic indicators of the index persons on an annual basis. It also includes sociodemographic indicators and childbearing history of all partners in marriage or cohabitation of the index person.

Results show that across all male cohorts, higher social status increases the proportions of 3+ children. There is no comparable clear trend among women, although the negative effect of female education on higher parities diminishes over time. Interestingly, the gender differences appear to diminish among younger cohorts. We discuss reasons for the shift towards gender equality in mating patterns in families with many children.

Plural Modernities and Post-Western Sociologies: Individuation in Europe and in China

In a context of plural modernities we have entered in a period of post-Westernization of societies and of the construction of situated knowledge. We are in the midst of a "global change" which is distinct from previous changes and their ephemeral nature which appears to be a turning point in the history of the social sciences. In this communication we will consider the diversity of epistemic injustices and reticular dominations, the emergence of Post-Western sociology through the dialogue between European and Chinese sociologies; finally we will be focused on theoretical continuities and discontinuities between Chinese and European sociologies through the analysis of the process of individuation in Europe and in China. The concept of the individual is not very highly developed in Chinese sociology, whereas it has assumed a central position in European sociologies. On the other hand, various theories of the guanxi have been developed; some Chinese sociologists advance the 'we' is produced, on the one hand, by guanxi, which delineate the particular boundaries of the 'self' in the construction of the individual, and, on the other hand, by categorisations, identifications and social affiliations. Overall the past 20 years or more, it has been interesting to observe that in European sociology, and particularly French sociology, the contemporary individual, whether he appears uncertain, reflexive or autonomous, lies at the heart of sociological thinking, whereas he is scarcely visible on the Chinese sociological scene. This phenomenon highlights the affirmation of the process of individuation as a process of civilisation – in Norbert Elias's sense of the term – and shows that, whereas in the past it was social structures that sustained the individual and the level of reflexivity was consistent with the social structure. We would consider discontinuous continuities and continuous discontinuities between Chinese and European sociologies.

“Equality and Challenge: The Case of ‘Lysistrata’ in Ancient Greek Drama”

This paper concerns with the successful revival of the ancient Greek drama through the study of “Lysistrata” by Sophocles. The educational and recreational character of the ancient Greek drama gives the audience messages for
equality, a notion useful in building sound personalities, ready to participate in a democratic state. In this paper I will be present the analysis of "Lysistrata" through the mask/prosepio of the ancient Greek drama. The results were acquired after going through and studying elements from a variety of sources, such as masks form pottery, bas-reliefs, sculptures, frescoes, statuettes and texts. Aristophanes, who is considered to be the best ancient Greek comedy writer, was well aware of the social problems faced by the Athenian republic during and after the Peloponnesian War and thus felt challenged to present these problems through his writings. One famous persona he made up was "Lysistrata", an audacious, viv- id, powerful woman. "Lysistrata" is taught in philosophy schools and played in theatres around the world. The messages conveyed involve idea of the equality, peace, reconciliation, dialogue, human rights. The educational activities deriving from the ancient masks presented masks could take the form of articles, lectures, e- lectures, workshops, interactive programs, videos etc.

Epistemological Standpoints and Steps in Social Sciences. Intersectionality in Gender Studies

Human and social sciences are the subject of a long lasting confrontation between the ideal-type standpoint of the researcher's neutrality and the inevitable subjectivity in everyday life situations, between positivism and subjectivism. As a result of these paradigmatic oppositions, we encounter a cleavage between statistical quantitative methods applied to experimental data, "objective methods", and qualitative from a contextual research.

Since 1980's, in information and communications sciences but also in management and gender studies, we are talking about the reliability of qualitative methods, the role of experience, memory and standpoint. The objectivity is actually non-achievable, so the subjectivity must be assumed, explored, transferred.

Feminist studies (sociological first, then communicational, discursive, historical) are designed to reveal the women's perspectives, as the feminist approaches to problems on Epistemology, Metaphysics, Methodology and Philosophy of Science.

With this new orientation towards a "situated knowledge" (see D. Haraway), with the triangulation of methods and the intersectionality of sociological parameters , the traditional separation between the subject connoisseur and the object to be known is abolished and the group or community perspective can replace the neutral, individualizing perspective.

La Dimension De Genre Dans Les Organisations

La visée de cette intervention c'est de s'inscrire dans l'histoire des efforts entrepris pour éradiquer l'arbitraire, l'injustice et la discrimination envers les femmes en utilisant l'arme de l'information. Pour faire avancer la cause de l'égalité, il faut d'abord arrêver prendre le poids des inégalités, rendre visibles leurs causes et leurs effets, comprendre le degré de leur résistance et les implications de leur persistance.

En dépit des modifications de jure (loi contre la discrimination de genre-2002 pour la Roumanie), de facto les changements arrivent plus lentement. L’inégalité de genre reste une caractéristique majeure de la société globale et par voie de conséquence de la Roumanie postcommuniste aussi.

Dans les sociétés contemporaines marquées par la désindustrialisation, la production et la reproduction, le marché et la famille sont moins séparés ; ils deviennent des espaces où le sexe, la race, la classe se confrontent afin de donner une signification et valeur nouvelle au travail. La crise (de la production, du travail, de la famille etc.) entraîne des travaux temporaires, ce que des chercheurs féministes appellent du travail féminisé (moins payé, moins valorisé, etc.) ; c'est pourquoi on parle de féminisation de la pauvreté (accentuée par la crise).

Même si les femmes ont investi dans presque toutes les professions, la ségrégation sexuée du travail demeure une réalité qui se traduit notamment par la persistance de l'inégalité salariale et symbolique (ce que l'on va prouver par les vingt entrevues en profondeur avec des femmes appartenant à des professions, catégories d'age et de leadership différentes).

Suffering and Aesthetic Identification in Cosmopolitan Cinema

Looking at specific film examples of cosmopolitan cinema, this paper is concerned with both theorizing and probing how different modalities of aesthetic identification with the suffering hero – sympathetic, cathartic and ironic – are consequen- tial for the ways in which the viewer is capable (or not) of detaching herself from the immediacy of the emotions underlying her identification (e.g. compas- sion, sympathetic tears, tragic emotion, estrangement) and rise to moral judg- ment and reflection about what is represented. It is through the fictional exercise of the imagination that audiences are invited to identify and empathize with the fate of individual characters and to consider the moral implications of their suffer- ing in their own worlds. If fictional characters can become ‘real’, personalized and tangible as subjects experiencing pain, it is also because the suffering ‘other’ is perceived not as a distant object of pity but as a fully-fledged subject just like ‘us’. We will see that some modalities of aesthetic identification with suffering charac- ters have the potential to trigger cognitive linguistic deliberation– and, therefore, new cultural meanings of suffering - in a discursive ethical space where a range of interlocutors - audiences, filmmakers, creative personnel and critics – enter into conversation with each other about what constitutes human dignity and its violation. It is argued that cosmopolitan cinema challenges the idea that suffering is ‘unrepresentable’ by personalizing suffering and bringing its visual presence before us in ways that verbal representation cannot.

ROWE, DAVID* (University of Western Sydney, d.rowe@uws.edu.au)

Changing Society, Changing Sport? Social Diversity, Cultural Citizenship and the Sporting Nation

Sport is routinely evident as a key signifier of nation around the world. But in Australia the unusually elevated place of sport in ‘official’ and popular national culture means that questions surrounding sport, citizenship and national identity have an especially deep resonance. For example, sport is more prominent in the information for Australia's citizenship test, and more closely connected to its characterisation of national cultural identity, than in equivalent documentation of comparable countries such as Canada and the United Kingdom. Key national sports events are also protected for free television viewing by the world's most rigorous ‘anti-siphoning’ regime in the name of safeguarding “events of national importance and cultural significance” from less accessible subscription television platforms. Affinity with sport, and to the nation through sport, is likely to be less secure as global population mobility alters the demographic composi- tion of Australia's citizenry. It is for this reason that its most dynamically diverse region, Greater Western Sydney (GWS), was selected as the primary research site for a current project addressing sport’s relationship to cultural citizenship in Aus- tralia. GWS has an estimated resident population approaching two million, with almost a third born overseas and of non-English speaking background, approxi- mately half of whom arrived in Australia during or after 2001. With almost forty per cent of residents speaking a language other than English at home, over a half aged below thirty five and approximately a fifth in low income households, GWS is a highly appropriate context for exploring the process of ‘nationing’ through Australia’s sporting system and its relationship to socio-cultural inequality and exclusion under conditions of advancing globalisation. The paper reports on this research-in-progress, and analyses the preliminary findings of its qualitative exploration of the sport-nation-culture nexus.

"State-Formation From Below": Social Movement Of The Dam-Evictees' and 'Legal Transformation' Of The State In Maharashtra (India), 1960-1976

Dam-evictees' movements in Maharashtra have a long history. Peasants in Mar- hastra fought the first struggle against dams in early 1920s, which opposed

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
the Mulshi dam built by the Tatas. Significantly, this is the first known movement organized by the dam-affected persons in India and throughout the world. However, for various reasons, this movement failed. From 1960 onwards, the dam-affected movements in Maharashtra have been led by a federally structured organization named, Maharashtra Rayo Dharrangatra va Prakalpagrasta Shektaki Parishad (MRDPSP; Maharashtra State Dam-affected and Project-affected Farmer’s Organization). Many of the demands of MRDPSP, such as—equity in water distribution and civic amenities for the rehabilitated villages, have been largely fulfilled by the state. Moreover, these movements of the peasants have considerably transformed the structure of the state in Maharashtra. As a result of their mounting resistance, Maharashtra government mooted the first rehabilitation law in India, in the year 1976, which was further amended and replaced in the year 1986 and 1999. Though the movements of the dam displaced still continue to operate, in this paper I wish to analyse and analyse the impact of the period of initial protests from 1960 to 1976, when the first rehabilitation law was formulated in Maharashtra that legally empowered the dam evictees.

In this paper I argue that, dam-evictees’ movements in Maharashtra, were largely successful in getting their ‘material’ demands fulfilled because of having a long ‘historical legacy’ of movements against hydropower projects and mainly by their strategy of — a) raising purely local ‘ecological concerns’, in strategic disjunction from global environmental issues, b) increasingly rationalizing their demands through legal ‘rights based approach’ and c) orienting their movement towards claim-making on the Maharashtra state resources, through recurring cycles of conflicts and negotiations that ultimately caused the legal transformation.

Many Shades of Grey: Past, Present, and Future of Age Relations in America

Population aging is considered one of the top three challenges of global development by the United Nations. By 2025 one in every seven Americans, one in five Japanese, and one in four Europeans will be over the age of 65. This presentation reflects on the key sociological question: in the context of this historically unique transition towards an aging society, how does age matter to deviance and to social status? It describes how the 21st century cult of the youth is linked to the development of the images of majestic orb and traditional doll, the roly-poly, creates the tendency in their social networks. Mainland Chinese students account for 10% of the total number of ideas, whereas the majority of students are from upper-middle class or upper class families; whereas the majority of students are from upper-middle class or upper class families; whereas the majority of students are from upper-middle class or upper class families; whereas the majority of students are from upper-middle class or upper class families; whereas the majority of students are from upper-middle class or upper class families.

ROZHDSTVENSKAYA, ELENA* (National Research University, erozhdestvenskaya@hse.ru)
"to be Controversial" - a Social View on the Russian Art Piece at the Venice Biennale in 2013 ("Russia: Never overturn"

The author analyzes the art piece, which was established on the basis of national competition concept art with the focus of Russian national idea. The roly-poly, a 5-meter-high dynamic sculpture, featuring a wooden log crowned with a double-headed eagle, which rises back up when pushed over, is showcased at the biennial of contemporary art in Venice.

Visual analysis of the subject contains a political representation: the conjunction of the images of majestic orb and traditional doll, the roly-poly, creates the effect of dynamics, together with the provocative slogan “Try overturn” as an invitation to confront challenge to the aggressive counter-play with the audience.

The subject of textual analysis represents 458 art concepts involved in the digital competition, they demonstrate significant meaningful references for the understanding of the national idea in Russia. Several steps of coding in the qualitative tradition of grounded theory summarizes a thick description of the different thematic fields. As a result, the top ten most important components of the national idea in order of importance are: state symbols, family and children, Christian symbols, animalistic imagery, anthropocentric imagery, moral and humanitarian values, liberal values (2.4 % of the total number of ideas), environmental values, the idea of revival and patriotism. Interpretation of the narrative (IN30) core focuses on the change, transformation, physical effort, glorious death, salvation and hope.

In general, the analysis of this art piece reflects an important condition for the modern media presentations - the idea of conflict, the collision of ideological spaces. In the author’s framework of a deep understanding of national idea as “a thought that gives us the strength to improve life” is visually aggressive, and substantively - rather archaic.
vulnera autoridades civiles y agrarias, así como pueblos ikojí y Zapoteco. En este caso, la implantación de la nueva tecnología se da en un escenario contradictorio signado por problemas entre núcleos agrarios y entre grupos étnicos que desde hace ya muchos años mantienen una relación tensa de dominio y representación. Mediante la discusión de este caso, el trabajo desarrolla la idea de que los proyectos de inversión han reactivado viejos enfrentamientos y promueven un realineamiento de los actores, así como permiten la reconstrucción de demandas de autogestión y autonomía local que, bajo la política y el discurso del agrarismo nacional, habían sido eficazmente acallados. Nociones tales como zonas de refugio, colonialisación, y usura, adquisiciones, son herramientas necesarias para comprender la complejidad de un proceso que difícilmente se agota en, aunque no excluya, ideas sobre resistencia, despojo y desposesión que son hoy las herramientas conceptuales centrales con las que se abordan los conflictos étnicos y socio ambientales en el sur global.

*Markets in Life Itself: Transnational Surrogacy in India As Intimate Labor*

Are the babies born through commercial surrogacy commodities or are they gifts? Based on interviews with seventy surrogate mothers and thirty-one egg donors who live in Bangalore, India, and twenty families who reside in various parts the U.S. and Australia and have engaged in surrogacy in Anand, Delhi, and Mumbai, I pose three interrelated questions:

1. What do surrogate mothers make of the commodification of their pregnancies? Is pregnancy a part of a gift relationship, or is it a market relationship for which they receive wages?
2. If the newborn baby is a gift to the commissioning family residing in India or elsewhere, then what is the ongoing relationship between surrogate mother as gift-giver and commissioning parents as gift-receivers?
3. Conversely, if pregnancy is wage labor, then how does one make sense of the baby as commodity, a product of market pregnancy?

Beginning with Titmuss’s seminal *The Gift Relationship*, where he endorses the virtues of blood donation in the U.K. versus the dements of blood distribution as a commodity in the U.S., the social circulation of bodily fluids, tissues and organs is well examined (Ribonow, 1999; Schepure-Hughes and Wacquant, 2003; Waldby and Mitchell, 2006). Reaching back to a much larger treatise on the gift (Mauss, 1923; Levi-Strauss, 1969; Rubin, 1975; Bourdieu, 1977; Appadurai, 1986; Strathern, 1988), and mother as gift-giver and commissioning parents as gift-receivers?

This paper contributes to the growing literature on intimate industries (Parrenas, 1999), and commodification (Polanyi, 1944; Hochschild, 1983, 2003, 2012; Waldby and Mitchell, 2006). Lack of a common conceptualization of the value of social relations as well as personal resources and strategies. We will focus on the way people cope with the discriminations, the way they avoid, resist, abate or adapt, the way their strategies are successful or entail perverse side effects, in order to understand the effects on individuals as well as the collective consequences of discriminations. Ambivalent and uncertain, the experience of discrimination is all the less adjusted to its definition as a public policy issue, the links between discrimination and domination, discrimination and stigmatization, discrimination and inequalities are not obvious.

Regarding theoretical and methodological issue, we will insist on the relevance of sociological intervention (Touraine, 1978; Cousin & Rui, 2010) for the study of the discrimination’s effects at the same time on individuals and on society.

**RC28-489.6**

**RUI, SANDRINE** (Université de Bordeaux, sandrine.rui@u-bordeaux2.fr)

*Coping with Discrimination, from Subjective Experience to Social Consequences of Discriminations*

To what extent studying discrimination from the subjective experience of discriminated persons throws new light on the sociology of discrimination? Whereas most of the studies aim to measuring discriminations (usually with quantitative methods) or aim to evaluating policies implemented to reduce them, the point of view of those who are discriminated or susceptible to be discriminated is less often analyzed. This last perspective is at the core of the research this communication is based on. Our research has been led in France using 4 sociological interventions and 220 interviews with persons concerned by discriminations due to their origin, their culture, their sexuality or their sex (Dubet F., Cousin O., Macé E, et Rui S, (2012), *Pourquoi Moi ? l’expérience des discriminations*, Paris, Seuil.)

Our study emphasizes the gap between the subjective experience and the objective situations people go through. The experience of discrimination is therefore determined by structural and individual factors, by institutional, economic and social context. We will focus on the way people cope with the discriminations, the way they avoid, resist, abate or adapt, the way their strategies are successful or entail perverse side effects, in order to understand the effects on individuals as well as the collective consequences of discriminations. Ambivalent and uncertain, the experience of discrimination is all the less adjusted to its definition as a public policy issue, the links between discrimination and domination, discrimination and stigmatization, discrimination and inequalities are not obvious.

Regarding theoretical and methodological issue, we will insist on the relevance of sociological intervention (Touraine, 1978; Cousin & Rui, 2010) for the study of the discrimination’s effects at the same time on individuals and on society.

*Exploring the Less-Educated and Lower-Income Migrant Young People’s Experience of Transition to Adulthood – a Qualitative Research in Shenzhen, China*

In recent decades, many researchers have found that young people’s transition to adulthood is greatly prolonged in terms of finishing education, entering job market, getting married and having children. Accordingly, they suggest that contemporary young people’s transition trajectories have become radically different from those of their previous generations. Among researchers on youth transition, Jeffrey Arnett even contends to regard this prolonged transition to adulthood as a separate and normative life stage – emerging adulthood – between adolescence and young adulthood. However, other researchers criticize that the prolonged transition is not a universal phenomenon for all the young people. They believe that those who are socially disadvantaged and excluded incline to enter adulthood at an earlier age. On the contrary, local researchers in China find that it is just the increasing life pressure that forces the young, especially those who lack of social resources, delaying their transition to adulthood. The contradictions among existing studies indicate that transition to adulthood does not obey a normative rule and other words, individual transition to adulthood is socially constructed. Individuals under different social and cultural contexts may have various transition experiences. This study seeks to explore the transitional experiences of the less-educated and lower-income migrant young people (with age from 18 to 33) in Shenzhen – a migrant city in China’s southeast coast, as well as how their transition experiences are socially constructed. Qualitative in-depth interview is used to collect information as rich as possible from the life stories of the participants. Grounded theory is used to analyze the data and develop new understanding of transition to adulthood. Implications of the findings for social welfare services and policies targeting disadvantaged young people are discussed.

*The Influence of Political Inequality in Vulnerability to Natural Hazards: An Analysis of Selected Mexican Municipalities*
The susceptibility of different territorial units to be affected by natural hazards has been usually associated with the nature of the hazard itself, together with the socio-economic conditions of the local population. However, the political conditions that underlie planning and emergency response are usually overlooked. We argue that vulnerability varies in relation to the political inequalities regarding law enforcement, effective planning, land use control, environmental knowledge and resources availability among different territories in response to hazards; and these inequalities would significantly influence vulnerability outcomes of municipalities subject to similar hazards. This paper reviews the debates of political inequalities and their spatial effects. It also discusses the differences in vulnerability outcomes in different territorial units in Mexico, associated with such inequalities, from a qualitative comparative approach.

Participación Social Ciudadana. Reflexiones Desde El Pensamiento Comunitarista De Amitai Etzioni

La participación ciudadana, desde la aparición de las Tecnologías de la Información y la Comunicación (TIC), ha experimentado una radical transformación. Las teorías clásicas sobre participación social y creación y desarrollo de comunidades, se encuentran con el reto de adaptarse y contrastarse con los nuevos fenómenos de desarrollo tecnológico. Internet y las herramientas 2.0 tienen en común la participación colectiva mediante procesos de colaboración e intercambio con otros usuarios. El cambio de mentalidad que supone esta nueva forma de comprender e utilizar Internet desarrolla interacciones profundas y concretas con otros usuarios.

Esta comunicación se centra en el estudio del pensamiento de Amitai Etzioni, uno de los principales investigadores sociales sobre la creación y desarrollo de comunidades, y pone en relación su pensamiento clásico sobre participación con sus aportaciones recientes a la luz de las nuevas posibilidades de participación ciudadana.

Cycles of Contention Post-Apartheid: A Challenge to Current Theory

Since 2004 South Africa has been undergoing a wave of protests predominately led by the unemployed within South Africa’s impoverished townships and informal settlements. This protest wave reached a peak in 2012 where it has been estimated that was an average of three protests a day (IRIS, 2012). Furthermore, there has been a discernible rise in industrial unrest with an increasing number of wildcat strikes occurring as workers choose to take their demands outside organised trade unions and collective bargaining processes. The intensity of this movement and the hostility of the State to it was dramatically highlighted by the events at Marikana in 2012. This upsurge in contentious politics falls within a wider global cycle of contention. This paper uses the South African experience in order to challenge Tarrow’s theory of cycles of contention in order to advance social movement theory from a Southern perspective. It will be argued that Tarrow’s framework, and social movement theory more generally, pays insufficient attention to the specificities of capitalist development. This paper seeks to expand social movement theory and the analysis of popular protest through an examination of the specificities of capitalist neoliberal development and how this has shaped the working classes post-apartheid. The paper will demonstrate how a greater emphasis on the role of capitalism within social movement theory has much to contribute not only to the understanding of protest and social movements in South Africa but also for the analysis of the global cycles of contention.

Independent Cultural Centres As Amenities in Urban Regeneration

This paper reports results of a research project on 15 independent cultural centres around Europe. These specific sites, promoting culture and arts and related industries, have often acted as “urban pioneers” in their neighbourhoods, converting spaces considered “difficult” in size or because they are listed properties. The centres involve combination of different creative actors and action. They are professionally managed, and agree that visionary leadership is essential to succeed. They are usually organised as independent associations, but require acceptance and partnering of cities, often as owners of the properties. However, not all of them are dependent on subsidies, even in the form of land rent, but illustrate other examples how to organise such activity.

The paper discusses the role of independent cultural centres in urban regeneration. The current literature acknowledges both the supportive role of such activities in place-making and providing spaces that the market otherwise does not, but also highlights the paradox that if a development becomes commercially successful, rising rents may lead to their displacement, which eventually also lessens the character of the whole area. This study argues that instead of transitional activity in a particular property, planners should consider independent cultural centres as a new kind of civic activity supporting heterogeneity and mix in changing urban areas. This use of vacant spaces should be conceptualised as amenity—non-profitable venue that has broader significance for area’s atmosphere and liveability.

It’s Climate Change, Stupid! the Role of Think Tanks in Maintaining a Knowledge Divide in Climate Politics. Evidence from Germany, the United States, Japan, and South Korea

‘Global environmental inequalities’ are often used synonymously for the asymmetric tragedy of the commons problem posed by anthropogenic climate change: polluters (mostly countries in the developed world) are less affected and more capable to deal with the consequences of global climate change than the less industrialised countries in the global south. An important aspect of this problem is the rejection of national responsibilities or the outright denial of climate change by important emitting countries.

The consequences of environmental degradation and climate change can be felt directly at the local level. In contrast, public awareness as well as an understanding of the complex interplay of local and global aspects by national electorates is highly dependent on the production and distribution of scientific knowledge. While the production of relevant knowledge is institutionalised at the international level (e.g. IPCC), national level knowledge production and modes for distributing it to political elites and the wider public differ considerably. To examine the impact of diverse patterns of knowledge production and distribution on ‘climate scepticism’, I will focus on the influence of environmental Think Tanks. Think Tanks are said to provide applied research and impartial advice as well as political advocacy in ‘scientific disguise’. It’s therefore important to analyse their network ties to government authorities and among each other in order to estimate whether they are part of an epistemic community or forming advocacy coalitions instead. Linking the findings for selected countries (Germany, the United States, Japan, and South Korea) with the theoretical framework of differing ‘knowledge regimes’ helps estimating the consequences of an unequal access to and the distinction between a biased and a more neutral presentation of scientific findings for national climate politics and international burden sharing alike.

Fathers, Welfare and Gender

This paper examines macro-level social policy influences on national variations in men’s roles as fathers across different ‘worlds of welfare’. It begins by identifying a paradox. On the one hand, the paper illustrates that the mid-1970s represented a historical turning point in social policy responses to the changing nature of fatherhood. On the other hand, national variations in the social politics of fatherhood have been largely overlooked by comparative welfare state studies’ and ‘welfare regime analysis’. It does so through historical analysis of the social policy treatment of fathers and non-resident fathers in selected Nordic, Anglo-Saxon and East-Asian regimes and at the meta-level of European Union paternal ‘policy coalitions’ and gender equality discourses. The paper addresses this paradox by locating fatherhood as a central factor. Furthermore, Orloff (2011) identified the idea of a continuum of ‘two worlds’ of father regimes, typified at one end by the gender-egalitarian ‘father friendly’ regime in Sweden and at the other end by the targeted regime in the USA, which impacts most forcefully on a residuum of non-maintenance paying fathers. The paper concludes by discussing whether and how welfare states served to erode the patriarchal power of fathers during what Therborn (2004) identified as the long process of ‘de-patriarchalisation’, and by considering to what extent we are witnessing a feminist backlash in new discourses of re-patriarchalisation.

Population and Forest Land Use Cover Transition: The Case of Brgy.Puting Lupa, Mt. Makiling Forest Reserve, Laguna, Philippines

Theoretical propositions about the adverse impacts of population growth to the natural system have found grounding in many empirical-based literature since the environmental discourse became global. Neo-Malthusians predict ecological destruction when there is unregulated population growth coupled with advance- ment in technology and increase in per capita affluence in a society. When industrialization in Calamba legitimated by local and national policies materialized, the Makiling Forest Reserve (MFR) became vulnerable to on-site and off-site environmental pressures. In 1990, the University of the Philippines Los Baños (UPLB) was vested exclusive jurisdiction, control, and administration over MFR and in the following years, adopted a participatory approach to management. Chronologically following the implementation of these policies is the abandonment of agricultural clearing and increased state-owned forest management in the barangay. TheMuray forest reserve buffer zone in Barangay Puting Lupa. Results of this study show that forest land use transition occurred in MFR-Calamba characterized by first, deforestation and forest land conversion to agriculture, then to gradual forest recovery. Spatial analysis of the 1993-2002 Calamba land cover shows that forest increased by 18%, agricultural land use decreased by 4.9%, and the built-up area expanded by as much as 79%. Albeit forest land regenerated through time, land cover changed from forest species to agroforestry specifically in Barangay Puting Lupa. While industrialization is associated with increase in population and eventual environmental degradation, this study suggests that there are other socioeconomic elements that interact compatibly with each other to arrive at a different scenario of forest regrowth. Seemingly contradicting but synonymous commitments of policies of the university and of Calamba among other socioeconomic factors have a synergistic effect that amounts to the improved forest land use cover in the buffer zone in Barangay Puting Lupa despite increase in population and pressures of industrialization.

Labor and Populist Politics in Ukraine

This paper looks at the labor movement in Ukraine by considering two types of workers’ power (as defined by Wright): structural, resulting from their position within the economic system; and associational, contingent on the ability to form collective organizations – unions, parties, workers’ councils or community orga- nizations. Silver’s observation that the role of workers’ associational power is growing in the XXIst century and that therefore perspectives of the labor move- ment are conditioned on the broader political context, requires us to extend the definition of associational power also the alliances between labor and political movements. This paper discusses consequences of alliances between Ukrainian workers and various political projects since the break-up of the USSR, focusing...
in particular on the growing support for populist demands of nationalization of key industries and natural resources, voiced in particular by a right-wing populist party “Svoboda” as well as by the Communist party. The paper questions long-term perspectives for the labor movement if populist politics take on a right-wing flavor, and a left-wing populist alternative is lacking. Furthermore, it discusses the role that those self-engaged social scientists can play in evaluating labor movements alliances with various political projects and in strengthening workers’ associational power.

RYAN, LYN* (Macquarie University, Australia, lyn.ryan@mq.edu.au)

Ageing, Ageism and Discrimination

In Western society our populations are ageing, and even developing nations are showing increases in elderly populations. This is due to declining fertility, advances in medical science leading to greater longevity, immigration rates not keeping up with ageing, and also the Baby Boomer generation began to turn 65 in 2011. Older age is an inevitable part of life but some people use stereotypes of older people to discriminate against them due to their biological age. People hold views about ageing people which are not consistent with their views about other people and this forms the basis of prejudice, discrimination and ageism. While respect for elderly people has been a prominent part of Asian cultures which upheld Confucian principles, respect for the elderly has not been given such a prominent place in the history of Western society or its discourse. Issues around egregious abuse, such as violence and financial abuse have been commanding the attention of most social science researchers studying the maltreatment of older persons since the late 1970s. The more subtle, everyday experiences of disrespect, which arguably is a precursor to more notorious forms of abusive and violent behaviour; or respect which, arguably, can prevent such abuse from occurring, are less researched. Therefore, respect for elders is defined and disrespect versus respect, ageism, personhood and the quality of life of elderly people are all discussed. Society categorises older people into socially constructed age groups. It is important to recognise that while age has a biological meaning, income, work and retirement construct groups and meanings about age that may reflect negatively on older people and, therefore, lead to experiences of disrespect amongst our older population.

The Doctor-Patient Relationship and Type 2 Diabetes: What Can We Learn from a Cross-National Comparison of Three Qualitative Datasets?

Background: Evidence suggests that higher levels of patient involvement results in more beneficial care. Patient involvement can be higher in long term conditions, such as type 2 diabetes, where self-management is important. But we need to better understand what happens in the shared decision process and which factors contribute to the inherent inequalities. In this paper, we explore models of doctor patient relationship in three qualitative datasets from Germany, Spain and the UK. The data were originally collected to explore the experiences of patients with type 2 diabetes. Lay summaries are published at www.krankheitserfahrungen.de, http://www.dipes.es, www.healthtalkonline.org

Methods: A secondary analysis of the datasets using a two strand approach. First, a thematic analysis of the individual datasets to identify models of doctor patient relationships, and examine what factors may contribute to these models. Second, a comparison of these findings to identify similarities or differences across the datasets in order to enhance our understanding of shared decision making.

Results: Early analysis suggests the importance of a trust within the doctor-patient relationship and an enduring paternalistic model in the management of diabetes. While UK patients may suggest some partnership working in the way they articulate their self-management, in practice, they do what the doctor tells them. In contrast, German participants emphasize a desire to preserve a certain level of autonomy. This was most obvious with eating and weight management, where participants reported enjoying pleasures that their GPs regarded as unhealthy. Several Spanish interviewees experienced some lack of control from their professionals and felt their treatment was routine rather than an individually tailored process.

Conclusions: While management recommendations of diabetes are largely standardized, patient experience and expectations may differ according to cultural and national peculiarities. Interestingly, a paternalistic model is not necessarily experienced as a contrast to self-management.

Postsekulyarizm of Modern Society: Russian Option

We observe a social request for religion and religious values comeback in the private space today. This can be observed by the example of protests actions in defense of traditional family in France, protests actions in defense of keeping crucifixes in Italian schools, the Christmas tree as a Christian symbol of Christmas in the Benelux countries, etc. etc.

The Russian society lost faith in the communist ideas at the turn of the 80’s and 90’s and later liberal ideas - which were approved during the epoch of liberal democratic reform of 90s - had become nothing for the vast majority of people. This happened due to the fact that neither one nor the other idea contained the core of cultural and spiritual traditions of Russian society.

At what point and why the ‘Orthodox believer’ in Russia becomes the dominant force, the key of social change? At the time of the Soviet Union collapse, the destruction of Soviet type societies institutional structure, during the state of anarchy. At this point, the fabric of social relations becomes loose, able to sense even a small impact as triggers for deep and large-scale social change. At this point, the ‘Orthodox believer’ is gradually becoming a carrier of dominant Orthodox identity and ceases to be a ‘stranger’.

During the 90s and early 2000s the number of carriers Orthodox identity and Orthodox believers, including churched Orthodox believers increased several times. ‘Generation in the way’ are those who have experienced religion and found a new identity for themselves after 1991. ‘Generation in the way’ is a notion which more or less accurately captures a new social set, which is characterized by varying degrees of perception by this Orthodox identity: from the identity of the Orthodox by self-identification to deeply churched orthodox believer.

Chinese Migrants in the Russian Labor Market Competitors or the Driving Force of Economic Development?

This presentation shows trends in labor migration from China to the Russian Federation for the period 2000-2010, including the regions and industries of employment of Chinese migrant workers. Described economic “niches” that are Chinese migrant workers in the Russian labor market. Chinese migrants adapted to the Russian labor market quite well. Mostly of them working in Chinese companies. Social and economic component of their integration can be considered particularly successful - they have jobs, relatively high level of income for labor migrants in Russia. Chinese are known as great farmers, who know perfectly well the characteristics of agro-climatic conditions, they are much more efficient, professional, and disciplined workers than Russians. The examples of ethnic Chinese businesses in Russia, including those identified a strong correlation between investment and labor migration from Chinese in Russia. Currently Chinese investors in Russia are represented by investments made by large Chinese state-owned companies which purposefully invest their funds in basic projects related to development of transportation system, communications, and exploration of mineral resources in Russia. This type of investments goes through official channels, legally, based on official contracts. The second type of Chinese investments includes private investments in development of business with quick pay off - trade, food service, restaurant and tourist business. In this part of investments Chinese private investments is oriented at semi-legal and illegal methods of penetration in the Russian market. The presentation also discusses the features of labor migration and trade between China and Russia in the border regions of the Far East. It also describes features of the regulation of labor migration between Russia and China.

Integration of Vietnamese Migrants in the Countries of Eastern Europe and Russia: A Comparative Study

Questions of migration and integration of the Vietnamese migrants into social and economic processes of Russia, Ukraine and countries of Eastern Europe will be considered in presentation. Results of research revealed significant difference.
es in the number of Vietnamese in comparison with official statistic data. So in Russia according to 2002 census number of Vietnamese made 26 thousand people, however, study results suggested 100-150 thousand people. Part of Vietnamese is “veiled” by integration process. Based on the methodology developed by the authors, assessment of extent of integration of the Vietnamese migrants in host countries was given. The technique is based on allocation of integration components of Vietnamese in host countries, namely civil, economic, ecological, social and psychological, religious, cultural integration. Research was conducted in Russia, Ukraine, the Czech Republic, Hungary and Poland by 400 private institutions of high education, business, they were offered to put points from 1 to 10 to each component. Results showed that integration proceed differently. Vietnamese are most integrated in the Czech Republic and Hungary. According to experts, total score made 50 points out of 60 possible. State policy in the Czech Republic and Hungary was directed to the need for integration of Vietnamese in society through development of integration programs. In Hungary and the Czech Republic much of the Vietnamese citizens received citizenship in host countries, they became citizens. The success of economic integration is associated with high entrepreneurial activity, professional qualifications and access to the labor market of Vietnamese. Much less successful is integration of Vietnamese in Russia and Ukraine, civic, environmental, and socio-psychological component integration is low there. Evaluation of Russia is 40 points, Ukraine is 34 points. Over the past few years, neither Russia nor Ukraine has developed mechanisms for integration of Vietnamese. Bureaucracy, absence of standard and legal base strongly complicated integration process.

**Higher Education and the Labour Market: A Polish Perspective**

The structural conditionality of normal sciences, including state ideologies and financial support, is essential for the structure of higher education. The system's transformation in Poland, based on the neo-liberal ideology, involved the dependent development model not only to the economy but also to science, with its dramatic decrease of expenditures. This reinforced a negative selection of the scientific cade. This, by the inter-generation transmission of values and norms, were unable to adopt the traditional scientific ethos. The official ideology tends to transform the structure of academia in the market-oriented corporate manage-ment model. As a result, institution's functions of high education are established, based on the ideology of "practical" knowledge, which changed ed-ucation in a commodity and the education process in a vocational training. The overproduction of formally well educated young people, hardly able to abstract thinking, resulted in a high unemployment of the youth. The government's reme-dy is to apply this model of education/training to public universities, which are ex-pected to teach for the needs of the current market, notwithstanding the fact that the needs change faster than the education cycle. Instead of teaching students the ability of life-long learning in a flexible labour market, much governmental effort is made to produce formal education by bureaucratisation of universities.

**RYSAKOV, POLINA** *(Saint-Petersburg State University, vost5@yandex.ru)*

**Global Citizenship – New Pedagogical Aim or Market Strategy?**

The development of education in the globalization context poses a lot of questions, being quite a challenge for scholars. The analysis of such new trends as integration processes in education, the growth of educational migration, the involvement of international organizations and NGOs, and the education policy of national states leads to referring to the seemingly established concepts of particular features of education. The urgency to implement educational reforms is stressed by various international organizations. One of the promulgated aims of these new educational projects is bringing up global citizens. In recent years the concept of "global citizenship" came into a broad use in European and American educational and public discourses. However, its meaning remains blurry, and its content is interpreted very broadly. Analysis of the global education concept takes into account current sociological and political science discourses on the concepts of citizenship, nation and state. Previous understanding of citizenship as membership in nation-state gives way to a new variety of interpretations, which are based on the concept of universal deterritorised human rights.

The concept of education for global citizenship captures in what way this new understanding of citizenship and identity is interpreted in pedagogical discourse. Global citizenship is treated as a social engagement with the voluntary obligations undertaken, and priority is given to civil rights of the individual. It still stays unclear in what way state educational system as the key element in nation state building process should foster global identity formation.

Besides for many educational institutions and so called international students the engagement in “global citizen” educational programs is only a pragmatic tool to improve economic chances in the global educational and job markets.

**RYUO, TAKAYOSHI** *(Yokusuka Nursing School, tak.ryuo@gmail.com)*

**Against the State-Centered Model of Social Policy: The Moment of Schäffle in the Sociology of Durkheim**

Emile Durkheim, one of the founders of sociology, started his academic career in an interdisciplinary struggle. He refuted Spencer's self-interest based conception of society in the Division of Labour in Society, and rejected psychological approach for social studies in the Rules of the Sociological Method. But in order to acquire the institutional independence of sociology from neighbouring intellectual fields, he had to fight in another battlefront other than against economics and psychology, that is against the state-centred model of social policy.

In order to reinterpret the sociology of Durkheim in a broader interdisciplinary context, focusing on the moment of Schäffle is a helpful clue. Albert Schäffle was a German Staatswissenschaftler, economist, forerunner of sociology, and staunch opponent of authoritarian socialism. Durkheim reviewed the main work of Schäffle, the Construction and Life of the Social Body in his earliest academic article, and endorsed Schäffle's attack against state-directed socialism thereafter as in the Suicide and the preface to the second edition of the Division. The protest against the hypertrophic tendency of state bureaucracy is not a mere manifestation of political adherence of Durkheim, but a careful strategy to define sociology as a distinctive science in the light of historical and intellectual circumstances of the epoch.

That was the time Durkheim was contending for sociology when French government embarked on implementing modern social policies. By contrast to free market policy favoured in the 1880s, the turn of the century France welcomed state-led intervention measures originated from Imperial Germany under Bismarck. The concern of Durkheim over the state-centered model of social policy and his alarm for the peril of individual liberty under the authoritarian regime is a theoretical response to the ongoing transformation of the state and society and to the state-oriented social thought at the time in France.

**Changing Patterns of Spending on Leisure? Case of Finland, 1998-2012**

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
In the 2000s, the landscapes of leisure consumption have changed dramatically in the Western societies. Many traditional industries such as tourism, sports, and cultural activities continue to flourish. In addition, the new information and communication technologies (ICTs) have become widely adopted in everyday life. Access to ICTs is often considered as essential while at work, home, and even when spending free-time outdoors. As the alternatives for productive leisure activities have increased, we have also witnessed a trend of narrowing population disparities in the consumption patterns. Against this development, it is possible to argue that engagement in various leisure activities has become more versatile and less connected with individuals’ socio-demographic background. But does this assumption also apply to older consumers, people living outside urban and densely-populated areas, economically less well-off people, single parents, and the less educated population segments? Or, is it possible to argue that the expenditure patterns of the many disadvantaged population segments have changed differently from those of the better-off segments during the past decades? The paper examines temporal changes in leisure consumption by examining Finnish household expenditure patterns between 1998 and 2012. The data are derived from nationally representative set of household budget surveys (N = 17,412). Empirical analyses will concentrate on money allocation on cultural services, books and magazines, and household media and technology. In particular, structural diversities by educational level, economic background, age and life-stage, gender, and place of residence will be compared.

How Can Decision-Makers Cope with the Heterogeneity of Values in Public Innovations

In the last two decades the concept of innovation has been taken from Schumpeter’s logic of competition at the market to the public sector. In the private sphere the making of profit is essential, and added profit can be seen as added value. For the public sector this is much more complicated, and it has been a large debate about the concept of “public value” since the publication of Moore’s book “Creating Public Value” (1995). Values in the public sector can both be inputs (public ethos) or some sort of outcome (efficiency, improved quality etc.). Both for input and outcome there will be a heterogeneity of values. Beck Jørgensen & Bozeman (2007) are mentioning a “universe of public values”. In the invitation heterogeneity is understood as the “coexistence of different rationales”. We will argue that different set of values can be seen as different rationales. Creating new and innovative solutions in the public sector is part of the struggle for power in society. Different actors will use different parts of the “universe of values” to support their arguments. To get a decision the parts will have to bargain with others about the blend of values they try to realise. The context will influence the weight of different values.

The paper will discuss how the heterogeneity of values is treated in decision-processes in public sector. We will draw on relevant literature about “public values”, but especially on the case-studies in our edited volume “Innovating in Public Sector Services” (Fuglsang, Rønning, Enquist (eds.) ( Routledge Oct. 2013)

RC11-212.4
RØNNING, ROLF* (Lillehammer university college, rolf.ronningen@hi.no)
Innovation in Nordic Elderly Care

Innovations has for some decades now been seen as the engine for success in the competition at the market. Now the concept of innovation has made its way into public sector and even into elderly care. This paper is about the efforts to innovate elderly care in the Nordic countries. In many European countries there is a worry about the demographic changes in the population. The declining fertility rate and numerous cohorts from the after Second World War baby boom fading out of the labor market, are a challenges both for the pension system and the economy, as well as for the caring system. The challenges of the caring system are the focus for this chapter, especially the need for labour, or caring hands. The diagnosis is that too few people have to care for too many frail and elderly. Even if the Nordic countries do not have the most challenging rates between the generations, a caring deficit is seen as a growing and upcoming problem. In 2050 20% of the population is expected to be above 70 years, rising from 10% which is the situation today.

Most attention will be paid to the Norwegian situation. Because of the fortunate economic situation in Norway, the country has probably been able to maintain a (Nordic) model with a strong public responsibility to a larger extent than their neighbors. Attention will be given to three of the main paths to innovations of the elderly care in the Nordic countries, we have labeled them privatization, use of care technology and extended use of voluntary work. The paper is meant to be a “state of the art” paper, summing up the experiences so far, and reflecting on possible paths into the future.

Modernisation of Rural Economies - The Unsettlement of Land Use and Rights Following “Diversification”

A significant process of modernization is going on in the rural North. The paper presents some findings from a study of the implications of agricultural and rural policies’ emphasis on diversification through commodifying natural resources in which primary industries increasingly become a tertiary recreational and consumption deliverer. It also analyses how norms and practices of land use, land ownership and rights systems in the outfields and commons are unsettled and changing within a neoliberal context.

A strong increase in cabin/second home developments along with other developments – windmills, micro hydro power plants welcomed by the climate debate and systems of green certificates, has increased pressure on the land and escalated land use conflicts. Outfield commercialisation echoes widespread processes of enclosure and privatisation, which occur with regard to many kinds of commons.

One conclusion is that multifunctional agricultural policies and land use planning systems within a highly developed and modern country as Norway so far has not been able to handle the challenges of modernizing agricultural and rural economies in general and at the same time include long term sustainable land use systems (eg nomadic use by the increasingly marginalized South Sámis nor that of wild reindeers) sufficiently in these processes, nor to secure the long term sustainable use of farm land and associated natural resources in other respects.

On the other hand, neo-productivism, associated with the increased focus on the need to increase global and national food production, is redeeming objectives and policies of the previous strong Norwegian and European multifunctional model of agriculture and rural areas. Also, the increased focus on the bedrocks of the high north for mineral, is pointing to a turn towards strengthened primary sector interests in rural areas, challenging many of the ideas and notions linked to modernization of agriculture and rural areas.

Private Lands, Collective Values? Framing of Food Security in a Norwegian Land Use Conflict

The principle of food security is in recent agricultural policy documents in Norway being used to re-legitimize increasingly neo-productivist farming policies and systems. Thus conservation of agricultural land is once again prominently positioned on the political agenda. With only very limited availability of farmland, only 3% of Norway’s land area is in productive agriculture as use, the issues of agricultural land conservation and food security have become more or less inseparable in Norway. Further, Norway, as a non-EU member, has insisted internationally on maintaining a very protectionist agricultural policy to meet the objective of being 50% self-sufficient in calories produced from agriculture.

A large proportion of the best quality farmland is within the vicinity of the country’s major urban areas. While Norway was urbanised relatively lately by European standards, there is now a very strong centralisation tendency with in migration from rural areas. This, combined with increasing in-migration from abroad, is placing considerable pressure on the remaining farmland – particularly fertile land on the outskirts of major cities. Conflict between agricultural policy objectives for conserving farmland and an increasing financial interest following the demand for housing, roads and infrastructure is thus becoming a major issue in the public and political arenas. Based on a Norwegian case study, this paper will elaborate how provision of land and food security as related goals is framed and positioned in discursive struggles on land between financialization, climate concerns and urban growth.

Clinical Sociological Analysis Of The Issues And Challenges To Healthcare Delivery In Nigeria Today
Clinical Sociological Analysis Of The Issues And Challenges To Healthcare Delivery In Nigeria Today By Abdul-Mumin Sa’ad Professor of sociology (Criminology) Provost, Federal College of Education, Yola, Nigeria And Ruth Bulus Iganus Medical Sociologist, Department of Sociology and Anthropology University of Maiduguri, Maiduguri, Nigeria Abstract Health care delivery refers to the work done in providing primary care, secondary care and tertiary care, as well as public health. Health care is delivered by practitioners in medicine, chiropractic, dentistry, nursing, pharmacy, allied health, and other care providers such as medical social workers, clinical sociologists, etc. Constitutionally, health care provision in Nigeria is a concurrent responsibility of the three tiers of government. However, private providers of health play a visible role in the country’s health care delivery. The federal government’s role is mostly limited to coordinating the affairs of the tertiary health care (university teaching hospitals, Federal Medical Centres) while the state government manages the secondary health care (the various general hospitals) and the local government focuses on primary health care (dispensaries). In spite of this clear constitutional provision there are myriad of challenges regarding healthcare delivery in Nigeria. Of course health issues have always been issues that nations grapple with. Added to this is the fact that natural and manmade disasters are becoming frequent, catastrophic and unpredictable and these are posing great challenges to healthcare delivery. Nigeria, being an underdeveloped nation is even more vulnerable to these challenges. This paper therefore identifies and discusses these challenges and proffer solutions to them from clinical sociological perspective with a focus on the need and strategies for active collaboration of all stakeholders (especially the Clinical sociologists, healthcare professionals, the government, the organized private sectors and the society generally) to effectively surmount the challenges.

The present study identifies major preferences for combinations of rights and duties (henceforth, citizenship orientations), as reflected in the political worldview of Israeli junior-high school students. Two distinct orientations were found, termed here “liberal” and “ethno-republican.” In order to contextualize the examination of citizenship orientations in the deeply divided Israeli society, the study compares three educational sectors which represent these rifts. Findings suggest that citizenship orientations are context-bound, in the sense that they depend upon the educational sector. As expected, ethno-republican orientations were more salient among Arab pupils than among either secular- or religious-Jewish students. Secular-Jewish and Arab students tend more strongly to endorse the liberal orientation, a propensity that is especially manifest among Arab adolescents. This trend supports the perception that Israeli Jewish population is bifurcated.

Betwixt and Between Global and Domestic Forms Of Justice: The Israeli Case Over Time
This article elaborates on the global/domestic binary division in the social psychology of justice judgments. We analyze the interplay between global and domestic perspectives on justice behavior and theoretically represent and empirically examine the dynamics of a society’s domestic system of distributive justice within a global context. The intersection of these two contesting, though intertwined, perspectives of justice is explored in the case of Israel. Integrating conceptualizations of neoliberal globalization, social justice, and the socio-cultural and historical conditions of Israeli society, we gauge the effect of macro-level globalization trends on the Israeli domestic ‘spheres of justice’ as evaluated by a representative sample of secular youth. We find that neoliberal globalization trends present a considerable challenge to Israeli Zionism’s foundational pioneering ethos. Yet the 2011 cohort of Israeli adolescents have not unanimously embraced neoliberal principles of global justice. This suggests that individuals are guided by a complex justice belief-system that encompasses both neo-liberal global principles and the social-justice tenets of the domestic arena, creating co-existing and at times contradictory social justice judgment profiles.

The Changing UAE Family
Emirati families have been changing since the advent of oil and wealth. However, the recent socio-economic shifts in the society have affected the family on many levels. What the UAE family has endured recently in term of outside and inside pressure due to globalization is probably not comparable in many parts of the world. In no other country has the proportion of foreign nationals in a society been boosted so high in so short a time as in the UAE. As a consequence, Emirati men are not even the largest nationality group in their own country, and have had a hard time trying to sustain a culture among a continuously growing pool of foreigners. As communities from around the world have mushroomed around national families in both the public and private spheres, UAE households have turned global within. Although one could make comparisons with families in other Gulf States, the UAE’s pioneering economic model and speed of change have had an unprecedented impact on the globalization of families.

This paper focuses particularly on women in the family (mothers and daughters) who are considered the gatekeepers of culture and social wellbeing. It looks at major changes new challenges and the family style in the UAE are facing from different parts of the society and the state to perform to a role becoming increasingly difficult. The paper looks into such difficulties using a combination of quantitative and qualitative data gathered from National families of Zayed University students.

Mapping Filipinos’ Knowledge, Understanding, and Actions on Climate Change
A recent Climate Change Vulnerability Index identified 16 out of 170 countries as extremely vulnerable to climate change; of this set, the Philippines was ranked sixth (Maplecroft 2010). Despite advancements in technical strategies to adapt to the impact of a changing global climate, understanding the complex socio-behavioral dimensions of climate change remains a challenge.

Using the data from a survey module on climate change commissioned by the World Bank and implemented by the Social Weather Stations (First Quarter 2013 National Survey), the study aims to know: (1) What factors shape Filipinos’ awareness and knowledge on climate change? (2) In a more qualitative sense, how do they conceptualize or understand the effects of this phenomenon? (3) What factors affect citizens’ participation in efforts to address climate change? Do awareness and knowledge actually translate into tangible efforts?

Correlation analyses reveal significant relationships (moderate to strong) between awareness and knowledge on climate change and these variables: locale (higher among urban dwellers), socio-economic class (higher among upper classes) and educational attainment (higher among those with greater education). Climate change resonate to average Filipinos as a public health issue. When asked to identify the effects of climate change, half of them cited “increased incidence of illnesses”—significantly greater compared to other responses such as degradation of natural resources, ozone layer depletion, and rise in sea level. Participation in efforts to mitigate climate change is higher among those in rural areas and the youth (with moderate to strong correlations). There exists very weak relationship between awareness on climate change and participation. However, there is moderate evidence to support that those with more extensive knowledge on the impact of climate change also have greater tendency to participate in actions on climate change.

Social Inequality, Power Legitimacy, and the Future of Democracy in the MENA Countries
In spite of their relatively similar religious, cultural and linguistic foundations, the MENA (Middle East and North Africa) countries consist of a diverse set of particularities in terms of their geography, socio-economic structures, human capital, and political institutions. As far as their governments and governance are concerned, they have not always been thus. Rather, they have traditionally been authoritarian and autocratic regimes. Such governments have ruled autocratically and suppressed pluralism, limiting or totally denying fundamental societal, economic, and political
Love letter. For example, the success of two movies, locations in Hokkaido attract many tourists for other reasons, linked to pop culture and tourism linked to nature and outdoor sports (hike, ski). Nevertheless, some activities in the island. The place is famous for its landscape and its countryside, attracting Korean and Chinese tourists in Hokkaido, with many visitors who want to revisit the area. The notion of soft power is also going to be examined as a means to examine the possible shifts from nature tourism to pop culture tourism. The aim of this presentation is to question the possible shift from nature tourism to pop culture tourism. From Matsuri to Anime Convention: The Experience of Festivals and Contents Tourism in Japan

For foreign tourists, festivals are mostly associated to cultural events that present a colorful and picturesque image of a different and exotic culture. This work is then an attempt to question new forms of tourism, in order to draw a parallel between festivals and other types of gatherings that attract foreign visitors. This study is lying on the idea that tourism is made significant by a specific imaginary of the visited place. The travelers choose and comprehend their destination and its culture according to the picture they have before and during the trip, a picture elaborated through references. When enjoying festivals in a foreign country, tourists can see a concretization of their imaginary about the culture they discover, and sometimes, participating to the event, they feel immersed in that exotic universe. The aim of this presentation is to show that this process is also at work in the case of contents tourism, when the travelers experience media pilgrimage (i.e. visiting places with significance in media narratives, Coulondry 2005), guided by a fantasy built on pop culture and media references. Taking the case of Japan, this comparative study intends to show the similarity between the experiences of traditional festivals and pop culture events. In addition to data collected among French tourists in Tokyo, fieldwork will be conduct during specific events in 2014. Then, some traditional matsuri will be compared to events like the Comic market in Tokyo or the Toyako Fest in Toyako (Hokkaido). The Sapporo snow festival, that mixes playful aspects of traditional festivals and pop culture influences, will also be investigated. So, the analysis will question the structure similarity between these tourist experiences, in order to examine to what extent contents tourism revises current cultural tourism.

Nature and (pop) Culture Tourism in Hokkaido

For more than a decade now, the worldwide diffusion of Japanese pop culture has been analyzed as a soft power phenomenon, questioning the consequences of this success on the international image of Japan. Many studies have examine whether or not Japan is really gaining positive influence thanks to contents exports, and sometimes, participating to the event, they feel immersed in that exotic universe. The aim of this presentation is to show that this process is also at work in the case of contents tourism, when the travelers experience media pilgrimage (i.e. visiting places with significance in media narratives, Coulondry 2005), guided by a fantasy built on pop culture and media references. Taking the case of Japan, this comparative study intends to show the similarity between the experiences of traditional festivals and pop culture events. In addition to data collected among French tourists in Tokyo, fieldwork will be conduct during specific events in 2014. Then, some traditional matsuri will be compared to events like the Comic market in Tokyo or the Toyako Fest in Toyako (Hokkaido). The Sapporo snow festival, that mixes playful aspects of traditional festivals and pop culture influences, will also be investigated. So, the analysis will question the structure similarity between these tourist experiences, in order to examine to what extent contents tourism revises current cultural tourism.

Computer Mediated Communication has given access to political participation to a large number of citizens around the world mostly regardless of their ideological, social, ethnic, economic background. People living in different Countries or even who have voted for opposite parties for years may unite for a single issue purpose, for a protest, a petition, for organizing a revolt or a deeper change in government. The No-Global Movements years ago and, more recently, the Arab Spring have proved the possibilities of the Net in terms of political organization and impact. In Egypt and in Italy things have gone even further: Social Networks have become the means and the place for civic organization that later were transformed into political parties running for government. The paper will analyze possibilities and limits offered by the Web-Democracy in relation to these two recent examples.

The relationship between communication and politics has always been a tight one, but information technologies have taken this relationship a step further: in many cases they are no longer just a mean through which political parties or movements disseminate political messages, slogans and values processed off line. This process now seems to have been reversed: they have become the means and the place where policies, decisions slogans and positions are discussed, elaborated and voted. They have turned into a milieu of political organization as the Taharir Square movement in Egypt and the 5Star Movement in Italy have shown us, contributing to a wide spread rhetoric over the democratization power of the Internet. But while it is indisputably true that Computer Mediated Communication allows an easy access to political discussion and participation virtually to anybody, we cannot disregard that it also carries the seeds of disengagement, self-consolation and amusement which could have the counter-effect of enhancing citizens de-democratization levels. The paper will analyze both aspects of information technologies’ impact on political processes.

Argentina’s population is experiencing irreversible changes in the age composition. This changes must involve the implementation of public policies related to the labor retirement that provide fair living to the retired population. Health systems and social security should be able to absorb a growing number of beneficiaries.

The socioeconomic conditions of life of the elderly depend not only on the mechanisms that provide social security systems, but the role that family and relationships between them. In the past, large families accounted for the greatest protection, however, demographic change will result in a huge change in family composition. Reducing the size of the family will have significant impacts in terms of living arrangements of older people and the relationships among its members. How did change the older population over time? How are they alike and how they differ over yesterday and today? What are the socio-demographic profile of the cohort members in the coming years who will transit to older ages?

The goal of this communication is to investigate the changes observed in the last thirty years in the demographic profile of the population of 65 old years and over, based on cross-sectional analysis in four points in time, according to census data (1980-2010) and to describe the socioeconomic characteristics of the population over age 65 living in the city of Buenos Aires. This should take into account current theoretical developments in sociology of population that formulate a new paradigm with significant analytical potential for understanding the phenomenon of aging (MacInnes & Diaz, 2008).

The demographic trend influences the geriatric care sector twofold: While the demand for geriatric care increases constantly, the number of work force declines at the same time. For 2025 a shortage of about 125.000 full time nurses in Germany...
ny is estimated (Afentakis, Maier 2010). Additionally, the problem of fluctuation in the geriatric care sector causes a competition about qualified personnel among care-providing organizations.

Other sectors already use the idea of organizational commitment to keep their employees. The basic concept of commitment (Allen, Meyer 1990) distinguishes three concepts: affective, continuance and normative commitment. These components are not mutually exclusive but rather coexist. So far no specific study has researched the concept of commitment considering the specifics of geriatric care.

This paper is based on preliminary results from a qualitative research project looking at this topic from an inner-organizational perspective. As geriatric care in Germany is provided by non-profit organizations as well as for-profit organizations both types will be looked at.

Results from interviews with elderly-home managers give an overview of problems about keeping qualified employees. The range of instruments, which are already used by organizations to strengthen organizational commitment and problems in everyday work, will be illustrated. In addition determining factors, which restrict human resource management in the geriatric sector, are identified. Besides general factors also organization-linked factors are included.

Furthermore, results from problem-centered interviews with elderly care nurses provide reasons and conditions for why they work for their current organization. These results will be set into context with the Allen/Meyers organizational commitment model to specify the three commitment components in the context of geriatric care.

Finally a guideline based on the research results is presented. It will help organizations in the geriatric care sector to strengthen the organizational commitment.

SACKMANN, REINHOLD* (University Halle-Wittenberg, reinhold.sackmann@soziologie.uni-halle.de)

Education Inequality Among Shrinking Cities and Regions in East Germany

When birth rates drop the education system is the first social field to be confronted with new challenges. Due to compulsory schooling the size of birth cohorts affects the general school system quasi-automatically with dwindling enrolments. Newspapers in shrinking regions announce regularly school closings, a topic which is highly controversial both among the decision makers in charge and the affected communities. Pupils do not only have to cover larger distances to school but also the affected places fear to lose their attractiveness as a business and housing location. As the number of shrinking cities and rural areas (especially in Europe and East Asia) increases, it becomes crucial to investigate which consequences declining cohort sizes have for the school system. Are declining birth rates increasing inter-regional education inequality?

The basic assumption of the proposed paper presentation is that some cities and rural areas are more resilient than others when their schooling infrastructure has to cope with declining birth rates. Cities and rural areas have different economic bases. This is not only true when cities and rural areas are compared with each other but also within these broad spatial categories. From this point of view it can be suspected that school infrastructures in more affluent regions will be more resilient to declining birth rates than those in economically poorer regions. However, as schools are part of public infrastructure in many countries, this theoretically plausible relationship might also be modified by political decisions.

The analysis is based on data from East German regions for the 1990 and 2000 years. This regional focus is especially interesting for East Germany faced a very steep decline in birth rates during the early 1990s. The empirical strategy applied fixes the panel regression models which are especially suited to analyse changes over time.

RC08-153.6
SACKMANN, REINHOLD* (University Halle-Wittenberg, reinhold.sackmann@soziologie.uni-halle.de)

Totalitarianism and Dead Ends in Sociology

The 20th century did not only see the rise of academic sociology, but highlighted also strife within societies that resulted in specific forms of totalitarianism. Literature on the relationship of sociology and these totalitarianisms is controversial.

Some authors state that sociology is not a natural antipode to dictatorships: Some sociologists like Sombart and Michels were active proponents of totalitarian ideology, and most totalitarian regimes quite liked the technical expertise of social research.

Other authors propose that a flourishing sociology needs a certain form of society characterized by openness and tolerance to find a constructive climate for theoretical reflection, empirical research and practical relevance. From this position one could state that there is a “Wahlverwandtschaft”, a structural affinity, between sociology and democracy.

The presentation will use empirical material from a case study on the development of sociology at the University of Halle between 1900 and 1990. The University of Halle is an interesting case in so far as in this East German university the societal context varies between monarchy, democracy, fascism and communism. The empirical material focuses on published and unpublished work of Friedrich Hertz and Rudhard Stollberg, as well as archive material to their activities and conflicts. Specific dead ends of forms of historical sociology and empirical sociology are analyzed with regard to the guiding question, whether there is a structural tension between forms of totalitarianism and sociology.
The Impact of Sentencing Decisions about Similar Cases and Others' Opinion on Sentencing Decision

In 2009, Lay judge system started in Japan. Under this system, lay judges and professional judges determine guilty of criminals and sentences to the convicted criminals. After the determination of introduction of this system, some scholar have explored how that decision making is done by psychological experiments –mock trial study. However, the research which employed this method focuses on private lay judges' decision, not outcomes after deliberation. It is due to the difficulty of conducting mock trial study with deliberation.

Of course, the results of this research are useful when thinking about modification of trial procedure. However, the determination of sentences to the convicted differs from private, but is done through deliberation by lay judges and professional judges. In this paper, the impact of information which is given to lay judges is examined. In trials and sentencing deliberation, lay judges look graphs about past similar cases. This is basically shown in the form of graph of distribution, and it has powerful effect on lay judges' sentencing decision. In a psychological experiment, the impact of that graph and participants' opinion about how useful that graph is and how respectfully we should treat that graph are explored. In addition, there might be conflicting opinion with regard to sentencing outcomes by other lay judges. In the same experiment, reactions to those different opinions are also examined. This psychological experiment did not include sentencing deliberation itself, but due to that experiment, some important aspects about sentencing deliberation can be explored.

In this paper, the results of the psychological experiment are shown. Then, some practical implication about trial procedure is discussed based on the results. Especially, to incorporate general public opinion into judicial system is one of the goals of Lay Judge System in Japan. Therefore, the results are examined from this perspective.

The Demographic Transition and Subsequent Transitions: The Case of the United States

The United States has experienced major demographic shifts throughout its history. Like many other developed countries around the world, the traditional demographic transition associated with declining mortality and declining fertility has spawned subsequent demographic transitions. These transformations have included the urban transition, the marriage transition, the household transition, the aging transition, and the race/ethnic transition. Of these transitions, the two most prominent at the beginning of the 21st century are the latter two—the aging transition and the race/ethnic transition. In particular, the country is in the process of aging rapidly as the large cohort of baby-boomers start reaching age 65 between 2011 and 2029. In addition, as the white population begins to decline due to low fertility and major aging, the Latino population due to its youthfulness will dominate the nation's population growth. Indeed, population projections suggest that the Latino population will more than double from 50.5 million in 2010 to 111.7 million in 2050 compared to a 5 percent decline in the white population from 196.8 million to 186.3 million during this period. These major demographic transitions will have major impacts on demographic, social, and economic trends in the coming decades and in many ways is likely to lead to varying experiences between the United States and those of other developed countries. The implications of these trends in the future of the United States will be discussed.

The End(s) of Diversity: the Struggle Between Nationalism and the Hyperdiverse City

In the framework of the FP7-project Divercities, we investigate how urban policymakers deal with the increasing hyperdiversity in European cities (Tasan-Kok, van Kemenen, Raco & Bolt, 2013). In reaction to immigration and the intense diversification of the population, nationalist parties have gained electoral success in several Western-European cities. As a political ideology that focuses on constructing and maintaining a homogeneous nation-state, nationalism seems to be at odds with the hyperdiversity in contemporary Western-European cities. Characterized by the coexistence of people with very diverse socio-economic and ethnic-cultural backgrounds, the hyperdiverse city is an anomaly to most theories of nationalism. While authors like Anderson (1983), Gellner (1983) and Smith (1986) explained nationalism on a countrywide or regional scale, little has been written about the relationship between nationalism and the city. In this paper, we want to address the question how nationalist policies deal with hyperdiversity in the city.

In order to answer this question, we take the example of Antwerp in Belgium. As the largest city of the Flemish region, Antwerp is an interesting case because of the electoral success of Flemish nationalist parties on the one hand and the diversity of its population on the other hand. While extreme right-wing Flemish nationalism has long been relegated to the opposition, a moderate Flemish nationalist party recently came to power in Antwerp. Based on a critical discourse analysis of policy documents and interviews with policymakers, we compare past and present nationalist integration policies regarding immigrants in Antwerp. This comparison illustrates how urban integration policies have shifted away from multiculturalism to assimilationist policies. Serving nation-building ideals rather than the pragmatic inclusion of immigrants in the city, the nationalist assimilation policies seem to be ill-equipped to deal with the increasing hyperdiversity in the contemporary Western-European city.

Context specificity of stratifying factors is often alleged, but attempts to systematically test applicability of theories outside the context of their emergence are still relatively rare. Bourdieu’s ideas on cultural consumption and leisure practices were lucky in this respect. Due to their centrality for the late XX century sociology of culture and stratification, and general feeling that they have special French flavour, their applicability has been tested for a variety of national contexts (the US, Hungary, China, Australia). Thus, studies carried out in the US demonstrated that the opposition of high- and low leisure activities find only partial equivalent there (DiMaggio, Kingston, Lamont, Mohr). This study evaluates applicability of Bourdieu’s concept to the Russian context. As Bourdieu’s predilection for this notion which, to our knowledge, has not been addressed before: direct connection between intensity of leisure practices, high culture awareness, and taste. Using a sample of 450 high school students we find out that widely accepted measures of these variables demonstrate impressive lack of correlation even when various controls for cheating are implemented. Besides, two of the three measures are not related significantly to parental investments. The data seem even more surprising taking into account that Soviet time studies, carried out without knowledge of Bourdieu’s work, but in largely the same vein, produce results better fitting with this context. As Bourdieu’s predilection for this aspect of his theory which, to our knowledge, has not been addressed before: direct connection between intensity of leisure practices, high culture awareness, and taste.

The Academic Empires: The World-Society Argument and Colonial Legacies in the International Student Migration System

In the recent years, sociological thinking about globalization in the education sphere has been heavily dominated by the world-society theorizing, originating in works of John Meyer and his various colleagues. The major expectation, arising from it, is emergence of a unified global academic culture, and, generally, convergence in organization and practices of the education sector. This study tests the world-society theory by applying it to data on higher education students’ migrations between countries. The expectation derived from WS theory is that (a) the migration flows will demonstrate rapidly diminishing or already minimal levels of clustering around particularist cultural-institutional variables (e.g. common language, similar institutional structures caused by belonging to common political units) will have minimal or diminishing significance in predicting size of student flows. Volume of international student migration between pairs of countries (UNESCO statistics) in 1998-2012 is used to reconstruct the flows system. Network measures were calculated for each of the years to observe the dynamics of student migration system. For evaluating significance of cultural-institutional variables, negative binomial regression with historical experience of belonging to the same political system (colonial empire typically) was performed as an independent variable controlling for proximity, economic affluence, and size. Historically important dependencies between the most essential cultural and institutional variables demonstrate a high significance.
Empirical Measurement of Integration & Cohesion

Youth (LSAY) which involved over 10,000 students. Following this cohort of youth and use the 2003 Cohort data of the national Longitudinal Study of Australian eficial in a world in which life-long careers are a thing of the past. In this study attention to the significance of youth’s uncertainty about what they want to do later needed to be explained. Only recently have researchers begun to pay more at-

bated. Throughout this 50-plus years of research, it has always been thought that youth ambitions and eventual educational and occupational outcomes has never been explained. The link between career plans and educational and occupational outcomes are key concepts that are defined in different ways. There are impacts on identity, measures here refer to perceptions of feeling or belonging to a national society. In the British case, the trend over time is of a move from an ancestral understanding of identity, itself, identified with such factors as civic values and responsibilities. Secondly, migration impacts on integration, defined as group outcomes set against the societal average. Here migration’s impact assumes a great deal of importance—as migration and policies that modulate migration have impacts on trajectories. Notwithstanding that the choice of measure is critical, it is clear that different immigrant groups perform very differently. Finally, migration on gender, namely how migration affects current societies, and is defined by people’s perceptions of how people get along with each other in their local area. The paper reports UK empirical measures of this in two ways, first by perceived positive or negative changes in neighborhood and in respect and interaction between social groups; and second by levels of trust in local institutions (such as the police). The findings suggest that new migration does not notably affect cohesion but pre-existing diversity and high levels of poverty are predictors of lower social cohesion. There are important insights for social researchers examining issues around the size of migrant communities and for policymakers in respect of managing the pace of change in neighbourhoods.

Support to the world-society approach; cultural-institutional divisions retain and, eventually, even increase their influence.

Aimless or Flexible? the Consequences of Uncertainty in Youth Career Plans

The aspirations of young people have been extensively studied, and were key variables in early status attainment research in the late 1960s. The link between youth ambitions and eventual educational and occupational outcomes has never been doubted, although the ways in which the variables are related has been debated. Throughout this 50-plus years of research, it has always been thought that all young people had ambitions, but that how much, and for what attainments, needed to be explained. Only recently have researchers begun to pay more attention to the significance of youth’s uncertainty about what they want to do later in life. Some researchers have referred to this as aimlessness or role exploration. Yet this uncertainty can be also viewed as flexibility which is typical or even beneficial in a world in which life-long careers are a thing of the past. In this study we investigate the consequences of uncertainty shown in youth educational and occupational ambitions. We conduct our study from a longitudinal perspective, and use the 2003 Cohort data of the national Longitudinal Study of Australian Youth (LSAY) which involved over 10,000 students. Following this cohort of youth between ages 15 and 24 we will examine the consequences of uncertainty in educational and occupational ambitions focusing specifically on differences between those with and without aspirations and the possible various reasons behind them. We also discuss the implications of our findings for theories of youth social/psychological development, career development, and occupational attainment.

Becoming Cowardly: Automatic Rifles and the Change of Bodily Experiences in East African Battlefield

The Daasanach in the border regions of Ethiopia, Kenya, and the South Sudan have fought with neighboring pastoral groups, viewed as “enemies”, for more than a half-century. The Daasanach claim that their primary motive for going to war is the demarcation of masculinity, allowing men to be recognized as “brave” by community members. Various cultural mechanisms praise the “brave man” who kills a member of enemy group and who raids their livestock. Since the 1980s, the proliferation of automatic rifles in East Africa has increased the seriousness of conflicts. It has been reported that the youth are drawn to the destructive power of the automatic rifle, and their behaviour is carelessly destructive of the social order. However, many Daasanach youth told me that recent war experiences with automatic rifles had led them to “renounce war”. Two main types of experiences contributed to such decisions. First was the bodily (including “physical” and “mental”) pain of war, such as being grazed by a bullet or surrounded by dead bodies. Second was the shameful conflict that could occur among the Daasanach during the course of a war. In wartime, the unity of “we Daasanetch” could break down under the violence. Many persons who “renounce wars” said, “I became cowardly” as a result of such experiences. In this presentation, I will discuss how the change of weapon influence on the forms of war and bodily experiences in the battlefield, and how people reflect their pain and suffering in the battlefield to their life.

Changing Food Consumption Practices Among the Emerging Middle Classes in Metro Manila

This paper will present preliminary research results from an ongoing research project that considers the dynamics of food consumption among the middle classes in Bangalore and Metro Manila, including consumption patterns, practices and policies. Asia is often seen as the center of gravity for the “new consumer” phenomenon, where a rise in affluence can translate to consumers who enjoy better diets, private transport, throwaway products, and fashionable versus functional clothing (Myers and Kent 2004). The focus of this paper is on Metro Manila and the emerging middle classes, who may not necessarily be experiencing ‘better’ diets, but where there does seem to be a trend towards ‘organic’ and ‘local’ food consumption among some people. This paper wishes to highlight the emergence of organic and/or local food and composting as entry topics for environmental concern, as well as the influence of globalization on environmental initiatives.

One main finding is that changes in food consumption practices are not only related to a rise in affluence, but to changes in other practices, such as changing the location of your home, joining a new workplace, or the employment of a domestic worker. Specifically, a change towards organic food consumption seems to be motivated by a different set of reasons, not directly related to environmental concerns: certain people interviewed as part of this research project and who have chosen this kind of diet claim to do so because of health reasons, proximity to certain markets, as well as the influence of travels abroad. Looking upstream at organic farming and further downstream at composting, people engaged in these new practices had all been ‘elsewhere’ and brought new ways of doing back with them, upon returning to the Philippines. The significance of demonstration projects towards more ‘sustainable’ practices will be discussed.

Keeping Cool: Air Conditioning Consumption in the Philippines

Southeast Asia is growing in every possible way. Addressing the electricity needs of the region’s urban households is particularly relevant where cooling is concerned. This paper is about how people go about keeping cool in Metro Manila, the Philippines, focused on air-conditioning in the home. It is part of a grow-

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
ing body of research in ‘sustainable consumption’, tackling the related themes of air-conditioning consumption patterns, practices and policies, as well as the potential for change. Research was conducted among three socio-economic groups: households based in low-income housing, the growing middle classes in new housing developments, and affluent households based in gated communities. As a basis for the paper, the authors provide information on the environmental impact of household electricity consumption, in relation to economic and population growth. The history of cooling practices and air-conditioner manufacturing is also briefly discussed. The central theme of the paper is how current practices are tied up with a broader theme of consumption, from night-time, formalVoltAir® dressing or dressing fashionably. The material dimension of air-conditioning is discussed, specifically in relation to ‘west is best’ housing trends in Metro Manila: certain housing styles may be lacking in the need for artificially cooled air for years to come.

General trends in the region will no doubt contribute to an increase in air-conditioning consumption, yet current consumption patterns are not homogeneous: how people go about keeping cool in Metro Manila varies greatly. This paper contemplates what the future might hold for keeping cool in one of the hottest regions of the world – hot, both in terms of economic development and temperature levels. The conclusion provides insights, which may be relevant to other megacities in the region.

SAHED, IMAINE SAHED* (EHESS/Cadis, imaine-s@hotmail.fr)

Voluntary Risk Taking and Individual Emancipation

Background: In France, the important proportion of teenagers who develop a repeated consumption of cannabis, tobacco or alcohol consumption worries the security and public health authorities. The consumption practices among young people are clearly recognized by sociologists and social scientists and the role at night, formalVoltAir® dressing or dressing fashionably. Many scientific researches try to explain why they develop a health, social and penal risks behaviors. However, very little one has analyzed the way that experience of consumption is lived by youth. How do teenagers perceive their consumption behavior, what meanings that they attach to their behavior?

Methods: In order to apprehend the subjective experience of drugs consumption, we have led a qualitative investigation. We carried out 42 biographic interviews to twenty-one girls and twenty-one boys between seventeen and twenty years old. They live in Ile-de-France. These interviews have permitted us to apprehend subjective about their consumption experience and analyze the dynamic by which the have developed the substances use.

Results: The public health categorisation on consumption by youth does not tally with what happen in reality. The perception of the teenagers on their consumption moves away from the epidemiologic categorization. The drugs use means to the participants festivities or conviviality. Moreover, teenagers, who are currently looking for an autonomous identity, develop consumption, not to oppose to their parents or social and penal norms, limits. We observe that if the youth people develop the consumption of cannabis, alcohol and tobacco it is especially to build a personal and individual identity. It is in a context of individual emancipation (Kaufman, 2004) that we consider voluntary risk taking is part of individualization process.

Conclusion: There is a contrast between the collective and scientific perception and perception of teenagers on drugs consumption. Voluntary risk taking is a subjective and positive experience which responds to his quest for identity.

SAHOO, DR. UMEESH* (school of social sciences, S.R.T.M University,Nanded, ucsahoo11@gmail.com)

CIVIL Society and Development Perspectives

Voluntary action is an age old phenomenon in the Indian social landscape. In the past, say before colonial era it was embedded with cultural view, traditional values, social ethos which commonly atomized as humanistic, idealistic commonly act as bridging the gap of unjust social system. But in recent years, especially with the implication of liberalisation, globalisation and privatisation, the formal Voluntary Organisation (VO) is emerging as key players in the plan development process initiated by the government. Currently, they have acquired as ‘third sector’ for innovative approach, flexible structure, ability to reach the unreached, dedicated officers and BAME workers, which is expected to be completed in February 2014, after the Chartered Institute of Personnel and Development estimated that 1 million workers were concerned. A sharp rise in the implementation of this type of contract was observed in recent years, especially in the care sector in the context of the privatization of public services and the commodification of care.

The paper explores working conditions under ZHCs in the care sector and aims at shedding light on how precariousness of the workforce affects in particular BAME women in a segmented labour market. Concepts such as institutional racism, ethno-nationalism, and intersectional discrimination inform the analysis. This paper also looks into the role of trade unions in supporting their members on ZHCs and informing the public debate.

Whilst being empirically grounded in an on-going fieldwork with trade union officers and BAME workers, which is expected to be completed in February 2014, the analysis also draws on earlier studies on vulnerable and precarious workers (TUC, 2008; European Foundation, 2010; McKay et al., 2012), ethnic penalties (Heath and Cheung, 2007; Raymond and Modood, 2007), as well as care regimes and gendered work (Pflau-Effinger and Rostgaard, 2011; Dahl et al., 2011; Simonazzi, 2009; Bettio and Plantenga, 2004).

SAHU, DIPTI RANJAN* (University of Lucknow, sahu.dr@gmail.com)
Development Induced Protests in Contemporary India: Response from the State and Civil Society

The issue of forced human mobility has been receiving much attention from the government, policy makers, civil society organizations, activists and academia in contemporary India. Social scientists interpret forced human mobility as involuntary migration and internal displacement. The desire to take control over a certain territory and its resources becomes a cause of conflict which forces its residents to leave their current homes. The most visible are displacements associated with conflict over resources or antagonisms based on ethnic background. In the case of development-induced displacement or conservation-induced displacement, territory becomes an arena of specific conflicts between the interests of the public or private sector and the needs of people displaced or affected by particular development decisions. Development-caused displacement is often associated with conflict over resources which have led to landlessness and consequent problems.

The paper attempts to analyze the contemporary Indian society and development-induced displacement from a class-caste-gender perspective. The lower one is on that ladder, the greater the negative impact of changes introduced in their lives without their consent. The marginalized communities especially Dalits and tribals feel it more than the others do and women among them are the worst affected. They are deprived of the resources that were basic to their survival and are denied access to education, health services and nutrition. It forces them to deny their children right to childhood and to a decent adulthood. Women are deprived of the autonomy they had. Development cannot be real till such failures are remedied and its benefits reach those who pay its price.

SAIDANI, MOUNIR* (Tunis Al Manar University, mounir@ yahoo.fr)
Democratization of Art Production and Voicing Subversive Vision of the World

Tunisian youths are experiencing new form and styles of art production. This is especially true for rap music and graffiti. Facebook and you tube networks are the predeemed means of diffusing the products. One can see in this a wave of democratization of the production of art which sappers the old rules of ranking popular and mass arts. In the other hand, the content of these products are more and subversive especially after a massive youth participation in the revolution which did not keep a real change. This widespread disappointment enhanced practices of anger and refusing. A subversive imaginaire is more and more inspiring the youth vision of the world. Authorities are facing these new manifestations of the youth rebellion with police controle of the scences of shows, trials... Is this a new style of telling the crisis ? Why does the social narration of inequalities take this form?

Spousal Violence Among Rural Women: A Sociological Study in North-East India

Spousal violence is a grave challenge to a happy marital life. When proclivity of violence takes place in dyad relationship, it crushes the bond of family. Therefore, spousal violence has been considered as one of the most serious social problems throughout the world. Hence, this issue has a sociological significance. The theoretical arguments regarding spousal violence can be classified into different categories. But in this study specific focus has been laid upon wife-battering only. This paper seeks to know the nature of violence and to find out the causes and consequences of spousal violence in rural areas of North-East India. Apart from these two objectives, awareness and knowledge of the victims towards legislative measures to save them from spousal violence have also been investigated with proper method. The field of the study concentrates around a village namely Gooskata in North-East India. Keeping in view the objectives of the study, basic information about spousal violence was gathered from 100 married women out of 208 households of Gooskata village. The data were collected purposively and in this context accidental sampling procedure was followed. The findings of this study have revealed that rural women of North East India have been suffering from spousal violence. The relationship in between the husband and wife become more crucial and complex in rural areas, but it is also true that most of the violence have been hidden from public eye. Due to rigid traditional norms and values of rural society; victimized women never try to disclose it. The rural societies have been strictly controlled and regulated by traditional norms. This is the reason behind the failure of rural women to accept spousal violence as a serious criminal offence; which presents a grave challenge to society.
cases relating to spiritualism, and enjoy this authoritative position as it gives them the opportunity to spend their leisure in a healthy manner. A considerable demarcation thus separates the Marwari men and women in connection to their notion of leisure in spiritualism and this is what this paper intends to throw light upon. A detailed survey-work has been undertaken with some in-depth interviews to represent this field as accurately as possible.

SAITO, HIRO* (University of Hawaii at Manoa, hsaito@wcfia.harvard.edu)

Two Visions of Cosmopolitics

This paper explores how Ulrich Beck’s world risk society theory (WRST) and Bruno Latour’s actor-network theory (ANT) can be combined to advance theory of cosmopolitics. On the one hand, WRST is good at illuminating how relevant political actors interact with each other to deal with global risks while negotiating the two logics of politics, cosmopolitanism and nationalism. On the other hand, ANT is good at showing how scientists participate in the construction of global risks and helps to elaborate how science and politics are intertwined in cosmopolitics. By combining the strengths of WRST and ANT, it becomes possible to examine simultaneously the tension between the two logics of politics and the co-constitution of science and politics, both of which, I argue, are crucial for theorization of cosmopolitics. The proposed synthesis of WRST and ANT also force sociologists to critically reflect on their role in cosmopolitics and envision a new form of critical theory.

Nation Consciousness and “Multiracialism” of the Singaporeans: Focusing on the Concept of “Racial Difference” and Their Interactions

Singapore is well-known as a ‘multi-racial’ society, but then, how they form their identity as ‘Singaporean? Considering this problem, ‘multiracialism’ becomes an important concept in making ‘Singaporean’. However, its purpose is to make ‘racial differences’ obvious and emphasized. Therefore, how do people create Singaporean consciousness in these kind of society?

The aim of this research is to study this problem by using free talking interview and observation data carried out by the speaker. We can say that the government of Singapore reinforces the ‘races’ in order to make differences among ‘races’ highly visible by emphasizing the differences among the ‘races’. In Singapore, differences among ‘races’ are visible even though people from different ‘races’ interact with each other daily. Moreover, a sense of community or even of being a ‘Singaporean’ begins to grow and maintains; at the same time, differences among ‘races’ are maintained.

SAJA, SRINIVAS* (BITS PILANI Hyderabad Campus, sринivasajja@hyderabad.bits-pilani.ac.in)

Rainfall Variability, Coping Strategies and Livelihoods: Case Study from Godavari Basin, India

Natural resource-dependent rural households are likely to experience a disproportionate burden of the adverse impacts of climate change -- droughts, famines, floods, variability in rainfall, storms, coastal inundation, ecosystem degradation, health epidemics, and conflict. In some parts of the world, these effects may already be in play with potentially disastrous consequences for the poor. Reliance on subsistence agriculture means the impact of stresses and shocks (such as droughts or floods) are felt keenly by rural poor people, who depend directly on food system outcomes for their survival, with profound implications for the security of their livelihoods and welfare.

Variability in rainfall had been plaguing the farmers of Andhra Pradesh during the recent past resulting in crop failure and indebtedness. It would be important to find out the coping mechanisms that are being developed by the farmers to deal with variability in rainfall and the support being provided by the government. In some parts of the state, farmers are opting for cultivation of commercial crops instead of food crops as they are finding better returns from these new types of crops which could lead to issues like food security and loss of livelihood for certain communities.

This paper focuses on identifying livelihood adaptation strategies of cultivators in Nizamsagar project, where farmers developed new water sharing mechanisms and brought about changes in farm practices to deal with rainfall variability.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Data used for this study were derived from a web questionnaire survey conducted in September 2013. The sample is consisted of women having husband and children (under 15 years old), who reside in the Tokyo metropolitan area. In order to correct the potential bias of the registered monitors, we adopted stratified random sampling based on job status and the age of the smallest child. The valid sample size excluding quite short time response and/or inappropriate answers was 483. The average age of these women is 40.5, 59.8% are employed, and 40.2% are non-employed.

Multiple regression analyses the effects of employment and marriage cohort, family resources and normative status of them and the support in the workplace, upon the recognition of birth experience. Our results indicate high housework frequency of the husband decreased their first birth hesitation. On the other hand, positive recognition towards birth experience is influenced by the support in the workplace. Smooth communication with both family and workplace members leads to a possibility of a positive impact. These findings advance our understanding of how Japanese companies can take specific measures to improve low fertility.

One of the features of ICT use is greater alleviation of time and location restraints in communications. Although positive effects of ICT for improving work-family life have been reported, much of the ICT literature stresses negative effects on work-family life through increased extra work. Sakamoto and Spinks (2011) found that a higher degree of using ICT tools directly related to a higher work-family conflict of Japanese workers. This study explores the effective mediating factors that can reduce the negative impact of ICT use, applying work-family border theory to measure the concepts and propose hypotheses.

Data used for this study were derived from a web questionnaire survey conducted in September 2013. The sample is consisted of women having husband and children (under 15 years old), who reside in the Tokyo metropolitan area. In order to correct the potential bias of the registered monitors, we adopted stratified random sampling based on job status and the age of the smallest child. The valid sample size excluding quite short time response and/or inappropriate answers was 483. The average age of these women is 40.5, 59.8% are employed and 40.2% are non-employed.

Multi-group analysis of covariance structure modeling test the effects of using ICT on work-family life focusing on the housework frequency, time use and their perception of them. We analyze the mediating effect of domain identification, influence and across-the-border communication. Our findings advance our understanding of how we manage the permeability between work and family life.

This presentation will examine the work and private life situations of female and male university professors in Japan, and offers some examples of positive or affirmative action taken by Japanese universities and discuss its effectiveness. In Japan, the ratio of female researchers is low, as is the case of other countries. In 2011, just 13.6% of university professors (full professor, associate professor, lecturer, assistant professor) were female. From around 2006, the Japanese government started a positive action policy to increase the ratio of women. The government grants subsidies to offer about 10 universities each year for three years. The universities offer support centers for women, gender equal office, childcare centers and so on.

The presenter has worked in one of the gender equal offices as a staff member. My observation there and a questionnaire research for university professors are the main data source of the presentation. First, the presenter will discuss their work and private life situations. Many researchers have shown that male productivity tends to be higher than that of females. However, the results show gender does not mean scientific productivity when other control variables. First, they have specific marriage patterns. For example, most female professors tend to be single or have partners who are professors. Many couples live separately. However, women tend to shoulder domestic work and child rearing, as is the case with other occupations.

Many universities have set the goals of numbers or ratio of women and introduced many types of positive action. The presenter will show examples of them and discuss effective ways to support both sex and foster gender equality in universities.

Man has been using the wind for sailing ships, for pumping water and for propulsion with power for a very long time. The increasing concern for environmental and the high price of oil have made generation of electricity from the wind a realistic alternative. The question today is whether the costs and other disadvantages of oil and nuclear power have reached the point where wind generators developed by modern technology can be considered to be competitive. The wind power in India began in 1990 and has significantly increased in last few years. India has installed high capacity wind jammers to exploit wind and converts it as wind energy for its socio-economic inclusive development programme. As on 31 January 2013 the installed capacity of wind power in India was 19.64 gw.

Maharashtra state has the second position in wind energy in India. The first wind power project in the state was installed at Jamsande in Sindhudurg district in 1996. Vankuswade Wind Park is located on a high mountain plateau at 1,150 m. above the Koyana reservoir near Satara which is Asia’s biggest wind power project. The paper presents the overall situation of Vankuswade Wind Park, its need as well as ground level perceptions in Satara district of Maharashtra, India.

SAKATE, PUSHPALATA* (Samataawadi Mahila Manch, Maharashtra, pushpalata.sakate@gmail.com)

Role of Dalit Mahila Vikas Mandal Against Femalefeticides in Maharashtra, India

Strong preference for sons over daughters exists in the Asian countries and Indian Subcontinent. The female feticides over the last four-five decades have distorted sex ratios at birth in several Asian countries in general and in India particularly. Foetal sex determination clinics have been established all over India in the last two decades. There are studies on the outcome of an intensive abuse of prenatal diagnostic techniques for sex selection in India. Parents tend to be calculative in choosing the sex of the next child and the decision is based on the birth order, sex sequence of previous children and number of sons. The misuse of medical technology in India is resulting in reinforcement of patriarchal values as professional medical organizations seem to be indifferent to ethical misconduct.

The paper presents the assertive action by ‘Dalit Mahila Vikas Mandal’, a social organization which was established in 1990 in Maharashtra. Female feticides were done by medical fraternity have been exposed by this organization through sting operations carried out in Maharashtra and Gujrat state. The shocking facts found during the field work carried out by the author are also presented in the paper.

Professional Turf Battles Vs. Inter-Professional Collaboration: Their Impact on Inequalities in Health and Social Care in the UK

From a neo-Weberian perspective, it is argued that professions have long competed with each other in turf battles to enhance their respective positions in terms of income, status and power from the viewpoint of their professional self-interests. Using illustrations drawn from health and social care in the UK, it is argued that this has come at a substantial cost to both the user and the wider public - and has in particular exacerbated existing social inequalities. This paper outlines the growing trend for inter-professional collaboration in health and social care in the UK. Although there can be downsides to greater inter-professional working in relation to such issues as the complexity of communications and supervision arrangements, there are many positive generic reasons for such engagement – from creating a more satisfying work role for the professionals involved to enhancing the service given to the user. This paper specifically asks questions about the benefits or otherwise of inter-professional working in terms of social inequalities. In so doing, it acknowledges that inter-professional collaboration can take a number of forms. It also again draws on examples from health and social care in the UK to support its general argument that inter-professional collaboration can make a significant impact on social inequalities, not just in the UK but more globally.

Broken Promises. Temporary Labour Migrants’ Experiences of Working Conditions and Social Security in Finland

West European countries, including Finland have started to recruit more labour migrants to low-income sectors in hope of a partial solution to the consequence of rapidly aging working population. This paper demonstrates how highly skilled labour migrants from non-EU member countries face social disqualification in their efforts to become part of the Finnish labour market. Particularly, African and South-Asian male workers find mainly cleaning or dish-washer jobs despite their academic background. Our study explored the temporary labour migrants’ experiences of acquiring opportunities to working rights and social security. The results show that the majority of the interviewees had been reluctant to look for information either due to the fact that they were working only temporarily in Finland or due to their week bargaining positions. The information of recruitment, working rights, the Finnish taxation system, and of the Finnish social security rarely reaches the labour migrants. These features can partly be explained by labour and migration policies, and by the natives’ strong creation of ‘otherness’ between the native Finns and the non-white foreigners. In the analysis an intersection of gender, ethnicity and class has been applied to describe the unequal and sometimes precarious position of the labour migrants. The research material consists of documents, memos based on ethnographic observations and of seventy-eight semi-structured interviews, of which forty-nine were conducted among cleaners, bus drivers, and seasonal agricultural workers.

Re-Creating Mutual Belonging: Filipino Labour Migrants’ Local and Transnational Practices Between Finland and the Philippines

This paper demonstrates the unequal embeddedness of transnational Filipino labour migrants in the Finnish and Filipino society. My study of Filipino labour migrants’ working and living conditions in Finland explored the migrants’ adaptation strategies in their efforts to become integrated in the Finnish society and in staying in touch with the ones left behind. The analysis showed how the integration of Filipino labour migrants to their new host society is influenced by their adaptation strategies, such as of the migrants’ local and transnational practices and contacts. The active participation in sociocultural and religious practices helps the Filipinos to find their way of being in Finland without losing their contacts to the Philippines. The migrants’ adaptive strategies strengthens the Filipino ethnic identity and its mixture / ethnic belonging to an ethnic minority community in Finland, as well as to a transnational community. These two communities should not be perceived as two opposites but as dual sites of mutual belonging consisting of a hybridity of transnational and ethnic collective identities. At the same time, the migrants’ opportunities to become familiar with the Finnish society and to learn the Finnish language have been vague. There is a risk of segregation from the Finnish society if the Filipinos do not become familiar with the Finnish society and language. The research material consisted of open-ended interviews conducted among twenty Filipino cooks, nurses and cleaners and of memos based on ethnographic observations.

Occupy Gezi: From an Uprising to a Social Movement?

Occupy Gezi started as a small protest to oppose the demolition of a park in Istanbul and quickly transformed into a national grassroots initiative against the government’s authoritarianism and a hybrid democracy, which locks political action into the ballot box. After a month of intense street protests leaving 5 dead, dozens wounded and under arrest, it has shifted to “park forums” as thousands gather in their neighborhood parks to discuss the future and come up with a game plan. This lecture will look into how the #OccupyGezi experience opened new social and political possibilities, spaces of political action (online and off) and a new kind of political language; what shook the so-called “apolitical” generation out of their comfort zones to the streets; and brought people from all walks of life and political spectrums together. It will also look into the chances of Occupy Gezi becoming a full-fledged social movement and the limitations it faces in the process.
Materials and methods: the variables in the model proposed by the pilot study have been reviewed on the basis of the individual data available in the information systems of the local actors. They have been used for defining evaluation models based on the characteristics of the individuals, with the same techniques used in the pilot study. As a case study the municipality of Genoa, whose population is among the oldest in Europe, has been taken into account.

Results and discussion: The passage from regions to individuals in a large municipality confirms the validity of the model for people 65+ years old. ADL abilities are the main disability dimension with highest association with the worsening of the SE condition, also due to the effect on the social relations dimension. The public strategies seem to better protect individuals and families, with the help of the informal network of support for the family care. The indicators in the models could be very useful for the Social Services, in order to develop tools for better addressing policies and intervention at local and national level. Moreover, this work could extended wherever these kind of data are routinely collected.

What's the Impact of Coverage Error to the Study of Social Inequalities?

In some European countries, including Italy, survey organizations use the Directory of Landline Phone Numbers as sampling frame to survey the general population and study social inequalities (Häder and al. 2012). Under certain conditions, the use of this sampling frame may be problematic.

In Italy, with the only exceptions of Callegaro's work (2004 and 2008), there is very little interest in it. Little is known, for example, on the extent to which coverage error occurs and its impact on survey estimates, although in 2011 only 50% of households are included in the sampling frame (e.g., the directory of landline phone numbers). We believe a clear understanding of the nature of coverage error is urgently needed (households may be excluded from the sampling frame for different reasons) to develop appropriate strategies to tackle the coverage problem.

The overall aim of the paper is to evaluate the impact of coverage error on the accuracy of the survey estimates for a set of key socio-economic variables and, should evidence be found, to discuss possible strategies to correct for it.

We first describe changes over time in the pattern of coverage error by focusing on three groups of Italian households (household included in the sampling frame, households excluded from the sampling frame as they do not have a telephone, households excluded from the sampling frame as they do have a telephone but the telephone number is not listed). We then explore whether there are any differences in these groups in their socio-economic characteristics, including indicators of general trust and, for a selection of survey items (including income, health and social class), investigate the impact of coverage error on bias.

We use the 1997-2012 Multiscopo survey (“Aspetti della vita quotidiana”) run by the Italian Statistical Institute (n=20,000 households).

SALAZAR, LEIRE* (UNED, lsalazar@poli.uned.es)
RADL, JONAS (Open University UNED)

Research on preschool education and day-care programs is gaining momentum since the discovery of its potential to reduce social inequalities in education at an early age. Much of this research relies on case studies to measure mid and long term effects of preschool attendance on academic performance and school transitions. In this paper we adopt a broader focus and a comparative approach by exploring the extent to which early (pre-primary school) child stimulation can reduce background differentials in learning outcomes across 28 countries from the Americas, Asia and Europe.

Particularly we seek to unveil the relative impact of direct parental involvement and preschool education, as different ways of child rearing, on educational disadvantages that stem social origins, and the extent to which this applies to all the countries in our sample. Are the effects of both practices (institutional vs. parental form) statistically significant or do they show a different impact in different countries? How do institutional characteristics of the educational system affect performance at this stage?

To answer these questions we use PIRLS 2011, an international data source clustering students of primary education (4th grade) across countries. PIRLS provides a standardized measure of reading literacy among 4th grade students. We estimate random-constant and random-slope multilevel models to assess the effect of the type of child care adopted by families on educational outcomes, with a particular focus on the potential for a broad comparison of multi-layered processes that result in unequal life chances among children.

SALAZAR, ROBERT* (Ritsumeikan Asia Pacific University, salazarrobert@yahoo.com)

Climate Change Discourse and Action in the Philippines: Views, Voices, Vignettes
In the Philippines, there has been some amount of talk and, fortunately, some amount of action too, about climate change. We ask: What is being said and done about climate change in the country? How is climate change being framed and acted upon? Why are these developments unfolding the way they do? How do these discourses and practices reflect and influence sociocultural dynamics? The paper presents some views, voices, and vignettes from the country. It attempts an understanding of these realities by drawing from social constructionism, critical discourse analysis, and social movement theory.

Managing NGOs for Older Persons in East and Southeast Asia: Lessons and Good Practices from the Field

The paper reviews the roles and experiences of non-governmental organizations for older persons (NGOs-OPs) in East and Southeast Asia. It is based on case studies of selected NGOs from Hong Kong, Japan, Korea, Indonesia, the Philippines, Singapore, Thailand and Vietnam. The study finds an increasing number of NGOs-OPs present in the region, working in diverse areas of service delivery, education, research, training, and advocacy. Community-based older persons' organizations or senior citizens associations are also becoming more active, with some organizations beyond social and recreational activities, and venturing into policy advocacy and other areas traditionally served by non-community-based NGOs. Most NGOs are taking on multiple roles simultaneously, e.g., adding advocacy to their other programs, while a few are beginning to focus on a specific target group, activity, or service. On the organizational and management side, NGOs-OPs are also becoming more accountable and are taking creative and innovative steps in meeting the challenges of management. To be sure, NGOs-OPs need to solicit critical, hopefully constructive feedback from the older persons they are serving. Nevertheless, like the older persons they are working for and with, NGOs-OPs themselves are getting more active and growing wiser with age.

An Experimental Study Of The Relationship Between Knowledge, Attitudes and Recycling Behavior In Iran

It is often assumed that knowledge and attitude about the recycling will engage in recycling behavior. We used data from a survey on Mazandaran province, Iran in 2013 to investigate this premise. A survey method was utilized to conduct this investigation and by employing cluster sampling, a total of 300 respondents were selected randomly. A self-administered survey was employed to collect the data. Finally, 286 valid questionnaires were obtained. The research was conducted during February and March 2013. The data was analyzed using SPSS. We examined two types of knowledge: knowledge new programs and knowledge about recycling process. The regression analysis indicated that knowledge is associated with recycling behavior. The three central research questions are: 1) Do traditional demographic measures (i.e. race and class) adequately capture the phenomena of change? 2) Why do neighborhoods experiencing gentrification seem to look similar to each other and utilize the same semiotic tropes? 3) What are the physical indicators of neighborhood change and how are they involved in symbolic boundary construction between old and new residents?

Between Market, Art and Politics: The Different Ways of Resignification of the Old Industrial Spaces in the City of São Paulo

Since the beginning of this century, the old industrial buildings and spaces of the neighborhood of Monca, in the city of São Paulo, have been the subject of economic, political and social practices guided by a cultural sense with an increasing aesthetic relevance. Photography, painting, advertising, heritage practices, graffiti, have contributed to bring a new sense to these spaces, which goes from their private appropriation of spaces to the appreciation of public space by heritage state agencies. This implies in a redefinition of the relations between aesthetics and politics in a “postmodern” logic (Jameson, 2000; Harvey, 2000).

One of the consequences of this process is the construction of “postmodern urban landscape” characterized by gentrification and disneyfication (Zukin, 2000, Smith, 2000). On the other hand, according to Huyssens (2000), there is no pure space outside the market culture, which leads us to question the limits of these
processes, namely to consider the “specific strategies of representation and com-
modification and the context in which they are represented” (2000:21), or the cri-
tics to the regressive aestheticization of politics (and economy) by the politicization of art (W. Benjamin, 1985).

We will analyze the use of these strategies in the practices of artists, entrepre-
nears, experts, dwellers and their conflictual context - involving real estate boom and heritage practices (Pereira, 2010; 2013); the formation of gated communities (Caldeira, 1997) and the resistance against them (ibid., 2012). How they give new meanings to identities, places, revealing the tensions and complementarities be-
 tween advertising-driven aestheticization and politicization of art and problematize the construction of a singular public space: a heterogeneous urban landscape and a democratic political sphere, both institutional and non-institutional (Arendt, 1991; Habermas, 1984) in the city of São Paulo. We will use the methodology of visual sociology (Ferro, 2005), problematizing it in an interdisciplinary approach.

**Can Outsourced Workers Organize? a Case Study from the Philippines**

This presentation will detail an attempt by outsourced workers in the Philippines to form a labor union. These workers are in the “knowledge process outsourcing” sector, meaning that they possess significant human capital and do skilled tasks for firms of the Global North. The case immediately presents two puzzles. First, given the many structural barriers known to impede unionization by outsourced workers in the Global South, how did a union campaign emerge? Second, why did this unionization attempt ultimately fail? My ethnographic re-
search inside the outsourcing facility provides answers to these questions. Rep-
resentation struggles were initiated by highly-skilled workers and in response to new, driving tactics on the part of local management. The latter were reacting to pressures put upon them by their Western clients. The unionization campaign appeared to have caught local managers by surprise, and throughout it they were very concerned to keep news of it from reaching the government, the press, and Western clients. In short, employees possessed significant structural and work-
place power in their attempt to gain recognition. Ultimately, however, it was local management’s ability to harness greater associational power that led to the de-
feat of the union. One general implication is that studies of labor in global supply chains should theorize and examine empirically the vendor-client relationship. In these supply chains, vendor firms and client firms have different interests and resources.

**SALLAZ, JEFFREY* (University of Arizona, jsallaz@email.arizona.edu)**

**Foxxconning Science: The Globalization of Academic Publishing**

This paper presents ethnographic work done inside an outsourcing firm in the Philippines. This firm is part of the emergent knowledge process outsourcing, or KPO, field. It contracts with publishers wishing to outsource such work as copy-
editing, typesetting, authorial communications, and more. Most major scientif-
ic publishers now contract with such firms. I present evidence that the nature of these strategies supplies outsourcers with a new practice for organizing work. Suppliers lack basic knowledge of the overall field of production (in this case, academic publishing), and so judge themselves against unknown compet-
itors. They compete on price, rather than quality, and so continually engage in various “low road” techniques of management. Most notably: wage suppression, the “driving” of workers, and forced overtime. I conclude the paper by discussing at length one incident that provides a prism into the entire labor regime: a unio-
nization dispute that took place at this facility. Global pressures induced worker

**SALLÉE, NICOLAS* (University of Montreal, nicolas.sallee@umontreal.ca)**

**Rehabilitation and Punishment, a New Model of Rehabilitation in the French Youth Justice System**

According to recent research in policy transfer studies, youth justice systems across Western Europe are taking a “punitive turn” (Muncie, 2008), marked by the emergence of a new “culture of control” (Garland, 2001). This process is particularly significant in the United States and Great Britain, however it appears that other European countries are following suit (Bailleau & Cartuyvels, 2007). A closer look, however, reveals complexities: the level of youth incarceration, a commonly adopted indicator of punitiveness, differs considerably between coun-
tries. The French youth justice system, analyzed in this paper, does not escape these complexities: since 2002, the youth incarceration rate is decreasing, while the content of political discourse and legislative changes seems to fuel the in-
crease of a new punitiveness (Bailleau, 2008). To understand this apparent par-
adox, we will describe how political injunctions aimed to “get tough” on young offenders, are translated and reworked, at a lower level, through the activity of the administrative agency responsible, in France, for the functioning of youth centers: the judicial Protection of Youth (JYP). This analysis will allow us to highlight the crystallization of a new model of rehabilitation under constraint. First, using quantitative data, we will describe the increasing use of semi-closed youth facili-
ties as an alternative to prison. Tied to the development of new prisons for youth, supposedly “rehabilitative” (Chantreille & Sallée, 2013), this evolution is changing less the level of confinement than its meaning. Formerly perceived as anti-rehabil-
itative, confinement is now legitimized as an inseparable feature of rehabilitative processes. Second, we will analyze knowledge production practices, particularly child psychiatric and psychological knowledge, mobilized by the JYP to support this legitimation process. This paper will defend the idea that this new knowledge underpins old disciplinary recipes, and symbolizes the growing concern surround-
ing, in France, the institutional fabric of socialized individuals.

**The Relationship Between First Principle Production in Brazil and the International Demand**

The following research approaches the criticism of the production system of knowledge in Brazil, focusing on a laboratory of Theoretical Physics which works with First Principle Model (FPM), order to analyze the institutional dilemma and the relationship between the laboratory and the central spaces of knowledge pro-
duction linked to this research area. The production of science, how is the current in Social Studies of Science and Technology, demand an articulated network of researchers and analysis of published material for one label of FPM which is related to a Brazilian University. With the following research, we aim to contribute for the debate about the production process of knowledge, bringing reflexive elements about the role of Brazil in the production of FPM knowledge.

The Notions of Otherness and Critical Construction Sites: Theorizing Professional Boundaries within

This paper is about social and symbolic boundaries (Lamont & Molnar 2002). The aim of this paper is to suggest a theoretical way to understand constructions of ‘Otherness’ within professional boundaries. I draw on the empirical case of the doctors with immigrant backgrounds in the Swedish medical profession and use the notion of critical construction site by Cornell & Hartmann 2007. In order to bridge the gap between structure and agency the study started with a review of the Swedish research literature in order to see how ethnicity, ‘race’ and ‘Otherness’ had been received in research. In this review I found that ‘Otherness’ is often something that is ascribed to patients and not doctors. I then went on reviewing the professional debate around the issue of doctors with immigrant backgrounds in Sweden I found something I theorized as underlying assumptions of ‘the Other’. This ethnic ‘Otherness’ was not about doctors’ ethnic identity, nor about ‘race’ instead it had to do with that the doctors had immigrated and was perceived as something stable and predetermined.

This notion of ‘Otherness’ was later also found in interviews with doctors with immigrant backgrounds. In the interviews I expectedly found stories of discrimination, prejudice and even racism but I also found stories of agency, and coping strategies where the ‘Otherness’ they were ascribed with was used a way to construct their role in the Swedish health care system; to take care of patients with immigrant backgrounds.

The paper argues that as doctors with immigrant backgrounds seem to be using a primordial definition of the ‘Other’ in a circumstantial way in order to find their place within the Swedish medical profession which I argue, is a critical construction site.
Does the Transition to (grand-)Parenthood Change Intergenerational Relationships?

Existing studies suggest a close relationship between the presence of grandchildren and intergenerational solidarity. For example, studies on grandparental involvement in parenting show that the birth of a child increases opportunities for associative solidarity between generations as well as it increases the demand and supply of functional solidarity, both with regard to material help or childcare as well as information and advice. This, in turn, may also result in increased affective solidarity. But it might also operate in opposing directions: if the demand for intergenerational solidarity meets supply from the grandparental side, this may enhance the existing intergenerational relationship; in case of incongruency, the event may result in increased intergenerational conflict or detachment. Yet, more research is needed on how intergenerational relations adapt to the new family structure and needs of family members after the generational transition. Past research mostly concentrate on the presence of grandchildren regardless of their age, consider only one direction (parents or grandparents perspective), or are analyze cross sectional data. The present study examines the transition to first parenthood and the associated development in intergenerational relations over a two year period concerning various dimensions of the Bengston-Silverstein-solidarity-model. The German Family Panel (pairmon) is chosen as the appropriate data-set to addressing the research question, including reports from both perspectives, gathered in 2010 and 2012. Using difference score regression, N=7,163 children, the analysis focused in the frequency of contact and practical support only from the elder to the younger generation. No changes were found for financial transfers. Regarding the frequency of conflicts, the generational transition has a decreasing impact.

Invisibility of Sexual Minority “Women” in Japan

There are no existing laws that either discriminate against or guarantee the rights of sexual minorities in Japan. It is partly because in Japan LGBTs are quite invisible in every day life in Japan, except on TV shows. It is not strange to see a gay man or a man who appears to be so on TV. They often talk like women, crossdress, and are expected to be teased or to play the fool. However, we hardly see a lesbian or a woman who can be seen as an FTM (Female to Male) transgender even on TV.

In a LGBT community, some says the number of lesbians is less than that of gay men, because they don’t see them so often, and others mention most women are bisexual, so there not so many lesbians in Japan. Why do they appear to be fewer “lesbians” than gay men? Do most of them recognize themselves as "bisexual", in their presentation, I will compare interviews of sexual minority men and women focusing not on “the number” but the invisibility of the sexuality of women in terms of three points: the first is their different experiences when coming out, the second is a sexual double bind, and the third is ambiguity of sexuality which is beyond description in binary categories (e.g. homosexual and heterosexual). By introducing narrative, I will discuss how these elements make it difficult for “women” to talk about their sexual orientation and sexual identity.
Church/faith-based migrant formations that are spread out around the country. “Membership” knows neither boundaries nor time limits. is no stopping the migrant Filipinos from organizing cyber communities. Their –local or migrants– in whatever form and orientation is almost a taboo, there ing their unions and merging into coalitions of different migrant nationalities. campaigns critical of policies in the Philippines.

On the second part, we try to understand the emergence of this new reality and cal implications of the non-wage based relations for labour relations in general. pushing forward with their agenda.

SANCHEZ, FÁBIO* (Universidade Federal de São Carlos, sanchefacio@uol.com.br)

New Configurations of Informal Work in Brazil: Besides the Informal, Short of Rights

This work aims to examine the non-wage based labour relations and understand its implications for the State and Society. These kinds of labour relations have been referred to as “informal” or “non typical”. In this sense, they have been viewed academically and politically as lacking or unviable. However, if it is true from the perspective of the traditional labour institutions (Unions, State, and the juridical forms of labour regulation) these labour relations are aliens and cannot be characterized but for absence of the key attributes that traditionally have defined labour, in the context of political and economical changes that took place in the past decades, these labour relations are an important part of the accumulating history and have generated new field of conflict and have been trying to get politically organized, building identity and pushing forward with their agenda.

The first part of the work focus on understanding the theoretical and political implications of the non-wage based relations for labour relations in general. On the second part, we try to understand the emergence of this new reality and the development of new political subjects with their own agendas and identities. However, although these labour relations and their workers are not informal, they still not recognized in their relation with the State as having rights.

SANCHEZ, FÁBIO* (Universidade Federal de São Carlos, sanchefacio@uol.com.br)

The Solidarity Economy and the Social Struggles in Brazil: The Right to Associated Labor

One of the most important examples of a collective subject rising in the public arena in Brazil is the solidarity economy, which for several years has been shaping itself as an autonomous social movement. In this process, it has been trying to build new social rights for Associated Labor. It is a description and analysis of this process that this work intends to develop.

With this objective, it starts by rebuilding the history of the Solidarity Economy in Brazil, its development, but also the legal and political problems that have defined the movement. Associated Labor was in Brazil not only in the last thirty years that it has assumed a new configuration and new meanings as a result of the social and political changes that took place in Brazil after the eighties. The second part of this work focuses on showing how the Solidarity economy today has become a new social, economical and political reality in the Brazilian society however; the subjects of the Solidarity Economy still lack the institutional recognition of its rights.

Lastly, we analyze how the subjects involved with the Solidarity Economy have been for years mobilizing and requesting the rights to Associated Labor and have achieved some successes in this process such as the creation of the National Secretariat of Solidarity Economy and the approval of laws for the Solidarity Economy. As a result, the analysis of this movement in Brazil demonstrates that there are no natural rights but rights are political constructions consolidated from processes of social struggles that aim to expand democracy and transform society. It is some of these political agendas that we try to explore in this work focusing on showing the arenas where the struggles and debate around the development the right to Associated Labor take place.

SANCHEZ, FÁBIO* (Universidade Federal de São Carlos, sanchefacio@uol.com.br)

Building Global Worker Communities: The Case of Filipino Migrant Workers

Building global worker communities: The Case of Filipino Migrant Workers. Filipinos overseas are not wanting of associations or organizations to belong to wherever they may be. Commonplace are social organizations around common professions, faith/religion; also based on geographic regions or ethnolinguistic origins in the Philippines to name a few. These formations are meant to provide support to the members, enhance their profession, religion/faith, ethnolinguisit identities and the like. Rarely do they get in conflict with the laws and policies of the host countries; neither were they inclined to have sustained campaigns critical of policies in the Philippines.

Fastforward, 4 decades later, we see an expanded and varied landscape of mi- grant communities. In Hongkong, migrant domestic workers are joining and form- ing their unions and merging into coalitions of different migrant nationalities. In the Gulf, Gulf Council (GCC) countries where organzing of workers –local or migrants– in whatever form and orientation is almost a taboo, there is no stopping the migrant Filipinos from organizing cyrber communities. Their “membership” knows neither boundaries nor time limits.

In other nations such as Taiwan, what is feasible are support groups such as Church/faith-based migrant formations that are spread out around the country. Every Sunday, these formations touch base with more than a thousand Filipino migrants who congregate in the churches for the worship service. Off and on the pulpits, migrant issues are raised, activities and campaigns are undertaken. Interestingly, the ways and ways of organizing migrants paves the way for more direct involvement of migrants on issues that impact them; for more con- solidated actions and responses and for support and solidarity between migrants of one country and with migrants of other nationalities. Indeed, migrant worker organizing is the future, once that challenges the boundaries of nation-states in more ways than one. #
Coffee, Certification Schemes and Standards in the Reshaping of Sustainability Markets, Tracing Global-Local Tensions

In the last fifteen years, certification schemes (and the standards they enact) for producing sustainable products have become one of the most important strategies for enhancing sustainability into commodities (such as coffee) market. Similarly, certification schemes are introducing important changes in the governance of agriculture systems. Such transformations have been the focus on a wide set of works that critically highlight how certification schemes are embedded into a new global economy.” As well as the city-region context in the context of a moral economy. Although many of these approaches isolate technical and social dimensions as separated realms relative less attention have been put on how certification schemes are enacting sustainability in terms of trust, a key element in the material shaping of any differentiatied market.

Following Busch (2011) contributions on standards, enacted in the Certification schemes (Van Der Kamp, 2012), and trust I explore how certification schemes can produce two version of it in two different locations. First, trust as consistency in the International Coffee Organisation (ICO). Here I describe how certification schemes are designed to produce trust in the market related to the transparency and the consistency of coffee production according to international environmental standardised criteria. This trust, then, is limited to the boundaries of a certificate. Second, I describe the experience of a small coffee roaster and retailer with certification schemes in the UK, J. Atkinson & Co. What emerges there is a concept of trust as trustworthiness. Certification schemes are framed in terms of coffee relationships, these involve a more emotional and sensuous experience of the market. I present how some standards can be harmonically integrated in these arrangements and how sometimes such integration cannot be possible. As a result, an alternative version of sustainability is produced.

Marriage Selectivity and Stepfamily Formation

Although child outcomes specific to stepfamilies have been well researched, the literature is not resolved on the process by which these families are formed, nor which persons are likely to enter these types of unions. It is well known that stepfathers are likely to significantly impact coresident stepchildren, yet we would expect this influence to differ depending on many factors, including stepfather characteristics. Thus, determining which men are prone to become stepfathers is paramount to understanding conditions that promote both negative and positive outcomes in stepchildren. Two potential explanations of stepfamily formation are frequently invoked in discussions of stepfamily formation: 1) marriage selectivity, in which the quality of male partners available to women with children varies with marriage market conditions; and 2) marital search theory, in which single mothers have an increased desire for partnering with “good providers” as opposed to non-partners. These theories involve a more emotional and sensuous experience of the market. I present how some standards can be harmonically integrated in these arrangements and how sometimes such integration cannot be possible. As a result, an alternative version of sustainability is produced.

SAND, ANN-BRITT† (Stockholm University, ann-britt.sand@anlhorigo.se)
Caring Responsibilities and Gainful Employment in Middle Age: A New Population Based Study in Sweden

The Swedish welfare model is based on the premises 1) the society, not the family, has the main responsibility for care and 2) all adults are gainfully employed, from the time of employment until retirement. Sweden has a high proportion of women in the work force, also in their 50-60ies. Nonetheless, it is estimated that about 70 percent of all elderly care is performed by relatives. It focuses the care responsibility have any impact on paid work, maintenance and everyday life as well as their experience of public care, possibility to leave job and payment for care. Theoretically the study is connected to feminist welfare research. Of central value is to analyse gender, class, ethnicity and age. Early results shows that over 40% of the respondents help give help and 30% of women and 27% of men, help old, disabled or ill family member at least once a week and 15% of women and 12% of men help daily or several times a week. Care affects life in different ways; feeling mentally and physically exhausted, having difficulties to focus on work, less time for leisure. More women than men have made changes in their working life in order to manage the situation. Corresponding to 7% of women and 4% of men 45-66 years in population we can see that 100 000 women and 50 000 men has made changes in their working life; reduced working hours, stopped working, take early retirement as a result of caring.

SANCTON, ANDREW* (University of Western Ontario, asancton@uwo.ca)
Global Cities Making Policy or Making Policy for Global Cities?

Everyone acknowledges that cities have become increasingly important in the world economy. But there is much confusion about what this means for how they are governed. A natural assumption is that the municipal governments of the central-city municipalities is a global city-region are becoming more important for urban policy-making. But, unless the boundaries of such a municipality corresponds to the entire city-region (however defined), which is highly unlikely, then the central-city municipality will be quite incapable of responding to the most important policy issues, especially those relating to urban sprawl. The result in many countries is a search for the perfect municipal structure to enable effective city-region policy-making.

But what is forgotten in this kind of analysis is that, if city-regions are becoming relatively more populous in relation to small towns and rural areas, then our national and sub-national legislatures are becoming increasingly delineated by urban voters. In countries with one dominant city (France, England) and in federations and countries with strong devolved regional legislatures, urban policy for city-regions will not be made at the municipal level, whatever the municipal boundaries and structures might be. We are used to hearing that “all politics is urban.” What we need to consider is the likelihood that “all politics is urban.”

Although examples will be drawn from around the world, particular attention will be paid to the Toronto city-region (the Greater Golden Horseshoe) and Ontario, the Canadian province in which it is situated. Despite Ontario’s vast territory, the Ontario provincial government has many legislative measures that touch on city-regions. Ontario’s politics is urban politics. Although the main argument of this paper derives from my 2008 book, The Limits of Boundaries: Why City-regions Cannot be Self-governing, the paper modifies the analysis in light of recent developments.
caregiving; reducing working hours, stop working, taking early retirement etc., women are affected considerably more than men, which is the case in Japan as well.

Oil-Drilling in Arctic and Ecosystem-Management Plan of the Barents Sea

In the High North, The Barents Sea has large resources of petroleum and sustainable populations of fish. The international challenge lies in implementing the conservation of marine biodiversity, at the same time managing sustainable exploitation of natural resources in the Arctic region. The Norwegian government has tried to solve conflicts of interest by the making of a large scale ecosystem-based national management plan for The Barents Sea and Lofoten Islands. The national goals are sustainable use of petroleum, fishery resources and conservation of the structure of the maritime ecosystem. In this paper, I present an empirical case study of Norwegian national decision-making in ecosystem-based management of The Barents Sea. This new system of planning is implemented as the second sea area in the world. Australia has implemented a large ecosystem management plan at the east-coast with the Great Barrier Reef. In the paper, I discuss in a critical perspective of sociology of knowledge the social effects of the new environmental policy and environmental institutions of problem-solving of management of large sea area in the Arctic area. In the paper, I want to investigate how the social effects of the development of national planning of the sea ecosystems in the Arctic area. The question is: Does the government eco-system management planning of the Barents Sea provide a suitable institutional framework for solving the social conflicting interests between oil-drilling and conservation of nature in the Norwegian societies?

MALDONADO, MARTA (Iowa State University)

Integration and Belonging in Two U.S. New Destinations

The extension of border politics, and specifically, a policy-legal context characterized by increased surveillance of immigrant populations and the hardening of immigration controls, is concomitant with the emergence of new destinations (Massey 2008). In this sense, the border has been “pushed inward” (Coleman, 2007). Additionally, a growing number of state and local governments have proposed and/or enacted a wide range of policies with consequences for the lives of immigrants and their families. Some such policies are aimed at local policing and enforcing of immigration controls while others regulate access to jobs and housing, and more generally, the provision of services. This “variegated landscape” of local policies (Walker and Leitner, 2011) results in contexts of reception that vary significantly across U.S. spaces. From a research standpoint, questions about the interaction between socio-spatial scales (the global, the national, the regional, and the local) in the shaping of the conditions facing Latin@ immigrants gain centrality. How does the broader context interact with local contexts to shape the conditions facing immigrants? How do policies, social relations (shaped by power, as they are), and institutional arrangements at these various scales interact to produce particular outcomes for immigrants? We investigate these questions by exploring the experiences of Latin@ immigrants in two rural new destination communities in the U.S. Midwest region. We draw upon a theoretical framework that understands immigration and integration as racialized and gendered, political-economic processes. We utilize quantitative and qualitative data gathered through original research in rural new destinations in Southwest Kansas and Central Iowa.
Youth in Social Transformation Through Education

India, known as a country of youth, with the potential to help build a stronger democracy through social entrepreneurship. There is a need of enthusiastic and pro-active youth for any transformation. They need a balance while addressing country’s growth and social issues.

Education is a progressive approach for transforming society. Existing education policies has many shortcomings. There are many discriminatory practices applied at ground level. However, despite this adverse situation the young generation is engaged in creating an atmosphere for change in rural Maharashtra, India.

Idea of bringing education in the main stream of education has been established. But, due to distress & seasonal migration of deprived sections of the societies with family, education of students gets affected badly. Some experimental learning centres such as SAKHARSHAALA for sugarcane workers and PASHANSHAALA for stone crusher workers have been started for the education of deprived communities.

In tribal area, language is a big issue which cuts masses from education. In Gadchiroli (Indian Village), youth started translating the formal text books in Gondi, a colloquial tribal language, which was successful, and tribal students continued in schools. However, they are born in a society where there are three modes of moral reality that have various implications for charitable giving, moral obligations and civil society. First, moral conventionalists, who value familial and social networks, use charity as an opportunity to socialise and to have fun. Second, moral individualists, who are strongly committed to work and career, view charitable practices as performative acts that demonstrate their knowledge and skills. Third, moral critics are deeply committed to charitable causes, motivated by strongly held values and beliefs, which offer alternative visions for society.

The paper draws upon an ESRC-funded investigation into charitable giving that involved 41 semi-structured interviews with men and women of working and middle class social backgrounds, mostly white interviewees. Each interview lasted on average 2.25 hours, divided into two parts: the first part asked the interviewees to recount their life history, describing the twists and turns in their lives, their personal goals and their everyday practices, and in the second part, they recalled significant acts of giving and volunteering, describing their feelings and motivations. Another interview lasted on average 1.5 hours, divided into two parts: the first part asked the interviewees to describe the history of their organisations, and to outline their current strategic themes and priorities; and in the second part, they explained the use of the concept ‘social justice’ in their organisation. In addition, further interviews were conducted with sixteen participants from the first round either via Skype or emails to collect extra information.

Social Justice, Liberalism and Philanthropy in the UK

This paper examines how charitable and community foundations as normative institutions relate to issues of social justice, legitimacy and accountability. We will argue that grant-making foundations use their resources to support basic liberties and to assist the most disadvantaged groups in society, pursued a liberal conception of social justice and equality. But there are some tensions and limitations, partly arising from their historical legacy, internal features and structural positions within the polity. Foundations tend to have UK-focused mission statements, operate with minimal accountability, have parastatic endowment and sources of philanthropic donations, have privileged and conservative trustees, and face pressure from the right-wing media. To achieve a Rawlsian liberal form of social justice, foundations have to change their institutional practices and routines, aiming for justice and a socialised and democratic production system, rather than regulating economic and social inequalities.

The paper draws upon an ESRC-funded investigation into philanthropy that involved 34 semi-structured interviews with executive directors or senior project managers of charitable and community foundations and grant-makers. Each interview lasted on average 1.5 hours, divided into two parts: the first part asked the interviewees to describe the history of their organisations, and to outline their current strategic themes and priorities; and in the second part, they explained the use of the concept ‘social justice’ in their organisation. In addition, further interviews were conducted with sixteen participants from the first round one by one directly, via Skype or emails to collect extra information.

The paper underlines the importance of the role of charitable foundations and grant-makers in achieving social justice. A critical aim of the paper would be to highlight the challenges and opportunities for charitable foundations and grant-makers in achieving social justice.

The paper underlines the importance of the role of charitable foundations and grant-makers in achieving social justice. A critical aim of the paper would be to highlight the challenges and opportunities for charitable foundations and grant-makers in achieving social justice.

Increased Precarity and Widening Disparity of Youth Transitions, and Inclusion in the Labour Markets

The Youth Cohort Study of Japan (YCSJ) was a major programme of longitudinal research undertaken to monitor transitions from school to work in Japan from 2007–2011. The first survey was undertaken when respondents were aged 20. The respondents, who were selected nationally through random sampling, were
followed up annually for five years. The achieved sample size and response rates of the YCS are as follows: 1678, 40.2 % (2007); 1361, 82.0 % (2008); 1141, 86.2 % (2009); 1009, 90.7 % (2010); 891, 88.3% (2011). Based on the datasets of the YCS, we explore four main topics in this paper.

First, we analyse youth transitions to work, documenting the increasing precariousness of youth labour markets. Here we have used indices such as low income, irregular jobs, and unemployment, to examine the extent to which vulnerable situations in youth labour markets have expanded. Second, we investigate which cohorts are more likely to become precarious. Against precarity indices, we found key variables of disadvantage in relation to individual attributes, family socio-economic backgrounds, residential area, and current jobs were relevant to risk factors with statistical significance. Third, we consider forms of disparity in working conditions including work content and developmental opportunities. Here we find that there remains a significant structural disparity between genders and amongst transition types in working conditions.

Fourth and finally, we investigate the mechanism of inclusion in the labour market. We find amongst most of the transition types, irrespective of gender, that demands for high commitment to work – such as acceptance of long working hours and heavy responsibility – has increased every year despite an apparent disparity in many aspects. We propose two key factors to enable inclusion in labour with high commitment: discretion and participative involvement; and positive human relationships in the workplace.

Economic, Social Change and Son-Preference in Nepal

The purpose of this study is to clarify the promotion factors of son-preference, such as the neglect of female child, trafficking of girls and the interruption of the female fetus, in Nepal. According to UNDP (2010), the number of the “missing women” in Nepal is estimated to be about 0.1 million. Republica, local newspaper, on 29 Nov 2012 reported that the female population is 2.3 percent less than male in the 0-10 year age group in the latest census.

In this study, the findings of the ongoing research implemented in seven districts in Nepal, during March 2012 –March 2014, will be shown. The questionnaire survey of 1500 men and women both married and unmarried 18-80 year-old were selected based on a multi-staged random sampling technique. The data will be analyzed by modified framework of sustainable livelihood approach. This framework consists of three components such as livelihood assets, policy institution process and livelihood outcome (Chambers and Conway1992). This leads to analyze consequences among these three components. Livelihood assets, furthermore, consist of financial capital, natural capital, physical capital, human capital and social capital.

Former studies reveals the correlation between the property (financial capital, natural capital), relatively high educational level (human capital) and son preference (Clark2008; Banerjee2012; Republica 2012). In this study, the correlation among social institution such as family structure, 5 capitals and son preference, will be analyzed, in addition to the former studies. As the result, following three findings have been verified: (1) Even though lack of some of capitals, those who has variety of network does not tend to be son preference, (2) Even though abundant in capitals, those who live in extended family tend to be son preference, (3) Those who have female family member who reference (Clark2008; Banerjee2012; Republica 2012). In this study, the correlation among social institution such as family structure, 5 capitals and son preference, will be analyzed, in addition to the former studies.

Unequal Identities: The Attainment of National Identity and Ethnic Identity Among Children of Immigrants in Canada

Despite growing interest in “the new second generation,” quantitative analyses on the psychosocial adaptation among non-white offspring are limited, especially in Canada. This study addresses this gap by assessing the impact of ethno-racial characteristics among children of immigrants on the establishment of self-labelled national and ethnic identities using a nationally representative survey, the 2002 Equity, Diversity Survey. Results from binary logistic regression suggest that while white children of immigrants are more likely to form national identity, ethnic identity is more likely to be established among in their non-white counterparts. While this is consistent with the segmented assimilation theory, the study also reveals that the level of parental education does not explain the results, countering the assumption. As the result, following three findings have been verified: (1) Even though lack of some of capitals, those who has variety of network does not tend to be son preference, (2) Even though abundant in capitals, those who live in extended family tend to be son preference, (3) Those who have female family member who support family economically does not tend to be son preference.

Married and Cohabiting Adults with Ill and Old Parents: Does Intergenerational Solidarity Change According to Family Conditions?

The objective of this paper is to compare the patterns of intergenerational solidarity among children who cohabit or are married, with their own parents and those of their partners. To this aim, I report the results of qualitative research I performed in Italy, based on 50 in-depth interviews of cohabiting and married couples, with an age range between 26 and 56 years. The dimensions of family solidarity investigated, included the financial support provided by parents to their offspring, help in child-minding the grandchildren, the frequency of phone calls and visits and finally, the willingness (also in the past) of the offspring to look after one of their own parents or their partner's parents when ill and old. The analysis of the interviews has highlighted the varied types of interpersonal relationships established with parents by the cohabiting partners. While those who were married kept closer relationships and appeared to be more willing to help their parents and in-laws when ill and old, among those in cohabitation, only those who had a background of formation of a traditional family model, similar to marriage, adopted the same manner of solidarity. Those who had begun cohabitation, following separation or co-habited with a partner who was separated, felt less responsible towards their partner’s family members, to the extent that they did not perceive any kinship ties nor obligations. Consequently, they felt that caregiving activities were not their responsibility. Finally, the length of the marriage or cohabitation was seen to have no effect.

Between Subordination and Protagonism: Violence Experience of Young Women through Biographic Narratives

The involvement of women in violent actions and criminal activities is growing in Brazil. Even though, sociologists are not given an adequate attention to this issue. This paper discusses the relation between young women and violence in Brazil, stressing the main interpretations available in Brazilian sociology, which mostly emphasizes, on the one side, the secondary position of women, dominated by their male partners and peers, and, on the other side, the structural conditions of the Brazilian society – for instance, inequalities, uncertainty in work market, drug uses and school evasion – as the main reasons for this phenomenon. Besides this, the literature stresses the position of women as victim in violent actions, almost monopolizing the analysis when violence and women are connected. An omnipresence seen in the sociological perspective approach. This is the approach that stresses the disruption of norms and legal rules, neglecting this way another component of the practice of violence, that means, a subjective interpretation of reality. Biographic narrative approach permits to offer other possible interpretations to the engagement of young female in violent and in criminal activities. Based on preliminary findings of a research that are investigating direct and indirect experience of violence of young females, the paper presents the main antagonist positions founded, that means, between the subordination to dominant males and a more relevant and protagonist role played by women. The results show that using this kind of “inside” approach is possible to obtain new elements for the interpretation of the experience of violence in which the women’ role as victims and perpetrators are not always well defined.

Narratives on Violence and the Everyday Life of Children and Families Living in Favelas of Rio de Janeiro, Brazil

This paper discusses the everyday life experience of violence of children and families living in favelas - impoverished communities - of Rio de Janeiro, Brazil. This research was conducted during 2012 and 2013 and aimed to understand the different possibilities of biographical construction in social contexts marked by intense violence, perpetrated by the police, by drug dealers and by parents against their own children. For that purpose, it was conducted two different narrative research instruments: biographical narrative interviews with two generations of families, and biographical episodic narratives interviews with groups of special children. Even though violence not put directly as a topic to be discussed by children and family members, the two instruments allowed the investigation on how violence is part of their everyday life, as well as the different

The study of social vulnerability to disasters has generally focused on understanding how social stratification relates to disasters and how social forces can create the possibility of a hazard to become a disaster. Ben Wisner and his colleagues assembled a working definition of social vulnerability as they were studying the famine that unfolded in the Sahel from 1967 to 1973. In the book At Risk: Natural Hazards, People's Vulnerability and Disasters (2004), Wisner and his colleagues defined social vulnerability as "the characteristics of a person or group and their situation that influence their capacity to anticipate, cope with, resist, and recover from the impact of a natural hazard". Their definition includes the difficulties and chances that people may encounter as they mitigate, prepare for, deal with, respond to, and recover from the impact of a natural hazard. However, there is no firm definition of social vulnerability. Rather, it can be considered as an evolving concept. Despite its focus on process, applications of the concept of social vulnerability in research often fall short in capturing the elements and dynamics of vulnerability. This research uses Puerto Rico as a case study in which social vulnerability is conceptualized as steaming from evolving structural and behavioral forces. This research presents a dynamic situational approach to social vulnerability and explores how the practice of emergency management may impact, address, or fail to address the needs of impoverished marginal communities and their contrasting perceptions. The findings provide insights that could assist emergency management practitioners and disaster researchers and practitioners working in the areas of marginality, development, emergency management, bureaucratic change, rationalization, decision-making, and policy making.

Personal Networks and Changing Openness Toward Immigrants:
Social Network Analysis Measurement Versus Traditional Survey
Instrument of Personal Networks

Recent literature underlines the surprising integrative role of the family (DiPrete et al., 2011). The growing heterogeneity of families produce family based social networks that are less segregated on a number of dimensions than are other social circles. Heterogeneous family networks might favor changing norms and more open attitudes. The aim of this paper consists in comparing two instruments measuring family networks and in testing their predictive power on social vulnerability. The analysis of board interlocks reveals the structure of the environmental and climate policy network that links the corporate sector, the NGO sector and the transnational state, and emphasizes the mediating role played by policy-planning groups. At the level of individuals, the linkages between members of the global corporate, political, and scientific elites involved in producing and maintaining environmental knowledge suggest the existence of a powerful and interna
class faction, whose ascendency nevertheless remains highly uncertain.

School Divide and Social Fragmentation in Mexico

Inequality seems to be endemic in Mexico. After a decade of moderate economic growth and improvements in some social indicators, the country continues to show very high levels of social inequality. In a context of contradictory trends, a new model of unequal inclusion, is emerging. Privilege and deprivation exist side by side, ignoring each other and even tacitly accepting each other. Inequality has taken a qualitative leap towards fragmenting the social structure through spaces of inclusion that are not only unequal, but also socially and culturally distant. This paper will explore the contribution of educational segmentation to this broad process of social fragmentation. Access to education in Mexico has increased substantially in the past few decades. Between 1990 and 2010, basic education coverage became almost universal, and the average years of schooling of youth age 25 to 29 increased from 7.9 to 10.2. In addition, there were several constitutional reforms that extended compulsory education, most recently, in 2011, making it compulsory until the age of 12. But, parallel to this process, the educational system has experienced a deep fragmentation. Thus, privileged children and youth attend the same private schools, have more and better resources for learning at school and at home, and receive an education of higher quality and greater variety. Among poorer groups, children and youth also attend socially homoge

SARBU, MIHAI* (University of Ottawa, msarb016@uottawa.ca)

Transcending Frontiers: A Contribution to Overcoming Instrumental Rationality in Our Relationships with Nature and with One Another

Environmental sociology is uniquely positioned to analyze the relationships between humans and nature and expose the societal factors that lock our civilization into carbon dependence; it can also analyze why the issue of climate change is becoming increasingly politicized and divisive. Moreover, it can examine how social inequalities—ubiquitous in this era of unemployment and economic decline—compound environmental crises and aggravate the suffering of the most vulnerable.

This paper argues that the social and environmental hierarchies prevalent in the world today can be meaningfully analyzed using the theoretical framework of instrumental rationality. In a nutshell, using instrumental rationality means applying the means of reason short-sightedly to solve a problem without considering the larger context—burning fossil fuels to fulfill most of our energy needs is a prime example. Instrumental rationality has been linked to the drive for self-preservation and using this link as a conceptual tool can offer new insights: The first insight is that—paradoxically—we often hurt nature because we are (partially) from nature; the second insight is that our drive for self-preservation can be easily fused with an apparent and shallow (instrumental) rationality, leading to a substantial irratio

class faction, whose ascendency nevertheless remains highly uncertain.

The challenge then becomes to find ways to overcome instrumental rationality and this is the main purpose of this paper. It is an arduous task and one that needs to be assumed urgently to help us escape from the unsustainable path we currently follow.

Between the Corporate and the Government Responsibility: The Livelihood Issues Experienced By the Local Community in the Surrounding Conservation Forest in West Java, Indonesia

Until about ten years ago forest had ever been the primary source of income for the community living in the surrounding area of the Halimun-Salak mountain, West Java. This situation has been changing since the government launched the new regulation that prohibited people to get anything from the forest because the area was designated as forest conservation. Since that time the community has been experiencing a decline in their standard of living, especially who were only had the forest as their source of income. Besides, for many years, the community has only been provided with inadequate basic infrastructure (i.e. health, education, transportation) that supposed to be the government’s responsibility. The situation becomes increasingly critical when the people knew that there was a multinational company that has been exploring geothermal energy within the conservation area which has further caused anxiety and uncertainty in local people livelihood. The latest development seemingly has been overlooked by the local government since it has not been taken any significant action to help the people. Moreover, the conflict between local people and the MNC sometime has been raised as critical issues for the economic or political interests of certain actors in the community. Pressures to the company have been increasing since the government regulation stated that the company should perform the social and environmental responsibilities. Based on the ongoing research in the area of Halimun-Salak Mountain, this paper analyzes the relation between state, market and society (Martinussen, 1997) that might be applied in the case of the production of geothermal energy in West Java, Indonesia. This paper also examines the issue of local conflicts over foreign investment and the corporate practices when the host country government has the tendency to corrupt or indifferent to environmental protection and community development (Vogel, 2006).

: Comparison of Leisure Activities of Children of Tea Garden Community and Other Groups in Anganwadi Schools: A Case Study of Dibrugarh District, Assam, India

Dibrugarh is an easternmost city situated in the Banks of the river Brahmaputra. The place has the highest number of tea gardens giving it the status of ‘Tea Capital of Assam’. Though tea is a big industry, the children of the tea garden community do not get adequate facility of good education, health and leisure facilities. There are Anganwadi schools in the tea garden areas which look after the mental, physical, and emotional development of children between the age of 0-6 years. They also provide nutrition and value based education to children in the age group of 3 to 6 year. The conditions of these schools are not satisfactory to provide the pre-schoolers the pleasure of enjoying their childhood as compared to the Anganwadi centers for children in other parts of the city.

The dropout rate from the schools in tea gardens is very high, as a large number of the children are engaged in child labour and some help their parents to look after the younger siblings or help in the household work. Some children, who go to school, go there for the food provided as the mid-day meal. The leisure time activities of these children include playing with other children or helping their parents. They play in groups but very few have access to playing equipments. The facilities provided at school are not adequate as compared to other Anganwadi schools and in some cases, the teacher do not come to school regularly. These children are thus deprived of quality education, satisfactory leisure activities etc. as compared to the schools and Anganwadi centres in the city.

The paper attempts to do a comparative study of education and leisure activities provided by Anganwadi schools to tea garden community and other children in Dibrugarh.

Leisure, Tourism and Environmental Degradation—a Study Based on Assam, India

Tourism in Assam holds large prospects as the land is bestowed with natural beauty and resources. Tourism in Assam is essentially nature based. Assam has a rich cultural and ethnic heritage that has also made it a favourite tourist-spot. It is counted as one of the prime Eco-Tourism destinations in India. The rich bio-diversity of the region encourages eco-tourism. But compared to some other states in India, eco-tourism is not yet developed in the real sense in Assam.

A lot of tourists come to Assam for different leisure activities as the region is still less explored and provides for peaceful existence with nature. The eco-camps set up in areas like Nameri in Sonitpur, Tipam Phake village in Eastern Assam, camps set up around Kaziranga National park, famous for the one horned Rhino, attracts lot of foreign as well as domestic tourists. They are provided with facilities like boating, fishing, trekking in the wild etc. and misuse of these can lead to severe environmental degradation. Illegal destruction of forests to set up hotels for tourists near Kaziranga, excessive boating and fishing etc. has also been increased.

The land has the opportunity to develop several leisure activities based on eco-tourism where the rich bio-diversity of the region can be explored without environmental degradation. But activities like using the areas as picnic spots and then leaving behind plastic waste has already destroyed some of the natural spots. A systematic development of tourism involving local population, who can look after the protection of environment, is needed to increase the inflow of tourists.

This paper attempts to analyse the tourism scenario, development of eco-tourism inspired leisure activities and how tourism can be used positively to social inequality, and lead the way towards a more socially and environmentally responsible tourism practices.

What Was All That Growth for? Explaining Chinese Decreasing Well-Being in Times of Economic Growth

China is one of the countries that experienced the most impressive and sustained rate of economic growth. Since 1990s its economy has been increasing on average by 9.7% each year. Arguably, economic growth allowed a general improvement of several social, economic and sanitary dimensions of people's life. However, in the same period people's satisfaction with their life decreased.

What does explain this outcome? And who are the winners and the losers from economic growth? Finally, if economic growth did not improve the human lot, did it at least reduce well-being inequalities?

Using data from the World Values Survey, this paper identifies the determinants that shaped people's life satisfaction in China between 1990 and 2007. Results suggest that the erosion of social capital and social comparisons are the two main factors explaining why economic growth did not turn into higher people's well-being. Moreover, economic growth resulted in higher well-being disparities among people: those in the lowest three deciles and the middle-class experienced a significant reduction in well-being, whereas richer people substantially improved their conditions.

“the Influence of Institutional Framework on Local Community Schemes in the Period of Economic Crisis 2011-2013: The Example of the Municipality of Athens”
The aim of the paper is first to present the institutional framework concerning the role of participative action in Greece. The institutional foundation for cooperatives and unions is primarily set by Article 12 of the Greek Constitution, while specific laws provide the role of Social Cooperatives in Greece. After a short analysis of the legal framework the paper will examine the main sectors of activities of NGO’s and other bodies (organizations) that belong to the civil society, especially those acting in Athens.

More specifically this paper examines the schemes of the municipality of Athens to promote specific policies and volunteerism in order to contribute to the solution of problems that vulnerable social groups, who live in the city of Athens, in the period of economic crisis 2011-2013 face. An emphasis is given both to Law 4071/2012, which concerns the possibility of local authorities to set up social supermarkets, and the possibility of collaboration between local authorities and NGO’s. Structural impediments to such policy developments are also elaborated. Overall, the paper will attempt to answer the main critical questions of how the top-down and bottom-up models can co-exist in the implementation of public policies at a local level, and of how ways of cooperation concerning everyday problems can emerge from the economic crisis.

**Micro-Motives and Collective Action: Measuring Individuals’ Reasons for Participation in the #YoSoy132 Movement in Mexico**

Individual’s political mobilization has been explained by rational choice theory according to the main tenets of its approach to human behavior (Becker, 1968; Olson 1971). Following the well-known distinction between the narrow and the broad theory of rationality (Elster, 1988), this paper presents a more extensive view of political mobilization, considering the individuals’ strategic calculus for their participation in a contentious collective action (Tarrow, 1997). Following the broad theory of rational choice, the work incorporates cognitive, normative, and emotive factors to the explanation. So, first, we propose that the movement can be treated as a production function with two phases, where in each of them there are different mechanisms and games that help to explain the process of collective action. The first phase, which we call accelerative, is triggered by a political opportunity that incorporates elements such as coordination between groups, high expectations, and a focal point equilibrium. The second phase, called not-accelerative, arises once the election finishes and it is characterized by a lack of coordination, internal conflicts between groups, and lack of participation. From a set of three interviews to active participants in the movement #YoSoy132 Mexico City (14 women and 16 men), the findings show the variety of reasons present in the interviewees, and that some actors may have a predisposition to behave according to a kind of reason (i.e., instrumental vs. normative). The main conclusion we arrive is that the two versions of rational choice allow a better approximation to the individual and collective action in the movement #YoSoy132 in Mexico.

**Clinicians in Governance: Evidence for Hospital Performance from the Italian NHS**

The study explores the effects of clinicians’ involvement in governance on hospital performance through an empirical investigation in the Italian NHS. By drawing on the board human capital literature (Hillman & Dalziel, 2003; Kor & Sundaramurthy, 2008; Kroll et al., 2008) and the empirical evidences on clinicians in hospital governance (Dorgan et al., 2010; Goodall, 2011; Molinari et al., 1995; Veronesi et al., 2013), we develop our research hypotheses. More specifically we conjecture that hospital chief executive officer (CEO)’s (i) clinical expertise, (ii) previous governance experiences in the NHS, (iii) public health specialization, and (iv) business/administration specialization, have individually a good effect on the organizational performance.

We follow three steps. Data are collected for 3 years and the sample is composed by 278 observations. CEO’s expertise, experience and specialization are main independent variables. Six indicators in terms of financial/non-financial performance are instead used to measure the hospital performance. We employ a panel data approach and we estimate different empirical fixed/random effect models.

Main findings report a positive (negative) effect of clinical CEOs on non-financial (financial) performance. By contrast, non-clinical CEOs negatively (positively) influence the non-financial (financial) dimension. Paper argues a differentiation in the provision of skills to the strategic process, as well as in the relationships with the clinical/non-clinical staffs. Findings also report good effects of CEO’s previous governance experiences and public health specialization.

Paper contributes to research in different ways. First, we corroborate the relevance of human capital in governance for the organizational performance. Second, we discuss the dissimilar effects of clinical/non-clinical expertise by arguing their reasons in setting peculiarities. Finally we investigate never explored effects of clinical/non-clinical specializations and experiential background.

For what concerns the practice, we suggest policy makers to pay more attention to the expertise legal requirements for CEO candidates.

**Cultures, Strategies, and Organizations for Mobilizing Social Movements: Divergence and Convergence Between Social Movements and Labor Movements**

There have been few comparative studies of social movements and labor movements. Social movement studies have examined the conditions, development, and outcomes of social movements using various theoretical frameworks. In contrast, largely driven by Marxist and post-Marxist theories, labor movement studies have often focused on whether and how workers have organized themselves as a coherent force—i.e., as a class. In brief, in labor movement studies, workers’ movements have often constituted a sub-topic of the study of class, and the ways workers have organized as workers. But how exactly do these two movements differ? Or what do these movements share? By examining a Japanese social movement, the protest against the revision of the U.S.-Japan Security Treaty (commonly referred to as the 1960 Anpo protests, named after the acronym of the treaty in Japanese), this paper explores divergence and convergence of movement cultures, ideologies, and strategies, and the organization of social movement and labor movement groups. I compare two groups that participated in the 1960 Anpo protests—the Bund, a new left student movement group that became prominent during the 1960 Anpo protests, and a new left faction of the Osaka Central Telegraph union that became prominent among new left labor unions in the 1960s. This paper argues that despite similarities in ideology between the two groups, external constraints on their organizations shaped different strategies for mobilization. Furthermore, the two groups never merged nor worked together. Although they explored possibility, despite their common political goals and similar ideologies. This was due to intergroup culture differences, as well as problems with mutual trust acting as a wedge between them. The empirical data collected from interviews, for instance, show that while knowledge was a key issue for mobilizing student movements, trust was a key issue for organizing the workers’ movements.

**Alternative Art-Production Networks in Lower Manhattan in the 1960s-1970s: An Organizational Account of the SoHo's Gentrification**

This paper deals with an early period of an artist-led gentrification in SoHo in New York City in the 1960s and 1970s, from the standpoint of alternative arts-production-networks in Lower Manhattan then. A couple of studies have already dealt with the gentrification in SoHo (Simpson 1981; Zukin 1982). Given roles of the artists in the SoHo’s gentrification, previous studies have shown that there are two issues: a creation of living spaces and a construction of symbolical and institutional boundaries of art districts. These former studies contributed to examined that the artists’ spaces and their aesthetical images, fortunately or unfortunately, contributed to the subsequent creation of a commercial and consumption district there. Although these findings are valid and quite important, this paper argues that there was another fundamental issue in the SoHo’s gentrification; alternative arts-production-networks in downtown also critically contributed to construct physical and symbolical bases there.

In order to explore this issue, I will focus on artists’ activities and their networks from the standpoint of organizational sociology and production-of-arts theories (Becker 1982, DiMaggio and Hirsch 1976; Peterson and Anand 2004; White and White 1965). Some artists pursued alternative production and distribution systems against the backdrop of a flourish of art museums and commercial galleries in uptown. These anti-uptown ideologies consisted of organizational fields of art production-networks in downtown also critically contributed to construct artistic aesthetics bases in SoHo.

This paper deals with an early period of an artist-led gentrification in SoHo in New York City in the 1960s and 1970s, from the standpoint of alternative arts-production-networks in Lower Manhattan then. A couple of studies have already dealt with the gentrification in SoHo (Simpson 1981; Zukin 1982). Given roles of the artists in the SoHo’s gentrification, previous studies have shown that there are two issues: a creation of living spaces and a construction of symbolical and institutional boundaries of art districts. These former studies contributed to examined that the artists’ spaces and their aesthetical images, fortunately or unfortunately, contributed to the subsequent creation of a commercial and consumption district there. Although these findings are valid and quite important, this paper argues that there was another fundamental issue in the SoHo’s gentrification; alternative arts-production-networks in downtown also critically contributed to construct physical and symbolical bases there.

In order to explore this issue, I will focus on artists’ activities and their networks from the standpoint of organizational sociology and production-of-arts theories (Becker 1982, DiMaggio and Hirsch 1976; Peterson and Anand 2004; White and White 1965). Some artists pursued alternative production and distribution systems against the backdrop of a flourish of art museums and commercial galleries in uptown. These anti-uptown ideologies consisted of organizational fields of art production-networks in downtown also critically contributed to construct physical and symbolical bases there. In order to explore this issue, I will focus on artists’ activities and their networks from the standpoint of organizational sociology and production-of-arts theories (Becker 1982, DiMaggio and Hirsch 1976; Peterson and Anand 2004; White and White 1965). Some artists pursued alternative production and distribution systems against the backdrop of a flourish of art museums and commercial galleries in uptown. These anti-uptown ideologies consisted of organizational fields of art production-networks in downtown also critically contributed to construct physical and symbolical bases there.
Historical Overview of Migratory Flows Between Brazil and Japan

This paper will present an historical overview of the migratory flows between Brazil and Japan. The first part discusses the immigration of Japanese to Brazil at the beginning of the 20th century. During this time, their presence in Brazil not only sparked a heated debate among the politicians of the Brazilian elite as to whether or not they should be accepted. The Japanese were labeled as “not white”, an undesirable state according to the eugenicist policies of the time. At the same time, Japanese government closely accompanied the entire migratory process, helping to establish the Japanese immigrants in Brazil. In the second part, I will focus in the inverse route, upon the ending of the 20th century and beginning of the 21st century, when Brazilians of Japanese descent began to migrate to Japan. They were favorably contemplated in Japan’s 1990 immigration reform law, a factor which contributed to the increase of the population, especially during the first half of the 1990’s. From that time on, the Brazilian community began establishing itself and consolidating social networks within the host country, losing sight of its original temporary expectations and intensifying the flow of people moving between Brazil and Japan. However, after more than two decades, the Brazilian population in Japan began decreasing in 2008. At this time, the world financial crisis resulted in a rising unemployment and one third of the Brazilians in Japan returned to Brazil. They are facing great difficulties as they try to reinsert themselves into a new or different social and cultural reality in their own homeland, encountering problems in linguistic and educational fields as well as the local labor market.

The Meaning of the International Marriage in Korea

Nowadays in Korea, international marriage has increased since 2000 rapidly. Increase in this international marriage is not the change of the marriage from the influences of globalization. Because Korean people have protected their blood principle rigidly for a long time. It is a big change increasing to international marriage in Korea, and it is shaking now family value from the bottom. In this report I ask why has international marriages increased in Korea rapidly these days? Also, who and why do people choose an international marriage? I pay attention to the change of the marriage and the family in Korea today and intended to consider the meaning of international marriage.

This study developed the result of the data analysis of the census (1995, 2010) that I analyzed before. In the former analysis, I compared the change that was in the marriage form with the census of 1995 and 2010 according to sex, age, and educational background. The result implies from the rapid increase of international marriage today in Korea that it is due to the increase in high educational background of the woman from the 1990s and the economic power drop of the man from the late 1990s. Based on these findings, I will include variables such as economic activities state, occupation, occupational position and compare and contrast according to the man, woman and combination of couples who chose international marriage using census data. Furthermore, I will use the “dynamics statistics data” and cast the education level between the couples who married a person from a different nationality, the variable such as the nationality of the partner and consider the meaning of the international marriage in Korea these days by clarifying the sociodemographic characteristic of the couple who choose to international marriage.

Expulsions: When Complexity Produces Elementary Brutalities

The past two decades have seen a sharp growth in the number of people, enterprises, and places expelled from the core social and economic orders of our time. This tipping into radical expulsion was enabled by elementary decisions in some cases, but in others by some of our most advanced economic and technical achievements. I use the notion of expulsions to go beyond the more familiar notion of growing inequality and get at some of the more complex pathologies of today’s global capitalism. It brings to the fore the fact that forms of knowledge and intelligence we respect and admire are often at the origin of long transaction chains that can end in simple expulsions.

The talk is based on Saskia Sassen’s forthcoming book Expulsions: Brutality and Complexity in the Global Economy (Harvard University Press 2014)

Wandering Career Paths Among Japanese Youths: An Analysis of Jgss Life Course Study

In Japan, there had been a standard life model that many youths follow. Once students entered the labor force, their full-time employment was virtually guaranteed until retirement. Since the mid-1990s, however, many young Japanese did not (or were unable to) follow this standard life model. Increasingly, Japanese youths have started their careers as contingent employees. For many younger adults with unstable careers, incomes did not grow, and thus the gap between regular employees and contingent employees expanded. In addition, for many Japanese, marriage and childbirth became no longer an ordinary path of life.

The goal of this study is to illustrate diversified career paths of Japanese youths and investigate the causes and effects of the career paths. Life Course Study contains detailed life history, including educational background, work experience, marital record, with a national sample of men and women aged 28 to 42. Mix-ture modeling with longitudinal data was employed to classify Japanese career paths. In this model, retrospective data were treated as if we collected types of respondents’ employment each year.

Food Sovereignty and the Solidarity Economy Alternative

This paper explores the relationship between food sovereignty and the solidarity economy. It brings out the extent to which food sovereignty as an attempt to address corporate control of food systems, engender adaptation to and mitigation of climate change and ensure popular control of food systems embraces and articulates with the solidarity economy. The solidarity economy in this paper is not understood as a codified definition but rather a transformative practice emerging from below with an emancipatory utopian dimension, a new conception of common power and a commitment to deepening democracy. This exploration is carried out through the prism of two case studies. The CECO-ESOSA worker cooperative movement in Venezuela and its attempts at popular control of a food economy and the emergent food sovereignty movement in South Africa.

Structure of the Issues Surrounding the Nuclear Accident Evacuees: What Has Been Seen While Supporting Town Meetings

Since August 2011, “Tomioka sub group” of the Sociology Study Group of Large-scale evacuation (representative YAMASHITA, Yusuke) has been conducting interviews with Tomioka town residents in Fukushima Prefecture that were forced to evacuate from their home town due to the Fukushima Daiichi nuclear accident. While supporting town meetings organized by stakeholders, we recognized the following issues clearly.
1) Problems that evacuees have faced are complex and very extensive.
2) However, those issues are not correctly recognized by policy makers.
3) Therefore, the present policy does not effectively relieve the affected people.
4) As regional restoration plans were decided hastily, the problems of the affected people deteriorated.
5) The problem of Japanese legal system which surrounds local autonomy is behind such issues.
6) In addition to these issues, it is not possible to deny the existence of public opinion to boost the seriousness of these problems.

Therefore, this paper will draw on the theory and methods of both those who study the Northern corporation led market-oriented development activities and the extend of bioterrorism local autonomy in Japan. The focus of this presentation is the recent increase of atypical employment in Japan.

Women’s Empowerment Beyond ‘Smart Economics’: A Transnational Feminist Perspective

Since the economic crisis of the last decade, integrating women into development has become the major ‘smart economic’ strategy. UN Women states that “equality means business” and the year 2012’s World Bank report set gender equality as their top priority. Today, in the global South, Northern private corporations, like Coca Cola, aim to empower women in their value chains or at the ‘bottom of the pyramid’ by turning them into petty traders and vendors. Simultaneously, in the global North, corporations use cause-related marketing to empower privileged mothers to care for distant others by consuming ‘ethically’.

Critical feminist scholars separately argue that each approach may be functional to structural inequalities. However, from a comparative perspective, both approaches involve women in market-oriented activities, see women as caring mothers and responsible consumers and frame investment in women as ‘smart economics.’ In order to strengthen existing analyses, ‘ethical’ consumption and Southern livelihoods, presented thus far separately by critical feminist scholars, should be studied together. Such a study will, necessarily, be transnational and will draw on the theories and methods of both those who study the Northern consumer society (e.g. lifestyles and marketing) and those who focus on low-income societies (e.g. sustainable livelihoods).

This paper uses a transnational feminist perspective to examine existing feminist literature in a comparative study of the practices through which women generate livelihoods and the lifestyles women produce through their participation in Northern corporation led market-oriented development activities. This paper links inter-related constructions of mothers in the North and South in order to generate and test the foundations necessary to later study empirically if and how market-led corporate sponsored ‘smart economic’ development approaches obscure and/or transform structural inequalities in the name of women’s empowerment.

Atypical Employment in Japan

The aim of this panel session is to outline the changing practice of the Japanese employment system. The Japanese system has been classified as a organization-oriented”, the key feature being the security of long-term employment within the same firm. The main feature of the Japanese industrial relations system is the enterprise union, which appears to have reinforced the employment security. The Japanese practice of offering new recruits work straight after completing their education enables students to immediately begin their work-life as ‘regular employees’.

The Japanese employment practice, however, is also faced with different employment practices of other countries due to globalization, and it is becoming more difficult to maintain the high level of job security for various types of work in Japan. The focus of this presentation is the recent increase of atypical employment in Japan.

Health Discourse, Ruling Relations and Work Knowledge

Research in Institutional Ethnography (IE) has increasingly shown how institutional discourse frames the way individuals think and act within their everyday practices. For example, Luken and Vaughen provide compelling evidence that state affiliated organizations created a discourse about family housing that structured parents talk and actions concerning their living arrangements (2006, 300). This further highlights those ruling relations that served to organize parent’s daily family life.

This presentation will argue that an analogous case can be made in relation to modern discourses involving the use of health’ and ‘physical activity. It focuses on the case of rural female workers who live outside the mainstream conceptions of health and physical activity. Very little is known about these rural communities and the kind of contributions that women make in these environments. My aim

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
is to explicate some of the ruling relations that organize work activities in relation to women's health in these different cultural settings.

A key resource for this research is the concept ‘work knowledge’. ‘Work’ in IE points to anything that requires time and effort, that is conducted under specific conditions with specific resources and which may need to be thought about. This view helps the institutional ethnographer stay focused on what people are actually doing and what it is that they need to carry out their work. I show how it is especially suited to examining how women in rural communities think, plan and feel about the kind of work and physical activity that they engage in. I further demonstrate how in such rural communities and the kind of contributions that women make in these environments. My aim will be to show how sport is largely absent from these females lives but that physical activity is central for how they conceive of their work and health.

A key resource for this research is the concept of ‘work’ found in institutional-ethnography. In Institutional-ethnography work activity is conducted under specific conditions with specific resources and which may need to be thought about. This view of work helps researchers to stay focused on what people are actually doing and what it is that they need to carry out their work. I show how it is especially suited to examining how women in rural communities think, plan and feel about the physical activity and work that they engage in. I further demonstrate how in such rural settings work, health and physical activity are interconnected and not isolated as in their urban counterparts. The importance of a healthy lifestyle is then a product of the physical activity that is part of their overall work life and is not derived from sporting activities or government policies and recommendations.

Meta Rational Choice Analysis of Social Action

Various behavioral models have been proposed to explain human behavior. However, it seems to be under way to create a general theoretical framework that deals with the models in a coherent way. This paper proposes a theoretical first step toward such a framework. More concretely, I propose a mechanism that shifts the two mode of rational action: Forward-looking rational action and backward-looking rational action. In conventional rational choice theory and game theory in particular the former model has been used. The model assumes that an actor chooses his/her action based on his/her calculation of expected utility. The backward-looking rational action model, in contrast, has been used in evolutionary game theory and assumes that an actor chooses his/her action based on his/her experience in the past. Although both of them are plausible models of human behavior, an actor uses both of them in reality. Suppose that a person catches a cold and needs to go to a doctor. Then he/she would visit his/her family doctor without serious consideration. Suppose, in contrast, that the person is diagnosed with lung cancer during an annual checkup. He/she would collect as much medical information on the cancer as possible and try to find the best doctor who would properly deal with the cancer. The same person uses the backward-looking rational action model in the first case and the forward-looking rational action model in the second case. In other words he/she swings between the two models. How do we explain this swing? My argument is that an actor chooses one of the two models depending on the cost of searching for the information and the benefit of the result of the search. I will try to generalize this idea and present a more comprehensive theoretical framework.
political parties. I will call those civil organizations here as infrastructures for a post-nuclear society. They were, however, rather isolated before the Fukushima Daiichi accident. Whether was the situation changed or not?

To analyze it, Study Group on Infrastructure and Society conducted a survey during February and March in the year 2013 on 904 civil organizations, and got 326 answers from them (the collection rate was 32.6%). We find that firstly organizations which worked in the nuclear energy policy domain increased more than two and half times than before the Fukushima accident. Secondly, those new comer organizations handle new issues such as recovery from the disaster and measuring radiation level. Consequently, they widen the context of the nuclear related issue and broadened the connection between civic life and policy. Thirdly, those organizations discuss the policy based on data and information and sometimes collaborate with public sectors, which are crucial criteria for the post nuclear society. Fourthly, however, a coalition between the organizations often disappeared when they succeeded to set a clear enemy such as the government and TEPCO, but they do not share the concrete image of post new clear society.

Handmade Housewives: Between Production Labor and Reproduction Labor

The aim of this presentation is to clarify and better understand the relation between production labor and reproduction labor. I focus on Japanese housewives who make handmade goods and sell these. Since enforcing Basic Law for a Gender-Equal Society at 1999, the Japanese Government switched a “kind treatment” policy to the housewife and has aimed at making women work force. But it is difficult to continue working due to not only the heavy burden of parenting but also the unsupport system of raising children. Therefore women cannot help being a housewife through a birth. In other words women hold dilemma between the difficulty to participate in production labor by child care and the pressure which they should do production labor. In such a dilemma, what kind of compromise do housewives have? To clarify the question, I paid attention to “Sakka-san” and their group who are not only housewives but also making and selling handmade goods which are fabric accessories, leather crafts, woodworks, knits, etc. I investigated the reason of the act why they produce and sell goods through the field work to them. As it turned out, it might be the act from the gender division of labor at first, but they transcended that unawares and present the new way of labor to us.

The Influence of Drug Characteristics, Social Environment, and Personal Characteristics on Cognitive Enhancement Drug Use

Cognitive enhancement (CE) via pharmaceutical agents has been intensively and controversially discussed by scientists and the media. We investigate several drivers of and obstacles to the non-medical use of prescription drugs to augment brain capacity by using an extended version of the Rational Choice Theory (RCT). We conducted a web-based study among 2,877 students from randomly selected disciplines and German universities. Via a factorial survey, respondents expressed their willingness to take a hypothetical CE drug described by five experimental drug characteristics (costs and benefits) and three varied characteristics of the social environment. Personal characteristics and demographic characteristics were measured. We found that 65.3% of the respondents strongly refused to use CE drugs. The results of a multivariate negative binomial regression indicated that drugs promising strong augmentations of brain capacity (benefits) and a high probability of achieving this amplification increased respondents’ willingness to use CE drugs. A high probability of side effects (costs) and a high price decreased this willingness. Prevalent CE drug use among peers increased willingness, whereas a social environment that strongly disapproves of these drugs decreased it. Regarding the respondents’ characteristics, strong academic procrastination, high cognitive test anxiety, low intrinsic motivation, low internalization of social norms against CE drug use, and experiences with CE drugs increased willingness. No effects were found for the severity of side effects, social recommendations about using CE drugs, risk preferences, and competencies.

The application of the rational choice theory and our findings contribute to the understanding of factors influencing CE drug use. They support the assumption of instrumental drug use and may contribute to the development of prevention, policy, and educational strategies.

Loud Rebels: Politics Of ‘Revolutionary Women’ In Kyrgyzstan

Drawing upon Bourdieuean class analysis and Andrew Sayer’s ideas on social class, lay normativity, this paper explores how class, emotions and moral worth shape everyday politics in southern Kyrgyzstan. The research paper focuses on so-called ‘revolutionary women’ (also derogatively referred to as OBON - Otroyd Bab Osobogo Naznachenia [Women Units for Special Purposes], who have emerged as a visible and vocal political group, often engaging in protests and sit-ins. The study shows how this group of stigmatized women capitalizes on their limited symbolic capital as ‘elderly mothers’, social emotions (such as shame, anger and resentment) and moral and egalitarianism to counter the neoliberal policies and domination in all spheres of life. The paper argues that class and moral sentiments are an important part of human subjectivities that cannot be reduced to power or social conventions. The paper draws upon fieldwork data collected in southern Kyrgyzstan that includes 65 interviews with ethnic Kyrgyz rural migrants and urban middle class ethnic Uzbek and Kyrgyz residents during summer 2011 and spring 2013.

Why Class Matters In Kyrgyzstan: Everyday Experiences, Class and Moral Sentiments

Comparing Climate Policy Networks in the Germany and the UK

This paper compares, contrasts and accounts for the different outcomes of the climate policy networks of two western industrialised nations: Germany and the UK. Both are generally considered to have undergone changes in their environmental policy discourse from end-of-pipe solutions to more integrated forms of environmental management associated with ecological modernisation. Yet the two countries differ in terms of their climate policy networks. In Germany, the most influential policy actors are drawn mostly from policy arenas, industry and science. This is typical of what we might expect under conditions of ecological modernisation. In the UK, in contrast, the most influential actors represent either government or quasi-governmental institutions or the NGO sector. The UK has probably the most ambitious climate change legislation across the world, instituted in the Climate Change Act (2008), which calls for cuts in carbon dioxide of 80% on 1990 levels by 2050. However, little serious effort is underway to make headway towards achieving the targets. Thus, climate policy in the UK represents what one might anticipate given the nature of the policy network: the presence of strong advocacy coalition calling for large-scale cuts in GHG emissions, but one that has relatively little influence compared to climate policy network actors advocating business as usual. What is surprising, though, is the relative lack of influence of the energy giants. In Germany, less ambitious targets for reducing emissions and a set of more discrete concrete actions to address climate change could be considered the result of a policy network of ecological modernists, where pragmatic realism pervades.
The Changing Profiles Of Inequality and Exclusion In Australia

Despite evidence that income inequality has increased and is of community concern, Australian policy makers have emphasised their commitment to the fair go but replete with features in political debate, reproving the fears of a voter backlash in the face of reforms that involve losers as well as winners. Both major parties favour ‘growing the pie’ over ‘dividing up the slices’ yet fail to recognize that even a larger pie must be distributed fairly. Establishing how inequality has changed is complicated by definitional changes that have undermined the comparability of income distribution data, and the confusing picture portrayed by public opinion data on attitudes to inequality provides little guidance about how much actual redistribution (as opposed to how little inequality) the community is prepared to support. The emergence of social inclusion as a policy priority has given new energy to the search for inequality and social exclusion, although this relationship is poorly understood conceptually and inadequately documented empirically. This paper draws on a range of survey data to examine recent trends in different dimensions of economic inequality and social exclusion in Australia. Attention focuses on how the profile of social exclusion varies across the income distribution, on the extent and nature of exclusion-inequality itself, and on the association between these measures (in isolation and in combination) and the subjective well-being of those affected. The paper will conclude with some reflections on the implications of the emergence of social exclusion as a policy issue on egalitarianism and the redistribution agenda.

Contesting Time and Space in Istanbul: Differential Civic Activism in Urban Development

The paper explores the re-appropriation of urban space as a practice of collective contestation against established frames of time and space in urban policy making. Crisis and uncertainty in the governing of urban form have showed the spillovers of a rational model of spatial organization, based on long term future prediction of city growth and supply-oriented urban policy making. Civic society and urban users have been generally regarded as customers or users of urban space, whereas sometimes they are understood as strategic or political players. This paper argues that contemporary urban policy making are too much framing urban agency as a ‘governmentally designed object’, through preconstituted statuses and frames of urban policy making. This is why civic political activism as a practice of opposition against these space-time frames in urban policy making. It defines urban activism as the creation of differential space-time frames in urban policy making, driven by the objective to manipulate ‘time-space’ and ‘space-time’ constitutions of urban intervention. These borders constitute the major coordinates of contested urban agendas. The paper discusses how practices of creative resistance are targeted at governmentally defined time-space borders and underline that emerging conflicts lead to specific problems, which we call of spatial disaggregation. Eventually, the paper explores the attention given to ICT in urban intervention. These recent waves of protest in Turkey have been linked to a restructuring of urban activism against authoritative governmental policies. Despite its broad social and economic implications, we will particularly focus on the practices of framing urban interventions in the city and on the conflict between the modern logics of governmental intervention and the emerging relational spaces of urban activism.

Family Structure, Socioeconomic Well-Being and Elderly Chronic Illness in Thailand

Thai culture which is related to caring of the elderly has been named as one of a very strong one in the world. The family, in general, has to look at their elderly in every perspectives. This study focuses on Thai elderly ages between 65 and 84 years old quality of life, under the rapid changing of Thai society that moving from agricultural one to industrial one. The research examines effect of family structure, household socioeconomic well-being on elderly quality of life that measured from chronic illness. The research employs a national survey of Thai elderly sport, exercise, and physical activity, and elderly quality of life in Thailand 2012 by the Institute for Population and Social Research Mahidol University. Finding shows that the elder who live in a nuclear family which is among them or a lone are more likely to have some chronic illness, and lonesome when compare to those who live in extended family. Family support is more likely depending on household well-being, and living arrangement of them and their children. Those who have some chronic illness and participating with elderly club are more likely to do some exercise, and some physical activities when compare to those who do not involving in the club. They are a person who is mostly living in a nuclear family where do not have household registration. Thai elderly who would receive support from government need have some household registration. This result suggests that, to reduce some inequality of elderly quality of life when having some chronic illness, there should be some policies and some social welfare to support the illness elder, even if they do not have any household registration. This people are not a homeless person. They are Thai. But they may lose their household registration form.

ICT As a Communication Tool for Older People (aged 80) in an Urban Area

While ICT (Information and Communication Technology) has been spreading dramatically in Japan, little is known about how seniors use it as a tool to communicate with non-relatives.

The authors conducted interviews with residents (aged 80) of Suginami City, Metropolitan Tokyo, in October and November 2013, regarding communication with non-relatives. A total of 513 people responded.

About 60% of the respondents met and spoke with “friends” and “people they have known from childhood”; men were more likely to do so than women. In all types of relationships, a conventional phone was the most popular choice as a usual communication tool, followed by “letter” for “people they have known from childhood”, as well as “face-to-face meeting” and “cell phone” for “friends” and “people in the group they are members of.” In all types of relationships, 10% of the respondents chose “e-mail.” Men were more likely to send e-mails from a computer than women.

In North American urban sociology, there is great interest in how the faster communication, resulting from the increasing availability of affordable and efficient transportation and ICT, affects interaction among individuals. As the usage of ICT becomes more common among seniors, the ways the very old persons communicate with others are also expected to change.

Social Policies and Political Identity: Analysis of Bolsa Familia Program in Brazil

There are few studies analyzing how policies impact on political identity construction. Following the cognitive approach in policies, recent studies show that State actions creates new social actors: individuals that become beneficiaries but who didn’t constitute their identities in relation to the State before. Therefore the State is a space of cultural and symbolic production, where new identities are constructed and new political lessons are learned.

The social construction of target groups framework (SCTG), from Helen Ingram and Anne Schneider, brings a new element to the relation between policy and political identity analysis. It makes explicit the contentions that occur in the definition of what are the social problems which will receive attention from the government, their possible solutions and who will be the beneficiaries. This framework allows us to understand the political and social consequences and motivations inside policy design. The social construction of target groups becomes an important attribute, because it affects the relation between beneficiaries, govern and political approval.

There are two main dimensions for SCTG: political power and image. Political power measures the organization and mobilization capacity of groups affected by policies. It can be high or low, depending on the group influence to bring their decisions into account. Image can be positive or negative, affecting the way beneficiaries understand themselves and their space in the political sphere.

This paper analyzes the social construction of image between beneficiaries from the national conditional cash-transfer Bolsa Familia Program in Brazil as a dimension of the political identity. It analyses the role of the State, the media and other institutions in the construction of the public sphere. These elements are tightly connected and the beneficiaries are aware of the constant contention around the program's legitimacy. They react actively to the negative image constructed by the media and that is reproduced inside their sociability relations.

The research employs a national survey of Thai elderly sport, exercise, and physical activity, and elderly quality of life in Thailand 2012 by the Institute for Population and Social Research Mahidol University. Finding shows that the elder who live in a nuclear family which is among them or a lone are more likely to have some chronic illness, and lonesome when compare to those who live in extended family. Family support is more likely depending on household well-being, and living arrangement of them and their children. Those who have some chronic illness and participating with elderly club are more likely to do some exercise, and some physical activities when compare to those who do not involving in the club. They are a person who is mostly living in a nuclear family where do not have household registration. Thai elderly who would receive support from government need have some household registration. This result suggests that, to reduce some inequality of elderly quality of life when having some chronic illness, there should be some policies and some social welfare to support the illness elder, even if they do not have any household registration. This people are not a homeless person. They are Thai. But they may lose their household registration form.
A New Middle Class? Challenges for Inequality in an Emerging Country

The changes in the contemporary world have been quick and frequent, particularly in countries considered as emerging nations. They have an impact on the living standards and consumption, creating new social groups, resulting from those dynamics. Recently in Brazil, the debate on the emergence of a new class “average” gained relevance and academic crossed the borders, having an enormous impact in the public arena. Some economists define this “new middle class”, from their income. While recognizing the importance of this element in the study of inequalities, the concept of class demand more complex analyzes that include socio-occupational factors, as well as perceptions, values, expectations and worldviews regarding personal projects and processes of distinction.

As the task of studying multiple and varied dimensions of social life can not be restricted to a specific focus, either theoretical or methodological, we have been working with quantitative and qualitative methodologies. The work we propose to present is based on the fieldwork we carried out in Rio de Janeiro with individuals who fall into the two groups that we are defining “traditional middle class” and “new middle class”. Our goal is to understand their trajectories, as well as, their projects for maintaining or improving their living conditions in the future.

Multilevel Climate Governance In Europe: Are Cities Undermining Nation-States Role In Climate Policy?

Global environmental problems are increasingly showing the nation-states lack of will, as well as their inability, to take the path of sustainability. Climate change is probably the best example of the downsizing role of the nation-state in the pursu- ing and diffusion of environmental policies and actions. That’s the case in Europe, where the European Commission is becoming a global leader in this field, and, at the same time, an increasing number of cities and regions are getting involved in climate governance. Furthermore, climate initiatives like Covenant of Mayors are showing how sub-nationals and supranational institutions interact with each other by circumventing national governments. Starting from these considerations, this paper presents an empirical study on the involvement of Italian cities in the Covenant of Mayors: a multi-level governance perspective. Its aim is to understand the role of the nation-state with respect to that of a supranational institution like the European Commission. Our results show that the inaction of the Italian government in the past years related to environmental and climate issues, as well the proactive role of the European Commission, explain the massive participation of Italian cities in the Covenant of Mayors. The Italian case is paradigmatic, to the extent that of 5000 signatories of the Covenant, half of them are Italian. However, even if the role of Italian cities in climate and energy sectors is shifting from that of policy-takers to that of policy-makers, and that what it means to be the “state” is being reconfigured and contested, the nation-state remains a key actor, notably with respect to national policies that can foster and strengthen local and global climate actions. Nation-states scope and powers remain crucial in climate policy, and the day when local institutions take their place in the environmental domain still seems distant.

The Standardized Transition to Parenthood: How Standardized Practices Produce Gendered Subjects at the Transition to Parenthood

The transition to parenthood in Austria is constituted through a set of standardized practices that includes medical care, legal processes, public discourses on women’s health and decisions around public aid affect every pregnant women and most of their partners. In Austria the transition to parenthood leads to more traditional role configurations and to an increase in unequal distribution of labor. However, women in Austria are generally highly educated, have full access to the labor market and value and demand gender-equality, it seems crucial that throughout all levels of education women experience a retraditionaliza- tion of gender roles during the transition to parenthood. A focus on standardized practices is a sufficient way to show how even highly educated, career oriented and breathing partners, women become non-working mothers. As lack of discussion about the transition to parenthood. Standardized practices enforce and attenuate specific figurations of men and women. Since they are a major part of the transition to parenthood we suggest to pay closer attention to the sequence of those practices and the formations of men and women they seem to favor. Our questions are: How do standardized practices at the transition to parenthood produce gendered subjects? Which formations of women and men do they enforce? We answer those questions by deriving practices from 40 interviews with men and women during pregnancy and 40 interviews with men and women six months after birth. In addition we collected documents used in those practices. Within an ethnographic interpretation process lead by the theoretical principles of new materialism we derived sets of activities and participants, which later on where categorized into practices. The focus of our paper is on four processes of retraditionalization of the relationship between mothers and fathers during the transition to parenthood and how they are embedded into standardized prac- tices.

SCHADLER, CORNELIA* (Ludwig Maximilians University, cornelia.schadler@univie.ac.at)
We Have Never Been Individuals – New Materialist Ethnography

In 2011 I finished an ethnographic project on the transition to parenthood from the perspective of new materialism (Schadler 2013a, 2013b) and started another empirical project on definitions of family from this perspective. My talk will summarize the theoretical principles and onto-epistemological foundations of these theories and how they are transformed into an apparatus (Barad) that act as a tool for actual empirical research. I will also discuss how the researcher, research and a research field are established within this process. Theoretically we cannot perceive the researcher as a subject acting on a field, but the researcher is becoming with and figured with it during research. However, this process is also producing research outcomes, which are therefore not a product created by the actions of the researcher, but a part of the practice of researching. The researcher is formed as the part of the practice that assembles outcomes and provides them in writing and talking to research communities.

In particular I rely on the work of Karen Barad, Rosi Braidotti, Donna Haraway and Stefan Hirschauer. In my talk I also want to provide information how I derived a concrete method of analysis from the principles of new materialism. To collect data I used interviews, observations, documents and self enactments. For analysis a developed a coding process, that reconstructs practices and the estab- lishment of the boundaries, which separate components/participants in order to make them perceivable. The consequence is an ethnographic transcription of the figurations of interest (e.g. becoming parents) and the worlds they are becoming with. The researchers’ tools become an apparatus (Barad), which is becoming with a research environment. As a consequence research has its part in the formation of those boundaries, which are researched and in the figurations of the “object”, while we study how the object is figured.

Ethnic Inequalities in Educational Returns: Overeducation, Language Skills and Social Capital

According to existing studies, the persistence of ethnic inequalities on Western labour markets is largely due to ethnic differences in educational attainment. Empirically less important, but socially more relevant are differences in educational returns: why is education less beneficial for immigrant minorities in meritocratic societies? Apart of taste based and statistical discrimination, we argue that miss- ing language skills and a lack of social capital could explain why immigrants and their children cannot make full use of their education. For income, we additionally analyze the consequences of lower employment returns to education. Be- cause education is less useful in terms of finding a job for persons of immigrant origin, they are probably overeducated more often and in consequence their overall education has lower income returns.

Using data from the German Socio-Economic Panel (GSOEP) from 2006-2009, we show lower educational employment and income returns for first and second generation Patauass- iedel as well as persons of Italian, Greek and Turkish origin as compared to native Germans. Results of simultaneous conditional quantile regressions show similar- ly stark percentile and median differences for first and to a lesser degree also second generation immigrants. Missing language skills and social capital seem unlikely candidates, given the equal pattern of differences for different percentiles. Yet, these differences in educational returns are largely accounted for by the larger degree of overeducation among persons of immigrant origin. The results also show that lower returns to education have two sides of a coin: the returns are lower, but in addition the returns to education are less disadvanta- geous. If education counts less, so does its lack.

The All-Pervasiveness of Racism in Germany: Difficulties and Challenges in Addressing Racism

Racism is a societal imbalance relationship which structures social order, with social practices of difference, the construction of social groups and social meanings and inclusions and exclusions.

When looking at the mechanisms, attributions and manifestations of racism in Germany, global, European and national “lines of tradition” and histories of racism have a powerful effect. If one speaks about racism in Germany, its specific expressions and effects, the history of racism in Germany needs to be taken into consideration.

Studies show that racism today is institutionalised. For example in state employment agencies with regard to social security allotment or in institutions of education and social work and in the actions of professionals (Melter 2006, Fläm 2007, Gomolla/Radke 2007).

The focus of this paper will be on a reconstruction of a racist normality in Germany, constantly present as a societal relationship in the every day life of people to whom a migration history is attributed, as everyday occurrence and manifest in in normative practices of differentiation, isolation and exclusion. The analytic perspective of this paper will be on the subjective experience and interpretation and consequent strategies of action and negotiation of young people, whose everyday life is negatively impacted by racism.

In the international context of the conference it will be interesting to discuss with other researchers about the conceptualisations of racism and their influence on today's understanding of and acting on racism in the world.

The research presented in this paper is based on group discussions, and problem-centred interviews with eight young adults (age 14-20). Part of the data was collected during a 4-day workshop with young adults with a migration background, where reflections and discussion about experiences and strategies among participants took place.

Nonreligious Actors and Their “Others” – How Questions of Justice Become Matters of Identity

Whether in a highly secular context, as in Sweden, or in countries where religion plays a more influential role in the public sphere: Nonreligious groups, like humanist or atheist organizations, often construe “religion” and/or religious actors as obstacles to different cultural visions to normative orders, at how they position themselves in relation to religious actors – thereby navigating through the sometimes narrow path between mere advocacy for a secular state and social justice on the one hand and anti-religious criticism of faith communities on the other –, the socio-political dimension of being nonreligious becomes apparent – a dimension which so far has been hardly scrutinized by social scientists.

The Belgian Health Care System. General Practitioners and Medical Specialists

9/30/2013

The Belgian health care state: general practitioners on medical specialists

Prof. Dr. Rita Schepers, Centre for Sociological Research (CeSo), KU Leuven, Belgium.

Klein (2000) described the health care state as different from the welfare state because among other reasons, the medical professions are service professions with high specialized knowledge and also because of medical technology is advancing rapidly and creates demand.

In Belgium, the sickness funds play a crucial role. (In modern terminology, the purchase of care). The paper will briefly introduce the role of the sickness funds in Belgian health care. Then, the attention will be focused on the professionalization processes of doctors in medicine, surgery and gynecology. (Original title in 1849). Specialization processes started already in the 19th century but the coming into prominence of medical specialists started after the second World War, together with the introduction of obligatory health insurance (1944). The already existing rivalry between ‘general practitioners’ and medical specialists became very prominent. A sort of solution was reached at the end of the 20th century. In the meantime the position of general practitioners has improved.

Nato's Quest for Greater Operational Effectiveness: Concordance Theory and Civil-Military Personnel Relations

Many defense organizations are comprised of both military and civilian personnel working towards the realization of defense goals. Civilian personnel in defense organizations often work closely with their military counterparts. The issue of civilian-military personnel collaboration within defense organizations is an important issue that affects both operational and organizational effectiveness.

Personnel collaboration also has significant impact on civil-military relations theory. Civilian and military institutional separations has been the hallmark of the civil-military relations field since the post-World War II era. Focusing on the need for greater collaboration among civilian and military personnel in defense organizations challenges the traditional focus on separation. Objective civilian control does not exist at all levels of the civil-military relationship spectrum. The reality is that civil-military relations may call for broad institutional separations as well as more fluid and collaborative roles within defense establishments. Personnel relationships in defense organizations, often warrant more integrative dynamics and directly affect the development and execution of military strategy as well as operational and organizational effectiveness. Enhancing collaboration between military and civilian personnel points to a theoretical model, such as concordance theory, which embraces broader institutional separations as well as cultural conditions requiring more flexible civilian and military relationships. This presentation is created within the context of a NATO Human Factors and Medicine Research Task Group (HFM RTG-226) and a cross-national survey initiative.

SCHINDLAUER, SANDRA* (Bauhaus University Weimar, sandra.schindlauer@gmail.com)

The Alienation of Public Spaces by the Homeless

Since the 1970s, German researchers have turned their back on the topic of homelessness. As a result, Germany has neither a universal definition, nor an official statistic on the amount of homeless people living in the country.

Today, most German cities are facing a significant lack of affordable housing. Additionally, the borders of the EU have been opened towards Eastern Europe (2004 and 2007). In the hope of jobs and wealth, Eastern Europeans flock to Germany. However, a lot of them fail to fulfill their dreams and end up homeless as they are not eligible for German welfare. Hence, the number of homeless people being visible on the public spaces of German cities increased constantly in recent years.

As the cities are afraid that the ascending presence of homeless people contricts the consumer climate (especially in pedestrian and representative areas), they are seeing themselves forced to act. In contrast to the USA, where the cities usually formulated a housing strategy, the methodology chosen is displacement and decentralization of the homeless. During my presentation, I would like to focus on one of the most subtle ways to achieve these goals: structural modifications and installations which aim to prevent the “alienation” of public spaces by the homeless and other undesirable groups. I would like to complement my remarks with a discussion on how these actions are being implemented and justified by the cities and why people who do not belong to the “target group” are not able to decode their function.

People say that public spaces are a reflection of the society. The stepwise exclusion of unwanted persons from public spaces not only creates a distorted picture of the reality; it also calls a fundamental characteristic of modern democracy into question. We are talking about participation.

SCHINDLER, SETH* (Humboldt University of Berlin, schindse@hu-berlin.de)

Governing CO2 Emissions in Delhi, India: The Clean Development Mechanism and the Informal Recycling Sector

There is a consensus among policy makers that climate change must be addressed through global governance frameworks based on the measurement and reduction of CO2 emissions. This ‘carbon control regime’ at the global scale requires cooperation from municipal governments whose task is to enforce its implementation locally. Scholarly research on metabolises in the global South tends to focus on policies aimed at adapting to climate change, and this paper seeks to contribute to a growing body of scholarship focused on the efforts of municipal governments in the global South to mitigate CO2 emissions. I examine the impact of the UNFCCC’s Clean Development Mechanism (CDM) on solid waste management in Delhi, India. The main argument of this paper is that the CDM has contributed to the emergence of an environmental urban governance regime based on calculating and reducing CO2 emissions. This data fetishism obscures the relatively high recycling rates achieved by Delhi’s large informal sector, which is ubiquitous but difficult-to-measure. This has justified a dramatic shift in Delhi's waste management strategy, as plans to build sanitary landfill has been abandoned in favor of waste-to-energy incinerators, three of which have been approved by the CDM. This policy shift has precipitated conflict over the ownership and control of waste between small-scale informal enterprises and large formal-sector enterprises, and it relocates value from the labor of informal-sector waste collectors to waste matter itself which is required for the operation of waste-to-energy plants. I conclude that the overriding principle of this emergent governance regime is capital accumulation rather than the mitigation of CO2 emissions, and its inability to incorporate extensive informal environmental management systems calls into question its overall effectiveness.

SCHINDLER, SETH* (Humboldt University of Berlin, schindse@hu-berlin.de)

Making Delhi World-Class: Relations Between Informal Service Sector Workers and the ‘New’ Middle Class

Governments at multiple levels have ambitiously committed to transforming India's metabolises. In this context formal electoral politics increasingly favor the so-called ‘new middle class,’ while the urban poor are typically excluded from formal politics and the formal economy. While scholarship tends to compartmentalize the politics of the new middle class and the urban poor by focusing on how they interact with the state, little is known about inter-class relations. In this talk I present original research on relations between workers in the informal service sector (i.e. street hawkers and wastepickers) and associations that represent the new middle class (i.e. resident welfare associations and market traders’ associations). I show that in the case of Delhi, conflict between these groups is typically over the terms of use of urban space rather than zero-sum conflicts over space. Furthermore, the analysis shows that these classes are interdependent; the poor depend on demand for services from the new middle class for their livelihoods, and the lifestyles of new middle class are enabled by services provided by the informal service sector. However, both groups also require access to space; it is the most important means of subsistence for the poor working in the informal service sector, while members of the new middle class require the production of ‘world-class’ spaces where they can practice cosmopolitan lifestyles that serve as a basis for class membership. I conclude by examining how this class and the poor undoubtedly enable and participate in Delhi’s transformation into a so-called ‘world-class’ city. However, the reconciliation of competing visions of urbanization – one geared toward subsistence and the other social reproduction – is what is at stake in contemporary inter-class relations in Delhi.

SCHINKEL, WILLEM* (Erasmus University Rotterdam, Schinkel@fsw.eur.nl)

Climate (F)Acts. Climate and/As the Social

This paper investigates the ways in which ‘climate’ can be considered as social assemblage. It does so by showing how climate facts and factors have often been construed as climate acts and actors. This is illustrated by considering three ways in which climate has historically been construed in relation to the social. The first is to consider climate as a causal (f)actor. This has been prevalent from classical authors such as Hippocrates and Ovid to modern authors such as Monestaque, and has persisted up until the origins of modern climate science. This is illustrated with historical examples.

The second construes climate as an enrolment assemblage. Here, climate becomes an assemblage of various heterogeneous (f)actors working together with human actors to produce what we now call climate. This is illustrated in this paper using data from an ethnographic field study among paleoclimatologists.

The third way to consider climate as a social assemblage is to construe climate as medium of relationality. In this view, inspired by authors ranging from Watsuji Tetsuro to Tim Ingold, climate is a relational web that is the space in which life unfolds. The paper concludes by illustrating climate as medium in a speculative way, arguing that this conception implies a significantly different social ontology from that which has characterized modernity.

The worldwide outlook for children: A model for monitoring and studying children's rights?

The worldwide outlook for children (WOC) is a web resource of information and indicators of young people's wellbeing, rights, and interests. It may serve as a basis for human rights research, particularly for investigations of experiences, choices, and inequalities young people experience. WOC is a web resource designed for use by everyone, from scholars to policy makers to young people, and can be the site of an 'exemplary expansion' of the concept of art. Sociologically, this expansion served to a significant degree to communicate an understanding of western art as an autonomous and potentially universal category, the emergence of which has been analyzed by, for instance, Bourdieu, Heinich and Luhmann. WOC is a useful resource for identifying, understanding, and explaining young people's experiences across the world. WOC presents vast evidence about children, including indicators of their physical health and survival, educational attainment and resources devoted to educational success, violence committed against young people, and children's work experiences. WOC will raise awareness as well about indicators of children's wellbeing that are not yet available for many countries. As such, WOC may be an instrument for identifying what we do not know about young people's wellbeing, rights, and interests. Over time, WOC will work from a global perspective to share information regarding young people's wellbeing, rights, and interests.

Contacts to other fathers that are or have been in the same position play an important role for those “new fathers”. Some fathers already have access to other caring fathers within their peer group. Some try to find contact to other fathers through the use of new and social media. They attend “new fathers” groups on Facebook, are members of bulletin boards that are crowded mainly by fathers, or use blogs and focusing on the fathering process. On these sites, they often share their opinions, the everyday obstacles they encounter being stay-at-home fathers, or happy times and events with their children. In our talk we explore how those communities help fathers to maintain their role as caring fathers, with sometimes hostile or non-encouraging environments. The ability to share their experiences interplays with their well-being, their persistence against structural disadvantages and adverse comments, and the quality of the father's relationship to the mother and the child.

Sociotechnics of Economy

Joachim K.H.W. Schmidt
Sociotechnics of Economy

Revisiting my sociotechnically informed economic theory on autonomous humans (Göteborg 2010), Onati and Athens (2B11), not any longer based on Capital, Market, etc., as done by mainstream economists who failed for several hundred years. Mainstream theories have been spatially based, time only occurred as space-time as well as properties as measurements within space, and humans only as objects like game pieces. - My present paper will enlarge the common Factors of Productivity, traditionally Land, Labor, and Capital, by Time. Autonomous humans are characterized by Time as duration of their life which they have again and again to invest in portions as resource for their reproductive survival. An economic theory ignoring real time must fail, cutting out some half-century being sold for inauthentic slavery work. Excesses of present financial markets condemn the inefficiency of traditional economic theories responsible for such perversity. - Sociotechnics as empirical science designs and implements institutions, and these going concerns are dramatically changing; we move out of an age predetermined by analogous Greek ideology focusing on the organization of respective closed spaces, cf. Plato's Parable of the Cage, without time and movement, becoming manifest in positions, prohibiting time and movement. Greek world: A GIVEN one circling around positions. In opposition to this autonomous humans succeeding to leave Plato's Cage of perverted reality-concept, Time condensing themselves confronted with a digital reality, and experience themselves as homeless, being asked to construct their >homes< themselves by way of computation. Greek-Western institutions must necessarily be replaced, since nearly all passed down institutions of analogous Greek-Western world prove inadequate in present digital age, including presently still prevailing economic theories. In digital age social life will not any longer turn around positions, but will happen in networks in which being will be replaced by relation.

The Cultural Influence on Social Institutions

The Cultural Influence on Social Institutions

Joachim K.H.W. Schmidt, Berlin/FRG

Social institutions are culturally predetermined, the going concerns of people express beliefs in way of reality-perception. Cultures are different round the globe. Diversity of cultures contains a gigantic richness of human resources. Cultures actualize in human relations via common actions, and/or communication. Every culture has developed an own language for its communication. Western languages, especially Anglo-American languages, have presently become globally dominant, including Western civilizing culture which they embody. - The powerfulness of Western languages is subject to Greek ideology, its assumed fictional identity of thought and being, first expressed by Parmenides 2500 years ago. Greek ideology circles around an absolutely perfect and analogously conceived spatial Being, a fictive replication of an ideal world excluding change by Time and Movement. Greek ideology gets manifest in fictive positions: its operational base. All Western languages share the COPULA as constitutive element, expressing that everything will be defined either as this or that, e.g. either Greek or barbarian, or e.g. Nazis defined Jews as non-human and sent them into the gas chamber, or e.g. formerly Christians victimized heretics on auto-da-fé, and presently victimization of humans labeled terrorists by obamacare, using areal drones as killing machines. And we should not forget the multiple bio-, culture-, and genocides committed by Western people under the influence of Greek ideology. - As can be not overlooked by everyone, Western analogous civilization and culture is decaying with dramatic speed, getting its deathblow by digitalization of Western societies, and consequently all central institutions have to be redesigned, adapted to starting digital life of Western populations in the Third Millenium. My paper will create awareness of the problems to be faced in near future: A job for sociotechnicians.

Circulating Ideas and Visualizations in Educational Transition Discourses

Circulating representations of knowledge have been a central concern of Science and Technology Studies (STS). Depending on the conceptual approaches, they highlight either the stabilizing or flexible aspects of distributing and bridging knowledge through social worlds (e.g. Latour, Griesemer/Star).

For conceptualizing the circulation and transformation of ideas and knowledge (Latour), I will focus on commonly used circulating visualizations (maps, lists, graphs, icons) and related practices that visualize and facilitate the transition from school to work. Visualizations can be conceived as mediators, instruments and symbols of specific social orders and related knowledge formations. They typically serve to stabilize the relationships in which they are embedded. As representations and material artifacts they enable and/or constrain the distribution of knowledge. For a systematic analysis and a deeper understanding of the relationship between ideas, knowledge, and their visualizations I will combine STS concepts (e.g. immutable mobiles and boundary objects) with a discourse perspective from the sociology of knowledge (Keller).

The study of the circulation of ideas, knowledge, and symbols needs to take these aspects into account. In addition, it should focus on the practices of translating and transforming the visualizations between different social worlds or the strategic use of certain communicative forms e.g. in arenas, where the constituencies of relevant topics or problems are negotiated.

SCHMIDT, LISA-MARIAN* (Alice Salomon Hochschule Berlin, schmidt@ash-berlin.eu)
Producing Individuality: How Occupational Trajectories Are Embedded in Educational Practices

Referring to the pragmatist process perspective of social order and the constitution of self (Dewey, Mead, Strauss) I'd like to propose a conceptual suggestion and present empirical findings, that combine this perspective with a socio-historical understanding of the subject matter (Foucault). The concept will be presented in interplay of theoretical considerations and empirical results that derive from a current research project about the transition preparations in school and mentoring projects (school to work transition). I will specifically focus on schools because they are major institutions for the organized production of subjects.

Mead and Strauss described the different processes, phases and social interrelations that shape identity/ the individual. On this perspective, identity is a constant course of action and interaction between different concerned actors, things and the work of the individual on the integration of the plenty “me`s” to a self. This process can be conceptualized as a trajectory of the subject that helps to study this ongoing transformation. The trajectory concept allows the analysis of two perspectives. On the one hand all the situated and participating actors and (inter-)actions come into focus. On the other hand the perception and experience of the subject in this process can be understood.

Interwoven with these practices of the self are typical historical knowledge formations of the subject itself. In contrast to the pragmatist process perspective Foucault offers such a historical conceptualization about the emergence of the individual. This includes sensitivity towards questions of power and their productive effects in specific institutions. Linking pragmatist concepts with a discourse approach will enable a balanced theoretical conceptualization of individuality in modern societies and elaborate analytical tools for research.

SCHMIDT, LUISA* (University of Lisbon, schmidt@ics.ul.pt)
PEREIRA, SÉRGIO (ICS-UL)
Fukushima and Media Discourses on Traditional and Future Nuclear Energy

This paper presents results of a collaborative research funded by the European Fusion Development Agreement, consisting in an international comparison of media coverage of fusion and fission energy in three countries (Germany, Spain and Portugal) and in the English language international print media addressing transnational elite, from 2008 to 2012.
The analysis showed that the accident in Fukushima in March 2010 did not have significant impact on media framing of nuclear fusion in the major part of print media under investigation. In fact, fusion is clearly dissociated from traditional nuclear fusion and energy from nuclear accidents. It tends to be portrayed as a safe, clean and unlimited source of energy, although less credited with respect to research costs, technologic feasibility and the possibility to be achieved in a reasonable period of time. On the contrary, fission is portrayed as a hazardous source of energy, expensive when compared to research costs of renewables, hardly a long-term energy option, susceptible to contribute to the proliferation of nuclear weapons or rogue military use. Fukushima accident was consistently discussed in the context of safety problems of nuclear power plants and in many cases appeared not as an isolated event but rather as a reminder of previous nuclear disasters such as Three Mile Island and Chernobyl.

The analysis suggests that the public discourse on fusion is constructed mainly around research challenges, clamorous events and scientific and technological achievements, rather than energy policy debate, climate protection or future economic compensations of fusion research.

SCHMIDT, ROBERT J.* (Technical University of Berlin, robert.schmidt@tu-berlin.de)

Collective Action, Trust and Robust Innovation: The Case of a Regional Network of Research-Groups

Cooperation between working groups with heterogeneous disciplinary backgrounds is an important phenomenon for modern sciences. It stems on the one hand from the necessity of expertise and technology needed to answer fertile research questions, to succeed in scientific competition and on the other hand it is required by many forms of research-funding. The contribution focusses on a special form to deal with both: an enduring network between research-groups, which realizes different lines of research and funded projects in a remarkably successful way. Success hereby not only means that they get funded, they also managed to create highly relevant findings in a robust way (Ferry/Granovetter 2009). The case study concentrates on the phenomenon of emerging project-networks to enable flexible and also enduring, reliable collaboration between heterogeneous actors (e.g. Windeler/Sydow 2001) but conceptualizes it as one of the actualization of collective action. Within a practice-theoretical perspective (Giddens 1984), we can describe the latter as collective agency, as differences in praxis done collaboratively in a highly bounded way towards an end collectively framed. The first part of the presentation explores different roles collective action between heterogeneous actors play in the episode of robust innovation in the network during 2005-2013.

The second part focuses on trust as a specific quality of network-relations that makes it possible to actualize these lines of collective action between research-groups. It shows the importance of trust-relations in different sub-populations of the network for the network as a whole and its robust ability to produce relevant findings. In the end, the study can provide a more detailed picture of the implications of broad spillovers from the prison system to the health care enrollees, all indicators of a lower overall quality of care. Similar processes are evident when confronted with research costs, technologic feasibility and the possibility to be achieved in a reasonable period of time. On the contrary, fusion is portrayed as a safe, clean and unlimited source of energy, although less credited with respect to research costs, technologic feasibility and the possibility to be achieved in a reasonable period of time. On the contrary, fission is portrayed as a hazardous source of energy, expensive when compared to research costs of renewables, hardly a long-term energy option, susceptible to contribute to the proliferation of nuclear weapons or rogue military use. Fukushima accident was consistently discussed in the context of safety problems of nuclear power plants and in many cases appeared not as an isolated event but rather as a reminder of previous nuclear disasters such as Three Mile Island and Chernobyl.

The analysis suggests that the public discourse on fusion is constructed mainly around research challenges, clamorous events and scientific and technological achievements, rather than energy policy debate, climate protection or future economic compensations of fusion research.
Passing As Italian: The Image of the Friendly Southerner As a Crisis-Solution Strategy

People in a southern region of Austria (Carinthia), where over decades sharp conflicts between the German-speaking majority and the Slovenian-speaking minority reigned, some people claim an Italian family background in order to bypass discrimination as “Slovenian”. While relations with Slovenia are still tense, in several cities colourful “Italy festivals” have been held. In another regional context, Vienna, a similar phenomenon could be witnessed. In the 1970s and 1980s quite large number Palestinians came to live in Vienna – as a consequence of the political engagement of Bruno Kreisky in the Middle East. Some of them opted to open a business in gastronomy. But since the image of the Middle East was crisis driven, and food from this area (as well as a multiplicity of ethnic places) were still unknown to most Austrians, they opened “pizzerias” – in this way using the positive reputation such “Italian” establishments had built up at that time. And in a yet very different regional setting, in New York after 9/11, Iranians adopted a similar strategy. As one middle-aged man in a documentary showing the life of this community claimed: “Passing as Italian became a kind of survival strategy.”

All these examples have in common that the image of the friendly Italian is used and adopted by non-Italians in order to bypass ethnic, political, social and cultural conflict and to deal with ambiguous situations full of hatred and resentment against certain groups. The first goal of this paper is to explore the image of the friendly Italian constructed by way of such narrations and to highlight the persistence of stereotypes as well as milieu-specific alterations. The second goal of the paper is to propose a methodological approach to images as a symbolic strategy to confront and defer conflicts and discomforts in everyday life.

Patient Participation in Rehabilitation Centres: How Professionals Integrate Patients’ Expectations about Discharge Plans

Today, patient participation is considered “best practice”. Yet, there are different perspectives on what patient participation means. While there is a line of argument that patient participation “is justified on humane grounds alone” and in line with patients’ right to self-determination (Guadagnoli & Ward, 1998), there is evidence that not all patients desire to be involved (Thompson et al, 2007). Policies on discharge planning from rehabilitation centres stipulate moreover that patients participate actively. It is less clear, however, how patient participation occurs and how this process is achieved interactively. The goal of this paper is to analyse how patients participate in planning their discharge from rehabilitation centres in multidisciplinary meetings and within the health providers-patient interaction.

Three rehabilitation centres in Switzerland with a total of 37 patients and their teams of health professionals (physicians, nurses, occupational therapists, physiotherapists, etc.) participated in the study. Over 150 meetings were video recorded and analysed using Conversation Analysis, an inductive, observational method. Patient participation is shaped by organisational structure, by health professionals’ communicative practices and by opportunities for patients to engage actively. 1) Patients participate in weekly interdisciplinary meetings, and have the opportunity to intervene directly and thereby shape decisions. 2) Primary nurses coordinate care for patients throughout their stay, and relay the patient’s point of view to other health professionals. Professionals’ way to integrate patients’ opinion into final decisions might differ significantly. 3) When interdisciplinary meetings are held without patients, the patients’ point of view is thus indirectly integrated into decision-making: different professionals work as mediators. The analysis of three sites allows a reflection on professional competencies and best practices with regard to patient participation and proposes recommendations for education and practice.
vocational training. Furthermore for dropout students, years spend in education are important, especially in terms of occupational status. The acquired human capital however, can be better translated into labour market returns by those with formal credentials. For the years since 1989, or the 1930s, the acquired human capital however, can be better translated into labour market returns by those with formal credentials.

SCHOLTEN, MIRTE* (MZES/Mannheim University, mirte.scholten@mzes.uni-mannheim.de)

**School-to-Work Transitions of Higher Education Drop-Outs: Human Capital or Signalling?**

Graduates from tertiary education have good labour market perspectives but it is not well examined yet how the career perspectives of tertiary drop out differ from those of graduates. This paper aims at identifying differences in school-to-work transitions between tertiary education graduates and dropouts as well as students who did not participate in tertiary education but completed vocational training after upper secondary education. The focus will be on the different returns of different educational levels. Referring to Human Capital Theory and Signalling Theory we examine if additional years of tertiary education or rather credentials deliver higher returns to tertiary education non-completers. Especially in economic crises we expect that tertiary education drop out will have huge difficulties in entering the labour market as jobs are scarce and the competition is hard. In a first step we study the probability of entering the labour market and job search durations of the different educational levels. The further step comprises the close scrutiny of job quality (occupational status of the first job) and adds information about economic crises to the analyses. Our results show that higher education drop outs in Germany do have difficulties entering the labour market but obtain a higher occupational status job than students with vocational training. Furthermore for dropout students, years spend in education are important, especially in terms of occupational status. In times of economic prosperity job search durations of tertiary graduates and non-completers are the same, while tertiary education completers fare better in economic crises.

SCHOLTZ, HANNO* (University of Konstanz, hanno.scholtz@unikfr.ch)

**Debating Alternative Conventions and Defying False Friends: The Concept of Crisis in the Rational Choice Theory of Institutions and Historical Social Change**

Although the term „crisis“ seems to be ubiquitous, there are historical phases when it more abound than in others. For the years since 1989, or the 1930s, the term has (in most parts of the worlds) a higher importance than for the 1950s and 1960s. This can be understood from the fact that these times are phases in which institutional change is both going on and being prepared.

In rational choice perspective, institutions are added game elements in the game structure of human interaction, and they have both conventional and normative aspects. This perspective allow to study institutional change as characteristically depending on the complexity of organizational interaction: Independent organizations allow for early and smooth institutional change, as in the case of changing family concepts. However, there are cases as economic regulation, where organizations act in strong interdependencies and finding a new institutional setting becomes a question of social debate while the performance of old institutions degrades: These are crises. In crises, many solutions are discussed, including those with biased consequences and ‘false friends’ for which lower adaptation costs go together with a lower long-run adequacy. Hence sociological imagination and the deconstruction of old norms and perspectives can be rather helpful in avoiding false friends and desastrous consequences for solving crises.

For the understanding of the economic regulation of industrial society it can be said that unexpected consequences of the disaster (i.e. experiences of modernisation and deconstruction of old norms and perspectives can be rather helpful in avoiding false friends and desastrous consequences for solving crises.

**RC16-279.12**

SCHOLTZ, HANNO* (University of Fribourg, hanno.scholtz@unifr.ch)

**The Two-Step Nature of Modernity**

Over the last decades, the discourse over the end of industrial society and the coming of a second modernity has found evidence in recent phenomena that resemble parallels between 1860 and 1945, as globalizations, economic crises, democratizations, violence, social inequality, and global shifts in resource distribution. An understanding of the mechanisms behind these phases of crisis would be socially helpful since it is rather probable that the current one has not yet ended. The rational choice theory of institutions offers the tools to do so, but has not yet been applied to this question. The proposed paper (part of a larger book project) intends to fill the gap.

The paper develops a model of the two step nature of modernity by concentrating on the following arguments: 1. Modernity increases the availability of resources. 2. This results in changes in information relations, i.e. between positional and situation-specific information. 3. Multi-actor decisionmaking has two focal points of either relying on positional (domination / authority) or on situation-specific negotiation / argument. 4. A rational-choice understanding of tradition and modernity hence equates the two with applying the two focal points. 5. Not all games of human interaction are created equal, since organizations offer social structure and the transformation of situation-specific in positional information. 6. Hence an intermediate phase arises, with authority within and argument between organizations. This modelled intermediate phase is equated with the historical phase “industrial society”. Additional arguments analyze the nature of institutional innovations in the transitions between the phases, allowing for the confrontation with empirical evidence and for the prediction of upcoming institutional changes.

SCHORCH, MARÉN* (University of Siegen, maren.schorch@uni-siegen.de)

**The Hidden Patients - a Qualitative Study on Informal Caregivers in Germany**

Regarding the aged population, we also detect a parallel growth of age related illnesses like dementia, Alzheimer's disease or the like. In many countries world-wide, the majority of care for people suffering from these illnesses is realised at home by informal caregivers – their spouses, family members or close friends – due to cost or personal reasons. Often, the caregivers themselves are also at an advanced age. Both, elderly and still working-age family carers bear the heavy physical, psychological and emotional burden of taking care of their beloved ones at home. They are then at increased risk for psychical and physical morbidity like depression or burnout and can be described as our society's "hidden patients" (Schulz & Beach, 1999). The contribution will present first findings from a sociological qualitative study (observation and open interviewing) with this special group of elderly, informal caregivers in a rural area of Germany (Siegen and surroundings). The study is part of a larger, international and interdisciplinary research project called TOPIC (The Online Platform for Informal Caregivers), funded by European Commission and the Federal Ministry of Education and Research with partners in Vienna (Austria) and Troyes (France). First observations focussed on the every-day activities and routines within the households and underline the above-mentioned challenges for the informal caregivers in respect to time, energy and attention. Beyond that, the caring persons expressed the need for help in our talks, and not only in terms of financial assistance as often proposed by social institutions, but also for information and emotional support. This point is especially interesting from our point of view as observed some people’s difficulties to express their feelings respectively their own needs.

SCHOYEN, MI AH* (NOVA Norwegian Social Research, miah.schoyen@nova.no)

HALVORSEN, RUNE (NOVA Norwegian Social Research)

**Looking for a Balanced Treatment of Successive Generations: What Can Social Policy Learn from Perspectives on Sustainable Development?**

This paper argues that social policy scholars have good reasons to engage with the literature on sustainable development when analysing the challenges of how to combine different policy goals and welfare states. While many analysts have discussed the need to ensure the sustainability of welfare states and concerns for future generations, they rarely spell out the conditions for achieving welfare sustainability or provide an adequate theory of what such sustainability involves. Attempting to address these shortcomings, the paper asks what the scholarship on social policy can learn from perspectives on sustainable development.

In a European context, current debates on the need to create sustainable welfare states and how to promote sustainable development both raise difficult issues of intergenerational fairness and governance problems including tensions between economic growth and democratic legitimacy. The mantra is: ‘for a better future, citizens must make sacrifices today!’ Thus, the proposed paper is premised on the view that these areas intersect in important ways. However, they also differ, since generally questions about the welfare state are treated as problems of social/economic policy while debates about sustainable development put issues of environment and climate at the centre. Hence, linking the rich literature on sustainable development and the notion of sustainable welfare states, promises to bring new conceptual and empirical insights into the debate about welfare state futures.
The paper first introduces the notion of sustainable development. Next, we discuss how we can enrich the conceptualisation of welfare sustainability by taking on-board a broader sustainable development perspective. In addition, we ask how we might transform this improved definition into operational indicators which enable cross-national comparisons. Third, in view of the framework developed we tentatively compare a set of European countries. In conclusion we address the implications our framework has for the question of intergenerational fairness, and we highlight avenues for future research.

Young migrants unsuccessfully claiming refugee status may be ‘tolerated’ in Germany. This specific legal status positions them in the host society nearly at the end of a vertical model of civic stratification, implying restrictions in accessing central institutions of the society such as the education system or the labour market. Besides, they are constantly facing a high risk of being deported to the country of origin.

However, the impending shortage of the skilled workforce in Germany enforced a new political discourse. As a consequence young tolerated refugees hesitantly have been re-defined as educational subjects and labour market resource. Despite the still persisting inequality in the access to vocational training of tolerated youths as compared to young citizens or migrants being granted a residence permit, legal changes at the federal level have been introduced since 2009. They are to reduce vocational training boundaries for these residents with the highly precarious toleration status across Germany. But empirical evidence from our ongoing research project reveals a heterogeneous approach of new regulations. Especially migration authorities may act as institutional gatekeepers either supporting or constraining their access to vocational training. This results in regionally unequal vocational training chances for tolerated youths that cause new inequalities within this group.

What does the twofold inequality regarding the access to vocational training mean for other spheres of the social life and future prospects of tolerated youths? This is the question we would like to focus on in our presentation. To answer it we outline the current legal framework and present central findings of our comparative regional case study in Saxony-Anhalt (Schreyer and Schröder 2007). In a transnational comparison, semi-structured individual interviews and group discussions with experts. The findings argue for an enhanced consideration of institutionalised inequalities that are bound to a person’s legal status in the sociology of education.

(How) Does “Home Hospitalization” Transform The Relationship Between Patients and Healthcare Professionals?

“Home hospitalization” was officially instituted in France by an act of parliament in 1970. It has been largely developed over the last ten years.

Two major arguments are advanced in its favor of this mode of healthcare. The first is, that this form of hospitalization is chosen by patients who prefer to undergo long-term treatment (often with a fatal outcome, as many of those concerned are undergoing palliative care) surrounded by their families. The second is that of the access to vocational training of tolerated youths as compared to young citizens or migrants being granted a residence permit, legal changes at the federal level have been introduced since 2009. They are to reduce vocational training boundaries for these residents with the highly precarious toleration status across Germany. But empirical evidence from our ongoing research project reveals a heterogeneous approach of new regulations. Especially migration authorities may act as institutional gatekeepers either supporting or constraining their access to vocational training. This results in regionally unequal vocational training chances for tolerated youths that cause new inequalities within this group.

What does the twofold inequality regarding the access to vocational training mean for other spheres of the social life and future prospects of tolerated youths? This is the question we would like to focus on in our presentation. In The Shadow Of Alfred Schutz: Two “Ordinary” Sociologists In Extraordinary Circumstances

Peter Berger (interviewed at Boston 22nd October 2010) has qualified the three lecturers at the Graduate Faculty who most influenced both him and Thomas Luckmann as the “Holy Trinity”. The triumvirate was composed of Carl Mayer, Albert Salomon and Alfred Schutz. Though the latter has acquired a considerable reputation posthumously, Mayer and Salomon, apart from a short mention in the introduction to The Social Construction of Reality have been very little published and have remained almost entirely unnoticed. It is in this sense that they can be qualified as “ordinary” (that is to say not renowned) sociologists.

Their ordinariness contrasts with the extraordinary circumstances which affected their lives. Both Mayer and Salomon studied and eventually obtained positions in German universities during the first decades of the 20th century and both emigrated to the United-States at the beginning of the 1930s to become members of the Graduate Faculty of the New School for Social Research (Salomon was Jewish and Mayer married to a Jewish woman). Archival material, the few published documents available and my interviews with Berger and Luckmann lead me to suggest that the reasons for the lack of impact differ. Though Mayer headed a research project on religion in Germany he never succeeded in publishing the results of his study. Salomon’s work was largely theoretical and did give rise to some publications; others were rejected as inappropriate for American audiences.

By contextualizing the production of these two men I will try to explain some of the reasons for their academic in-success. Where they really so “ordinary”?

This will of course lead me to examine the criteria by which success is established in academia.

Organized Movement or Moving Organization – the Case of the World Social Forum

Since the 1990s there has been a significant growth in the number of Non-Governmental-Organizations (NGO) operating on a transnational level. This was called “NGO-Boom” and was largely considered as a positive sign towards an emerging global civil society (Keck und Sikkink 1998). Some of these new transnational civil society actors organized themselves to influence the politics of international institutions and to challenge multinationals. Doing ‘lobbying’ requires an effective and efficient way of organization to compete with transnational companies. The organizational forms of these actors are often comparable to those of private business companies (Mintzberg and Westley 2000). Other civil society actors deny any form of hierarchical organization and experiment with horizontal ways of organizing themselves. One example is the World Social Forum (WSF) with its ‘open space’ concept (Whitaker 2007). In 2001 a transnational coalition of civil society actors organized the first WSF event. The last WSF took place in Tunis (Tunisia) in spring 2013. In this paper I will present some insights of an in-depth ethnographical research on the organizational forms of the WSF. I will present the major mechanism and structures which help to stick together the transnational coalition that organizes the WSF since 2001. By doing so, I will discuss the possibilities and limits of the WSF between organized movement and moving organization.

Breaking the Silence at Spanish Universities

This paper focuses on the impunity of aggressors in most Spanish universities and on the aspects that maintain these specific gender, power and knowledge dynamics and finally lead to the expulsion of the victims instead of the aggressors. Whereas VAW at universities all around the world is a recognized problem, the educational systems at Spanish universities do not seem to be aware of it. The experience of VAW at universities all around the world is a recognized problem, whereas VAW at universities in Spain is still a silenced subject. Advocacy networks in international politics. Ithaca [etc.]: Cornell University Press.

This phenomenon, in Spain, is still silenced although first steps have demonstrated the need for researching this phenomenon. The project “Gender-based violence in Spanish universities” funded under the Spanish National RTD Program (Valls, 2006-2008) was pioneer. For the first time in Spain, a questionnaire with 1083 students, 13 in-depth interviews with professors and university staff, and 16 communicative daily life stories with students on this issue were conducted. The results, showing a more international number of aggressors, show that a high percentage of the participants knew someone or have suffered some kind of situation of VAW at the university. Besides, it evidenced that people supporting the victims of VAW become “second victims”. This research was crucial in breaking the silence on VAW in Spain.
social and civic dialogue: confronting the challenges of the post-
neoliberal economy

This paper will show that social dialogue establishes a balance of bargaining power in the employment relationship. Globalization has changed the labor market and contributed to a decline in union membership in a number of countries. It seems that the expansion of global production and the increasing mobility of capital has caused a shift of bargaining power in favor of employers. Growing inequality globally and within a number of companies and the growth of insecurity among those excluded from social dialogue are the empirical expression. In this situation, social dialogue remains a mechanism to protect workers and ensure stable labor relations for employers. Several countries have been able to use it to find ways out of the recent financial crisis: they were able to preserve jobs and to facilitate adjustment of companies.

The analysis of social dialogues in the world realized in this paper will reveal new aspects of social dialogue closer to civic dialogue. If we concede that the current democracy cannot be limited to the distribution of resources, but should also include a discussion of the means of production, the dominant idea is that the business world can not be separated from society and that it must therefore participate in the discussion on the objectives of the economic world. The increasing flexibility of the labor market requires what A. Sen and Hirschman called the capability to express oneself so that workers and capital owners together may introduce new thinking about the business world. If social Europe becomes a reality, a new model of prosperity must be built with ideas and actors from civil society. To do this, the organizations of employers and workers and the states should create new initiatives and adapt new strategies to meet the challenges of the 21st century.

christian enclaves, freedom of education and the quality of time: contested secularity in the netherlands

The Netherlands are highly secular – only one third of the population being a church member; euthanasia and same sex marriage are broadly supported – against recurrent religious opposition. In some areas though, one finds an almost reversed religious-secular setup: In the Dutch ‘Bible Belt’ orthodox reformed groups strongly influence the organization of public life. Here it is not about accommodating religious minorities – rather, given the majority religions, Christian legal traditions and the structural pluralism of Dutch secular order, these places participate religious counter culture alike.

At the same time - due to e.g. population mobility – these places are changing, thereby becoming contact zones (Pratt, 1991) of religious and secular lifestyles. Central sources of conflict are Sunday rest and religious schools. The secular-religious divide becomes more complex with regards to non-western migrant populations and their (socio-economic) integration goals. These secular-religious conflicts help discussing two central questions regarding the public sphere in religiously diverse countries: 1) what are (competing) notions of the public and how are they related to religious-secular history and 2) in what way can the state allow for multiple publics without failing to maintain social cohesion.

I discuss the conflict around Sunday openings and religious schools with regards to a changing Dutch secular model. Further I sketch how local contexts become arenas for conflict over secularity, and how these conflicts differ according to context. Based on my empirical findings I discuss the relation of secular models with religious/secular majority relations as well as the functioning of contact zones in stigmatizing secular identity formation.

transforming struggles: organizational modes, mobilization outcomes, and occupy wall street

Encampments at Zuccotti Park and elsewhere have been violently dismantled, the mass media spotlight moved on, the spectacle stopped. Fissures between different tactical and organization approaches widened. Yet, the mobilization continued through manifold spin-offs, ranging from Occupy Sandy, which provided rapid relief in response to a devastating hurricane, to groups such as the Alternative Banking Working Group, which worked on new policy proposals, and Strike Debt, which developed new kinds of direct action. Although Occupy Wall Street inspired public debate and imagination, there are hardly any tangible policy achievements while recent data point to even further increasing socio-economic inequality. Assessments of the leaderless, General Assembly-based organizational form were divided over whether these were the essence of a prefigurative politics for real change and attracting participants or whether the lengthy, consensus-requiring deliberations prevented tactical efficiency, liaisons with large unions and NGOs,
and negotiations with the political establishment to win concrete legislations. What lessons can be drawn from the Occupy experience so far? How can social movement theory help to explain the rise, fall, or metamorphosis of the mobilizations? How do existing theories need to be revised in light of the new empirical experiences and the challenges ahead? Multi-method focus on the experience in select cities shows not only enormous local variation but also varied modes of connecting sites of struggle. The paper concludes with a discussion of options for future action.

SCHULZ MEINEN, HAİMO* (University of Hanover, h.schulz-meinen@ish.uni-hannover.de)

Bothering Pays for Sociologists

Bothering pays.

Segmentary societies bear inequality. All of them. Urbanized even more. Cities have proven to be inequality carved in concrete and stone. The more abundance of material culture, the more inequality. Chiefs in tribes have to bother. They remain chiefs only if they impress bothering and solving conflicts. Bothering guels even the smallest tribe.

Today's large scale social units call themselves 'modern' to claim their qualitative difference to chiefdoms and the like. Here, nobody even considers an end of inequality, it is purely unthinkable as necessarily linked with the total dismissal of the material abundance (which could and should be achieved, plans have been made).

More, bothering has become a specialized task, a branch, a profession. Clerics (clergy men and women), pedagogics, social workers, journalists – and sociologists compete here. People who have worked in the five groups can tell. So does the author.

Empirical long-term analysis of inequality studies provide evidence that the inequality index in the researched areas and regions remain more or less the same. Meanwhile, research about the economical situation of the inequality-authors shows that more than a decent living has been possible due to the inequality studies.

Bothering thus provides access to the elites and enables a stable and good living for those who bother. This is why we bother about inequality – sometimes. Have a happy conference!

SCHUCHTER, FREDERICO* (Universidad de Buenos Aires, ffschuchter@gmail.com)

Social Movements and the Political Invention of Future. Considering Recent Argentina

During the 1990's, neoliberal policies drove Argentina to huge transformations of the state, economy and labour. The process left a large number of poor and unemployed people and concluded with a monster crisis in 2001. During that time, there was a very important change in the field of social movements. As a consequence of the neoliberal policies, labour movement (which has been the most important movement in whole country contemporary history) diminished roughly its statistical presence in social mobilization. This happened in 1993 and in 1996 a new kind of movements grew up. That was the case of territorial movements, established in the poor neighbourhoods and small towns in a few provinces. They were composed mostly by unemployed, who asked for elementary rights to survive. By the end of the century those movements (often known as piqueteros) reached the main cities suburbs and constitute the most important social and political agent in the country. Since 2003, when a new President was elected, the country began its normalization. With the recovery of employment, Unions regained strength and power, but the territorial movements, even diminished, didn't disappear. They have been recognized by political agents, some of then entered the parties, other even the state and many of them still have the capacity to mobilize and defy political system, at the local, province or federal level.

In this paper we analyse this process and consider why and how these new social movements have emerged as political agents and what influence they had in the recent political period. To do that we use a data base of our own (created by the coordination Euro-Guerrillas of Acção Colectiva y Protesta Social, that I lead). It has 10000 cases of contentious mobilization actions and goes from 1984 to 2011. The paper include statistical and qualitative analyses.

Global Garlic and Its Labor Consequences

This paper investigates the dynamics of China's integration into global commodity chains and a simultaneous race to the bottom. I explore this globalization-labor topic with a case study of garlic. Even in the garlic kingdom, the race to the bottom is visible.

1) China took off as the global exporter of garlic around 1982 and has been the dominant exporter since then. In 2009, 84 percent of the globally traded garlic came from China.

2) China's 2002 adherence to WTO allowed it to export to previously closed or high-tariff markets such as the United States. In 2002, China surpassed Mexico in capturing the U.S. market.

The race to the bottom began with North-South competition. As the U.S. economy continued to contract, firms sought even cheaper labor, moving significant parts of the production process to Asia. Such moves threatened to undermine Mexico's payoff from NAFTA. This capital mobility unleashed a race to the bottom in labor standards and working conditions. It is not possible for every nation to be a net exporter: one country's gain is another's loss. Although they do not initiate the race, governments become complicit because they, as much as foreign investors, want to hold onto their “competitive advantage” of cheap labor, lax working conditions, and lenient environmental regulations.

The South-South competition is reflected in the shifts in trade and investment flows. China's export and foreign investment gains and Mexico's losses are not simply those of two nations acting independently.

Labor conditions are oppressive, but firm owners, processors, exporters, and governments are not alone in their responsibility. "Bottoming out" is a response to global importers who search for better prices.

In this research I investigate the conditions of garlic workers in China and Mexico as they relate to U.S. producers and the import market.
ELRICK, JENNIFER* (University of Toronto, jennifer.elrick@mail.utoronto.ca)
From Statistical Category to Social Category: Organized Politics and Official Categorizations of ‘People with a Migration Background’ in Germany

Social scientists disagree over whether it is acceptable for states to collect statistical data on the racial or ethnic composition of their populations and thus institutionalize these differences. Seeking to reconcile normative concerns with political desires to combat discrimination and reduce social inequality, some countries, like Germany, have chosen the ‘migration paradigm’ (i.e. using place of birth and parents’ place of birth to focus on the act of international migration) over the ‘ethnic paradigm’ (i.e. using phenotypical markers and/or cultural and linguistic links to a particular national group) as a ‘color-blind’ measure of difference. However, while much attention has been paid to categorizations deriving from survey and census variables, debates about whether and how to measure immigrant estranged population differences often ignore other processes of categorization operating at the nation-state level, such as interactions in the arena of organized politics. In this paper, we expand the terms of the debate by examining the relationship between statistical classifications and their mobilization in political interactions, in order to examine the validity of the distinction between the ‘migration’ and ‘ethnic’ paradigms in population statistics. The category of ‘persons with a migration background’ (Personen mit Migrationshintergrund), which was introduced in the German microcensus in 2005, serves as our case study. Drawing on a qualitative content analysis of 60 parliamentary documents originating in the years 2005 to 2013, we show that the way the migration paradigm is deployed by representatives of the state differs from the statistical categorization: it is implicitly representative.

Inequalities in recognized authenticity are discursive products of the same symbolic violence necessitates expanding the Bourdieusian framework while sticking to its than embodied habitus. Studying these inequalities as a unique form of symbolic social structure, the ethic of authenticity is embedded in structures of unequal recognition, and may thus encourage actors to participate in their own subjection. Inequalities in recognized authenticity are discursive products of the same symbolic power that naturalize hierarchies, yet they rely on aspirational categories more than embodied habitus. Studying these inequalities as a unique form of symbolic violence necessitates expanding the Bourdieusian framework while sticking to its mission.

SCHWARZ, ORI* (Bar-Ilan University, pri.schwarz@gmail.com)
The Symbolic Economy of Authenticity As a Form of Symbolic Violence: The Case of Middle-Class Minorities

In contemporary societies, the language of authenticity has become central to the organization of work, manners, social ties, and most interestingly; social and moral evaluation. The paper explores how the ethic of authenticity informs symbolic economies of worth in Israel and the US. These new symbolic economies differ from Bourdieu’s: mastery of legitimate practices and dispositions may in fact enhance the social worth of some actors, but also devalue other actors, whose classed habits and identity are considered ‘inauthentic’ independently of their performance. Based on analysis of wide empirical literatures on raced and classed identities in Israel and the US, the paper explores how this symbolic economy of critical middle-class minorities. When dominant ethnic groups monopolize the symbolic recognition of authentic middle-classness, middle-class members of dominated ethnic groups are at risk of being accused of mimicry (acting white, Ashkenazization). This also applies to second-generation middle-class actors: following the racialization of class culture, their deeply entrenched middle-class tastes and dispositions may be suspected as inauthentic. While dispositions are often acquired in classed contexts and their distribution is hence class-based, the recognition of authenticity often follows race/ethnicity lines. In some cases, middle-class minorities react by investing in acquiring lower-class styles and habits that lack social legitimacy but may supply them with recognized authenticity. Far from being an emancipatory power that disembeds whimsical actors from social structure, the ethic of authenticity is embedded in structures of unequal recognition, and may thus encourage actors to participate in their own subjection. Inequalities in recognized authenticity are discursive products of the same symbolic power that naturalize hierarchies, yet they rely on aspirational categories more than embodied habitus. Studying these inequalities as a unique form of symbolic violence necessitates expanding the Bourdieusian framework while sticking to its mission.

Schwittek, Jessica* (University of Wuppertal, j.schwittek@uni-wuppertal.de)
Submit, Exit or Change: Strategies of Coping with Generational Order(s) in a Transition Society

This paper aims to conceptualizing problematic conditions of transitions to adulthood in the Central Asian country of Kyrgyzstan. Previous research in Kyrgyzstan has revealed that the social order in this society comprises a strong age and gender hierarchy. Such restrictive generational order shows as well in my qualitative study of young Kyrgyz adults. Respondents describe experiences of inter- and intrapersonal conflict when their freedom of choice (concerning study subject, marriage partner, lifestyle) is confined by their parents. While this can be said to match Kyrgyz traditions and notions of ‘collectivist’ culture, this strong power asymmetry is by no means taken as a matter of course by the interviewees. My study shows that young Kyrgyz according cope with such conflicts in a variety of ways which I divided into three categories: ‘submit’, ‘change’ and ‘exit’. The first category refers to strategies which imply the submission of the young under the rule and decisions of the elders (mainly parents or parents-in-law). ‘Change’ subsumes all those strategies with which the young manage to follow through with at least part of their personal aims, engaging in compromises, trade-offs or negotiations. With the last category “exit” I labeled attempts of full or partial escape away from the existing social order. Furthermore, my analyses indicate, that certain narratives are used to legitimize the respective strategies: While people who engage in “change”-strategies (paradoxically) often relate to traditionalized narratives, those who submit under others’ demands in most cases deploy an individualized and self-related explanation. In the paper I wish to present the above concepts more closely, and to discuss the seemingly paradox patterns of applying and legitimizing solutions of intergenerational personal conflicts. Beyond that, I would like to discuss which implications such patterns have for the potentials and barriers of social change in a so-called “transition society”.

Identifying Sensitive Questions with Non- Reactive Methods

Sensitive questions result in misrepresented responses and identifying those questions is crucial to get straight answers to sensitive topics. Using para-data as non-reactive data should reflect the uncertainty and the perceived social desirability while answering the questionnaire. By tracking response change and page change in addition to item non-response and response latencies, the researcher has a powerful tool to reveal exceptional response patterns in web surveys. In practice, these methods can also help to cut costs of further surveys that are usually used to identify sensitive questions and they can also show problems with wording and too high cognitive effort in earlier stages.

Non-reactive methods such as measuring response latencies and event tracking adds information to be analyzed without adding load to the respondents. Such events are filling in the questionnaire, for example, changing the page and selecting or changing an answer option. Tracking these events not only by time, but with multiple answers over time per item, view the process of completing the questionnaire instead of leaving the black box untouched, which is between handing out the form and getting the (final) responses. In this way it is possible to reveal answers of first choice, response change and page change as event types besides response latencies and the order of completion.

The para-data from a web survey is compared to data from a questionnaire about the perceived social desirability and threat of disclosure of the questions used in the former one. The response patterns uncovered by the event tracking should correlate with these sensitivity measurements. Sensitive questions should have, in addition to the occurrence of non-response, a) higher response latencies, b) multiple page views, c) more response changes and d) lower intra-item correlation between the first and final answer.

The Impact of Work, Family and Gender Equality Policies on Vertical Occupational Sex Segregation: Comparative Analysis Across 21 European Countries

Labour markets in Western welfare states are highly gender segregated with women concentrating in less prestigious occupations and industries and being underrepresented in top positions. During the last two decades a whole set of EU and national policies in Western European countries have been aiming at gender equality on the one hand and promoting an adult worker model on the other. While these policies can be seen as separate, the first addressing discrimination, the latter better reconciliation of work and family, they both have an effect on gender inequality in the labor market. However, little is known so far about the outcome of these policies in comparative perspective.

We will address this lacunae by looking at the impact of work, family and gender equality policies on vertical occupational sex segregation. The study starts with a comparative assessment of different welfare state regimes in terms of overall division of labour to identify the type of breadwinner model and then map the relevant recent policy reforms in 21 European countries. Special emphasis is given to policies reconciling work and family and gender equality policies. While it can be assumed that these policies have an effect on female representation on the top and middle ranges of the job hierarchy, female concentration at the lower end might be less affected. Since low representation of women at the top often is the top and middle ranges of the job hierarchy, female concentration at the lower end might face. True gender scholarship requires a more critical appraisal of gender relations that is inclusive of the male voice in family tourism. There has been whole-family research highlighting the role of fathers in taking on primary responsibilities as entertainer of the children and facilitator of mothers’ own interests (Schanzel and Smith, 2011) which requires further inquiry. However, research into fatherhood also needs to be more inclusive of diverse family forms and a range of fathering experiences, such as, solo-fathers, non-resident fathers and gay fathers. This study extends previous research into nuclear families and focuses on the family holiday experiences of fathers travelling with their children without the mother present. It is structured in an analysis of solo and non-resident fathers in Auckland, New Zealand and conducted after the summer holidays in January/February 2014. Because of the explorative nature of this research an interpretative paradigm and in-depth interviewing is chosen. The aim of this study is to understand the experiences and meanings gained by single fathers travelling with their children. The findings of this research and comparisons to earlier research on nuclear families will be presented.

The lack of research into fathers on holiday is a reminder that understandings of work research that focuses on the middle class in comparatively developed countries because it may serve as some sort of ‘reference frame’ for an improved understanding of socio-structural driving forces perceptible in developing countries. For Developing Countries

We would like to take up this understanding by contributing a piece of groundwork research that focuses on the middle class in comparatively developed countries because it may serve as some sort of ‘reference frame’ for an improved understanding of socio-structural driving forces perceptible in developing countries. With these preliminary reflections in mind, we use data of the International Social Survey Programme (2009; module “social inequality”) in order to compare perceptions and evaluations of stratification realities and aspirations. On the basis of five distinct types of stratification, respondents of 26 primarily European countries were asked for their assessments regarding the current and the desired social standing of their respective occupational group. By performing multinomial logistic multi-level regressions we identify individual- and country-level determinants.
Concerning stratification realities gender, age, education and (subjective) socio-economic status prove to be significant predictors. On the country-level, the objective socio-structural shape (income-based percentage of lower, middle and upper class), the GDP per capita and social expenditure (as a percentage of GDP) turn out to be relevant. With regard to stratification aspirations results indicate that responsible citizens in the majority of countries under study opt for a society with a broad middle segment – in fact, irrespective of any stratification realities. Thus, context effects impact solely on perceptions of stratification realities, whereas we observe a universalistic preference for the ‘middle class’ society.

In our view an understanding of the normative leaning towards the middle class in developed countries may improve the comprehension of mental mechanisms and orientations in developing countries.

SCODELLARO, CLAIRE* (Université de Lorraine, claire.scodellaro@univ-lorraine.fr)
Le “Libre Choix Des Patients Dans Une Relation Plurielle Et Diachronique

Le droit des usagers au « libre choix », tel qu’il est formulé dans la loi du 2 janvier 2002 en France, semble sous-tendre que les patients s’inscrivent dans une relation duale avec les médecins au sein de laquelle ils seraient des sujets singuliers, raisonnables et autonomes dans leurs décisions. Les travaux sociologiques ont cependant montré d’une part que la réalisation de ce modèle bête contre des obstacles notamment liés à aux positions de classe, genre et âge des patients et aux situations de crise qu’ils rencontrent ; d’autre part que les maladies sont rarement traitées dans leurs parcours de soins mais souvent aidés par des membres de l’entourage. Quant aux décisions des médecins, elles sont de plus en plus fréquemment prises en équipe pluridisciplinaire. Nous faisons donc l’hypothèse que les décisions de soins doivent être analysées dans le cadre d’une relation plurielle autour du patient, qui questionne la voix au chapitre de chaque acteur.

Par ailleurs, techniquement révocables à tout moment, ce qui invite à les analyser de manière diachronique.

Notre recherche porte, dans ce cadre, sur les décisions de primo-entrée en hospitalisation à domicile (HAD) et de sortie du dispositif. En fort développement en France sous l’impulsion des pouvoirs publics, l’HAD est censée constituer une solution économique pour les finances publiques et répondre au souhait des patients et aux situations de crise qu’ils rencontrent ; d’autre part que les maladies sont rarement traitées dans leurs parcours de soins mais souvent aidés par des membres de l’entourage. Quant aux décisions des médecins, elles sont de plus en plus fréquemment prises en équipe pluridisciplinaire. Nous faisons donc l’hypothèse que les décisions de soins doivent être analysées dans le cadre d’une relation plurielle autour du patient, qui questionne la voix au chapitre de chaque acteur.

Par ailleurs, techniquement révocables à tout moment, ce qui invite à les analyser de manière diachronique.

SCOTT, BERNARD* (Centre for Sociocybernetics Studies, bernces1@gmail.com)
Reflections on the Sociocybernetics of “Cybernation” and the Emerging “Cyber-Nation”

The term “cybernation” refers to the existing and imminent cybernetic technologies of control and communication, data storage and retrieval, social media, user modeling and intelligent support for man-machine conversational interaction. The term “cyber-nation” refers to the emerging internet-based communities that promote social change and, explicitly or implicitly, practice forms of non-hierarchical (hierarchical) democracy. Well-known examples are Wikipedia (http://en.wikipedia.org/wiki/Main_Page), Avaaz (http://www.avaaz.org/en/) and Change.org (http://www.change.org). A less well-known example is the Zeitgeist movement (http://en.wikipedia.org/wiki/The_Zeitgeist_Movement), that developed from the Venus Project (http://en.wikipedia.org/wiki/The_Venus_Project), initiated by the late Jaques Fresco and Roxanne Meadows. Fresco coined the term “sociocybernetics’ (there is a Facebook page dedicated to his work (https://www.facebook.com/pages/SociocyberneticsIn-world-a-better-place/175409582507177)). A well-known example of an hierarchical organisation that works towards social change through cyberspace is Google (http://www.google.org/). There are many other organisations that use the internet to promote their particular vision of global harmony and utopian futures. A useful list can be found here: http://www.peoplefromharmony.org/?cat=en-1. Questions addressed in the paper include:

- What is the current state of play?
- What does the future hold?
- What influences are at work in terms of checks and balances on privacy and social control?
- Who owns cybernation (hardware, processes, data)?
- How viable is the concept of a cyber-nation in the context of existing dominant belief systems and institutionalised practices?

Border Regimes in the European Neighbourhood: Is Their Multilevel Negotiation Possible?

Tensions between securitisation and cross-border interaction have been a major focus in many European border studies - particularly as a result of human suffering and deaths of immigrants “sans papiers” attempting to enter the EU from the South and East. Perceptions of a Fortress Europe and a unilateral imposition of border security regimes in many ways challenge the European project of cross-border and regional partnership with its neighbours. As part of the negotiation of such regional partnerships (e.g. within the scope of the European Neighbourhood Policy - ENP) security and border management have been defined as policy areas conducive to “co-development” and, to an extent, “co-ownership”. Yet it is unclear to what extent a true multilateral and multilevel process along these lines has materialised or is indeed possible under present circumstances. The paper will explore the evolution of new border regimes between the European Union and its eastern neighbours. It investigates the negotiation of border regimes between the EU and Russia, Ukraine and Moldova, we will identify to what extent the co-ownership and/or co-development of border policy has been possible. Do EU and its neighbours indeed share common interests in terms of border-related issues, including security? We will also investigate the extent to which local development concerns have been considered as part of negotiating such border regimes and the possibilities for greater local participation in future.

In the Middle or in a Muddle: Socio-Cultural Politics and the Indian Middle Classes

The state of middle class culture and politics in India is complex and often contradictory. While many among the estimated 200 million middle class have ethical and economic concerns, the social mobility over the past 20 years, large numbers of salaried professionals in government service and small companies have seen their status and incomes decline relatively over the same period of time. As such, we see notable schisms within the middle class: the new rich and the entrepreneurs as compared to traditional salaried workers; the middle classes in India’s many regional towns, as opposed to those residing in vast urban metropolises; and differing cultural outlooks from generation to generation, region to region. Interesting political differences are also evident with many of the “traditional” middle classes, for instance, exhibiting a cultural conservativeness while holding politically progressive views. Based on extensive research among the Indian middle classes over the past 15 years, I contend in this paper that the middle classes are not homogenous, are deeply divided politically and culturally but nevertheless they remain significant as brokers of political and cultural change within India. Examples drawn from Kolkata and Darjeeling in West Bengal will be the basis for the discussions in this paper.

The Paradoxical Politics of South African Labour: Unions and the Fight Against Precarity

As neoliberalism has undermined formal wage work across the global South, labor scholars have increasingly turned their attention away from organized and formally employed workers and towards the growing sections of the ‘precariat’. A large literature has blossomed examining the politics of precarious, informal, and non-traditional workers. Behind this precarious turn in labor studies is an assumption that these workers will be the primary source of a new labor politics that looks beyond issues of wages and working conditions and towards broader questions of livelihood and social reproduction. However, in South Africa, while precarious workers’ movements have remained disparate and unorganized, formal workers unions have taken up a range of issues—such as a universal national health insurance, a basic income grant, and land reform—that constitute a new politics of the precarious. This is surprising given that many of the policies that unions advocate would involve the subsidization of precarious workers’ livelihoods by the minority of formally employed organized workers. In order to explain this paradox the paper draws on nationally representative household survey data as well as one year of field work in three rural areas and one major urban center. The data show that the decline of formal wage labor has led to an increasing social and economic interdependence between large sections of South Africa’s precarious and formally employed workers. The case shows the importance of understanding the ways in which the rise of precariousness has reshaped not only work, but also workers’ house-
holds and broader social lives. It also shows the role that "old" organizations can play in the "new" politics of labor.

*The Triangular Relations of Society, State, and Market in the Context of the Processes of Contestations Between Globalization and Decentralization: A Sociological Perspective*

This paper gives a general description of the triangular relations between Society, State, and Market from a Sociological Perspective. Within the context of this triangular relations, a major challenge facing contemporary Indonesian Society will be explored, which is the social problem of Poverty and Social Exclusion. Before understanding the relations between Society, State, and Market as a conceptual analytical tool for explaining poverty and social exclusion, there are several important caveats to be addressed. These important caveats are related to the relations between Nation-State, and Nationalism within the context of the processes of contestations between globalization and decentralization (democratization on the local level). The discourse on nation-state and nationalism within the contestations of globalization and decentralization in Indonesia is a highly significant social and political context if the major social problem of poverty and social exclusion can be explained and solved from a sociological perspective. The paper is based on primary data using qualitative methodological approach and a specific case study from Indonesia.

**SEDA, FRANCISCA S. S. E.* (University of Indonesia, saverio09@yahoo.com)**

*When There Is No State*

The Decentralization processes in the context of this case study have not yet resulted in a more flexible and decentralized structural relations between the Central Government and the Local Governments (both at the Provincial and at the Regency Levels) generally and also specifically in the Industrialization Strategy in the Oil and Gas Sector (1999-2009). The triangular relations between the State, Market, and Society are fluid and internally fragmented within each pillar and externally contested between the three pillars. Inclusive policies by the local governments have not yet been effective and externally contested between the three pillars.

The relations between the local communities and the local government are not as strong nor as dependent on compared to the relations between the local communities (especially DAV) with the MNC (BP). Collective actions are sporadic, not as strong nor as dependent on compared to the relations between the local governments need to have a clear and more inclusive policy focusing on the local communities welfare, including immigration policies. The MNC (BP) Programs need to take into reconsideration the categorization of DAV and IAV local communities and the internal fragmentation within these communities.

The relations between the local communities and the local government are not as strong nor as dependent on compared to the relations between the local communities (especially DAV) with the MNC (BP). Collective actions are sporadic, so far only the IAV local communities have done so against the MNC (BP). At present, there is no indication yet of any process of social movement in the making on the local level.

The condition of no real role carried out by the State in the context of decentralization and industrialization strategy in West Papua can be traced back to several factors. These factors are the relations between natural resources and development, the process of decentralization, and the specific nature of the BP Tangguh Project in The Bay of Bintuni regency.

*Getting (in the) Sack(ed). Gender Domination and Male Honor*

Three years ago an American college girl presented a sort of replica of an academic essay evaluating like a professor would do to his/her students male sexual partners evidence, which is the social problem of Poverty and Social Exclusion. It got out of hand in no time. With considerable discomfort building up (in the networks she was implicated in), soon she was forced to apologise to everyone involved, namely her sexual partners, and remove her outrageous paper from public sphere. What was so ignominious about her conduct, one might ask. In other words, what contemporary and social aspects, personal and private, of mankind where unsettled by miss Owen's daring? Was it simply a matter of a diffuse moral memory bank as well as the way in which learners process information. Individual programme seeks to understand; the learners style; the attention span; the possible tenure-taker of gender relations.

This paper will be discussing is that the choice of football is, at the same time, a strategy to extend and to accomplish a fulltime identity that often is not allowed to be expressed within the more conventional professional spheres; and a decision that shows new ways for young people to cope with uncertainty in transition to the labour market and to adulthood.

*Mobilising Migrant Workers in the South African Post-Migrant Labour Regime: Precariously, Invisibility and Xenophobia*

The critical role played by the migrant labour system in allowing formidable levels of accumulation in core sectors of the South African economy (mining, agriculture) has been documented extensively over the past 30 years (First et al., 1972, Burawoy 1976, Legassick & Wolpe 1976, Arrighi et al., 2010, Crus, 2007). The mobilisation of this migrant workforce from within and beyond South African borders and its critical role in the emergence of independent Black unions in the
unions have learned to incorporate environmental concerns in their campaigns. This presentation describes some successful red-green alliances in Latin America, exploring the implications for labor strategies more broadly.

Maintaining Identities of Distinction in Taiwan through the Foregrounding of Linguistic Abilities

In his seminal work Distinction: A Social Critique of the Judgment of Taste, Pierre Bourdieu demonstrates how the cultivation of taste serves to reproduce class differences in society. In this talk, I argue that class divisions are similarly being reproduced today based on proficiency in languages of wider communication – particularly English. After discussing the mechanisms by which identities of distinction (or any identities, for that matter) are produced in interaction, I will present interview data from a longitudinal multi-case study illustrating how this process of practices and performance indexing dominant ideologies plays out in Taiwanese society. The study’s multilingual Taiwanese participants repeatedly point out instances in which they have distinguished themselves from those around them through their use of and (relative) proficiency in English (and to a lesser degree, French). For these participants, images of themselves as more worldly and sophisticated than their peers started to be nurtured quite early in life through tuition classes and private tutoring, and from that point on, they continuously struggled to maintain these identities of distinction, often resorting to performativity to foreground their linguistic practices. These participants, however, viewed their differentiated status as something acquisitive, for accompanying their repeated reports of attempting to stand out through English use was a frequently expressed anxiety about the fact that their English abilities alone might not continue to adequately differentiate them from others, particularly in the employment arena, as more and more Taiwanese gain English proficiency.

A Paradox of Coercive Power: Institutionally Founded Power Relationship and Rationality of Action

Reviewing the literatures on social power, it is found that so many different kinds of power concept as well as measures of magnitude of power have been proposed. Hence, without an appropriate specification of power concept, no meaningful analysis is possible. This research focuses on the coercive power which is defined as follows; an individual A is wielded a coercive power by B when A is forced to choose an action x which she/he would not choose if B’s action following A’s action were somehow different. In other words, B forces A to choose x by preparing a punishment to A’s non-x choice. (Strictly speaking this is “negative” coercive power. There is also “positive” one in which B prepares a positive sanction to A’s choice of x.) This concept of coercive power involves individuals’ rational choice; A is forced to choose x because it is her/his rational choice under a given situation.

It is frequently supposed that a power relationship is asymmetrical in which the power holder and the power subordinate are fixed. If A is the power subordinate in relation to B in one situation, this asymmetrical relationship applies to other situations. Especially, if the relationship is institutional, that is, if it is institutionally stipulated that B is entitled to control A’s action by preparing a punishment to A’s normatively deviant action, B is identified as the power holder in relation to A.

However, there are paradoxical cases in which the presumed subordinate A can control B’s sanction schedule in such a way that B is forced to choose a sanction which does not punish A’s deviant action. This happens because B also has to choose the sanction rationally. This study shows the mechanism of this paradox and analyzes mathematically the conditions that this paradox emerges,

SEKINE, KAE* (Rikkyo University, kaesekeine@pk9.so-net.ne.jp) BONANNO, ALESSANDRO (Sam Houston State University) Labor Relations, Neoliberal Agri-Food Policies and Disasters in Japan

This paper probes the issue of changes in the agri-food labor structure under neoliberal globalization. Employing two cases from Japan, the paper documents the lost rights of independent farmers and their replacement by hired labor. This process, it is argued, was accelerated by the implementation of neoliberal policies and by the effects of natural and human-made disasters that affected Japan in recent years. More specifically, this work illustrates: 1) the manner in which neoliberal agri-food policies engendered changes in agri-food labor relations; 2) the characteristics of the new forms of social relations under neoliberalism; and 3) the specific alterations of labor relations that occurred in the aftermath of recent disasters in Japan. In the first of the two cases presented, labor relations in farms controlled by the transnational corporation, Dole Food Company, are illustrated. The second case analyzes the neoliberal agricultural reforms introduced in the aftermath of the March 2011 earthquake. Also considered in this case are labor relations in the fishing sector and the responses of fishermen to the neoliberal reforms of the sector.

SEKULA, PAULINA* (Jagiellonian University, paulina.sekula@uj.edu.pl) CEDAW As an Instrument to Foster Women’s Political Equality in Central and Eastern Europe?

All countries of the Central and Eastern European region adopted the Convention for the Elimination of All Forms of Discrimination Against Women. Its implementation in these countries can be seen not only as a fulfillment of social justice but also as one of the mechanisms of democratization. Based on the comparative analysis of the official country reports and information delivered by non-governmental organizations the impact of CEDAW on the implementation of gender equality in new European democracies will be assessed. The special attention will be devoted to the problem of the enhancement of women’s political rights in Central and Eastern European democracies. What it means to implement the provisions of the CEDAW concerning political and public life in these countries? Can there be seen progress in their implementation? Is the Convention (and if yes, in what ways) used by women’s organizations in order to demand institutional measures to strengthen women’s representation in political institutions? Is CEDAW a point of reference for those who argue for legal changes – including gender quotas and zipper system – to help increase women’s political representation? Is the Convention a tool used by these actors who engage in supporting women deciding to be politically active both on local and national levels? What are the similarities and differences between the countries of the region in implementing the Convention and its promotion as a tool of effective social change leading to women’s political empowerment?

SELIGMAN, ADAM* (Boston University, seligman@bu.edu) Trust and the Problem of Boundaries

This paper analyses the boundaries of trust which divide communities of belonging, moral credit and risk, from communities of knowledge, strangeness and security. It will discuss the ambiguous and hence threatening nature of boundaries and the consequences of this on constructing trust and solidarity across communities of difference. It will further query the sufficiency of liberal individualists’ models of personhood and community to overcome what is one of the most serious social challenges of our time.
However, the complete recording of one’s life brings up new questions about personal information management and emerging inequalities. Cases studies of methodological, epistemological and social aspects of lifelogging already show fundamental concerns about the relationship between one’s own life and the data set created by liflogs. Critics warn that people using lifelogging and producing large amounts of data throughout their lives might become unwitting subjects of surveillance.

The critical discussion of lifelogging refers to the theory of “shifting baselines”. Three main shifts have to be considered: 1. From subject to object (loss of individualism). 2. From action to function (loss of autonomy or agency). 3. From privacy to post-privity. "Technoapartheid", "over-diagnosis", the standardisation of human behaviour, the emergence of new social norms and the shame punishment of deviant people are examples of new inequalities caused by extensive lifelogging. Against a background of research projects on media of the future and empirical data, this paper discusses lifelogging as a controversial issue, focusing on the role of recently developed digital devices. Even if related developments in the area of lifelogging are not yet in the public domain, important questions about shifting boundaries are emerging and need to be discussed.

Aged Population and Social Disability in Rural South India: The Social Exclusion and Inclusion Perspective

Ageing is a natural process that begins at birth, or to be more precise, at conception, and a process that progresses throughout one's life and ends at death. With prolonged human life, reduced mortality and fertility rates due to recent developments in science and technology, ageing has become a global phenomenon in the 21st century. World Health Organisation (WHO) views ageing as a privilege and a societal achievement. This process started in developed countries and slowly shifting to developing countries like India with increase in number of graying population. Elderly life is considered or assumed as a burdened life, full of struggle, illness, depression, exploitation, abuse etc. Traditionally, the joint family took care of the aged but rapid urbanization and the migration of persons from rural to urban areas have created a vicious situation. In the absence of the ability to earn, and with little or no community support, in the form of kinsmen or the extended family, the aged are rendered destitute. It is also evident from Indian data that 40% of the elderly live below the poverty line and 90% are neither covered by any state pension nor have any family to take care of them. Increased rate of survival beyond 60 years have implications for financial burden from both family as well as state. Social disability is the unproductiveness, redundancy and social maladjustment to the environments. This paper aims to underpin the socio-economic inequality that exists among the elderly population and causes social disability. Also it exposes the determinants of poverty and discrimination among elder people in the study area. And analyze about the social, economic and psychological problems experienced by old persons and advocate an action plan for effective implementation of welfare, care and support of the aged populations in the study area as part of social intervention.

International Tourists at a Japanese Festival

The paper concerns the experiences of international tourists visiting a traditional festival in Japan. The festival, Tsukuda Ōmatsuri, is a shrine festival held every third year in August in an old neighborhood in Tokyo, and attracts thousands of spectators and tourists. I have had the privilege to observe this festival for three years. Over the years the festival’s relationship with tourists has changed. At one time during the 1990s, when the local area was threatened by urbanization, tourism was encouraged to boost political support and protection. Once the area avoided demolition, the crowds of tourists were seen as disturbing to festival performances, and the festival was no longer advertised for tourism. In spite of this, tourists continue to visit the festival in great numbers, mostly Japanese, but to some extent also international visitors. Contrary to expectations the decision not to promote the festival or encourage tourism has not diminished its value as a tourist experience. People appreciate the lessened crowds and heightened authenticity of getting closer to local performers and events. Also the few international visitors who come feel that they get a better understanding of the festival than international tourists who come feel that they get a better understanding of the festival than international tourists.
an increased interdependency and competition between external and internal labour markets is proposed. More than forty years later we reconsider the relevance of Internal labour market theory (Doeringer, Piore 1971) from a contemporary perspective. The strategic use of core-periphery has shifted towards market-mediated employment relationships and affects indifferently high and low-skilled sectors. This issue is part of the wider socio-economic debate on inequality associated to labour and ranking and sorting process in labour markets (Granovetter, Tilly 1988). Many European countries have undertaken reforms in order to increase flexibility. From this perspective the framing refined by Varieties of Capitalism (VoC) literature has been evolving, as companies situated in different countries facing the global competition - seem to be adopting similar employment practices. Recent studies (Herrmann 2008) showed the ways by which firms can compete circumvent pragmatically their own rigidities though functional equivalent practices, by using and standardizing different types or inputs or implementing the required skills into international labour markets. Firms seem to be doing what their institutional contexts do not encourage.

We consider new forms of division and distribution of labour between firm-based and market-based labour force and their social implications, from the key point that skills and competences are crucial factors of productivity and competitiveness. Following Streeck’s contemporary Durkheimian interpretation that “economic efficiency is to an extent conditional on the effective enforcement of social constraints” (Streeck 1997) we aim to better understand if there is a sort of collectiveness .

point that skills and competences are crucial factors of productivity and competitiveness. Following Streeck’s contemporary Durkheimian interpretation that “economic efficiency is to an extent conditional on the effective enforcement of social constraints” (Streeck 1997) we aim to better understand if there is a sort of collectiveness. Awareness of the reduced social value of work or if, in alternative, companies are robustness” (Streeck 1997) we aim to better understand if there is a sort of collectiveness .

Globalization of production has yielded contradictory consequences to the lives of women workers who question about gender justice. Supporters argue that globalization ensure gender justice because it brings positives changes to lives of women workers in various forms, like, expansion of employment opportunities leading to income earnings (Barrientos, 1995; Razavi, 2001; Kabeer, 2004), break- ing patriarchal bond (Lim, 1997), growth of self-awareness about rights and duties and participation in collective bargaining association (Gills, 2002), shifts in gender roles and value structure, reconfiguration of the public-private and production-reproduction dichotomies (Umi, 2002). On the other hand, critics reject the claim of economic benefit of women; rather state that it is pushing women into more vulnerable situation than they were before (Boserup, 1970; Elson and Pearson, 1981, 1997; Nash and Fernandez-Kelly, 1983; Acker, 2004; Caraway, 2007). They argue that working conditions and labour rights in global factories are characterized by unjust labour practices, such as insufficient wages, extremely long working hours with minimum compensation, lack of occupational safety and health, little access to maternity and childcare benefits, arbitrary punishment and workplace harassment, absence of union and low workers’ participation, presence of forced and computed work and exploitation. Bullying is a serious issue and evidence from Readymade Garment Industry of Bangladesh, this paper explores that gender justice is yet to achieve at the global factories following the conceptual framework of social justice by Amartya Sen (Sen, 2009). This paper concludes that labour justice can be ensured if all local-global actors (state, employers, employees, corporations, NGOs, consumers’ groups) play responsible and ethical role towards unfortunate workers.

A City, Two Neighborhoods, Ten Years: Observing Gentrification before and during the Crisis

In gentrification studies most of the empirical literature draws on in-depth analysis of single case study or on multi-site comparative analysis having time as a fixed variable. This paper aims at introducing and problematizing the time dimension as a comparative analysis. The paper we propose here is based on a double fieldwork in two neighborhoods of Torino, Italy, known as Quadrilatero Romano and San Salvario, that have been facing gentrification from the early Nineties up to recent times, following one another as subsequent targets of public interventions and market dynamics. The time-span of more than ten years allows us to compare and major conclusions on the overall regeneration of the city of Torino, the role of gentrification in theremaking of the central city and the effects of the financial crisis on households, commercial activities and the image of the city.

The data are qualitative, mostly fieldwork notes, interviews and observations. The contributions of this paper are both theoretical and methodological. On the one hand , it offers new understandings of fourth-wave gentrification phe...
as in science fiction the methodology is based on empirical socio-spatial findings (knowability), technological projection, epistemological growth and speculation regarding potential tangents and tipping points. The ability to act positively towards desirable futures is deeply embedded in possibilities of change, identifiable trajectories and an acknowledgement of the fact that cities and society continually transform. Paralleling urban change in context of resilience (Walker et al., 2004)(Holling, 1996), adaptation and assemblage (DeLanda, 2006), potential urban futures become the space of socio-spatial speculation and resultant action.

SENOO, ASAMI* (Osaka University, smile1027as@gmail.com)

"What I Want to Do" As a Form of Strategy to Survive on the Job-Hunting Process: The Case of Japanese University Students

In Japan, university students are facing challenges to get a job today. For example, only 60 percent of university graduates can find a full-time job now. Many quantitative researchers conducted researches on job-hunting for university students to understand how social structure impacts the job-hunting process. These studies pointed out that the labor market requires university students not only to have a better educational background but also to have higher motivation, like "yaritaikoto (what I want to do)", because the labor market requires them to work for other reasons besides money. However, no one has analyzed how the word "yaritaikoto" has been used by students.

My research aims to describe the job-hunting process for Japanese new graduates by analyzing the use of word, "yaritaikoto." I conducted interviews with 11 students who were in the middle of job-hunting activities. Each person was interviewed two to four times during February to July in 2012. Using Goffman's "warm-up" and "cool-down" theory (Goffman, 1952) as an analytical framework, I shall raise the following points. First, they used the word "yaritaikoto" to warm themselves up to get into job-hunting mode; however, many of them failed in job competitions. Second, they let themselves cool down their "yaritaikoto." Third, they changed the meaning of "yaritaikoto", reinterpreted it and warmed their "yaritaikoto" up again for the next competitions. Therefore, students have to continue to change their "yaritaikoto" during the process until they get a job. It is hard for them, however, to deny their "yaritaikoto" and adapt to the job market. Students need the competition to survive in job-hunting competition, but not in their real lives, which means, interestingly, that they are not able to meet the expectation that the labor market has for them as long as they use the word.

Consolidating Patients' Rights in South Korea: The Case of the Breast Cancer Patients' Movement

The promotion of patients' rights and quality care have been rapidly spreading in South Korean hospitals since the 1990s. The most conspicuous method that the labor market has for them as long as they use the word "yaritaikoto" is "itaitoku (what I want to do)". Conducted by class and other contradictions, the technological and industrial transitions involved in the collapse of 'heavy' modernity and the emergence of more 'liquid' forms, and by globalization, including global modernisation and the globalisation of capital. Youth work emerges in the flux of those contradictions. The paper explores the responsibility for youth workers to partner with young people to manage and challenge the conditions of their disenfranchisement and to find compensatory processes which facilitate young people's renewed agency.

The Post on Social Network Sites: The (Dis)Embodiment in the Digital Era

Private archives (the letters and photos of ordinary people) have been an invaluable resource for historians, biographers and researchers of society. Since few of these archives of the social networking sites was being analyzed by correspondents, future researchers will have fewer writing documents as source materials than in the past. Digital writing and images have no physical substance. To some degree, then, we may be returning to the pattern of oral cultures: much digitally expressed cultural activity will leave no record.

As the popularity of online social networking like Facebook sites grows, so do concerns about the impact of such sites on the process of cultural memory construction. Our research has concentrated on the presentation of the past of Russian elderly (60+) through social networking profiles (our subjects are two modern Russian social networks "Vkontakte" and "My Former Classmates"). This study has looked at social networking profile pages as a single text including iconic, audio and textual elements.

We analyze two strategies of networking which are characterized of senior users. The first important characteristic of old people sites is the way personal information, which is generally described as "yaritaikoto" (what I want to do)". They changed the meaning of "yaritaikoto", reinterpreted it and warmed their "yaritaikoto." This strategy shows contradictory intentions of elderly who "play" with time changing the personal contemporary image. Deep interviews with senior users help to reconstruct some practices in situation if the profile owner died.

We discuss inequality problem in terms of "digital divide" and "power over time" between elderly who use new technologies and non-users.

New and Old Path to Economic Power: Social Origins and Recruitment of Managing Elites

The transition to the new century in Latin America display several changes and challenges. Democratization processes had to overcome multiple economic and political crises, left turn over and new economic growth cycle. Despite of Uruguay is a small country has high human development and outstanding democratic legacy in Latin America. As well as many countries during the last decades had many political and economic changes.

Economic globalization in the last two decades modifies the structure of economic power and impact into business elite integration. On the one hand, the increasing influence of the transnational companies rose to new managing elites. Corporate elites are based on cultural capital background, economic and political capital background. On the other hand, the traditional entrepreneurs recruited through family prestige and inherited capital, exclusive business membership and local networks linked to political power.

Moreover, the left turn over in Uruguay had several consequences on recruitment of management elites based on trade union and political capital background.

The study inquires about recruitment processes and careers of senior managers (CEO, MD). The paper identifies business elites’ relationship (social origins, family, education, work, leisure time) and political networks. The study researches

SERRA, MICHELA* (RC47 Social Classes ab, serramikela@libero.it)  
The Movimento 5 Stelle (M5S) Between Populism and Direct Democracy  
This article presents a study on the Movimento 5 Stelle (M5S), founded in Italy in 2009 by the comedian Beppe Grillo. The elections of February 2013, established the success of this movement that with a result of 25.5 per cent, has placed 163 members in Parliament between Deputies and Senators. 

The Movimento 5 Stelle promotes initiatives to bring citizens at the center of public life through practices of direct democracy, while undermining the crisis of representation of the traditional political parties. 

The study is aimed at understanding the political, social, cultural meanings of this movement and in particular it examines the way in which its members oppose to and are distinguished by the traditional parties, in facing and developing interventions through participation and direct democracy in the fields of interest of the movement, namely energy, water, waste collection, connectivity, social services. 

The Movimento 5 Stelle will be analyzed through three dimensions: the space represented by the online Beppe Grillo’s blog, the online and offline meet up tools and the institutional places. The work is also interested in showing the controversial elements of the movement in relation to the presence of a charismatic leadership, the intolerance towards dissenting voices, the emphasis on the democratic nature of the network, as well as some populist features such as the opposition people versus elite, the simplification of the social and political reality. 

This study suggests an interpretation of the Movimento 5 Stelle as a controversial political and cultural movement that in some ways can be considered populist.

Managerial Doctors: Medical Technocracies Revisited  
Across European countries, the relationship between professionalism and managerialism indicate new emergent configurations of hybrid professionals and mixed forms of governance in health care. Studies concerning Portuguese case (Serra, 2010; Carvalho, 2012; Correia, 2012; Kuhlmann, et al. 2012) show a specific situation due to the power the medical profession stills to exert over health regulation. Definitely, doctor's influence on state regulation seems to counter the dynamics that have been described in sociology of professions and organisations, which point out the increasing criticism of medical autonomy, the growing managerial control over medical authority and the state regulation of medical procedures.

In Portugal, the control of technologies is an example of the intersection between state and medical regulation. Serra (2010) had already described different systems of governance based on the physician's technical skills in a given medical area of expert knowledge (medical technocracies); systems in which medical experts are in control and where decision-makers are selected on the strength of their degree of skill and qualification.

Also, the need for public investment coexists with the relative inability to maintain the state's regulation over the effective control of medical technologies. For hospitals and medical specialties in particular, the domination of a technology is important insofar as it boosts the self-regulation mechanisms of the profession which also allow the organisation to attract investment that brings greater financial sustainability. From the notion of medical technocracies (Serra, 2010) the aim of this paper is to look to key question of technological dependence and the control of management instruments by medical profession, which allows medical procedures to meet the demands of the 3Es – economy, effectiveness and efficiency (Rimécy, 1994) and, simultaneously, boost the self-regulated professional power, defined as medical technocracy. To a certain extent, it is the increasing introduction of NGP criteria that strengthens medical technocracy.

Redefining Gender Reform in Indonesia: Oligarchy and Exclusion of Marginalized Women

Gender reform is regarded as a precondition for democratization since it results in women's empowerment. In Indonesia, gender reform implicated in gender mainstreaming policy and affirmative action policy which assure women across classes and ethnicities and as significant beneficiaries of democratization that is currently taking place in the country. This study examines the impacts of gender reform policy toward marginalized women. Using Banten, a province headed by a women governor, as a case, this study employed a qualitative method (i.e. FGD and in-depth interviews) for its data gathering strategy. This study indicates that gender reform policy has mainly benefited the elite women. They have captured local discourses on women political participation and gender mainstreaming programs through the practices of oligarchy and control over resources in various domains. Moreover, the elite women have used their access to political power for continuing practices of nepotism, corruption, and the accumulation of the ruler's wealth. As the consequences, marginalized women, particularly the poor, have been excluded from the access to political and economic resources. Gender reform policy has not yet contributed to the transformation of marginalized women to have a better living. This study contends that women are not a homogenous entity. Their gender identity intersects with class, ethnicity and other identities. Accordingly, women have various interests and regard gender reform as opportunites in different ways. Hence, the practice of oligarchy done by women elites has confirmed the heterogeneity of women based on their intersectional identities. Therefore, gender reform policy promoted by the Indonesian government, does not necessarily benefiting all women citizens in equal basis.

SEVILLA, ALELI* (Miriam College, Quezon City, Philippines, aleli.sevilla@yahoo.com)

Attitudes, Motivations and Barriers Among Third Age Learners Toward Lifelong Learning and Education

With the advent of the growing ageing population, the focus on lifelong learning for older adults known as – third age learning, later life learning and adult education, has emerged in the past decades. In the Asia Pacific region, especially in the Philippines and other developing countries, old age and ageing issues have received minimal attention from government, social thinkers and educators. Lifelong learning and education opportunities for ageing have not been a high priority.

This study aims to explore the interplay between and among attitudes, motivations and barriers of third age learners toward lifelong learning and education. A three- part questionnaire was administered to third age learners to describe the understanding of their attitudes, motivations and barriers. The instruments were validated by experts in adult education. These were analyzed through the use of factor analysis. It was noted that although many now advocate the need for education and learning over the life course, it is becoming increasingly clear that the attitudes of third age learners toward lifelong learning are key to developing such educational opportunities. This study has shown further that having a positive attitude does not necessarily mean that they will participate in lifelong learning rather they have to be motivated. Two intentions for pursuing lifelong learning appear to motivate third age adults to seek educational and learning opportunities: instrumental ambition and expressive aspirations. Finally, findings also identified barriers that prevent the third age adults from accessing and participating in lifelong learning. Results of the study provided a clearer understanding of the third age learners and valuable insights for social gerontologic educators in planning and designing a more relevant and functional future lifelong learning and education programs for third age learners.

SEVÅNEN, ERKKI* (University of Eastern Finland, erikki.sevonen@uef.fi)

Knowing Society through Literature

It was in the 19th century that novelists such as Honoré de Balzac and Émile Zola, two leading figures in French and European realistic-naturalistic literature, saw their own literary creation as an imaginative or “experimental” way of studying society. At this stage, sociology - literature’s competitor in the field of societal knowledge - was a dawning discipline whose position in the academic world was insecure. At the beginning of the 20th century it became a legitimate discipline, still it would not gain a monopoly in relation to questions regarding societal knowledge.

In addition, literature offers insights into society. In his Temps et Rêve (1983), Paul Ricoeur speaks about triple mimesis. In their social interaction people create institutions, rules, common meanings, myths, and representations of the world (mimesis 1). At the next level (mimesis 2), popular stories, literature and other arts describe the first level and take material from it when creating fictional or alternative worlds. Thus, these cultural products give us representations of society and a more or less critical sense of alternative worlds, whose order differs from the normal societal order. Finally, readers or receivers (mimesis 3) recognize that these products function simultaneously as representations of the real world and as critical deviations from it.
Literature's cognitive function does not, however, limit itself to representation-al knowledge and alternative or utopian world models. Literature is not a mere description of society; it also shows how people experience their lives in society - or how they experience society's economic and political structures that cannot, as such, entirely be an object of literary description.

Consequently, literature is a fruitful research object for the sociology of knowledge and the study of ideologies. Likewise, it can be utilized as a documentary material in social-historical research.

SEZERINO, GLAUBER* (École Hautes Études Sciences Sociales, g.bresil@gmail.com)

Pierre Monbeig: Les Différents Traits D'Un Entrepreneur Scientifique

En 1957 la création à l'Université de Paris de l'Institut des Hautes Études de l'Amérique Latine visait à donner plus de visibilité scientifique aux études sur cette aire culturelle jusque-là peu développée. Depuis sa création et jusqu'à 1977, cet institut a été dirigé par Pierre Monbeig. Géographe de formation, il a été ensuite futur Directeur Adjoint pour les Sciences Humaines au CNRS et créateur d'une importante plateforme institutionnelle pour les études latino-américaines en France, le Centre de Recherche et Documentation sur l'Amérique Latine. L'analyse de la trajectoire de Pierre Monbeig est particulièrement révélatrice des dynamiques, à la fois sociales et scientifiques, visant à développer les échanges entre la France et le Brésil. Notamment lorsqu'on se penche sur sa participation dans la création des institutions responsables pour des échanges scientifiques et universitaires. D'une part, son rôle précurseur pour la géographie humaine au Brésil grâce à son séjour avec la mission française ou encore son mandat comme président de l'Association des géographes brésiliens entre 1936 et 1946, sont révélateurs d'un projet visant le rapprochement scientifique et institutionnelle entre les deux pays. On peut s'interroger également sur son rôle particulièrement actif en tant que maillon fort d'une « chaîne de savoirs » de toute une génération des géographes brésiliens et français et « patron » d'une école de pensée sur les franges pionnières qui est loin d'être négligeable. D'autre part, son séjour au Brésil ne le permet pas de participer activement dans le processus d'autonomisation de la géographie en tant que discipline universitaire vis-à-vis de l'histoire. Or, l'hypothèse est qu'en occupant une position marginale dans le champ en raison de cette expérience à l'étranger, Monbeig s'est orienté vers l'international. L'analyse de sa trajectoire offre l'occasion de saisir les mécanismes institutionnels à l'œuvre dans la création des nouveaux réseaux scientifiques.

Model Of Happiness In The Former USSR Countries

The phenomenon of happiness being studied by scientists from different fields of science, the concept of “happiness” is multifaceted and polysemic. Happiness is determined not only satisfaction of primary human needs for food, clothing, shelter and security, but also in meeting the spiritual needs, the internal state of the person. At the same time happiness can be characterized by opportunities for citizens to participate in public and political life of their country, attached to the masterpieces of world culture, the possibility of complete rest.

In this work will be presented comparative data from sociological surveys conducted in framework of the project HITT-CIS - Health in Times of Transition, it is an international research project supported by the Seventh Framework Program of the European Union (FP7-Health). Field works were conducted in 2010, across nine former Soviet Union countries (Armenia, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Russia and Ukraine). The objectives of this research were to study the conditions of lifestyle, health, social well-being, political views and their relationship. A total 18,000 respondents were surveyed by standardized personal interview. Sample represents the population at the age of 18 years and older, also represents distribution by region and type of settlement.

Results of the regression analysis will be presented, where the dependent variable is subjective feeling of happiness, measured on a ten-point scale, as well as influencing variables - number of variables, including not only the socio-demographic characteristics, but also the level of satisfaction with various aspects of social and political development of countries.

Transformation Processes In The CIS Countries: Comparative Data On The Results Of Sociological Surveys 2001 and 2010

In this work will be presented comparative data from sociological surveys of the projects LLH (Living Conditions, Lifestyle and Health), conducted in 2001,
and HITT-CIS - Health in Times of Transition, conducted in 2010. These international research projects were supported by the European Union Programs. Field works were conducted across nine former Soviet Union countries: Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Russia and Ukraine. The objectives of these researches were to study the conditions of life-style, satisfaction, health, social well-being, political views, and trust to government and state institutions. A total 18,000 respondents were surveyed by standardized personal interview. Sample represents the population at the age of 18 years and older, also represents distribution by region and type of settlement. The following sections will be presented in conceptual framework with respect to various development, satisfaction with economy development, healthcare, social protection, civic activity, political views, life satisfaction and feeling of happiness. Data will be present by countries in comparison 2001 and 2010 years.

Hoping for More: Renewing and Redeveloping Public Housing without Marginalizing Low-Income Residents  

Since the 1980s, politicians, government officials, and real estate developers have popularized the strategy of building mixed-income housing to replace troubled public housing projects in the United States. Although the term is used to describe a growing number of developments, “mixed-income” has never been officially or consistently defined. Drawing upon a newly-constructed database of income-mixing in projects completed under the HOPE VI program since 1993, as well as on other initiatives, this paper investigates selected public housing sites that have been redeveloped into so-called mixed-income housing in order to understand what qualifies as mixed-income and to develop a more analytically precise way of describing these projects. We reveal that the mixed-income label is applied to a wide range of income mixes, from projects that try to minimize the presence of low-income housing (less than 1/3 of total units), to projects that attempt to preserve a substantial majority of units for low-income households. This differentiation has led to a new approach for identifying and categorizing mixed-income developments in terms of how income mixing is implemented: 1) mixing in a few low-income residents into a mostly high-income project or vice versa, 2) mixing together roughly equal proportions of low-income and high-income families into a single project, 3) mixing in new high-income residents around low-income residents living in an existing project, and 4) mixing in low-income residents by spreading them out into a larger neighborhood, rather than a project. The categories reflect divergent ideological positions about both the physical and social place that low-income people should have in mixed-income communities, and by extension, the role of public housing in American society. Although mixed-income developments can be a useful tool to insert affordable housing into tight housing markets, we argue that these developments are too often used to displace formerly all low-income communities.

Who Participates in Encompassing Protests and Why Does It Matter? Israel and Spain in 2011  

In Spain and Israel in the spring and summer of 2011, multiple demonstrations each mobilized hundreds of thousands of participants in the framework of Occupy-type protests. The Spanish *indignados* (15M) and Israel’s social justice movement were instances of an unusual variety of protest, labeled “encompassing” because it combines massive mobilizations with high levels of public support. Such encompassingness does not necessarily imply society-wide solidarity, but may instead be based on what are in effect multiple parallel protests in which some social sectors are under-represented or even altogether absent. This paper reports analyses of national sample surveys carried out in both countries, showing the effects of political cleavages and other social divisions on the passive and active engagement of individuals in these instances of encompassing protest. For Israel only, these conventional sources are supplemented by data collected via mobile phone signals, which make it possible to paint a reliable portrait of the social, cultural and political characteristics of demonstrators.

Changing Nature of Conflict in Post 2014 Situation and Its Implication in South Asia  

Pakistan emerged as the frontline state during the Cold War era and especially Afghan conflict (1979 – 1988). Pakistan remained the focus of attention during this time. After the 9/11 and later in war against terror, Pakistan again became part of this new war. But the nature of country’s involvement in both wars was totally different. In the mean time during 1989 to 2001, Pakistan developed its own parallel agenda to play at different fronts simultaneously. But that policy miserably proved faulty, resulting killing of more than 45,000 civilian and 3000 soldiers and police officers in the line of death. This paper analysis Pakistan’s future policy in the post 2014 scenario and how it plans to move forward. Will this policy be helpful in resolving conflict or it would further sharpen the existing conflicts. Paper also focuses how regional and international players may play their constructive role to help Pakistan to get out of the crisis and how much Pakistan itself tries to pursue the agenda of good and especially regional peace.

War, Conflict and Human Rights Violation: New Debates and Discourses in Pakistan  

Eventual aim of human beings is to have a peaceful society where human dignity and human rights are well respected. But during the war and conflict times situation totally rejects the concept of the such values and norms and especially in situation where conflicts persists for decades on asymmetric pattern. Situation becomes more complex in those cases where states provide covert support to the non-state actors to further toe their agenda. Pakistan’s military developed nexus with the jihadist with the financial backing of other countries, but eventually the jihadists are now haunting the patron itself.

Now conflict between militants and state has turned to situation that where the level of violence has reached to new zenith. In this situation, abuse of human rights from both sides becomes a very common issue. But due to protest of civil society bodies and judicial activism at least debate on human rights violation is being taken place in different fronts. Human rights organizations and judiciary are pursuing the agenda of missing persons and other sensitive situation vigorously.

Paper discusses how with the strengthening of democratic traditions and emergence of free media debate on human rights violation is getting strong voice in Pakistan.

ception, and home country life. Although Jews are a longstanding religious U.S. minority, there is a paucity of research on recent Jewish immigrants and their health needs.

Objectives: 1) What are the health needs of recent Jewish immigrants in the U.S and in Israel? 2) How do these needs vary by home country and how do they compare to non-Jewish immigrants? 3) What are the findings’ policy implications for faith-based interventions and how do they vary between the U.S and Israel?

Methods: Adult Jewish immigrants were surveyed as part of the randomized U.S. New Immigrant Survey data set and the Israel National Health Survey. The surveys included extensive health, religion, immigration, and other demographic variables. Outcome measures included health status, health behaviors, chronic diseases, and mental health. Univariate and bivariate analyses were performed. Variations by ethnicity were analyzed and outcomes comparisons made between the U.S and Israel and with non-Jewish immigrant groups. Over 25 key informant interviews with faith-based and Jewish community leaders in the U.S and in Israel were then conducted.

Results: Health needs were identified and variations were found in health outcome measures by key religious, immigrant and demographic factors, with implications for widespread faith-based interventions such as synagougue programs. Opportunities for widespread faith-based interventions suggested by these findings and the informant interviews will be discussed, spotlighting contextual variations by denomination, home country and host country.

Conclusion: Opportunities may exist for faith-based health interventions among immigrant Jews by leveraging the social and religious capital in this under-studied community. Efforts to target Jewish immigrant needs by faith communities and take their varying characteristics into account, including country, are important.

Religious Capital and Addressing Latino Immigrant Health Inequalities in the U.S

Background: There is much evidence linking participation in an organization with health outcomes, more than the relationship of faith outside of a religious organization in context with health. For example, church attendance is the measure of religiosity most of often linked with better health outcomes. While some attribute the religion-health connection to social capital, there is insufficient attention to how aspects of religion itself may also be a resource contributing to the health of members of a religious community through religious capital. While it has primarily been used in other contexts, religious capital can be an important resource for health. There is a paucity of both theory and evidence, however, in understanding how religious capital may be related to positive health outcomes and, in particular, how it can affect inequalities for vulnerable populations such as immigrants.

Objectives/results: To fill this gap in the literature, this study draws from theoretical concepts in the field of sociology to examine whether religious involvement is associated with better health status and health behaviors among Latino immigrants, with potential to reduce health inequalities through increased religious capital. The study will describe in detail the theoretical framework for religious capital, with relevant constructs explained. Quantitative evidence supportive of the theory will be brought from multivariate analyses the author performed of over 1000 Latino immigrants from the randomized New Immigrant Survey (NIS), controlling for demographics, as well as from a review of the literature to support the study’s theses.

Conclusion: Religious involvement can be related to better Latino immigrant health because of religious capital found among churchgoers. As a result, opportunities may exist to leverage widespread church-going already taking place by Latino immigrants to reduce inequalities by creating faith-based interventions which draw upon this religious capital.

Teaching Across Borders: Making Local-Global Connections in Sociology Teaching

In recent years, there is a growing awareness that teaching sociology should include topics related to globalization. While a limited number of authors provide important suggestions for sociological curricula, we feel that there should be a more systematic approach to introducing theories and concepts of globalization in sociology classes. In this paper, we present our strategies of teaching about globalization in sociology classes. We understand globalization as a series of significant changes in social relations due to interconnectedness of the world. We look at different economic, political, social, and cultural connections between different countries and locales. We developed class activities to examine each dimension of globalization. By analytically emphasizing economic, political, social, and cultural flows of globalization, we want our students to see how different institutions and actors initiate, cooperate, and negotiate transnational connections within each sphere.

One Country Two Realities: Work Values of Jews and Muslims in Israel

This study examines work values of 909 Jews and 219 Arab Muslims, (or Palestinians that have Israeli citizenship). It is a unique study since there are very few studies on cultural values and no studies on work values, which compare between different ethno religious groups who have been living in the same country/land for more than century and shares a long ethnic conflict. The findings reveal a significant difference between the two ethno religious groups regarding the importance of all life domains and in most of the preferred work goals and the regression analysis of the main demographic variables cannot explain these differences. The MD5 of Jews and Muslims also demonstrate different perceptions and internalization of work values among the two ethno religious groups. The value gaps can be explained by the cultural differences (individualistic Jewish culture vs. collectivist Arab culture), by high degree of segregation, by the employment discrimination and primarily by the Israeli- Arab/Palestinian conflict.

SHARMA, NANDITA* (University of Hawai'i at Manoa, nsharma@hawaii.edu)

Categorical Divisions: The Hostilities Between ‘Indigenous’ and ‘Immigrants’ As a ‘State Effect’

Nationalist politics has increasingly become one of the main ways that people constituted as “natives” have attempted to overthrow colonial domination. Together, the state language of “sovereignty” and the national language of “self-determination” have shaped notions of identity and have tended to anchor such identities to particular places. All this has figured into how contemporary “indigenous” nationalisms have staked their claim to a place within a global system of national states. Over time, a stark delineation between “Natives” and “non-Natives” has been asserted. Today, a growing number of scholars who identify as indigenous, as well as those who position themselves as their allies, portray all “non-Natives” as colonizers. In this paper, I examine how a nationalized politics of decolonization has come to mark “Natives” and “migrants” as mutually antagonistic positions. Focusing on such politics of place in the national states of Canada and the United States, I question the confinement of processes of colonization with those of migration. I historicize such politics within their social, political, economic context by looking at the continuation between colonial state practices and contemporary indigenous nationalisms. I also contrast contemporary indigenous nationalisms with other political strategies of decolonization, particularly politics
that have refused the differentiations of "race" and "nation" and the Leviathan of national sovereignty.

Making Housing Affordable for Urban Poor: Approaches Adopted in India

Housing is one of the basic necessities of an individual. However, the dream of having a house remains distinct for one-third urban population. They remain marginalised in terms of civic services, housing and other socio-economic parameters. The cost of this marginalisation is often very high and many studies have shown that it may be up to 2.5 times of the formal system.

By 2030, an estimated 5 billion of the world’s 8.1 billion people will live in cities. About 2 billion of them will live in slums, primarily in Africa and Asia, lacking basic services, unsecured tenure, congestion and surrounded by desperation and crime. In India, the urban housing shortage has been estimated as 18.78 million, of which almost 96 per cent pertains to urban poor. Affordable housing has been considered as the only option to meet this challenge. A Task Force on "Affordable Housing for All", constituted by the Government of India, Ministry of Housing and Urban Poverty Alleviation, defined affordable housing in terms of (a) multiples of household income; (b) size of the tenement; and (c) percentage of household income, in case of rented accommodation.

3.0 Approach of This Paper
This paper will address the following issues, in the perspective of earlier discussions:

1. The need for a multi-pronged strategy for housing delivery to all sections of the society. This includes housing delivery system, target group and housing typology.
2. Incentives and subsidies to make housing within the reach of target group and mechanisms to retain the ownership. Right policy instruments for subsidy transfer are needed to make people shop for their dream house, without any restraint on size or location.
3. The access of urban poor to sources of institutional lending.

Equal Leisure in an Unequal World

Equal Leisure in an Unequal World Though the globe today is characterized by deep and different layers in terms of capital accumulation and resource appropriation, the leisure experience may display a different type of demarcation – one that may have the possibility of enriching different social groups if they drew from each other. Societies in which leisure has come to be characterised by the consumption of the fruits of production individuals may appear to be bound by a stimulus-response mode of leisure behaviour. What should be ‘done’ during ‘leisure time’ is fed into the psyche through media pressure and socialisation resulting in activities that may or may not be self-enhancing even thought they feed into the leisure industry. In conventional understanding of leisure, there continues to be a simplistic dichotomy between work and leisure and ‘free’ and ‘occupied’ time as though these were easily separable categories. In this same layered global society there are groups of people who still live with values that recognize the organic unity of all things, are aware of a sense of continuum, as a movement from matter to spirit and vice versa, and see an interconnectedness of all things. As a result there arises a tendency to respect the environment and other beings. The ‘leisure’ of such societies need not be time abstracted from other day to day activities but a mindset that characterizes the whole. The presentation will look into the possibility of interaction of these segments on each other so as to enable a more holistic attitude to the environment and to other existents on earth.

SHARONOVA, SVETLANA* (St.Tikhon's Orthodox University, s_sharonova@mail.ru)
The National Russian Model of University in the Era of Academic Capitalism

The transformation of the national model of Russian university is under the influence of academic capitalism. The very same academic capitalism born in the depths of the neo-liberal capitalism. The basic principles of the neoliberalization fully implemented within the transformation of national educational systems:
- the creation of conditions of accumulation of capital and power of the economic elite;
- the denial of a nation, and therefore the promotion of the idea of the dangers of government intervention in the economy (in this case is to minimize the interference of the state in education);
- promoting free and stable functioning of the education system is not in general, and of its individual elements (schools, institutes, universities, etc.).

In Russia, and in other countries, this leads to the destruction of national educational systems. Yet Durkheim said that in society there are many cultures of each of them has its own education system. Simmel argued that cultural diversity enriches the world community. However, the implementation of neoliberal policies in the field of education under the slogan of "globalization" ignores the law and seeks to simplify the interaction between the educational systems in order to achieve clarity and transparency of market exchange. Author analyzes the example of Russia where the trends that are happening as a result of the modernisation of the education system that implements neoliberal principles and creating academic capitalism. Virtually all non-liberal utopian promises of the project, in practice, lead to quite the opposite of the expected results.

SHARONOVA, SVETLANA* (St.Tikhon's Orthodox University, s_sharonova@mail.ru)
The Spiritual Capital As a Fundamental Element Of Cultural Capital

Cultural capital is usually regarded as a mechanism of influence on personality. Largely contributed to this study Coleman, although Bourdieu introduced the concept of a theoretical understanding of capital varieties. He was interested in the convergence of social, cultural and economic capital. We propose to focus on the cultural capital of both the qualitative characteristics of the state of society. The problem is that in the presence of cultural capital as a funded system of values enriches the form of works of art and science, society degrades morally. Any cultural capital based on traditional religious values. This does not mean the broadcasting of religious themes in works of art, although it excludes, but rather a philosophical position of artists and researchers, through which the public receives the interpretation of events, their assessment of a certain value-regulatory system of coordinates. This element is the sense that are happening as a result of the modernisation of the element of cultural capital. Qualitative state of society, its morality depends on the amount of spiritual capital, which he occupies in the field of cultural capital. A striking example of how the degradation and spiritual revival of capital in society can serve as the processes that took place during the last century.

SHAW, VIVIAN* (University of Texas at Austin, Vivianshaw@utexas.edu)
Energy and Identity: Women, History, and Anti-Nuclear Social Movements in Japan

Since March 11, 2011 (3/11), some Japanese citizens have responded to the ongoing Fukushima nuclear crisis by staging large protests against the use of nuclear energy in major metropolitan areas. Within this revival of anti-nuclear collective action, scholars and global news media have argued that the prominent role of women, who have been observed leading "tent city" occupations in Tokyo and organizing rallies in other cities, signals an important evade with potential implications for the changing status of gender in Japanese public politics.

Applying a historical frame to the contemporary case of women’s leadership in post-3/11 activism, this paper challenges a simplified narrative of feminist emergence, instead arguing that contemporary anti-nuclear politics must be read as part of a longer context of women’s organizing in Japan throughout the twentieth century. Moreover, this history of social movements also reveals important divisions within Japanese women’s movements across lines of race, coloniality, and citizenship. In this paper, I deconstruct the concept of “anti-nuclear” and examine how this politics converges with other histories of post-war women’s collective organizing, particularly examining the roles of Japanese women in the related histories of peace and anti-militarization social movements.

In arguing how gender has politically and rhetorically functioned as a method of organizing Japanese public politics, I challenge notions that Japanese women, in the context of social movements, should be viewed simply as a formation of collective identity. Rather, the different meanings of women’s identities within these cases suggests the importance of reading Japanese women’s social movements in relation to various political contestations at the “local” and transnational levels and moreover, in terms of what they are able to signify about race, coloniality, and citizenship.

SCHERBAK, ANDREY* (Higher School of Economics, scherbakov@hse.ru)
Nationalism in the USSR: Historical and Comparative Perspective

The late 1980s and early 1990s were characterized by the sudden rise of nationalistic movements in almost all Soviet ethnic regions. It is argued that the rise of political nationalism since the late 1980s can be explained by development of cul-
tural nationalism in the previous decades, as an unintended outcome of commu-
nist nationalities policy. The Soviet political and cultural nationalism is studied in
historical and comparative perspective. All ethnic regions are examined through-
out their entire history of the Soviet Union (49 regions, 1917-91), using a structural
equation modeling approach. This paper aims to make at least three contribu-
tions to the field. Firstly, it is a methodological contribution for studying nation-
alism: a ‘quantification of history’ approach. Quantitative values are assigned to
historical trends and events. Having constructed variables from historical data, I
use conventional statistical methods like SEM. Secondly, this paper contributes to
the theoretical debate about the role of cultural autonomy in multiethnic states.
The results challenge the concept of ‘cultural autonomy’ as solution to intereth-
nic conflict. Cultural nationalism matters, it indirectly reinforces political nation-
alism. Concessions in the cultural domain failed to stop the growth of political
nationalism in the late 1980-s. Finally, the paper statistically proves that the break
between early Soviet and Stalinist nationalities policy explains the entire Soviet
nationalities policy. In fact, the late Soviet nationalities policy was inherited from
the Stalin’s rule period. This finding revealed in other studies now gets statistical
evidence.

SHEN, JIE* (Chinese University, jie.shen@hotmail.com)
Chinese Youth’s Post-Materialist Values in an Era of Multi-
Modernity

Today’s China’s society is in a compound of multiple dimensions of time and space.
China’s modernization is late and unfinished. When the mainstream direction of China’s social development is manifested as
the transformation from traditional society to modern one, the developed West-
ern societies that have completed the modernization goal constitute the envi-
ronmental conditions affecting the development of China’s society. As a conse-
quence, China’s society more clearly than ever in the history is at the same
time being affected by three dimensions of time, or, put another way, in the present
there are three dimensions of time – traditional, modern, postmodern – coexist
in the same space.

If so, although the total direction of social psychological changes in the course
of China’s modernization is the transformation from the tradition to modern-
ity, this is not intended to preclude the possibility that the present Chinese social
psychological changes will present a more complex pattern than in any previous
eras and societies.

Just as using Inglehart’s two important theoretical tools – scarcity hypothesis,
socialization hypothesis can attest that when China entered the take-off stage of
its modernization, changing from a society of scarcity to one of prosperity, the
spiritual world of the social members is undergoing rapid and profound changes,
along with gradual improvement of their hierarchy of needs. It is Chinese youth
who first shows these changes. In China, the post-materialist values have begun
to emerge in these people born in the 1980s, and have further manifested by
these groups born in the 1990s.

Occurrence and development of the post-materialist values among Chinese
young people will definitely lead to changes in their activities of daily life and ways
of social participation, and to affect the appearance of China’s society especially
when they enter the society in an all-round way.

SHEN, JING* (University of Toronto, jing.shen@uleth.ca)
The Value Of Mixed Methods: How Does Certifiability Of Job
Requirements Determine The Channels Of Job-Person Matching?

Using qualitative collected in three representative Chinese cities and quantita-
tive data drawn from the 2003 China General Social Survey, in this study I have
built up a theoretical framework to understand the interdependence of formal and
informal employment channels. I argue that a job-person matching process
should be understood from a dual perspective of the employer and the job ap-
plicant. From the employer’s perspective, requirements for certain job positions
are composed of two parts, namely, certifiable and uncertifiable qualifications.
The variation in the relative importance of these two types of qualifications deter-
mine that employers’ recruitment strategies vary from formal channels only, to
formal-informal joint channels, and then to informal channels only. From the job
applicant’s perspective, quantitative analysis shows that an applicant’s pre-hiring
resources— human capital, political capital, and social capital— match up with
the targeted employer’s expectations of both certifiable and uncertifiable qual-
fications in a successful job-person match. By articulating the three typical sce-
narios of employment activities, I highlight the great importance of joint formal
and informal employment channels. I argue that studies on employment need
to take a formal-informal joint approach, instead of focusing on formal or informal
employment channels alone.

Two Decades of Educational Expansion in Taiwan: Social Equity
Concerned

During the past two decades, Taiwan experienced a movement of expansion of
senior secondary education and higher education (the expansion in brief). In
the meantime the entrance system of higher education institutions and senior high
schools has changed accordingly in response to the open enrollments demands
from the public.

One of the causes of the expansion was to achieve social equity in terms of off-
ering more educational opportunities to those students from the disadvantaged
groups. However, until 2013 even though the gross enrollment ratio of upper
secondary education and tertiary education reached 98.33% and 84.43% separa-
ately, those students with disadvantaged background were still left far behind
with their counterparts from better family background in terms of educational
achievements, such as being admitted into the academic senior high schools and
universities with good reputation.

The central argument here is the increase of senior high schools and higher
education institutions (HEI) actually enrolled more students from the disadvan-
taged groups. The reason for the diffusion and the differentiation of senior high
schools and HEI in terms of preference and various ability requirements, still made the social eq-
uality an unfulfilled dream.

The paper examines the expansion, first through the reveal of the statistical
data illustrating the extent of the expansion; then through the investigation of the
definitions proposed since the 1990s and finally through the collection of the
issues resulting from the expansion mentioned above.

The Relationships Among Ethical Ideology, Work Stress, and School
Life Adjustment of Elementary School Teachers

The purpose of this study was to explore the relationships among idealism,
relativism (two kinds of ethical ideology), work stress, and school life adjustment
of elementary school teachers. The data were collected through questionnaires
from a sample of 565 elementary school teachers in Kaohsiung city. The major
instruments for this study included Teachers Idealism Scale, Teachers Relativism
Scale, Teachers Work Stress Scale, and Teachers School Life Adjustment Scale.
Structural equation modeling (SEM) was applied to make parameter estimations.
Path analysis revealed the following findings: First, idealism could negatively pre-
dict work stress, whereas relativism could positively predict work stress. Second,
in the common estimation, idealism could positively predict school life adjust-
ment, but relativism could not significantly predict school life adjustment. Third,
work stress could negatively predict school life adjustment. Fourth, work stress
was not the mediator among idealism, relativism and school life adjustment.
The implications of this study to elementary school teachers’ human resource
management in Kaohsiung and future studies were discussed.

Managing Authorship in Chinese Research Organizations

Scientists put great stock in authorship as a form of universal recognition for
originality in the profession of science. Yet, despite accounts of various author-
ship practices across disciplines and countries, scholarly literature has had little
to say about how this professional norm emerge in research organizations in the
advancement of managerialism. This study, based on in-depth interviews with 26 re-
search teams in two Chinese medical schools, explores into this question in by
looking at the Chinese case. China has been characterized by its recent surge
in scientific publications and an overwhelming “publish-or-else” orientation in
every field. However, research organizations, which have both explicit and hidden
incentive systems, have different incentive systems. Firstly, I compare the rules and
discourses surrounding authorship in each research team within the two schools.
Researchers invoked four distinct discourses on authorship: 1) “sponsorship of students” 2) “contribution-based distribution”, “need-based distribution” and
“fairness in the long-run.” In both schools, researchers regarded “sponsorship of students” and “contribution-based distribution” as institutional demands from the profes-
sion. However, more teams in one organization than the other made “sponsor-
ship” an explicit rule, and “contribution” is defined differently in the two settings.
"Need-based distribution" and "fairness in the long run" were characterized as innovations by some teams and enacted under certain conditions. Secondly, I examine three organizational factors that contribute to these differences: the incentive system of each organization, the hierarchy of each team, and finally the constraints and opportunities each team faces inside and outside of the organization. Depending on the organizational circumstances of each team, certain discourses about authorship prevailed while others were impeded, generating systematic differences at the organizational level.

Exploring Reactions to Risk and Uncertainty in the Context of Smoking and Lung Cancer

Research examining the sociology of diagnosis has demonstrated how the recognition of a clinical diagnosis from a health professional can promote identification of illness or disease, facilitate behaviour change, and enhance adoption or resistance of illness identities (Jutel and Nettleton, 2011). Further examination of such frameworks could contribute towards achieving a richer understanding of health communication compliancy, thus enabling better management or avoidance of ill-health and disease.

The current study examines such frameworks within the context of a Stop Smoking Service (FagEnds, Liverpool) and the study has been designed to replicate a recognised model of diagnosis. However, rather than a clinical diagnosis, smokers receive a personalised lung cancer risk assessment – essentially providing them with a diagnosis of uncertainty. The primary aim of this study will be to ascertain whether provision of personalised lung cancer risk information alongside health advice, will enhance smoking cessation.

This mixed-method paper will disseminate the findings of a randomised controlled study consisting of ~300 smokers, in which the control arm receive generalised lung cancer risk information and the intervention arm receive a personalised lung cancer risk assessment, using the Lung Lung Project risk model (Cassidy et al., 2008). It is anticipated that provision of personalised lung cancer risk information may encourage behaviour change i.e. smoking cessation and long-term maintenance of this change at six-month follow-up. In support of the aforementioned quantitative survey, qualitative interviews will also be conducted with a selection of participants (N=30), which aims to provide further explanation as to the impact of receipt of a diagnosis of uncertainty and the subsequent behaviour and attitudes of which it may entail. Overall, it is anticipated that the findings will contribute towards our understanding of the sociology of diagnosis and may help to inform the development of future health risk communications.

The Triangular Market: Reworking, Reproducing, and Repairing an Online Marketplace

The Internet has revolutionized how consumer goods are bought and sold in the United States. Yet the market for local services – semi-skilled or skilled professionals hired by consumers to perform a service – still operates largely as it did before the emergence of the Internet. I will present preliminary findings gleaned from 19 months of ethnographic research at a firm aiming to do for the local service sector what Amazon has done to retail. The firm planned to create a venue in which buyers and sellers of local services would be connected more efficiently than ever before; in so doing, the company hoped that each party, in pursuing its own self-interest, could create a better world for all involved by making it easier for consumers to hire local service professionals than ever before.

My research reveals that tensions continually arose in the market because, rather than creating a horizontal relationship between buyers and sellers, the firm had created a triangular market in which its own interests frequently differed from those of buyers or sellers. In a triangular market, supporting the interests of one party necessarily damages those of another. If sociologists accept that markets are not generated and maintained spontaneously, we must investigate the work that contributes to the creation and reworking of markets; to the reproduction of markets and their participants; and to repairing the damage to relationships between market participants that can be caused by the market's inherent tensions and ruptures. In this firm, the work of reworking, reproducing, and repairing the market circulated across a global division of labor spanning a headquarters in San Francisco and two online, work-from-home teams with a combined workforce ten times the size of the home office – one located throughout the Philippines, and another in the Las Vegas area.

Maternal Health In Rural India: Consequences For Gender Inequality

Maternal Health In Rural India: Consequences For Gender Inequality

Shakuntala.C.Sheetar
Professor, Dept. of Sociology
Karnatak University,
Dharwad – 580 003
shakuntalashettar@gmail.com

Abstract

Maternal health is a critical topic in global development. Maternal ill health and deaths impacts families, communities and societies and has far reaching effect across socio-economic strata. Despite recent data showing a positive turning point in the battle to keep mothers alive through pregnancy and child birth, the maternal mortality rate are still high in India and significant gender-based health disparities remain in India. With limited access to education and employment, high illiterates and increasing poverty level in India making health improvements for women exceedingly difficult. Female disability is especially in attributable to maternal causes and maternal deaths. The present paper is an effort in understanding maternal health and care in rural parts of Karnataka.

The objectives of the paper are to know the status of maternal health and consequent problems and also to analyze the socio-economic factors that act as barriers to access good health facilities. The data for this paper are based on the complete birth histories collected from the 200 ever married women age 20-49 years, selected from 4 villages of Dharwad district in Karnataka.

The findings suggest that inspite of the Government's efforts in improving maternal health in rural India, women have been suffering from health problems resulted from complications during pregnancy and child birth and also anemia and malnutrition. Hence the existing health facilities need to be strengthened to improve such health problems of pregnant women.

Key Words: Maternal Mortality, Maternal Health, Autonomy, ANM, Sex and Gender, Gender Inequality.

“Problems and Prospects of Women Police: A Study of Gender Inequality in Indian Society

Revised:
Keywords: Gender inequality, Indian society, Women Police, Hubli-Dharwad.
Affiliation: Karnatak University, Dharwad.
Research Committee = RC41. Session: Population, Gender Inequality and International Migration.

Title of Abstract: Gender Inequality in Indian society: A Study of Women Police in Hubli-Dharwad.

Name and Address of author(s): Prof. Shaktuntala. C. Shettar, Professor of Sociology, Dept. of Sociology, Karnataka University, Dharwad.

Abstract: A middle class woman working outside in different jobs is post-independence phenomenon in India. It is only in recent past, women have been working in police departments and have made a demonstrated profession that requires lot of physical stamina, power, wisdom, rational thinking, capability to control the situation and confidence. At present, India has got the distinction of having not only first women police station but also having large number of women police.

The culture of police system is altogether different from work in the other departments such as banks, hotels, hospitals, or business organization. The police work demands to work more hours, to work at late night and to work in dangerous and uncongenial places. Such a situation poses many problems for women police. The present study is an effort in understanding the problems of police women at their work place and at their family. The study is confined to 50 women police of Hubli-Dharwad Municipal Corporation, Karnataka, India. The findings of the study suggest that women police have been emerging as a significant development especially among the lower middle class group. It has not only changed their economic status but also overall status. At the same time, women police have been making their mark in the different fields, wages, gender discrimination, promotion, career etc. Still majority of women have a sense of satisfaction of serving a society by joining this service.

Power Asymmetry and Resource Use Conflict Between Farmers and Pastoralists in Northern Nigeria

Northern Nigeria can be described as a “zone of instability” in Nigeria. Since the country’s independence in 1960, Nigeria has witnessed a myriad of conflicts ranging from religious, ethnic to political including a brutal three year civil war. Though many of the conflicts are widespread, the northern region appears to have been the epicentre of several interlocking conflicts. The north of Nigeria is characterised by three major types of conflict, which are different but interrelated in nature, namely: inter-ethnic, religious and resource conflicts. This paper focuses on resource use conflict between farmers and pastoralists which can be explained by a variety of factors including scarcity of resources, growth in the population of herds and humans, the political economy of land use and asymmetry in power relations between the two resource users. The paper argues that historically the control of political power has vacillated between the two resource users. In the past, pastoralists were politically powerful in many states in the African savannah and Sahel including northern Nigeria; and hence, had access to land and land based resources for their livestock. In the contemporary dispensation, sedentary crop farmers are the politically dominant and “landed” group, and have often made it difficult for the pastoralists, the “landless” group, to access land and land based resources for their livestock. There is thus a fierce contest for environmental resources between the two resource users, mediated by power relations, and often resulting in violent conflict. The paper concludes that though scarcity of resources is often considered as a key explanatory variable in resource use conflict between farmers and pastoralists, the effects of scarcity are unevenly distributed in the “unequal world” of farmers and pastoralists in Northern Nigeria.

Changing Politics of Social Policy in China: Blame Avoidance and Credit Claiming in an Adaptive Authoritative State

Blame avoidance and credit claiming are two popular concepts for explaining the politics of welfare retrenchment in the mature welfare state. They indicate the crucial impact of electorates in competitive democracies on the policymaking process. The papers show that the state can protect its policy changes against blame and gain political credit by shifting the blame to other institutions in the welfare state. The paper extends this theory to the Chinese context. This paper argues that the state can make poverty alleviation policies an “unwitting” tool for blame avoidance and credit claiming. In the process of welfare retrenchment, the state can deploy this strategy by making welfare institutions resilient even under the pressure of permanent austerity. This article modifies these concepts to account for the politics of social policy in China.

Japanese Approaches to the Music of Frédéric Chopin

The paper examines the "Japanese" understanding of the music of Frédéric Chopin at a time when the narrative discourse of Japanese pianists who have studied in Poland and France.

The works of Chopin occupy an undoubted position in Japanese music institutions for their accomplished artistry in piano techniques. Musicological studies show that having quickly appeared as crucial in concert repertoires of the first years of the twentieth century, Chopin became an icon of "Western" culture to which the "civilized" Japanese should aspire. Japanese music universities came to emphasize the importance of his technically demanding works, e.g., Etudes, Ballades and Scherzos while mostly neglecting Mazurkas and Waltzes.

The paper sheds light on critical thoughts regarding "Japanese" education held by some of the country's contemporary musicians who have formulated their professional identities vis-à-vis "French," "Polish," or "European" traditions of Chopin's music. Semi-structured interviews with Japanese pianists who underwent studies in France and Poland are put through a method of critical discourse analysis that draws upon structuration theory and allows effective inquiry into an agency's narrative in the face of established institutional discourse.

What is the general view on the teaching of Chopin's music nurtured in Japanese music institutions? How does it affect individuals' approaches to Chopin's works? How do pianists confront or develop the "Japaneseenesse" of their performance after education in France or Poland? What are the renovated "Japanese" elements in the understanding of Frédéric Chopin's music after study in Europe?

Analysis conducted under the umbrella of such questions attests to several things including pianists' recognition of "delicate" Japaneseenesse resonating with Chopin's works, notable critique on the "Japanese" pursuit of sophisticated techniques extracted from the fuller universe of Chopin's music, and the unique refurbishment of a sense of nature through the performance of Mazurkas.

Intimate Economies of Rehabilitative Work: Policing Sexuality through Wage Labor and Re-Education through Labor in China

This paper begins to theorize the intimate labor regimes of the "rehabilitation industry" in China. It examines the collusion between transnational interests, the state and the market through two types of vocational training programs for sex workers in China. In state-sanctioned rehabilitation through labor (RTL) programs serve as mandatory sanctions for prostitution offenses; at the same time, American evangelical Christian missionaries recruit sex workers to work as jewelry makers, and label them as victims of human trafficking to transnational consumers and activists. These programs aim to generate economic alternatives to labor migration and sex work. However, the focus on labor training and re-education as the animating force of social mobility ignores the complex labor, gender and ethnic hierarchies that exist within the intimate labor industries. Opening the black box of this new industry, my work will investigate the connections between the local and global and question the optimism around the transformative potential of "good work."

This paper is based off 28 months of ethnographic participant observation at an evangelical Christian vocational training center in Beijing, China, and pairs this with preliminary analysis into the historical and contemporary practices of rehabilitation through labor in China.

An Exploring Study on Networked Market Disruption and Resilience

The main objective of this study is to explore the core of socially restrained buying trends of the agricultural foods and products made from Tohoku Area. Actually these cases mean that many people do feel something unfavorable and they are not going to buy foods made from Tohoku Area. And these trends are still often observable anywhere ever since the Fukushima Nuclear Disaster of the twentieth century.

In this concern, I presume that these social trends are underlying in the information-asymmetry as the market for ‘Lemons’. And I define this presumption as an agent-based model on social cascading, social uncertainty, networked market disruptions and percolation process. As results of simulating runs, I clarified my hypothesizes and these are possibly actualized in configured conditions. Namely I can conclude that the emergent cascading of socially restrained buying trends of agricultural foods made from Tohoku Area can be engendered by information-asymmetry as the market for ‘Lemons’, and its networked market is also crucially ruled in the percolation principle. Finally, I will show these details and discuss the relatives.

Freedom Markets: The Moral and Political Economies of Human Trafficking in China, Thailand and the U.S.

This project is a global and multi-sited ethnography of the transnational social movement to combat human trafficking through state- and market-based approaches to managing low-wage labor migration and women's work. Empirically, this project compares faith-based and secular approaches to anti-human trafficking work. In China and Thailand, and their sites of movement organizing and consumer activism in Los Angeles. The project is structured around the dissertation's five main sections: the "global connections" as well as disconnections between transnational social movement activists, global governance institutions, states, markets and movement subjects—low wage women workers, inclusive of both those who are identified and unidentified as trafficked.
Current Crimes and Major Issues of Policing in Japan

The number of reported crimes has been decreasing since 2002 in Japan. However, the Japanese society faces to some new crimes, including cybercrime, domestic violence, and stalking. The Japanese Police are now struggling with these new crimes and constructing new rules and practices to deal with them. Current policing and countermeasures against these new crimes in Japan will be illustrated.

«Cellular Globalization» and Communicative Inequality

In view of high speed of development and inculcation of the new informational technologies, growth of consumerism, space globalization in the contemporary societies the high level of social dynamics remains. At present the world community experiences increasing influence of the informational and communicational technologies. At the beginning this changes weren’t very visible, but now we already don’t imagine our life without social networks and connection which is available constantly. Our friends are increasingly not real people, but simulacrum. New trends of world development, their orientation on an innovation and modernization create the conditions for new social phenomena formation, one of which is communicative inequality. Communicative space is constantly changing, and with the emergence of advanced communicative technologies new vectors of its formation are born. Between those who have the technical capacity and the necessary educational level for using the Internet and those who have no such possibility the border lies. The new mobile communication potential influence the individuals’ behavior. Communicative inequality develop in the new telephony using and in obtaining information from a variety of sources including the media which price isn’t available for wide range of customers. Recently they gap between rich and poor in the sphere of information has become more and more conditioned by the technological characteristics, when the rapid expansion of communication tools covered only some of the users layers while other should be satisfied with a rapidly aging equipment. New digital communication medium created by mobile operators, Internet companies, state programs on providing the Internet connection and telephones, prepared a real geographical revolution. At this moment we can speak about the overcoming of the regions informational lag. But communicative inequality between the regions and between them and the Federal center are still remains.

A Sociological Approach to Varying Treatment Outcomes of Complementary and Alternative Medicine

Social sciences of medicine have not given much attention to the variations in the real-world treatment outcomes of CAM situated in different social contexts yet. This neglect is surprising, because the wisdom has long existed in social sciences of medicine that the effects of medical interventions are significantly influenced by social and cultural circumstances. Along with this neglect, a problematic view seems to be revived and reproduced among the medical science community that any deficiency or efficacy in the treatment outcomes of acupuncture and herbal medicine is attributable to the characteristics of the treatment in itself detached from its medical and social environments. However, the limitation of this view becomes clear when acupuncture or herbal medicine of the identical quality and design leads to varying treatment outcomes in different trials. As a way to consider these puzzling variations and to propose a sociological explanation of the varying effects of acupuncture and herbal medicine, this paper examines systematically how divergent treatment outcomes are in acupuncture and herbal medicine in Japan, U.S. and how they are related with the social environments of these medical interventions. In particular, this paper highlights the significance of coordinating these CAM treatments with the mainstream biomedicine at multiple levels in order to get tangible health care benefits. It concludes with reflections on the limitations of the current discourses on the social determinants of the effects of medicine and the inter-cultural medicine and cultural competency.

Family-Related Risk Perception and Individualization in East Asia

Based on a survey research conducted to citizens of three capital cities of East Asia, Seoul, Beijing, and Tokyo, this paper is aimed at comparing the family-related risk perception in the three cities with a perspective of individualization theory and a typology of risks developed for East Asia. More specifically, it is aimed at revealing how the citizens of the three cities feel about the recent changes in the family such as divorce, low fertility, decrease in the parent’s role in home education, isolation and suicide of the elderly, individualist tendency, decrease in mutual help in the family, and conflict in the property distribution. The research questions are as follows: First, how do the citizens of three cities perceive about these various family-related risks? Second, what influences the family-related risk perception? As to the first question, it turned out that perception of the first modernity-related risks are higher in Beijing, while that of the second modernity-related ones are higher in Seoul and Tokyo. As to the second question, it turned out that not only the family-related macro changes as revealed in law and policy changes and statistical indices in the area of fertility, divorce and marriage, but also individualization turned out to be significant. This suggests that the three cities seem to be in different stages of development and that the three cities have both the first modern and second modern risks.

Funeral Ceremony As an Embedded Social Capital

Funeral ceremony is one of the institutionalized social facts in each society. It could be carried out with family, relative and community members in the traditional societies. But in the modernized society, funerals tend to be held only by family and closer friends. We compared the East Asian funeral ceremonies in Invisible Population: the Place of the Dead in East Asian Megacities (ed. N. Ave- rin, Routledge, London 2000). We found the great changes of funeral customs in Japan, China and South Korea. The undertakers became the new actor of the funeral services and we can’t conduct it without them in the urbanized cities. We can call that tendency as “the commercialization of funeral ceremony”. Now the funeral service can be carried out only by the professional undertakers.

In the East Asia the relations and friends are very important actors. They help the family members for organizing the funerals. So the social networks that the dead and family members have are “the embedded social capital” for the funeral ceremony. We shall compare the properties of the societies from this point of view.

The Center for Social Capital Studies in Senshu University held the researches in East Asian Societies cooperated with the organizations in these countries; Vietnam, Laos, Cambodia, South Korea, China, Taiwan and Thailand. We asked the people about social relation, social trust, security, customs and ceremonies. I will show their attitudes about the participations for the funeral ceremonies of relations, friends, neighbors and colleagues.

Too Much Business and Few Policies: The Role of Major Construction Companies in the Housing Program "Minha Casa, Minha Vida" in Non-Metropolitan Cities in Brazil

Brazil is now passing through an unprecedented moment regarding housing production due to the large volume of public funds focused in just one single program: the “Minha Casa, Minha Vida” (PMCMV). It was released in 2009 with the goal of building 3.4 million housing units in six years only. Since then, the role of the real estate market was consolidated in Brazilian contemporary housing policy, which had already been outlining since the late 1990s, characterized by the performance of major construction companies and by the scale and standardized production housing throughout the country. This geographic expansion covered cities and regions that weren’t major companies’ priorities so far, such as São Paulo state country cities and other states capitals (beyond the axis Rio-São Paulo), causing significant changes in the local real estate dynamics and in the socio-spatial configurations in these cities. This article aims to analyze such changes under two different approaches that are related to each other. The first looks at how the production of PMCMV is revealed socio-spatially in non-metropolitan areas, taking the real estate market as the territorial focus, the cities of central region of São Paulo state, in which it is possible to note the high concentration of housing units produced by only a few major construction companies. The second approach focuses on understanding the production structure of PMCMV, starting from the analysis of a major company that currently accounts for 30% of the housing units in the study area. The hypothesis is that the recent phase of housing production is controlled by a market policy, rather than a housing policy, in which the state provides funds and companies design and produce the city, delineating a private conception of urban design and housing product.
Estimation of Hedonic Single-Family House Price Function Considering "Scenes"

In this study, hedonic house price functions are formulated using the single-family house market in the 23 wards of Tokyo as the subject. In the formulation of the model, the inclusion of omitted variable bias is thought to occur in cases when, in addition to locational factors (i.e., factors involved in decision making when buying a property) and building structures which affect the house prices, local environmental variables or "scenes" and the individual characteristics of house buyers, such as their income, are not taken into consideration. However, since it is difficult to obtain "scenes", Statistical Development of Alliance between Two Movements. Democratization also gave negative impact on the political dynamics after the presidential election of 1972. In 1977, Bell articulated his three positions: "socialist in economics, liberal in politics and conservative in culture." He tried to transcend the binary oppositions peculiar to the Cold War through his idea of "trinity." This study reevaluates Bell as a post-Cold War intellectual who fought against neoliberalism and neoconservatism.

About World Championships in Athletics and TV Broadcast

This study examines changes in the nature of Japanese TV broadcasts of the World Athletics Championships from 1997-2013 using a qualitative methodology. Specifically, the study examines the changes in the Tokyo Broadcasting System (TBS)'s coverage between the 1997 Athens event and the 2013 Moscow event. The results indicate that TV broadcasts became more professional from the point of the Berlin event in 2009. Up until the 2009 Berlin event, broadcasts featured much screaming-like behaviour from television commentators such as Yuji Oda. However, the screaming-like broadcasts decreased after the Berlin event and the screaming of Yuji Oda was not seen in Moscow in 2013. In addition, the nicknames of the players were not used in the Moscow TV broadcasts. This may be due, in part, to the request of the Japan Association of Athletic Federations to the Tokyo Broadcasting System to eliminate the use of nicknames. The nature of live coverage of sports events varies according to different events. In addition, they are dependent on whether or not there are Japanese players involved, and depending on whether or not there are star "foreign" players. Based on the results the paper highlights implications for future track-and-field and other sport broadcasts.

Why Does Inequality Keep Rising In South Korea?

This paper explores the rise of economic inequality in South Korea, focusing on changing income distribution of individuals and families after financial crisis in 1997. In South Korea, the great U-turn of inequality was observed since the early 1990s. Both Gini coefficient of household income inequality of household and Gini coefficient of individual's wage inequality had decreased commonly until the early 1990s. They have kept rapidly rising earlier than financial crisis in 1997. Both appeared depending on whether or not there are Japanese players involved, and depending on whether or not there are star "foreign" players. Based on the results the paper highlights implications for future track-and-field and other sport broadcasts.

Rethinking "Medicalization of Death and Dying": Explanations Through Examining Japanese Case

The Economic Partnership Agreement (EPA) has initiated healthcare worker migration from Indonesia to Japan since 2008. Issues and challenges concerning regulations and cross-cultural understandings of healthcare have emerged around such EPA healthcare work and workers in both societies. What issues have arisen and been reported in Indonesia and Japan? How do the media, policy makers, healthcare institutions and workers themselves and in cross-cultural understandings of healthcare migration and their policies in Indonesia and Japan over time. Analyses of the national media reporting, information from the governments, and interviews in Indonesia and Japan reveal a contrast of social responses to healthcare worker migration. In Indonesia where healthcare workers have been sent to Japan and other countries, this tends to be understood positively, overall, as economic benefits and Indonesian professionals' contributions to the care worker shortage in Japan. In contrast, Japanese are more likely to respond negatively to these issues; yet, they intend to face cross-cultural challenges, although slowly, making revisions in the language and license examination policies. We pay particular attention to social issue construction and policy institutionalization processes around EPA healthcare workers in Indonesia and Japan. Our study contributes to our sociological understanding of healthcare worker migration, cross-cultural understandings of healthcare and related concepts, and how national contexts and globalization construct and re-construct social issues and policies toward a new social change.

Discourses in the Magazine "KeiSetsu Jidai": The Popularization Process of Higher Education in Postwar Japan

At a time when it was called the "examination hell" in postwar Japan, the magazine KEISETSU JIDAI was popular among students that take the entrance examination in higher education. It has a history of more than eighty years, but this time, how the magazine has changed?

The purpose of this study is the analysis of magazines in the 1950s-1960s. I would like to declare that KEISETSU JIDAI has a function of career guidance through the late 1950s. The tendency changed subjects, contributors, quantities of the magazine, and their consciousness. It's mean to liberate students from some superstitions. A practical learning and a scientific method was directed to solve problems. In particular, the issue was a difference between urban and rural areas, which have dates and skills of an entrance exam. Some difficulties confronted them, conflicts and barriers surrounding the higher education, such as gender difference and economic issue.

This study may suggest a new history about the severe competition in school entrance exams.

The Effect of Environmental Education at School and Home on How Students Behave Towards the Natural Environment in Japan

Several studies on the factors that promote pro-environmental behavior have found the importance of educational environment. A number of environmental educational programs that aim to nurture ethical behavior towards the environment have been developed worldwide. For example, in Japan, some students in a junior high school take part in diving programs to study marine environments. The aim of this study is to examine the effect of environmental education at school and home on students' pro-environmental behavior. In November 2010, we conducted a quantitative survey of all third-year students and their parents at all the junior high schools located in the city of Minamata, Japan. Pollution has had a severely detrimental effect on the health of the residents of Minamata since the 1950s, and the disease caused by pollution has come to be known as Minamata disease. The negative experiences with pollution have led to the implementation of various interesting environmental education programs in all the junior high schools in the city.

The analysis of the results indicates the important factor that effects on the pro-environmental behaviors of students: It was their perception of the contributions their parents made to address environmental challenges, instead of the actual contributions or behavior of the parents. The pro-environmental behavior that students took had a mediating effect on the way students' perception on their parental contributions to the environment. The results also indicate that experience-based environmental education, such as related volunteering activities at school, promoted students' pro-environmental behavior significantly more than classroom-based environmental education that focused on knowledge creation. However, classroom-based environmental knowledge creation remains critical
because it provides an opportunity to influence pro-environmental behavior through the discoveries and the surprises by learning.

Career Strategies and Spatial (In-)/Mobility Among Skilled Migrants Between Asia and Europe: The Role of Gender Power Dynamics in the Work-Family Interaction

This paper aims to unravel the gendered career strategies of skilled migrants in Germany’s financial and academic sectors, which are being developed not only in tandem, but also often in negotiation, with gender relations in the family. Much of the current scholarly effort in the field of skilled migration and mobility has concentrated on the principal migrant and work-related context, treating the family as a rather secondary, separate and essentially ‘female’ terrain. Drawing on participant observation and interviews with highly skilled mobile workers from Asia, this paper shows that these two terrains, work and family, are closely interrelated in building skilled migrant workers. Germany has lately joined the “global war for talent” to seek out highly skilled migrant workers, but although the number of skilled women entering Germany through the established migration scheme is growing, only a small minority of them are skilled in science and technology. In this paper, I examine the role of gender in the career strategies of highly skilled migrant workers in Germany and their family, and how these strategies differ in different sectors and regions.

Conceptualizing Spatial Ambivalence Among Migrant Academics: The Dimension of Temporalities in Understanding Career Strategies

Highly skilled migrants are often deemed to have mobility capital: extant studies have shown that for career advancement they mobilize the capacity to be spatially mobile through cross-border migration, based on their cultural, social and economic capital. In policy, too, the debate around “gain and retain” has popularized the construction of mobile skilled migrants. In fact, Germany, the country which this paper focuses on, has been widening its channel for skilled and highly skilled migration streams and opened a route for long-term and permanent settlement for skilled migrants entering through its skilled migration regime. New, skill-biased migration governance radically rewrites the established understanding of German citizenship, based on “Selecting by Origin”.

Recent scholarship has brought about a nuanced understanding about spatial mobility capital and its mechanism, by considering the work-family interaction. While these studies put forth ambivalence and gendered power dynamics in realizing career aspirations among highly skilled migrants, I argue that less attention has been paid to the temporal dimension in capturing spatial ambivalence and career strategies. By focusing on migrant academics in three German cities, this paper aims to conceptualize their spatial/temporal ambivalence, which is influenced by three temporal points in their own and family lives: past, present and future. However, rather than treating these three points in isolation from one another, I want to make sense of them in a continuum, that would together affect migrant academics’ decision/orientation to stay, move on, or return home. Drawing on a quantitative survey and problem-centered interviews, I aim to demonstrate that the temporariness intersect with, and give meaning to, locally specific experiences along the social dimension of race/ethnicity, gender, country of origin, and age in the workplace, family, neighborhood and local administration. In addition, I will discuss the strengths and challenges in using these methods.

Between Freedom and Neglect: Community-Based Approaches and Neoliberalism In Policies For Asylum Seekers In Australia

Policies regarding asylum seekers in Australia have changed frequently since the late 2000s. The federal Labor government that came into power in 2007 decided to abolish the notorious policy of the former conservative government, namely, the “Pacific Solution” and Temporary Protection Visa (TPV) scheme, both of which aimed to reduce the numbers of Irregular Maritime Arrivals (IMAs) and violated their human rights. On the other hand, the Labor government maintained the problematic policy of mandatory detention for asylum seekers, and therefore sought to develop “Community-based” approaches for asylum seekers to argue that the government guaranteed their human rights. Thus, the Labor government developed the Community Detention program and expanded the number of asylum seekers who were issued a Bridging Visa E (BVE) and released into local communities. While human rights lobbies and refugee service providers tended to welcome the policy change because it released asylum seekers from detention centers, the advancement of the Community-based approaches was also a response to the need to bring down the high costs of the existing asylum seekers policy. In other words, the Community-based approaches for asylum seekers can be recognized as a segment of the neoliberal reforms of Australian social policy. In this paper, I will examine the details of the Community-based approach to asylum-seeker policy in Australia from 2007-2013, using policy and discourse analysis from a sociological point of view. I suggest that the policy aimed to promote freedom for ethnic minorities can result in their neglect when the discourse of neoliberalism and spatial management are utilized to justify the policy.

Dynamism Among Japanese Railway Fans: Transition of Taste in the Dimension of Hobby

In this paper, I intend to examine “shumi” (Japanese word for “hobby”) in contemporary Japan, revealing its mechanism and dynamism. “Shumi” is composed of three aspects: “omomuki”, taste, and hobby. “Omomuki” is a Japanese word for a concept of aesthetics in the nature. Taste is a concept of value judgment. Hobby is a concept of enjoyable activities. In sociology, taste and hobby have been researched, far depicting how the concept of taste has been regarded in the concept of hobby in a class society. However, it is necessary to study this matter from the perspective of hobby. Railway fans have been chosen to conduct the survey for the purpose of this study. This is because they participate in activities that are rich in variety, as well as complexity. According to some surveys, there are around 20,000 serious railway fans and roughly from 1.5 to 2 million casual fans. A distinguished characteristic is that although the age distribution is widely covered from under 10 to over 90, at least 80% of them are males. Also, based on my field research related to railways, conducted from July 2009 to October 2012, railway fans have been found to enjoy various kinds of activities, which are not limited to competitions, such as “Ago” that Gaillou refers to. Focusing on Bourdieu’s theory of “champ”, or “distinction”, I examine the new framework to analyze the conceptual interaction between taste and hobby. Specifically, I introduce “games” as the sub-concept of hobby, revealing that each fan transitions between values to different realms within the dimension of hobby. Thus, I aim to show the possibility that interaction taste and hobby takes place in a non-class society.

Fundamental Paradoxes of the Theory and Practice of the Criminal Law

The “crisis of punishment” as well as negative phenomena of the modern system of justice determines to the ideological handicap. Let’s focus only on two mainframe ideas.

Understanding of the social justice

Social justice is a measure of social benefits from laws and other regulators based on an agreement which establish and maintain the life order of individuals and institutions. This order promotes the survival and development of the society, as well as provides integration and decent life of its members. The “decent life” is a compilation of all the benefits proclaiming in modern society: freedom, equality, social security, etc. Therefore the justice system should be aimed primarily at preventing crime, restoration of the rights and rehabilitation of the victims, and only then – on the prosecution, punishment and/or rehabilitation of criminals. Economic pragmatism of the “social protection” concept

The concept of punishment should be based on a quality management underlining efficiency and effectiveness. In this regard, in Western societies are widely discussing concepts of “safety” and “protection”. However, they are discussing without an analysis of what, in fact, should be protected. So “reliability” becomes symbolic notion and goes back to the “retribution”.

In this perspective, should still expect the punishment, if we should solve the problem, it is necessary to decide from which perspective we should evaluate its quality. From producer’s perspective? But what exactly it produces: improvement of criminals, their crime or protection of society? And from the perspective of the law in modern society.
Intergenerational Transfer within Families from the Perspective of Social Inequality in Japan

As in Europe and the US, Japan's ageing population, and the accompanying generational imbalance, has become one of today's most pressing social policy issues. My paper primarily examines how intergenerational transfer within families takes place, and whether this process contributes to expanding inequality between families.

I focus on three kinds of private intergenerational transfer: co-residency, remittance, and asset inheritance. In particular, I intensively discuss different directions of transfer, both from parents to children, and from children to parents. The aim of my research is to identify similarities in determinants of all three types of intergenerational transfer, and in both directions. In conclusion, I explore whether the relationship with macro-level intergenerational imbalance is consistent with the one at the micro-level.

I will analyze data from two sources: the Comprehensive Survey of People's Living Conditions (CSCJ), conducted by the Ministry of Health, Labour and Welfare, and the 2010 Panel Survey of Living Conditions among Middle-Age and Elderly People (PSMEP). The former presents cross-sectional, detailed household income data, with a sample size of 26,115. The latter is first wave of nationally representative panel survey of people aged 50 to 84. The survey, with a sample size of 6,442, includes detailed information on financial and care support between parents and children, and on household assets and savings.

According to my preliminary results, the meaning of co-residency has changed. The elderly are no longer always the beneficiaries of co-residency; rather, they retain the role of household head that provides basic economic support to younger family members. Private transfers divide society rather than redistribute resources, since the older generation provides more than the younger, and intergenerational imbalances in private transfers become more obvious as the population ages.

Intergenerational Transfer, Social and Private, in Japan

Largely because of generational imbalance, the ageing population of Japan is one of the most urgent topics in social policy. My paper principally examines the relationship of social and private intergenerational transfers in Japan. I analyze two kinds of data. The first is that of the "Comprehensive Survey of People's Living Conditions," which was conducted by the Ministry of Health, Labour and Welfare, and the second is that of "National Survey of Living Conditions among Middle-Age and Old-Age People in 2010."

The public pension system, which produces social transfers from the younger to the older generation, can be regarded as a form of intergenerational re-distribution. I first examine the extent that public pensions limit poverty among the elderly in Japan as a way to gauge the impact of public transfers in improving social equality. The main research question here is the extent to which public pensions reduce the risk of poverty as the generational imbalance worsens.

I study two-fold private transfers, co-residency and remittance. In Japan's welfare society, the family has played a critical role in providing basic economic security to its members. The elderly have secured their economic well-being through co-residency with their off-spring. I examine how private transfers across generations, as in co-residency and remittance, have taken place. My second research question is whether such transfers have been enhanced by population ageing. According to my preliminary result, the meaning of co-residency has now changed: the elderly are no longer always the beneficiaries of co-residency; rather, they retain the role of household head that provides basic economic well-being to the resident younger generation. Private transfers divide society rather than re-distribute resources, since the older generation provides more than the younger, and intergenerational imbalances in private transfers become more obvious as the population ages.

Comparative Study on Vocational Education in Japan and in France

In this paper, I will discuss on the vocational education at the level of secondary education in Japan and in France with a comparative point of view.

In France, there are mainly three types of high school (lycée): lycée général, lycée technologique and lycée professionnel. When the pupils accomplish their study at high school and pass the final examination (baccalauréat), they receive a diploma which corresponds to their study course (baccalauréat général, baccalauréat technologique and baccalauréat professionnel). Though all these three types institutionally give the right to enter the higher education, the courses of pupils after graduation of each type of high school show a clear difference: continuing to study at higher education or entering employment; types of institution (grande écoles, university, professional junior college ...). When they continue to study... Historically, 'technological' and 'professional' courses are introduced for the purpose of vocational education, but the situation of the pupils after graduating has been changed in the last years. In France, there are general education course, specialized education course and comprehensive education course in high school. I will discuss the tendency of the way that the pupils of each course take after their graduation as comparing with the situation in France.

With these discussions, I will try to examine concepts of ability, career and so on, in a wider sense.

Gender Dynamics in the Dualisation of Coordinated Market Economies

Recent research about growing inequalities in some of the most protected employment economies has pointed to the dualisation of employment conditions originating in the expansion of non-standard employment and the deregulation of social protection coverage for significant segments of the workforce. This paper will focus on bringing informal work in private households into registered employment, they have strengthened the traditional path of women's labor force (re-)entry into part-time work, while creating large differences in the forms of part-time work taken up by educated and less skilled women.

In the late 2000s Austria and Germany introduced policies aimed at expanding the employment of household services in order to support families in their ability to reconcile work and family. Both sets of policies targeted the use of a particular form of marginal part-time work, to make formal employment relations more attractive to households. The effect however, has been to constitute household service work as insecure low wage work, and to introduce new lines of inequalities between working women. While neither the Austrian or German reforms have resulted in the expected effects, they have served to highlight the social protection framework in which household services are embedded, and the more generally poised between women's employment and household responsibilities.

In Japan especially after the World War II, it is said that the importance of intermediate group is rediscovered in Japan after the Great Hanshin earthquake in 1995. A law which prescribes to give the right of juridical person to a NPO, one of the forms of intermediate group, is founded in 1988. Since then, there are more discussions on NPO than before. I will reconsider these discussions to analyze the significace of intermediate group in the contemporary society and sociology in Japan. I will also treat other intermediate groups, such as neighborhood associations for example, to deepen the discussion.

Family Supports and Insecure Work: The Politics of Household Service Employment in Conservative Gender Regimes

In the late 2000s Austria and Germany introduced policies aimed at expanding the employment of household services in order to support families in their ability to reconcile work and family. Both sets of policies targeted the use of a particular form of marginal part-time work, to make formal employment relations more attractive to households. The effect however, has been to constitute household service work as insecure low wage work, and to introduce new lines of inequalities between working women. While neither the Austrian or German reforms have resulted in the expected effects, they have served to highlight the social protection framework in which household services are embedded, and the more generally poised between women's employment and household responsibilities.

In Japan especially after the World War II, it is said that the importance of intermediate group is rediscovered in Japan after the Great Hanshin earthquake in 1995. A law which prescribes to give the right of juridical person to a NPO, one of the forms of intermediate group, is founded in 1988. Since then, there are more discussions on NPO than before. I will reconsider these discussions to analyze the significace of intermediate group in the contemporary society and sociology in Japan. I will also treat other intermediate groups, such as neighborhood associations for example, to deepen the discussion.
SHISHIDO, KUNIAKI* (Osaka University of Commerce, kuniaki@daishodai.ac.jp)
IWAI, NORIKO (Osaka University of Commerce)
SASKAI, TAKAYUKI (Osaka University of Commerce)

The Japanese General Social Surveys project conducts a nationwide social survey every two years since 2000 to study the attitudes and behavior of Japanese people. As the U.S. GSS, the JGSS questionnaire covers a wide range of topics including family issues.

Working with Korean General Social Survey, Taiwan Social Change Survey, and Chinese General Social Survey, JGSS shares some modules of questions with East Asian Social Surveys (EASS). The theme for the first EASS (EASS 2006) is Family, for the second (EASS 2008) is Culture and Globalization, for the third (EASS 2010) is Health and Society, and for the forth is Network Social Capital, and for the fifth (planned in 2015) is Work and Life. EASS aims to continue valid and reliable cross-national surveys by using repeated research that has already generated robust results.

In this presentation, we will illustrate the change in Japanese family and capture the present picture based on the results of cumulative JGSS data. The overall trends between 2000 and 2012 will be described. While swayed by unstable job climate, both individuals and families suppress dissatisfaction and come to grips with reality.

The number of unemployment and contingent employment among youths has been enlarged, the percentage of unmarried people has increased, and unmarried children have increasingly been raised together with their parents. A growing number of women in all ages entered into labor force and the trends between 2000 and 2012 will be described. While swayed by unstable job climate, both individuals and families suppress dissatisfaction and come to grips with reality.

The bottom of the M-shaped employment rates among women have become shallow. Following favorability towards socialization of livelihood security and care of the elderly, increasing people favor socialization of childrearing and education. The changes in employment among youths and women should have a strong impact on Japanese family in the future, and thus a whole picture of the reform of taxation system, employment policy, and social welfare should gain attention.
Governments around the world are endeavouring to work out how to meet patients’ expectations regarding universal health coverage. Even wealthy nations such as Australia that formally enjoy universal health coverage experience gaps and inequities in access to health care. Not all patients enjoy an equal capacity to choose. Inequities in access to care, long waiting times for surgery and increasing out-of-pocket expenses are creating a divide in healthcare between those who can afford to pay either out-of-pocket or via private health insurance, and those who cannot. The aim of this project is to advance policy-relevant sociological knowledge about the factors that shape and constrain patient choice as a basis for transformative healthcare professional education and evidence-informed policies.

The study is informed by a critical discourse analysis of selected Labor and Coalition Federal policy texts to examine how patient choice is spoken about, shaped and enacted at the federal level in Australia. The content of speeches and statements related to social justice as a means for building social cohesion in 1995 reform. The importance of social justice as a means for building social cohesion in 1995 reform. The position taken here is that methodological pluralism (philosophy of science debate) are delineated: defining variables, methodological and ethical challenges and present a model for more equitable and just societies. The paper will try to narrow down to types of theories, metho
dological and ethical challenges and present a model for more equitable and just societies.

Is There an Emerging Transnational Advocacy Network in Opposition to Weaponized Drones?

The use of unmanned aerial vehicles (UAVs) or drones by the United States for carrying out targeted killings in territories throughout the Middle East, South Asia and Africa has by now become a routine, but controversial, American counter-terrorism practice. In recent years, these drone strikes have been regularly denounced by human rights organizations and have also drawn the critical attention of United Nations special rapporteurs on account of the civilian casualties such attacks frequently cause in apparent violation of international norms governing the use of military force. Perhaps just as significant, however, in continuing to resist the normalization of drone warfare, has been the increasing activism of a variety of like-minded norm entrepreneurs involved in the production and dissemination of knowledge about its legal aspects and realities created on the ground. Volunteer lawyers representing victims/survivors of drone attacks have been pursuing litigation in different national jurisdictions, most notably in the United Kingdom and in Pakistan, to identify liable parties and publicize their alleged complicity. Concurrently, the epistemic community of international law scholars and practitioners has been engaged in public intellectual debates concerning the legality and morality of drone warfare, while investigative journalists have (often at their own peril) continued to document attack incidents and play a significant role in bringing these facts to public attention. This paper explores whether, and to what extent, these separate, yet complementary, initiatives may be indicative of an emerging transnational advocacy network opposed to the use and proliferation of weaponized drones.

SIDIQI, ASIF* (Peking University HSBC Business School, sidiqii123@gmail.com)

The Democratic Peace Debate: Theory and Fact

The concept of a Democratic Peace (DP) is a major theoretical strand within International Relations (IR). Depending on precisely how democracy is defined, the number of wars between such states over the last two centuries varies from zero to a handful. Moreover, democratic states have never fought on opposing sides in a general war involving all, or nearly all, the great powers. Such a record cannot be claimed by any other form of government – monarchies, Communist and authoritarian states have all fought against one another. The only zone of peace that is grounded in a shared political system is that of liberal democracies. In a field in which there are relatively few empirical regularities of even modest strength, scholars were encouraged to validate or invalidate the findings. Thus, DP provides an almost perfect focal point to grapple with contentious issues involving theory in IR. First, DP will be differentiated from the liberal (or Kantian) peace, a concept with which it is often conflated. Second, the main debates about theory within IR that DP helps to illuminate will be discussed. These debates can be categorized as follows: 1) Rationalist vs. Reflexivist (paradigm debate); 2) Quantitative vs. Qualitative (methodology debate); and, 3) Methodological Unity vs. Methodological Pluralism (philosophy of science debate). Hence, concerns about theory-building in IR (as reflected through DP) are delineated: defining variables, confounding of variable effects, and fleshing out causal mechanisms that connect the variables to each other. The position taken here is that methodological pluralism is a pre-requisite and, furthermore, such a flexible and wide-ranging approach should also prove highly beneficial for delineating real-world connections.

SIDIQI, SAIRA* (GC University, sairasiddiqi14@hotmail.com)

Gender Inequalities and Socio-Cultural Themes of Leisure in Contemporary Societies: Illustrations from Pakistan

This paper takes into account the cultural and social themes of leisure that explicate how women’s leisure has been marginalized in a contemporary society. It attempts to understand and use the perspectives of inequality to look at leisure and social transformations. Reflecting the intersection of social and cultural themes of leisure, and progress towards the Millennium Development Goals, this paper views gender disparity paradox and contradictions within gender segregation and disparity is found in hetero-social dimension in Pakistani society. Equal rights to leisure are given in a range of UN declarations even if it is frequently viewed as less important than basic human needs of food and shelter. Its purpose is to suggest how women’s participation and perception in the context of central aspects of leisure dynamics may alter and enrich analysis and characterization of contemporary global society. The studies on gender inequalities have given theories and methods; therefore, this paper argues that women having developed different educational and organizational talents and have the capacity to make a distinct and positive contribution to contemporary global societies. The paper will try to narrow down to types of theories, methodological and ethical challenges and present a model for more equitable
leisure policies and new resolutions for more leisure opportunities for women that enable leisure to serve as a force for human growth. Finally, in drawing together some themes of leisure and gender equality, the paper will indicate how these realities have the capacity to add to our understanding of the complexity of contemporary global society. Leisure and gender inequality will be seen in a socio-cultural framework.

Inequalities of Gender, Violence and Dehumanization in Multiple Forms in a Conflicting Cultural Values Outlook in Pakistan

This paper provides a theoretical framework of understanding, experience and struggle of gender and pursuit of women rights concerning inequality, violence and dehumanization, and how multiple forms of such disparities overlap and interrelate with social categories and cultural values. The paper's main theme will be a theoretical inquiry into the way Violence is conceptualized in relation to the conflicting cultural values in traditional and modern theories. Theoretically and methodologically the paper will be designed so as to allow the interpretation of maltreatment of women with reference to sexual and gender options concerning violence, class, and discrimination in the background of conflicting cultural values. It will focus on Pakistani society since it got its independence in 1947 and build its argument on previous research conducted among indigenous groups in Pakistan. It will be discussed here that an examination of multiple forms of inequalities of gender, violence and dehumanization in the lives of women in Pakistan, the interpretation would be that of a society surrounded with violence. Central to this theory is the understanding that violence is an integral part of the lives of women which accounts of the ways Pakistani women find themselves between being modern women and traditional women to illustrate the limits of the dichotomy of the theories of traditionalism and modernism. This paper will focus on the rights of the women who suffer from violence and dehumanization. These rights will include socioeconomic rights of getting jobs, social security, health facilities and shelter. In the end the paper will give a model of gendered approach for rehabilitation of the women who have faced such inequalities considering into view the legal Act against women victimization in Pakistan.

Crisis of Labour: Macro- and Micro-Level of Social Analysis

The report focuses on the phenomenon of labor crisis and its macro- and micro-level analysis. At the macro-level labor crisis is a transition to a postindustrial society; one of its features is a weakening of the need for hard work for industrial production. Labor in its classic sense is a thing of the past. Due to globalization, the processes of labour mobility across countries and the emergence of the international labor market play an important role in the contemporary world. And at this level the study focuses on the problems of the prospects of labor as an activity, changing the nature of work, etc. Therefore a researcher faces new challenges such as: identification of new labour types that replace labour in its classic sense; changes in the organization of the living space of people; career opportunities; a change of identification of new labour types that replace labour in its classic sense; changes in the organization of the living space of people; career opportunities; a change of

Building a Hybrid Culture in Multinational Military Operations: The Perceptions of Eufor Peacekeepers on Collaboration and Negotiation for a Better Information Sharing

Information sharing describes the exchange of data between various organizations and people. A hybrid culture based on collaboration and negotiation may play the way for better information sharing within an organization. In the meantime, the nature of the organizational work is changing with the help of globalization, technological developments, complexity and today's sophisticated social and political problems. To remain competitive and to gain an advantage of these developments by solving conflicts effectively (Hocker and Wilmot, 2009), some new “multinational collaborative work arrangements” are being established both in civilian and military multicultural working environments. These working environments are also in place for military multinational military operations (Pedersen, 2001). In fact, if the cultural diversities are being managed well, organization can use advantages of this situation. In this case, the concepts “collaboration” and “negotiation” have become much more vital to manage the intercultural process effectively, to prevent some misunderstandings and create a better information sharing between the partners.

The research questions of this study are:

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
weakening of community networks. Reported by the interviewees refer to individual behavior, family isolation, and the scenario. As a result, the main strategies to prevent or cope with victimization are part of the organized crime have been weak and access to public services and policy benefits has been mediated by particularistic intermediation rather than a matter of citizens' rights. The analysis is based on qualitative research methodology. An interview to explore these research questions -designed by the writer while he was the Chief of Capacity Building Department at EUFOR in 2012- was applied face-to-face to 55 peacekeepers of 13 different countries within EUFOR Peace Operation in Bosnia and Herzegovina between April-October 2012. The collected data will be analyzed by “content analysis” method to find out the answers to research questions and to propose strategies on a better information sharing within the light of the findings.

From 'Absent-from-Home Father' to 'Committed Father': Changes in the Model of Fatherhood in Poland and Role of Mothers-'gatekeepers'

The current situation of fathers in Poland is an excellent example of the gap between the one hand - the level of social expectations, and on the other hand - everyday practice. Social expectations have tended to climb as a result of the promotion of a new fatherhood model, extensively discussed by the media and by experts, which has led to the creation of new social patterns and a new model of 'the father'. The majority of press, radio, and TV programmes present the idea of the committed father, involved in childcare in a very positive way, as an opportunity for men to benefit from developing close relations with their children.

In the same time, Polish fathers rarely get involved in dealing with children, do not spend a lot of time with them, do not decide on matters that are important for children, etc. The question is: why? There are many reasons for that, one of them is the attitude of some Polish mothers which could be described as 'Gatekeepers'. Many of mothers admit that the fathers of their children are able to look after children, but they treat them as if they were children themselves. They claim that men need detailed instruction, and when faced with a task of taking care of a child, the mother has to prepare everything for him. Due to this, many women prefer to have fathers 'under control' even though they deprive themselves of the chance of taking a break. In consequence, sometimes women subconsciously 'push men away' from children, because male commitment threatens their identity as built on being the mother, and thus the sole caregiver and expert in children's affairs.

The main purpose of my presentation is to describe the situation of fathers in the context of maters' attitudes and behaviors.

The violent conflict that emerged in Mexico - due to drug trafficking and the government's response - has produced a sharp rise in the incidence of violence, expressed in an escalation of homicide rates and disappearances. This violence not only has had an impact on its direct victims but also has engendered collective victimization. This paper describes changes in daily life experienced by the population in five municipalities in three states (Cuevavaca and Juipec in the state of Morelos, Saltillo and Torreon in the northern state of Coahuila and the city of Zacatecas in the homonymous state) that have witnessed an increase in drug related violence since 2007. In each locality, four focus groups were carried out with interviewees–men and women–from lower middle class neighborhoods. Among this sector of the population, the presence of state institutions has always been weak and access to public services and policy benefits has been mediated by particularistic intermediation rather than a matter of citizens' rights. The analysis shows deep changes in personal, family, community spheres as well as with respect to citizens' linkages to public security and justice institutions. These changes are expressed in the way in which the perception of crime, criminalization and social embeddedness of powerful groups of organized crime have weakened community organization and collective action to face the more violent scenario. As a result, the main strategies to prevent or cope with victimization reported by the interviewees refer to individual behavior, family isolation, and the weakening of community networks.

Police and Excessive Use of Force in Mexico City

In Mexico City, excessive use of force by police officers from different police forces is a problem acknowledged by the public and some political actors. This concern resulted in the enactment of a 2008 law governing the use of force by police forces of the Federal District. However, there is little research and systematic information about situations in which police abuse is concentrated. In developing democratic societies civilian control agencies has been one of the most important efforts to constraints police abuse and achieve a better level of compliance of basic rights. The main mechanism is the assessment of complaints against illegal police behavior. In Mexico City this responsibility lies with the Federal District Human Rights Commission. Since its founding in 1993 around a fifth of all registered complaints involve policemen (either from the Secretary of Public Security or the Attorney General of the Federal District). Based on the analysis of 600 complaints regarding police abuse between 2007-2011, this study describes the main characteristics of abuse in the use of force, and accounts for its severity by looking at social, spatial, situational, and individual factors. Police abuse is concentrated in a limited set of situations linked to the specific functions of each corporation, the motives and interests of police officers, as well as in spatial patterns.

Community Responses to Drug Related Violence in Mexico

Community Responses to Drug Related Violence in Mexico

The violent conflict that emerged in Mexico - due to drug trafficking and the government's response - has produced a sharp rise in the incidence of violence, expressed in an escalation of homicide rates and disappearances. This violence not only has had an impact on its direct victims but also has engendered collective victimization. This paper describes changes in daily life experienced by the population in five municipalities in three states (Cuevavaca and Juipec in the state of Morelos, Saltillo and Torreon in the northern state of Coahuila and the city of Zacatecas in the homonymous state) that have witnessed an increase in drug related violence since 2007. In each locality, four focus groups were carried out with interviewees–men and women–from lower middle class neighborhoods. Among this sector of the population, the presence of state institutions has always been weak and access to public services and policy benefits has been mediated by particularistic intermediation rather than a matter of citizens' rights. The analysis shows deep changes in personal, family, community spheres as well as with respect to citizens' linkages to public security and justice institutions. These changes are expressed in the way in which the perception of crime, criminalization and social embeddedness of powerful groups of organized crime have weakened community organization and collective action to face the more violent scenario. "If You Were a Man, You Would Be a Captain": Observations, Strategies and Experiences Of a Woman Anthropologist Among The Military In Brazil

This presentation aims to explore the relationship between the researcher and the researched perceptions in ethnographic approaches of the military in Brazil, showing methodological features and general practices in this field, together with observations from my own background and experiences of research in military organizations from southeastern and north of the country. The way the military reality is classified and arranged is, to some extent, revealed in contacts between anthropologists and military personnel which are initially marked by the experience of the anthropologists' perception as "civilians", i.e. "outsiders" of the "military world/environment". There are a lot of positions and relations being built and acquired in the development of research, that refer to the poles "military / civilian", and that, far from being fixed categories, reveal themselves as relational and contextual regarding the researcher (Castro & Leirner, 2009). By addressing issues such as women in the Armed Forces and military families in my studies, this paper aims to compare the entry in the fieldwork into units that are military academies in relation to other garrisons, as border platoons in the Brazilian Amazon. I will present the strategies for approaching and contact, positions acquired in the research context and experience as a researcher, "woman and 'friend of the Army'" and extend the reflection to the gender issue that permeates my research trajectory.

How Time Organised By and for Babies?

By and large, time studies have been carried out in the sociological area, con-verging in theoretical as much as methodological aspects when analyzing time use by adults in contemporary western societies. However, research on time use by children is still incipient and until now the main topics addressed refer to daily socialisation experiences (Larson and Verma, 1999), the differences in time use considering social class and gender differences (Carvalho and Machado, 2006), childhood life in urban and rural areas (Christensen and James, 2008) and the comparison between activities developed over different decades (Cruz and Teixeira, 2008). It is important to emphasise that such research only considered children over 6. For this reason, the present undertaking seeks to understand time use by and for babies under 12 months old, and hence complete the gap found in studies based on this age range. Firstly an instrument to record daily time use was elaborated, for completion over 24 hours in observation of both baby and parent. This instrument was used twice - once on a weekday and the other on a weekend. Interviews were later carried out with the parents in order to further explore the information recorded. The sample comprised two babies - one girl and one boy and their respective parents. If on the one hand, babies receive recurrent external determinations leading us to understand time as an instrument of social regulation (Elías, 1998), despite such impositions they also determine their own time use on the other.

Sweeping Floor and Building Identities: Centrality and Contradictions of Paid Work for Women in Brazil

The XXI Century Brazilian Society has undergone some transformations, whether in the political, economic, technological or social aspects. This new situation has led to changes in gender roles and labor relations, including women's work. Inserted in this context, this research presents a retrospective of Brazilian women's struggle for the conquest of their labor rights and interprets these changes empirically. We conducted a comparative case study on two organizations - one public another private - of Higher Education in the South Region of Brazil, with women that work in a cleaning sector for at least five years. We sought to understand how these women construct their identities at their social space of work and at home, as housewives. The data were collected through semi-structured interviews and focus group. It was found that for these women, the paid work has a centrality that builds contradictory feelings and actions. At first glance, the work promoted financial independence and increased self-esteem of these women. On the other hand they have experienced an invisibility as citizens and a lack of recognition of their activities in the organizations and at home. The consequence of this process has been a conflict in the construction of their identities as workers and as housewives.

The Role of Small Cooperatives and Communitarian Agents in Brazil: Strategy of Action to Sustainable Food Security and Struggle Against Poverty

Food security understood as a process that goes beyond the production and access to food, has been an important topic of discussion in the Central Countries as well as in the Developing Countries. FAO, UNESCO and Local Governments have presented measures aiming to guarantee the right to food security and a sustainable development. However, many of them has not been succeeded because of the disregard for local knowledge, great bureaucracy and a lack of involvement by the local population. In order to face this reality in Brazilian Society on XXI century, this proposal aims to identify, disseminate and replicate possible actions undertaken by organizations and agricultural cooperatives, and local agents and leaderships who are focused on the preservation of food traditions and enhancement of capabilities and local knowledge. These possible actions can create a favorable environment for the use of social technologies, with low cost and community use in a variety of forms and on scales. In this sense, this research is aimed at observing workers in China and fast food workers in the United States to protests against austerity in the European Union and by unemployed and precariously employed towns. The data will be systematized in the form of booklet, video and articles in order to stimulate new actions in other regions and countries.

A Spatial Analysis of Residential Segregation By Race and Income Gap in a Brazilian Metropolitan Area

Inequalities between White and Black people are known in many countries around the world. It affects, for example, the income, educational and health outcomes having multiple causes, as discrimination, composition variations and forms of segregation. Therefore, this paper proposes to analyze the residential segregation pattern by race and income gap in a Brazilian Metropolitan Area, the third bigger in Brazil, and its variation related with racial income gap. The choice for this Metropolis was made, once bigger Metropolises, as São Paulo and Rio de Janeiro, was already analyzed; but the techniques used here is not generally applied, due to being the first time that racial information are in universe questionnaire of census. Then, to this goal, data from 2010 Brazilian demographic census are analyzed through spatial analysis techniques, as “spatial lag” and “spatial error”, adding a spatially lagged variable, differently of some "aspatial" indexes currently used - as Dissimilarity Index, for example. The main goal is to show that residential segregation by race exists on Brazilians Metropolises, unlike the greater part of the literature claim the opposite, pointing socio-occupational status as unique cause of segregation. The results shows a large concentration of White people in the center of Metropolis, while Black people are in the periphery. Indeed, there is some overlap between household income and racial distribution on urban space, but is not only this that explains the existing segregation. Therefore, the proposal is to discuss how residential segregation conforms this Metropolitan Area, and how is it related with income gap between White and Black. The conclusion shows that residential segregation by race exists in this context and has relations with racial inequality in Brazilian Metropolises.

The Unequal Distribution of Employer-Provided Training. Empirical Findings and Sociological Conceptualisations

The aim of this paper is to analyse learning and training opportunities, and participation in employer-provided training (in-company training, in-service training, personnel training). Which employee groups are trained the most? And who are those who do not participate in workplace training at all and who lack the learning opportunities? Employer-provided training has been theorized mainly by economists (Gary S. Becker [1964] Human Capital; Jacob Mincer [1962]) On the job training: Cost, returns, and implications.) In economical literature employer-provided training has been conceptualized as human capital. Today when skills are the most important single asset an employee has in the labour market, sociological theorizing on employer-provided is needed. How should employer-provided training be conceptualized and theorized in relation work place hierarchies and class structure? What kind of capital workplace training is (e.g. Bourdieu?) The question is about class based skill strategies.

In international comparison the participation rate in employer-provided training is very high in Finland. What is typical for Finnish workplace training is its uneven distribution among employees. In the long run the participation in employer-provided training has grown. However, the differences in participation between levels of hierarchy (social classes) have been remarkably persistent. The differences have not diminished in 30 years.

The empirical data used in the study are The Adult Education Surveys by Statistics Finland. Adult education surveys study not only participation in education and learning and skills among the adult population; in addition, they produce data about people's opinions and experiences of adult education, their motivations and willingness and need to participate in it, and obstacles to and preconditions for it. The data from the survey are based on face-to-face interviewing of a sample of more than 5 000 people. The survey 2012 was a part of a European co-operative project co-ordinated by the Statistical Office of the European Communities.

SILVER, BEVERLY* (Johns Hopkins University, silver@jhu.edu)

Geopolitical Turmoil and the Fate of the Labor Movement in the 21st Century: 10 Years after Forces of Labor

My paper revisits the conceptual framework elaborated in Forces of Labor as a tool for understanding the roots of (and prospects for) the recent global upsurge of labor activism. Drawing on a variety of forms of labor activism - strikes by factory workers in China and fast food workers in the United States to protests against austerity in the European Union and by unemployed and precariously employed
workers in various parts of the world. I deploy a theoretical perspective that sees historical capitalism as a system characterized by ceaseless change—"all that is solid melts into air"—and therefore as a system that is recurrently making, unmaking and remaking working classes on a world scale. The paper traces how various capitalist "fixes"—spatial, technological, product and financial—reshaped working classes locally and globally in recent decades; strengthened/widening labor; creating challenges and opportunities. The paper develops several arguments that can be found in embryonic form in Forces of Labor. One, the combination of technological and financial fixes has been destroying livelihoods faster than it has been creating new livelihoods, leading to a generalized crisis of subsistence for workers, and a crisis of legitimacy for capitalism. Two, the profitability of the financial fix results almost entirely from the redistribution of income from labor to capital. Redistribution was key to resolving the 1970s crisis of capitalist profitability, but at the cost of an intensifying crisis of legitimacy. Three, financialization, crisis of legitimacy and hegemonic decline go hand in hand. We are at the end of the neoliberal era and of the era of US world hegemony. Thus, the geopolitical terrain is critical for understanding "what is to be done", including the prospects for labor solidarity across borders and status divides in the very unequal world bequeathed to us by centuries of world capitalist development.

Reshuffling of the World Proletariat

The transformation of historical capitalism over the past several decades has resulted in a "reshuffling" of the proletarian and proletarian movements on a world-scale. In my previous writings, I focused, among other things, on how the rapid industrialization of parts of the global South has led to the emergence of large new "reserves of the reserve army" in the industrialized classes. The emerging working classes in China are the latest manifestation of this dynamic process of capital mobility and new working class formation. These writings focused on the "active industrial army". Another important dynamic underlying the contemporary reshuffling of the proletariat is the secular trend toward increasing capital intensity, and thus the growing mismatch between global labor supply and demand. As such, a deep re-theorization of the concept of the reserve army is imperative—a concept which is both critical to, but distressingly unelaborated in volume 1 of Capital. This paper seeks to contribute to this task by theorizing (1) the distinction between, and the relative historical and ideological exploitation and exclusion in the development of capitalism; (2) the ways in which capitalist accumulation has depended historically on the externalization of the costs of reproduction of labor and nature, and therefore some of the ambiguities of "exclusion"; (3) the unevenness of processes in time and space, and the resulting deep divisions within the world proletariat along lines of gender, race and citizenship; (4) the ways in which this unevenness is reflected in the patterning of world labor unrest in recent years; and (5) the implications of all this for moving toward a post-capitalist world system which guarantees a decent and secure livelihood for all.

Placing Panethnicity: Performing Arab Space on Sonnenallee

The multicultural Berlin district of Neukölln is home to a large number of very diverse foreign-born and migrant-background residents. Some 140 nationalities make up 40% of the population in 2010. Among the migrants least welcome by the dwindling, sometimes xenophobic, native German majority are the asylum-seekers from the Middle East. Unlike their Turkish neighbors, the Arabic-speaking refugees from Lebanon, Egypt, Syria, Afghanistan, Iran, and other countries in the region have a precarious foothold in Berlin. Establishing a small business, even if it is unprofitable, demonstrates self-sufficiency to the authorities. Ironically, immigration laws partly account for the "parallel societies" so deplored by the likes of Thilo Sarrazin, who characterized Turkish and Arab immigrants as lacking "a productive function, except for running fruit and vegetable business." This research looked into the ethnic enclave of distinctively Arab businesses and institutions clustered around a segment of the five kilometer long artery, Sonnenallee. These businesses do not sell fruits and vegetables, but rather goods and services that demarcate a specifically Arab space. The Arab businesses are frequently engaged in illicit or off-the-books activities to make ends meet in an economy from which they are formally excluded. Based upon field work and interviews with shopkeepers and customers, religious and ethnic association leaders and members, government officials, and Turkish competitors who cluster along a different Neu- kölln street, I report on the place-making activities of Arab Berliners. I find this street offers social public space for Arab political and cultural expression and the forging of "pan-ethnic community." Beyond common Arabic language, this street and nearby square is the location of pan-ethnic demonstrations and the center of ethnic associations, mosques, and predominantly Arab parks, schools, and other institutions in which solidarity crosses national lines. The symbolic boundaries of pan-ethnic space separate Arabs from both Turks and Germans.

New Experiences of Inclusion: Affirmative Action for Blacks and Natives in Brazil

After several decades of black social movement struggles for rights in Brazilian "racial democracy", it was recognized by the nation-state the practice of racial discrimination in the country, as well as affirmative action as a policy to correct inequality. In this scenario, the passage of Law 12.711 on Affirmative Action, in 2012, presupposes a set of substantive changes that alter the access to public high education in Brazil. To understand the social context that has led to the new legal framework of education on racial and ethnic relations as well as African and African-Brazilian history and culture for school system requires analysis of the democratization process of the Brazilian State. This paper focuses on three aspects: 1) the change in state policy related to inclusion of blacks, native population, and poor people; 2) the impact of these actions in the academic debate; 3) the role of black social movement in this process. The research fieldwork gathers the legislation that have changed the normative field in relation to the ethnic and racial issues after the Constitution of 1988; collects official data on the expansion of blacks, natives and poor people to public high education; and review the literature on racial affirmative action and black social movements producing a typology of the arguments.

Filial Piety Expectations of Older Adults in Urban and Rural China

Due to declining fertility rates and growing life expectancy, China will have one of the world’s oldest populations by the middle of the 21st century with more than one in three individuals over the age of 60. Reductions in family size—the result of the one-child policy in urban areas and 1.5-child policy in rural areas—will also lessen the dependency ratio of adult children to the elderly. This presentation will make use of 2012-13 pilot data from the Chinese General Social Survey of Aging, a national study of older adults (60+) in China that yielded 1,126 individuals about evenly divided between urban and rural locations. Questions in the survey about filial expectations concerned whether children should be financial providers to their parents, whether children should live close to their parents, whether children should live with their parents, and the special obligation of sons to insure the old age security of their parents. Descriptive and multivariate statistics will be presented to determine if aging in urban and rural China is truly a tale of two family types and identify the social, economic, and health factors that may be responsible for any differences detected.

Crime Control in São Paulo/Brazil: Military Police and Criminal Justice System

This paper discusses the State actions of crime control in São Paulo State/Brazil in the last decade. We seek to analyze how institutions and State agents engaged to crime control and criminal justice management are affected by the emergence of new “criminal organizations.” An expressive growth of the incarceration rates, and a decrease in number of prisons, is linked to the emergence of the ‘Primeiro Comando da Capital – PCC’, bringing a new dynamic to the relations inside the ‘world crime’. Research (under data collection) has identified two main strategies of crime control to face the new crime dynamic: i) a militarized combat based on lethal confrontation led by the Military Police against supposed criminals and ii) a classic judicial control producing both imprisonment for specific population and low rates of punishment, especially for homicides and police violence, showing the high selectivity of the penal system. Two empirical cases exemplify each strategy mentioned, and allowed to describe some of their characteristics. First data indicates some affinities between classic crime control and police violence.

Slow Birth and Fast Growth of a World-Class Post-Secondary Education in Singapore

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This paper examines the background and strategies behind the slow start but fast expansion of a world-class post-secondary education in Singapore and presents an overview of its current trends and future directions.

When Singapore gained its sudden independence with its separation from the Malaysian Federation in 1965, one of the legacies of the British colonial heritage was its low investment in the infrastructure of schools and teacher training. This is reflected by the low literacy rate of 73% in 1970, and a high 83% of population aged 25 years and above having qualifications below secondary level even in the year 1980, based on data released by the Department of Statistics.

However, the small city-state transforms itself from an entrepôt to an industrialized economy, rapid school construction and large scale teacher development were initiated to meet new socio-economic needs and to provide education to all. These efforts bore fruitful results within a short quarter century, as evident in the following figures: by 2000, the proportions of 25-34, 35-44 and 45-54 years-old with at least education were about 56%, 32% and 21% respectively and the figures rose to 82%, 64% and 36%, in the same order, in 2010.

Apart from expanding enrollment at the post-secondary level, Singapore also had to shift its efficiency-driven education to an ability-driven one in the past decade, to respond to growing educational aspirations among the young and the deep impact of the digital knowledge-based era. This paper will conclude with a discussion on the new challenges, opportunities and measures to adapt to the ever-changing landscape of post-secondary education.

**The Forbidden Discipline: The Impact of the Pinochet Dictatorship on Chilean Sociology and Sociologists**

In 1972, during the height of Allende’s presidency, Santiago de Chile hosted the Conference of the Latin American Sociological Association (ALAS). The conference would not return to Chile for 41 years, until September 2013.

At the time, Chile was the Latin American center of social scientific exchange and collaboration (Franco, 2007). Besides, Chile’s path towards socialism and its changing society attracted many sociologists from Latin America and overseas. This golden era of Chilean sociology immediately came to a halt with Pinochet’s coup d’état in 1973 and the seventeen years of dictatorship. As in other authoritarian regimes the dictatorship not only deeply altered and affected Chilean society (Fleck, 2007), but had major impacts on sociology and the humanities, resulting in the closure of sociology departments and the persecution of sociology and sociologists as leftist ideology, with many having to migrate to save their lives (Barrios and Brunner, 1988; Brunner, 1988; Garretón, 1997, 2005). At the same time, with the forceful implementation of neoliberalism in all areas of life under the guidance of the Chicago Boys, neoliberal economics became the queen of the social sciences, leaving little space for what seemed to be ‘ideology’ and thus the abandoning of accepted knowledge in the social sciences.

This paper studies the fundamental transformations of Chilean sociology and sociologists’ lives during the Pinochet dictatorship (1973-1990). Based on qualitative interviews with Chilean sociologists who either experienced the dictatorship as students, academics or professionals, this paper explores three dimensions in which the dictatorship transformed sociologists and sociology: 1) biographical ruptures and transformations, 2) institutional changes such as department closures and the subsequent impact on employment opportunities for sociologists, and 3) epistemological changes within sociology as a discipline, and changing epistemological orientations of sociologists.

“Popular-ing” the Satellite City: Conceptions of Ownership and Idле Behavior As Poverty Frontiers in the Occupation of Cairo’s Gated Suburbs

On October 27th 2011, far away from cyclical occupations of Cairo’s Tahrir Square, 1800 people collectively invaded and squatted Orascom’s Harem City, one of many ‘fully-integrated’ private communities dotting Cairo’s state-built satellite cities. Angered that UNDP promoted, privately operated housing on publically subsidised land is selling to an upper-middleclass market, the group travelled from central Cairo’s impoverished Qabaha district to claim 891 flats, connecting utilities, converting villa facades into storefronts, and building a market with a microbus terminal for transport to the city-centre.

Presented by Orascom as the “slum-ification” of its gated-community, the accidental integration of new consumerist aspirations with shaabi (popular/common) survival in a tabula rasa masterplan defies a central epistemological formal/informal binary of contemporary urban development practice and scholarship. Research on ways the urban poor constitute the city, entrenching livelihoods in spatial practices and creating economies around shelter, stands to benefit from case-studies of cross-class economic consolidation and shifting conceptions of property ownership or housing tenure.

This ethnography re-evaluates James Holston’s research on insurgent claims at the urban periphery in terms of the instrumentalisation of state categories such as ‘activist’ and ‘middle class’ by residents as strategies for consolidating territories against eviction in a fully privatised landscape. How Egyptian street subjectivities of figures ‘appearing to succeed in life without trying or doing’ combine with the popularisation of revolutionary social justice discourses across the great psycho-social exodus from urban to suburban Cairo (described by one participant as an “Internal immigration”). As deep economic ties grow between Harem City’s extremes, public stances stressing the appearance of idle behavior elide with a perceived threat of collective violence to sustain a temporary commons, contingent on taut antagonisms yet outlining all major political shifts of the last two-and-a-half years.

The Interplay Between CEDAW, the Brazilian Women’s Movements, and Global Feminisms Agendas

In this paper we investigate how Brazilian women’s participation in transnational feminist networks and the UN Conferences on Women and Brazil’s ratification of CEDAW have profoundly shaped the two most recent waves of the Brazilian feminist movements: third wave of the 1980’s and the ongoing fourth wave. Our paper presents a case study of the interplay of the national and transnational dimensions in shaping women’s movements. The third wave of the Brazilian feminist and women’s movements encompasses the civic participation of Brazilian women in the transition from a military dictatorship to a democratic regime as well as participation in the transnational women’s movement and Brazil’s ratification of CEDAW in 1982, during the military dictatorship. The ongoing fourth wave of the Brazilian feminist movements has focused on the institutionalization of CEDAW through public policies for women; the creation of executive and managerial organs for such policies at the national (the national Special Secretariat for Policies for Women), state and city levels etc. We argue that the reciprocal impact or feedback mechanism between transnational feminism and the Brazilian feminist movements can not be overstated. Brazilian women played a key role in building gender and international agenda for transnational feminism – currently reflected in the intersectionality of gender, race, class, and sexual orientation. CEDAW was also utilized by Brazilian feminists as a crucial tool to legitimize a very broad intersectional agenda. Based on our case study of the Brazilian feminist movement and CEDAW, we would like to argue that the feedback mechanism
Reflecting on the role markets play in shaping the interests and actions of social life, this paper presents the argument for how institutional ethnography furthers our understanding of the discursive creation and enactment of markets as part of daily life. Drawing on data emerging from an ethnographic study of financial institutions within the City of London, this paper asks how markets are created, maintained and ideologically positioned though the everyday actions of economic actors located within key financial institutions.

Informed by Goffman's (1961; 1963) work on the body as a site of cultural inscription, it is argued that markets are essentially constructed and managed through the production of dominant cultural sensibilities. This blended approach of cultural economics identifies the market as an enacted phenomenon, bounded socially and spatially within institutions of finance. By focusing on the embedded cultures, enacted through the daily practices within the city's financial institutions, we can explore how the market operates in terms of its agenda, practices and conflict with the outside world.

Through exploring the lived experiences of those working within the City of London, light is shed on the unfolding effects of a deregulated economic landscape that exalts the principles of the market which legitimises the production of social harm through its own unique set of experiences and ideologies. As a result, this paper explores the way in which managers and traders, in their daily capacity as market actors, seek to utilise existing technologies, architecture and habits to create a more efficient market – one where individuals are better placed to draw profit from their own financial acumen whilst insulated from the broader, social costs of evasion and remote management, with extensive and expensive devo-

ition of implementation to local and private contractors on the civil side, contin-

uous with use of private contractors and local proxies on the military side. Evidence for egalitarian distribution of risk, a condition central to sociological models of risk such as 'risk society', is limited. Risk-averse 'enclaved' intervention operates as a transfer of risk to local and civil populations, whether as inadvertent civilian ca-

sualties of military operations, or as populations excluded from, or marginalised as part of daily life. Drawing on data emerging from an ethnographic study of financial institutions within the City of London, this paper asks how markets are created, maintained and ideologically positioned though the everyday actions of economic actors located within key financial institutions.

The paper concludes by not only examining the role of markets within the City of London, light is shed on the unfolding effects of a deregulated economic landscape that exalts the principles of the market which legitimises the production of social harm through its own unique set of experiences and ideologies. As a result, this paper explores the way in which managers and traders, in their daily capacity as market actors, seek to utilise existing technologies, architecture and habits to create a more efficient market – one where individuals are better placed to draw profit from their own financial acumen whilst insulated from the broader, social costs of evasion and remote management, with extensive and expensive devo-

Ted cultures of finance actively create and manage markets.

The paper presents an analysis of 'state-building' intervention and civil-mili-

tary practice in the context of global terrorist-related and conflict-related risk. The paper is based on qualitative field research conducted in Afghanistan, and in particular focuses on the international intervention 'risk management', at two levels. The paper first considers 'state-building' intervention as management of the global risk of terrorism, or of conflict-related regional instability as continuous with global terrorism. At the level of everyday practice, the paper considers the intervention operations of both civil and military organisations as in part driven by management of the risks of operating in a high-risk environment. In this the paper brings together Shaw's concept of risk warfare (2005) on the military side with Duffield's concept of the fortification of development aid (2010) on the civil side. Practice in both cases converges on a risk-averse model of intervention emphasis-

ing 'enclaved' and remote management, with extensive and expensive devo-

tion of implementation to local and private contractors on the civil side, contin-

uous with use of private contractors and local proxies on the military side. Evidence for egalitarian distribution of risk, a condition central to sociological models of risk such as 'risk society', is limited. Risk-averse 'enclaved' intervention operates as a transfer of risk to local and civil populations, whether as inadvertent civilian ca-

sualties of military operations, or as populations excluded from, or marginalised in urban spaces that have become enclaves for international organisations. This model of intervention is potentially counter-productive, as it increases local con-

flicts with the outside world.
“Other within”, Seen from an orientalist perspective, the sociological description of the Arab-Jews had engendered a negative reflection of these communities. At the same time it paved the way for a contrasting and a more “legitimate” model upon which the ideal Israeli archetype could be defined. The main endeavor of this paper is to show how an Israeli “legitimate” identity has been constructed in the context of the political analysis in a way that strengthened the political legitimacy and bolster its national inner logic.

Music As Leisure in the 21st Century: The ‘sportisation’ of Music Fandom

The term ‘sportisation’ (Elias and Dunning, 2008) is used by figurationalists in a general sense to document the development of rules and regulations for previously chaotic games (e.g. boxing and football) into the commercialised, controlled ‘sports’ that occupy such an important position in modern society. King (1997) focuses on the role that commercial forces, in particular the introduction of modern all-seater football stadiums, have had on the emotional management and masculine identities of sports fans. This paper readdresses the focus on leisure (in this case music fandom) in the figurational sociology of sport and leisure, charting the impact that ‘sportisation’ processes and marketplace influences have had on the live music experience of heavy metal fans.

Drawing from a three year study of heavy metal subculture which incorporated data from participant-observation and interviews, this paper examines how transformations in modern music ‘arenas’ has significantly diminished the quality of the live music experience. This is encapsulated by the problematic issues raised in terms of emotional management and identity projection that that fans have experienced in the context of such transformations. In particular, focus is attributed to the importance of the heavy metal rituals (moshing, crowd-surfing) which have previously been facilitated in ‘controlled’ environments that allowed for the ‘de-controlling’ of emotions and exaggerated displays of masculinity. Following the changes in such subcultural spaces, particularly the increased seating in large music venues, the strategies used by fans to reconceptualise ‘established’ notions of masculinity within the scene and to demonstrate their heavy metal identity are explored.

Focus Group Interview As Research Method inside the Military

In the proposed paper I would like to focus on the several dimensions, as shape, establishing and duration of relationship between different groups in the military institution perceived in the context of chosen research methods. The starting point of the paper is the reflection on the use of Focus Group Interview as a tool for qualitative research in the Polish Armed Forces. The history of use of FGI starts in military studies in Poland begins in the mid of 90. (XX c). FGI as a method was used in the research mainly focused on the issues of women in the service, conscripts and lowest rank professional soldiers. The social process, that is activated as a result of use of FGI includes the re-creation of social relations and organizational culture of the military.

This paper is a modest attempt to underline the urban inequality and its impact on health. It describes the health implications of social inequalities within city. It also describes the health problems from which low-income groups in urban areas suffer more than other groups including those that are not linked to poor sanitary conditions and those that are more linked to relative poverty (and thus the level of inequality) than to absolute poverty. Study on the health of rich and poor households within cities shows the much larger burden of disease, injury, and premature death that low-income groups face. Most of this burden is easily prevented because it is a result of their unequal access to homes which have provision for piped water, sanitation, drainage and garbage collection, and adequate health care. Thus with this we can say that health inequality never been an independent phenomenon. By using health and social impacts of urban inequality as a focal point of the discussion, the paper also intends to provoke thought on some of the fundamental issues of human development trajectories.

SINDRESTEAN, ALEXANDRA* (University of Vienna, alexandra.sindrestein@univie.ac.at)

Developmental Logics Beyond the Divide

Developmental projects have been the common denominator of the post-1945 global order irrespective of political divides and divergent economic systems. Whether we look at the emerging postcolonial states of the South, state socialist Europe or the US and Latin America, it is clear that the processes of development in these regions have been marked by the coexistence of two distinctive types of developmental logics. The first type is the ‘capitalist’ developmental logic that was epitomized by the rise of the Fordism as described by the neoclassical economic growth theory. The second type is the ‘socialist’ developmental logic that was epitomized by the rise of the ‘socialist’ developmental projects in the Eastern bloc. This paper explores the relationship between the two developmental logics and the role of technological change and political interventions in shaping these logics.

This paper aims to shed new light on a particular kind of developmental continuum in an effort to question the wide-spread assumptions about the relationship between local variations and global structural constraints, namely the tendency in terms of explanatory frameworks to emphasize only particular local specificities, and to ignore external factors for certain socio-spatial formations. Drawing on extensive fieldwork in a Romanian Danube-riparian port city, I argue that it was the contingency of the 1977 earthquake that turned the city and the surrounding region into a laboratory for a new kind of developmental logic. After the downfall of the socialist regime in 1989, the very same region became yet again part of a new understanding of development. In accordance with pre-accession criteria for EU membership, Less Favoured Zones have been established in 1998 in order to attract foreign direct investment through long term tax exemptions.

Instead of seeking to establish path-dependencies linking state socialism with its aftermath, I conceptualize ‘contingent development’ as a way to look into improvements schemes that result from the arbitrariness of a natural disaster in relation to local changes that result from the dynamic of global capital since the 1970s.

Beyond the Stereotype of ‘Slum’: A Sociological Study of a Slum in Amritsar (India)

The slum in a city is considered as a poor area and it is assumed that all slum dwellers are alike. The present paper is an attempt to study the micro level discourse related to the issue of inequality within a slum. Inequality has been studied at various levels: such as national, regional and city, but not within a slum. A slum, like a city, is a heterogeneous entity, in which various categories of poor people share the same space and dwellings. The findings suggest that there are clear-cut inequalities among the slum dwellers in social, economic and political spheres.

Role of New Communication Technology Initiatives (NCTI) in Bridging the Digital Divide: The Case of a North Indian State

Communication technology includes the hardware equipment, organizational structure and social values by which individual collect process and exchange information. The new communication technology (NCT), such as satellites, cable, television, wireless telephony, the internet, computers, laptop, iPod, have certain characteristics that are similar in some respect of those of both interpersonal communication as well as of mass communication. This NCT, also called as new media integrates the characteristics of both interpersonal and of mass communication. Information exchange via the new media is interactive, meaning that the participants in a communication process have control over, and can exchange roles in their mutual discourse. The present paper is aimed to explore the role of NCT in bridging the gap created by the forces of globalization in developing countries like India by focusing on a NCTI launched recently by the state government of Uttar Pradesh i.e. Scheme of distributing laptop to every undergraduate student who took admission in the year 2012 or later in any college/university of the state irrespective of their social background. A cluster sample (N=399) drawn from a PG College of Western UP includes both the males and females. The study indicates that the representation of females was relatively high in all social categories. About half of the respondents were having their own mobile phones. The study shows that the NCTI launched recently by the state government of Uttar Pradesh aims to achieve the goal of increasing access to information and communication technology (ICT) and promoting ICT literacy, thereby enhancing the quality of life of the students

Critical Policy Studies: The Contribution of Basil Bernstein’s Knowledge Code Theory

Critical policy studies adopts a discursive analytic approach to policy research, drawing specifically on the Foucauldian concepts of discourse, regimes of disciplinary power (bio-politics and panopticon surveillance principles), and subject positions; and the Bourdieuan concepts of field, capital and habitus. A core aim of critical policy studies is to analyse the ways in which supranational organisations, such as the OECD, increasingly regulate official national curriculums given their role in the development, administration and reportage of tests which are ‘closely linked with the debate about national standards’ expressed as comparative performance on basic mathematics, scientific and literacy skills (Tyler, 2010: 145). However, passing from such theoretical work is a modelling of the production, recontextualisation, and acquisition of knowledge codes from the macro-level of supranational organisations to the local level of school practices. This was the focus of Basil Bernstein’s sociological theory of education. This approach, Bernstein (1975 onwards, distanced his ‘particular corpus of work from that of Foucault or Bourdieu’.

This paper undertakes three tasks. Firstly, it critically reviews the literature that has compared and contrasted the sociological approach of Bernstein to Bourdieu (Maton, 2008; Harker and May, 1993, Hasan, 1999) and Foucault (Diaz, 1984; Tyler, 1990 onwards). Secondly, it focuses on the knowledge codes underpinning supranational, national and local school curriculum models, and the potential consequences of such knowledge codes on different groups of students. Secondly, it explores Bernstein’s claim about his distinctive contribution to modelling knowledge codes (the structuring of curricula and the potential consequences of such knowledge codes to analysing policy enactment around standardised national testing draw on examples from two contexts, namely Queensland, Australia and Newark, New Jersey, USA.

SADOVNIK, ALAN (Rutgers, The State University of New Jersey)

Totally Pedagogised Societies. Sociologies of the Pedagogic Communication of Knowledge

Basil Bernstein (2000: 365) asks: How real is the contemporary pedagogic panopticism? And then suggests that a new sociological project might focus ‘on the diverse sites, generating both claims for changes in knowledge forms and displacement of and replacement by new forms, creating a new field of knowledge positions, sponsors, designers, and transmitters’ (2000: 368). Bernstein’s ideas have been the springboard for an analysis of: (1) the intellectual field of the new sociology of education (Moore, 2013; the Bernsteinian concept of the knowledge code); (2) the possibilities of a social realist project on knowledge (Moore, 2013) and geographies of knowledge (Piasas & Roussakis, 2012); (3) the transformation of teachers’ work (Robertson, 2013) and teacher professionalism (Beck, 2012); (4) the bio-politics of education and health policies (Evans, 2012); and (5) lifelong learning and new apprenticeship discourses (Gerwitz, 2008; Poulet, 2010).

Our paper aims to build on this work in two ways. First, we undertake a meta-analysis of the research literature drawing on Bernstein’s concept of the totally pedagogised society, as well as literature forging a new direction for the sociology of education on the basis of Bernstein’s work. Second, we distinguish between: (1) knowledge codes – the structuring of curricula and (2) pedagogic codes – the structuring of specialised communication for teaching. In so doing, we propose an alternative intellectual trajectory for the sociology of education. Specifically, we are interested in analysing new modes of global governance through pedagogic communication devices taken up in a range of formal and informal agencies to construct 24/7 spaces of learning, particular modes of learning engagement, and pedagogic identities. Our objective here is to simply lay out the possibilities for developing a sociology to examine new modes of pedagogic governance and the new spatial and temporal configurations of new pedagogic modes (see Tyler, 2001).

Globalization, ICT and Professional Education in India

The process of globalization has posed new challenges in every sphere of social, economic and cultural life of both the developed and developing societies. The transnational mobility of professionals has been increased in last two decades throughout the world. The professional education in India is also under process of transformation as a result of the pressing demands of globalization of professions. Apart from the existing professions, new categories of professions with new work ethos and work atmosphere have been emerged. The professional education in India also needs to transform in order to compete at the global level. It also demands the homogenization of certain basic elements of the professional education on the one hand and a thrust to include the context of the socio-cultural milieu of the given society on the other. As the professional education requires huge financial resources, the quality of professional education and institutions varies between and within the developed and developed societies. The poor countries have invested more on the expansion of basic professional manpower rather than on the post-secondary professionals particularly in the field of education and health looking into their pressing development needs. The rich developed countries, however, have focused more on the expansion of post-secondary professional manpower in order to stop outsourcing from their countries. In India, however, there have been expansions of both the basic professional training as well as of the post-secondary professional education. E-learning through the internet is an essential component of professional education in the globalized unequal world. The present paper analyses the various dimensions of intricate relationship between globalization, ICT and professional education in post-globalization era.

Religious and Colonial Encounters in the Straits Settlements: From Self-Governance to Institutional Regulation

The interface between non-Christian religions in the colonies and the British Empire has attracted considerable scholarly interest and produced by now exciting social science and historical literature from all corners of the globe. In comparison to the rich and nuanced African and Indian material, one struggles to find similar works on the former British colonies in Southeast Asia. This paper attempts to redress this imbalance by turning the gaze to the religious landscape of the Straits Settlements, an administrative unit of British colonial initiative under which these rather diverse and scattered geographical entities were united between 1826 and 1945. I demonstrate that the adopted method of dealing with the religious pluralism of colonized populations was an adherence to the broad articulated principles of religious tolerance and non-intervention, but which often could not be followed through in practice. Through the 19th century, the colonial context in the Straits Settlements was not, by and large, detrimental for expressions of non-Christian religious religiosity. The absence of restraints and control in this arena, undoubtedly, enabled expressions of non-Christian religions and facilitated their early institutionalization in this region.

I thus argue that from the mid-19th Century onwards, the colonial context in the Straits Settlements was enabling for religious communities in the Straits Settlements. We see in these times a vigorous sense of religious solidarity and community, witnessed in intense institution building and founding places of worship, cultural and religious organizations across Hindu, Muslim, Christian, Buddhist and Sikh communities. However, by the early decades of the 20th century, this ‘liberal’ attitude was supplanted by a new vocabulary of regulation, supervision and administration of non-Christian religions. With this shift, new institutional structures, laws and mechanisms were established for managing non-Christian religions in the Straits Settlements signaling a move away from self-governance towards greater institutional regulation and supervision.

Institutional Conflict Settlement Field in Brazil: Four Levels of Justice System

The paper proposes an interpretation of the operation of the State conflict settlement field in Brazil. It takes the perspective of disputes among corporations, knowledge and practices that take part of this field. A reflection on the Brazilian case proposes the coexistence of at least four conflict settlement logics (or four interaction levels) to which correspond hierarchies of rituals, proceedings, persons, types of conflict and places. The study is based on eight years of ethnographic approach in courts and State informal services of justice. The observation on ordinary courts proceedings, informal courts, extra-judicial techniques, formal and informal police proceedings (including illegal ones) leads to an analysis of the coexistence and disputes in a field that produces unequal treatment of the citizens.

Projection of Family in Representation of Intellectual Youth in Russia

Russian demographic health should be based on development of positive trends in fertility, marriage and family relations of young generation of the country. Considering that the generation born in "new" Russia, characterized by new ideas about life strategies, value orientations, enters in reproductive age, it is important to assess similarities and differences between role of families and children in this generation representations regarding previous historical period. This study aims to determine specifics of modern marriage and reproductive behavior of young people receiving professional education in Russia. This group of young people is more demanding to high standards of living, thereby extending these requirements to sphere of marriage and family. This specificity necessitates more detailed study of their attitudes and motivations in marriage and reproductive behavior. Identification of possible limits of marriage and family and reproductive student's attitudes is scientific problem of this study.

In 2012-2013 Center of Social Demography and Economic Sociology, Institute of Socio-Political Research conducted a survey of students in higher and secondary education full-time and part-time students. The study was conducted in form of distribution questionnaire prepared by the Center. The survey was conducted in the cities of Central, North Caucasus, Urals and Volga federal districts. The study had a multidimensional nature, and it is focused on identification of general and specific issues of reproductive behavior of most educated part of Russian sociability to clarify the state family policy for more effective implementation and stabilization of demographic situation in the country. On this basis, were selected areas (subjects) to conduct the survey, which allowed us to identify the specifics of students ideas and their reproductive and matrimonial intentions between metropolis and provinces, between different regions of the country, between subjects of different types of administrative-territorial formations.

Social Work Discretion between Professionalism and Managerialism in Denmark

Professionalism and managerialism are important and conflicting concepts in the study of professionals working in public service organizations. By focusing on street-level social workers and social work discretion, it is possible to see how welfare-to-work policies are practiced as well as how organizational guidelines frame discretionary powers. This paper seeks to account for how management organizes, supervises and seeks control over social work discretion. The paper also addresses how management influences the discretionary powers of social workers in a Danish municipality working with clients who are unfit for work or labour market due to health problems. In Denmark the local municipal Job Centre delivers services related to welfare-to-work. Here values, interests and policies, transformed into rules and regulation, meet the concrete practices of welfare-to-work service inside the specific street-level organization. This is a fundamental democratic process of implementation. It makes discretion inevitable and crucial as professional judgments and decision making, determines the client's eligibility to benefits and need for special attention or intervention before returning to work. Here professionalism is institutionalized in bureaucratic organizations. Hence the social workers must control clients' legal access to sick leave programmes and at the same time deliver individualized services to promote the workability of the client in order to help them become self-supporting after sick leave. As well as examining how social work discretion is made possible in the job centre, the research behind the paper discusses the issue of new forms of professionalism emerging in social work. In the light of policy changes and reforms of welfare services a new type of social interventions towards people on sick leave is demanded. This can place pressure on the street-level organization to develop new or more professionalism.
ernization are often conceptualized as “learning” i.e., as formation of pro-legal cultures based on an unquestioned value of the rule of law. Empirical research on the Polish investors abroad put in question such simplistic views. Firstly, in light of this research, the processes of learning are much more complicated, multidimensional and multidirectional. Secondly, the state and its agencies play here an important role - both in form of protection of rights and interests of domestic actors (national markets), and in form of protection of rights an interests of investors abroad (rights and interests of its citizens and companies). Therefore, the rule of law in a globalizing world presents a complicated negotiation game not only of values, but also of interests, between strong and weak agents, private and public.

SKARPELIS, ANNA* (New York University, aks402@nyu.edu)
Risk, Rumour, Radiation: Japan’s Nuclear Catastrophe and the Politics of the Apolitical

This paper analyzes the particularities of the Japanese approach to risk communication around radiation after 3/11. Radioactive contamination in Japan was first measured and its results published by the Japanese Ministry of Education, Culture, Sports, Science and Technology (MEXT) and the Japan Atomic Energy Agency on March 14, 2011, three days after the Great East Japan Earthquake ravaged the country. The Government’s initial attempt to control the situation by deploying the media as messengers for the government proved inadequate and even counterproductive. Official radiation monitoring in the following weeks continued in an haphazard manner, yielding vague and at times misleading data that failed to provide actionable information on the necessities of evacuation to the local population. Within days, various groups and organizations emerged and joined Geiger counters to enable collective radiation monitoring, resulting in a higher degree of granularity of data available to the affected population. Still, while the provided data was more transparent and comprehensive than that which had previously been made publicly available, the groups made few attempts at interpreting the data for the public. The groups insisted that their actions were complementary to, rather than antagonistic to, those of the government and TEPCO and that they therefore should not be seen as political.

The paper explores the role of digital media and technology in altering the production of and access to vital information after disasters.

SKEGGS, BEVERLY* (University of London, B.Skeggs@gold.ac.uk)
A Global Sociology of Value and Values: How to Move beyond the Analytic of Capital?

Many theories adopt the metaphors of capital to explore power (e.g. Bourdieu), and to analyse personhood (via human capital), or action (via rational action theories), leading some sociologists to suggest that not just capital but the capital analytic has subsumed all areas of life. The relationship between quantification and qualification has been complicated further by the incursion of calculation (via algorithms) into many aspects of our daily life. Whilst, no doubt, capital behaves according to its own logic, finding new lines of flight, converting affects such as sentiment and suffering into value, making multi-culturalism marketable, generating new forms of bio-capital, and making many of our actions subject to the logic of calculation (academic writing for instance), why should sociologists do likewise?

If we only understand the world from the perspective of capital relations what do we miss seeing? Are there any values remaining or remained? How do we understand the relationship between value and values?

The Motivations of the Opponents of a Social Memory Implant. the Re/Building of the Royal Castle in Poznań (2010-2014)

In 2010 began the re-building of the Royal Castle in the city of Poznań, which was demolished in 1796. The process, which was initiated by the Committee for the Rebuilding of the Royal Castle arouses strong controversy. The builders of the castle are accused of falsifying history (it is not sure how the building looked like before being taken to pieces) and destroying the original remains of the old castle. However, the committee was able to reach both political and social support for the rebuilding and collect money for this aim. Due to a very long absence of the castle in the urban space and lack of any confidence when it comes to its outlook, the object which is being built can be called an implant of social memory. An implant of memory is an object, which function is to construct a particular knowledge of the past, becoming the carrier of this knowledge through its own form – imitating forms of ancient objects, buildings etc.

The speech will be devoted to the motivations of the people who publicly criticize the re/construction process and take part in different protests against it - the opponents of the Committee for the Rebuilding of the Royal Castle. There will be presented strategies with the help of which those people explain their engage-ment in the protests and their resistance to the re/building process. Conclusions will be presented on the basis of a series of individual in-depth interviews carried out at the turn of 2012 and 2013.

SKOGHEIM, RAGNHILD* (Inst Urban & Regional Research, ragnhild.skogheim@nibr.no)
Architects and Urban Planning

This presentation discusses to what degree the architect profession is able to define what counts as relevant knowledge in urban development and urban planning processes, based on material from Norway. Urban planning is a field constituted by numerous actors/stakeholders representing different knowledge traditions implying that they do not always speak the same language. However, in order to handle environmental problems, transport and other infrastructure and land use, multidisciplinary knowledge and cooperation between different sectors are required. In Norway, the architectural profession has long had a key role in urban planning and positions as heads of urban planning administrations have been a power base for architects. However, architects’ judgments and forms of knowledge are no longer hegemonic and their power base is thus weakening. This is partly caused by an increasing proportion of planning propositions (like zoning plans) prepared by private actors. Moreover, local authorities increasingly seem to depend on private funding to accomplish housing and infrastructure projects.

RC52-833.9
SKOGHEIM, RAGNHILD* (Inst Urban & Regional Research, ragnhild.skogheim@nibr.no)
Architecture As a Hybrid Profession

Hybrid organizations and professions are characterized by conflicting goals, which may cause tensions. For architects, such tensions are typically between art and market, and between ideal ideas and conceptions of design, and preferences and claims from clients/principals and others. Although market dependence is intrinsic in the role and history of the profession, this still plays a significant role in architects. When dealing with this tension, some architects are quite pragmatic and accept and adjust to prevailing conditions. Other architects are more uncompromising and insist that creativity requires freedom from external constraints. Particular architect “heroes” espouse autonomy and distance from the service part of the profession. This may seem like a paradox as architects more than most other professionals depend on, and have to adjust to, the power, wealth, favor and money of their clients.

SKOVÁJSA, MAREK* (Charles University Prague, marek.skovajsa@soc.cas.cz)
Rockefeller Foundation’s Role in Promoting Social Sciences in Interwar Czechoslovakia

This paper presents the place of geopolitical concerns in the policy of the Rockefeller Foundation towards social sciences in Czechoslovakia between the two world wars. The RF provided scholarships for Czechoslovak social scientists (around 35) and sponsored social science work at various Czechoslovak institutions. The scholars supported by the RF were sociologists, lawyers, and economists, both German and Czech-speaking. Their individual fates display wide variation: several perished during WWII, others escaped and became recipients of displaced scholars grants, still others were exiled after 1948, a handful joined the Nazi and later the Communist structures. Only those who chose emigration produced academic work of some importance. The dominant geopolitical concerns were reflected in the effort of the RF to maintain a balance between German and Czech scholars and institutions supported or in promoting research in areas that were expected to contribute to maintaining the status of the Czechoslovak state or Central Europe such as unemployment and social welfare, interethnic relations or the so-called Danubian studies. Key among Czechoslovak institutions in social sciences that received support from the RF was the Social Institute, affiliated with the Ministry of social welfare, the incubator of innovative ideas that directly influenced Czechoslovak social welfare legislation and policies. RF also funded a large research project on the urbanization of Prague that became the first major empirical study in Czech sociology while another study on German-Czech relations could not materialize due to the dismemberment of Czechoslovakia. The RF made a significant contribution to the development of empirical social research and social policy in Czechoslovakia, but the overall impact of its funding was virtually erased by adverse geopolitical conditions and turbulent political developments in the period 1938-1948.

The Elusive Code: Anomalous Cultures of Civil Society

This paper attempts to add new evidence and theoretical insight to the literature on the processes of civil society inauguration within cultural sociology by Jeffrey Alexander and Philip Smith. It argues, first, that unlike the US case, the codes of civil society in ethnically heterogeneous places are the product of multiple external oppositions which can, in certain cases, result in alternative or contrary codings. For instance, some currents in the Czech, Polish and other Slavic nationalisms in the 19th century construed the Germans, their principal “other”, as rational and efficient, taking pride to the contrary in being emotional and unpractical. Second, the paper shows that civil societies are fragmented and the general code of civil society is appropriated differently by different social groups whose interpretation of the basic binaries is dependent on their particular social experience as well as their relative position to other groups. For example, as pointed out by Marada, Buchowksi and other authors, the cultural codings characteristic of the heirs of the anti-Communist dissent in East Central Europe are in some aspects, including the role of formal procedures and professionalism, completely at odds with the codes, inherited by Western-style social movement organizations. With its roots in a conspirative underground community this dissident culture doesn’t code personal ties and secrecy as counter-democratic. On a general level, the paper argues for a more historically-oriented approach to the study of cultural structures of civil society that recognizes that the generalized codes are embedded in concurrent interpretative traditions and, as such, are unstable, contested and often ambiguous.

Medical and Legislative Gatekeeping in ART: Narrow Trajectories in the Realm of Miracles

The techniques of assisted reproduction have the potential to free us from the bodily limitations and open the physical reproduction to people who would not conceive without medical intervention. The access to this type of treatment is regulated by numerous ways, both formally and informally. Reproductive medicine, seemingly firmly anchored in scientific objectivity, and often presented as a revolutionary or miraculous cure for anyone, in its praxis works as a controlling mechanism over bodies and the reproductive capacities of citizens, differentiating between the categories of patients. The obliteration of the long tradition of infertility treatment, wide network of infertility clinics, competitive success rates and liberal regulation of the ART regarding the range of procedures allowed, became one of the most popular destinations of reproductive tourism. On the other hand, there is a strict regulation of the access to the ART based on the characteristics of patients such as their age, education and partnerships. The paper will focus on the process of the legislative and medical gatekeeping as a genuine example of the Foucauldian biopower, as a control over bodies, interaction and norms of population performed by the medical professionals and by the administration and regulation of treatment. The paper is based on the two sources of data: interviews with 15 medical professionals working in the field of ART and the analysis of the Czech parliament debate over the new legislative limits of ART (2011). The analysis focused on the following questions: what is the position of various actors in the process, how is nature and normality, in the context of ART, discussed, what kinds of citizens/patients are defined by the clinicians and parliament members as deserving candidates for infertility treatment, and, how these regulatory mechanisms can be reflected in the context of “biotech age” and globalized biopolitics.

CAUSES AND CONSEQUENCES OF TIME INVESTMENT IN FRIENDSHIP NETWORKS: A DYNAMIC ANALYSIS OF THE POLISH PANEL SURVEY POLPAN 1988-2013

Time investment in one’s friendship network depends on the utility function $U = \text{log}y(t) (1-\text{log}Q)$ that people maximize, where $Q$ is the social tie parameter (between 0 and 1) measuring the ith actor’s taste for bonding with friends, and $Q$ refers to the other leisure-time activities. In the theoretical part of the paper, we connect this utility function with time investment in friendship network (I) assuming that the numbers of friends and the density of their contacts are crucial for the amount of time that people actually spend with friends. The Polish Panel Survey POLPAN 1988-2013 contains information on how frequently respondents meet with friends ($I_{ij}$, our main leisure-time variable), numbers of friends ($N_{i}$), density of their contacts ($D_{i}$) and several socio-demographic characteristics of respondents for the period of measurement (t) and earlier periods (t-1, ..., t-5, where the period-units are 5-year waves of the POLPAN study). In the empirical part of the paper we examine main determinants of time investment in one’s friendship network, focusing on family formation variables. We show that time investment, as well as the change in number of friends and the change in density of contacts among friends, depend on marital status, number of children, and number of people in the household. In addition, we confirm previous findings that interdependent ties among friends’ income influence attainment and that having friends with entrepreneurial experience increases people’s chances of establishing their own businesses, independently of the number of potential bridges between friends. The paper concludes with a discussion on meeting friends as a form of leisure activity that plays a significant role in the formation of social capital, and has important implications for generating social inequality.

Hazard Vulnerability and Housing Inequality after the Tuscaloosa, Alabama Tornado: A Critical Analysis of Rebuilding Efforts

The tornadoes that struck Tuscaloosa, AL and surrounding areas on April 27, 2011 caused tremendous destruction to both businesses and residences. The highest levels of damage occurred among low-income residences, both single and multifamily. In this paper, we apply hazard vulnerability theory to the rebuilding of Tuscaloosa. Hazard vulnerability theory focuses on how social factors, including race, gender, place, and socioeconomic status, affect a population’s preparedness for a natural disaster. We extend this perspective into the recovery process, particularly on the availability of low-income, multifamily housing approximately two years after the storm. Data from multiple sources, including government data, city planning resources, apartment websites, and interviews with city personnel, indicate that multifamily residences that have been constructed to replace destroyed or damaged housing complexes generally demand higher rents and have fewer units available for rent than the complexes that existed before the storm. Additionally, even as a residential construction boom has occurred in Tuscaloosa, Hazard vulnerability theory focuses on how social factors, including race, gender, place, and socioeconomic status, affect a population’s preparedness for a natural disaster. We conclude that low-income residents of Tuscaloosa were doubly vulnerable to natural disasters; not only were they more likely to be living in structurally flawed housing before the storm, they were also left out of the rebuilding process after the tornado. We discuss some of the potential consequences of the reconstruction of Tuscaloosa, and propose suggestions that can limit social inequality in the rebuilding process for Tuscaloosa and other cities that have been harmed by natural disasters.

PROFESSIONAL KNOWLEDGE AND EXPERTISE

Professions are according to Abbott the most important way expertise is institutionalised in modern societies. Sociologists have studied the characteristics of professionalisation as well as the role of professionals in society. Even though an abstract knowledge is considered a core if not the core characteristics of professions, sociologists have examined the characteristics of professional knowledge used in occupational practise only to a limited extent. In my paper I discuss professional contributions within the literature on expertise and argue that some of these perspectives are highly relevant to complement sociologists understanding of professional knowledge.

While sociologists have emphasised that abstract knowledge acquired in higher education is an important characteristics of professionalism, practical training and tacit knowledge is found to be the most important precondition in the literature of expertise. Sociologists do not deny the need for practical training, but tacit knowledge is a somewhat mysterious term often considered as opposed to abstract explicit knowledge. Based on questioning why knowledge is tacit, Harry Collins (2010) distinguishes between three types of tacit knowledge. This distinction opens up for a more nuanced perspective on the relationship between tacit and explicit abstract knowledge. His perspective also imply that explicit knowledge play an important role in the development of expertise and transmission of knowledge.

Professional work is characterised by uncertainty. Inspired by Collins different types of tacit knowledge, I distinguish between three types of uncertainty that have significant importance for the reliability of professional expertise: 1) Explicit uncertainty related to uncertain knowledge; 2) Cognitive uncertainty related to...
We consider democracy as an instrumental value. It appears to be effective and naturally arises when society reaches sufficient consent in regards to basic values (one God for everyone, nation, person, society, etc.). When such agreement not exists, a dictatorship provides the minimum order in a society. For example, dictatorships of Cromwell, Napoleon, Stalin, Pinochet, etc. There is no consent regarding basic universal values in the modern world. Hardy a man and his rights will be recognized as the highest values by billions of people in the near future. The policy of Western countries aimed at their promotion, leads to anarchy and violence. Therefore it is difficult to expect peaceful expansion of democracy on a global scale. Today’s biggest task for social scientists to reveal basic values in regards to which mankind can come to the consent.

Tap Water and the Public Policy

Water is the source of life on the earth and the driving force of human development. The diamond-water paradox presented by A. Smith shows the underestimated economic value of water. However, it has its social value that can be viewed from human dimension perspective.

The knowledge of how citizens perceive the drinking water is essential to understanding the political, economic, technological context of the public policy. According to sociological survey, 82% of citizens in Saint-Petersburg are not satisfied with the quality of tap water. These figures demonstrate, that despite the fact the city water is cleaned by ultraviolet and has biomonitoring system to meet the high requirements of international water standards, there are some hidden issues explaining this situation.

SPb water is a nexus of generations inhabiting this place: it keeps the memory of past times, preserves the spiritual fabric of the society and gives an incentive to new generations for further development. However, the industrialization has destroyed this consciousness. The growth of scientific knowledge has enabled experts to make a strict distinction between bad natural water that had adverse effects on people health and good filtered water that had the status of paid public services.

It is believed, SPb water is rusty and dangerous to drink, because city officials take bribes and do not provide the modernization of water infrastructure system in time. Public dissatisfaction takes the form of disagreement with the public policy. It prompts citizens to buy bottled water sold by water transnationals, although it is the same tap water, in fact. As a result, SPb water market is showing 12% annual growth.

Basing on the citizens' concerns on the water problem, one can construct the Index of tap water as an indicator of the level of public confidence in the public policy.

Daily Practises of Home Making and Belonging Among Owner-Occupiers and Tenants in a Disadvantaged Neighbourhood in the Netherlands

In this period of globalisation daily practises of local home making and feeling at home are considered important. In order to illustrate such practises the focus of this paper is on a street in a disadvantaged neighbourhood in a Southern city in the Netherlands. In this street tenants and owner-occupiers with a different ethnic background - including native born - are interviewed and observed. In this natural laboratory, the street was divided into clusters; those with only tenants, those with only owner-occupiers, and those having a mix of both. This offers insight into the role class and ethnicity play in the homogeneous and mixed micro-settings and its impact on physical and social practices of home making and belonging/feeling at home. Therefore attention is paid to narratives and the informal organization of different living spaces, territory-making activities, and practices in the different domestic clusters. This shows that the domestic space can be experienced as a vehicle of intimacy and sociability and in other clusters as encouraging alienation. Such practices can also take place in the same cluster, resulting in mechanisms of inclusion and exclusion which in turn go together with boundaries between public, private and community spaces.

SMIRNOV, PETR* (Grigory Smirnov, smirnovpi@mail.ru)

Future Of Democracy In The Modern World

Democracy is one of the ancient forms of social self-government, which possesses many advantages and democratization of a society is a progressive process. However, today mass media spread illusory ideas about democracy as the terminal value which presence will provide the peace and well-being on the Earth. Relying on this illusion, Western democracies, headed by the USA, stimulate democratization process in the world, using ideological, political, economic and military means.

However the facts of real history disprove this illusion. Democratic states are not less aggressive, than authoritarian ones. Athens, Sparta and Rome, all European democracies during epoch of colonialism and the USA (during all its history) were aggressive.

Emotion Work in the Practice of Medicine: The Case of Physician Assistants of Color

We focus on the concepts of emotional labor or emotion work and white racial framing to describe the experiences of Physician Assistants (PAs) of color as they navigate racialized barriers in the medical field. We first present results from a nationally representative sample of 15,275 PAs and then examine the more detailed personal experiences of PAs of color from an online survey. Finally we use the personal narratives of ten African American PAs. We identify and analyze emotion themes resulting from work-related experiences and stressful encounters that arise from interactions with faculty, staff, nurses, physicians, and patients in the workplace. Odds ratios from the online survey show that African Americans experience more emotion work than other groups. African American PAs were 26 times more likely than white PAs to report patient refusals to treat them. When we examined only Black women PAs, they were 46 times more likely to report patient refusals. Other ethnic groups experience elevated levels of emotionally negative experience, but they were not always statistically significant when other variables were included in the analysis. Women in general experienced a variety of discriminatory behaviors. Narrative accounts exhibit large amounts of emotion as the African American PAs detailed their encounters with patients and medical providers.

The Art of Governing in an Age of Revelation: On the Biopolitics of Biovisuality

This paper examines the transforming value, resolution and vitalism of the social body as it is increasingly informationalized, visualized and animated by multivalent systems of exposure. Multiplex biopolitical interests influence and

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
incite these practices: wills to discern and direct consumption habits; ambitions to inscribe structured meanings upon somatic territories; and desires to better identify, verify and assess corporeal components. An emerging confluence of biovisual imperatives, practices and flows are placing unique demands on embodied subjects, specifically concerning (a) the control, ownership and arrangement of personal information deriving from bodily interference, and (b) the types of performative exertions and authentication protocols that are now routinely requested and indeed expected at various visualization contact points (McGrath 2004; Andrejevic 2012). In an age of somatic magnification and scrutiny (Monahan and Wall 2007), where fleshly topographies are considered as stable sites for truth adjudication and as volatile sites for correctional modulation, the sociological imagination can help excavate several resonances attendant on the proliferation of biocapturing mechanisms and on concomitant conditions of biovisuality. As I will argue, repetitive bioexposure, as both involuntary dictate and volitional act, generates de-contextualized knowledge streams, the channeling of which can assist experts in sharpening their diagnostic definitions and honing their prognostic interventions. But it also produces curious subjectivization effects at the phenomenological level. Subjects become accustomed to exteriorizing interior confidences and revealing subjective states in the form of informatic particles (Foucault 1988). In this process, personal intimacies become public property, a situation inducing social harms and igniting insurgent possibilities. A critical consideration of these issues, specifically their interconnectedness and biopolitical significance, occurs in the paper as it focuses analytical attention on the types of subjectivity being fashioned from bodily transmissions and transitions.

SMITH, JEREMY* (University of Ballarat, jeremy.smith@federation.edu.au)

Civilizational Discourse and Models Of Modernity In The Meiji Revolution

During the Meiji revolution, Japanese writings on international arena, Western empires and the Western tradition nourished a discourse on civilization. At the same time, Japan’s civilizational works also reflected debate on models of modernity. Over the course of consolidation of the Meiji regime, deep engagement with different foreign traditions produced an exceptionally intense phase of international and interdisciplinary ways and limited in scope and vision in others. The sociology contributed greatly to this inter-disciplinary field. In a phase that stretched all three sets of interpretations developed by the Meirokusha intelligentsia and the urban public sphere that they participated in. Within that public sphere, the Meirokusha set in train historically and culturally specific processes of transformation of Western thought which included translation of the concept of ‘society’ itself and the development of Japanese vocabularies for philosophy and sociology. Social and political conflicts around modernity manifested also in the wider movement for popular rights that arose in the 1870s and then subsided. A main claim of the paper is that consolidation of Japan’s imperial polity in the 1890s superseded all three sets of interpretations developed by the Meirokusha intelligentsia and the popular movement, but not the civilizational discourse that they instituted.

SMITH, JEREMY* (University of Ballarat, jeremy.smith@federation.edu.au)

Debating Civilizations: Sociology and The Inter-Disciplinary Field Of Civilizations Analysis

In the early twentieth century, civilizations analysis combined perspectives from anthropology to archaeology through to world history. Founding thinkers in sociology contributed greatly to this inter-disciplinary field. In a phase that stretched from Weber, Durkheim and Mauss to Sorokin and Elias, a ‘classical era’ of civilizations analysis generated a program of research problems that was productive in critical and interdisciplinary ways and limited in scope and vision in others. This field was lost as a suppressed tradition during the postwar institutionalization of disciplines. This paper will examine what was gained for sociology in the early traditions of civilizations analysis as well as what was displaced when it subsided. Potential paths for renewal of multidisciplinary scholarship involving sociology will be sketched out based on the contemporary experiences of new-generation revival of civilizations analysis in the work of Benjamin Nelson and S.N. Eisenstadt. The paper will also identify intrinsic limitations in latter-day approaches.
first cohort analysed graduated in 1986, the last in 2000) and, within cohorts, the changes in the differences after graduation; ii) to determine the extent to which field of study continues to cause a gender difference in pay; iii) the factors other than field of study that cause a gender difference in pay, including family responsibilities. The paper reports i) analysis of the effect of gender on labour force status, focusing on the changes likely to subsequently increase pay; ii) consecutive cross-sectional Oaxaca-Blinder decompositions within and across cohorts; and iii) panel analyses within cohorts. The results suggest that, even within this highly educated sample, in the short period after graduation, women tend to cumulate a number of experiences that contribute to a widening gender pay gap.

SMITH, MICHAEL* (McGill University, michael.smith@mcgill.ca)
Did Rising Inequality Cause the Recent Financial Crisis?
One of the possible explanations proposed for the 2007-2008 financial crisis is rising inequality in the United States. Rajan (Fault Lines, 2010) and others proposed the following explanation: i) associated with rising inequality, incomes stagnated or declined in the lower half of the earnings distribution; ii) this provoked distributional conflict; iii) the US political system prevents a response to this that would involve taxing the better off to provide income-supporting transfers to those experiencing stagnant or declining incomes; iv) but the political system has allowed a response to distributional conflict through a liberalization of access to credit including, in particular, access to mortgages for those with relatively low incomes; v) the financial crisis was caused by a boom in house prices caused by house purchases by those ill-equipped to make mortgage payments and this, in turn, caused a wave of mortgage defaults which provoked the crisis; vi) the aggregation of default-prone mortgages into securities (especially collateralized debt obligations) held by financial institutions ratcheted up risk in the financial system which, in turn, exacerbated the financial problems caused by defaulting mortgage holders. Rajan provides little evidence in support of this interpretation. This paper addresses the following questions: i) Did incomes stagnate or decline in the lower part of the income distribution in the decades leading up to the crisis? ii) Did distributional conflict cause the liberalization of credit in the form of sub prime mortgages? iii) What is the provision of mortgages to low income house buyers that caused the boom and subsequent bust in house prices. iv) To what degree was increased risk in the financial system caused by policies encouraging the issue of sub prime mortgages? On the whole, the evidence raises doubts about the rising inequality account of the financial crisis.

SMITH, PHILIP* (Yale University, philip.smith@yale.edu)
On Dry Othering
Existing theories of Othering can be thought of as ‘wet Othering’. They focus in metaphorical and material ways on the slippery and ambivalent. In such theories Othering is associated with intense emotional reactions. Those perceiving the ‘Other’ feel intense hatred, disgust and dread. This paper introduces the new concept of ‘dry othering’. This involves a completely different logic. Those doing the Othering feel – or are believed to feel – nothing at all. The victim of Othering is a mere object to them – one that does not evoke emotional responses. The logic of action is not symbolic as in wet othering but rather overly-instrumental. Victims of this kind of Othering are traumatized not by an awareness that others think they are disgusting and enjoy their humiliation (an emotional response) but rather by realizing that they are mere objects to the Otherer (who has no emotional response). Social theory on the gaze is used to make sense of this situation. The theory is illustrated with reference to accounts of unethical medical experiments, Alien abduction narratives, animal attacks, torture and serial killing.

SMITH, ROBIN* (Cardiff University, smithr3@cf.ac.uk)
HALL, TOM (Cardiff University)
The Urban Fabric, Repair and the ‘Good Enough’ City
This paper considers the work that repair might do in mediating and smoothing over maldistributions of the physical city and the small acts of maintenance and care can seem inconsequential in the face of the global risks that menace the modern city and the brutal conditions, exclusions and exploitation that some of those cities are home to. Yet a humanist sociology might be sympathetic towards piecemeal and everyday activities which aim to put right, one step at a time, things gone wrong – deviant occurrences, ugly moments when life in the city breaks down or does not play out as we might want it to. Ken Plummer’s recent call for a sociology of hope takes this line, insisting on the need for ‘a down-to-earth pragmatism of empathy, justice, kindness and care’ and inviting sociologists to ‘think small in a big way’.

Something similar – thinking small, in a big way – can be found in the writings of human geographer Thrift, though differently inflected. Thrift directs attention to mundane activities of urban care and maintenance – street cleaning, roadside repair, emergency call-out – and invites us to take these unremarkable, everyday activities as a template or spur for thinking about the social and political life cities. Similarly down-to-earth or at least anti-utopian, he suggests that thinking about repair might be a way in which to think about the good city, or a good enough city. Our paper contends that arguments about urban repair do not extend so very easily from the physical – palpable, material, mute – fabric of the city to the social and political. Broken windows are a poor model, in some ways, for what it is to have broken down and need repair as a person. Sociology has been here before, yet Thrift’s thesis neglects this history.

Methodological Complexities When Using Visual Methods in Dementia Research
Methodological complexities involved when using visual methods in dementia research
Sarah Kate Smith & Gail Ann Mountain, School of Health & Related Research (ScHaRR), University of Sheffield
In our study of the subjective experiences of older people with dementia who are interacting with others, we have used video recording as a key method. Dementia impairs verbal communication, and this can have significant impact on how researchers may explore individual's subjective experiences.

Non-verbal communication such as gestures, body language, facial expression and posture therefore has greater significance when creating this understanding. The benefits of using video based methods in dementia research are two-fold, but these methods are key to the faithful representation of non-verbal behaviour. Second, these methods can overcome some of the communication issues that can be encountered when interacting with people with a dementia diagnosis.

We report how our use of video recordings has provided us with important data to make sense of people with dementia’s interactions with technology, the challenges of visual data analysis, and how the project has led to new understandings of how such data can be analysed and represented. Data will be presented and discussed, providing an arena for methodological discussion and debate. Second, the methodological issues to be discussed include the need for greater focus on the processes of visual data analysis (Schnettler and Raab, 2008); whether more rigorous approaches to visual data analysis will lead to objectification, generalisation and loss of quality and expressivity (cf. Pink, 2011); and ethical issues in the use of visual data.

KEYWORDS: dementia, visual methods, qualitative, touch-screen technology.

SMITH, TOM W.* (NORC at the University of Chicago, smitht@norc.uchicago.edu)
The Origin and Diffusion of Comparative Survey Research
Cross-national, survey research emerged out of and developed along with many seminal megatrends of the 20th century including globalization and democratization. It was also shaped by such major historical events as World War II, post-bellum collective multinationalism, and the spread and collapse of Communism.

The development of cross-national, survey research is an example of what Rogers calls the diffusion of innovation. Public opinion polls were created in the United States in the mid-1930s and spread to other countries. Like all diffusions, its development was innovation specific and was both aided and hindered by particular characteristics of survey research.

Its expansion was part of the general process of globalization. For survey research, globalization involved considerable interaction between the global product (survey research) and the local markets and cultures.

Additionally, as Oberschall has noted “the expansion of surveys in general and public opinion polling in particular was part of the general growth of democracy within and across societies.” Surveys in general and public opinion polls in particular typically develop and only thrive in open, democratic societies. Democratization in general and decolonialization in particular opened up more countries to surveys.

Besides being shaped by these megatrends, the development of cross-national, survey research was influenced by historical events such as World War II, post-war collective multinationalism and the founding of the UN, and the Cold War.

This paper examines 1) the emergence of cross-national, survey research including the role of early adopters (e.g. survey-research organizations), 2) the initial diffusion of survey research, 3) foundational survey-research meetings and associations, 4) the impact of World War II, 5) the role of the UN and other international organizations including the International Sociological Association, 6) initial comparative surveys, 7) the contributions of international exchanges, 8) later developments, and 9) impediments to development and diffusion.
Each year, researchers are interested in understanding the role of assistive technology (AT) in the provision of care for people with dementia. AT can help individuals with dementia carry out daily living activities (ADLs) and improve their quality of life. The aim of this research is to determine the extent to which people with dementia (PWD) and their carers have access to AT for personal care ADLs, and to assess the difficulties and preferences of caregivers.

The research included a qualitative study of 45 informal caregivers of people with dementia, including carers of PWD who did and did not receive AT. The study was conducted in the UK, and the caregivers were recruited through dementia support groups and social care services. The interviews were conducted in a secure space and were audio-recorded with the consent of the participants.

Findings from the study showed that caregivers face a number of challenges when providing care to people with dementia, including physical and mental health conditions, and difficulties in accessing suitable AT. The caregivers also expressed their desire for more AT and support in managing the care of their loved ones.

The study highlights the importance of AT in enabling caregivers to provide quality care to people with dementia, and the need for further research to understand the opportunities and challenges of AT in the provision of care for people with dementia.
it had not entirely vanished and has remained generally confined to families and
bounded groups. By growing social distrust, people have reacted to the increas-
ing social inequality during the post-socialist transition and its associated figures of
the insular individualist and predatory capitalist. This does not invalidate the
thesis of socialist ‘legacy of distrust’, but significantly adds to it. Data quantifica-
tion suggests that the effect of increasing social inequality during transition is six
times stronger than the effect of persistent communist legacies on current levels of
social distrust. This has important policy implications, which are outlined in this
paper.

Relations Between Individuals at Work in a Contemporary Context: Necessary Changes in Communication in Organizational Context

Companies organize themselves around objectives that seek the maximum re-
turn to its shareholders or founders. However, when forming the individuals in a
group to which these goals are achieved, dreams as well as desires and ambitions
emerge.

Typically, subjects align with organizational interests in the expectation that
their own goals are also achieved, existing three important issues in these work-
ning relationships. The first question relates to the symbolism of the “notion of
work”. The second issue reinforces the role of work in social relations. Despite
all the discussions involving the centrality of work (OFFE, 1989; BAUMAN, 2008),
it still remains one of the central points of life. The third issue concerns the lack
of work, the possibility of unemployment and frustration as reality (BALDISSERA,
2010). The subjects experience these conflicts and tensions of force paradoxically
(BALDISSERA, 2010; KUNSch, 2012).

Some factors explain this movement transformation in communication direct-
et to employees: a new technological context (social networks); new relations
between people and organizations, caused, for example, a new employee profile
and fewer permanent links with companies, besides the existence of an internal
environment of conflict and tension.

Employees need time to develop relationships and coherent narratives in their
experiences within the organizations, but in a world where the future is already
the day after tomorrow, in a fragmented environment, focused on project exe-
cution and flexibility, employees are not allowed to develop strong relationships
(SENNETT, 2009). Communications directed to employees will be impacted.

The safety at workplace, employment and career in one organization is re-
placed by employability. The needs of the organizations are more important than
the needs of its workers. The imperative of aligning organizational strategies can
find counterpart in the desires of the individuals in the organization. As profes-
sionals working in this field, communicators must understand those changes and
challenges.

Decentralization: From the Constitution’s Dream to Reality

This paper aims to analyze the decentralization of public policies in the state of
Ceará, Brazil, as supported in the Federal Constitution of 1988. The decentral-
zation agenda, mobilizing social and institutional players, proposed the partaking
of decisions during the elaboration and management of public policies in order to
strengthen and expand citizenship bonds. The establishment of structures for
the arbitration and recognition of organized sectors within civil society bolstered
the public sphere for the discussion and negotiation amongst various social and
institutional segments. This allowed in specific circumstances for a communal
decision-making process in turn strengthening the bonds of a new civic and part-
nership culture across Brazilian constituencies. The hypothesis presented in this
article is that investments in this joint model and the assertion of a shared polit-
cic and civic culture were weak due to of the lack of institutional support from the
local, state and Federal government. However, the dilemmas that emerged during
the self-organization and creation of representation instances closer to the social
actors have strengthened the local democracy.

SOBOLEVA, NATALIA* (Higher School of Economics,
natsobol@gmail.com)

Gender Attitudes in the World of Work: Cross-Cultural Comparison

The paper deals with factors determining work-related gender attitudes. With
the spread of emancipative values the difference between gender roles becomes
vaguer but is still strongly dependent upon country characteristics. While values
are usually regarded as factors impacting socio-economic behavior, my research
underlines a less explored aspect: they are themselves formed and changed in the
process of economic interactions. The objective is to assess the role of education
and job characteristics among factors determining gender attitudes in different
types of countries. More specifically, I focus on the interaction effect between ed-
ucation and employment characteristics on micro- and macro-level. Female labor
force participation rate and ratio of female to male tertiary enrollment are used
as the indicators of female involvement in labor market activities. The 5th wave of
Wave Values Survey (2005-2008) serves as empirical base. The targeted group
of population is the employed. Multilevel regression modeling is used. According
to the results, work-related gender attitudes vary considerably by country. Edu-
cation is a stronger predictor of gender attitudes than occupation and job char-
acteristics. At the same time the higher occupational status and intellectual jobs
and jobs with higher independence lead to more egalitarian gender attitudes. On
the other hand, the higher the labor force participation rate and ratio of female to male tertiary enrollment, the more egalitarian are work-related gender
attitudes in the country. In the countries with the higher women’s involvement in
education and labor market activities education and job characteristics impact
gender attitudes to a lesser extent. Furthermore, there is less difference in female
and male gender attitudes in such countries.

Rethinking Citizenship in a Post-National Constellation

Classical citizenship was understood as a status attributed to all those who are
full members of a national state. Around the inclusion in this status and its expan-
sion with new rights many social movements have fought their struggles. Howev-
er, internal inequalities that have survived in many countries led some authors to
suggest the existence of a hierarchy of citizenship. In other contexts, the mobil-
ization agenda, mobilizing social and institutional players, proposed the partaking
of decisions during the elaboration and management of public policies in order to
strengthen and expand citizenship bonds. The establishment of structures for
the arbitration and recognition of organized sectors within civil society bolstered
the public sphere for the discussion and negotiation amongst various social and
institutional segments. This allowed in specific circumstances for a communal
decision-making process in turn strengthening the bonds of a new civic and part-
nership culture across Brazilian constituencies. The hypothesis presented in this
article is that investments in this joint model and the assertion of a shared polit-
cic and civic culture were weak due to of the lack of institutional support from the
local, state and Federal government. However, the dilemmas that emerged during
the self-organization and creation of representation instances closer to the social
actors have strengthened the local democracy.

Ribeirinho Communities: Identity and Social Cohesion in the
Brazilian Amazon

This article aims to observe the general processes of identity construction and
social cohesion of the ribeirinho communities of Combu Island, an Environmental
Protection Area, located on the left bank of the Guama River, near the city of
Belém, in the Brazilian Amazon Forest. These populations are concentrated along
the rivers due to the lack of means of rail and road transport, using as a prima-
ry means of travel inland waterway vessels. In this sense, they are considered
part of the so called ribeirinho communities, descendants of indigenous people
and also the region of northeastern migrants coming from the great drought in
the Northeast in the late eighteenth century and large integration projects in the
Amazon from the twentieth century. This indicates that the interaction between
ethnicity and multiculturalism is that this migratory movement qualify as social
construct, in other words, individuals are not the region’s natural, but are adapted
to the conditions and integrate historical, social and cultural inheritances with
indigenous, colonial and migratory people. Thus, we propose to present some
reflections on identity and social cohesion present in this part of the population
of the Brazilian Amazon. Ribeirinho Communities are a blend of simplicity and
complexity and based on social characteristics and demographic dynamics, we
present the way of life of these different communities, through the relationship
between territory and identity. The intention of this paper is to open a range of
new interpretative possibilities on these communities, with no claim rule out pret-
ent analysis or establish universal truths.

**Professionalizing Armed Forces in Africa: No Easy Game. Why Not?**

In this paper we focus on recent attempts of the international community to help African nations to professionalize their armed forces towards proper and effective capacities in dealing with new security threats all over the continent. One of these programs is the US-led African Partnership Station. In the framework of the AFIT program, the Netherlands Navy has launched a project called African Winds 2013, in which seven West-African countries were visited to train themselves and host-national militaries, particularly marine and navy forces, in: diving, hydrographic research, amphibious landing operations, illegal fishery policies, boarding procedures aimed at anti-piracy measures, economic development, etc. In this paper an assessment will be given of those activities, based on field work at sea and evaluations by the participants themselves. There will be a connection with previous research on training and educating young African cadet-officers in Western military academies. Both endeavours will be analyzed on the basis of mixed-methods military sociological research.

**Röyama Masamichi’s East Asian Cooperative Community Theory**

Röyama Masamichi’s East Asian Cooperative Community Theory. While I was conducting the long-term project “Northeast Asia’s Transnational Space”, I was interested in the problem of when and how East Asia became identified as a unit. Soon, I became interested in the way that ‘East Asia’ is called and requested.

To approach the task, I have been interested in East Asian Cooperative Community (EACC) theorists such as the philosopher Miki Kyoshi, economist Kada Tetzi, and international politics scholar Röyama Masamichi, and I will mainly talk about Röyama Masamichi in the presentation.

The core of Röyama’s EACC Theory is a region or regionalism. I would like to talk about the issues related to regionalism in the relationship between East Asia and the world, which is the relationship between particularity and universality speaking in the abstract. I will divide Röyama’s regionalism into three aspects based on universalism.

First, it is the attempt to escape from the international universal order caused by the Machtzustand Asia issue.

Second, it is the attempt to make ‘East Asia’ into a meaningful region, emphasizing the special identity of East Asia.

Third, it is not that the regionalism of the EACC is a particularization of the world order but that the EACC itself constructs a universal world order.

Lastly I will wrap up my paper by discussing following 3 topics. 1)Japan’s leadership position 2)Horizontal regional order vs. Vertical intra-region order 3) The fact that the vertical intra-region order, which was attempted by Japan through the ship position

**Women, Disaster and Challenges: A Case Study from Iran**

During the past decades, Iran’s natural disasters such as earthquakes, droughts and floods have caused a considerable loss of human lives and livelihoods, environmental damages and the destruction of economic and social infrastructure. Although 49.6% of Iranian population are female but gender analysis has been ignored in the most national reports and surveys related to different aspects of disaster management. This study aimed to highlight the challenges of women before, during and after natural disasters and to investigate the capacity of Iranian women to reduce the consequences of natural hazards. Data collection was done by the interview with affected women of Varzaghan and Bushehr earthquake (2013, 2012), field observation, and review of related documents as well. The findings indicated that although the investigated women were affected more than men but their needs and problems were not identified sufficiently. On the other hand, women vulnerabilities were highlighted more than their capacities and capabilities in handling the disasters. In conclusion, it is important to consider women participation in all phases of disaster management (mitigation, preparedness, response and recovery). Gender analysis with localized/standardized analytical tools can be suggested for future studies.

**A Comparative Approach on Migration in Post-Communist Societies; The Case of Albania in East-European Context**

The post-communist transformations in Central and Eastern Europe represent an interesting example for comparative studies: a number of countries began this transformation from the same starting point (1989), following more or less the same common goal of moving towards democracy and liberal market economy, and EU. Based on the comparative method Brezinski predicted twenty years ago (as it was later confirmed with surprising accuracy), the historical calendar of those countries (the article “The Great Transformation” 1993), given an example of ‘thinking comparatively’ and foreseeing the future.

This paper is regarded with the hypothesis: Albania is an excellent laboratory for studying comparatively the new migratory process. The collapse of the socialist system was viewed with concern by many policy-makers in Western Europe who expected their affluent countries to be flooded by immigrants. Yet, this fear did not materialize and post-communist East-West migration was rather moderate. The only exception is Albania, whose emigration displayed features of an exodus. No other country has been so affected by migration, in such a short period of time like Albania has. It is confirmed that 34.2 percent of the Albanians have immigrated in more than 30 other countries, while the world migrant average is about 2.7 percent. And including the migrants that have spent a considerable lengths of time abroad, and have made their return back to the country, than we have a country in which more than half the population has experienced migration in the last two decades. This paper is an attempt to give a comparative answer to the question: “Why so many Albanians have migrated in such a short time, quite different from the other ex-communist countries, i.e. the countries with the same historical fortune?” in Albania, quite different from other countries, migration is shaping the society...

**The Strange Case of Soviet Sociology: A Goffmanian Analysis of a Failed Discipline**

History of the Soviet sociological movement is an intellectual puzzle. Sociology of science routinely identifies success in academic world with gaining intellectual recognition (Mertonian version) or boosting credit through manufacture of “facts” (constructivist version). Soviet sociology enjoyed unprecedented popularity at the time of its emergence (1960s), survived political prosecutions, and continued its expansion after Perestroika with its leaders attaining status of disciplinary culture figures. A commemorative tradition developed with most prominent figures leaving autobiographies. A whole industry of hagiographic literature emerged. All evidence of success was present; at the same time, Soviet sociology left no intellectual legacy: neither theories nor empirical findings from the Soviet times are circulating today, the only book from this period still in press and widely cited is a methods textbook (by Yadv), and authority of its leaders has been never translated in international space. This talk will try to explain political hardships of Soviet sociology, the past and present admiration for its leaders, and oblivion of substantive results of their work by applying a concept of “dramaturgical formation” inspired by Goffman’s work. Any research deals with secrets, but these secrets can belong to different types: some of them are natural, while others are social, involving reflexive attempts to conceal. In contrast to Western sociology, Soviet sociologists dealt with the second type of secrets, unpleasant facts about Soviet reality revealing of which the Party attempted to suppress or at least force away from the public space. Disclosure of such secrets required moral, rather than intellectual virtue. Social science was in an especially favorable position for doing this job as the Marxist regime legitimated itself as based on “scientific understanding of society”. That made it especially vulnerable for criticisms from the Academia, which explains both sociology’s success in institutionalization, repressions, and recognition in absence of intellectual achievement.

The (Im)Possibilities Of The Politics Of Solidarity: Human Rights Defenders Discourse, Humanitarian Aid Dynamics and Transmigrants Experiences In Mexico’s Transit Assistance-Based Places

Mexico has the most transited migratory corridor in the world. The complex migratory flows transiting the country—mainly Mexican, Central and South American—have historically been perceived as economic and male. Scholars have noted as problematic the categorisation of the ‘labour migrant’ as being exclusively voluntary. It has been demonstrated that framing agency through simplified understandings of ‘voluntary’ and ‘involuntary’ movement cannot easily capture the realities of movements along the Mexican corridor. Identification using legal categories such as ‘illegal’ migrant and end up demarcating and ‘invisibilising’ individuals eligible for protection. The securitisation of borders and criminalisation of migration throughout the 20th century, led by the global north, has intensified and has added further fuel to the fire. Protection has still not been clearly delineated for the undocumented and seems to be eclipsed through the criminalisation of migration. Incidents such as death, rape, kidnappings and other types of abuses faced by transit migrants have opened up the debate among key human rights stakeholders on solidarity and protection. Human rights defenders have established shelters, humanitarian aid, led manifestations, caravans and campaigns ‘in solidarity’ with the migrant among other activities and services. These forms of solidarity have been predominately presented by human rights actors to the Mexican government through human rights and humanitarian visa appeals for migrants to transit the country. These appeals and other forms of emerging humanitarian aid dynamics are occurring outside the refugee protection regime. Also the majority of human rights defenders are non-state actors—albeit there is reliance on states for the implementation of human rights. The purpose of this paper—based on extensive qualitative research in transit-assistance based places—is to explore what kind of contribution the politics of solidarity has in reshaping the transmigrant subject; focusing on key human rights defenders discourse, humanitarian aid dynamics and transmigrants experiences.

Involvement in Physical Leisure Activities in Low Income Households

In Norway as in most other Western countries, the research body on involvement in physical leisure activities like sports and fitness activities indicates a strong connection between high involvement, good health and social inclusion and well-being. However, this connection detects an involvement pattern shaped by social class and social exclusion. Families with low economic, cultural and social capital have the lowest involvement in physical leisure activities as well as the biggest health problems.

The paper will focus on: (1) how parents in low income households conceive, experience and handle their possibilities to participate in physical leisure activities and sports in their local communities, and further 2) what impacts these conditions may have on children’s participation in physical leisure activities.

The data material consists of qualitative interviews from a strategic sample of pupils belonging to low income households. Both Norwegian and non-western immigrant households are represented in the sample.

The overall findings showed that the involvement in physical leisure activities was strongly restricted by lack of economic capital both for the parents and the children. Most of the informants were single mothers and they had few resources to give priority to their own wishes for participation in fitness- and leisure activities. The children were also deprived of the opportunities to participate and thus less included in the peer groups in their neighbourhood. Even though the studied households possessed low economic capital, they differed in cultural and social capital. Those with the highest amount of cultural and social capital were also those who were able to articulate and claim their needs for finance support for leisure activities from the municipal social service.

Women’s Work and Reasons for Absence from Work

The equal opportunities for women in the Scandinavian labour market have been improved the last decades. But in terms of caring tasks in domestic life there is still a way to go, and therefore it is a challenge especially for women to combine the two spheres. During the period 1980 to 2009 the sickness absence among men in Norway has been relatively stable while the sickness absence among women has increased 70%. Women’s higher sickness absence rate is not exceptional. Comparative studies show that women had a higher rate of sickness absence than men in most countries. But they also conclude that the excessive absence is not simply due to biological or social factors. We also have a lack of knowledge about the reasons for women’s higher sickness absence.

This paper will focus on a) women’s self-reported reasons for their sickness absence, and b) the importance of social capital at the work place and in their domestic life.

The data material is responses from a postal questionnaire sent to Norwegian long term sick listed women with mental illness or musculoskeletal diagnoses, and in-depth interviews with a sample of long term sick listed women with the same diagnosis.

The overall findings showed that women’s sickness absence has to be understood as a combination of demand, control and social capital both at their work place and in their private lives. Persons with high social capital both at the work place and in their domestic lives have the best prospects to return to work. Single mothers often have low social capital in both spheres, and they are the most vulnerable group. The political consequences for reducing women’s sickness absence will be that it is urgent to focus not only on measures at the work places, but also at women’s burdens in the private sphere.

De carácter diacrónico intentará captar, a través del análisis de la memoria, la forma en que se ha modelado la experiencia de la modernidad en Guadalajara. Objetivo general del proyecto: llevar a cabo un análisis, entre distintos grupos y sectores sociales, de la forma en que los tapatíos asumen las transformaciones de la vida moderna, se adaptan a ella, o las asimilan, entablando procesos de negociación del orden social. La perspectiva de trabajo parte de la premisa de que no existe una ruta única, ni una forma única, de entender la modernidad, sino múltiples posibilidades para definirla y dotarla de sentido. Cada grupo social tiene distintas opciones a mano y las aprovecha o construye dependiendo de una serie de condiciones de orden material, cultural y político. Aspectos como la religión, la educación, los valores heredados, la clase social, el grupo de edad, la situación de genero, etcétera, son clave para determinar el tipo de adaptación/ negociación con respecto al proceso de modernización que se vive.

Método, el proyecto pretende utilizar diferentes técnicas analíticas, entre las que se encuentra la encuesta, la observación, la documentación y la exploración fotográfica.

Normalmente, los estudios de valores no logran captar aspectos más profundos de la vida social, como los comportamientos reales y los sentimientos, los cuales son elementos cruciales para una adecuada interpretación de los valores y su significado. Un abordaje como el nuestro es más útil para lograr una comprensión más cabal de este tipo de fenómenos sociales.

Gender Bias in Higher Education- Study on Indian Universities

Owing to higher priority assigned in successive Five Year Plans, Higher education in India has witnessed phenomenal expansion, with establishment of number of State and Central universities, Institutes of advanced studies, and numerous private and deemed universities. Pay scales revised to bring them on par with other prestigious services in public and private sectors, rendering it highly sought after sectors of employment. It encompasses graded disciplines and po- sitions with differential status, recognition and rewards. It is hypothesised that, distribution of academic positions and allocation of disciplines could be deter- mined by the social forces and extraneous considerations among which gender is an important variable. The paper addresses this issue in the context of Indian universities in which the number of women faculty is on the steady rise in the last two decades. Data collected through interview of 362 women faculty members from 23 South Indian Universities reveals that, gender segregation of academic disciplines and positions are discernible with concentration of women academi- cians in soft disciplines as well as at lower academic positions. The hard core applied disciplines, being where the faculty could be more visible, receive more research grants, claim consultancy and patents have predominantly male faculty. Even in terms of cadre composition, the proportion of women faculty decreases with successive higher academic position. Study further reveals that, even among women academicians religion, caste and rural urban background are pertinent in determining the patterns of segregation subjecting women faculty to double discrimination.

Value Systems in Transformation: Changing Values in Relation to Changing Societies

Changes in the value systems are usually studied by comparing some values, value types or value orientations and their estimates over time or between generations. With few rare exceptions, there are practically no studies concentrating on the transformation of the value structures or on the changing relations between different values. Associations between values are being seen as stable and universal both between countries/societies and over time. This is an assumption that cannot be made in a world that is more and more characterized by cultural and social pluralism as well as alternation of traditional cultural templates, communication technologies, economic systems, political ideologies etc. All this necessitates the usage of methodological and theoretical approaches that are enabling to recognize the heterogeneity in the value structures within societies and between different time points. In order to compare value systems, they must be equivalent in their structural formation. If this is not the case, then diverse value systems must be distinguished and structural differences (between societies and over time) that arise, must be explained by the variations in the socio-economic or other settings and by the developmental trajectories of those settings.

Current paper intends to fill this gap. Using value questionnaire developed by Shalom Schwartz (PVQ21) and data from European Social Survey, present study argues that the assumption of homogeneity of value structure does not hold. Using latent class modeling framework, diverse value structures are being distinguished within European societies and in different time points. Those value systems are being compared between societies and over time. Culture-specific aspects of them are being allocated and related to wider socio-economic contexts. Finally, the temporal dynamics of those cultural specificities are explored and further related to the historical settings of their development.

Current Attitudes of Supporting Older Parents in Asia: Korea, Malaysia, Hong Kong, Singapore, and Japan

This paper presents the attitudes change for supporting older parents according to social changes. In Asian countries, it has been said that elderly people are taken care by their families and it is the Asian-cultural tradition. Therefore, this research investigates attitudes change in accordance with social changes such as pensions, social services, guaranteed incomes, etc.

(METHODS)
Since caregiving has been heavily considered as women’s role, surveys were conducted on female university students in Seoul, Kuala Lumpur, Hong Kong, Singapore, and Tokyo from 2011 to 2013. Around 200 questionnaires were gathered in each area.

(Questions)
1. To investigate changing attitudes toward supporting older parents in each countries.
2. To find out female caregiving roles by generations and countries.
3. To find out interrelations between social changes and attitude changes.

(Findings)
Similarities 1. As for Korean and Japanese students, both female students wish to live with their own parents but not husband's parents. 2. They are willing to live nearby their own parent's houses but not those of husband's. 3. Mothers wish to live with and have supports by daughters in later years.

Differences 1. The majority of Korean mothers wishes to have financial support and the majority of Japanese mothers wishes nothing. 2. Both mothers expect support by their daughters more than sons. 3. Employing caregivers at home are not an option in Japan but in Korea, Malaysia, Hong Kong, and Singapore. 4. The majority of grandparents are likely to live with children in Malaysia, Singapore even in Hong Kong but not in Japan and Korea. 5. Attitudes of supporting older parents are highly related to social policies and the financial independency of elderly people.

SÖMER, MARKO* (Tallinn University, markos98@hotmail.com)
Social Context As Mediator Between Values and Well-Being

Ed Diner (2009, p. 66) claims that individuals attain subjective well-being (at least partly) while moving toward an ideal state or accomplish a valued aim. Shalom Schwartz (1994, p. 20) defines values as „desirable transsituational goals, varying in importance, that serve as guiding principles in the life of a person or other social entity”. Consequently happiness occurs after needs are met and goals are fulfilled. Therefore people are happier when their values are “right”, that is, attainable in given social, cultural and economic context. Sagiv & Schwartz (2000) have also argued that people are likely to experience a positive sense of well-being when they experience the same values that prevail in their environment, when they inhabit an environment that allows them to attain the goals to which their values are directed.

The purpose of this paper is to evaluate relations between basic human values (or desirable subjective goals), socially differentiable environments undermining or supporting the value priorities in question and subjective well-being. Multi-group and multilevel structural equation models are used to accomplish this task. Data from the fifth round (year 2010) of European Social Survey is used.
media can cause responses in segmented public spheres of the World Wide Web. Vice versa, content that is produced in blogs, wikis or social networks can become part of news coverage in the mass media. In addition to the public of mass media, we mainly analyze status and authority through a comparison of professional self-perceptions and narratives as presented in magazines distributed within the professions.

Explaining the World of ‘Big Data’: Global IT Consultancy and Reshaping of Policy Knowledge in South Korea

This analysis of the process through which South Korean government produced policy knowledge for ‘Big Data’ policy demonstrates a certain actor’s - global IT consultancy - intervention upon it. The gap between an actor’s cognitive capacity and the complex, thus unobservable world gives birth to a number of institutions producing knowledge, especially which not only describes the world, but performs as the inter-subjectivity among actors for their reflexive adjustments, thus have ‘performativity.’ Given this, the article explores how the knowledge offered by global IT consultancy converted the Korean government’s attempt to describing the sociotechnical world of ‘Big Data,’ and examines how the intervention affected the Korean government’s decision-making process.

“Rubber Rice Bowls”: Work and Family for Women Entrepreneurs in Post-Socialist Rural China

The three decades of China’s market-oriented reform since 1978 have brought about an increasingly deregulated and privatized rural economy, which posed new opportunities and challenges for women to balance work and family. This study focuses on a unique group—women entrepreneurs—who were neither the Maoist “iron girls” nor the cheap laborers in capitalist workshops. Drawing on interviews from two coastal villages in Jiangsu and Zhejiang provinces collected during 2004-2010, this study finds women entrepreneurs found their “rubber rice bowls” satisfying due to its flexibility and potential rewards, but also challenging because of the increasing risks and competition. Such entrepreneurial dynamics led to various patterns of work-family balance among women entrepreneurs, which could not be summarized under the traditional gender norms or the socialist egalitarian ideology.

The Korean Webtoon As a Reflection of Society

Since 1990, the technology of digital media has been constantly developed in Korea, and the digital media became popular among the general public. With the emergence of the social network service (SNS), people increasingly expressed themselves with visual images, such as photos, icons, animated characters, etc. The new digital media expanded the scope of communication between people and visual images. Webtoon is the new genre of cartoon as the result of digitalization. Webtoon enables readers to easily access and to participate in the process of webtoon making. The stories of webtoons show social experience in ordinary people’s daily lives. Webtoon readers become participants who share their own thoughts with webtoon artists and also create amateur works. Thus, the familiarity of webtoon increases. It is a remarkable big change in the history of Korean cartoon; thus, this research will discuss how webtoon influences people’s experience of seeing and interpretation. To do so, this research will study the production process of webtoons by the artist, and examine how the artist communicates with readers. Also, this research will show the different responses caused by media switching...
from webtoon to film. Today, webtoon makes changes on the ways of storytelling and positioning visual images and of interacting with readers. Also, the Korean webtoons are more broadly spreading overseas, such as France. With its increasing popularity and easiness to reach the public, webtoon is regarded as a driving force to boost the field of Korean cartoon industry.

The Impact of Adult Children's out-Migration on the Elders’ Psychological Well-Being in Rural China: Does Gender Matter?

This study examined the impact of adult children's out-migration on the psychological well-being of older Chinese parents left behind in their rural villages. Using data from two waves of the Longitudinal Study of Older Adults in Anhui Province, China, analyses showed that, controlling for personal characteristics and resources, the out-migration of children reduced the psychological well-being of their parents, particularly among older fathers. However, the transition to co-residence with an adult child buffered the negative impact of daughters’ out-migration on the psychological well-being of older mothers. These results suggest ambivalent feelings on the part of older parents when their adult children migrate out of their home villages for work or marriage. However, there is an important gender division in the adaptation to the out-migration of children. Mothers benefited from entering into a traditional multi-generational living arrangement when their daughters migrated; comparable fathers suffered from worse psychological well-being following entry into such an arrangement, presumably because living with children increased their dependence. It is concluded that a complex gender interaction needs to be considered when examining the consequences of dynamic intergenerational family processes in China.

SONG, LU* (Soochow University, lusong.su@gmail.com) LI, LIANG (Soochow University)
Use it or Lose it? the Impact of Grandchild-Caring on Grandparents’ Cognitive Functioning in Rural China

Using the data from the waves of the survey “Well-being of Elderly in Anhui Province, China” conducted in 2001, 2003, 2006, 2009 and 2012 respectively, this study examines the impact of grandchild-caring on Chinese rural grandparents’ cognitive functioning through constructing multi-level growth curve models. The results show that, comparing to the low intensity care for grandchildren, high intensity care has positive effect for the grandparents’ cognitive aging, however, the effects of high intensity care depend on the age and gender of grandparents. The grandfathers’ cognitive aging are protected by the high intensity care for grandchild, while for the grandmothers, the protective effect of grandchild-caring is repressed. The mothers benefited from intensive care; and this gender difference tends to be widened as aging. These results support the hypothesis of “use-it-or-lose-it”, and imply the significance of gender roles and norms in the Chinese rural families.

Multiracial Parents and the Intergenerational Transmission of ‘Race’ and Belonging

In both popular culture and academic discourses, being ‘mixed’ is becoming increasingly ordinary in Britain. While there has been growing research on mixed race children and young people, very little is known about how mixed race people racially identify and socialize their own children. Many adult mixed individuals have now become parents - prompting the fascinating question of how they, as parents, think about the racial identification of their own children. Parenthood engenders one’s ancestral and the ‘right’ socialization of children; What may such socialization bode for the future and significance of racial categories and boundaries in Britain? Are mixed race parents adopting post-racial attitudes and practices, or is there evidence of intergenerational transmission of racial thinking and identification in these households? How do parents think about the relationships between ‘race’ and racial difference, national and regional forms of belonging, and family lineage/ancestry? These questions are pressing, especially in light of recent research which does not necessarily privilege ‘race’, or which examines the meanings and experiences of ‘race’ in connection with other axes of identification and experience.

Based on a Leverhulme research grant, this exploratory study investigates the ways in which mixed race parents think about and communicate ideas and practices concerning racial identities and racial difference, and is suggestive of how they foster their children’s (and their own) sense of belonging in the wider society. This research draws on interviews with 60 multiracial individuals (parents) in both urban and suburban regions in England. A qualitative approach is crucial in critically examining not only racial categories/terms, but also trends reported about multiracial people in large scale data sets, especially those in the US.

Educational Mobility in Three Generations: Single-Parent and Grandparent Effect

This study examines the educational reproduction of American families in multiple generations. The key question is how grandparents’ education contributes to the educational success of grandchildren, and how the grandparent’s effect differs for single- and two-parent families. The grandparent effect works through both direct and indirect paths. The current research examines how grandparents’ education first affects whether parents have any children and how many children they have, before grandparents proceed to influence the educational mobility of their grandchildren. Analyzes build upon the mobility and demography model used in Mare and Song (2012), and draw on empirical evidence from the Panel Study of Income Dynamics. Recent researchers and policymakers alike have expressed a growing concern that single-parent family is responsible for the growth of an “undereducated class” in America. This study investigates whether or not grandparent effect contributes to the growth of the undereducated class from single-parent families in the grandchild generation.

Through Thick and Thin: Ecological Modernization in Thailand’s Electronics Industry

Electronics manufacturing in Thailand has undergone substantial transformations over the last two decades, including with respect to technological environmental innovation. Business conditions in Thailand have been highly challenging during this period, as the country has weathered multiple changes of government, mass mobilizations, torrential floods, and uncertain institutions. State policies are at the lower end of global supply chains, electronics manufacturing in Thailand has persisted through this period, even if not entirely thriving. Driven by growing international regulation of hazardous materials and waste electronics and the greening of global supply chains early in the new millennium, technological environmental innovation in Thailand has proceeded. Drawing on field research conducted over two decades in Thailand, as well as on available data, this paper addresses the causes and consequences of those transformations, including such questions as: How have these changes come about? What roles have domestic and international exogenous (market, regulatory, environmental) and endogenous (industry, firm, labor) forces and dynamics played in technological environmental innovation during these two decades? What has changed and not changed in electronics manufacturing in Thailand as a result? In what ways has electronics manufacturing in Thailand become more environmentally friendly since the beginning of the new millennium? The paper concludes with a discussion of the implications of the experience of Thailand’s electronics industry for social theories of technological and environmental change, including Ecological Modernization Theory.
as “freedom”, “flexibility”, and “resilience”, which are contrasted with the concept of the “structure” of society.

Secondly, we did fieldwork in The Laboratory School of Improvisation, which is an impromptu group that carries out impromptu performances and workshops in Japan, and interviewed its members. We found that when improvising on stage, the performers don’t express ideas freely in their own separate ways. They embody and share “formats” which constitute the explicit/implicit manners and rules of impromptu

In short, “improvisation” has paradoxical properties. Though “improvisation” is represented as a concept that frees us from social “structures” and enables us to create stories with others flexibly, performers in fact acquire freedom by means of “formats” when practicing impromptu.

Is Rise of China a Threat or a Chance? a Comparative Analysis of Determinant of Perception on China in Korea, Japan, and Taiwan

The rise of China has been discussed in different area of social sciences, but it is still rare for sociologists in East Asia to address this issue. International dimension of social development in East Asia is, however, necessary and indispensable part in sociological argument and the recent rise of China is one of the core parts of such international dimension.

Comparison of Korea, Japan, and Taiwan in terms of their attitudes toward China provides us with a lot of sociological insights. Comparative analysis of expatriates’ guanxi-building in China tells us that Korean expatriates are more aggressively establishing guanxi mechanisms than Japanese and Taiwanese counterparts. Our recent international collaborative research suggests that perception of “political risk of China” is different from Korean businessmen and Japanese/ Taiwanese businessmen.

This paper tries to conduct exploratory analysis of Korean, Japanese, and Taiwanese perception of the rise of China in comparative perspectives. More concretely, two research questions will be approached in this paper; namely (1) How people in three societies evaluate influence of China, and (2) Who are most concerned about the influence of China on their society, by using AsiaBarometer 2006, which is the only one dataset that enables us to compare Korean, Japanese and Taiwanese views on China in connection with other important socio-economic variables.

Our data analysis reveals the fact that it is only in Taiwan that household income of the respondents has negative correlation with evaluation of the influence of China. Why is there such a difference? This paper, by answering this question, tries to argue that “perceived” relation is important in discussing the issue of the rise of China.

The Nexus Between Collaboration, The Internet and Productivity: An Empirical Study Of South African Science

Prior research has investigated the relationships between collaboration, connectivity and the publication productivity of scientists. Most of this research has been conducted in either the developed or developing countries where internet access has been either well advanced or at the other end of the continuum. Investigations in countries that fall in between these two extremes are rare. Conducted amongst scientists and academics in South Africa, this study is aimed at filling this gap. Interviewing academics and scientists (n=204) from the sampled institutions, the paper presents details of how the above three variables are interfaced with each other in the South African scientific system which has become a strong contributor to science. The study also, from the policy point of view, brings out the features of scientific collaboration that exists in South Africa with its variations between the two sectors—academic and research.

Cultural Capital In Movement: On The Dissolution Of Traditional Educational Codes By Educational Policy and Social Movements Among First Generation Academics In Germany

Barriers to educational advancement are often described in the literature. In this connection, authors mainly refer to Bourdieu’s concept in which a lack of suitable cultural capital is often a barrier to the educational advancement of children from non-academic families. Acquiring such capital, in accordance with this theory, is an essential prerequisite for success in an advanced educational career. Bourdieu paints a rather pessimistic picture of the chances of acquiring such capital. Codes of the milieu of origin survive, mediated through habitus, and continue to hinder educational advancement.

The last decades of development in Brazil have fostered a significant increase in women’s participation in paid work in both the formal and informal sectors. Looking into the significance of women’s growing labor force presence, this paper raise a number of questions to investigate to what extent women’s paid labor impacts inequality between gender (men and women) and among gender (among women on the basis of class). We address that main issue by looking into the connections between women’s paid labor and unpaid labor and two main factors - the sexual division of labor in the family, and the labor legislation and social policies concerning maternity leave and child care. Analyzing data from the 2012 national survey data (PNAD) from the Brazilian Census Bureau, we show that women’s transition to paid labor in Brazil has been taking place without a significant changes in unpaid labor related to the persistence of the traditional sexual division of work in the family, and b) adequate policies geared to socializing responsibility for child care. We argue that a more equitable division of domestic work and children rearing in the family, as well as more inclusive social policies on parental leave and child care provisions are crucial to improve the balance between work and family (benefitting not women only, but men and children as well), and to foster equality between and among gender in the labor market and in the public sphere.

The Income Inequality In Mexico: Dynamics At The End Of XX Century

The purpose of this study is to analyze the evolution of the income inequality in Mexico considering two elements: the dynamic of labor income and wage and the general productivity in the economy. I consider that is important to contrast the level of income inequality and the structural conditions which produce macroeconomic instability, the slumps of economics and the inflation. The income inequality in Mexico is part of the socioeconomic historic unequal.

After the reduction in inequality during the 1960s and 1970’s, the exhaustion of the resilience of accumulation by substitution of imports, and the crisis of the bureaucratic-corporative regulation, were reflected in a greater concentration of income, accompanied by structural heterogeneity, technological inequality and...
difference in the degree of economic and social development in the diverse territories of the country. The market reforms of the 1980’s and early 1990’s worsened inequality. Start to change the unequal in recent years but the poverty has not decreased.

The Right of Women to a Free Violence City. a Case Study about Public Transportation in Mexico City

According to Women Human Rights, the government of the Federal District has made significant efforts, particularly recognizing that gender violence hurts the principle of respect to human dignity, makes difficult the participation of women in similar conditions and slows down the whole development of countries in political, social, economical and cultural life, on January 29th 2008 the “Law Access of Women to a Violence Free Life” is approved for the Federal District, through which it is agreed that women have the right to live a life free from any kind of violence. In the framework of this law, the Institute for Women designed a program to prevent, support and punish sexual violence against women traveling on public transportation in the city through actions aimed at promoting the rights of women, law enforcement and citizen oversight. This program includes various activities such as: Modules Care and Reporting Sexual Abuse cases in the Subway Public Transport System, Program “Athena” which is an exclusive service for women and separation of men and women in the Metrobus, Light Rail and Subway Public Transport System.

In this way The purpose of this paper is to analyze the effects of actions to prevent sexual violence that have been in public means of transportation: in the practice of daily mobility, in the perception of transport security, and feminine representations are built from this policy of gender equality.

The main hypothesis suggests that government actions in public transportation contribute to the generation of spatial justice, and with it in the exercise of the right to the city as a human right for women. Nevertheless, on the other side we hypothesize that the program intervention has generated paradoxical effects because they help to reproduce traditional representations of feminine and masculine in the city.

Women’s Work and Family Life. the Case of Micro- Enterprise for Rural Women in the Central Zone of Chile

Among the most significant changes that have occurred in recent decades in rural areas in Chile highlights the increasing visibility of women in the labor market, which from our perspective is key for the effects it has on a personal level, quality family life and living arrangements of rural families. In this context, the exercise of an independent activity or the creation of a microenterprise is a pathway for personal and family subsistence for an ever wider rural woman. Therefore, from a perspective that combines quantitative and qualitative methods, the purpose of this paper is to analyze specific cases of micro-enterprises rural women in Central Chile, examining three specific dimensions: empowerment process, family restructuring and meanings built around productive activity.

The paper is part of a broader study held in the province of Ñuble, Central Chile, concerning with female work in different social and geographic spaces and the effects of paid female work at personal and family levels and in local and national development (Proyecto DUEBB 133324 2/3).

Digital Citizenship and Equal Access to Democracy

Democracy, as says the German philosopher Stephan Kirste, is a fundamental human right. Every person needs to have space to public manifestation, to get respect even this person belongs a minority group, to participate in political decisions that regulate and define its own life. Without these guarantees it will be unviable develop citizenship in front of majority groups and also State. Albeit this concern there isn’t new, it became urgent when digital technologies expanded theirselves in the world. Safety, recognition, privacy, information, all this subjects, and rights too, turn into the center of debates about social inclusion in a digitalized world. And to promote people inclusion one must to guarantee individuals equally, what it will be facilitated by legitimate democratic regimes. Two issues have to stay in the spotlight nowadays: how to organize popular participation in Digital Societies and, also, how to empower citizens to ensure their regular and equal participation in the political decisions. Without inclusion policies by governments it will be very difficult do get it. Citizens must to have “access passwords”, as Brazilian social scientist Eugênio Trivinno, to use digital systems, like specific hardwares, updated softwares, domain specific language of digital media, adapted theirselves to speed web interaction that he calls “dromocracy”, and others abilities needed in digital times and not ever available to everyone. This type of exclusion, and also discrimination, concentrate power in some hands, what causing democracy imbalance. Solve these issues presented is the only way to people inclusion and it’s a democracy essential condition too.

Clean Energy and Political Stability: Challenges for International Cooperation within the Union for the Mediterranean

The challenges represented by “global warming” and “energy demand” have contributed to insert the enviromental debate among the main topics of international cooperation agreements. The Union for the Mediterranean (UFM) – an institu- tion which comprehends forty-three countries in Europe, North Africa and Middle East – has developed ecological projects which were also designed as a strategy for strengthening the political and economical ties between its members. Within this context, these targets define the Core of the new UFM project (2008) aimed to enhance the visibility of the UFM, two were clearly based on ecological criteria: the de-pollution of the Mediterranean Sea and the installation of solar power plants in desert regions. Precisely the discussion on the political conditions for
the implementation of the Concentrated Solar Power (CSP) in the Sahara Desert is intended to support our reflection about the potentialities and contradictions of such initiative. Once these solar plant projects are destined to provide not only Middle East and North Africa (MENA) with “clean energy”, but also approximately 16% of the European energy demand by 2050, it seems urging to consider the geopolitical transformations that the “desertec” project could unleash. We are inclined to think that such enterprise would indeed change the geopolitical meaning of the Sahara Desert and thus contribute to balance the political relationship between European and MENA countries. Although it is not likely that the marginalization of countries of the UFM are going to become “equi-counterparts” of its European counterparts, it is probable that the export of solar energy can diminish the political asymmetries between North and South. It is also crucial to reflect whether the political instability of the MENA countries can impose barriers to the accomplishment of the idea, especially because “Desertec” was conceived before the so-called “Arab Spring”.

Global Environmental Change: Environmental Policies in China with Reference to Brazil

The environmental issue has assumed the status of global problem, mobilizing civil society organizations, media sectors and governments around the world from the last two decades of the twentieth century. Among global environmental changes, climate change has proven to be structuring the debate in recent years, characterized as one of the main challenges of the global society at the entrance of the XXI century. It is called a “desertification” and China still have many challenges to be addressed with respect to the set of problems that make up the environmental issue in a world characterized by high modernity, by the risk society and by the context of global environmental changes. These two countries have been noted for their international importance and, above all, the importance of environmental issues at the core of their political processes. In this context, this project aims to investigate the trajectory by which Brazil-China have internalized the environmental issue, especially with regard to the climate issue, primarily analyzing two social spheres fundamentally present in this process: the sphere of government and the scientific community. The study of the pillar Science-Policy in Brazil-China is of fundamental importance, and consequently one of the innovations proposed in this research project. Regarding methodological aspects, different methods of investigation will be adopted, including, in particular, the systematic analysis of primary and secondary sources, such as the bibliographic and documentary research, and semi-structured interviews with government and scientific agents. We have a team of Doctors and Postgraduate students who will participate in the activities described in this research project, contributing to the realization of the proposed study in this project.

Key words: global environmental change, climate change, environmental policy, Brazil, China.

Alliances, Cooperation and Conflicts Between Ecostate-Men and Fishermen In The Pendjari River Area, Northwest Of Benin

Northern Benin (Dassari area) is crossed from either side by numerous little rivers and catchments that dry up very quickly because of the pronounced shore-foot deforestation among other things. The area is severely threatened by environmental strains. The causes are multifaceted: lack of rain (only 70 to 110 rainy days on average, October, November), technical infrastructures are not adequately the water, land degradation. Migrations of African fishermen from neighbouring countries (Niger, Burkina Faso, Nigeria, and Ghana) towards the protected Pendjari River in the Dassari area remain locally important drivers for environmental changes into new spaces configurations. This paper will open with a description of the methodologies and scientific agents used to gather information and findings. To this end, it will compile a series of statistical data combining qualitative methods and based on original research. Then, the main empirical idea of the paper will be centred in selected main villages of the studied area located near the river. The main goal is to understand and describe the adaptive capacity by the Pendjari River region (a kind of governance for sustainability) and the prevalent environmental governance regime. The River, located in a protected forest area, physically and politically imagined to be more environmentally secure, is ironically creating new demographic dynamics and trends (migration of fishermen, demands of new natural resources, etc.) that are not often reducing vulnerability and risk. How little scope forest officials have to manage policies that might actively help to protect the local environment, compared to the options that fishermen might have, to take preventive measures (in some way) to protect the area, if necessary. Afterwards, the paper will analyse the mobilization of those African fishermen along the Pendjari River and will focus on the fact that the ironic environmental “risks” that the politically correct environmental “conservation” efforts themselves may create.

Labour Market Experts and Their Professional Practices: Technologies of Self-Control of Job Placement Professionals

In the past 20 years the trend towards New Public Management became prominent in labour market reforms all around Europe and had a deep impact on the transformation of welfare states. In Germany the Public Employment Service (PES) as the central actor was transformed from a traditional bureaucratic institution to a managerial service provider which had an enduring effect on job-ori-ented placement activities and the placement professionals. The introduction of controlling, management by objectives, computer-supported placement activities, service orientation, customer segmentation, and action programs are typical features of an administrative managerial organization that follows business routines to increase efficiency and formal rationalization in the era of neo-liberalism. Under the New Public Management regime the work of the placement personnel is structured differently: On the one hand the job placement professionals are labour market experts with an extended scope of action. In counselling interviews the job placement officers interact with job seekers and provide advice and moni-tor the individual behaviour of job seekers. On the other hand all decisions of the placement professionals are checked by a close meshed accounting system and revised if they contradict the contractual business logic. Today, these professional emerge as „transparent job placement officers”, and their authority and expertise is not given because of their professional and managerial interests. The placement professionals are exposed to a systematic self-control which assesses the counselling and the placement of job seekers not only by technical and professional criteria, but always by the success of specific strategies along the internal organizational accounting system. The contradictory effects of extensive accounting practices on job-placement officers and the organisation we will show in our paper.

The Articulation of Japanese Culture in the Global Era: The Case of Japanese Small-Type Coastal Whaling

After the whaling moratorium had come into force in 1986, the Japanese government as well as anthropologists and social scientists tried to establish “small-type coastal whaling” (STCW) as a new category within the International Whaling Commission (IWC). Japanese coastal whaling has a long tradition dating back to the 16th century. Even today whaling is socially, culturally and economically important in the whaling towns as Taiji. However, the articulation of whaling as Japanese culture was not successful. A comparison of the Japanese and the Greenlandic articulation strategies shows: Despite of many similarities of the coastal whaling, the Greenlandic whaling is still considered illegal because of conflicting relations between professional and managerial interests. The placement professionals are exposed to a systematic self-control which assesses the counselling and the placement of job seekers not only by technical and professional criteria, but always by the success of specific strategies along the internal organizational accounting system. The contradictory effects of extensive accounting practices on job-placement officers and the organisation we will show in our paper.
problem has made people to question the capacity/competence of the police, and also casting aspersions on the quality of governance. Recently, the military was drafted to support the fight against terrorism. In response to the problem, some ethnic militia have sprung up, with some serving as “local police” in communities. Nigeria currently operates a unitary/centralized policing system, but there have been calls for the establishment of state police – separate from the federal police. Increasingly, communities and individuals do not wholly entrust their security to the police, and there have been local community actions against crime, including street barricades and the restriction of vehicular and pedestrian access at certain times. While the informal policing outfits have been playing positive roles with security control, the relationship between them and the police have not been entirely cordial.

Drawing from recent challenges, issues and experiences with the war against crime and insecurity (including terrorism), this paper discusses the policing and security system and the informal structures, as well as the relationship/interactions between the various security units. Suggestions are made for more effective policing in Nigeria, including greater collaboration/partnership between the formal policing system and the informal policing structures. The paper also advocates greater collaboration between the police and the public for a more successful campaign against crime in Nigeria.

Transnational Trajectories? Studying Nation and Citizenship in East Asia

Despite sociology’s increasing engagement with global processes, the relationship between global/transnational studies and cross-national, comparative studies remains a question, both conceptually and methodologically. This paper inquires into this relationship through an empirical focus on the transnationalization of nation and citizenship in East Asia. Unlike the common practice, by transnationalization, I do not simply refer to the advance of explicit transborder regimes (e.g. the World Trade Organization and the European Convention on Human Rights), or social formations “spanning borders” (e.g., migrant networks). Rather I offer transnationalization as an analytical node to capture the diffusion of non-nation-specific, universalistic frameworks, models, and standards, and the engagement of nationally located actors’ (states, social movements, professional organizations, and individuals) with such frameworks to orient their actions and strategies. This view locates the nation-state and a variety of national actors within their broader transnational environment—in an analytical sense these two levels are inseparable.

Densely organized at the national level and beyond, education policy is highly susceptible to transnational isomorphism. The analysis of the post–World War II school curricular reforms and content (particular focus on Japan and China, in comparison with European developments) shows that national educational systems in East Asia increasingly assume a globalized society, and the role of active and able citizens and nations in making this society. In so doing, they systematically insist upon the “distinct” contributions of the nation and its citizens to the good of the wider world. Yet, as the nation (and its uniqueness) is expressed fiercely, the policy reforms that affirm transnationally difficult, common models of social order. Nations as “imagined communities” and individuals as citizen acquire commonalities across societies. The assertiveness of the nation (divergence), as well as its progressively common imaginary (convergence), is linked to its transnationalization.

SAPARGAREN, GERT* (Wageningen University)

Environmental Agency and Power in the Global Network Society

Over the past two decades, practice theories as developed by Anthony Giddens, Theodore Schatzki and Elizabeth Shore amongst others, moved center stage in the sociology of sustainable consumption and everyday life. Practice theories often attract a third way in between individualist (value driven) and determinist (technology driven) models of environmental social change. In this paper, we explore in more detail the two modalities for analyzing the reproduction of social practices as put forward by Giddens (1984) and Shove (2012) in particular. First, when discussing practices as performances or as strategic action, we explore how specific lifestyle groups with particular ‘green’ portfolios or competences participate in the practice in order to make the practice and their lifestyles more sustainable. We show that the environmental dimension of (consumption) practices can be crucial for attracting new practitioners to the practice since they expect gaining emotional energy (Randall Collins, 2004) from participating in the process of simultaneously greening the practice and their lifestyles. Second, when discussing practices as entity and as part of an institutionalized set or nexus of practices, we focus on the process of strengthening or weakening the connections between different practices. We argue that the concepts of power as put forward by Manuel Castells (2009) can be used to illustrate the interrelationships between practices and thereby the key dynamics of environmental changes in the global network society.
atic patriarchal oppression of women within the Catholic Church. This radical and pioneering international movement is struggling for recognition as a legitimate religious formation as it campaigns for a more inclusive and accountable Catholic Church. The female ordination movement thereby provides a fertile conduit for examining how religion can both oppress individual freedoms and also be used to mobilise political, social and spiritual liberation from institutional disempowerment.

This paper will utilise critical discourse analysis of various social media outlets and webpages to elaborate on the institutional oppression and spiritual liberation which lies at the heart of this religious group. Drawing on feminist theology and a feminist epistemology, this paper will explore the effectiveness of social media in connecting women across the world who are facing institutional religious repression and who are seeking support from likeminded faith believers. Through critical discourse analysis, this paper will find that social media is used by groups involved in the female ordination movement such as The Catholic Network for Women’s Equality, Women’s Ordination Worldwide and The Women’s Alliance for Theology, Ethics and Ritual, to subvert the dominant attitudes towards women within the Catholic Church and to provide an alternative form of religious expression for disaffected Catholic women. These groups are thereby able to mobilise women into a solitary international religious formation which empowers working women who have experienced suppression or subjugation from the Roman Catholic Church.

SPENDLOVE, ZOEY* (University of Nottingham, zoey.spendlove@nottingham.ac.uk)

UK Maternity Services ‘Risk Culture’: Is the Professional Status of Midwives ‘At Risk’?

UK maternity services, accounting for a significant proportion of National Health Service litigation claims, are increasingly regulated by ‘risk management’ standards. Such standards, aimed at improving the safety of maternity care and reducing litigation, inevitably associate childbirth with risk, and the control of professional behaviour in managing such risk. The growth of this ‘risk culture’ within maternity services poses significant threat to professional status claims.

This paper presents findings of a Doctoral ethnographic study observing the real time impact of the ‘risk culture’ within an English National Health Service maternity department. Litigation and subsequent increasing regulation has fuelled the social construction of a ‘risk discourse’ surrounding maternity care. Aligned with the assertion that modern society has become increasingly risk averse (Beck, 1992), professional anxiety regarding risk has provoked socialisation amongst doctors and midwives that control over the childbirth process promotes risk minimisation. The stereotypical medical interpretation of risk, based upon fear of uncertainty and pathophysiology, has consequently permeated all aspects of pregnancy and childbirth. This in turn has led to the subscription of the ‘biomedical model’ as the prominent paradigm in managing maternity care, fuelling control, intervention and the ‘medicalisation’ of childbirth. Such ‘medicalisation’ has cemented doctor-led, intervention-laden management firmly within modern childbirth, with midwifery-led, naturalistic childbirth becoming an ever-decreasing occurrence. A professional identity crisis has ensued amongst midwives in that the role of midwives in the 21st century is in a state of flux, raising concerns for the professional status of midwives within future childbirth provision. The ‘risk culture’ in the UK has provoked significant inequalities between the professional status of doctors and midwives within modern maternity care. The role of midwives as autonomous practitioners in normal childbirth is eroding; therefore the ‘risk culture’ in the UK placing the midwifery profession at risk of deprofessionalisation?

Doctors’ Narratives

Doctors’ Narratives. My answer to the question outlined in the title of this session would be: “Doctors’ Narratives”. As illness narration is a means to gain direct access to the subjective aspects of illness, so utilization of doctors narratives in which they portray themselves is important in order to understand who physicians really are. Making a distinction between the motivations behind their choice and the manner in which physicians perform their profession, the author tries to decipher the “black box” of medical identity. He does so using 40 qualitative, in depth interviews with doctors working in Italy in various branches of different ages and professional placements. The narratives so collected appear strikingly similar to those of doctors in flesh and blood from other parts of the world or to “imaginary” doctors created by the fantasy of great writer - doctors (Bulgakov, Cechov, Celine, Conan Doyle, Cusk, Mary, Morhance, etc.). Perhaps even the sociological choice of trying to understand the profession through biographical tales reveals more than a point of intersection with the “narrative” approach in medicine: to make a proper ana-
The Challenges for Alternatives in the Brazilian Energy Matrix: The Sustainability of Family Farming in Biodiesel Production

The paper presents results from an exercise of castor beans production to obtain biodiesel from small farmers in southern Brazil. This research provides some reflection about the family farm crisis, which has been accentuated in recent decades, because the rural aging population, as well as the lack of successors. The social responsibility to settlement people on lands is the government’s role; this is the agrarian policies would propose strategies to modify the productive logic inherited from monoculture production, in the southern of Rio Grande do Sul. It is essential to rethink the viability of family farming beyond funding programs of the federal government. As a result, experiences articulated with different areas of knowledge could bring innovations in the ways of generating household income to the sustainability of rural activity.

ETHNIC DIFFERENCES IN PREMATURE MORTALITY OVER THREE DECADES: THE INTERSECTION BETWEEN INDIGENITY, SOCIAL CLASS AND PREVENTABILITY

This study uses national-level mortality data to investigate the changing social class and ethnic patterns in premature mortality in New Zealand men from 1975 to 2006. During this period there was a political struggle for recognition of indigenus rights, a social policy focus on inequality, and major macro-economic reform. We used information from national death registrations and national census data from the five yearly national population censuses from 1976 to 2006 to examine changing patterns in social class differences in all cause, preventable, and non-preventable mortality for Maori and non-Maori men under the age of 65. Our results show that social class differences in male mortality have increased since 1975. Maori male mortality was significantly higher than non-Maori mortality in each social class for preventable, non-preventable and all causes of mortality. The social class mortality differences within Maori were markedly greater than those within non-Maori.

Despite focused efforts to improve Maori health, the inequality between Maori and non-Maori in premature mortality appears to be increasing, even when socio-economic status are taken into account. The persistently higher Maori rate of potentially preventable deaths indicates that the health sector is still not meeting the serious health needs of many Maori. It also appears that there is increasing social stratification developing within the Maori population such that the social class differences in mortality within Maori are now larger than the inter-ethnic differences between Maori and non-Maori. We present several reasons why decades of indigenous development have not overcome ethnic differences in a fundamental marker of population health such as premature mortality but have resulted in increased inequality within the indigenous population.

The Internet Is Not The Answer To The Problem Of Leisure Identities, But The Internet Is Interesting For Leisure Studies: Against Poststructuralist Theory and For Empirical Leisure Research

As people’s leisure lives have become mediated through the global networks of the internet, leisure scholars such as Tony Blackshaw (2010) see a digital world of liquid leisure. Drawing on the work of Castells, Beck and Bauman, Blackshaw and others such as Rojek (2010) who have advocated the ‘post-structural’ turn in leisure studies welcome the dissolution of boundaries, the reduction of inequalities of power, and the individualization of leisure choices and leisure identities that the internet supposedly brings. In this paper, I provide a strong critique of the post-structural turn in leisure studies by showing that the theoretical foundations of such claims are weak, and the evidence base for such claims demonstrates only that some people in some countries have some freedoms to play at leisure identities. I will show that the internet in the work of post-structuralist leisure scholars has become a chimera that has little resemblance to the internet that actually exists. I will end by using some of my own research to demonstrate the limits of leisure on the internet and the structures that still shape human interactions, human leisure and human culture.

Inequality and Inclusion in Primary Health Care System in India: An Interstate Analysis

The trajectory of primary health care system in India is at crossroad with the gradual withdrawal of state from health sector. However, there are efforts to re-vamp the organisation and delivery of health care in rural areas with the introduction of National Rural Health Mission (NRHM) in 2005. Within this context the present study tries to analyse the internal differences in health care outcome in India and its relation to the social determinants of health. Secondary data analysis showed that there are wide inequalities existing between different states in terms of various indicators of health development. The state of Kerala stands out in terms of its achievements on major indicators and often hailed as Kerala model of health development, whereas the state of Assam performs lowest in most of these indicators. However the state of Assam is the only state in India, which included health as one of the basic right to its citizen. A secondary analysis combined with an ethnographic field work in these two states revealed that the inequalities between these states and within the states are complex and a unitary model of inequity determinants fails to answer the complexity. Thus the social health determinants models needs to be re-looked from the vantage points of the local context.

A Multilevel Model of Organization and Network Change

According to one vision organizations are more likely to establish network ties with partners having similar operational experiences (homophily). A second vision suggests that interdependent organizations connected by network ties are more likely to assimilate each other’s knowledge and develop progressively more similar portfolios of internal activities (assimilation). The internal structures of organizations can be represented as networks of interdependent portfolio items. These intra-organizational networks are nested in networks of organizations and influence the homophily and assimilation described above.

In this paper we try to establish which of these two visions best describes the dynamics of collaboration (measured as patient transfers) and organizational change (measured as change in specializations) in a community of hospitals. We estimate a new developed stochastic actor-oriented models (SAOMs) for multilevel networks which specify how inter-organizational relations affect organizational decisions to change the portfolio network of internal organizational activities by adding or abandoning activities. At the same time, the model allows joint examination of how the common affiliation to internal activities affects decisions to change network ties as terms of patient sharing relations between partner hospitals. We innovate over existing studies of network dynamics in that we represent processes of change in internal organizational structure, and change in the structure of inter-organizational networks as coupled sub-components of a more general process of co-evolutionary development. The objective of this paper is to examine this multilevel process that allows us to empirically use data observed between 2003 and 2007 among all the hospitals in a regional community. In the discussion of the results we emphasize the connection between recent advances in the specification and estimation of SAOMs for multilevel networks, the current theoretical debates about the emergence of organizations and markets and the interpretation of our findings in the light of rational choice assumptions of the statistical framework.
The Precariat: From New Dangerous Class to Class-for-Itself

Neoliberalism, stemming from the musings of the Mont Pelerin Society after the Second World War, meant a model of liberalization, commodification, individualism, the privatization of social policy as well as production, and – least appreciated – the systematic dismantling of institutions and mechanisms of social solidarity. From the late 1970s onwards, it meant the painful construction of a global market system, in which the globalization era was the disembodied phase of the Global Transformation, analogous to a similar phase in Karl Polanyi’s Great Transformation. In both cases, the disembodied phase was dominated by financial capital, generating chronic insecurities and inequalities. But whereas Polanyi was analysing the construction of national markets, the Global Transformation is about the painful construction of a global market system.

One consequence has been the emergence of a global class structure superimposed on national structures. In order to move towards a re-embedded phase, it is essential to understand the character of the class fragmentation, and to conceptualize the emerging mass class-in-the-making, the precariat. This is a controversial concept, largely because traditional Marxists dispute its class character. However, it is analytically valuable to differentiate it, since it has distinctive relations of production, relations of distribution and relations to the state. It is still a class-in-the-making rather than a class-for-itself. But it is the new dangerous class because it is a force for transformation, rejecting both labourist social democracy and neoliberalism. It has a distinctive consciousness, although it is this that holds it back from being sufficiently a class-for-itself. It is still divided, being at war with itself. However, it has moved out of its primitive rebel phase, and in the city squares around the world it is setting a new progressive agenda based on its insecurities and aspirations.

A Precariat Charter: From Denizens to Citizens

This paper discusses my new book, A Precariat Charter: From Denizens to Citizens (2014), which builds on key arguments from my 2011 book which introduced the Precariat as an emerging mass class, characterized by inequality and insecurity. A Precariat Charter discusses how rights - political, civil, social and economic - have been denied to the Precariat, and the importance of redefining our social contract around notions of associational freedom, agency and the commons. The ecological imperative is also discussed - something that was only hinted at in my 2011 book but has been widely discussed in relation to the Precariat by theorists and activists alike. By taking debates about the Precariat a step further, I further examine the kind of progressive politics that might form the vision of a Good Society in which such inequality, and the instability it produces is reduced.

Public Access to the Unorthodox Sacred Via Portuguese Urban Spaces

Drawing on numerous interviews carried out in 2010, this paper focuses on the popular cult surrounding a medical doctor famous for helping the poor, Dr. Sousa Martins, who died over a century ago in Lisbon. Because of contested rumors of Sousa Martins’ having been Freemason and having committed suicide, he is unlikely to ever be canonized within the Catholic Church, and the cult of devotion surrounding him exists completely outside of the church’s authority. The popular devotion toward Sousa Martins involves thousands of Portuguese of all ages whose numbers appear to be growing. Devotees believe that Dr. Sousa Martins can cure their illnesses, find jobs and homes for them, and even conduct ‘spiritual surgery’ on them to remove cancer. Despite the fact that the Church does not condone this devotion, the cult is enabled - and its ritual activities organized - by three public spaces within and near Lisbon (his statue, his tomb, and his home-turned-museum) in which devotees can openly ‘communicate’ with Sousa Martins to ask for his help (especially medical cures), bring him offerings, and leave gifts of thanks for miracles performed. The fact that this devotion has no organizing institution also means there is room for active individuals to guide it in particular directions. Such individuals include a charismatic female medium, a seer-turnt-writer who has written numerous popular books on Dr. Sousa Martins, and the owner of a kiosk selling cult objects, who has invented rituals for communicating with the doctor which she tells to her customers. This paper will explore the importance of the public spaces through which devotees ‘communicate’ with Dr. Sousa Martins, how this communion takes place, and how these public spaces connect to charismatic Christianity and other, more private spaces such as sessions with spiritual mediums who claim to be able to communicate with Dr. Sousa Martins.

Inequalities in Social Capital and Socio-Economic Status in the Post-Industrial Cities of Central and Eastern Europe

Development and Inequalities in Post-Socialist Countries: Comparative Perspectives

The main purpose of the paper is to explain some differentiations in the levels of social capital and socio-economic status between the inhabitants of post-industrial cities in Central and Eastern Europe. In accordance with the sociological literature, two components of social capital will be considered: trust and social networks. Socio-economic status will be analyzed by level of education, monthly income, and job situation.

The main thesis of the paper is the assumption that in the post-industrial cities of Central and Eastern Europe access to social capital is not highly associated with the socio-economic status of inhabitants.

The empirical basis for the paper is a database from surveys carried out in selected post-industrial cities of Poland, Russia, Hungary and Lithuania. In each of the above countries one city was selected in order to conduct a survey of representative samples of inhabitants between the ages of eighteen and seventy.

The empirical investigation was carried out in the year 2012 with the financial support of National Centre of Science in Poland.

New Cognitive Perspective in Survey Research Methodology. Comparative Results from Georgia, Russia and Poland

Applications of the cognitive psychology theories analyze the bias in survey research limiting the meaning of the term “cognitive” to cognitive functioning of people’s minds. Cognition should be understood in a broader sense because it is determined not only by intellectual capabilities of people but also by their social background as well as by their values and attitudes. Although it is obvious that achieved education is an inferential indicator of intellectual capabilities of a person, thus his or her cognitive abilities, it is not that obvious that intellectual capabilities are determined by social background and social experience of the people and that the perception of survey situation depends not only on the abilities but also on the attitudes. If respondent has never experienced democratic form of government and, in addition, does not have a theoretical knowledge about what democracy is, he/she cannot really express his/her attitudes to democracy. And, of course, his/her intellectual capabilities have something to do with the ability to express attitudes toward democracy but their effect on quality of response cannot be limited to strictly cognitive processes that are involved in answering the survey questions because this depends on the attitudes as well. Our approach assumes that social background, political knowledge and experience as well as political attitudes of people affect how they understand public opinion polling and, finally, affect the quality of answers. The comparative data were gathered in Poland (2010), Georgia (2013) and Russia (2012). The aim of analysis was to find to what extend political attitudes and experience determine the perception of public opinion polls and quality of answers. Significant differences have been found between attitudes and survey behaviors of Georgians, Poles and Russians.
Trust and Democracy in Different Post-Communist Societies: Poland, Russia and Georgia Comparison

The subject matter of the paper is a comparison of political trust (that consist of the fundament of political stability) and democratic attitudes in three very different post-Communist countries: Poland, Russia and Georgia. Political trust is extremely different from two other countries because of a very strong democratic tradition while neither Russia nor Georgia have such a tradition and experience but they differ in terms of their political culture and present political aspirations. Differences of political trust are analyzed in their relations to attitudes towards democracy.

We are particularly interested in analyzing social differentiation of trust in political system and in particular political institutions in the three countries. We would like to answer the question what are the segments of their societies that might be considered fundaments of social stability and development towards legitimized democratic system. We would like to find out what are the determinant of political attitudes, especially their relations to political trust in the system as a whole and theirs' institutions in countries with different traditions and different pace as well as direction of transformation. The main question is, what are the differences between those three countries in terms of the level of political trust and democratic attitudes, what are the differences in relations between the two, and what are the differences in social composition of those who trust the political system and support the democracy and those who do not. That is especially important because of the differences in existing systems. The attempt to answer these questions is made by analyzing the results of survey research conducted in national random representative samples in Poland in September 2010, in Russia in March 2012, in Georgia in August 2013.

Intergenerational Dependences and the Financialisation of Retirement: Lessons from Australia

Across the developed world, population ageing has coincided with rising living standards and expectations in retirement. Since the 1980s this has led to growing concern about the sustainability of public pension systems. Australia has been held up as an example of prudent fiscal management, as it looked to fund retirement income through compulsory private savings. This supplemented Australia’s flat-rate and means-tested public pension system, also supported by widespread home ownership. The shift to private pensions has made individual workers more reliant on lifetime savings and on benefits accrued through the tax system rather than direct benefits. We examine the intergenerational implications of this trend towards greater financialisation of retirement incomes by analysing cross sectional data from the Australian Bureau of Statistics. Given the significance of the Australian model to international debates, we discuss the potential long run international implications for inequality in retirement of this experience.

Leisure in the Middle East: Tradition, Taste, and Equal Access

Much of leisure in the Arab/Iranian Middle East may be accounted for by the forces of tradition and taste in free-time activity as these two have evolved across the centuries since the birth of Islam (c. AD610). Tradition and taste have become the cultural foundation for scores of leisure activities, which are preferred by one sex or the other, are coordinated with the Islamic calendar, appeal to particular age groups, among other differentiating principles. This paper, using a variety of library resources, examines the traditional and contemporary leisure activities in the Middle East, pointing out where equal access to them is an issue. Most Arabs and Iranians with deep family roots in this culture seem satisfied with their traditional leisure tastes. Differentiation according to the aforementioned principles is not general and problematic, not considered unequal in the social scientific sense of the word. What are considered unequal by some participants in the region, however, are certain “new” leisure activities, this new leisure being adopted (and often adapted) from outside the region, usually the West. These new activities range from imported European fine arts (e.g., classical music, ballet) to imported popular culture (e.g., rock music, stand-up comedy). Here, inequality is evident, for example, in differential monetary and geographic access to the fine arts. Adherence to Islamic values and traditional gender roles number among the factors generating inequality in popular culture.

The (In)Stability of Disorder Across Time and Space? a Spatio-Temporal Analysis of Physical and Social Disorder and Fear of Crime in the Netherlands

Whereas the occurrence of physical and social disorder across the urban landscape and the explanation of the observed spatial patterns have long preoccupied criminologists and urban sociologists, relatively few studies have looked at the spatio-temporal dynamics of disorder patterns. In an attempt to derive a spatio-temporal perspective, elucidating the (in)stability of spatial patterns of disorder and fear of crime is especially important for the model of urban development known as the Broken Windows Thesis, which posits that physical and social disorder, if unabated, lead to heightened fear of crime, reduced informal social control, and eventually a rise in more serious crime.

The present contribution is a spatio-temporal cluster analysis of physical disorder, social disorder, and fear of crime in the Netherlands based on the Dutch Police ‘Population Monitor’ survey between 1993 and 2005, a large-scale biannual household victimization survey covering every municipality in the Netherlands. By aggregating the individual survey respondents of each commune, we constructed a municipality-level longitudinal dataset spanning twelve years. We perform geovisualization and spatio-temporal clustering analyses of Dutch municipality locations in order to determine whether there are significant local differences in physical disorder, social disorder, and fear of crime and whether these spatial patterns persist over time. In addition, self-organizing maps serve to classify individual municipalities into clusters of similar spatio-temporal type across the Netherlands. Finally, we test to what extent this “data-driven” typology of municipalities accounts for the observed shifts in the spatio-temporal patterns of disorder and fear of crime over the twelve-year study period. The study thus produces evidence whether the front end of the hypothesized “developmental sequence” linking disorder with heightened fear of crime and reduced informal social control can be observed across time and different types of municipalities or is a rather transient and exclusively urban phenomenon.

It’s Hard out There for a Girl: Online Surveillance of the Female Body on Social Media

In 2013, we interviewed 50 Canadian girls and young women between the ages of 15 and 22 about their experiences as girls on social media. They described a complicated, often playful but often difficult relationship, with online surveillance that magnified the need for them to comply with mainstream expectations of beauty and the bodily performance of girhood. Although they relied on social media to keep in touch with friends and family, many of them experienced a high level of discipline from these groups when they stepped outside the narrow bounds of stereotypical performances of femininity, reducing their opportunities to experience a lived equality in online spaces. Most of them also internalized and then acted out a narrow, stereotypical performance of the female body online in order to protect themselves from criticism. Girls who were unsuccessful in doing so suffered from harassment and self-criticism; girls who were successful articulated ongoing concerns about the precariousness of this success. Rather than enjoying their social relationships with peers through increased online interaction and connection, many of them relied on a series of mutual agreements to mobilize online when the reputation of a member of the group was attacked. Perhaps most disturbingly, the online surveillant gaze encouraged many of them to rely on external validation of their physical appearance to manifest a performance of “confidence”, both deepening the effect on mainstream stereotypes and discouraging them from developing an internal sense of validation and worth. Our findings underline the need for policy and educational initiatives to support girls online and open up spaces for them to confront online stereotypes, push back against the gendered constraints they encounter online and participate equally in online society.

Shaping the Romanian Identity. the Nationalist Discourse of the Orthodox Romanian Church

In a Europe increasingly secularized, Romanians trust the church is high and growing. According to the World Values Survey 1999-2000, 47.9% of the Romanian has high trust in this institution while only 2.7% is the opposite. Also, except Malta, the highest percentage of Europeans who believe that religion is very important in the stability of democracy is recorded in Romania (51.3%). We can say that we are witnessing, in the XXI century’s Romania, a true renaissance of God (la renaştere de Duh, Qăteni kapă Samuel Huntington).
Analyzing the academic literature (Bryan Wilson, 1998, Steve Bruce, 2002, Rob Warner, 2010, Pippa Norris and Ronald Inglehart 2011, etc.) one can note the following explanatory factors of this phenomenon: the degree of modernization and economic development, human security and the feeling of vulnerability to risks, political repression during the communist and nationalist discourse of the Orthodox Church.

The purpose of this paper is to identify in a longitudinal and transversal discourse analysis – the proximity between Orthodox Church and national ideas. We will try to prove that in Romania, as well as in other Eastern European countries, religious nation was a constant, regardless of political regimes. We illustrate the previous statement with a quote from Dumitru Stăniloae, one of the most respected theologians in Romania: Romanian nation is biological-spiritual synthesis Dacian elements, Latin and Orthodox Christian (...) Orthodoxy is an essential and vital function Romanian spirit. Our national ideal can be conceived only in relation to orthodoxy.

Where There Is No Utopia? When Real Virtual Social Spacing(s) Performs to Theory

Viral proxemic social spacings of the Occupation (from Occupy Wall Street to Occupy Gezi Park and Occupy Brazil) and of Gangam Style lend evidence to the next first cut proposition. It is that sensory experiences of practiced iconic irony (of virtual wealth and real poverty) in everyday virtual spaces are able to capture attention to be listened to and joined in at distance for outperforming obstructive acts, actions and actants in human spatial behavior. Configurational comparative analysis of viral proxemic processes from transitions to or initiation of interactions at near and away, and in swaying with initiating interactions real-time emergence of related joint actions of affiliated iconic ironists, not only in vicinity but far afield, and both in geo and vireal (digital) spaces begs explaining. It is possible by collected data to infer whether they are consequential following of reactive politics of hope or stem of proactive trust of belonging to humanity resilient to depair through crowd-sourcing ligatures as being change-maker of global society legitimately enacting locally its constitution and performances.

STIEGMANN, ANNA* (Center for Metropolitan Studies Berlin, anna.stiegemann@metropolitanstudies.de)

Shopping For Community - Local Businesses As Features Of Social Inclusion?

Increased ethnic diversity, a high degree of differentiation in income and education levels as well as lifestyles and related the socio-spatial changes have changed not only residential and commercial neighborhood structures, but also the range and level of local interactions and leisure time activities - with wide implications for neighborhood cohesion. As one result the social cohesion of inner-city neighborhoods and their residents is often seen as vulnerable. Whereas some of these problems are addressed by numerous neighborhood management programs, sociology still needs to pay more attention to how that shapes local interactions, i.e. everyday social contacts and connections between and among various groups of residents, how these affect local social capital.

So far, the great majority of research on this topic has focused on narrow and well-integrated primary relationships among neighbors in residential settings and attempts a loss of local social networks. But these studies have mainly neglected the comparatively loose and unpretententious everyday interactions, particularly during leisure time activities as well as interactions in (semi-) public spaces and how both contribute to community bonding and social inclusion shaping local interactions, i.e. everyday social contacts and connections between and among various groups of residents, how these affect local social capital.

We base our research on Serge Moscovici's social representation theory (1961). In order to rich our epicist goal, we will analyze the political discourses in the euro-parliamentary election process in 2014. We consider the relationship between such videos and other forms of "self-branding" and authenticity, and analyses of female masculinity standards conceptualized the high risk and the high threat resilient diplomat body. Conceptualizations are legally enacted with relative budget appropriation for the fiscal year 2014.

When the Stranger Become the Enemy, the imagine of the East-Europeans in Western-Europe Political Discourse

Europe nowadays is under rupture more than ever before between narrativity and reality, between the rich North and the poor South, between the democratic West and the (ex) communist East. Attracted by the temptation of the West (liberty and welfare) and driven out of poverty and the lack of perspective inside the ex-COM-ECON space, the latest Eastern inhabit – more or less legally - the western side of Europe. It is indeed apparent that every new wave of EU integration has recently lead to a new wave of immigration. These citizens bring with them not only cheap labor force, but also different principles, behaviors and attitudes towards the "adoptive" state, the institutions, etc. In fact, the readiness of migrant workers from the new EU states to accept the hardships of their new existence in the host state, leads not only to a desirable multiplication of diversity, but also to interethnic tensions. The Polish plumbers or the Romanian maids have become characters with well-known and recognizable traits all over Europe. However, along with these characters came also the Romanian beggar, the Bulgarian beggar, etc. As Umberto Eco argues, by extending the characteristics of its marginalized members to a whole ethnic culture, one can provide an ideal scapegoat for a society caught up in ethnic change which is not able to recognize itself.

The purpose of our study is to identify and explain the imagine of the East-European in Western-Europe political discourse and to find out if, under the displayed tolerance one can find the premises for a stereotypical transformation of the Stranger into the Enemy.

In order to rich our epicist goal, we will analyze the political discourses in the euro-parliamentary election process in 2014. We consider the relationship between such videos and other forms of "self-branding" and authenticity, and analyses of female masculinity standards conceptualized the high risk and the high threat resilient diplomat body. Conceptualizations are legally enacted with relative budget appropriation for the fiscal year 2014.

teens narrate their consumer practices. I argue that transgender videos play a double role as personal and collective identity work, affording individuals the possibility of enacting a transgender self, and also participating in the act of community-building via new media, in the context of post-feminism, the medicalization of gender, blurred public/private boundaries, and late capitalism. Turner (1996) suggests that economic transformations characteristic of postindustrial capitalism have changed the meanings of the body for individual social actors. Once the site of ascetic control and discipline, the body is now the locus of pleasure, leisure, and consumption. Not a fixed biological given, "the body can indeed be reconstructed and fashioned so as to bring about profound changes of identity, including changes of gender" (21). While these transgender video autobiographies do in fact exemplify the malleability of the body, I suggest that they also display the enduring importance of ascetic control and discipline.

STEINER, PHILIPPE* (Institut universitaire de France, Philippe.steiner@paris-sorbonne.fr)

Auguste Comte, Altruism and the Critique to Political Economy

Altruism is now a current concept among economists and sociologists. When Comte coined that word in he wished to oppose a new spring of action to the selfish one that was, according to him and many other social observers, flourishing in the industrial society. While focusing his attention on the opposition between egoism and altruism, an opposition deemed to be the "great human issue", Comte was not merely pursuing the elaboration of his own system of thought with the so-called "positivist" approach and the development of the religion of humanity at the heart of his Catéchisme positiviste (1852) and his Système de politique positive (1851-54). He was also pushing further the critique to political economy that he had exposed in the 4th lecture of his Cours de philosophie positive (1830-42).

Comte's theory of altruism is a central point of his religious credo but it is also a critique to the political consequences of the spreading of political economy altruism that gave birth to a large debate. The topic is thus perfectly fitted to a history of the relations between sociology and economics.

The first considers how selfish behavior or egoism came to be considered as a major threat endangering the functioning of the industrial society, by Comte and those who were worried by the diffusion of egoism. Then, the second part summarizes the methodological critiques set forth in the Cours before connecting this critique to the economic content of the Système and the concept of altruism. The last part contrasts Spencer's view of altruism to the one held by Comte and, how French political economists reacted, defending the moral value of their science.

STEINER, PHILIPPE* (Institut universitaire de France, philippe.steiner@paris-sorbonne.fr)

The Great Performation: Economic Design Versus Social Design

There are now a significant number of studies done on the performativity of economies — to use Michel Callon's words — according to which economics as a science is actually not describing the state of economic affairs, but performing its own principles about the functioning of the economy.

The topic of this communication is to suggest a larger view of the performativity thesis in combining Callon's and Polanyi's approaches. In his Great Transformation (1944), Polanyi explained how much political economy contributed to the creation of the market system; however, he added that there existed as well counterforces protecting the society from such market system. Accordingly, the communication claims that there is a “Great Performation” at work. With the development of design economics, matching markets, economists are able to create communication claims that there is a “Great Performation” at work. With the development of design economics, matching markets, economists are able to create communication claims that there is a “Great Performation” at work.

The empirical material for the study is interviews with artists involved in artistic projects in workplaces in Sweden but also the study of non-institutionalized forms of social movement.

Whatever Happened to Japan’s Radical Left?

In the early postwar period Japan developed two major parliamentary left political parties, the Japan Communist Party (JCP) and the Japan Socialist Party (JSP). Each was supported by labor union federations and other affiliated organizations, which mobilized for social movement activities on many issues. By the late 1950s, an extra-parliamentary New Left emerged among university students. The first group broke from the JCP-dominated national student federation to form an independent Communist League, and a second independent student group developed out of Trottsky study groups on various campuses. For over a decade, the student-based New Left played a major role in social protests alongside Old Left parties, labor unions, and other civil society organizations.

During the late 1960s and early 1970s, Japan experienced a New Left protest cycle that paralleled those in Europe and the United States. It concerned very similar issues and had a similar trajectory of escalation of violence followed by strong state repression, which ended the protest cycle and drove the most radical elements underground or into exile. However, unlike the radical left in many European countries and the United States, the radical left in Japan has been largely invisible since the 1970s and is only now becoming somewhat more visible.

Based on long-term fieldwork, this paper will trace the Japanese radical left's evolution into an “invisible civil society” that continues to engage in social movement activity, but has had little impact on mainstream Japanese political agendas and action repertoires. The analysis will examine internal conditions within the movement and its interaction with the larger Japanese social and political context, including public fear engendered by the escalation of violence, the rigid employment structure that permanently marginalized radical activists, continuing state countermeasures against the radical left, and the gradual dismantling of the support base for left political parties.
propulsive human development shortsighted in time and duration; meaning that once the conditions are set for full development and enjoyment of capabilities, the interventional work of the UN would be over, although, apparently, the way they are working with the Theory of Capabilities suggests the contrary.

Care, Surveillance and Legal Mobilization

Legal institutions must be mobilized by people and institutions in response to disaster. Our discussion has brought together two different perspectives: one as victim and as people who have been rescuers. In studying assistance after disaster, we often treat programs as though they are distinct and experienced separately. Yet people encounter the law in disaster after having encountered other law in their lives, and interpret how to make legal claims through what they know about other programs. Similarly, state responses to disaster or efforts to mitigate or respond often work in ways that are characteristic across social programs. Although care might well be the goal of disaster assistance, for example, in the United States it is one program in a welfare state with goal of getting people off assistance and ensuring that poor people take responsibility for themselves. The people who need assistance the most can experience it as hard, confusing and frightening when it ends before anyone can find a job or get resettled, whatever the goal. This project draws on assistance for people who fled the Gulf Coast after Hurricane Katrina.

A Spitting Image of Reality? Analyzing Stories of Meaningful in-out Group Incidents As a Tool for Understanding Students’ in-out Group Relationships in a Divided Community

This article explores the usefulness of analyzing narratives of particular incidents that are meaningful to and involve members of different ethnic groups in a situation of conflict. Narrative analysis of the content and structure of stories told by 15 Greek and 15 Turkish Cypriot students about a particular ‘spitting incident’ and the micro- and macro context in which these students, selected from two secondary schools in the Republic of Cyprus develop their narratives, shows that the analysis of such stories can enhance our understanding of: a) the different ways in which actors represent this incident and the factors and processes that inform these representations and b) the more general representations actors make of their own in-group and perceived out-group. More specifically, TCs portrayal of the TC protagonist as a vulnerable but likable and brave hero who is the victim of deliberate and hostile actions of a powerful and untrustworthy villain (the GC protagonist and particularly the GC community), who uses hisellow to poorer when it hero unfairly and excessively corresponds to their views of how GCs treat TCs in the Republic of Cyprus more generally and TCs passive, more defensive response to such treatment. Similarly, GCs portrayal of the GC protagonist as a pious hero and the TC protagonist as the disrespectful anti-Orthodox villain corresponds with their views of TCs as dominant, aggressive religious (Muslim) extremists who cannot be trusted. In addition, while TCs narrate this story primarily as an isolated incident, and seek to excuse, deny and/or downplay the accusations directed to the TC student, GCs often tell this story in relationship to a more general, critical discussion of existing policies which they define as hostile towards them . The conclusions discuss the implications of this study for future research and social policy on in-out group relationships.

Transition Cities – a Sociotechnical Approach for Transformative Innovation

The paper draws on the sociotechnical transitions and system innovation framework of Geels and others to develop a new approach at city level to govern low carbon innovation in three major end use sectors – buildings, transport, and energy networks.

It reports on the European Institute of Innovation & Technology (EIT) Climate-KIC Transition Cities project. This involves a partnership of 6 cities – Birmingham, Frankfurt, Castellon/Valencia, Bologna/Modena, Wrocław & Budapest. The aim was to develop a transition policy capability to facilitate transformative low carbon innovation in three major end use sectors – buildings, transport, and energy networks.

An inventory was made of all low carbon innovation projects underway in the partner cities. This used a broad sociotechnical definition of innovation and included a diversity in terms of scale, knowledge and types of innovation. 107 projects were identified with a value of €2 billion in the 3 areas identified. The distribution was similar to earlier studies on city climate innovation but was at a significantly higher scale, suggesting that the national focus of innovation policy is underestimating the extent of activity at the city level. However despite the extent of activity they tended to be treated as separate, disconnected projects and there was little evidence of strategies to link and enable wider system innovation.

An analytical and practical framework was developed in order to facilitate the clustering of projects around clearer arenas of system innovation. Social network analysis involving stakeholder participation was carried out to assess the prospects for system innovation and plausible transition pathways up to 2020 in each partner city. The results showed major differences in the prospects for transition in different arenas. It also showed the emergence of key integrating non-technological innovations in different cities with the capacity to play a key role in making transition happen.

**Breaking the Ignorance Contract: White South Africans' Recollections of Complicity and Collusion with Apartheid**

It has become a commonplace joke in South Africa that one cannot find any white South African who admits to have voted for the Apartheid government. White South Africans tend to produce accounts of their past that present innocence, or at the least, ignorance of how their privilege was premised upon the disadvantage and oppression of black South Africans. Focus groups were conducted with white South Africans who lived in South Africa during the apartheid years, and they were asked to reflect on the narratives and interviews that they engaged in conversations about their racialisation into whiteness. They were invited to reflect on a) what they in fact did know, b) what they chose/preferred not to know, and c) what they now feel they legitimately can claim they did not know about the system and how it impacted the lives of black South Africans while holding their racial privilege in place. Drawing on the emerging field of epistemologies of ignorance, the paper investigates the costs and rewards of breaking faith with “the ignorance contract” that holds white collusion with racial privilege in place. I explore some of the complexities of dealing with the shame and continued self-interest that inhibits the admission of complicity.

**Bringing Family Demography in: Class Variation in Family Behaviors and the Implications for Inequality Patterns**

Stratification research focuses, traditionally, on the role of families as providing the life conditions for future achievements and opportunities. Studies have highlighted the importance of family structure and family behaviors (e.g., assortative mating) in producing and reproducing inequalities, class position and life chances. Recent changes in family patterns point attention to the interplay between social class and family demography, which is not yet fully incorporated in stratification research. Changes in family behaviors, including family formation and dissolution, fertility patterns and parenting practices, and the economic behavior of women are not uniform across social classes. Studies emphasize the importance of family structure (e.g., the vulnerable position of single-headed families); the economic consequences of divorce or the effect of homogamy on inequality among families. Recently, more attention is given to the contribution of family behaviors (e.g., assortative mating; differential fertility) to the general level of inequality.

In this paper I highlight the importance of class disparities in family behaviors and their consequences to the life chances of individuals. I emphasize in particular the important role of women’s educational attainment plays in determining family behaviors, and the various consequences of class and family interaction to the economic disparities between families and gender inequality within families in particular the gendered division of paid and unpaid work. Recent studies, for example, demonstrate a higher risk of divorce for the lower classes. Similarly, women’s education is related to their work activity and the formation of double-earner families. These differences further deepen disparities between families and individuals that grew up in different types of families located in different class positions. Taking class variation in family behaviors into account is necessary in order to understand the direction of inequalities and how different policies and institutional arrangements may alleviate them.

**How Media Cultivates Body Perception and Sexual Attitudes: The Effect of Television, Magazines, Video Games, and Internet**

In the late 1960s, George Gerbner developed cultivation theory to understand how exposure to television shapes individuals’ perceptions, particularly violence in the real world. Research using cultivation theory consistently showed that heavy television viewers were more likely to perceive the world as more violent, even after controlling for negative experiences involving violent situations. Gerbner later extended cultivation research to sex-role stereotypes and sexuality (Morgan and Shanahan, 2010).

Using cultivation theory, the current study explores how different types of media influence individuals’ body perception and sexual attitudes. The media studied are television, magazines, video games, and internet. The sexual attitudes studies are acceptance to hooking-up (casual sexual encounter) and rape myths. For the current study, we collected data from undergraduate students at an American university, using an online survey. The data indicate that body perception and sexual attitudes differ by media type consumed. More specifically, we find that (1) controlling for gender and self-esteem, exposure to television, magazines, video games, and internet is negatively associated with individuals’ evaluation of self body image, and that (2) high exposure to television, magazines, video games, and internet correlates to more mythical sexual attitudes and sex-role stereotypes. We will discuss the implications of the results and provide suggestions for improving self body perception and eliminating sexual myths.

**Children’s School Achievement and Educational Aspirations: The Role of Parents’ Peer Group As Social Capital**

Parental educational aspirations for their children’s educational careers have been found to be affected by the students’ school performance. Some available evidence suggests that parents with lower status background are more susceptible to detrimental effects of poor school achievement. However, explanations for this phenomenon have not been empirically tested yet. We hypothesize that the aspirations of parents with lower social status are more reactive to constraints because of being embedded in less ambitious social contexts and are, thus, less endowed with social capital. These hypotheses are tested with data from the Mannheim Educational Panel Study (MEPS), where participants are primary-school parents in Germany. Firstly, we found strong net-effects of the level and temporal development of the children’s grade-point average on the parents’ educational aspirations, which strongly decreases with increasing parental education. Secondly, aside from the children’s academic achievement, the average aspiration level in the parents’ egocentric network is found to exert significant net-effects on the parents’ educational aspirations. Thirdly, the aspirations in the peer group moderate both the effect of the level and temporal development of the children’s grades on the parental aspirations: Parents with high aspiration contexts are less willing to adapt their aspirations in view of their children’s poor educational performance. Fourthly, the compositional difference in the peer group’s aspiration level between families with different educational status explains their different willingness to adapt their ambitions to their children’s achievement reality completely. Thus, a positive attitude toward education in the parental social network serves as a protection against detrimental effects of poor school achievement and as intergenerational social capital for their children. These results are not consistent with a simple version of a rational-choice explanation of social capital utilization.

Debating Canadian Climate Change Policy: Policy Networks and Discourse Coalitions in National Media

The news media serve as an important forum for public debate among key actors and organizations involved in climate change policy networks. We examine national news coverage of climate change policy debate in Canada during 2007-2008, which is a peak period in national climate change news coverage. We use a discourse analysis approach to answer four questions: Who are the central organizational actors who appear in national news coverage? What are the central discourses about climate change in national news coverage? How do these central organizations cluster around shared agreement over key climate change discourses? How do these central organizations cluster around shared opposition to key climate change discourses? By answering these research questions, we see how the national media and key news sources attribute responsibility for addressing climate change and define the political responses that should be implemented to mitigate or adapt to climate change. We also gain insight into the ways that organizations align around particular policies and ways of understanding climate change, resulting in discourse coalitions, as well as rifts in climate change policy debate.

Old Harry and New Media: Environmental Movements and the Oil-Tourism Interface in the Gulf of St. Lawrence

Over the past two decades, offshore oil development and tourism have gained importance within the political economy of Atlantic Canada. In the province of Newfoundland, these sectors represent alternative models for living with and making use of coastal environments. While environmental movements routinely mobilize against oil projects like the Alberta oil sands, Enbridge pipeline, or Keystone XL pipeline, there has been an absence of critical engagement by environmental movements in relation to offshore oil development in Newfoundland. However, recent proposals to open up oil exploration in the Gulf of St. Lawrence, where Old Harry is located and the Northumberland National Park, has sparked resistance from environmental movements and has brought the tourism-oil interface into sharper focus. We draw on internet ethnography of key websites and web 2.0 content, as well as interviews with core members of environmental organizations, in order to better understand how environmental movements are for intervening in environmental governance and shaping the oil-tourism interface in the region. Our analysis shows that environmental organizations use websites and web 2.0 applications to make productive use of the tensions between different political and ecological scales. These new media technologies provide movements important tools for inserting themselves into the oil-tourism interface and defining offshore oil development as both environmentally and socially problematic.

Nationalism and Antisemitism in Postnational Europe: A Comparative Analysis of Austrian and English Print Media Debates on the Economic Crisis

Karín Stoegger (Vienna/Lancaster)
Nationalism and antisemitism in postnational postnational European society: a comparative analysis of Austrian and English print media debates on the economic crisis

The post-official period's "postnational constellation" (Habermas) characterised by pluralism and cultural mobility, globalised economy and the nation-state's change of function. Especially in the post-official period's "global economic crisis a particular vulnerability to producing nationalist and antisemitic reaction, whereby moments of both tend to intertwine, becomes evident. This presentation sheds light on the intermediation of nationalism and antisemitism in a cross-country comparative perspective, including Austria and England. By applying Critical Discourse Analysis, print media debates on the current economic crisis are analysed as to how they operate with nationalist and antisemitic discourse fragments.

In mainstream print media, nationalism as well as antisemitism do not generally occur in a brutally exclusivist manner, as openly articulated racist forms of expression, but rather in latent forms, encoded in everyday linguistic practices and routines. Therefore, a broad concept of nationalism and antisemitism is deliberately chosen and the analysis gives priority to everyday modes of inclusion and exclusion. By focusing on discourses around the Self and the Other in the context of the global economic crisis, everyday social communicative practices are problematized in order to trace the role of nationalism and antisemitism within them. This approach draws on the working hypothesis that in contemporary Western societies, extreme right-wing open nationalism and antisemitism are not the only force that stands in the way of a society of world citizens, but also unnoticed but well-practiced routines of exclusionary identification in everyday life. These routines subtly refer to a horizon of understanding, an archive of ideological habits, which by tradition includes nationalism and antisemitism.

How to Avoid "Normal" Accidents? Risk Management As a Dynamic and Inter-Occupational Negotiated Decision Process

This communication aims to describe how two high-risk organizations are operated, i.e. nuclear power plants and railway operation system. These technologies are so complex that ambiguous situations often arise. Organizations' responses to uncertainty usually relies on procedures. Despite a huge amount of technical documents, applying a procedure is not such an easy task to perform. The procedures must fit the current phases, workers teams may be available or not...Thus coping with technological complexity and uncertainty implies operators to make "difficult tradeoffs and decisions about human risk, acceptable and even how measure the risk" (Leverson et al, 2009, 240). Rather than focusing on major failures, the communication zooms on day-to-day activities, on how operators make technical decisions that try to encompass all the demanding issues of high-risk systems (safety, system availability, workers' safety, environmental protection, etc.).

Both organizations studied are characterized by a strong technical and social division of work: high-risk systems operators turn to be specialists in their field (production, safety, maintenance, etc.). Yet, these specialists are interdependent regarding the organizations' functioning: organizational reliability thus relies on vertical communication between humans and between humans and techniques (Perrow, 1984). Our empirical results describe in depth the nature of arrangements and negotiations made within and between occupational groups to articulate the work. To increase decision-making rationality, professionals communicate with each other. They develop argumentation and explicative practices to make their point visible and to contribute to the collective bargain about technical decisions that have to be made. In sum, a major way to cope with complexity relies on communications performed in situation, especially during technical points-of-view confrontations.

STOLL, FLORIAN* (University of Bayreuth, Germany, stollflorian@gmail.com)

Future Visions in Social Milieus Among the Middle-Class of Nairobi and Mombasa – Empirical Results and Theoretization of Future Concepts

In this paper I will focus on own research on future visions in the middle classes of Nairobi and Mombasa. These results will be the basis for a theoretical interpretation of these views on future. The various future visions among the different social groups (=milieus) in the middle classes of these two Kenyan cities point at certain social developments and can thus be interpreted as paradigmatic tendencies in the present society. While the social context of the milieus and their future visions might reflect global trends and even global culture, they are at the same time very high local as they are adaptations to specific conditions - as the term ‘glocalization’ (Robertson) suggests.

Different social milieus in the middle classes of Nairobi and Mombasa have certain lifestyles and related future visions which reflect different tendencies of the contemporary social world. Kenya is a very interesting case study as the country has undergone considerable change and an increased integration into global structures in the last 20 years while it is still a developing country. Especially the differences in future orientations of East Africa’s dynamic economic center Nairobi and the old multicultural town Mombasa can reveal a variety of future references. Thus I will demonstrate by paradigmatic examples how future orientations of milieus in urban Kenya reflect specific social developments and how they can contribute to the theoretical interpretation of sociological future concepts. This way the paper even tries to (re)construct social theory from a specific perspective of the Global South.
RC09-177.2
STOLL, FLORIAN* (University of Bayreuth, Germany, stollflorian@gmail.com)
Social Milieus in the Middle-Class of Nairobi – Lifestyles, Attitudes and Future Visions Beyond Homogeneity

One of the key questions in the debate on (political) orientations of middle classes has been how these groups develop their attitudes. To answer this it helps to consider political positions in their heterogeneous sociocultural contexts among the different groups of the middle classes. As an example I will take a look at some social milieus, their lifestyles and their future visions in the middle-class of Nairobi – with a look at milieus in Mombasa as a contrast.

The reconstruction of milieus in the specific context of Kenya’s capital aims to demonstrate how a variety of factors influences the lifestyles of Nairobians and that there are heterogenous groups with different lifestyles in the middle income strata.

Future visions are an excellent indicator for lifestyles and current orientations of milieus to see how they integrate these visions into their daily practices. E.g in Nairobi developed over the last decade a milieu of Young Urban Professionals between 20 and 35 years who have a consume oriented lifestyle and who are bound to the city. They are usually not driven by religious or traditional values. Their orient is insecure and future visions differ a lot from groups who are strongly led by religious affiliations, (neo-)tribal values or by connections to the country side.

So this paper will provide a sketch of exemplary milieus, their life styles, their living conditions and their future visions. Another relevant question might be how different milieus look for solutions or demand different actions concerning the threat of radical terrorism which last attack shook Nairobi in September 2013. All aspects mentioned will contribute to draw a complex picture of the different social milieus in the Nairobi middle class and their divergent life styles.

Morality in Context: A Multilevel Analysis of the Relationship Between Religion, Governance and Values in Europe

The exact relationship between religiosity and moral values is understudied, and it is so far unclear what the process of secularisation means for the morality of Europeans. Attitudes to religiosity and the visibility of religion, must be seen in light of whether religion’s presence in the public sphere strengthens moral communities and identities, or merely highlight moral differences.

From Haidt’s (2012) moral foundations theory and Norris and Inglehart’s (2004) existential and cultural theory, we know that religion is associated with traditional and conservative values as well as low levels of political and economic development. One question is whether religion can act as a substitute for well-functioning secular authorities where these are absent, or if it simply has an additional effect on morality that is independent of the quality of governance. Another question is whether the relationship between religiosity and morality changes as the average citizen becomes less religious, and as religious diversity increases.

Using data from four waves of the European Values Study (EVS) 1981-2008, we analyze attitudes to personal autonomy and self interest in a multilevel model of 48 European countries. Results show that religiosity is most associated with moral values that concern personal and sexual autonomy, that individual religiosity is more associated with morality in countries with high levels of religiosity and that religious context is only negatively associated with self-interest in countries with low quality of governance.

Included But Still Not Equal? Board Interaction and Gender Segregation

Abstract
Included but still not equal? Board interaction and gender segregation

Norway was the first country in the world to pass legislation specifying gender representation on company boards of directors. The Norwegian Parliament passed a new regulation in December 2003 that required at least 40 per cent of each gender on company boards. Before the reform, law opponents claimed that the new women directors would not be able to, or allowed to, participate fully in board decision-making; instead their role would only be window dressing. Based on a questionnaire sent to all directors in public limited companies in 2009, the article studies this allegation.

Results show that women directors report less ability to influence board decision-making than men directors. Moreover, women to a lesser extent feel they are part of the inner circle on boards, where such phenomena are perceived to exist. These tendencies also hold when we control for a lot of other independent variables such as board role, ownership interest, number of directorships and occupation. Hence, the hequota regulated boards show tendencies of hierarchical gender re-segregation.

STRAZBERI, IRENE* (University of Foggia, irene.strazzeri@unifg.it)
Provincializing Postsecularism: Critical Reflections On New Western Civil Religion

This paper aims to denounce the provincialism of the European postsecularism, considering that an insufficient pluralism was often invoked by European Union in order to justify the cultural failure of her integration’s process. The Postsecular orientation risks, if applied without a adequate sociological and interdisciplinary cultural reflection, to become a new civil religion. In the first part I will bring up the consequences of this critical reflection on the actually relationship between State and religion in the specific context of Italian society, lacerated between a public secularism and a private Christianity. In the second part, I will try to apply to the European postsecularism, as discursive regime of the European identity, two critical hypothesis emerged from the Post-colonial Studies: the suggestion to “Provincialize Europe” and the critic to her “Cultural Hegemony”. Provincializing Postsecularism does not mean, of course, repudiate or abandon secularism, but thinking about how to renew it. In Italy the transition to post-secularism can not be seen as a simple historical transition, but also as a case of translation: translation of plural memories, religious tradition, desires of believers. In the third part, I appeal to the hermeneutic tradition of Paul Ricouer, trying to connect a new translation of postsecularism to a new phenomenology of the Italian believer, hoping that the recognition of the religious pluralism can contribute to the constitution of a lay European political community.

STRECKER, DAVID* (University of Jena, david.strecker@uni-jena.de)
How Market Economy Did Away with Violence: A Liberal Story and The Ugly Truth of Contemporary Slavery

The history of power and violence in modernity has traditionally been conceptualized within a nation state-framework and along notions of centralization: while socially dispersed in pre-modern times, power and violence had later be-
come increasingly concentrated in the political realm. In the course of functional differentiation, the core feature of modern societies, a state apparatus developed which organized positions of power and ultimately monopolized the legitimate use of violence. Violence, thereby, more or less disappeared from all other social spheres which turned into arenas of predominantly peaceful cooperation. With regard to this process, this paper was facilitated by the alleged ironic functions of market transactions: Contractual relations and trade are premised on trust and, thus, do not allow for manifest violence in the economic realm. Accordingly, it has been claimed that capitalism was the driving force behind the abolition of slavery. However, violent labour relations have not ceded to exist. In fact, contemporary slavery is a pervasive phenomenon subjecting millions of people to privatized violence. This papers aims at making sense of this situation by discussing the relative merits of the claim about capitalism’s civilizing effects on labour and relating it to contemporary slavery from the perspective of a world society shaped by economic globalization and the transformation of state authority.

**Feminist Theorizing of Intersectionality**

This paper arises from collective work within the 5-year Swedish Research Council project, ‘Feminist Theorizations of Intersectionality’, organised within the GExCel Collegium for Advanced Transdisciplinary Research Studies (Örebro-Karls-stad-Linköping Universities), with a specific focus on the equality architecture, and in part from the EU FP6 project QURING.

The whole larger project examines intersectionality as a central concept in contemporary gender studies, in relation and dialogue with the diverse, and sometimes conflictual, theoretical and political stances in feminist debates. The project is designed against the background of the rich and diverse feminist traditions for theorizing of intersectionality, but it is also informed by the tensions between these traditions.

This paper analyses and compares how equality architectures (Walby, Armstrong, Strid, 2012, *Social Politics* in Europe are restructured and challenged by the developments related to intersectionality and diversity, and the implications of the restructuring for theories of intersectionality. It links concepts of equality and intersectionality to policy frames and frameworks. It examines how the challenges of intersectionality are reflected and dealt with “on the ground”, in practical equality architectures on national and institutional level, e.g., in governments and universities, and the implications for gender equality and for the quality of the gender equality architecture. It takes the merger of equality institutions in European countries as case study and analyses the implications of the mergers for theory and practice.

Preliminary conclusions based on previous research (Walby, Armstrong, Strid, 2012, *Social Politics, QURING*) suggest that even though the quality of the architecture may have improved by the inclusion of multiple inequalities, there may be a reduction of quality in terms of resources. For theory, preliminary conclusions suggest that intersectionality as mutual shaping (Walby, Armstrong, Strid, 2012, *Sociology*) may be a more successful approach to theory and practice than the often-prioritised mutual constitution.

**The Transition from School to University: Pressure and Coping in Catalonia (Spain)**

In this paper I present results from a study about university transitions in Spain. Young people face uncertainty, precariousness and discourses that individualize structural problems currently in most Western societies. Spain suffers, moreover, from the severe effects of economic crisis and high unemployment, accompanied by severe cuts in the education system and an increase of university fees. Hence, the pressure on young people is growing further, and the contradiction between high skills and little or no power is especially pronounced. In the paper at hand I aim to identify main pressures, affecting young people in their transition from school to university, and their shown coping strategies.

In spring 2011 I conducted twelve focus groups with pupils in their last year of post-obligatory education in public, semi-public and private schools in an urban and a rural context in Catalonia and from September 2011 to May 2012 I accomplished 21 interviews with some of the participants, amplifying the sample with first-year students from underrepresented groups. I selected and analyzed several of the focus groups and interviews with the documentary method including elements of intersectional analysis.

The end of school is characterized by uncertainties and pressures, especially related to being admitted to the chosen studies, the study choice itself and fears not to be successful in university – both, academically and socially. Students experience these pressures differently and show varying strategies to handle them, whereat their personal characteristics, structural dimensions and representations interact. I identify types along the dimensions worried/non-worried and idealistic/pragmatic, relating those to gender and social class. The comparison with the follow-up interviews does not only reveal additional problems in the further transition to university and throughout the first year of studies, but enables considering the encountered difficulties from a different perspective, adding insights due to the methodological triangulation.

**Creating a Gift-Based Sphere of Exchange in Greece**

**Background:**

A large number of groups all over the world are creating alternative, utopian visions of a world governed by non-monetary economies based on bartering and gift-exchange. Both the perceived lack of solidarity in market economies as well as the daunting existential situations people are facing in terms of poverty provide the ground on which such visions of solidarity economies are exploding today.

**The TEM scheme in Volos:**

The case study that will be presented is located in the Greek city of Volos, facing the double crisis of the almost closure of its port (following the Syrian civil war; however, violent labour relations have not ceded to exist. In fact, contemporary slavery is a pervasive phenomenon subjecting millions of people to privatized violence. This papers aims at making sense of this situation by discussing the relative merits of the claim about capitalism’s civilizing effects on labour and relating it to contemporary slavery from the perspective of a world society shaped by economic globalization and the transformation of state authority.

**Contradictions and Challenges:**

However, the contradictions of this real world application of a solidarity economy are not to be neglected. Ethnographic accounts of gift-based economies suggest a high degree of social control and mutual distrust in gift-economies. National states as well as the mainstream market economy are fearing the potential bypassing of commercial law and tax obligations. Social groups that are able to produce economic value (think children, disabled, non-skilled) are at risk of being even more marginalised. Furthermore, it is likely that the TEM scheme only provides an alternative sphere of exchange rather than replacing the mainstream economical and societal model.

The case study that will be presented shows how citizens enact a social utopia and the contradictions and pitfalls they are facing while doing so.

**Feminist Theorizing of Intersectionality**

This paper arises from collective work within the 5-year Swedish Research Council project, “Feminist Theorizations of Intersectionality”, organised within the GExCel Collegium for Advanced Transdisciplinary Research Studies (Örebro-Karlsstad-Linköping Universities), with a specific focus on the equality architecture, and in part from the EU FP6 project QURING.

The whole larger project examines intersectionality as a central concept in contemporary gender studies, in relation and dialogue with the diverse, and sometimes conflictual, theoretical and political stances in feminist debates. The project is designed against the background of the rich and diverse feminist traditions for theorizing of intersectionality, but it is also informed by the tensions between these traditions.

This paper analyses and compares how equality architectures (Walby, Armstrong, Strid, 2012, *Social Politics* in Europe are restructured and challenged by the developments related to intersectionality and diversity, and the implications of the restructuring for theories of intersectionality. It links concepts of equality and intersectionality to policy frames and frameworks. It examines how the challenges of intersectionality are reflected and dealt with “on the ground”, in practical equality architectures on national and institutional level, e.g., in governments and universities, and the implications for gender equality and for the quality of the gender equality architecture. It takes the merger of equality institutions in European countries as case study and analyses the implications of the mergers for theory and practice.

Preliminary conclusions based on previous research (Walby, Armstrong, Strid, 2012, *Social Politics, QURING*) suggest that even though the quality of the architecture may have improved by the inclusion of multiple inequalities, there may be a reduction of quality in terms of resources. For theory, preliminary conclusions suggest that intersectionality as mutual shaping (Walby, Armstrong, Strid, 2012, *Sociology*) may be a more successful approach to theory and practice than the often-prioritised mutual constitution.

**Uses Of Social Theory In Comparative Religious Studies: Assessing Chidester’s Social Redescription Of Religion In South Africa**

In analysing “sociality” (the formation of inclusive or exclusionary collective identities), “materiality” (gendered bodily performances of rituals and sensory experiences and the desire for material objects) and “exchange” (communist or capitalist economic exchanges in rituals of gift-giving and expenditure) as three aspects of religion within local and global contexts, David Chidester has used the social theories of Durkheim, Bataille, WEB Du Bois, Weber, Marx-Adorno-Horkheimer, Benjamin and others. The purpose of this paper will be to assess what we have gained from Chidester’s use of such social categories to redescribe religion in South Africa within a global context, by relating *Wild Religion: Tracking the Sacred in South Africa* (2012) to his preceding oeuvre of twenty years, particularly Fakes: Religion and American Popular Culture (2012), and in line with the aim of this panel I will, in assessing Chidester’s social redescription of religion in South Africa within a global context, reflect on the legitimacy of using ethic vs-av-ems emic categories.

**Competing Narratives of Modernity and Muslim Middle Class in India**

The last decade has seen an increased interest in the “phenomenal rise of the Indian middle class”. With economic liberalization since the 1990s, the entering of multinationals into the Indian market and the simultaneous process of a rapidly growing transnational media and consumption culture “new economies of desire” have developed. Boundaries between ‘traditional India’ and the ‘modern West’ have been broken down and a new national self-image as a modern global player has emerged. Public Indian discourses typically make a correlation between the growing middle class and the national pride of modern India. While increasing consumer choices, and western connote values are important symbolic markers of middle class membership, the latter is linked to an expressive and confident af-

Emergence of the Interns’ Collective Actions

This paper examines the cultural warfare over national languages through investigating the rise and fall of Taiwanese-dialect cinema, which was identified as a counter-hegemonic project against the monolingual ideology in Taiwan. How did Taiwanese-dialect cinema manage to rise in the 1950s while the émigré regime KMT officially banned the use of Taiwanese-dialect? Even more curious, why did the dialect cinema suddenly die out ten years later? In this paper, I will argue the Taiwan-born filmmakers intentionally resisted KMT’s language policy through skilfully acquiring overseas capital to produce dialect films, which were highly popular among overseas Chinese in Southeast Asia. In the climate of Cold War, the KMT on one hand had to maintain legitimacy domestically, and fought against the Communist Party of China (CPC) to win over overseas Chinese on the other. The unexpected success of Taiwanese-dialect cinema was turned into KMT’s asset to secure overseas Chinese support, and hence the dialect filmmaking was tolerated. After discovering other ways to win over overseas Chinese, the KMT manipulated regulations on filmmaking and initiated a national language campaign to stigmatize the usage of Taiwanese dialect, all of which led to the demise of Taiwanese-dialect cinema.

The Representations of Disabled People in Elementary School Textbooks in Post-War Taiwan

Existing literature has primarily investigated the representations of class, gender, ethnicity, and sexuality in textbooks. However, few studies focus on the representation of disability in the education system. This paper uses content analysis to explore the frequencies, categories, naming and portrayal of disabled people in elementary school textbooks in Taiwan, from 1952 to 2003. From a disability studies’ viewpoint, we explore the ableism ideology in the textbooks. First, disabled people are underrepresented in the textbook. The disabled people represented in the textbooks were mostly people with physical disabilities; people with mental illnesses were ignored. Second, the naming of people with disabilities change from “the handicapped” (cán fèi) to “the disabled people”(zhàng ài zhì). Third, people with disabilities were usually viewed as “the other,” who needed to be helped or who inspired “normal” people. Fourth, disability was defined as an individual problem instead of a social problem. Finally, disabled people represented in textbooks were mostly voiceless. There was no discussion on the world view of disabled people or disability, and there were very few discussions addressing the diversity and multiculturalism of disabled people.

Emergence of the Interns’ Collective Actions

This paper looks at the protests at both collective and individual levels taken by student interns in Chongqing in the summer of 2013. Drawing on a 5-month participant observation of the protesters’ school life and their internships in the electronic manufacturer YD, this article examines the favourable factors, features and outcomes of the interns’ collective actions. The author first argues that the emergence of collective action by these student interns could be attributed to the occupational school had higher self-respect and expectations for the future than their counterparts of previous generations. Meanwhile, the student interns have encountered “coercive discipline” which aimed at eliminating students’ humanity during their internship. These two factors contributed to the injury of students’ self-esteem in their internship and their resentment towards the factory managers. Second, it is found that the students’ collective actions tended to take the form of violent fighting rather than strike due to their previous school experiences. The students usually resorted to violence such as fighting to resolve individual or collective disputes in their school. Third, the author suggests that school violence not only determined their action repertoire, but also help to nurture a sense of solidarity and brotherhood, which in turn provided a supporting network to students, particularly to those who lacked support from their family and teachers, flavouring their workplace resistance. Fourth, the student interns’ collective actions tend to be generally scattered and transient. Last but not least, most students who participated in the collective actions were later expelled from factories and schools, negatively affecting their prospects after the internships. This paradoxically consolidated their sense of solidarity, sowing the seeds of future resistance against capitalist exploitation.

The Commodification of Education and Labor in China

This article reveals the mechanism involved in the mutually complementary commodification of education and labor, and the results of this commodification. Emphasizing institutional factors, this article argues that the state plays a dominant role in the combination of the two types of commodification. It also scrutinizes the impact of this dual commodification on student workers—deskilling, alienation, fragmented social lives, and industrial injury—as well as their response.

Contesting Hegemonic Language through Films: A Study of the Vicissitudes of Taiwanese-Dialect Cinema

One of the questions that Norbert Elias tries to resolve in his work - either explicitly or implicitly - is the issue of the relationship between the individual and society. Elias critically assesses two resolutions to this issue that sociology offered in his time, namely the Weberian conception of individualism that postulates the human individual as the starting point of sociological thought, and the Durkheimian concept of holism, which considered society as a whole as the starting point.

The Commodification of Education and Labor in China

This article reveals the mechanism involved in the mutually complementary commodification of education and labor, and the results of this commodification. Emphasizing institutional factors, this article argues that the state plays a dominant role in the combination of the two types of commodification. It also scrutinizes the impact of this dual commodification on student workers—deskilling, alienation, fragmented social lives, and industrial injury—as well as their response.

Norbert Elias: Figuration As a Solution of Problem of Individuals

In 1937 P. A. Sorokin, together with R. K. Merton, published an essay entitled Social Time: A Methodological and Functional Analysis, in the American Journal of Sociology. They noted that most social scientists share in a silent assumption about the use of the astronomical concept of evenly flowing, quantitative time, and maintained that the astronomical concept of time has a number of shortcomings when applied in the social sphere, so they tried to promote the concept of “social time” as a methodological tool, to lead to a deeper understanding of social periodicity. Since then, the concept of social time has become settled in sociology and social sciences and been the subject of various reflections. This paper examines the problems associated with its use.
Mosque associations represent the social and organisational core of Muslim religious life in Germany. Their primary goal is both the practice of religion and the transfer of religious knowledge to its members, irrespective of their specific shape (e.g. organisation affiliation, ethnic composition, etc.). More recently, sociologists draw attention to the increasing multifunctionality of the mosque associations, which also offer leisure activities and courses with an orientation towards the German society, like e.g. German language courses. Previous studies and my own research suggest that this development is a result from both internal changes (demographic change, unemployment among members) and changing expectations of their environment, which are closely linked to the widespread integration debate.

However, a closer look on the expectations of the environment reveals a paradoxical situation. On the one hand Muslims are expected to open up for the German society by offering services which go beyond religious activities and support the socio-economic advancement of their members. On the other hand authorities and other urban actors are sceptical about additional services within the mosques as they fear that the infrastructure might increase segregation of the Muslim population and thereby endanger integration.

The present paper examines how mosque associations deal with the conflict between their own plans and the contradictory expectations of their urban environment. I have conducted case studies about mosque building conflicts in several cases across North-Rhine-Westphalia. The empirical findings are based on expert-interviews with representatives of Muslim communities and churches, neighbourhood associations, administrations and politicians. Furthermore, I have analysed newspapers and different documents (statutes, city council records, declarations and I) and participant observation in council meetings and neighbourhood assemblies. A case comparison shows, from the bottom-up-perspective, how different actor-constellations and local systems of relevance affect the development of the local Muslim organisations.

*The Complicated Relationship Between Generalized Trust and Democracy*

R. Putnam (2001) insists that social capital is made up out of generalized trust, reciprocal norms, and social activities. Social capital, he points out, has a strong impact on democracy. An analysis of the 2005 World Values Survey Data, however, does not show us such a relationship between generalized trust and democracy. This fact seems to imply that Putnam's thesis can be applied to only advanced democracies. In this presentation, I will discuss the reason such a phenomenon emerges against the prediction of Putnam's social capital theory, and show that the social capital theory does not need to be rejected, but needs to be complemented by new theoretical assumptions. In order to explain the weak correlation between generalized trust and democracy, I distinguish between trust based on democratic values and trust based on authoritarian values and demonstrate a simple mathematical model assuming individual's rational choice and different network effects of the two types of generalized trust. This model enables us to explain a non-linear relationship between generalized trust and democracy, as it allows us to see that generalized trust has both positive and negative influences on democratic values because it intermediates with educational achievement. Thus, we can say that Putnam focused on only the positive influence of generalized trust on democracy in advanced democratic societies, and ignored the negative influence of generalized trust on developing democracies. In order to test this theoretical explanation of the relationship between generalized trust and democracy, I analyze the 2005 SSM (Social Stratification and Social Mobility Survey in Japan) Data and 2005 World Values Survey Data. An analysis using multilevel SEM shows that predictions of non-linear correlation between generalized trust and democracy at both individual and nation levels are accurate.

“Lifestyle Migration” and Quality of Life in Japan

In Japan, the number of people who moving to rural areas (or the countryside) from urban areas (or metropolitan area) is currently increasing. In this presentation, I will examine this phenomenon by using the idea of “lifestyle migration”, and then discuss the relationship between the decision to migrate and enhanced quality of life.

In foreign countries, “lifestyle migration” means moving to elsewhere in search for a better way of life (Benson & O'Reilly 2009). This idea is associated with a new form of international migration, unlike the case of internal migration in Japan. However, “lifestyle migration” occurs as result of self-reflection among these migrants, and consequently, this idea can be adopted to describe Japanese who move to rural areas from urban areas in Japan.

Searching for a better way of life by moving to the countryside relates to quality of life. For example, in my research at Chichibu area in Saitama Prefecture, I found that some migrants engaged in farming, but they often visited the nearby urban area where they engaged in consumption activities. Meanwhile, some people chose to keep working in Tokyo. That is, a sense of “the better way of life” differs according to each migrant. However, moving to rural areas had a positive impact on the health and mindset of migrants; in the countryside, they could achieve balance between work and leisure. Notably, they do not move for the sake of work or leisure alone, but aim to control both. In my presentation, I will attempt to consider the relationship between “lifestyle migration” and quality of life through a case study of migrants who moved to the countryside in Japan.

*Changes in Urban Brazilian Family Arrangements*

Brazil has experienced great and complex changes with contradictory aspects. The country has experienced a modernization based on a development model with an exclusive focus on the cities.

Changes in the family relations were also notorious. The family model characteristic of the 1950 decade lost importance, substituted by a new model, whose members are not only defined by sex and age criteria. This change was not, however, linear. It summed up the coexistence of traditional and modern values with nowadays-individual values. Some of these changes can be seen in the declining marriage and fertility rates and increases in co-habitation and non-marital unions. Parallel to this, there was an increase in the number of divorces and a decrease in the only male breadwinner families. There was also an increase in the number of families with a female head, not restricted to low income groups. It is important to mention the impact of the new female role in the society in these family changes. Increase in the women's schooling, decrease in fertility rates and the female participation in the labor market influenced in a significant way the family relations.

The main objective of this study is to analyze urban families in the last 50 years, using data from the Brazilian Demographic Census. The analysis consider different dimensions: the impact of changes in gender relations with respect to familiar responsibility, effects of family income, status of marriage/union, the age and schooling of the head of the family and regional inequalities.

In spite of the changes in the family arrangements, it is worth mentioning the maintenance of the family ties in the Brazilian society. These changes in the Brazilian families are though more complex than the changes in the developed countries due to the strength of patriarchal values that might be a deep-seated characteristic of the Brazilian culture.

*Consequences of Delayed Evacuation in Iitate-Mura Village*

Residents of Iitate-mura in Fukushima prefecture, located within 30 to 50 km radius of TEPCO's Fukushima Daichi nuclear power plant, got their first instruction to evacuate 42 days after the earthquake, and they began to evacuate in mid May. In the evening of March 15, just 4 days after the accident, the radiation level measured in front of the town hall of the village showed 44.7μSv/h. So the majority of villagers stayed in the village where the radiation was level was high, for over 2 months. Why was their evacuation delayed? There are two reasons behind this delay. First, although the Japanese government enlarged the evacuation zone from 10 km radius to 30 km radius shortly after the accident, most of Iitate village is outside the 30km radius. Second, village authorities set priority on protecting and sustaining the major industries and jobs in the village. Whether this decision was appropriate should be put to review. Now the villagers are in an even more difficult situation, being unable to draw a plan to rebuild their lives while the government is taking decision of evacuation and re-population. In my presentation, I would like to focus on Iitate-mura, this paper addresses the issues regarding the political measures to cope with the nuclear disaster, with comparison with municipalities in the neighboring region.
The Role of Family Caregivers and Their Working Lives: Convergences and Divergences Between France and Japan

This paper presents the method and results of a comparative research on family caregivers and their professional trajectories in France (Ile de France) and Japan (Osaka).

The aim of the research is to chart two kinds of trajectories in a person’s life: professional and of caregiving, and to examine their interdependence. In the current context of the proliferation of life expectancy, a person can provide care several times in different periods of life, or care for more than one person in parallel at the same time. The care provided may be for different causes of frailty. We should therefore look into the temporality and the global view of the caregiver’s life without limiting the study to a certain type of frailty.

We rely upon a sequential analysis of data on caregiver’s trajectories. We also collected on care networks developed around the caregiver by individuals participating in the care, including care for the caregiver. The typologies of professional trajectories are analyzed in relation with variables such as socio-demographic characteristics of the caregiver and care-receiver, types of care networks, etc.

We try to study the different configurations that come out for Ile de France and for Osaka, while situating them in the context of the public welfare and labor markets of each country and region. We will be interested to know, for instance, what traits of caregivers come out, and on what type of conception of care and work related logic they are based.

The Islamization of Leisure in Indonesia (A Comparative Analysis of Aceh and West Java)

In this culturally unequal world, Islam is perceived as a minority civilization which is acted upon by the dominant “western” civilization. The influence is allegedly reflected in various spheres such as leisure in which a “division of labor” between leisure and work come forth. The recent revitalization of Islam portrays a more assertive Islam in society with the development of Islamic leisure in addition to Islamic economy. The case of Indonesia indicates that there is a process of Islamization of leisure with the application of Islamic values such as the prohibition of “haram” or non-“halal” food and liquor, “khilwat” (close proximity between men and women), gambling as well as the obligation to comply with Islamic dress code. The implementation of this process can be seen as a colonization of life-world along with economy and state in which society emerges as a new arena and theater. A comparative analysis between Aceh (a Shariah province) and West Java (a non-Shariah province) will shed lights on various social movements that are alleged to overlap with a turning point in social research.

We try to study the different configurations that come out for Ile de France and for Osaka, while situating them in the context of the public welfare and labor markets of each country and region. We will be interested to know, for instance, what traits of caregivers come out, and on what type of conception of care and work related logic they are based.

Housing Estates As Experimental Fields of Social Research

In this presentation, I discuss researchers’ relationships with the research object and its transformation in empirical sociology by examining “danchi” (housing estates) studies conducted by Japanese sociologists.

The Japanese housing policy system was quickly established in the early 1950s, and the reinforced concrete housing complexes stimulated journalistic interest. Most influential researchers in postwar Japanese sociology began studying these housing estates during the mid-1950s and 1960s. One reason was that social surveys involving random distribution of standardized questionnaires to individual respondents were compatible with the new housing form. Housing estates became experimental fields of social policy and social research.

Urban sociologists attempted to comprehensively grasp the lifestyles and social consciousness of housing estate residents. Social psychologists introduced sociometry to describe social relations evident in these housing estates. Researchers often referred to the seminal text “Organization Man” by William Whyte (1956), with a Japanese translation published in 1959. According to Whyte, white-collar residents in the newly developed suburban residential areas formed active neighbor relationships. Kokichi Masuda, a family sociologist, emphasized the contrast of the rarity of neighbor relationships in Japanese housing estates with what was the norm in the United States.

The image of housing estates as pictured by social researchers transformed around 1960. Studies of residents’ associations showed that housing estate communities were being formed through cooperative solutions found for residents’ common problems. Whether or not a housing estate was formed as a “community” depended on how the residents related to the space. This change was also reflected in the relationships between the researchers and the respondents in that the distance between them when using the standardized attitude and opinion survey was lost. The change in the image of housing estates in the 1960s can be said to overlap with a turning point in social research.

Between the War and Consolidation of Communist Power: The Forgotten Social Research in Poland in the Second Half of the 1940s

Opinion commonly held is that empirical social research in Communist Europe resurfaced only as late as in the second half of the 1950s, during the post-Stalinism ‘thaw’. However, in some countries like Poland, Czechoslovakia and Hungary, social research was possible immediately following the WWII. It did not last long though. Consolidation of Communist power delivered blow to this research in the late 1940s.

In this paper I discuss how in the years 1946 – ca. 1950 sociologists in Poland took an advantage of opportunity to study the society in which they lived. Polish society has just came out from the war and was about to enter a process of political ‘reconstruction’ under the leadership of the Soviet-style Communist party. Following the war sociologists immediately started to investigate social and psychological effects of the war, post-war migrations, new communities in the former German territories, ethnic relations (especially Polish-Jewish), and social mobility as a result of the war and the political changes. Fieldwork and questionnaire were methods of these studies. However, politically sensitive issues, e.g. mechanisms of political power and public opinion were banned by the authorities as topics of sociological inquiry. Later in the 20th century the post-war social research was almost forgotten and only now is being rediscovered by social historians.

The Power of Women’s Representation in Local Government in Combating Women’s Underrepresentation at Local Politics

The importance of local politics is on the rise particularly concerning the discussions of gender inequality in and relations with power, democracy, economy, social life and the intersections between aging, health and low-income, self-built housing we analyze detailed data on reported problems with the dwellings and housing we analyze detailed data on reported problems with the dwellings and housing we analyze detailed data on reported problems with the dwellings and...
the last two decades, the academic interests about the relation of local politics and gender have been on rise and policy-makers who are aware of this fact have been paying serious efforts to bring local actors to the front to increase women’s political involvement. Since the 2000s, Turkish government has charged the various branches of politics, including the municipalities and mayors in the scope of this research, in enhancing women’s participation particularly in local politics. However, recent studies and statistics reveal that neither the number of women at local level politics have been increased either these responsibilities have been fully acknowledged by the local actors in Turkey. It is assumed that, as women representatives, female mayors would contribute to increase women’s political participation in local politics and be more assertive to fulfill the related responsibilities to support women’s involvement into local political relations. Thus, in the case of 2009 local elections in Turkey, this study aims to find out to what extent female mayors can contribute in enhancing women’s political involvement at local level. In this research, this will try to analyze the related discourse and activities of female mayors who were selected in 2009 local elections in Turkey by in-depth interviews.

The Controversy: Family Separation and the Immigration Law in the U.S.a

This study examines whether the Courts in the United States are recognizing the provisions of the UN Convention on the Rights of the Child as an international customary law even though it is not ratified by the U.S.A. Drawing on multidisciplinary, including the work of scholars and legal professionals the article explores the extent of parental rights and the family separation through immigration procedures and human rights approaches. The article introduces the concept of the child’s best interest, how courts determine this and the extent of parental involvement. The article also presents a comparative study focusing on the U.S., Canada, Australia, New Zealand and the European Union and the UK. It concludes with the need for a more holistic approach taking into account the child’s best interest.

Care Migration in Asia: A Comparative Study

As some countries in Asia develop economically and experience major demographic challenges such as persistent below-replacement fertility, the issue of immigration and care provisions emerges. It is particularly important in the Asian context where people have to rely on the market in the absence of effective welfare state. This Asian situation is called “liberal familialism.” In this paper, we will examine the extent to which the Courts in the United States are recognizing the provisions of the UN Convention on the Rights of the Child as an international customary law even though it is not ratified by the U.S.A. Drawing on multidisciplinary, including the work of scholars and legal professionals, this article explores the extent of parental rights and the family separation through immigration procedures and human rights approaches. The article introduces the concept of the child’s best interest, how courts determine this and the extent of parental involvement. The article also presents a comparative study focusing on the U.S., Canada, Australia, New Zealand and the European Union and the UK. It concludes with the need for a more holistic approach taking into account the child’s best interest.

Lateral Networks of Homeowner Associations and Civil Society Building in Urban China

Civil society organizations are crucial for the development of civil society, because these organizations teach citizens democratic practices on the one hand, and constrain the power of the state on the other. Recently, lateral networks of homeowner associations are being formed in many Chinese cities. While not being recognized by the authoritarian state or even faced with potential political risks, these networks are playing an ever more important role in facilitating homeowners’ collective actions to defend their private property rights. Existing literature tends to understand homeowners’ collective action as a reactive response to counteract the powerful real estate developers and their management agencies in a very mature housing market. But based on interviews, participant observations, and online discussions of the lateral networks of homeowner associations in Beijing, Shanghai, and Guangzhou, this study argues that these networks are proactively adopted as important infrastructures for the development of civil society in urban China. Driven by the ambitions of promoting the development of civic organizations in China, the activists use homeowner associations as the most practical way to make such attempts. They not only deal with immediate material interests concerning housing and neighborhood management, but also strive for the participation of multi-ethnic associations on a regular basis and for better quality of life. The article presents a comparative study between Beijing and Shanghai and explores the potential migrant nurses from Delhi. This study examines the extent of potential nurse migration from India and their causes, types and nature. Methods: Apart from empirical study, the research also relies on secondary sources. The study is based on the response of 48 potential migrant nurses from Delhi.

SUN, XIAOYI* (City University of Hong Kong, xiaoyi.shirley@gmail.com)

Pro-Growth Coalitions and Homeowner Activism – a Comparative Study in Shanghai and Taipei

Middle-class homeowners, whom one would expect to be the gainers of China’s urbanization, have formed one of the largest social groups as other social groups such as the Chinese government and real estate developers. The saliency of collectives, such as petition, litigation, sit-in demonstrations – to uphold their private property rights. Existing literature tends to understand homeowners’ discontent as a result of the immature housing market, the deceitful real estate developers and their management agencies, and the non-independent legal system. While focusing on immediate causes, existing studies neglect more important structural factors that contribute to homeowner activism. By adopting a comparative study – based on documents and interviews – in Shanghai and Taipei, this study argues that different levels of state intervention in housing-related disputes lead to different levels of homeowners’ activism. In Shanghai, the local state actively involves land-owners and play a dominant role in planning, relocating, and leasing the land to the developers. They build close relationships with the developers. When housing disputes emerge, the local states are motivated to intervene and ally with the developers considering the fact that they have substantial interests involved. This explains why more often than not homeowner activism in Shanghai directly targets the government and proceeds in a non-institutional manner. But in Taipei, the local states are mere regulators in land development processes. Individual land-owners initiate the redevelopment projects and negotiate with the developers. Housing disputes in Taipei are usually dealt with through negotiation or courts. This study offers a new perspective to understand increasing homeowner activism in Chinese cities. It also has profound implications for state-society interactions and urban governance in contemporary China.

Pro-Growth Coalitions and Homeowner Activism – a Comparative Study in Shanghai and Taipei

Middle-class homeowners, whom one would expect to be the gainers of China’s urbanization, have formed one of the largest social groups as other social groups such as the Chinese government and real estate developers. The saliency of collectives, such as petition, litigation, sit-in demonstrations – to uphold their private property rights. Existing literature tends to understand homeowners’ discontent as a result of the immature housing market, the deceitful real estate developers and their management agencies, and the non-independent legal system. While focusing on immediate causes, existing studies neglect more important structural factors that contribute to homeowner activism. By adopting a comparative study – based on documents and interviews – in Shanghai and Taipei, this study argues that different levels of state intervention in housing-related disputes lead to different levels of homeowners’ activism. In Shanghai, the local state actively involves land-owners and play a dominant role in planning, relocating, and leasing the land to the developers. They build close relationships with the developers. When housing disputes emerge, the local states are motivated to intervene and ally with the developers considering the fact that they have substantial interests involved. This explains why more often than not homeowner activism in Shanghai directly targets the government and proceeds in a non-institutional manner. But in Taipei, the local states are mere regulators in land development processes. Individual land-owners initiate the redevelopment projects and negotiate with the developers. Housing disputes in Taipei are usually dealt with through negotiation or courts. This study offers a new perspective to understand increasing homeowner activism in Chinese cities. It also has profound implications for state-society interactions and urban governance in contemporary China.

This paper examines the extent of potential nurse migration from India and their causes, types and nature. Methods: Apart from empirical study, the research also relies on secondary sources. The study is based on the response of 48 potential migrant nurses from Delhi.

Discussion: India has been and will continue to be an important source country of nurses for the developed countries in the light of emerging shortfall of nurses in the major destination countries in the future. Under the current scenario, it may be presumed an annual out-flow of 8-10 thousand nurses from India. However, in spite of the fact that the country has a stock of 1.6 million registered nurses, there is an additional requirement of 10 lakh nurses to fulfill nurse-population ratio of 1,500. The current nurse-population ratio stand at 1:1100 compared to the developed country average of 1:150. Therefore, India and the other developing countries need to double their efforts of producing nurses to meet both domestic and international demand by creating a vast and sustainable infrastructure for the production and training of nurses.

Policy suggestions: First, improving the availability of data on migratory flows of nurses from the country. Second, a detailed analysis of alternatives available for procuring and filling up the vacant posts in the shortage areas on the one hand, and identifying and targeting the surplus areas for international recruitment of nurses on the other. Third, twinning programmes between organizations of both source and destination countries to undertake programmes of research, staff exchange, staff training and support, and flow of resources to source countries. Four, preferential treatment for migrant nurses for immigration in the destination...
country and facilitate return as per the willingness of migrant nurses, and finally, signing of nurse-mobility partnership agreements with the important destination countries, such as, UK, USA, Middle Eastern countries, Ireland and Australia.

**SUNA, BIRENDRA** (Indian Council Social Science Research, sonya.birendra@gmail.com)

**Public-Private Partnerships and Micro Health Insurance Schemes in India: A Sociological Perspective**

This paper is an attempt to look at the socio-economic features, and health seeking behaviours of the lower income group and their involvement in the functioning of the micro health insurance schemes. The model micro health insurance as a mechanism of social capital is examined its strength to create a good “health for all”. In other words, it focuses on the importance of public (government) intervention to create a feasible health care systems with the partnership of private both for-profit and non-for-profit sector, so that, the micro health insurance schemes profitable for the vulnerable sections of society. More precisely, practicable schemes for better health can be created by the intensive involvement of public and private, by which willingness-to-pay for health can be possible by the lower income groups.

Despite increasing acknowledgement that social capital is an important determinant of health and overall well-being, empirical evidence regarding the direction and strength of public-private linkages in the developing world is limited and inconclusive. An increased contribution from the community has been identified as an important financing option. To date, however, there has been little systematic documentation or analysis of experiences with different health financing methods.

Currently, the health sector is unable to meet the growing needs of the population and is severely financially constrained. The study estimates the impact of the program on trust and cooperation in rural communities. Rashtriya Swasthyo Bima Yojana (National Health Insurance Programme) is the government initiative to provide quality health facility to the lower income groups. It is important to emphasize that the study does not separate the direction of causality between trust and cooperation. The analysis treats both aspects of social capital equally in the impact study public and private inter-linkages for better health facilities of the Indian society.

**Ordinary Sociologists**

Until the 1990s the sociology department of a public university in Indonesia strengthened their college teaching staff by recruiting college seniors with good academic achievements as part-time teaching assistants. After obtaining their bachelor's degrees in sociology some of these sociologists would continue to teach on a part-time basis while waiting for an opportunity to be recruited as a full-time faculty member. For most of them, however, the wait was in vain, among other things because there were very few vacancies available, and also because the eligibility standards for becoming a full-time faculty members were gradually raised. After teaching part-time for a number of years – while, in some cases, working towards a master's degree – most of them finally sought and obtained full-time employment at other public or private higher education institutions, where they continue to teach sociology.

The practice of recruiting college students as teaching assistants was eventually discontinued, Factors such as centralization and bureaucratization within the university, the tightening of recruitment criteria for teaching staff at colleges in compliance with national standards, and the application of efficiency criteria forced the department to abandon its policy.

This paper, a case study of sociology teaching, describes the biographies of a selected sample of former teaching assistants in sociology – their social backgrounds, present social statuses, academic performances and careers. The life history data are based on depth interviews with informants who were part-time teaching assistants recruited in the 1990s, are still working as academics at institutions of higher education outside their alma mater, and are still teaching sociology. Data for the study are also based on interviews with on-campus resource persons, and on the examination of relevant documents.

**The Indonesian System of Higher Education, Global Challenges and Domestic Contestation**

The Indonesian System of Higher Education, Globalization Challenges, and Domestic Contestation

---

**Author:** Kamanto Sunarto (University of Indonesia)

In the wake of the 1998 reform movement in Indonesia which put an end to 32 years of authoritarian rule, the subsequent governments introduced a number of higher education reforms in response to globalization challenges. As part of these reforms the new governments ratified international and regional agreements, and introduced new acts, regulations and policies.

A significant break with the past was the policy of allowing public higher education institutions to become legal entities with more autonomy. Another development was the increased emphasis on quality assurance: the accreditation of study programs and higher education institutions became mandatory. Unaccredited study programs were no longer allowed to issue higher education diplomas and certificates, the authority to accredit study programs will gradually be handed over by the government to independent accreditation agencies established by related civil society organizations while the government will only accredit higher education institutions.

As part of its concern with quality the government issued national higher education standards to which all higher education institutions and study program will eventually be required to comply. A national qualification framework has been decreed, which will become the basis for the formulation of learning outcomes of all study programs.

These developments take place in the context of dynamic social and political reforms. While in the past government policies tended to proceed unopposed, government policies in the reform era became more prone to challenges from society. This presentation will discuss the various contestations between the State and Society concerning the adoption of global trends in higher education, and the outcome of these processes.

**In Times of Civil War: On Being a Schizophrenic (public) Sociologist**

This contribution will address some of the dilemmas that sociologists in the Global South face – how does one choose between the demands of the public moment, the university as a space of work and struggle, and our duty to our “disciplines”? How do we engage in practically extending the democracy and equality that we routinely learn and teach about, and yet seize the time and space required for reflection and produce research that is valued to the extent that it seems to be disinterested? And how do those of us who live and work in the global academic periphery validate our sociology in a world where the standards are often set by scholars abroad?

**Undue Process and the Paradox of Increasing Juridification**

Since the publication of Malcolm Feeley’s 1979 classic, *The Process is the Punishment*, the idea that improved adjudicative processes necessarily lead to an increase in substantive justice has been questioned. In more recent work, Nasser Hussain, The Jurisprudence of Emergency (2003) has argued that colonial legality in particular, relied on rules and laws as a form of rule. Post colonial legal systems, like that of India, are notorious for the costs they impose on those participating in the system, primarily but not only litigants, in terms of fees, delays, the alien nature of legal norms, or the unwillingness of the executive to implement court orders which go against them. This burden falls disproportionately on the poor.

Paradoxically, however, there is an increasing juridification of social and political issues, with a range of disadvantaged groups resorting to the courts, asking for some right or protesting against some violation. This paper explores this paradox of increasing juridification coupled with the ongoing and perhaps increasing procedural injustice in the name of due process. Scholars of Indian law have argued that litigation is often conducted to aggravate rather than resolve issues, a transfer of a dispute to another sphere. But in the case of indigenous groups and others attempting to access the courts, knowing they will be harassed themselves, what ideas and expectations are at play? What does justice mean in this context, and is that even the objective?
less couples, indicating that the meaning of parenthood and the norm of child-
birth have changed in the post-Confucian agrarian era. The burden of child care
and education has exacerbated couples’ motivations to become parents, partic-
ularly among dual-income families. However, childless Koreans may not be a ho-
genous group. Some couples remain involuntarily childless due to infertility, and
others simply delay having children. In this study, we categorized childless
married Koreans into three groups, voluntary, involuntary, and delayed, and ex-
amined the factors associated with each group.

Data came from 553 childless married Koreans who had been married at least for three years using quota sampling in metropolitan Seoul. We conducted
multinomial logistic regression to identify the individual, attitudinal, and marital factors associated with participants’ membership in each of the three childless
groups using involuntary childlessness as a reference group. Both the voluntary
and delayed groups were more likely to perceive advantages of childlessness, to
put less importance on religion, and to have less intention to adopt a child. How-
ever, other factors were differently related to the voluntary and the delayed groups.
Specifically, attitudinal characteristics were significant among the voluntary group
while marital characteristics were significant among the delayed group. The vol-
untary group was more likely to have negative attitudes toward parenthood and
to report a lower ideal number of children compared to the involuntary group.
The delayed group was more likely to be dual-incomers and to report a shorter
length of marriage compared to the involuntary group. Our findings suggest that
childless couples may not be a homogeneous group in Korea. It is worth noting that
there are differences in attitudes towards parenthood and marital characteristics
depending upon the childless group.

US Retirement Migration to the Philippines: Reasons and
Explanations for Later-Life Migration

Studies of retirement migration in the United States often focus at the national
level, and there is comparatively little information about the retirees who cross
international borders in their search for new homes. Retirement migration flows are unusual in that the late-life migrants select destinations in less-developed
countries as compared to the general pattern of migration from poor to rich coun-
tries in search of jobs, higher incomes and a better standard of life. This study has examined the reasons for retirement migration from the United States (US) to The Philippines using data collected from different locations in The Philippines. A non-random simple sample of 141 US retirees was surveyed. The findings identify four major reasons for migrating to Mexico: financial circumstances, the natu-
ral environment, a sense of community and friendship, and finding life/sexual partners. While these relocations contradict much taken-for-granted and popu-
lar knowledge about migration patterns around the world, they have important
implications for the ways of life, social relationships and welfare of the migrants.
More in-depth multidisciplinary studies are needed to increase understanding of
this evolving phenomenon.

Becoming Father, Doing Fathering: How Gay Men’s Practising of Relatedness, Intimacy and Care Disrupts Normative Constructions of Families

Fatherhood is frequently conflated with parenthood for any man who begets
children. Fathers are typically assumed to be involved parents as ‘natural’ out-
comes of biogenetic relationships with children. Drawing from the findings of a qualitative study examining the ways in which the gay men conceived and
ennuished between parents and children and co-residence as benchmarks operating to reg-
ulate families, the men’s stories open (discursive) spaces for reconceptualising
possibilities for queer fathering, mothering and parenting beyond heteronor-
mative understandings of ‘proper’ families. Within a context of escalating family
transformations in an increasingly complex society, thinking and talking about
new forms of practising relatedness, intimacy and care in ways that are expressive
and generative will open up rather than shut down possibilities for all families.

A Longitudinal Perspective on Quality of Life in Times of Crisis: Switzerland from the 1990s to Nowadays

During the past twenty years Switzerland experienced three major recessions and
periods of economic slowdown: the prolonged and deep economic stagna-
tion of 1992-95 – the country’s most pronounced recession of the post-war pe-
riod – and the comparatively mild two recessions of 2002-03 and in the wake of
the global financial economic crisis of 2008-09. During these periods of economic
crisis, unemployment and poverty increased, particularly during the crisis of the
1990s, when unemployment soared from its previously extremely low level. The
proposed paper aims to explore the consequences of recessions and economic
downturns on various dimensions of quality of life by comparing the three histor-
ical periods of economic stagnation.

In order to analyse how quality of life has evolved since the early 1990s, we use
tion and inequality, as well as of subjective well-being will be calculated in order
to measure and compare quality of life during different recession periods. Our
empirical analysis will explore the impact of economic crises for different popula-
tion groups as well as for various quality of life domains (objective and subjective
indicators). First results suggest negative crisis impacts on quality of life and sub-
jective well-being particularly for specific vulnerable population groups.

Being Dad or Mum? about Traditional Parental Roles from the
Perspective of Polish and Swedish Fathers

Parenthood must be concerned as one of areas within which reproduction of
gendered practices occurs. In my paper I will try to show how Polish and Swedish
fathers understand traditional parental roles, how they perceive biological and
cultural differences between motherhood and fatherhood, and whether they think
about gender equality within the household. My paper is based on 52 in-depth
interviews conducted with Polish and Swedish fathers in 2012 and at the begin-
ing of 2013. It is a part of broader research project on fatherhood in Poland and
Sweden. Interviews concerned men’s experience of parenting and are analysed in
the institutional and social contexts of both societies. In my opinion these con-
texts are extremely important here. Stereotypical roles of fathers and mothers are
strongly connected to cultural patterns of masculinity and femininity. Besides
that Polish and Swedish societies provide, through family policies, completely
different conditions for having children and differently approach the problem of
work-home balance. Unsurprisingly, these have an impact on how men define
father’s and mother’s roles. Among Polish fathers there is a tendency to look at
it with more conservative and traditional approach. They are convinced that it is
impossible to cross biological differences between motherhood and fatherhood
and that father is rather regarded as mother’s helper or additional carer. Whereas
Swedish fathers are more eager to question imposed by society patterns of
behaviour. Sometimes they really struggle with stereotypical gender roles to
be more involved in family sphere and try to redefine traditional fatherhood. Ob-
viously these attitudes have an impact on everyday fathering and the way family
functions. Father’s perspective is important here, since without their bigger
involvement in family life, gender equality cannot be achieved in other areas of
social life.

Prosper Or Deteriorate : Modern Millennium’s Path To Happiness

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The objective of this academic paper is to present students' perspective on methods of attaining happiness. After realizing that this age group is leaders and possesses the potential to lead, it is helpful to bring their perspective and expand it into a philosophical study to analyze and adapt to the livelihood of the general society as a whole.

The results revealed 4 methods of attaining happiness in the perspective of students. They include 1) Living under moral and ethical conduct and live with the intent of eradicating defilements 2) Setting a constructive intelligence and mindset; human beings have the ability to comprehend logic and causes of phenomena as well as resolve issues 3) Human beings should place importance on spiritual and interpersonal relation aspects over materialistic aspects 4) Body of knowledge passed on or accumulated by ancestors or knowledgeable people

If ultimate happiness and collective social happiness are the goals of human beings, it is reasonable to follow the path that leads to a good management of life and society by understanding the principles or the valuable rules and apply them in all levels and forms of society.

The Rise of Community in Asian Care Provision

Theories of civil society sometimes assume or praise a civil society as being independent from the state, in which citizens, by communicating their opinions freely, cultivate their power to claim oppositions and/or propose alternatives to governments. However, in Asian countries, governments themselves have intervened in cultivating civil societies in the modernization processes. For example, in Japan, the Meiji, Taisho and Showa governments tried to bring up a civil society in order to catch up with western modern nation-states (Garon 1998). The neighborhood association, chônaikai, originates in such a government’s effort to organize a cooperative civil society. Recently, even in many countries including advanced welfare states in the west, the governments have become more relied on the voluntary/community sector to deliver care to the elderly and/or children. Partly because of the financial constraints combined with changes of demographic structures, the role of volunteer/community becomes more important to sustain lives of vulnerable people. The introduction of the social model of care (as opposed to the medical model) seems to have legitimized this trend.

This paper tries to grasp the weight of voluntary/community sector in care diamonds in Asian societies. It outlines common features as well as differences among Asian societies in the structures of community care provision, and it also investigates how governments promote community care through regulations and incentives. Through these inquiries, it tries to explore whether and to what extent the community sectors contribute to de-familiarization of care in Asian societies.

Why Did the “Blue-Green Coalition” Develop in the Case of Minamata? an Analysis of the Struggles of the Union and Social Movements Against Chisso

From the late 1960s to the mid-1970s, there was an upsurge of social movements against industrial pollution. Victims of pollution diseases as well as local residents organized anti-pollution movements and opposed the construction of pollution-prone plants in their neighborhoods. Reactions of labor unions to these social movements were indifferent or even hostile. Some enterprise unions supported activities of residents against pollution in principle but withdrew their support when the latter’s actions, such as filing lawsuits against polluters, came in direct conflict with the interests of unions and their firms. Other unions at firms that caused industrial pollution stood on the management side and took confrontational attitudes toward local resident social movements.

The earlier case of the present article is the case of this general tendency (the absence of “blue-green coalitions”), by focusing on the relationship between the enterprise union of Chisso (the SNU) and social movements of pollution victims and their supporters. When it became clear in 1968 that organic mercury discharges from Chisso’s Minamata plant caused Minamata disease, the SNU became actively supportive. When it became clear in 1968 that organic mercury discharges from Chisso’s Minamata plant caused Minamata disease, the SNU became actively supportive. When it became clear in 1968 that organic mercury discharges from Chisso’s Minamata plant caused Minamata disease, the SNU became actively supportive.

In this presentation, we will reconsider the English translation possibility of “Life, Work, and the Loss of Meaning in Death” by Shun Inoue. What is the “post-war(Sen-go) Japanese society” for Mr. Inoue? We would like to discuss the description “can be understood in the cognitive level” or “feeling”. Because, the question to the “Meaning in Death”, was written while clearly reflected the feeling and experience of Mr.Inoue himself to the “post-war(Sen-go) Japanese society”. In another word, “post-war Japanese society” could show us many possibilities.

In addition, as for the “normative level”, developing interdisciplinarity sociology between literature, Mr. Inoue is the only one scholar who manage the subject of analysis sociological knowledge itself “feed it, because can contribute to the “accumulation of results beyond the generation of sociological research”. Sociology of knowledge, Inoue advocates, social consciousness theory, or, cultural sociology we do not have to limit the domain of Mr. Inoue’s theory. We believe in the wake of this presentation, we would like to appeal widely, the contribution of Inoue for the world aging society.

Do Older Women without Work Experience Participate Less? Life Course Analysis Using the Jages Data

**Background**
Social participation, such as being a part of community groups, is key to healthy, active, and successful aging in older age may be defined by cumulative experience throughout one’s life course, many older Japanese women today have never worked outside the home. As work experience can help expand social interaction and social networks, it is possible that women who have never worked do not participate in social groups as actively as those who have.

**Methods**
The Japan Gerontological Evaluation Study (JAGES) is a social epidemiological survey of a community-representative sample of functionally-independent individuals aged 65 and older. In 2010-11, responses were received by telephone from 12,123 people in 31 municipalities across Japan (66.3% response rate). Social participation was measured by monthly or more frequent participation in any one of six types of social groups (business, volunteer, senior, sport, community, and hobby). Using logistic regression, four models were tested on 41,966 to 44,272 women with a valid response for each outcome variable: whether lack of work experience in older Japanese women is associated with (1) less social participation, (2) less social interaction, (3) less frequent interaction with friends, and (4) fewer friends.

**Results**
Controlling for age, equivalent income, family structure, years of education, and health conditions, lack of work experience throughout life was associated with a 21 percent lower likelihood of participating in groups, 25 percent higher likelihood of having less social interaction, and 12 percent higher likelihood of having fewer friends. The association between lack of work experience and lack of group participation held for all income levels and age groups.

**Conclusion**
Lacking work experience appeared to lead to less social participation later in life. Work experience can develop better social skills and more extensive social networks, contributing to more active social participation in older age.

Beyond Duality and Heteronormativity: Gender Display and Manipulation in Japanese Yaoi/BL Narratives

Boys Love (BL) in Japan refers to commercial fiction and fictional media by and for heterosexual women that focuses on male–male erotic/romantic relationships. These works are more generally known in other countries as Yaoi, a Japanese term often used as an umbrella category that can encompass various Japanese subgenres of male–male erotic/romantic fiction by and for women. The past decade has seen the emergence of studies of Yaoi/BL that have focused on gender and sex as analytical categories. Such scholarship is important in understanding fan-based cultures, production and consumption. However, a conflation of gender, sex, and sexuality at the analytical level in Yaoi/BL impedes further theoretical development. By making a clear conceptual distinction between these intertwined notions as distinctive analytical categories, this paper attempts to clarify Yaoi’s achievement in the (un)conscious feminist agenda among Japanese women. The study examines nearly 800 commercial Yaoi/BL novels written in Japanese, which were chosen based on a certain sampling method. Through descriptive statistics based on and textual analysis of the samples, as well as interviews
with professional Japanese female writers, the paper first identifies some important features in the contemporary Yaoi/BL texts such as transgression of sexual norms, subversion of gender fixity, renewed definitions of masculinity and femininity, and highly context-dependent sexual orientation of protagonists. By doing so, I argue that Yaoi/BL has made it possible for Japanese heterosexual women 1) to transform normative gender dualism, sexual acts and sexuality at least at the level of discourse; 2) to use men’s images not only for their empowerment but also for their own gratification as agent of desire. This is a significant step forward from early Yaoi works that focused upon getting affirmation from others and fleeing from patriarchy.

To be or Not to be, That Is the Question: The Bifurcation Approach of the Japanese State and Identity Formation of Koreans in Japan

Koreans in Japan present an important case for understanding the nature of the interconnections between race, nationalism, and ethnic relations. All too often, studies of these phenomena center on Western cases or on cases where non-Western racial minorities move to Western states. In this paper, however, I examine these inter-relations within Northeast Asia. The Zainichi Koreans or old-timer migrants in Japan (who are already in the fourth generation) must face what I call a 'bifurcation approach,' which makes a strict distinction between the Japanese and the non-Japanese based on nationality in the management of ethnic/racial diversity instituted by the Japanese state and society. In Japanese, the concepts ‘race’, ‘ethnicity’ and ‘nation’ are virtually indistinguishable. The formulation race = ethnicity = nationality = culture is essential to the Japanese conceptualization of what makes one Japanese. Moreover, under the Japanese sense of nationhood defined along exclusively ethno-genetiological lines and nationalistic multiculturalism, minority cultures have become fossilized owing to state sponsorship of the dominant Japanese culture. As a result, Zainichi Koreans—who have significantly become acculturated to and share a similar phenotype to ‘impersonate’ being Japanese.

SUZUKI, MAYA* (Tokyo University of Foreign Studies, mayasuzuki.edu@gmail.com)

Challenging Law and Justice from below: The Public Interest Litigation (PIL) Movement in the Dalit Community

In this paper, I examine protest movements of the marginalized Dalit community (formerly known as Untouchables) in contemporary India from a case study of Balmiki (a sweeper caste). In particular, I explore the political aspects of caste by focusing on the caste-based quota system, known as “reservation,” which is a part of India’s affirmative actions. This paper is organized around two significant issues. The first is the formation of a “new” identity among the Dalits through saint worship, which poses the following question: Why has the community embraced saint worship? The answer to the question lies in their religious choice to worship a saint, which gives them a sense of dignity and empowerment, and helps in the construction of a collective identity among members.

The second issue is the implications of caste-based identity politics. Since the late 1980s, an important factor Indian politics is the shift to a multiparty system for the benefit of the lowest castes was significantly low. The distribution has been uneven among the targeted groups. Moreover, the results of my fieldwork also affirmed their caste in order to obtain the benefits of welfare schemes and protection their rights by challenging the judicial system through Public Interest Litigations (PIL). This paradoxical response explains why caste identity has become more positive and assertive, which has led to the politics of difference in contemporary India.

SUZUKI, MIKAKO* (Keio University, mikako0308@gmail.com)

The State of Neoliberalism Criticisms in Japan: Why the Discussion on Cosmopolitanism Does Not Gain Steam in Japan

As economic globalisation progresses, a wave of neoliberalism is sweeping across the world, demanding states and societies to render a variety of modifications. Such a phenomenon has been analysed, described, and criticised extensively worldwide. Japan is no exception; criticisms toward neoliberalism are said to be forming a major trend in Japan. However, such critiques are slightly different from those toward neoliberalism in other parts of the world. Worldwide criticisms toward neoliberalism often lead to discussions on global transformation and cosmopolitanism, whereas such a connection is almost never made in Japan. For example, David Harvey, the author who disputes neoliberalism in his worldwide bestseller A Brief History of Neoliberalism, expresses in Cosmopolitanism and the Geographies of Freedom published in 2005 my empathy with De Sousa Santos’ (2005) idea of ‘subaltern cosmopolitanism’—Harvey finds hope in the movement to form a cosmopolitan solidarity by amplying the voices of the victims of neoliberalist globalisation that exists worldwide. Ulrich Beck (2006) also criticises the trend, stating that state politics are reduced when the state neoliberalistically prioritises adaptation to global market competitions; he argues that becoming cosmopolitan is the realistic future for states.

As seen from the above, a global trend is seen in the inclination to progress from criticizing neoliberalism to promoting a cosmopolitan transformation. However, neoliberalism criticisms in Japan rarely lead to the discussion of cosmopolitan transformation. One of the reasons for such a difference is that neoliberalism criticisms in Japan are rarely discussed solely in a global context because they have significantly become acculturated to and share a similar phenotype to ‘impersonate’ being Japanese.

The Effects on Self-Consciousness of Junior High School Students in Japan Depending on the Fact That They Have Boyfriend/Girlfriend or Not

The purpose of this study is to make clear the significance of a boyfriend or girlfriend among junior high school students in Japan. For this purpose, I firstly investigated the determining factors of having a boyfriend/girlfriend, and then clarified the following fact that one has a boyfriend/girlfriend on their self-consciousness. As a result of this analysis, I got following two findings. First, there is a significant influence on their self-consciousness. Second, when I analyze the effects of that fact on their self-consciousness, it is necessary to consider not only the very thing that one has a boyfriend/girlfriend or not, but also if she or he is likely to have a boyfriend/girlfriend. This analysis suggests that a success in love for girls in junior high has a more complex meaning compared with that for boys.

Divorce Studies in America and Japan

This paper aims to suggest ‘Good Divorce’ comparing divorce studies in America with divorce studies in Japan. The divorce rate in the United States has continued rising after the World War II, and one out of two marriages came to an end. Among the couples who married. At the same time, as remarriages have also increased, ‘step family’ is not rare in America. A new sociological concept, ‘binuclear family’ advocated in “The Good Divorce” (1994) by Constance Ahrons has become generalized. On the other hand, the divorce rate in Japan has continued rising as well as the United States. Therefore, many people are caught up with the procedure of how commemorative events are organized by local authorities. We will present what should be done to be ‘good divorce’. ‘Good divorce’ means to ‘keep your family together when your marriage comes apart.’ We will also introduce International Academy of Collaborative Professionals (IACP) for collaborative practice, including Collaborative law and interdisciplinary Collaborative Divorce.

Sociological Theory after September 11, 2001 and March 11, 2011

This paper aims to rethink theoretical foundations in sociology comparing American sociology after September 11, 2001 with Japanese sociology after March 11, 2011. Although some ‘empirical’ sociologists in America described and analyzed attacks by terrorists on September 11, 2001 and American society after 911, almost ‘theoretical’ sociologists left. However, Jeffrey Alexander, a leading American theoretical and cultural sociologist, has interpreted sociological theory and American society of and after ‘911’ from a post-Parsonian point of view. On the other hand, although some ‘empirical’ sociologists in Japan have described Japan after the Japan earthquake and Tsunami on March 11, 2011, almost ‘theoretical’ sociologists within the Pasaron and Post-Parsonian tradition in Japan have kept silence.

In this paper, I will suggest that theoretical foundations for the sociology after 911 and 311 would be established on Jeffrey Alexander’s theoretical logic, cultural sociology, and civil society. First, I will discuss that new sociological theorizing including the sociology of 911 and 311 would be multidimensionally reconstructed on the metatheorizing by Talcott Parsons, Jeffrey Alexander, Jonathan Turner, and Richard Munc. Second, I will argue that new solidarities could be founded on cultural sociology and civil society advocated by Jeffrey Alexander keeping a philosophical foundation of multidimensional sociological theorizing. Finally, it will present what should be done to reconstruct Japanese sociology multidimensionally after March 11, 2011.

Constructing Identities Across Borders: Case of the Istrian-Italian Diaspora in Trieste

In the last two decades, the accelerating speed of globalization has challenged the modern notion of state borders. Rather than the fixed line of a sovereign state, state borders are viewed as a dynamic interplay between territorial organizations and local societies. This is evident in the border regions of Europe wherein extensive cross-border cooperation and interaction transform a border from a geopolitical “territorial line” to a socio-cultural “contact area” of neighboring societies. On this basis, people living in borderlands have new resources and opportunities to construct or safeguard their identities. This study examines the construction of a “We” consciousness by the Istrian-Italian diaspora, who suffered from national conflicts and mass exile after World War II, and emigrated from their native homeland Istria (formally Yugoslavia) to settle in Trieste, a border city in Italy close to the Slovene and Croatian borders. Based on fieldwork, the identity construction of this diaspora by specifically using the cases of national celebrations when cross-border interaction collides with national manifestation. Our data is based on fieldwork conducted in Trieste on the procedure of how commemorative events are organized by local authorities. We will present what should be done to be ‘good divorce’. ‘Good divorce’ means to ‘keep your family together when your marriage comes apart.’ We will also introduce International Academy of Collaborative Professionals (IACP) for collaborative practice, including Collaborative law and interdisciplinary Collaborative Divorce.

“Intellectuals” in Gramsci’s Prison Notebooks: An Active Relationship As a Key Concept

In Prison Notebooks (written between1929-35), Antonio Gramsci (1891-1937) – as a realist and a theoretician – reconstructed the notion of intellectuals in the process of reconstituting the Marxist “class” concept. What are “intellectuals” in the theoretical world of Gramsci? And how did Gramsci theorize intellectuals and their roles in modern society? My presentation first introduces how Gramsci and his work have been studied and contributed to sociological theoretical research in Japan and then illustrates how his writings in his Prison Notebooks located intellectual and active relationship constructions. Content analyses of Prison Notebooks reveal that the logical foundation for his understanding intellectuals was the reconstructed concept of “man” or human being which was formed by active relationships. This study shows Gramsci’s belief that there was no ‘man’ who was not intellectual; therefore, all the human beings are indeed the intellectual. Yet, not everybody plays the socially organizing functional role of an intellectual. The active relationships of the ordinary people most of the time have individual characteristics; on the contrary, intellectuals create and engage in socially active relationships which are aimed on the economic, social, cultural, and political field. Therefore, I argue that Gramsci advanced Marx’s social class theory by focusing on intellectuals and their hegemonic social engagements in which the socially active relationship plays a crucial role in society. This paper contributes to our sociological understanding of Gramsci, his theoretical roots, and commonalities with the Marxist and other theoretical traditions.

Visualization of SNS Communications Concerning Radiation Risk from the Fukushima Daiichi Power Plant

In this presentation, I visualize people’s communications on a Social Networking Service (SNS) concerning the risks of radioactive pollution stemming from the Fukushima Daiichi power plant accident. The data consists of the communication log from a regional SNS that was launched by the residents of Iwaki City, Fukushima Prefecture, after the accident. It contains text from diaries and comments written by the SNS members and information about who made comments to whom. The co-occurrence network of words derived from the text data reveals the members’ concerns about radiation risks. Comment relations are expressed as a form of social network that shows the structure of the human relationships on the SNS. The co-occurrence network can be integrated and analyzed concurrently to show the development and interaction of the members’ shared concerns and the social networks in the SNS. The SNS members expressed various concerns, including radiation measurement, influence on health, food safety, and so on. Based on their concerns, they created messages in the comments as “conscientious organisms” to “technical artifacts”, or even to “organisms being merely alive” as their experiment progresses (Linde-
Japanese way of honoring the animals killed for scientific research has been known for “offering a ceremony” for dead animals (Kuyoo). This paper pays attention to not only to the ceremony but also everyday caring practice in the laboratory. Thus, I discuss how scientists and technicians affectively commit to experimental animals. Inspired by Science Studies scholar Casper Bruun Jensen and the sociologist Anders Blok (Jensen and Blok 2013), who developed Actor Network Theory through Japanese techno-aminism, I explore new dimensions of contemporary Japanese techno-science.

To Serve and Survey: Lawyers and Auditors’ Efforts To Reconcile Professional Commitments, Client Demands and Regulatory Requirements For Anti-Money Laundering

This paper studies how professionals serve as agents of public regulation. Following the trend for risk governance in various policy areas (e.g. Hood et al 2001), a distinguishing feature of anti-money laundering regulation is that risk management is a primary tool to combat crime. Transnational agreements and national law require various professional services providers to monitor client behavior and report indications of money laundering without informing the client(s) about these suspicions. In short, businesses must survey clients, even as they serve client needs.

Law and accounting are both professions with a history of explicit commercial engagement. However, auditors differ in that they constitute part of a legally-sanctioned compliance industry. Using an interview-based study, we probe 1) how lawyers and auditors articulate principle tensions between commercial demands, professional commitments and regulatory requirements, and 2) how these tensions are addressed or mitigated in practice.

We observe varying degrees of tension between professional autonomy, the role of client advisor/advocate and regulatory compliance. We also observe similarities in the formalization of client handling process as a structural means of making visible and actionable the balance between competing demands.

In research, and especially quantitative research, the working class is often singled out as more xenophobic than other classes. However, it appears that the working class has actual relationships with “immigrants” to a larger extent. Rather than determining which class is the most xenophobic, the aim of this paper is to discuss the relevance of dominant theories about class and racism in relation to empirical findings, and more specifically to interrogate why and how class may be important for understanding people’s use of racist discourses in different social contexts.

This study examines the production chain of Rapana Venosa (veined rapa whelk) and the socioeconomic statuses of women factory workers in this process. In rural areas of the Black Sea region in Turkey, women often participate in non-agricultural production. The production of veined rapa whelks is one of the sectors which rural women are especially employed. Veined rapa whelks are “marine invaders” which migrated from Far East Asian seas to the Black Sea by ballast water in the 1940s. Today, they are considered to be threatening the Black Sea’s ecosystem and consuming many native species. In the context of globalising marine ecosystem and multinationalising agrifood production, rapa whelks began to be exported from Turkey to Japan in the 1990s. While the prevalent catch method, alganna dredging, is known to be harmful for the reproduction of many native species, the exportation of rapa whelks is hoped to reduce their ecological pressure in the Black Sea and create employment opportunities for rural women. This study explores the use of rural women’s labour in the global production chain of rapa whelks between Japan and Turkey. The research was conducted in two phases. In the first phase, women workers’ socio-economic statuses were investigated in depth through interviews with 40 rural women workers of whelk-processing factories in two Middle Black Sea villages. A research in the second phase was conducted in summer 2012 in Tokyo and data regarding the production chain were collected mainly by interviews with an importer, a manufacturer and a retailer. Research findings suggest that the global Rapana Venosa production bears many characteristics of informal economy. The flexible production chain depends on rural women’s flexible, invisible and hence cheap labour while women develop new strategies to create a space of autonomy through paid work.
**Interconnected 21st Century and the Decline of Traditional National Security System**

Traditional national security system has been definitely one of the crucial pillars for Western statecraft paradigm since Westphalia Peace agreement in 1648. Especially in last two centuries the main task of sovereign state was how to protect own citizens and territory from foreign (military) threats with strategic concepts like deterrence and retaliation are. It was very clear the national power was based on physical and natural resources, industrial production as well military capabilities. The national state was practically the only reputable actor in international relations, through for many scholars like Fukuyama this historic development was ended with the end of Cold War, I think the crucial revolution began with modern communication and technology already mid of former century. Consequently till the end of millennium we got interconnected society with borderless, lightly regulated and largely anonymous online environment which has been rising to new strategic domain. At the same time security as a concept was changed by possible interconnection and new non-state actors like individuals, corporations, (cyber) terrorists, organized crime and autonomous actors appeared as new international players. That makes traditional national-based security system incapable to prevent all security incidents occurring in cyber as well physical space. In spite of the merits of measures to protect society against new kinds of security threats, national security policy makers therefore have to accept a certain level of vulnerability and redirect their focus to recovery and resilience, the ability to restore a state of normalcy after disruption. The primary security objective is effectively mitigating the impact and quickly restoring the original situation. For that purpose traditional very rigid national security should be redesigned into more flexible crisis management and knowledge integrating system with capability to collect all societal skills and potential convenient for ensuring security in interconnected semi-transparent world.

**Contractual Gift-Giving As a Functional Hybrid: The Case of Gift-For-Sex Exchanges in Russia**

Ideal typical forms of capitalism (cold profit orientations) and gift-giving (the „pure gift”) can be found to illustrate the crucial aspects we assign to these concepts. Yet these two concepts blend together extensively, especially in practices of institutional gift-giving. In particular, „contractual gift-giving” is a particularly „pure” hybrid form of exchange, as it is more formalized, and thus more rationalized and less instrumented. In contrast to gift exchange, strong evidence of this hybrid practice can be found within compensated dating practices.

Using the case of contractual gift-for-sex exchanges in Russia, the empirical basis of this paper is a rich body of recently collected (2010-12) data, including online content analyses of dating websites and discussion fora, face to face interviews, and a quantitative survey. Multi-method results demonstrate that the two sides of the contractual gift „hybrid” exchange form interact so that both maintain key aspects of their conceptual purity, yet in a way that allows translation between them. In particular, the gift form is unique in its ability to bring symbolic relationships (such as love and romance) into market exchange as commodities through involving them in contracts. While the „purity” (altruisms) of such gifts is indeed removed/unveiled through their availability on the marketplace of „sponsorship” and compensated dating, the gift nonetheless maintains its valence of care, generating emotional love for practitioners. The features of this contractual gift form are analyzed in the context of the post-socialist economic transformation in Russia, focusing especially on the subjective incorporation of market logics and language into everyday life and the recent materialistic and partial sexualization in Russia, focusing especially on the subjective incorporation of market logics for ensuring security in interconnected semi-transparent world.

**The Loneliness of Many? Investigating the Roots of Urban Russian Loneliness**

Much early sociological work on cities has focused and the connection between city life and urban estrangement. A host of modern maladies are proposed to have higher concentrations within cities: to include alienation, anomie, and the ‘blasé’ attitude. As a result of these and shifting forms of social cohesion in urban spaces, we should also expect to find a higher prevalence of loneliness within urban environments. Cross-country data (the ESS) shows loneliness rates to be much higher in Eastern than in Western Europe. Russia is therefore an ideal place to investigate loneliness.

Using Russian WVS data from 2012 on the question of loneliness, I attempt to find the mechanisms through which the urban loneliness effect occurs by also controlling for other relevant factors, such as social engagement, alienation, and values such as individualism/collectivism. In particular, I am interested in the way that individualist values mediate loneliness, either by catalyzing or mitigating its effect, and I expect that this mediation effect is different in cities, with ‘urban values,’ compared to rural areas. I compare four samples: one metropolitan (Moscow), one city (Tambov), a non-urban sample (Russians living in settlements of 100,000 or less), and Tatarstan (city and non-city). Results confirm several important hypotheses. Notably, nearly all loneliness effects in cities are mediated by individualism, collectivism, in stark contrast to loneliness in non-urban areas. In particular, I find that individualists in Moscow are more lonely if they have children, likely because family isolates them from the types of ties they would prefer (with friends, associations, and wider networks). For collectivists, this effect is reversed. Likewise, collectivists in a smaller city (Tambov) are more lonely if they are involved in more civic organizations, likely because this involvement is compensating for a lack of the ties they idealize (family).

**Locating the Media Discourse of Climate Change Policy Network in India 2007-2010**

This paper explains the framing of climate change in Indian newspapers. With its economic growth, India has become a major contributor of greenhouse gas emissions and has a major role to play in any global cooperation to reduce emissions. Yet India's rhetoric and concerns about climate change differ from other developing and developed countries. India is the world's largest democracy, but it has a weak state that lacks levers of control over its society and economy. Consequently, the distinct framing that India's newspapers give to climate change concerns, not the need for new government policies, but the need to convince and mobilize civil society.

**Trust Me If You Can: Trust As Strategic Tool for Decision Making to Deal with Ignorance and Uncertainty in Contaminated Sites of Germany and India**

In this paper we will investigate the role of trust in decision making process under ignorance and uncertainty. Classical approaches to risk analysis are based on statistical calculations dependent on hitherto known variables. This research suggests that knowledge for risk calculation is limited then the decision making of experts as well as lay persons are dependent on their individual and intuitional trust. Based on newly emerging sociological theories of ignorance, this paper involves two field studies: redevelopment of contaminated sites in Germany and mitigation of groundwater arsenic contamination in India. Interestingly, in both the cases knowledge on underground processes is limited. Processes of cleaning-up in Germany usually are confronted with contaminations that had not been identified in investigation activities. Unexpected surprises by the actors often are taken as normalcy. In the Eastern Indian region, concentration of arsenic in groundwater increases due to geological processes in succession of a decreasing groundwater level, caused by human activities. So, today's clean water may be poisonous by arsenic tomorrow. This creates a situation of ambiguity and confusion. Stakeholders (from policy makers to local inhabitants) have to take various pertinent decisions based on trust in individual, group or system. From the existing sociological literature the paper explores various dimensions of trust involved in decision making for both experts and non-experts.

**Physical Activity and Quality of Life Among Chinese Cancer Survivors**

Cancer is the leading cause of death among Asian American populations in the United States (CDC, 2013). Asian Americans are actually reported to have lower cancer deaths compared to non-Hispanic Whites. Consequently, more Asian Americans will survive cancer diagnosis and live a longer life after treatment. It has been shown that physical activity at modest intensity can significantly im-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
prove the side effects of cancer treatment, quality of life among cancer patients, and breast cancer mortality. Although research on exercise has grown in quantity and quality (i.e., more RCTs) during last decade, most available studies recruited primarily Caucasian samples and were based on smaller sample sizes (Pekmezic & Demark-Wahnefried, 2011). Thus, these findings are not able to be generalized to non-Caucasian subgroups, such as AAs. Furthermore, exercise patterns vary with different cultural traditions. Intervention strategies such as aerobic exercises, resistance training, and Yoga which have demonstrated positive impacts might not be applicable to AA cancer survivors because most Asians will be more inclined to use Tai Chi or Yoga for their exercise routine. Thus, more research is needed to study the unique cancer experience of various racial/ethnic groups.

This paper examines the linkage between physical activity and quality of life among Chinese American cancer patients and survivors. It is hypothesized that more physically active cancer patients and survivors are reported to have higher quality of life and less distress compared to sedentary counterparts. Data was collected from self-report surveys of 55 Chinese cancer patients and survivors. In addition to basic demographic characteristics, weight status, medical history, two standardized scales are used to measure quality of life (SF-36) and physical activity (CHAMPS). Currently, we are conducting the data analysis and a manuscript based on the results of the data analysis that will be completed in the spring of 2014.

**Navigational Capacities For Youth Success In Adversity: A Sociology Of Southern Youth**

The global South has for too long relied on global North contexts and theories in the sociological study of youth and youth development. These Northern approaches have centred on US-driven positive youth development focused on dynamic systems, risks and protective factors, and the UK-led socio-cultural approach addressing youth agency, resistance and cultural reproduction. This paper asks two key questions towards a comparative consideration of the sociology of youth: Who are Southern Youth, and in what ways are their lives the same as, or different to their Global North counterparts? What are these contexts of diversity? These contexts of diversity, rather than skills, are learnable and are available to young people in the pursuit of success, where success is postulated as the capacity to (1) exert individual agency; (2) obtain, create and invest capitals in their primary proximal contexts of engagement; (3) recognize and analyse the ways in which interconnected distal contexts such as institutions, practices and policies exert influence to oppose and enable agency; (4) see the way in which power operates through identity markers to restrict participation, and perpetuate domination and poverty; and (5) practice collective agency for civic participation and life cycle transitions. In this regard, the notion of navigational capacities draws together the best emancipatory and transformative elements of both the dynamics systems and socio-cultural approaches to youth studies, and has the potential to make visible (‘deinvisibilise’) the lives of Southern Youth.

**SWENSEN, DONALD*** (Mount Royal University, dswenson@mroyal.ca)

**Gender Marital Roles in an Ecumenical, Covenant, and Charismatic Christian Community**

Marital gender roles and religion continue to capture the landscape of much sociological research in families. A significant amount of research has emerged in investigating how ‘Promises Keepers’ marital worldview primary locus is in Evangelical-American Christianity. Much of the critique of the movement focuses on language such as: “the last gap of patriarchy,” the “first backlash of patriarchy,” “soft-boiled masculinity,” sphere of anti-feminist backlash,” “hegemonic masculinity,” “an essentialist retreat from progressive gender relationships,” and the Promise Keepers changing the centrality of the political within the family. Against this backdrop, this paper presents empirical evidence from a 350 member Ecumenical[1] Covenant[2], Charismatic[3] community named “Allulalia” in Augusta, Georgia, USA. Husbands are expected to lead, protect and provide for their wives and children. They are called to be leaders in their marriages and could be seen to reflect the images portrayed above in regard to the Promise Keepers. However, with data based on interviews from randomly selected cases (36) and 300 members of 350 who provided quantitative information, a very different story of leadership is presented.

The husbands model their leadership on a kenotic style of headship. This consists of leadership which is humble, empty of self-interest, sacrificial love (agape), a detachment from status privilege, gentle, meek, kind and self-effacing. They are to love their wives as “Jesus loves the Church,” and wives are to respect their husbands.

From the interviews, both of men and women, this was the common story. Regression analysis of measures of gender roles shows significant correlations with a wide variety of measures of religion.

**SWIDER, SARAH*** (Wayne State University, ss wider@gmail.com)

**Constructing Asia: An Emerging Model of Migrant Labor Exportation**

This article explores how global forces are reshaping the form of labor migration in the region. China has become an important influence reshaping the Asian region through increased foreign direct investment (FDI) in public construction projects such as roads, railways, and ports. As Chinese companies expand operations overseas they often bring their own workforce, exporting hundreds of thousands of Chinese migrant workers. These workers migrate under the umbrella of Chinese multinational companies and represent a fast-growing form of labor export migration called “project contract migration.” This expansion of project contract migration represents an important form of temporary migrant worker programs which are generally governed by either labor brokers and/or bi-lateral agreements among states, and are characterized by receiving countries only accepting immigrants under “strict functional and temporal limits” (Castles, 2004: 23). In contrast, China’s emerging labor export model is an example of multinational corporation-led migration with a new twist. Historically, multinational corporation-led migration has taken the form of high-skilled professionals being relocated from developed nations into developing countries (Findlay, 1990; Stahl, 1991) while China’s multinational companies are exporting both high and low-skilled workers.

According to China’s Ministry of Commerce the number of Chinese workers sent abroad has risen from about 2,000 in 1979 to around 6.5 million in 2013. Roughly 812,000 of these overseas Chinese workers are now employed by Chinese companies in the form of project contract workers, and if we include illegal or undocumented migrants, these numbers would double. This article focuses understanding why Chinese multinationals are importing their own laborers instead of using local labor. I argue that this emerging model of labor exportation creates a kind of extraterritoriality that allows Chinese multinationals to evade national and international regulations designed to protect worker and migrant rights and increasing worker control.

**SWIDER, SARAH*** (Wayne State University, ss wider@gmail.com)

**Engaging the State: Informal Worker Protests in China**

In China, the rise of precarious and informal work is closely linked to the processes of migration and urbanization. There are roughly 150-200 million migrant workers, representing between 15-17 percent of the total Chinese population (Chan 2010). By 2009, sixty percent of all urban employment in China was informal (Huang 2009); most of this is precarious work and a majority of these jobs are filled by migrants. Informal work is performed outside of the purview of the state, and it is labeled precarious because these jobs do not provide employment stability, are low-waged and lack social protection.

This paper explores informal worker protests in China. I look at two different groups of informal workers: construction workers and street vendors and find that the salient issues for each group are different. The most salient issue for informal construction workers is non-payment of wages and among street vendors that the salient issues for each group are different. The Developmental Hierarchy Cultural Schema

In everyday conversation, popular media, and scholarly work, terms like the “Third World” or “developing countries” are often contrasted with the “First World” and “developed countries.” This is often assumed by scholars that share a cultural schema of a developmental hierarchy of societies. How prevalent has this schema been throughout history? Drawing from cognitive anthropology, I argue that in general the terms people use are indicative of specific cultural schemas. This is especially the case with terms that refer to societies’ position on a developmental hierarchy (e.g., “developed” versus “developing countries,” or “advanced” versus “primitive societies,” etc.). Using the Google Books N-gram Database, I analyze the usage of over 80 such terms by year, measuring their relative frequencies in all books written in English from 1700-2008. I then combine this quantitative endeavor with historical and other data, constructing a historical narrative of the developmental hierarchy cultural schema over the last three hundred years. The terminology of the developmental hierarchy has been prominent throughout the time period examined, though it has experienced significant changes. During the eighteenth century, developmental hierarchy terms gained popularity as the ideas of social evolutionism expanded. Notions of sovereignty and capability eventually challenged social evolutionary ideas in the beginning of the twentieth century, leading to their demise. In their wake, modernization theory quickly became prominent, bringing a new set of developmental hierarchy terms, institutionalized by the founding of various international organizations in the mid-twentieth century. Modernization theory renovated the developmental hierarchy cultural schema by shifting the object of development from societies and peoples to that of the nation-state. The developmental hierarchy cultural schema has exercised considerable power in organizing the way people classify societies.

SYKORA, LUDEK* (Charles University, sykora@naturn.cuni.cz)
From Chicago to Los Angeles: Western Concepts and the Study of Post-Socialist Cities

Post-socialist cities have been omitted from disputes on global urbanism. However, the insights gained from the study of their dramatic transformations can provide important suggestions for the international urban studies. The paper first introduces the key features of post-socialist urban transformations placing them within the context of contemporary global urbanism. The paper specifically discusses the development in cities, which developed during periods with different political regimes and socio-economic conditions. Their urban landscapes reflect multiplicity of socioeconomic logics and are characterized with a high level of socio-spatial hybridity. The western models that assume relatively stable relations between the principles of urban development and resulting socio-spatial patterns are not capable to capture the nature of cities in radical transformations. The paper then discusses the relevance of “western” concepts for the study of post-socialist cities. It is framed within the paradigmatic evolution from Chicago to Los Angeles schools of urban studies. The paper argues for the recognition of a multiplicity of urban logics and urban structures internalized within urban landscapes of transforming cities. Relating long term development paths and contemporary path-shaping practices, paper documents that concepts from both schools are relevant for the understanding of post-socialist cities. Finally, despite the present urban landscapes of post-socialist cities can be seen as different from cities in other world regions, there are striking similarities. The paper argues that despite historic and cultural specificities in local contexts, contemporary urban development is conditioned by the universalistic driving forces of urbanization embedded in a globally spreading capitalism. The hybrid coexistence of different socio-spatial landscapes can thus be only temporary as the most dynamically developing urban areas related to global capitalism gradually displace the original urban patterns. The theories and concepts developed in the social context of capitalism thus have high relevance for contemporary global urbanism.

Gambatte Ikô: Negotiating Identity and Belonging at a Japanese University Women’s Kendo Club

This paper draws on an 18-month ethnography at a Japanese university women’s kendo club and examines the concept of seishin (spirit), and how it is embodied through the process of doing one’s best for the group. Gambatte Ikô (Let’s do our best together) expresses the personal commitment to endure hardship in order to achieve a group goal. The strengthening of seishin can be attained through enduring physical, mental and emotional hardship alongside others, where the hardships are embedded in the club’s demanding training, work obligations, and hierarchical relationships. As such, seishin training takes place on all levels, in a variety of situations, encouraging the holistic development of club members. Seishin development can be goal of membership and its embodiment can be advantageous as it promises to equip members with the resilience necessary to fulfill their gendered roles as capable, exemplar models of society. Arguably, for female club members developing significant relationships takes precedence over the development of seishin. In time significant relationships with other members became my reason for being and the primary source of motivation to engage in seishin training.

Safety in the ‘House of Certainty’: The Question of Violence in a Ukrainian Prison

Prisons are potentially volatile places. This paper draws on ethnographic research in a medium-security men’s training prison to discuss the nature of a relatively low level of physical violence in a Ukrainian prison despite the low staff-to-prisoner ratio. It attributes this phenomenon primarily to the informal structure of prisoner society, and the central role of its illicit normative code of prison life. I explore how the legitimacy deficit of the Ukrainian State and its legal system, together with often anachronistic and unreal official prison rules and limited staff presence render the unofficial prisoners’ behavioural code the guarantor of the peaceful co-habitation. I demonstrate that despite discriminating against certain prisoners and instigating mutual and self-scrutiny, these unofficial arrangements were deemed by most prisoners more just and legitimate than the official ones. Whilst this informal structure was inescapable and entailed harsh punishments for violations, it, to some degree, controlled and limited arbitrary violence and established a ‘house of certainty’ (Foucault, 1975). Furthermore, I argue that despite the official antagonistic stance towards the ‘inmate code’, prison authorities heavily depended on the prisoner-controlled informal structure to both keep the prison orderly and safe and maintain uninterrupted industrial production. I then discuss the implications of the recent and current changes in Ukrainian society and prisoner profile to the maintenance of safety and order in national prisons. I posit that the intricate power-balance present in the prison has relevance beyond Ukraine because it represents a microcosm of the interaction between powerful legitimate and illegitimate interests, where the vested interest of both is profit (industry) and order (status quo).

HIV Stigma in U.S. Faith Communities

Stigma remains a significant barrier to HIV prevention/treatment in African American communities. Religious congregations, especially black churches, have been called to address HIV stigma. Social forces such as religion may create reinforcing stigmatized conditions that predispose individuals to HIV infection and limit their ability to access HIV testing and treatment. However, scientific evidence examining the concept of HIV stigma and its effects in religious communities is limited. Our work is guided by the concept of stigma as a social and cultural phenomenon linked to actions of whole groups of people.* This approach emphasizes the need to examine social structures and processes and enable communities to move from individual-level perceptions to collectively identify and act upon negative stereotypes and discrimination against the stigmatized. Our multi-method study examines HIV stigma in faith communities from the perspectives of congregations, community members, and people living with HIV. We collected and analyzed data from interviews with faith leaders representing a theologically diverse sample of congregations; interviews with HIV-infected individuals; and, town-hall meeting-generated ideas about faith-based strategies to address HIV. We used predictive modeling of factors linked to welcoming/alienating attitudes on the part of congregations, as well as content analysis and concept mapping to qualitatively assess the concept and extent of HIV stigma present in faith communities. In congregations, stigma was often attached to the perception of individuals as asexual carriers of infection. These perceptions are most stigmatized, followed by infection drug use, heterosexual relations, and mother-to-child/healthcare-related situations. We also classified individuals who felt alienated in congregations because of stigma/discrimination. Finally, community stakeholders identified reducing stigma as the most important strategy to address HIV in their faith community; however, the feasibility of this strategy was questioned. In the analysis, we triangulate/discuss the findings to explore the concept of stigma, its consequences, and potential stigma-reduction strategies in faith-based settings.

Nativity, Religiosity, and Mental Health in the United States

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Religiosity has been linked to better mental health including lower rates of depression and other psychiatric problems. However, little is known about the association between religiosity and mental health in immigrant populations. This study examined the role of religiosity in the association between foreign-born status and occurrence of dysthymia (long-term depressed mood) in the U.S. population using a longitudinal sample of U.S. citizens. Dysthymia was assessed per DSM-IV criteria. Religious activity was a scale based on how often respondents attended religious services, how important were religious or spiritual beliefs to respondents, and how many members of their religious groups they saw socially at least every two weeks. Acculturation, stress, sociodemographic and other factors were also assessed. Prevalence and 3-year incidence of dysthymia was modeled using nested logistic regression (weighted analyses). Immigrants were more likely than US-natives to have dysthymia, controlling for sociodemographic factors. This difference was explained after accounting for religious activity, acculturation, stress, and other factors. Religious activity remained a significant predictor of dysthymia after all adjustments; higher levels of religiosity were associated with a lower likelihood of dysthymia among the respondents over and beyond other factors. There was no difference between foreign-born and US-natives in developing dysthymia over time, but religiosity remained a significant predictor (lower likelihood) of developing dysthymia over time in the total sample. Further analyses will examine the differences in the effect of religiosity between the foreign-born and the US-native populations and discuss the findings in the light of acculturative stress and religious coping perspectives. Public health implications will also be addressed.

What Shapes Attitudes Towards Fertility Treatments in Present Day Europe?

The issue of medical treatment of fertility has special social relevance today for most of the European societies which are characterized by very low levels of fertility, and an increasing number of people not having children at all. Biotechnology makes parenthood available for those who used to be excluded from that earlier (medical problems, single women and same sex couples).

The aim of this research is to examine the attitudes of European society on in-vitro fertilization: do they think that it is a stigma to become a parent without sexual intercourse or do they consider it as a possibility to help people to experience parenthood. The previous studies have already indicated that respondents’ gender, age, educational level and religious background determined whether they supported fertility treatments: women, younger people, those with higher educational level and non-religious background tended to be more supportive than others (Kailasam 2001, Scheneker 2005). This research would exceed that by focusing on how traditional gender roles, family beliefs and attitudes towards homosexuality can influence the acceptance of fertility treatments. The paper also seeks to answer the practical question whether the institutionalisation level of assisted reproductive technologies can affect the social acceptance of fertility treatments in Europe.

Our data come from the last wave (2008) of the European Value Study (EVS). The EVS provides insights into the ideas, beliefs, preferences, attitudes, values and opinions of citizens all over Europe by applying standardized questionnaires. In the fourth wave of EVS an artificial reproduction-related variable was introduced, which we chose as our dependent variable, measuring the acceptance level of the artificial insemination or in-vitro fertilization. As both individual and country level factors and also to account the most appropriate statistical technique to be used are multilevel techniques.

Far-Right Voter: The Efficiency of Social Bases As a Discriminating Factor in Voting for Far-Right Parties

The paper will address two problems: the social characteristics of voters who identify themselves as “far-right”, and secondly what are the additional factors which are conducive to identifying with, and voting for either radical (far-) right parties or mainstream right (or conservative) parties. Beginning with H. Kitschelt’s (1997) and H. Norris (2003) seminal works we know that social bases, i.e. changes in social structure and economy are not sufficient conditions for the appearance and stability of radical right parties. Kitschelt and Norris identified the party system and the electoral rules as two decisive factors for far right parties’ electoral successes, which argues that the conductive factor is “convergence of moderately left and right parties toward a median voter” and Norris emphasizes the role of institutional context (e.g. electoral rules). It will be shown, using the left-right self-placement scale as a measure of far-right identities, how far-right voters distribute their votes among political parties and what are the social and ideological factors which discriminate against mainstream right parties, apart from the type of party system and broader institutional context. The analysis will be based on recent ESS surveys and a more detailed analysis of the Polish case based on general election studies.

Young Chechen Refugees in Europe: The Role of Gender and Religion

The presentation focuses on two intertwined factors that shape immigrant incorporation in today’s Europe: religion and gender. It draws on an empirical study of young refugee women from Chechnya (Russian Federation) residing in Germany, Austria, Poland and Belgium. It aims to explain the relationship between women’s religious identities and gender practices while considering the significance of their pre-migration childhood experiences of life in a war-torn society and refugees’ living conditions in the receiving societies. The study examines two topics, which have dominated debates about incorporation of Muslim immigrants and their children in European societies: 1) new forms of religiosity among Muslim women in Germany and 2) transformations of women’s roles in immigrant families and communities. It focuses on Muslim immigrants from Eastern Europe who have received little scholarly attention as opposed to communities originating from Maghreb or Turkey. That is despite having gained a considerable presence in Europe since the early 2000s. Russian citizens, most of them from Chechnya, have been among the most numerous groups of asylum seekers in Poland, Austria and Belgium for almost a decade now. The numbers of Chechens applying for asylum in Germany in 2012 and 2013 have also risen sharply. The data collected in Germany, Austria and Poland reveal remarkable intergenerational differences in adaptation strategies of Chechen women. A significant number of young women in these countries are adopting more conservative gender practices and embracing new religious identities that are perceived as alien by the women of the older generation. The study in Belgium examines the validity of these findings in a different institutional environment. Compared to the other three countries, Belgium offers recognized refugees an easier access to citizenship and provides more inclusive educational environment for young immigrants.

Satisfaction of Former Employees of the Swiss Armed Forces with Their New Work Situation

Two years after the latest reform of 2004 in the Swiss Armed Forces (SAF) a higher number of resignations by the professional members was registered. A qualitative and a quantitative study were conducted to analyze the current turnover situation. The present contribution focuses on the quantitative data of 77 former employees and describes the present work situation of them. The majority of former employees of the armed forces works in the federal or cantonal administration, one third is employed in the private sector. Most of them are successful in their jobs, have managerial positions with more than two subordinates and they did not need further education for their present jobs. The former employees are significantly more satisfied in their new positions, have lower levels of resignations, have more autonomy, are more satisfied with their compensation and perceive more job alternatives available to them than the currently employed military professionals of the SAF. Their attitude towards work is more oriented towards work-life-balance as most of them believe that every employee should have an opportunity to work part-time. In all, the data suggests that a military education is attractive on the civil labor market, but that it could be difficult for the SAF to win back former employees.

Art Against Racism. Works By Santiago Sierra As a Voice Against Racism

In my paper I would like to present an artist who is socially engaged and whose works refers to very important social issue – exploitation of workers and cheap work force. Santiago Sierra, born in 1966 in Madrid, is the best known contemporary Spanish artist, who lives and works in Mexico City. Main topics of his works are: critic of capitalism, underpaid labourer completing menial tasks and immigration. It is said that he get involved in social engaged art when he realised how little money get Mexican workers for performing gruelling work. His social background also has a big influence on his work, because he comes from a working-class family.

In my presentation I will discuss some of Santiago Sierra works, which can be understood as statement about (or rather against) racism. As we consider racism as invention of modernism we can also see some direct link between racism and capitalism, cheap labour force and illegal immigrants. We can also easily match those factors: being subjected by racism is often connected with being illegal immigrant who delivers low paid menial work. Furthermore, as we can learn from Loic Wacquant that racism has always been a convenient excuse to justify exploitation of some groups of people. Almost every economic system needs some resources to exploit to exist. Especially capitalism. In capitalism racism has its economic function: it lowers cost of production and stabilizes hierarchy. Similar functions also have illegal immigrants, who are necessary in the system, because capitalism still needs people to complete menial tasks for small salaries. Employing illegal immigrant for lower wages may be justified by racism – they are no us, they are foreigners, they not equal to us.

Concept of Artistic Brand As a Tool for Analysing Art World

Social construction of artistic reputation and artistic success have been an important issues in sociological research from many years now. In my paper I am going to present the idea of artistic brand as a tool for analysing art world and construction of artistic career – mainly the careers of contemporary visual artists.

Artistic brand can be a person (artist, gallery owner, collector, curator, critic) or an institution (gallery, museum, art fair). The most important criterion for distinguishing the artistic brand from non-branded artist or institution is its recognition by the representatives of the various spheres of social life. I separate three spheres of social life in which artistic brands can be present: art world, media and ordinary social life. In every of those three spheres could exists different artistic brands, which are also constructed and sustained in different ways.

Phenomena that have recently occurred in the art world (development of conceptual art, separating the artist from the art work, the lack of clear criteria for evaluation works of art, professionalization of the art market) made that artistic brand have gain an importance in the art world. Artistic brand simplify the complexity of the art world, improve the decision making process, add value to the art world product. Artistic brand is a guarantee of quality, a mean of communication with customers and agents. Brand is also a tool of negotiating rules in the artistic field, a tool for building hierarchy in the art world and a tool for building artistic field autonomy towards other fields.

As the exemplification of my conception of artistic brand I am going to present the outline of my research project concerning the in-depth analysis of the presence of artistic brand (contemporary visual artists and institutions dealing with contemporary art) in Poland.
The Conditions for Sustainability, Complexity, Social Learning and Integrated Climate Governance in a Warming World

This paper introduces the concept of the ‘Conditions for Sustainability’ and reviews some of the main conceptual approaches dealing with the relationships between complexity, social learning and global environmental change. The aim is to produce fresh theoretical insights and to outline an operational synthesis to better understand the types of interactions, ways of knowing, and required feedbacks that influence the production of socio-ecological complexity and affect our structural conditions and learning capacities to cope with accelerating global change. Social learning is understood as the only possible means to overcome current cultural constraints for a rapid societal transformation, and to provide the kinds of fair and quality of life development pathways that may allow humanity a dignified way out of the present unsustainability predicament.

In particular, my approach uses an ecological sociology perspective based on a further operationalisation of the SEIC conceptual model (Tábara & Pahl-Wostl, 2008) and focuses on the case of the integrated governance of climate change. From a non-dualistic standpoint, I look at the agents’ interactions and social-ecological systems dynamics in complexity production and their implications for social learning and transformation. Such analysis is carried out in a relational mode within and between the following social-ecological components and systems: 1. Structures, rules and institutions (S) 2. Energy and resources (E) 3. Information and knowledge (I) and 4. Cumulated socio-ecological change (C). It is argued that such a framework can provide a more robust theoretical understanding of the required conditions for a global sustainability transformation and support Integrated Climate Governance (ICG) policies and options.

Ethnographic Biography

In this paper I present a new methodology that I call ‘ethnographic biography’. I have used this methodology to examine changes and developments in ethno-class identity among young adults from different social classes who are graduates of an integrated school and who are now finding their way in adult society in Israel.

Ethnographic biography involves repeated in-depth interviews with all of the subjects over time, and from different perspectives, alongside the ongoing ethnographic study of events in their lives through various communications media, such as telephone conversations, email correspondence, and the subjects’ activities in social network sites (e.g. Facebook). It also entails attending life events in the subjects’ lives (going to a football match together, visiting a subject in mourning, joining a fast for a meal, visiting subjects at their place of work, attending weddings, and so on).

The method of ethnographic biography has a number of important advantages. First, it offers a framework that is tightly linked to the subjects’ everyday lives while at the same time reinforcing both their interpretive and reflexive capabilities and the ethnographic dimension. Second, it enables us to follow various biographical events in the subjects’ lives in real time, and not retrospectively. Finally, ethnographic biography allows us to study the development and dynamics of ethno-class identity at varying, complex and nuanced resolutions, and thus to draw out its various pathways and instantiations.

A Critique of the Use of the ‘Neet’ Category

In OECD countries, the problem of young people not being in education, employment or training (the so-called “NEET”) has been frequently raised in the political and social fields since the beginning of the last crisis.

On the basis of empirical data collected in Switzerland within the framework of the NCCR Lives project (www.lives-nccr.ch/en), we shall first attempt to understand what the use of the NEET category is founded upon: we shall show that it is based on two tenets. One is of a social nature, founded upon the fact this age group is the most affected by unemployment; the other is of a moral nature, resting on the idea that any unemployment at all in this age group is a problem. We will show that the field of political controversy around these tenets has clear borders (Bourdieu, 2012) and that it mostly centres on whether various measures should be imposed or not, whilst there is complete agreement on the category itself.

We will then show that street-level bureaucrats dealing with youth unemployment endorse the official normativity about NEET. 44 of them have been asked to identify and precisely describe these situations that they consider as emblematic of their interventions toward unemployed youth people; hence, more than 150 such situations have been collected and allow investigating how the past, present and future stages of the beneficiaries’ life course interact within them. The data show that their normative figure is the employed adult and that they see NEET as people in need of socialization.

In conclusion, we will show that the NEET category is founded upon a linear and androcentric representation of the life course (education-training-employment-retirement) (Levy, Gauthier, & Widmer, 2006) which not only subsumes very diverse life stories into chronological categories (Bourdieu, 1984, Yates & Payne, 2006), but tends to deny the importance of power relationships founded upon age.
Can be given the status of a natural language of the life-world. Historically, the national nationalism. Hence, it is debatable whether a nationally constructed language is possible only in the assumption of a “nation-society” by methodological nationalism, which presupposes the sharing of language as the most fundamental institution of social life. These theories suggest that the same language is shared intersubjectively by people, in which turn enables them to understand subjective meanings. This idea has become a marked trend since the 1960s in relation to Max Weber’s interpretative sociology, and is found, for instance, in Peter Berger and Thomas Luckmann’s phenomenological sociology, Harold Garfinkel’s ethnomethodology, and Jürgen Habermas’s theory of communicative action. However, Weber himself, who lived during the formative period of the German nation-state, had consciously avoided the hyponatatization of speech community linked to the idea of a natural language. He embraced the universality of the Western civil-society, and shaped his theory on the principle of individualism. For him, a speech community prior to individuals was only superficial. The method of understanding that he proposed was based on the rational calculability. The idea of an intersubjectively shared language cannot be axiomatic, because intersubjectivity, as pointed out by Niklas Luhmann, is incompatible with subjectivity. Even when the same language is shared by people, the language of the majority that creates a macro-association amongst people is based on its standardization by a nation-state. A linguistic sociol that presupposes the sharing of language is possible only in the assumption of a “nation-society” by methodological nationalism. Hence, it is debatable whether a nationally constructed language can be given the status of a natural language of the life-world. Historically, the theoretical idea of sharing a language was in prevalence during the cold war period, when nation-states were relatively stable. In sociological theories, language is one of the zombie categories that carry the residue of such “nation-societies.”

**Recovery or Redevelopment: An Examination of the Long-Term Socio-Spatial Transformation of Earthquake-Affected Neighbourhoods in Bhuji**

This paper examines long-term socio-spatial transformation of historical urban neighbourhoods in the earthquake-affected city of Bhuji. The research draws upon archival review and field data collection in this city ten years after the massive earthquake of 2001. The paper first examines the recovery programme and plans for reconstruction at different scales of city, neighbourhood and individual buildings, with a particular attention to housing reconstruction policies. It then encounters changes in the built environment of two neighbourhoods in the old fabric of the city across time; from the pre-earthquake condition, to the disaster time and ten years after it. Changes in the social environment of these neighbourhoods are investigated through the examination of interviews with the pre-earthquake residents of the two neighbourhoods. The juxtaposition of the narratives of those who stayed in the neighbourhood and those who opted or had to leave it demonstrates the contested meanings of recovery. The paper discusses how socio-economic trends, the disaster and its impacts, as well as post-disaster interventions of different actors played a role in such transformation. It is discussed how these influences are manifested in the still changing built environment and how these manifestations are in turn perceived by the residents of the two neighbourhoods. The paper concludes by drawing lessons from this case study to inform future urban planning efforts following major urban disasters.

**Negotiating Identity Performance in the Canadian Forces; Soldiers and Stereotypes**

A new security paradigm has driven an expansion in the roles of women in warfare; female soldiers are becoming an increasingly valuable asset in counter insurgency tactics. Female soldiers are uniquely suited to penetrating the private spheres of traditional authoritarian societies, and remain the only means by which females-of-interest can be apprehended while still respecting the cultural mores of the host state. However, this line of reasoning begs the question: If the military is relying on a social construction, in what ways is military subculture influencing it? I explored this question using theories of gender politics advanced by Judith Butler to frame interviews I conducted in 2011 with Canadian combat arms soldiers recently deployed to Afghanistan. The excerpts from these interviews focus on the soldiers’ recollections of female soldiers in active duty from the perspective of their male and female colleagues. The interviews illustrate that the space permitted for female soldiers to express their identity remains artificially bound by stereotypes concerning their physiological and psychological aptitude. More broadly, this adaptation of Butler’s classic framework suggests that an ideal female gender performance is discursively incompatible with the ideal soldier identity performance.
Perhaps the most underdetermined influence on the latest generation of Canadians is the impact of technology on Millennials’ intellect and interaction. While some scholars advocate for increased integration of technology into personnel training and communication, others warn against the potential for the dissemination of privileged CF information. This tension is not easily allayed by statistical evidence on Millennials’ use of technology; studies reveal that Millennials are nearly as likely to abuse technology as they are to use it effectively. Like other epochal transformations, the advance of technology is ineluctable. The Canadian Forces must prepare for the integration of a generation who has fully integrated modern technology into their day-to-day operations. Not only has technology re-shaped the methods that Millennials use to execute tasks and communicate, but it has profoundly reshaped their cognitive abilities, their expectations of experience and their access to information. The trouble arises when the ambitions of the programs exceed the awareness of the users; prompting crises in privacy and security. This review examines available literature on Millennials to disaggregate the programs’ attitude from vigilance to trust towards the sports betting industry. It looks to highlight promising areas where technology can alleviate challenges in organization and communication, and suggests areas where technology poses a threat to privacy and security.

The Meaning of Urban River Pollution and Sense of Place: An Ethnographic Study of the Klang River, Malaysia

This paper is based on a PhD research, which investigates values, beliefs and practices associated with two polluted rivers in urban settings – the Klang River in Kuala Lumpur, Malaysia, and the Torrens River, South Australia. However, this paper focuses on the findings from the Klang River ethnographic data. Theoretically, the concept of place is central to this paper. Findings suggest that in the urban settings where rivers have increasingly been polluted and modified, and as a consequence whose water is not suitable for direct contact, the visual faculty plays a prominent role in determining the state of the river. From the perspective of everyday users, what constitutes pollution depends significantly on what can and what cannot be seen with naked eyes. In particular, objects (such as rubbish) intermingling with river water, the colour and texture of water, the decline or abundance of aquatic species in the river are some of the common visual experiences described by the locals as indicative of pollution. What emerges is that local people have a broad conceptualization of river pollution. The values of a healthy river flow into their daily life and the physical environment surrounding it. Specifically, the concrete grey walls and straightening of the Klang River for flood mitigation schemes and transportation routes were viewed by the local people as a form of pollution. They expressed a deep concern regarding the physical transformation and modifications of the surrounding riverscape from ‘natural’ to ‘unnatural’, which consequently affect their visual experiences and overall sense of place. In conclusion, the concept of place is central to this paper. It is a useful means to understand and analyse the manner in which people comprehend environmental degradation and more specifically river pollution.

Betting with the Enemy: Changes in Sports’ Attitude Towards Sports Betting

Match-fixing in sport has emerged as a serious and widespread global problem. However, international sports organisations have tended to adopt an ambivalent position towards the issue. One the one hand, they deal sternly with match-fixing itself as seen in their common ‘zero-tolerance’ policy. On the other hand, the sports betting industry that brings about match-fixing has now been accepted as a reliable business partner. These conflicting approaches to match-fixing and sports betting industry frame match-fixing as a matter of individuals’ morality and ethics, instead of structural aspects that drive individual players to becoming involved in match-fixing. Interestingly, this dramatic shift in sports organisations’ attitude from vigilance to trust towards the sports betting industry appears to have been driven by monetary motivations. As FIFA President Sepp Blatter stated, “match-fixing” because “we need Toto and football to raise money for the sport”. This presentation briefly discusses various measures that international sports organisations are currently adopting to tackle sports betting along with the limitations of these measures. While in the early 19th century the football association in England struggled to protect their sport and players from dangers of the betting industry, this presentation raises a question whether today international sports organisations try to protect their business partners including licensed bookmakers from non-partners such as players in danger.

On the Function of “Symbolic Media” in the Process of Functional Differentiation

It is one of the most important contributions which Niklas Luhmann has made toward the thesis of functionally differentiated society to indicate the roles of “symbolic media” in concrete temporal events of common life. Medium/Form-distinction is the theoretical device introduced by Luhmann for the purpose of analysis of function-forming in autopoietic and information processing systems (including meaning-processing communicative ones). In short, it is necessary for meaning-processing systems in general, communication systems in particular, that they constitute any appropriate distinction between Medium and Form and symbolize objects in the environment as Forms through Medium to operate and observe them.

We focus on this distinction of Medium/Form. This presentation shows how Forms in Luhmann’s terms, which mean distinctions with asymmetry between the inside and the outside, are used as symbols in the self-reproduction of the communication in which they are adopted. And we deal with “health as symbolic media” for an instance so as to elucidate the significance of this theoretical device for empirical researches. In concrete terms, we will take up a case study about care work for people with physical disabilities in Japan in order to scrutinize the validity and the applicability of the thesis of functional differentiation in Luhmann’s theory. It shall be confirmed that various kinds of Forms employed as symbols are so connected with “health as symbolic media” as to allow the emergence and the self-reproduction of the functionally specific care work of health.

Integration and Segregation - Teachers’ Attitudes Toward Ethnic Culture and Identity of Immigrant Children in Japan –

This paper investigates how the Japanese schoolteachers think about immigrant children’s ethnic identity and culture by conducting interviews with the twenty-five schoolteachers for immigrant children in Tokyo. For the immigrant children, school is the first-entrance to Japanese society. It plays a significantly important role to determine how they participate in Japanese society and in what manner. Cultural aspect and social aspect, both in cultural aspect and social aspect, strongly interact with each other. The interaction is under the name of “the students in the city” or “students in the city”.

This case study provides a valuable insight into the discussion of immigrant integration and multiculturalism. I discuss how the theory of multiculturalism is interpreted by the ethnic majority in a society where they recognize the different dimensions of culture and national identity is strongly ethnic and cultural, but not civic.

A Shortage of Medical Doctors Due to Uneven-Distribution in Location and Specialty Needs Interprofessional Collaborative Practice in Health and Social Care in Japan

A shortage of medical doctors has been pointed out in last 20 years in Japan, but it has been more apparent after 2009, when two more years of a new compulsory clinical training added, after six years of medical education and successfully passed the medical licensure examination in Japan. A number of practising doctors per 1,000 population in 2009 was as follows: Norway 4.0, Germany 3.6, OECD 3.1, UK 2.7, USA 2.4, Japan 2.2, Turkey 1.6 and Chile 1.0. The highest number per 100,000 was 286.2 in Kyoto and the lowest 142.6 in Saitama, in 2009. Causes of the shortage in Japan were as follows: advancement of medical science, specialization of health and social care professionals, increase to participate in private practice, increase of woman doctors, longer time to talk with patients, change of patients’ consciousness to right, concentration of doctors to cities, decrease of practising doctors in pediatrics, and obstetrics.

Meanwhile, average life expectancy has extended as follows: 1921-1925: m 42.06, f 43.20; 1947: m 50.06, f 53.96; 1960: m 63.32, f 70.16 and 2012: m 79.94, f 86.41 (years).
Various needs of elderly people in health and social care could not be solved by a single profession, such as medical doctors. Many symptoms in health care occurred in the elderly, such as senile dementia, metabolic syndrome, hemiplegia, dysphagia, fragility fracture and dysuria, could be better treated by a team of multiprofessionals. Health care outcome such as average and/or healthy life expectancies may not be always correlated with a number of doctors.

In order to improve QOL of service users, a paradigm shift is needed in strengthening competencies of health and social care professionals for interprofessional collaborative practice, to develop a comprehensive health care network within a community, consisting of three community-based powers on health care, welfare and education.

Method: We conducted a semi-structured qualitative study in 2013. The interviewees were 23 married men, who were volunteers, and 28-58 years old. Twelve men lived in Niigata, 5 in Hyogo and 6 in Kagoshima. The majority of them were members of the Japanese Trade Union Confederation and participated in our questionnaire survey in 2012. The rest interviewees were recruited through the personal relationships of the first author.

Results: We have identified a few of new factors to promote the household work participation of married men in Japan. A married man would have positive intention to participate in the household work, if he thinks as follows: he could take the power to decide the principles of his family life (modern patriarchal hypothesis); he could manage the household economy (family economy management hypothesis); and he has clear memories of the experiences in home economics education classes (home economics education hypothesis). In the near future, we will look into these hypotheses by analyzing the data of questionnaire survey in 2012.

* This study was partly supported by Health Labour Sciences Research Grant of Japan in 2012 and 2013. Dr. Ayako Kuramoto, Kagoshima Prefectural College, is a member of this study.

### Women’s Reversion-to-Japan Movement in Okinawa

**TAKAHASHI, JUNKO*** (Niigata University, junko-t@kc4.so-net.ne.jp)

**Women's Reversion-to-Japan Movement in Okinawa**

This paper considers women’s reversion-to-Japan Movement in Okinawa in the era of U.S. military occupation from 1945 to 1972.

The fact that women supported that “all Okinawa movement” with the number of mobilization is seldom known.

In Okinawan society, under the collective war, the women, and the children, took the field, how they mobilized, and how they lived after the reversion?

Are there experiences, the feature, and a meaning unique to women?

I think the viewpoint of gender is indispensable to consider overall structures of the movement and the community in Okinawa, although it has not been paid enough attention.

For that purpose, I have conducted document analyses and interviews about female teachers. I paid attention to relations between the United States, Japan, and Okinawa, and also to those between men and women.

**Rise of Renewed Mobilization Strategies Beyond Imperialism in the NGO World**

Conventional paradigm in the arena of international development has been challenged along with the growth of civil society in the third world. In the pre-dominant model, the balance of power among non-governmental organizations (NGOs) is typically prescribed by traditional North-South relations. Northern entities, which possess an abundant supply of resources, hold hegemony over their Southern counterparts in the decision-making processes. Even in the NGO world where people strive to ensure social equity and political equality across borders, the formation of hierarchy has been justified under the name of aid assistance.

In other words, the legacy of colonial imperialism still persists due to continuing influences of international NGOs in the Global North. However, a recent phenomenon has substantially proved that Southern NGOs attempt to overcome such a subordinate socio-political positioning, becoming an alternative node of mobilizing financial as well as human resources. In addition, those emerging organizations are getting further eager to develop their global operations, which contribute to opening up a renewed horizon of south-south cooperation at the grassroots level. This tendency indicates that what is called as international NGOs is no longer defined simply by geopolitical conditions in the history. In order to strengthen fiscal foundations toward global expansion, NGOs in developing countries are required to seek methods different from traditional ones: raising the amounts of donations/grants. To name a few, innovative schemes pursued by these organizations are fostering and utilizing social entrepreneurs to increase operational profits. To name a few, innovative schemes pursued by these organizations are fostering and utilizing social entrepreneurs to increase operational profits. To name a few, innovative schemes pursued by these organizations are fostering and utilizing social entrepreneurs to increase operational profits.

Face-to-face interviews with Japanese men with children under 13 years old, mainly working for Japanese enterprises in Netherlands (13 persons), Germany (13 persons) and Sweden (10 persons) were held in August-September 2013. The preliminary analysis shows that the different social institutional settings seem to have enhanced their WFB: the majority of the interviewees report that they have more time to spend with their family and with themselves than they did in Japan.

**Re-Discovering Children As Social Actor in Conflicting Close Relationships in Contemporary Japan**

This research aims to explore possibilities of children to be re-discovered as social actor particularly in advert circumstances caused by conflicting family relationships. The Japanese family law as part of Civil Code has recently been modified, and since April 2012 post-divorce life of children has also been influenced by this family law reform. Even though contact to child by non-resident parent is regarded as one of the children’s rights, children’s wishes and will are not always sufficiently considered when the question is a high conflict case so that family court is asked to make a decision either by judge’s decision or court mediation. Bearing in mind such court practice in Japan, it will be studied how children have been recognized in Japanese legal debate by analyzing relevant research literature. This legal aspect on child will further be analyzed through contrast to discourse on childhood among Japanese sociologists of childhood. The second part of this paper will address the discrepancy between normative views and realities of gender equality concerning parental responsibilities for child rearing in contemporary Japan. In a sense, family policy in Japan holds strong tension between promotion of gender equality and recognition of children as social actor - rather than passive object under parental authority. It would be argued that children as social actor need urgently be re-discovered in order to improve safety of children’s life and development regardless of their relationship with parents.

Social Quality in Cross-Cultural Media and Public Debates: Implications for Public Policy for Social Empowerment

This research begins a discussion by examining distinctive features with Japanese discourse on quality of life addressed by decision-makers of public policy. It will be questioned how the media and public debates have addressed the safety and quality of life in post-3.11 Japan. The main focus of this research is on various ways of manifesting citizens’ well-being, including freedom from violence in private life, as a point of start of social empowerment. In the post 3.11 world it seems more important to take into consideration the intersectionality of various factors concerning social quality, whenever we attempt to seek proper public policy response for nurturing social empowerment. It will be studied which social indicators have been referred to and/or ignored by Japanese media, and in which manners non-Japanese media has been approaching the issues on well-being. In domestic debates Japanese media and governments tend to be selective with data sources and indicators, excluding substantial among of information on those risks and issues such as radiation risks, well-being of vulnerable citizens as well as transparency in decision-making, i.e. governance risk. In brief, this research will ultimately attempt to enhance our understanding on scientific relevance of comparative studies of social quality and empowerment.

Peter Singer and the “Why be Moral” Problem

The aim of this presentation is to point out the fatal flaw in Peter Singer’s thinking by analyzing his discussion about the “Why be moral” problem. Peter Singer is one of the most influential ethicists today. He studies theoretical ethics and also engages in social practices in order to address moral issues like animal rights, bioethics, environment problems, etc. The “Why be moral” problem has been one of the topics he is passionate about since his master’s thesis. “Why be moral?” has two meanings: “Why should we be moral?” and “Why should I be moral?” The former means, “Why do societies need moralities?” The latter means, “If societies need moralities, why should I accept them?” This problem is connected with the discussions about civil societies because it also asks us whether civil societies are necessary.

Ethicists submit some valid answers to the former question but no ethicists have submitted answers to the latter. Peter Singer tries to answer the latter. In his opinion, the ethical life is better than the unethical life because ethical people can realize the consistent meaning of their life but unethical people can’t. In other words, ethical people are happier than unethical people. So we, individuals, should be moral. This answer is invalid. For example, there are people who are satisfied with being egoistic. Therefore he fails to solve the problem. This is the fatal flaw in his argument.

Some say trying to solve the “Why be moral” problem is nonsense, worthless or useless. In fact, even though we don’t solve the problem, we can do many social practices. Nevertheless, solving it is important for Singer because his opinion is too radical to accept for ordinary people. That Singer doesn’t solve the problem becomes an excuse for people not to act morally.

TAKAHASHI, RYOKO* (Kanazawa University, takahasi@staff.kanazawa-u.ac.jp)

Increased Involvement of the Disabled in Welfare Policymaking

There is increasing emphasis on participation by disabled people themselves in the process of formulating policies for the disabled, both in Japan and abroad. One of the most recent examples of this trend took place in Japan; in 2010 the government set up the “Committee for Disability Policy Reform”, forming it in such a way that more than half of the members were directly concerned with the issue (people with disabilities and/or their family members), to discuss reformation of policies for the disabled, and to develop dialogue and cooperation with them.

The aim of this report is to identify the conditions for successful advocacy that promotes the participation of disabled people in the field of welfare policymaking. I will review and compare the advocacy of organizations consisting of disabled people in reference to Esping-Andersen’s welfare regime typology. The discussion covers the organizations’ history, fundraising strategies, ways of participating in the policymaking process, relationship to the government, as well as their role and influence.

My research results are as follows; disability organizations are actively participating in policymaking both in the Scandinavian countries, classified into the social-democratic regime, and in the United States, the liberal regime. However, there is a difference between the two cooperative relationships with the government: in Scandinavia, welfare policymaking is carried out with strong support from the government, and thus always runs smoothly. In the United States, on the other hand, it is often carried out amid a tense relationship with the federal or state government, and because of this, there are cases in which it is not smooth. I will add analyses of Japanese cases classified into the conservative regime, and examine the universal conditions and problems requiring distinctive solutions that can be found through the participation of the disabled in every country.
Policy makers such as European Commission, UK, and Japan are now interested in happiness as a policy tool. Happiness is normally measured by a likert scale. The comparison of happiness scale needs common understanding of happiness. However, happiness distribution can be classified into three types: normal, skewed and twin-peak. For example, the distributions in Japan and Hungary are of the second type. This implies that individuals have different reference points culturally. The reference points were tested to apply question about ideal happiness. Some may refer to 100% happiness, but the other may refer to 50% happiness and 50% unhappiness.

Quantitative survey was conducted in Japan, Thailand and Philippines. It included questions about their current happiness on a 0-10 scale and ideal happiness. Adjusted by ideal happiness, the distribution was skewed distribution similar to Nordic countries. The survey's result confirmed that distribution of happiness embodied the difference of ideal happiness.

TAKAHASHI, YOSHIKAI* (University of Tsukuba, ytaka2001@hotmail.co.jp)

Others' Happiness: New Evidence from Four Asian Countries

If individual pursuit of happiness forced others' happiness to lower, happiness would not be a good concept to evaluate the progress of a society. We can call the society a "selfish happiness society". However, if happiness is more interpersonal, the balance between pursuit of individual happiness and other person's happiness may make society lead good direction. In particular, we now face many issues related to interpersonal happiness. Balance between economy, society, and environment and balance between current generation and future generations are keys for our survival. We can call the society a "social happiness society". Thus, the concept of "social happiness" is much more important in our society. However, effect of a person's perception about her own happiness and others' happiness on her happiness is not clear. Therefore, it is worthwhile for us to explore if a person who takes care of or pays attention to others' happiness is happier. I analyzed the relationship by using a survey in Japan and confirmed that other person's happiness makes us happy (Takahashi, 2012).

Similar to the survey in Japan, surveys conducted in Thailand and Philippines in 2013 included questions about general happiness and interpersonal happiness. Using these dataset, the author can test this interrelationship between individual happiness and other person's happiness. Even after controlling other important factors such as age, income, job and marital status, it is reported that those around her were happy and she made those who were most important to her happy are happier than others. From the result, the author can conclude that other person's happiness makes us happy at least in Asian countries.

TAKAKU, SEJI** (Soka University of America, stokaku@soka.edu)

Identifying and Reducing The Anti-Japanese Prejudice By Koreans In Job Hiring Decisions

We investigated the level of prejudice that contemporary Koreans hold toward contemporary Japanese because of the Japanese military's victimization of Koreans during the war and social psychological mechanisms that might alleviate the negative feelings and attitudes held by the contemporary Koreans toward the contemporary Japanese. The Korean participants were asked to evaluate a pseudo-job candidate for a position at an IT company upon reading his resume and watching a video clip of his job interview. The ethnicity and language ability of the candidate were manipulated to see if these manipulations would affect the participants' responses. Based on theories of intergroup conflict, social identity, and the collective guilt assignment, we hypothesized that: 1) the Korean participants would endorse the Japanese candidate more when he is portrayed as a trilingual (speak Japanese, English, and Korean) than when he is portrayed as a bilingual (speak only Japanese and English) and 2) the more collective guilt the Korean participants assigns to the Japanese candidate, the more negatively the candidate would be perceived in terms of his personality, which would result in less endorsement to hire the candidate. The results confirmed the hypotheses. Possible implications and suggestions for future studies are discussed.

TAKALA, MERVI* (Finnish Centre for Pensions, mervi.takala@etk.fi)

Loss of a Spouse As a Poverty Risk

The death of a spouse is one of the most stressful changes in one's life. Spouse's death increases the morbidity as well as mortality of widows and widowers. The explanation is the lack of social support because the family is generally regarded as a primary source of support. One important aspect is also what happens to the income after the death of a family breadwinner. All these three factors - physical, psycho-social and financial - have a substantial impact in widows and widowers wellbeing.

In Finland after the death of a family breadwinner the income of the surviving family members consists of widow's and orphan's pension. The initial pension and the basic amount of the orphan's pension paid from the national pension scheme are paid regardless of income. The survivors' pension paid from the earnings-related pension scheme comprises the surviving spouse's pension and the orphan's pension. A child of the deceased will receive an orphan's pension until the age of 18. The survivor's pension act came into force in 1967 in earnings related pension system in national pension in 1969. Both were reformed last in 1990.

In this study we use register data of statutory pensions. Roughly 282,000 people were paid survivors' pension at the end of 2012, of which 261,000 were widows or widowers and 21,000 were children. Men's share of the pensions is 17 percent. Most of the surviving spouse's pension recipients are women over the age of 65. Also widowers are mostly old. The poverty risk of widows and widowers is high, of those who draw old-age pension 38 per cent live under poverty line whereas of all pensioners under poverty line live 22 per cent. Right after spousal loss the income in family decreases about 20 per cent compared to pre-loss income.

TAKAMARU, RIKAI* (Ochanomizu University, kelinci.ruru@gmail.com)

Social Networks and Conjugal Interaction in Japanese Expatriate Families

International assignment of Japanese businessmen has been expanding in corporate career management system most during the 1980s by reason of the rapidly-expanding economy in Japan. That career management system was only for men's status position until the Equal Employment Opportunity Law in 1999. Therefore from back then there are the norms of the expatriate housewife as caretaker of the family, not only she provides a comfortable home environment so that husband can concentrate on his job, but also entertains the corporate clients at Japanese style party.

The characteristic of Expatriate Family is the family who transferred abroad by assignment of the company, that is their social networks change radically every few years. Thus in the new and cross-culture land, the foreign conjugal have no choice but to rely on spouse each other.

In Japanese Expatriate Family research, much attention has paid on gender perspective and wives' career development, even though there are few studies focusing on conjugal interaction. This research investigates how expatriate conjugal forms social networks in overseas focusing their relationship, cognition of belonging to the corporation and family resource effects.

A questionnaire survey was conducted in advance to expatriate housewives, based on which semi-structured interviews were conducted. The data used to a case-code matrix through constant comparison.

This study found that Japanese Expatriate Housewives experience three phases as the process of the friendship network formation. At the first phase, wives need husband's company tie to adjust new-life, and from the second phase to third phase, wives share their partner with the association which creates themselves networks.

In the presentation, I will report the interviews data which carry out the expatriate couples every 3 to 4 months.

A Comparative Study of the Effects of English Language Proficiency on Wages in Japan and France

The purpose of this study is to compare the effects of English language proficiency on wages in Japan and France.

Many Japanese women have been learning English in the hope of finding jobs which require communicating in English. Such women have abandoned the idea of careers with Japanese firms, where women are entrusted only with jobs that carry little esteem. These women also have strong affinity for Western culture. In Japan, women have had the choice but to rely on spouse each other.

In this study, we use register data of statutory pensions. Roughly 282,000 people were paid survivors' pension at the end of 2012, of which 261,000 were widows or widowers and 21,000 were children. Men's share of the pensions is 17 percent. Most of the surviving spouse's pension recipients are women over the age of 65. Also widowers are mostly old. The poverty risk of widows and widowers is high, of those who draw old-age pension 38 per cent live under poverty line whereas of all pensioners under poverty line live 22 per cent. Right after spousal loss the income in family decreases about 20 per cent compared to pre-loss income.

Association As a Tool or As a Principle?: The Reception and Usage of the Concept of the Association in Postwar Japanese Modernization Theory

How the association could be legitimized was a key question for French Sociology, because the French Revolution prohibited not only old corporations but also new voluntary associations in order to establish a Modern Society. For some sociologists, "Association" was theorized as an alternative to market society, for some legal scholars, the state was defined as a contract of association, in order to submit State Power to Civil Society’s control. In either case, the basic principle of association was the union of different peoples to accomplish their common purpose.

Comparing the French case, this paper focuses on the place of the association in Japanese Modernization Theory. This theory stressed the liberation of individuals from traditional ties, rather than Civil Society’s independence from the State. As a result, first, the association was understood as one type of secondary group, which is contrasted with the local bonding community, and not as a principle for the society as a whole.

Second, the association was not considered to contribute to the Modernization Process in Japan. Modernization took the form of individualization in the free Market Society.

Today, Japanese society has been thoroughly modernized in that sense; individuals are free from tradition and customs. Paradoxically, engagement with local community activities has been revalorized and is considered to be an individual choice. Tradition became one of the resources that create the voluntary associational relationship.

These situations seem similar to Giddens’ “Reflexive Modernity” in appearance. However, today the Japanese regard the association as a tool for solving problems, not as a principle of society that unifies different peoples for the good of the commonwealth. Retracing this history, we would like to critically examine why we have understood the association as a tool, rather than as a principle, and how this understanding affects today’s policy.

Transitional Pathway from a Temporary Migrant Worker to a Permanent Resident: Narratives of Filipina Live-in Caregivers in Canada

With the rapid growth of the Tagalog (Filipino) speaking population, recent demographics in Canada has been directly affected by the pattern of global female migration and the subsequent arrival of these women's family members. In particular, a specific foreign temporary worker program, known as the Live-in Caregiver Program or LCP, explains the current population growth of this visible minority. More than 80 percent of the migrant workers registered under the LCP are females from the Philippines. Furthermore, the LCP grants these female migrant workers the opportunity to apply for permanent residency and to bring their families to Canada after fulfilling a 24 months live-in working requirement. The LCP is the only temporary foreign worker program that has this legal pathway toward permanent residency in Canada.

This study aims to understand the social constraints on female migrant workers through examining everyday experience of Filipina live-in caregivers in Canada. The paper particularly focuses on the transitional legal pathway from temporary to permanent residency. The study of the transitional pathway of migrant workers uncovers the social process of inclusion and exclusion of migrant workers and their family members by states. Furthermore, this social process is highly gendered and racialized experience because vast majority of the applicants under the LCP are females from the Philippines.

The Nagano Olympics: Impacts on Local Community

This study aims at demonstrating the impacts of Sport Mega-Events (SMEs). In Japan, some studies on environmental or fiscal impacts caused by SMEs have been studied. However, few studies address the concrete impacts in a specific area and local community, nor try to investigate the long-lasting effects.

In recent years, the International Olympic Committee (IOC) has attached a high value to ‘Olympic legacies’. However, there are two main concerns regarding the IOC ‘Olympic legacies’. First, these legacies are mostly based on positive effects for the host city/nation, the National Olympic Committee (NOC), other sport-related organizations, and for the IOC itself. Secondly, the ‘Olympic Games Global Impact’ project, launched by the IOC in order to improve the evaluation of the overall impacts is completed within 2 years of the event, and is much too soon to measure the legacy. This study argues that it is important to conduct research for a prolonged period of time in order to capture not only the positive aftereffects of SMEs but also to address negative aspects thereby ensuring a more complete understanding.

This study evaluates different aspects of SME impacts through a case study of Hakuba village (Japan) which hosted the Nagano Olympic Games in 1998, and the Olympic Games in 2010. The research examines positive/negative and planned/unplanned impacts. Especially, the impacts on the tourism industry of Hakuba are discussed in detail. The analysis in this study is based on the questionnaires and interviews conducted with people from the community itself and on a variety of statistical data.
This paper examines the changes in the irregular migrants’ situation in Japan and argues that the securitization of migrants’ situation has led to highlight the effects of sovereignty, which makes irregular migrants vulnerable.

Giorgio Agamben (1998) theorized that biopolitics, as a function of sovereignty, operates to define the included and the excluded, the latter of which is called “bare life.” Some studies regard irregular migrants who are legally excluded as living in a contemporary “bare life.” However, other studies have criticized Agamben’s argument that emphasizes legal criteria in arguing biopolitics in the geopolitical and historical contexts. Following these studies, this study explores the case of irregular migrants in Japan.

Irregular migrants began to attract broader public attention in the late 1980s. Generally, Japanese citizens did not initially have negative attitudes toward them. Despite their lack of legal status, they were included in society according to various criteria such as the moral economy of society or international norms, becoming a labor shortage and Japan’s self-recognition as a powerful nation at the time.

However, since around the turn of the century, reactions to irregular migrants have dramatically changed. Their presence has been linked to security issues, and they have come to be regarded as “criminals.” Immigration authorities collaborated with the police in launching a large-scale crackdown, which endangered the daily lives of irregular migrants. At the same time, however, the legalization of irregular migrants was promoted based on moral values. At present, sovereignty, connected with moral values, mainly defines the included and the excluded among irregular migrants.

Thus, changes in the situation of irregular migrants in the last two decades in Japan show that the substantial effects of sovereignty can vary over time and according to the circumstances in which it operates.

This paper examines how Kurdish musicians have utilized the opportunities in Japan and argues that the securitization of migrants has led to highlight the effects of sovereignty, which makes irregular migrants vulnerable.

As Karl Polanyi pointed out, the reproduction of human beings and society is external to the liberal capitalist economic system. At the same time, the multi-dimensional reproductive activities (biological reproduction, economic reproduction and socio-political reproduction) are vital to the maintenance and development of the capitalist economy. The dilemma posed by the contradictory relationship between reproduction and capitalist economy had long been dealt with by mobilizing families and local communities, officially or unofficially, within each national economy. States have often played a vital role in the institutionalization of the link between reproduction and capitalist economy by locating families and communities within the national economy, in other words, governing reproductive activities, as exemplified by the setting-up of the welfare state system. Economic restructuring influenced by neoliberal principles in recent years, however, has eroded the foundation on which families and local communities can function as a reproductive unit.

The paper explores the theoretical question regarding the contradictory relationship between reproduction and capitalist economy, that is, how the governance of reproduction functions in the process of developing and maintaining capitalist economies, with reference to the works of Polanyi and the ‘governmentality’ school. The analysis of the Japanese case offers some insights that illuminate inherent problems existing in the governance of reproduction embedded in governmentality.

This research focuses on the developing process of the local food culture in Germany. Immigration from developing countries to Europe is often experienced not only as a social downward mobility but also as a cultural deprivation. In the context of Turkish migrant in European countries, their musical activities have drawn attention as strategies in discrimination: effort for transmitting cultures to the next generation and in informal spheres, where indigenous European people are rarely to be found. The research will consider this flow of Austrians to Niseko and its impacts on the local community through different theoretical concepts and ideas, as well as the significance of such community under the nexus of Australia and Japan.

This action was a response to the following two types:

(1) Enforcement of “municipal regulations for controlling vacant houses”

In 2010, Japan’s first municipal regulation against vacant houses was enforced in a city of suburban area of Metropolitan Tokyo. This action was a response to an increase in the number of destroyed houses. More than 40 cities have enforced similar regulations since then, and the number is further increasing. This tendency is especially prominent in local governments facing severe economic conditions, suggesting that how to control vacant houses has been a potential problem. Main actors are local governments and the house owners. More specifically, who bears the demolition costs of aging houses is the point.

(2) Management of “vacant-house banks”

It is a challenge to local governments to introduce vacant houses, which have not been valued in private housing markets, to public information networks to promote their effective use. There are various types in the management of “vacant-house banks” by local authorities. Diverse actors including NPOs are involved in this type. Because renovation of vacant houses costs a large amount of money, those actors are seeking to form a partnership with each other and to explore efficient methods. Generally, not only reducing vacant house-associated risks but increasing values of local resources is aimed.

This research focuses on the developing process of the local food culture in central Tokyo. Regeneration of the central district promoted to develop the local food street and a local identity. The purpose of this research is to analyze how the urban regeneration deepened the local food culture.

TAKEDA, HIKO*/ (University of Tokyo, takeda@global.c.u-tokyo.ac.jp)

The Governance of Reproduction in Japan: How Can Reproduction Be Located within the Capitalist Economic System?

This study examines how Kurdish musicians have utilized the opportunities in Japan and argues that the securitization of migrants has led to highlight the effects of sovereignty, which makes irregular migrants vulnerable.
This research area called 'Tukishima' is located in the water-front area adjacent to the urban center. The Water-front mega-projects in the 1990's opened new large business/commercial district on the reclaimed island which attracts international and domestic tourists. The new subway lines were constructed through Tukishima, the number of tourists come to Tukishima increased. The traditional local shop owners in Tukishima changed their business, they opened special local food restaurants. This special local food called 'Monja'-used to be a common afternoon snack for working-class children here. About 60 Monja restaurants made the distinctive street of local food. Many tourists come to eat it at lunch time. After lunch they go sightseeing and shopping at the waterfront. Tukishima became a popular tourist spot. This is the first impact of urban regeneration on Tukishima.

The second impact of regeneration is the boom of building super high-rise condominium towers. Tukishima is very close to the business district both of urban center and the water-front, it became the area filled densely with high-rise condominium towers where professional service class live. Tukishima is gentrified, and new residents enjoy to eat Monja as a traditional local taste.

The third stage of regeneration is about to begin. Tokyo has been chosen to host the 2020 Summer Olympic Games. The venue is very close to Tukishima, high-rise tower residences can see games from their windows. The price of condominium goes up. Local food will be popular to visitors. The new era of Monja is about to start.

Challenges for Healthy Eating: A Cross-Cultural Study of Conceptions of Eating Among Young Adults in Urban Australia and Japan

In the early 21st century when bio-medical view on health and medicine dominates global discussion on “healthy eating”, most guidelines and recommendations are primarily concerned with fulfilling nutritional requirements and avoiding or limiting the intake of undesirable substances. They are motivated by the prevalence of chronic diseases such as cancer, cardiovascular diseases and obesity in modern society. Consequently, cultural ideologies around “healthy eating” are being constructed around these rationales. Beyond food intake, some studies and public health policies assert further that commensal eating (eating with others) encourages healthy eating behaviours such as eating slowly and consuming a variety of foods.

I argue that the bio-medical approach mentioned above is often individualistic and overlooks the social-cultural contexts of eating and living in a local community such as commensal eating, culinary culture, history, lifestyle, and food supply chain. I explore the construction of “healthy eating” among young adults in urban cities of Australia and Japan through 71 in-depth interviews conducted during 2012-2013. I examine holistic aspects of eating by including contextual aspects of commensal eating (eating with others). In contrast to previous literature, I find that the majority of participants see commensal eating as a good cultural practice and may associate it with mental health benefits, but that this practice is not necessarily associated with the healthy intake of food (portion size, pace and food content). This is due to the fact that commensal eating is rather complex and sensitive to social-cultural circumstances.

In conclusion, this study identifies dynamics of eating contexts in different cultures as challenges for healthy eating promotion in the modern society.

How Japanese Male Narratives Are Made up?

We have recently researched Japanese university students' sexual lives for a few years and published as a book in Nov. 2011: “talking about sex with college students: their truths and lies through their narratives for gay students’ sexual reality at the research and described how much they suffer from their lives. After the book published, I used that as a textbook in some universities. Then I happened to meet some gay students. The more I collected their narratives as a gay, the more I questioned why they so suffered from their sexuailty are...I noticed a paradox of the narratives as a gay or that of 'gender identity disorder'; the more they talk, the more they are suffered. I wish I could suggest some case studies of their narratives what is to against 'male narratives' from their words and why they suffered from such unimportant miss much from their identities.

Who Makes the Stories, Medical Professionals or Patients?

I am really interested in the arguments which should save patients more ‘narrative based medicine’ or ‘narratives in Medicine’? In my point of view, carers including medical professions should more focus on patients stories about their illness and life. When patients’ narratives are controlled by medical professionals, even if it had been for medical treatments, patients are controlled by others. That might means one's life is possibly controlled by medical stuffs which are strongly connected medical governance in their country. For instance, ones narratives about “How to die” or “how to give birth” should easily connected to economical point of view in one's country through the conversation with medical stuffs that are controlled by local systematic medical standards. I may contribute to your session as a small research-based argument rather than theoretical one. I have researched both alcoholics anonymous group and self help groups for mental illnesses in Hokkaido, Japan. Patient's narratives are strongly controlled by medical stuff indeed in Japan. This should be the result of 'Narrative Medicine' had been done in Japan. Then I happened to meet some gay students. The more I collected their narratives, the more they are suffered. I wish I could show you some case studies of strongly controlled narratives of patients though Japanese mental carers at a self help group. I will supply a small material for the argument who is to draw patient's narratives.

The Great Recession and Unemployment Among Brazilian Immigrants in Japan

The economic recession which occurred during the period from 2007 to 2010 led to a massive growth in unemployment among workers in many countries. Conversely, it is important to note that the gap in unemployment between immigrants and native-born population differ markedly across nations. In particular, in Spain and Portugal, unemployment rates among the foreign-born increased much more than those among the native-born whereas in several other countries, there were few divergences between these two groups with respect to unemployment growth over time. This cross-national variation appears to depend on institutional arrangements of the labour market structure, industrial relations and employment policies.

Japanese labour market has been characterised by a higher level of employment security for regular workers. However, increasing global economic competition has forced the labour market to become more flexible and has thus led to rapid growth in the number of non-standard workers. During this period, immigrant workers who came from Asia and Latin America have been incorporated into the sector of non-standard employment. They can be easily dismissed during the time of economic slowdown because of their nature of employment contract. In fact, many immigrants became unemployed during the recent financial crisis.

This study focuses primarily on Brazilian immigrants in Japan because Brazilian workers represent typical cases of the precarity of employment status among immigrants in Japan. Approximately 80 per cent of Brazilian workers have been employed as temporary workers by temporary help agencies. Because of that, the growth of unemployment after economic crisis was considerably greater among Brazilian workers than among Japanese workers. This study addresses the question which has been raised in various literature: what is the employment of Brazilian workers in Japan? I will investigate the effect of human capital and assimilation, employment status and industrial sector on their likelihood of unemployment during the economic crisis.

Sociology of an Immigrant Between Borderlines: An Intellectual Biography of Hiroshi Saito

This paper examines the intellectual biography of the Japanese-born sociologist Hiroshi Saito (1919-1983) by considering the dilemmas and impasses lived by him. Our goal is to explore the relationships between his personal trajectory and his academic work, mostly devoted to the subject of Japanese immigration in Brazil. As well as the majority of Japanese people who emigrated to this country in the first half of the twentieth century, he worked as a farmer in the cotton fields at the State of São Paulo. In search of better opportunities, Saito moved to the cap- ital city, where he became the already well-known professor Donald Pierson. He became the first Japanese immigrant to build a successful academic career in Brazilian sociology. The analysis focuses on the strategies he developed and the political positions he defended between the 1940s and the 1950s in order to confront both the political repression of Brazilian State, on one hand, and the Japanese ultranationalist groups, on the other. Moreover, we seek to demonstrate that the author played a crucial role for the institutionalization of the studies on the Japanese immigrants in Brazilian social sciences, being himself one of the pioneer researchers on this subject.
This study examines whether the difference of firm size influences job career of female Taiwanese using the Panel Study of Family Dynamics (PSFD) data. Previous studies show that majority of Taiwanese women continue their job without a long career break by marriage or childbirth. Well-known explanation for this is that the industrial structure composed of large number of small-and-medium sized enterprises (SMEs) and family business provide women with flexible working conditions. However, existing studies testing firm size effects on a woman’s career, have failed to reach a consistent result. To eliminate possible problems providing the inconsistencies, this study limits the objects of analysis to female employees with regular salary, excluding self-employed workers and workers of family business without payment. Also, previous studies usually treat job change and job turn over separately, but in this study those two actions are simultaneoulsy analyzed in a discrete-time multinomial logit model.

This study tests mainly two hypotheses: female workers in small sized firm are able to (1) enjoy flexible working conditions by negotiating with their employees and (2) accumulate better skills which are useful for a labor market than their counterparts in large firms are. Dependent variable is employment choice, which have 4 categories; “continue the same job”, “change job in SMEs firm”, “change job in large firm” and “leave from working”. Main independent variable is a dummy variable indicating working experience in SMEs and interaction terms SME dummy and event dummies standing for marriage and childbirth. The result indicates that women who have working experiences in SMEs are more likely to have uninterrupted working careers than those who have experiences in large-sized firms.

Jeunes, inégalités, Sens Du Changement Social

De quoi parle-t-on à propos de “changement social” lorsqu’on prend en compte la problématique des jeunes confrontés aux longs effets des inégalités sociales, dans la société brésilienne, mais qui sont dans un processus collectif actuel de changements surtout au plan subjectif (de leur collectif et/ou collectivité)? Changement d’attitudes quotidiennes en face de leurs propres situations précaires de vie et vis-à-vis des rapports sociaux qui rétrécissent toujours leurs possibilités de participation (économique, sociale, culturelle ou politique). Les multiples transformations à l’intérieur d’une société ont des effets différenciés sur les sujets sociaux selon la place qu’ils y occupent, raison pour laquelle le sens du changement social ne peut être défini qu’à partir des perspectives sociétales. Peut-on envisager une discussion sur le changement social et le processus de subjectivation (sens foucauldien) tout en considérant certains des effets inattendus liés au développement des réseaux sociaux appuyés sur les nouvelles technologies d’informations et de communications sociales? Peut-on réfléchir sur le changement social tout en s’affranchissant des concepts « classiques » de reproduction, déviance, antagonismes de classes… afin de permettre l’émergence dans le discours sociologique, et la conceptualisation d’autres modes d’existence sociale, d’autres espaces d’expérimentations, d’autres intensités de vie, d’autres modes de penser le monde ou d’autres modes de plier les lignes de force telle qu’une multitude en son essai d’une nouvelle économie affective où la subjectivité devient une puissance de vie (sens Deleuze et Tarde) ? Des collectifs jeunes, au Brésil, en leur essai d’expérimentations culturelles, artistiques et micropolitiques qui se déplient dans les « périphéries » brésiliennes, mais aussi certains « mouvements sociaux » où les principaux protagonistes sont des jeunes, depuis 2011 (’indig-nados; ‘occupy wall street’; ‘printemps arabes’, ‘révolte brésilienne-2013…’) sont les fondateurs empiriques de notre réflexion sur le sens du changement social à l’intérieur de l’imposante logique des inégalités sociales.

TAKIKAWA, HIROKI* (Tohoku University, takikawa@sal.tohoku.ac.jp)

A Mathematical Model of Status Hierarchy

The emergence of status hierarchy, defined as a social order that ranks individuals in society from top to bottom, is one of the main topics in sociology. Although many empirical studies on this topic have been conducted, the complete theoretical understanding of it remains lacking. In recent years, Gould proposed a groundbreaking theory of status hierarchy. Using game theory and social network theory, he showed that status hierarchy can be considered as a type of equilibrium when players assign attachments to all other players on the basis of their qualities. The major difficulty in Gould’s model, however, is the unwarranted assumption of limitless resources such as time and emotional costs that players must pay in executing their attachment strategies. Here we extend Gould’s model to be theoretically more coherent and empirically more valid by incorporating multidimensional choices for resource constraints. Unlike Gould’s model, in our model, a player choose only one allocation strategy as a multidimensional choice; that is, a player must determine the attachment levels for all the other players at the same time. Our main result is to show what is called “the relationality of social status”. Specifically, we show that an individual’s status is entirely determined by the individual’s relative quality in the social system. This observation contrasts with that of Gould’s model in which an individual’s status is dyadically determined. Our model can be considered as a type of network formation model having broad applicability.

Remembering and Resilience after Traumatic Social Loss: A Multicultural Perspective

A challenging realm for Global Sociology is the cross-cultural thinking and processing of the experiences of collective remembering after mass social trauma and post-traumatic resilience across cultures and generations. In this presentation we will develop a theoretical and applied multi-cultural framework for working on the intersubjectivity of memory, with a focus on the unprocessed dimension of social experiences of traumatic loss, building on the latent, private, intimate individual and cultural aspects of experiences of collective memory and transmission. We will also work on the concept -building on Hallwachsian work of “undercurrents of memory,” incorporating the more recent concept of “moral injury,” a contemporary development out of the post-traumatic stress literature.

This line of grounded theoretical research, developed by collaborative efforts by the authors over the last decade, explores the underlying conflicts of the unresolved past as they are woven into the fabric of contemporary cultures, the effects of unresolved experience lying in the undercurrents of collective memory, often excluded or absent from the public narratives of memory, but which paradoxically retain a profound intersubjective and cultural presence, until they finally push their way into the public realm. Social studies of collective memory need to include this realm of the unprocessed (latent but present) experiences and trajectories of social memory.

The authors will develop a joint conceptual approach to look at individual/community and cultural traumatic remembering, and the resilience of certain memories, over time. Applied research cases will include Southern Cone political authoritarianism, the Japanese American incarceration experience in the US as well as the Japanese memories of the 3.11. Great Tohoku Earthquake.

TALBOT, JOHN* (University of the West Indies, john.talbot@uwimona.edu.jm)

Food Regimes and Food Import Dependency: An Analysis of Jamaica’s Food Imports, 1950-2000

This paper uses food regime theory to analyze the changes in Jamaica’s food imports in order to explain how it became so heavily dependent on imported food. It argues that food regime theory has a bias toward production and food exports; it tends to focus on the drivers of the food regimes: First World states and transnational corporations, along with the New Agricultural Countries, the few developing countries that have become major players in the global food system (e.g., Brazil, South Africa, Thailand). To correct for this bias, we need to examine how small Third World countries are connected to the global food system through consumption and food imports. As food regimes evolve, their characteristic commodity complexes change. In turn, the types of foods imported by Third World countries also change. However, once a country becomes import dependent for a particular type of food commodity, it is very difficult to go back to self-sufficiency. Thus the evolution of food regimes creates a cumulative food import dependency for more and more kinds of food. One element of food regime theory which does focus on consumption and food imports into the Third World is the analysis of how the US PL480 “food aid” program changed Third World diets, undercut Third World agriculture, and created food import dependency. This paper expands on that analysis and uncovers additional mechanisms through which food regimes tend to create food import dependency in small Third World nations.

Chilean Universities, Crisis Ordinariness, and Respatializing Knowledge
University competition for international excellence centers faculty research productivity (measured by indexed publications, research citations, etc.), global rankings, and international recognition. This presentation analyzes internationalization and research development in Chilean universities as a spatial reorientation of faculty work, knowledge, and subjectivity. Since Pinchot's dictatorship, Chile's neoliberalism intensified everyday competition in a free market and declining welfare state. Following the regime's political repression, universities' knowledge alignment with popular subjects changed to creating practical, neutral knowledge through technocrats. More recently, Chilean university policy older turns to World Bank and OECD logics to increase research productivity and rankings.

I theorize globalization as a “spatial rationality” that attributes causal powers to space to create efficiency, utility, and normative ideas of “the good” that catalyze particular actions and subjectivities. Rhetorics of globalization’s economic demands and “the good” imposes rationality, norm, and towards rationality, norm, and towards rationality. This projects a threefold rationality. First, the economic rationality is the production and distribution of goods and services. Second, the political rationality is the exercise of power and control over human affairs. Third, the social rationality is the organization and development of human society. These threefold rationalities are interdependent and interrelated, and they shape human perceptions and behaviors.

This is not a simple narrative of research homogenization, domination, or resistance, but of how crisis ordinariness creates new spaces, subjectivities, and knowledges.

I Miss My Mum and Dad: Children's Well-Being and Parents' Job Migration In Estonia

Estonia is fastly developing country, which has experienced many societal and economic changes after regaining independence in 1991. Although there has been many positive developments, the global crises has influenced the lives of many people in Estonia. One of the most recent developments is a growing job migration out from Estonia. According to Statistics Estonia since 2010 the number of people migrating out of Estonia has been constantly increasing. Since 2012 it has been doubled in previous years. Negative net migration together with negative reproduction rate has been the main indicator influencing drop in population of such a small country. Another tendency that is poorly studied is the well-being of children whose parents have gone abroad. In some cases they are left with their children with them, but in relatively same number of cases they are leaving children behind with one parent or if mother and father both leave, other relatives take care of the children. There have been also cases where children are left just by themselves without any proper care, in some cases just older children taking care of their younger siblings. Aim of the current study is to analyze social and psychological well-being (life satisfaction, personal well-being and relationships in school and at home) in group of children who are left behind by one or more parents and to compare the findings with control group – children who are living together with their parents in Estonia. For the analysis most recent data is used from the Jacob's Foundation survey Children's World (data collected in autumn 2013). Altogether 3000 children from Estonia are studied, covering the ages 8, 10 and 12, around which is the most vulnerable age in sense of psychological and social attachment and challenges of growing up.

The Gender Gap in STEM Majors: Evidence on the Gender Belief Hypothesis from Taiwan

Why are women underrepresented in science, technology, engineering, and math (STEM) fields in college and work? Drawing on an unprecedented range of survey data with both Shauman (2003) rejected many common explanations (such as gender difference in math ability and the pipeline hypothesis) for the gender difference in college majors. Survey-based research has yet to explain much of the gender gap. Drawing on experimental studies, Ridgeway and Smith-Lovin (1999) develop a concept called cultural beliefs in gender (gender beliefs), using survey data to corroborate the experimental results, Correll (2001) argues that gender beliefs result in biased math self-assessment (BSA) and MSA explains why females are underrepresented in quantitative majors. Yet, upon close scrutiny, her results actually show that MSA is at best a minor source of the gender gap. Interestingly, Cech (2011) shows that professional role confidence, as a form of gender beliefs, can explain the gender gap in persistence through engineering majors in college. This seems to indicate the causal importance of some gendered cultural and psychological mechanisms may well be at play.

This study re-examines whether gender beliefs can explain why more men choose the science track at senior high school and STEM majors in college. We draw on the core panel of the Taiwan Education Panel Survey (TEPS), a large and representative sample of first year junior high school students in 2001. In general, students' gender beliefs early in high school explain a minor portion of the gender differences but parents' gender beliefs when children were early in high school explain substantially more—about a half of the gender gaps. Taken together, the two beliefs explain most of the gender differences and the residual gender gaps become insignificant. For the first time, then, survey-based results can provide a simple and direct confirmation of the gender belief hypothesis.

Pregnancy: Supporting Networks and Families in Disaster

The aim of this research is to analyze pregnancy in its social contexts: privatization and familism. In post WWII Japan, pregnancy has become privatized as a family issue. The disaster in 1995 and 2011 revealed us that there was much limitation of supporting system in these social contexts. My research is based on data as follows: (1) statistics on pregnancy, (2) relevant laws, (3) articles in professional journals, and (4) 10 interviews of women who were pregnant in disaster. My presentation is as follows: (1) To review development of laws that protect pregnant women in disaster as well as in peacetime for these twenty years in Japan, (2) To show what happened to pregnant women and their families in disaster, (3) To figure out a chain of caring support and women's power to change disaster into opportunities, (4) To point out further issues left to us, especially in Fukushima. In more concrete terms, I show invisibility of pregnant women in 1995, and then development of networks to support pregnant women and their families by the third sector since 2011. We can find a great deal of change in Eastern Japan Disaster in 2011, in comparison with Hanshin-Awaji Earthquake in 1995. The voices of women and babies in the disaster show us that they have become a turning point to support pregnancy beyond privatization and familism. On the other hand, Fukushima remains as a harsh reality for families and mothers especially with babies. The facts tell us the way we construct families and supportive networking as well as their limitations after disaster.

When Are Interviews Good Enough? A Reflection on Threats to Retrospective Methods Posed By Automaticity and Performativity

Research on respondent performance in the research setting and on automaticity, human cognition directly challenge the validity of interviews. Interviews, however, efficiently produce what looks like rich, relevant data and they are particularly appealing when studying complex work in difficult to research environments. This paper looks for evidence of the practical relevance of performativity and automaticity in transcripts of interviews with civilian and military staff just returned from their rotations in a reconstruction mission in a (post)conflict environment. Re-analysis of these interviews suggests that the validity of retrospective methods may degrade rapidly as complexity increases.

Symbols, Communicative Citizenship Actions and the Claiming of Human Rights from a Transnational Perspective: The Case of the Social Movement of Victims of Eastern Antioquia, Colombia

In this paper I would like to present the experience of two social movements of victims of Eastern Antioquia (Colombia – South America) that have been developing different types of communicative citizenship actions and symbols in order to do political activism in regional public spheres and claim human rights from a transnational perspective in the midst of the Colombian armed conflict. Specifically, I will focus on the experiences of the Association of Victims of Granada Town (ASO-VIDA) and The Provincial Association of Victims to Citizens (APROVICO), and how these two social movements of victims have been implementing transnationally their communicative citizenship actions and symbols as a reference other victims’ groups of the world such as Women in...
Therefore, the United States' State Children's Health Insurance Program (SCHIP) unemployments and urbanization rates within those prefectures. Big cities, such as Tokyo, offer a range of job opportunities; however, the cost of living is high and upward economic mobility is difficult, so many low-wage workers forego paying their insurance premiums. The number of uninsured children is a crucial issue. Therefore, the United States' State Children's Health Insurance Program (SCHIP) should be evaluated for its use in Japan.

There has been considerable works on the anthropology of Christianity relating conversion and its impacts to colonialism and consciousness (such as the important work of J. Comaroff) or simply to the success of missionary activities. Works on conversion of indigenous minorities generally relate to the religious politics of identity in relation to the majority people, as pointed out by most contributors in the volume edited by Charles Keyes on Christianity among the indig- enous peoples of Southeast Asia. There is often the tendency for conversion as a passive process on the part of the indigenous people. This paper will use the data from ethnographic research among the Badeng (a sub-group of Kenyah indigen- ous people) of Long Geng in Sarawak, Malaysia, to show how the “thinkers” and ordinary people have played major roles in actively engaged in conversion to Christianity in their negotiation with their encounter with modern changes that had reached their part of the world. In this respect religion and religious change are used as a kind of capital to negotiate with both traditions and modernity and to open up a way of adjusting to the changing world. Conversion provided the legitimacy to redefine traditions and even to remove some old practices, leading to the re-composing of ethnic identity.
An Intertemporal Comparative Analysis of Japanese Xenophobia Between 2009 and 2013

Japan is one of the most ethnic homogeneous countries in the world; however, Japan is also in the midst of rapid globalization with increasing numbers of foreign nationals living in Japan. Therefore the grassroots right-wing movements have spread and radicalized in recent years. But the causes and mechanisms of rapid growth of xenophobia in Japan remain unclarified.

The aim of this presentation is to reveal factors of xenophobic attitudes in Japan, especially the effect of social events. I analyze two survey datasets which were collected in 2009 and 2013 all over Japan. Between 2009 and 2013, Japan has experienced terrible diplomatic problems like Senkaku/Diaoyutai Islands dispute against China and also economic recovery seems to be caused by “Abenomics”. The hypotheses on relationship between social events and xenophobia are as below. The first one is the influence of “East Asian geopolitics” (Higuchi 2012) on Japanese xenophobia especially toward Chinese and Koreans. Japan has territorial disputes against China and Korea. There are also political debates on the understanding of history in the period of Second World War. This hypothesis assumes that those conflicts have negative effect on Japanese attitudes toward China and Korea. The second hypothesis is the realistic conflict theory (Sherif 1966 etc.). From this perspective, in the time of economic depression, competition between immigrants and native citizens over limited resources are intensified, therefore the negative feeling toward foreign residents are also escalated. If this theory is correct, the relations between respondents’ socio-economic status and xenophobia can be weaken from 2009 to 2013. Because in 2009 Japanese economy suffered in economic downturn precipitated by the Lehman Brothers bankruptcy, but “Abenomics” seems to show signs of economic recovery in 2013. I will confirm those hypotheses by using Multi-group Structural Equation Modeling.

An International Comparative Study on the Sport Development for People with Mental Health Problems in 5 Nations

Since the end of the 1980s, French Immigration Memory (mémoire de l’immigration) has gradually become visible in France. As a result of this process, the first immigration museum in France, Cité Nationale de l’Histoire de l’Immigration(CHNI), was inaugurated in late 2007. Immigration Memory, once an almost exclusive topic to the archival and historical circles in France, has become a new domain for various institutions and organizations. This emerging museum movement is part of a larger “memory boom” in European countries, which has included the establishment of a huge number of museums in the field of immigration and ethnicity. In addition, the phenomenon of immigration memory has become both a public and academic subject to bring normative construction of knowledge and its violence into question.

TANAKA, HIROMI* (Meiji University, hiromi@meiji.ac.jp)

A Biographical Analysis of Women’s Political Participation: The Importance of Politicization in Female Legislators’ Biographies

Politics as a social institution remains highly gendered in many societies both quantitatively (few politically active women such as legislators) and qualitatively (androcentric political culture). It has been a major area of concern in both the- ories of feminism and post-colonial studies. The aim of this paper is to examine whether the concept of “politicization” can help us understand why women have been involved in public life. In Japanese society such politicization rarely occurs in women’s lives. Women are traditionally ascribed to the private sphere of domestic work, being excluded from – or discouraging women from being engaged in – public life. Scholars of women’s political participa- tion have stressed the androcentricity of institutional politics and identified in- stitutional and psychological obstacles to women’s political participation, ranging from a lack of money, party support, publicity in running an election to women’s reluctance of engaging herself in institutional politics. Our study looks at opportu- nities rather than obstacles for women’s political engagement and focuses on how female legislators experienced the process of politicization and transcended the private-public divide.

First Land: Creating a Farm for the Future

According to the 2007 US Census of Agriculture, less than two percent of labor force in the nation is in agriculture; the average age of principal farm operators was 57 years in 2007, and more than a quarter of all US farmers were 65 years or older. In order to support the emergence of the next generation of farmers, we, as agricultural researchers and educators, need to provide them with pathways to economic as well as environmental and social sustainability. Based on the data collected from our multi-state, multidisciplinary research project on beginning farmers that illustrate the understanding of the dynamics of finance and capital agriculture. Using the “economic map” as both a methodological and theoretical tool, we will then discuss the key patterns of how these beginning farmers position diverse financial/economic actors as critical resources for, or hindrances in, shaping their farming practices. We will also explore in these narratives how the concepts of “sustainable farming” and “economic viability” are articulated to guide their prac- tices.

An International Comparative Study on the Sport Development for People with Mental Health Problems in 5 Nations

Aims: The aim of this study is to explore how sports for people with mental health problems have been promoted in 5 nations, which are Italy, England, Den- mark, Germany and Japan. Those countries have developed sport for people with mental health problems, according to Tanaka et al. (2013). This study attempts to identify each support system in order to contribute to international sport move- ment for people with mental health problems.

Backgrounds: People with physical and intellectual disabilities in many nations have come to enjoy sport not only for rehabilitation but also as a normal part of everyday life. On the other hand, sport offerings for people with mental health prob-
The Role of Tourism Companies in Forming Ethical Tourists: Case Studies of Tourists from China to Japan

The increase in Chinese tourists overseas and its socio-cultural and economical influence are of interest worldwide as well as in Japan. While many agents in the tourism industry invite Chinese tourists, the conditions of tourism between China and Japan are unstable, especially under the influence of political relations between the two countries. Further, media outfits tend to create a negative image of Chinese tourists.

This article focuses on the social and cultural interaction of tourists from China to Japan, particularly the role of tourism companies. Previous works criticized the role of tourism companies in creating media images and promoting unsustainable mass tourism. The industry also needs to pay attention to sustainability and establish alternative forms of tourism, such as ecotourism, which is a trend in sustainable tourism. The industry also needs to pay attention to sustainability and establish alternative forms of tourism, such as ecotourism, which is a trend in sustainable tourism.

Two case studies are examined. First is the case in which tourism companies teach their clients tourist ethics. In China, the government has recognized the importance of "tourist civilization," and in relation to this, I present a practice of "moral education" in tourism companies. I point out how they teach social and cultural order effectively in accordance with appropriate practices in Japan. The second case involves visits for inspection or training, which is a dimension of social tourism. In China, mobility for tourism is relatively strictly restricted, and consequently, many people with experiences of touring abroad support the inspection or training of visiting business visas, which tends to include sightseeing. I point out a type of development of social tourism that is not an alternative form of mass tourism.

Building a Global Domestic Workers’ Movement: The History, Strategies and Activities of the International Domestic Workers Federation (IDWF)

Formally launched in 2009, the International Domestic Workers Network aims to develop an effective global network of domestic workers. In the past campaign for the ILO Convention 189 for domestic workers, the IDWN coordinated and actively supported campaigns and activities of domestic workers at various levels, to enable them to speak for themselves and take leadership. Now that the ILO C189 has been achieved, we need to build a strong organization of domestic workers to ensure that countries around the world ratify the convention and national policies and laws are put in place to deliver real gains to domestic workers on the ground. In October 2013 the IDWF will hold its inaugural congress in Uruguay. In this paper we will discuss the history, strategies and activities aimed at building a strong democratic organization that can effectively protect domestic workers’ rights and change power relations in society to promote gender equality and human rights.

Recovery and Social Inequalities: The Use of Capabilities Approach and Intersectionality Analysis in Exploring the Social Conditions for Recovery

‘Recovery’ has become a dominant discursive feature in the UK mental health policies. Under the neo-liberal context, the mainstreamed recovery services tend to promote individualistic recovery strategies. Such policies and services fail to address the structural inequalities that give rise to distress and mental ill-health or place sufficient emphasis on the diversity of intersectional inequalities among service users that shape recovery journeys. This paper critically engages with the concepts of ‘recovery’, based on a case study of Chinese mental health service users in the UK which explores how structural factors, such as class, gender and ethnicity, contribute to their diverse recovery journeys.

To shed light on the complex interplay of structure and agency in shaping recovery journeys, a synthesis of the Capabilities Approach (Sen, 1999, Nussbaum, 2001 and Hopper, 2007) and Intersectionality Analysis (Walby, 2007 and Anthias, 2006) was developed as an alternative framework. Repeat-in-depth life history interviews were carried out with twenty two Chinese people who had received a psychiatric diagnosis, recruited from three cities in the England. Findings showed that participants strove, sometimes cautiously, to retain and exercise agency to move from patienthood to personhood. Their journeys were shaped by social inequalities demonstrating that targeting social inequalities is essential for facilitating and nurturing meaningful recovery.

Drawn on the findings in the case study, this paper will illustrate in what ways the medicalisation process enhances or hinders the (re)development of capabilities. It will also discuss about the use of the Capabilities Approach and Intersectionality Analysis in exploring the social conditions for meaningful recovery.

Navigating Domestic Violence Protection Law By Immigrant Wives in Taiwan

This paper seeks to explore the question: why do abused Vietnamese immigrant wives married to Taiwanese men find it difficult to escape from violence even though the Domestic Violence Prevention Law has been in place for more than 15 years and the government claims a supportive system has been established? By applying the institutional ethnography approach (Smith 2005) we contend that, even though there are laws, institutions (police, hospital, social workers, courts etc), and professional people that constitute a support system for abused immigrant wives, the structural forces of class, ethnicity and gender discrimination on intersectionally influence them as they seek to find a way out of the abuse they face.
Intercultural Training Program as a Mechanism of Raising the Individual Level of Competition

Seventy people representing five regions, and 32 countries were involved in the research. 25 expert interviews and 6 focus-groups were conducted by the researchers. Most contrast patterns of cultural clashes were observed in the interaction between the citizens of St. Petersburg and the representatives of western and eastern cultures. The strategies of acculturation of the people with diverse origin are very different. The representatives of Western Europe and the USA tend to believe that their difficulties in adaptation result from low standards of local people and Russian social environment. Newcomers from far eastern countries make enormous efforts to understand the motives guiding the local people's behavior, and try to adjust to the context of local culture. Africans tend to conceal their problems. The main problem of their adaptation is the lack of local people's tolerance resulting from physical and cultural differences. Weighing pros and cons of living in St. Petersburg they often try to focus on positive aspects and offset up negative sides. As for the citizens of the CIS and former Baltic republics (Estonia, Lithuania, Latvia), the process of their adaptation is the easiest one, because they speak fluent Russian, have been visiting St. Petersburg since childhood and do not feel enormous cultural differences. However, the lack of notable differences led to certain difficulties in constructing the cultural assimilators with their participation. At the same time, the migrants from the CIS, who came to raise their earnings and living standards, are often excluded from the social environment of St. Petersburg because of their limited access to economic and cultural resources.

Sociological Study of the Cultural Differences in Korean-Russian Mixed Marriages

According to Korean statistics in South Korea 90489 marriages between Koreans and foreigners were registered. The share of marriages with Russians was 835, among them 523 marriages between Russian women and Korean men. For the present study of the cultural differences in Korean-Russian mixed marriages the method of semi-structural interview was selected. This method gives a good opportunity to gather the necessary information and to interpret the object of research scientifically. The empirical research was conducted in Seoul, South Korea in 2010. Ten Russian women in the age from 19 to 31 years old, married the citizens of the Republic of Korea, participated in the study. Following the opinions of the respondents, the most difficult thing in family life in mixed Korean-Russian marriage is the difference in mentality with their husbands, but also the communication with husband’s relatives, the obligation to visit them during the collective family holidays (Lunar new year, the harvest festival “Chusok”) when crowds of relatives gather in parent’s home. Russian women definitely emphasized the differences in celebrating holidays, family rituals and ceremonies of life cycle. Cultural differences in such marriages are quite big due to specific scenario of children’s socialization in two societies. In the same time various actual differences in presented research were not found out because of the length of marriage of the respondents. Young Russian women and their Korean husbands who participated in the research were in their so called “honeymoon” period. It is also worth mentioning that the cultural context of ethnic relations and global trends change nowadays so rapidly that in several years Korean-Russian marriages will turn from somewhat exotic and unusual into ordinary and routine practice.

Social Cleavages Caused By Radioactive Contamination of Food and the Environment: The Case of Fukushima

The nuclear disaster in Fukushima has inflicted devastating damage to agriculture and food of Japan in many respects. I will give an overview of the social cleavages caused by the first, the social estimation of organic agriculture was tremendously damaged because the regional circulation of organic matters, one of the most important characteristics of organic farming, was broadly contaminated by radioactive substances. Many consumers particularly concerned about food safety have stopped buying organic foods not only grown in Fukushima but in surrounding areas. Despite the fact that radioactive substances remaining in soil were not transferred to agricultural products, most of the consumers have not yet come back to the farmers. The fall of the reputation of organic agriculture is the more serious because it is deeply connected with the growing distrust of Japanese food in general. Radioactive contamination of food has become a serious threat to the national food security. Second, a deep cleavage occurred between the farmers who are willing to live and farm in Fukushima at the risk of exposure of radiation and many anti nuclear activists who criticize these farmers insisting that they quickly leave the contaminated hometowns. The recognition gap concerning the risk of being exposed is so wide between them that it is difficult to establish the solidarity movement between farmers and anti nuclear movement.

Third, there appeared a great gap between Fukushima and the rest of Japan, or between Tohoku District, northeast part of Japan consisting 6 prefectures including Fukushima, and the rest of Japan. The nuclear disaster has reproduced the unequal development patterns that were often observed during the modernization history of Japan: taking the goods to the center and bringing the bads to the periphery.

“Strength through joy” in Japan

During the second half of the 1930s and into the 1940s, the National Socialist leisure organization “Strength through Joy” (Kraft durch Freude, shortly KdF) had a great influence on the development of Japanese leisure movement (Kôsei movement), and played a crucial role in the establishment of relationships between the two countries. Since the World Recreation Congress in Hamburg 1936, the activities of the KdF, which should regenerate the “strength” of workers through “joy” in leisure, attracted public attention in Japan, where the general interest in the subject of leisure had been slight. The KdF gave the Japanese movement many suggestions and became its model. After the foundation of the Japanese Recreation Association (Kôsei kôsei taikai) in Osaka 1940. At this congress, to which also representatives from Germany were invited, the slogan “Strength through joy” was adopted and the exchange between German cooperation in the field of social policy was proclaimed. However, the actual discussions between the two countries on issues relating to leisure were not deepened by the congress, and also the mutual perceptions of Germany and Japan contained contradictions in many respects. This report therefore examines the image of the KdF in Japan and that of the Kôsei movement in Germany, and also investigates the relationship between the two countries, in order to clarify the features of the mutual perception and its significance.

Mapping out the Educational and Future Trajectories of the Children of Internationally Mobile Families

Children’s education and future career trajectories are of paramount concern for many transnational families. Educational concerns impact upon whether and when families decide to move internationally together or stay apart. This paper focuses on teenage and young adult children of Asian and African backgrounds who have been mobile in childhood and are popularly referred to as “Third Culture Kids” (Useem & Downie 1976). It explores how they experience and articulate, in varying ways, their internationally mobile upbringing and the transnationality of their family lives in relation to their educational future. Some report multiple international moves with their families due to their parent(s) job placement, while others are sent overseas by their parents to one or more countries on their own for educational purposes. Decisions about their schooling are tempered by their parents’ and their own economic, social and cultural capital in the context of national and international economic and cultural inequalities (Bourdieu 1986). This paper highlights the way pragmatic considerations about education and economic futures intersect with the ambivalence that young people feel about their transnational upbringing and identity, as well as the way they imagine ‘home’. Given that international mobility is the norm for the young cohort I studied, their experiences offer significant insight into the complexity of transnational family lives and its impact on children.

Data is drawn from a yearlong ethnographic research conducted in Jakarta, Indonesia in 2009 at an international school catering to foreign expatriate and local elite families. I conducted participant-observation of high school students (grades 9 to 12), as well as in-depth interviews with over 130 students, school staff, parents and alumni of international schools.

HIV/ AIDS Among Adolescents in Brazil and France: Similarities and Differences

In order to analyze the Aids epidemic in France and Brazil, particularly among adolescents, a critical review of literature, official documents and on-site verification of services for sexual and reproductive health for adolescents was held. The concept of vulnerability and its categories were used as theoretical basis of research. A confrontation to France and Brazil reveals the number of Aids cases in proportion to its population. In France there was a continuous decline in the incidence of this disease from 1998 onwards; in Brazil, the decline started in 2002,
but there was a rise in cases in 2008. Both countries offer universal access to ARV treatment and the epidemic shows a trend of impoverishment, feminization and heterossexualization. Among Brazilian adolescents, the number of cases is proportionally 3.5 times higher; they have an earlier sexual initiation, use condoms less frequently and schooling is shorter. In France schools are obliged by law to offer regular educational activities on sexuality, the notification of Aids and HIV are mandatory; the access of adolescents to health services with confidentiality is facilitated, there is availability of tests for STDs and of voluntary interruption of pregnancy, which offer conditions for prevention and treatment of sexual disorders.

Anti-Nuclear Movement Discourse in the Countries of so Called “Nuclear Renaissance”

Since the first half of 2000s the world society has been observing the expansion of national nuclear energy programs in a number of countries, also called by nuclear power industry as ‘Nuclear Renaissance’. This development has been accompanied by the contemporary trend in public opinion showing positive attitude towards nuclear energy. The striking is, however, that this situation occurs in the countries with the history of significant anti-nuclear movements, e.g. Sweden. The revival of nuclear energy programs, public opinion favouring the expansion of nuclear energy and the experience of anti-nuclear movements in the past are the points of departure for this study. The constellation of these circumstances in several countries encourages the following research questions to be considered in this paper. First of all, the national nuclear energy strategies have affected the discourse of anti-nuclear movements, the primary task of this paper is to find out in what way. Then, the second question is to analyze how these policy changes account for a shift in contemporary understanding of nuclear energy by anti-nuclear movements. Thirdly, the connection between discursive opportunities embedded in these discourses and movement mobilization is studied. Finally, the paper aims to discuss whether there is a change in public perception of nuclear energy.

Several explanations and events are responsible for the mentioned changes, among others are the issue of climate change and the accident at Fukushima-Dai-ichi. This paper explores in what extent and how these turning points become part of the anti-nuclear movement discourse.

In terms of methodology this study is based on discourse analysis.

Multiple Discrimination: Personal and Institutional Perceptions, Impacts, and Actions

This paper investigates the phenomenon of Multiple Discrimination in Hungary, with special attention paid to cases of intersectionality based on ethnic origin. The research unfolds those mechanisms that lead to multiple discrimination in the field of job seeking, hiring, and employment. The phenomenon of multiple discrimination is studied, on the one hand, from the perspective of decision-makers representing public and private employment agencies; on the other hand, from those who are the victims of discrimination on multiple grounds. The research project identifies the personal and institutional perceptions, impacts of and actions taken with regard to discrimination by the various stakeholders. Through a series of semi-structured interviews and a survey of private and public employment agency clients we demonstrate how a low awareness level of discrimination, in particular of multiple discrimination, among victims, and a high inertia and inaction on behalf of decision-makers lead to the reproduction of social mechanisms responsible for discrimination.

Education for Lifestyle (Leisure) Counselling in an Unequal World (Szeged, Hungary)

Max Weber’s lifestyle model emphasizes the role of life opportunities, life chances and choices. Life opportunities provide the conditions for choosing one’s lifestyle. Life chances are the chances of actually realizing the given values. For realization it is the social environment that ensures the structural prerequisites. Opportunities, chances and choices in everyday life mean that people have a free choice within the wider or tighter boundaries provided by their social environment and related social pressure. At the same time, lifestyle is not only a dependent of one’s social position, but it also plays a considerable role in designating one’s position in the social structure.

Considering Looking: Political Spectatorship Distinct from Action

From museums commemorating genocide to human rights organizations issuing fundraising pleas, photographs of violence are a frequent means of calls to political action. Representations of suffering as a result of political violence invoke a theoretical trajectory that connects looking at images of suffering to actions undertaken in response to what is seen, culminating in a broader political change. This trajectory is also taken up in the models of spectatorship developed by contemporary visual theory, such as that of Ariella Azoulay. Attending to the assumptions and fantasies embedded in this broader trajectory, this paper reveals difficulties with Azoulay’s argument for the political uses of photography and brings the possibility of such a politics into question. Alternatively, Jacques Rancière’s theory of spectatorship provides a starting point for conceptualizing looking as an activity distinct from direct involvement in the looked upon scene. This paper will argue for a modest approach to looking, as a space for political and ethical imagination, rather than as the first step in enacting a response or mounting a campaign for change. If spectatorship is unmoored from the trajectory to which Azoulay and others confine it, then the political potential of photography requires reconsideration. I ask: If spectatorship does not necessarily lead to action, what is left of looking as a political practice? If given space distinct from action, how might practices of looking open up possibilities for appreciating the political dimensions of suffering?

Gender and STEM: No Shift Required

In the past thirty years, several waves of opportunity have come successively closer to realizing Papert’s vision of a world in which children can self-actualize with technology and technological thinking without having to first (or ever) label themselves as “them,” the kind of person that actually likes technology. They can tinker, jolting and selling. In particular, recent tools associated with the Maker or DIY (“Do It Yourself”) movement have the potential to increase embodied, craft-oriented performance-focused behavior. Girls (and a range of boys) can now create inexpensive, personalized craft objects that cause them to rub elbows with technology and technological thinking without having to first (or ever) label themselves as one of “them,” the kind of person that actually likes technology. They can tinker, both with creations and identity. They can develop skills which will help them no matter what they go on to do, and their relationship to those skills can change over time. The crucial opportunity, ironically, lies in the relative unimportance of the technology in defining the students’ projects. Supported by the National Science Foundation under Grant No.1142510

Scientific Criticism in the Dispute over the Risk of Radiation Exposure

This study examines the role of scientific criticism in the dispute over health effects of exposure to low-level radiation, focusing on the situation in Japan after the Fukushima Daiichi nuclear disaster. In radiation-related fields, it has usually been difficult for environmental movements to establish and utilize a network of scientists who provide a scientific basis for the movement, because of the strong connection between government officials promoting nuclear energy and scientists in this field. Considering these difficulties, I will examine what enables conducidos e intensificados de forma urgente dentro de la cinematografía ibero-americana reciente.

Palabras-claves: cine, migración e identidades; estudios visuales y adaptabilidad;
scientists to maintain an objective distance and conduct academic research with possible critical implications for the existing policy. On the basis of a document analysis of historical materials and in-depth interviews with the people involved, we found a remarkable difference between scientific fields regarding research resources available for outsider scientists. In the field of dosimetry, many citizen groups measured doses of radiation using their own dosimeter, which enabled them to urge the government to adjust their policy of decontamination. However, in epidemiology, it is difficult for critical scientists to conduct large-scale surveys; therefore, they have concentrated on assessing and criticizing Fukushima Prefectures “Health Management Survey.” We also found a complex relationship between academic research diversity and political mechanisms for constructing a unified view. Occasionally, articles in international journals express different views; for example, one uncovers the possibility of health effects caused by very low-level radiation and another denies it. Even though the academic discussion has not yet been completed, the International Commission on Radiological Protection (ICRP) has taken the position of creating a systematic regulation; consequently, the diversity of academic research has diminished. To maintain diversity in the circulation of scientific knowledge, we need alternative ways to organize critical scientists and the results of their research.

Television As a Global Kaleidoscope: Multiple Socio-Cultural Realities within a Paramount Political Reality

In recent years, due to a number of factors like the severe global socioeconomic crisis, the citizens of countries like Greece search for information through foreign media. Thus, globally broadcasting corporate or state television channels, (i.e. BBC, CNN, France 24, Al Jazeera, Russia Today, CCTV News), became very popular. This paper attempts to discuss these channels’ (re)presentations as alternate sources, focusing on three levels. First, the formative one: They all (a) use English for oral and written discourse; (b) follow standardized forms of Western broadcasting; (c) utilize the media cosmogony of our epoch. Second, the substantive one. (a) Operating within a ‘global village’ framework, they function in their ‘public sphere’ without barriers; (b) They manage to create ‘media events’, authenticated and explained by participating actors and professional experts; (c) Cultivating a sense of a relevant immediacy, they connect individual life-worlds with projected ‘world views’. Third, the conclusive one: (a) While documenting issues from ‘multiple socioeconomic realities’ (i.e. society, economy and business), with a presumed undisputed factuality, they express a ‘paramount (political) reality’. (b) This ‘reality’ is a ‘noematic construction’ which reflects core values from a channel’s ethnocentric perspective with a long historical tradition. Any interpretative scheme they provide derive from this perspective. (c) Thus, foreign channels offer planned images, which hide the impact of political ideology in (un)official “translations”, becoming improvisations with inauthentic color schemes on the screen canvas. The critical question remains: Are those media nothing but a kaleidoscope for the democratic forum of ‘a global village’?

A Study of Women’s Roles in Rural Livelihood Improvement: A Case Study of Yamaguchi Prefecture in Japan

This study aims to identify links between internal and external factors, where women farmers developed an important role in rural life improvement. In a sparsely populated and aging society in Yamaguchi Prefecture, western Japan. In Japan the rural livelihood improvement program was started in 1949 in response to the consequences of the Great Depression (1929–1933). The program, introduced in the 1950s and the 1960s, is a wide range subjects domain over science, economy, and politics. Although numerous attempts focused on consequences of climate change or effectiveness of policies. However, there are few reports on social acceptance of climate change. In Japan, what kind of frames is used in climate change? Which political stakeholders are mainly joined and how connected?

For this purpose, as a part of international comparative study of Comparing Climate Change Policy Network (COMPON Project), this project media analysis for articles of Japanese newspapers by using common methods among society cases of the project. In this project, we created climate change article database by searching for keywords of “Climate Change” or “Global Warming”. Then we counted articles and extracted issues and stakeholders on climate change from the database.

In conclusion, this data suggest that (1) Coverage amount is linked international agreements (like Kyoto Protocol) and political international events (G8 and COP), (2) Issues have shifted to “domestic - economy” policies in 2000’s from international contributions or sciences in the 1990’s. (3) The corporate sector and government come up a lot, but civil society actors were found to be less. (4) After the Great East Japan Earthquake of 2011, interest in climate change has fallen sharply.

Media Coverage and Stakeholders on Climate Change in Japan

Climate change has become a serious problem facing from global society in the 1980s and the 1990s. It is a wide range subjects domain over science, economy, and politics. Although numerous attempts focused on consequences of climate change or effectiveness of policies. However, there are few reports on social acceptance of climate change. In Japan, what kind of frames is used in climate change? Which political stakeholders are mainly joined and how connected?

For this purpose, as a part of international comparative study of Comparing Climate Change Policy Network (COMPON Project), this project media analysis for articles of Japanese newspapers by using common methods among society cases of the project. In this project, we created climate change article database by searching for keywords of “Climate Change” or “Global Warming”. Then we counted articles and extracted issues and stakeholders on climate change from the database.

In conclusion, this data suggest that (1) Coverage amount is linked international agreements (like Kyoto Protocol) and political international events (G8 and COP), (2) Issues have shifted to “domestic - economy” policies in 2000’s from international contributions or sciences in the 1990’s. (3) The corporate sector and government come up a lot, but civil society actors were found to be less. (4) After the Great East Japan Earthquake of 2011, interest in climate change has fallen sharply.

The Relationship Between “Global Meanings” and “Local Meanings”: A Case Study of Protests Against the Construction of the “Kaminoseki Nuclear Plant” in Iwai-shima, Yamaguchi Prefecture

How do global social movements relate to local social movements, and in what way does the former influence the latter? This presentation examines the relationship between “Global meanings” and “Local meanings” considering two analytic frameworks on social movements: cultural theories of social movements and the new social movement theories. Cultural theories of social movements pursue the “construction process and the source of meanings” (Nomiyama 2002). On the other hand, the new social movement theory pursues the construction process of “collective identities” (Melucci 1988). In other words, this perspective highlights the fact that movement groups and participants construct ideas through the various interactions between them.
In the present work, we provide a case study of a protest against construction of a “Kaminoseki nuclear plant” at Iwaishima located in Yamaguchi Prefecture. Attention is given to two groups. The first one is the “Iwaishima no shizen wo mamorukai”, a group that specializes in the environmental aspects of biological diversity. The second one is “Kaminoseki genpatsu wo tatesasenai Iwaishima tomin renmei”, a group that specializes in the environmental aspects against construction of Kaminoseki nuclear plant. Using the investigation data of the voice of the participant in that two groups, we analyze the motive of participation, the resource of motive, and cultural factors (e.g. collective memories, local histories, and motivation) in order to find out the construction process of “global/local meanings” and “collective identities”. Lastly, we attempt to clarify that the “global meanings” was related to the significance of the “local meanings”, and highlight the resource of the “global/local meanings” and construction process.

Sociological Study of E-Dating and E-Prostitution in Iran

Abstract

Iran has provided the possibilities for virtual networks by facilitating internet access to the public. But the open nature and lack of “enough” control over the virtual community contradicted with the laws and regulations put into practice by the Islamic Republic. One of these contradictions is the dynamics of online dating and prostitution. As a result of strict rules imposed by the government, dating, “illegal” relationships, as well as prostitution, has been looking for new opportunities in virtual environment. In particular, online social networks such as Facebook have provided a new market for sex trade. There has been a surge in Facebook subscriptions and prostitution.

Data collected from Facebook pages of Iranian users concerned have indicated that the following key points have led to the growth and popularization of this phenomenon.

- evasion of law
- freedom from the restrictions of family,
- passing the limits of time and space,
- achieving social identity in digital social stratum of prostitution,
- anonymous identities,
- ease of socializing,
- desirably setting the conditions/price for services,
- avoiding loss of earnings to pimps,
- screening and vetting the persons of interest
- sociological (e.g. economic, cultural, religious) reasons, implications, and lowering the risk of embarrassment,
- possibility of freely expressing hidden sexual fantasies and leisure,
- combating social exclusion and finding the strength to oppose popular culture.

The trend of e-prostitution in Iran is on growth and our study attempts to discuss the consequences of this phenomenon.

Keywords: Iran, cyber-space, Facebook, prostitution, leisure

Women Go Shopping: Discussing the Behaviour of Generation Y and “Green Consumption” in Rio De Janeiro

This paper aims to discuss the buying behavior of the female segment with respect to the consumption of products with ecological appeals (“green products”), in the post-modernity, through the subject area of green consumption. The sample includes 100 surveyed women of Generation Y. For this study, we conducted a qualitative, exploratory research, with field survey using structured questionnaires. The interviews were held in January 2013, at the exit door malls in Rio de Janeiro. The theoretical basis of this study are the concepts proposed by Bauman, Cancini and Lipovetsky. The data discussion reveals a women of Generation Y with a consumer behavior paradoxical, showing that the influence of fashion, media and academic information makes young people oscillate between following fashion trends and practices resulting of a deeper understanding of environmental issues, according glances of environmental responsibilities and conscious citizen seized through education and through the Internet. The results also reveal the idea of consumption as a process of a hybrid culture (through the influence of global culture produced and widespread by the socio-technical networks) and local culture, with traces of belonging, social recognition, especially from the perspective of the consumer-citizen relationship. This ambivalent condition of this generation relies both from the perspective discussed by Bauman (dialogic relationship between the spectacle and the vacuum of consumption as a moral/social duty and the critical reflection of the consumption, through spaces as schools and universities), and by the vision of Cancini which emphasizes the logic of cultural hybridity and the idea that to be a citizen is required to carry a consumer identity. Complemented by Lipovetsky, both thoughts emphasize the consumption behavior of the social actor of female sex in the Generation Y as a reflection of a society that expresses the concept of a individualistic and consumerist ethic.

Cultural Artifacts in the Mexican Social Movement Sector: The Artifactualization of Performances and the Performativity of Artifacts in a Digital Age

Where resides of a less democratic past persist, as is the case in Mexico and several other Latin American states, challenges to the state often take more subtle and creative forms, which means that cultural inscriptions in mobilization processes can be especially instructive. Drawing on several mobilization sites and moments from contemporary Mexican social movement sector the paper aims at exploring whether the tools of cultural analysis—performances, ideations and especially cultural artifacts—are used in the production of oppositional meanings and whether the unfolding events and actions around them can become central to the identity and to the genesis of social movements. The social construction of these cultural artifacts, their social embeddedness, and the diverse ways that audiences respond to them, mean that artifacts themselves can play key roles in mobilization trajectories, as social actors encounter them, appropriate them, develop them, modify them, and mobilize around them. The paper focuses on the artifactualization of performances through digital technologies and vice versa on how artifacts can take on qualities of performances by being digitized and posted on a Facebook page or blog, the paper also explores whether online social media have transformed the cultural analysis of performances and artifacts.

Collective Action Between the Street and the Court: Public Hearings in India

Public hearings, in the contemporary Indian context, are public meetings organized around the implementation of a given public policy (for instance the right to education). These meetings take the form of a confrontation between the administration and the people, moderated by a panel of “experts”. This peculiar form of collective action, characterized by a deeply ambiguous relationship to the judiciary, has become increasingly visible in India in the past decade.

This paper will attempt, firstly, to trace the genealogy of public hearings, back to the people’s tribunals of the 1960s; it will show how the public hearing has since been reinvented and interpreted, and how it has met with a new popularisation that is used by very different types of actors and struggles. Secondly, the paper will describe and analyze the dynamics of public hearings in order to highlight their hybrid nature, in between the community meeting and the lawsuit. Finally it will try to understand the sources and the limitations of the efficiency of public hearings as a mode of mobilization.

TAYLOR, EMMELINE* (Australian National University, emmeleine.taylor@anu.edu.au)

Punitive Pedagogy and the Political Economy of the Surveillance School

Surveillance Schools are emerging around the globe characterised by new technologies and practices that identify, verify, categorise and track pupils in ways never before thought possible. The school gates have been opened to a variety of surveillance technologies including CCTV, metal detectors, fingerprinting, online monitoring, facial recognition and palm vein scanners, to name just a few. Of course, Surveillance Schools are not just comprised of technological apparatus, many have full time uniformed police officers, armed in some countries, patrolling the corridors and classrooms, they subscribe to random drug testing and use sniffer dogs to search students and their possessions stored in transparent lockers and bags. Taking schools as microcosms of society, they can provide us with a prophetic glimpse into an emerging penal vista characterised by surveillance, containment and control. Set against this backdrop, the paper examines the new penal pedagogies and corporate priorities that have increasingly flowed into schools as successive waves of neoliberalism have come to shape the political landscape. Corporate schemas increasingly pervade schools, reclassifying citizens as consumers and aligning education with the needs of the post-industrial market. As the Surveillance School assesses pupils according to their value...
as 'human capital' (Apple, 1998) they are sorted into two ideal types; compliant 'worker-consumers' and 'market rejects'; those that are disposed to poverty, or in the most extreme cases face a direct and expedited channel from the school to prison. The paper debunks the meritocratic myth to argue that the school-to-workplace pipeline has bottle-necked as neoliberalism desicrates jobs. The school production line is no longer only routed to the industrial workplace, but rather prisons have become the relief valve, filtering off the already marginalised poor into carceral warehouses.

Mental Health and Illness and Workplace Harassment

Even though every person is protected against harassment and discrimination in areas defined by Alberta's Human Rights Citizenship and Multiculturalism Act, The Canadian Charter of Rights and Freedoms and the Canadian Human Rights Act, general types of harassment or bullying are not prohibited in Alberta, so this qualitative analysis examines the avenues to resolve harassment issues within the context of Alberta Public Service in Canada. The goal is to achieve a healthy workplace for every person. The 'harassed worker' has been explored within a psychiatric framework, so the paper searches for an appropriate framework namely labour code, union grievance, legal remedy or medicalization of deviant behaviours in the workplace.

Imagining Futures in Paper Homes. Ambivalence, the 'Politics of Becoming' and the Everyday Life of Temporary Immigrants

This paper asks whether changes in the patterns of migrant mobility have been accompanied by, or indeed have generated, the affective register of ambivalence as a way of coping with life as temporary, nomadic and often unwanted peoples. Migration is increasingly temporary in nature, with an attendant loss of access to the channels of full incorporation to formal citizenship and belonging. As a result, immigration policies in meeting the basic needs of life as well as in the long-term projects of imagining a new life in host societies. This paper proceeds with a focus on the fluid contexts of immigrants' everyday lives, negotiating the complex pathways of globalised labour markets, national migration regulations and the localised experiences that constitute and homogenise the immigrant experience. Ambivalence can be conceptualised as a rational response to the uncertainties faced by immigrants: temporary and precarious work; second-class citizenship; marginality and invisibility. At the same time, ambivalence can also be understood as a more widespread emotional response, observable under the conditions of late modernity in confluence with economic globalization; a response heightened through the immigrant experience, though perhaps not distinct only to the immigrant experience. Drawing on the concept of a 'politics of becoming' as a rejection of the zero sum game approach of mere inclusion or subsumption of rights claims and identity politics (Hong 2009), the paper argues for a more holistic conceptualization of life change with, rather than through migration. That is, the immigrant experience is one among many contemporary modes and experiences of change. The paper draws on original qualitative data from interviews with temporary migrants in the Asia Pacific region, focused on the fluidity everyday life and securing work, subsistence and on imagining futures. The interview material offers insights from temporary migrants to the possibilities of a 'politics of becoming.'

'Rooted Cosmopolitanism' or 'Politics of Becoming'; A Thick Convergence?

This paper proceeds from a grounded understanding of cosmopolitan values as ‘rooted’ in particular experiences and ways of life, yet assumes those same values to be generalisable – as human rights. ‘Rooted cosmopolitanism’ speaks to an aspect of human rights, namely its relationship to the nation-state form. Though historically natural rights are conceived as universal ideals, their fulfillment in tangible entitlements and claims occur predominantly at the level of the nation-state. The possibility of human rights – and of our commitment to their primacy (as ‘natural law’) hinges on cultural understanding of rights and questions of what is it to be human. Rather than proceeding from the well understood logic of universal human rights as internationally held norms that ought to be realized and applied through the domestication of those norms in particular states, the paper proceeds with a view to the realm of affect; sympathy and love as disgust, shame and humiliation. Why do we intervene and feel sympathy and compassion for some individuals and groups, and not others? How does a politics of affect emerge in relation to vulnerable migrant groups such as asylum seekers, temporally and unauthorized migrants? Through examining the perspectives of ‘rooted cosmopolitanism’ (or cosmopolitanism from below) and the ‘politics of becoming’, the paper aims to map a theoretical convergence between hospitality and attention to proximity (nationalism).

Inequalities and Similarities Between Dutch Families: Holiday Making By the End of the 20th Century

In many studies on recreation and leisure as a social phenomenon, leisure is regarded as the opposite of work, or as compensation for work. Leisure is also seen as being complementary to an individual’s line of work. However, a number of scholars question whether this is the most fruitful way of gaining insight into recreation and leisure. Phillipson (1963), Roberts (1981), Kelly (1983) and Te Kloeze (1985a) believe a family or household approach to be more productive, which means that the theory should be directed at the social context of leisure on a micro and a macro level. The social context of people refers to the primary life domains of leisure and family life – which are embedded in the wider context of society, both institutionally and socio-spatially. The question is how far the above is valid for tourist behaviour being an important part of (family) leisure life. The family tourism market is arguably more important now than it has ever been (Southall 2010).

An empirical study on family and leisure was conducted in the mid-nineteen nineties (Te Kloeze 1996).

Part of the data of that study haven't been analysed before. Those data were focused with a view to the realm of affect; sympathy and love as disgust, shame and humiliation. Why do we intervene and feel sympathy and compassion for some individuals and groups, and not others? How does a politics of affect emerge in relation to vulnerable migrant groups such as asylum seekers, temporally and unauthorized migrants? Through examining the perspectives of ‘rooted cosmopolitanism’ (or cosmopolitanism from below) and the ‘politics of becoming’, the paper aims to map a theoretical convergence between hospitality and attention to proximity (nationalism).

Conundrums for Policy and Practice Regarding Vulnerable Youth

Many youth related policies and institutions are aimed at supporting vulnerable young people to prevent problems from arising, to catch problems early, and to assist young people who are experiencing problems. Identifying some young people as vulnerable (or ‘troubled’, or ‘at risk’ – the terminology varies) rather than providing such services for everyone enables limited resources to be targeted at those who need them most.

This poses several conundrums. First, selecting some young people for special attention creates the dual risk of stigmatising some and excluding others. However, not singling them out may lead to further disadvantage. This creates a dilemma for the provision of services for young people. Secondly, determining which young people warrant what kinds of support and when is a fraught issue. The criteria for such ‘triage’ are rarely clear-cut. At the policy level, this challenge focuses especially on which priorities to highlight in public announcements and through funding. At the practice level, enactment of policies may affect how and to whom programs are advertised, and who is considered eligible. How such decisions are made impacts on individual young people who are targeted (or not) and also impacts on their community and wider society. Getting this ‘right’ is important in terms of equity, social cohesion, cost-effectiveness and the quality of life of young Australians.

The presentation will engage with these conundrums by not only exploring how and why certain young people are identified as vulnerable in relevant policy, but also the policy-practice nexus and the potential impacts of such challenges.

Professional Ethics for Social Justice: Codes, Principles and Resources

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
It is likely to be widely accepted that ethical reflection by professional workers, such as teachers, is of benefit for improving equity and social justice in society. More controversial, however, is whether formalized codes and principles are helpful. In the introduction I begin by analysing critiques of formal frameworks for procedural ethics: both professional codes of ethics and guidelines for research ethics, especially within the education and social science research. Specific concerns relate to the restrictiveness of codes, the impact of codes on undermining professional deliberation, and a lack of cultural relevance. I draw on Nancy Fraser’s framework of social justice to relate these issues to considerations of inequality, ethics, especially within education and social science research. Specific concerns relate to the restrictiveness of codes, the impact of codes on undermining professional deliberation, and a lack of cultural relevance. I draw on Nancy Fraser’s framework of social justice to relate these issues to considerations of inequality, ethics, especially within education and social science research.

Rather than pre-determining codes or principles for students to adopt, I started with a Smorgåsbord approach, offering various ethical theories and materials. These were resources for students in order to construct their own ‘professional ethical toolkit’. I provide examples of these resources and how they were used by students.

Finally, I return to the session question of how professional ethics may contribute to diminishing inequality. I examine principles commonly used in research ethics frameworks internationally (respect for persons / autonomy, beneficence / non-maleficence and justice) as well as ethical resources through Fraser’s lenses. I favour the procedural approaches and more informal pedagogical approaches.

When Food Aid Supports Local Farming: Towards a Sustainable Solution? Case Study in France

In Europe an increasing number of people require the assistance of food aid organizations to help meet their needs and food aid funding. Access to fresh quality foods gets difficult, impacting people health. This contribution is an original on-going case study assessing the impact of an innovative food aid supplying mode supporting small local farmers. Besides developing links between urban consumers and local producers, it reveals the current conditions shaping the creation of fair and sustainable markets. This case study is based on the pluridisciplinary intervention research ECOALES in partnership with the ANDES (national association for food aid) which has set up in 2012 an innovative short supply channel for fruit and vegetable for solidarity grocery retailers in western regions of France. Objectives are to increase fresh fruit and vegetable consumption among food aid recipients and support local farmers by buying their products at sustainable price via a pre-order system. The intervention also includes cooking workshops and visits to farms. The network of local farmers is organised by a coordinator in charge of deliveries to food aid outlets.

We will focus on the diverse constraints: creating links between shops and farmers who are spread over a large territory; the articulation between support to farmers in a difficult situation and regular supply in quality fruit and vegetable; meeting consumers’ expectations... We will also assess necessary adaptations and the sustainability of the system.

Fieldwork (including participant observation) follows the lines of global approach, including the diverse protagonists involved: farmers, solidarity food outlet staff, recipients as well as financial and political partners, representing institutions involved. The original methodology, combining interdisciplinary perspectives (anthropology, epidemiology and economy), offers finer understanding of what is at stake. The analysis should highlight the favourable conditions for the viability of such a project.

The Place of Art in Social Theory: A Possible Approach to Max Weber and Michel Foucault

Max Weber dedicates his work to the delimitation of the historical specificity of the West taken in terms of culture. His study on the rational and social foundations of Western culture is only his formulation of that cultural specificity within the aesthetic sphere. This unique trial presents a precious articulation between the formal analysis of an aesthetic language and the definition of the specificity of Western culture through a method of historical sociology that settles the singularity of its objects by comparing them with similar expressions located in different historical contexts. In turn, Michel Foucault elaborates the literary understanding as a specific happening that emerges in the eighteenth century, as a privileged locus for defining the knowledges and practices, double dimension of his conception of experience that takes place outside of a discourse systematically ordered. Therefore, it is up to investigate it in order to define the present as historical unique. The purpose of this contribution is to examine the possible similarities between methodological arrangements proposed by both authors to undertake the analysis of aesthetic expressions in order to formulate the historical specificity of the modern world.

*Religion, Migration, and Human Trafficking: Experimental Evidence From Grassroots Practitioners*

This study investigates whether faith-based organizations are making an impact in preventing human trafficking and prostituting women. This study assumes that human trafficking is closely linked with migration which often causes prostituted women to be trapped into sexual slavery. This study critically suspects that because human trafficking is closely linked with organized syndicate and criminal organizations, faith based organizations remain on the sideline of social engagement into the public sphere. This study executed an in-depth interview with particular faith-based organizations working among prostituted women to probe whether these organizations are actively engaged in combating human trafficking in their own respective area of ministry. This study utilizes critical questions to test whether there are indications of participatory engagement of these organizations in partnering with government agencies or the civil society. This study finds out that faith based organizations are driven by their passion to see victims and prostituted women transformed by the power of the gospel. This observation is based from the following evidences that faith-based organizations, despite the danger and risk involved, are actively engaged in providing various interventions and aftercare services for the victims fueled by their religious convictions and values. It was evident from the study however that migration, whether it is legal or not, is a mechanism of organized syndicates to deceive and betray victims of human trafficking. Also, it resonates to the study that combating human trafficking in local and international level requires collaborative network and engagement of faith-based organizations to non-government organizations and government agencies such as legal and justice experts. This study suggests a theological framework in which faith-based organizations adopt and suggests ways on how to mobilize Christian churches to combat human trafficking in the local and international context.

*Democratic Upset and the 15-M Movement: the Social Basis of the Political Crisis in Spain*

Recent years have witnessed a great diversity of mobilizations in authoritarian political regimes (Arab Spring, Colours Revolution) and consolidated democratic societies (Europe, North and South America). Driven by the consequences of the economic crisis, the implementation of liberal economic programs in different social classes and the presence of significant democratic deficits, many citizens have shown their discontent with a low level of previous political mobilization occupied the public space to show their discontent. The reasons are complex and, therefore, it is difficult to find a unique explanatory array that can be applied in all cases. The Spanish case has served as an example to other subsequent mobilizations and although its peculiarities, due to the depth of the economic crisis, it also presents similarities with other cases mentioned. The aim of the paper is twofold. Firstly, deepen in the reasons that activists and sympathizers of the movement 15-M consider as mobilization triggers: the immediate consequences of the economic crisis and people responsible for it, the politicians' behaviour and its role in the crisis, the functioning of democratic institutions, the elements that limit, condition and pollute democracy, and the crisis of the political link between representatives and citizens. Secondly, to analyse the contributions and proposals of 15-M claiming for a more democratic process, as well as the results and impact of the mobilization. The following data will be used: 1) the survey of the CIS (Center for Sociological Research) to the Spanish population on the 15-M movement; 2) eight focus group sessions and ten individual interviews with activists; and 3) the results of a survey carried out by the INJUVE (Spanish Youth Institute) on social and political attitudes on the 15-M based on the answers of 1,100 young people aged between 15 and 29 years old.

*Bersih and Street Protest: National Consciousness and Social-Political Change in Malaysia*

The starting point of Malaysia's legal-political history is based on the premise of a plural society and the presence of race-based political parties. By plural society we mean the coexistence of various ethnic communities that interact with one another but at the same time are segregated each according to their various spaces, languages, and expressions. This phenomenon is in turn mirrored in the political structure and representation of the National Front (BN) coalition comprising of the main political parties of UMNO, MCA and MIC that has ruled Malaysia for 56 years. This has significant implications. Because of this nation-building and nationalism is then internalised and expressed through the lenses of ethnic or separated nationalisms. Recent events have shown how the crisis, on July 9, 2011, despite police presence, tear gas and chemically-laced water cannons, tens of thousands of Malaysians marched through Kuala Lumpur to demand for free and fair elections. Bersih 2.0, a coalition of non-government and civil society organisations, had called for the rally. Focus group discussions with Malaysian Chinese youth participants indicate that there is an emerging new discourse of national consciousness and political unity that is acquired from participating in the rally. This paper attempts to discuss what this new discourse is. It intends to explain how it arose and has been articulated, and why this alternative discourse has emerged. Finally it attempts to raise some implications of this revived and renewed consciousness, and the possibilities it offers for the reconceptualization of a different Malaysian society.

*Undermining Poor Women's Labor and Caregiving: State Welfare Policies, Social Workers and Differentiated Deservedness in Singapore*

"Work-life balance" as public problem has come to the fore in Singapore as in other developed countries. Women's capacities to balance wage-earning and caregiving has received a great deal of attention. In Singapore, research (including my own) has focused on the norms among middle-to-high income families that heavily involve foreign domestic workers and grandmothers. Less attention has been paid to the families and women for whom these are not viable options, and for whom "work-life balance" is a problem they lack access to. In this paper, I argue that the state's approach in public policy has produced uneven outcomes for women across class lines and thereby deepened the reproduction of inequalities across generations. I focus on how the state's welfare approach, with its principle of what I call "differentiated deservedness," constrains the lives of mothers who are poorly educated and in low-income households. I first outline the multiple ways in which they and their needs are negated in Singapore's pronatalist policies of the past three decades, before turning to a discussion of how the implementation of specific policies targeted at them, and the everyday practices of social workers who work with them, cast them as unimportant and undeserving both in public policy and in social work orthodoxy. I then discuss the implications of this for women's lived experiences of the public policies that partly shape their lives.
European and Latin American Higher Education Between Mirrors

Higher Education systems all over the world have gone through deep transformation and extraordinary expansion. In Europe, major transformations in higher education and in place during the first decade of the 21st century resulted mainly from the implementation of the so-called Bologna process. The main goal was to establish a European Higher Education Area which allowed an increase in international competitiveness, attractiveness and comparability between European higher education systems. Evaluation of results and consequences of the Bologna process has largely depended upon the evaluators’ perspective. At the political level, it is easy to conclude that the Bologna process has been successful since it allowed greater integration and harmonization between the various education systems of the 46 participating countries. However, at the institutional and local level, the response is more cautious due to the great variety of contexts involved.

In Latin America, timing was different since this was the first region where neoliberal policies were put in place, after Pinche’s military coup in Chile in 1973. Several authors described the end of the 20th century in Latin America as the “lost decades.” The beginning of the 21st century brought with it important changes to the scene. The election of progressive governments in some LA countries gave way to policies which favored redistribution of wealth. At the same time, in some countries, with robust indigenous communities, their cultures were granted political and social recognition and intercultural policies were developed. It is not meaningless that it is precisely in LA, where the first neoliberal experiment was carried out, that the search for alternative policies and the construction of other rationalities were undertaken. This paper presents the results of a research project developed by the Network RIAPE, comprehending 31 universities from 21 countries of EU and LA, funded by the ALFA Programme 2010-2013.

Institutional and Peoples’ Response to Cope with Growing Urban Challenges: A Case of Women’s Participation and Leadership in Poverty Alleviation in Chandigarh

Chandigarh has distinctly implemented urban poverty alleviation (UPA) scheme called SJRSY unlike other towns in the region. The women as ‘change agents’ are leading various UPA activities in the city. The self help groups have been formed by women for women and not only catalyse the women members but other women in the poor clusters to join the skill formation training programmes for setting up self employment ventures to earn the livelihood and also to strengthen urban community development networks etc. Three major women based activities i.e., ‘Learning on Wheels’, ‘Eco-friendly Handbags manufacturing by HIV+ poor women SHG’ and ‘Women As Change Agent in Building Leadership and changing带来 in their Community’ have recently won the prestigious ‘HUDCO Best Practice Award to Improve The Living Environment’. The new pattern of community leadership is emerging among the poor women. The Municipal Corporation has formed a dedicated Cell with adequate staff to implement SJRSY and other UPA schemes. There seems to be democratic strengthening through enhanced participation and leadership of poor women in local decision making in implementing UPA program. They are able to articulate the voice and choice of disadvantaged women in a better way. The local participatory initiatives have multiplier impact on socio-economic conditions of the poor women. There is negligible poverty and better service provisions. The emerging pattern of women participation and leadership in Chandigarh is a positive step towards UPA, inclusive urban society, women empowerment and also coping with growing urban challenges. There are many success stories of emerging trend of women participation and leadership in UPA in Chandigarh which have been documented by the author for the paper.

The Transformation of Youth Attitudes to Economic Success in Japan

The purposes of this study are to reveal the transformation of youth attitudes to economic success in 2000s in Japan, and to consider the youth under unequalizing in the society which has the legacy of equality. Though the Japanese society was seen as egalitarian and Western societies have being transformed to an unstable society with liquidity and disparity since the end of the 20th century. Particularly the situation of youth employment was becoming worse and has not recover after the bubble economy from mid-and-long term perspective. In this situation, the social challenge is how to recover people’s motivation not just current economic gap.

In this study, we analyze the quantitative data which was collected in Suginami (Tokyo) and Kobe in 2002 and 2012 by the Japan Youth Study Group. Respondents aged from 16 to 29 were randomly sampled.

Major findings of our first analysis are summarized as follows: First, the percentage of young people who think of “individual effort” as the most important factor of economic success is about 10% less than that in 2002. In 2012 the percentage of young people who think of “individual talent” as the most important factor of economic success is about 10% less than that in 2002. In contrast, in 2012 the percentage of young people who think of “family environment”...
as the most important factor of economic success is about 10% more than that in 2002. This difference can be contemplated that economic success for the youth are transformed from the individual matter to the social matter. This may mean the penetration both of the sense of inequality and the awareness that this matter should be treated publicly, not personally. In the presentation, we will discuss the impact of this transformation on the Japanese society and youth.

**The Pragmatic Social Theory of Sign in Shunsuke Tsurumi**

While most critics may agree in applauding Shunsuke Tsurumi (1922-) as one of the most influential intellectuals of post-war Japan, no one has recognized him as an eminent sociologist. The aim of this presentation is to show some sociological implications of his thought and methodology. His works should be categorized as sociology of culture and cultural studies. Shuneuke Tsurumi’s interest is in the life of ordinary people and in “pragmatism in Japan”. He focused on a lot of cultural things, especially writing practices of elementary school children (TSUZURIKA-TA), comics and KARUTA (a Japanese alphabet card game). His notions on the so-called “researches have to be mass” aim not only to find the roots of the resistance to the government and bureaucrats, but also to criticize the conventional, scientifc, or professional intellectuals and sociologists. Sociology can’t read and find the potential hidden behind the unwritten words and thoughts of ordinary people, people who express themselves through work, games, talking, rhymes and poems, and art. He named such practices as “marginal art” (Tsurumi [1960]1991). The influence of these implications are widespread in contemporary Japan, but sociologists such as Keichi Sakuta (1922-) and Shin Inoue (1938-) are the first to share and acknowledge the methodology and importance of Tsurumi’s work.

In my presentation, I’ll reconstruct Tsurumi’s practices and works into “The Pragmatic Social Theory of Sign” through the reconsideration of his studies regarding the development of pragmatism in the US and Japan and his analysis of Japanese popular culture.

**Toward Environmental Sociology of Risk Perception, Risk Literacy, and Risk Democracy in the Aftermath of the Fukushima Nuclear Disaster in 2011**

Research on Environmental risk perception has been accumulated focusing, for example, on “irrationally” or “emotionally” biased perception of lay citizens. These researches have assumed that environmental and other risks can be calculated by the formula: Risk = Hazard x Probability (or Degree of Exposure).

Recently, however, risks from environmental hormone disruptors, genetically engineered organisms, and radioactive contaminants are those that the formula is not directly applicable to estimate the gravity of impact. The level of hazard or exact probability cannot be decided by the present level of scientific analyses. In addition, we experienced the catastrophic and irreversible impact from the Fukushima nuclear disaster. Thus, the new criteria to evaluate risks, other than risk/cost/benefit analyses, such as environmental justice, risk information disclosure, and participatory decision-making have become more significant.

After the Fukushima disaster, the public have become more skeptical about the scientists/experts-centered risk assessment and more citizens have demanded for “risk democracy” in which wider range of stake holders can participate in environmental decision-making based on the equal “risk literacy”.

However, the degree to which respondents claim “risk democracy” or pay the cost for “risk literacy” varies according to their socio-economic status. Those in the upper-middle strata, in general, have more resources to access newer information on risks with scientific uncertainty and risks with catastrophic results such as GMOs and radioactive residues. Those in the lower strata, on the other hand, tend to be concerned about well-known risks such as air pollution and waste incineration. However, they are even more seriously concerned about “environmental justice” issues because they are more vulnerable to disproportionate risk burdens in general.

Thus, the effect of socio-economic variables is ambivalent. However, there is consistent interrelationship among “zero” nuclear option, serious risk perception, environmentalist consciousness, “environmental democracy”, participatory and transparent decision-making orientation.

**The Nation As Greek Gift? Marcel Mauss on the Ambiguities of the Nation Form**

In 2013, Marcel Fournier and Jean Terrier published posthumously a book by Marcel Mauss, entitled The Nation. An article bearing the same name, collected in Mauss’s Œuvres at Editions de Minuit, had long been known to scholars. That article, in fact, is only the first part of a much longer book covering three topics: 1) a historical sociology of the national phenomenon, 2) a presentation of what a so- cialinvestigation in the reception this book will enjoy. Mauss’s book can be seen as one of the most articulate exponents of a “civic” concept of nationhood and as the spiritual father of the sociology of international relations. In this paper, I will present and explain Mauss’s position on the nation and provide an assessment of the historical significance of this work.

**TEWARI, BABITA*** (CSJM University, babita.tewari@yahoo.co.in)

**Women, More Roles, Less Personal Leisure: A Case of Kanpur City**

A need exists to understand leisure in the context of everyday life along with obligations and social structures. As women often occupy more roles than men (e.g., Housekeeper, mother, caregiver etc.) they may have less time available for their own autonomous or personal leisure. For anyone who is in a caregiver’s role, leisure as free time may be irrelevant. Within the role of being a mother, for exam-ple, women have many expectations that must be addressed for leisure to hap- pen either personally for women or within the family (Hunter & Whitson, 1991).

The underlying hypotheses of this analysis is that the more roles undertaken by the women, the more likely that the individual is to have less personal lei- sure. The present study takes the case of fifty household women of Kanpur City, through an interview questionnaire wherein leisure time was examined. A contradiction seems to exist between addressing the relationships and roles that are central to women’s life and needing time for leisure. Establishing the findings of Wearing (1991), the present case finds leisure as a place where men fulfill their leisure goals and where traditional feminine identities and roles are often associated with putting men’s wishes and serving men’s leisure before most women’s own personal leisure. The value of this research is in the theory that is leading to the broader understandings of how gender and roles affect the leisure possibilities of women.

**Lessons From Uttar Pradesh and Bihar: Sport Development Initiatives and The Potential For India’s Sociologies Of Sport**

Despite the potential of sport development to highlight broader social complexities, sociologists in India remain disinterested in this area (as sport generally) as avenues of legitimate study. Yet, sport development programs provide sociologists opportunities to know and engage with body politics, questions of structure & agency, and social transformation. Accordingly, in this paper I draw on Bourdieu (1992; 1993) & Giddens (1990; 2009) to understand the construction and consequences thereof, sport development projects and the broader processes to which they are a part. I discuss my research with youth in two Indian states, and, consider how sport development agendas are often confounded by tensions, ne-gotiations, and resistances contours of the local context.

The factors influencing sports participation have emerged as a point of interest among many academics (Wheeler, Sharom, 2011). In order to detect determinants of sports participation, a constructive and exploratory research methodology has been adopted. The data drawn upon in this study has a sample size of 500 interview, spread over two States of India.

The inclination and practice of socio-economic background towards putting their children in sports shows a declining trend. Involvement and attainment in a ‘field’ are based on a combination of one’s habitus and cultural capital. With rise of income level, inclination towards sports does increase. In many ways sport represents a social ‘field’ (Bourdieu, 1992), a structured space of positions that impose specific determinations on those who enter it and this has been tested positive. Rather than simply enhancing individual freedom and opportunity, sport-based programs serve as social control and regulation. Basic education is important for gaining foothold in sports in order to think of social neoliberalism of the society, geographical conditions, educational arrangements and the region- al economy determine to a large extent if personal development and ambition are able to flourish.
Narrations of the Shooting Death of Trayvon Martin and the Trial of George Zimmerman As Intersectional Challenge to the School-to-Prison Pipeline in the United States

Reactions to the shooting death of unarmed seventeen-year-old Trayvon Martin in February 2012 and the not guilty verdict in the trial of George Zimmerman in July 2013 could be heard throughout the United States and around the world. In Al Jazeera, Susan Abulhawa, a Palestinian writer, wrote, “The contempt, the disregard, and the disrespect for the black body runs through this whole case. It runs through this country and transforms itself to adapt to the times.” On August 12, 2013, U.S. Attorney General Eric Holder announced that the Justice Department would work with the Department of Education, “to confront the ‘school-to-prison pipeline’ and those zero-tolerance school discipline policies that do not promote safety...” but instead lead to the criminal justice system. Reactions to the death of Martin and the announcement of a new approach to the disciplining of youth are acknowledgements of the systemic use of violence to control people of color in the United States.

While many accounts of the Martin/Zimmerman case have focused on race as a central theme, some have pointed to race as it intersects with gender and/or caste. A narrative it resonates with an audience, thereby providing a kind of truth. Intersectional analysis complicates a narrative, but it also provides a nuanced view of societal violence/power as well as a vantage point from which to exercise agency and bridge the research/practice gap. Using content analysis of media from around the world, we identify multiple ways in which the Martin/Zimmerman case has been narrated, focusing on intersectionally-framed accounts that along with race point to gender—masculinities deployed—and/or age—youth/adult to make sense of the violence. Statistical data on incarceration in the United States will be used to show the relevance of the narrations to the school-to-prison pipeline.
rupt our humanity and sociality. While, simultaneously, we are being presented with a modality of equipotentiality (Heidegger, 1962; Dreyfus, 1991, 1992; Verbeek, 2005) from within the frenzy of technological activity, which paradoxically inures us in our sociality and sociability. This contention is carried through to its articulation in Castell’s (2000, 2001) theoretical substantiation of the Network Society in the Information and Internet Age with a view to opening up and tracking into specific transformational dynamics of the new modalities of the social, economic, technological and the global. The aim behind which is to consider in which ways the Internet-based transformations offer themselves up as nodal points that gather opacity and sociality in the ‘virtual’ world. And by contrast consider the ways in which the latter dimensions of social being as predicated upon individualism are scattered throughout the labyrinthine ‘cyber world’. Taken together the paper seeks to think through how both moments of gathering and scattering are recast in the new global informational-intellectual division of labour as mirrored in the ‘Digital Divide’. We close this line of thinking by reflecting on South Africa as engaged in this Internet-based New Global Network, with its ambivalences and consider the incorporation of Developing Countries into the new global order as a function of new social inequalities and subject positions that are emergent and made manifest in one of its forms as ‘Scatterlings’ of the ‘Digital Divide’. 

RC23-419.8 THELEN, LIONEL* (European Research Council, lionel.theilen@ec.europa.eu)

The European Research Council... An Open Door For The Sociology Of 21st Century?

The European Research Council is the most recent and most successful Funding Body created by the European Union. Why successful? Because it allows the funding of single research teams in all fields of Science (up to 2.5 million EUR for a 5 years project) and it is the sole EU funding body directed by a Council of top-notch Scientists.

The author is for now more than 5 years the Scientific Coordinator of the so-called SH2 Panel, bringing together 15 panelists – from Sociology but also from Anthropology, STS, Political Science, Religious Studies, Law and Communication Studies – in charge of evaluating between 120 to 200 proposals.

The way the ERC assesses proposals - singularly in Sociology - is quite peculiar and tends to blur boundaries between disciplines.

The evaluation procedure is done in 2 steps and, at step 1, each proposal is given to 4 reviewers. The latter are, frequently, not specialists from the main proposal’s discipline. It follows, that from, debates among them not only about the excellence of the proposal but also about its relevance in confront with its subject, hypotheses or methods.

This fruitful interdisciplinary debate 1) helps panelists understanding each other point of view while bringing them, in most cases, to a consensual decision about any given proposal; 2) gives interesting hints about the various paradigms in use in disciplines apparently close from each other; 3) raises a lot of questions about the fact that some disciplines seem more "successful" than others and 4) allows to grasp at best that having reviewers from different disciplines can have paradoxical effects for interdisciplinary proposals.

Such a debate is undoubtedly helping outlining the main features of Sociology as a discipline increasingly aware of the need of "porosity" of its own boundaries and, by extension, of the other social sciences’ ones.

Marketization in Long-Term Care and Growing Inequality within Care Workforce: A Comparison of Sweden and Germany

Since the 1990s, two distinct processes of marketization in long-term care provision can be found in Sweden and Germany. First, professional long-term care services were restructured inspired by ideas oriented towards New Public Management. Second, tax deduction policies were established to create a new mix of (ir)regular domestic and professional care services. Despite the international character of the development, the existing structure of professional and (ir)regular domestic services at the beginning and the approaches selected, their effects on the infrastructure and on the situation of care (and domestic) workers differ significantly between both countries. In both countries, research findings indicate – however country-specific - patterns of a worsening of working- and employment conditions of care workers embedded in distinct processes of hierarchisation among care workers. The paper aims to compare pre-existing service structures, policy approaches, their effects on service restructurings and the situation of care workers. On a first consideration, it will reveal and explain the effects of country-specific policies and restructurings on processes of hierarchisation among care workers.

Conceptually, the paper combines international comparative research on care policies and marketization and intersectional approaches developed within sociology to relate the effects of marketization to the emerging patterns of inequalities within the care work force based on gender, social class (training levels and positions) and ethnicity. Empirically, it will include documents and laws, literature review and representative statistics to analyze policy changes and existing- and changing infrastructure. Findings of a German-Swedish research project on the situation of professional carers with approx. 600 care workers in each country, will be used to reveal the country-specific restructurings and processes of hierarchisation within formal care provision, which is complemented by research on the developments within domestic service provision.

AUTH-981.1 THERBORN, GÖRÄN* (University of Cambridge, gt274@cam.ac.uk)

Göran Therborn: The Killing Fields of Inequality

This is a theoretical as well as an empirical book. Theoretically, it sorts out the differences between difference and inequality, it sets out a moral argumentation for why inequality matters, it presents a multidimensional analysis of inequality, and it lays bare the mechanisms of egalization as well as of inequalization. Empirically, the book is global in scope, historical in depth and multidimensional in range, analyzing life expectancy, health and body measures, and existential recognition, rights, and respect, as well as income.

It also tries to answer three puzzles: Why have the Northern welfare states failed on vital inequality? Why has existential egalitarianism been so (relatively) successful in the past fifty years? What is the connection between the concurrent inter-national convergence of income and rising intra-national inequality?

The book ends with a discussion of the world politics of (inequality and the possibilities reducing inequalities.

Stunting and Deadly – Effects of Inequality

Inequality has to be understood and analyzed as a multidimensional phenomenon, and so have its effects. Drawing upon my new book The Killing Fields of Inequality this presentation will focus on the stunting effects on human bodies and personalities, and on consequences of early and premature death, set in a global perspective of class, gender, and territory.

RC14-255.2 THEVIOT, ANAÏS* (Université de Bordeaux, a.theviot@gmail.com)

Helen Margetts parle de « cyber-parti », au sens où un parti tendrait à se détacher des structures traditionnelles et des modes de communication en face à face et privilégierait la machine sans intermédiaire humain (Margetts, 2006). Le PS serait-il en train de se transformer en « cyber-parti » ; tendance déjà amorcée en septembre 1998 avec la création d’une section virtuelle, Temps réels ? Ou reste-t-il fortement ancré dans des modes d’organisation traditionnels, réduisant les pratiques numériques à des gestes d’aide à l’image ?

Notre analyse se base sur un questionnaire diffusé auprès des militants PS (n=504) afin de dégager le profil sociodémographique du « cyber-militant » et du « militant-résistant » ; ainsi que sur 45 entretiens, réalisés auprès des militants PS au sein des Fédérations de Paris, de Gironde et des Alpes-Maritimes. Nous verrons qu’au-delà de personnes âgées ou incompétentes sur la Toile, il existe de jeunes militants revendiquant les vertus de la militance sans l’intermédiaire de l’écran, préférant « le contact humain, au cœur même du socialisme » ; ou de façon plus modérée, se refusant à utiliser certains types d’outils numériques.

LORENZ, ALEXANDRA* (Technical University Berlin, alexandra.lorenz@tu-berlin.de)

Simultaneity of Seeing and Doing in Wayfinding from an Ego-Perspective. Eye-Tracking and Video Analysis As Tools of Visual Sociology

We examine eye-tracking data that stem from an interdisciplinary user study that aims at evaluating different cartographic methods for indoor navigation maps (cartography) and at exploring social practices of orientation (sociology). In order to collect data we have been conducting social field experiments every year since 2009. Participants' task is it to find their way from the ground floor of the university's main building (starting point) to the rooftop (goal) as fast as possible. To accomplish this challenge, they are asked to use specially designed maps that they should rate afterwards.

Each year, we broaden the range of our methodological instruments and test their usefulness for analyzing spatial practices. Among the instruments we are currently mixing are: different cartographic methods, surveys, ethnography (both participant and non-participant observation), photography and eye-tracking.

To use eye-tracking devices for data collection gives us the opportunities (1) to visually document an ego-perspective of participants' experiences during the way finding process and their use of the maps, (2) to capture the focus of their gaze and (3) to record simultaneously what they said and heard during the way-finding task. To combine all of that is not possible with any other data collection technique.

To analyze the data we used the video analysis method (Tuma et al. 2013). It includes the selection of relevant scenes, transcription (visually and in written form), their interpretation and the presentation of results.

In this paper we want to present some of our results, show how we got there and discuss what worked out well and what problems we had in applying this approach.

THIJSSSEN, PETER* (University of Antwerp, peter.thijsssen@ua.ac.be)

The Potlatch of the Young. the Paradox of Excessive Intergenerational Solidarity in Aging Welfare States

In this paper a new theoretical model is applied to a research field that is somewhat fragmented, namely that of intergenerational solidarity in aging societies. Inspired by utilitarian considerations many scholars tend to problematize the lack of commonality and reciprocity characterizing intergenerational exchanges. As some generations are longer old and more numerous they may receive excessive support of the younger generations, especially in a democratic setting. However, in reality there is limited empirical evidence of intergenerational conflict and theoretical explanations of this paradox are dim. An integrated and dynamical approach that incorporates Durkheim's solidarity theory, Honneth's intersubjective recognition theory, and the current work on reciprocal exchange is necessary in order to understand the survival of intergenerational solidarity in aging welfare states. Our integrated approach is inspired by a cyclical model of solidarity (Thijsse, 2012). According to this integrated model in a prefigurative culture where the status of the young has risen dramatically, the empathization of exchanges is the driving force of intergenerational solidarity. Hence, we come to the paradoxical conclusion that attempts to preserve intergenerational solidarity by denouncing excessive transfers might be counterproductive because they may erode the empathic underpinnings.

Intra-EU Mobility: Posting As Permanent Organization Of Poor Labour

An employee is legally considered as “posted” when working temporarily in another member state of the European Union other than its usual workplace. However, the temporary, neutral and legal status of posting tends to conceal the very nature of the process: organizing permanent mobility from south and east-European countries to the richer states, exerting of pressure on local bargaining standards (social dumping), giving legal appearances to illegal practices, underestimating the massive character of the phenomena. These are at least the first results of a transnational French-Portuguese research programme in the construction sector. For the sociological perspective: the skills and abilities that make these postings possible are not just part of the workers' usual employment contracts. They also depend on the political conditions of the sending and receiving states.

Our integrated approach is inspired by a cyclical model of solidarity (Thijsse, 2012). An integrated and dynamical approach is necessary in order to understand the survival of intergenerational solidarity in aging welfare states.

Expectant Parents, Expecting Perfection: Constructing Down's Syndrome in UK Antenatal Care

In the UK, expectant parents are offered screening for Down's syndrome, an incurable chromosomal condition, as part of routine antenatal care. Drawing on an ethnography of two antenatal clinics, I explore how the prospect of Down's syndrome is interpreted and negotiated by healthcare professionals and expectant parents during screening consultations. The potential diagnosis of Down's syndrome, despite the condition being recognised by professionals as "compatible with life", is confined within universalising discourses such as "risk", "problem", or "abnormality" which not only construct Down's syndrome as a detrimental pregnancy outcome (the common vernacular of risk, in particular, becomes synonymous with danger or threat), but also imposes a collective category which masks the considerable variation of the condition. By drawing attention to the mundane interactions and materiality (e.g. booklets, posters, architecture) of the clinic and by considering diagnosis as both a category and process, I capture how the social construction of Down's syndrome is mediated through the symbolic and material structures, and is further embodied in cultural ideologies around perfection/imperfection and normality/abnormality. This creates a range of affects including producing self-blame among expectant parents, though particularly expectant mothers, who are enacted - within a neoliberal era
el turismo como un puente de intercambio material, cultural y simbólico entre los seres humanos; reevaluar los recursos locales como herramientas para el disfrute de un tiempo libre de calidad; reestructurar la actividad turística a partir de una nueva escala de valores basada en la equidad, la eficiencia y la simplicidad; relocular la actividad turística abriendo la posibilidad de redistribuir los espacios de proximidad y así ayudar a una redistribución de los recursos mediante una actitud de cooperación; reducir los impactos negativos a través de la conciencia de la relación entre sociedad, tiempo libre y naturaleza. Este trabajo explora las coordenadas para pensar un modelo de turismo rural basado en los intercambios sociales como vía para vincular recursos, territorios y personas, que se benefician mutuamente sin incentivar el crecimiento y la acumulación.

THOMAS, TANJA* (University of Bremen, tthomas@uni-bremen.de)

Naked Protest, Vulnerability and Power: Gendered Scenarios of Visibility and Protest

"Allah made me visible." This is what some young German women shouted while they were protesting IKEA's decision to remove all the women from the furniture catalogue for the Saudi-Arabian market. Protesting topless was meant to raise media attention and to get publicity; additionally it was unequivocally inspired by the Ukrainian feminist group 'Femen', which some have called one of the most successful campaigns of feminism in recent times.

In this paper I'd like to invite the participants to consider diverse examples of naked protests – e.g. fighting for peace and human rights in Liberia and Nigeria – from a transcultural perspective. In enacting nakedness as a performance of vulnerability and precariousness these examples draw our attention to particular corporeal actions, activities, practices, and events and they also clearly illustrate that the body signifies more than a site of cultural inscription. At the same time one can realize that such protest performances and their depictions in the media in particular have been criticized as self-commodification, as pornography reinforcing power structures of heteronormativity, and as the idea of the (post) colonial 'other'. I would argue, I argue, that it also constitutes a deep pathology of the Critical Theory tradition through a reworking of reification.

RC36-627.1

THOMPSON, MICHAEL J.*, (William Paterson University, thompsonmi@wpunj.edu)

Reification: Reconstruction and Extension Of a Concept

This paper will seek to reconstruct the concept of reification and extend it along three different social-theoretic lines. I argue that reification needs to be seen not simply as a the reduction of human relations to relations between things, but that it also constitutes a deep pathology in the capacity of individuals to conceive of the pathological nature of the social relations themselves, reification constitutes, on my reading, a cognitive defect within the thinking subject and therefore as a pathology of epistemic, cognitive, and evaluative capacities of subjects. This renders them unable to perceive and understand the true nature of their social being and, as a result, they come to distort the social and material world of nature around them. The depth of reification therefore leads us to an explanatory model of why individuals are susceptible to accepting forms of social power and domination that do not serve common public ends. There is, I suggest, a social ontology that is barred from our world-view due to the defective nature of reified thought. I take this theory to move against contemporary forms of Critical Theory, such as Habermas and Honneth to bring us back to the more radical impulse of the Critical Theory tradition through a reworking of reification.

THORPE, RACHEL* (La Trobe University, r.thorpe.latrobe.edu.au)

Women and Aging: Appearance and Age Appropriateness

Evidence suggests that Baby Boomer women may ‘do’ ageing differently to previous generations (Calasanti and Slevin, 2001). To date, there has been only minimal research considering Australian Baby Boomer women’s embodied experiences of ageing. Drawing on data from semi-structured interviews and personal journals from 28 Australian women aged between 55 and 81, this paper explores the ways in which women’s presentation of self was strongly informed by notions of appropriate dress, grooming and even behaviour for older women. Often these “rules” were taken for granted, and connected to broader ideas of ‘doing’ normative femininity and presentation of self.

This paper will consider the women’s motivations for doing this “appearance work”, and the impacts this had on their sense of self. While their endeavours were largely informed by established norms of female beauty and “appropriate” age-specific appearance, there was also considerable resistance to these norms and acceptance of the ageing process. Competing discourses, such as ‘resisting age’ and ‘being yourself’, were also apparent, and these processes of contesting and disrupting appearance norms will also be considered.

Art As Acute Action: Art and Articulations of Public Concerns in the Wake of 3.11

In the wake of the immense earthquake disaster that struck Japan on the 11th of March 2011, a myriad of art-based projects were conceived and shaped instantaneously as a response to the issues and concerns faced by people in the affected areas. Responding to the acutefulness of the situation, artists and art professionals – alongside various other social actors – turned their practices towards aiding the disaster-zones. In doing so, artists started shaping their artistic practices according to the realities faced by North-Eastern Japan, in close cooperation with those affected and other actors involved in disaster support. I suggest that such disaster-driven art projects can be fruitfully viewed through Bruno Latour’s concept of matters of concern, and the wider theoretical context of Actor-Network Theory (ANT). With the notion of matters of concern, Latour allows for the analysis of new and ongoing formations, provoked by public concerns and cross-cutting the spheres of art, activism and disaster relief. Analyzing specific artistic projects, I argue that this approach enables one to follow the practices and movements at stake as hybrid undertakings, which serve to publicly articulate, and thus give cultural shape to, the multiple concerns triggered by the disaster.

Figurative Methods: Towards ‘Bridging the Gap’ Between ‘Transition’ and ‘Cultures’ Research

The study of ‘youth transitions’ has consistently highlighted the persistence of class influence on life chances and opportunity. The study of youth cultures has had a more troublesome and fluctuating relationship with class. The foundational subcultural studies and more recent work continuing that tradition has been critiqued for (among other things) over-romanticising working class practice; finding ‘resistance’ everywhere; and having an unhealthy focus on the ‘spectacular’ while disregarding ‘everyday’. Work done on the loose sense of ‘post-subcultural’ studies (including ‘scenes’ and ‘neo-tribes’) has been critiqued for giving too much heed to fluid notions of identity; ignoring structural constraints; and over-romanticising ‘choice’ in consumer culture. In general, youth researchers have tended to focus on ‘people like us’ or young people for whom we have empathy. There has not been a lot of work on what I would call the more ‘mundane, vulgar’ end of youth cultural practice. By utilising Tyler’s ‘figurative method’, this paper proposes that tracing the use of terms such as ‘bogan’ or ‘hipster’ can enable an understanding of the ways symbolic violence is disseminated at the same time ‘classes’ are defined from public discourse. Rather than (just) seeing class as something that is static and to be measured, a figurative method can shed light on the ways classes are relational categories produced through constant symbolic and moral struggles. This can help bridge the gap between ‘transitions’ and ‘cultures’ research and work towards ensuring that youth researchers do not unknowingly reproduce unhelpful stereotypes. Further, figurative methods can enhance knowledge of the ways young people are represented and the impact this has on their experiences of social injustice, symbolic and material inequalities and moral economies.

THREAGOLD, STEVE* (University of Newcastle, steven.threagold@newcastle.edu.au)

Global Reflexive Hipsters Vs. Local Abject Bogens: Towards Understanding Affective Inequalities in Youth Cultures

This paper looks at terms like ‘hipster’ and ‘bogan’. Using ‘figurative methods’, analysing the ways these terms are operationalised towards groups on the margins and popular culture can enliven global comparative youth sociology. These floating signifiers enable distinction to be performed while eschewing the very notion of class. Both terms are mostly used as a pejorative towards various youth culture tastes. The ‘hipster’ is a global figure used in many English speaking countries. It embodies diverse, often ‘alternative’ and, reflexive irony that sees the term used in a quite playful way. On the other hand, the ‘bogan’ is a specifically Australian term but has relations in other countries that denote a similar class position such as ‘chav’, ‘white trash’, ‘red neck’ etc. Through processes of symbolic violence, the ‘bogan’ has rapidly become a prominent cultural discourse in pop culture, for Skeggs. Some people use the classifications and characteristics of race, class or femininity as a resource [hipsters] whilst others cannot because they are positioned as them [bogans] (my additions). These figures are indicative of the ways class is made and of the ways the boundaries between them, both local and global, are fuzzy sites of cultural conflict. As precariousness becomes normalised for even the well-educated middle classes, these figures also serve to highlight processes of global social change as they illustrate new forms of class based anxieties. The ‘bogan’ and terms like it tap into middle class insecurities producing forms of ‘downward envy’ (Everingham) and ‘disguised subject’ (Lawler). The ‘hipster’ plays a dual role: it represents a kind of clown that allows the middle class to both ‘reflexively’ laugh at itself alongside an ‘ambivalent’ and somewhat sheepish recognition of the ‘cruel optimism’ (Blerant) of consumer culture.

THUESSEN, FREDERIK* (Danish National Centre Social Research, frt@sfi.dk)

Segmented Social Capital and Ethnic Diversity in the Work Place

Work places employing many highly skilled and low skilled migrant workers and members of ethnic minorities are interesting focal points for investigations of the potential built-up of social capital along ethnic and national lines. Factories, retailer shops, offices etc. represent social spaces with varying degrees of social closure, interaction and formation of social relations between different employees depending on the composition of the work force, the work tasks, working conditions etc. Work places employing many highly skilled migrants have found it difficult to engage with the gendered notions of independence, adventure, embodiment and ‘risk’ which underpin much tourism experience and practice. Drawing on the author’s own ethnographic study of British stag party tourism in a Polish city, the paper will draw out key themes emerging from in recent debates about the positioning of masculinity in the complex social interactions fostered by tourist mobility and the creation of new and developing tourist spaces. Through observing how tourist enactments of masculinity interact and potentially conflict with the gender performances of others, the stag tour weekend offers an insight into wider notions of how masculinities are negotiated through embodied, relational, performances within tourist spaces and through tourist practice. In particular, the notion of masculinities being increasingly fragmented and pluralised must be reconciled with the apparently straightforward and taken for granted gender ‘masculinity’ commonly enacted during the stag tour weekend. The paper suggests that the emergence of such male bonding rituals which are frequently based around excessive inebriation, transgressive behaviour and disinhibition illustrate the convergence of numerous emergent strands in men’s lives. As such, sociological knowledge of the stag tourism phenomenon is a pertinent catalyst to wider discussions of themes relevant to the critical study of men and masculinity. In conclusion, the paper will suggest various future directions for the study of tourism and masculinities.

Peresttings on Environmental Justice in the North; The Case of Denmark, Sweden and Japan

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
What is the recent development of environmental movements (EM) in the North in response to the institutionalization and globalization of environmental issues and the speeding up of climate change? How and to what extent do activists link EM issues with those of global social justice? This article will present preliminary results from a 4-year research project titled Environmental movements in a globalizing world: transformation and/or institutionalization? In a pioneering study of the EM in Sweden, Denmark and the Netherlands from 1990, Jamison et al. showed how the development of the EM linked to national political traditions and to different strategies adopted by each state in dealing with social movements. 20 years later, we analyse and compare the current development of the EM in Sweden, Denmark and Japan. In all three countries, the EM face the challenge of global politics as parts of relatively strong national political consensus cultures. In Scandinavia, the EM is increasingly focusing on climate change, while parts of the traditional movement seem to be in decline. Local mobilization has given way to transnational networking and interaction on the global level via internet forums, websites and social media, a development that actualizes and articulates the idea of climate justice. The Japanese EM is comparatively weaker, but since Fukushima, the issue of nuclear power is giving rise to new movements and to heated debates regarding its pros and cons in fighting climate change. While the nuclear accident has pushed the climate issue to the background, it has also stimulated interest in energy and public debate regarding democracy and the fair distribution of risks in relation to energy.

Changes in Social Interactions in Reform-Era Urban China
The pattern of social interactions represents social divides and inequality. The homophily principle suggests that people are likely to interact with others of the similar sociodemographic, behavioral and intrapersonal characteristics (McPherson, Smirth-Lovin and Cook 2001). As resources are differentially embedded within networks, social interactions represent the hierarchical structures of the society (Lin 2001).

Tonnies (1887) argues that the industrialization changes the pattern of social interaction from Gemeinschaft (community), interactions based on kinships, to Gesellschaft (society), interactions based on education and work. It was confirmed by much empirical work documenting a decline of intergenerational interactions (Cherlin 2012) and an increase of marriage patterns based on education and work (Kalmijn 1998).

We examine the changes in the general pattern of social interactions in the reform-era urban China – a nation with strong cultural traditions regarding kinship ties and one that has experienced rapid economic and industrial development over the past several decades. Using the position generator from two social networks surveys collected in 1998 and 2005, we aim to answer two questions: First, is economic reform associated with interactions less based on kinships and more on occupations? Second, does the pattern differ by gender?

TIAN, FELICIA FENG* (Fudan University, felicia.tian@outlook.com)
Changing Pathways To Adulthood In China: Urban-Rural Divides, 1982-2005
Pathways to adulthood have been increasingly diversified in the United States and Western Europe in the economic globalization (Buchmann and Kriesi 2011; Shanahan 2000). The standard, tight, sequential pathway to adulthood (Klepper 1990) has been loosened, or twisted (Bruckner and Mayer 2005). These patterns are divided across the socioeconomic line: while most middle-class youths postpone the transitions, an increasingly proportion of working-class youths no longer follows the sequence of education, full-time employment, marriage and parenthood (Kalmijn 2010).

Little is known, however, about how economic change affects the life experience of the youths in the developing world. This analysis aims to fill the gap, using reform-era China as a case study to examine how the pathways to adulthood have changed from 1982 to 2005.

It will be focused on urban-rural difference. In these twenty-three years, China has experienced a noticeable increase in the urban-rural income gap (Sicular et al. 2007). The urban-rural divide arguably contributes substantially to the increasing income inequality in China (Zie and Zhou 2013). Therefore, it is both theoretical and substantially important to compare the pathways to adulthood between urban and rural youths, and explore the relative contributions of each institution (i.e., school, labor market, and family) to the difference.

To answer these questions, this analysis uses three censuses (1982, 1990 and 2000) and 2005 inter-censal survey. Instead of examining one transition at a time (Grunau and Kalmijn 2004), the analysis incorporates education, work, and family transitions simultaneously. Methodologically, it will treat each census as a synthetic cohort, and will use the entropy index to measure the level of heterogeneity in these pathways (Russell 2005) and the bootstrap to test the statistical significance. It will also use de-composition method to examine the institutional contribution to these changes. (References available upon request).

The Power of Media Communication: How Propaganda Techniques Used in Advertising Influence Japanese Women
Media, as a communication tool, has a great impact on society. From the traditional simplex communication tools such as T.V., radio, newspapers, and magazines, to the most current bidirectional communication tool, the internet, media has a great amount of influence on society. Media is a powerful tool that can influence a country's policies, shape public opinion, and even set the standard for societal norms. Consequently, research has shown that media outlets use propaganda within advertising. Advertising agencies skillfully manipulate female emotions, in order to create and bolster a perpetual culture of consumption. As a result, this directly contributes to gender inequality.

The primary purpose of this paper is to analyze how media propaganda influences females in Japanese society and the impact it has on their lives. Additionally, this paper will detail how media outlets use propaganda techniques, which have proven to be effective in manipulation. This greatly affects how females view themselves and their roles within society.

Social problems including, excessive consumption, identity, and gender inequality, are viewed as generalized social problems. These social problems are often ignored or downplayed by the mainstream media. This paper will engage in a historical analysis, to include the studies that have been conducted, concerning media propaganda on women in Japan.

Although, the news media is supposed to report objectively, studies have shown that notion to be false. The news is often skewed to serve the interest of the power elite. As a result, the news media often reinforces the dominant social ideology. In Japan, the dominant ideology is largely male-oriented. Similarly, this paper argues that the propaganda techniques used by advertising agencies, even as a byproduct, serve that same purpose: to maintain a male-dominated power structure in society.

Gender Segregation in the German Vocational Training System
Transitions from education to work are known to be particularly smooth in Germany. This is mostly attributed to the “dual system”, which combines firm-based training and vocational schooling (Müller/Gangl, 2003). In the dual system trainees spend 2-3 years in a company as apprentices and acquire firm specific skills. Both firm and apprentice thus invest in the training which leads to a mutual commitment and a high probability that the apprentice is taken over by the company after training.

However, the German vocational training system does not only consist of the dual system but also of school-based vocational training. In these schools, the contact to potential employers is limited and the curriculum is not firm-specific. We therefore expect that the transition from education to work is less smooth for trainees from school based vocational training. They should face a longer transition period and/or more job mobility.

As gender specific occupations coincide with the type of vocational training, training types are highly gendered in Germany. Women are more likely to enter school based vocational training. We therefore expect that their pathways into employment are less straightforward. The lower firm-specificity of their skills and the lower commitment of employer and employee also should lead to higher job mobility.

We use the German National Educational Panel Study (NEPS). This dataset consists of detailed retrospective lifecycle information about educational and occupational biographies of approximately 11,000 individuals. We examine transition patterns of German women and men after completion of their vocational training and assess how much of the gender differences in the duration of the job placement process and early career mobility can be attributed to the type of training.
Political participation and participation in the community is often associated with higher levels of reported subjective happiness, but in the case of Japan a negative correlation between activities in neighborhood associations among female members was found by Tiefenbach and Kohlhaeuser (2013). The current study uses data gained from an online monitor survey (n=1600) conducted in September 2013 in Japan to get a better understanding of the relationship between happiness and participation in the community. A special emphasis is put on the sources of procedural utility (competence, autonomy and relatedness) as well as on voluntariness and loneliness as moderators and mediators of the effects of participation on happiness. Preliminary results suggest that participation in the community leads to higher or lower levels of happiness depending whether it is conducted voluntarily or not. In either case, participation leads to lower levels of loneliness, which in return has a positive effect on happiness. Finally, the sources of procedural utility can be linked to higher levels of happiness, but significant gender differences can be observed.

**Historic Preservation of Significant Cultural Sites in Taipei: Comparing 2 Case Studies in the Aspect of Cultural Heritage Management**

Cultural heritage management has traditionally been concerned with the identification, interpretation, maintenance, and preservation of significant cultural sites. The public face of CHM, and a significant source of income to support continued management of heritage, is the interpretation and presentation to the public, where it is an aspect of communicating with govern- ment and the public is therefore a key competence. The thesis focuses on 2 sites in the city of Taipei, Taiwan. Both targeted case studies are defined as art spaces of cultural property organized by Taipei City Government. Spot-Taipei Film House, built in 1926 with a southern colonial architectural style during the colonial period, was originally the residence of the U.S. Ambassador. Once closed due to Pacific war and reopened for the residency of the U.S. Ambassador under the rule of Republic of China, it had faced another closed due to U.S. changed its diplomatic recognition to PRC. Tsai Jui-Yueh Dance Research Institute, built in 1920, was a Japanese style house for the residency of the Japanese Governor. The later owner, Mr. Tsai Jui-Yueh, a dancer who was educated in Japan during the Japanese colonial period, had settled her dance studio in the dwelling, held a 24-hour-long creative activism to save it from demolition by the later ruling government of KMT. This paper will look at Taipei city government’s action toward the two historical buildings. How did the two dwellings process their way to become cultural heritage? The difference movements represent the interpretation and preservation of the space. Additionally, the thesis will review how the two culture heritage presents themselves to the public as well as the spatial reinterpretation of Taipei citizen.

**‘standpoints’: Attitudes to Global Justice Among Young People and Youth Workers in Ireland**

This paper draws on an empirical study of attitudes among young people and youth workers in Ireland towards development and global justice issues, and of initiatives taken in youth work contexts to raise awareness and promote action in relation to such issues. Young people’s views ranged from the very knowledgeable, critically aware and insightful to the uninformed and apathetic, with the majority in between these two positions, showing some limited knowledge of global issues or relationships but an appreciation of their relevance and a willingness to explore them further. Youth workers (particularly but not only those with direct development experience) for the most part showed a high level of knowledge and awareness of global issues and relationships, and of the links between the global and the local. There were however considerable divergences of opinion among them as to the interpretation of certain key concepts, including ‘global justice’ itself. Some young people gave examples of actions they had taken themselves in response to global issues and concerns (for example decisions about where or what to buy), but respondents on balance felt relatively ineffectual with regard to such issues. While the youth workers were much more likely than the young people to say that they thought they could make a personal difference to how the world works, there were very different views of how this could be done; and the researchers noted that workers commonly spoke in terms of what they could or should do in response to development and global justice issues rather than describing what they had done or were currently doing. Overall the research suggests that there is a high degree of ambivalence regarding the nature of global justice, the operation of key, related concepts such as power and agency and the relevance of these to youth work practice.

**Transnational Somali Families and Resilience: Experiences of Two Generations**

Transnational Somali families and resilience: experiences of two generations

Following the civil war and collapse of the Somali state, sizable Somali diaspora may be found in particular in North America and Europe. In Toronto alone an estimated number of people of Somali descent is around 100,000; in Finland the corresponding number is about 15,000. In many places of resettlement Somal- i migrants have faced challenges regarding education, employment, housing, discrimination and racism. Also economic recessions have contributed to low-in- come status of many Somali families, where not only the first generation, but also the second generation often ends up in low-paid and precarious jobs. A family unit, including transnational family connections, is important for increasing the overall resilience, wellbeing and safety of the family members.

This presentation will address the role of (transnational) family as experienced and narrated by both Somali parents and their children who have grown up in the diaspora. What kinds of expectations do parents have towards their children as part of the family? What are parents’ strategies to support and protect their children and youth? In which ways do the children – young adults – contribute to the wellbeing and resilience of their families? How do they feel about and relate to transnational family members, including those in Somalia?

The presentation is based on ongoing research on transnational Somali families in Canada, Finland and Somalia, funded by the Academy of Finland (2012-2017). The data consists of ethnographic interviews of two generations in the families of Somali descent residing in Toronto and in Helsinki. In addition, transnational family members in Somalia and some European countries will be interviewed.

**“Generation IV” Nuclear Reactor Design Project As A Controversial Innovation Process: A Qualitative Study of the French Case**

This communication aims to qualify the socio-material and organizational processes that affect local and institutional decisions related to the design of future nuclear reactors in France. In the post-Fukushima context, nuclear risk is less and still tolerated by society. Yet, France, along with thirteen other countries, is currently engaged in the design of new generation nuclear reactors, known as “Generation IV”. The “GenIV” concept and the renewal of interest for these technologies are linked to the launch in 2002 of the USA of the “GenIV International Forum” to coordinate researches’ efforts on a global scale. It led to the identification of four “GenIV” objectives: highly economical, minimal waste, proliferation resistant and safer. Six concepts are currently being researched. Even if these designs are not expected to be available for construction before 2020, they arouse oppositions and remain highly controversial.

Our proposition builds on an on-going empirical study of the ‘new reactors’ design process in France, where one concept appears dominant: the sodium-cooled fast reactor, supported by the CEAs. However, this choice is disputed, especially by academic scientists who try to re-negotiate the choice. Based on qualitative data, we analyze this innovation process as an “interactive chain” (Callon et al., 2002) that involves distinct actors (Latour, 1987), both humans and non-humans, from university labs to industrial production unit, through industrial research centers and political organizations. By observing innovation “in action”, we aim at showing how the “uncertainty/irreversibility” dilemma is collectively managed through the construction of scenarios relying on explicit and implicit hypotheses. We want to demonstrate how the positioning, the power and the level of knowledge of the different actors guide the hypotheses’ formulation and can support technological “lock-in” phenomena, finally affecting the innovation process far from being of a pure rational choice based on the four “GenIV” criteria.

**Cuando La Participación Ciudadana Argentina Tomo La Palabra**

La adopción en 2009 de la Ley de Servicios de Comunicación Audiovisuales constituye un paso muy importante en el proceso de democratización de los medios audiovisuales argentinos. Frente a un sector audiovisual fracasado (construido sobre el decreto-ley n° 22 285/80-adoptado por el gobierno de facto de 1976), esta ley se presenta como el punto de partida de la tentativa de reconstrucción del sistema audiovisual e instaura un nuevo modelo audiovisual democrático,
multicultural, pluralist, inclusive and respetuo of the misiones de servicio publico (los pueblos originarios, ocupan un lugar privilegiado en este nuevo sistema audiovisual).

Por primera vez el debate legislativo argentina implicó una participación ciudadana digital sin precedentes. Mas de 300 organizaciones sociales, sindicales y comunitarias y mas de 12,000 personas (inconformes con el modelo audiovisual en vigor) participaron, desde el 2004, a esta discusión a través de foros y debates con el objetivo de lograr un consenso institucional y social. Como resultado de esta iniciativa ciudadana llamada “Coalición por una radiodifusión democrática”, se elaboró en julio 2008 un texto de 21 puntos que fue tomado en consideración por los legisladores argentinos. En este contexto, el activismo de las movilizaciones sociales orientado a participar al proceso de transformación del sistema audiovisual se vehiculó a través de la utilización de las redes sociales.

Esta que ley debió afrontar una fuerte resistencia del sector privado y que pa- dece hoy en día las consecuencias de un sistema político-jurídico anómalo (frente a su eficacia como consecuencia de su judicialización) sigue siendo el centro de movilizaciones sociales generadas a través de la red. El objetivo de esta comunicación es de presentar esta experiencia argentina, de entender esta participación en la esfera pública, de analizar la fuerte expansión del uso de las TIC en diversos sectores de la sociedad (en especial: los pueblos originares).

**Identidades Políticas y Culturales. Entre La Crisis Económica, Mediatizaciones y Tecnologías**

Esta ponencia tiene como objetivo presentar los avances de una investigación que estudia los procesos constitutivos de las identidades políticas y culturales en relación con las actuales formas de implicación y participación de los sujetos en la esfera pública.

Al mismo tiempo, se propone presentar reflexiones sobre las prácticas culturales con el fin de analizar las características más sobresalientes de la interacción de la sociabilidad propia de las relaciones que establece la población con las instituciones del orden público y social.

Los resultados aquí presentados contribuyen al conocimiento de la constitución de identidades y sus consecuencias de un sistema político-jurídico anómalo (frente a su eficacia como consecuencia de su judicialización) y la mediación digital y la crisis económica y financiera de la fase actual del capitalismo.

El contexto empírico de la investigación se sitúa en dos universos institucionales y urbanos: la ciudad de Toulouse (Francia) y la ciudad de Rosario (Argentina), en el marco de sus respectivas regiones. Dos sociedades pertenecientes a dos países que también han sido diseñadas como ciudades potenciales comunes como hermanamiento entre sus respectivas autoridades en 2008.

Existen dos corrientes de investigación que encuadran de manera diferente el objeto de estudio que nos ocupa. Por un lado, todo lo relacionado con la llamada videopoliitica y sus derivados en el desarrollo actual de las tecnologias digitales. Por otro lado, la tradición de la participación social, que se centra hoy en la emergencia de nuevos actores.

La cuestión que aquí se presenta es heredera de las dos tradiciones, priorizando la existencia de un nuevo orden político desgado por la mediación y la comunicación digital en un contexto de creciente crisis económica.

**Workers Who Organize in the Public Square: A Comparison of Mexican and U.S. Informal Worker Organizing Models**

The growth of informal employment in Mexico and the United States cries out for solutions. For informal workers, unprotected by existing laws, this requires developing new and distinct organizing strategies, and building alliances. Our study uses case studies of organizing of informal workers who contest over the use of public space in the two countries to understand this process in comparative perspective.

Our central questions are:

- What forms does this organizing take in the two countries? How and why are these forms different between the two? How do informal worker organizations formulate and implement their strategies, and how do they target and develop alliances, in the two countries?

- What is the role of worker identity in these organizing processes? Our analysis undertakes two case studies grounded in interviews and participant observation: day laborers in the US, and street vendors in Mexico. It is a bit unconventional to carry out such a non-comparative comparison of different sectors in the two countries, but we have chosen to examine these two informal groups because the literature suggests that they are the most advanced instances of informal worker organizing in each country. We will need to take the sectoral differences into account in explaining differences in strategic direction and degree of success, but choosing the two most advanced cases should give us leverage on our central questions.

In our case studies, we will examine national-level organizations, but our main focus will be on day labor organizations in Los Angeles California and street vendors in Mexico City, Mexico. These respective cities not only house the greatest concentration of these groups of workers, but are also the home base of the leading national organizations representing these trades.
"Common sense" arguments for participation in movements like the environmental movement often refer to grievances, or beliefs, as key factors that give rise to participation. However, structural analysts have demonstrated that neither discontent nor ideology are sufficient conditions to explain social movement participation. Rather, while discontent and beliefs might help to define those who might potentially be mobilized, individuals need to be connected to other movement participants in order to become active. We explore the relationship between social network ties and participation in the Canadian environmental movement. Data are from a self-administered questionnaire, collected from nation-wide probability samples of environmental organization members. We find that ongoing participation is positively associated with ties to individuals in a range of environmental organizations. This effect is net of positive effects for identification with the movement, and the respondent's NEP score, on participation. Past participation is the strongest statistical predictor of network embeddedness. Thus we argue that both "social selection" and "social influence" effects are in play. People develop ties through their participation, and are more likely to participate in new activities because of their ties. We further examine the mechanisms underlying these patterns, and discuss practical implications of these insights.

Social Media Use for Contentious Politics: Facebook-Activism Against Imposed National Education Curriculum in Hong Kong

This paper examines the use of social media for the protest against the "Moral and National Education" curriculum in Hong Kong. Employing media content analysis and archival research, it explores how social media users facilitated grassroots movement organizations and stimulated cyber-activism among atomized users in practice. On 30 August 2012, a local student organization – Scholarism – went on a hunger strike. Occupying the public area in front of the Headquarters of the Hong Kong Government, members of Scholarism protested against the controversial curriculum imposed by the Education Bureau. In the subsequent days, tens of thousands of people joined the protest. Nine days later, the government succumbed to the pressure and retracted its plans. While new information and communication technologies provide the technical infrastructures for organizing movement campaigns and protests, various uses of new media configurations offer flexible mechanisms for people to take part in contentious activities. During the occupation protest, Scholarism eagerly employed Facebook technologies to coordinate collective actions and mobilize participants. At the same time, numerous users made active use of Facebook to communicate about the movement, forge social networks, produce alternative knowledge, and create innovative protest activities. As diverse actors simultaneously undertook online activism, the patterns of their computer-mediated communication facilitated the emergence of counter-publics and the development of movement practices and culture. Borrowing insights from the growing theory on computer-mediated social movements that challenges the assumption about requirements for formal leadership and organizational hierarchies, this paper argues that new media use modified the relationship between social movement organizations and individual users, and permitted alternative forms of civic engagement for democratic participation.

TIRADO, RICARDO* (UNAM, tirardo@unam.mx)

Blood Sacrifice, Instant Celebrity, Organization and Mobilization

The paper deals with cases in which almost unknown persons, because of a tragedy, suddenly jump from anonymity to the civil sphere converted in celebrities with great capacity for civil intervention. These celebrities owe their instant fame to the fact that they are closely related to the victim of a bloody tragedy: the kidnap and murder of a child, a wife or a husband.

The paper will concentrate in these aspects:
1) The casual birth of a new (involuntary) celebrity, because of a bloody tragedy.

2) Scandal, annoyance, desperation, and new tragic stars in the media.

3) The re-edition and impact of the old myth of sacrifice, blood spill and redemption.

4) The effectiveness of the myth that tragic death of an innocent victim is a sacrifice and sacrifice should be useful and deserve compensation.

5) The great impact of bloody sacrifice symbol. Bloody sacrifice and "conscience crisis" (Habermas).

6) The great possibilities of social action and intervention of some of these people.

7) The different strategies, goals and routes of social action.

8) The discovery of the possession of an unknown new great "magic" like power.

9) Amazement and improvisation of the action of the new celebrity

10) Why some of the co-victims can develop social leadership and others don't?

11) Resources for the mobilization of this mythical power.

TODEV, EMANUELA* (University of Surrey, e.todeva@surrey.ac.uk)

Business Network Theory and the Role of Country of Origin

Business networks are recognised as the new organisational form of doing business, where cooperation and competition take place simultaneously, where the interdependencies between firms co-evolve through complementarity of skills, assets and capabilities, and inter-firm relationships thrive in the form of long-term repetitive exchanges and alliance membership. The theoretical and empirical literature is very rich in assertions about the benefits from networking and the positive impact of alliances and cooperation on firm performance, on supply chain integration, on dissemination of innovation and on learning and development of individual firms. Business Network Theory represents an eclectic body of theorising that focus at three distinctive levels – the level of actors' attributes, the level of dyadic and multilateral inter-firm relationships, and the level of overall configurations of multinational business networks, or multinational business operations trespassing firms’ boundaries and countries’ borders.

Traditional concepts of international business theory, such as ‘country of origin’ could hardly explain the complexity of resource flows that take place on a global scale. While research on Asian multinational firms demonstrates clear evidence of distinctive patterns of governance and investment strategies, ‘country-of-operations’ has become a more dominant concept that can explain global collaborative strategies.

The paper presents a new argument that global supply chains and commodity chains, or multinational business networks in a number of industries exhibit a common characteristic, where the regulatory environment in countries-of-operation induces similar strategic behaviour.
Mothers’ Use of Terms Referring to Their Child in Japanese Conversations: A Conversation Analytic Perspective

This study examines ways mothers refer to their child in conversations in Japanese from a conversation analytic perspective. Conversation analysis is a method-ology to examine real time interactions from the perspective of the participants themselves (Sacks, Schegloff, and Jefferson, 1974). Person reference has been among the major topics of conversation analysis since the seminal work by Sacks and Schegloff (1979). Studies have shown that forms of reference can do a special interactional work other than referring to (a) person(s) (Schegloff, 1997; Stivers, 2007). For instance, Oh (2010) shows that Korean speakers use a quasi-pronoun based on the distal demonstrative ce (‘that over there’) in referring to a co-present third person in order to distance themselves from the referent. In this study, I focus on the kind of interactional work mothers are doing when they use different expressions to refer to their child in conversations. My data were collected at two Kosodate Hiroba in Osaka, Japan. Kosodate Hiroba is a place where mothers of a very young child spend time watching their child and enjoy conversations with other mothers and staff members, often sharing their problems in child-raising and getting advice from them. I found that the unmarked form of a mother’s ref-erence to her child is either the child’s name or kono ko (‘this child’), neither of which does anything more than refer to the child. By contrast, the mother’s use of kono hito (‘this person’) to refer to her child can do a special interactional work. For instance, mothers recurrently make reference to their child with kono hito when they explain the child. I argue that the expression kono hito makes a complaint more easily recognizable because the word hito (‘person’) conveys that the referent has independent thought and is difficult to control even for her/ his mother.

Comparison of Radio Buttons, Visual Analogue Scales and Slider Scales

The most traditional rating scales in Web surveys are made from radio but-ton panels. These panels are not based on probability mechanisms and hence in-ferences are difficult to make. Post-survey adjustments techniques such as propen-sity score weighting are often used to improve data quality. However, which methods work best and which variables need to be taken into account differ per survey. In an attempt to structure methods of post-survey weighting techniques for the volunteer Leisure Panel, different weighting methods are evaluated as well as different weighting variables, such as behavioral, attitudinal, lifestyle, and socio-demographic variables. Results are compared to outcomes of a probabili-ty-based panel (LiSS Panel) and figures from Statistics Netherlands.

Investigating Response Quality in Mobile and Desktop Surveys: A Comparison of Radio Buttons, Visual Analogue Scales and Slider Scales

Mobile devices have smaller displays, touch screens and different methods of navigation compared to desktop computers. This may limit the amount of infor-mation that can be placed on a mobile phone screen and it can also affect how a survey is comprehended and completed. The most traditional rating scales in Web surveys are made from radio buttons. Radio buttons require quite a lot of space, which is scarce on mobile devices like smartphones. Thus, only a limited number of response options can be pre-sented simultaneously. Otherwise, respondents have to scroll to see all response options which may bias ratings. Visual Analogue Scales (VAS) are operated by point and click: respondents move the mouse arrow to any position on the line and after clicking the mouse button a marker (e.g., a cross) appears at the very position. In contrast, slider scales have a handle visible directly on load of the Web page. Ratings are done by drag and drop. Both scales can either be implemented as continuous rating scales, or as discrete rating scales where only a limited number of different responses can be given. A continuous implementation is especially valuable if respondents use mobile devices like smart phone where an efficient use of space is required. A comparison is needed of radio buttons, VAS, and slider bars to see how they affect data quality on mobile phones compared to regular desktop completion. Finger navigation on mobile devices is less precise than mouse navigation on desktops. This could result in selecting the wrong (not intended) answer option in radio buttons. Slider bars or VAS might be more efficient in selecting the intended response option. The usability of question formats is conjectured to be related to the number of scale points.

Energy Regime Change and Institutionalism: Understanding Developments in Carbon Capture and Storage

Many analyses of energy technology development disregard the importance of institutions and the interdependence of economic, technological, political and so-cietal concerns and events. I propose a dynamic institutional systems framework to integrate the various concerns into a simultaneous analysis and demonstrate the framework with case analyses on the budding developments of Carbon Capture and Storage (CCS) technologies in Europe.

The framework integrates cognitive institutionalism, Socio-Ecological Systems (SES) and socio-technical transitions theory. Institutions are the rules of the game in shaping human interactions; both formal rules, such as laws and regulations, but also informal institutions through traditions, practices and beliefs. Individual but shared beliefs about energy regimes shape how the systems develop, leading to issues of technology lock-ins, incremental change, institutional inertia and path dependency.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This paper focuses on self-referentiality in the mental models of stakeholders as a factor that shapes these issues. The institutions held by the actors are seen to organize in a nested mental model: the three levels of socio-technical landscape, socio-technical regimes and the innovative niche (Geels 2002) are seen nested holons or SESs.

This paper is based on case studies in Finland. The case studies are focused along two projects: one cancelled retrofit of a coal power plant and one case of technology in development, mineral carbonation. These two projects are deeply embedded in a national and international context, and the aim of this paper is to establish how stakeholder’s institutional self-referentiality affects the developments in the projects and what these project issues tell us about CCS and energy regime change in general.

The paper demonstrates novel methodology to measure path dependency in policy-making. The method takes large text corpuses of policy documents, plans, scenarios, roadmaps, preparatory text and the like, and analyzes the flow of concepts, phrases and blocks of text as later documents inherit bits of earlier documents. The analysis proceeds by looking at relative frequencies of words and phrases in documents through a measure called term frequency-inverse document frequency, and translates this into two networks: the document-document network and the concept-concept network. This network analysis describes how conceptual usage is inherited between documents and the concept-concept network describes courses or network areas of concepts that are used together and start to institutionalize in the political language.

The paper demonstrates the method through an analysis of energy policies in Finland, and how various technologies, policy tools, and conceptualization has been developed and fell over a fifteen year period from 1997-2012, from right after joining the European Union, through the rise of climate change negotiation and the Kyoto treaty, and into a period when energy policy came to be incorporated with climate policy.

"Belonging" in the Study of Younger Generations of Migrant Background

This paper discusses the analytic purchase of the concept of "belonging" to study identity formation among younger generations of migrant background. It is argued that "identity" has more usage as an empirical concept, whereas "belonging" provides more analytic purchase to grasp the underlying mechanisms of inclusion and exclusion that inform young people's identity formation.

The theoretical discussion will be informed by an empirical study on young Kurds' negotiations of belonging in Finland. The qualitative study looks at how young Kurds narrate their belonging in terms of various mechanisms of inclusion and exclusion, including institutional arrangements and (racialized) discursive categorizations. The broader theoretical premises of the empirical study lie on transnationalization, identity formation and narrativity, and the theoretical discussion leads to question the analytical edge of "belonging" and how it addresses the questions of who gets to belong and who does not. The case study shows that young Kurds construct a sense of belonging in terms of the discursive construction of national belonging and "otherness" in the Finnish context. The racialized boundaries of "Finnishness" echo in their narrations and position them as the "other", namely the "immigrant", "refugee" or "foreigner" on the basis of their darker embodied signifiers.

Floya Anthias argues that belonging, in contrast to identity, assumes access and participation, and becomes activated in situations of denied membership and experiences of difference. In this sense, it is suggested that "belonging" better captures the political dimension of feeling at home among the younger generations of migrant background. Such theoretical choices also bear consequences for our understanding of the political dimension of feeling at home among the younger generations of migrant background. Such theoretical choices also bear consequences for our understanding of the political dimension of feeling at home among the younger generations of migrant background.

In France, an increasing number of local authorities have developed programs focusing on “urban mediators”, which aim to reduce insecurity within districts referred to as deprived areas. These individuals make the rounds in such districts to ensure a calming presence for inhabitants as well as to speak with them. This street intervention allows mediators to meet with various persons distant from public services, such as drug addicts, juvenile delinquents, victims of domestic violence, or immigrants facing integration problems. This demonstrates that such interventions include security and social dimensions at the same time: The mediators intervene not only with persons who “cause” insecurity but also with those who suffer as a result of it. Therefore, they differ, on one hand, from the police, whose actions consist mainly of repression (Roché 2004) and, on the other hand, from social workers, who intervene mainly in the long term as a result of requests. These features led us to question the way the characteristics of different districts can influence the respective importance given to both dimensions (security and social) of the mediation. This fieldwork and the analysis of archived data from the year 2010 onwards show that this action can be classified not only according to the degree of the municipal coordination but also to the community size (larger or smaller), the networks which the municipality has with other actors, and the social status and cultural background of mediators. This communication will reveal the impact of the principal coordination on the articulation of these two dimensions, the process of construction of partner networks around the question of the insecurity, and the interaction between urban mediators and inhabitants. The paper demonstrates the method through an analysis of energy policies in Finland, and how various technologies, policy tools, and conceptualization has been developed and fell over a fifteen year period from 1997-2012, from right after joining the European Union, through the rise of climate change negotiation and the Kyoto treaty, and into a period when energy policy came to be incorporated with climate policy.
On the basis of the above results, I will discuss the dysfunction of self-reliance as a social norm.

The Process of Children's Socialization in a Group

This presentation will discuss the process of children's socialization in a group. Although the socialization of children has been one of the most important research topics in sociology, the concrete aspect of it is still uncertain.

The study was conducted in a children's self-reliance support facility (called "Z") in this presentation) from May 2012 to June 2013. Beginning in September 2012, I conducted semi-structured formal interviews with twelve staff members. Each staff member was interviewed once or twice, and each interview lasted for 45-110min.

The results reveal the following: (1) In Z, living with a group is optimally used to treat, care for, and socialize the children. In particular, their rank in their relationship, which is based on age or phase of treatment, plays a very significant role. (2) It is important to note that such a rank is not permanent. As the upper-class children leave the facility, or when a new child enters the facility, the rank shifts. (3) Moreover, the children do not uniformly experience the reconstruction of these ranks. Rather, it is an individual experience.

As indicated above, living in a group and experiencing the construction and reconstruction of ranks in their relationship take very important role in children's socialization. This process can be interpreted as the process of "role-taking" in group dynamics. Moreover, such "role-taking" can be regarded as a type of anticipatory socialization that occurs after children leave the facility. I will conclude by discussing the implications of these findings for the field of sociology.

TOMALIN, EMMA* (University of Leeds, e.tomalin@leeds.ac.uk)
Gender, Development and the 'De-Privatization' of Religion

"Poverty has a female face" in many contexts, which has been exacerbated by the recent global economic crisis. Amongst the range of actors that have responded to declining levels of welfare support by the state are both faith-based organizations, and international donors and agencies increasingly recognize these as significant 'development' partners. This 'turn to religion' within mainstream development policy and practice has taken place against the backdrop of a perceived 'religious resurgence' or 'de-privatization' of religion, which casts doubts upon earlier predictions that secularization and modernization are two sides of the same coin.

From a 'gender and development' (GAD) perspective, the 'rise of religion' coupled with declining levels of state welfare provision presents a threat to gender equality and women's rights. The preference for 'secularism' amongst numerous women's rights activists and GAD practitioners is no secret, and has been promoted as the best route for securing equality, freedom and security for women globally. Therefore, it is crucial to view the recent 'turn to religion' by mainstream development actors through a gender lens. This is not only because women are more vulnerable to poverty, but also because 'religions have a male face' (see also Tadros 2010; Tomalin 2011).

This paper examines the future of the 'secular' in the light of theories about the 'de-privatization' of religion and the implications this has for gender equality and women's rights, which are central to GAD. Currently, understandings of religion that influence mainstream development policy and practice rely upon frameworks for an analysis that are outdated and unhelpful for addressing the above concerns. Focusing upon examples from South Asia, I will demonstrate that distinctions between the religious and secular, the private and public, and the idea of a clearly defined thing called 'religion' are unhelpful in addressing contemporary questions around 'gender, development and the de-privatization of religion'.

Albularyo Ritual Healing: A Construction of Ethnicity of Filipino Immigrants in South Korea

The transnational movement of people around the globe has challenged migrants' belief systems and their quest for well-being. The movement of people in itself is a form of ritual performance, a journey towards a dream and the aspiration to acquire a new sense of self and identity. The goal of this research is to illumine how migrants reconstruct their ethnicity through access to the albularyo ritual healing of their homeland. In this paper, migrants are viewed as secular pilgrims who experience the manifold stages of liminality as they continue to seek well-being. Along the journey they suffer from pneumopsychosomatic illness, which has to maintain connection with "home." They romanticize the memories of their homeland. They access shamanic ritual healing, which brings into the real "here and now" the interplay of memory and the self's narrative that defines their identity. The research is based on the ethnographic data collected April to June 2013 in South Korea. It focuses on the story of Filipino immigrants who experienced shamanic healing in their homeland and continue wearing the amulets given to them by shamans to prevent illness and protect them from evil while in a foreign land. The migrants' definition of their "new selves" is shaped by the core institution of modernity.

Findings indicate that the root cause of disease from pre-industrial society to the age of globalization is emotion. Negative emotion breaks one's social ties with the self, significant others, and the divine. Physical illness often stems from one's spiritual sensibilities in his/her religious worldview. Also, migrants' state of identity-consciousness is "in between" – that is, "neither here nor there" – and they must undergo different stages of liminality in restoring selfhood. Thus, healing is an outcome of rebuilding relationships – practicing one's spirituality and reconstructing one's ethnic identity.

Development, Inequality, and Discrimination in Europe: A Comparison of Post-Socialist and West European Democracies

This paper uses the European Social Survey 2002-2012 to examine trends in discrimination, taking into account two different groups: those who feel discriminated against because of their ethnicity, and those who espouse xenophobic attitudes. The country-level relationship between feelings of discrimination and xenophobic attitudes calls for explanations that consider economic development and social inequality. A complimentary research question is: To what extent does social inequality influence feelings of discrimination and intolerant attitudes, beyond economic development factors, individual socio-demographics and various personal outlooks? Our analysis covers post-socialist and West European countries (N>16) in the period 2002-2012. Multilevel regression analysis on the ESS data provides the statistical means to examine the effects of country-level and individual-level determinants and their interactions on feeling discriminated and on xenophobic attitudes. Economic variables at the country level include national income per capita and Gini index of income inequality. At the individual level, we focus on social stratification – education, occupational status, and income – subjective evaluations of standard of living, as well as a range of attitude measures. Results demonstrate how these variables are related to ethnic discrimination and xenophobic attitudes, controlling for political views and national orientations. We show that in post-socialist countries ethnic discrimination became more salient as society embraced party pluralism and freedom of speech. At the same time, in both post-socialist countries and Western democracies right-wing and nationalistic attitudes are strongly fuelling discrimination. At the end of the paper, we discuss theoretical implications of our findings for analyses of development, inequality, and democracy.

Peruvian Immigration to Chile: Racism and the Deskilling of Female Transnational Workers

Historically Chile has been a country of emigrants rather than a country of immigration. There are around one million Chileans living abroad. However, in the last decades immigration to Chile has accelerated. Immigrants from Peru, Ecuador, Bolivia, Colombia, China and Korea confront a hostile and racist society. The largest of these groups is formed by Peruvian migrants. About 130000 Peruvians live today in Chile. Of these, 60% are women, many of whom end up working as domestic servants. Peruvians have become a large group among domestic laborers, in particular as live-in domestics. Although the levels of education of Peruvians are higher than those of Chileans, they are consistently pressured into low paid work with little protection. By using a netnographic methodology I investigate how racism, that has historically casted mestizo Chilean women in the role of ‘nanas’, today stream Peruvian women into the homes of wealthier families and domesticics, regardless of the levels of education and skills they bring with them at the time of immigration.

A Study of Policing the Protest in Japan: Effects for Social Movement Organizations and Arrested Activists

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This study investigates the policing for social movements in Japan. Compared with other countries, a few studies empirically examined the policing in Japan. In 60s/70s movements, over 5,000 activists were captured by police. Though arrested activists had dramatically decreased since 1970s, policing still have an impact on social movement organizations (SMOs) and participants in Japanese political activism. In this study, author conducted the research surveying the efficacy of policing for political activities from two sides: SMOs and individual participants. Three kinds of data are employed in this analysis: Interview data, event data and network data. We could find some features of policing in Japan from event data. In Japan, policing is relatively not violent, but the period of detention is extremely longer than other countries. On average, protesters have arrested from 10 to 20 days and SMOs have to do activity for helping the arrested person. On the other hand, seized participants face to the crisis collapsing their careers as a student, businessman, housewife, and other roles in their usual life. Participants are arrested, some activists avoid taking part in and continuing the social movements. Once the participants are arrested, some activists avoid taking part in and continuing the social movements. SMOs have to spend their money and time to release the arrested one from police, thus their resource are decreased and it is difficult to continue the movements as they used to be. Moreover, arrested participants sometimes break off with external relationship from the social movements: his/her offices, friends, and families.

“Looking at Invisible Woman. the experience of Housewives in Contemporary Italy”

The contribution presents the outcomes of a research promoted by the Department of Political Science and Sociology, University of Florence. The aim of the research was to design an updated picture of nowadays housewives, as well as to investigate why so many Italian women still remain out of the labor market. In Italy, it is very difficult to draw a so “invisible” picture, partly because the research was conducted from a multiple methodology, reaching more than 500 women through online questionnaires, in deep interviews, meeting outside the malls and the schools, newspapers, blogs, etc. Outcomes show that the traditional label “housewife” is no more appropriate to describe a population more and more differentiated, with variable identities, personal histories, motivations, life events.

The research investigate a high number of dimensions, nevertheless some of them (motivations, domestic life’s organization, role identification) allow to identify at least four different types: 

grateful housewives, aged women, who choose domestic life according to their traditional image of the family and firmly claim the value of their choice as well as a major social appreciation of the role of housewives; 

forested housewives, mainly forced housewives, who, share a less traditional picture of the genders’ roles, has been employed and “adapted” to domestic life without represent themselves as only “housewives”; 

housewives, temporarily housewives, particularly young and highly educated women who, considering the uncertainty of their professional life, invest in their family and consider their role of wives and mothers as moratorium, waiting for more favorable times in the labor market.

The Coordination Mechanisms of Organizational Routines: A Case Study on a Free/Open Source Software Project

How might distributed, peer-production organizations that rely on the Open Innovation paradigm sustain task specialization and achieve effective coordination in the absence of formal hierarchical control? This question is increasingly relevant because a number of production processes are being shifted from the physical to the virtual domain. Traditionally, scholars identified in organizational routines the building blocks of coordinated action in organizations. In this paper, we draw on the evolutionary perspective of organizational change (Nelson and Winter, 1982) to investigate the emergence and change of organizational routines in the context of distributed, peer-production communities. We argue that change emerges endogenously from the repeated coordination of actions linked to production processes. In particular, we ask: How do organizational routines (structured sequences of actions) emerge, evolve and persist despite the demographic turnover of participants and the ever changing character of organizational problems? To answer this question we run newly developed class of Relational Event Models on the entire sequence of actions undertaken by software contributors on source code during the entire lifetime of the Apache HTTP server, a very large Free/Open Source Software (F/OSS) project. By examining directly the micro-level, socio-temporal interdependencies generated by individual actions performed by problem-solvers, we find that self-reinforcing processes underpin the endogenous coordination of a decentralized production community, by fostering task specialization learning mechanisms. Different types of activities can exist and be coordinated over time in a decentralized decision environment. Our analytical goal is to show how sequences of interdependent problem-solving actions become embedded in temporal sequences of relational events, which then trigger

Case Studies on Working and Organizing of Domestic Workers in China

The number of labors involved in informal employment is 163 million, which contributes to 58.85% of non-farm employment in urban areas. In order to analyze the social solidarity of informal workers, the article takes the domestic workers as a case study for the working condition of informal employment, as well as its possibilities of organizing. We found that there are at least four workers' solidarity types, labor NGO, trade Union, self-organization or grassroots organization and the internet. These social solidarities have different organizational culture, strategy, function and activities and play different role.

Age of Transition to Parenthood Among Married Adults: Social Determinants and Gender Difference

Using retrospective life history data from the 2008 Chinese General Social Survey (CGSS) and event history analysis, this study investigated the timing of transition to parenthood for both adult males and females for marriage cohorts spanning from 1965 to 2008. Within the neoclassical economic and second demographic transition frameworks, we expect that there will be a trend toward delayed childbearing and a lengthening of the duration between marriage and first child bearing across the cohorts. However, we found that a shortening trend of marriage-first child interval across cohorts, and the more recent cohorts are more likely to transit into parenthood net of other effects. We also found that higher educated people are more likely to transit into parenthood earlier than those who have primary or no education. We speculate that the trend in China contradicts the tendency for delayed parenthood in Western countries due to the resistance to change the traditional childbearing norm of "earlier parenthood after marriage." This is because child rearing is an issue involving extended families, rather than couples' own independent decision. Under the one-child policy, extended families can pool more human and financial resources that they utilize for childbearing. We also speculate that increasing intimacy between newly married couples in the more recent cohorts contributed to this trend.

An Institutional Approach to Autonomous and Connected Cities: Ostrom's Distributed Metropolitan Governance

Global cities are the economic and cultural centres in the world. They compete with each other for a number one status on various lists. International accessibility is essential for a city's ranking and for its 'supply' of people, goods and resources, putting a city's position in the international network of airports and harbours and in the international economy high on the political agendas of national and local governments.

Cities are constantly searching to improve their performance. Specialized planning models support city governments to deliver the various public goods and public services that are expected from them. More integrated models, such as the airport region and urban metabolism models, emphasize the tensions between international connectivity and local liveability. The extent to which current institutions are capable of managing these tensions is questioned by stakeholders. They search for institutional structures supporting the delivery of the public goods promised, with a prominent position for questions of scale. Technological developments have made these questions more urgent. The fast developments in the field of renewable energy technology, smart grids and electric vehicles call for redefinitions of rules and roles of consumers, producers, citizens, local, provincial and national authorities and of the public goods delivered to them.

In this paper, we address the search for institutions that match today's challenges by using the theoretical framework of distributed metropolitan governance as developed by Vincent and Elinor Ostrom. With this institutional approach, we explore current urban governance challenges in the Netherlands. To sustain their competitive position in the global network, Dutch cities strive to become resilient, self-organising and self-governing. We will explore how institutional mechanisms as consociationalism and pillarization, as identified by Lijphart, which have proven to be able to bridge conflicting values, are still relevant for a renewed conception of distributed metropolitan governance.

Possibilities for New Forms of Resistance in the Neoliberal Era: Unification of All Rights Movements During Tekel Workers' Resistance in Turkey

The working class has become overwhelmingly disorganized in the neoliberal era partly due to the attacks on legal and institutional grounds of trade unions and partly due to the transformation of working class itself. Dialectically enough, the current phase of capitalism is pregnant with new crises and forms of resistance and is the result of increasing precarious jobs, jobless growth, insecurity and extreme commodification. Under these conditions, unions are faced with altering their strategies. A possible formula is to organize unemployed and precarious workers as well as workers around counter-hegemonic united front on a non-competitive defence of collective rights (right to water, rights to transportation, right to shelter, right to decent work etc.). This study provides an historical account of a working class protest which took place in 2009-2010 in Turkey. It argues that this protest foretells the possibility of unifying all rights movements under an expansive struggle for collective social rights. June 2013 mass protests in Turkey also show that the sense of injustice is becoming stronger and felt increasingly by those who are subordinate to all sorts of unequal power relations.

A Scientific Controversy Across the Channel: Unemployment Theories, Sociology and the Rise of Mathematical Statistics in the Early 20th Century

In the early years of the 20th century, on both sides of the Channel, social reformers were struggling to define what « unemployment » could be. Political economy, sociology and social statistics were mobilized in the process of shaping the novel category. Defining unemployment scientifically seemed to imply that the unemployed should be enumerated, otherwise transformed in solid figures. Various statistical devices were imagined in both countries for trying to solve that same puzzle, but quite different scientific languages were mobilized: William Beveridge used the language of political economy (1909), Max Lazard that of Durkheimian sociology (1909), and Arthur Bowley the new tools provided by mathematical statistics (1912).

An argument developed in professional journals between Lazard and Bowley, who doubted of the statistical techniques the other one was using: Lazard had calculated an occupational unemployment rate, Bowley an index-number of the variations in the volume of unemployment. In order to describe this controversy, one can use the notion of « national scientific styles » and observe how tools circulated between British statisticians and French ones, through the International Statistical Association and an intense exchange of literature. The limited reception of the correlation coefficient among French statisticians raises an interesting general issue of the conditions of the circulation of knowledge.

Accounting for the difference between Lazard's and Bowley's formalisations implies analyzing sociologically what they were designed for and the relations that were being established between scientists and the users of their knowledge in the respective labour administrations. In both countries, a close relationship between scientists and administrators conditioned the development of abstract statistical forms that could be applied to formalizing a new social issue and contemplated public policies: in France unemployment insurance by industries, in Britain public works providing jobs when an unemployment crisis would be looming.

RC33-567.1

TOPALOV, CHRISTIAN* (École Hautes Études Sciences Sociales, topalov@ehess.fr)

Network Analysis and Spatial Analysis Combined: The Case of Reform and Philanthropy in 1900 Paris

Historical monographs on specific spheres of social reform are many when it comes to the late 19th and early 20th c. in the largest industrialised countries of the time – it was a « progressive era » for all of them. Every monograph points out that a good deal of the characters involved were simultaneously present in many other fields of reformist action – e.g. public health, housing reform, work relief, « protection » of women and children, prison reform, social science, etc. This invites scholars to cross the boundaries of specialisation and study reform and philanthropy as a possible unified field of action, interaction and sociability. This can be done through network analysis: voluntary associations used to publi-
lish reports and lists of leaders, members and supporters – by making the names of their followers public they increased the legitimacy of the cause.

This circumstance made it possible to collect complete lists of members of 106 reform associations, totaling 17663 people in 1900 Paris. Two directories of Paris charities have been added to the data base, i.e. 1346 charities and 2060 people. Sources provide the initial address of the charities and most of the individuals. A GIS was set up that allows it to locate every address on the street plan of Paris (as of 1888). This material is exceptional by its quantity and systematic character. Using the data base, we can separately and simultaneously consider both social and spatial links: the affiliation of people to the same institution, the residency of people in the same building or neighbourhood, the co-presence of two institutions at the same address.

The paper presents the most interesting results and discuss the methodological solutions that had been developed for combining social and spatial analysis, and facing the problems related to the bulky character of the data.

**Negotiating Normalcy – Self-Narratives of Troubled Young People**

Young people's risk-taking is in most contemporary societies a matter of concern. Research on troubled young people who have been placed in out-of-home care shows that these young people more often than other young people are involved in risk-taking behavior such as excessive drug use. What is rarely investigated, however, is troubled young people's own ways of understanding their risk-taking behavior in the context of their everyday lives. This paper analyses the role of excessive drug use and its influence on young people's self-narratives about their everyday lives. The young people's drug-use experiences continuously inform their perceptions of what they consider a 'normal' youth life and thus how they negotiate their self-narratives accordingly. This paper is based on 15 in-depth interviews with young people at age 18 who in their childhood have been placed in out-of-home care and have experiences with extensive drug use. Drawing on theories of stigmatization and normalization the paper demonstrates that what the young people conceive as a normal youth life is influenced by their drug use experiences and troubled childhoods. Their risk-taking behavior thus challenges their wish to create meaningful and coherent self-narratives and the result is often the creation of fragile self-narratives based on subtle negotiations of what they perceive as normal.

**Historic Environment as an Opposing Element to Inequalities**

Taketomi Island in Okinawa Prefecture is one of the outer islands near the southwest border of Japan. Its islanders have suffered two-fold inequalities for years. The area of Okinawa Prefecture was a small independent nation until 1879. This nation was defeated by Japan and subsequently annexed by the national government. Afterward, mainland Japanese, especially uneducated ones, began to regard these islanders with contempt as defeated people. Another source of inequality is the island, which was peripheral even during its era as a small nation; the people of this small nation considered Taketomi islanders as non-cultural people. This tendency continued even after Taketomi's incorporation into Japan.

However, the "historic environment" that Taketomi islanders have preserved and created through an active movement in the last 30 years has changed their dismal situation dramatically. Preserving historic sites did not affect the situational changes per se, but it elicited widespread discussion of common shared values and examination of the daily lives of islanders. As such, Taketomi residents have created peculiar historic environments, which attract many visitors and tourists.

**Critics of Time in Modernity By Yusuke Maki**

This presentation thematizes the series of works of Yusuke Maki, which is the pen name of Munesuke Mita. He is one of the most prominent sociologists in Japan. In this presentation, I would like to focus on the works of Yusuke Maki, and to define their significance and limitations.

For the abovementioned purpose, first of all, I will try to consider Yusuke Maki's series of works as a unified process and in which his project of criticism about "time in modernity (characterized as irreversibility and linearity; Newton's abso-

lute time)" has been gradually deepening. Maki's critics of his initial works were based on Marxism, or strictly speaking, on theory of reification. For example, in *Gendai seikatsu no shitsurakusei* (Existential Structures of Contemporary Society) (1977), Maki carefully examined Marx, and in *Ningen-Kaihou-no-Riron-no-Tameni* (Toward The Theory of Human Liberation) (1971), he criticized the difficulties of an-

alytical reason on the basis of theory of reification. However, after that, the color of Marxism had gradually faded away from his works and he employed the perspective called "comparative sociology". As a result, it seems to us that his critics of time in modernity became more and more consistent. It is simply illustrated in the fact that he thoroughly relativizes even the Marxism view of time, depended on. However, it is obvious in his *Hokoku-Syokai* (Comparative Sociology of Time) (1981), which is a fruition of his inquiry from the perspective of comparative sociology.

Furthermore, I would like to examine the terminal point of Maki's inquiry. In doing so, I will employ the view of time of "vertically accumulating time", which has been developed in phenomenological perspectives. This process aims to articulate the significance and limitations of Maki's works, and to find a way of developing his insight.
Social Capital in Late Life: The Case of Chilean Older People

Chile is experiencing an accelerated process of population aging. People aged 60 and older currently constitute 13% of the population. This proportion is projected to reach 28% in 2050. In this context, questions have raised about the quantity and quality of older people's social capital due to the decrease in family size and changes at the value level related to more individualized societies. The theory of individualization proposed by Beck and Beck-Gernsheim states that in today's society people are less bounded by traditional forms of representation and control. At the interpersonal level, this means that family members would relate to and help one another because they 'want' and not because they 'must' do so. However, the latter does not necessarily imply negative consequences on older people's social capital, but rather it may produce a change of scenario. That personal ties can be developed based on voluntariness also means that older people can invest in relationships outside their nuclear family. From this stance, the practical and emotional help required by older people could be also sought in friendship relations and weak ties. Drawing on in-depth interviews with people between 60 and 75 years old living in the city of Santiago and secondary analysis of focus groups I aim to investigate whether the nuclear family is still the predominant source of social capital or, instead, older people are replacing or complementing family resources with other types of ties (e.g., friend, neighbors and/or state).

Gender and Education: Differences and Similarities in the Trajectories of Young Men and Women

The preliminary results of a longitudinal study, which has surveyed the same individuals at 13, 17 and 21 years old, indicate that there are convergences and divergences in the practices and attitudes of young women and men. Young women do better in school but, at the age of 13, they also report more depressive symptoms. On the other hand, at the age of 17 and 21, the trajectories of young men are reshaped showing divergences in some respects and similarities in others. Accordingly, young women's initial educational advantages may not have promising effects, culminating, sometimes, in early interruptions and control. At the level of personal ties, this means that family members would relate to and help one another because they 'want' and not because they 'must' do so. However, the latter does not necessarily imply negative consequences on older people's social capital, but rather it may produce a change of scenario. That personal ties can be developed based on voluntariness also means that older people can invest in relationships outside their nuclear family. From this stance, the practical and emotional help required by older people could be also sought in friendship relations and weak ties. Drawing on in-depth interviews with people between 60 and 75 years old living in the city of Santiago and secondary analysis of focus groups I aim to investigate whether the nuclear family is still the predominant source of social capital or, instead, older people are replacing or complementing family resources with other types of ties (e.g., friend, neighbors and/or state).

Resistance to New Technologies: The Information and Communication Technologies Case in Spain

This paper adds to the debate of Marshallian economic-industrial sociology and the reintroduction of Becattini's Industrial Districts theory. It aims at situating - within the context of territorial development - a Local Agri-Food Systems (LAFS) perspective, which highlights the profound relationship between food and territory, as well as the importance of collective action, rural agro-industry, local know how, the environment and food quality, among other issues. The paper is divided in three parts: the first part addresses the theoretical-methodological development from a sociological perspective, but one that incorporates other disciplines such as new geography, anthropology, complexity sciences and agronomy, all of which enable and form part of a LAFS perspective. The second part of the paper contrasts case studies from Mexico and other Latin America countries that were undertaken as part of research project funded by the Mexican National Council of Science and Technology (Conacyt), the National Autonomous University of Mexico (UNAM) and the European Union (EU). The final part of the paper concludes that LAFS can potentially contribute solid arguments to implement public policies for territorial development that would enable rural peasant families to earn higher incomes and help overcome rural poverty.

New Perspectives of Economic and Institutional Sociology. Local Agri-Food Systems and Territorial Development

This paper adds to the debate of Marshallian economic-industrial sociology and the reintroduction of Becattini's Industrial Districts theory. It aims at situating - within the context of territorial development - a Local Agri-Food Systems (LAFS) perspective, which highlights the profound relationship between food and territory, as well as the importance of collective action, rural agro-industry, local know how, the environment and food quality, among other issues. The paper is divided in three parts: the first part addresses the theoretical-methodological development from a sociological perspective, but one that incorporates other disciplines such as new geography, anthropology, complexity sciences and agronomy, all of which enable and form part of a LAFS perspective. The second part of the paper contrasts case studies from Mexico and other Latin America countries that were undertaken as part of research project funded by the Mexican National Council of Science and Technology (Conacyt), the National Autonomous University of Mexico (UNAM) and the European Union (EU). The final part of the paper concludes that LAFS can potentially contribute solid arguments to implement public policies for territorial development that would enable rural peasant families to earn higher incomes and help overcome rural poverty.
The Rising of Neopopulism in Europe: A Comparison Between Italy, England and Denmark

European and Western countries are witnessing the rise of social movements, organizations and political parties directly inspired by populist discourses and practices.

Based on empirical research on populism in Europe, the paper aims to compare a sociological perspective of the different populist discourses, orientations and practices in three European countries: Italy, England and Denmark.

Trust As Indicator of Social Consciousness in Russia

Social consciousness has always included many indicators: results of activity, needs, motives, values, interests and other indicators. Among them the significant place takes up the trust, which always reflects one of the main forms of comprehending existing social relations, and at the same time, level of knowledge, awareness and evaluation of the ongoing changes in the socioeconomics.

Role and place of trust in this sphere were studied in process of All-Russian comparative research study of 1989 and 2012. The main goal was the comparison between the situation in the last period of Soviet time, when the market relations were beginning, and situation in Russia after 25-year realization of these reforms. Data of this study showed, that there are the different tendencies in the development of trust. In connection with the division of levels of social organizations - All-Russian, regional, enterprises and personal - the researchers tried to analyze the specific features of trust on these levels.

This study showed that on the level of Russian society the trust to political, social, economic institutes to a great extent decreased. On the regional level the trust has the contradictory character in depending in situation in region: the reach or poor, agricultural or industrial, political activity and ethnic specifics.

Trust in enterprises depends from the forms of property - state or private, municipal or public. On the personal level the trust has increased and played the leading role among the kinds of trust existed all over the places.

Old Managerialism and New Professionalism? Social Professions Vs. Healthcare Professions

The aim of the paper is to discuss the tensions between the managerial and the professional logics, both at the theoretical and the empirical level. Original evidence comes from two qualitative studies (interviews) carried out in the Turin area. The other one involves professionals engaged in healthcare-social team work. We move from a discussion of the nature of the managerial logic, seen as a complex puzzle stemming both from classical organizational theory (Scientific Management) and from the new institutional economics (Public Choice). Our findings suggest that in social work an "old" version of managerialism has been implemented, in which the managerial logic is reduced to hierarchical control. We then analyze professionals' strategies adopted to cope with managerialism, as they result from ours and other studies on social workers and healthcare professionals. One strategy (cooperation) stands as a non-zero sum game in which professionals act proactively to include managerial tasks within their activities and shows that the managerial and the professional logics can be reconciled, though social workers seem to be less eager and/or less capable to adopt it than healthcare professionals. The significance of this for a new concept of professionalism is finally discussed.
expression of respect, humility and tolerance for decision makers, particularly
expressed in the male population. Family relationships are characterized by re-
spectful and caring relationships between family members: husband and wife,
children, close relatives, respect for elders, tolerance and civility.

One of the leading trends in the experimental work in social psychology: it
is - the organization and conduct of scientific research projects, scientific field
trips, "Categorical perception of facial expressions of racial characteristics", "The
specifics of communicative and cognitive processes of the Tuva Todzha people",

**Medical tourism as national economic development in Asia: comparative case study of Singapore and Thailand, versus Japan and Taiwan**

Medical tourism development has been put on the national economic develop-
ment agenda by a number of Asian countries in the last fifteen years. Beginning
with the forerunners of Singapore, Thailand and Malaysia, subsequently other
countries, notably India, the Philippines and South Korea, joined the fray. Most
recently, Japan and Taiwan also declared that they would promote medical tour-
ism. The governments of these countries seem to share a common policy goal in
developing medical tourism, i.e. to increase foreign exchange earnings, expand
medical and other ancillary services, and generate employment opportunities.

However, each country has developed different strategies in targeting specific
niches in the international healthcare markets. In this paper we compare state
strategies, scholars, practitioners in the modern period of development of society
and groups, with the position of the cultural and historical context, research ap-
proaches enrich the process of social cognition personality image of the world
in a globalized world, the design and interpretation of environmental social reality
of Tuva ethnic.

**Intergenerational Dependencies: Retirement and Old Age in the Prism of Family Geography**

If the family is a determining element at every age in life, it is even more at old
age. At the same time retirement and old age are more and more dissociated.
What form does the family take for retired and ageing persons? How does the
social constraint in family apply on its members?

The research undertaken until today has focused mainly on the one hand on the
structural modifications affecting the households rather than the family and
on the other hand on the residential mobility of the persons themselves rather
than in the evolution of their environment. The aim of this research is to try to
observe the spatial configurations and thus the places, not the individual or his
household, but of his non co-resident family. When retiring, do individuals change
their place of residence? Do they take advantage to move closer to their family?
What about the following years when the individuals are ageing?

Based on a transversal approach we will choose three life periods (the active
individuals aged over 55, the retired aged under 65 and the retired aged over 75) to
observe which spatial family forms are dominating and if it is possible to establish
a balance between the life steps after 55 years of age. This work obliges us to take into
account social and demographic characteristics of individuals and their families
as their mobility and family geography depends on it.

This work builds on the survey « Famille et Logement 2011 », which collected
data from one of the first surveys among both sex aged over 55 years of age. This work obliges us to take into
account social and demographic characteristics of individuals and their families
as their mobility and family geography depends on it.

**Visiting the Boy Who Cried Wolf: Tornadoes and the False Alarm Effect**

While the origin of the story is not clear, the 1867 publication of Aesops Fables
brought "The Boy Who Cried Wolf" into the homes and hearts of many families.
The story is simple and the message clear. It tells of a shepherd boy who lies to
his community about a dangerous wolf to make people run to his assistance for
his entertainment. The moral of the story is "if you don't tell the truth people
won't believe you when you need them to." Its appeal is massive and cultures
around the globe use it to extol the moral virtues of truth, honesty, and honor.
It is somewhat unsurprising then that building on the very same logic, academic
ics and practitioners have long debated the "cry wolf" or more often the false alarm
effects of warnings. The question is simple: Are we somehow acting like
that little boy and "crying (insert some weather phenomenon)" too often. Using
a playful reference to the original fable, this analysis breaks down the key moral
elements of the classic story and reinterprets their connection to current tornado
prediction and patterns of risk perception as a way to help illustrate the range
of complexities in need of targeted scientific research. We go on to provide
scientifically based quantifiable analysis and critical discussion of the effects of false
alarm, and behavioral response to a series of tornadoes that occurred between
2007 and 2010. Contrary to most existing research, we do find a statistically sig-
nificant false alarm effect among other important predictors. Conclusions discuss
the importance and limits of these results and suggest further research needs.

**The Impact of Social Segregation on Educational Achievement in France**

Social and spatial segregation is increasingly present in debates on urban pol-
icy and in the analysis of the phenomena of violence among young people. In
recent years the extent of social segregation among French secondary schools is
mainly due to a greater social polarization in some urban areas.

There have been little studies about social segregation mainly because of the
difficulties to build a set of relevant methods and measures.

The aim of this paper is to provide various measures of social and spatial seg-
regation in order to assess the links between segregation, competitiveness and
educational achievement.

Between Empowerment and Paranoia: The Role of Social Media within the #YoSoy132 Mexican Social Movement

In May 2012 the #YoSoy132 movement emerged as a strong political actor, asking for the democratization of Mexican media and criticizing the strategy of the PRI Party and its candidate, Enrique Peña Nieto. The available literature on the movement has repeatedly stressed the importance played by social media platforms, but few have problematized and nuanced the uses and the appropriations of these digital technologies. Drawing on an extensive review of the literature, on group and individual interviews with activists of the movement, as well as on digital and offline ethnography, in this article I explore the use of social media platforms by actors of the #YoSoy132 movement. In this paper, constructs an anatomy of race, or more precisely, establishes a theory of racial paradigms. This theory is empirically applied to racial thinking in distinctive historical times and geographic spaces, to demonstrate paradigmatic continuities and ruptures with the modern age, thereby perpetuating global racial inequalities.

Governance and Public Security in Brazil: An Analysis Of State Departments Of Public Security -- CANCELLED

As in other areas, the public security policies have faced institutional, organizational and cultural obstacles. Sometimes are the limitations and conflicts of jurisdiction that hinder the implementation of new policies. On other occasions are the internal structures of the institutions of public security and criminal justice that hinder innovation. Moreover, the organizational culture permeated by mistrust and prejudice has hindered quite the implementation of new public security policies.

In Brazil, the State Departments of Public Security play an important role in the coordination and articulation of the actions of the various institutions that compose the criminal justice system. Its structure varies in each state, as well as the profile of the professionals who work there. Furthermore, there are significant differences with regard to their political status vis-a-vis the police. There are cases that the police are formally subordinate to the secretaries of public security. In other situations, police chiefs have the same powers of the secretaries. These differences ultimately reflect on the capacity of these departments to formulate and implement public security policies.

In this paper, we analyze the governance capacity of the Brazilian State Departments of Public Security. That is, the ability of these departments formulating and coordinating policies in the area of security.

Evaluating the Contribution of Schools to Pupils’ Progress in Educational Outcomes through a Bivariate Multilevel Model

In the last few decades, school value-added studies have largely demonstrated the effects of socio-economic and demographic characteristics of schools and pupils on standardized tests performance. Traditionally, contextualized value-added models (CVA) have been employed to assess variation arising from the schools and pupils in standardised tests of Mathematics, Language, Science, etc. in separate univariate models. However, recent studies show analyses of schools’ and pupils’ performance significantly benefit from additional model complexity, including the specification of unexplored levels of variation, either nested or non-hierarchical, such as between classrooms or teachers, between neighborhoods and local authorities, as well as carry-over effects from primary schools.

Using data from the 2004 and 2006 SIMCE database (Chilean National Pupil Database), an extended 5-level bivariate cross-classified CVA model estimating simultaneously the variation in Mathematics and Spanish Language between primary schools, between classrooms (within secondary schools) and between local authorities was implemented. This is in addition to the variation between pupils and secondary schools. This extended CVA model for progress in Mathematics and Spanish Language proved effective in reducing bias present in the traditional univariate value-added models, while controlling for the correlation between the two subjects. The model also controls for the fixed effects of prior attainment, household income, gender, grade repetition, school type and average school socio-economic status, as well as the random effects of prior attainment and gender.

This research intends to contribute to school value-added modelling by analysing additional relevant structural effects and by considering the relationship between two of the most relevant educational outcomes. The analysis of these data shows that using school averages or even 2-level CVA model is incomplete for the purposes of informing school-level effects, and therefore parental choice and school accountability due to overestimation of school effects and pupils’ heterogeneity.
The Dialectic of Rationality and Irrationality of Urban Growth in Post-Socialist Urban Development and the "Classic" Capitalist One

It was during the 1970s that urban studies scholars began to analytically investigate the dialectic of rationality and irrationality related to urban growth. These pioneering analyses were a response to the early stage of the post-Fordist transition of Western economies and the emergence of consumption-based economic development. Having admitted "the general irrationality of the present urban system" (1978: 329), Molotch described the American urban system of the second half of the twentieth century, in which cities retained relative autonomy from the central government. For his part, David Harvey called cities "the irrational rationalizers" within the capitalist mode of production (1976: 112) and demonstrated why "the capitalist laws of accumulation" remain, for the time being, the only known laws of history. While both scholars emphasize a recurrent reconfiguration of urban alliances in order to cope with difficulties in financing the development of cities, Harvey, in his later work, described how neoliberal urban policies found a strong friend in the central state via neoliberalization of the state itself. Drawing on these path-breaking scholars, I argue that it is an irrational rationality which unites postsocialist urban development and the "classic" capitalist one. Today it is neoliberalism that figures as the global political rationality. It promotes market logic across all spheres of life. Part of this rationality is the expansion of state institutions. These act to broaden their administration into the practices of all societal spheres. Urban growth machines in Russia and elsewhere have embraced neoliberal policies and promoted global, market-led urban development. Since these processes have recently unfolded in the context of the global financial crisis, the growth machines often go awry. Yet this does not impede authorities from any level from investing, symbolically and economically, in the new iconic projects—by continually putting forward the rhetoric of efficiency and growth.
masses (e.g., space tourism offered by Virgin Galactic) are growing quickly despite
difficult economic times. These processes together with the increasing techno-
logical apparatus at the geostationary orbit are deemed as examples of the ‘hu-
mumanization of the universe’ (Dickens and Ormrod, 2007). That is, the many
ways humans may affect non-human cosmic bodies (e.g. potential environmental im-
acts of space exploration). Space and its exploration are subjects with ‘contem-
porary resonances in popular culture, frontier capitalism, and the restructuring of
superpower status in the coming century’ (Parker and Bell, 2009: 4). In this paper
we aim at critically reflecting about some of the future consequences of space
exploration by unpacking and extending the concept of planetary protection. This
concept, located in space policy literature, is mainly confined to risks of biological
contamination when transporting objects and people to outer space. We iden-
tify its primary limitations such as the damage caused to non-biological features
and address some of its shortcomings through a multidisciplinary approach with a
view to unpacking the conceptualisation dilemma and potential solutions of
what their lives ‘should’, or ‘could’ be.

TRUONG, ALEXIS* (University of Ottawa, atruong034@uottawa.ca)
Self and Others in Transitions: How Moving from One(s) Self to the
Next Isn’t Being Done Alone

Up until the early 1990s, the Japanese post-war period was marked by im-
portant economic growth and the implementation of social reforms that set the
stage for the standardization of many social scripts and the institutionalization
of often gendered and classed life courses. Following the collapse of the bubble
economy, individuals were faced with new challenges in the course of their daily
lives, adjusting their socio-economic structures and trajectories. Young adults
were particularly affected, as transitions that had become the norm in past periods
became uncertain. Such changes are well documented, and include amongst oth-
er examples the increased difficulty to find regular employment and adhere to social
scripts institutionalized before the 1990s, play seemed to be saving the day.

To better understand the articulation of culture with both socio-economic
structures and individuals’ life paths, I look at a particular set of leisure practic-
es which characterize both contemporary forms of play in Japan (asobi) and its
popular culture, practices identified as kosupure and which revolve around cos-
tume play (e.g. ‘cosplay’). Following over two years of fieldwork in Tokyo, my re-
search aims to better define how these cultural practices articulate participants’
identities and how they interact with other significant aspects of their daily lives.
For some, play became a ‘career’ - in both the literal and subjective sense of the
word. In this presentation, I aim to better define the role and the importance of
leisure practices and culture in a social and economic context perceived by par-
ticipants as uncertain, and in which value has become an increasing concern; be-
it for Japan’s economy, to better understand opportunities and constraints linked
to access and participation in said practices, and for contemporary selfhood in

Globalization and Higher Education in India

The globalization is a process which is now transforming every sphere of our
social, cultural and political life both in the developing and developed countries.
Transnational flow of the capital, commodities and people is an essential feature of
the globalization. This creates homogenization of higher education although

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
in a very limited sense to enable the mobility of the potential population of the countries who opened their economy for global trade in last few decades. This requires the standardization of the education system in terms of content and quality of education throughout the world. In India, the system of higher education is highly fragmented and stratified and produces students of different qualities. A large number of students having different social background and different type of schooling up to secondary level also vary in their educational attainments as well as in their career graph. They usually fall short to the national and international standards. Only few institutions of higher learning have the capacity to produce the students who have potential to compete in the global job market. Thus, globalization poses a new challenge to make necessary structural and qualitative changes in the institutions of higher learning in order to cope with the changes taking place in the globalized economy of the country. The present paper analyses various dimensions of the intricate relationship between globalization and higher education in a developing society like India.

Exchange and Life Satisfaction: Intergenerational Reciprocations in East Asia

Exchange plays a key role in affecting level of well-being. This study aims to develop a fundamental typology of exchanges across generations. By focusing on exchange of finance and household services between adult children and their parents (and parents-in-law), four types of exchanges can be identified: balanced, credit, debt, and self-reliance. We then investigate if different types of exchange affect life satisfaction and marital satisfaction. Empirical data are drawn from the East Asian Social Survey, which allows a comparative study of Japan, South Korea, Taiwan and China.

Land Grabbing in Taiwan: The Crisis of Food Security and Land Justice

Since the 1980s Taiwan had adopted liberalization economic policy and given up the principle of food self-sufficiency. The importance of agriculture had decreased and the land had been seen as valuable asset rather than the means of production. These changes together contribute an over-dependence on imported food in the local market and the loss of food sovereignty of the consumers and farmers. As a result, the food self-sufficiency rate has been extremely low in Taiwan (33%), far lower than China (95%), France (122%), the U.S. (128%), and even Japan (40%). In recent years, the implementation of neo-liberalism in agricultural policy has further worsened the practices of farming and the ways of land use in the rural areas. Since several local governments aim to promote rapid development in the high-tech industry, many farmers and rural residents have been forced to leave their farmland and assets. Over the past decade, Taiwan has consequently lost 4,000 hectares of farmland per year and totally lost 109,652 hectares in the last 30 years equalized around 12% of farmland. In reality, the legalized land exploitation which in the name of scientific and industrial park and various developmental projects could be seen as a new form of land grabbing. In this paper, we present two case studies and explore how the recent land exploitation has changed the agricultural practices and social context in the rural areas and the long-term effect on the food security of the whole society. The two cases cover the events and outcomes which have happened in Dapu District of Miaoli County and Siangshihao of Changhua County, the former representing the form of anti-land-grabbing and the latter of as anti-water-grabbing one. Finally, we will attempt to discuss the impact of land grabbing on the food security and the possible citizenship aspires to food sovereignty.

Genetic Science in Identity Making: The Rediscovery of Taiwanese Origin and Ancestry

The global development of genetic science and technology has it’s various manifestations in different local political and cultural contexts. The government of Taiwan began to support the development of biotechnology by funding projects during the 1980s, when this country underwent dramatic transition from authoritarian rule to democracy, emergence of ethnic politics, and conflict of national identity. After the rule by martial law ended, scientific research on the origin and the genetic background of Taiwanese began to emerge in the 1990s. Taking for example the research findings and scientific discourse of the team led by Professor Marie Lin, M.D., widely known as “the mother of the research of Taiwanese blood,” my article aims to explore the particular process of co-production between genetic research and identity politics in Taiwan. Since the 1990s, she has devoted herself to unveiling the mystery of the origins of the ethnic groups in Taiwan by finding scientific evidences of blood attributes and genes. Based on the research findings of her team over the recent two decades, Lin argues that 1) 85 percent of Taiwanese have aboriginal genes; 2) the Han Taiwanese people (Hoklo and Hakka ethnic groups) are mainly the descendants of the Yue people from southern China; 3) a major part of blood attributes of the Han Taiwanese people is derived from plain aboriginal people and 4) aboriginal peoples in Taiwan have multiple origins. These arguments pose a radical challenge to the dominant Chinese nationalist ideology of the period of the authoritarian rule, which is still lingering on now. My article analyzes how the genetic research on Taiwanese origin and ancestry represented by Lin and her team’s has been shaped by social, political, and cultural factors in the context of democratization and ethnic identity. My analysis also shows clearly how science and politics are mutually constitutive.

Efficiency of Information Influence: Features of Measurement

Moscow is overflown with outdoor advertisement that’s why analysis of advertising campaigns efficiency becomes an extremely actual matter. We use tracking to solve a lot of research tasks, such as determination of the population percentage attracted by any advertisement, correlation between advertising images kept in mind and number of brands or company names recognized, poster attractiveness for target groups of any products or services, etc. In spite of considerable measurements, regular sociological surveys in this sphere were only conducted in England and Australia. Espar Analyst Research Agency has conducted the first monthly tracking surveys in the outdoor advertising market in Russia. The objects of its research are advertising posters within the territory of Moscow and the matters are brands and companies.

The goal of the research is to determine an efficiency rate of an outdoor advertising campaign. Efficiency means here the rate of poster penetration and brand recognition. This goal may be achieved in case if the main task of measuring general parameter for evaluation of each outdoor advertising campaign’s efficiency is resolved.

The following factors shall be considered in the analysis of the data obtained:
- number, type and location of advertising media;
- duration;
- other media used for advertising the brand;
- creative solution;
- advertised product category.

One of the most important results of tracking campaigns is an opportunity to form a limited indicator basis for each group of products and services, which would allow to compare the campaigns and bring their characteristics into correlation with average indicators for different product categories or formats used. Such surveys are aimed at renewal the empirical basis of social sciences, which study the influence of different format advertising images of human consciousness that is extremely important when the so called visual culture is developed.

Quality of Life As Local-Global Reflection

The changing world exacerbates so many contradictions of economic, social and environmental issues what affects the quality of life of the inhabitants of modern cities and villages. This kind of problem is especially perceptible for the most vulnerable socio-economically disadvantaged groups such as young people and the elderly.

Finding this approach, according to which a QoL refers to a comprehensive well-being, that takes into account the various aspects of human life, the Department of Sociology of Russian State University for the Humanities conducted research using questionnaires in October 2012 and September 2013. It represented the adult population and distinguished four main studying groups: youth, senior citizens, urban and rural population of the area.

In the result, we obtained not only an idea of the self-perception of different socio-demographic groups representatives in relation to the assessment of individual aspects of life (personal economic status, social status, personal security, availability of education, social welfare and medical services, maternal and child welfare, employment, leisure etc.), but also identified mechanisms to increase self-perception of QoL.

The first one (objective) defines QoL as a result of combinations of different statistics. The second model is based on affirmation that the real sense of QoL is reflected in subjective feelings of individuals, which are formed on the basis

The Vavi scandal has brought to the fore the embeddedness of sexual harass-
power of the incident for this paper is that it highlighted the patriarchal, unequal and
maly; and moderate usage of internet services, such as usages of e-mail and web
the barriers of second order digital divide and understanding the social impli-
disadvantages appear to be excluded from the digital activities that could help
most. This study, by employing secondary and longitudinal data of national
Individual and Household Digital Divide Survey in Taiwan, aims at examining the
barriers of second order digital divide and understanding the social impli-
cities of the digital divide that are measured by ICTs usage and some socio-
education policies in Hong Kong. The progress of integration will be exam-
ed in the dimensions of access (the extent to which students with SEN attending
students; acceptance (the extent to which all students are treated as
full school members); participation (the extent to which all students contribute
active activities in school and achievement in terms of academic, social and emo-
values dilemmas and paradoxes resulted from the in-
integration measures will be examined with a focus on accommodating
diversity, quality, equity and fairness, as well as reducing or enhancing social in-
ed from the public sphere and discouraged by the National Health Insurance.
Besides, the strategic alliance among psychiatrists, teachers and parents for deal-
ing with various learning difficulties effectively justifies the medical framework of
children's deviant behaviors. By analyzing the archives of the professionalization of
Taiwanese psychiatry, and by conducting interviews with psychiatrists, relevant
mental professionals, teachers, and the main parents organization, I unravel the
interrelated processes of the development of the medical subspecialty, the pub-
lication of health services and the medicalization of education, in order to elab-
orate that the biomedicization of ADHD in Taiwan is not a necessary achieve-
ment of advancement in psychiatry, but a co-production with various social and
political conditions. In particular, the "biomedical evidences" and “gearing to the
international norms” constitute the driving rationality and emotion of the pro-
fessionalization of Taiwanese psychiatry in a latecomer context; moreover, as a
late-developing medical specialty, Taiwanese psychiatry lacks a sufficiently power-
ful legacy of the psycho-dynamic approach, which dominated Euro-American psy-
chiatry before the 1980s and has thus far provided competition for the biomedical
approach. Furthermore, Taiwanese child and adolescent psychiatrists are too few in number to encourage multi-paradigms. Therefore, although controversies and alternative practices concerning ADHD exist, they do not originate from the psychiatric in-group and thus find it difficult to shake the mainstream practices. Consequently, the biomedicale discourses and treatment of ADHD have been sta-
bilized and reproduced in Taiwanese psychiatry.

Digital Inclusion or Digital Exclusion? The Second Order Divide in Taiwan

The study of digital divide has shifted its focuses from unequal access to ICTs to the
second digital divide that addresses the inequality resulting from the different
way ICT technology is adopted. The ICT usage gap refers to the differences in
use of ICTs between regions; and ICT usage inequality refers to the differences in
use of ICTs among subgroups, such as gender, income, age, and education. The
results show that despite of the closing gaps of ICTs access across groups and declining usage gaps in
basic internet activities (e.g. information searching, communication, entertain-
ment), persistent or widening gaps are found across groups in intermediate and
advanced internet activities, such as usages of online finance, e-government and
civic engagement. These results imply that social inequality might accelerate the
information society for those well privileged groups take uneven advantages and
benefits from effectively use of online activities in the social, economic, and
political spheres, while lack of usage in needed digital resources will make groups that are already socially disadvantaged fall further behind. Without proper inter-
vention, the wider array of ICT usages in information society becomes the potent
tools to deepen social divides.

Vavillicos Scandal: The Politics of Sexual Harassment in Post-
Apartheid South African Trade Unions

In July 2013 the General Secretary of the Congress of South African Trade
Unions (COSATU) (the largest South African labour federation in South Africa), Zwelinzima
Vavi was accused of rape and sexual harassment of a junior female colleague. While the rape allegations were later withdrawn by the accused, Vavi was subse-
sequently suspended and investigations into the allegations of sexual harassment
are being conducted by the federation. Much focus from the South African media is
on the political struggles within COSATU and attempts by Vavi to capital-
ize on the scandal to remove him from his position. However, the significance of
the incident for this paper is that it highlighted the patriarchal, unequal and
egalitarian gender relations dominant in the South African trade union move-
m (Scott, 1986). Unions are organizations of power, which is often defined in
male terms.

The incident also reminded us of the need to publicly acknowledge the im-
portance of sexuality in organizations (Acker 1990:139), where women and men are
perceived differently and assigned roles according to how they are perceived.
This paradigm has brought to the fore the importance of sexual harassment
within the masculine organizational culture of the federation and its affil-
iated unions. The paper aims to discuss the politics of sexual harassment in the

denotes a presenting author. Abstracts are organized by first presenting author's last name. 
post-apartheid South African unions, where women continue to be marginalized from leadership positions in spite of constituting almost half (48 per cent) of the union membership (COSATU 2011). The paper seeks to understand the significance of women's composition in COSATU unions in terms of raising their voices and challenging dominant patriarchal practices. What is the significance of the increase in women's membership in terms of their struggles to reconfigure the dominant masculine culture of trade unions?

TSIGANOU, JOANNA* (National Centre for Social Research, jtsiganou@ekke.gr)
THANOPoulos, MARIA (National Centre for Social Research - Greece)

**Women Academics Under Crisis: A New Field for Reflexivity**

Research data show that the present economic crisis has worsened women's position in society. New categories of women become vulnerable to the impact of this crisis. To the traditional categories of vulnerable women (migrants, single-parent families, women victims of domestic violence, unemployed young women etc.) are now added women coming from middle and upper-middle class ladders of society (women entrepreneurs, women of high educational and employment credentials, women owners of big properties etc.). Women belonging to these new categories seem to be threatened by the risk of status degradation and the risk of impoverishment.

This paper focuses on the impact of crisis on women of high credentials. Such is the case of women academics that work in universities and research centers in Greece, a category of women of hitherto recognized social status and established high position in social hierarchy.

Our presentation is based on qualitative data coming out of the living experiences of women academics facing the impact of crisis in their professional and personal life. Initial results indicate the gravity of the present economic crisis as it expands also to include women holding highly privileged academic positions in the social hierarchy. Authority measures have not only diminished the income of academic women but also have enormously affected their living standards and worsened their working conditions. Moreover it is to be noted that the economic crisis seems to have brought into surface latent aspects of the crisis resulting from pre-existing social transformations which in turn also affect academic women's lives.

Thus our attempt is to develop a reflexive account on the living experiences of women academics as well as to discuss the impact of the present economic crisis on processes of women's downward social mobility.

**Young People in Social Disadvantage: Opportunities and Threats in Local Environments**

The arguments advanced in the proposed paper are based on the analysis of data concerning the means and ways of combating social exclusion of young people in social disadvantage at local communities by means of suitable educational and training programs.

In fact, in an era of globalization of economic and social relations, the employment structures may not be understandable on the basis neither of the model of "technocratic advancement" nor of the model of "specialization". If such is the case, there is an urgent need for the employment of other forms of capital in order to combat marginalization of those young people that suffer multiple social disadvantages. The question is how detached are modern societies from traditional forms of education, training and employment especially under conditions of austerity. Another issue for serious consideration is whether local environments possess new capacities for training and job opportunities for young people in social disadvantage. It is to be discussed also whether the local versus the global (i.e. in the sector of enterprises) may possess more opportunities than threats in combating unemployment and exclusion.

**The Systemic Crisis of Greek Labor**

**Abstract**

The current crisis in Greece has brought to the surface the employment security aspect of the Greek "labour system". The employment relationship seems to be embedded upon a bifurcated system whereby labour is separated institutionally in a) a secured salaried public sector and b) a private sector defined by precarious labour conditions that are characterised by the technical separation of work from its social security (mainly pensions) relationship. The two systems have been coupled with separate health care systems developing separately (recent attempts to unify are in process). The paper explores this hidden reality by defining the organisation of the labour system in Greece, its politico-administrative controls that formulate a binary legal system (public/private) that does not allow for the emergence of the not-for-profit-law institutions.

The "social" reproduction of private labour is based upon the formally established private and "commercialized" interests that practice "trade" in basic needs (health, education). As a result, communities rely on the family, the church, self-help and out-migration. By focusing on this anarchistic and discriminatory system of political order for the labour we may be able to unlock the reasons for the weakness of labour social economy organisations in Greece and the acute unemployment rates (the highest in the Eurozone). This approach will aid our understanding of the Greek crisis as a failure of Euro-Zone's public policy.

TSOLIDIS, GEORGINA* (University of Ballarat, g.tsolidis@federation.edu.au)

**Octopus Man and Tiger Woman - Why the Chinese Are Bad for Australian Nationhood**

Historically Australia has considered itself a white, Christian and British bastion in the South Pacific region. The main threat to this status was conceived of as coming from the east, particularly from the ‘hordes’ of Chinese who would sweep down and over run the nation. These discourses were prominent during the Gold Rush when Chinese men came as part of a wave of migration. They were also re-staged as an octopus of evil. Immigration policies were instigated to stop the ‘yellow peril’. While the so-called White Australia Policy was formally rescinded in the 1970s those from Asia are still constructed as a threat.

Most recently it is Chinese students who are ‘taking over’ the most desirable government scholarships. Because of their hard work and diligence they are excelling at entry exams and providing little incentive for mainstream Australian students to compete or be schooled in environments dominated by Asian students. Tiger mothers are represented as standing over their children, ensuring they work hard enough to achieve well. The work ethic associated with the Chinese is a form of racism. In contemporary discourses this is associated with rote learning for exams rather than independent thought.

In this paper historical depictions of Chinese men represented as an octopus ready to seduce Australian women, including through the provision of heroin, will be contrasted to depictions of Chinese women as Tiger mothers who stand behind their children ready to wield ‘tough love’ towards success. What does the promulgation of such representations in the media tell us about Australian nationhood and its reliance on gendered forms of racism for meaning?

**Sakyadhita and the International Movement for Gender Equity in Buddhism**

During the 1980s, the glaring discrepancies between opportunities for women and men in Buddhist institutions and societies caught the attention of a small group of women living in different countries and practicing in different Buddhist traditions. Communicating by post, they decided to gather to discuss what could be done to address these inequalities. In 1987, at the conclusion of this first gathering in Bodhgaya, India, an international association of Buddhist women called Sakyadhita was founded. Since then, Sakyadhita has received scant attention from the academic community, but the consequences for women in Buddhist societies have resounded around the world. For twenty-five years, Sakyadhita has organized a series of biennial conferences and issued numerous publications that have educated Buddhists in the new global ethic of gender justice. The path to gender equity in Buddhist communities and institutions has not always been smooth, however. Consciousness or unconsciously, entrenched interest groups continue their efforts to maintain the imbalance of power that disenfranchises women.

This paper explores how a small grassroots movement to improve conditions for in college and undereducated women, especially nuns, has grown into a global movement to challenge inequalities on a structural and institutional level, reclaiming landmarks in the history and development of Sakyadhita and the international Buddhist women's movement from its inception until the present. In the first section, I describe the objectives of Sakyadhita and the key personalities who have helped propel the global movement for gender equity in Buddhist societies. Second, I explore the setbacks and obstacles that Buddhist women have faced over the years and continue to face in their struggle for gender justice today. Third, I trace the major achievements of the international Buddhist women's movement precipitated and explore potential directions and strategies that Sakyadhita has mapped out for the future.

A Study on the Costs and Demand for Foreign Nurses/Care Workers in Japan – from the Angle of Hospitals and Care Facilities –

Many consider that the international migration of nurses and care workers is driven by economic factors. Wage and cost differentials should work as a ‘push factor’ in sending countries and a ‘pull factor’ in receiving countries, though rules and regulations may partly hinder it. Japan opened the gate for foreign nurses and care givers under the Economic Partnership Agreements for the first time in 2009. It was anticipated that application and entry would rise sharply because wage gaps with other Asian countries remained high and the rapidly aging of Japan's society badly needed more nurses and care workers. However, the actual entry of such personnel has been on a declining trend in recent years, despite government efforts for reducing entry barriers. This study has attempted to analyze the pull factor, i.e. the economic costs that accrued in the hospitals and care facilities based on a survey conducted. The analysis revealed no statistically significant correlation between the economic considerations and the willingness to hire nurse candidates, implying the existence of non-economic reasons for the reduced entry of such workers. For the care givers, economic considerations seem to have had some impact on the willingness of care facilities to receive additional foreign workers. It would be imperative for the government to address institutional impediments for the nurses and pay more attention to the economic incentives for the care facilities in order to increase the number of foreign nurses and care givers in Japan.

Organizing Immigrants in Rural Areas in Japan: Case Studies of the Tsunami-Devastated Areas

This study examines the process of organizing immigrant groups in rural areas in Tohoku, Japan, especially the 3.11 tsunami-devastated areas. In recent decades, Japan has witnessed the entrance of many more immigrants. Along with this influx of newcomers, their relationships with Japanese society and their social mobility have drawn attentions. Although previous studies tend to focus on the cases of labor immigrants in urban areas or highly urbanized core areas, few studies have been conducted with a focus on the immigrants in rural areas that lack a concentration of immigrant populations, such as the Tohoku region.

Many of immigrants in the Tohoku region are female immigrants as spouses of Japanese nationals, who are mostly dispersed throughout small towns and villages. They tended to be marginalized from their local society and given the limited understandings and supports from the local government. The Great East Japan earthquake that devastated many areas of the Tohoku region seriously affected these immigrants as well as Japanese nationals. The disaster and its aftermath consequently led them to form groups to help support each other and to change their social surroundings. How did they attempt to grapple with the difficulties after the disaster? To what extent did their organizational efforts contribute to changing their relationships with their local society? With a focus on these questions, this study analyzes the process of organizing immigrants in the Tohoku region. The findings from my interviews with the actors and participatory observations suggest how they obtain resources inside and outside their community on the recovering process after the disaster, and the social issues they face to continue living in rural society. This study contributes to considering the possibilities and issues of “bottom-up” approach for immigrants to change their social surroundings in rural society in Japan.

Healthy Aging and Concerns Among Japanese Elderly People

Background: Japan is facing an unprecedented aging society. In 2011, 23.3% of total population in Japan was elderly people 65 years old and older. One third of the population in Japan will be at least 65 years old in 2035. Healthy aging is a crucial key for public health and society in Japan. However, under budget limitation of social security, policies and frequent policy changes have posed a great uncertainty and concerns on that elderly population. Given these circumstances, we conducted questionnaire surveys in 2010 to examine concerns in this age group. Method: In 2010, we sent questionnaires to university graduates 65 years old and older randomly selected from lists of graduates from 11 universities. The questionnaires were open-ended and asked them to write any concerns that they had about health care, health policy, health systems and their future. Results: We received 331 (Age 73.1±4.43) responses. Among those who responded, 84.9% (281 respondents) said that they had concerns. We conducted text analysis (PASW Text Analytics for Surveys 3.0.1) and extracted keywords from their Reponses. The keywords that were extracted frequently were; Doctor, Hospitals, Health care, Japanese Government Policies, Expensive, Health care cost, Medical expenditure, Doctor scarcity, Prevention, Health insurance system for those 65 years and older, Quality of care, Long term care and others. Discussion; In this study, many elderly people in Japan have concerned about health care expenditure, health care systems and health policies. This may be caused by frequent policy changes and uncertainties due to frequent administration changes such as uncerneance of a raise of out of pocket payment rate from 10% to 20% for elderly people under budget constraint in Japan. Correct policy-making and determination are necessary for healthy aging by removing concerns from this vulnerable population in Japan.

Discussion of Factors That Drive Regenerative Science and Assisted Reproductive Technology

One of hottest ethical arguments in regenerative science is whether creating human eggs and sperm from IPS cells or ES cells should be permitted. Then whether to permit these eggs and sperm to be fertilized and to develop into babies. In 2012, Japanese scientists created primordial germ cells, which can develop into germ cells, both sperm and eggs from skin cells of mice. Another team in Japan has also created mouse sperm and egg cells from IPS cells and used them to create young mice within the past year.

A guideline of Ministry of Education, Science and Technology in Japan requires prior notification of all efforts to generate sperm and egg cells from human IPS cells, but fertilization is prohibited. Two teams have already started the research. We would like to consider the issue by logical steps through analyzing narratives of scientists and patients in assisted reproductive technologies. First, we would like to focus on how scientists explain the necessity for the research. What is purpose of the research? What do scientists recognize as advantages and disadvantages? Second, we would like to consider how patients in assisted reproductive technologies react to the news? What do they think about the technology and ethics? Third, we would like to show what a council which regulates the technique discusses. Through interviewing scientists in regenerative medicine and patients in fertility treatment, and analyzing conference minutes of the council, we will point out the driving force and the justifiable reasons of regenerative science and assisted reproductive technologies.

TSUJI, IZUMI* (CHUO University, Faculty of Letters, tsuji@tamacc.chuo-u.ac.jp)

Changes in Friendship Relations of Japanese Youth

This study aims at revealing the changes in friendship relations of Japanese youth. In their everyday life, friendship relations are becoming more and more important.

According to a recent report “In response to questioning about when they feel that their life is fulfilling, the largest percentage of Japanese youth answered “When I am with friends or companions” (74.6%)”. This is also the largest percentage among the other five countries (South Korea: 58.1%, U.S.A.: 64.7%, U.K.: 45.1%, France: 68.2%), and that have basically increased from past year (1977-78: 50.1%, 1983: 59.2%, 1988: 62.0%, 1993: 70.8%, 1998: 74.0%, 2003: 72.5%, 2007: 74.6%). But in recent years, there are some interesting changes. The percentages giving “When I am by myself without being annoyed by anyone” (13.8% in 2003 to 19.8% in 2007) increased over the previous survey. (Naikaku-fu, 2009, “The JAPANESE YOUTH :In Comparison with the Youth of the World, A Summary Report of the Eighth World Youth Survey, http://www8.cao.go.jp/youth/english/worldyouth8-e/html/mokuji-e.html”).

This is so complex situation that is difficult to be understood, and our recent research also shows the same situation.

In this study, there are two ways of approach. Firstly, I would like to review the hypotheses about the changes in friendship relations (e.g. the dilution hypothesis, the selective hypothesis and the homogenization hypothesis). Secondly, I would like to analyze the quantitative data, and reveal the present situation and the changes. The data was collected in Tokyo and Kobe in 2002 and 2012. Respondents were randomly sampled. Their age ranges from 16 to 25.

In conclusion, it is revealed that the number of friends are increased but the diversity of that is reduced. It suggests that the friendship relations of Japanese youth have been homogenized.
Examining the Chain Relationship from Initial Contact to Classical Music to Socio-Economic Status Via Music Preference

This paper examines the effect of the initial contact to classical music on the music preference, and the effect of the music preference on the socio-economic status, in Japan. Especially, as in Bourdieu’s reproduction theory, whether people’s “orthodox” music preference from family affects their income is examined. A questionnaire was handed to 2,000 audiences of Saito Kinen Festival in 2012. 594 audiences answered. The questionnaire included the questions of initial contact to classical music, preferences to 20 composers, and household income. By latent class analysis of the initial contact, four types were found: (1) vague, or no particular initiation, the effect of (2) family, (3) eye-opening experiences, and (4) various sources and experiences. By latent class analysis of the composer preferences, five types were found: (a) shallow listeners, who do not know many composers, (b) orthodox maestro devotees, (c) hardheaded devotees, who love orthodox maestros but dislike contemporary composers, (d) overarching lovers, and (e) contemporary music lovers. Crossing the types of initial contact and the types of music preference, the following was found:

1. Those with vague initial music experience tend to be shallow listeners.
2. Those who are affected by family do not have a particular preference.
3. Those who had eye-opening experience are not shallow listeners.
4. Those who received various effects are not shallow listeners, nor hardheaded, but overarching lovers.

OLS of the equivalent household income reveals the following. Those whose preferences were affected by family tend to have higher income than those with eye-opening experience. The orthodox maestro devotees have higher income than those with vague preference or hardheaded. However, as seen above, there is not an effect of family on orthodox preference. Therefore, we should conclude that there is no clear evidence for the chain relationship in Japan.

Food Aesthetics and the Unintended Construction of Civility in Peru

Peruvian food had always had important elements that connected it to national identity. However, in the last 10 years, food has acquired new meanings that pertained to a strong sense of national pride, and new understandings of what it meant to be Peruvian, particularly in media and politics. In Peru’s biggest city, Lima (where 35% of its population live), culture and cuisine reflect the diversity of its population through years of internal and external immigration processes since the times of the Spanish colony. In this paper I argue that, in great part, the “aesthetization” of food in Peru—a focus on aesthetics rather than on flavor—was pivotal to the transformation of its social meanings during the mid 2000s. In the early 2000s, chefs and tourism operators considered this process of “aesthetization” essential for the promotion of Peruvian food and, consequently, for the promotion of tourism and the increase of economic revenue to Peru. An unintended consequence of the success of this process was that the newly named “novan Andean” cuisine became a central element of an invigorated Peruvian pride. Additionally, this pride in Peruvian cuisine, in great part, allowed for emergence of new spaces of social “civility” based on weak links in a society that historically has been strongly divided by differences of class, socioeconomic status, race, etc. This “aesthetization” of food took place almost exclusively in the biggest urban centers of Peru, mostly because of the intrinsic characteristics of Peruvian media, the economic configurations of the country, and the importance of spaces of social communication in cities. These publics allow different people to discuss and experience food in big cities directly or indirectly (through conversations or food television shows, for instance), as opposed to the “immediacy” of food outside of these urban spaces.

Indirect Reciprocity in Intergenerational Support in Japan

Intergenerational familial support is a fundamental aspect of family relationships. It has critical effects on the welfare of family members and reflects the distribution of social capital in the family. This study focuses on the elderly old who provide support for their adult children, and assesses how their own parents’ support has affected their propensity to provide caregiving to their grown children. While directly reciprocal relationships in intergenerational support between parents and their children have been reported in the U.S. and Japan, we tested for the presence of indirect reciprocity from parents to children and grandchildren in Japan. The main research question is: Do the elderly who received more support from their parents tend to give more non-financial support to their adult children?

Models are examined with data from the National Survey of Middle- and Old-aged People’s Life conducted in August 2010. The sample consists of 5,648 elderly people who were 80-94 years old with at least one child over 18 years old. To detect the indirect reciprocal association between from-parent-to-respondent support and from-respondent-to-children caregiving, some regression models are applied. The outcome variable is the number of types of non-monetary support that respondents gave to their first child within the year prior to the interview. The controls are socioeconomic status of the respondents and their first children, and the support exchanged between them.

We found that receiving greater non-financial support from parents raised the propensity to offer caregiving to children, after controlling for other relevant factors. This result offers some rationale for the indirect reciprocity model of intergenerational support.

The Current Situation and Future Tasks of Community Service Actions Conducted By Local Sport Clubs

In recent years there’s been impressive growth in sport team volunteering to local community service. The purpose of this study was to examine the current situation and future tasks of community service actions conducted by local football clubs in Shikoku, JAPAN.

A survey was conducted using interviews, questionnaire and fieldwork from July in 2011 to July in 2013. Data of the questionnaire were collected from a sample of 104 clubs, while the return rate was 49.8%. The main findings were as follows: 1) About twenty percent of local football club conducted local community service actions, 2) human communication related to unity of sport competition and promoting mutual friendship was important to local football clubs, 3) it was favored for local football clubs to have human network closely related to local community, 4) sixty percent of local football clubs intended to continue or start the local community service actions. There were discouraged factors of the local community service actions, while members of local football clubs didn’t know what to do. Moreover they didn’t have enough methods to conduct the local community service actions. This indicated that the share information and financial aid could seed potential local community service actions and 4) local community service actions deeply related to proper leader and frequency of practice. It was quite important to have good connections with the club like sponsor or football school. It is necessary to examine the assessment of people living in local community and differences of income between local football clubs.

TSUTSUI, JUNYA* (Ritsumeikan University, junya.tsts@nifty.com)

Constructing Social Cleavage Indicators Using the Mixed-Effects Model

This study demonstrates how we can construct national indicators by analyzing comparative surveys using mixed-effects (ME) model. ME model, also known as multilevel analysis, is usually understood as a method to analyze nested data. Few studies pay attention to its unique ability to estimate individual (or random) effects.

Estimating individual effects, country-specific effects in the case of national comparison, using ME model has two distinct advantages that existing methods do not have.

One is that we can “estimate” indicators with statistical confidence, not just “compose” them by adding up or averaging relevant figures. This merit addresses the problem of composing indicators using unbalanced comparative data. A comparison of attitudes between a country with sample size of 1,000 and one with sample size of 10 would be questionable if we just calculate means of several attitudes for both countries, because the value of a country with small sample size lack reliability. Estimating individual effects using ME method can avoid this problem by introducing “shrinkage estimator”.

Another merit of ME estimation is that we can eliminate the effects derived from differential composition among countries. An indicator value of attitudes or happiness could be different because of different distributions of social groups such as gender, age, and classes. Also, simple averaging of different level of attitude among social groups can suffer from bias, because one social attribute (such as educational background) correlates with others (such as age or gender). ME method can deal with this problem because it uses linear regression technique.

This study applies ME method to compose “Attitudinal Divide Indicator” (ADI). ADI can be interpreted as indicating how an attitude toward government roles is divided among people.

TU, JIONG* (University of Cambridge, jf457@cam.ac.uk)
**Rebuild a Trust Relationship Between Doctors and Patients--Informal Exchange in Chinese Health Sector**

Trust lies at the heart of effective patient-doctor relationship. Chinese health sector is facing a trust crisis between patients and doctors as shown in the rising numbers of conflicts and denunciation. In seeking an accountable health care, patients widely employ informal exchange by giving gifts and red-packets to doctors, seeking connections and acquaintance relationship (guanxi) to get health care. The gift exchange and guanxi network involve the cultivation of emotion (rening, ganging, the emotional feelings of indebtedness and obligation), through which a trustworthy relationship is emergent and negotiated. However, in the changing moral context of China today, trust is very fragile amidst the inherent uncertainties of medical care. The individual efforts of gift-exchange and guanxi networking sometimes could not secure a trustworthy relationship, and patients frequently become the targets of defrauding, extortion and abuse of power. The paper, setting the context in the post-socialist China, shows how people are dealing with falling uncertainty in daily life and to secure a trustworthy doctor-patient relationship. It is about how trust is practiced, dismantled, and rebuilt in daily medical encounter. The paper recognizes the limits of individual informal exchange in building trust, and suggests more works to be done in building a trustworthy health system and improving the trust in society as a whole amid the wide mistrust.

**Tucker, Hazel** (University of Otago, hazel.tucker@otago.ac.nz)

**Gendered 'Living Like The Other' In Turkey**

Some tourists, those who decide to stay a longer while than other tourists in a place they like, might ‘fetishise the idea of ‘living like the locals’ (Davidson 2005: 46). One of the ways Davidson suggests they might do this is through ‘integrating themselves within and among local, indigenous communities, learning from them forms of experience and knowledge rejected and repressed by the West’ (2005:51). Some might even enunciate their sense of belonging by becoming tourism entrepreneurs and playing the role of host to tourist guests. Related to this, Soares (1998) talks about globalization as increasing the opportunities for copying which may be related to a desire to perform one’s own fantasies about the ‘other’. Soares adds that, therefore, ‘mimicry can be a weapon against the political reification of identities’ because ‘the experience of being something else challenges reified identities and brings the possibility of circulating, shifting, and changing to the forefront of social and cultural life’ (1998: 295).

Such mimicry is riddled with paradox and contradiction, however, because it is never possible to fully become the other. This paper considers the gendered dimensions of such tourist attempts at ‘living like the other’, at belonging and at becoming ‘other’. Drawing on my long-term ethnographic study of tourism relationships in Göreme, Turkey, the paper discusses the different ways in which foreign (yabanci) women and men experience, shifting, and changing to the forefront of social and cultural life (1998: 295).

The research shows that the strategies of copying which might be related to a desire to perform one’s own fantasies about the ‘other’ are different for each. By itself reflexively applying Videography [2] onto the practices of video analysis I am able not only to study those three fields and the spread of visual analysis as a communicative form of generation of knowledge, but am also presenting a reflexive form of videography which allows for the reflection of our situated practices and knowledge that has been criticized as missing in the use of video in interaction research.

**Taking Medicines: Expanding Routines, Disruption and Management in Daily Life**

This study aims to analyze the strategies and tactics used by patients suffering from cancer to manage their medication. The methods used in this study are qualitative interviews and participant observation. The study was conducted in three hospitals in China. The results of this study show that patients use a variety of tactics to manage their medication, including keeping a medication diary, using a pillbox, and asking for help from family and friends. The study also shows that patients feel concerned about the side effects of their medication and are willing to make changes to their medication routine to reduce these effects. The results of this study have implications for healthcare professionals and patients, including the need for better communication between patients and healthcare professionals and the importance of patient education.

**The Triple Role of Social Media: A Case Study**

The Arab Spring’s ‘Facebook dimension’ has already received unprecedented attention. New technology was presented as an instrument used by protesters to build extensive networks, create social capital, organize political action locally and nationally, and put in place transnational links. A debate ensued between the views of ‘cyber-enthusiasts’ and those of ‘cyber-skeptics’ (or ‘digital evangelists’ and ‘techno-realists’). A common element, however, is that very little of this research identifies and describes the nature and dynamics of the visual practices that have emerged. The present paper studies the role of social media in shaping the Arab Spring. The paper presents the outcomes of a project that focuses on activities of interpretation of video recordings. The interpretation/analysis of visual data is not only performed within sociology but in a growing number of professional fields and everyday situations (“Vernacular video analysis” [1]). My presentation draws on a focused ethnographic study of interpretation practices. I have done ethnographic fieldwork in three fields and recorded practitioners at their interpretation work. The three fields each highlight different aspects of interpretation work.

In 1) Police Work the identification of actors and their (“criminal”) actions is the police officials’ main concern, in 2) Football Training the aspect of instruction is most important and in 3) Market Research the interpretation of eye tracking video is distributed and organized via means of information technology.

By itself reflexively applying Videography on the practices of visual analysis I am able not only to study these three fields and the spread of visual analysis as a communicative form of generation of knowledge, but am also presenting a reflexive form of videography which allows for the reflection of our situated practices and knowledge that has been criticized as missing in the use of video in interaction research.

**Sociological Approach on the ART of Using Drugs By Patients Suffering of Oncological and Psychiatric Diseases**

This study aims to analyze the strategies and tactics used by patients suffering from oncological and psychiatric diseases on the scale of social classes. This study would help to analyze and discuss the most comprehensive questions about the subject at hand.

• Which are the factors that determine the choice of the patient when he takes a medicine?
In the sociology of globalization there has been much talk of porous borders, the effects of the international flow of labour, legal pluralism, the fragmentation of civil society by multiculturalism, and the decline of state sovereignty. America however appears, as ever, to be an exception to this. After 9/11 and the Patriot Act, there has been considerable emphasis on the securitization of society as a whole. The focus of national security is echoed in the agenda of the Republican Party which has opposed the naturalization of illegal migrants, supported a hawkish foreign policy, warned against the dangers of creeping Sharia, and rejected cuts to the Pentagon budget. Despite its ideological opposition to big government, the Tea Party has driven the GOP further to the right over national security and defence expenditure. While the rightward drift of Republican Christians is consistent with traditional millenarianism and Christian Zionism in America, it is reinforced by fears of American decline. Confronted by economic weakness foreign policy now faces a dilemma: isolationism versus confrontation. The foreign policy of Chris-
industry and the civil society have intermingled giving rise to many theoretical interpretations that underline the professed radical change of universities and sciences. Of these theories, the current article focuses on the triple-helix of university-industry-government relations. The model claims that intensified interaction between university, industry and government has given rise to a new kind of research, which not only seeks to advance knowledge but also tries to attain commercially viable products. As a normative policy model, triple helix might be transportable into analysis certain understanding of the developmental role of scientific research. The present paper summarizes the major viewpoints of this theory and reflects on the commentary given to it. To better understand the various virtues of the model, it also analyses the model's distinct theoretical status and claims that it is ambiguous, as it combines three types of sociological theory, i.e., diagnosis of an era, general sociological theory and research theory. After assessing the status of triple helix, the paper contributes to the discussion about the model by probing different theoretical avenues that research associated with the concept might proceed. Of central importance here is systems theory by Niklas Luhmann, as major protagonists of triple helix have frequently used his ideas in discussing the model. The current paper draws concepts from Luhmann's theory to specify ways in which empirical research associated with triple helix could be made more responsive to the multi-functional and internally contradictory character of the contemporary research university.

Dress and the Embodiment of Age in Everyday Life

Clothes lie on the interface between the body and its social presentation. Getting dressed is an everyday body practice, one of the ways in which bodies are made social, given identity and meaning. When we get dressed, however, we do so within the bounds of a culture and its norms; and these include ones in relation to age – as they do gender also. The presentation which draws on an ESRC project published as Fashion and Age: Dress, the Body and Later Life, Bloomsbury, explores the role of dress in the day to day performance of aged - and gendered - identities.

New Approaches to Inequality Patterns in Education Science and Childhood Sociology

New approaches to inequality patterns in education science and childhood sociology

From a perspective that considers children as social agents we analyze how socialization- and learning environments are designed, processed and have an influence on children's self-orientation and autonomous learning. By using an interdisciplinary approach that combines sociological and pedagogical theories different dimensions of the 'self' are put into the center of attention. Thereby we aspire to gain new insights into causes of inequalities.

This article uses data provided by the (longitudinal) study "SEBI - Self-orientation and Self-directed Learning: An Analysis of Socialization and Learning Environments of Primary School Children". First quantitative results of the ongoing study assessed the importance of parenting for children's self-confidence in primary school. A perceived parental interest in the own personality – associated with parental interest in the child's specific hobbies, activities and interests – can be seen as central for the academic self-concept. However, a perceived parental emphasis on efforts for the child's academic success does not have such a significant effect. Further, these findings could not be related to social class or ethnicity, which makes a difference to common findings of the majority of socialization studies. Thus, this study contributes to an extended view on inequalities in education by focusing on different socialization practices in families and institutions and how these interrelate to the child's academic self-concept and performance. The perspective gained by these findings can be supplemented by qualitative interviews concerning aspirations, parental practices and children's perspectives on school and family life with parents and children across various social backgrounds.

Based on this multi-method way of proceeding we aim to identify different patterns of inequality in socialization related to the self as a central variable. In how far this is a track worth following will be shown by presenting relevant data.

TYURINA, IRINA* (Russian Academy of Sciences, director@isras.ru)

Consolidation of Russia and Characteristics of Russians' Identities

Under conditions of globalization the national identity takes on special significance. Globalization creates unprecedented opportunities for the cultural convergence, expansion of the communicative space, lifestyle enrichment. However it causes many challenges and destructive tendencies, including a trend which is the national identity crisis. A number of research associated with the concept of identity politics can be considered as essential to defining the domestic sociological tradition were developed with three forms of 'subjectivities' distinguished: domestic disciplinary subjectivity, the degree to which sociologists of a particular locale were considered (or acted) as if they belonged to one bounded community; domestic empirical subjectivity, the degree to which a geographical territory was seen as others than an epistemological subject; and civilizational subjectivity, the degree to which sociologists perceived that they belonged to a culture distinctive from the Western civilizational frame in sociology. The patterns are further associated with the post-War geopolitical statues and identity politics of the three places: the 'imposed Chinese nationalism' in Cold-War Taiwan and its challenge from the rising indigenous identity after the 1980s; the 'colonial denationalisation' policies in Hong Kong and the ambivalence toward the reunion with China in 1997; the 'multi-racial nation making' project in Singapore following its unexpected independence in 1965.

ZHANG, JING-WEN (National Tsing-Hua University)

Internet-Facilitated Social Activism in Taiwan: Modes and Constraints

On 3th Aug 2013, a group of 39 anonymous ‘netizens’ mobilised, largely via the internet, a crowd of estimated 250,000 people in front of Taiwan's President Office to mourn for the man-made death of a military corporal, Mr Hung Chung-Chiu, and to protest against how the government responded to the case. The pressure forced the government to concede, agreeing to abolish the discredited military judicial system during peace time.

The 803 protest marked a new mode of ambiguity of globalization practices affecting not only the outer structure of social relations, but also individuals’ inner world reinforce the need to define their own national and cultural identity. This need is global. However in every society it has its specific manifestations and gives rise to different social consequences. Russia isn’t unique in the fact that it experiences the problem of post-Soviet geopolitics. Four categories of thinking, comparing themselves and the world, trying to understand the general and the particular in their identification characteristics. Problems of transformation of Russian identity assume ever greater importance. They mediate the future of the country, its ability to face the challenges of modern world as well as to carry out cultural, economic, social and political modernization. The images which will dominate in mass consciousness will affect the prospects for civil society in Russia, the functioning of political institutions, the social climate of the society. At the same time the Russians’ perception of themselves, of their own place in the world and of the others affects the formation of political, social and cultural orientation, which mediates the mass sense of place and role of Russia in the modern world, people’s attitude to the Western countries, institutions and values.
an social activists and oppositional politicians into self-questioning why they had failed to stage a rally at a comparable scale in recent years—even with the help of internet. The question calls for a comparative analysis of this incident and other internet-facilitated social movements.

Drawing from literature review, interviews and some participant observations, this paper surveyed the existing practices of internet-facilitated social movement in Taiwan—a young democracy known for its strength in computing and communication technologies. Four ideal-typical categories are identified and discussed: (1) online activism of conventional advocacy/concern groups, (2) communication platform aimed at facilitating public deliberation and social empowering, (3) issue-specific protest initiated in a decentralised, less consolidated fashion among concerned ‘netizens’ and (4) various ‘open access’ projects initiated within an IT-savvy community (e.g. the ‘g0v’ zero time government project).

A model will be theorized from the comparative analysis to account for the varying situational utilization of these four categories: emotional epistemic factor, cognitive entry barrier and technological entry barrier. At last, a normative ethic on managing the scale of activism will be developed with the ‘public attention’ considered as a scarce public resource. The various modes of internet-facilitated activism will be critically evaluated with the ethics in mind.

A Comparative Study on the Inter-Professional Collaboration Among Actors Involved in Active Ageing Programmes: Lessons from Denmark and Taiwan

This research aims to investigate the inter-professional collaboration among actors involved in the collective actions of Active Ageing campaigns, from NPOs to the state, the media, political parties, and commercial companies. It asks how do actors interact with each other and to what extent can inequality be eliminated? Denmark and Taiwan, with their differences in welfare regime, population age, and development of democracy and union movement, can be good cases to be compared. With the theoretical framework developed by Nahapiet and Ghoshal (1998), this study examines the relational dimension of inter-organizational social capital. Strikingly, three patterns of perceived relational social capital can be concluded in both the Danish and Taiwanese organizational fields, and each has its implication to collaboration. In Pattern 1 where actors continuously measure who needs whom and for what, an unequal power relation can be noticed. Actors at a more disadvantageous position are more vulnerable to collaboration availability and they identify with their partners in exchange of their trust. Moreover, when a collaboration project is accepted, actors’ identification of being in the same community is formed. However, with numerous back-and-forth circumambulations, actors keep asking if they should trust their partners. This is the Pattern 2 in this study and its kinetics can be categorized as follows: a) toward mutual trust because of complacency of identification; b) toward distrust with problems of obligations and expectations as the crucial reason; c) toward distrust with imperfection in norms as the basic problem. Last but not least, Pattern 3, which features in harmony and stabilization, differentiates itself from other two patterns by harmonized conflict of interests among actors and a shared enemy - usually the state. Overall, embedded trust, which is weighted with identification functions as the key mechanism in shaping such inter-professional collaboration.

It’s Time to Change: How Does Kid-Focused Business Survive and Benefit from Population Ageing?

Ageing is a dynamic process involving responses at both individual and societal levels. Theoretically, the existence of an organization is a consequence of temporal societal demands. This study asks why and how kid-focused business can survive and benefit from our ageing society. Particular emphasis is on their strategy in terms of legitimacy and organizational social capital. Japan and Taiwan, with their similarities in filial piety and inter-generational solidarity, can be good cases to study this issue. Various methods, such as in-depth interviews and content analysis of publications and government statistics, are applied to identify the underlying processes and narratives.

Social innovation across institutional boundaries can be recognized. Charities for the elderly and cram schools both recruit senior volunteers to teach children after school hours. Institutional re-design can also facilitate social innovation. Examples include kindergarten and nursing homes to be set in the same building and public school campus turning into tourism resort. Vague vision is another strategy for actors to find legitimacy and incorporate as many projects as possible. Moreover, institutional reframing based on institutional reproduction but with actors’ minor modification due to institutional leaks and personal interests, can create alternatives for those whose jurisdiction is territorially defined. A good example is public schools in the cities with students changing their household registration from the countryside but in reality commute everyday.

To sum up, actors’ agency and conditioning of institutions can both pave the way for kid-focused business. The concept of New Institutionalism can explain actions within a given institutional environment while the notions of organization and identity proposed by Giddens can help to understand why Active Ageing campaigns are widely utilized. This study ends with suggestions for re-thinking the meaning of Active Ageing campaigns and if the elderly are hence empowered or exploited.

How to Include Material Elements in the Analysis of Life Stories? Applying Actor-Network Theory to the Analysis of Autobiographical Narratives on Alcohol Dependence

Often the aim in the analysis of life stories is to identify cultural meaning structures that tell about the values and norms that regulate people’s life choices and responses to their aspirations. Hence, the life story, the often approached, for example, by applying Vladimir Propp’s theory on narrative functions or William Labov’s theory on narrative categories. By applying actor-network theory (ANT) to the analysis of autobiographical narratives on alcohol dependence, the paper shows how the methods that focus on the identification of cultural meaning structures have a tendency to detach action described in life stories from its material and bodily mediations and overemphasize the importance of psycho-social and cultural factors in action. In ANT action is understood as an effect of network where both human and material elements can act as a set of links of relations. ANT offers tools to grasp how alcohol dependence, for example, is produced and mediated by a network of material, bodily, psychological, social, conceptual and cultural entities that transforms the action in an unforeseen way.

The paper uses empirical examples from the life stories on alcohol dependence told to social activists and oppositional politicians into self-questioning why they had been submerged in the issues. Vague vision is another strategy for actors to find legitimacy and incorporate as many projects as possible. Moreover, institutional reframing based on institutional reproduction but with actors’ minor modification due to institutional leaks and personal interests, can create alternatives for those whose jurisdiction is territorially defined. A good example is public schools in the cities with students changing their household registration from the countryside but in reality commute everyday.

To sum up, actors’ agency and conditioning of institutions can both pave the way for kid-focused business. The concept of New Institutionalism can explain actions within a given institutional environment while the notions of organization and identity proposed by Giddens can help to understand why Active Ageing campaigns are widely utilized. This study ends with suggestions for re-thinking the meaning of Active Ageing campaigns and if the elderly are hence empowered or exploited.

Women’s Responsibilities, Freedoms, and Pleasures: An Analysis of Italian, Finnish and Swedish Women’s Magazines’ Alcohol-Related Advertisements from the 1960s to the 2000s

Since the 1960s, feminist movements have emphasized that men and women should be seen as equal in their roles as parents, breadwinners, and citizens. This conception is not confirmed by the images produced by advertising. The article presents an analysis of alcohol-related advertisements published in Finnish, Italian and Swedish women’s magazines from the 1960s to the 2000s. The advertisements are approached as representations of gendered performances in which gender is made visible “here and now” by placing women in particular subject positions (identities, gender roles) that are related to private or public spheres and associated with specific kinds of gender expectations and norms reflecting women’s shifting responsibilities, freedoms, and pleasures. The article asks what kind of drinking-related subject positions have been portrayed as desirable in women’s magazine advertisements over the past few decades and how those positions have changed as we move closer to the present day. The analysis reveals both continuity and variability in alcohol-related subject positions in Finnish, Italian and Swedish women’s magazine advertisements. It shows how women’s responsibilities, freedoms, and pleasures have expanded from the traditional domain of the private sphere to multiple new areas as Finland, Italy and Sweden have developed from modern societies to late-modern societies. However, the expansion of women’s identities has occurred differently in each geographical area. Furthermore, the analysis shows that the expansion of women’s identities does not mean that the traditional gender norms have disintegrated and been replaced by equal gen-
der norms. Rather, it seems that traditional gender norms continue to be reproduced in alcohol-related advertising.

**UANG, SHIAW-TSYR** (Minghsin Univ Science & Technology, uang@must.edu.tw)

**Changing Consuming Behaviors By Designing Eco-Efficient Green Products**

People continue to create and consume more innovative technology products in order to make life more convenience and comfortable than the past. However, huge industrial processes bring significant changes in the Earth. Natural resources are getting to dry up; ozonosphere has been destroyed; environment has been contaminated and so on. These environmental changes cause serious threats to the survival of the Earth's species.

Therefore, in recent years, environmental awareness began to be respected, and researchers explore green issues hoping to make living things can be survival sustainable. Many countries have implemented environmental protection laws to reduce the environmental impacts of industrialized society. For instance, WEEE (Waste Electrical and Electronic Equipment Directive), RoHS (Restriction of Hazardous Substances Directive) and EuP (Energy Using Product) organizations under the auspices of the European Union try to limit the environmental pollution caused by products. Laws and regulations seem to be a “pushing” force on changing consuming behaviors.

On the contrary, this research examines the possibility of a “pulling” force on changing consuming behaviors by designing eco-efficient green products. The present study attempts to integrate 39 engineering parameters of TRIZ (Theory of Inventive Problem Solving, developed by Genrich Altshuller) with 7 eco-efficient elements (Reduce material intensity; Energy intensity minimized; Dispersion of toxic substances is reduced; Undertake recycling; Capitalize on use of renewable resources; Extend product durability; Service intensity is increased. REDUCES, in short) proposed by WBCSD (World Business Council for Sustainable Development) to construct a green product design matrix, and use patents to verify the validity of this innovative green product design process. The green product design process of this research may allow designers to generate green products by improving eco-efficient elements as well as resolving conflict design issues. Hopefully, eco-efficient products may attract consumers' attention and thus unconsciously change consuming behavior, and approach sustainable goals.

**UDA, KAZUKO** (Senshu university, kazuko_u@mse.biglobe.ne.jp)

**Industrial Food Pollution: A New Perspective on Food Safety Risks Beyond the Current Legal Definition**

This study proposes a new perspective on food safety risks, with reference to the 1968 Kanemi rice bran oil poisoning in Japan. This poisoning was brought on by Polychlorinated Biphenyls and dioxins, which are hormone-disrupting chemicals. As a result, the victims had chronic illnesses and passed on the poisoning to their children. Despite the victims' ongoing need for compensation and relief, no adequate policies as yet exist.

Similar to the Kanemi case, East Asian society has experienced many other food contamination, e.g., the 1955 Morinaga arsenic milk poisoning in Japan, the 1979 Taiwan rice bran oil disease, and the contamination of food with melamine in China and Korea in the 2000s. These cases show that salient issues regarding food in East Asia have changed from security to safety. Furthermore, they indicate that this study can be applied to other contamination cases.

In contrast to neglected those cases, environmental pollution incidents such as Minamata disease - caused by the methylmercury contamination of Minamata Bay in the 1950s - were officially recognized as 'public nuisance'. The victims of them therefore received public compensation in accordance with the law. However, the government denies that serious food poisonings are ‘public nuisance’, leaving victims without compensation.

From the sociological perspective, the social damage structure of the Kanemi was not similar to typical cases of food poisoning. Rather, with regard to the victims' possibility of recovery, the negative effects on daily life and community, and the cause of the contamination, it was similar to ‘public nuisance’.

In conclusion, I propose a new perspective of ‘Industrial Food Pollution’, beyond the Japanese legal definition of ‘Food poisoning’ and ‘Environmental pollution as public nuisance’. Based on this perspective, I recommend the establishment of ‘Relief Fund for Industrial Food Pollution’, which institutionalize compensation systems for victims.

Rights and Responsibility - Investigation of the Emergence of Entitled Children and the Amendment of Juvenile Law in Japan from the 1990s into the Next Century

In Japan during the 1990s, concepts of childhood changed, both within the domestic and international contexts. The emerging notions of self-determination, freedom, and responsibility, being debated on several fronts, were applied to children. The translation of these notions extended into the functionality of juvenile law. The questions to be raised are: is the child considered as an object in need of protection and guidance? Should the child be viewed, similar to the adult, as an independent being who has an innate ability for self-determination? How has Japanese society perceived the child? These questions form the core for investigating social, political, and legal transitions within Japanese culture in regards to its entitled children who newly emerged in the 1990s and started emphasizing their rights as they thought were rightfully theirs. In this research, entitled children are defined as those who consider themselves as an independent adult holding the rights concerning the choice of their actions. This research aims at reconsidering and reconstructing Japanese society during this time concerning the topic of entitled children and their degree of self-determination as conceptually developed by their observers, such as educators, psychologists, sociologists, legal professionals, and others. This research also enables the production of interdisciplinary discussions between areas of law, sociology, cultural studies, media studies, and qualitative fieldwork. Investigating the developed observations of multiple disciplines is beneficial for formulating a broader context in order to analyze and comprehend the topic (235 words).

Facebook Activism By Foreign Domestic Workers in Singapore

Studies of foreign domestic workers are now numerous in the social science literature, with much attention paid to left behind families. Since new research is required to contemplate the latest change, this paper uses authentic accounts related to the current explosive growth of social networking by live-in domestic workers in Southeast Asia. Evidence was gathered through 54,000 posts on a Facebook group, most from Filipina domestic workers in Singapore. Interviews were held with Facebook group members, including a founder of the NGO responsible for starting the social network group. Findings confirm that internet technology has become an integral part of the lives of foreign domestic workers, enhancing their social interactions and mobilizing their self-expression. There is evidence that Facebook reduces psychological and physical costs for live-in workers, making it relatively easy for them to participate in activist social networking. Evidence suggests that, in addition to providing entertainment for foreign workers, Facebook motivates an increasing number of distantly scattered individual workers to engage in social activism.

How Japan Imports Social Problems from the West: Child Abuse from Early 20th Century to the Present

For more than a century, Japan's approach to the child abuse problem has been stimulated and shaped by developments in western countries, particular in the US. Early in the 20th century, a national discussion of child abuse was initiated by hundreds of Japanese who had been exposed to western philanthropy. In the 1970s, Japanese medical professionals raised awareness of battered child syndrome proposed by a leading American pediatrician. Starting in the 1990s, a massive discourse on child abuse problem emerged from various professional groups who advocated prevention and treatment measures from the US. Official data show that child abuse cases in Japan are most common for people of lower economic class. However, social policy on child abuse problem downplays the importance of economic stability and attributes the problem to individual families. Thus, government policy prioritizes identifying settings where there is a risk of child abuse and counseling parents instead of focusing on bringing families out of poverty. A child abuse risk assessment tool from the US is applied to every Japanese family in which there is an infant. The present study shows evidence of increased social panopticism and shows that risk technology morally penalizes mothers, leading to social exclusion.

Moral Identity in Friendships Between GLB and Straight College Students

People make moral claims about sympathizing with and providing support for stigmatized individuals, but past studies tended to focus on this type of moral identity construction within formal organizations. The present study seeks to extend the literature by identifying the process of moral identity construction in a personal setting—friendships between gay, lesbian, and bisexual (GLB) people and straight people. Analyzing data from in-depth interviews with college stu-
Gender equality and women's empowerment are important indicators in development strategies that focus on poverty reduction and improved mater-
material health. Despite the overall wellbeing of many of these facts, conditions for women and the nation, research in this area is neglected. Besides the condition of women in relation to women empowerment, indicators have remained poor. The study used data from the latest national Demographic and Health Survey (nDHS, 2008) to examine the socio-economic condition of women in relation to the level of empowerment and as a correlate to maternal health outcome in Cross River State. The study utilized data of a representative sample of 735 wom-
women of age 15-49. A majority of respondents reported Poor/low socio-economic status ranging from low educational status, unskilled occupation, low income per month, seasonal employment etc and this affected the level of empowerment in all the indicators. These are women's participation in household decision making, their attitude towards wife beating and their attitude towards a wife's right to refuse sexual intercourse with her husband or partner. This condition is man-
manifested in high maternal morbidity, mortality, inability to determine number of children, spacing and antenatal care options available to them. This is in line with the prevalent scenario in the entire country. There is therefore an urgent need for improving and enhancing women socio-economic condition as it will improve their level of empowerment and will bring about better maternal health status.

This paper shares some initial findings of a theoretical and methodological ex-
ploration, in which I use institutional ethnography (IE) to examine the role played by planners and bodies in the dispossessing of Indigenous peoples in Chile. Over the past fifteen years, the planning literature started to recognize the complicity of the di-
cipline with colonial domination and imperial aspirations of territorial expansion, in particular how land use planning has been one of the main mechanisms used by European settlers to appropriate Indigenous lands. Starting from the prem-
iss that planning processes are embedded in complex and broader institutional structures, I further argue that planning has contributed to the reproduction and perpetuation of colonial injustices until this day, in part through the existence of institutional, legal, and decision-making frameworks that are colonial legacies. Although IE has not been widely used by planning scholars, I claim that to un-
derstand how colonial rationalities are reproduced through everyday planning practice it is critical to look at how written texts – especially plans, legal docu-
ments, regulations, and policies– shape planning action and help reveal colonial ruling relations. To answer this empirical question, I draw on in-depth interviews and document reviews, discussing how the daily actions of government planners in Chile bring to life colonial visions and understandings, although in subtler and more invisible ways than in the past. I use as an example the planning and imple-
mentation of the first Consultation on Indigenous Institutions, led by the Chilean Ministry of Foreign Affairs in 2011, when a new model was developed in the context of the recent endorse-
ment of ILO Convention 169 and the UN Declaration on the Rights of Indigenous Peoples. This exploration shows how the recognition of Indigenous rights chal-
genues Indigenous/State relations and simultaneously reinforces colonial notions of state sovereignty, Lockian ideals of land use and property rights, and liberal understandings of human rights.

This paper explores a controversial side of police culture: the use of ethnicized humour among the police. The research material consists of twenty-two inter-
views made in context of an assessment on the work environment for ethnic mi-
nority officers and civilians within a major Swedish police force. The qualitative analysis illustrates how officers and civilians with an ethnic minority background talk about the widespread use of racial humour within the police. On the one hand, ethnic jokes are not always intended to be racist but they reproduce eth-

nica stereotypes and tends to position minority officers as ‘outsiders’, but, on the other hand, they contribute to the reproduction of racial jokes and consider it to be an unavoidable, quite unproblematic, part of daily police jargon. Finally, the difficulties of walking the thin line between police jargon and ethnic bullying and the problems that racial humour implies for diversity work within the police are discussed.

Facing An Unequal World: The 1967-70 Civil War In Nigeria, Its
Causes, Consequences and Implications On The Biafran Side Of
The War In Contemporary Nigeria

SHORT ABSTRACT: The paper examines the causes and effects of the 1967-70 Civil War on the Biafran side of the country, even decades after the actual war.

LONG ABSTRACT: Violent conflicts of inter and intra state wars of myriad con-
csequences have become an embedded states in Africa. The Nigerian-Biafra war of 1967-70 took a genocidal dimension in which the killing of people on the Biafran side of the war became a state industry. These decima-
tions took the features of a pogrom against the “Biafrans” which resulted in mil-
ions of people of that side of the country examined in the war.

This paper, therefore, analyses the causative factors of the war, the conse-
quences of the war in terms of the massive human deaths, the refugees’ prob-
lems and the expropriating economic and social aftermath of the war on the then citizens of Biafra and Nigerians in general. The paper argues that even in the com-
temporary globalization world, the global strategies that cost-
tituted victims of the secessionist war still suffer from unequal treatment in the present Nigerian socio-political context, being a hangover of the Nigerian-Biafra civil war of post-independence Nigeria.

The Social Meaning of Racial Humour Among the Police

This paper explores a controversial side of police culture: the use of ethnicized humour among the police. The research material consists of twenty-two inter-
views made in context of an assessment on the work environment for ethnic mi-
nority officers and civilians within a major Swedish police force. Gender Representations in Occupational Descriptions

The Swedish labour market is to a vast degree segregated by gender, likewise as in many other nations. Women and men work in different occupations, branch-es and even sectors and a majority (73 percent) work in occupations where 60 percent or more of the employees are of the same sex. Women are engaged in oc- cupations such as nurse, social worker, teacher, assistant nurse and child minder, while men primarily work in manufacturing or with diverse technical occupations. The separation of men and women in the labour market can be explained by the structural mechanisms which result from the sex-segregated and stereotyped gen- dered images of occupations. Both tasks and occupations tend to be sex-typed and we associate them with being either female or male. “Female” occupations include different aspects of caring for other persons and thereby correspond with dispositions assumed to be held by women. “Male occupations” are associated with physical strength, technical skills and logic – dispositions traditionally asso- ciated with men. Sex-typing is an ongoing process, part of the overall gender sys- tem in society, and is related to hegemonic cultural beliefs about gender.

This paper draws on empirical data consisting of occupational descriptions produced by the Swedish Public Employment Service (Arbetsförmedlingen). It presents the results from the on-going research project that studies whether descriptions of occupations are a mechanism for social reproduction of gender, class and ethnic identity. The paper focus how gender is represented in the 30 most common occupations for women and men respectively. The aim is to find out whether these occupational descriptions reproduce stereotyped images of gender, and how. The study was conducted through a qualitative content analy- sis. Preliminary results reveal that they both reproduce and break stereotypes; by emphasizing that nurses need to be technical and that a janitor must have social skills.

Information and Communication Technology (ICT) and “Isolated Child-Rearing” in Japan

This paper explores how ICT affects social movements for dealing with “isolat-ed child-rearing” through analysis of political documents and qualitative interview data, especially focusing on the relation between ICT and neighborhood relation- ships or regional networks for families. In Japan today, these social movements for dealing with “isolated child-rearing” have been active. They problematizes “isolat-ed child-rearing” from the urbanization, the increasing number of nuclear families and the dilution of neighborhood and family relationships, mainly on the assumption that the isolation relates to “child abuse” and “child-rearing anxiety.” For this reason, they try to strengthen supports for parents by neighbor-hood or special local agencies. On the other hand, recently some governmental ICT projects for preventing “isolated child-rearing” have been promoted, so as building a social networking service site for parents and developing e-learning environments to foster advisors on child-rearing. These projects enable parents to seek advice or to talk with other parents on their smartphone or personal com- puter without leaving home regardless of their regional contacts. So, how does the promotion of these ICT projects affect the need for developing a sense of community and building regional networks for preventing “isolated child-rearing”? In conclusion, the governmental ICT projects in Japan are rigidly focusing on “local community,” so in the name of “community informatization,” many local govern- ments are engaged in developing ICT to strengthen neighborhood relationships and regional networks. Similarly in a real-life situation, most of the parents who replied this investigation prefer to ask for help and talk with someone they know by sight rather than only online. For these parents, the primary objective of using ICT in their child-rearing lives is to communicate with their family or neighbors. Thus, in Japan the utilization of ICT for preventing “isolated child-rearing” is direct-ed to strengthening neighborhood relationships or regional networks.

Producing Economic Knowledge: An Ethnography of Newsrooms in Brazil

Producing economic knowledge: an ethnography of newsrooms in Brazil

In line with recent ethnographic research concerned to shed light on knowledge production in advertising agencies (Arztia, 2013), trade floors (Beunza & Stark, 2010) and news agencies (Boyer, 2011), this investigation considers the newsroom as site of economic knowledge production in Brazil. In particular, this paper pres- ents the early results of a multi-site ethnography of economic news production in the mass media in Rio de Janeiro and Sao Paulo in 2013. It draws from more than fifty interviews with economic journalists, media commentators and economists, as well as from participatory observations of journalistic practices within newsrooms. The paper looks at how relationships – both competitive and collaborative – between the following four entities help create economic knowledge, and how this knowledge interacts with the generation of news. The entities in question are: 1) professional economic journalists and groups; 2) journalists, economists, commen-tators, editors, etc.; 2) non-human instruments (devices, models, rankings); 3) structures (classes, professions) and 4) networks (relationships between actors, instruments, structures). The paper pays special attention to how news about the economy is constructed and circulated, and how this news in turn draws upon, contests, and helps to produce economic knowledge. This research forms part of the ERC funded ECONPUBLIC project, which study how the ideas about the econ- omy have been produced in the mass media in the UK, US, France, Argentina and Brazil in the post-war period. http://www.econpublic.hps.cam.ac.uk

Democratization of Local Leadership---- the Role and Function of Local Governance in the Disaster-Processes of the Great East-Japan Earthquake and the Tsunami

The gigantic earthquake of magnitude 9.0 which occurred on 11th March, 2011 caused tremendous damage to the huge coastal area around Northeast Japan. The tsunami was of historical record in terms of its height and area affected. As the end of March, 2012, over 20 thousand people were reported as dead or missing related to this disaster.

Moreover, serious accidents at the Fukushima Nuclear Power Plants that hap-pened sequentially had a great impact on the huge area. The catastrophic dam- aged communities had been in financial difficulties with a high percentage of aged people, revealing various types of precariousness in the social structure of the communities and the vulnerability individual resident groups have.

In terms of mitigation, temporary living, restoration and reconstruction pro- cesses, the role of local political leadership that could listen to requests and meet the demand of the residents on the one hand and that could negotiate with the central and prefectural governments in order to get necessary assistance to help people in the disaster areas on the other hand, is getting more and more important. Based on the in-depth interviews to local leaders of the hard hit areas we explore the role and function of local leadership and its effectiveness, as well as the condition on which they are doing well with these tasks.

Among the democratic countries Japan has a rather centralized political and social system, with a strong central government. In terms of budget-control, reg- ulation of prefectoral and local government system etc. Furthermore the earthquake we experienced the change of governing party from the Democratic Party of Japan to Liberal Democratic Party, which seemed to mean that it is ne- cessary to consider deeply the way of the political leader, not only at national level but also at local level.

An Ethnomethodological Explication of the Usage of Diagnostic Categories: On the Relation Between Diagnosis of Autism Spectrum Disorder and Self-Identity (2)

Through the lens of medicalization in sociology, the relations that people have with medical categories are considered subordinate to medical professions. Therefore, how individuals with autism spectrum disorder (ASD) come to terms with the category of “ASD” is considered a manifestation of that subordination (Conrad, 2007). However, this perspective prevents us from understanding ac- tual situations in which those individuals come to terms with the diagnosis of ASD. Many studies have investigated the various relations people actually have with their diagnostic categories (Hacking, 2009; Jutel, 2011). Based on these pre-cedent studies, this presentation examines the sessions of tojisha-kenkyu (which roughly translates as “sufferers’ first-person study”) and explains the interactions of the settings in which participants refer to their own diagnostic categories. The Japanese word tojisha-kenkyu refers to a collaborative activity in which the indi-
viduals suffering from social isolation due to their impairments talk about their troubled experiences and study the structures of these experiences in their own words. Tohjisha-kenkyu began in a mental patients’ group in the town of Hokkaido, Japan and has since been utilized in many other groups of individuals with various impairments (Ayaya and Kumagaya, 2008; Ishihara, 2013). The sessions of tohjisha-kenkyu this presentation examined were for individuals with ASD and conducted by these individuals. Using ethnmethodology and analyzing audio recordings of the sessions, we focused on the following questions: (1) What is the significance and what are the roles of the participants’ self-reference to diagnostic categories? (2) What relationships do these usages of diagnostic categories reveal possible between participants? (3) What consequences do these usages give to the meanings of these diagnostic categories?

How Diagnostic Categories Influence the Self-Description of Person with a Diagnosis: On the Relation Between Diagnosis of Autism Spectrum Disorder and Self-Identity (1)

Previous studies have revealed that there is a mutual relationship between the self-description and social cognition/interaction (Spreng and Mar, 2012; Nelson and Fivush, 2004). These studies have found that to infer the intentions, feelings and beliefs of others from their behaviors requires the structured self-description which serves as a reference frame. On the other hand, self-description is structured through the social interaction.

The persons with Autism Spectrum Disorders (ASD), the medical definition of which is qualitative deficits of social cognition/interaction, are suggested to have difficulties in semanticizing their own autobiographical memories through social interaction, which gives atypical structure of self-description (Crane et al., 2010; 2011; Bon et al., 2013; Lind et al., 2010; Williams et al., 2010; Uddin et al., 2011). However, performance of social cognition/interaction and self-description depends on how to interact ‘with whom’, and may not be reduced to individual characteristics (Crane and Goddard, 2008; Bruck et al, 2007; Crane et al., 2012).

As a practice in which alternative self-description and social recognition/interaction are generated simultaneously, we focus on Tohjisha-kenkyu. ‘Tojisha’ means first-person in Japanese, and ‘Kenkyu’ means research. In a nutshell, Tohjisha-kenkyu is studying oneself through communication with others who share similar experiences. Tohjisha-kenkyu is a novel method of self-help and intellectual exploration born in Japan, which neither accepts without question nor rejects completely existing technical terms and diagnosis, but rather uses and customizes them to make more suitable descriptions for each experience.

In this presentation, the speaker, who is diagnosed with ASD and is a facilitator of Tohjisha-kenkyu meetings for ASD, will introduce 7-year experiences of Tohjisha-kenkyu. She also talks about how she has utilized technical terms to change her own self-description, which ranges from implicit body schema to explicit self-narratives, and the relationship with others (Ayaya, 2013).

China's role as an emerging donor and its conceptualization of social policy in Africa has generated polarized reactions in the West. Many argue its 'productivist' approach is driven less by notions of citizenship and social rights, and more in terms of accumulation functions. Social investment is justified for broader economic development goals in contrast to current safety-net or 'wellfarist' models of western donors. While some international organizations perceive the Chinese approach as antithetical to Western goals and practice, others welcome it as an alternative development policy. This qualitative research explores to what extent and in which direction Chinese aid to Africa is influencing Western ideas about welfare policy in developing countries. The study comprises a systematic review of Sino-African and Western policy documents and semi-structured interviews with senior Chinese, Western and African stakeholders. It investigates how social policy is conceptualized by those involved in Chinese aid to Africa, to what extent this differs from traditional Western perspectives. It means for Western social development policy. The implications for understanding the drivers of global policy development and links between the economic and social dimensions of welfare will be explored.
For the first time in modern history and with the region's turn to multiculturalism, most Latin American censuses now ask respondents to identify by race or ethnicity. These new data allow researchers to systematically examine ethnorracial inequalities, which have long been ignored or denied. However, reliance on census ethnorracial categories could be problematic because of classification ambiguity in the region and because the categories themselves may hide racial heterogeneity. To overcome this, we modeled the relation between skin color as well as census ethnorracial categories and educational inequality, using innovative data from the 2010 America’s Barometer from the Latin American Public Opinion Project (LAPOP) and 2010 surveys from the Project on Ethnicity and Race in Latin America (PERLA). We found that skin color was strongly related to educational inequality in all examined nations (Bolivia, Brazil, Colombia, Dominican Republic, Ecuador, Guatemala, Mexico and Peru), even after controlling for parental occupation and other factors. On the other hand, ethnorracial identification was a weaker and less consistent predictor.

USMANOVA, LARISA* (Kazan Federal University, OUSMANOVA@GMAIL.COM)

**Between Europe and Asia; Cross-National Marriages in JAPAN (RUSSIAN CASE)**

The paper focuses on modern Russian diaspora in Japan and based on research conducted in 2012 in Kyoto (Japan). Although Russians in Japan have more than 100 years-history, in fact the Russian-speaking Diaspora has been formed just last decade. There were only 322 Russian (Soviet) citizens in 1985, but in 2004 the Russian community in Japan has counted more than 7 000 members. In account that Russian-speaking community can include the CIS’ citizens, it is understand able how many Russian-speaking foreigners in Japan now - about 10 000. All population of the Russian community in Japan could be divided into two groups: labor migrants and members of cross-national marriages. I pay attention to the second, larger group of the Russian community in Japan, because it is still studied a little. It is a marginal community, still not Diaspora in due its small and dispersed numbers. Having many problems of identification, they want to keep their transnational identity, influence on cultural environment of host country and to be a root between it and homeland, between two cultures - European and Asian. This study (interview with Russian women married Japanese men) shows us an impact on Japan of many new ethnical communities and how Japan is becoming the society of multi-cultural coexistence. So, under influence of the small Russian community, Japan will take a new identity as a multicultural state, but not homogenous one. To prevent depopulation, Japan has to accept 17 million immigrants between 1995 and 2050, immigrants and their descendents would total from 18 up 30 percent of the total population of the country by 2050. There are two main state's coalesce policies – assimilation (melting pot) and multiculturalism (the salad bowl). In case of Russians, they don't want to assimilate and prefer the multi-culturalism (diapсорic) model.

USUDA, AKIKO* (Showa Women's University, 9a9m5j8n93@kza.biglobe.ne.jp)

**Japanese Teenagers' Perception of Their Mothers' Employment and What They Do in after School**

Japanese junior high school students and high school students (age 13 to 18) are rarely reported internationally regarding their behaviors after school and attitudes towards their mothers' employment. I interviewed approximately 40 these teenagers, 20 each from relatively wealthy area, Setagaya and the down town, Taito in Tokyo. The result showed that most of their mothers were working part-time, and this affects family supper. Some of them were suffering from neglect or somewhat of neglect by mothers particularly concerning supper. The difference was teenagers in Setagaya are more likely to complain it, while Taito counterparts were more likely to accept their severe situation in family.

In addition, comparison between this study and the result of Australian researcher, Barbara Pocock's in-depth interview of teenagers (2006) will be shown. The result was different from the Australian one and the largest gap is that almost no Japanese teenagers referred their parents' joy gained from paid work, while Australian teenagers do. Probably due to Confucianism, many of Japanese teenagers seem to thank their parents' paid work, although some of them were not provided supper. And this tendency is more obvious in down town.

Neglect of these age groups is difficult to be recognized in the society, due to their own pretense as normal and their affection or sympathy towards their parents. There are no marks on their bodies and no yelling is heard from neighbours. Therefore, these teenagers' vulnerability remains invisible. I believe this study has significant meaning in youth studies, family studies and Japanese studies.

**Whistleblowing and Intervention: A Role For The Clinical Sociologist**

Worldwide there is a tendency to view the act of whistleblowing as making an important contribution in the fight against corporate misbehavior. However, a more ambivalent attitude is often displayed towards the whistleblowers. There are global debates about whether whistleblowers should be considered as heroes or traitors and what kind of protection they should have.

Whistleblowing takes place when a present or past member of an organization disclose suspicions about organizational wrongdoing to those they believe to be in a position to take action. Whistleblowing could occur internally when the whistleblower communicates the message inside the organization (using prescribed or non-prescribed channels) or externally when the whistleblower resorts to an external agency, which could include the media. Regardless of how the disclosure is done, organizations generally regard whistleblowing as illegitimate. The disclosure of information about organizational wrongdoing, especially if it is placed in the public domain, is regarded as a form of betrayal and often leads to retaliation by the organization. Acting as ‘loyal and caring’ employees, whistleblowers generally do not expect the severe negative responses they receive as a result of disclosing irregularities in their places of work.

This paper discusses whistleblowing in the USA and South Africa and considers the role clinical sociologists could play in designing and/or implementing interventions that would ensure better outcomes for the whistleblower as well as the organization and clinical sociologists could attempt to improve people’s quality of life by designing and/or implementing interventions based on an analysis of problem situations. In the case of whistleblowing their role could include advising the organization with regard to the implementation of confidential reporting systems that would pre-empt whistleblowing; developing support systems for whistleblowers before, during and after the disclosure is made; acting as ‘neutral’ counselors to the whistleblower and the organization; and providing legal protection for whistleblowers.

**Public Religious Activities of Muslim Women in Turkey**

This paper aims to analyze the effects of Sunni Muslim women's increasing public religious activities on their everyday lives and social status within their close relationship circles such as family and neighborhood. The analysis is an account of a two-year-long ethnographic field study in two state Quran courses and one informal Quran course in Ankara and twenty six interviews with the participant pious women. Muslim women's public visibility has been increasing in the world as well as in Turkey. This is firstly due to the increasing rates of public participation of women in Turkey (there is positive development in women's employment and education rates). Since working women spend most of their time outside their homes, pious women choose to fulfill their religious obligation of daily prayer (salat) in the mosques and mesjids which are public spaces. Secondly, more and more pious women claim their right to the public religious places such as mosques which have traditionally been male spaces and public religious activities such as Friday prayer which have been dominated by men as male religious activities. As a result, more women attend public religious activities at public religious places. This paper argues that pious women reorganize their everyday lives according to their public religious activities and that pious women's public visibility elevates their social status within their families and among their neighbors and friends. They are seen as the “people in charge” of the religious affairs by their families and by their friends.

**Building “Ethnic Ghettoes” or “Intercultural Bridges”? the Use of ICTs in Migrant Organizations in Spain**

The use of the Information and Communication Technologies (ICTs) by migrant organizations is a relevant factor for the enhancement of social cohesion. Migrant associations develop in-group solidarity, association and transnational identity, influence on cultural environment of host country and to prevent depopulation, Japan has to accept 17 million immigrants between 1995 and 2050, immigrants and their descendents would total from 18 up 30 percent of the total population of the country by 2050. There are two main state's coalesce policies – assimilation (melting pot) and multiculturalism (the salad bowl). In case of Russians, they don't want to assimilate and prefer the multi-culturalism (diapсорic) model.
useful in forming new ties and whether those are strong or weak. This study aims at explaining the impact of ICTs use in the migrant associations’ social capital. Are migrant associations using ICTs to expand bridging social capital or to reinforce homogeneous networks? In depth interviews to the representatives of 25 immigrant associations in Spain, from five different origins, namely Romania, Morocco, Equator, Colombia and Bolivia, have shown that the use of ICTs is increasingly essential for their organizations. Furthermore, ICTs are used to access to information on both the origin and the host country. However, the organizations’ communications, both online and offline are mainly addressing their local communities. On the other hand, there can be no doubt that the associations that use more diverse ICT tools are those who are more oriented to social cohesion. The study shows that, indeed, bonding social capital is essential for migrant associations and that the use of ICTs helps maintaining strong ties, while fostering the creation of new weak ties and political participation of their communities in the host society. In sum, ICTs come up as an opportunity for migrant associations to improve their public image, collaborate with other public, private and non-profit organizations and thus to enhance social cohesion, in general. Therefore, an effort should be done from public and private initiatives to facilitate this digitalization. This paper is part of a larger research financed by the Spanish Ministry of Economy.

Workplaces In Tncs: Can Green Practices Be Transported Across The Home-Workplace Border?

Just under 50% of the world’s GHG emissions in 2004 were attributable to energy supplies and industrial production (IPCC, 2007). The demand for manufactured goods is expected to rise by at least 100% by 2050 (from 2006 levels), with a consequence that industrial emissions, if unarrested will lead to a 90% increase in CO2 emissions by 2050 compared to 2007. Following new EU regulations, national governments have created policy instruments designed to reduce or compensate the level of emissions of specific organizations. However, these regulations have not proved to be effective, neither in terms of production nor consumption. The research project: Low Carbon at Work, attempts to understand the drivers for and barriers to environmentally sustainable practices at work and at home, and recognizes not only the crucial contribution of industrial production to GHG emissions, but also that consumption is an inseparable driver of production. Investigating two TNCs (vehicle production and oil industry) in Sweden and the UK, we have asked under what conditions workers and managers are encouraged to transfer “green practices” from work to home and/or vice versa. We have also investigated how relationships between managers, employees and trade unions might encourage or prevent the adoption of ‘greener’ production processes. Both case studies include informational and life-history interviews to understand changes at different times of their life course. Our findings explain why workers are often unable and unwilling to carry practices between home and work, why they draw at different times of their life course. Our findings explain why workers are often unable and unwilling to carry practices between home and work, why they draw at different times of their life course. Our findings explain why workers are often unable and unwilling to carry practices between home and work, why they draw.
men. India presents a novel case to test theories of inequality and to examine social change given its diversity and the pace of recent growth that has excluded a significant proportion of the population, and due to persisting educational and gender inequalities. Specifically, large cities in India that have expanded both in terms of population and economic growth are ideal contexts for such a study of social mobility. This paper analyses primary data collected through a survey of over 1800 respondents in two cities, Delhi and Patna. In-depth interviews with some of the surveyed respondents provide the much needed context to this study of persisting inequalities.

**Bearing Witness to Social Suffering: The Emotional and Social Complexity of Social Documentary Photography**

There is a highly contested debate in the social sciences and the humanities about the artistic bearing of witness to social suffering. If we take the paradigmatic case of social documentary photography, does prolonged exposure of individuals to images of social suffering have de-politicizing effects, dulling empathy and leading to compassion fatigue or does it spark an empathetic imagination and ethical reflection, and thereby stimulate an active solidarity and sense of shared responsibility that constitutes a cultural pathway to an active citizenship. Although we sympathize with the latter judgment, we admit this is based more on wilful optimism than persuasive evidence because, in actual fact, there has been very little rigorous social science research investigating this debate. We currently are redressing this oversight through an ongoing research project with the Side Gallery in Newcastle, UK. For over 35 years, the Side has hosted exhibitions of social documentary photography, many of which have been dedicated to exploring large scale social and political transformations with a special focus on social suffering and hidden injuries. For each exhibition, the gallery has kept a comment book and we have coded and analysed a sample of 25 exhibitions across three decades featuring diverse forms of social suffering and distinct subjects. We use these contemporaneous comments to trace how the images impacted on individual emotional states (what kind of emotions were triggered, whether particular images generated specific responses). We also explore whether these exhibitions acted as a force for social learning; increasing people's understanding of social complexity and power; recovering people in the photos as proper subjects, worthy of dignity in their own right; and enhancing knowledge of possible alternatives. Finally, we are interested in whether we can observe how individuals employ distinct ethical, emotional and critical judgments when encountering these kinds of images.

**Fatherhood and Doing Gender. How Challenging Can Institutional Changes be?**

Transition to parenthood in Switzerland takes place in a particularly gendered welfare state. It is the only European country where men do not have access to any kind of statutory paternal or parentery leaves. Following a conceptualization of paternal leave as a social structure, we consider that parenthood is shaped by social mechanisms producing difference and inequality between fathers and mothers at the institutional, interactional and individual levels. This paper investigates empirically the extent to which institutional change - such as the introduction of a paternal leave - can challenge the construction of gendered fatherhoods. It is based on a case study conducted in a public sector organization which implemented in 2010 a one-month paid paternity leave. Sequence and cluster analyses are performed on register data about the patterns of employees' leave uptake (N=95). Interpretive analysis of interviews with fathers who took paternity leave (n=22) and with married charged leave uptake in their team (n=8) is conducted. Results indicate a limited challenge of the gender structure. At the interactional level, although paternity leave enables fathers to spend more family time, a gendered division of childcare tasks is observed: fathers still have a secondary role with the newborn child. The majority of interviewees adopt a modified family model, similar to the dominant norm in Switzerland. As regards interactions in the workplace, paternal leave contributes to make fatherhood more visible, but informal norms about the legitimate leave pattern are observed. On the individual level, paternity leave uptake contributes to men's appropriation of their fatherhood identity and to increase their sense of competence and duty as fathers. However, their conception of fatherhood is structured according to contradictory discourses which highlight change in gender relations and persisting differences between motherhood and fatherhood.

**Highly Skilled Migration As a Structuration: What Is New?**

This paper examines the role of interaction between social structure and human agency in the process of international migration of the highly skilled professionals. The discussion draws from Giddens's structuration theory and Bourdieu's forms of capital. It revisits Giddens's analysis of duality of structure and relates it in a migration field. This presentation is devoted to explore two questions: Why do highly skilled professionals migrate even they are financially satisfied? Why others do not consider migration? What kinds of forces in migration decision process do participate? This paper is based on results from twenty in-depth open ended interviews with highly skilled professionals of Lithuania in the fields of natural and technological sciences. Migration and social status is seen as endless process constructed from set of events passed on micro, mezzo, and macro level.

In the view of structuration theory migration is seen as recursive process formed and transformed by active agents and itself shaping and structuring subsequent social behaviour of agents. Both structural determinants in the countries of emigration and immigration and acknowledgment of migration as efficient strategy for life betterment creates new cultural element in the social structure that influences migration decision making of other peoples. International migration is a continuous interaction between migrants and economical, political, social, and cultural contexts on macro level in the sending and receiving countries.

New insights shed light on deeper than just economic considerations layers involved in forming attitudes towards international migration. The structural ant socio-cultural context where individual is acting, migration experience in parent family, seek for higher social status, personal freedom, and need for professional recognition are just several pieces of the puzzle, the outcome of which is decision to (not) migrate.

**Mexico: Democracy and Inequality in the States**

In Mexico only electoral democracy has been developed. There is no growth neither social nor political important presence from social and civic organizations that show developments on social democracy and that allow an effective control of the government by the society. The elections alternation in every aspect has been a proof of the presence of electoral democracy.

Mexico’s ranked place 61st on the Human Development Index. Nevertheless, inequalities on the 32 national entities are quite evident.

This paper analyzes the evolution of the electoral democracy on the 32 Mexico’s states and relates it with inequality according to the HDI.

The unit of analysis is the alternation on municipal governments during 10 years, identifying those entities with a greater percentage of municipalities with alternation in their governments and searching the relation with the evolution of the HDI and the evolution of income poverty.

**Mexico: Electoral Geography from the States View**

Ever since year 2000, Mexico has had very competitive presidential elections. Two of these electoral processes, have been pinpointed as fraudulent, because of several irregularities that have happened.

The electoral geography has introduced the states behavior in the three elections to be studied (2000, 2006 and 2012), showing more or less territorial aggrupation.

This paper introduces the elections geography based on the electoral results from the capitals of the 31 states in the country, taking into consideration, that generally, the states capitals concentrate the higher amount of voters, and have the major political diversity from each state.

This paper also presents the political-governmental evolution from each entity, as a political and geographic context that supports the explanation.

**All Mixed up: Defining Mixed-Income in Public Housing Redevelopment**

Since the 1980s, politicians, government officials, and real estate developers have popularized the strategy of building mixed-income housing to replace trou-
bled public housing projects in the United States. Although the term is used to describe a growing number of developments, “mixed-income” has never been officially or consistently defined. Drawing upon a newly-constructed database of income-mixing in projects completed under the HOPE VI program since 1993, as well as on other initiatives, this paper investigates selected public housing sites that have moved into so-called mixed-income housing in order to understand what qualifies as mixed-income and to develop a more analytically precise way of describing these projects. We reveal that the mixed-income label is applied to a wide range of income mixes, from projects that try to minimize the presence of low-income housing (less than 1/3 of total units), to those that attempt to preserve a substantial majority of units for low-income households. In addition, we develop a new way of identifying and categorizing mixed-income developments in terms of how income mixing is implemented: 1) mixing in a few low-income residents into a mostly high-income project or vice versa, 2) mixing together low-income and high-income housing to create a single project, 3) mixing in new high-income residents around low-income residents living in an existing project, and 4) mixing in low-income residents by spreading them out into a larger neighborhood, rather than a project. The categories reflect divergent ideological positions about both the physical and social place that low-income people should have in mixed-income communities, and by extension, the role of public housing in American society. Although mixed-income developments can be a useful tool to insert affordable housing into tight housing markets, we argue that these developments are too often used to displace formerly all low-income communities.

Domestic Violence As Eigenvalue in Contemporary Society: A Sociocybernetic Approach to the Construction of a Form of Gender Based Violence in Chile

Domestic violence, including several forms of gender based violence, does not exist independently from an observer, neither is this observer limited to a domestic realm. In contemporary society, domestic violence is constructed as such in a network of operations that encompasses both private and public realms. This network involves a diversity of human and non-human agents – questionnaires, medical instruments, etc.; and coordinates public policy, legal, scientific and political criteria. As a result of these operations, experiences of violence are transformed into cases of domestic violence, which overflow into courtrooms, state agencies and other sites. In this sense, domestic violence is an Eigenvalue (Heinz von Foerster), a referential correlate of this complex network of operations. This paper, which is based on field observations made in Santiago, Chile, describes a section of this network: the section that goes from the moment a report is made to the moment it enters a courtroom transformed into a case of domestic violence. It is stated that three problems of reference (Niklas Luhmann) give meaning to the diverse operations that are involved in this network: a) the attribution of cases of violence to the environment of the system; b) their observation as forms against a medium; c) and the constitution of chains of transformations (Bruno Latour) through which references to the lived experiences of violence are mobilized. Specific mechanisms that contribute to solve these problems are presented and analyzed. Finally, two main consequences are explored. At the same time that the constructed reality of domestic violence becomes inscribed in the lives of victims and their relatives, shaping their experiences and descriptions of the world, it is shaped as a stream of facts that feed state mechanisms of population control.

La Violencia Invisible: Acoso Sexual Callejero a Mujeres En Lima Metropolitana

El acoso sexual callejero comprende un conjunto de prácticas cotidianas como frases, gestos, sibilidos, sonidos de besos, tocamientos, masstrucción pública, exhibicionismo, seguimientos, entre otras, con un manifiesto carácter sexual. Estas prácticas revelan relaciones de poder entre géneros, pues son realizadas sobre todo por hombres y recaen fundamentalmente sobre mujeres, en la mayoría de casos desconocidas para ellas. Las realizan hombres solos o en grupo. No se trata de una relación consentida, sino de la imposición de los deseos de uno (s) por sobre los de la(s) otra(s). Se realizan en la vía pública o en (desde) el transporte público o privado, de manera rápida e intempestiva. Pese a tener impactos en la libertad sexual y el derecho al libre tránsito, estas prácticas han sido normalizadas y hasta justificadas en nuestra sociedad.

Esta ponencia mostrará los resultados preliminares de una investigación en curso sobre el tema, realizada gracias al financiamiento de la Pontificia Universidad Católica del Perú (PUCP). Los resultados de la Encuesta Nacional de Género 2012 realizada por la PUCP muestran una mayor incidencia en Lima y Callao que en otros ámbitos del país, lo cual revela su carácter fundamentalmente urbano. Asimismo, el segmento más joven de mujeres (18-29 años) es el más afectado, lo que revela que estas relaciones de poder entre géneros tienen un componente de edad: a mayor juventud, mayor probabilidad de ser afectada. A nivel cualitativo hemos podido recoger también discursos que justifican estas prácticas.

La ponencia presentará también la experiencia del proyecto que dirijo: ‘Paremos el acoso callejero’, que desde el 2012 ha colocado el tema en la agenda pública peruana, logrando que medios de comunicación, municipios e, inclusive el Ministerio de la Mujer, se hayan pronunciado y estén realizando acciones para combatir el problema.

Territorial Politics and the Emergence of Sub-National Welfare Models in Italy, Spain and Great Britain: Regionalist Mobilization, Institutional Asymmetries and Left-Wing Partisanship

This paper investigates the relationship between sub-national politics and the emergence of region-specific models of welfare governance in Italy, Spain and Great Britain. Data on spending, legislation and implementation of social policies in all the regions of these countries have been collected and analyzed. The main finding is that in all three countries territorial mobilization – through the creation of regionalist parties – has been an important factor in the development of well-structured and distinctive welfare models at the sub-national level. In countries with relatively flexible constitutional arrangements (Spain and, especially, Great Britain), regionalist parties have promoted distinctive models of welfare governance by engaging in bilateral bargaining with central authorities and obtaining special formal powers for the regions they represent. In the absence of constitutional flexibility (the Italian case), the intervening effect of formal institutional asymmetry is less relevant and what really matters is the fact that regionalist parties have used standard self-governing authority in distinctive and ‘creative’ ways. In this paper I also consider the ‘welfare effect’ of left-wing mobilization in Italy. I show that its importance varies depending on the role that mainstream centre-left parties play in national policy making and on their relationship with regionalist movements. In Italy the Left has been excluded from central government for many decades and has therefore acted as a ‘regionally-focused’ political force, which, despite not representing regional minorities, has used the regionalism discourse to promote distinctive social policies. On the contrary, in Spain, the main party of the Left, the PSEOE, has been a dominant force in central government and has therefore mainly focused on the promotion of state-wide, standardized social policies. In Great Britain, left-wing mobilization and ‘sub-state nationalism’ have been closely linked in recent decades, thus having a combined effect on welfare development in Scotland and Wales.

Religion That Heals or Harms? an Examination of the Association Between Religion and Gender Differences in Depression

Gender differences exist in religious involvement and depression, with women reporting significantly higher levels in both. Most research finds that women benefit more from religion than men, as they are more involved than men in many facets of religion. Research has for example shown that prayer offsets the noxious effects of stress on well-being for women, but not men. Other research showed that women are more likely than men to make use of supportive religious networks through church attendance and other religious activities, and are therefore more likely to reap the instrumental and psychological benefits with those relationships. However, in contrast a small number of studies suggest that women may face unique challenges in the church that diminish or offset the benefits of religion to mental health. Compared to men, women are more often prescribed to traditional role patterns and a subordinate role in the worship service. In addition, in secular settings, women may be confronted with the “cost of caring” by trying to maintain both extensive church-related ties while also remaining active in more secular networks.

Unfortunately, the vast majority of current research is conducted in Anglo-Saxon and non-secular settings. In the current study, we aim to examine the association between religion and depression in a cross-national comparative perspective. First results based on the European Social Survey (2006-2007) showed that religion, as measured by subjective religiosity and frequency of praying is associated with higher levels of depression, in both men and women, but more pronounced in women. These finding contradict the most frequent finding that religiosity is related to fewer depressive complaints, especially among women. We intend to further investigate our results by incorporating both individual indicators such as church attendance, as well as contextual moderators, such as religious context into our model.

In principle ISAF is part and parcel of these efforts, but in practice it is not always self-evident how soldiers should act. Should fighting corruption be a priority for improving physical health? Based on our results we cannot endorse the role for improving physical health. We conclude that at least in the low and middle income countries the relationship between inequality and health is mainly relevant for health are taken into account. We conclude that at least in the low and middle income countries the relationship between inequality and health is mainly statistically not significant when individual and countries' resources relevant for health are taken into account. We conclude that at least in the low and middle income countries the relationship between inequality and health is mainly explained by compositional effects while the health institutions have a limited role for improving physical health. Based on our results we cannot endorse the idea of a true contextual effect of inequality on health, at least not in the low and middle income countries or in relation to physical health measures.

On Inequality and Physical Health: A Bio-Markers Based Test Of The Neo-Materialistic Argument In Low and Middle Income Countries

This paper re-examines the relationship between wealth inequality and two measures of physical health: anemia status of women and of their children and the experience of women with child mortality. We test the role of individual resources (i.e., wealth) and of the countries' resources relevant to health (i.e., the level of wealth of the country, the private financing of health and the efficiency of health services) for explaining the empirical association between inequality and physical health. We use data collected between 2000 and 2011 by the Demographic and Health Survey in as much as 52 low and middle income countries. Our binary logistic multilevel models reveal that higher wealth inequality is significantly associated with worse physical health, but this relationship is weaker and ultimately statistically not significant when individual and countries' resources relevant for health are taken into account. We conclude that at least in the low and middle income countries the relationship between inequality and health is mainly explained by compositional effects while the health institutions have a limited role for improving physical health. Based on our results we cannot endorse the idea of a true contextual effect of inequality on health, at least not in the low and middle income countries or in relation to physical health measures.

Are the Chinese Saving for Old Age? the Precautionary Motives of High Household Savings

The one-child policy in China, put in force in 1979, converged with the macro-economic developments over the last two decades. The Chinese GDP increased at an annual rate of 9% between 1995 and 2010. Poverty had declined from 65 percent of the population in 1981 to about 13 percent in 2010, lifting hundreds of millions out of poverty at an unprecedented rate. The share of household savings more than doubled to about 25% of disposable income, the highest saving rate in the world after India. As the parents of one-child generations grow older, the steep demographic changes pose increasing insecurity. The old-age dependency ratio - number of people over 65 for every person of working age - is expected to double over the next two decades. What kind of policies the Chinese central government initiated to prevent old-age poverty and the overburdening of the middle generation? And, is the high household saving quota an indicator that the Chinese are aware of the financial risks of longevity? Though the Chinese government launched various pension programs, these payments are not yet adequate for older Chinese to being able to contribute productively to the public good, serving for themselves and others. Though often instrumental with regard to elderly's resources in times of population aging, negative age stereotypes are challenged in new ways: We establish a rising awareness towards discriminatory effects of age stereotypes as well as various political and academic endeavors to foster positive images of aging and old age. However, this attempt turns out to be at least ambivalent when it comes to ageism: Since the rising awareness is mostly about the supposed "unjustified" negative stereotyping of capable "young retirees" and older workers, discrimination occurs even among the "normal" Amsterdammers. Parallel to the forms of physical and social displacement that gentrification causes in Amsterdam, these cinematic representations can be understood as effecting the cultural displacement of racialized age. Material living conditions of retirees, employment rates in later life, social images as well as social expectations towards older people were quite different in the former GDR and FRG. Whereas older people in the Western part were pictured as retirees, enjoying leisure and earned repose, elderly in the GDR were seen as veterans, who had fought against fascism and capitalism. They were continuously addressed as productive parts of the socialist society, while the living conditions were rather precarious at the same time. However, it is not just the different settings before 1989 that make a difference in people's life stories, but also the experiences following the re-unification, namely the wide-spread unemployment in the new federal states. At the same time, the Western model of early retirement and deserved disengagement has been challenging since the early 1990s, too, giving way to a re-negotiation of old age as an productive phase of life. The presentation asks, how far the different experiences of life before and after re-unification influence how older people think of and cope with this development? Are we witnessing ongoing West-Differences or even profoundly different age cultures? The presentation is based on empirical findings from the research project "From retirement to active aging? Images and practices of old age in the transformation of the German welfare state after reunification" – drawing on biographical interviews with elderly from the Eastern and Western part.

Ageism in Times of Population Aging. Rising Awareness and New Forms of Discrimination

Age and aging have become highly popular issues in industrialized countries recently – namely in a twofold manner: Next to doom scenarios on population aging and increasing costs, older people have been discovered as active, productive and successful citizens, which is particularly true for the non-frail and healthy elderly. Each of the notions, no matter if it comes to activity, productivity or success, revolves around the idea that older people are capable, relevant, and being able to contribute productively to the public good, serving for themselves and others. Though often instrumental with regard to elderly's resources in times of population aging, negative age stereotypes are challenged in new ways: We establish a rising awareness towards discriminatory effects of age stereotypes as well as various political and academic endeavors to foster positive images of aging and old age. However, this attempt turns out to be at least ambivalent when it comes to ageism: Since the rising awareness is mostly about the supposed "unjustified" negative stereotyping of capable "young retirees" and older workers, discrimination occurs even among the "normal" Amsterdammers. Parallel to the forms of physical and social displacement that gentrification causes in Amsterdam, these cinematic representations can be understood as effecting the cultural displacement of racialized age. Normalizing Displacement: Cinematic Representations of Gentrifying Amsterdam

Focusing on recent cinematic depictions of Amsterdam, this paper discusses the relation between the socio-spatial processes of gentrification and their popular culture representations. Formerly taken as an exemplar of inclusive, democratic urbanism, in recent years Amsterdam has been characterized by increased socio-spatial polarization. Gentrification is evident in the rapidly growing middle-class residential projects in the historical city center and in the associated assertion of consumptive and cultural middle-class practices. Drawing on popular Dutch films in which Amsterdam's city life is a central feature, we argue that these representations not only document or reflect the recent social transformations. In addition, they serve to normalize and even glamorize urban gentrification. This normalization of a classed and ethnicized urban order is produced through narrative structure and – even more forcefully – through visual techniques. In the recent productions on which this paper focuses, the city of Amsterdam plays an important role, not so much in terms of plot and decor, but as a spatial imaginary in which urban inequalities are mapped onto symbolic sites and landscapes. While the spaces and agents of gentrification are portrayed, peripheral, non-normalized spaces of vice and squalor. The films portray middle-class, White professionals solving culturally and morally critical situations in this particular area. What's more, the films narrate stories that could not be told in previous centuries on which this paper focuses, the city of Amsterdam plays an important role, not so much in terms of plot and decor, but as a spatial imaginary in which urban inequalities are mapped onto symbolic sites and landscapes. While the spaces and agents of gentrification are portrayed, peripheral, non-normalized spaces of vice and squalor. The films portray middle-class, White professionals solving culturally and morally critical situations in this particular area. What's more, the films narrate stories that could not be told in previous centuries.
and ethnicized non-White and lower-class White residents. Studying gentrification processes in Amsterdam in light of their cinematic representation, we argue that in their celebration of urban middle-class and elite consumptive practices and life-styles, these representations serve to legitimize a newly unequal urban order.

**Employee Representation Regimes in Europe: Do They Exist in Practice and Have They Changed in the Crisis?**

Forms of employee representation have been legally institutionalised in most of the EU countries. These ER regimes have also been recently framed in European directives. However, there exists a great variety of institutional ER structures among the Member States: union-based or works council type; single or dual channel, complementary or exclusionary. Institutional differences exist also in the powers assigned to the ER, in particular whether the ER has not only consultation, but also co-determination rights (see for example DE). A next dimension of diversity is the role these bodies play in collective bargaining. In many systems they play only an additional role in relation to supra-company bargaining, in other countries they have a key role.

Recently theoretical classifications have been constructed to cluster these different institutional regimes. We can refer to the general typologies of Van den Berg et al. (2013) and Bryson et al. (2012) of IR-regimes. More specific has been the typology of Altmeyer (2005), which is also applied by Van den Berg et al. (2013). Management style, type of body, assigned powers, bargaining role are used to develop a 5-type model. However, this clustering has never been empirically tested. The paper will in a first step do this empirical test by conducting a cluster analyses on the relevant European Company Survey data of 2010. In a second step and for a country selection, the paper would compare these results with the ECS data from 2005 and investigate the effect of the crisis on the typology.

Concretely the paper would tackle the following questions:

1. A confirmatory analysis of the Altmeyer model of ER in Europe: are the country clusters statistically to distinguish?
2. Which type of companies show a different pattern in the country typlology?
3. Has there been an evolution in the regime types since the start of the crisis?

**Social Dialogue on Green Mobility in Belgian Enterprises: Interpreting the Results from a Social Movement Perspective**

Belgian trade unions are known for their ‘social movement unionism’. Within this framework they have been picking up issues like environmental challenges and sustainable development. They obtained also legal information and consultation rights on these matters at enterprise level. Among others, the works council and health safety committees obtained consultation rights on (sustainable) mobility issues. The paper present empirical results of 50 in-dept cases on ‘how’ and ‘when’ these issues of green mobility are dealt with in Belgian workplace social dialogue. The paper tackles the ‘how-question’ by clustering first the cases in 5 types on form and content of social dialogue on green mobility. In a second part the paper investigates where and when these configurations can be distinguished. A conceptual model of workplace industrial relations is used for this purpose that takes into account context, actor and process characteristics. A QCA mixed-method is adopted for this interpretation of the case data.

The results show that a specific mix of joint cultural framing and specific knowledge resources determine if a social dialogue between trade unions and management develops on green mobility and not only the creation of a political opportunity structure by assigned legal powers on the matter to the information & consultation body.

**Predicting Workplace Characteristics. an Inductive Research on the Influence of Country Characteristics on Workplace Characteristics in the European Union**

**Abstract**

Workplace innovation increases the quality of working life and the organizational performance (Oeij e.a., 2012; Kramer e.a., 2008). Moreover, the European Economic and Social Committee (2011) underlines that workplace innovation is essential for the future of Europe. The sociotechnical theory stresses that workplace innovation need to take place by an intervention in the technical system and in the social system (De Sitter e.a., 1997). In the social system, workplace characteristics (e.g. job complexity and job autonomy) influence the quality of working life and the organizational performance (Kramer e.a., 2008). Consequently, workplace innovation needs to stimulate an optimal balance between workplace characteristics. Smith e.a. (2008) show that European countries differ in workplace characteristics.

This research examines, inductively, the conditions which cause different workplace characteristics in European countries. In addition, country level conditions such as welfare regime, union density, participation rate and varieties of capitalisms will be used in the analyses. The European Working and Condition Survey will outline the aggregated workplace characteristics in the different European countries.

**Governing the Migration Control Predicament: Reconfiguring Sovereignty-Discipline-Government**

This paper explores the contemporary government of migration and integration and is based on an analysis of the ‘strategic case’ of the Netherlands. By analogy to what David Garland has called the ‘crime control predicament’, it describes the “migration control predicament: a problematic of the rates of migration combined with a realist position on the problems of integration and an acknowledgement of the limitation of the national state and its previous policies to deal with these issues. This predicament of control poses a challenge to three forms of power discerned by Foucault: sovereignty, discipline and government. At a response all three forms of power are mobilized in the government of migration and integration in new ways. To restore sovereignty the tactics of detection, detention, deportation and deterrence are deployed. The disciplinary techniques under the migration control predicament involve the production of the good citizen (e.g. citizenship tests) and the effective state. Finally, in terms of government, there is the introduction of a market order government, a number of one of performance and the selection of skilled- and exclusion of risk migration. The Netherlands serves as a strategic case because an extension of the argument is possible for a variety of Western-European countries (e.g. the UK, France and Germany) as well as for developments in Australia and the US. In addition to arguments that claim divergence of state responses, it can be argued that there is a convergence in the problematisation and government of migration and integration as a control predicament.

**The New (Biological) Culture of Control: Neoliberal Communitarianism and the Singularity of the Contemporary Homo Criminalis**

At stake in this article is an understanding of the new biological culture of control (cf. Garland 2001). It discusses the emergence of the New Homo Criminalis: the new biological subject in the government of crime (Rose 2000; cf. Rose & Abi-Rached 2013). This paper investigates the power/knowledge relations between contemporary penal government and criminological theory. Three leading questions are: 1) what conditions facilitated the re-emergence of bio-criminality, 2) how to understand bio-criminality, and, 3) what are the possible effects on the government of self, others and the state? Answering these questions the paper argues, firstly, that the last thirty years witnessed the emergence of a regime of government that can be called neoliberal communitarianism. It explicates how criminological theories can be placed in the discursive space of neoliberal communitarianism. This also implied a fundamental rupture in the assumptions of government. One of the effects of this paradigm-shift is that it made possible the re-emergence of bio-criminal approaches. The latter will be under-
stayed, secondly, in its 'singularity' (Foucault 2000). It will be argued that it is not simply the re-emergence of Lomboko and Homo Criminalis because the question that should be asked is precisely how the new biocriminological approaches problematize crime, criminality and contemporary crime control in radical new ways. This singularity of the bio-criminological program will be analyzed, thirdly, by a study of the strategic case of ‘neocriminality’ (Raine 2013). This paper explores its claims, assumptions and how this involves a change in the government of self, others and the state.

VAN KOPPEN, KRIS* ( Wageningen University, kris.vankoppen@wur.nl)

Humans, Animals, and Morality in a Nature-Inclusive Sociology

Disruption of natural systems and depletion of natural resources have become major concerns in society, both in their global reach and in their local impacts. Natural science insights into human behaviour - particularly from the fields of neuroscience and evolutionary biology - have increasing impact on our understanding of the social world. Sociology has to embrace these insights in its analysis, but not by abandoning its hermeneutic method. Starting from these tenets, this paper sketches principles of a nature-inclusive sociology, building on studies of Moscovici and Foucault, and on earlier work of the author. In applying and elaborating these principles it explores the social implications of the commonalities of human and animal bodies. While similarities found in evolutionary, neurological and ethological research have profound impacts on the understanding of animal and human behaviour and the ethics of animal-human relationships, they fall short in supporting the environmental morality tied to these findings by Edward O. Wilson and other conservation biologists. The paper then sets out to describe a social practices approach to human-nature relationships that gives due attention to natural science findings and natural system dynamics while leaving intact the role of human agency and responsibility in protecting our natural world.

The Celebrity Logic of the Global Financial Elite

This paper examines a particular aspect of the development of a global financial elite, its organizing around the production of particular kinds of celebrity CEOs and financial ‘stars’ with their intersect and form alliances with those at the peak of other elite fields such as sport, entertainment, journalism, and science. The analysis looks at the workings of what Robert Merton called the ‘Matthew effect’, which concerns the ongoing accumulation and leveraging of advantage, and how it works across a variety of fields including finance, to produce a global system of over-lapping elites. In a sense the paper is an attempt to re-work C. Wright Mills’ ‘The Power Elite’ for the present day, looking at the performative aspects of the global financial elite and the competitive demands placed on the presentation of self and representation of elite status. The overall aim is to show how the process of ‘refeudalization’ outlined by Sigfried Neckel has its core the production of global celebrity across a range of field, as the contemporary version of a global aristocracy.
The Multidimensional Spatiality of Citizenship: Understanding

Images and their interrelations may both confirm, contest and confuse existing affinities and contradictions between different visualizations in order to assess figured and redeployed within this field of images? How can we conceptualize ways, often to claim rights and gain political agency in highly precarious circum-

stances. Illegalized migrants themselves work to make themselves visible in circumscribed advocacy groups, policy evaluations, political actors and activists. More specifically, the work being done by NGO's, ad-

verters in border management and alternate visualizations and dissemination. State institutions are far from alone in their attempts to see Visualizations of registered data, routes, maps, risks, opportunities and uncer-

tainties are implicated in governmental attempts to gain overview, anticipate the future and authorize control. However, these images of governmental surveil-

ance and security exist and become visible in a wider field of image production and dissemination. State institutions are far from alone in their attempts to see and disclose 'what's going on at the border'. This paper will analyze the relations between images implicated in border management and alternate visualizations of cross-border mobility. The latter concern the work being done by NGO's, ad-

vocacy groups, political actors and activists. More specifically, illegalized migrants themselves work to make themselves visible in circumscribed ways, often to claim rights and gain political agency in highly precarious circum-

stances. How are images and the craft of making them copied, translated, dis-

figured and redeployed within this field of images? How can we conceptualize affinities and contradictions between different visualizations in order to assess multiple ways in which 'Europe' and 'not-Europe' can become visually enacted? Images and their interrelations may both confirm, contest and confuse existing imaginations of 'Europe' and its 'outside'.

hybridize non-Latin and Latin musical genres to argue for pro-indigenous equality and student rights. Finally, they obtain information from global sources to argue for policy changes on issues pertaining to the environment, same-sex rights, and Latin American sovereignty.

Amidst this turn to what can be seen as globalized ethics, we draw from Latin American youth studies literature to argue that the outcome of this transformation requires scholars to pose young people’s relationship to politics as a question in need of investigation rather than assuming a pre-defined relationship. As youth from Latin America imagine the future from global vocabularies, they seek to transform the meaning of the local, the particular, and the personal. Rather than localities serving as a barrier to cosmopolitan outlooks, Latin American literatures on youth political activism indicate that an awareness of an unequal world is embedded in transforming the immediate spaces in which they live.

*Life Course Pathways to Later Life Wellbeing: A Comparative Study of the Role of Socio-Economic Position in England and the U.S*

A main paradox in comparative social epidemiology is that subjective wellbeing in the U.S. tends to be higher than in England in later life, although physical health is often worse. This puzzle is due to all factors (Banks, Marmot, Oldfield, & Smith, 2010). One proposed mechanism, the differential distribution of education and wealth in both countries, is at the core of this paper and will be extensively tested. Multiple measures of wellbeing, such as depressive symptoms (Radloff, 1977), satisfaction with life (Diener, 1984), and more eudemonic approaches to wellbeing such as CASP (Hyde, Wiggins, Higgs, & Blane, 2003) and psychological wellbeing (Ryff & Keyes, 1995), will be considered. Using a growth curve approach that investigates not only differences between people, but also within people over time, we will investigate to what extent life course approaches to socio-economic position, such as accumulation, social mobility or latent period, explain baseline differences and rates of change in wellbeing in later life. This analysis will be conducted using multiple waves (2002-2012) of two sister studies of ageing, the U.S. Health and Retirement Study (HRS) and the English Longitudinal Study of Ageing (ELSA). Both panel studies have a large, representative sample (N=20000 for HRS and N=10000 for ELSA) of the community residing population aged 50 or more and contain comparable information on a wide array of life circumstances, among which gender, marital status, health, and both current and childhood socio-economic circumstances will be the most important for this analysis.

*In Love with Place: Off-Grid Living and Place-Making*

Why do residents of Western world live off the grid? This presentation provides answers from a youth study that explores the off-grid phenomenon. The phenomenon “off-the-grid,” refers to the living condition of a household or a community lying outside the electricity and natural gas infrastructure, but often also denotes disconnection from other infrastructures such as municipal water conduits, natural gas pipelines, road networks, garbage and waste collection, food supply chains, and telecommunications. Drawing from and contributing to the literatures on sense of place, rural studies, and voluntary simplicity we argue that while off-gridders embrace values typical of the voluntary simplicity philosophy, their biographical and geographical trajectories reveal that living off-grid is not a clear and free choice. The performance of the mundane complexities typical of the lifestyle renders off-grid living a uniquely radical, but also contradictory and even paradoxical, constellation of practices through which new marginal spatialities are constituted. Drawing from ethnographic fragments culled from a multi-sited ethnographic project unfolding across Canada we present a thickly descriptive look into the motives and lifestyles of off-gridders.

*Controlling the Social Cost of Local School Markets?*

Education policy is evidently in a state of change across industrialised countries. The fragmentation of education has manifested in a local government reforms, privatisation and agencification, whilst the core executive’s capacity to steer has eroded. In toto, a wide variety of endeavours to move away from the firm idea of state-funded, state-controlled and state-provided compulsory education have emerged. Along that trajectory the Finnish compulsory education system shifted during the 1990s from one of the most centralised to one of the most decentralised. Consequently, segregation between municipalities, residential ar-
eas and families has emerged also in Finland, and the variation between schools, measured by PISA scores, has recently increased.

Our aim is to elaborate the Finnish local spaces for school choice, and the ways in which the negative outcomes of school choice and overall diversification are governed by contrasting three distinctive local contexts. By analysing administrative statistical and documentary data, we aim to model how local authorities respond to novel, local inequalities, and the demands of freedom to choose and equality of opportunity, simultaneously. Our analysis models three different sets of policies in the municipalities in Metro- politan area of Helsinki (1.5 million inhabitants). First (the municipality of Espoo), the local institutional space for school choice is constructed in favour for choice, without any current policies for positive discrimination. Second (Vantaa), school choice is more restricted, the policy is to prevent segregation by emphasising the uniformity of schools. Third model is very pro-choice (Helsinki), where the policies to prevent segregation have included actions in regional policy and direct positive discrimination to schools located in sub-standard socioeconomic status neighbourhoods. By revealing the diversified policies concerning positive discrimination and other forms of control of negative externalities, we discuss about the formations and estimations of social cost for school choice.

*Leisure in an Unequal World: Assessing Causal Relation between Resources and Leisure*

Leisure in the global sense is an unfamiliar phenomenon in the toil-ridden lives of the marginalized and poor women in Indian villages, where moving out of homes in groups, into the open fields for privy is a leisure activity. Leisure for them is freedom from the restrictions on mobility outside the home. The multitude of toilets built with government aid, being used as storage places for fodder prove the argument of this deliberate choice of practice of leisure by women. Examining the data collected by questionnaire categorized in four leisure activities like reading a newspaper, listening radio, watching television and sitting at the computer. Study reveals with 30 married women age group of 18 to 40 in backward villages of Bundelkhand. Findings are that nearly 78% of women do not have access to all besides most of these activities are considered leisure activities indulged by men. The resultant recurring themes were of denial and lack of resources. The data affirmed that television is the most popular mode of leisure and access to computer negligible. As a gender norm women practice enormous denial: whether in food, leisure time, questions of health, desires etc... They prioritize their tasks as wives, mothers, sisters and daughters and 99% of them adhered to the retrograde practice of purdah system. All these activities were directly related to the level of education and income of the household. The study reaffirms the implication of possibility for enjoying leisure activity -as defined globally is directly proportionate to one’s education and resources “instability and uncertainty that characterize the world today have their origin in the fact that an immense and vertiginous accumulation of wealth by a few has precipitated the dispossess, impoverishment and exclusion of millions of human beings in all latitudes of our planet.”

*Assessment of Managerial Skills in a PSO: The Eufor Case and Its Capacity Building Role*

The European Union (EU) launched a military operation in Bosnia and Herzegovina (BiH) in 2004 named “EUFOR - Operation Althea” to assist Bosnia by ensuring safe and secure environment and conducting capacity building and training tasks in support of the Armed Forces Bosnia and Herzegovina to facilitate their progress towards EU and Euro-Atlantic integration. In the meantime, militaries directly and indirectly are suffering from spending cuts and efficiency and effectiveness have been core issues of defense forces. Eventually this emphasizes a better assessment of training of military personnel in peace operations. The current attention is focused on how to train prospective military personnel for asymmetric warfare. Developing management skills may have a better practical perspective. The aim of this paper is to assess the managerial skills of EUFOR peacekeepers from participant perspective and to emphasize the individual capacity building role of PSO experiences in removing the training deficiencies of peacekeepers. The research will also try to discuss wide-ranging impacts of asymmetric warfare on the officer profession, military training and education. Ten different managerial skills including decision making, stress management, problem solving, team working, motivation, and conflict management etc. under personal, interpersonal and group level are studied in this research. The data (perspectives of participants of EUFOR) were collected from the interviews with five high level military managers of EUFOR and also with the “Assessment of Managerial Skills Questionnaire” filled by 32 peacekeepers from nine differ-
The main red thread crossing the debate about the disparity between Italy's northern regions and their southern counterparts is the polarity between the categories of "modern" and "pre-modern". This polarity has been used to portray the two regions as intrinsically different in their economies, politics and cultures. Although the use of this dichotomy has proved useful for emphasizing the gap between the two, this has been achieved, I argue, at the cost of exaggerating their differences: the South has been described with the categories of pre-modernity, community, informality. Symmetrically, the North has been associated with modernity, society and formality. The attributes of "developed" and "under-developed" have been assigned accordingly. I argue that the study of formality and informality can be helpful to understand how these territorial imbalances are reproduced, provided that the former are understood as simultaneous, not mutually exclusive systems of rules. To do so, I analyse how three significant public spaces in Naples, southern Italy's biggest city today and its capital in the past, are regulated via formal and informal rules. With personal observation and interviews with local authorities, planners, local activists and users, I seek to understand how the interaction of formality and informality produces these spaces. Both formal and informal regulations are postured, exist in the city, and neither is intrinsically desirable or conducive to development. Rather, well-functioning public spaces are postulated to result from a distinct mix formality and informality, whereby the two are both present and complementing each other. An explorative case study will be carried out in January 2014. There, the two sets of indicators (measuring the relative and the absolute strength of formal and informal rules) will be tested. At the RC21 conference I wish to present that case study and an assessment of the methodology adopted.

RC21-375.3

VARRIALE, ANDREA* (Bauhaus-University of Weimar, andreadevarriale@hotmail.it)
The Management of Public Spaces in Naples: An Essay in Urban Legal Geography

Independent film production, characterized mainly by its low budgets and by the absence of a hierarchical division of labor, acquires increasing recognition by consecration instances of traditional Brazilian cinema. It is also notable a proliferation of specific instances – such as independent film festivals or distribution companies focused on independent production –, which may indicate the beginning of an autonomization process.

Here we bring empirical data to situate the contemporary independent production in the large Brazilian cinema field and especially to show how reputation and consecration here are constructed in opposition to the values/practices of industrial cinema. And it means not only the adoption of certain aesthetic positions, but also the adoption of some practices in terms of social organization of production. We also call attention to the fact that, among the independents, consecration sometimes brings the "reverse effect" of threatening the representation of independence – which is a subject of dispute.

How to understand independent agents, for which categories as dominant or dominated, established or newcomers, are all unsuitable in some extent? How to analyse the construction of consecration in a context where the many forms of institutionalization (including some kinds of recognition) may threaten the very condition of "independent"?

RC41-698.2

VASEY, HUW* (University of Manchester, huw.vasey@manchester.ac.uk)
Diversity and Inter-Ethnic Marriage – An Agent-Based Approach

Inter-ethnic marriage, both a cause and a consequence of immigrant integration, is generally used to imply that the social distance between groups is low and, by extension, that community cohesion is high. The decision to marry outside one's own group is often regarded as stemming from individual preferences and opportunities for contact. However, many anthropologists and sociologists have noted that culture-specific norms of kinship and reciprocity have a profound effect on who may be considered as eligible partners (Ballard 2008; Gardner 2006), echoing segmented assimilation theory's focus on the importance of community and family influences in shaping assimilation processes.

Using a descriptive agent-based modeling approach, we seek to investigate the processes of partner selection in diverse communities, focusing on individual preferences, opportunities for contact, and group norms to uncover how these may lead to differential rates of inter-ethnic marriage. Agent-based approaches provide an ability to study 'global' phenomena simultaneously with their causal 'local' processes (and vice-versa) in a dynamic setting. They allow us to investigate the development of population-level phenomena from a simulated 'local' social space of norms and values populated by acculturated agents familiar to sociologists, potentially providing insights into community cohesion and inter-ethnic marriage which would not be available from other sources. Whilst agent-based models of inter-ethnic marriage have been developed previously, they have overestimated rates of inter-ethnic marriage and largely ignored the group-level processes necessary for a global understanding of inter-ethnic marriage. Utilising research and evidence from quantitative and qualitative sources from across the social sciences, we thus seek to develop a complex model of emergent processes of differentiation and change in the marriage patterns and social cohesion of migrant communities.

VASILIEVA, LESSYA* (docent, lessya-vasilieva@ya.ru)
The Quality of Political Elite and the World Crisis

The quality of political institutes of society depends from qualities of political leader as a representative of elite or ersatz-elite. The representatives of elite have such mental qualities as sophisticated cognitive intellect, diverse range of behavior and social attitudes and aims allowing them to bring maximum benefit to the society. The ersatz-elite have some common qualities with elite. But its representatives haven't diverse range of behavior and their ideas of values are mainly targeted at satisfaction of personal interests not regarding public ideas. The representatives of elite and ersatz-elite are presented on all levels of social hierarchic pyramid. The quality of political institutes of society depends from qualities of political leader as a representative of elite or ersatz-elite. Ersatz-elite introduce or develop social mechanisms depriving people of any control over political machinery. It turns out that in political and economic spheres of society the deficient motivation and deficient satisfaction of basic needs are indifferent through political difference, social and economic frustration. The present crisis does not have only economical but mainly social roots and cultural effects. It needs to specify the term Social Rent with new scientific definition. An equivalent formulation may be given in terms of the social parasitizing when given such a status by government. Social rent is a form of un economical compulsion. It is necessary that such status must be admitted by productive, market and state forces. The power and economical monopolies are the social factors which are converted into settled rent factors. Institutionalization of social rental relationships destroys economic and social competition.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.

1023
The main subject of social rentiers is the ersatz-elite. As they develop and become the ruling class, the economic and political systems either arise with seizure of new resources or destroy themselves.

Constructing Social Myths in the Modern Mass Literature (the Narrative Analysis of the Female American Novel)

Constructing Social Myths in the Modern Mass Literature (the Narrative Analysis of the Female American Novel)

- The paper problematizes the literary text that becomes a subject of the sociological analysis when representing social processes and phenomena as well as social practices of certain groups. The narrative analysis reveals a deep structure of the text reflecting values, norms and social attitudes used for describing social groups and social processes. The analysis correlates with structural hermeneutics of G. Alexander implying sociocultural research of semantic structures of the modern mass literature where social myths and archetypes are updated, serving as interpretive models to explain and organize (construct) the social world.
- The paper aims to show the results of the empirical research while proposing an original method of the narrative analysis of 18 American female novels, top rated in the largest specialized websites. The method synthesizes various courses in narrative analysis (event-structure analysis by D. Heise and L. Griffin), structural approach (R. Barthes, V. Propp, T. van Dijk) and K.Yung's theory. It consists in constructing a causal sequence of narrative events interpreting it in the context of the social myth. The method's steps include:
  - studying the life course of the heroes;
  - selecting significant events (based on structural indicators);
  - narrativization of the chosen events using the grammatical approach (verbs as action highlighters);
  - forming causal sequence of the events;
  - detecting the general narrative structure interpreted in the context of the social myth.
- The resulting narrative schemes form 3 basic archetypal female role-models within the cosmogonist myth and can be considered as interpretive patterns for describing gender role transformation in modern American society. The results of this empirical research can be verified in the context of feminist and post-feminist theories.

VASSERMAN, YURI* (Perm State Technical University, imv@psttu.ru)

Modernization of Values and Its Implications

This work is based on the understanding of culture following the lines laid out in the works of L. White, P. Bohannan, A. Montague etc, and defined, loosely, as a system of non-biological regulators of human behavior (such as values, norms, attitudes, etc.). Just a few generations ago, the majority of Russian population was rural, living in the countryside environment and was engaged in natural-subistence economy. Their culture corresponded to the low-level technological environment. The process of modernization has changed the environment in just a few dozen years, leaving the some cultural adaptors far behind. Some people experience conflict with impacts and challenges of modernization such as new women status, political democracy, market economy etc. We can see cultural differentiation on the process of modernization continuation. Two poles of the continuation axes can be found. One of them is pole of modern culture acceptance, another one is pole of modern culture rejection. A number of both poles are Webnet ideal types. The Likert scale was used for culture modernization measurement in our survey. The scale was validated by R.Indelhart's index and S. Schwartz's scale.

Socio-cultural types often differ according to the condition of socialization also corresponding to the generational differences. More modernized type of culture is adapted to more modernized type of social environment. New generation has corresponding to the generational differences. More modernized type of culture validated by R.Indelhart's index and S. Schwartz's scale.

VASSILOPOULO, JOANA* (University of Sussex, jvassilopoulou@gmail.com)

Integracism At Work. The Case Of Germany

This paper further explores the notion of integracism, which has been introduced by the author briefly in a previous paper. The notion of integracism refers to a specific interpretation of the notion of integration with implicitly racist assumptions. This racially biased and ethnocentric notion of integration frames the meanings of managing ethnic diversity in Germany. Integration policies and management measures are deployed to ‘address the better integration of’ ethnic minorities, who are widely seen as deficient and difficult to integrate, rather than adopting diversity management measures to foster equality, fairness and inclusion at work. In that frame, ethnic diversity is depicted as a source of potential problems.

There is a surge in the use of the concept of integration in management of immigration, not only in Germany, but also in France and in the UK in recent years. The notion of integration is the dominant concept in the management of ethnic diversity in Germany. The aim of this paper is to examine the corrosion of the notion of integration with racial bias, which undermines the overture proposal of equal opportunities at work. Arrangements of integration for immigrants include requirements of extensive documentation, training, point based calculations based on qualifications, economic wealth and experience, citizenship rituals. Most of these requirements are highly variable, based often on racial profiling. It could be argued that these policies and practices of managing ethnic minorities and immigrants are not as innocuous as they may seem at first sight. This paper shows how ethnocentrism and racial bias influence employment practices, leading to the exclusion of highly skilled ethnic minority workers.

The paper operationalises Bourdieu's key concepts, field, habitus and symbolic violence and draws on a large qualitative study based on more than 40 interviews, a case-study, focus group as well as visual material and a research diary.

Teaching Ourselves and Reviewers Institutional Ethnography in the Process of Publishing

Methods textbooks in the United States often introduce institutional ethnography (IE) as one of a number of qualitative methodologies used by researchers, rather than as a mode of inquiry whose aim is to provide an alternative sociology. Institutional ethnography, as proposed by Smith (1987), is a much more radical departure meant to challenge “the objectified subject of knowledge” including the discursive practices of established social science discourse. This presentation focuses on how the work of institutional ethnographers differs from qualitative researchers who are often sympathetic to IE, but fail to recognize these differences in practice. Drawing on our experience of publishing our research in standard sociology journals, we explore how reviewers’ comments and questions turn subjects into objects of investigation and explanation, standpoint into a subject
position or category within society, everyday world into the object of study, and generalize forms of consciousness into generalizations about people. We discuss the ways we have responded to reviewers and how this process has taught us more about the distinctive features of institutional ethnography as an alternative sociology.

La Adopción De Un Modelo Organizacional Como Estrategia De Comunicación Para La Transferencia Del Conocimiento y Tecnología En Centros Públicos De Investigación
El presente trabajo se plantea la necesidad de contar con un modelo organizacional como estrategia de comunicación institucional para la transferencia del conocimiento y de la tecnología en centros públicos de investigación de la región del Bajo, a fin de identificar la forma de comunicación más efectiva en materia de difusión de los procesos de transferencia de conocimiento y tecnología de cada Centro. Se parte de la premisa de que el conocimiento se presenta como el activo principal para la transformación y el progreso de toda sociedad, particularmente en organizaciones que se han creado con la intención de contribuir al progreso de la sociedad a la que se debe, fortaleciendo la economía del conocimiento, a través de la transferencia del conocimiento, y de la tecnología. Se concibe a los Centros Públicos de Investigación como sistemas vivos, en permanente movimiento, cambio, adaptación y evolución. La estrategia metodológica con la que se ha realizado la investigación, es desde un enfoque cualitativo, siendo el estudio de caso como uno de los instrumentos metodológicos. En este artículo se pretende mostrar formas para una adecuada comunicación institucional de los procesos de transferencia y tecnología en Centros Públicos de Investigación.

Alienation of Scientists in Post-Communist Europe
This paper focuses on the alienation problems of scientists: researchers in scientific institutes, centres and universities in Post-Communist Europe. This topic hasn't yet received enough attention, especially in sociological researches of these countries. After the fall of the USSR it was seen decreasing of scientific study especially in furth scientific branches of science but also in humanitarian knowledge. This process was accompanied by cuts of wages of researchers, their social exclusion from decision-making process and growing alienation. From the other side many researchers went abroad from the countries of their residence and some of them begun to participate in different projects and programs of foreign countries. They didn't identify results of their researches with former Homeland but linked their achievements with the place of present residence. This situation provoked appearance of the new forms of alienation. The paper analyzes manifestations and consequences of such alienation in scientific practices. I'll try to give certain contribution to the discussion about alienation in Post-Communist European countries. How did dramatic social changes that had taken place in these countries stimulate growing alienation of scientific researchers in different Post-Communist European countries? From the other side scientific cooperation contains reserved possibilities to help scientific researchers' overcoming self-estrangement. Haw the changes of political life in their Homeland could influence their isolation? Thus the paper focuses attention on this background of people's alienation. My analysis builds on media accounts, interviews with scientific researchers and data's of sociological monitoring of different materials. The paper provides useful information for an outlook necessary for understanding. Big sportive events in formation of different identities. Many local places of international championships are characterized by multinational population with very long and complex history (London, Sochi, Rio de Janeiro, Tokyo and so on). Haw big sportive events impact on local, regional and national identities in different countries? From the other side sport contains reserved possibilities of cooperation and solidarity not only on the local and regional but also on the global levels. Haw the Olympic spirit and changes of political life in the Region of the residence of big sportive events could influence the choice of identities? Thus the paper focuses attention on this background of people's identification. My analysis builds on media accounts, interviews with officials from the Organizing Committees of big sportive events and data's of sociological monitoring of different materials. The paper provides useful information for an outlook necessary for understanding national and regional identities.

Why Sociological Theory of Happiness Falls Short
Happiness in the sense of life satisfaction is a psychological phenomenon in the first place. Consequently most sociological explanations draw on psychological theory, often implicitly and with little view on its limitations. A dominant perspective in sociology is that happiness results from comparison between perceptions of life-as-it-is and standard of how-life-should-be, which view fits with the notion that happiness is a social construct and as such culturally variable. Explanations in terms of universal affective appraisals and needs are marginal in sociology, as wide biological sociology. Though not suited for explaining happiness as such, sociological theory is apt for explaining conditions for happiness, societal conditions in particular. Empirical research shows that conditions for happiness are quite good in modern society, where its inhabitants live now longer and happier than ever in human history. Yet most sociological theorizing is about the miseries of modern society. Some sociological explanations for this sociological short-sightedness are discussed.

Violencia, Armas De Fuego Y Mortalidad Juvenil EN Mexico
La violencia en México ha ocasionado un alto número de víctimas -sobre todo entre los jóvenes-, muchas de ellas provocadas por el uso de armas de fuego. Objetivos: Analizar el comportamiento de la mortalidad por armas de fuego en el grupo de edad de 15 a 24 años en México en los últimos 20 años e identificar factores socioeconómicos asociados a sus variaciones interestatales en el trienio 2009-2011. Material y Métodos: Con la información oficial sobre defunciones por armas de fuego se calcularon tasas de mortalidad por armas de fuego en el grupo de edad de 15 a 24 años en México; mediante una análisis de regresión múltiple se identificaron las variables asociadas a las variaciones interestatales en la tasa de mortalidad por armas de fuego en México; dos conclusiones: El aumento de la mortalidad por armas de fuego, especialmente entre los jóvenes, es un obstáculo para el incremento de la esperanza de vida en México. Este es un problema social y de salud pública que debe ser abordado de forma interdisciplinaria.
Social Norms of Morbidity As Specific Factors in the Demand for Health Services

Seeking professional medical help is caused not only by medical criteria health pathology. There is a complex system of social factors of the transition from the physical sensations of discomfort or psychological distress to get help from a professional medicine, i.e. make it socially relevant fact. This is the most important cause why the accounting treatment for medical help and true morbidity can not match. The different access to health care for different social groups is the most active cause of morbidity-free environments. The other social factors and in countries and cities where the network of medical institutions sufficiently developed they are more important. This result was obtained in representative survey in St. Petersburg (2007-2011). The most part of them are the social attitudes / norms which give rise to refuse treatment in medical institutions and relates to the culture of health behaviors. This culture is very contradictionilly. Improving education increases the tendency of self-medication. Massive short duration diseases (e.g ARDS) are treated within the family without recourse to occupational medicine in 75% of cases. Social attitudes of non-professional care are supported by the surveys support the range of informal norms to contain work in diseases with partial loss of ability to work. Such practice is supported by other informal social contract employees with employers: rejection of the fixing of cases of the disease in the social insurance company. This and other identified dependencies suggest that the indices of morbidity are subject to change without unambiguous connection with the actual number of patients and the duration of their illness. Methodological conclusion: for the considered social and medical conditions the survey are necessary for the correction usual morbidity data. Conclusions on the basis of registration of patients who seek health care may reflect the actual changes of many factors.

The Indicator of External Validity As Aggregate Criterion Quality of Survey

The external validity criteria in sociological survey methodology and practice are used rarely. The exceptions are electoral polls. The well known Gallup and others polls obtained the trust of public and professionals due to external (predictive) validity, although the term had not yet been coined. The predictive validity is the simple and most convincing proof of the high quality of all elements and stages of research single target parameter and one external parameter analogue of an unbiased independent source are used. Therefore, in the most sociological survey various criteria of internal validity criteria are used for evaluation of survey quality. These methods allow to evaluate the common error for all variables of a survey. The basis of application of the internal validity methodology has been shrinking too. The paper offers a few steps expand the application of criteria of external validity: - install for surveys on specific topics limit application of the criteria of internal validity - "unanswerable nonresponse rate" (nonresponse is the main factor that makes a non-random sample); - develop and apply external validity indicators for assessing the quality of a survey on selected topics - "item external validity"; - include ancillary questions in the questionnaire, which will compare the survey data with data from independent external sources. In our surveys of social settings in St. Petersburg (2007-11) we used as a measure of external validity and simple distribution, and complex calculated indicator of latent social phenomena.

The Disadvantaged Position of Muslim Women in the UK Labour Market and the Formation of Religious Identity

Among ethnic minority groups in the UK, Muslims are generally in a disadvantaged position, experiencing many social and economic inequalities. Muslim women suffer from high unemployment rates and insecurity levels compared to their male counterparts and other ethnic minority women. This is despite policies to reduce the diversity gap in the UK labour market based on gender and religious affiliations. The disadvantaged position of Muslim women can be seen as Muslim penalty and failure of integration and social cohesion. Many of my young educated informants, belonging to second and third generations of immigrants, resonated “ontological insecurity” leading to the formation of Islamic identity. This can often be manifested by embracing visible Islamic dress, which is a conscious decision, despite the disproportionate discrimination and negative attitude towards veiled women as a result of displaying their faith in public.

Applying feminist theory and questioning Muslim women’s place as a marginalized group at the centre of social inquiry, this paper explores Muslim women’s experiences of unequal treatment. There is a complex system of social factors of the transition from the physical sensations of discomfort or psychological distress to get help from a professional medicine, i.e. make it socially relevant fact. This is the most important cause why the accounting treatment for medical help and true morbidity can not match. The different access to health care for different social groups is the most active cause of morbidity-free environments. The other social factors and in countries and cities where the network of medical institutions sufficiently developed they are more important. This result was obtained in representative survey in St. Petersburg (2007-2011). The most part of them are the social attitudes / norms which give rise to refuse treatment in medical institutions and relates to the culture of health behaviors. This culture is very contradictionilly. Improving education increases the tendency of self-medication. Massive short duration diseases (e.g ARDS) are treated within the family without recourse to occupational medicine in 75% of cases. Social attitudes of non-professional care are supported by the surveys support the range of informal norms to contain work in diseases with partial loss of ability to work. Such practice is supported by other informal social contract employees with employers: rejection of the fixing of cases of the disease in the social insurance company. This and other identified dependencies suggest that the indices of morbidity are subject to change without unambiguous connection with the actual number of patients and the duration of their illness. Methodological conclusion: for the considered social and medical conditions the survey are necessary for the correction usual morbidity data. Conclusions on the basis of registration of patients who seek health care may reflect the actual changes of many factors.

The Occupational Challenges of Female Architects in Iran

In the recent decades, Iranian women’s access to educational opportunities in the field of architecture and professional formation has been greatly limited. For women, urban planning and engineering has been broadened. However, despite the considerable number of professional women with qualified success and technical expertise, patterns of gender inequalities have been sustained through traditional social and cultural systems. Some of the patterns of gender inequality are related to monopolisation of managerial roles by men at senior level and job polarisation in careers. These experiences and authority issues in terms of practicing the profession. Traditionally architecture, building industry and construction management have been considered as male domain. When professional women enter these fields as engineers, surveyors, or officials and hold the positions of power, their authority is challenged not only by unfamiliar female workforce, but also by educated men under their management.

Having said that in the educational institutions, particularly private institutions, they receive positive discrimination compared to their male counterparts, as they demand high financial demands.

Research on the challenges of female architects in Iran is scarce. Based on interviews, this paper aims to reflect the social, structural, and cultural challenges that young professional women in Iran experience. The paper will also shed light on women’s agency in overcoming the barriers and claiming their rights and authority within the male-dominated social structures.

The Disadvantaged Position of Muslim Women in the UK Labour market and the Formation of Religious Identity

Among ethnic minority groups in the UK, Muslims are generally in a disadvantaged position, experiencing many social and economic inequalities. Muslim women suffer from high unemployment rates and insecurity levels compared to their male counterparts and other ethnic minority women. The mobility of professionals has important repercussions for organizational performance and to some extent also subjective career success of the professionals involved. Within professional football, team quality is directly affected by the movements of players to and from the club. Transfers have a big impact on player careers as well, as footballers changing clubs increase their income or revitalize their career with a renewed chance on first team football. Whereas previous research examined these movements from the perspective of individual players, this study analyzes to what extent player transfers are shaped by the interaction between institutionally embedded organizational goals and the interests of footballers.

Using event history analysis to estimate the probability that a player moves to a different team, I argue that player transfers are a function of the location of an organization in the field and the position of a footballer in his team. In general, fringe players are more likely to move. This is especially so for high status teams, where such players move to pursue their interest of first team football. Moreover, players of underachieving high status teams are bound to be transferred, as the club lets go of the players it blames for its relatively low performance. The key players of these teams have a higher probability to move, as they are looking to increase their career rewards by moving to a higher placed team. Moreover, key players in overachieving low status teams are particularly likely to be transferred, as such teams sell their best players to cash in on their hard earned success.

In sum, this study highlights how professional labor mobility is shaped by the interaction between the institutionally defined interests of professionals and the goals of the organizations they work for.

Gender Asymmetry As the Barrier of Political Modernization in Russia

Considering activity of the women organization in the context of Russian political life we establish the fact of Gender Asymmetry in Russian politics. Representatives of women in Parliament (State Duma) vary from 10% to 14%.

The main features of social context determining gender asymmetry are the following: feminization of poverty, latent labor discrimination; Social and cultural inertia accompanied with gender stereotypes; Ignoring gender interests in political sphere. As the result one can see marginalization of women in the political and economic spheres.

We consider Globalization as the factor inspiring political activity of women in Russia and analyze role of more than 1500 thousands women organization and pay attention to the positive dynamic of their activity. Most of them act in social sphere (Maternity and childhood protection (39%), The help to socially deprived groups (29%), Providing of public services and amenities to city environment (29%), Healthcare (21%) and Education (22%), Protection of social interests (13%), Human rights (10%).

Main reasons of low representative of women in Politics can be described in different terms: Peculiarities of political socialization; structural factors (unequal distribution of resources owned by men and women; situational and biographical factors. For many years even the very consideration of the Law “On guarantees of equal rights and equal opportunities for men and women” was blocking. The Law about quotas for women in the party lists also was not adopted, despite the extensive discussion in the information and the public sphere. The trend of gradual increase in the proportion of women MPs in the federal and regional legislatures is very low still.

Hidden discrimination in the political sphere restricting activity of women leads to the different problems of social sphere.

Parliamentary Debates on Ritual Slaughter. a Contextual Discourse Analysis

Parliamentary Debates on Ritual Slaughter: A Contextual Discourse Analysis

During the last three decades the visibility of religion has increased in the public sphere of many European societies. This has not only to do with the arrival and settlement of large numbers of Muslims and other non-Western immigrants in these countries, government policies for managing religious and ethnic diversity, but also with political agenda setting of powerful secular forces. Illustrative for this is the political debate on ritual slaughter in the Second Chamber and the Senate of Dutch parliament in 2011, initiated by the Party for the Animals. In this presentation, the argumentation used in this debate will be analyzed from the perspective of contextual discourse analysis. The arguments will be related to features of the main participants in this debate as well as to the wider context of Dutch politics in the wake of “9/11” and ‘the Fortuyan revolt’ in 2001. These events have attributed to a reframing of Dutch identity in cultural and secular terms. Within the new created frame religious rites such as Jewish and Islamic ritual slaughter are defined in opposition to secular Dutch identity.

Criminalizing Inequality: The Narratives of Women Formerly on Death Row in the Philippines

This paper delves into the pathways to prison of women who once received the death penalty in the Philippines. Drawing upon extensive participant observation at the only two existing women’s prisons in the country and in-depth interviews with 27 former death row inmates, I examine how the women framed the circumstances that brought them to death row, based on their understanding of their identities, relationships, and social worlds. I analyze the link between the women’s histories of victimization, social and economic marginalization, and substance abuse problems and their crimes. I also consider how the experience of deception and betrayal in close relationships, compounded by corruption in the criminal justice system, constituted a pathway to death row for the majority of the respondents. I discuss the implications of their narratives for the discourse on women and crime.

The women in my study were largely in marginalized positions in their families and relationships, at work, and in society in general. Their crimes resulted from their efforts to survive on a day-to-day basis and cope with their circumstances. Their narratives reflect many facets and social realities of low-income and working-class culture in Philippine society. Their accounts of victimization, violence against specific men and even women and children, drug abuse and/or drug dealing in response to social and economic marginalization, cooperation with illegal and legal as a result of relational responsibilities, corruption on the part of government and law enforcement, and familial and intrastate violence, illuminate the contours and dynamics of their conflict-ridden world. My paper exposes the challenges to the dominant discourse on women's crime, as illustrated by their narratives—as predominantly low-income women in a postcolonial, low-income nation enmeshed in poverty and institutional corruption.

Microblogging and Macro Weather: Climate Change Risk Discourse on Twitter

The social web represents a new arena for local, national and global conversations and will play an increasing role in the public understanding of science and the creation of risk discourses. This paper presents an analysis of climate change social representations on Twitter, analysing over 60,000 tweets collected using a random web method. The analysis includes a combination of web metrics, latent semantic analysis and semantic network analysis. Results indicate that most active users on climate change are distributed according to a power law distribution and that web metric indicators suggest a moderate conversation on the topic. In terms of content, there is a remarkable complex network of topics that hints to a rather multi-dimensional and complex risk discourse accounting for complex casual links between climate change and natural, social and economic consequences. Most of the tweets cluster around the domains of the effects of climate change, the measures that are proposed to adapt to it, the policy debate between policymakers and energy industry and call for actions for offline events. Moreover, the media economy of the tweets, the web links shared in them, are from a wide set of sources with a major role played by traditional media but with a substantial presence also of scientific journals and NGOs websites.

Psychology and Learning Difficulties

In the context of a sociological thesis conducted in France in primary schools, the focus has been on the issue of the diagnostics and devices used to help children with learning difficulties. The purpose of this paper is to analyse the role of psychological approach in the management of academic difficulties. In the attempt to understand how the family, the mother figure in particular, are blamed for the learning difficulties of their children. It will be seen that the lifestyle and educational habits of families are analysed by teams of professionals, and that when considered as deviant, they suggest help to the family. Indeed, from the professionals’ perspective, these learning difficulties are due to family dysfunctions, and educational deficiencies of the parents. This would damage the mental functioning of the child and lead to difficulties in their learning. In schools where children are mainly or exclusively of modest background, it seems that these psychological methods are nearly exclusively the methods being used. Thus, children going to these schools are more likely to be diagnosed with mental illness than in a school with students from the upper-class. This psychologising tends to put the responsibility on the family or the child for his failure, while ignoring the issue of the gap between the culture of the school and the one of children from modest backgrounds. (Bourdieu, 1964, Morel, 2012) It will be demonstrated that the psychological approach used by teachers allow them to suggest reasons for the difficulties faced by children and to put in place solutions. Indeed from a psychological perspective, the parents are seen as ‘actors’ of the success or failure of their children. The challenge for schools is then to accompany parents to transform their habits and their way of parenting.

Changing Trends In Migration Flows From Mexico To The United States

Although some observers tend to view Mexican migrations to the United States as a common socio demographic phenomenon due to the vicinity of the two countries in the context of unequal economies, late drastic reduction in migration flows from Mexico to the United States pose several questions. In the views of some analysts this is mostly associated to the security measures practiced by the U.S. government on its southern border after September 11, however there are other indications that point out in a different direction suggesting that these changes might be associated with a set of several factors in which demographic variables along with economic, labor market and political ones are closely interconnected, or if not is the case they coexist and interact in the same political arena.

Other variations of Mexican migration flows have to do with the repatriation to Mexico of huge numbers of irregular or undocumented migrants mostly of whom were previously residing with their families in the U.S. On another dimension there has also been change characteristics in the flows of Central American migrants crossing Mexican territory on their way to the United States. This new trend has been offering a challenge to Mexican authorities with new implications to the legal Mexican political framework.

One objective of this presentation is to offer data and information related to the kind of changes that have taken place lately not only in terms of Mexican migrations to the U.S., but with respect to the different political actions in the U.S. as well as in Mexico with reference to Central American migrants crossing the country and staying in the country.

A second objective is to interpret these new modifications at the light of other general changes especially those concerning the “management” of migration flows by other governments.

The World Bank and the Global Governance of Social Policy: A Strategic-Relational Approach to the Education Case

The World Bank’s original mandate did not include education, but its involvement in education policy and reform has grown substantially since the 1960s. Today it is widely recognized as the most powerful and hegemonic of the international organizations operating in the education for development field. The Bank is the largest single international funder of education for development in low-income countries, and its technical and knowledge-based resources tower over those of other international institutions. This paper develops a global governance approach for understanding how the World Bank’s agenda and policy outcomes in the education field have been constructed and have evolved with the passage of time. According to such an approach, research on agenda settlement in international organizations (IOs) needs to focus on three main dynamics: the political opportunities created by geo-political and ideological shifts among the most powerful member governments; the IO’s relationships with borrowing (or “client”) countries; and finally the internal dynamics and organizational culture of the IO’s own bureaucracy as it aims to reproduce itself and manage shifts in the previous two dynamics.

The paper explores how these three dynamics interact in the constitution of the Bank’s educational agenda and policies in four key periods: from the 1960s to the beginning of the 1980s, when the debt crisis exploded in many developing nations; from 1981 to mid-nineties, a period marked by structural adjustment lending; from the mid nineties to 2008, when the Post-Washington consensus emerged; and from 2008 to present, characterized by significant shifts in power in the world system and an accompanying rise of strategic uncertainty at different levels within the Bank.

Learning from Informality? A Case Study to Rethink the Misfit Between Formal Policy Strategies and Informal Tactics of Citizenship

Dutch disadvantaged city neighbourhoods face a wide variety of policy strategies to regenerate housing and public spaces, integrate migrants, support families, and make these urban areas safer and more attractive to the middle class. Residents there, who are often the poorest, seem to experience their environment more equipped for their lives. They perform tacit and informal practices to deal with experiences of threat and develop community activities from the bottom-up. Informal practices – like everyday routines, tacit use of public spaces, and interactions at a square – tell much about the urban experience. Socio-economic disadvantages and a lack of linguistic skills make it hard for residents to engage in formal participation schemes. They experience the state through street-level interactions, but their stories do not find acknowledgement in the formal public sphere. Recent needs for welfare work appear to be a form of violent escalations that make local governments eager to rethink citizen’s involvement. How could sociologist but also policy practitioners learn from informal performances of citizenship in relation to the dominant actors and institutions? This paper analyses the misfit between informal tactics of residents and top-down strategies of government in a neighbourhood in Utrecht. An ethnographic case study of performed interactions between citizens, welfare practitioners, and policy makers unravels how strategies to involve residents paradoxically disrupt informal mechanisms and thereby disengage residents from taking part in the political process. Latent tensions deepen in the unhandy relationship between well-intended strategies and everyday tactics. Could local governments use tacit knowledge without ‘taking over’ or ‘disrupting’ the tacit fabric of the neighbourhood?

Relative Deprivation, Affirmative Status Generalization and Social Identities

The paper is based on caste-based graded inequalities and social identities emerging from the perceived relative deprivation by the socio-economically and educationally backward castes and affirmative actions based on identification of backwardness by the State agencies in India. The emerging social identities are discussed under a new concept ‘Affirmed Status’, besides, Achieved and Ascribed, as explained by Ralph Lynton. The affirmed status characteristics generalization are empirically verified to reconstruct the social structure, in modern Indian context. The process of such generalization and thereby emerging identities are explained with the help of a theoretical assumption, ‘Social Devolution’. Affirmed status is explained as the social identity of an individual or group (s) of individuals who has acquired a status higher than their ascribed status albeit, positively discriminated by the state in their favour but mainly because of their perceived relative advantage, whether achieved advantage, at whatever level, could not have been possible without such support from the state. Thus, the social identities of the affirmed status group(s) are resultant of aspirations and achievements of individuals belonging to a group(s) but due to support of the state. The status and mobility among affirmed status group(s) required to be higher could only increase with the implementation of the policy of positive discrimination, as more and more opportunities and benefits would become available and could be redirected to them. “Social Devolution” is construed as a process of elevating social power, prestige and dignity to relatively deprived, socio-economically and educationally low status groups by way of positively discriminating them to provide opportunities by a central agency (state in the case of India) without redistributing supremacy and forwordness of so-perceived-high -status groups which also now, aspire to engage in formal participation schemes. They experience the state through street-level interactions, but their stories do not find acknowledgement in the formal public sphere. Recent needs for welfare work appear to be a form of violent escalations that make local governments eager to rethink citizen’s involvement. How could sociologist but also policy practitioners learn from informal performances of citizenship in relation to the dominant actors and institutions? This paper analyses the misfit between informal tactics of residents and top-down strategies of government in a neighbourhood in Utrecht. An ethnographic case study of performed interactions between citizens, welfare practitioners, and policy makers unravels how strategies to involve residents paradoxically disrupt informal mechanisms and thereby disengage residents from taking part in the political process. Latent tensions deepen in the unhandy relationship between well-intended strategies and everyday tactics. Could local governments use tacit knowledge without ‘taking over’ or ‘disrupting’ the tacit fabric of the neighbourhood?

CHILD Abuse in India : Navigating the ZONES of Silence

A growing body of text have begun to furnish information and data on the widespread pervasiveness of child abuse in India. The paradox is that the perpetrator or the offenders are often someone known to the child and more often someone from the extended family. Though in some situations it is beyond their control, but many times the family fails to protect the child from sexual abuse given to the cultural tradition of ‘family being a private space’ where no interlocutor of public into critiquing its members is implicit. Moreover social stigma makes it difficult to talk about child incest in public. However, there is still a absence of in depth understanding and empirical evidence to support general observations because of the lack of the sensitivity to the issue and the failure to acknowledge it in the first place. This paper assess the perception of child abuse among young college students in the age group of 17-20. The focus of the paper is the in-depth case studies of 10 victims of child sexual abuse and incest. The purpose is not only to get quantitative data on the issue as understood by young girls but also get an insight into the manifold dimensions and meaning of abuse to the victims through case studies which is mostly anecdotal. It reflects on the excessive influence of normative standards of families also looks into the long term consequences of this in the lives of the victims.

Multilevel Approach of Professional Fields : Differentiation of Professional Status inside Governance
Multilevel approach of professional groups set up a large differentiation of is-
sues, practices and status inside the same professional groups. This approach will be developed for planners and secondary teachers in France. Local surveys frame the observation on a rich diversity of practices and capabilities. National surveys focus on the normative requirements of professional integration (certifi-
cation, regulation). European survey focus on the governance-models inside the convergence of professional standards (Swensson). The notion of profession can be framed inside three repertoires of issues. We recognize a differentiation of perceptions and of professional claims within the relations between qualifica-
tion and autonomy for teacher, between status and recognition for knowledge workers (Larsons, Abott)

The sociological question comes to specify the place of professional groups inside the networks of globalization. The convergence of expert knowledge stan-
dards at the global level do not mask the intense differentiation inside each pro-
fessional group (Freidson), between the level of practices and the definition of profes-
sional responsibility, between mercitocracy and salarees. The professional fields frame a tensive reorganization between these different levels and different status.

Human Rights As a Social Institution
Human rights as a social institution
Contrary to legal-positivistic approaches to human rights, sociologists often argue that human rights need not be restricted to legal norms. Rights have to be seen as more than legal norms discerned by judges trained in legal reasoning. For human rights to have social meaning, they must become institutionalised socially and become embedded in people’s mindsets as well as in the day-to-day workings of societal institutions such as the judiciary, the schooling system, healthcare and the family. The aim of this paper is to develop such a sociological-institutional approach to human rights, which provides an important contrast to standard le-
gal-positivistic approach of human rights. Based on the work of a.o. Meyer and Luhmann I will argue that fundamental rights can be seen as a social institution playing a crucial role in the protection of individual agency in a modern, horizontal and heterogeneous society.

Real Fantasy
Real fantasy
As new format of the cultural industry, reality shows are usually approached from two opposite and irreconcilable views. Sometimes they are taken as a sham, ie, programs that falsify reality by pretending to reproduce it. Otherwise, they are considered the immediate exhibition of Real (in the Lacanian sense of the term) – in this case, these programs would be a kind of window that opens to the display of objects beyond the symbolic field, such as violence and intimacy. Either thinking of them as a fake, or approaching them as attractive or generator of perverse pulse – therefore, as an exceptional phenomenon –, both perspectives tend to isolate the show from the society that forged it. The purpose of this paper is to present a third perspective that takes into account the world that such format is fed and which returns as mirroring: the flexible accumulation capitalism. From this perspective, it is possible to think of reality shows as a reproduction, not of the Real, but the reality itself, understood as the fantasy that ties our daily practices. Our hypothesis is that such programs take the form of social structure to organize practices such as surveillance, selection or evaluation of performance, all central devices for labor control in contemporary capitalist enterprise. The shift in the television format approach allows us to understand, at the same time, the new organization of the cultural industry – also looking for flexibility – as well as a cultural production incapable of achieving any form of transcendence.

Professionalism and Managerialism: How Do Teachers and Physicians Deal with Management Measures
The implementation of reform measures in public administration has conduct-
ed to critical changes in the functioning of services and had a great impact on
several professions. Changing to a management culture, oriented by efficiency, results control and meritocracy affected of professionalism. For instance, the man-
gement measures applied in the portuguese health sector, such as corporatiza-
tion of hospitals, organizational decentralization and deregulation of the labor market conflicted with the interests of the medical profession, opposing to its core values (i.e., caring and altruism) and ethos code, leaving to a loss of autono-
my and power in decision making related to its duties. Besides this, the attempt to implement a performance appraisal system led to resistance from physicians, saying that the model doesn’t take into account the specificities of medical pro-ession. In the education sector, there was also specific conflicts between manag-
ers and teachers due to the application of this system. In this paper, we apply to profes-
sions dealt with the same management policy in different ways. While physicians
(through their main trade unions) negotiated with the government the necessary adaptations of the model and guaranteed it was not implemented before that, teachers showed a collective resistance to its implementation in schools since the
beginning, and failed to get an agreement with the government.

Thus, we observe different ways of dealing with the same management mea-
sure by two different professions, and even more, we can ask if physicians hold
greater bargaining power than teachers to protect the profession interests.

We observe these differences where there has been an effort of trade unions and
professional associations to maintain the status and interests of the professions,
resisting to NPM policies. Kindlack and Randall (2008) call it a postprofessional-
ization process (instead of deprofessionalization). Moreover, the management measures, although opposing to the interests of these professions, seem also to contribute to reinforce professionalism.

Free Software Workers and The Myth Of a Deterritorialized Knowledge Production
Software and Information Technologies of Communication have an important
place in the development of globalization (Castells, 1998). Since the mid 1990’s, in
opposition to capitalist globalization based in intellectual property, we have seen the rising of Free software (Linux, Firefox . . . ). This new way of producing software, thought Internet communities involve a free participation, and give the image of an happy deterritorialization of production. This social model of knowledge pro-
duction is presented as having many virtues that potentially eliminate geographic and social determinants related to a territorialization. From a critical perspective, we propose first to describe the main discourse features of the actors of Free Software, these supporters and then, from an empirical study, we compare these theses to the quantitative study of data that we have collected. Using social net-
work analysis on a large sample (N = 10,494) of free software developers, belong-
ing to hundreds of different free software projects, we therefore chose to study the coupling between coordination and territoriality, including investigating the
homophilies (Lazarsfeld and Merton, 1954).

While we might expect a territorial decoupling, we analyze quasi systematically
homophily phenomena: territorial ones, but also in terms of skills. This setting light of homophily phenomena allows us to question the perspective and deterritor-
ialization present in discourses.

Also, we can realize a strong embedding of these communities in the elite academic institutions, as well as a strong professionalization of the activity.

Adherence to Preventive Illness Control Among Filipino Women through an Autonomy Perspective
The focus of this study is the capacity of women to assert themselves within
the household and how it may affect the sufficiency of their utilisation of ante-
natal care and which practitioner to visit. This behaviour regarding choice may vary depending on socio-economic status. The empirical study based on a survey of a pro-
duction of the household autonomy. Autonomy here is inclusive of edu-
cation and employment status but also considers other facets as attitude to-
ward intimate partner violence and mobility and economic dependency within the
household.

Using regression models, it is found that the usual education and employment for cash indeed affect health-related behaviour but as in Philippine context, num-
ber of children ever born affect it as well, but at differing degrees. All these men-
tion have particular thresholds that may be positive or negative in effects. What is central is socioeconomic status of the household which is positive in effect.
Results support the oft considered health gradient that access is based on the perception of finances. This becomes the main barrier for women to seek sufficient antenatal care and medically-trained personnel as well. Also, seemingly counter-intuitive findings had lead to having initial interviews with mothers in selected provinces in the country. What is supported by this approach is that traditional views on healthcare shape their views but perceptions of gradients that some types of care are only suitable for those who can afford them.

Is Poverty a Key Aspect of Ageing?

The poverty in old age is one of the most persistent stereotypical images of ageing. Due to the significant differences between income before retirement and pension benefit, there is an objective drop in the income with the retirement. However, with the individualisation of pension provision and weak link between statutory retirement age and labour market exit, the connection is not so straightforward anymore and the image gets even more colourful when social class and different forms of capital are taken into consideration.

Using the secondary analysis of different surveys carried out in last decade among the Czech population aged 40 years and above, I will show the attitudinal data on the role of poverty and financial exclusion in old age definition. I will address issues such as expected (sources) of income after the retirement, marginalisation in consumption, indebtedness, age discrimination in financial services provision and subjective poverty. I will use the paradigm of a segregation of older population to show how these differ in different age, gender, income- and social capital- groups.

Food Security, Rural Livelihoods and Agricultural Change: Evidence from a Case Study of Potato Contract Farming in Maharashtra, India

Despite decades of sustained economic growth, food insecurity remains a seemingly intractable problem for many households in rural India. In recent years, food security has been elevated to pre-eminence in the political discourse of India with the passage of the much-debated National Food Security Bill (2013). At the same time, there has been a growing recognition among researchers that achieving food security in rural areas is not simply about solving food production or distribution problems, but rather addressing broader questions about household livelihood security (Pritchard et al., 2013).

Currently, the majority of rural Indian households continue to rely on smallholder agriculture as their primary livelihood activity. The nature of agriculture, however, is changing in India, as liberalisation policies open up the sector to domestic and foreign capital. One such change has been the spread of contract-farming schemes. Where they operate, contract-farming schemes are changing the dynamics of smallholder agricultural production, as land-owning households are increasingly exposed to modern inputs, technology and markets. These schemes present new opportunities for some households, yet it is unclear how these changes will influence patterns of social differentiation at various scales.

This paper discusses the nexus between household livelihoods, food security and modernising agriculture in rural India, using evidence from a case study of a potato contract-farming scheme in Maharashtra. The paper argues that by understanding agricultural change through a rural livelihoods lens, we can reveal the nuances of how rural households negotiate change specific to time and place, and who is in a position to benefit from such change. If we understand food security as primarly a livelihoods issue, then understanding how modernising agriculture is influencing patterns of social differentiation will be critical to the long-term food and livelihood security of India’s most vulnerable rural households.

Transferability of Successful Cooperativist Actions: The Case of Albacete’s Cooperatives

The Integrated Project INCLUD-ED (FP6 of the European Commission) identified Successful Actions (SAs) in diverse social domains. In the field of employment, the successful case of the cooperatives of Mondragon in the Basque Country was analyzed. The Mondragon Corporation (MC) has proven to be a non-capitalist alternative to the traditional organizational and governance models of capitalist firms, combining democratic principles, values of solidarity and strong competitiveness that allow it to achieve both efficiency and equity. In this organization, five successful cooperativist actions (SCAs) were identified and considered crucial in explaining these accomplishments. In order to analyze the transferability of the SCAs, some of them have been recreated in the poorest and most marginalized neighborhoods of Spain: La Estrella and La Milagrosa in Albacete. In 2011, a cooperative was created on the basis of developing the SCAs to provide decent, stable and sustainable employment to people from those neighborhoods. This paper aims to explain the success of the transferability of the latter to the cooperative in La Estrella and La Milagrosa and the ways in which this successful actions approach is contributing to overcome inequalities while contributing to generate alternatives to the capitalism. This work is developed in the framework of the international network of research on cooperativism coordinated by Erik Olin Wright and Ramon Flecha.

Sustainable Consumption Practices in Brazil’s "New Middle Class"

In recent years, Brazil and other emerging economies are showing a significant change in their socio-economic composition, which highlights the increasing income of the poorest sectors of the population. Some Brazilian authors claim that such economic growth will not lead to a significant change in their socio-economic composition, which highlights the increasing income of the poorest sectors of the population. Some Brazilian authors claim that such economic improvement fosters the emergence of a “new middle class”, prompting a debate on such socioeconomic changes, and on the very concept of social class, as this concept is not consensual within the Brazilian social scientists. Regardless of the classification which assigns to this stratum of the population, this represents a profound change in Brazilian society, with implications for the consumption patterns. This phenomenon occurs in a scenario where environmental issues gain public notoriety and the discourses that advocates the responsibility of the State, enterprises and non-governmental organizations to address them now include the role of the individual in their daily practices, including that related to consumption. So, it sets up a paradox between the possibility of increased levels of consumption and access to material goods by this economically emerging stratum (labeled as the “new middle class”), and the diffusion of the discourse and the proposals that advocate sustainable consumption and the need to reduce the consumption patterns as a way of coping with environmental problems.

Given this paradox, the paper will present results of an ethnographic study that aims to map the debate about the economic rise of the phenomenon of the less affluent in Brazil and the trajectory of environmental thinking until the moment this research was conducted. The study aims to determine, from empirical cases, how these subjects are positioned in relation to the new morality established by discourses and proposals for sustainable consumption advocated by environmental groups, government agencies and businesses, and whether or not these are adopted by the new middle class.
En las últimas dos décadas América Latina presentó importantes resultados en la reducción de la pobreza, aumento de la esperanza de vida y reducción de la mortalidad infantil. Sin embargo, el incremento de la incidencia de muertes violentas, sobredosito, entre los jóvenes en este mismo período sigue siendo un desafío pendiente. Así como ocurre con la mortalidad infantil o el embarazo adolecen, las tasas de homicidio inciden diferentemente sobre los individuos de acuerdo con su posición en la estructura social. Los estudios sociodemográficos evidencian que hay una alta selectividad en la mortalidad juvenil por sexo, color/ etnia y clase social. Irónicamente, las vidas ahorradas en los primeros años de vida en las áreas más vulnerables por medio de políticas de saneamiento y cuidado en la niñez continúan siendo interrumpidas prematuramente en la adolescencia o juventud por causa de la violencia. En los países latinoamericanos, la sobremortalidad masculina alcanza considerable magnitud. En muchos de nuestros países los chicos mueren de 4 hasta 6 veces más que las chicas de la misma edad. Esos feminicidios y los asesinatos dentro del marco de una cultura que aún sostiene fuertes rasgos machistas y una visión muy arraigada de valorización de la virilidad. Este trabajo discute las relaciones existentes entre los indicadores de condición de vida en las áreas más vulnerables por medio de políticas específicas de saneamiento y cuidado.

Autonomy and Heterogeneity of Managerial Changes in European Judicial Systems

For a long time reluctant towards managerialism, Dutch, Belgian, French and to a lesser extent Italian judicial systems have undergone deep changes, since the Ministry of Justice implemented new management policies and tools. In terms of professionalism, accountability procedures, new norms (a more customer- and efficiency-driven approach), the valuation of other competences than legal ones, budget restrictions modified professional practices and identities of clerks and the magistracy. New models of what constitutes “a good magistrate / clerk” emerged.

The paper will focus on the part of autonomy and heterogeneity of professional groups and political actors who either decided, implemented or had to cope with those managerial changes. Ambivalence prevails regarding their promoters and insiders.

Managerialism was partly promoted by other national or international institutions (the Ministry of Finance, the Parliament...). But even when they felt reticent about this trend, hierarchy at local levels (regional court chiefs and managers, judges and clerks at the head of diverse services) also took initiatives to gain efficiency, even though it might create conflicts with the law or their colleagues. Thus they contributed to the profession’s definition of relevant managerial criteria and procedures.

But this autonomy varies according to the professions and hierarchical positions. Is it a sustainable hierarchy or increased individual abilities (in priorities definition, budget allocation...). Yet, professional identities of ordinary magistrates and clerks got somehow weakened by the priority given to productivity and by contradicting orders (both making quick court rulings and listening to citizens, reinforcing crime repression and reducing short prison sentences...).

Finally, we observe a hybridism between legal and managerial values reinforced by the recent involvement of consultants and professionals other than law professions in the judiciary.

Combining sociology of professions with public policy analysis, this research relied on an empirical study based on observations and 130 interviews with bureaucrats, lawyers and clerks.

Lean Production in Public Services: Selective Transfer and Jurisdictional Conflicts

Lean production has spread to public services, even in countries and institutions for a long time reluctant towards a managerial approach. The French State agency in charge of the “modernization of the State” (DGME) perceived it as an efficient tool to implement State reforms. How understanding this focus at the French State level, on lean systems could have been transferred to other countries. This paper proposes an alternative reading of transnational and diasporic urban political spaces. It is argued that complex diversity and social contradictions nurture intensification and widening of trans-cultural cosmopolitan habits alongside a backlash of parochial opinions.

In a second part of the paper these emerging trans-national identity containers of multi-layered belonging will be tested while introducing some research results of a comparative study on new European citizenship and vernacular cosmopolitanism with respect to different ethno-national minorities in Britain, Germany and the Netherlands.

Trajectories of Risk and Uncertainty? Medical School Students and Their Vocational Choices

In Portugal, the imposition of a numerus clausus system at the HE entrance has contributed to the strengthening of a hierarchy of excellence in the school system. At the same time, it has introduced an increased uncertainty regarding the possibility to accomplish future projects and ambitions.

The case of medical courses has been paradigmatic in this regard. Its high demand has fixed permanently, academic excellence as an entry requirement. The access to a medical school implies some effort and sacrifices that not every young student is willing to take. Namely, because it implies a tension between the need to invest in studying on a highly competitive basis (thus focusing on future projects) and the desire to invest in youth sociability practices, under a high peer pressure (which are rooted on the present).

Obtaining and maintaining high grades along the secondary education is a long-term process (built during the three years of secondary education), but highly uncertain and risky: a single moment (an exam, an assessment) can ruin everything.

This presentation aims to analyze the processes involving Medical School entrance in Portugal. In particular, we intend to confront students’ investment on a highly competitive basis (thus focusing on future projects and ambitions).

The analysis is drawn upon data collected within the project “Failure and drop-out at the University of Lisbon: scenarios and trajectories”, a recently completed research project sponsored by the Portuguese Science and Technology Foundation (Project PTDC/ESC/64875/2006). In particular, it will explore data from in-depth interviews conducted in the academic year 2009/2010 to the students that in the previous academic year had entered the 1st year of medical school at the University of Lisbon.

Did Someone Say Cosmopolitanism? A Critical Feminist View on Cosmopolitan Citizenship, Post-Nationalism and Trans-Nationalism in Europe

By Dr Ulrike M. Vieten (University of Sheffield, UK)

Since the early 1990s cosmopolitan visions evolved as an endeavour to transform the modern nation-state into a “global community” (Giddens 1998). This perspective has been informed by the postmodernist idea that globalisation has broken down the traditional boundaries of society, with various identities becoming more fluid and the concept of a universal civil society becoming a reality. The concept of cosmopolitanism as it is understood today is seen as a response to these changes and a way of thinking about the world that is based on principles of equality and universality.

Speaking from Europe, and witnessing a rise in nationalistic socio-economic interests and neo-fascist political orientations in various EU Member States it seems we also live in a very rebellious civic world society; also very much connected to structural changes of the social fabric as far as ethnicities, race and religion is concerned in metropolitan cities all over the world.

While critically analysing Habermas’ and Soysal’s view of the ‘post-national’ and turning to Young’s concept of the ‘social connection model’, the first part of the paper proposes an alternative reading of transnational and diasporic urban political spaces. It is argued that complex diversity and social contradictions nurture intensification and widening of trans-cultural cosmopolitan habits alongside a backlash of parochial opinions.

In a second part of the paper these emerging trans-national identity containers of multi-layered belonging will be tested while introducing some research results of a comparative study on new European citizenship and vernacular cosmopolitanism with respect to different ethno-national minorities in Britain, Germany and the Netherlands.

Lean Production in Public Services: Selective Transfer and Jurisdictional Conflicts

Lean production has spread to public services, even in countries and institutions for a long time reluctant towards a managerial approach. The French State agency in charge of the “modernization of the State” (DGME) perceived it as an efficient tool to implement State reforms. How understanding this focus at the French State level led to lean system? How was it re-appropriated to Southern Italy (the Ministry of Finance, the Parliament…) . But even when they felt reticent about this trend, hierarchy at local levels (regional court chiefs and managers, judges and clerks at the head of diverse services) also took initiatives to gain efficiency, even though it might create conflicts with the law or their colleagues. Thus they contributed to the profession’s definition of relevant managerial criteria and procedures.

But this autonomy varies according to the professions and hierarchical positions. Is it a sustainable hierarchy or increased individual abilities (in priorities definition, budget allocation...). Yet, professional identities of ordinary magistrates and clerks got somehow weakened by the priority given to productivity and by contradicting orders (both making quick court rulings and listening to citizens, reinforcing crime repression and reducing short prison sentences...).

Finally, we observe a hybridism between legal and managerial values reinforced by the recent involvement of consultants and professionals other than law professions in the judiciary.

Combining sociology of professions with public policy analysis, this research relied on an empirical study based on observations and 130 interviews with bureaucrats, lawyers and clerks.
The debate about the concepts of the body is justified by the fact that the novi
cate is a key element for the formation of the body conception of undergraduate
students, this is the first step to consolidate how to think and act in different
fields. We aim to discuss the conception of body from teachers of a philanthropic
University of Goiás. The research is a cross-sectional study explored the na
ture. Made sure a case study with a questionnaire developed and validated specially
for this study. Was distributed approximately 20 questionnaires and one teacher
refused to answer. The study was approved by the Ethics Committee of the PUC
Goiás under No. 1256/09. identifies the fact that 26.7% of teachers working with
activities, 40% with the humanities, and 33.3% with the area of biology.
About the body conceptions that prevail among teachers, nine replied the ques-
tion, 66.67% consider the body as a machine, or as an organism, comprising sep-
arrately from other components. Was also questioned whether teachers read au-
thors on the issue, 88.89% considered. Was also asked if teachers talk about the body in their classes and again 88.9% said yes.
The completion marks the fact that teachers’ conceptions of body can be con-
sidered traditional, since there was no overcoming the dualism of body and soul,
or the condition of a body “thing” (machine or organism). This conception among
university teachers can affect the thinking about the subject among academics,
that is shown by other researches.
to higher education in some selected countries, based on international statistics.

2. The second one is based on an empirical research undertaken in six universities in Mexico City, that are classified by academic characteristics, and by the implications that these have in the process of globalization of knowledge, and will examine the material and symbolic inequalities of the students that obtain their professional degrees.

3. The third one, will consist on a reflection that, based on empirical national data versus international data, allows the design of some elements of comparison regarding the inequities experienced by the young students that succeed in finishing their degrees, in some selected emergent countries.

Argentina's Dirty War: Counter-Hegemonic Collective Memories & Frame Analysis

In this paper, I analyze the contentious and long-lasting collective process to document, understand and reach justice for victims of Argentina’s Dirty War, based on fundamental texts produced after the end of the last military dictatorship. By looking into the challenge of “Never Again” report prepared by the National Commission on the Disappearance of People (CONADEP), which included hundreds of testimonies by survivors of torture and acquaintances, reading scholarly analyses on this matter, and finding testimonies published in other venues, I discuss how this report became a master narrative from which subsequent interpretations of the Dirty War emerged. I apply Goffman’s (1986) frame analysis theory to understand the complexities and nuances of processes of collective memory-making, and identify how hegemonic and counter-hegemonic frames were used to create meanings and organize experiences of the Dirty War. Then, I propose alternative frames (an “intersectional frame” and an “emotions-conscious frame”) with the aim of contributing to ongoing and long-lasting collective efforts to comprehend this phase of history. While this use of frame analysis may be considered unorthodox given that scholars do not generally impose a frame on a document, I intend to demonstrate the power of framing and reframing as tools to animate what existing frames may be masking and thus reach deeper levels of understanding through furthering the production of counter-hegemonic knowledge.

Excision and Migration: Between “Legality” and “Loyalty” in the Transmission of a Traditional Practice in Migratory Context

Female genital mutilation (FGM) is forbidden in many countries of the North (Europe, Nord-America) and of the South (Africa). However, this traditional practice is still transmitted from generation to generation by women. If medical and pathological consequences of FGM are well-known, the social and symbolic implications in the intergenerational process of transmission of the practice and the migratory context are not yet well understood. The social and symbolic universe of the countries where sexual mutilations persist, implies that women who are not excised are considered “dirty” or “obscene”. Non-excised women are stigmatized in their sexual identity and within African community. On the other side, young women living in a migratory context are confronted with other sexual models and may start to feel a sexual disability. Communication around the practice of excision is almost absent in the families where women and girls are nevertheless excised. The perpetuation of the practice is intrinsically connected to the gender system stakes and in particular to the unequal status between women and men in some of these societies (Zimmermann, 2001). Introduction to sexuality can become one moment of distance between the parental and family standards and the social standards of the local society (Andro, Lesclingand, Poreutt, on 2010). This qualitative survey involves both social sciences and biomedicine. To seize these representations and the sexual practices connected to sexuality and to health, a series of semi-directive detailed interviews have been conducted with ten African women living in Switzerland and have undergone FGM. On one hand, transmission of FGM on the second generation of immigrants in the migratory context, is the way for keeping memories and traditions alive. On the other hand, teenager’s sexual socialization becomes a ground of resistance against the western colonization, which takes place in the field of the sexuality.

Dans nos sociétés prises dans ce que le philosophe allemand Hermut Rosa appelle l’« accélération sociale du temps », et face à la dégradation des conditions de travail et du «temps de soin», maîtriser son temps de travail est un enjeu. Et ce d’autant plus dans le milieu hospitalier où temps de travail est souvent synonyme de don de soi et de soi.

Depuis une dizaine d’années une forme de travail atypique se développe, à la limite de légalité, dans les équipes soignantes des hôpitaux français : le travail en 12 heures d’affilée. Présenté par les directions des hôpitaux comme une solution pour pourvoir les postes vacants, le travail en 12 heures permet aussi à court terme d’économiser des postes en supprimant les temps de chevauchement entre les équipes. Mais pour les soignants eux-mêmes, ne travaillant « plus que » 12 jours sur 28, les 12 heures permettent d’avoir plus de temps pour sa vie privée. En effet, à la différence des plannings traditionnels en 8h, travailler en 12h permet d’obtenir un roulement fixe et de dégager mécaniquement du temps pour cumuler une deuxième activité face à l’unif des salaires.

Notre exposition se concentrera sur les premières conclusions d’une enquête ethnographique de plusieurs mois menée dans divers services d’hôpitaux parisiens, ainsi que d’entretiens avec les soignants, dans le cadre d’une thèse engagée depuis octobre 2012. Nous montrerons que ce qui apparaît comme un consensus inébranlable entre les directions et les soignants autour d’un meilleur équilibre entre travail et famille, est en fait un moyen pour les soignants de fuir un travail qui s’est intensifié depuis que les politiques de restriction des dépenses et de maximisation de la productivité se sont imposées ces dernières années à l’hôpital : au moins on ne revient pas travailler tous les jours !

Multiple Imputation Of Squared Terms

We propose a new multiple imputation technique for imputing squares. Current methods yield either unbiased regression estimates, or preserve data re- lations. No method, however, seems to deliver both, which limits researchers in the implementation of regression analysis in the presence of missing data. Besides, current methods only work under a MCAR mechanism. Our method for imputing squares uses a polynomial combination. The proposed method yields both unbiased regression estimates, whilst at the same time preserving the quadratic relations in the data for both MAR and MCAR mechanisms.

Russian Housing Care for Orphans: Equal Rights in Unequal Opportunities

A great number of decrees, regulating various aspects of social security for orphans (including housing), have been adopted by the Russian government in 2013, which put Russian Orphan Care among the paramount issues of social policy.

This paper analyzes the housing care laws in relation to orphans in Russia, including federal laws, regional statutory documents and case law protecting the housing rights of orphans.

At present, the Russian government has a duty to provide orphans with housing regardless of their age, which is made at the expense of both the federal budget and the resources of local authorities. At the same time, orphans are unequally allocated in regions with various levels of economy, which collides with their housing needs and standards of living.

For example, during the period of professional studies orphans are provided with a room in the university dormitory, thus their housing need is partly met by the funds of their educational establishment. However, after graduation orphans are required to have a permanent registration, i.e. living space of their own, in order to have a job and for other purposes.

In general, the paper combines the case study methodology with legal analysis of effective housing rights for orphans and young care leavers who are in need of housing. The study leads to the following key point: equally guaranteed rights to housing care are hampered by the lack of (i) a unified mechanism for different regions of Russia and (ii) appropriate economic resources to implement the rights.

From Right-Wing Violence to Racist Terror – Exploring Factors of Radicalisation

In November 2011 a racist terror group in Germany that claimed responsibility for the murder of nine migrants and one police-woman was discovered by chance. For more than thirteen years security forces had no real idea of the activities of the group, assuming that the killings were caused by criminal motives. After the existence and activities of the racist group has become known several high-ranking security and secret service officers resigned and the security apparatus is still under reconstruction.

The paper addresses the attempts by researchers to locate the factors why a terrorist group developed from a much broader racist violence-prone movement and tries to weigh up the role and actions (as well as non-actions) taken by state actors towards the extreme right in Germany in general and against the regional right-wing movement in Thuringia from which the terror cell emerged in particular. In doing so, the investigation tries to find out if in the first phase restraint by the state might have encouraged right-wing violence while in a later phase adamant decisions by public prosecutors may have contributed to a radicalisation processes resulting in racist homicide.

The Identitarian Movement

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
In autumn 2012, the Génération Identitaire, a French group, launched a video message on Youtube declaring war on multi-culturalism. In order to gain a maximum of public attention and as an example of how the movement’s performance would look like the group occupied a mosque in Poitiers, chosen for the final victory of Karl Martell against the invading Moors in 732 AD.

While, in France, the group’s roots date back into the early 2000s, the occupation of the mosque quickly inspired imitators in neighboring countries like Austria and Germany. Although presenting themselves as being non-racist its ethnopluralist approach and public statements on several issues clearly indicate that the movement belongs to the spectrum of right-wing racist populism.

The paper will outline the emergence and the development of the ‘Identitarian’ Movement taking the variations in several countries into account. A focus will be given on the analysis of the movement’s claim of not being racist on the one hand and the de facto involvement of known right-wing protagonists on the other hand. Public performance of the movement that is web-based to a large extent is investigated. In sum, the paper offers an analysis of a new political phenomenon and situates this into a broader understanding of more recent developments of right-wing populism as a whole.

**Gendering Responsibility: Work Practices and Institutional Responses to Intimate Partner Violence in Finland and in Russia

This paper examines how the highly gendered phenomenon of intimate partner violence (IPV) is encountered in various institutional settings of social and health care services in Finland and in Russia. The empirical data comprise (1) 16 focus group interviews with staff members (n=73) in various social and health care units in Finland and (2) 74 interviews with staff members (n=56) and services users (n=14) in three public crisis departments and one NGO crisis center in Russia. Based on the analysis of this data corpus, it seems that one of the dominant institutional discourses is that of making the female victims responsible for dealing with the problem of IPV. According to the interviewed professionals, it is difficult or even impossible to address the topic of the responsibility of male perpetrators due to various reasons, e.g. inadequacy of existing work practices or insufficient legislation. This paper takes a closer look at the ways in which the above-mentioned discourse operates to organize work practices that result in “gendering responsibility” at the level of local activities. Following the ideas of institutional ethnography (Smith 2005), the basic assumption of this paper is that institutional discourses organize the ways of “seeing” and “knowing” the solutions to the problem of IPV in institutionally actionable ways. Of special interest here are the interconnections between the institutional processes carried out locally and those organized at state, national and even international level. In addition, this paper addresses some cultural differences between Russia and Finland in the ways in which the female victims are made responsible for dealing with the problem of IPV in the everyday work of the institutional settings under investigation.

**Testing the Effectiveness of HRM Practices Among Expatriate Humanitarian Aid Workers

Abstract: Staff turnover has become a major concern for humanitarian organizations. On the one hand this can be seen as something humanitarian organizations have to live with, but on the other hand it has also been blamed for reducing effectiveness and efficiency due to discontinuity in staffing and loss of institutional memory. To prevent public pressure for greater efficiency and accountability, Professionalization, and especially adopting for-profit management practices, for example regarding human resource management (HRM) was deemed to be key to achieve enhanced efficiency and accountability. In short, no sector is dependent on the employees and their loyalty and at the same time experiencing a very high turnover. Therefore, this is the present setting to study the effectiveness of HRM practices. Yet, while much discussed, in-depth research on the consequences of human resources practices on attitudinal outcomes of employees, like trust in management, job satisfaction and leaving intentions in this sector has so far not been conducted. So far, most studies have been conducted in the for-profit sector and to a lesser extent in the public sector. While it is assumed that HRM practices should also be effective in humanitarian organizations empirical data was lacking in order to actually test this. To the knowledge of these authors, this is the first empirical attempt to study these issues among a sample of humanitarian aid (HR) workers from one of the largest agencies in the field: MSF. Preliminary results show that HRM practices are positively influencing individual attitudinal outcomes (job satisfaction and turnover intentions) and that trust in management is an important factor mediating this relation. HRM practices are conducive to building trust in management, which in turn is positively related to job satisfaction and intention to remain with the organization.
This paper presents the results of a research project based on five case studies where artists are invited by urban professionals to work and produce knowledge on cities and project sites in France. They are digital artists, sound artists, choreographers, visual artists, actors. They work mainly through intensive field work. Site immersion and (informal) interviews are singled out as the key elements that are used. We will first discuss in which way and to what extent artists produce knowledge that is different from that produced and used by city professionals. What kind of knowledge do artists produce? In which aspects is this knowledge different? Are these differences due to artists’ specific skills? To their methods? To their unique gaze? To their capacity to represent the reality? Then we will discuss how can urban professionals use and work with this new kind of knowledge. How do they analyse it? What are the epistemological, methodological and analytical problems encountered in their understanding and their transposition in urban studies?

Young Graduates Self Entrepreneur: Searching for Job or Creating a Company?

Precariousness is a rising condition of high skilled and knowledge work. The implementation of new kind of work contracts is supporting this movement. In France, a new fiscal regime for self-entrepreneur had been created in 2009. This consists of lower tax rate and simplified administrative procedure for small companies (turnover under 33 000 euros).

This contribution presents the results of a research on graduates (master or PhD in social sciences) who enter the labour market by creating this kind of self-entrepreneur. It appears that they didn't choose this scheme of work: it had been required by employers to lower their labor cost, flexibly the working relationship and externalise administrative procedures. While graduates are administratively independents, their conditions of work are mainly those of salaried: in the firm, with fixed schedule, prescription from the superior, etc.

In these situation that fuzzed and hybridised working regime and working conditions of independents and salaried, how are these graduates (as specific population of knowledge workers) adapted? Their working conditions, activities, projects and discourses reveal different feelings about that situation. This paper will explore these three idea-types of young self-entrepreneur: subordinated, independent, or in inclusion. To what extend does this situation trained them to become entrepreneurial worker?

Masculinities, Violence and Multiculturalism in Latin America

Male violence has occupied a foundational place in Latin American history. Latin America’s past has been marked by men’s violent acts, such as the Spanish Conquest and Colonization in which not only colonized “women” were powerless within their communities, but also colonized “men” were subordinately placed within a hierarchy of masculinities. This societal structure was based on mechanisms of racial inferiority and gender subordination, which established relationships of domination and of complicity between the people and their colonizers. The postcolonial period manifested the consequences of such brutality and its difficult to speak about Latin-American social history where violence hasn’t been present, not as a Latin-American cultural trait but as a social fact. While I’ll reference the Latin-American context generally, I’ll particularly focus on the situation in Colombia, an area on which I have extensively worked. Due to the old and painful reality of the Colombian armed conflict, exceeded only by the Israeli-Palestinian and Indian-Pakistani conflicts, the need has become apparent to promote initiatives, which introduce discussion and action into the public and academic domains. The two following issues: first, the conflict continues to differently affect the lives of Colombian women and men because of their social place in the gender order; and second, the difficulty of dissociating the violence of masculinity, as it has been designed and constructed socially in the Colombian context.

This paper will first reflect on the relevance of social intervention programs developed with men oriented towards violence prevention. It will then address male resistance to change and the attempt to trivialize violence against women and reaffirm masculinity based on domination, in which some geopolitical and internal social hierarchical considerations are present. Finally, this paper will discuss the forceful effects that multiculturalism in the region may or may not have on gender violence and its eradication.

Living with the Sea: The Satoumi Concept

The importance of sustainable marine resource management through the Eco-system and the Participatory approaches is widely accepted and supported by contemporary science. Fisheries management based on the internal knowledge of the local artisanal communities, which operate with traditional techniques and tools, has considered the key to the preservation of the marine and coastal ecosystems. In Japan, the participation of fishermen in the decision-making process as well as the enforcement and realisation of conservation plans is being researched and promoted widely. The most promising conservation framework, the satoumi, is based upon the interaction between traditional human activity in fishing communities and ecosystem management. These ecosystems
still maintain high productivity and biodiversity, coupled with human activity. The satoumi is based upon traditional resource management techniques which aim at the protection of the targeted ecosystem. As the depletion of fish stocks and the degradation of marine habitats expand around the globe, the provisioning, regulating and cultural services that the marine ecosystems provide for the fishing communities are disappearing. Through extensive literature review, this paper explores the capacity of the satoumi concept for the sustainable use of the marine resources. The most important aspect of the research is the exploration of the significance of the implementation of the satoumi for the survival of the communities that have adopted it. The majority of these communities depend on the local marine resources for their livelihoods and maintain a strong bond with the sea, as their ancestors have passed down to them their maritime tradition. The satoumi practitioners have shown evidence of adaptability and resilience whilst maintaining high levels of productivity and sustainability.

Perceptions of Rising Powers: Are Russia and China Still Brothers Forever?

Russia and China are brothers forever was a popular slogan in the Soviet Union time, that perfectly shows how important it is for political science to understand differences in perceptions. While in Russian culture a brotherhood can be relationships of the equal, in mind of Chinese people an hierarchy is always formed and one of the brothers has to be older, has to be a leader. Even though China has experienced a new political system and a new type of superpower, that relays more on soft power than on hard, it is struggling with the China Threat theory and problems of misinterpretations of the Harmony World concept. In order to predict the role of China in the future many specialists turn to its imperial past, the tribute system and roots of the strategic culture, so processes of a politicization of history can be clearly observed. The majority of these communities depend on the local marine resources for their livelihoods and maintain a strong bond with the sea, as their ancestors have passed down to them their maritime tradition. The satoumi practitioners have shown evidence of adaptability and resilience whilst maintaining high levels of productivity and sustainability.

Religious Heterogeneity and Civic Participation In Comparative Perspective

The effect of diversity on civic participation is a hot issue in social sciences during the last decade. While some authors point out that diversity erodes social capital and addresses political participation, other researches prove that different type of diversity (namely ethnic or linguistic diversity) have different effects on political and civic participation. The current research focuses on the effect of religious heterogeneity on civic participation, taking into account the effect interaction between the religious heterogeneity and individual belonging to a particular religious denomination. The result of multilevel hierarchical models run on EVS 2008 data shows that religious heterogeneity has a negative effect on civic participation, but the moderate effect depends on the individual religious denomination.

Unequal Social Participation in Later Life

The concept of active ageing comprises the maintenance of societal participation throughout the life span into old age. ‘Good’ ageing in line with this activity paradigm develops into a starting point of social inequality rather than being its result. Based on the German Ageing Survey (DEAS) and on the German Survey on Volunteering (FWS) we investigate the access to volunteering and to educational activities depending on social and spatial aspects of inequality. The DEAS is a nationwide representative cross-sectional and longitudinal survey of the German population aged 40 and above, so far data was collected in four waves in the years 1996, 2002, 2008 and 2011. The FWS is a representative cross-sectional survey on voluntary work, honorary office and civic engagement of the population living in Germany aged 14 and older. Data is currently available for the years 1999, 2004 and 2009.

Societal participation is socially and spatially structured: Individuals from a lower social class are less often involved in educational activities or in volunteering. The results of our multi-level-analyses clearly support these inequalities in societal participation known from the literature among individuals in both, middle and later life. The findings indicate that individuals living in economically disadvantaged regions are less likely to participate than in economically strong regions. Disadvantages cumulate in case that low individual resources overlap with poor economic conditions in the living area. Therefore, measures to facilitate participation should be taken on the local level to enhance opportunities for volunteering and educational activities throughout the life course and especially in later life. This should help to increase the participation of individuals from lower social classes sustainably.

Environmental Attitudes before and after Fukushima

The Fukushima Daiichi nuclear disaster revealed the dangers of nuclear power and might have changed people’s attitudes towards this energy source. Therefore this paper examines whether a nuclear accident like the Fukushima accident has a long-term effect on attitudes towards nuclear energy. After we describe the overall impact and trend before and after the accident for different countries we test hypotheses about the structure of the effect. On the one hand, whether the effect is temporary or persistent; on the other, whether the average treatment effect depends on individual characteristics, like age, gender, education or nationality. According to availability heuristics (Tversky and Kahneman, 1974) we would assume a temporary effect (declining media coverage, memories fading away), classical rational choice theory (Coleman, 1990) might expect a long-term effect which is caused by an updated risk evaluation due to new information we got from the Fukushima accident (e.g. how tedious it is to stop nuclear chain-reaction or a lack of trust in authorities because of bad disaster management). Using data from the latest ISSP 2010/2011 environmental module II we design our study as a natural experiment as we have both people surveyed before and after the accident. Within the causal framework of a Regression Discontinuity Design (RDD) and a Difference-in-Difference Estimator (DiD) we assume heterogenous treatment effects so that some individuals change their attitudes more drastically than others. Our results indicate that young people are more likely to be influenced by the accident while gender does not matter. Moreover we find different patterns between countries that need further research.
Creativity & Creative Class in the Transformation of Russian Society

Russia is a country of creative minds, rich in talents. Creativity - is a fundamentally new state of Russian society, associated with the formation of the creative class, the integrated group, which unites representatives of various professions on the basis of a demand of self-realization and service to the public good. Investigation of the conditions, the vector of development and activity of the creative class shows that, despite the spontaneity of social initiatives steady trend of actualization of potential creative class occurs, which gives us hope for a successful modernization of Russia, the qualitative renewal of all aspects of public life. Today Russian society gets its second wind, gets rid of “post-reform fatigue syndromes and skepticism”. It requires the formation of the creative person, creative education, creative management of all aspects of Russian society. It is with the growth of creative trends and shaping the creative society, a society of social creativity the future of Russia is linked. What responsibility has society and what a social dialogue should be to implement a real historical breakthrough depends on the creative class.

Discourse of the Integration of Society in Latvian Sociology

If sociological theory considers social integration as a universal process which involves the whole society and all types of its diversity, the public consciousness in Latvia, as well as the scientific discourse, persistently relate this term to just one dimension – ethnic. The findings presented in the article demonstrate that the scientific research on the integration processes in Latvia has become more critical towards the methodological assumptions which appeared in the 1990s, but in their entirety there is a reconsideration of the values of those ideological approaches to the understanding of society integration which first were formulated in T. Parsons’ conception. At the same time, the ideas of J. Habermas who considered it necessary to recognize a collective identity of ethnic minorities in the multicultural society might become a significant ideological resource for the research on society integration in Latvia. The article presents some data from the sociological research carried out in the largest city of Eastern Latvia – Daugavpils, the city with an ethnically diverse population. The data obtained in the run of the research demonstrate the possibility to reconcile the liberal conception of society integration in Latvia with the recognition of the value of a collective identity of ethnic minorities.

The Formation Of Political Subjects

The Formation of Political Subjects. Tenant Protest in Berlin and New York

A crucial point in the development of urban social movements is their ability to form coalitions to overcome the deep entrenched structural and discursive fragmentation and particularization of neoliberal societies. The urban seems to be the context in which this can be achieved. In current tenant protest in Berlin and New York, though highly specific in their issues and demands, we can see such an abstraction from personal interests making affiliations of broader political positions possible. In the process of legitimizing their right to stay put some of the protest groups go as far as to make universal claims to (represent) the common good.

Admission rates of patients with a diagnosis of schizophrenia and affective disorder combined decrease with increasing population growth, unemployment rates and percentage of traffic areas. Admission rates for schizophrenia are negatively related to population growth, average income and percentage of green areas, while admission rates for affective disorder combined decrease with increasing population growth, population density, average income and percentage of green areas, while higher admission rates are correlated with negative binomial regression models.

Multiple Migrations: Who Moves On and Why? – Answers From a Biographical Informed Perspective

Even though multiple migrations have and continue to gain in importance due to contemporary internationalization processes, to date they have hardly been subject of systematical examinations in migration research. Not only are the dimensions and significance of their repeated migratory movements in the society as a whole underestimated, but also bring they out a methodological challenge for social research, especially quantitative methods. The multiple transnational paths of those onward migrants usually don’t appear respectively go missing in survey statistics. Nevertheless, according to certain targeted quantitative studies a notable part of international migration can be characterized as repeat migration. Based on these data there are available on their demographic characteristics since 2005, social cash transfers (SCT) have become a legitimate and widely used instrument of global development policy. This is surprising, because development organisations have long rejected direct cash transfers, citing concerns of dependency and lacking capacity for implementation in the Global South. In this paper I attempt to explain how and why development organisations changed their position on social cash transfers. Previous research indicates that a shift in global discourses may have caused development organisations to reconsider SCT as a policy option. Therefore, using an approach of sociological discourse analysis, I check in how changes in global discourses prior to the early 1980s has led to their perception as potential drivers of development due to untapped economic potential. This shift in the perceptions of global actors legitimised social cash transfers, because they were successfully portrayed as a direct investment into the poor which can help to fulfil their untapped potential.
such as age, income, employment, educational background and country of origin. However, even less is known about their individual motivations, decision-making and experiences. In order to contribute to an understanding of who is moving on and why, results of a qualitative, biographical oriented study on serial migrants from different national and social backgrounds are presented. Therein the underlying structures of meaning and patterns of orientation given their multiple migration movements are reconstructed and analyzed as constitutive elements of their transnational trajectories and social contexts.

Challenging New Governance: Evaluating New Approaches To Employment Standards Enforcement In Common Law Contexts

A mounting crisis in employment standards enforcement is prompting experimentation in common law contexts with new instruments aiming to improve workplace regulation. This experimentation across all stages of the enforcement process indicates the increasing influence of ‘new governance’. Focusing on reforms in five countries, this paper rather raises serious cautions around ‘new governance’-style enforcement mechanisms, demonstrating that, put into practice, enforcement models envisioned in the new governance literature are not readily accounted for in the power dynamics of the employment relationship. Furthermore, assumptions about the inevitable collapse of state enforcement capacity are premature and can impede strategies for more effective ES regulation.

What's the Best Way Forward for Immigrant Workers? the Dynamics & Efficacy of Building Unions and Building Social Movements

In 2006, the peak association of the U.S. labor movement, the AFL-CIO, reversed its longstanding opposition to the legalization of undocumented immigrants and committed itself to organizing immigrant workers. Only a handful of its 57 affiliated unions actually heeded the call, but those that did successfully unionized immigrant workers in some key cities and states.

Yet, the number of immigrant workers involved in these unionization drives pales in comparison to the millions of immigrant workers involved in a very different kind of action: the massive nation-wide rallies for immigrant rights that took place in the United States in the spring of 2006. Here, too, a couple of labor unions played a critical role, both in the immediate lead-up to the rallies and 3 years earlier in their attempt to help build a national movement for immigrant rights. Two unions (SEIU and UNITE HERE) sponsored the Immigrant Worker Freedom Rides (IWFR). Bus rides of immigrant workers and activists were used to bring publicity to the plight of undocumented workers in the U.S. and also to foster relationships among local labor unions, community-based organizations, and religious, student and immigrant-right groups in the cities and towns where the buses stopped. Recent research shows that the IWFR laid much of the institutional foundations for the 2006 rallies, especially in new destination communities (Voss and Bloemraad 2011).

In this paper, I examine these very different types of campaigns—those focused on unionization and those focused on building alliances and a social movement—comparing their dynamics and effectiveness. This assessment is far from straightforward; as one has to take into account not only immediate impacts but also longer-term effects, including the backlash against immigration in some of the new-destination communities that had rallies in 2006. Moreover, this backlash continues to be conditioned on state and local political climates.

How Does Class Affiliation of Sociologists Impact Their Choice of Theoretical-Methodological Research Paradigm for Study of Social Structuration and Inequality and of Corresponding Practical-Political Strategies?

The paper proposes self-reflexive examination of the impact of the class affiliation of sociologists on their choice of theoretical-methodological and practical-political research paradigm starting from which sociologists attempt to explain and understand discontinuities in social structuration and propose corresponding strategies for conservation, mitigation or elimination of socially structured inequality.

The main hypothesis of the paper is that sociologists like other highly educated experts are affiliates of the new small bourgeoisie, in turn, subscribing to class affiliation. Sociologists like other professionals, possess formal certificate of acquired specialist knowledge. Diploma makes accessible to them salaried employment and work place privileges of performing planning and commands’ mediating work functions, but does not relieve from permanent worries not to lose them and fall into the ranks of the manual wage laborers in times of high unemployment. This contradictory place in the class division of labor of direct producers of legitimizing ideologies, leaves sociologists greater margin for the choice of the world view and social standpoint than to the affiliates of the main antagonistic classes.

The core finding of the paper is that from the time of institutionalization of the sociology as the academic discipline, the majority of sociologists tend to retain/improve the standpoint/interest of exploiting class of commanding managers to conserve or only to reform the existing relations of reproduction of civil society’s social life and inequality, articulating simultaneously the corresponding main-stream consensus or conflict version of the positivist “old-materialistic” and/or phenomenological-hermeneutical “idealist” research paradigm of eternal hierarchically structured social structure/stratification. The minority chooses to attempt to come over to the standpoint/interest of the class of exploited executors, to overcome class division of labor which reproduces social inequality and to establish the relations of self-managed “socialized humanity”, articulating simultaneously the corresponding critical “new-materialistically inverted dialectic” research paradigm of liberating potential of self-organized class struggle.

Social Media Collaborative Storytelling: The Occupy Movement and the Narratives Constructing It

Social Media developed in the 21st century have become tools for people to transmit and express their opinions for the global political scene. At the same time, worldwide recession and financial crisis has lead the people to make use of these technologies in means that were never intended to when they were launched. Looking specifically at the Occupy movement and the role of social media, this paper will argue that Twitter cultivated the ideal conditions for this social movement to bring together online and offline activist communities that shared common values. Considering the use of Twitter during a number of protests that adapted the ‘Occupy’ name, slogans or rationales, incubated in New York, London, Madrid and Athens, this paper will be premised upon the following advances. First, that this platform is increasingly evolving into means for collaborative storying by the social movement activists, endowing them with a collective identity and a sense of belonging. Twitter’s discursive identity appoints an interactive storytelling by the social movement activists, endowing them with a collective identity and a sense of belonging. Twitter’s discursive identity appoints an interactive storytelling by the social movement activists, endowing them with a collective identity and a sense of belonging. Twitter’s discursive identity appoints an interactive storytelling by the social movement activists, endowing them with a collective identity and a sense of belonging.

The Effects of School-to-Work Transition Pathways on Economic Outcomes through the Great Recession

Whereas the term “school-to-work transition” (STW) implies a clear, discrete event, this increasingly prolonged transitional period is not always unidirectional and typically includes involvements in both school and work. Destandardization in the STW transition makes it difficult to assess the extent to which young people today “flounder” during this period. Using longitudinal data from the US Youth Development Study and hierarchical latent class analysis, this paper examines the interplay of educational and career attainment and its longer-term economic consequences. Four STW pathways were observed from age 18 to age 30: two groups that attain careers through postsecondary education (via Bachelor’s or Associates/Vocational degrees) and two floundering groups that do not (those with some college and those with no postsecondary experience).

Regression models demonstrate the negative effects of floundering pathways on economic outcomes and the heightened difficulties of those pursuing these pathways during a recession. While the High School Flounders were consistent in the worst off, the Some College Flounders (SCF) also experienced relatively poor economic outcomes. Both pre-recession (2005) and in 2009, respondents in the SCF pathway were less likely to have a savings account and own a home, and had more financial problems and lower job satisfaction than those who moved into the labor force with Bachelor’s degrees. Even starker were their circumstances in turbulent economic times, with the SCF pathway now more likely to be unemployed, receive financial help from parents, and to have recently lost a job. This pattern of most differences between the SCF group and the Bachelors into Career group were non-significant, despite their unequal educational attainments, suggests that the pathway from an Associates or Vocational degree to a career is a viable alternative. We discuss implications of these findings both for the U.S. context, as well as for transition dynamics in other countries.

Contrasting Young People's Personal and Political Uses of Social Media

Recent debates have highlighted the increasingly blurred boundaries between everyday social media use and the use of social networks and its use for broader engagement with politics. Young people use social media extensively and many see that active use of social media by political actors will enhance young people's reconnection with formal politics. In this paper we analyse how young people themselves conceptualise the relationship between their everyday social media use, the use of it for political expression, and how both politicians and celebrities try to engage with them in politics. Most existing studies tend to treat young people's political engagement as homogenous; instead we analyse young people's attitudes towards political use of social media by comparing both active participants with non-participants, as well as those from an advantaged social-economic status with less advantaged young people. This data analysis is based on 12 asynchronous online group discussions participated in by 108 young people in Australia, UK and the USA. In each country the groups were divided into four segments: high/low participation by high/low SES to ensure that the discussion groups themselves had high homophily.

Social Reproduction Strategies and Participation in Higher Education during the Economic Recession

The current economic crisis in many Southern European countries has inevitably affected the number of students (male and female) progressing to higher education. The way young individuals and their families make their choices for the future is connected to the new social realities that this crisis has created. New inequalities are expected to take shape; such inequalities for example seem to arise from the unequal horizons for choice making. Middle class students and their families engage in choice-making in higher education with broader options while lower classes have restricted horizons often stemming from mechanisms of self-selection and self-exclusion. These eventually produce stratification in the educational system due to factors that are not always educationally related or connected to individual characteristics. The decision making process needs to be located in macro sociological factors that relate to the structure of available opportunities on offer.

Experiencing Interethnic Relations in Cypriot Schools

The aim of this paper is to examine the way teenagers experience and report interethnic relations with emphasis on interethnic violence in the school environment. It will report findings from a qualitative investigation from an EU funded research project titled: “Children’s Voices: Exploring Interethnic Violence and Children’s Rights in the School Environment”. The qualitative investigation included semi-structured interviews with school teaching staff and counselors and with pupils whose work was related with interethnic relations in schools. Additionally, eight focus groups with children (4 in primary and 4 in secondary schools) were conducted to explore teenagers’ perspectives. Findings indicate that in Cyprus there is an environment of growing concern about the presence of migrants. People coming mostly from Asia and Eastern Europe and people of Islamic faith appear to be more vulnerable to prejudice. Overall there are mixed perceptions about interethnic tolerance in schools ranging from negative to (politically correct) positive ones. While the prevalent discourse of multiculturalism in Cyprus uses the rhetoric of integration, what appears to be happening in the Cypriot educational system is assimilation practices focusing on language acquisition. Whenever the latter is successful potential tensions tend to minimize. These findings point to interesting directions for educational policy regarding the whole gamut of interethnic relations in Cyprus at a period in time when the current economic crisis appears to have largely negative effects on multi-ethnic coexistence.
While civil violence is almost always countered by state violence, the opposite is not true. It is unclear, according to Christian Davenport, whether state violence triggers or contains civil violence. In fact, one of the most difficult issues in the study of contentious politics is to predict civil society actors’ reactions to state violence. Will those who have witnessed state repression pick up a weapon in anger or quiet down in fear and despair?

This paper tackles this repression-dissent problem. The literature on collective violence emphasizes the importance of institutional and structural contexts—e.g., political regime characteristics, state capacity, ethnic, religious, and class cleavages, levels of socioeconomic development, etc.—to understand the repression-dissent dynamics. A major stumbling block in the effort to carry out such a research agenda is methodological. On one hand, small-N case studies, while good at revealing exact processes of state and civil society interactions, cannot measure adequately the effect of multiple contextual factors. On the other, typical quantitative analyses of annual event counts, while good at estimating the contextual effects, fail to detect interactive dynamics.

By conducting a cross-national comparison of contentious event sequences, this study attempts to examine both the contextual effects and the interactive dynamics at the same time. We use a data set of 10 million events world-wide, reported by Reuters, between 1990 and 2004. This unique data set records event information at a daily—instead of yearly—basis and, thus, helps us detect interactive dynamics. Moreover, we distinguish the actors who are more likely to resort to violence after state repression from the actors who are more likely to give up any further attempts to make claims by using multilevel analysis of actor-target interactions. This paper presents an original analysis of national contexts, actor characteristics, and actor-target interactive dynamics.
porary sociological writings go back to the concept of swarms to describe internet collectivities. The notion of society does hardly appear within the sociology of the internet. Instead of simply taking that as a sociological blind spot, this paper argues for an empirical perspective. Discussing different supplements (Derrida) of the notion of society within internet culture it thus addresses internet practices as societal practices. Internet communities are social practices – and within modern society there has always been a typical figuration of proximity and distance, fluidity and diversity. But at the same time the different supplements for the notion of society could indicate that societal forms are changing (through the influence of new media practices), e.g. the figuration of proximity and distance or the figuration of privacy and publicity. For the special case of the internet, this might be an instance of “writing (society) into being” (boyd). The paper discusses the sociological discourse on internet collectivities from an empirical point of view. It emphasizes that internet practices take place within society. And it works out how the new supplements to/ of the notion of society could be indicators for social transformations.

WAGNER, ELKE* (JGU Mainz, wagner@uni-mainz.de)
Internet Communities As Intimate Publics

The culture of the internet has long been described as community culture (Rheingold, Wellman, Thiedeke). But what does community here actually mean? On the one hand there is a sort of community feeling and support in online social groups (Bourdieu, Granovetter). On the other hand internet communities are often communities between strangers who have never met or will never meet. Even in Social Network Sites like Facebook the Friend- ing-Practices don’t often mean true friendship but simply contacts between different addresses. Therefore Danah Boyd (2006) has suggested to describe community-building on the Internet as “writing community into being”: communities don’t exist per se, they have to be fabricated by writing practices. This paper wants to illustrate these community writing practices. It shows on the basis of screen-shots from Facebook and interviews with Facebook users how the special feeling of community does emerge here: On the one hand community means here an intimate sphere where contents between true friends are published. On the other hand contents remain indeterminate enough to include different friends from the contact list. Thus, community appears in Social Network Sites like Facebook as intimate publics. They are intimate because they assemble a list of close persons, but they are publics because there are different circles (Simmel) of close persons who have to be integrated in the writing practices. That is why indeterminate writing practices emerge.

True Finns and Non-True Finns: The Minority Rights Discourse of Populist Politics in Finland

This paper analyses the minority rights discourse found in political statements of the populist party called the True Finns. The party won a historic electoral result in the Finnish Parliamentary Election in 2011, increasing its share of the votes from 4 to 19 per cent. A theoretical framework for this paper is provided by research about populist politics. On the other hand internet communities are often communities between strangers who have never met or will never meet. Even in Social Network Sites like Facebook the Friend- ing-Practices don’t often mean true friendship but simply contacts between different addresses. Therefore Danah Boyd (2006) has suggested to describe community-building on the Internet as “writing community into being”: communities don’t exist per se, they have to be fabricated by writing practices. This paper wants to illustrate these community writing practices. It shows on the basis of screen-shots from Facebook and interviews with Facebook users how the special feeling of community does emerge here: On the one hand community means here an intimate sphere where contents between true friends are published. On the other hand contents remain indeterminate enough to include different friends from the contact list. Thus, community appears in Social Network Sites like Facebook as intimate publics. They are intimate because they assemble a list of close persons, but they are publics because there are different circles (Simmel) of close persons who have to be integrated in the writing practices. In connection with the Fifteenth Conference of the Parties to the United Nations Framework Convention on Climate Change (Cop-15) in Copenhagen 2009, many activists had (at least reasonably) high hopes about successfully pushing for a new international climate agreement. After the complete stalemate between different country positions in Copenhagen, many climate activists lost their faith in the possibilities of achieving substantially changed international climate policies through the Cop meetings. Four years later, facing the Cop-19 meeting in Warsaw 2013, the climate movement mobilizes protest in a political situation with ostensibly more limited political opportunities. How do participants’ motives for protest and sense of efficacy vary between two equivalent climate protests when political opportunities change over time? The paper also explores shifts between the two points in time regarding what political strategies the participants in transnational climate demonstrations claim to prioritize. This is analysed based on two surveys of protest participants, one collected at the largest demonstration during the Cop-15 meeting in Copenhagen 2009, and the other one at the main climate demonstration during the Cop-19 meeting in Warsaw 2013. The data collection is based on a strict standardized methodology established in the international research programme CCC (Caught in the act of protest, Contextualizing Contention) which ensures reliability as well as comparability across protest events. Inevitably, the research design not only involves comparison of cross-sections of climate protest participants over time, it is simultaneously a comparison of two national mobilizing contexts. However, these two aspects can be sufficiently disentangled by controlling for demonstrators’ country of origin in the highly transnational demonstrations. The study aims to contribute to current scientific discussions about protest mobilization, as well as to tap into the contemporary developments of the (European) climate movement, from the perspective of individual climate protesters.

Variations of Stressful Work and Effects on Health after Labour Market Exit. Results from Share and Elsa

Recent research has highlighted the importance of former life stages in explaining social inequalities in health at older age. In this paper, we describe working conditions during adulthood and analyse their influence on health after labour market exit. Analyses are based on two longitudinal studies with comparable information across 14 European countries: the English Longitudinal Study on Ageing (ELSA), and the Survey of Health, Ageing and Retirement in Europe (SHARE). We measure working conditions in terms of psychosocial stress at work (as defined by the demand-control and the effort-reward imbalance models), as well as working careers are regrouped using sequences analyses. Moreover - given cross-national dataset – we explore the relationship between specific indicators of social and labour market policies (e.g. expenditure on active labour market policy) and working conditions. Results show important variations of working conditions according to gender, socioeconomic position and countries. In addition, results illustrate the importance of work and employment for health among older adults, where effects of stressful work and unstable careers on later health were more consistent for men.

They Need for Preparedness in Communities?

According to the UN framework, disasters are natural hazards (e.g. floods, earthquakes, hurricanes) that cause human suffering. However, the term community needs to be understood in a broader social context, as it includes not only individuals but also institutions and organizations that provide support to people in need. Therefore, a community is defined as a group of people who share a common interest or goal, such as disaster preparedness. In this study, we explore how different communities respond to disasters and what factors influence their level of preparedness.

Disaster Preparedness Among Older People with Long-Term Care Needs and Family Caregivers: Who Is Vulnerable and What Do They Need for Preparedness in Communities?
Background: Hurricane Katrina in the U.S. highlighted the potentially fatal effects of a natural disaster on older individuals. This experience was reinforced by the Great East Japan Earthquake, where community-dwelling elderly were again at the greatest risk of mortality. Understanding the needs for and concerns of older persons with long-term care needs and their caregivers is vital to the development of public health programs for community level disaster planning.

Purpose: The preparedness of community-dwelling older people with long-term care needs were examined to identify characteristics of care-recipients and caregivers that are associated with worse preparedness and greater concern.

Methods: A self-administered survey among family caregivers of older Japanese with long-term care needs (n=952) were conducted in 2011. Logistic regression analysis was used to identify the predictors of disaster preparedness, including evacuation plans and caregiver’s concern about preparation. Data were analyzed in 2013.

Results: Most older people had no concrete evacuation plans, and those with dementia were 40% less likely to be prepared. Caregivers who were responsible for older persons with worse mobility, as well as those in worse health or poor financial situations, reported higher levels of anxiety about their disaster preparation. However, more experienced, wealthier, and better socially integrated caregivers in the community were more prepared.

Conclusions. Older people with long-term care needs are at heightened risk in disasters, and rely upon caregivers who may be ill-prepared to respond in emergencies. Education of caregivers and development of community support programs could provide important sources of assistance to this vulnerable group.

Class was determined using Florida’s (2012) scheme; specifically: “super-creative” (n=99), creative professional (n=110), working (n=83), and service and sales (n=281). An ANOVA indicated that working class participants were employed significantly more hours (M=52.1) than super-creative (M=46.7), creative professional (M=47.5), or service and sales (M=45.7), employees. Dependent t-tests examined the discrepancy between the three needs during leisure, and during work, by class. Results indicated that autonomy was significantly greater during leisure regardless of class; competence was significantly greater during work regardless of class; and belongingness did not differ by class. A second series of dependent t-tests examined the difference between the three needs during leisure, and during work, by class. Results indicated that: (a) during leisure, autonomy was significantly greater than belonging except for working class Chinese, and belonging was greater than competence for creative professionals and service workers; and (b) during work, belonging and competence were both greater than autonomy, regardless of class.

These results are noteworthy because they: (a) do not support Florida’s (2012) contention that the super-creative class’s leisure and work overlap; (b) suggest that while autonomy is the primary need satisfied during leisure, it is tertiary to competence and belongingness satisfaction during work, regardless of class; and (c) are not always congruent with findings from a comparable study conducted in Canada (Walker, & Glover, 2013).

Behavioral Versus Questionnaire Measures of Influence

In this project we examine the relationship between attitudinal measures of expectations and influence and a behavioral measure in an experimental setting. The attitudinal measures are typical questionnaire items regarding a study participant’s views of themselves, a partner, and their task interaction. The behavioral measure, Ps, is the standard dependent variable for the kinds of experiments from which the data comes. P(s) reflects the participant’s resistance to influence from his/her partner and is thought to reflect underlying expectancies and influence and a behavioral measure in an experimental setting. The attitudinal measures, equality, are of particular importance. In this study we regress P(s) on the series of attitudinal questionnaire items regarding expectations, influence, and affect. Results indicate that there is a strong relationship between attitude and behavior. Further, attitudes about ability, particularly the partner’s ability, are more closely associated with behavioral influence than affective sentiment is.
Forgotten Estates: The Precarity of Neighbourhood Restructuring in Salford, UK

Since the 1980s, the Northern English city of Salford has undergone intense deindustrialization and been subject to systematic waves of urban regeneration. A key aspect of these regeneration efforts has been to rebrand and reconstitute the city and its districts from ‘grimy’ and ‘old Salford’, to dynamic and cosmopolitan. Under the aegis of the ‘New Deal for Communities’ policy, one specific district in the mid-2000s was earmarked for a distinct process of redevelopment entailing the demolition of public housing stock and the construction of private housing developments within newly enclosed estates and along the profitable local riverside. Ten years on and amid a challenging fiscal climate, this redevelopment vision has largely stalled resulting in an amalgam of complex neighbourhood impacts and processes encompassing partially demolished public housing estates, threats of further eviction for housing tenants, the arrival of new private owners and a severly disinvested community infrastructure. Drawing on a programme of recent qualitative research, this paper examines the impact on new and established residents of this stagnated and disrupted restructuring process to unpack the damaging, but under-researched effects of a neoliberalised regeneration logic.

Film Screening 1: Jeppe on a Friday (2012) + Discussion: Contradictions in the Cracks: Filming Johannesburg

JEPPE ON A FRIDAY (2012), DOCUMENTARY FILM (SOUTH AFRICA / CANADA), ENGLISH, ZULU
DIRECTED BY SHANNON WALSH & ARYA LALLOO

Film synopsis: A city can be seen in news reports, crime statistics or Hollywood blockbusters. It can be explored through guided tours, from behind car windows or through history. “Jeppe on a Friday” explores a different city: the Johannesburg that exists through the men who occupy it.

Discussion: All visual meaning-making consists of choices: what we see and what we don’t see. In our documentary project on Johannesburg, Jeppe on a Friday, layers form upon layers of what is seen and what is hidden. Part of this were conscious choices made for the stories we wanted to tell and the images that would reflect the city we saw in front of us. But part of the layers and visibilities were also about the way in which the city, the community, chose to reveals itself to us. The tensions between these various ways of seeing are present in film, and often emerge in the discussions that followed as we presented the films to different audiences. Of course all filmmaking always consists of making choices, but not all choices are always allowed. The city, then, becomes a protagonist and a storyteller. Jeppestown is one more collaborator in the team of filmmakers creating this imagined, and real, portrait. What can we learn by digging up these visible and invisible traces left in the film? What can we see about our own practice as image-makers through looking more closely at what remains?

WALSH, SHANNON* (City University Hong Kong, swalsh@cityu.edu.hk)

Film Screening 2: St Henri

On August 26th, 2010, sixteen filmmakers followed multiple stories in the Montreal neighbourhood of St-Henri. The result is a touching, funny and fascinating day-in-the-life of this ecletic community. Doris travels the streets collecting bottles; Belinda is a dynamic hair stylist from Togo; Babyface, the 15 year old Canadian feather weight boxing champion prepares for a match; Robert and Edmée enjoy their golden years together; Danielle, an urban explorer scales abandoned buildings and descends into St-Henri’s sewers. These are just a few of the characters we follow in “St-Henri, the 26th of August”, a film that asks what community means today, and how we inhabit our neighbourhoods.

Inspired by the 1962 ONF film ‘A St-Henri le 5 septembre’, this unique collaboravtive film brings together some of the brightest talents in the contemporary Montreal documentary community to capture this story.

Explicating Individual Training Decisions Based on Instrumentality Theory

Participation of individuals in continuing vocational training (CVT) stagnated or even declined since the late 1990s in numerous countries. In light of the long-standing predictions of an increasing need for CVT, this development is puzzling.

Several theories exist to explain CVT participation. Nevertheless, most empirical studies use merely personal and occupational characteristics as the main predictors of CVT participation. Also, many studies scrutinize the decisions of either participants or non-participants relying on ex-post survey data. Respondents, however, might rationalize their past behavior and give distorted assessments of their ex-ante training motives. Hence, these works do not provide an integrated explanation of individual training decisions and give no answer as to why participation does not live up to scientific and political expectations.

We apply instrumentality theory to explicate individual training decisions. Based on novel individual data, we estimate the effect of subjective expected utility (SEU) from CVT, the effect of restrictions, and the effect of personal characteristics on the willingness-to-participate. To construct individual SEU-scores, we confront interviewees with a specific training scenario and gathered information on:

- importance-ratings of nine potential CVT-outcomes,
- the perceived probabilities that successful training would actually help achieve each outcome,
- the perceived probabilities of training success.

Results show:

- SEU is a main driver of training decisions.
- Financial restrictions are most decisive for persons with higher training tendencies.
- Lack of time helps explain why some individuals are entirely unwilling to participate.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The regional infrastructure is a crucial training determinant. Age and vocational degree do not directly affect training decisions. Yet, persons in specific occupational settings do exhibit a lower training tendency. Also, training behavior of these persons appears to be more rigid and less likely to react to changes in their cognitive training attitudes.

Encountering the ‘Other’: Interpreting Student Experiences of a Multi-Sensory Museum Exhibition

The Immigration Museum in Melbourne, Australia launched the Identity: Yours, Mine, Ours (IWO) exhibition in 2011. Aimed primarily at young adults and secondary school students, this major long-term installation seeks to foster reflection on identity and belonging as well as dialogue about racism through a reflexive, empathetic and interactive museum experience. Drawing on findings from three secondary schools, this paper reflects on a multi-method approach that included narrative interviews, video diaries and focus groups with Year 11-12 students as well as key informant interviews with principals and teachers.

While focus groups were a catalyst for dialogue about everyday experiences with cultural diversity and racism, the ‘identity’ lens privileged in these groups could not account for the complexity of embodied experiences of belonging that were, to at least some extent, captured in narrative interviews and video diaries. For example, the narrative interviews allowed students to talk about themselves in relation to aspects of the exhibition rather than directing and framing their experience a priori, thus capturing a complex understanding of the students’ IWO experience through an entanglement of their life worlds, at home and school.

Overall, the combination of qualitative methods revealed the ways in which an interactive and immersive museum space can support students to encounter and engage with individual stories and faces, move beyond dichotomised interpretations of ‘the Other’. We conclude by discussing the potential of multi-method qualitative approaches to draw upon students’ meaning-making, including the narrative barriers experienced in multilingual contexts, in order to provide a rich emic perspective on multi-sensory exhibitions.

Internet Public Sphere Under Construction: A Grounded Theory Analysis to Sina Netizens’ Comments on “Toilets Standard”

The dilemma for China to construct its internet public sphere does not result from the lacking of the same physical foundation as the western world has. On the contrary, the structural constrains such as no clear boundaries between public and private, the inner-circle communication oriented caused by “Ch чувств”, as well as the non-stand against as the ‘weapons of the weak’ do matter, that finally prevent from the opinions transforming from personal to public. To break through the deduction circulation that whether the virtual or physical public spheres should make the first move, this paper try to get the answer from the induction from the Comments on “Toilets Standard” by Sina Netizens using the grounded theory analysis method. It is easily to find out after a series of coding that, the public all agree that this standard has very bad operational management on a more scientific and democratic basis from the central government and projectism. This regulation of course didn’t answer the call for putting decision-making in a democratic and anti-projectism context.

Labor Migration Regime and Factory Dormitory in Taiwan

Taiwan adopts guestworker scheme to hire migrant workers from Southeast Asia as a means to offset its nationalistic policies in the region. Manifested in such incidents as territorial disputes (between Japan and China over the Senkaku/Diaoyu islands, as well as between Korea and Japan over the Dokdo/Takeshima islands) and the debates over the so-called “historical consciousness” and history textbooks. How can we make sense of such a seemingly paradoxical situation, and what are possible outcomes of this contradictory development? This paper is a modest attempt to explore the answers to the above questions from a sociological perspective. Drawing on the theoretical insights from British cultural critic Raymond Williams and German sociologist Max Scheler, this paper provides a preliminary examination of what can be called “structures of feeling” in East Asia. Three dimensions of these structures are outlined for analysis: (1) grief/victimhood and the politics of memory; (2) resentment (or resentiment in Scheler’s terms) and value systems; and (3) power relations and the multi-layered structures of resentiment in East Asia. It is argued that the true reconciliation among different people in this region has to be reached before any ideal of Asianism or East Asian Community can be carried out. Towards the end of the paper, the implications for the reconciliation in the region will be further explored.

The (Im)Possibility of the “East Asian Community”: Reflections on Nationalist Sentiments and the “Structures of Feeling” in East Asia

The recent development in East Asia has witnessed two contradicting trends: on the one hand, there have been reviving interests in Asianism (especially inspired by Takeuchi Yoshimi) and/or the so-called “East Asian Community” in both official and intellectual discourses; on the other hand, there has been an escalation of nationalistic policies in the region, manifested in such incidents as territorial disputes (between Japan and China over the Senkaku/Diaoyu islands, as well as between Korea and Japan over the Dokdo/Takeshima islands) and the debates over the so-called “historical consciousness” and history textbooks. How can we make sense of such a seemingly paradoxical situation, and what are possible outcomes of this contradictory development? This paper is a modest attempt to explore the answers to the above questions from a sociological perspective. Drawing on the theoretical insights from British cultural critic Raymond Williams and German sociologist Max Scheler, this paper provides a preliminary examination of what can be called “structures of feeling” in East Asia. Three dimensions of these structures are outlined for analysis: (1) grief/victimhood and the politics of memory; (2) resentment (or resentiment in Scheler’s terms) and value systems; and (3) power relations and the multi-layered structures of resentiment in East Asia. It is argued that the true reconciliation among different people in this region has to be reached before any ideal of Asianism or East Asian Community can be carried out. Towards the end of the paper, the implications for the reconciliation in the region will be further explored.

The Quest to “Overcome Modernity”: War, State-Building and Nationalism in Japan and China

Drawing on Japan and China as two illustrative cases, this paper intends to shed new light on our theoretical understanding of modernity by articulating the relations between war, state-building and nationalist discourse in the non-Western context. From its very burgeoning, the historical formation of modernity in East Asia has been intertwined with the experience of the defeat of war (or war threat) that, in turn, gives rise to nationalism. Moreover, understood as originating from the West, modernity to the East has been regarded as something to be achieved and overthrown at once. On the other hand, it is also contended
that Western modernity has intrinsic contradictions that will eventually lead to self-destruction, of which the only redemption is through the alternative path provided by the East. Such a dichotomous view of modernity has been dominating nationalist discourses in many instances in East Asia. Thus, nationalist projects in East Asia often have a double task: to pursue modernization through state-building, on the one hand, and to “overcome (Western) modernity”, on the other. However, due to the legacies of war, which leads to a lack of reflection on state ideology and violence, such nationalist projects often fall into the trap of modernity itself without being able to become the genuine critique of the latter. This paper will use the attempt to “overcome modernity” in wartime Japan and the search for “anti-modern modernity” in contemporary China as two examples to examine such a paradoxical situation. It is concluded that, to better theorize (and critique) modernity, the intertwined relationships between war, state-building, nationalism and global inequality have to be taken into account.

Feeling Good about the Iron Rice Bowl: Economic Sectors and Happiness in Post-Reform Urban China

Situated in China’s market transition, this study examines the relationship between economic sectors and individuals’ happiness in post-reform urban China. Based on pooled data analysis of restricted urban samples from the China General Social Survey (CGSS) 2003, 2006 and 2008, the subjective premium enjoyed by workers in the state sector is noteworthy: individuals working in the state sector have significantly higher levels of happiness than their counterparts in the private sector, other things being equal. After controlling for selectivity in mobility into the private sector, differences between those remaining in the state sector and those moving from the state to the private sector are highlighted: those remaining in the state sector are significantly happier than former state sector workers who moved into the private sector, whether the move was voluntary or involuntary. Possible underlying causes of these psychological costs are further explored: institutional segmentation in the allocation of social welfare benefits rather than psychological factors serves as the primary nexus linking state-to-private mobility and happiness. On the one hand, those who moved voluntarily experienced a trade-off of enjoying higher paid-offs while losing a sense of security. On the other hand, involuntary, downward mobility leaves long-term psychological scars to those who experienced layoff or unemployment after controlling for social welfare benefits. People who experienced sectoral mobility, whether voluntary or involuntary, suffer from loss of the iron rice bowl. Results from robustness checks indicate that neither observed nor unobserved confounding factors, if any, would bias our conclusions. This study emphasizes the role of social security as an important dimension in determining individuals’ happiness that should be explored in future research.

Re-Territorialization and Social Resistance in the Remaking of Dafen Village, Shenzhen, China

After exhibited in Shanghai EXPO2010, Dafen Oil Painting Village has been advocated as an innovative “best practice” of governing that has transformed urban villages with low-skilled labors and chaotic landscape into a cultural cluster. Many scholars have noted that, in China, couples of famous cultural clusters have emerged and prospered in places with a near vacuum of governance, such as villages or remote suburbs, only to drastically change upon the extension of state governance. Nevertheless, there seems to be a marginalization of scholarly attention to the trade-painting community of Dafen Village, perhaps due to the common critiques on authenticity of trade-painting industry and thus, negligence of everyday life of trade-painting workers and their struggles. What concerns us is the changing landscape of social relations when a particular area is demarcated as a special cluster subject to the state’s regulation in name of objectifying the imagined economy. Instead of debating the nature of trade-painting industry, we argue that the remaking of Dafen Village into a cultural cluster is a project of re-territorialization, driven by the state with a market mindset. The fabrication of the cultural thesis into the settlement of the trade-painting community entitles the state to try new logic and new forms of inclusion and exclusion. More specifically, we are concerned about the differentiat-ed treatment given to different social groups through calculated policies and the corresponding social struggles of various social groups for their rights. Particular attention is given to two major calculated rules: spatial planning for land use regulation and differentiated welfare access rights. Through the study, we attempt to offer a critical yet nuanced perspective toward the heterogeneous society and changeable alignments or blurred boundaries between the state and society in the dialectic process of re-territorialization and counter-territorialization.

Gender Differences in Social Quality in Taiwan

This paper will try to explore the social quality through gender lense. Taiwan is facing a transition in terms of gender equality and social progress. However, unstable and anxious social atmosphere tend to occupy the society quite often. This paper is going to see whether there in gender difference in perception of social quality.

The data is derived from 2nd wave SQS survey done by National Taiwan University. This questionnaire has been originally designed by the Seoul National University and modified by ACSQ network and Taiwanese SQ team member. Here are about 1200 sample are collected and CATI system has been utilized during data collection. Stratified random sampling has been used for sample representation purpose.

The data will address that here is gender difference in subjective feeling about social inclusion and social empowerment. Women compared their counterpart tend to be more satisfied in those area. More detail will be discussed in this paper.

Effects of Social Capital on the Psychosocial Development of Children in Middle Childhood in China

In this analysis, the effects of social capital (including family, school, peer and community social capital) on the psychosocial development of children from trade-painting families in China have been investigated. Five dimensions of psychosocial development are analyzed, including social competence, emotional competence, self-esteem, resilience and pro-social behavior. In total, 140 children studying in grades 4 to 6 from two primary schools in Tianjin have involved. And all of the participants are selected randomly. The outcomes suggest different effects of social capital on the five dimensions of psychosocial development. The interaction effect between family and community social capital significantly affects children’s social competence, emotional competence and resilience at the same time. School social capital and peer social capital are interacted, and influence emotional competence. Meanwhile, pro-social behavior of children and community social capital has significant effect on resilience. However, except for the direct effect of family social capital on social competence, no other direct significant effects of social capital have been found surprisingly. It is also surprising to find no significant effects of social capital on self-esteem or pro-social behavior, which is conflict with the current literature from Western culture. The outcomes from empirical analysis suggest that, simple social capital can not promote the psychosocial development of children in middle childhood in Chinese context. To strengthen the interaction between family and school, school and community, and family and community, will be very important to improve children’s psychosocial development level. Furthermore, more potential predictors are supposed to be function to promote self-esteem and pro-social behavior in Chinese context, such as cultural capital.

The Guanxi Hierarchy - Family Ties and Finance in China’s SMEs

In his seminal work, From the Soil, Xiao-tong Fei found that solidarity in social ties fades with distance from primary group relations. Thus the power of guanxi (i.e., connections or relationships) would differ according to it’s source. Most powerful would be guanxi based on kinship, with the power of such connections fading as one moved down the scale from kinship, to regional location, thirdly to school ties, and finally to business ties. Fei’s early work has returned to prominence in analyses of group ties in private enterprise, following market reforms over the past four decades. For instance, Yu-sheng Peng (2004) highlighted the economic benefit of kinship networks in China’s rural industrialization programs. He found that kin solidarity played an important role in protecting the property rights of private entrepreneurs. In the absence of credible market institutions or a legal order protecting property rights, kinship ties reduced transaction costs during the early stages of market reform. Yan-je Bi (2009) broadened the thesis, arguing that the emergence of private firms can be traced back to guanxi networks. However, He and Jia (2005) discovered a reverse hierarchy in the strength of guanxi ties. They found business-based guanxi gaining prominence more recently in the management and operation of domestic private firms.

I look then to the pattern of guanxi ties, and relevant hierarchy in the strength and significance of such ties among owners of private enterprise. Data were drawn from about a thousand SMEs between October 2008 and March 2009. I found that strong kinship network ties were correlated with positive effects on
The influence of early trauma on the quality of life in Taiwan: The moderating impacts of religiosity

A growing body of life course research based on the Western societies has displayed the long-term negative effects of childhood and teenage trauma on life conditions in later life stages and has pointed out that religion plays an essential role in moderating or buffering the critical impact of early trauma. However, whether similar patterns appear in Asian societies remains largely unexamined. It is especially ambiguous whether the effectiveness of religion's coping impacts applies to Asian societies where religious compositions are more diversified with non-Christian religions. As a result, this research regards Taiwan as an ideal setting to elaborate the associations among early trauma, religiosity and two indicators of adulthood life quality: happiness and self-reported health.

With the utilization of the data drawn from two nationwide representative samples: the 2009 Religion Module of the Taiwan Social Change Survey (TSCS) and the Survey of Religious Experience in Taiwan (REST), three sets of questions are investigated. The first sets of analyses enable this research to ascertain the impacts of diverse dimensions of early trauma on the life quality, including quantity views (as classified as parental-related, sibling-related, self-related, and economic early trauma), and juncture views (as sorted into childhood traumas and teenage traumas). Furthermore, this research discusses whether the Taiwanese with higher level of childhood and teenage traumas tend to display higher level of various types of religiosity during adulthood, including belonging aspect (as grouped into no-religion, diffused-religion, and institutional-religion), belief aspect (as measured by attitudes towards supreme god and spirituality), and behaviors aspect (as determined by public religious attendance, private observance, and religious techniques). Last but not least, this research gauges whether the negative influence of early trauma on adulthood life quality is moderated and buffered by religiosity during adulthood.

The embeddedness of corruption in contemporary China: The Bo Xilai and Lai Changxing Cases

Economic corruption cases are a window into networks linking state office holding with wealth accumulation. This paper draws on the concept of embeddedness (Granovetter 1985) to examine two prominent cases in contemporary China. The cases are, I claim, ideal typical of agents and their networks coming into play. One is “corruption from below”. Its agent is an entrepreneur from a humble background, Lai Changxing, who forged networks with hundreds of officials in an immensely profitable smuggling operation that was exposed in Fujian Province in 1999. The other is “corruption from above”. Its agent was a high-level official born into the political elite, Bo Xilai, who accumulated great wealth through networks in his social circles that were revealed in 2013. This paper’s analysis centers on how the agents select, monitor, and sanction others in their networks. There are two key findings. One is that the networks are organized through third-parties (proxies). The other is that the networks’ institutional basis is constituted not only by trust, but also by coercion. The paper’s subsequent discussion considers some mirrored differences reflected in the humble and elite positions of the agents, and how their two kinds of networks can interact. In the conclusion, I use the paper’s argument to stress the need to develop an economic sociology of corruption.
and age discrimination in the residential area. Whether older socially deprived individuals go out during a heat wave period is not much a result of available green spaces, but rather of existing socio-spatial conditions.

Conclusion: The elderly are particularly vulnerable towards heat stress. With urban populations ageing, and urban temperatures rising, design of urban areas must increasingly consider the interaction of social and climatic factors to increase age-friendliness. Vulnerability towards heat is not natural, but produced by socio-spatial conditions and can be counteracted by community-building initiatives.

Since resources are limited, it is a common dilemma for religious organisations how much of their resources should be allocated for these different purposes. This dilemma can be approached analytically by distinguishing between Gemeinschaft-oriented and Gesellschaft-oriented activities, drawing upon Ferdinand Tonnies’ classical ideal types of social relations. Both kinds of activities are important for achieving a sustainable religious organisation with a potential for long-term growth. The author’s studies of the Baha’is and of fund-raising in Danish churches abroad provide empirical material for developing this proposition into a generally applicable model of the internal dynamics of proselytising organisations in terms of Gemeinschaft and Gesellschaft. It will be argued that Gemeinschaft and Gesellschaft are complementary to each other and not opposing ideal types of social relations. On the one hand, the organisation must fulfil the members’ expectations of Gemeinschaft – otherwise, in the long run they will become passive or even resign. On the other hand, the functioning of the organisation must not be jeopardised by neglecting the need for administrative efficiency and proper management of resources, which by definition are Gesellschaft-oriented activities. If proselytising is a more permanent activity, it requires formal organisation, rational planning and money to be efficient. When resources are limited, investing in proselytising usually occurs, at least partly, at the expense of activities that strengthen Gemeinschaft. Eager proselytising can therefore easily lead to an organisational and human strain which is not sustainable.

Older People in Public Space(s) – Engagement or Disengagement?

Background: Public spaces are in transition, and it doesn’t head towards age-friendly cities. Instead, spaces are turned into functions of mobility – lacking opportunities for social interactions and integration. This tendency intensifies in times of economic crisis with the withdrawal of public maintenance and the fortification of socio-environmental injustice. Older people are particularly affected as they are highly dependent upon their immediate residential environment for maintaining their quality of life.

Methods: The main research question is how older people cope with the deprioritisation of public places and what role the specific localities play in their strategies. A comparative case study of contrasting residential areas in Vienna, Austria, will be presented. A mixed-methods design combining both quantitative and qualitative methods is deployed.

Preliminary Results: The quality of the residential area significantly correlates to older people’s outdoor behavior. Factors that reduce the likelihood of spatial engagement are a disadvantaged neighborhood and age discrimination in the residential area. Who owns little resources is even more affected. However, older people also own specific resources that can contribute to the revitalisation of public spaces, increasing not only their own quality of life but the quality of city life in general.

Conclusion: The intersectionality of old and new dimensions of inequality – like age intersecting with education and gender – poses new challenges for environmental justice discourse. Hence, environmental justice can be discussed under the keywords of age-friendliness. Without counteraction, environmental deprioritisation and the corresponding withdrawal of older people from public space will increase the age – both in regards to health and significance. Who withdraws from public space becomes invisible in society. However, older people are also a highly competent group that is yet hardly targeted by urban revitalization initiatives. Here lies potential for inclusive ‘gentrification’ of urban areas.

Gender Equality Policy Revisited, the Case of Poland and Norway

Gender equality is one of the most complex and contested concepts in recent decades in Europe and worldwide which has been developed by academics, practitioners, and politicians. It is seen as a tool for economic growth and sustainable development. While some European countries have made significant progress as far as the gender equality is concerned, there are still evident examples of inequalities in the economic, social, and political sphere. The aim of this presentation is to discuss the possibility to use the new framework of gender equality created by the MAG3EQ project to analyse the equality policy in Poland and Norway. Comparing both models will allow to identify specific social contexts for development of GE policy in Europe and allow to answer the question if it is possible to integrate various approaches and measures to GE policy on the European level. In other words, the policy analysis in both countries will help to suggest the areas of potential improvement for gender equality policy and a new methodological framework for gender equality.

This paper will present the result of research project: Gender equality and quality of life - how gender equality can contribute to development in Europe. A study of Poland and Norway funded by Polish-Norwegian Research Programme.

WARBURG, MARGIT* (University of Copenhagen, warburg@hum.ku.dk)

Mission and Management of Meagre Resources in Religious Organisations

Religious organisations must organise labour and raise money for diverse purposes, such as preparing and holding religious feasts and social events, communicating internally and externally, maintaining property, and in most cases also proselytising, it is resource-consuming, however, to recruit new adherents and subsequently educate and socialise them into the religious and communal life.
While socio-economic-spatial divisions within cities and towns have long been evident, it is postulated they are generally considered to be growing sharper and differentiating at the scale of suburbs and neighbourhoods. This produces effects in which the poor and non-poor increasingly live apart from each other and is referred to as ‘socio-spatial polarisation’. These socio-economic-spatial processes have significant implications for the ways in which poverty and socio-economic disadvantage is being reproduced through converging socio-economic and spatialised processes. Drawing on a series of studies conducted in Victoria, Australia, and exploring social network structures and experiences of community in disadvantaged and non-disadvantaged neighbourhoods, this paper explores the implications of converging socio-economic and spatialised processes with particular focus on settings of place-based neighbourhood disadvantage. Issues addressed are: 1) discussion of findings from network analyses that show contrasting patterning of social networks between residents of poor and non-poor neighbourhoods; 2) consideration of the implications of divergent network patterning for experiences and potential of community in place-based settings for poverty reduction strategies. Network analyses use a range of methods to collect network data on residents’ networks including contact diaries, CATI surveys and ethnography and, more recently, mobile phone and Global Positioning System (GPS) technology. Evidence from these and other studies suggests that residents of socio-economically disadvantaged neighbourhoods are likely to have more local networks and fewer extra-local networks, than residents living in other kinds of neighbourhoods. These findings have significant implications for poverty reduction strategies that assume neighbourhood ‘community’ to be potentially transformative mechanisms for driving socioeconomic change at local levels. Rather, efforts should focus on understanding macro processes that are contributing to socio-spatial disconnections among vulnerable populations and developing poverty alleviation strategies that include efforts to connect residents into extra-local and socioeconomically diverse networks.

The recession of 2008-9 and the prolonged economic downturn have brought to the fore fundamental questions about the ramifications of the crisis for the working lives of diverse social groups. In Britain, a marked absence in the plethora of research projects exploring the work and employment outcomes of the crisis is explicit attention to ‘housework’. Whilst campaigning women’s organizations have made multiple predictions about the impact of crisis on the gendering of work, inside and not just outside the home, there has been little empirical attention paid to domestic work and the crisis. The evidence that does exist is patchy, often anecdotal, and hints at diverse ramifications of the crisis. This is a key gap in our current knowledge. It is significant because domestic work talks powerfully to social identity and students’ faculties. Unlike the SAT and the National Center Test, the entrance exams contribute to the maintenance of much bigger systems, outside schools.

This paper examines the various functions of examinations by comparing three countries, France, the United States, and Japan. Special attention is paid to the socialization patterns in each country. The Japanese National Center Test for University Admissions was modeled after the American SAT (Scholastic Aptitude Test), but what each test examines is quite different in terms of modes of knowledge and students’ faculties. Unlike the SAT and the National Center Test, the French Baccalaureat employs end-of-course exams. The Baccalaureat is accepted as a rite of passage to becoming “French” through the acquisition of a dialectic for writing and talking that is based on an idea of a shared culture. With this analysis of three types of examinations (contents and systems) and the preparatory education involved, the paper attempts to model different types of socialization and the links between education and society.
the tendency to have informal social interactions (e.g., discuss personal matters, share free time) with departmental colleagues who share parental status (parents or non-parents). We use social network data on about 380 faculty within the natural and social sciences at a large research-intensive Midwestern university. For the preliminary analyses, we ran OLS with permutation tests and did not find a significant gender difference in parent homophily, which was measured using the point bi-serial correlation (PBS). The next step is to run Exponential Random Graph Models (ERGMs) and test the gender difference controlling for dyadic dependence.

Why Do Organizations Form Groups?: Complex Structure and Behavior of Japanese Groups from 1977 to 1998

Although it has been a well-known fact that Japanese business groups have consisted of two types of network, the structural difference between them has not been paid enough attention to by researchers. Applying the techniques of network analysis and regression analysis to data on a total of 2,972 large Japanese firms over a 22-year period, this paper demonstrates the correspondence between network structures and the three different goal-pursuing behaviors of firms.

Corporate Complexes (i.e., the largest six cross-industrial corporate networks with a circle pattern of bilateral equity ties) had a significantly positive effect on member firms' status-oriented behavior as well as on firms' technology-oriented behavior. However, the effect on firms' efficiency-oriented behavior was not confirmed with the same dataset. Meanwhile, Corporate Groups (i.e., the seven corporate networks in the automobile industry with a tree or star pattern of unilaterial equity ties) had a positive effect on member firms' economic behavior as well as a negative effect on member firms' technological behavior. In the case of the economic effect, however, only superordinate firms benefited from corporate groups. The effect of corporate groups on member firms' social behavior was not confirmed. The patterns of group structures and member firms' behaviors did not change throughout the observation period despite the fluctuation of the macroeconomic environment.

From the analyses, these findings suggest that Corporate Complexes were a system of resource-acquiring by means of firms' high social status, while Corporate Groups were a system of making profits to sustain the costly system for subordinate firms. (For subordinate firms, corporate groups were the system for making profits to sustain the costly system for superordinate firms. (Toyo University, t_harayama@s4.dion.ne.jp)

Worlds of Nurses in the Care at Home, a Comparison France-Japan

Most of the Japanese nurses in the care at home in the regions Fukushima and Nagano are married, having children, but they had an interruption in their careers, longer than the French nurses. So we observe it in difference between length of having D.E. (Diploma of State) and experiences as nurse in the care at home. In France, the nurses in the care at home stress the activity and more exactly on their condition of exercise, at the levels of motivation and difficulty, unlike the nurses in hospitals, who like working in team, emphasize the cooperation with other professionals. The French nurses mention practically never the relations with patients' families. So, the professional world of the first ones focuses on the market arrangement, while that of the second on the industrial arrangement. In Japan, the nurses in the care at home, quite as the hospitable, suggest the relations with patients in terms of motivation and difficulty, which one understands the relations with the family of the patient. The professional world of the nurses in the care at home is characterized by the proximity or domestic convention. However, the nurses in the care at home in Fukushima differ from those in Nagano. The second criticize care managers in the point of view of cooperation. The first ones suffer from the difficult situation after the disasters to improve the quality of life of the patient, but they think of the role of the professional associations in terms of civic convention. This requirement of collective organization comes along with a bigger autonomy and, doubtless, with a grip of more important responsibility. This will have important and positive consequences on the image of the profession.

Communicating the Discrepancy: Operational Outcomes of the Activation Policy in the Field of Local Support Activities for Migrant Residents in Germany

This paper addresses the question of how migrant residents and local welfare organizations experience the recent political changes to the “activation” welfare policy in Germany.

Because of a radical transformation of the political landscape in the last decade in Germany, people with migrant backgrounds are subjected to activation politics in two ways. Since there are twice as many jobless migrants compared to Germans, the migrants are necessarily the addressees in the new job placement measures, which may be well compared to the workforce policies in the United Kingdom. Furthermore, migrants are involved in the activation scheme through the formation of an integration policy in Germany that strongly reflects the concept of activation by requiring total engagement, self-responsibility, and willingness to get involved in the life and norms of the host country.

To assess the practical outcomes of such a political arrangement in the direct surroundings of the involved actors, the authors conducted narrative interviews with migrants and local actors who are either in charge of job placement measures in the job centers or are in charge of job placement or support programs in elementary schools in migrant-dense city areas in Munich. A wide range of administrative documents were also referred to.

On the basis of these sources, this paper demonstrates the cognitive discrepancies among the actors and discusses that one of the most significant outcomes of the activation policy measures may be achieved by promoting a reflexive mindset among local institutions and migrant residents. The discussion is concluded by indicating that the operational interest of local welfare organizations is paid increasingly to enhance their communicational sensitivity so that they could deal with the highly complex demands of their individual clients; i.e., the sensitivity that relativizes the predominant distinction between Germans/non-Germans in the traditional welfare community.

The Death or the Reinventing of the Social?: A System-Theoretical Contribution to Changing the Semantics of Inclusion and Exclusion in Activation Welfare Strategies

This paper addresses the question of how the landscape of inclusion and exclusion can be recast in the light of Luhmann’s systems theory by referring to narrative interviews with local actors from migrant support organizations.

The ongoing discussions about social inclusion and exclusion can be recast in the light of solidarity, social policy, and welfare state. On the contrary, Luhmann’s systems theory concerns another tradition of “the social” i.e., the tradition of social action, interaction, and communication, and it is used in a particular way, according to his definition of inclusion/exclusion, neither membership in the legal rights nor a status in the central labor market is crucial; only communicational relevance matters. Taking this definition seriously, even a bankrupt or jobless person is economically “included” insofar as (s)he is communicatively relevant in the economic system, which finally leads us to the conclusion that there is no “social exclusion” in the “social systems.”

Applying the systems theoretical understanding of inclusion/exclusion, this paper addresses how the communicational form of migrant support organizations is changing because of a radical shift in the activation policy of the last decade in Germany. The range of political reforms is generally considered a move to a neo-liberal arrangement of the welfare state, which would be comparable to the diagnosis of “the death of the social” (N. Rose 1996).

This paper presents another scenario by highlighting that operational sensitivity is increasingly enhanced in local welfare organizations; this enhancement is meant to deal with the highly complex demands of individual clients and to ensure their cooperative engagement. Finally, it calls for “reinventing the social” (S. Lessenich 2008), particularly by aiming at a constructive contribution to link the different assumptions of the social.

The Interactional Accomplishment of “Impairment and Disability” in a Sport: From Game Analysis in Wheelchair Basketball Games

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
How can the Impairment and Disability be accomplished in the sports games? Answering this question, I apply interaction analysis and game analysis to the Wheelchair Basketball games.

The social model of disability is very important in the way that “disability” is “the Social”. But this model is rarely used for the studies of the sports sociology. The social model is simply used as a factor to block personal sports participation. However, from a viewpoint of the Ethnomethodology, we can regard the severity of the impairments and the disability as the cooperative accomplishment in / by the interactions of people. The purpose of this study is to illustrate “the sociality of disabilities” from experiences in the sports practice. In this study, I classify games of wheelchair basketball, the top-level, middle-level, low-level and examined the play in each game.

The game analysis of sports paid attention to the result of a game and illustrated each play related to the result of the game for an index. However, the game analysis does not consider that the performance of the game “achieved” something.

In the wheelchair basketball, it is empirically-known that a competition power of the team is closely concerned with the skill of the low-point player (a player with severe impairments). In the team having high competition power, the implication of a player with severe impairments may be different from a low team. In the logic of the wheelchair basketball rules, “impairments” is indispensable. The game performance shows it. While, “impairments” is experienced as difficulty in the game when the low-point player does not function effectively by the team. The negative (ATR) are two services approaches that will be highlighted as examples. HF is an intervention developed in the United States—and spreading international-ally—that provides immediate housing with low service demands to chronically homeless individuals with co-occurring mental health and substance use disorders. ATR is a program funded by the U.S. Substance Abuse and Mental Health Services Administration (SAMHSA) that engages individuals with substance use disorders to develop their own recovery goals. ATR also provides individuals with stipends that can be used to access a number of services that are not provided by traditional programs. Discussion of both service approaches will emphasize the importance of immediate access to resources through the provision of flexible services that give individuals the latitude to establish their own goals and plans for obtaining them. This presentation will focus on this emerging paradigm and the effect it is having within the mental and behavioral health fields.

Reducing Uncertainty and Improving Recovery through the Provision of Flexible Services

For many individuals living with mental health and substance abuse problems, it is difficult to obtain the safety and security that are necessary components of recovery. This is because they do not have access to recursos such as food, housing, transportation, and employment that are needed to begin the process of stabilizing their lives. When these resources are available, they are often are attached to a variety of caveats that make it difficult to exercise personal agency, another important component of recovery. Recognizing this, new approaches to mental and behavioral health care have begun to emphasize the importance of immediate access to resources through the provision of flexible services that give individuals the latitude to establish their own goals and plans for obtaining them.

This paper aims to do two main things. Firstly it provides an overview of UK housing market restructuring which has occurred as a result of longer-term shifts in tenure patterns, and shorter-term impacts of the 2008 credit crunch aftermath and the Coalition Government’s welfare and housing policies. The impact of this restructuring is that the tenure boundary between social and private renting, in terms of rents and security, is becoming increasingly blurred, while homeownership is being transformed via shifts in mortgage finance availability. The result of these trends is the end of both social renting and home ownership as we know it. Secondly, the paper focuses on London and it demonstrates how the national trends are exaggerated in the capital, partly as a result of the central London housing market providing a ‘safe haven’ in relation to global capital flows, and partly as a consequence of urban regeneration schemes which have had the net effect of reducing the proportion of social housing throughout much of London. The paper uses Census and other data to examine the dramatic rise private renting in London since 2001, a rise which is predicated on the buoyancy of the buy-to-let mortgage markets, foreign capital inflows which generate build-to-let developments, and also the increasing outflows of ex-public housing into the private rental market. The Coalition Government’s recent welfare and housing reforms, such as the ‘bedroom tax’, overlay these longer-term trends. The net result in London now is that nearly three-quarters of households are in the private rental market. The Coalition Government’s recent welfare and housing reforms, such as the ‘bedroom tax’, overlay these longer-term trends. The net result in London now is that nearly three-quarters of households are in the private rental market. The Coalition Government’s recent welfare and housing reforms, such as the ‘bedroom tax’, overlay these longer-term trends. The net result in London now is that nearly three-quarters of households are in the private rental market.

This paper sets out a framework for understanding how state-led gentrification has occurred in London with reference to public (council) housing and urban regeneration policies. It argues that these two strategies are increasingly complicit rather than distinct. Gentrification as a process is described by the social model of disability. The game analysis of sports paid attention to the result of a game and illustrated each play related to the result of the game for an index. However, the game analysis does not consider that the performance of the game “achieved” something.

Are There Only Detours and Dead Ends? Durkheimian Routes to the Suburb of Europe

The paper aims to extrapolate several qualitative hypotheses concerning detours and dead ends in social science from a case study of three generations of Polish scholars influenced by a Durkheimian school in sociology. By this, it attempts to contribute to a larger and seemingly paradoxical question: whether a foreign reception of a school of thought might lead it into a dead end?

In the narrative of history of sociology, the origins of a Durkheimian approach in Poland are associated with Stefan Czarnowski (1879-1937), a student of Henri Hubert and Marcel Mauss, the author of Le culte des héros (1919) and the founder of the first chair in sociology in Warsaw in the 1930s. On the basis of the analysis of his unpublished letters to Mauss and Hubert (rediscovered by the author

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
of the paper), the paper shows the initial organizational and cultural obstacles to the institutionalization of the discipline and to the transnational exchange of ideas. Then, it moves to the case of Czamowski's student Nina Assorodobraj-Kula (1908-1999), showing how she combined the Durkheimian thought with Marxism. Although the results of this unusual merge were interesting, the question arises whether they could be considered Durkheimian anymore. Finally, the works of a third generation (represented by Assorodobraj's students) show that what was still left from the Durkheimian core was more and more undermined by a reception of American sociology. Several tentative conclusions are drawn from this overview: 1. Although relatively influential in Poland, the Polish Durkheimians were internationally unknown, which already forms one of the dead ends of the school; 2. The way Durkheimian thought was reinterpreted, provokes the question whether it was still Durkheimian; 3. There has not been a conceptual innovation starting with the third generation. These observations can be extrapolated for the sake of future comparisons.

WAYACK PAMBÉ, MADELEINE* (University of Ouagadougou, wayack.madeleine@yahoo.fr)
Interrogating Female Household Headship from Women Heads of Household Perspective: Findings from a Qualitative Study in Ouagadougou

Background and Objective
Despite its extensive use, the notion of female headship is a matter of constant controversial debate among scholars. This paper analyzes how women household heads in Ouagadougou perceive themselves, versus the ways in which female household headship is conceptualized by researchers. Studies on female headed households are scarce in Burkina Faso, and it is our expectation that this study will contribute to fill the gap.

Methods
Semi-structural in-depth interviews were conducted to explore women’s view of and experiences on household headship, in relation with domestic power and decision-making. A sample of 20 female household heads was derived from a previous quantitative survey by using a purposive sampling method, in order to have women of different marital status and educational levels. Data were analyzed using a manual grid.

Findings
Findings show that all respondents acknowledged themselves as the current head of their respective households, even though all women mentioned the absence of a male partner as the reason why they defined themselves as the ‘head’. In terms of authority on family matters, the respondents made no spontaneous association between their being head and having domestic power nor making decisions in the household. It emerges from the responses that for female heads mothers of young children, the consistency of authority on household matters was mediated through women’s relationship with in-laws, mostly men. Conclusio

The study reveals that women’s experience of household headship differ significantly with the conceptualization of female household headship by researchers, in terms of control over family matters. While the husband/wife transition in the occupancy of household headship seems quite ‘natural’, the authority tied to this position seems to be claimed by a woman. The study challenges key conceptual understanding of female headship and current debate around the dynamics of domestic power in their household.

WEAKLIEM, DAVID* (University of Connecticut, weakliem@uconn.edu)
Explaining the Rise in Top Incomes

Since the 1970s, the concentration of income at the top has grown in most advanced capitalist nations. The standard economic explanation is that the development of information technology has increased the productivity of managers and professionals and reduced the demand for blue-collar and white-collar workers. However, the extent of growth in top incomes varies widely among countries, suggesting that it is necessary to go beyond the common technological factor. This paper suggests three factors that seem to have the potential to explain the national differences. The first is changes in the power of labor and capital. A decline in the strength of labor may have led to a decline in wages of ordinary workers and an increase in profits and the wages of top management. The second is a combination of deregulation, especially in financial markets, and the degree to which the political system facilitates “rent-seeking.” Where the “rent-seeking” possibilities for managers and top managers may have been able to shape the regulations in ways that worked to their advantage. The third is changes in social norms. There has been a good deal of discussion of the influence of social norms on pay, but most of it has focused on lower-level workers. However, it seems possible that the same factors also influence top earnings. On the one hand, a concern for reputation might put some restraint on top earnings. On the other hand, social comparison might lead to a “races” for relative position among top earners. It is possible that the increase in top earnings reflects the degree to which the forces that produced stability were weakened or disrupted.

The paper will discuss the implications of these three hypotheses and offer a preliminary test using data for OECD nations.

Policy Actions for Securing Computers

Societies rely on information technology, be it for business operations, private life, or for public infrastructures. However, IT systems are not reliably protected against attacks on data integrity or confidentiality, as the debates around the Stuxnet worm and the NSA have shown. It is expected that powerful organizations, such as foreign competitors or secret services, will launch significant attacks on businesses or infrastructures in the future. Industry cannot invest large sums to create highly secure systems, as users who did not yet suffer large damages will not be willing to pay for their development costs. Therefore, only a slow migration takes place towards, e.g., the use of virtualization to isolate sensitive or risky applications. Moreover, the paths to highly secure systems are not clear. One path would be to have careful specification, implementation and evaluation. This path is known to be expensive but would provide a level of protection far so unknown. However, even such implementations might be hacked. Therefore, a path towards provably secure systems might be preferable. Though significant progress has been made, the development of provably secure computing systems faces three challenges: first, a large open source software base needs to be created. Second, matching hardware needs to be designed and ultimately an entire secure system. Third, means need to be explored to make sure that actual implementations match the system design, without insiders planting Trojan horses, and without having any implementation errors.

In either case, a policy push is needed which must take place in at least some economically significant countries. It is needed (1) to make the problems and solutions better known, (2) to explore the costs and benefits of the paths, and (3) to make some path mandatory. The latter could be done in a gradual way, starting with some devices and applications.

Lessons Learned about Different Experimented Researcher Positions within Military Organization

This paper will focus on ethnographic methods used to analyze military organizations and groups and, more precisely about immersion which has been — and still his — a privileged tool use during my research within military universe during the last twenty years.

Four positions will be questioned. A first one, as member of the Army when I was drafted and when I realised my very first research in order to complete my master’s degree (study about incorporation and instruction of a draftee). A second one, year later when I was a researcher completely outside the institution. A third one, as PhD student financially supported by the French MOD but also in a technical way to realise my immersions in the Army, in the Navy, in the Air Force and in the French Gendarmerie. At least, my current position as a researcher and a teacher on secondment from the French University within the French Military Academy of Saint-Cyr where I conducted a research on the socialisation processes of the French Army officers through a class of cadets. Each one of those positions presents its own advantages or disadvantages, inevitably associate to the intelligible dimension of each study produced. The presentation will consequently stick to consider aspects which appear to me as most important: those relating to the posture of the researcher and his statute ; those of the delicate question of distance and the differences between the « participating observation » and the « observing participation »; those correlated with the challenge of restitution and the significant stage of the writing with a possible self-censorship; those still of the tricky question of the researcher’s identity in a male dominant universe; etc.

Elderly Suicide - A Question Of Social Standing?

The growing social inequality in Germany features a strong spatial component, which is why attention to the concentration of poverty in specific urban areas triggers so much attention, beyond just the social sciences. Subsequent we argue

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
that the reported suicide statistics in the Berlin Health Report require a closer in-
pection because the zones used in reporting are not sensitive enough to provide a
robust picture of the articulation of social status and suicide. For example, in
2009 the Berlin health report suggested that there was no relationship between
elderly suicide (individuals over 60) and social status.

Although Germans have never been healthier, or had such high life expectancy,
social inequality continues to rise. While the population as a whole is experiencing
this positive social development, it runs counter to the findings that people who
are on the periphery, those who are socially and economically disadvantaged,
experience less of this good health and extended life. Often these people are
clustered together geographically.

The identification of these zones or socially weak areas is based on the re-
search of the working group "Monitoring Soziale Stadtentwicklung" in Berlin. They
aim to describe and analyse the socio-structural transformation of parts of the
city and different districts through a statistical indicator system. Their very precise
development index for smaller spatial areas was correlated with the comprehen-
sive coroner data we collected. Then, by ranking the districts with the highest
suicide statistics and comparing them to the Berlin health report, we detected a
strong correlation between social status and elderly suicide. This suggests that
incorporating the legal and medical records from the coroner and altering the
definition of a municipal district to capture this fine level of detail establishes a
real and concerning trend.

Is Suicide a Question Of Social Standing? Elderly Suicide Rates In
Cosmopolitan Berlin

Although Germans have never been healthier, or had such high life expectancy,
social inequality continues to rise. While the population as a whole is experiencing
this positive social development, it runs counter to the findings that people who
are on the periphery, those who are socially and economically disadvantaged,
experience less of this good health. International studies have shown that these
people are often clustered together geographically.

We argue that the reported suicide statistics in the Berlin Health Report require a
closer inspection because the age groups and zones used in reporting are not
sensitive enough to provide a robust picture of the articulation of social status
and suicide. For example, in 2009 the Berlin health report suggested that there
was no relationship between elderly suicide and social status. We will introduce
our comparative study which aims to test whether there is indeed no correlation
between elderly suicide and districts when (a.) more comprehensive data from
coroner statistics is being deployed and whether there is indeed no correlation
between elderly suicide and specific spatial areas when (b.) more comprehensive
data from smaller heterogeneous urban zones beneath the district level are being
accounted for.

The identification of these zones or socially weak areas is based on the re-
search of the working group "Monitoring Soziale Stadtentwicklung" in Berlin. They
aim to describe and analyse the socio-structural transformation of parts of the
city and different districts through a statistical indicator system. Their very precise
development index for smaller spatial areas was correlated with the comprehen-
sive coroner data we collected. We detected a strong correlation between social
status and elderly suicide. This suggests that incorporating the legal and medical
records from the coroner and altering the definition of a municipal district to
capture this fine level of detail establishes a real and concerning trend.
ing in photographing experience on the film set of Korean TV drama 'Couple or Trouble'.

As the second German Village is now in the process of being built elsewhere in Korea, we need to ask even more so, how the notion of ‘place’ is reproduced through spatialities in which embodied performances and practices are facilitated within complex infrastructure, networks and mobilities. This paper incorporates reflexive and visual methodology to explore how identities are being configured through local narratives and practice, and questions how we identify the ‘tourist’ in this era of transformative change as exemplified by the German Village in Korea.

Home Away at Home: Tourism Narratives of the German Village in South Korea

"Where do you come from?" is a question that haunts tourists. Here, places are conceived as fixed spaces in the same way destinations are considered an end in tourism. In the context of multi-strata mobilities, places are increasingly being reproduced through embodied relationships in a world that is never quite finished. They are performed on unstable stages as they are being reimagined. It becomes apparent then that spaces are emergent and need to be considered alongside the sedimentation of identities.

Places emerge as tourist places when they are appropriated and made part of memories and narratives through the experiences of people engaged in embodied social practices. They are not only packaged for touristic consumption, but are also constantly redefined especially in terms of spatial identities located throughout everyday tourist practice. This paper focuses on the German Village on the island of Namhae in South Korea, which was built over a decade ago as a tribute to the Korean workers who lived in Germany as Gastarbeiter. It explores the question of identities of the ‘locals’ as portrayed in the film, ‘Endstation der Sehnsüchte’ by Cho Sunghyung and juxtaposes this alongside the huge influx of ‘tourists’ indulging in photographing experience on the film set of Korean TV drama ‘Couple or Trouble’.

As the second German Village is now in the process of being built elsewhere in Korea, we need to ask even more so, how the notion of ‘place’ is reproduced through spatialities in which embodied performances and practices are facilitated within complex infrastructure, networks and mobilities. This paper incorporates reflexive and visual methodology to explore how identities are being configured through local narratives and practice, and questions how we identify the ‘tourist’ in this era of transformative change as exemplified by the German Village in Korea.

Children's Unequal Entitlements to Social Assistance: A Rights-Based View on the National Social Cash Transfer Arrangements Across the Global South

In most countries of the global South, social cash transfer programmes have spread considerably since the early 2000s. Many of these public social assistance programmes in cash to people considered in need explicitly target children and families, respectively. What can we conclude from this increase of social protection programmes with respect to the children's right to social security? I restrict the investigation to social cash transfers as a test case of social security: In what way are children entitled to a social cash transfer? Based on a huge and newly constructed database including all social cash transfer programmes throughout the global South (produced by the FLOOR research group, Bielefeld University, Germany, www.floorgroup.de), I analyse the institutional design of the programmes from a rights-based perspective. I mainly focus on two questions:

1. What categories of children are targeted and which restrictions are applied to their entitlements?
2. If a particular group of children is entitled to a social cash transfer benefit, to what degree is this entitlement “secure” and reliable?

The first question sheds light on the aspect under which conditions the children in a country are considered to be (particularly) deserving, the second question refers to the degree of institutionalization of the entitlements in terms of legal foundation, funding etc.

According to preliminary analyses, I find that both regional and global patterns of children's entitlements to social cash transfers exist, expressing different constructions of vulnerability and desert. However, there are huge differences both between countries and within countries. I maintain that the institutionalization of the children's right to social security in form of social cash transfers varies according to the following items: firstly, the child's characteristics such as age, disability, orphanhood, gender, ethnic origin, and secondly, his surroundings, such as the district of residence and the household composition.

Las Tendencias De Polarización Social En El Conurbano bonaerense De La República Argentina. Su Impacto En El Trabajo De Los Jóvenes

En la República Argentina desde fines del siglo XX han surgido nuevas formas de desigualdad social: Una de sus consecuencias es la polarización social y su relación con el trabajo. A pesar de que, en el año 2008, disminuyó la incidencia de trabajadores insertos en empleos precarios o indigentes en un 12.7%, el problema persiste e impacta preocupantemente en el trabajo de los jóvenes.

En este trabajo presentamos un ejemplo paradigmático de la polarización social y su repercusión en el trabajo de la juventud. Del universo de jóvenes hemos seleccionado como objeto de estudio a los jóvenes de zonas suburbana que bordean la ciudad de Buenos Aires. Tomando en cuenta este universo se realizaron encuestas semi-estructurada sobre una muestra no aleatoria a individuos de entre 18 y 25 años del partido de Pilar y sus zonas aledañas (Campana, Exaltación de la Cruz, Luján, Gral Rodríguez, Moreno, José C. Paz, Malvinas Argentinas y Escobar) y del Partido de Lomas de Zamora (Barrio Santa Marta y El Ceibo). La brecha social que se observa dentro del mismo partido de Pilar se exacerbá entre Pilar y las villas de emergencia de Lomas de Zamora. El resultado de las encuestas muestra claramente esta brecha social en el conurbano bonaerense de la República Argentina, así como su impacto en el trabajo de los jóvenes que sigue sin lograr una solución. La juventud que se encuentra en un empleo precario o indigente, continúa sufriendo las consecuencias de las políticas sociales de los años 90.

Frente a este contexto de desigualdades planteamos el debate en torno a la aplicabilidad del desarrollo de las capacidades en el sentido de la política social de Amartya Sen. Brevemente, se trata del desarrollo de las libertades positivas, voluntad política mediante.

The Ga-oji/Gaau-Gey Discourse in Chinese Youth Culture: Homosexually-Dependent Language, Homosociality, and the Transformation of Masculinity

Literally meaning "to engage in homosexual conducts" and originally from Cantonese gaau-gay, gao-ji (doing gay stuff) is a derogatory term to refer to homosexual people in mainland China. Thanks to the rapid development of Internet and cyberculture in recent decades, the use the gao-ji as well as other derived terms such as ji-ting (gay romance) and ji-you (gay buddies) have been going mainstream, particularly among Chinese urban youth. Other than referring to homosexual behaviors and relationships, the use of the gao-ji discourse becomes increasingly popular to describe the homosocial bonds among heterosexual-identified young men. Focusing on this newly emerging sociolinguistic phenomenon, this research provides an alternative reading of homosexually-themed language that has been traditionally associated with homophobia at both institutional and interpersonal levels. Drawing on findings from mainstream media sources and ethnographic interviews with young people living in Shanghai, combined with a nuanced analysis informed by social constructionist theories on gender/sexuality and other empirical studies done by western counterparts, the paper reveals the construction and transformation of gao-ji discourse in today's urban Chinese society. Although acknowledging the decline of homophobia, as shared by other countries, has largely contributed to the rise of gao-ji discourses in popular culture, I contextualize my discussion of this sociolinguistic practice in relation to 1) the continuing Chinese tradition of male homosociality; 2) the transformation of Chinese masculinity that gives more credits to intimacy and expressiveness; and 3) the urban youth communities that are stratified along the lines of class, gender, and sexuality in contemporary Chinese society. I conclude my paper by discussing how the gao-ji discourse, as one manifestation of queering the mainstream, could affect the public views towards homosexuality as well as its implication to the LGBT politics in mainland China.

Curricular Alienation: Multiculturalism, Tolerance, and Immigrants in Dutch Primary School History Textbooks

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The stories found in a nation's history textbooks are profound statements about the way the nation sees itself. Textbooks that exclude certain groups alienate these children and may lead to disengagement from education and lower levels of educational attainment. The Netherlands is known internationally for its tolerance and multiculturalism, particularly towards immigrants, and sees these elements as critical to their national identity. However, historical and contemporary policies and social attitudes towards immigrants reveals levels of racism not unlike their European peers who, like The Netherlands, have experienced increased immigration and xenophobia in the last decades. In the educational domain, multicultural policies of the 1990s have shifted to those emphasizing integration, with immigrants often blamed for low educational attainment. This paper examines how immigrants, multiculturalism, and tolerance are represented in all Dutch primary school history textbooks published since 1980 to identify trends to determine whether or not they reflect larger political discourses and speculate as to the potential effects of these depictions on the children who read them. Preliminary analysis suggests that immigrant groups are depicted as culturally different outsiders from underdeveloped, poor, and violence nations who cause problems for the Dutch society that benevolently allow them entry. Textbooks fail to meaningfully address discrimination in The Netherlands suggesting that immigrants’ failure to integrate is due to cultural differences, which likely enhances social alienation among the many immigrant students encountering these texts. Findings are of relevance to multiple nations with large immigrant populations.

**WEINGARTNER, SEBASTIAN*** (University of Zurich, weingartner@soziologie.uzh.ch)

**The Role of Preferences and Attitudes in Film Consumption**

The sociological analysis of cultural consumption is usually situated in the field of social stratification research, identifying the way how cultural consump- tion is related to social identity and examining the role cultural consumption plays in social boundary formation. Much less attention has been given to the theory of action underlying cultural consumption. Broadly speaking, there are two major perspectives that come into consideration here: The first conceives cultural consumption as the result of a deliberate (rational) decision making process that is based on the weighing of aesthetic preferences and situational opportunities. In contrast, the second perspective points to the importance of culturally and aesthetically shaped attitudes and dispositions guiding cultural consumption in a rather automatic way, given relevant situational cues. Since either of these perspectives brings up both theoretical and empirical problems, it seems reasonable to conceptualise cultural consumption as a joint process of conscious preference weighing and automatic attitude following. This in turn asks for a “dual-process”-model of action which is assumed here to offer a more accurate picture of the individual foundations of cultural consumption. Drawing on recent survey data from Switzerland (conducted in February 2013), this assumption will be tested in the domain of film consumption. This dataset includes measures of the frequency of attendance to various types of films, and measures of the respondent’s preferences for as well as attitudes towards these types of films. This allows for (1) comparisons between the effects of film pref- erences and film attendance on film consumption, (2) the identification of the relationship between film preferences and film attitudes, and (3) the examination of the interplay of film preferences and film attitudes in the process of film con- sumption.

**From School to Work and Back – Inequality in Late Postsecondary Education As Part of the School to Work Transition in the US, Germany and Sweden**

Varieties in the school-to-work-transition are often discussed against the back- ground of social stratification and education system. The focus of most studies is the integration into the labor market. In this paper, I take a different perspective and compare differences between education systems in a. the patterns of school to work transitions with particular focus on non-traditional education and b. the decision to re-enroll into postsecondary education. In order to explain country differences, I refer to the openess and institutional flexibility for non-traditional students of the postsecondary education system.

Non-traditional patterns, such as late re-enrolment after an initial phase of work, vocational training or motherhood differ by country in their relevance for the typical school-to-work transition. In several industrialized countries, in par- ticular Chile and some social origin categories follow the patterns and take “educa- tional detours”. As a second step, I pay particular attention to the re-enrolment decision, which is sometimes suggested as an option to ease the transition from school to work. Existing single-country studies raise the question how differences are shaped by institutional setting. Therefore, I compare the US, Germany and Sweden regarding to the role of inequality in non-traditional educational careers for school to work transitions. While Sweden and the US clearly are societies with broad and open access to the tertiary education, Germany is an ideal of a rigid, in- flexible system. Analyses are carried out using longitudinal micro-data from Germany (German Life History Study), Sweden (Level of Living Survey) and the US (National Longitudinal Study of Youth, 1979). The findings indicate that in the two open and flexible systems social origin effects on the patterns of educational careers are indeed larger than in inflexible systems such as Germany. However, this is more than compensated by their overall smaller educational inequality.
situations. By reviewing diverse but mutually complimentary theories the paper of solving socio-material problems embedded in specific knowledge may glocalize, namely: the setting and emulation of standards, the codified and explicit or as comprising tacit and incorporated components. The transnationalism, field theory, cosmopolitanism and social studies of science) which professional knowledge and practice can universalize and/or remain bound to the socio-spatial autonomy of persons and resources. In times of globalization we must assume that knowledge should be able to solve socio-material problems (d) embedded in situations (e). The review secondly identifies a diversity of ways in which knowledge may be “differ are able to tackle from this standpoint his political positions in relation with the Nation, which are boldly stated from his early studies on East-Prussia onwards. The tensions between Gemeinschaft and Gesellschaft will be confronted with this author’s prospective on the rationalization process, and his positions on the Nation looked through this prism.

Social Layers in a World of Territorial Containers, Political Closure, and Socially Differentiated Functionings

The sociology of social stratification is caught in a dead-lock: Data and concepts remain bounded by the nation-state while recent theorizing as well as popular debate focus on the global level. Based on a theoretical book project, but illustrated by results from two inter- and transnationally comparative research projects on skilled migration, the paper suggests a novel approach to the challenge. Building on individualist traditions with their focus on the resources of persons and households but emphasizing the relational character of capabilities I take a closer look at the social contexts in which resources are put to use. In times of globalization we must assume that persons and social arrangements appear in more than one social context and we should part with the assumption that the nation state can frame a congruent set of economic, political, cultural and territorial borders. By clarifying the ways in which persons and their resources are embedded in territorial, political, and functional contexts sociology can identify social layers in the world that are structured (a) by their resources and (b) by the socio-spatial autonomy of persons and resources. The proposed model of social layers in the world is adequate for both an analysis of populations residing in strong national welfare states and for the larger part of humankind who is mobile and/or embedded in zones of weak statehood and/or in transnational social fields. As socio-spatial autonomy can be operationalized, the model will contribute a distinctly sociological perspective to empirical research on global inequalities.

The Glocalization of Professional Knowledge and Practice

Current debates about migration and high skilled labor markets are characterized by an ambiguity: On the one hand knowledge, especially in the natural and health sciences, appears to be globally versatile. On the other hand, the application of this knowledge in professional practice is inhibited by many factors, including national systems of higher education and licensing as well as migration regulation claiming that the knowledge of migrant professionals may be “differently endowed” than the knowledge of persons and resources. In an attempt to overcome prevailing universal/local and theory/practice dichotomies in globalization research the paper suggests a diversity of ways in which professional knowledge and practice can universalize and or remain bound to specific locations and in which the mobility of people and the spatial extension of bodies of knowledge co-constitute each other.

A review of newer theories in global studies (neo-institutionalism, migratory and Socially Differentiated Functionings)

We have to take into account that Weber’s much more deeper and longstanding commitment to the German Nation –in comparison with Tönnies- can be read in terms of Gemeinschaft (the national Gemeinschaft is one of the examples provided by Weber’s “Soziologische Grundbegriffe”), as well as to put forward a relationship between his emphasis in the Nation and his desperate intention to sustain a communitarian feeling against the historical-universal tendency -in an ideal-typical sense- towards the bureaucratization of societies.

That will lead us to analyse Weber’s use of Tönnies’ categories, in order to be able to tackle from this standpoint his political positions in relation with the Nation, which are boldly stated from his early studies on East-Prussia onwards. The tensions between Gemeinschaft and Gesellschaft will be confronted with this author’s prospective on the rationalization process, and his positions on the Nation looked through this prism.

Contempt. Dealing with Disrespect and Misrecognition Among Berlin Hauptschüler

The social production of contempt defines forms of exclusion via processes of social ascription in which low socio-economic status is linked with disregard, in turn ‘producing’ a disrespectful or contemptuous treatment of others.

1) According to Honneth, people experience misrecognition as a deprivation of requirements for a positive development of the self. In Germany, Honneth refers to these deprivations as Missachtung (misrecognition), while I prefer the slightly different term Verachtung, which better captures the emotional dynamics of this process and also has a more active connotation: in the sense that the students are not only deprived something but that their human dignity is actively harmed. The most appropriate English translation of ‘Verachtung’ is ‘contempt’. The social production of contempt defines forms of exclusion via processes of social ascription in which low socio-economic status is linked with disregard, in turn ‘producing’ a disrespectful or contemptuous treatment of others.

2) In an ethnographic study of “Hauptschüler” in Berlin, Germany, I have shown that the problem of misrecognition is a pervasive experience among this status group. The main problem for the students proved to be misrecognition on emotional, legal, and social levels – the frequent coupling of social stigmatization with the deprivation of citizenship rights and precarious family situations. In this context, the social practices of “Hauptschüler” can be considered mechanisms of coping with contempt and as struggles for recognition. This can take the form of searching for respect within peer groups based on ideas of mutual support, it can take the form of emotional reactions (shame, anger, envy) and it can take forms of playing with stigmatizations through jokes and irony. What unifies these various reactions is the active approach of dealing with and reacting to the contempt with which the students are confronted.

The multifaceted problem of the ambivalence of the stranger – how it is produced, how it can be researched and how it is lived – will be the focus of my paper, dealing specifically with “Hauptschüler” (secondary students, often migrants) in Berlin, Germany. These students are faced with a variety of exclusionary mechanisms – besides discrimination on the job-market also media stigmatization and the denial of full citizenship.

I will treat the morally loaded ambivalence of the cultural figure of the “Hauptschüler” as a stranger. It is made into strangers? How could one describe the ambivalent positions and positionings of the students? And how do the students themselves deal with their situation? In the first part, based on a media analysis of a public debate about the “Hauptschüler”, I will show how structural problems of the school system are constructed as problems of ethnicity and religion. In the second part, I will describe the actual mingling of class, ethnicity and gender in school. In the third part, I will turn the view on the question how the students themselves deal with negative stereotypes and racial or social classifications of being inferior.

The ambivalence of the „Hauptschüler“ as a stranger appears in all three perspectives in a different light: In the media debates ambivalence appears as a problem, in the ethnographic section ambivalences and intersections are treated as a challenge for sociological analysis and in the subversive practices of the students ambivalence is used to resist negative ascriptions and processes of self-victimization. The morally loaded processes of constructing, reproducing and deconstructing ambivalence are thus at the core of understanding the Berlin “Hauptschüler” as a stranger. The task of sociology is to show these processes are functioning and what kind of subjectivities they produce.

The Social and Institutional Context of Decision-Making in the Case of Sickness

The Social and Institutional Context of Decision-Making in the Case of Sickness

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Illness has a major influence on people's lives. Studying healthcare-seeking is therefore of vital importance. Patients' decisions about healthcare fundamentally influence the performance of the overall healthcare system in terms of a population's health, the quality of healthcare services, and the level of expenditures. Even though illness behaviour has been an intensively studied research topic over the past five decades, previous work has largely overlooked the embeddedness of these decisions in social and institutional contexts. We will present first insights from a project that aims at theoretically, methodologically, and empirically enhancing previous research. It contributes to the development of an integrative theoretical framework of illness behaviour and provides an important test case for institutional theories and the theory of frame selection.

For analyzing healthcare decision-making, a new survey is constructed to collect data on the basis of 2,000 face-to-face interviews in Germany that will provide a unique data source covering the healthcare needs and the way these needs are managed. At the conference, we will provide first results from the survey. We will analyze people's decision making when having a medical condition with a particular emphasis on the interpretation of symptoms and the utilization of healthcare, and generate information about the extent and variety of self-care strategies. Our paper covers how social networks and institutional features of the healthcare system influence the decision making of healthcare seeking.

Capital-Labour Relations in China's Car Industry - What Is "Chinese" about Them?

Facing shrinking profit margins, and driven by a quest for cost-efficiency and market access, manufacturing enterprises intensified their expansion into the global South since the 1970s. It was especially the automotive industry that was eager to venture into promising markets, first and foremost China. Though global car manufacturers have been present in China since the 1980s, research on their operations is still limited – especially when dealing with sensitive issues such as labour relations and unrest.

The presentation thus sets out to shed light on workers’ reactive and pro-active agency in relation to enterprise strategies, trade union culture and developmental policy. Taking a functional examination of certain political and institutional patterns – of which labour issues are merely one factor amongst others – thus producing capitalist global economy, respectively its current stage. On the one hand this will concern the enterprise orchestrating its established strategy with local conditions – of which labour issues are merely one factor amongst others – thus producing boundaries, potentials and vehicles for workers’ political-economic agency on the shop floor. On the other, it will focus on workers’ subjective concerns, rooting their agency in their more complex social conditions of existence. Relating these findings to a functional examination of certain political and institutional patterns in China, the uniqueness of Chinese capital-labour relations will be raised to question.

The National Society As a World-Societal Model

The concepts of national ‘societies’ and of a single ‘world society’ are often presented as mutually exclusive alternatives. While sociological theorists take pride in having left national concepts of society behind, the latter still dominate the popular usage of the term. This paper transends this impasse by taking a sociology-of-knowlege perspective, asking how globalisation processes have contributed to the plausibility of these diverging connotations. Informed by world society theories (neoinstitutionalism, systems theory) and recent approaches to ‘balan nationalism’, we (1) analyze the sociological content of the term. Rather, these acknowledgments of qualitative content analysis are used to extract different lines of arguments, the various levels of the discourses and the diverse discourse positions from the empirical data.

Data include in-depth qualitative interviews with “normal” consumers and professionals from science, industry and politics; press articles, TV and radio broadcasts of regional and national media, academic publications and documents, from scientific, political, non-profit, charitable, educational, and economical organisations.
amines international tourism at the Cu Chi Tunnels in South Vietnam by focussing on the narration of the war by Vietnamese tour guides and its interpretation by young American, Australian, British and European tourists. While the oversight of tourism in Vietnam by the state sees tourists at Cu Chi presented with some strong anti-American rhetoric, this is offset by a strong dialogical narrative of the war presented by local guides. It is argued that guides are important reputational entrepreneurs who in order to account for post-Fordist tourists privilege the local while also drawing together different national traditions. For Western tourists this typically results in a greater recognition of Vietnamese suffering and a questioning of the anti-authoritarian and post-heroic narratives that have dominated Western projections of the war. However, the dialogical dimensions of the tour and their experience of everyday life in Vietnam also commonly provides tourists with greater agency to mourn the death of Western soldiers. It is argued that through media portrayals and word of mouth such ‘dark’ tourist experiences have a broader influence on understanding of history and in shaping debate within the cultural public sphere.

Social Networks and Subjective Wellbeing in Australia

Previous research into social networks and social wellbeing has tended to examine objective aspects of well-being such as employment and socioeconomic attainment, physical security, and political participation. Fewer studies have examined subjective social networks and subjective well-being, and those that have tended to emphasise limited aspects of social connectedness, such as social support. This paper develops a comprehensive theory of the relationship between social networks and subjective well-being, with the latter concept defined in terms of cognitive (life satisfaction) and affective (happiness) evaluations of one’s own life. The theoretical framework defines social networks more precisely, specifies different mechanisms for positive and negative network effects and also attempts to account for mechanisms and selection processes whose omission some critics argue undermines much previous social networks research. We examine this theoretical model empirically using data from a new national Australian survey currently being undertaken that is specifically designed to investigate social networks and subjective well-being. In the paper we describe our theoretical framework and the cross-national comparative project we are undertaking on the relationship between social networks and subjective well-being in Australia, China and the United Kingdom. We then present early results from the Australian survey, including measurement models of key scales and constructs, and substantive models examining some of the central relationships posited by the theory.

Alternative Lifestyles in Growth-Critical Societies – Conceptual Reflections on Social Movements

This paper attempts to give some conceptual reflections about the ongoing debate in social philosophy/social theory with regard to the conditions and the possibilities of an embodiment of the good and the right in sociological research. To look more closely and empirically to the outcomes of these debates, the focus lies on the conceptualization of lifestyles which are taken from different social movements/thoughts in Switzerland dealing with questions of (post-)growth (e.g. Décroissance), concerning these lifestyles for the actors it seems to be not so much whether or not the GDP is growing, but for them it is all about the rejection of growth as the dominant social imaginary (Castoriadis 1990, Latouche 2009) and instead of thinking about the design of alternative lifestyles. Two main themes will be presented:

(1) Social-theoretical focus: From the background of a discourse analytical approach the genealogy of growth will be examined and how this concept is treated in different movements. Besides the study of social and cultural practices, the (value) beliefs are primarily considered from an overall theoretical perspective. One main question is how individuals and communities are capable to make experiences of resonance in times of growth-critical societies.

(2) Empirical focus: Some hints can be given concerning the (sometimes disparate) designs or experimental lifestyles that are compatible with the requirements of a post-growth society. The central intuition here is that a successful life management depends not only on ethical and aesthetic ideas of a singular individual, but includes as well moral and political justice considerations (Sandel 1995, Nussbaum 2010).

Higher Response Rates - at What Price? Effects of Different Strategies to Increase Participation By Motivating (Un)Motivated Participants

Different approaches – e.g. normative explanations, rational choice models or social exchange frameworks – have been used to explain motives on survey participation. This paper deals with one of them, the rational choice theory. However, both commitment (e.g. triggered by appeals to attend to social norms (Misra et al, 2011)) and consideration of benefit/cost ratio (e.g. positively influenced by incentives) are regarded as decisive for survey participation – at least for the initial items. These strategies may result in higher response rates but also in satisfying “instead of generating the most accurate answer, respondents settle for merely satisfactory ones” (Krosnick, 1999). Consequently, the longer a survey takes to finish “No-Opinion-Responses” (ibid) but also “Non-Responses” are expected to be more likely and both may affect data quality.

The central issue of this paper is to examine the effect of different motivating strategies on refusals to answer. For this reason experimental arrangements were included in a survey dealing with student participation at university. The survey population was randomly divided into several groups. The information provided to each group differed concerning the presence and combination of the following “triggers”:

i) the possibility to make profits (incentives),
ii) appeals to social conscience (commitment) and
iii) information on duration and progress (related to effort/burden).

Additionally the answer categories of several questions varied with regard to including a “No-Opinion-Option” to control for satisficing. Finally, pros and cons of the presented “manipulations” in order to gain higher response rates will be discussed.

WETZELHÜTTER, DANIELA* (Johannes Kepler University, daniela.wetzelhuetter@jku.at)

“I Haven’t Got a Clue!”? Do Clueless Respondents Affect Data Quality through Response Behaviour?

Several papers are dealing with the effect of different numbers of response categories (e.g. Preston & Colman: 2000; Lai et al: 2010). However, irrespective
of the number of categories it can be assumed that respondents are facing difficulties in answering questions if they do not already have an opinion for the topic. If a “don’t-know-option” is offered the participant might tend to choose it even if it were possible for him or her to form an opinion. This is “making survey researchers reluctant to offer this option unless absolutely necessary” (DeLourme & Cooper, 2002, p. 15). However, if the “DK-option” is missing, respondents may skip the question and increase items missing. Offering a middle category in rating scales may even enlarge biases if perceived as “neither-nor-option”. In this connection personal characteristics and the type of question (e.g. opinion, attitude or behaviour) are expected to influence corresponding ad hoc decisions.

According to these consideration, the paper focuses on the effect of different numbers of categories in combination with “don’t-know-options” on missing values, takes several question types into account and considers effects of personal characteristics on scale quality. The results are based on methodical experiments included in three online surveys in Austria and Germany.

The Racial Divide? African American College Students: Mitigating Digital Visual Culture

The most important development in terms of Internet users between 2000 and 2005 was the radical increase in the number of women, ethnic and racial minorities online. In the early years of the Internet's massification, cyberculture scholars discussed online with only marginal references to online media produced by African Americans, Asians and Latinos, instead focusing on representations of racial and ethnic minorities produced for consumption by white users and audiences (Nakamura, 2002).

Notably, social media, such as Facebook and Twitter, are platforms of web and mobile-based technology that enable consumers to turn conversation into interactive conversations, much of which is widely consumed by college students today. Demographic studies on Internet use emphasize African American's position as consumers. But surveys of access, rate and the “digital divide” that fail to measure digital production in favor of measuring access or consumption, cannot tell the whole story. This suggests that minorities are more or less successful in online media produced by African Americans. In parallel to the friends of these bodily commodities has arisen an unregulated market, a ‘rotten trade’, in which ‘bioavailable’ women and their body "part-time work" is work part-time hours. The prevalence of this working pattern in Australia underlines contradictions between gender equality and care and raises questions about the contrasting possibilities for career retention and advancement associated with the transition to part-time work, particularly in the context of austerity pressures. In this study we examine the employment patterns of Australian mothers and assess the career implications of transitions made on return to work. Our analysis draws on data from the first two waves of a longitudinal survey of Australian mothers who had given birth to a child in 2010 (Wave 1, n=4,201; Wave 2, n=3,487). The basis for our analysis is that women are employed in part-time work: 77% of those who had returned to work in Wave 2 of the survey were working part-time, and among those who had been working full-time prior to the birth of their children, 75% returned part-time. We use multivariate models to examine the impact of these and other transitions on indicators of career mobility, utilising changes in hourly earnings and occupational mobility as objective measures and responses to a question on perceptions of career prospects as a subjective measure.

Our analysis identifies some risks associated with the transition to part-time: for example, around 40% of mothers making this transition believed that their career opportunities had declined compared with only around 20% of those who maintained their pre-birth-working-time status. Our models explore the complex relationships between these and other potential influences on career mobility, including the type and duration of parental leave taken. The analysis establishes a baseline from which longer-term effects may be examined and the contradictions of the Australian context explored.

Parenthood and Career Mobility: Implications of Transitions to Part-Time Work Among Australian Mothers

One of the main strategies adopted by Australian mothers to minimise work-life interference is to work part-time hours. The prevalence of this working pattern in Australia underlines contradictions between gender equality and care and raises questions about the contrasting possibilities for career retention and advancement associated with the transition to part-time work, particularly in the context of austerity pressures. In this study we examine the employment patterns of Australian mothers and assess the career implications of transitions made on return to work. Our analysis draws on data from the first two waves of a longitudinal survey of Australian mothers who had given birth to a child in 2010 (Wave 1, n=4,201; Wave 2, n=3,487). The basis for our analysis is that women are employed in part-time work: 77% of those who had returned to work in Wave 2 of the survey were working part-time, and among those who had been working full-time prior to the birth of their children, 75% returned part-time. We use multivariate models to examine the impact of these and other transitions on indicators of career mobility, utilising changes in hourly earnings and occupational mobility as objective measures and responses to a question on perceptions of career prospects as a subjective measure.

Our analysis identifies some risks associated with the transition to part-time: for example, around 40% of mothers making this transition believed that their career opportunities had declined compared with only around 20% of those who maintained their pre-birth-working-time status. Our models explore the complex relationships between these and other potential influences on career mobility, including the type and duration of parental leave taken. The analysis establishes a baseline from which longer-term effects may be examined and the contradictions of the Australian context explored.

WHITTAKER, ANDREA* (Monash University, andrea.whittaker@monash.edu)

From intimate industry to rotten trade: reproductive travel in Southeast Asia

Intimate processes of conception and reproduction have become increasingly global in expectation and practice. They have become the focus of a new form of global commercialized reproductive travel, often termed ‘reproductive tourism’ whereby people travel to seek reproductive health services in other countries. This can involve the movement of patients, but also of service providers, ova donors and surrogates, as well as ova or embryos across the region. In this paper I concentrate upon the intimate industry of cross border IVF involving the movement and in some cases trafficking of women for reproductive services. The social and medical benefits in many parts of the region compromises attempts at regulation of the trade. Examples of the internet advertising for Thai surrogates and testimonials of commissioning parents illustrate the ways in which Thai surrogates are marketed and constructed as willing and available to service the needs of foreigners. Implicit assumptions of privilege are woven through exchanges between ‘farang’ and Thai often glossed within the discourse of ‘Asian service values’. In parallel to the legal circulation of these bodily commodities has arisen an unregulated market, a ‘roten trade’, in which ‘bioavailable’ women and their body parts are trafficked to feed the demand for their reproductive capacities.

"Table of Contents"
How should intergenerational inequality be explained? A common idea is that parents transfer their children's and that parental investments influence their children's attainments. Most studies have emphasized the effects of parental investments in education. It is easier for parents to directly influence their children's attainment of education than their success in the labor market. Therefore early parental investments are considered to have the largest impact on their children's life chances. This is not the case for wealth transfers between generations. Wealth may be easily transferred during the whole life course, and in many cases transferred quite late in life.

In this paper, we measure intergenerational inequality through the life course using sibling correlations. A sibling correlation provides an omnibus measure of family background and neighborhood influences, a measure that includes both observable and unobservable characteristics. There are no prior studies to our knowledge that assess life course changes in sibling correlations using wealth as measurement.

Following recent theoretical developments, we explore the consequences of different parental investment strategies. Put simply, one strategy is that parents make equal investments in their children, something that leads to the expectation that sibling correlations in wealth should decrease over the life course. If, however, the parents seek to compensate for initial differences in talents and attainments among siblings, by transferring most to the least successful sibling, we expect an opposite trend. We discuss how these patterns may be influenced by children's labor market success and savings, and by variations in parental strategies in different socioeconomic layers.

We use register data from Norway for brothers and sisters born 1955-1960, tracked annually 1993-2010. Our measures include earnings and capital income, as well as two measures of wealth (net and gross wealth). We also take into account sibling differences in education.

Increasing immigration poses a serious challenge for many countries. Empirical studies from around the world indicate that immigration and increasing diversity lead to decreases in social cohesion and increases in social withdrawal, particularly in disadvantaged areas. Less understood, however, are the mechanisms that explain these relationships. We contend that these associations are at least in part due to two key factors: how residents perceive the neighborhood composition and how these perceptions influence residents' own social identity. Further we suggest that these relationships will differ in cities with different immigration histories. In this paper we integrate census data and the Australian Community Capacity Study survey data from approximately 10,000 residents living across 298 neighborhoods in Melbourne and Brisbane, Australia. Using a multiple level multilevel mixture model, we first consider the cues that lead individuals to distort the presence of non-whites in neighborhoods. Here we focus on recent immigration increases, ancestry, language and religion as important cues of difference. We then employ multi-level models to test if these distortions influence residents' subjective or subordinate identities. Finally, we consider the independent effects of these distortions and social identity orientations on residents' reports of social cohesion and interactions with fellow neighbors.

Children and young people's civic engagement has occupied the attention of researchers and policy makers globally during recent decades, but there is a growing acknowledgement that young people’s political engagement can only be understood in the context of wider social cultures and practices. This paper explores the social dynamics of civic engagement, in the context of one community’s democratic practices and targeted activism, involving the ‘nannas’ as central players as well as mothers, children and young people.

In the Dandenong Mountains near Melbourne, Australia, a small community has taken up a prolonged battle with a multi-national fast food giant. The picket line, the on-line world, the legal system and mass media are the different fronts of the battle, providing multiple sites for experiences of political engagement, confronting ideas about political issues, power inequalities, social justice and the role of the state.

In facing an unequal world, one of the challenges for global sociology is about creating the conditions where the systemic drivers of injustice can be recognised. Analysing material from the campaign’s social media pages, this paper identifies critical moments where activist sensibilities are awakened and identified, within, despite and through how the performative fear and anger, humour and hope can be heightened when elements of difference in power, class, gender and generation are named and mobilised as resources.

Voluntary Association Involvement Among First- and Second-Generation Immigrants in the Netherlands: Addressing the Role of Different Layers of Social Context

Voluntary association involvement is both a cause and consequence of immigrants’ integration into their host societies. Yet, while previous work has demonstrated that immigrants generally lag behind in civic participation as compared with their first-generation counterparts, whilst Turkish immigrants exhibit the exact opposite pattern, we contrast the observed associational involvement patterns for different immigrant groups with their engagement in informal volunteering.

My analysis employs data from The Netherlands Life Course Study (NELLS). The first wave of this panel study was carried out in 2008-2010 and the second one in 2013. Its oversampling of respondents from Turkish and Moroccan descent helps to overcome the statistical power problems that usually haunt research on ethnic minorities. Moreover, its panel design allows me to shine a light on immigrants' involvement trajectories over time.

Exploratory analyses of the NELLS yield intriguing results. Most notably, I find that, given all immigrants being less likely to volunteer than Dutch natives, second-generation Moroccans are in fact catching up as compared with their first-generation counterparts, whilst Turkish immigrants exhibit the exact opposite pattern (controlling for amongst others educational attainment and religiosity). This puzzling finding invites the question of what is behind these differentials.

Intra-European Labor Mobility from Post-Socialist Countries: The Example of Hungarians, Slovaks and Czechs in Austria

This paper deals with job-search strategies and related labor market outcomes of cross-border commuters residing in the regions of the Czech Republic, Slovakia and Hungary bordering on Austria. This European core region has a long history of cross-border mobility and social exchange, from Habsburg Monarchy to post-war period and after 1989. Several years after the fall of the Iron Curtain a process of European re-integration began which led to the accession of post-socialist countries into the EU. However, substantial social inequalities between Central European countries still exist in terms of wages and unemployment. Cross-border mobility on an emerging transnational labor market therefore can be seen as an "individual response" to massive transformations in this region.

So far the given circumstances for participants in this transnational labor market have not been investigated in depth. Our paper aims to close the research gap by pursuing the following research questions: What job search methods do cross-border commuters from Hungary, Slovakia and the Czech Republic use in order to find employment in Austria (1)? What are the labor market outcomes of these job search methods in terms of wages (2)? Theoretically, we build upon a model developed by Aguilera and Massey on the nexus of social networks, job search methods and related labor market outcomes. Methodologically, we use a longitudinal survey on employment careers of cross-border commuters conduct-
ed in 2012 (N=2,550). Our results show that human and social capital resources serve as key factors for job finding strategies and successful labor market integration. There are also substantial gender differences and differences related to previous occupational status and migration experience within the group under study. Overall, our results reflect cross-border commuting as a renewed form of social practice in this European core region, which may reduce structural inequalities between Central European countries in the mid-run.

WIEVORKA, MICHEL* (Fond Maison des Sciences de l’Homme, wiev@msh-paris.fr)
The Limits Of Multiculturalism

1. Multiculturalism and transnationalism are concepts that belong to the present historical era. They have been produced in western countries, and are used often, with a deep unconscious ethnocentrism. Aren’t they part of the intellectual hegemony of the west, and in the same time, maybe, of its decline?

2. There is in some parts of the world at least a feeling that multiculturalism, if not a failure, is at least in a difficult situation, and there are important criticisms of the idea of transnationalism.

3. The political concrete limits of multiculturalism are connected with the rising importance of globalization, including transnational phenomena. But globalization does not necessarily mean the decline or the crisis of the Nation and/or the State, which is the natural framework for multiculturalist policies and institutions. And the limits of transnationalism are given by States that still control borders, deliver passports, authorisations for transit, visas, etc. If societies are not entering an era where multiculturalism and transnationalism are stronger and stronger, how will they deal with cultural differences, on the one hand, and with identities and practises that are not lited to one national state?

From Web Surveys to Online, Multi-Device Surveys

Unintended mobile survey completion rates have risen largely in the past couple of years, with around 7% of the online respondents attempting to access surveys using tablets and 2% using smartphones (USS panel, June 2013). While these rates are expected to continue to grow, the question arises whether one can speak of traditional web panels as we know them anymore. Especially the tablet user group has become too large to ignore anymore.

While regular web surveys can be accessed via mobile browsers, this can be burdensome if the layout has not been adapted. To avoid coverage, nonresponse and measurement error, new strategies are needed for offering web surveys which can be properly accessed by the most common online devices.

We present the strategy for the Dutch LISS panel to develop from a web panel towards a true multi-platform compatibility to the different online respondent groups. We start with presenting the latest rates of unintended mobile response in online panels and provide a profile of the mobile respondent. We discuss the advantages and disadvantages of different multi-platform approaches and report the latest experimental findings from the field.

WILKESMANN, UWE* (TU Dortmund University, uwe.wilkesmann@tu-dortmund.de)

Which Form of Organizational Governance Supports Freedom of Teaching and Increases Their Perception of Relevance? Empirical Evidence from Two Types of Higher Education Institutions

New Public Management caused an ‘economic turn’ in universities to managerial governance. The leadership literature distinguishes two modes of governance, which can also be applied to the governance of universities: transactional and transformational modes of governance. Transformational governance encompasses all forms of managerial governance, which includes creating incentives and monitoring capacity. The theoretical underpinning of this mode can be found in Principal-Agent Theory which is the theoretical underpinning of New Public Management. Whereas transformational governance covers on the one hand, the means of restructuring the roles of principals and agents in the interaction situation in the organization, on the other hand, it also addresses all the means of restructuring the relationship between perceived environment and motivation, as can be seen in Self-Determination Theory. Other elements of transformational governance are social norms such as those that inform the quality of research or approaches to teaching. As a starting point, the main research question is: What has more impact on professors’ perceptions of the significance attributed to academic teaching in Germany – transactional or transformational governance? Two hypotheses for transactional and two hypotheses for transformational governance were developed. The research question was posed in two different panels, one conducted in 2009 with a sample of 1,119 German research university professors and another conducted in 2011 with a sample of 942 German professors from universities of applied sciences. The main findings are that transactional governance has no impact on the perception of the significance attributed to academic teaching whereas transformational governance has ample influence. Under the bottom line, economic instruments could produce not intended effects but without an increase of the perceived relevance of teaching.

WILKINSON, LORI* (University of Manitoba, lori.wilkinson@ad.umanitoba.ca)

A Longitudinal Examination of the Intersections of Ethnicity and Sex and Their Influence on Perceived Racism Among Newcomer Youth in Canada

Perceptions of racism and discrimination are powerful forces influencing social cohesion of members of any society. Real or not, those holding a perception that they are victimized by discrimination feel marginalized and ostracized socially and may experience the instrumental forms of discrimination in various aspects of their lives. The main research question is: What has more impact on professors’ perceptions of the significance attributed to academic teaching in Germany – transactional or transformational governance? Two hypotheses for transactional and two hypotheses for transformational governance were developed. The research question was posed in two different panels, one conducted in 2009 with a sample of 1,119 German research university professors and another conducted in 2011 with a sample of 942 German professors from universities of applied sciences. The main findings are that transactional governance has no impact on the perception of the significance attributed to academic teaching whereas transformational governance has ample influence. Under the bottom line, economic instruments could produce not intended effects but without an increase of the perceived relevance of teaching.

Economic Democracy in South Africa: Women at the Grassroots

In this paper we explore the ways in which women are creating spaces for economic and political participation in South Africa. The post-apartheid South African Constitution has been hailed as one of the most progressive constitutions in the world with its entrenchment of socio-economic rights and recognition of equality among various cleavages such as gender, race, and sexual orientation. There are myriad policies and legislation entrenching women’s rights. Despite the conducive policy environment, the state has not created spaces for women’s political participation at local levels. Nevertheless, women are creating their own spaces of political and economic participation, linking up with the state when and where it is possible, and forging ahead when it is not possible to link with the state. In this paper, we look at a township north of Johannesburg and a rural area in the Eastern Cape to see the ways in which are creating and engaging economic production within their communities. Are these simply survivalist strategies or do they represent an emergent alternative that is rooted in economic equality and social justice? Are they practicing economic democracy? What role has the state played in this process?

Rescaled Citizenships and Vernacular Cosmopolitanism in Sydney, Australia

In the Australian context, notions of cosmopolitanism have had less airtight than the nationally sponsored program of multiculturalism. Cosmopolitanism has emerged in academic theories of living together with difference, as well as in the realm of urban governance, where it is strategically employed as a place marketing technique, for example, in marketing Sydney as a multi-ethnic, globally competitive city. Academic theories of vernacular cosmopolitanism have been used to analyse forms of quotidian engagement across ethnic difference in Australian society, and are usually synonymous with notions of ‘everyday multiculturalism’ (Velayutham and Wise, 2009). However, these theories have been less explicit about how such everyday, intercultural exchange might be part of a rescaling of belonging for migrant residents, and how this might impact on the nation-state (Kay, 2000). In this regard, I suggest drawing on notions of urban citizenship (Holston and Appadurai, 1996) as a form of post-national or sub-national belonging to scale up the potential implicit in quotidian modes of cosmopolitanism. Urban citizenship – as a set of substantive rights relating to inhabitance in the city – enables a more explicit framework for thinking about how everyday practices of urban dwelling might complicate the dominant scaling of belonging at the level of the nation-state. The paper draws on qualitative research in two multi-ethnic neighbourhoods in Sydney, Australia to explore localized belonging amongst migrant communities and emergent forms of urban citizenship that destabilize dominant narratives of national belonging. The paper argues that urban citizenship as a form of post-nationalism can complement and augment the potential of everyday cosmopolitanism – which is easily appropriated by the state and commercial interests. Also, arguments about emergent urban citizenship should draw on ethnographic understanding of ordinary cosmopolitanism to better understand the multiple ways migrants negotiate identity and socio-spatial belonging in urban settings.

Cords of Collaboration: Exploring Political, Clinical, Private, and Third-Sector Interests within the Emerging British Umbilical Cord Stem Cell Bioeconomy

The paper illustrates how attempts are being made to redress ethnicity-based social inequities in health through collaborative governance of umbilical cord stem cell banking. This technology has enjoyed a growth in popularity among clinicians delivering treatment to cancer patients, partly because it is believed that ethnic minorities are more likely to find a tissue match in umbilical cord stem cell biobanks than in extant bone marrow registries (Anthony Nolan Trust 2013). In response, clinical experts, third-sector charities and policy makers have sought to develop an infrastructure to increase the public collection of immunologically diverse umbilical cord stem cells (Brown et al 2011).

As such, we are witnessing the novel intersection of clinicians, charitable bodies, patient advocacy organisations and private enterprise. These stakeholders come together in parliamentary meetings to discuss barriers to development, produce policy documentation (APPSSCT 2012, UKSCSF 2010) and foster further dialogue.

As has been noted by Emerson et al (2012), such a model of collaborative governance can facilitate discussion among parties seemingly separated by impermeable boundaries of profession and politics. This paper explores the means through which expertise and interest are brought together toward opening policy discussion to a wider field of stakeholders. In this way, it is a case study of an emerging collaborative governance model that hopes to add to this burgeoning area of theoretical development.

The presented data, including interviews with stakeholders and observation of parliamentary meetings, also investigates the manner through which a recognised ethnicity-based health inequity can be strategically deployed for specifically professional, political or civic interests; that is, how socially charged notions of race and ethnicity can be mobilised toward potentially beneficent ends (St Louis 2010; Benjamin 2013). Finally, the paper also brings into relief the tenuous position of the “expert” within a widening forum of stakeholders.
of Australians to shed light on various ‘spaces’ of cosmopolitanism that provide the opportunity for cosmopolitan encounters. Rather than revealing a linear pathway to a final, utopian cosmopolitan destination, we highlight various gradations of opportunities enabled by certain spaces, and in a range of places, that may or may not nurture the seeds of cosmopolitanism to their full potential or permanency. We conclude with recommendations for deeper understandings of the relationship between space, place and performance into what constitutes cosmopolitan encounters. We then propose particular research strategies for uncovering cosmopolitan encounters, and highlight unlikely contexts worthy of investigation in future research.

Fitness As Leisure - Exploring Physical Activity through Consumption and Lifestyle

Drawing on the discussion on the commercialization of the fitness culture, this study examines fitness as a leisure activity. Fitness is prominent both in media and consumer culture, and it plays an important role in individuals’ everyday life as everyone is surrounded by the social world of the fitness culture, its meanings and signals. Fitness activities are practiced in numerous ways and due to various reasons. Also the fundamental aims of the activities have changed; they have become commodities of the leisure industry.

The core of leisure is in the production of value, and it can thus be associated either with freedom from work and responsibility, or as freedom for self-production. Fitness is understood in relation to both health and appearance, which have become central not only to the social order, but also to individuals’ occupational success and social status. Fitness has both instrumental and non-instrumental value, but the rationale for fitness is still instrumental; fitness is seen as an investment in the body’s physical capital.

This study takes a quantitative approach to examining how consumption and lifestyle are related to the motives for physical activity. The data is derived from The National Student Health Survey (n=4403) conducted in Finland in 2012. The results revealed three consumption styles/lifestyles: hedonistic, healthy and sustainable. Moreover, four main motives for physical activity were found: sociability, health, target-orientation and appearance, which all correlate with the appreciation of well-being emphasizing different aspects. Hedonistic lifestyle correlated with all fitness motives, the strongest relation being with the motive of appearance. Also healthy lifestyle was related to all fitness motives, emphasizing the motives of sociability, health and the most. Sustainable lifestyle, on the contrary, had no correlation with any other fitness motive than health, even having a slightly negative correlation with the motive of appearance.

Glorious Mission: Social Media, Video Games, and Propaganda

Governments and social movements have long used information technology to promote their causes. In the past books, songs, radio, and television where used to persuade people that political and social actions where necessary. With the growth of information and communication technologies there are now new media that can be used for propaganda and persuasion. Technology such as Twitter, Facebook, and Video Games have emerged in the past decade as growing forces in protest movements and government propaganda.

This paper will discuss how new technologies have been used for purposes of propaganda around a number of political issues in Asia. Analysis is based on content review of Twitter archives, online newspapers, blogs, and Video Games associated with political issues in East Asia. The issues to be addressed will include territorial disputes such as the Dokdo/Takeshima Islands, North and South Korea, and the Chinese internet censorship. Results suggest that governments in East Asia have been quick to recognize the propaganda power of new media and have quickly organized to provide a government perspective on ongoing disputes. Protest movements may have had an initial advantage in recognizing the power of new technologies and new media, but government quickly responded to remove or reduce a political advantage they had. Even though new information technologies have become common the issues of public discourse and propaganda remain fundamentally the same. Propaganda through Twitter and Video Games has the same motivation as in the past, but presented using current and emerging technology.

Managing Risk in a Complex Food System: The Importance of Inter-Personal, Professional and Organisational Trust

A challenge of managing food safety risk is the multi-sectoral nature of the complex system set to do so, with responsibilities lying with expert actors from both food industry and food regulation. Amidst this complexity, a unified message must be conveyed to consumers so that food risks are managed. This paper presents research conducted to navigate this complex system. We investigated the role of expert actors from the food regulatory and food industry settings in developing/breaking/repairing/maintaining trust with consumers about food. Qualitative interviews were undertaken in Australia (n=30), the United Kingdom (n=15) and New Zealand (n=5). Respondents identified that risk management, including increased consumer trust, could only be established if trust existed within and across the expert actors. As such the nature of the trust between actors became central to the research. Inter-personal, professional and organisational trust between these actors was observed. Interpersonal trust and relationships were developed between actors through transparency, good communication and regular phone and face to face informal meetings. Organisational trust was built and maintained through documents such as memorandums of understanding and regular, formal meetings. Professional trust was particularly apparent between actors within the regulatory and industry systems who both had responsibilities for managing food risk. Some actors indicated that they did not understand the perspective of the other system, because of the different processes and systems in which they worked. Despite this, each system had a common goal (to avoid foodborne illness). When this common goal was recognised by industry and regulatory actors, stronger trust was formed which enabled a unified message to be communicated to consumers. Therefore one way to manage the complexity of the food regulatory system, and ultimately better manage food risks, is to develop inter-personal, professional and organisational trust between expert actors in the food system.

Does Newsworthiness Influence Construction of Food Risk? Views of Media Actors

In modern society, many risks are invisible and are brought to the attention of the public through the mass media. This is particularly relevant for food, where the widening gap between producers and consumers in the developed world has increased the need for consumer trust. Therefore the media play a crucial role in how food risk is constructed and presented to the public. It is pertinent to gain an understanding of the construction of food risk as this is likely to influence consumer trust in food. This paper presents empirical data from research investigating how the media construct food risk and ultimately affect consumer trust across three countries: Australia, the United Kingdom (UK) and New Zealand (NZ). Interviews were undertaken with media actors from each country including 20 from Australia, 10 from the UK and three from NZ. First, our findings identify that newsworthiness is important when constructing a story about food risk. This followed a hierarchy, with risks affecting children and babies perceived as the most newsworthy. Second, risk reporting follows a cycle with precedence given to the dissemination of any information about the risk, regardless of the severity of the risk to public health and safety. This is followed by tempering of the risk, coverage of new angles to keep the story going and seeking to uncover the ‘truth’ such as the source of contamination that led to the food incident. Third, working conditions of media actors, including limited time, limited space and short deadlines were found to diminish the ability to report a balanced story, hence adding to newsworthiness and augmenting construction of risk. Our findings indicate that the construction of food risk by the media is influenced by newsworthiness and this is likely to impact the ways in which consumers regard the food risk presented.

A Walk through Memory: Urban Interventions and the Sensual Battle Against Oblivion

In the years following the Latin American military dictatorships of the 1970s and 80s, historians and activists noticed a disappearance of documentary evidence that paralleled the disappearances of human beings. Decades of activism by the Mothers and Grandmothers of the Plaza de Mayo, human rights groups, and political organisations that value human rights, has fueled an archive of memory: an ongoing city-wide network of projects and museums dedicated to remembering the Dirty War years throughout Buenos Aires.

This paper explores the roles of mural art and street flagstones in the production and reception of two post-conflict memory projects in Buenos Aires. The Olimpo project, initiated by the non-governmental torture survivor organisation Barrios x Memoria y Justicia, and the Olimpo project, created by the Barrios x Memoria y Justicia collective began as an ongoing endeavor to replace parts of sidewalks with small, colorful plaques, in front of places where victims of state terrorism were born, lived or were kidnapped.

We consider two-decades of historical data reflecting the struggles to establish memory projects that bring into conflict state authorities, human rights organisations, neighborhood groups and university students. These concrete visual reminders of state-sponsored violence are both memorials and fuel for the battle against forgetting and/or rewriting history.

The Origin of the World: Analysis, Representation and Performance

This paper focuses on an artistic experiment or performance, ‘The Origin of the World’, in which over a two year period, 50 male artists were provided with instructions, paper and instructions quickly to draw a vagina (only) with no human or other model. 20 of the drawings were later re-presented in a video in which the drawings slowly morph together and apart consecutively to music. Later, the drawings and video were exhibited in a university space. This paper explores this process and these data from a methodological perspective, discussing their potential as both representation and performance. First, the drawings were analysed interpretatively in relation to Lacanian psychoanalytic theory and feminist critiques of the same. This analysis highlights the notable lack of consensus in the shapes produced, the extent to which the artists stuck to or deviated from the instructions given, and the clues they provided as to the artists’ responses to the exercise (anxiety? disgust? humour?). This work raised further questions as to the nature of the data analysed and the potential contribution to such analysis of interviews exploring the artists’ perspectives on the exercise, its distance from their habitual artistic practice and perhaps their own gender/sexual identities. However these data are also performative (Law 2009) in that they enact multiplicities, whereby interrogating categorisations and, in more general terms, illustrate the potential of such methods and data to provide an opening to the uncertain and less defined. Further the video itself constitutes an interrogation and re-arrangement of the video, as well as an instrument of arrangement to external stimuli both within and without such conventions. In a world that is supposedly more and more mobile and in which globalised LGBT rights claims are now firmly on the UN and many national agendas, lesbians often remain, paradoxically, invisibilised and immobilised—but to varying degrees. This paper will consider this paradox with reference to the issue of political asylum.

Trends in Wealth Inequality

Nico Wilterdink: Trends in Wealth Inequality

This paper will present new estimates of inequality in household wealth in the Netherlands 1993-2011. Changes in this recent period will be connected with long-term trends in Dutch wealth inequality (from around 1900), which will be compared to trends in other Western countries. Preliminary findings are: there has been an overall tendency of partial collectivization (a shift from personal to collective wealth) and diminishing wealth inequality in the Netherlands and other Western countries during the greater part of the twentieth century, followed by a tendency of decollectivization and growing inequality since the 1980s. The latter trend will be explained by connecting it with processes of deindustrialization, globalization and politico-institutional change. The paper will give special attention to recent changes under the impact of the financial crisis, and discuss the question to what extent national government policy can be used to modify wealth inequality.

WINCZOREK, JAN* (University of Warsaw, janwin@janwin.info)

Legal Costs Insurance (LCI) – an Attempt at Comparative Analysis

Legal aid systems are best conceptualised as complex entities, comprising different institutional and non-institutional mechanisms enabling the individual to obtain legal advice. In this perspective, commercial, public-subsidized, pro bono or prepaid legal services are all one method of providing access to legal advice, just capitalising on different resources. The same can be said about private/informal mechanisms of dispute resolution, self-help, and bundled legal services. Yet another widely-recognized mechanism for providing legal aid is legal costs insurance (LCI). Despite relative prevalence of this channel of access to legal advice in some countries (such as Germany, Netherlands or Austria), legal aid literature (with some notable exceptions) does not devote much attention to LCI. In particular, it by and large neglects the interactions between the LCI as a channel of access to legal aid and other types of provisioning such services. Not much is also known about the institutional and cultural conditions of establishment of LCI systems.

The paper aims to contribute to filling this gap. It undertakes an attempt to answer the question of the factors driving emergence, prevalence and stability of legal costs insurance and the interaction it enters with other channels of provisioning of legal aid. To this end, the paper does two things. First, it analyses the historical literature in the search for theoretical explanations of said phenomena. Second, it juxtaposes theoretical explanations with the outcomes of an comparative study of LCI in Europe, utilising existing data on LCI, legal systems, disputing behaviour as well as values and culture.

WINCZOREK, JAN* (University of Warsaw, janwin@janwin.info)

Why Do Procedures Have Unexpected Outcomes?

According to a famous statement by Adam Przeworski, the difference between democracy and dictatorship lies in the fact that in democracy the content of a political decision cannot be known in advance: democracy, not dictatorship, institutionalizes uncertainty. Sociology has largely ignored the institutionalized uncertainty thesis that follows from this observation. In particular, one has to be careful not to confuse Przeworski’s argument with that of Robert Merton, which is about sociological discussion about unintended consequences for decades. Merton argued, famously, that important factors exist, which may keep the outcomes of action from the sight of the acting party, yet he perceived unintended consequences of action as largely undesirable and non-institutional.

This paper attempts to contribute to both the discussion of Mertonian unintended consequences and to the developing of a legal sociology of institutionalised uncertainty, a la Przeworski. It aims to do this by translating the intuitions of both authors into the langue of Niklas Luhmann’s systems theory. The particular field under investigation is akin to what Przeworski found remarkable: procedures and their outcomes. Yet, against Przeworski’s theses and some theories of procedural law and democracy, it is argued that procedures are not necessarily outcome-neutral and that they do contribute to certain outcomes of political and legal processes. Against Merton’s observations, but in accord with these of Przeworski, it is demonstrated that macro-sociological and indeed deeply institutional factors exist, which contribute to the production of unintended consequences of individual actions. Finally, against theories of procedural justice in sociology and psychology of law, it is argued that procedures do not provide individuals with a sense of ontological security, but to the contrary, are but one form of “institutionalized uncertainty”.

The paper has been published in Mica, Peisert, Winczorek (eds), Sociology and the Unintended. Robert Merton Revisited, Peter Lang 2012.

WINTER, BRONWYN* (The University of Sydney, bronwyn.winter@sydney.edu.au)

(Im)Visible and (im)Mobile: Lesbians, Exile and Global LGBT and Women’s Rights Movements

In a world that is supposedly more and more mobile and in which globalised LGBT rights claims are now firmly on the UN and many national agendas, lesbians often remain, paradoxically, invisibilised and immobilised—but to varying degrees. This paper will consider this paradox with reference to the issue of political asylum.
On one hand, social movements campaigning nationally, transnationally and internationally for both women's and LGBT human rights have facilitated access to asylum, mostly in Western countries, for lesbians from the many countries where homosexuality remains illegal (76 countries), or where the state fails to protect homosexuals from abuse, despite decriminalisation (another 60-70 countries). The European Union, for example, now explicitly includes references to the specificities of LGBT experience and needs in its new standardised asylum procedure.

On the other hand, continued cultural taboos and in some cases political backlash have, in many countries, maintained or even exacerbated the isolation of lesbians, depriving them of easy access to global LGBT rights networks (including the very important online networks that have proliferated over the last decade, but which frequently continue to privilege gay men). Moreover, the significantly lower levels of financial and cultural autonomy for women in many countries have meant that access to escape routes is much more limited than for men—a problem that lesbians share with heterosexual women but can be even worse in their case. Yet, access of lesbians to asylum presents as one of the world's most urgent human rights issues, as almost without exception, lesbians seeking asylum have suffered multiple forms of physical and psychological torture.

The paper will discuss the above issues with reference to the importance of transnational social movement activism and support that specifically addresses the situation of lesbians, as well as to case studies from France in particular.

"My Boss Is Like Family" — A Singaporean Case Study of Race Relations at Work — CANCELLED

A growing literature on race relations foregrounds cultural ‘contact’ in developing stronger intercultural understanding and forms of community that bridge difference (Amin 2002). The nature of this literature takes the actual site and social field of ‘contact’ as important in mediating difference. The workplace is a special kind of micro-public, where the rules and codes of contemporary working cultures interplay with collegial and hierarchical relationships, which in turn mediate inter-ethnic relationships. In addition media cultures and wider national discourses and discussions are relevant to the study of race. This paper discusses the role of the workplace in fostering social change.

This paper focuses on a case study of low and ‘middling’ workers in a multi-national firm based in Singapore. The case study is drawn from a larger comparative study of inter-ethnic relations in workplaces in Singapore and Sydney. Drawing on the work of Lamont & Akkaiti (2002) and others, the paper explores the discourses, scripts, rituals and practices (Noble 2009) workers engage to create or overcome boundaries of difference.

Employees in the case study multinational framed experiences of belonging and collegiality in familial terms, drawing on ideas of reciprocity, care, friendship and intimacy to describe positive feelings towards co-workers of same and different backgrounds. Race and cultural difference was described by most as having little salience in everyday working life. Yet we argue that the quality of collegial intercultural relations at work does not necessarily translate into shifts in racialised hierarchies nor views about cultural and racial ‘Others’ more generally. Indeed, the use of ideas of family and informal modes of recognition and care actually reinforces and legitimised certain forms of vulnerability and discrimination. This is so especially in a context like Singapore which is a highly racialised society with a variegated system of temporary work visas where opportunities, rights, and conditions differentially distributed according to national origin and race.

WISSELGREN, PER* (Umeå University, per.wisselgren@soc.umu.se)
Alva Myrdal, Unesco, and Cold War International Social Science, 1951-1955

The paper is concerned with the international organizing of the social sciences during the early Cold War era. Empirically it is focused on UNESCO's Social Science Department (SSD) during Alva Myrdal's directorship, 1951-1955. The SSD was set up in 1946, as part of the wide family of intergovernmental organisations that emerged with the United Nations in the aftermath of the Second World War. When Alva Myrdal (1901-1986) became the Director of SSD, it has been suggested that she "set the department on its feet". But what difference did she actually make? What ideas, visions and hopes did Myrdal have regarding the SSD? How did she try to realise them? Which projects did she initiate during her time as director? Which issues lay closest to her heart? What did she oppose? How did she view her own role as Director of the SSD? With which people and organisations did she collaborate? By employing a STS-perspective and analysing the everyday practices at the SSD during these five years, the paper intends to discuss the above mentioned questions in relation to the contemporary geopolitical setting.

WITTCROCK, CHRISTIAN* (Aarhus University, chr@wittrock.dk)
A Typology and Analysis of "World-Changing Management Concepts": Beliefs, Unanticipated Consequences and Anomie

I develop criteria for and analyze consequences of what I call “world-changing management concepts” (WCMC), drawing on Lean, TQM, BPR, JIT and coaching. To qualify as a WCMC, the authors claim that the concept: 1) yields specific, predictable results if implemented correctly; 2) enables fundamental, groundbreaking changes leading to a superior competitive advantage for the organization, regarded as the context; 3) is a more humane form of management practice, making previous approaches obsolete, and 4) will change the world for the better. I.e. they are presented as grand theories. However, the knowledge content in these concepts is based on studies of distinct or disparate cases, industries, or cultures and is therefore not transferable to the Automobile Industry, or are based on ideas from other fields of practice (e.g. sports).

I draw on translation models (by Lilirank (1995) and Røvik (2007)) to show how treating management concepts as theories of the middle range, rather than grand theories (like WCMCs), is likely to greatly enhance the local translation of management concepts and reduce unanticipated consequences. I further show how the claims of WCMCs’ logically require changes to basic underlying assumptions in the organizational context (Schein 2010). Such requirements create a situation where the culture is at odds with what employees are asked to do, potentially creating anomie (Merton 1968), and in a further sense creating a double bind for employees (Bateson et al 1956).

Although theoretical in scope, the presentation builds on ethnography from management consultancy.

WITTCROCK, CHRISTIAN* (Aarhus University, chr@wittrock.dk)
Lean between Practices and Ideology: the diffusion of a “World Changing Management Concept”

In my international review of quantitative studies of lean diffusion, surveys indicate recurrent problems with the implementation of lean: managers report that a “lean culture” is difficult to attain. Furthermore, positive outcomes are scientifically unsubstantiated (Freytag & Arljbørn 2011). Lean is an example of what I call a “World-Changing Management Concept,” characterized by holding ideological ambitions to create a better world, while claiming that practices work regardless of context. I use the seminal texts of Womack et al (2007 (1990)) and Womack & Jones (2003 (1996)) to show how lean is in part a theoretical construct, inspired by “Japanese management”, but ideologically aimed at creating a sustainable management practice in a global economy.

I draw attention to the distinction between the adoption of a management idea as a practice and as an ideology (Guillén 1994). I then use Guillén’s neo-institutional...
al framework to show how lean draws heavily on practices and ideologies that
do have a long standing in Japanese history, including ideologies of co-prosperity
(Goto-Jones 2005). I show how institutional factors in the organization adopting
lean will be decisive for whether lean will come across as Taylorism in disguise or
something closer to the original ideological intentions. In keeping with my argu-
ments, recent research on work environment issues in lean projects gives a mixed
picture of consequences for employees (Edwards et al. eds.) 2010).

Information Et Participation Politiques En Ligne: Inégalités Ou Fracture ?

Dans les recherches interrogeant les rapports entre politique et numérique, l'une
des thèses les plus discutées porte sur l'existence d'une "fracture culturelle" entre citoyens de
vitesses différentes. Comment pourraient-ils être utilisés à trouver et organiser l'in-
formation pertinente, dans un contexte de profusion, de flux informations dé-
multipliés par les réseaux numériques. Autrement dit, les individus qui seraient déjà motivés et intéressés par les questions politiques bénéficieraient pleinement du
web comme ressource d'information, mais ceux qui seraient peu motivés n'en tireraient pas réellement profit, ce gain informationnel serait donc marginal.
Cette fracture culturelle reposerait sur l'inégalité répartition des compétences d'in-
dividus disposant de manière variable de capitaux culturels et cognitifs. A cette
fracture, viennent s'ajouter d'autres thèses sur la contribution des médias, de
masse et numérique, à soutenir voire à accroître l'apatheie politique. En effet, la mul-
tiplication de demandes quotidiennes, les thèmes numériques ou câblées et la personnalisation des
contenus permettraient aux individus qui préfèrent le divertissement de profiter
de l'information préservée, tandis que l'information intéressante se trouverait plus
difficile à trouver et organisée sur le web.

Assessing Nonresponse Bias with Microdata from Official Statistics – the European Case

"Data without Boundaries" – a project funded under the 7th European Framework
Programme – aims at improving access to microdata from official statistics in
Europe. This overarching goal is reached through several tasks, among them:
collaborating to make more and make current mortality data available in 33 countries. In many of these countries, EU-LFS is mandatory leading to very high response rates. Because of Ford's history in the Argentine dirty wars. The heated episode almost
forced the young dynamic network to shut its doors, and brings to the fore the
complex tensions of local autonomy and global sovereignty, highlighting the con-
divergent and oft-times reactive nature of transnational communication networks.

The analysis demonstrates how not only those directly interested in micro data
from official statistics but also survey researches benefit from the efforts of “Data
without Boundaries” and the improved access to Eurostat's data.

WOLF, CHRISTOF* (Leibniz Institute for Social Sciences, christof.wolf@gesis.org)

Problems of Survey Measures of Social Networks

Since Fischers (1982) and Burts (1984) seminal contributions to collecting egocen-
tric network data in social surveys the method has been employed in numer-
ous studies and can be regarded as standard in this field. Recovery of this approach
has, for example, been severely criticized. Several authors have pointed out that the
standard approach to measuring egocentric network data suffers from strong interviewer
effects which may lead to misleading conclusions (Paik/Sanchagrin 2013; Bruderl
et al. 2013). The presentation will discuss the methodological problems with the standard
approach to collecting egocentric network data. Several adjustments to the stand-
ard approach will be discussed and alternative methods to capture aspects of
“social capital” will be presented. The presentation ends with a plea to use a com-
bination of several independent measures of social embeddedness thereby over-
compenating shortcomings of the main outcome. One potential solution is to
measuring egocentric network data. The shared claim is that these
networked organizational forms, and accompanying cultural practices, are creat-
ing a new more egalitarian social world. At the foundation of this argument is the
framing of transnational activist networks as a form of civic society, leading to a
new conception of the dynamics of global democracy and local autonomy
come into tension, offering a more nuanced look at the intersection of the global
and the local in global networked social movements. Founded during the WTO
protests in 1999, indymedia is a global-spanning media network, with over 200
active nodes on six continents, where news and journalism is produced in multi-
ple formats in over 30 languages. In specific, in this chapter I look at the decision
of the global indymedia network to reject a large grant from the Ford Foundation
because of Ford's history in the Argentine dirty wars. The heated episode almost
forced the young dynamic network to shut its doors, and brings to the fore the
complex tensions of local autonomy and global sovereignty, highlighting the con-
divergent and oft-times reactive nature of transnational communication networks.

The analysis demonstrates how not only those directly interested in micro data
from official statistics but also survey researches benefit from the efforts of “Data
without Boundaries” and the improved access to Eurostat's data.

Assessing Nonresponse Bias with Microdata from Official Statistics – the European Case

“Data without Boundaries” – a project funded under the 7th European Framework
Programme – aims at improving access to microdata from official statistics in
Europe. This overarching goal is reached through several tasks, among them:
collaborating to make more and make current mortality data available in 33 countries. In many of these countries, EU-LFS is mandatory leading to very high response rates. Because of Ford's history in the Argentine dirty wars. The heated episode almost
forced the young dynamic network to shut its doors, and brings to the fore the
complex tensions of local autonomy and global sovereignty, highlighting the con-
divergent and oft-times reactive nature of transnational communication networks.

The analysis demonstrates how not only those directly interested in micro data
from official statistics but also survey researches benefit from the efforts of “Data
without Boundaries” and the improved access to Eurostat's data.
ple to teach the ideas of communism and social action, thus banned teaching sociology at universities in Korea. K. D. Har was not able to teach sociology, and eventually kicked out from the university. After liberation from Japan, he pursued the career in journalism, but his newspaper was not allowed to publish due to its critical report on post-Colonial South Korean government. Using K.D. Har as a case study, this paper discusses the potentials and limits of public sociology in (post) colonial context, and explores the challenges of global sociology in (post) colonial context.

Passing and Crossing: A Study of Transgender Embodiment in Hong Kong

Issues of transgender and transsexuality provide a new impetus and a practical need to problematize assumptions about bodies and identities and to rethink the categories of women and men. While transgender studies have exposed the artificiality and mutability of sex/gender/sexuality categories, a tension exists between the transgender/transsexual discourses which are oriented toward a search for a gendered home and the queer emphasis on creating trouble for the gender order through non-normative, unintelligible embodiments. This paper seeks to address the dilemma through an examination of the embodied practices of passing and crossing in the transgender community in Hong Kong. For many gays and lesbians, passing or acting straight is a strategy for coping with stigmatization in a hetero-normative society. For many transgender people, passing, that is, to blend into society both socially and visually in accordance with their preferred gender, is a goal rather than a means. They want the society to see them in their desired gender. The emphasis on passing is reinforced by the 'Real Life Test', which requires trans to dress and live in their gender identity successfully for a period of time in order to be eligible for hormonal treatment or surgery. Questions will be raised as to whether a hierarchy based on the ability to pass has been created in Hong Kong's transgender community; to what extent the practices of passing entail compliance with dominant standards of dress and behavior which are grounded in the class privilege and compulsory heterosexuality. Similarly, questions will also be raised with regard to incoherent embodiment. Who can afford incoherent or unintelligible embodiment? Whose incoherence is strategic, and whose incoherence is necessary or unavoidable? This paper argues for the importance to subvert dominant codes, yet without losing sight of the materiality, complexity and ambiguity of the lived experiences of transgender people.

Biographical Experience, Desires, and Interests: A Case Study of Individual Hong Kong Fans of Japanese Boy Love Comics

This paper is an ethnographic attempt to understand the relationship between individual Hong Kong fans of Japanese Boy Love (BL) comics and the national image of men in BL through the fans' derivative creation of BL. The key concept here is the desire. We show that while Hong Kong fans of Japanese BL comics share a collective meaning of the general image of male characters in BL comics, each of their desires tends to maintain a unique interest in it. We further argue that the unique interest in the general image of male characters in BL comics is closely related to the biographical experience of each individual Hong Kong fan. The biographical experience itself is a product of many social factors, among which family is the most important one. Following Sangren (2000), we argue that in order to understand how biographical experience shapes unique interest of each individual fan, we should understand how family as a social institution underlies the desire of individual fans toward BL comics in general and the general image of male character in BL comics in particular. The desires instituted by family in turn will be shown to motivate the unique behavior of individual fans toward BL comics. Through this ethnographic attempt, we shall try to transcend the classic dichotomy of individual and society, sociology and psychology, and culture and personality lingering in social sciences in general and sociology in particular.

Can the Industrial Relations in Japan be Reconstructed in the Long-Term Perspective?
More than ten years have already passed since it was first proposed that Japan’s corporate management and labor relations should be reformed to keep pace with globalization. After the financial crisis of 1997, especially, corporate governance changed, and management began to shift emphasis to short term rather than long term profits and shareholders’ rather than employees’ concerns. In addition to the general reduction in labor costs, replacement of regular employees with non-permanent employees rapidly proceeded. The wage system became more performance-based as well in accordance with emerging HR policies that sought the immediate competence of employees. However, some scholars argue that, in the long term, such changes in business strategy and HR policy have negatively affected Japanese industries’ productivity and quality. Moreover, Japan’s industrial relations have been affected as well. Laborers have failed to cope with problems such as wage reductions, growing numbers of non-regular workers, and the decrease of collective bargaining power. These problems exist against a backdrop of increasing wealth disparity. This paper aims to elucidate the possibility whether Japan’s industrial relations could be reconstructed or not in the long-term perspective, focusing on the mechanisms by which globalization and changes in corporate governance are influencing industrial relations at the micro level.

Welfare Support Attitudes in Korea, Taiwan, Germany, and Italy: Focusing on the Influence of Institutional and Political Factors
Previous studies have shown that welfare attitudes are determined by various demographic, economic, and social factors in Western countries. Class is found to be one of the most influential factors in explaining individual welfare attitudes in Western countries. On the contrary, no clear factors have been found to be significant in differentiating individual welfare attitudes in Asian countries, particularly in South Korea so far. To understand welfare attitudes in comparative perspective, we will analyze the Life and Society survey data collected from Korea, Taiwan, Germany, and Italy in 2012. Two Asian countries are small emerging welfare states, whereas Germany and Italy are already mature welfare states. However, these countries have some commonalities in that their welfare systems were constructed by the principle of Bismarckian insurance system. It would be very interesting to check changes in welfare attitudes in Western countries, finding out differences and commonalities between Western mature welfare states and Asian emerging welfare states.

The first purpose of this article is to explore whether there are different social cleavages in welfare attitudes in Western and Asian countries. The second purpose is the main part of this study. The study focuses on the issue addressed by institutionalists in the analysis of welfare attitudes. That is the importance of institutional and political factors. We expand the concept of political trust to measure an evaluation of the political world. We argue that institutional and political factors that measure objective evaluations of the political as well as are important in explaining welfare attitudes such individual support for welfare states. At the same time, we will show that there are variations among four countries, and particularly differences between Western and Asian countries in the direction and significance of institutional and political factors.

WOOD, BRONWYN* (Victoria University of Wellington, bronwyn.wood@vuw.ac.nz)
‘Presentism’ and Youth Research: Methodological and Historical Oversights
A key incentive for why many youth researchers undertake research is the hope we can ‘make a difference’ for the young people. No more so than the community participatory research when we are invited in to participate in transformative change for marginalised young people in particular. However, while we know that social change takes time, we are constrained in such research by timeframes imposed by neoliberal institutes that compel quick research turn-arounds and rapid outputs. Moreover, such constraints also encourage a very ‘presentist’ view of the young people at the focus of our research, thus overlooking historical legacies, continuities and discontinuities that are embedded in communities and how these shape their social worlds. In this paper I examine a participatory community youth research project that ‘failed’, forcing me to confront my own presentist and short-sited views, as well as those imbued in methodological choices. Drawing on Hannah Arendt’s (1986), I re-examine the ‘web of relations’ (p. 150) which these narratives of ‘failure’ are situated in, thus highlighting the complex and intertwined historical and contemporary factors at play when we conduct research. The paper critiques presentist tendencies in youth research and raises questions about collective ethical responsibilities toward sustainable actions of change through youth research.
used a range of terms to capture the 'grey zone' that falls between worklessness on the one hand, and relatively secure full-time employment on the other. This 'grey zone' varies significantly in size across first world countries and is likely to expand under the current turbulent economic conditions. Although sociologists have both introduced and critiqued various terms used to represent insecure and fragmented forms of employment, there have been few attempts at a theoretically driven conceptualisation that ties the new conditions to broader processes of change in advanced capitalist societies and links structural change to new forms of consciousness. While the idea of a framing the experiences of fragmented and casualised work in the new economy as a new class, for example the precariat, has some attraction, there are also difficulties with the conceptualisation. One of the core problems relate to the fact that not all young people who are structurally located in the precariat by virtue of their employment in casual or insecure forms of employment represent a disadvantaged or marginalised group. For some the experience of precarious employment is alleviated by access to other resources, such as family support, and they escape some or all of these precarious work conditions as they get older. Drawing on evidence from a number of countries, and primary data from an ongoing mixed-methods study of youth in Australia, in this paper we describe some of the ways in which changes in the labour market are affecting young people, consider the adequacy of representations of precarious and fragmented positions as the basis of a new 'class' and propose an alternative way of conceptualising ‘individualised’ structured inequalities in the new economy.

Balanced Advice? Appointments to Advisory Boards and Gender Quota's in the European Union

Advisory councils and boards play an important role in countries with corporatist decision-making. Appointments to these boards are often controlled by political actors but regulated in a bureaucratic framework. Feminist movements identified these decision-making bodies as both crucial gatekeepers and easily malleable venues for a quick fix of gender balance. Given that many of the bodies are appointed by the state, boards and public committees seemed to offer the opportunity to quickly change the gender balance in decision-making, even as electoral sectors were changing slowly. Countries such as Belgium and Norway adapted legal gender composition rules for appointed bodies by 2005. Later quota's in electoral politics became more widespread. Today many European countries have also started proceedings to implement gender quota’s in advisory bodies and corporate business boards with state participation. To what extent has the increasing integration of Europe led to adaption of gender regulations of appointed boards in EU member states? How does this interact with political appointment processes? What are the results and how does the bureaucratic capacity of the state interact with implementation of gender-balance rules? This paper will report on comparative data and measures in the 27 European Union countries. Who has adopted quota for these bodies, and what are the arguments? How do gender equality considerations relate to debates about de-politicization of appointments? Further the paper will review available results on the composition of appointed bodies in Europe and discuss the implications of findings and potential pitfalls for adaption in other political and cultural contexts.

Between Ambition and Reality: The Role of Gender Representation Rules in European Scientific Advisory Councils

Research Councils are crucial gatekeepers to academic power. Substantial research indicates that gender skewed scientific advisory and review boards play a role in the underrepresentation of women receiving scientific grants. Since the mid-nineties, many European scientific advisory bodies have adopted guidelines about the gender composition of their panels, either compelled by national legislation and European directives or voluntarily. European Union scientific review boards are supposed to be composed at the 40%/60% level, for example. However the adaption of guidelines and the implementation and monitoring of guidelines are not always linked. Quotas may generate controversy, even among female scholars. Further, the re-arrangement of the European Research Area may mean that ambitions of representation become lost thanks to neo-liberal arguments about an undefined and ambiguous concept of ‘excellence.’ This paper documents the present state of affairs in terms of regulation, the resistance to quota regulations and the extent to which there is compliance with regulatory demands on the composition of panels and management. The implications for research councils and gender equity in decision-making will be discussed. Contextual and structural factors of legislation, leadership, peer pressure, Europeanization, monitoring and bureaucratic capacity are identified as contributing to differing outcomes. Concretely, the paper treats the major European players in transnational funding and management: European Science Foundation, the nascent Science Europe, the European Research Council and the Commission of the European Union.

Rematerialising the Commodity in Social Theory: Performativity, Iconicity and Object Transitioning

The frontiers of social theory and cultural inquiry have been advanced by the affordances of object-oriented analyses and, more critically, a material ontology. Objects, things and materials are the stuff of new ecologies of meaning and practice, whereby social structures, global networks, cultural ideals, social values and relations of power have been shown to be materially real and constellated. Studies of object ecologies, material culture and things have challenged how we think about the nature of mundane experiences, modes of social communication and performance, and networks of social affiliation. In all of these fields, the material basis of social life has been uncovered and emphasised. As it has matured, material analysis has tended to bifurcate into interpretivist and materialist approaches, leaving approaches to materiality at something of a crossroads. One the one hand, strongly materialist approaches tend to fetishise material dimensions and relational, systemic patterns of exchange, while interpretivist approaches focus on the socio-cultural and symbolic dimensions of signification and meaning. Using the central sociological category of the commodity, this paper explores opportunities for integrating these approaches with special focus on the relatively new cultural sociological resources of performance theory and theories of iconicity.

Neoliberalism on the Defensive: Austerity As a New Form of Common-Sense

Since the global financial crisis, the extensity of resistance to global forms of neoliberalism has been marked, with economists being at the forefront in demonstrating how austerity is unsustainable as a means of production. Both radicals and Keynesian economists, alongside a wide variety of political and social movements - in previous decades the Occupy campaign, regional political movements such as those in Latin America, reactionary nationalist groups and religious-based organisations, which have all been explicit in their attacks on the hegemony of neoliberalism. In response, the notion of austerity has flourished as a concept in order to keep such criticisms at bay. This paper will argue that the notion of austerity has developed into a defensive ideology, geared around the rejection of comprehensive alternatives to the crisis. Instead, it is geared upon the idea of presenting austerity as a compulsory painful measure, required in order to re-stimulate growth and confidence in the economy. It will also suggest that this narrative has been strengthened by the failure of its criticisms to adequately construct a viable hegemonic alternative that might replace the status quo. As a result, austerity has assumed a character that can be understood as a form of ‘common-sense’ in the wider Gramscian tradition. It serves as providing a set of norms and conditions which are underpinned by both ‘natural’ and ‘universal’ principles. In this way, the paper will conclude that it is through this articulation of common-sense that neoliberalism has (as least to date) managed to survive and go on the defensive. Such a position that was not seen possible merely five years ago.

Neoliberal metropolitanism and the remaking of welfare systems: The rise of professional projects in the government of the biopolitics of the metropolis

European research on the linkages between professionalization and political systems has focused either on the role of the state in professional projects or, more recently, on the relevance of transnational developments for a globalisation of professions. This paper extends the analysis of political systems to a new scale, that of the metropolis. It identifies the recent discourse of metropolises as ‘landscapes of power’ in global economy as a meta-level turn to ‘neoliberal metropolitanism’ in public policy. The paper further argues that the new discourse has helped to constitute metropolises also as important landscapes for professional projects.

The analysis examines urban planning focusing on the Greater Helsinki region as ‘a world-class centre for business and innovation’, focusing on the professional projects that rise in the intersection of government and professional expertise. I employ Patrick Carroll’s ideas about how the role of scientific expertise for ‘material design’ and conducted policy. Carroll highlights how the key boundary objects of land, people and built environment are transformed into ‘techno-territoriality’, ‘bio-population’, and ‘infrastructural jurisdiction’. Employing Carroll’s framework to my analysis of role of expertise for the biopolitics of the metropolis, I argue that expert professionals are key agents of this transformation work, forging expert knowledge into institutional practice.

The findings show that the old liberal state that gave rise to new sciences such as public health the market-conscious metropolis also supports expert projects anchored in the public sector. The reported analysis of policy documents finds four expert professional projects: innovation policy and innovation professionals; new public management and efficiency professionals; transnational human resource management and recruitment professionals; and integration policy and diversity management professionals.

A Sociology of Real Utopias

On Marx’s tomb in Highgate cemetery is one of his most quoted passages: ‘Philosophers have only interpreted the world in various ways; the point is to change it.’ Usually this is taken as a call to action. But it is also a call to produce a certain kind of knowledge, knowledge that is relevant to the task of social transformation. Such knowledge needs to grapple with four broad problems: specifying the values that drive our search for a better world; developing a rigorous diagnosis and critique of existing social structures and institutions in terms of those values; elaborating models of emancipatory alternatives that better realize those values; and understanding the conditions and strategies for transformations that move us towards those alternatives. Sociology, in its various critical traditions, has focused mainly on the second of these – the diagnosis and critique of the way existing social processes generate harms in the world. It is now especially imperative that we engage the rest of this agenda. The idea of ‘real utopias’ is one way of doing this. It is a way of connecting ideas about emancipatory destinations beyond the existing world to practical transformations that prefigure such alternatives. The utopia in real utopia insists on developing visions of alternatives that embody our deepest aspirations for a world in which all people have access to the conditions to live flourishing lives; the ‘real’ in real utopia means taking very seriously this. It is a way of connecting ideas about emancipatory destinations beyond the existing world to practical transformations that prefigure such alternatives.

Child Abuse and Public Inquiries: Historicizing the Imperative for Openness and Disclosure

WRIGHT, KATIE* (The University of Melbourne, kwright@unimelb.edu.au)

Child Abuse and Public Inquiries: Historicizing the Imperative for Openness and Disclosure

By the late twentieth century, an imperative for openness and transparency – what might fruitfully be called a ‘culture of disclosure’ – was increasingly evident across all spheres of social, political and personal life in the West. While this can be identified in disparate domains, it has been particularly striking in relation to disclosures of child abuse. This paper explores the imperative for openness and disclosure about the abuse and neglect of children against the backdrop of emergent constructions of childhood vulnerability since the 1970s. It takes as its focal point a key instantiation of societal openness over the last several decades: public inquiries into childhood maltreatment. While official inquiries have a number of functions, a key purpose is acknowledged as ‘learning lessons’ from the past in order to prevent future recurrence. Given it is now widely accepted that people who have suffered abuse and neglect as children often face lifelong challenges, including poverty, social isolation and poor mental health, there is a strong warrant for investigations that throw light on cases of past abuse. This paper first considers the rise of public inquiries in a number of countries, including the United Kingdom, Ireland and Australia, as exemplars of increasing societal concern about childhood vulnerability and abuse. Second, it examines inquiries against the backdrop of emerging theories of human development and psychological research that re-shaped how childhood experience, and the effects of ill-treatment, came to be understood. Finally, it explores the public pedagogical function of inquiries, and makes a case for the use of official inquiries in understanding broader processes of social change; in this case, changing concepts of childhood vulnerability and the emergence of social and educational policies aimed at safeguarding children and promoting their wellbeing.

Digital Contention: Anonymous and the Freedom of Information Movement

WRIGHT, JARED* (Purdue University, jaredmatthewwright@gmail.com)

Digital Contention: Anonymous and the Freedom of Information Movement

The main task of this paper is to analyze the online collective known as “Anonymous” as a case study using the theoretical framework of traditional social movement studies. I outline this framework in the literature review section of this paper as nine distinct characteristics, each pertaining to a different aspect of social movement research. My purpose in doing so is to argue that Anonymous is part of a larger, loosely-connected new social movement, which I call the Freedom of Information Movement, as well as to show how its unique characteristics have developed out of new digital technologies are making it necessary for sociologists to update and expand upon our existing theories and concepts of social movements. Some of this work has already begun. There have been several, though not many, studies of cyber-activism, hacktivism, digital repertoires of contention, cyber diffusion, online activist networks, and decentralized organizational forms of online movements. Through a combination of historical and qualitative content analyses of news articles, websites, operational fliers, and other written materials associated with Anonymous, I am attempting to build upon and expand this new and growing paradigm concerning online social movements and digital forms of contention.

The Role of Official Inquiries in Understanding and Preventing Childhood Maltreatment

WRIGHT, KATIE* (The University of Melbourne, kwright@unimelb.edu.au)
The 1970s saw both the emergence of child abuse as a recognised social problem and the rise of public inquiries to investigate issues of major social concern, including childhood maltreatment, in a number of Western countries. In the United Kingdom there have been more than 80 inquiries into various aspects of childhood abuse and neglect over the last four decades. In Ireland, 14 reports published since the 1990s have examined abuse in schools and institutions. Similarly, in Australia, growing concern about the welfare of children in out-of-home care has prompted a number of official investigations, the most recent being the current Royal Commission into Institutional Responses to Child Sexual Abuse. It is one of the largest public inquiries in Australia’s history and like the Irish Ryan Commission before it, is likely to be one of the most significant inquiries into historical instances of child abuse internationally. Through examination of a number of prominent inquiries, this paper first explores the role of official inquiries in social and educational policy reform, and in shaping public understandings of the problems of child abuse more broadly. It then considers the cathartic function of inquiries for victims and for societies more broadly, through exploration of the notion that inquiries reflect an open and transparent society in which ‘the voices of the powerless are heard’ and the powerful are held accountable. Finally, the paper analyses the fraught social justice issues at play in the investigation of past instances of abuse, and the promise of social and institutional change aimed at better protecting young people today.

*Choreographing Risk: Multiple Sociotechnical Networks of Multiple Pregnancy*

This paper creates the concept of ‘choreographing risk’ to explore the sociotechnical networks of multiple pregnancy, mostly caused by assisted reproductive technology. I argue that during the processes of assisted conception and multiple pregnancy, elements of technical, legal, financial, emotional, political and gender, are coordinated around risk. Data includes in-depth interviews of women and medical professionals, and archival data. I find that in the stage of getting pregnant with assisted reproductive technology, doctors tend to use multiple embryo transfer and ovariain stimulation medication to increase the pregnancy rate. Both doctors and women perceive failure of conception as the major risk, and tend to disregard the risk of multiple pregnancy. In the case of multifetal conception, fetal reduction becomes a technical model to reduce the risk of multiple pregnancy. However, some women and doctors refuse this technique for reasons other than health risk; network of fetal reduction often collapses. High prevalence of multiple pregnancy in Taiwan exists. Pregnant women of twins and triplets take embodied responsibility to avoid risk of premature birth, including diverse bodily work, and negotiation between productive and reproductive labor. This paper shows that as women vis-à-vis medical professionals become more and more the central choreographer in the multiple networks of multiple pregnancy. For policy implication, I suggest adjusting assisted conception methods, such as reducing the number of multiple embryo transfer during in-vitro fertilization, to relieve women from the hard labor of multiple risk choreography.

*How Scenes Drive Housing Prices in Beijing*

Wu (2011) proves that Scenes heavily influence the urban residential choices in China. In that paper, an analytical framework is constructed to study 375 counties of 23 large cities in China. The objective of this paper is to improve on the previous analytical framework and delve into an examination of neighborhood level housing markets. Specifically, we focus on the city of Beijing in this paper and collect a dataset which includes three-year housing prices data and 85 types of amenities from 220 neighborhood areas in Beijing. In addition, we develop a novel technique to overcome the drawbacks of the original theory in spatial evaluations due to strong spatial autocorrelations among housing prices. We also employ geographically weighted regression and Kriging mapping to support our analyses. Our conclusions are the following: (1) the distribution of local culture and amenities is polarized in Beijing; (2) housing prices in Beijing are significantly influenced by neighborhood level culture and amenities; (3) the distribution of housing prices in Beijing has the shape of a comet, corresponding to the distribution of local culture and amenities, and with tails spreading towards the northwest.

*The Research of Cost Performance of Urban Housing in China: Base on the Theory of Scenes*

In the last decade, the rising real estate price in Mainland China has become a worldwide issue. All walks of life paid close attention to the urbanization process stood by flourishing Real Estate Market in China. Moreover, some scholars have more emphasis on crisis and bubble hidden by the fast-rising real estate price. Researchers also analysis on commercial housing vacancy ratio, relationship with housing price land value and Housing Price-to-Income Ratio have occupied the mainstream. These researches either stressed the influence on housing price by the cost of residential land from the perspective of supply or underlined the mismatch of housing price and per capita income from the perspective of demand. However, this paper argues whether there exist bubbles in commodity residential market is a dynamic equilibrium process, it is difficult to judge only by one-side factors. Hence according the Theory of Equilibrium Price posed by New Classical Economics, this paper re-examine the residential market bubble issue in China from a totally new perspective–cost performance of commodity housing based on Principle of Supply-demand equilibrium. Using ideological system of the latest achievements of Scenes Theory from Chicago School, this paper selected Panel data from 2001 to 2012 in 147 main cities in china, built urban residential Scenario index to measure cost performance of commodity housing in different regions in China and empirically proved the rationality and validity of the index. Finally this paper points out that urban cost performance of commodity housing ruled low in general, Second-tier cities had a low commodity residential market bubble level rather than first- and third-tier cities had a high level and offers targeted policy recommendations for macro-control of real estate market of the government of China.

*Micro and Macro Conditions for Happiness in Urban China*

Despite the large literature on happiness research, sociological studies on the social determinants of happiness in China remain rare. This study examines not only micro conditions for happiness but also the potential interplay of micro and macro conditions in urban China. Specifically, we focus on some wide-studied and much overlooked micro conditions, socioeconomic achievements (what you get) and non-cognitive skills (who you are), respectively. However, the happiness effects of micro conditions may well differ across macro contexts. We thus investigate how the happiness effects socioeconomic achievements and non-cognitive skills depend on the level of economic development in urban China.

Our data are drawn from the urban sample of the 2011 Chinese General Social Survey, a nationally representative social survey. Socioeconomic achievements refer to years of education and annual total income. Non-cognitive skills refer to conscientiousness, operationalized by indicators of consistency, dependability, and deferral of gratification in performing the student role. Macro conditions refer to urban areas in the developed provinces, as indicated by provincial-level GDP per capita. We obtain three main findings: (1) Both adolescent conscientiousness and personal income, but not education, enhance personal happiness. (2) The happiness effects of education and income are highly contingent on the level of development, with education having a positive effect in less developed areas but a negative effect in more developed areas. (3) The happiness benefit of conscientiousness is robust across urban areas of high and low economic development. The evidence thus suggests that the micro conditions for happiness do depend on certain macro conditions in China. There is a penalty on happiness for high achievers of education and income in the most developed urban areas, but the happiness effect of adolescent conscientiousness is uniform across development contexts.

urban China? (2) Does adolescent conscientiousness also modify (interact with) the SWB effect of SES? (3) Are the SWB effects of conscientiousness and SES contingent on the degree socioeconomic competition of an urban area?

Drawing on the urban sample of the 2011 Chinese General Social Survey, a nationally representative social survey, we measure SWB with multiple indicators of positive and negative affect and conscientiousness with consistency, dependability, and deferment of gratification in performing the student role. We obtain three main findings: (1) Adolescent conscientiousness enhances education and income. (2) There is no interaction between adolescent conscientiousness and SES in predicting SWB. Each has independent effect on SWB. (3) However, psychological functioning and structural inequality interplay in a more complex way. We use level of economic development as an indicator of the degree of socioeconomic competition. While the SWB benefit of conscientiousness on SWB is robust across urban areas of high and low economic development, the SWB effects of education and income are highly contingent on the level of development. The evidence suggests that there is a penalty on SWB for high achievers of education and income in the most developed urban areas. Thus psychological functioning does not only affect socioeconomic achievement, it also critically determines the SWB benefits of socioeconomic achievement.

Perceptions on Hurricane Information and Protective Action Decisions

Tropical storms and hurricanes have caused extensive casualties and damage in past decades. Population and economic growth in the vulnerable coastal areas have made hurricanes a serious problem and created the potential for a catastrophic loss of life. The existing research literature lacks a sufficient scientific understanding dynamic protective action decision making during events in which additional behavioral and emotional factors are involved in a timely manner. Emergency managers and residents in the risk areas are most likely to make decisions on their protective actions based on National Hurricane Center's hurricane forecast advisories. This study uses the DynaSearch program to conduct a computer-based experiment that the understanding of hurricane strike probabilities and their choices of protective action recommendations during four different hurricane scenarios. The results show that participants were able to utilize the available hurricane information to make reasonable judgments about each city's relative strike probability. However, their failure to be left-behind but lived with both parents at the time of study tended to experience less depressive symptoms, demonstrated both as the direct effect of their unique left-behind experiences and through the mediating effect of social capital in their family and neighborhood.

Data of this study came from a questionnaire survey with 701 children ages 11-18 living in the rural counties of Guizhou province, China. The structural equation modeling results suggested that, compared to those rural children who lived with both parents and never had any experience of being migrant or left-behind, children who were currently left-behind and had some previous experience of being a migrant appeared to exhibit higher levels of depression. Children who used to be left-behind but lived with both parents at the time of study tended to experience less depressive symptoms, demonstrated both as the direct effect of their unique left-behind experiences and through the mediating effect of social capital in the family. Implications of these research findings were further discussed.

Ethnic Autonomous Policy and Ethnic Inequality in China: An Evaluation

China's 55 ethnic minorities constitute about 9 percent of the national population, and more are concentrated in remote areas and disadvantaged in social and economic development compared to the Han majority. To promote ethnic inequality, Chinese government has instituted the ethnic autonomous jurisdictions at different levels: 5 autonomous regions, 30 autonomous prefectures and 120 autonomous counties/banners, covering 71 percent of ethnic minorities and 64 percent of the territory as of 2005. This paper aims to explore China's census (from 1982 to 2010) and the mini-census data in 2005 to evaluate the effectiveness of such a policy on ethnic disparities in educational, occupational attainment and income. Specifically, we will employ the causal inference methods to investigate the experience of ethnic minority (relative to Han) living under their own autonomous jurisdiction and their counterparts otherwise. The findings will have important implications for China's policy towards ethnic minorities.
About one hundred years ago, William Bagley put forward several controversial issues on different trends of education concepts. One of them concerns the debate between two opposite values in pedagogy: the individualism and the collectivism. If these two values represent and distinguish two different notions in diverse civilizations, especially during this transitional stage and the context of globalization, China’s youth is the first generation whom simultaneously contact with various cultures from the Western world and from their own tradition, thus directly confronting this dilemma during their socialization.

On one hand, Chinese social convention attaches importance to the strategies needed in maintaining a collective life, in which individuals should adhere to Doctrine of the Mean in hopes of becoming invisible within the community; On the other hand, the competition advocated by market economy require individuals to show their uniqueness in order to stand out above others. Moreover, the Confucian family tradition is used to emphasize that an individual submits to the collective, and honors his or her public responsibilities. However, civil society introduced from western cultures, stresses the importance of the individual but, meanwhile, promotes integration into the communal solidarity and the sense of civic duties. Today’s Chinese youth is growing up in this very conflict and the amalgamation of these paradoxical values.

How then, do they evaluate their own identities and their family relationships? How do they consider their civic responsibilities and their social connections? These questions concern for them, justice in their own lives and others? By means of a survey focusing on adolescents and conducted in a Chinese city, we try to discover, by still have an impact on the Chinese, the responses to these paradoxical values.

The concept of “food security”. has been enshrined in official AISEAN including Thailand’s government documents. It is argued that there are increasing evidences of rural and urban-based social movements related to food. In Thailand and the Mekong, the concept of “food security”. has often been redefined, from its rural and agricultural and animal husbandry practices to be more readily conceptualized under the food sovereignty concept. Situated in the tropics, Thailand like other Mekong and ASEAN countries are rich in agrobiodiversity. Modern agriculture, diverse cash crops have been promoted as sources of foreign currency for the country, with much less recognized negative impact. Thais recognize the use of agro-chemicals and monocropping practices resulted in the loss of biodiversity.

More recently, expanding industrialized agricultural and animal husbandry practices have been promoted responding to market demands of globalizing trade. In these contexts, food sovereignty movements have been observed, from ethnic tribal highland rice farming, new organic and sustainable agriculture including traditional mixed ones, vegetarian diets and struggles to localize

Multilingual Education of European Union – Backstage of Ideology  

The image of state education, together with visions of its main functions, priorities and expected results are constantly being reshaped under the impact of various social, economic, political and cultural changes. Being a powerful tool of influence, education is often becoming the battlefield of different interests, the most powerful of which have their reflection in educational policies and practice. This paper concentrates on the case of Poland, which faced several important transformational processes during last decade, among most important of which is joining the European Union (2004). What impact on educational system and its actors did it have? This paper investigates how EU’s directives and recommendations influenced Polish educational system, using the example of foreign language proficiency. In 1995 the European Commission published a White Paper on Education and Training, which states that each citizen of European Union must speak at least two foreign languages, which would enable mobility and competitiveness on the labor market. This is the starting point of the analysis of the paper, which will present the insight to EU recommendations concerning foreign languages and relate this data with the actual educational reforms in Poland in 2004-2013. Further on, the paper will concentrate on the analysis of the foreign language skills characteristics of Polish citizens in 2013, using the data gathered in Polish Panel Survey POLPAN and European Survey on Language Competences (2011). Interpreting the results, the paper confronts the dominating idea that Poland should “catch up” in learning foreign languages (Poland National Summary ESLC, 2011) and opens the questions of whether foreign language proficiency is an unavoidable condition of modern world and to which extend the multilingual pressure creates the new marginalization, unequal relationships and uneven chances.

Contested Control: Irregular Transit Migrants in Europe  

This presentation is about young migrants’ journeys with low chances of receiving asylum or any other type of residence in Europe. These migrants exhibit a highly complex migration pattern. First, these migrants are frequently in durable “transit” across Europe, moving back and forth between different states. Second, transit migrants must exhibit a high degree of flexibility, as they have to respond to suddenly changing conditions, such as work opportunities, rejection of asylum claims, detention or deportation. Third, transit migrants often switch between different legal statuses, such as asylum seeker, rejected asylum seeker, illegal worker or detainee. This throws them into a general state of uncertainty of asylum claims, detention or deportation. Third, transit migrants often switch between different legal statuses, such as asylum seeker, rejected asylum seeker, illegal worker or detainee. This throws them into a general state of uncertainty of asylum claims, detention or deportation. Third, transit migrants often switch between different legal statuses, such as asylum seeker, rejected asylum seeker, illegal worker or detainee. This throws them into a general state of uncertainty.
University, analyzing two key factors of variable quantity, marketing and word of mouth, we research China’s audience of animated film and try to discover facts addressed in this research. For instance, we examine China's audience of animated film and try to discover the statistical problems of reverse causation and unobserved heterogeneity, and the role of familial ties in hukou conversion. However, the finding does not have the necessary data to account for political actors to follow, its legacies' features and effectiveness varied across China, or whether such professionalism is a fragmentary one instead of a coherent one. However, it is clear that traditional mouthpiece role of Chinese mass media has no longer been able to offer enough explanation to portray the current change in such a profession.

In this paper, we first document a rapid increase in income inequality in China in the past decade, partly because of the commercialization of the mass media and emerging elite media, it still remains a question whether there is a journalistic professionalism in China, or whether such professionalism is a fragmentary one instead of a coherent one. However, it is clear that traditional mouthpiece role of Chinese mass media has no longer been able to offer enough explanation to portray the current change in such a profession.

Aspirations, Motivations and Immigrant Children’s Unexpected Success in Education

Evidences have shown that despite their undesirable family background, immigrant children are doing unexpectedly well in education when compared to their native counterparts. Previous studies have failed to prove that strong motivation towards better life and high aspiration for upward mobility may contribute to their academic success. To fill this gap, I use Hong Kong PISA data to identify four types of incentives that theoretically would cause immigrants’ outstanding performance, and use mediation analysis to measure how much of the effect of immigrant status on academic achievement is mediated through these factors. The results confirm that aspirations and motivations do mediate a part of the influence of immigrants’ characteristics on their educational outcomes; however, the model explained a limited part of the variance. The results support the cultural model of education that suggests that the cultural self-awareness of the Chinese immigrant population is an important resource for the success of their children. Moreover, the research extends the model of aspirations and motivations by showing that high aspirations are associated with better social and educational outcomes.

Factors Associated with Subjective Well-Being in Chinese Elderly People

This paper uses data from China General Social Survey to examine factors related to Subjective Well-Being (SWB) in Chinese elderly people. I constructed a conceptual model adapted from Anderson’s health behavioral model and probed the associations between SWB and predisposing, enabling, need and health behavior factors. I discovered that higher SWB is more likely to be found in elderly people who have spouses accompanied, maintain good quality of relationship with family relatives and friends, have stronger need for recreational activities, have better health status, exercise more, perceive an increase in their current socio-economic status compared to previous situation, and remain optimistic about their future socio-economic status. Results also suggested that enabling factors (socio-economic status and quality of social connections) can impose more influence on elderly people’s SWB. Thus, policies that maintain or boost the perception of upward socio-economic mobility and that enhance harmony between older people and their relatives and friends should be given special consideration in future.
Why so Weak?: The Social Conditions of Labor Insurgency in Malaysia

Many Asian countries have experienced rapid industrialization and developed manufacturing for the past several decades. Given that manufacturing was traditionally one of the bases of labor activism in many countries, the growth of manufacturing can activate the labor movement. In fact, as a result, some newly industrialized countries including South Korea and China have also experienced labor upsurge in a large scale. However, in Malaysia, which has also been remarkably industrialized since the 1970s, there does not necessarily exist a strong labor movement. This paper seeks to explore the reason why the labor movement in Malaysia is so weak even though manufacturing has clustered. Firstly, the brief history of Malaysian labor movement is reviewed and the labor movement in Malaysia is explained by various measures for resource mobilization, and to analyze how the recent deterioration of economic inequality can affect workers and their movement in order to define the social conditions of labor insurgency in Malaysia.

Japanese Challenges Towards the Sustainable Society – the Recovering Process from the Earthquake and Tsunami, and Establishing New Industrial Relations –

After the serious earthquakes and tsunami in 2011, Japanese society, mostly in Tohoku area, had been damaged horribly and the accidents of Fukushima nuclear power plant are still on-going. Japanese central government had established “Reconstruction Agency (http://www.reconstruction.go.jp/english)” for reacting to them. The task is “leading and managing the reconstruction process”, and the role is “to accelerate structural reconstruction and revitalize in the affected area by considering implementation of government policies and managing coordination of reconstruction strategy and initiatives between various branches of government at a national level and with local municipalities”. However, the reconstruction process is not sufficient for the local communities.

Following this situation, at a municipality and a community level, we could consider two distinctive changes as hints for new Japanese working features. This presentation tries to examine whether these changes will shed their skin and become new industrial relations or conditions.

The first case would be an excellent collaboration between fishermen and NPOs in Iwate prefecture. Traditionally, the cleavage between fishermen and leisure divers was deep, because of their miscommunication. Currently, a NPO is proposing a cooperation aiming at recovering the sea both for fishery and divers. Through the collaborative works, fishermen have gradually presented their positive attitudes to divers and both of them have been able to understand each philosophy of work.

The second case would be a citizens’ participation toward local administrations. For the aim at reconstructing a community, most of all municipalities are requesting citizens’ participation to set their future plan. In this case, the working style of municipality’s staff had changed to deliberative and negotiating process. Under this pressure, the staffs of municipality office have been forced to think how they can work with citizens and how they can realize the policies through deliberations.

A New Attempt to Analyze the Narrative World of the Life-Stories of Doctors and Patients Involved in the HIV Tainted Blood Product Incident in Japan

A new attempt to analyze the narrative world of the life-stories of doctors and patients involved in the HIV tainted blood product incident in Japan.

We had conducted the research projects started in 2001 ended 2010, which aimed at collecting and analyzing the life-stories of doctors and patients involved in the HIV tainted blood product incident in Japan. This endeavor culminated in the final reports consisting of 3 volumes which amount to 1358 pages. Against the simplified bipolar model of the perpetrator and the victim of this incident, we found more complicated and individualized world of life-stories which would reflect the differences of social and historical context where each interviewee was situated at that time. First, the doctors had been thrown into the uncertainty and indecisiveness toward the then unknown disease of HIV infection, which would result in refraining from taking a clear-cut attitude concerning the use of non-heat- concentrated blood product. For most doctors, the change from cryoprecipitate to concentrated product meant undoubtedly a quantum progress of medical care treatment for hemophiliacs; to return to the old method of treatment looked retrogression and might run the risk of engendering the lives of hemophiliacs by the higher rate of intracranial bleeding.

Second, the older generation of hemophilia in Japan unanimously experienced the unbearable painfulness of bleeding and was told by parents that they would have no children. For them, the anti-hemophilius factor concentrate was regarded as the miracle medicine to ease the pain and to endow a long life. However, facing up the occurrence of HIV infection, they felt being kept separated from every trustworthy information sources. Although, the frank communication between doctors and patients should be acutely demanded at the time of confusion and uncertainty, we found little evidence of any interchange between them.

The “Vocabulary of Motives” of Worker’s Suicide in Japan

Recently, Worker’s Suicide has emerged as a serious social problem in Japan. According to the governmental statistics, the number of application for insurance and the total amount of payout about “karo-jisatsu” in the worker’s compensation insurance system in Japan have gone up significantly last ten years. The purpose of this presentation is to examine how worker’s suicide is understood among Japanese people now through the interview researches with bereaved families.

Japanese government reported the number of the people who committed suicide per year in Japan has been more than 30,000 from 1998 to 2011. This presentation especially focuses on worker’s suicide, what is called “karo-jisatsu” in Japan. Koro-jisatsu is a Japanese word that means working person’s suicide after too much working or moral harassment in workplace. This word has been popular in our country since 1990’s, while “karo-shi” which means death from overwork has been known since 1970’s. Some lawyers and doctors who are engaged in labor problem or industrial hygiene have claimed that too much working and stress make worker exhausted, so he/she injures his/her mental health, in the worst case he/she kills him/herself. That is called “karo-jisatsu”.

But I point out there is a logical leap between overworking and committing suicide. I clarify how they have been connected in the discourse of “karo-jisatsu”. First, I consider the composition of vocabularies.

In Japan, the government keeps a registry of “koro-jisatsu” and “koro-shi” which seems very related to each other. But they have different social meanings. The governmental data shows that the incidence of suicide is regarded as one of the symptoms of depression today, while “harakiri”, “seppuku” and “kamikaze” have traditionally regarded as heroic suicide in Japan. Medical terms constitute a major “vocabulary of motives” (Gerth & Mills, 1953) of worker’s suicide. So when bereaved families decide on the significance of their member’s suicide, they tend to use these types of vocabularies.
The Determinants of Gender Inequality in the Proportion of Managers in Japan

This paper analyzes linked data of employer and employee surveys from the Integrated Longitudinal Comparative Surveys on Work-Life Balance conducted by the Research Institute of Economy, Trade, and Industry to find the determinants of gender inequality in the proportion of managers among male-white-collar workers in Japan. The high job quit rate among women is a common reason given in employer surveys conducted by the Ministry of Health, Labor and Welfare for “having few female managers.” This cannot be the true cause underlying gender disparity. The proportion of managers among female college graduates is far below that among male high school graduates even when the female employees have worked the same number of years as the male employees at their current companies. The fundamental problem is the institutionalized managerial practices of Japanese firms through which sex is given greater weight than educational attainment in evaluation for managerial potential.

Using the decomposition method of DiNardo, Fortin and Lemieux, this article shows that the difference in human capital between men and women only explains 21% of the gender disparity in the proportion of managers. It also shows that in order to become a manager, long hours of work are required even more for women than for men and that the proportion of managers increases for men and decreases for women depending on the age of their last child in a way suggestive of the reinforcement of traditional gender roles by employers. The analysis also shows that firms with 1000 or more regular employees and firms with centers dedicated to the promotion of work-life balance have smaller gender inequality, and that gender inequality in those firms decreases more rapidly than other firms as the quit rate of female employees decreases. Policy measures to eliminate gender inequality in attaining managerial positions are also discussed.

The Impact of the East Japan Great Earthquake on Community in a Small Village

This article explores the impact of the East Japan Great Earthquake on the sociocultural aspects of community based on 40 in-depth life history interviews and a survey administered to more than 1200 villagers in a small seaside village. Noda village, which is located in northern Japan and has a population of 4500, is characterized by close interpersonal ties, a traditional patriarchal system, and an ethic of mutual aid. During times of economic prosperity, many male villagers moved to the Tokyo metropolitan area to work as carpenters due to the lack of jobs in the village. When a 37-m-high tsunami hit this village, 37 people were killed and almost 30% of the houses were damaged. The tsunami caused not only material damage and life-threatening situations, but also changed the sociocultural characteristics of the community. For instance, people were initially reluctant to accept support from outsiders, such as volunteers, and talking about the tsunami experience has become almost taboo among villagers. We explore the processes by which sociocultural changes occurred and discuss the goals of post-earthquake community reconstruction in the context of data from small village.

Lay Responses to Radiation Contamination of Food

The possibility of radioactive contamination of food presents a threat not only to health but to autonomy. Radioactive contaminants cannot be seen, smelled or tasted, and the extent of any possible danger is not easy for the lay public to assess. Consumers are thus forced to depend on external sources of knowledge, such as government oversight and advice from experts. In the aftermath of the Fukushima disaster of 3/11, the Japanese public has experienced an increasing diminishment of trust in the government’s ability to ensure the safety of the food supply. Consumers are not convinced that “the experts” (e.g., government officials) are providing sufficient information to enable them to avoid the threat. Beck (1986) suggests that in such a situation, individuals are forced to find “individualistic approaches” to the systemic contradictions, such as making their own private decisions about which foods to buy and dealing with any health issues as their own problem. However, there are indications that new social coalitions are emerging in Japan, motivated by shared fear of a common danger and/or by shared bonds of sympathy and empathy. This paper is going to argue that these phenomena -- in which individuals seek and create “societal approaches” to deal with the contradictions created by the emergence of this new set of risks and the perceived failure of experts to fulfill their roles and ensure safety -- is an indication that experiences that concern safety or risks at the local level can motivate a response that is much more social and less individualistic than the theoretical formulation would predict. The data used come from a series of focus group discussions; separate groups were created by gender, by households with and without children, by educational background and by type of work.

Effects of the Natural Disaster Recovery Process on Multicultural Community Development

This presentation discusses the impact of natural disasters on foreign nationals in Japan and the process of recovery that they undergo. The data were collected through interviews. The Great Hanshin-Awaji earthquake of 1995 had a major impact on both newcomers as well as early immigrants in our society. Most of the affected people were family units who shared the same heritage, and aids were accordingly designed to support these families. In the area affected by the Great East Japan Earthquake, foreign brides of Asian origin in Japanese families posed a major problem. Although they belonged to a different culture, they expected to be treated like their Japanese counterparts as they believed they played an important role in passing down traditional Japanese family culture just as a Japanese family member would. However, circumstances have changed their lives after the disaster; they have started using their mother tongue, and find many ways of giving expression to their culture. The experience of the disaster and the recovery process has created a bond among these foreign brides -- many of them have taken part in training, enrolled in Japanese language programs, and lived as caregivers, and some of them have been employed as professionals in various organizations. Such empowerment programs have enhanced their self-esteem, which has changed their family lives and the local community. Participating in various social activities is crucial to being equal members in a society.

Lay Responses to Radiation Contamination of Food

The possibility of radioactive contamination of food presents a threat not only to health but to autonomy. Radioactive contaminants cannot be seen, smelled or tasted, and the extent of any possible danger is not easy for the lay public to assess. Consumers are thus forced to depend on external sources of knowledge, such as government oversight and advice from experts. In the aftermath of the Fukushima disaster of 3/11, the Japanese public has experienced an increasing diminishment of trust in the government’s ability to ensure the safety of the food supply. Consumers are not convinced that “the experts” (e.g., government officials) are providing sufficient information to enable them to avoid the threat. Beck (1986) suggests that in such a situation, individuals are forced to find “individualistic approaches” to the systemic contradictions, such as making their own private decisions about which foods to buy and dealing with any health issues as their own problem. However, there are indications that new social coalitions are emerging in Japan, motivated by shared fear of a common danger and/or by shared bonds of sympathy and empathy. This paper is going to argue that these phenomena -- in which individuals seek and create “societal approaches” to deal with the contradictions created by the emergence of this new set of risks and the perceived failure of experts to fulfill their roles and ensure safety -- is an indication that experiences that concern safety or risks at the local level can motivate a response that is much more social and less individualistic than the theoretical formulation would predict. The data used come from a series of focus group discussions; separate groups were created by gender, by households with and without children, by educational background and by type of work.
The labor demand for day-laborers decreased since the early 1990s. As a result, the number of homeless in major Japanese cities increased. After the establishment of a new law to help homeless people become financially independent in 2002, many people who were homeless or considered unable to work because of age or disability received welfare and took up residence in urban underclass areas. Kotobuki, Yokohama's urban underclass area, currently houses the highest rate of welfare recipients—approximately 80%—of underclass areas in Japan. The number of welfare recipients in the area has especially increased this decade. As a result, the area has become the center of the socially vulnerable.

In light of this social change, the local government, the social welfare council, and nursing care business offices developed a community welfare system in 2011. This system mostly focuses on officially recognized residents, not on those who are homeless. In 2006, Yokohama City reduced its special temporary welfare support for the homeless and then cut it entirely in 2012. This created greater difficulties for the homeless in the neighborhood, creating a highly concentrated district of welfare recipients.

So far, urban underclass areas are important for the homeless with regard to receiving access to social resources—for example through forging relations with supportive groups and getting free meals. As urban underclass areas have gradually changed into places of concentrated welfare recipients, those who do not receive welfare support and are homeless now face even greater pressure.

**A Half-Open Door to Africa: Chinese and Japanese Migrants in the Twentieth Century South Africa**

Over recent years, amid the increased presence of China and residents of Chinese descent in African countries, growing attention has been paid to experiences of Asian migrants in interdisciplinary fields of studies in South Africa. What has been revealed by exploring their histories is that, despite their small numbers, the existence of Chinese and Japanese migrants had a considerable impact on ‘white’ Southern African racial policies. By focusing on those who migrated from East Asia at the beginning of the twentieth century, this paper seeks to examine how they confronted the technologies of exclusion that South Africa introduced in order to maintain the colour bar of the country. While several countries and colonies had restricted Asian migration associated with the ‘Yellow Peril’ panic and a threat to the ‘white’ labour at that time, the British government encouraged Chinese and Japanese migrants at the turn of the twentieth century to compensate for the absence of labour in gold mines. Lake and Raymonds (2008) emphasizes that introduction of the Chinese strengthened ‘white’ laboratory unions and encouraged legislations which restricted skilled work to white men. As for the Japanese, they were listed as prohibited migrants under the 1913 immigrant Regulation Act, and were later removed from the list because the Union government needed to allow Japanese business persons into the country in order to expand the wool exportation. This can be considered as a precedent for the ‘eminent visitors’ status under apartheid, or the privileged status granted to non-white inhabitants staying in the country for business or diplomatic purposes. The paper seeks to contribute to wider discussions on South Africa’s history of immigration policies, some of which have not been adequately addressed due to Atlantic-centrism of academic research.

**YAMAMOTO, MEYU***(Kyoto University, meyu.yamamoto@gmail.com)

**Child of the Other: Wartime Sexual Violence and the Japanese Repatriation Support Policies after the Second World War**

In the end of and just after the Second World War, mass rape by Soviet troops against Japanese women took place in Manchuria and Korean Peninsula. Many Japanese and Korean women who contracted venereal disease were uncovered upon arrival of groups of repatriates to Japan, and hundreds of abortions were carried out inside or near the harbors between 1946 and 1947 as part of an official support. Parliamentary papers and related documents indicate that identification of unborn babies to Russian perpetrators encouraged the Japanese medical doctors and relief workers to implement the abortion. Illustrating the experiences of Japanese women in the post-war period, this paper aims to examine how the ‘child of the Other’ or children born / unborn as a result of wartime sexual violence have been excluded from their peers, community, and the states. Previous studies on children born from wartime sexual violence have revealed that they frequently suffer discrimination from mother’s communities. One of the examples of this is that they are often attributed pejorative names. Regarding the case of rape committed by German soldiers against French women during the First World War, the children were called ‘child of the barbarian’. In other conflicts, such as East Timor, the children born to Timorese women were called ‘children of the enemy’, in Rwanda, ‘children of bad memories’ (Seto 2013). Close observation of the case studies above and the case of Japanese victims indicates that the children are unwelcomed due to identification not with their mothers but with their ‘enemy’ fathers. This paper suggests that investigation on children should be addressed from feminist and humanitarian perspectives as well.

**Displacement and Politics of ‘Transitory Space’ for Resilience: A Case of the Great East Japan Earthquake**

Forced displacement induced by disaster makes various types of “transitory spaces” in the process of reconstruction. The aim of this presentation is to discuss about functions and politics of “transitory spaces” for disaster assistance in the age of population-shrinking/aging society based on a case study of the Great East Japan Earthquake and Tsunami in Iwate Sanriku coast. The first point is to rethink about “temporary housing” system established in the 20th century. In the history of disaster in Japan conventional relief act defines “sufferers” by the standard whether they lost their own “houses” or not. As a result after the dissolution of emergent shelters public assistance tended to be concentrated on temporary housings made by the municipal government. But in the case of the Great East Japan Earthquake and Tsunami this system did not adequately function because in the age of population-shrinking/aging society when power of kinship and community is weakened more and more the concept of “house” do not necessarily mean that residents do not have “social vulnerability”. Inequality of assistance among sufferers in temporary housings and in their own houses became serious problem in the 2011 Japan disaster. To cope with such situation new types of social spaces emerged to mobilize multi-scalar resources as a stable and continuous foundation on condition of sufferers according to the case. This second point. This presentation will focus on a temporary “base point” of assistance which was constructed by individual affiliate labor union in Tono area, one of the inland cities in Iwate prefecture. On the background of urban precarity and de-centering of regional city this “base point” emerged as a nodal space for re-organizing collective infrastructure of life. Considering such politics of “transitory spaces” will offer a valuable hint to invent future system of social resilience.

**Party Membership during Partisan Dealignment and Realignment Phases in Post-War Japan**

This paper investigates whether an abrupt and drastic realignment trend (i.e. a revitalisation of political support) in Japan since 2000 has changed patterns of political membership, even though Japan had a quite similar political dealignment pattern (i.e. a constant and substantial increase of independent electorates) to advanced industrial democracies in the West until 2000.

Political scientists have pointed out that party membership has constantly declined in contemporary Western democracies. This substantial downward trend has been caused by the widespread political detachment from conventional party politics throughout the post-war period. In Japan, scholars have rarely examined the association between dealignment and political membership, although a long-term dealignment trend throughout the 1960s to the 1990s was observed by newspaper opinion polls and social survey datasets. Furthermore, using the Japanese General Social Surveys (JGSS), this paper clarified that the realignment trend inverted into realignment since 2000.

The data analyses using Japanese data in the World Values Survey indicated that party membership witnessed an increase of inactive members from 1981 to 1995 and the percentage of those had remained through 1995 to 2005, while the ratio of active members remained stable from 1981 to 2005. In addition, logistic regression models suggested that political interest was a significant predictor throughout 1981 to 2005, however, its explanatory power had been weakening through the periods. Even though Japan entered into a realignment phase since 2000, the growth of partisanship has not led to an increase of party membership, although it has a great theoretical potential for contributing both the Western and Asian political membership studies. This is because it has not only a Confucian-style political culture, which is based on strong social ties in a local community, and Asian political membership studies. This is because it has not only a Confucian-style political culture, which is based on strong social ties in a local community, and Asian political membership studies.
Medicalizing the Male Obesity through Metabolic Syndrome – Some Social Aspects of the Japanese National Chronic Disease Prevention Program

The Japanese mandatory National Chronic Disease Prevention Program started in 2008. Although some experts in public health and medicine have questioned the efficacy and feasibility of the program, it cannot be denied that it spread the term “metabolic syndrome” among the public and contributed much to the medicalization of obesity in Japan.

We interviewed scientists, experts, doctors and public health nurses about the intention of the program and the difficulties in its implementation. Currently, we found the following points. 1) In spite of the fact that the program designates the whole population aged 40 to 74 as its target, the real target of the program is middle-aged men, especially working for small companies or self-employed. In that sense the medicalization of obesity is gender-biased. 2) The program used the newly developed diagnostic concept “metabolic syndrome,” as its key concept to prevent cardiovascular diseases and type 2 diabetes. The concept played the central role in medicalizing obesity in Japan, where men’s obesity has always been the focus of health professionals. 3) The program faced with serious difficulties and resistance in its implementation. Some of the difficulties are viewed as originating from the misunderstanding of one’s health and its care. 4) There is also a marked contrast in the understanding of the program between public health nurses and general practitioners. Whether the reason for this lies in the professional interests of the two or in the gender biased concept of health for the two is not yet clear.

We like to place all of these issues in the context of medicalization of men’s health in the post-industrial society where several traditional masculinity-related behaviors are viewed as problems and medicalized.

The Uneven Structure of Home Care Service Provision Between For-Profit and Non-Profit Organizations in a Quasi-Market System

The Japanese Long Term Care Insurance (LTCI) was implemented in 2000, aiming the promotion of user’s choice and the competition among different kinds of providers (i.e., such as for-profit, non-profit). It was expected that a quasi-market system would facilitate the effective competition among providers and improve the quality of care, though the price of each service was regulated as “legal price” by the government. However, it is not clear that such competitions can be realized, because different providers have different motivations in providing care services. Especially, non-profit organizations (NPOs) have altruistic motivations to meet the needs of local residents. Thus, the different motivations of providers may result in segregation among them rather than the effective competition over the quality of care.

Thus, this study investigates the structure and mechanism of segregation of providers’ motivations in NPOs based on the analysis of the data from 12 in-depth interviews with care workers and a questionnaire survey of 34 NPOs.

The findings are as follows: First, among the services of the LTCI, NPOs tend to undertake lower-priced domestic work, while for-profit providers take on higher-priced ones, covering the domestic work in spite of large costs. Second, NPOs provide the older people with additional services in order to meet their needs outside of the LTCI rubric, even though the income from the additional services is smaller than the services under the LTCI. Third, the altruistic motivation makes NPOs’ workers content with long working hours of additional services.

NPOs have tendency to deliver their services in spite of small profit, as long as users need them. This allows for-profit providers to choose the services with larger profit, that is, cream-skimming.

The different motivations of providers create the uneven and uncompetitive structure of the elderly care system in Japan.

Cross-National Survey on Well-Being and Social Relations

Well-being is an important issue in recent social survey research and many surveys focus on subjective well-being, happiness, and quality of life with some measures or scales on certain items in questionnaires. The measurement, however, is not free from differences on gender, culture, and other social conditions. As for social values and general response tendencies to questionnaire surveys, we have repeatedly reported regional variations in our longitudinal and cross-national surveys over half a century by the Institute of Statistical Mathematics (Yoshino, Nikaido & Fujita, 2009) (http://www.ism.ac.jp/~yoshino/index.htm and http://www.ism.ac.jp/ism_info/j/kokuminesi.html), under the paradigm of Cultural Linkage Analysis (Yoshino & Hayashi, 2002) and Cultural Manifest Analysis (Yoshino, Nikaido, Fujita, 2009).

The present study examined the relationships between well-being and social factors using our cross-national surveys, “a study of statistical science on health and culture: cross-cultural study on dynamics of social disparity and life,” carried out during 2002-2010 in four western countries (USA, Germany, France, UK) and three East Asia countries/region (Japan, South Korea, Taiwan). The survey was carried out on the target population of adult residents in each country/region, with the sample size of some 1000. Random Dig Dialing (RDD) telephone survey using CATI system was conducted in in the four western countries and Japan whereas a face-to-face interviewing was conducted in the South Korea and Taiwan. By multivariate analyses, we show how social and cultural factors are related with several indices on well-being as well as the similarity and dissimilarity of these Western and East Asian countries. We discuss the characteristics and limitations by considering methodological issues.

3.11 Crisis and Okinawa’s Demilitarization Movements

Okinawa has a long history of resistance against the U.S. imperialism and Japan’s power over its islands and have been engaging in various forms of resistance to protect their ancestral lands, dignity and human rights. This paper looks at articulation, mobilization and discourses of Okinawans, and examines the impact of impact Japan’s post 3.11 crisis have brought to the movements and how Okinawans have responded to it. One of the common frameworks used to describe a connection between Okinawa and 3.11 survivors is that they both are “sacrificed” for the larger “national agenda.” Some of the anti-nuclear protestors and Japanese settlers in Okinawa suggest that it is a coalition opportunity between people of Okinawa and the survivors. However, some Okinawan activists criticize such framework because it overlooks complicated power struggles between Okinawa and the national government. Another common misconception is that Okinawa is a safer place to be. Various types of Japanese organizations have planned get-away programs for the survivors of 3.11 in Okinawa. Okinawa is marketed to be a “safer place” since it is the farthest location from the “affected region” in Japan. These programs upset some activists for its false and disrespectful claims. Due to the largely concentrated and long lasting U.S. military presence, Okinawa’s land and water has been contaminated by many toxic chemicals such as PCB, dioxin, depleted uranium and so on that the military had stored. Lastly, some of the post 3.11 Japanese settlers in Okinawa declare themselves “refugees” and participate in the demilitarization activism threaten the ownership of the movement and attempt to shift the focus of the movement to fulfill their agenda.

Social Perceptions and Environmental Communication on the ‘Benefits’ and ‘Risks’ of Tidal Flat Restorations

This paper looks at how the ‘risks’ and ‘benefits’ of tidal flat restoration projects are communicated, perceived and negotiated by different stakeholders in case studies from Japan, the UK, Netherlands and Malaysia.

Various tidal flat restoration projects have been conducted in Japan and elsewhere in recent years in an attempt to revitalise fish stocks or preparing sea level rise. Coastal wetland restoration projects, such as coastal realignments or re-flooding farmland, still represent a new concept. Due to the need for long-term social support and investment in such schemes, it will become increasingly important to take into account the various perceptions that exist in the community from now on. Yet, at the moment it is often not clear 1) what kinds of environmental ‘benefits’ and ‘risks’ of tidal flat restoration projects upset some activists for its false and disrespectful claims. Due to the largely concentrated and long lasting U.S. military presence, Okinawa’s land and water has been contaminated by many toxic chemicals such as PCB, dioxin, depleted uranium and so on that the military had stored. Lastly, some of the post 3.11 Japanese settlers in Okinawa declare themselves “refugees” and participate in the demilitarization activism threaten the ownership of the movement and attempt to shift the focus of the movement to fulfill their agenda.

This paper explores the above four points to examine the improvement conditions of participatory sustainability initiatives. This paper is based on data collected during a three-year government-funded research project (2011-2013) from stakeholder interviews and through document analysis of the environmental information provided to citizens and decision makers via various media.
Performing Cool Japan and Uncool Hybridity: Analysing ‘Luugo’ (Lou Language)  

‘Metrolinguism’ refers to young people’s use of new hybrid language or foreign languages/dialects, in popular culture or everyday interactions (Otsubo and Pennycook 2010). They are creative moves which challenge and loosen cultural, historical, and political boundaries, in-sync with the late-modern and globalised social reality that we apparently live in today. As of Japan, Maher (2005) provocatively stated: ‘Cultural essentialism and ethnic orthodoxy are out. In Japan, metrolinguism is in. Cool rules’. True, young people in Japan today are far more ‘open’ towards foreign cultures and languages: dimsum and Thai curry follow for dinner, followed by drinks at a British pub with social reality that we apparently live in today.

Despite the popularity of such cunning comedy, the boundaries between languages and ethnicity do not look as if they are loosening and liberating. Rather, the comic act securely positioned the hybridity in the marginal discursive space. In turn, even the seemingly liberal, multi-layered and sometimes fun nature of hybridity is supporting the hegemony and the distinction between the socioeconomic powerfully and the rest.

Changing Determinants of Women’s Continuous Employment at the Time of Family Formation: A Comparison Between Japan and Taiwan  

[Background] Women’s work-family experience differs across countries. This study analyzes how different employment systems (including firms’ employment customs and public policies) lead to different work-family experiences for Japanese and Taiwanese women. The post-war employment system in Japan segregates workers according to gender and marital status assuming that women quit employment at marriage, and this system is more prevalent in large-scale firms and clerical workers. Under this system, women employed in large firms or clerical occupations are more likely to retire at the time of marriage or childbirth in Japan. In Taiwan, the segregation is more on the basis of human capital (gender and marital status). Moreover, men with lower human capital are more likely than others to retire at marriage or childbirth. Since the 1990s, however, with intensifying global economic competitions and low birth rates in a backdrop, Japanese employment system has qualitatively changed: non-standard employment has expanded while measures for balancing work and family for standard employees have developed. Taiwanese system may be intensified under economic competitions but not qualitatively transformed. (Research question) This study analyzes how employment systems since the 1990s affect the work-family experience for Japanese and Taiwanese women. (Results) Analysis of data obtained from the 2005 Social Stratification and Mobility Survey reveals that the determinants of women’s continuous employment have changed in Japan: women in standard employment are more likely than those in non-standard employment to continue employment at marriage or childbirth while firm sizes and occupations no longer have large effects. In contrast in Taiwan, the situation that women with higher human capital are more likely to continue employment has not changed in this period. (Conclusions) Employment systems differ and historically change among East Asian societies, which produce different work-family experiences for women. Policy implications will be discussed.

Gender Difference in Older Parents’ Coresidence with Their Adult Children: A Comparison Between Japan and Taiwan  

[Background] In East Asian societies, being influenced by Confucian values, the intergenerational coresidence (i.e. older parents live with, are provided, and cared for by their adult children) has been thought to be desirable. Recently, however, the coresidence rates are decreasing even in East Asia. Moreover, there are differences in the manners of the coresidence between societies there. The coresidence rates are relatively low in Japan but high in Taiwan. Gender distributions of living arrangements also differ between the two societies: older mothers are more likely than older fathers to live alone in Japan while there is no large gender difference in Taiwan. (Research question) Analyzing the process and determinants of intergenerational coresidence, this study explores why mothers are more likely than fathers to live alone in Japan and why there is no such difference in Taiwan. (Results) Analysis of data obtained from the 2006 East Asian Social Survey reveals that in Japan, the “reunion” coresidence (the coresidence after a parent become widowed) prevails, and the determinants of coresidence differ between widowed mothers and widowed fathers: the factors that promote widowed fathers’ coresidence with their children do not necessarily promote the widowed mother’s coresidence with their children. In contrast in Taiwan, “life-time” coresidence (the continuous coresidence before and after a child’s marriage) prevails, and there is no difference in the likelihood of coresidence between widowed fathers and mothers. (Conclusions) First, with different public pension systems in the backdrops, older Taiwan’s independent living is more expected in Japan than in Taiwan. Second, in Japan with different gender expectations (men as the care-receiver, women as the care-giver) in the independent living, independence is more expected for widowed mothers than for widowed fathers. Implications of older mothers’ risk in the availability of family care will be discussed. (296 words)
Japanese Jewelry Market

Though jewelry market size in Japan in 1991 was three trillion yen (around thirty billion USD at current rate), its size is less than one trillion yen (around less than ten billion USD at current rate) in 2013. The reason for this is that, in Japan, people have grown up with bubble economy. After collapse of bubble economy in 1991, the market size continues to shrink up to the present date. Japan had not had western style of jewelry market because Japanese wore “kimono” and western style of jewelry does not fit with kimono. Japanese does not wear western style of jewelry. After restoration of Imperial power in 1868, western style of clothes was getting popular in Japan and western style of jewelries started to be manufactured and sold in Japan. Along with western style of clothes population, western style of jewelry market continued growth. It means western style of jewelry market in Japan has only one hundred and fifty years’ history. In addition to that, generally, the value of jewelry is difficult to judge for consumers. This is true not only for Japanese but also western people. In the process of new market of western style of jewelry growing, I will investigate how the knowledge of western style of jewelry was implemented and diffused or Not implemented and diffused to Japanese. I also will analyze how western style of jewelry market was formed in Japan during these one hundred and several decades and how the relationship among seller, purchaser and institution was transformed and affected each other from view of institution of jewelry and its contribution. As researches on jewelry from sociology points of view is very rare in Japan, I would like to make contribution by stating historical background of Japanese jewelry market and relationship of players and institutions.

Reconstructing Biopower: From an Analysis of Television Programs about Conducting Surrogacy

How does performance affect the human body in terms of biopower? This research analyzes a process where discourse about reproductive technology leads to its implementation to change actual bodies. From an examination of television programs in Japan, I show how culture impacts the materialistic sphere, which is mediated by performance regarding “America,” an icon of modernization for the Japanese.

The Japanese national public broad casting organization, NHK (Nippon Hoso Kyokai), has aired programs about reproductive technology since the emergence of In Vitro Fertilization. At the beginning, the program portrayed the technology as a realization of scientific progressivism, but regarded the ethical aspects as unrealistic. In the discourse, the image of Europe was that of an agent of intelligence; on the other hand, the image of the U.S. is that of savagerness.

However, after a Japanese celebrity couple conducted surrogacy in the U.S., “America” became a normative model for the Japanese; there was a contrast between the undeveloped Japanese and the developed American in terms of modernization. The television programs implied surrogacy stands for emancipation from the traditional Japanese convention to oppress women to construct a new family. Moreover, they constructed a sollemn image of the children taken from the U.S. by utilizing imaginary which evolves memories of the imperial coronations.

These images raised a positive public opinion toward surrogacy, which led the government to rush to legalize it. However, after foreign mass media revealed that a Japanese male had conducted surrogacy in India with a purchased egg (known as Manji’s case), NHK stopped discussing surrogacy and the Japanese government postponed the legalization of surrogacy. The Manji’s case showed the Japanese had already gone beyond the savage and modernized “America.” Therefore the Japanese lost their frame of reference.

The above examination indicates the decision to apply reproductive technology depends on culture.

YANG, ARUM* (Yonsei University, diddpql@gmail.com)

Cultural Consumption, Class Mismatch, and Gender As a Determinant Factor

Studies of cultural consumption have a distinctive academic tradition after Bourdieu’s book “Distinction” (1984) where each class has their own cultural tastes and high class people are considered as high culture, giving them the authority to judge for others. This may be due to the fact that existing class-based approaches put too much emphasis on the class, rather than focusing on diverse social groups and the meaning behind a person’s preferences for certain culture.

As an alternative to the existing class approach, the approach based on gender will be presented with data from Survey on cultural Enjoyment 2010 data, South Korea as well as other empirical research results conducted in many countries such as France, West Germany, the United States, and the other developed countries. These empirical findings suggest that women consume more cultural activities than men, even after controlling traditionally important variables, for example, class and education. In addition, women have a tendency to prefer high culture, even women with low education or class background, implying the distinctive meaning of women favoring high culture compared to men. A discussion of several reasons for these results will be followed focusing on the particular meaning to women’s identity and status. We will conclude with the suggestions for future research to address more issues related to the interactions between social factors such as race, gender, and class, along with analyzing the latent meaning of preferring certain culture for each social group.

The Metaphor of home/Family in Introduction of the Nordic Model in Taiwan

Welfare studies find specific characteristics in East Asian countries, such as development of welfare system is considered as introduced from top and the focus of the family in East Asian societies is linked with Confucianism. Different from former studies, this paper focuses on the reform of child care policies in Taiwan, which was initiated by women’s organizations and several feminist scholars. Moreover, feminist discourses in introducing the Nordic model in Taiwan highlight the family, which is not as conservative as it was considered in ‘Confucian Welfare States’.

Departure from feminist welfare studies, this paper aims to examine the active role women play in transformation of social welfare policies. The research methods consist of discourse analysis of comparative study of the Nordic model in Taiwan and interviews from key figures in child care policies reform.

I find feminist discourse stresses on de-familialization while using the metaphor of home/family that regards the state as ‘the People’s Home’ and the local community as ‘the big communal family’. I will argue that Confucianism can be strategically used by state feminists who employ a legitimated cultural tradition in order to make the importation/emulation of the Nordic model in an East Asian country possible. Secondly, I will examine how such a discourse highlighting the provision of child care by a strong collaboration between civil society and the state is a social context with high communication of child care in Taiwan. This will make the triangle model of ‘state-market-civil society’ complicated and help us to rethink the relation between civil society/family and the state. I will relate my analysis to former debates on Confucianism in welfare studies specifically and discussions of civil society and family in social theories generally.

Taiwan’s Higher Educational Reform in a Global Context: The Paradigmatic Shift from Modern to Postmodern

Through theoretical approach, this paper aims at analyzing Taiwan’s higher education reform since 1990 under the influence of globalization. Firstly, this paper lays bare the definitions and critiques of globalization while dealing with the related issues. Then, it describes the transformation of the conceptual development from the modern humanistic idea of higher education to the postmodern non-centre idea of higher education in a global context. Next, it mentioned issues and problems of Taiwan’s higher educational reform since 1990 presented a fundamental paradigmatic shift from modern to postmodern in a global context. Finally, it provides some suggestions about higher educational reform for Taiwan in a global context.

A Study on Female Industrial Structure and Gender Segregation of China

[ABSTRACT] In the first decade of the 21st century, China achieved stable and rapid economic development, and made new progress in industrial restructuring: the modern service industry and emerging strategic industries have provided more employment opportunities for laborers including women. To analyze the female industrial structure and gender segregation in industrial structure, data retrieved from the Third Wave Survey on The Social Status of Women in China in 2010. It was found that if viewed from the perspective of gender structures in different industries, females are mostly concentrated in sectors with lower levels
of income and social security, where gender segregation and gender parity coexis-
tist. Compared with 10 years ago, the proportion of employed women in farming, 
forestry, animal husbandry, fishery and water conservation shows a substantial 
decline, while the increased ratio in wholesales and retail, and in public adminis-
tration and social organizations are the two highest. The proportion of women in 
industries with higher degrees of monopoly is low, and the declining tendency 
reflects the intensified gender discrimination and gender differentiation in mo-
nopoly industries; the proportion of females in the modern service industry as 
well as the degree of gender parity in the industry have been increasing, making it 
possible for more and more women to obtain higher incomes.

Keywords: industrial structure, gender segregation, New Century of China

From Green Energy Governance to Green Economy: A Case Study 
of a County in Southern Taiwan, 2009-2013

After a lot of negotiations, conducted by Ping-Tung Government in Southern 
Taiwan, among solar PV companies, Tai-power Company, Central Government 
and local farmers, 25MW solar farms were installed on the damaged lands of 
orchard and fish farms in Lin-Bian and Jia-Dong, two towns in central Ping-
Tung, in which the government carried on post-disaster reconstruction in the 
wake of Typhoon Morakot on 8th August 2009. Meanwhile, under these highly 
ground-mounted solar panels, there were organic vegetable farming and ecolog-
cal fish farming set up. Inspired by the example of agricultural/solar farms in 
Lin-Bian and Jia-Dong, companies of various green energies came to Ping-Tung in 
search of different technical experiments.

Since April 2013, a hydrogen fuel cell company has allied itself with local B&Bs, 
gas stations and convenience stores, offering 80 hydrogen-powered scooters 
to promote a “low-carbon tour.” Now, this company is preparing to get fuel cell 
scoters into mass production. Meanwhile, small-scale wind turbine are planned to 
be installed in central Ping-Tung, together with the existent solar farms and 
hydrogen fuel cell systems, to conduct a “smart grid” experiment, which has been 
listed in the ‘Smarter Cities Challenge, 2013’ by IBM Company. Also, in northern 
Ping-Tung, there is another ‘smart grid’ plan to connect solar farms, wind farms, 
bio-gas power from pig farms, and micro hydropower systems.

The author of this paper has investigated and analyzed the performance of 
green energy in Ping-Tung by means of participative-observations and in-depth 
interviews. More specifically, adopting the concepts of green energy governance, 
social innovation, green economy and STS, this paper describes and explains the 
interviews. More specifically, adopting the concepts of green energy governance,

The Origins Of Conservative Democracy In South Korea: Nation-
Building, Democratic Transition, and Middle-Class Politics

After more than twenty years since the democratic transition in 1987, South 
Korea remains in an ironic political scene, in which a daughter of the former dicta-
tor Park Chung Hee, Park Geun Hye, was elected as the new president in the 
winter of 2012. This paper argues that the middle class largely shaped the post-de-

cracyization trajectory in Korea by resisting any significant social reforms and 
preventing furthering social equality and redistribution. While the middle class is 
believed to be a strong supporter of representative/electoral democracy to have 
led a democratic transition in Korea, the middle class has also been the one that 
resisted significant socioeconomic reforms implemented by the center-left gov-
ernments including the Kim Dae Jung and Roh Mu Hyun administrations. This pa-
per examines the origins of conservative democracy in Korea in which the middle 
class played a key role as a status-quo political actor. To do so, this paper traces 
the historical process of nation-building and economic development, through 
which the middle class was emerged by the support of the authoritarian state 
and became an exclusionary social group that advanced its own class interest

Athletic Sport or Health Promotion: Development Dilemma 
Confronted in Globalization of Chinese Traditional Martial Arts

This study is to clarify the relationship between the two different purposes of 
Chinese Traditional Martial Arts as a sport: athletic sport and health promotion, 
and propose the author’s own view on the development direction of Chinese Tra-
ditional Martial Arts in the context of sport globalization.

This paper reviewed 75 related published articles and academic papers and 
summarized the views. The author held ten semi-conducted interviews with Chi-
inese Traditional Martial Arts coaches, scholars, students and other Chinese Tradi-
tional Martial Arts enthusiasts.

Some hold that in the process of globalization we should focus on training elite 
players and develop athletic sport system for traditional martial arts, which will 
help traditional martial arts widely recognized by western cultures. This kind of 
thoughts results in an reality that Chinese Traditional Martial Arts practitioners 
prefer to practice athletic Martial Arts. In university, Chinese Traditional Martial 
Arts Majors choose to practice athletic Martial Arts and attend contest of all kinds,
because this is the only way they can get authorized eligibility as first or second class national sportsmanship.

Others argue that since its functions of attacking and defending have been in degradation as modern weapons developed, Chinese traditional martial arts still can attract many people of different countries, ages, and backgrounds, not because of its athletic features, but because it contribute immensely to one's physical fitness and self-moral cultivation, and the cultivation of both physical and moral health is the power source of its sustainable development in the context of sport globalization.

The author think that as to the development of Chinese traditional martial arts, a regular authorized eligibility certification system as the athletic sport has will standardize its technical requirements, and focus on the physical and moral health promotion will keep its diversified national features in its globalization in the world.

Asian Migration to the United States and within Asia in Comparative Perspective

More than one million Asians had migrated to America before 1965. Since 1965, Asia has been a major source of migration to the USA and more than 10 million Asians have arrived on U.S. soil. Most recently, Asia has surpassed Latin America as the largest source of immigration to the USA. Up to the mid-19th century, Asians mainly migrated to other Asian countries, and in contemporary time Asians have started to migrate within Asian countries. What are the trends in Asian migration to the USA and within Asia? How do sending countries of Asian migration to the USA and within Asia resemble and differ? Do the same or different types of Asians migrate to the USA and within Asia? What are the similarities and differences in causes of migration to the USA and within Asia? Are there similarities and differences in Asian immigrant transnationalism between the USA and Asian countries? How are Asian migrants to the USA and within Asia similar and different in patterns of adaptation to host societies? How do the impacts on host societies of Asian migration to the USA and within Asia resemble and differ? What is likely to happen to Asian migration to the USA and within Asia in the near future? Using a variety of data from the USA and international organizations and focusing on the post-1965 period, this paper seeks to answer these questions through comparison and to address the implications of the findings.

Mechanisms of Trust Formation Under Different Conditions of Political Identity

Individual political behavior is a manifestation of social behavior, and individual voting behavior indicated his/her political choices and political identity. After democratization in Taiwan, presidential elections show bipartisan polarization and reinforce general distrust of social phenomena. Therefore, this study intends to explore how people format their trust behavior when they interact with others of the same or different political identity groups. In stage 1, the computer randomly assigns trustees and trustees and does not show political identity of 2012 presidential candidates (Ma Ying-jeou and Tsai Ing-wen). In stage 2, the computer displays political identity logo by random arrangement. In stage 3, the subjects can choose their preferred objects of the same or different political identity logo by themselves. There are three mechanisms of trust behavior formation under different identity condition. (1) Win-win mechanism: Win-win strategy is that both trustee and trustor attempts to maximize their providence and return through exchanging with the targets of the same or different political identity groups from the beginning round. (2) Identity mechanism: Under the condition of political identity choice by subjects, identity effect becomes strongly significant at the beginning of the first round on the third stage of the experiment, especially for that of Ma-Macau identity mechanism; Mutuality effect is very significant in all three stages of trust experiment, especially in the second and third rounds of each stage. When people exchange with the same political identity groups, it will produce the phenomenon of polarization. When the trustee return high proportion profits to the trustor in the first round, the trustor will feedback more in the second round. However, if the trustee return low proportion profits to the trustor, the trustor will feedback less and less, even lower than exchanging with different political identity groups.

Saemaul Undong and Beyond: Upgrading the Opportunities and Capabilities of Women in 1970's South Korea and Kenya Today

Capabilities and empowerment are no longer new concepts: they are well understood and widely seen as necessities for individual as well as community development. Practices in today's developing world, however, are not always successful. Nor have the successful practices of the past been much elaborated so as to provide practical lessons for today. This study attempts to fill this gap with the case of Saemaul Undong, a New Village Movement in South Korea in the 1970s, in combination with discussions of its applicability to Kenya, one of today's developing countries.

Saemaul Undong has recently become an inspiring development model for many developing countries. It is known for its strong and committed leadership both at central and local levels, as well as the high rate of local participation. The rise of women as equally capable agents of change as men has been noted as one of its distinctive features. Indeed, Saemaul Undong is understood as a remarkable turning point for women in rural areas, which made them visible and active in formal activities beyond their own family and household. This newly explored social force is known to have effectively served rural and national development during the high growth periods of Korea.

The objectives and the structure of this paper are as follows. First, it explains the mechanism and processes of Saemaul Undong, which made women's involvement, or empowerment, possible within a society that had a strong Confucian character at that time. Second, it elaborates the strengths and weaknesses of the Movement in terms of women's capabilities and empowerment. Finally, the paper discusses the applicability of the findings to today's developing world. Our selected case country is Kenya, but discussing the applicability of the case is expected to provide practical lessons the developing world in general.

A Tale of Two Suburbs: Earthquake Recovery and Civil Society in Christchurch, New Zealand

This study followed two similarly affected, but socio-economically disparate suburbs as residents recovered from the devastating 6.3 magnitude earthquake that struck Christchurch, New Zealand, on February 22, 2011. More specifically, it focuses on the role of local churches, community-based organisations (CBOs) and non-governmental organizations (NGOs), here referred to broadly as civil society, in meeting the immediate needs of local residents and assisting with the longer-term recovery of each neighbourhood. Analysis of sixteen qualitative interviews with residents as well as key informants from local civil society in each suburb found that despite considerable socioeconomic differences, civil society in both suburbs has been vital in addressing the needs of locals in the short and long term following the earthquake. Institutions were able to utilise local knowledge of residents and damage in the area to a) provide a swifter local response than government or civil defence and then help direct the relief these agencies provided locally; b) set up central points for distribution of supplies and information where locals would naturally gather; c) take action on what were perceived to be unmet needs; and d) act as a way of bridging locals to a variety of valuable resources. However, the findings also support literature which indicates that other factors are also important in understanding neighbourhood recovery and the role of civil society, including: local leadership, a shared, place-based identity, the type and force of civil society, social capital, and neighbourhood- and household-level indicators of relative vulnerability and inequality. The intertwining of these various factors has influenced how these neighbourhoods have coped with and taken steps in recovering from this disaster. It is suggested that a model that takes a multi-factorial approach in understanding community vulnerability and capacity within the Christchurch context be designed to more effectively explore further research in this area.

Culture As "Agon": Agonological Features of Weberian Sociology

Culture as Agon: Agonological Features of Weberian Sociology

Max Weber treated the Greek concept of "agon" with great interest, in the final parts of his treatise of the “City”. However, if we focus on his interest on "agones" in general, the social fields of competition and social selection, we should rather say that this interest can be considered as his premier Leitmotiv, which permeates his comparative study of cultures.
This paper explores the advantages and the limits of this methodology on the cultural comparison of ogones (that will be coined “agonomy”). Starting from Weber’s concrete historical depiction of Asian competitions (especially, in his “Hinduism and Buddhism”), this paper moves in to the theoretical concerns. It argues that, it is much fruitful to point out the agonological features of Weberian methodology than just to stick the “ideological”, “methodological individualism”, or “conflict theory”. Finally, briefly contrasting this Weberian agonological features with modern sociological theories of competition, such as Bourdieu’s theory of symbolic violence, etc., we will like to outline the future possibilities of this comparative agonological perspective.

Feasibility and Possible Fields for Application of Clinical Sociology in Iran

According to some Iranian sociologists, the absence of sociology, and sociologists themselves, in relation with the society in one of the most important negative aspects that has had a major impact on weakness of sociology in Iran. There are so many social problems in Iran for which we need social solutions. But the absence of sociology in obvious not only to recommend sociological theories that match these problems but also to intervene in the process of solving them.

Clinical sociology can play an important role in filling this gap as a mediator between sociology and society. This study, first of all, assesses the practicability, and possible obstacles, of utilizing this particular type of sociology and then determines and introduces the fields in which it can be applied and intervene more effectively to improve the quality of lives in Iranian society.

By making use of documentary method, any attempt, if exist, for applying clinical sociology is considered and by interviewing some sociologists and social activists, different fields, and also major obstacles, for application of clinical sociology in Iran are proposed.

Social Justice, a Key Concept in the Social Movements of the Last Hundred Years in Iran

Social Justice is a very important and widely used concept in the political and social history of many nations. As well as many countries, it has had a significant role at least in mobilizing people for social movements and in protesting against the existing political system in Iran. In analyzing the causes of many social and political processes and also the Constitutional and Islamic Revolutions in Iran, the realization of social justice is cited as one of the major and prominent indicators. It can be found in different kinds of resources and documents such as poems, speeches, political debates, rhetoric of social groups and so forth. Therefore a form of emphasis on the concept of social justice has existed in every single social movement in Iran based on its special arrangements and aspects which were shaped socially and politically.

This study aims to narrate the history of social justice in the social movements of the last hundred years in Iran to provide a better understanding of it during this very important period of time and to theorize this concept and its changes over this timeframe.

By making use of documentary method and interviewing some sociologists and social activists, a classification of usages of this concept and their differences, in the history of social movements in Iran, is presented.

Residents Life Satisfaction in the Perspective of Social Empowerment

Social quality is composed by socio-economic security, social cohesion, social inclusion and empowerment/autonomy. In various degrees, these four components affect the life satisfaction of residents in China. This article carries out an investigation of the data obtained from six cities in China, it analyzes the degree of empowerment and the impact on life satisfaction. Large social anomie reduces people’s life satisfaction.

The Occupational Stratification Process for the Rural Poor in Mexico

The influence of socioeconomic origins on occupational outcomes is an expression of inequality of opportunity in society. The reproduction of intergenerational inequalities has been widely studied within the field of social mobility and stratification. Education and labor market insertion have been identified as key ele-
ments in the stratification process. Mexico is a highly stratified and rigid society in which children born in poor households have a high probability of experiencing intergenerational transmission of poverty. Using path analysis models, this paper provides empirical evidence on some of the factors that shape occupational allocation of the rural youth that belong to poor households in Mexico. This contributes to the understanding of the process of intergenerational reproduction of inequality and poverty.

Recreational Hunting in Africa: “Meat” or “Poison” for Local Community

Recreational hunting is one of the oldest known tourism activities using wildlife. Leader-Williams (2009) defined recreational hunting as the hunting where the hunter or hunters pursue their quarry for recreation or pleasure. Same as in colonial period, hunters, mainly from Europe and U.S.A., range over hill and dale in developing country to obtain trophy of big game and their pleasure.

Some researchers have suggested that controlled recreational hunting can benefit the development of local communities, thereby promoting the protection of wildlife resources as well as both ecological and economic sustainability. However, important debates remain regarding the social impacts of conservation and tourism on local communities.

This presentation aimed to introduce a social impact of recreational hunting on local community in Cameroon. Approximately two years of fieldwork, mainly based on field observations and interviews, showed that recreational hunting in North Province, Cameroon generated tax revenues of approximately 0.9 million US dollars in 2009/2010, that is, 200 times as large as than safari in National parks did in the same year. A part of economical benefits shared with local communities as profit sharing and employment opportunities. However, the local inhabitants were affected by regulations of their right to use natural resources. Moreover, some villages experienced forced migration because of the beginning of hunting tourism in this area.

Recreational hunting brings to local community not only positive impacts such as profit sharing and employment opportunity, but also negative one as control of the livelihood of local people and forced migration. Even if recreational hunting can play an important role in community conservation and wildlife conservation with its great economic benefit, the independence of local people and their connection with wildlife should be considered to re-conceptualize “Sustainability”.

An Analysis of Recent Internationalization of Education in Japan: A Case Study of Nepalese Students

In this paper, we discuss the experiences of Japanese language school students from Nepal, as a case study, to understand the emerging new trends and issues surrounding the internationalization of education system in Japan. In 2008, the Japanese government proposed the goal to recruit 300,000 international students by 2020. Due to the effect of the Japanese government and school systems, the number of international students has been increasing; however, the patterns of international students have been changing simultaneously. For example, Chinese and Korean students, who used to be the most popular group of international students, are now less likely to choose Japan as their destination country to pursue their education. Instead, the number of students from Nepal, Vietnam and Myanmar has been increasing in the last five years.

To explain the new trends, we discuss the push-pull factors for the changes. Also, the international students need to acquire Japanese language skills to be enrolled in the Japanese university system, the Japanese language school often serves as the first school for many international students. For this reason, we focus the role of Japanese language schools to discuss students’ perspectives on life in Japan. Based on the case study of Nepalese students, we found that the most of them are “self-funding” students. Although they hope to pursue higher education and better career prospects, providing financial support to their families in Nepal has become the top priority. Nepalese students have to work double or even triple jobs to manage the heavy debt from study abroad, high living cost in Japan and support families in Nepal; consequently, many students face challenges to pursue their dreams. In addition, some of them expressed cultural differences and isolation from the society. Based on the analysis, we propose social implications of the emerging trend of international students.

A Systemic Approach to the Construction of Urban Places

This paper reports on research undertaken across three markets in the centre of London, England. The research adopts an ethnographic approach that focuses on the ongoing process construction. By using in-depth/ iterative interviews the work highlights both the changing narrative that people constructs ‘in the moment’ while also highlighting the role of researcher in place construction. This projects works on the premise that it is beneficial to understand places as complex adaptive systems that are constituted by an array of heterogeneous parts. Places have physical locations and material forms but they are also in part, made up of the very people who experience the place. Understanding such complexity leads the researcher to focus on the ‘how’ of place, rather than the ‘what’, ‘where’, or ‘who’. Rather than attempting to understand place as unique, stable, concepts, this work builds on systems-theoretical approaches towards an understanding of places that facilitates both change and permanency so important to architecture and community building theories.

East Asianism in a Context of Civilizational Analysis

This paper aims to examine migrants’ ethnic identity and cultural practices, based on field research conducted in an ethnic town. In Tsurumi ward, Yokohama city, historically many ethnic minorities including Okinawan, Korean, Chinese and Nikkei Latin American (Brazilian, Bolivian and Argentine etc.) have moved to work in industrial complex of coastal areas. Such immigrants have made this area multicultural site for development of the region in Japan urban area.

In this area, many ethnic minorities including Okinawan, Korean, Chinese and Nikkei Latin American (Brazilian, Bolivian and Argentine etc.) have moved to work in industrial complex of coastal areas. Such immigrants have made this area multicultural site for development of the region in Japan urban area.
The author will examine the following points: (1) East Asia in Civilizational Analysis from Durkheim, Mauss to S.N. Eisenstadt. (2) Asiasian in the Japanese Civilization. (3) Is there any difference between (1) and (2), (3) New Civilization and value change. Finally the author will examine the present situation of East Asianism in East Asia.

Study Choice, Gender and Ethnicity

This study aims to explore ethnic differences in gender specific study choice patterns. The central research question is: to what extent do ethnic minorities present different gender-specific choice patterns in mathematics, science and technology (MST) and what are the reasons for such differences?

The study is based on the premise that pupils with non-western ethnic backgrounds differ in their evaluation of MST-studies from pupils with native ethnic backgrounds as a result of the difference in cultural values. To explore this premise, we first examined the effects of gender, ethnicity and grade averages on school profile choices of 265 pupils in higher secondary education in two schools in the Netherlands. This was followed by semi-structured interviews with 45 individual pupils about their choices.

In our sample 59% of male and 42% of female pupils have chosen a MST-profile, of which 39% of both male and female pupils have chosen this profile in combination with a Health-profile. Moreover, the combined grade average for mathematics, physics and chemistry is shown to have a strong impact on a positive choice for a MST-profile. Gender also has a significant effect, even after controlling for the combined grade average. Ethnicity however does not.

The interviews reveal that female pupils who choose a MST-profile often did so because of interest in a health related career. The high share of pupils and in particular female pupils with a MST-profile is partially also explained by the wish to keep options open for future educational choices since a MST-profile grants access to almost all fields of study in tertiary higher education. Ethnic background, despite not being significant, is thought to serve as a proxy for social class since pupils with non-western backgrounds have smaller social networks than pupils with native backgrounds through which they can acquire information about choices.

Class Differences in Women's Work-Care Reconciliation in Contemporary Leeds

This paper focuses on women's working lives in Leeds, England, where some of the UK's most affluent and most deprived localities are found. The authors compare the work-care reconciliation practices and attitudes of lower and higher educated workers, and consider how differences and similarities in these are shaped by local welfare state arrangements and conditions in the local labour market.

The analysis, conducted within the EU-funded FLOWS project, is based on data from a survey of local women and focus group interviews with women who combine paid work with raising young children or looking after older, disabled or sick family members.

While working-class women in the UK have 'always worked', the second part of the 20th century brought middle-class women's mass entry into the labour force. In some other countries, this process was actually encouraged by state provision of publicly funded care services and other policies to support women's attachment to the labour force while raising young children and/or looking after older family members.

In the UK's liberal welfare state, childcare and caring for older, sick or disabled adults have primarily been conceptualised as individual/familial responsibilities and care services are currently provided primarily by market actors, rather than directly by the state. The authors explore the relative importance of the national/local state, cultural preferences and market conditions on women's working lives, and consider how these shape social inequalities between women in different socio-economic circumstances.

Gender Disparities in How Older Workers Reconcile Work and Care in England

Carers in England and across the UK have been a focus of policy debate on work and care for several decades. In the 2000s, modest new employment rights (including the right to request flexible working) were introduced to support them reconcile work and care, and municipalities received new funding from central government to help develop local services to address carers' needs. In national population censuses in 2001 and 2011, the Office for National Statistics collected data about caring responsibilities and these permit examination of the relationship between the (unpaid) care individuals give to their older, sick or disabled family members, friends or neighbours and paid work, age, gender and health.

Based on analysis of these data, and supported by insights from two surveys of carers (the 2009/10 Survey of Carers in Households and the Carers, Employment and Services survey undertaken in 2006-7 at the University of Leeds), this contribution examines data on the intensity of caring responsibilities (using hours of weekly care provided as a measure of intensity) and participation in the labour market for men and women aged 45-64. The paper highlights gender differences in patterns of care and paid work, with a particular focus on the extent to which men and women in this age group appear to use part-time work and early retirement as ways of combining work and caring responsibilities.

In interpreting these data, the authors also draw on qualitative and policy evaluation studies undertaken by the CIRCLE research group at the University of Leeds. These provide insights into older workers' motivations, preferences and behaviour in relation to work and care, and indicate the complex cultural, moral and institutional contexts which shape patterns of caregiving in later life.

Forming Counter-Hegemonic Identity through Narration: Personal Stories, Historical Narrative, and the Transformation of National Identity in Taiwan

Over the past four decades, Taiwan has undergone a dramatic political transition from authoritarian rule to democracy. Accompanying this transition is a major change of the sense of national identification when hegemonic Chinese nationalism has increasingly given way to local Taiwanese consciousness. A series of recent data show that the percentage of people who identify themselves as being Taiwanese has risen from 17% in 1992 to 57.5% in 2013, while the percentage of people who identify themselves as being Chinese drops from 25.5% to 3.6% in this period. Yet few researches have been made on how common people formed a counter-hegemonic national identity on the personal level during the period. To investigate this transformative dynamics, we draw on the theoretical perspective of "narrative identity" to analyze a large number of "letters to the editor" describing personal experiences of identity transformation which were published in two major Taiwanese newspapers during the period from 1994 to 2004, when the change accelerated sharply. We find that a special historical narrative which consisted of a distinctive historical outlook and story line and displayed unique values and emotions served as a common framework for reference for those who began to discredit Chinese nationalism to reassess their individual life history and make sense of their connections with the destiny of Taiwan. It was critical to the formation of the counter-hegemonic Taiwanese identity. We argue that counter-hegemonic identity is typically effectively created and sustained when an elite-derived historical narrative had popular resonance in the sense that it demonstrates a remarkable ability to explain the marginalized and suppressed life experience of ordinary people.

Indigenous Mobility: Experiences and Narratives of Mobility and Immobility of Yami Indigenous Youth on Lanyu (Orchid Island), Taiwan

Travel, mobility and diaspora are facts of contemporary societies across the globe and their implications are profoundly important. This paper attempts to articulate the significant connections between travel, mobility and diaspora in Taiwanese indigenous Yami society. It argues that the Yami youth from Orchid Island cross the strait to urban Taiwan for diverse reasons relating to both mobile physical bodies and emotional displacement. The paper offers a range of mobility narratives as reflective accounts cultural diasporic encounters toward a deeper understanding of travel and mobilities in contemporary indigenous society. Engaging with multi-stied fieldwork between Taiwan and Orchid Island, in-depth interviews with Yami youth, this paper explores the complexities of the forced 'migration' phenomena of indigenous young people and their experiences and narratives of travel and mobility. It addresses issues that arise when they are 'on the move' and feel a loss of identity due to their emotional attachment to a place whether interpreted as home or homeland. Focusing on aspects of everyday life, this study illustrates the tensions and dynamics of travel, mobility and diaspora. It aims to open a dialogue among tourism studies, indigenous studies and mobility studies in which issues of diaspora and people being 'on the move' are investigated.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
L'économie solidaire au Brésil regroupe des travailleurs (informels, chômeurs, personnes qui ramassent et trient les matériaux recyclables). L'économie solidaire consiste aussi dans des « chaînes de valeur » qui regroupent, par exemple, des coopératives assurant la production du coton écologique jusqu'à la fabrication des vêtements, et leur commercialisation selon une politique de prix accessibles aux familles à faible revenus.

Ces initiatives collectives montrent que la redistribution de richesses s'opère en amont même de leur production, dans les choix de filière d'activité en relation avec les communautés locales. Ces initiatives donnent aussi un contenu concret à ce que peut être la citoyenneté au travail, qui consiste à remettre en cause les divisions traditionnelles entre concepteur et exécutant / intellectuel et manuel, et aussi entre travail marchand et travail de reproduction sociale. Les réalisations questionnent enfin les notions de démocratie et de représentation collective.

Cette communication propose un éclairage sur la façon dont des syndicats de la CUT (Centrale unique des travailleurs, principale confédération syndicale au Brésil) sont amenés à prendre en compte le rapport au travail des personnes considérées peu qualifiées, en s'appuyant sur l'observation des pratiques sociales et des identités collectives dans le mouvement de l'économie solidaire au Brésil. Celui-ci rassemble des coopératives et associations de production d'horizons divers (anciennes entreprises industrielles récupérées par les travailleurs, création d'activités de faible valeur ajoutée en couture, alimentation, collecte et tri des matériaux recyclables…), coopératives d'agriculteurs familiaux, qui ont en commun un processus de déconcentration et de représentation collective. L'étude de cas menée au Brésil auprès de syndicats et du Forum brésilien de l'économie solidaire indique que les initiatives se constituent comme des modèles alternatifs quand elles font appel à des formes participatives et délibératives de démocratie non au processus habituel d'agrégation des intérêts par des syndicats, qui ont tendance à reproduire les pratiques dominantes.
Struggling to Climb the Organizational Ladder in Turkey

Depending on twenty in-depth interviews with men and women who graduated from top universities of Turkey and who have been working in corporate jobs for more than ten years, this paper reflects on the impact of gender on prestigious white-collar jobs. It aims to answer the questions of to what extent gender has an influence on the experiences of a white-collar employee, what it means to be a white-collar employee for a woman, and what kind of factors prevent women from rising up in the corporate hierarchy. It points out that males talk about issues relating to gender only when they are directly asked to respond on the impact of gender on work experience, whereas gender has a central role throughout the accounts of females, especially if they are married and have children. For married women with kids, it is not possible to talk about their jobs without talking about how they manage their domestic responsibilities. The paper argues that organizational cultures that emphasize staying at the workplace for extended hours make it very hard for women with kids to climb the organizational ladder, as child care is still primarily considered as women's responsibility. Women who have struggled to reach senior management positions give up, as they get exhausted because of the double shift of paid work and child care. Although these women have average family incomes and can afford to hire domestic help, because of the traditional ideology that emphasizes the crucial role of mothers for socialization of kids, they give up their careers and shift to jobs that have regular work hours but no future prospects. Educated in the same way with their male colleagues to be successful and to have achievements, these women end up being unsatisfied with not only their jobs but also their lives.

Research on Public Attitude Towards Social Impact Assessment of Chang E Lunar Probe Program

For a long time, China evaluates engineering’s or project’s impacts mainly by assessing its economic contribution, always lack of social impacts. This study chooses Chinese Chang E Lunar Probe Program and conducts a survey by using questionnaires about public’s attitude towards Chang E’s social impacts. The results suggest that public’s attitude towards high-tech and non-direct-interest engineering’s social impact consists of military impact factor, political and economic impact factor, psycho-social impact factor and educational impact factor. Furthermore, public’s attitude towards Chang E’s social impact is related to age, and female’s attitude prone to be more positive than male’s, while the people with engineering’s social impact consists of military impact factor, political and economic values are increasingly seen as supporting each other. Radical ecologist and sound legal regulation in France, while monetary value plays a more important role as a justification for climate policy arguments in the United States. These differences are not due to differences in the selection of sources by journalists, but seem to reflect deep-seated cultural differences. In France, even business organizations often resort to the civic mode of argumentation while in the US, civil society organizations often justify their arguments in economic terms. Over time, we see convergence in both countries towards arguments based on the idea of ecological modernization; economic growth, technological progress and ecological values are increasingly seen as supporting each other. Radical ecologist and radical pro-market arguments are both becoming more marginalized.

The Business of Housing God: A Case of Singapore Megachurches

Religion and business are often seen as inhabiting separate social spheres but in this paper I explore how they are combined and reconciled in the activities of megachurches. Through two case studies of Singapore’s largest megachurches, I examine how they combine religion and business, focusing on how these churches strategize to mobilize and target their allies and opponents in coverage of UN climate change conferences in Le Monde and the New York Times between 1997 and 2011. We find that arguments are more often justified by appealing to civic values like equality, democracy and sound legal regulation in France, while monetary value plays a more important role as a justification for climate policy arguments in the United States. These differences are not due to differences in the selection of sources by journalists, but seem to reflect deep-seated cultural differences. In France, even business organizations often resort to the civic mode of argumentation while in the US, civil society organizations often justify their arguments in economic terms. Over time, we see convergence in both countries towards arguments based on the idea of ecological modernization; economic growth, technological progress and ecological values are increasingly seen as supporting each other. Radical ecologist and radical pro-market arguments are both becoming more marginalized.

Crowding in: Why and How Indian Civil Society Organizations Began Mobilizing on Climate Change

In this paper, we argue that a process of crowding in of civil society organizations (CSOs) into the field of climate change advocacy has occurred in India since around 2007. Both the number and the diversity of CSOs involved in this field of advocacy has greatly increased. Drawing on the Dynamics of Contention approach, We identify five mechanisms that explain why and how this process has unfolded: (1) The expansion of discursive opportunities in the global public sphere, (2) the event effect of Copenhagen COP 15 in 2009, (3) the network effects of expanding global civil society networks of climate change advocacy and the resulting flows of discourses and funding, (4) adoption and innovation of new action repertoires, and (5) the global political pressure effect leading to development of national climate policies and corresponding opportunities for CSOs to influence their formulation and implementation.
Nuclear Energy and Safety: International and National Isomorphic Pressures

Nuclear safety has often been an accident driven topic as the Three Mile Island, Chernobyl and Fukushima disasters show. In addition to accidents, severe economic and environmental challenges related to the construction of new nuclear power units and management of ageing plants and new technology, not to mention decommissioning of existing older units keep nuclear energy and safety among the relevant topics. Furthermore, the recent upgrading of safety requirements at the national and international level and harmonization attempts of nuclear safety regulation by the Western European Nuclear Regulators' Association, raise questions about the cultural features of nuclear safety regulation.

The aim of the paper is to explore how nuclear safety (that is an important component of human and environmental health) has been dealt with in the international and national level in Finland and the UK after Fukushima and what kinds of factors constrain learning. The data consists of the International Atomic Energy Agency's Safety Standards, Western European Nuclear Regulators' Association's reports and the OECD Nuclear Energy Agency's reports, the national final reports of the Stress tests of Finland and the UK, national nuclear energy act and safety guides. The method of analysis is content analysis.

The conceptual frame draws on the isomorphic pressures, which refer to the phenomenon by which organisations become structurally or strategically homogeneous. Isomorphic pressures, stemming from national institutional patterns or professionalisation of certain sector may play a role in the nuclear sector, since they affect the what, how and who of safety-related action. Isomorphism is important to the extent that it may strengthen and spread effective understandings of, and approaches to, safety, but it may also engender inability to detect specific needs and requirements or it may lead to contrasting understandings and approaches among bodies involved in nuclear safety that are exposed to different isomorphic pressures.

Populism As Politics of Personal Experience: The Case of Suuvirsi

In this paper, I will present one possible sociological interpretation of conserva-
tive populism, recently of rising popularity all over Europe. I will base my analysis of the work on Laurent Thévenot's sociology of engagements and use texts from candidates from the conservative populist Finns party in the 2011 Finnish parliamentary elections as empirical examples. In the texts, the candidates appeal to the shared national experience of singing a traditional Christian spring hymn, Suuvirsi, as schoolchildren. I will argue that populism can be interpreted as an attempt to expand the gamut of acceptable political claims to include claims based on personal experiences, where the physical and emotional proximity to significant persons and objects is of crucial importance.

This is in contrast to a typical requirement in mainstream politics: to distance one's self from one's demands. It is customary to present political claims as based on universally accepted and abstractly communicated principles of justice such as democracy, the market mechanism or technical efficiency, instead of mere personal preference. The populist mode of argumentation is in stark contrast particularly to typical Finnish expectations of politics.

To make this argument, I need to present four elements: first, Boltanski & Thévenot's theory of public justification; second, a brief overview of Finnish political practices; third, Thévenot's sociology of engagements; and fourth, the case of Suuvirsi and the populist and non-populist practices in which it is used in national political argumentation. I conclude with a discussion of the implications of this interpretation, pointing out that nationalist politics made with reference to personal affiliations can be even more exclusionary than ones based on public justifications. On the other hand, however, an acceptance of personal affiliations into politics is also a possibility for political movements of other types, not just reactionary conservative nationalism.

Youth, Political Socialisation and Everyday Life

This paper aims to explore the social processes that shape political socialisation of European youth. The theoretical point of departure is the literature of political socialization that sees family and close friends as principal actors in young people's political socialisation process (e.g. Hyman 1959, Jennings et al. 2009). A key question is to what extent parents pass on political values and habits to their offspring, and how upcoming generations differ politically from their predeces-sors. However, there seems to be a lack of knowledge concerning social dynamics and interaction in the everyday experience of young people's political life. Especially, whether the development of modern family patterns and increased gender equality might change the classic roles of the parents in the political socialization process.

While we recognize the importance of parental socialisation, we challenge the typical assumption of a "one-directional" intergenerational transmission of political values from parent to child. Therefore, we believe it is essential to scrutinize how young people engage in daily conversations and discussions about politics and society, because young people who engage in political discussions with family and friends tend to be more engaged in political participation than other youth, such as voting at elections, petitions and participation in demonstrations (Gundelach and Levinsen 2011).

Besides outlining relative contributions by different agents of political socialisation, we aim to explore the contexts of political socialisation by asking how political issues are raised and what kind of political issues are discussed? Thereby, it is possible to make a coherent analysis at different levels, which both maps the networks of political socialisation and explores how young people gain and develop information and knowledge.

Methodologically, the paper adopts a mixed methods research model. The paper triangulates survey data (n=936) and in-depth interviews (n=60) of young Danes. Data has been gathered for the Myplace project.

How Social Class and Education Affect Youth Transition in Japan? : Youth Cohort Study of Japan

The purpose of this report is to clarify how social class and education influence youth transition in Japan from Youth Cohort Study of Japan (YCSJ). In the late 90s, the life course after secondary school graduation have significantly changed. The close connection between upper secondary schools and employers to smoothly transit the graduates into work in Japan had been once highly praised, but the system became less functional due to several factors (Mary C.Brinton, 2011, Lost in Transition). Many young people cannot get permanent and secure jobs, so some of them become 'Freeters' who only get temporal and insecure jobs to make a living. Many empirical studies have taken place to find who are the most disadvantaged among Japanese youth, trying to find what causes the dysfunctional transition between school and labor market in the 2000's. However, most of these studies focused on the youth transition during only a certain period of time, and they are not sufficient to clarify the complexity of youth transition. YCSJ has conducted a panel survey of a group of youth for five years from their age of 20, so that YCSJ is able to capture the dynamic young people's transition in consideration of various factors. Above all, we aim at unraveling how youth transition differentiated with social class and educational opportunities.

A New Attempt At Organizing Irregular Workers In Korea :Examining The Activities Of The Korean Women's Trade Union

It is difficult to organize irregular workers, especially female irregular workers in Korea, as many of them are employed by small enterprises, change their jobs frequently and enter and leave the labor market according to economic fluctuations. Therefore the Korean Women's Trade Union (KWUTU) has tried to build a new model of a trade union and a new idea of a labor movement which are different from the enterprise unions for male regular workers in order to organize female irregular workers who have been entirely excluded from the protection of labor laws, the welfare system and the trade union. While the enterprise unions have concentrated on protecting employment and improving working conditions of the workers, the KWUTU has been an independent women's trade union which any working woman can join by herself without distinction of industry, occupation or region, or whether she is unemployed or not beyond the enterprise, and performed various activities. In this presentation, we consider the activities of the KWUTU as well as its implications.
The Rise of ‘Reflexive University Governance’ in the Risk Societies: Japan, the United Kingdom and the United States

Socio-economic upheavals after the Lehman Shock, and in European countries, the introduction of austerity measures have financially overshadowed the university sectors cross-nationally. The purpose of the paper is to identify how uncertainty and insecurity in the post-2008 period have reshaped university governance relating to risk management. The study examines university governance at the system and institutional levels in Japan, the United Kingdom and the United States.

The paper is both theoretical and empirical driven. The study takes the theoretical approach by utilising two conceptions of ‘peer reflexivity’ and ‘risk’ in the context of university governance. The former refers to the ‘cycle of peer feedback, self-monitoring, self-analysis and action. Higher education institutions are treated as learning organizations’ (Clark 1998; Dill 1999). The latter explores Becks (1992) and Giddens’ (1990, 1999) risk society. The study then proposes, a new concept, ‘peer reflexive governance’, which is compared with Foucault’s neo-liberal ‘governmentality’ (1988, 1991) to capture the characteristics of ‘peer reflexive governance’.

Regarding empirical analysis, the study takes documentation for data collection in order to identify the extent to which the institutions in three country settings are autonomous (not in direct state control modes), making the peer reflexive mechanisms feasible. The collected document includes acts, government White Papers, circulars and other official documents.

The paper argues that ‘peer reflexive governance’ has become significant in the insecure and uncertain environment in the post-credit crunch period because the universities have become increasingly more self-aware, reflective, and reflexive than ever before. The universities have strengthened their self-monitoring mechanisms in order to respond to uncertainty and risks, shaping them into learning organizations. The practices of peer reflexive governance, however, differ between Japan, the United Kingdom and the United States.

The study is significant because few literatures so far connect the conception of ‘risks’ to university governance.

Change in Juvenile Delinquency in Japan

In Japan we witness four peaks of juvenile delinquency after the World War II. Immediately after the war the Japanese police system was demobilized. However, the police did not have resources enough to carry out the activities for prevention of juvenile delinquency. With the recovery of economic conditions the police established the system to prevent juvenile delinquency. Since then the police have carried out the net-widening of their activities for the prevention of juvenile delinquency. I will explain how the net-widening has been carried out.

Japanese Language Education for Japan-Philippines Economic Partnership Agreement

This paper asks how Japanese language education for Filipino nurse candidates under JPEPA can be located in the Philippine socio-cultural settings, in order to provide academic grounding toward more meaningful policy making for both governments.

Foreign nurses’ entry to Japan presents a unique pattern of migration from the point of view of language learning. It pertains to adults who learn a foreign language from the beginning; yet are required to reach a high level of proficiency. Historically speaking, adult migrants often meant either unskilled workers who are not required high level of language skills; or skilled workers who already know the language of the host country. In any cases, the movement often took place from a former colony to a former sovereignty. As for Japan and the Philippines, although Japan occupied the Philippines for a few years during World War II, linguistically speaking, there is distance among the young generation of Filipinos today. Also, due to the eligibility constrains, it is unlikely possible to find an EPA candidate who has received higher education in Japan.

The paper illustrates the socio-cultural situation in language practice in the Philippines at large and points to the both governments’ weakness in systematic understanding and addressing it — a) multi-lingual-ness with ambivalent relation with English as both colonial and global language; b) prominence of orality over literacy; c) weaker establishment of Japanese language education than other Southeast Asian countries in quantity and quality; d) the class issue in gaps in motivation and needs of Japanese language learning.

University Governance and the Academic Profession in “Rising” East Asia

The role of universities is increasing with the rapid growth of the knowledge economy across the world. At the same time, universities are also being called upon to change their governance and management structures in order to transform themselves into the core sector of the globally competitive knowledge industry. Salmi (2008) suggests that “world-class” universities and higher education systems require favorable governance with autonomy and academic freedom. Terms such as “entrepreneurial universities” (Clark, 1998) and “academic capitalism” (Slaughter and Leslie, 1999), however, imply that traditional “collegium” governance is at risk. Most East Asian higher education systems have been established and developed through strong intervention by national governments, and, therefore, granting of academic freedom and autonomy has been relatively slow and recent. Namely, the top universities in these “Post-Confucian States” (Marginson, 2010) are now achieving “world-class” status without experiencing the strong “collegium” governance pattern of the past. Japan could be an exception, having dynamics of strong academic freedom and autonomy led by the faculties since World War II. However, now, top Japanese universities are faced with stagnating performance in both research and education. As a result, there have been calls from business and government for drastic reforms of their governance to enhance their chances of survival in the growing competition with universities and other knowledge industries in Asia and around the world. By utilizing data from the Academic Profession in Asia (APA) survey among selected Asian countries in various development contexts gathered by Arimoto et. al., the author examines the following questions: Is it possible to establish highly competitive universities without a strong tradition of collegium culture? If so, as seen in the emerging Asian countries, what are the implications for the mature university governance typically seen in Japan and Western Europe?

What Leads to High Participation in Tertiary Education?

The relationship between demographic change and investment in education is one of the topics that has attracted considerable attention from both policymakers and experts. Extended education increases the social and private costs of raising children, and has been considered a major factor in the decline of birth rates. At the same time, the growing knowledge societies are faced with stagnating participation in higher and post-secondary education. Individuals tend to utilize advanced educational qualifications for migration to world cities and knowledge clusters, but also simply for securing stable jobs in their hometowns. The relationship between the growing patterns of tertiary education enrollment and demographic trends is not that simple. There are varieties of approaches for achieving high levels of participation in tertiary education in different countries and economies; in cost sharing between the public and private sectors, in the distribution of resources within tertiary education systems and institutions, and in regulatory frameworks for sustaining and enhancing academic excellence and a minimum quality of education and training. In this study, the authors examine patterns of achieving high levels of participation in tertiary education, focusing especially on their relationship with demographic changes. Then, the authors identify the characteristics of these patterns in Japan and other East Asian countries where the higher education systems are financially highly privatized, but under the strong guidance of national governments. Lastly, the authors conduct a detailed case study on the reality of the high-participation tertiary education system in Japan as a country facing a very serious aging problem, and outline the implications for international discussion.

Food Sovereignty and the Politics of Food Insecurity in South Korea

Food Sovereignty and the Politics of Food Insecurity in South Korea

As South Korea has become one of the fastest industrialized countries in the world, it has also been one which experienced a dramatic decline in agriculture. Between 1970 and 2011, the share of agriculture in GDP dropped sharply from 25.4% to 2.3%. The collapse of agriculture has been accelerated by the global agri-food system and the government’s neo-liberal agricultural policies. As a result, food insecurity is one of the most important social issues in South Korea, today. Food insecurity can be understood not only as low grain self-sufficiency, 22.6% in South Korea; but also, as food safety problems. The Korean government, however, has prioritized overseas land exploitation and has recently strengthened neo-liberal agricultural reforms such as the FTA. Under these circumstances, the food sovereignty movement, which was originally advocated by La Via Campesina, has been discussed among the South Korean civic and peasant movement sectors. In order to establish food sovereignty, the peasant movement sector is urging the South Korean government to secure stable production, while the civic movement is advocating a right to food project. Considering the fact that consistent food insecurity has threatened not just the farmers’ livelihoods, but also the consumers’ dining tables, the concept and practical application of food sovereignty may bring many groups together. Building a consensus between civic groups and farmers’ movements seems to be more feasible in Korea, under these conditions. The aim of this study is to analyze the various actors, and their dynamic interactions involved in food sovereignty, in South Korea. We investigate the mechanism of the politics of food insecurity and food sovereignty by examining two major cases in South Korea involving the full-tariff on rice, and the import ban on fisheries products from Japan, due to radioactive contamination.

Examining Factors Contributing Spontaneous Volunteerism in a Disaster Situation: The Case of the 2009 Red River Flood

Spontaneous volunteers play a significant role in times of disaster. Before governmental and organized voluntary disaster agencies arrive in sufficient strength, civilians often spontaneously mobilize to protect their lives and belongings in the early period of disaster. This study uniquely examines the characteristics of spontaneous volunteers at three different levels of flood stage risk during the 2009 Red River flood in Fargo, North Dakota. The Red River crested at a record level on March 28, 2009. More than 20,000 civilian volunteers spontaneously mobilized and gave of their time to respond to the threat of Red River flooding. Unaffiliated volunteers signed-up at coordination sites throughout the city and filled more than 3 million sandbags and piled these sandbags alongside the riverfront. Sign-up data from 11,553 volunteers were geocoded to connect volunteers to the local area’s 96 census block groups. Data on these census block groups were then compiled from the American Community Survey (ACS) 5 year data (2006-2010). Factors in terms of socio-economic and geographical characteristics of spontaneous volunteers are examined before, during, and after the flood stage at the 2009 Red River Flood. Findings show that education, race, age, occupation, and geographic factors are significantly associated with volunteerism along with different levels of risk in the case of the 2009 Red River Flood.

Brain Circulation and Transnational Identity of Asian Students Studying in Asian Countries

This paper is based on an empirical comparative analysis of study-broad students from Korea, China and Japan. By focusing on the phenomenon of ‘regionalization of higher education,’ the study compares international students’ mobility within Asia, construction and transferability of human resources, and formation of transnational identity. The study specifically focuses on Korean, Japanese, and Chinese students studying in institutions of higher education in Korea, Japan and China.

This study is based on a survey study among Asian students studying abroad in South Korea, Japan and China. The survey was conducted in Korea from October 2012 to December 2013 among 405 students; in Japan from October 2012 to February 2013 among 319 students; and in China from December 2012 to April 2013 among 312 students.

The most significant research findings are as follows. With regard to students’ career plans, the three groups of international students showed high rates of those who plan to return home five years after studying abroad at around 40-50% and a relatively high rate of those who plan to migrate to a third country at around 20%.

Regarding the transversability of education, all three groups indicated high assessments of transferability. The data shows that all three groups believed that their education from home country is transferable in the host country and that their education through studying abroad is recognized in their home and a third country. While experiences of studying abroad positively increased awareness for regional community and transnationalism, it did not meaningfully affect the students’ national awareness. Such result illustrates that national identity remains central to Asian international students. This result is interpreted as stemming from the continuation of close connections between the individual and the nation.
state as Northeast Asia experiences a conservative shift and territorial and historical disputes are reignited.

The New ICTs and Gender Inequality in Korea

This presentation aims to explore the implications for gender inequality of the increased access to and usage of mobile ICTs, based on the data collected in Korea. Korea used to be no exception to the conventional digital divide in which women, compared to men, were disadvantaged in the use of ICTs. In recent years, however, there has been a remarkable increase in Korean women's access to internet and, specifically, mobile internet technology. Women have surpassed men in the number and proportion of 'smart' mobile phone users. Among young generations, in particular, girls, compared to boys, tend to have access to the mobile phone earlier and use it more frequently and longer in duration of time. In 2011, Korean children are reported to own their first mobile phone at the average age of 10.4 years (fifth grade at elementary school), and 80% of the third graders at elementary school own it.

What would be consequences in terms of gender inequality of this earlier and increased exposure to mobile internet technology represented by the ‘smart’ phone? On the one hand, the user friendliness of the new technology has the potential of narrowing or eliminating the gender gap in its professional and financially lucrative utilization, and its mobility in time and space potentially brings the liberating effect for women both in employment and domestic labor. On the other hand, however, there are concerns that the easy availability and access to the mobile technology would lead to continued gender inequality, in which women remained more consumers, and increased vulnerability to the new problems brought by the new technology, such as digital/mobile addiction. This presentation investigates the consequences of the new ICTs in gender inequality and their implications to cope with the general inequality at present and in the future.

Cultivating Ethnic Solidarity in the Transnational Enclave: Co-Ethnic Relations Between South Korean “Newcomers” and Korean-Japanese/ Korean-Chinese “Oldcomers” in the Korean Enclaves in Osaka and Beijing

Recently, scholars have noted that migrants exhibit distinct patterns of adaptation characterized by frequent movement to their countries of origin. This influx of transnational migration has in turn, altered the structure of historically established minority communities. My research investigates how changes in the ethnic community may be brought about by transnational migration have shaped the ways ethnic minorities construct notions of ethnic identity, using ethnographic, interview and survey data conducted in the Korean enclaves in Osaka and Tokyo.

The Korean enclaves in Beijing and Osaka are characterized by two distinct waves of Korean migrants: recent South Korean transnational migrants, and third- and fourth-generation Korean Japanese/Korean Chinese minorities. As a result of the growing number of South Korean newcomers since the 1990s, the Koreatown in Beijing and Osaka today have become increasingly connected—both on the institutional and grassroots level—to the homeland. But rather than strengthen sentiments of ethnic identity, increasing contact to South Korea has weakened minority communities. My research investigates how changes in the ethnic community may be brought about by transnational migration have shaped the ways ethnic minorities construct notions of ethnic identity, using ethnographic, interview and survey data conducted in the Korean enclaves in Osaka and Tokyo.

The Korean enclaves in Beijing and Osaka are characterized by two distinct waves of Korean migrants: recent South Korean transnational migrants, and third- and fourth-generation Korean Japanese/Korean Chinese minorities. As a result of the growing number of South Korean newcomers since the 1990s, the Koreatown in Beijing and Osaka today have become increasingly connected—both on the institutional and grassroots level—to the homeland. But rather than strengthen sentiments of ethnic identity, increasing contact to South Korea has led to the growth of formidable barriers in constructing a collective ethnic consciousness within the Korean community. Damaged co-ethnic relations between the two waves of Korean migrants have significantly hindered their ability to mobilize the rich transnational resources in the enclave for upward mobility. This paper brings to light the structural barriers Korean migrants encounter in cultivating ethnic solidarity in the transnational enclave. In doing so, I offer suggestions for social welfare policies that may aid transnational migrants in more effectively cooperating together to mobilize the resources of the enclave to better their life chances.

Effects of Child Involvement in Housework on Future Gender Role Expectations

Housework allocation has been studied extensively, particularly in its relation to women's employment. Despite the richness and abundance of literature on this subject, most research has focused on housework allocation between couples, and children's participation in housework has been understudied. These few studies, however, indicate that children participate in household tasks to varying degrees. The present study utilizes writing assignments submitted by approximately 120 undergraduate students enrolled in family sociology courses at a Midwestern U.S. university, and qualitatively analyzes patterns of housework participation in students' familial and care of origin, with specific attention for maternal and paternal involvement.

The findings are drawn from an analysis of written essays students submitted in response to questions about their families and housework allocation. The essays were organized by gender, and examined in detail for patterns of housework allocation, and the implications of children's involvement in household tasks. The implications of the findings have important implications to cope with the gender inequality at present and in the future.

Who Takes Part in Anti-Nuclear Actions? a Case Study of the Organizations of Evacuated People from Fukushima Plant Area and Their Attitudes Concerning Nuclear Energy

It is often assumed that the people of Fukushima, especially those who lived near the nuclear plants, are increasingly aware of the impracticality of Japan's nuclear energy policy as they have been replaced in their homes or living in evacuation zones.

In this paper, the author asks whether the assumption is valid in any case, and if it isn't, what are the reasons for the cases that goes against the assumptions. The author will examine some of the responses of the recently formed organizations based on the areas bordering the Fukushima prefecture and other prefectures in the more distance.

First, it is shown that, as long as each organization represents the people who lived in the same municipality before the devastating event of March 2011, the extremes of both now passionate "anti-" or "pro-" opinions concerning the nuclear energy policy have been embraced by some of these organizations.

Second, it is demonstrated why these people have taken either "pro-" or "anti-" stances in the process of the disaster followed by the nuclear accident, and the author points out that these attitudes are affected not only by their experiences
after the beginning of the disaster, but also by their life-styles before the disaster and their memories of these life-styles.

Third, the question of whether these organizations have simply endorsed or excluded some of these “anti”-attitudes and oppositions is discussed; here we see the unexpected effect of the “anti-nuclear” discourse on the formation of these views. People’s doubts about the discourse; but even this adverse effect has not resulted in showing anti-“anti-nuclear” discourse.

Hence scholars may expect that time would ease the unfortunate misunderstanding about the anti-nuclear opinion; however, this could take a generation, which may be too long a time for some witnesses.

Aging Problems in Suburban Neighborhoods: A Case of Hiroshima Region

The Japanese suburban neighborhoods that were developed in the 1960s to 1970s are standing at a crossroads; one path leads to sustainable communities to which young people move, while the other leads to “ghost towns” in which both young generations move out when they grew up and old people leave their homes because of residing in a nursing home. Regarding the demographic characteristics and housing conditions of Japanese suburbs, a large number of housing estates are at risk of heading towards the second road. Aging and the increase in vacant houses is one of the most serious and urgent topics to be surveyed by scholars in a variety of academic backgrounds. This paper examine (1) aging problems in Japanese suburban neighborhoods with GIS methods, and (2) relationship between aging and increasing vacant houses in Hiroshima region; and (3) finally, we discuss generative process of vacant houses in local cities.

A Sense of Absence: A Reflection on Ethnography of Walking in Yokohama and Vancouver

This paper reflects on our ethnography of walking, part of our larger cross-Pacific project on the formation and regulation of communities of sex-workers, which we have been conducting since the summer of 2012 in former-brothel-distRICTS of Yokohama, Japan and Vancouver, Canada, places that are commonly marked by absences of material and discursive traces and documentation of communities of sex-workers. We discuss how we came to make sense of and engage with the places through our sense of the material absences but “ghostly” presence (Gordon 2008) of sex workers’ bodies and broths. We also discuss how our affective responses such as frustration, numbness, boredom and anger, which we experienced when encountered the production of those absences, enabled us, emplaced ethnographers, to make the absences visible and envision an ethical way to engage with the spaces whose communities were uprooted and memories have been marginalized, erased or forgotten.

Women’s Hair Loss from the Perspectives of Body and Gender

This research aims to pursue the social cognition on women’s hair loss (women’s baldness) due to alopecia, and to clarify the structure of oppression on which they were placed from the perspectives of body and gender. Through this study, I want to point out that women’s hair loss should be argued as a sociological object than just a medical disease.

Until recently, hair loss was mainly identified as alopecia in a medical or psychological research. By the previous studies, mental difficulties of women with alopecia are clarified(Eckert: F1976, Van der Donc et al.: F1994), and the usefulness of wearing wigs as the ways of coping is shown (Nakajima, Nakayama:2002). However, in these researches, it isn’t clarified about the problem experience after wearing wigs.

So, this research uses Goffman’s passing theory (Goffman: 1968) and analyzes the narration of 14 bald women with alopecia area who wear wigs.

This study draws the following discussions. Firstly, the point of view of the concerned individual, wearing a wig is itself a disability for bald woman and it is based on the cultural norm which considers hair as the symbol of femininity. Secondly, one reason behind the production of the disability as being the existence of “close others” (family), who force or encourage the individual concerned to wear wigs. As the encouragement by society and the intimate sphere to wear the disability fits with the gendered body’s accepted norm, it is one reason why the individual continues to wear the wig.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.

In conclusion, women’s hair loss is seen both as a physical abnormality (disease) and as a deviation from the gendered body’s norm, and that these two consequences place the issue in a structure of double oppression.}

Organic Farming, Consumers and “Teikei” in Japan: Focusing on the Influence by the Nuclear Plant Accident

The nuclear power plant explosion in March, 2011 caused severe damage to the people in Fukushima and surrounding areas. Present paper examines its influence on organic farming, focusing on the behavior of customers - general consumers and teikei (direct co-partnership between farmers and consumers) consumers.

After the accident, farmers were restricted to sell contaminated products, and even if not contaminated, the fear restrained customers from purchase. The heavier organic customers one is, the more sensitive was her/his reaction to products from affected area, and the economic damage of organic farmers was severe. It was ironical that the food industry and local people supported affected farmers at the critical stage.

Consumers and farmers of teikei groups held study meetings jointly to understand the situation, and such meetings were opened to general consumers, too. Among un-affected consumer groups, the number of members increased, which shows the reliability of Teikei was reevaluated.

Many consumer groups did some kinds of special supports, but continuing the relationship was also the support. Consumers went to farmers’ fields to help farm work, and some group sued nearby nuclear plant to stop the operation. Feelings of mutual help and solidarity encourage the affected farmers, and also give deep consuming to customers.

Teikei is shrinking in Japan while “Community Supported Agriculture” is growing worldwide. Conventionally, teikei relied on voluntary work of women (especially for consumer side). Such style become difficult to maintain, and Teikei is now shifting to individual based one using parcel delivery service. Serious divergence between farmers (rural) and consumers (urban) in the consuming society is the cause and the result of the accident. Social consensus and broad struggle to get out of such divergence, learning from the experiences of teikei, need to be sought seriously and not to reopen the nuclear plant.

YOSHINO, RYOZO* (Institute of Statistical Mathematics, yoshino@ism.ac.jp)

Cultural Manifold Analysis (CULMAN) for Cross-National Comparative Survey

The objective of this presentation is to show our paradigm called Cultural Manifold Analysis (CULMAN) for the comparability of cross-national surveys. This paradigm has been developed in the longitudinal and cross-national surveys on national character by the Institute of Statistical Mathematics (ISM) over the past six decades since 1953. First, I summarize our paradigm of cross-national and longitudinal surveys. Second, I summarize some Japanese social values and, among others, aspects of people’s sense of interpersonal trust shown in our longitudinal survey of Japanese national character. (See http://www.ism.ac.jp/ism_info_e/kokutoukei_e.html)

Thirdly, I present cross-national comparisons of interpersonal and institutional trust as well as some basic social values based on our past surveys, including the Seven Country Survey (surveys of seven-countries (Japan, USA and five European countries)), the East Asia Values Survey (EAVS) (2002-2005), the Pacific-Rim Values Survey (PRVS) (2004-2008) and the Asia-Pacific Values Survey (APVS) (2010-2014). (See http://www.jsps.go.jp/j-grantsinai/12_kiban/chiran_22_e-data/e33_yoshino.pdf) The results show that East Asian countries have already departed from traditional Confucianism and that people share more common social values beyond the distinction of East and West. Fourthly, I present an overview of data on Japanese immigrants in Brazil, Hawaii and the U.S. West Coast in order to study the interaction between the environment and ethnicity. Finally, some comments are provided for our future research.

The Representation of Widow News in Taiwan: Critical Thinking about Romantic Love, Capitalist Ideology and Gender Politics

This research explores the representation of weddings news in mass media in Taiwan. Focusing on the gender/sexual politics, the researcher examines how wedding events are reported on mass media. In terms of textual analysis, the researcher discusses the gap between the wedding news representation and the

This study draws the following discussions. Firstly, the point of view of the concerned individual, wearing a wig is itself a disability for bald woman and it is based on the cultural norm which considers hair as the symbol of femininity. Secondly, one reason behind the production of the disability as being the existence of “close others” (family), who force or encourage the individual concerned to wear wigs. As the encouragement by society and the intimate sphere to wear the disability fits with the gendered body’s accepted norm, it is one reason why the individual continues to wear the wig.
social reality. Additionally, the implied ideology is examined. Hopefully, the result could be transformed into teaching materials for the graduate course of sociology of gender.

Wedding as an event affects and is affected by a combination of external and internal constraints and expectations. In modern Taiwanese society, weddings are big money and people want to get it on the act. Thus it may be said that wedding consumption is related to emotion as well as interpersonal relations. The researcher is interested with how wedding is reported on mass media and how these representations will affect people's cognition and attitude.

Heterosexual relations and gender stereotype roles in the wedding events have been depicted in certain ways. These images also convey illusion of romantic love ideology. Popular culture plays a key role in naturalizing the capitalist as well as the gendered pattern. The present research attempts to analyzed the wedding news to explore the implied gender ideology.

We are living in an age often portrayed as being dominated by consumer capitalism and the products of capitalist popular culture. It is important to acknowledge the influence of the mass media in shaping people's identities and daily lives. Combining gender analysis with sociological inquiry, the researcher believes that the study on the representation of wedding news could provide some insights for the teaching practice of critical media literacy, gender equity education and relationship education in universities.

### The Power of Religious Objects in Transnational Migration

Since the economic crisis in Spain hit most migrant households as the most vulnerable, religious institutions such as the Catholic Church, are becoming increasingly important. Their houses act as reference points by which the migrant community is kept together. Tangible assistance is offered and transnational communication structures and family bonds are sustained. Being assisted by local Saints, the Catholic Church serves as a place of remembrance to produce and reproduce senses of belonging that date back to the early colonial era. Social relations of migrants are manifested in a series of social interactions that mobilizes the power and glory of the former Colonial regime.

Giving the example of the congregation of San Lorenzo in an immigration neighborhood in Madrid, it is shown, which role and agency religious artifacts play in re-producing collective identities and allocating social and financial resources. By focusing on the object itself (not necessarily its symbolic representation) the functions and cultural meanings of the figure in different historic contexts become apparent. The religious staging around the object of the Saint show spatially and chronologically comprehensive chains of interaction which reflect deep seated power relations between the immigrant and the host communities.

### Economic Crisis: Toward the Erosion or Stability in Individual Welfare State Preferences?

Understanding voter preferences for the welfare state and how they are formed has become an important basis for making claims about either the erosion or continued stability of the welfare state. In the past decade evidence has mounted to point towards a relationship between individual measures of economic hardship/risk and support for the welfare state. However, most of the research has been constrained to limited time-series data that evaluates this relationship under relatively stable business cycles which seldom affects individuals belonging to more secure economic groups (high skill, high income). In light of the increasing global economic instability that places these individuals at greater risk, it becomes important to determine how they will respond differently and change the direction of aggregate support for the welfare state.

This paper will examine in detail how different class groups respond to increasing risk, in particular more economically secure groups, and identify if recent findings of increased aggregate support as well as class convergence in Sweden hold or if they resemble a recent study that demonstrated a decline in welfare state support in the United States following the 2008 economic crisis.

The leverage of this study is based on the use of (1) exogenous properties of the 2008 economic crisis, (2) a Swedish survey that reflects respondents' welfare state preferences and socio-economic attributes that spans seven consecutive years sampling approximately 3000 respondents per round, and (3) a design which employs a difference-in-differences method to compare individuals across municipalities. Municipalities are sorted according to those that experienced an immediate substantive spike in unemployment and those that experienced little change, which resembles a treatment and control group respectively. This design reduces endogeneity to make stronger claims for causality, improves estimation of increased economic risk on more economically secure groups, and consequently overall changes in public preferences.
ipated in reporting the Wenchuan and Lushan earthquake, this article finds out the discrepancy in using the traditional media and new media. It also elaborates that a new form of inequality emerged due to the digital divide, while weibo is eliminating traditional inequality.

Is Religion an Alternative Source of Help for Immigrants to Maintain Their Mental Well-Being?

A number of studies have shown that religious participation is positively related to immigrants’ mental well-being in the West, thus making religious venues “places of refuge” for immigrants and religion their “balm for the soul.” A study in Canada in 2007 found that immigrant status is associated with lower rates of use of mental health services, which is likely caused by cultural and linguistic barriers to care. In this paper, I attempt to find if religion is an alternative source of help for immigrants when they suffer from psychological distress and whether religious participation is associated with lower rates of use of mental health facilities among immigrants. The goal of my research is to help policy makers better understand how immigrants adapt in their host countries when facing barriers to access to certain mental health services.

I will conduct my analysis within the Canadian context, where there is universal health insurance. My analysis will be based on data provided by the Canadian Community Health Survey: Mental Health and Well-being. The variable mental well-being is defined by the “psychological well-being manifestation scale” in the survey. Consisting of 25 questions ranging from “self-confidence” to “pace of living” on five scales, these measurements are combined into one continuous variable. Religious participation can be defined by the two questions on how religious respondents participate about themselves, and their frequency of attending religious activities. The survey also contains a section on health care utilization, thus making it possible for me to analyze the relationship between religious participation and the use of mental health services.

Declining Marriage Rates Under Globalization: Homogeneity Or Heterogeneity?

Around the world, marriage is undergoing massive changes. The United States has called on “saving marriage” (Popone, 1993; Furstenberg, 2005), the Middle East is experiencing a marriage crisis (Rashad, Osmany, and Roudi-Fahimi, 2005), Latin America is seeing the rising substitution of cohabitation and single motherhood in place of marriage (Esteve, Garcia-Roman, and Lesthaeghe, 2012), and China is seeing more “sheng nu” meaning “leftover women”, a group of single women who are highly educated and high income. A series of questions arise from these changing trends of marriage: Does globalization affect marriage the same way in the developing countries as it does in the developed countries? What causes declining marriage rates under globalization? Do these changing trends mean marriage as an institution is weakening or even disappearing? What does a marriage mean in different regions under globalization? Previous research focuses on either the declining marriage rates in the developed countries (Cherin, 2004 and 2013; Trost, 2010) or the “flight from marriage” in the developing countries (Jones, 2005). What is missing in the current literature is a comparative perspective on this phenomenon, which can help us better understand marriage as an institution characterized by a heterogeneity (its complexities) not a homogeneity (an individually driven phenomenon). This paper explores the declining marriage trends occurring in different regions (i.e. the United States, Latin America, the Middle East, and the Southeast Asia), compare and contrast their similarities and differences, and analyze the implications for the significance of marriage as an institution. I argue that delayed marriages and declining marriage rates in the developing countries do not indicate marriage as a traditional institution is eroding, replaced by other modern alternative living arrangements. Instead, marriage is still viewed as a significant institution and its traditional characteristics are reinforced by family and economic contexts under globalization.

Effects of Social Capital on the Developmental Outcomes of College Adolescents: Evidence from Shanghai, China

It has been suggested that individuals are faced with more transitions and life-decisions in adolescence and young adulthood than at any other stage of life. Overseas studies have also suggested that during these period social ties might change. However, domestic research has spared disparate efforts in the investigation into college students’ psychosocial development undergirded by the deficit-based model. Drawing upon a sample of 1153 university students in Shanghai, China, this study investigated how family social capital, friendship qualities, associational social capital, linking social capital, and adolescents’ agent personality influenced multiple developmental outcomes of college students in mainland China. The results of a structural equation modeling analysis provided a good fit for the sample as a whole. The overall findings support the hypothesis that higher levels of agent personality were associated with better developmental outcomes of college students, including higher levels of resilience, self-efficacy, and self-esteem. Agentic personality also mediated the effects of family social capital, friendship qualities, associational social capital, and linking social capital on developmental outcomes.

The study advances the theory of social capital by incorporating its various dimensions into one conceptual framework, thus unraveling the mechanism of how family social capital, friendship qualities, associational social capital, and linking social capital influence the college students. It also advances the theory by testing it in a non-western socio-cultural context, thus potentially fortifying its universal applicability. Moreover, it is desirable that more programs for enhancement of agency building could be devised to foster emerging adults’ agentic personality. Family education, positive peers groups, associational participation, and linking mentoring are also anticipated to promote their optimal development.

A Sociological Analysis of Linking Renewable Energy with Rural Regeneration

A feed in tariff system that was introduced after Fukushima nuclear accident has let people think that there are big business chances in the renewable energy’s market. Then, a lot of companies have tried to join to the market as electricity generator. In this presentation, we will examine the way of linking this market waking up with regenerations of rural economy from sociological perspectives.

Because electricity generators need to sizable land for a facility, they install it in rural area. Rural areas where suffer from economic recession welcome it. However, if installers are only big companies whose main offices are in big cities such as Tokyo, economic benefits for rural areas will be limited.

Our scheme of research groups aims to link installs of renewable energy facility with spontaneous developments of rural areas. Based on this scheme, our group has researched and supported several projects that people living in rural area install renewable energy facilities.

In the research, we have found that small entrepreneurs encounter a lot of barriers to install renewable facilities. Typical one is the negative attitude of local banks to financing them.

Financing local companies by local banks is essential to the vitalization of regional economy. For promoting this finance, an analysis from sociological concepts such as social networks is useful.

To date, with overcoming barriers, lots of projects are ongoing by local people in Fukushima and other parts in Japan. For example, in Minami-Soma where is partially polluted by radioactive substances, farmers have installed PV panels on their farmlands. This project is called the ‘solar-sharing’ and will bring profits to farmers. In this case, a social network has played an important role.

We will take some projects by local people and show the way in which people overcome financial and other barriers.

Disregards to Principles on the Distribution of Risk and Bads

Geological disposal is the primary option for most countries where have high-level radioactive waste. All countries except for Finland, however, have not (or are unable to) select geological disposal facilities due to objections from the population. Japanese government is facing same problem. We must dispose nuclear wastes regardless of continuation/stop of nuclear electricity. How can or should we tackle this problem?

The essential sociological perspective is the distribution of risk/bads. This perspective was suggested by Ulrich Beck in his Risk Society (1998). He has insisted that the concept of class is not effective for understanding the logic of this distribution anymore. To his argument, lots of works have asked whether it is true or not. The logic of the distribution of risk/bads has been a focus of sociological studies.

In this presentation, we will show two disregarded principles on the distribution of high-level radioactive waste. These principles are deduced from an analysis of conflicts on general wastes in Japan. Based on these principles, we will analyze a site finding scheme and its result of geological disposal facilities in Japan.

Japanese government is looking for communities where spontaneously accept the facility now. For getting a spontaneous candidacy, the government established a governmental body called NUMO (Nuclear Waste Management Organization of Japan). This governmental body has carried out successive projects to select geological disposal facilities. We have shown that the governmental body disregards the principle of territorial equivalence of risk/bads.

We have also shown that the governmental body disregards to the principle of territorial equivalence of benefits. The governmental body denies the beneficial effects of siting facilities in coastal areas.
The aim of the paper is to use methodological viewpoint of the visual turn of sociology to understand the visual turn of Japanese Animation and Manga and the phase of 'globality.' The data that will be dealt with is the one from the extended survey research on Manga and Anime conducted by Association of Japan Sub-Culture Studies at Kobe University (headed by the author).

Comparing the research results that have already been conducted by Europe-an Manga Network in European countries a few years ago and that of conducted by the Association of Japan Sub-Culture Studies in Asian countries in the last year, paper will describe a view as to the similarities and differences in the process and phase of 'accepting' (and rejecting) Manga and Anime as cultural production in those areas.

Empirical researches from which the data of the paper generated, have been conducted in the areas such as in Hangzhou (ZJDB) in China, Hong Kong, Taipei and the survey research has been done using questionnaires as well as interviews with the participants / fans in the events of Manga / Anime festival in those cities / areas.

Observing those processes of acceptance/ rejections, and the ways of penetr-ating into people's daily life paper suggests the transformed nature of our con-temporary way of life in terms of the visual and the social are constructed simulta-neously in localized 'cosmopolitan' consciousness from below.

This paper addresses the fusion, rupture and transformations in the notions of race, nation, and culture by attending to the contradictory but reciprocal relation-ship between racial nationalism and the 'cultural' deployment of multicultural rhetorics. Focusing on the South Korean context, the contemporary racialisation of Chosŏn'jok (Korean Chinese) migrants in tandem with the rise of the autochthonous far-right is examined as an illuminating case study. South Korea, a country of race, nation and culture by attending to the contradictory but reciprocal relation-ship of race, nation, and culture by attending to the contradictory but reciprocal relation-ship of race, nation, and culture by attending to the contradictory but reciprocal relation-ship of race, nation, and culture by attending to the contradictory but reciprocal relation-ship of autosmology that considered itself to be racially homogeneous, has begun to experience the phase of 'accepting' (and rejecting) Manga and Anime as cultural production in those areas.

In both cases, trade unions have developed new strategy for organizing precarious workers regardless of contract types.

This paper explores an alternative basis and method of employment standards enforcement with cases of construction and personal care service industry in Korea. In both cases, trade unions have developed new strategy for organizing precarious workers for and for closing the enforcement gap since 2000s. In particular, unions have focused on the liability of 'user enters' in industries where other precarious work than employment relationship becomes the norm.

Furthermore, this paper analyzes the nature of dependence of precarious work and suggests that it can be understood as 'exteriorized dependence' which comes from the cost-and-risks transfer from capital to labour and society. In con-trary, the paper shows reversing the cost-and-risks transfer chain is the better approach for expanding labour protections for all kinds of workers regardless of contract types.

effect than abortion in reducing births in South Australia. The abortion rate is still lower than in the rest of Australia as calculated from Medicare data, even though this is an underestimate because it includes only fee-paying patients. There remains a need for continuing emphasis on better contraceptive use, including better emergency contraception.

An international comparison of the recent abortions data for South Australia, UK and USA revealed that the prevalence of abortion in South Australia was marginally lower than that in the UK and USA.

The Chechen and Japanese Values in a Globalization Context: The Comparative Analysis

In the modern world the globalization process strengthens an interference of cultures and values, actualizes contradictions of secular and religious, traditions and the modernity, requirement of defining a vector of a society development.

Object of research: the Chechen and Japanese values in conditions of globalization.

Methods: cultural and action approaches, methods of the sociological, comparative analysis.

Results. In Caucasus, as well as in Asia, Japan in the hierarchy of values the key place take the values of family, collectivism, respect for seniors, mutual aid, solidarity, group unity. The Chechen values, despite religious and language distinctions in Caucasus, are considered as a part or a segment of the Caucasian and Russian values. During the post conflict period in the Chechen Republic, as well as during the post-war period in Japan, high interest to social and cultural values and norms is observed, responsibility for preservation and revival of traditions and customs is shown. In the Chechen and Japanese society there is a similarity and distinction in the ratio of collectivism and individualism, display of paternalism, reflections on globalonization calls. Transformative changes in Russia cause social activity, among young and persons of middle age enterprises, initiative, requirement for a competition is more often observed. The Internet, mobile communication, other information means make changes to functioning of traditional norms. In this context interesting is the aspiration in Japan to adapt traditions for new conditions.

Conclusion. Caucasus is on crossing of the European and Asian cultures. Japanese social practice of combination of traditions and the modernity serves as a model for others in carrying out transformations in social and cultural spheres of life. However in each region and country it is necessary to develop a strategy of modernization taking into account social and cultural specificity.

Work Values in a Modern Linguistic Space

In the modern world, in the conditions of globalization many languages and cultures undergo changes. Social factors make the mediated impact on languages that is shown in contexts of their use, new word meanings.

The purpose of our research is the study of work values in the English, German, Russian and Chechen idioms taking into account social and language contexts, the language situation in the Chechen republic.

Methods. The comparative, semantic, corpus, sociolinguistic analysis of idioms, poll of the Chechen language speakers is carried out.

Results. In the basis of work values there are the material values focused on income, profit; spiritual and psychological values - self-realization in work, pleasure from work, understanding and feeling of the meaning of life, spiritual growth through work, creativity, social and career values - education, status in society. In an internal form of idioms the cultural values describing work traditions, customs, and the historical events forming work cultures of different countries were also reflected. So, in the English and German languages the value of official regulated work was accentuated, in German the value of an official duty was also specified. In the Russian contexts very similar social experience is fixed. According to the poll of Chechen language speakers at the present stage important are the values of income and success that can be connected with a post-war situation of revival, construction of work culture. In the frame of a language situation in Chechnya the idioms with the opaque internal form which fixed the facts and subjects of culture not taking place in the modern reality are less familiar and seldom used.

Conclusion. Thus, the study of contexts is necessary for revealing the influence of social factors on idioms and evaluation of the language situation in society.

La Presencia De Las Mujeres En El Trabajo y Los Cargos De Dirección En México

Las mujeres en cargos de dirección del sector privado en México.

Gina Zabludovsky Kuper

La ponencia mostrará cómo, a pesar del drástico aumento de la participación de las mujeres en el ámbito laboral y en las universidades, su presencia en los cargos de dirección y de liderazgo en la compañía privadas es todavía muy escasa y varía de acuerdo a una diversidad de circunstancias y como son el tamaño, género de la compañía, procedencia del capital, existencia de políticas de diversidad, y otras características del ámbito laboral.

Las fuentes de la investigación la constituyen: los trabajos académicos sobre la temática, la interpretación de los datos estadísticos del país, la cuantificación y generación de la propia información a partir de los distintos directorios empresariales, el trabajo de campo realizado con base en entrevistas y con directores(as) de recursos humanos y las mujeres ejecutivas de varias corporaciones. Con base a estos datos, el trabajo adoptará una estrategia comparativa que permita analizar la situación en México con las tendencias de otros países tanto en América Latina como en el resto del mundo.

Los puntos a tratar, son los siguientes:

1) Las presencia de las mujeres en la fuerza de trabajo, en los cargos de liderazgo y en la educación superior. Persistencia del “techo de cristal” segregación horizontal y vertical en los oficios y carreras en las organizaciones.
2) Los efectos sobre las oportunidades que tienen las mujeres de las políticas de flexibilidad, diversidad y de apoyo a la conciliación familia trabajo. Diferencias entre las empresas de capital extranjero y las nacionales.
3) Características familiares y diferencias generacionales de las mujeres directivas.
4) Feminización y masculinización de las ocupaciones.
5) Diferentes trayectorias laborales.
6) Principales retos y obstáculos de las mujeres en cargos gerenciales y ejecutivos.
7) ¿Hacia dónde vamos? Proyección hacia el futuro.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The role of collective cultural and social memory in public belief they belong to Tempelhof (and keep its memory) vs. those who do not. It is not only the conflict of the power elites and citizens, but also of people campaigning against gentrification and rocketing rents. Thus, it is obvious that the -park, consisting mostly of engaged volunteers and enthusiasts, yet of different wave of activism emerged. What was in stake was not only a loss of a unique place -was closed for traffic in 2008 and the airfield turned into a huge park, much loved -was designed in a theoretical context of balanced development. Its application confirms the theory that rapid development is associated with diminishing balance between its different domains.

As with many other high-income welfare states, maternity care in Australia is available through a system of universal health coverage available to all citizens. However, Australia is distinctive in its parallel private health insurance sector which operates alongside and in competition with the public sector. The private health insurance sector has been heavily subsidised through a range of government policies, many of which have been criticised as costly and inequitable insofar as they favour the most affluent segments of the Australian population and those in metropolitan regions. In addition, concerns about the impact of this stratified system of care on maternal outcomes have been increasing. For example, women birthing in the private sector are at substantially higher risk of instrumental delivery, caesarean birth, induction of labour, episiotomy and epidural anaesthesia; their stay in hospital following birth is, on average, twice as long as women birthing in public facilities (Australian Institute for Health and Welfare, 2011). What do these differences mean for how women experience post-birth care following discharge from hospital? In this paper, we report on analyses from two Queensland studies of women's experiences of care in the community following childbirth, with a particular focus on the impact of public and private care provision. We report findings from a Queensland survey of new mothers (N=6,433) in terms of their experiences of care in the community, and their confidence and satisfaction with their healthcare. In addition, we report the findings of qualitative interviews with 70 new mothers and 49 health care professionals providing post-birth care in public and private health care sectors in Queensland. Together, these analyses demonstrate inequities in health care provision resulting from the current stratification between public and private systems of maternity care.
HIV/AIDS Prevention Among Female Sex Workers, Lahore, Pakistan

Background: Although commercial sex is illegal in Pakistan, yet the number of FSWs is increasing. Pakistan is almost in the grip of an Asian epidemic, where HIV/AIDS is spreading like a silent killer. One of its main reasons is the high rate of transmission among sex workers and their clients, due to lack of awareness, limited access to healthcare and preventing services, socio-cultural barriers and taboos.

Description: FSW Service delivery project to respond spread of HIV/AIDS was launched in collaboration with Punjab AIDS Control Program and Contech International in Lahore during 2012-13. Comprehensive package of HIV services and provision of safer sexual practices in the environment were the key project interventions. DISH (2) Centers (including FSWs friendly-DICS (3) established in high concentration areas of FSWs, focusing their typology including home, street, kot-kha na and highway-based FSWs. Extensive trainings were imparted to peer educators and counselors of the centers of multipliers and these spots conducted. Vested in the community network (VCN) was formulated by bringing together more than 100 volunteer peer-educators. Innovative strategies including provision of Primary Health Care (PHC), STIs management, Inter-Personal Counseling sessions with 9,500 FSWs and Behavior Change Communication (BCC) interventions was applied for awareness and promotion of safe-sex practices. Moreover, law enforcement agencies, local GPs/CBOs, sex-workers network operators were also sensitized to create enabling environment.

Challenges: Major challenges e.g. community and service-providers stigma regarding sex-workers, substantial use and limited access to healthcare services, availability of prevention commodities, HI-testing, illegality of sex-workers and non-cooperative attitude of law agencies were addressed.

Conclusion: A mix of multiple interventions involving key stakeholders is beneficial to bring change in knowledge and behavior of community and vulnerable populations. Offering both outreach and drop-in services proved the best way of involving sex-workers and the services would be more effective with this coordinated approach.

Dual Job Market for Universities’ Graduates – Comparing Educational Paths and Careers of Science and Humanities Graduates

During last twenty years huge expansion of tertiary education could be observed in Poland. Number of students has risen from less than half a million in the begging of the nineties to almost two millions in recent years (GUS, 2011). For most of the in this period the number of students of humanities, especially social sciences, was rising at fastest pace. At the same time a shortage of technical and scientific studies among graduates has been shaped by economic changes and the realization of a nationhood project. Construction of the “migration issue” as a social problem in Russia is in many ways embedded in the tensions obtaining between the demands of the state for social cohesion and the demands of enterprises for socially disunited labor. My study has demonstrated that the operation of these factors results in the racializing of visually recognizable groups of labor migrants, the social relations in which they are involved, and, more recently, the category of “migrant” itself. Since groups and individuals develop strategies for negotiating their place in the racial order, they are also involved in the process of negotiating access to material and discursive resources. We need to identify and examine trends in the shifting logic underlying the construction of the racial other through the migration regime and also take a closer look at individual and group responses and negotiations in respect to this process.

The Politicized Schooling: Institutionalizing Educational Decentralization in Indonesia’s New Democracy

The paper discusses the effect of new democratic environment on the implementation of a globalizing policy of educational decentralization in Indonesian municipalities. It identifies the new policy has created a new organizational arena in which different governance arrangements arise, beyond the policy’s original will.

The Indonesian education decentralization policy was enacted in the early 2000s following one of the world’s most radical political decentralization projects. The central Education Ministry has transferred most of its authorities to municipal administrations whose leadership is established through a democratic election. This new policy also offers greater school autonomy as well as invites wider civil society participation. While much research on policy implementation has emphasized the role of formal institutions, this paper highlights the involvement of non- formal sectors that nonetheless play more dominant function. Analyses are done through developing two neo-institutionalist’s concepts: “organizational field” and “governance and exchange relations.”

Using the former, this paper proposes that the new democratic field has left the reformed education system trapped in a democratic network of constraints, involving numerous organized interests like political parties, teacher unions, education corporations, and rent seeking entrepreneurs. New alliances between autonomous schools and private suppliers do enable schools to attain their immediate outputs. However, school principals cannot simply enjoy such autonomy for they have to maintain a patron-client relationship with the municipal officers who appoint them.

Furthermore, employing the latter concept, the researcher goes beyond the boundaries between institutional and technical environments in analyzing the effect of noninstitutional relations. Such relations do to some extent reflect the technical aspect of mandated civil society participation and help educational organizations avoid a loosely coupled management. As they become routine, however, new institutionalized practices are established. And as a result, the effort for their fulfillments tends to overlook the substantive changes originally intended from the policy.

ZAMORA, GERARDO* (Universidad Pública de Navarra, g.zamora.monge@gmail.com)

Addressing Social Justice Issues Around the Economic Crisis in Spain

Against the backdrop of a deep economic and financial crisis worldwide, welfare regimes in countries of the European Union are undergoing drastic changes driven by austerity policies. In the case of Spain, such changes affect an already weak welfare state and the large support networks woven around the family. Extreme unemployment rates, weaker job security conditions or rising poverty rates coexist with recent, dramatic changes in values around the family, gender roles or individuals’ rights.

Given its length, it is feasible to expect that the crises may be influencing changes in the country’s demographic dynamics and its value system. This presentation focuses on three aspects of the economic crisis affecting women’s births. Recent research in other countries suggests a reversal in the traditional pattern of childlessness in women: now less educated women are more likely to stay...
childfree/childless than the more educated (studies on men and childlessness keep being less abundant, though). Moreover, research findings from European countries suggest low fertility may be correlated to unemployment risk and job insecurity. How are births being affected in Spain? Secondly, an inquiry on how older never-married women and men, regardless of their sexual behaviour or identity, face growing difficulties due to the crisis. Within a familial welfare regime, never-married older individuals (and some childfree ones) build support networks in a slightly different fashion than do parents/married older adults. Such networks tend to be more diverse, but also more vulnerable to health/dependency-need/negative events. Thirdly, a question on whether salient social justice issues are being dealt with or not when looking at the two previous points: is becoming a parent a choice increasingly being reserved for the more educated and privileged individuals? Are childfree/childless and never-married individuals suffering cumulative inequalities just for the still prevailing stigma of such conditions?

Childfree/Childless Individuals, Population Ageing and Sexual Identities

In many societies, either as a single person or as a couple, individuals who choose not to have children are increasing in number and as a share of the population. Also, many individuals and couples do not have children not because it is their choice, but because of other social and individual factors. Both situations confront normative sexualities, and question the normative links between sexuality and reproduction. In parallel, a large group of individuals have been denied social (and thus legal) recognition concerning the access to parenthood; therefore, a great part of these individuals have remained childless/childfree, whether voluntarily or not. This is the case, for instance, of many lesbian, gay, bisexual, transgender, intersexual or queer (LGBTIQ) individuals aged 60 and older, or even younger. Both LGBTIQ parents and non-parents confront and question, too, normative sexualities and the links with normative reproduction. How are these social processes affecting demographic changes, such as population ageing? Have they been affecting such changes? Does the study of childless/childfree individuals in their fifties and sixties shed some light on how to address the challenges facing societies in the future decades, when family structures will have changed so much and childlessness will become more visible? Will the increasing choice of a childless/childfree life blur the boundaries between certain features of the so called sexual identities? Can there be an identity based on childless/childfree choices? Will this affect sociological research perspectives on demographic changes? Is this relevant for policies addressing population ageing?

This paper analyses waves 1, 2 and 3 from the Survey of Health, Ageing and Retirement in Europe (SHARE). It compares parents and childless/childfree individuals in terms of health, social expectations, and other variables. The paper analyses, too, results from 10 in-depth interviews with LGB individuals aged 50 and older, most of them non-parents.

When Exclusion Replaces Exploitation: Structural Unemployment and the Retreat of Class Politics

The rise of mass unemployment in Europe in the late 70s and early 80s changed the conditions of the political struggle and debate in the west industrialized societies, producing a strong economic and political inequality within the working class. While the conflict between capital and labour had structured the analysis of the post-War years (with strong unions and labour parties), the 70s and 80s witnessed a shift of attention to the unemployment crisis and in particular its unequal effects (as evidenced by the centrality of debates around exclusion, urban marginality, and unorganized struggles). This simultaneously political, sociological, semantic and ideological turn is deeply rooted in the changes that have taken place within European societies in the last forty years. The increase in unemployment, which is itself increasingly concentrated on parts of the population (both socially and geographically) resulting in the emergence of a vast stratum of (what Marx called) “surplus population”, is a key elements in understanding this evolution. This evolution also created the conditions of possibility for both the conservative political strategies aimed at limiting access to the Welfare State as well as the de-clined centrality of “the working class question” among authors and critics on the new left like André Gorz or Herbert Marcuse. In this new ideological framework, the “exploited” is defined by its exclusion and its increasingly precarious relationship to work. Making use of new statistical data on unemployment in Europe, our paper will explore how the political struggle and debate was progressively framed around the question of the “excluded” and the underclass in a way that made less relevant the question of exploitation and changed the political agenda. This evolution is of fundamental importance – theoretically and practically – for the advancement of critical theory and for understanding inequality under neoliberalism.

Sociological Dilema of Iranian Sociology: Critic of Critics

The purpose of this paper is to study the situation of sociology in Iran focusing especially on examining the lack of sociological theorizing. For thirty years the development of positivism and experimentalism has dominated, emphasizing quantitative methodology. The impact of this is that theorizing about Iranian society has been forgotten. To understand the reason for this we have performed a meta-analysis of discourses of social actors in social sciences. Findings indicate that this can be explained by social choices and not social chances, individualism, or a lack of cooperation or creativity. Findings also suggest that what is important is the manner in which they spoke, perhaps even more that what they actually said.

The Early Employment Inequalities of Disabled Postsecondary Graduates in Canada

Disabled youth have become an increasingly important at risk group for educators and policymakers in Canada. Youth with disabilities are more likely to drop out of high school and are significantly less likely to pursue higher education. Yet, many universities are now reporting that nearly 10 percent of their graduating students self-identify as having a disability, and educational achievement-based programs designed to accommodate students’ needs are growing across campuses. While accessibility within postsecondary education may be improving, existing studies suggest that youth with disabilities still face inaccessible workplaces and hiring discrimination. In fact, perceptions of disability by employers and colleagues have been shown to have stronger effects on workplace outcomes than lack of accommodations in the workplace. Drawing on Statistics Canada’s 2005 National Graduates Survey, we explore three major research questions. First, do students with disabilities have stronger effects on workforce outcomes than their non-disabled counterparts? Second, what types of credentials appear to moderate the effects of disability on workforce outcomes? That is, how do the transition outcomes of disadvantaged groups compare across fields, faculties, and types of programs? Do these relationships vary across levels of education (college, trades, undergraduate degrees, graduate degrees)? Finally, do disabled graduates experience similar inequalities across economic and non-economic transition outcomes (earnings, education-job match, job satisfaction, employment, full-time employment)?

The Communist Legacy As a Self-Transforming Social and Semiotic Structure

This paper will focus on the problem of the contested meanings of the legacy of communism in Central and Eastern Europe and the relationship between moral and political assessment of the communist past and the modes of its interpretation in academic debates. Post-communist societies are commonly perceived in terms of the legacy of the communist period, which is seen as a crucial factor defining both their general path of development and shaping their internal social hierarchies. At the same time, elements of the communist legacy are imbued with strong moral and emotional judgments. In the majority of cases, this legacy’s conception is clearly negative and is used to color most of the past and current outcomes of the socio-economic development in countries of the region. Moreover, contemporary social actors, for a variety of reasons, are often viewed as being

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
tainted by the communist legacy, as products of the communist institutions and path-dependent effects. Analogically, diverse discourses that may be perceived as harmful are seen as direct outcomes and/or new forms of communist “new-speak”. This highly moral and political nature of the communist legacy, which is an important component of the reservoir of moral metaphors of public discourses in the countries of the region, makes debates on the nature and scope of the “real” or structural impacts of the communist past extremely difficult. The paper will demonstrate how constantly re-negotiated meanings of communism, and the boundary between “negative” and “positive” (if any) aspects of the communist legacy, impact the way in which the role of the past is interpreted in academic debates. Examples will be taken from discussions of regional inequalities and from sources that examine the roots of economic and social backwardness of Poland and other countries in the region.

Gender’s Crooked Path: Feminism Confronts Russian Patriarchy

This contribution discusses the uneasy development of gender studies in Russia as one example of public sociology, on the basis mainly of our own experience in the Gender Studies Program at the European University in St. Petersburg. It observes how the political and academic context of the 1990s created opportunities for academic innovations that ideologically challenged Soviet patriarchy and invoked gendered criticisms of post-Soviet changes. I discuss the effects of the rapid but partial institutionalization of gender studies in the Russian academic context and how gender became the umbrella term for both feminist and anti-feminist standpoints. Since international support for the gender studies diminished in the 2000s, the fashion and economic benefit of doing gender studies has declined, with only a small group of researchers maintaining their commitment to the feminist approach to gender. I focus on the politization of gender in the last decade of Putin’s Russia and the role of feminist researchers in the analysis of the new conservatism, expressed in gender ideology. The problems of combining public expertise and academic work in the particular realm of gender politics are examined.

Successful Aging: Cross-National Analysis of Subjective Well-Being in the Late Life Period

This paper aims to identify and analyze the life course and contextual factors that influence the level of subjective well-being (SWB) of 60+ aged people. Our research is based on the results of 5-years wave of World Value Survey. We have investigated the level of SWB of older people on individual and country level. The results of research demonstrate that the strongest predictors of SWB in late life period are satisfaction of financial state, health state and sense of control, i.e. the subjective feeling of being able to influence factors that influence the level of SWB very strongly. For older people the country in which they live, the level of democracy, GDP per capita, freedom and tolerance are very important. In contemporary society late life period is a time for self-realization, new activities, new leisure and new emotions. If society understands the needs of older people and provides the opportunities for their realization, society can overcome the challenges caused by population aging. Only in this case we can say about such a conception as “successful aging”.

The Schooling Of Emotion and Memory: Analyzing The Emotional Styles Of A Teacher's Pedagogical Practices

In this paper, we explore the intersection between emotions and memories using data from a case study of a teacher’s pedagogical practices in a conflict-troubled society. The aims of this study are: to examine the construction of emotional style(s) in a teacher’s pedagogical and interactional practices whilst teaching the memories of ethnic conflict and war; and, to investigate whether these emotional styles are stable or changeable over time. In a contemporary society late life period is a time for self-realization, new activities, new leisure and new emotions. If society understands the needs of older people and provides the opportunities for their realization, society can overcome the challenges caused by population aging. Only in this case we can say about such a conception as “successful aging”.

Apport De La Socio-Analyse à L'Etude Du Processus De Construction Identitaire

L'objectif de ma communication consiste à explorer le lien entre l'expérience de l'immigration et la construction de l'identité ethnique, à partir d'un cas concret (une famille d'origine nigérienne émigrée/immigrée au Canada). Les théories de l'ethnicité, qui ont connu un boom depuis les années 1970, ont certes rompu avec l'essentialisme des précédentes approches, mais perpétuent souvent (à leur insu) une représentation substantielle des identités ethniques (Brubaker, 2000; Jenkins, 2010). On reconnaît volontiers ces dernières comme étant mouvantes et dynamiques, mais on s'attarde très rarement sur leurs incohérences, leurs ruptures, leurs contradictions (Bajot, 2009; Collovald, 2007). Par ailleurs, l'ethnicité (comme l'identité ethnique) a souvent été traitée sous l'angle soit de l'intégration (le fameux concept du “vivre-ensemble”), soit du déracinement (“classe d'identité”), soit encore du rapport intergénérationnel (“crispation ou dissolution de l'ethnicité; ethnicité symbiote”). La socioanalyse (Sayad, 1991; Bajot, 2009), en remettant l'individu au centre de la recherche et en privilégiant la méthode de la biographie reconstituée, permet de construire l'identité ethnique (dans leurs discours dichotomiques) dans ses contradictions les plus profondes, ses ambivalences, ses évolutions (au cours d'une vie), ses mécanismes de dissimulation, etc.

Pour ce faire, il faut nécessairement saisir l'expérience de l'immigration dans toute sa complexité; autrement dit, dans les rapports qu'elle implique avec le pays d'origine: souvenirs, fantasmes, nostalgie, désillusion (du retour); avec la famille élargie: entre culpabilité et sentiment de devoir s'acquitter d'une dette; avec la société d'accueil: promesses (réelles ou découles) d'une nouvelle vie ou de nouvelles possibilités, discriminations (raciales, sociales, économiques, etc.), sentiment de se sentir déclassé, écarté, etc. Il s'agira donc d'étudier le processus plutôt que le résultat de ce processus (comme disait Brubaker (2002), l'identification, plutôt que l'identité, permet d'éviter le piège du substantialisant et de penser l'ethnicité en termes dynamiques, relationnels et processuels.)
The Reverse Panopticon Metaphor: The Autocratic State's Fear of Being Recorded

In the aftermath of the catastrophic earthquake that occurred in the Chinese province of Sichuan in 2008, the artist and activist Ai Weiwei launched an independent ‘citizen investigation’ movement that challenged the government’s failure to gather accurate data on the number of deaths, especially the deaths of schoolchildren who had fallen victim to shoddy school building construction. Through a case study of this movement and its suppression by the Chinese State, this paper aims to analyze how new media facilitate the power dynamics between the autocratic state and social movement actors.

To analyze this campaign, the paper uses David Whiteman’s ‘coalition model’, developed to evaluate the impact documentary film affect social movement actors, and redefines this model. First, activist documentary film that is disseminated via the internet and makes use of the internet at various stages of the creative process does not merely influence the dominant public sphere, but, rather, it creates new public spheres, including a local ‘grievance community’, as well as an activist community. It creates new internet spaces to discuss issues addressed by the documentary. Second, the documentary film production and distribution become key processes of movement mobilization in this context. Third, various state agencies’ responses to social movement actors illustrate a pattern of the autocratic state’s fear of being recorded. The prison Panopticon metaphor is therefore reversed in the process: the governor who is monitoring all members of the autocratic society, becomes the subject of all-pervasive observation by its prisoners in the new public spaces created by new media technologies.

This study signifies discursive social movements in the digital century in a party-state with multiple strict controls and heavy censorship on expression and association.

Asian Values Revisited after 20 Years: Value Shift in China, Japan, South Korea, and Taiwan

1 Introduction

This paper focuses on the value shift occurring in four East Asian societies resulting from socioeconomic modernization and political democratization. Proposed in the first half of the 1990s, the notion of ‘Asian values’ describes the socio-cultural characteristics of East Asia (i.e., conformity, hierarchy, harmony, and the priority of collective interests). In reexamining Asian values in China, Japan, South Korea, and Taiwan against the background of overwhelming social transformation in this region, this paper addresses two issues: (1) the differences of Asian values in the public and private spheres in four East Asian societies and (2) whether citizens in these four societies detach from the Asian traditional culture and thus Asian values.

2 Methods

The theoretical discussion includes an examination of the empirical evidence provided by the Asian Barometer Survey. Three waves of surveys administered over the past 10 years in four East Asian societies have offered an abundance of information to test the value shift in this region.

3 Results

Revisiting Asian values 20 years after its initial proposal has revealed two major findings. First, no remarkable gap exists between the Chinese and other East Asian societies’ citizens in terms of Asian values in the public sphere. Second, although citizens in Japan, South Korea, and Taiwan have abandoned authoritarian political values, this value shift has not been observed in China.

4 Conclusion

The value shift is more significant in the public/political sector in East Asia. Even though Asian values in the private sphere are popular in all four East Asian societies, modernization and political democratization have facilitated declining Asian values in the public sphere in Japan, South Korea, and Taiwan. Not only do the Chinese cherish traditional family and social values, as do the citizens in other East Asian societies, but they also uphold authoritarian political values.

An Evaluation of Poverty Prevalence in China: New Evidence from Four Recent Surveys

Knowledge of actual poverty prevalence is important for any society concerned with improving public welfare and reducing poverty. In this paper, we calculate and compare the poverty incidence rate in China using four nationally representative surveys: the China Family Panel Studies (CFPS) of 2010, the Chinese General Social Survey (CGSS) of 2010, the Chinese Household Finance Survey (CHFS) of 2011, and the Chinese Household Income Project (CHIP) of 2007. Using both international and official domestic poverty standards, we show that poverty prevalence is not uniform but varies in the national, rural, and urban levels based on CFPS, CGSS, and CHFS are much higher than the official estimation and those based on CHIP. The study highlights the importance of using independent datasets to validate official statistics of public and policy concern in contemporary China.
the possibilities of resolving civil disputes from bottom up. Using a national survey dataset (CGSS2005) from China's 410 villages, this study aims to test the impact of social capital on rural residents' preference and actual choice of resolution in virtual and actual civil disputes, respectively. The social capital in the village refers to the features of social organization, such as trust, norms and networks that can improve the capacity of a village by facilitating the coordination. The author argues that increase in social capital can significantly increase the probability of mediation. First, the abundant associations provide more platform and agency for the residents to resolve their civil disputes. Second, the networks on the community level could give rural residents more choices when they face disputes. Considering the high cost of administrative and legal ways of resolution, the macro networks are cheaper and more available for ordinary villagers. Third, the social trust increases the interaction and dependence with each other so that villagers may be more willing to resolve their disputes by resorting to the informal parts. This research is of great importance for discovering the informal institutions indisputes resolution and provides insightful evidence for rethinking the state-society relationship in authoritarian China.

ZHANG, JUNDAN (JASMINE)* (University of Otago, jasmine.zhang@otago.ac.nz)

“No Gods, No Shangri-La”: Rethinking Tourism In An Environmental Discourse

Currently, environmentalism and the conservation movement still largely are situated within a postivist epistemological paradigm that is built on a tradition of Western science that is reductionistic. Consequently, the role of the current concepts of the ‘green economy’ and ‘sustainable development’ often are not challenged from non-Western political and ethical perspectives. Drawn from a study in a remote Tibetan village called Nizu, in Shangri-La County of northwest Yunnan province, China, I pose the question; “what role does tourism play in the formulation and dissemination of power and reshaping knowledge in terms of how humans relate to ‘nature’?” From a political ecology perspective, I will identify an environmental discourse within which tourism is embedded. By describing how tourism acts as a medium for mediating the material needs and cosmological beliefs in the village, I will challenge the idea that tourism is an imported product with the power to bring people and their living environment to modernity, in a more “ecological” way than would otherwise be the case. I argue that the descriptors “premodern”, “modern” and “postmodern” are performed by the villagers in one way or another, through tourism. Such performances can be contextualized in the environmental discourse that constantly is shaping and reshaping ecological knowledge that has been taken for granted. Finally, I suggest we look further into the subjectivities that determine such performances of tourism, and the power relations involved, to better understand the complex and fluid nature of concepts such as “nature”, “culture” and “tourism” in this setting.

Tourism, Politics and Beliefs in Nizu Village in Shangri-La, Southwest China

While most of the literature in tourism studies focuses on the problems relating to tourism development at World Heritage Sites, little attention is paid to places that somehow failed to be included in the list of World Heritage Sites. This paper will talk about tourism, politics and beliefs in a Tibetan village called Nizu, with a reputation as the ‘backyard of Shangri-La’ in relation to the famous tourism destination Shangri-La County, Southwest China. Geographically located within the Three Parallel Rivers Region, which is a natural World Heritage Site, the 2003 application of Nizu village to be included in the Three Parallel Rivers WHS failed due to the governmental plan for a copper mine north of the village. Pudacuo National Park’s establishment in 2007 brought hope to the villagers of Nizu for promoting tourism. Yet the power of the local agency and the complexity of tourism decentralization in rural China has led the village to experience countless problems in the re-development of tourism, which has not been settled until the present day. This research focuses on the functioning of social capital in this case. Using survey and interviews with key informants, this paper will present the analysis of the role of social capital on actual choice of tourism development in the case of Nizu, the interaction between tourism and social capital and their importance in determining tourism development in similar situations.

Labour Dispatch, the State, and Contested Labour Regulation in Post-Socialist China

The aim of this paper is twofold. First, it problematizes the common assumption of the coreperiphery labour markets dualism as a “natural” economic trend or fact, inquiring into the processes through which this boundary is itself defined and contested. Second, it seeks to examine the enduring (albeit evolving) impact of revolutionary and socialist legacies (notably, the populist mass line) on the subsequent labour politics in post-socialist China. Through an in-depth study of a case of labour dispatch (temporary agency work) and the contested legislative process associated with it, this paper argues that the simultaneous dynamism of dualization and mobilization of both parties emerged from the boundaries created by the labor politics which are the result of active state policies and regulations to strike a balance that draw boundaries among its working population. On one hand the market-oriented labour reform has significantly increased labour market flexibility and led to widespread job insecurity. On the other hand, there has been a persistent but evolving dualistic employment structure supported by the state that constantly creates boundaries and inequalities among workers. The Labour Contract Law, for instance, promises more job security and protection for workers with regular labour contract to shore up the state’s legitimacy, while excluding agency workers to promote flexibility. Yet the ongoing battle over the subsequent Amendments to the law in response to popular discontent channeled by the official union, suggests that the Chinese labour politics is not a “settled” fact. The Communist Party’s continuing public adherence to its populist mass line while persisting in the one-party authoritarian rule, has recurrently incited contestation, negotiation, and boundary-drawing by the party-state and its agencies, employers, and different groups of workers. This struggle for inclusion by the excluded workers, I contend, have periodically propelled the party-state to redraw boundaries and expand liberal labour rights to some of the formerly excluded.

Collective Journalism Is in Formation? Common Net-Users Challenging Professional Journalism Online and Offline

With the development of social ICT (Information and Communication Technologies), the media landscape has achieved dramatically transformation. Utilizing the social ICT, common people obtain the new tool and the public space for self-expression, discussion and opinion exchange, thus exercising a practice of journalism. There are several social sites/examples of participatory journalism or citizen journalism, such as Ohmynews, Newpublic, thus ordinary people become ‘citizen journalists’. In China, the mass media is still strictly controlled by the state. Since the 1990’s, accepting the influence from the market economy, the mass media has changed its function and role, become a kind of enterprise, but it remains far from the perfect platform for people to participate in civil society. Compared to the mass media, the Internet is less controlled by the state and it is technologically impossible for the government to control online content as thoroughly as traditionally mass media.

In recent years, some social affairs (such as ‘South China Tiger’ and ‘Black Brickfield Scandal’) had become nation-wide known public events, were the result of Internet users. During this process, the concept of ‘citizen journalist’ has also been introduced to China. There are no successful citizen news websites as Ohmynews in China, common users and several famous individual figures are utilizing websites, blogs, BBS forums to collect information and exchange opinions. Through an interview with the ‘first citizen journalist’ in China, ZHOU Shuguang, whose online and offline identity, and performance and expertise as a journalist will be clarified in this paper. Additionally, journalism conducted by the plenteous ‘citizen journalists’ will be clarified in this paper. Additionally, journalism conducted by the plenteous ‘citizen journalists’ has periodically propelled the party-state to redraw boundaries and expand liberal labour rights to some of the formerly excluded.

A Study on the Method of Public Participation Based on Discourse-Power Model Among Different Stakeholders: A Case for Avoiding NIMBY Risks of Waste Transfer Stations in Nanjing, China

Promoting sustainable development and public participation are inextricably linked, to promote sustainable development, it should to enhance the public participation.

The “NIMBY” phenomenon which means that not in my back yard is an increasing prominent urban problem in China to threat sustainable development. NIMBY risks are the kinds of negative external effects of urban facilities. However, in China, with its rapid urbanisation rate, city services still need to be optimised, and many public facilities must be established. Thus, the remission of avoiding NIMBY risks is an area of research that can help to improve social equality and justice.

NIMBY conflicts are a type of social conflicts among different stakeholders including governments, experts, planners, developers, media, residents from different locations, etc. To solve it, we need to coordinate the interests among different stakeholders to avoid NIMBY conflicts.

This study constructs a method of public participation based on discourse-power model among different stakeholders for avoiding NIMBY risks and also the related approaches to realize them in Nanjing. Firstly, it classifies the different interests groups basing on the spatial zoning of different negative impact areas and the services area of waste transfer stations by using GIS-based spatial quantitative analysis approach. Secondly, it introduces the concept of discourse power, establishes a discourse-power model based on different interests groups, and analyses the game relationship among them. Thirdly, it builds a mechanism of distribution and implementation of discourse power to clarify different discourse power among stakeholders. This study attempts to improve an ordered public participation on avoiding NIMBY risks to guarantee a scientific, participatory, and operational urban governance.

Data Envelopment Analysis on Assessing the Efficiency of Japanese Film Release Market from 1955 to 2011

The film industry, as one crucial component of the leisure and entertainment industry, has received much attention in decades due to its great contribution to the economy and culture. Undoubtedly, with the presence of a big domestic market and excellent works, the Japanese film industry is playing a crucial role both to Japan and the world.

This study examines economic performance of Japanese film release market quantitatively from the perspective of input-output by applying the method of DEA based on the data from 1955 to 2011, and tries to interpret the change in light of historical development. The results demonstrate a wide range of efficiency among the individual units, and suggest a new perspective to recognize the performance of Japanese film industry for years.

Specifically, the models adopted in this study are Charnes, Cooper, and Rhodes model (CCR, 1978) and Banker, Charnes, and Cooper model (BCC, 1984), which are frequently used models of DEA. Technical efficiency (CCR efficiency) measures a DMU’s ability to convert inputs to outputs given the size of the DMU. On the other hand, by decomposition of CCR efficiency scores, BCC scores (Pure Technology Efficiency) and Scale Efficiency(SE) is calculated to examine whether the scale of the industry has any impact on its efficiency. The input includes number of screens, number of Japanese films released, number of imported films released, and average admission fee. On the other hand, the number of admission and box office receipts is output. The results also present the change of inefficiency slacks on basis of the different market model, which helps to improve the potential inefficient room for input. Based on the above calculation, possible reasons for the changes of efficiencies and also some managerial implications and helpful insights are provided to competitors, investors and researchers.

Social Integration of New-Generation Migrants in Urban China: A Case Study of Suzhou

Associated with the rapid urbanisation, there is a gigantic issue of social change in China. Part of that change is caused by the millions of rural-urban migrants. As a consequence, their integration into China's urban society has drawn extensive attention for many recent years. The new migrant population—new-generation migrants whose prospects of integration cannot be simply gleaned from the experience of their predecessors, the old-generation migrants. Based on the concept of lifeworld (Habermas), the character of the new generation migrants are investigated from the perspective of their social interactions at the neighbourhood level. The study uses qualitative and quantitative data derived from a survey of a large resettlement neighbourhood (new ‘urban village’) in Suzhou. In the survey, we examine the socio-spatial sphere of migrants’ social interaction and the role of the receiving neighbourhood in facilitating such interaction.

Our sample shows that new-generation migrants are more willing and have more potential to integrate into the urban society and become permanent urban citizens. Although new-generation migrants have weak neighbourly interactions, they have relatively high attachment and sense of belonging of the neighbourhood. The findings also show that new-generation migrants are more willing to increase the quality of public open space which could support better social integration of migrants.

ZHANG, YI* (Chinese Academy of Social Sciences, zhangyi@cass.org.cn)

China’s Aging Population and Challenges It Is Facing

According to Chinese population projections, the paper analyzes future aging process of different historical periods. Findings indicate that unless the family planning policy reforms in future decades, the bottom of population pyramid will shrink dramatically, and growing life expectancy will progressively expand its top. By the year 2050, the aging population over 65 will account for 25% of the society. Considering the reduction of children population, the population in the labor force between 15-64 years old will also decrease.

This population transition will bring some very serious problems in the near future: Firstly, China will face the shortage of labor force if automatic standards of production process can't be improved, especially in the low-end industries. It means migrant workers' income will keep increasing and the labor cost in the production process will be getting higher. It will produce some negative effect on China's international competitiveness.

Whereas aging process will accelerate, the adult population will save money for their future aging, restricting the consumption rate. It will affect the domestic spending policy. On the one hand, the decreasing of children population will lower family's expenditure rate, on the other hand, the lower level social security will prevent the people in the labor force from contributing more to savings in their productive years.

With the population transition and the changing Chinese family structure, the aging people will face the shortage of social support network, especially due to lack of family members’ support. The linkage between mother and children's family will weaken because of population mobility. Thus Chinese aging population will have to depend on their spouses for their care. If they lose their spouse, the aging people will have to be send to bedhouse to be cared for. But up to now, China has not prepared enough bedhouses for their aging population.

China’s Class Structure and Future Trend

According to a series of nationwide sample data, the paper analyzes the changed trend of Chinese class structure, finds that the population of middle class is becoming more and more, the population of working class is surpassing the counterpart of farmer class. With the expansion of higher education, the population of middle class will be the first biggest class in the near future, but the new middle class is still smaller. However, farmer class will be shrunk dramatically when urbanization is speed up. This kind of social transformation will affect the distribution of most Chinese society's social policy.
What is the boundary between formalization and informalization? Why does the state attempt to formalize the informal space and how does it do so? Will the effort of formalization produce new forms of social, spatial, and political order amid the expansion of informality in the Global South? This paper tackles these issues by examining the current effort of favela "pacification" in Rio de Janeiro. As one of the most visible manifestations of urban informality, favelas of Rio de Janeiro have gone through several regulatory and upgrading programs but none have succeeded. Starting in late 2008, Rio de Janeiro's State Government has been placing a special police unit called Pacifying Police Unit (Unidades de Policia Pacificador, UPP) inside some favelas and providing public services to the residents in order to regain control over territories long lost to drug traffic and reintegrate the economically challenged communities into society. As of September 2013, thirty-three favelas were "pacified" in Rio. Despite the official discourse of crime control and public goods provision, the "pacification" program is highly controversial. The method of financing, the design of the projects including the locations and internal structural coherence and institutionalized connections with private and public sectors have failed. More drastic actions such as the squatting of empty buildings. The cross-national analysis of the practices and consequences of low-income housing provision in France, China, and Brazil. As the urban income structure has become increasingly bifurcated with the rise of service economy, there is an increased demand for low-income housing in cities. How to meet the demand by the large population working at the lower tiers of the urban economy is a critical policy issue facing cities of both the developed and the developing countries. Failing to address this issue will not only hinder the long-term economic development but also undermine the political and social stability of cities. This paper tackles the issue of urban inequality by comparing the practices and consequences of low-income housing provision in France, China, and Brazil. Whereas France launched the low-income housing construction through a system called HLM (Habitation à Loyer Modéré, French for "housing at moderated rents") in the 1950s, similar practice is at the early stage and lacks systematic operation in China and Brazil. In China, many low-income housing projects have produced a concentration of poverty where residents suffer from a long commute to work and the lack of public facilities. In Brazil, a growing number of social movements have intensified their claim to create alternatives for the inclusion of low-income housing in the city centers, some of them employing more drastic actions such as the squatting of empty buildings. The cross-national comparison reveals the intricate relations between the state, market, and civil society organizations in low-income housing provision. It shows that a state with internal social cleavages and institutionalized connections with private and civic actors is critical for the successful provision of low-income housing. Besides the method of financing, the design of the projects including the locations and densities of the low-income housing is important in shaping the economic and social wellbeing of the local communities and the entire cities.

Demokratia in Everyday Lifeworld

In this article, the author argues that there is a tendency to realize a high degree of demokratia in Western everyday lifeworld. Depending on one year ethnographic fieldwork in a Dutch village, the author uses the method of authentography in order to provide a frame to observe the tendency. The article is divided into three parts. In the first part, the author explains that Everyday lifeworld is the horizon of social life, in which human being as ordinary practitioner lives its own meaningful life and realizes its own desires, wishes and hopes with emotions. The author identifies three principles, equality, togetherness and openness, as the principles of "Demokratia". In the second part, the observing frame of the phenomena theorized as demokratia in everyday lifeworld will be provided. The frame includes the gestures in daily interaction, the dialogue in daily lifeworld, and the form of collective action in daily lifeworld. In the last part, the author argues that the nature of "Demokratia in everyday lifeworld" is the habitus of practical reason. Playing together could be the possibility of "Demokratia in everyday lifeworld" in the future. To disclose the ruling relationship in everyday lifeworld should be one of the main sociological issues.

Awards and Conservation of Intangible Heritage

In 1804, Napoleon Bonaparte rewarded for the French "Honneur et Patrie", which became the first modern intangible heritage awards. In the last part, the author analyzes the main characteristics and consequences of the "pacification" program. It shows that the purpose and approach of the formalization effort is largely shaped by the state's agenda of global image building. As the city of Rio will host two major sporting events - the FIFA 2014 World Cup and the 2016 Olympic Games, an event-planning and governing ethos is at work that caters the global audience whereas marginalizes the local demands, thereby is hard to have an impact which is both substantive in scale and lasting in impact. By neglecting the interest of local communities and denying the channels of public participation, the effort of formalization is symbolic and paradoxically creates new space for informality.

Resource Capabilities of Children with Disabilities

The younger generation is an important resource of society. However, children with disabilities require significantly more material, physical and emotional inputs in the process of socialization in comparison with healthy peers in order to later become full-fledged subjects of social reproduction. Children with disabilities are clearly losing their peers, having a low level of health, education, opportunities for socialization, traditionally seen as individuals with low human potential. As a result, young people with disabilities remain largely unclaimed in society and they cannot fully realize themselves and as a whole bring benefit to society. In 2011 and 2013 years the author conducted a sociological study among children with disabilities in the aged from 12 to 18 years to identify the resource potential of the juvenile disabled. The respondents were interviewed through a formal interview. So, the juvenile disabled consider themselves talented people who realize their abilities in various social practices. Most of the studied types of students are active members of the society who have the relevant social norm of knowledge, skills, aspirations and values. As a result, in this connection, various social practices of the younger generation with disabilities can be considered the perspective intellectual, economic, social, political and cultural reserve of society and investing in them is the most important task of the state, influencing national security.

Grassroots philanthropic organizations (GPOs) have emerged in China in large numbers. Previous studies tend to focus on these organizations' interaction with the government, particularly their experience with the unfriendly NGO regulation system in China, while leaving their daily operation, and their process of development out of the discussion. The current study looked at GPOs in China at a particularly important stage of their development: when they face increasing internal and external challenges and could no longer remain informal. Through studying southern China GPOs involved in rural education promotion (n=44), we show that rather than the unfriendly registration system harming the development of GPOs, organizations have been enjoying their informal way of operation, including lack of legal identity. They focus on their relationship with the rural students, the cohesiveness of the organization, and the feeling of being able to help. They often have little desire to register or formalize until various internal and external changes, such as the growth of members and the expansion of programs, challenge the sustainability of the organization. At this point, GPOs do not naturally formalize. Thus, the study shows that they can maintain their usual way of operation, until the idea of professionalism is introduced to them by outsiders. Such a foreign idea may cause much confusion among the members, resulting in disagreements about
the organization's future. Under different situations, GPOs will choose different paths. Some will professionalize, and become paid staff NGOs; some will remain informal and wait for better opportunities; some will take a clear stand to resist future attempts of formalization; and some will dissolve or break into different organizations. Government policy only starts to influence GPOs once they decide to seek registration.

The Rise of Income Inequality in Urban China, 1996-2010: Increasing Returns to Education, State Sector Shrinkage, and Composition Effects

Income inequality in urban China has experienced a rapid growth over the past two decades. To account for the rise in income inequality, previous studies have provided three major explanations: widening regional gaps, increasing returns to education, and growing residual inequality. Since the mid-1990s, however, the composition of the urban labor force has been considerably reshaped by three large-scale structural changes: (1) the expansion of higher education, (2) the shrinkage of state sector employment, and (3) a surge in rural-to-urban migration. In this article, I discuss how the recent rise of income inequality can be driven by these institutional and demographic shifts. Based on data from two nationally representative surveys, I use variance function regressions to decompose the growth in income inequality from 1996 to 2010 into four components: changes in between-group income gaps, changes in within-group income variation, and two types of composition effects (distribution effect and transfer effect). The decomposition results indicate that changes in between-group income gaps explain around 40% of the rise in inequality, while more than half of the total growth can be attributed to composition effects. Using counterfactual analysis, I find that changes in between-group income gaps are almost entirely driven by increases in returns to education, which becomes the foundation of the Participation and Cooperation Between the Elderly and the Organizational Workers. Accordingly by way of self-care and participating in service the elderly construct the Participation and Cooperation in Context with the care-givers together, which contributes to both the old persons themselves and the resident, and to reaching the elderly's 'productive' identity. The elderly's participation and their cooperation with care-givers are meant to be an approach to Productive Aging in Institutional Care service.

Participation and Cooperation: An Approach to Productive Aging for Institutional Care Service in F Resident

Institutional care service is an important part of the elderly welfare system aiming at improving the quality of life of the elderly. In the resource-input type of the welfare service, care-givers tend to treat the older people as vulnerable groups and to ignore their abilities and value. Based on the materials obtained from the observations and interviews in F Social Welfare Institution, the “functioning” of the elderly resident is to buy their first houses in the period, i.e. the young generation born in the late 1970s and post-1980s. This paper aims to examine how home ownership influences life and work chances in contemporary China. It uses data from both national surveys and survey of the university graduates. The empirical analysis will start with home ownership rate with regard to type of employer, age, household registration and residential areas, which this paper argues to be four most important factors for the segregations in home ownership. The core analysis focuses on the young generation, concerning their differences in expenditure (leisure, holiday and education), car ownership, savings, subjective feelings as well as marriage and work by owning a home or not and living in a metropolitan city or not. The main arguments are people without home ownership are in a relatively disadvantaged position in life quality and even the marriage and labor market, so in the metropolitan cities in China, home ownership has become an important index of socio-economic status or to measure social inequalities.

How Home Ownership Becomes a Measurement of Inequalities: Analysis of Home Ownership of the Young Generation

Since the beginning of the 21st century in contemporary China, house prices have been increasing rapidly especially in metropolitan cities like Beijing and Shanghai. The problems of ‘unaffordable houses’ are most significant among people who desire to buy their first houses in the period, i.e. the young generation born in the late 1970s and post-1980s. This paper aims to examine how home ownership influences life and work chances in contemporary China. It uses data from both national surveys and survey of the university graduates. The empirical analysis will start with home ownership rate with regard to type of employer, age, household registration and residential areas, which this paper argues to be four most important factors for the segregations in home ownership. The core analysis focuses on the young generation, concerning their differences in expenditure (leisure, holiday and education), car ownership, savings, subjective feelings as well as marriage and work by owning a home or not and living in a metropolitan city or not. of what can be labelled the „conservative“ block of the Western elite. „Conserva-
tive“ means that its primary interest is the conservation of the status quo: the rule of a small elite through a democratic capitalist system. Attempting to achieve this
goal in a dynamic environment with major challenges (the spreading of the commu-
nist ideology, the breaking up of the colonial system etc.), it needs to adapt inno-
vative methods, like the creation of supranational institutions.

In the descriptive part I focus on nationality, age, gender and occupation of the participants. In the second, analytic part, I present the connections between different sectors of the industry as well as positions of political power that the participants held. In a further step I attempt to describe the shift in this network between the 1950s and today. The official lists of current participants of the Bil-
derberg meetings allow researchers to draw an adequate picture of this network in its current form. From previous research on the topic of the change in the elite it can be expected that the major changes have occurred regarding the dominant industries. Little changes are to be expected regarding the nationality, the gender and the age of the participants.

Between Voicelessness and Empowerment – A Biographical
Approach to Life Stories of Complex Traumatised Mothers

Regarding currency and scope of sexualised violence against children my re-
search takes a look at the long-term consequences for victim-survivors of these
human rights abuses. With this perspective the social positioning of highly ment-
edly bullied survivors comes into consideration. This paper is based on a bi-
ographical-sociological approach of the life stories of women, who are all patients
of a traumapsychiatric hospital and who were abused in their childhood. I would like to contribute first empirical results of my PhD project. Due to the fact that all the women I interviewed have children my results point to the major dif-
ficulties of being diagnosed, treated and seeing oneself as mentally ill and at the
same time being a mother who is not supposed to be mentally tainted in any way.
In my presentation I would like to illustrate that there is a strong self devaluation regarding the women’s motherhood that leads to a form of voicelessness of the interviewees towards actors, e.g. in medicine or social work. Based on further empirical results I will also take a closer look at ways of empowerment due to traumapsychic approaches the women have appropriated to themselves. I would like to discuss on the one hand to what extent a traumapsychic approach might overcome women’s voicelessness concerning issues of motherhood and on the other hand to what extent these women are somehow limited to pathologising labels of mental illness that detach their present mental symptoms from their biographical background.

Yokohama, 1860-1923: Confinement and Clashes, Exchange and
Hybridization

Yokohama, meaning “broad beach”, was Japan’s biggest free trade port opened in 1859, under so-called „unequal treaties” with Western powers. It became Japan’s most important venue of economic exchange with the world, technological
in its current form. From previous research on the topic of the change in the elite it can be expected that the major changes have occurred regarding the dominant industries. Little changes are to be expected regarding the nationality, the gender and the age of the participants.

ZIMMERMANN, OKKA* (Technische Universität Braunschweig, o.zimmermann@tu-bs.de)
Comparative Analysis of Changing Family Formation – Different
Life Course Regimes and Developmental Paths Identified in
European Countries

The paper contributes to the comparative analysis of life course dynamics and
cohort changes in Europe. Varying forms of data collection and preparation often hinder quantitative comparative analyses; therefore, international survey programs like the Generations and Gender Survey (GGS) have been initiated. I added data from the National Educational Panel Survey (NEPS, research methodology very similar) for West Germany to compare developmental paths with regards to family related life courses between four European countries (Germany (NEPS), Italy, France and Norway (GGS)). I use sequence analysis to examine life course patterns of nearly 40,000 respondents and identify life course regimes and chang-
es between them. The empirical patterns are finally related to classifications of cohabitations and developmental paths as provided by concepts of welfare regimes (e.g. Esping-Andersen).

Findings show, that Northern and Western European countries follow a similar sequence of regimes, starting from a traditional life course regime, marked by a second dimension of cohabitation and marriage and subsequent fertility among the majority of respondents. Afterwards, they pass through a ‘semi-traditional’ regime with unmarried cohabitation preceding traditional family formation. Fi-

ally, they reach a post-modern’ life course regime, in which life courses with first birth(s) to unmarried, cohabiting couples are more frequent than other life courses. The process of change in Norway and France, while in West Germany the transformation from the second to the third regime is retarded. Italy follows a different developmental path: The change towards a ‘semi-traditional’ regime is much slower and the regime is characterized by a postponement of the traditional process of family formation.

Overall, the concept of family related life course regimes is helpful to under-
stand, compare and classify life course dynamics. The sequence of the regimes can be interpreted as developmental paths; developments are not determined, differing speeds and changes in directions are possible.

The Aesthetics of Banality

Be it Breton's fascination for an adorned wooden spoon or Valéry's ambiguous affection for a sea shell and not to mention the uncanny experience of cracking the crust of a where Brulée described by the movie character Amélie Poulain, all these seemingly ordinary objects are said to be surrounded by a sacred aura offering the possibility to sense the (assumed actual) mysterious depth hidden behind the surface of banality. Whilst the avant-gardes at the beginning of the 20th century conjured the magic of the overlooked in terms of a countercultural movement, we are postizing that the epiphany of the unimposing has to be regarded as a prevalent model of popular culture symbolizing a nostalgic search for the utmost real.

According to sociological approaches referring to material culture and with respect to coeval cultural theorists we will first reconstitute the emergence and the changing cultural valuation of the discourse about the cultural significance of the insignificant, claiming that the contemporary search for the meaningfulness of banal artifacts serves as a prime example for the reenacted conquest of the quotidian. In particular the new aesthetics continuously stress the fact that the aesthetics of the marginal are laying at the core of the condition postmoderne: on the one side with regard to the construction of the banal as a category of sensuality and on the other side with respect to diverse strategies of aesthetisizing creating the auraic effects of trivial things. Hereon we will secondly shed light on the consequences of this discourse on the study of material culture suggesting that we won't be able to expose the cultural significance of mundane objects properly, if we don't account for the factor that these "actual significatory structures" are themselves part of a prevalent model of the aesthetics of banality.

Multi-Level Governance in the Adaptation to Climate Change in Australia - the Latrobe Valley

The planning and political negotiation processes of sustainable energy production in Australia are complex, interwoven processes. A number of different players from Commonwealth, State Government and regional level got involved to transform the Latrobe Valley region that has the dirtiest coal fired power stations in Australia.

We examined the interwoven processes of strategic planning and governance, the set-up of the Latrobe Valley Transition Committee and the development of a Roadmap to transform the region as well as the funding of concrete projects to provide new jobs within the region. What has been seen by many as a smooth and successful process came to a halt when the political conditions changed. At the same time it became clear that allegedly smooth process had some weaknesses. Sinetected process had been driven by funding promises of Commonwealth and State Government the region did not develop an independent vision of the transformation of the region. With the loss of funding it became obvious that there is a need to develop such a vision to further drive the process. However, good networks have been developed that might be strong enough to push forward where major funding resources are no longer available.

This paper will discuss the conditions of climate change adaptation and the advantages and challenges multi-level governance structures provide for regional planning and governance.

ZINN, SABINE* (University of Bamberg, sabine.zinn@uni-bamberg.de)

A Multiple Imputation Approach To Address The Problem Of Nonignorable Nonresponse and Misreporting Patterns In Income Data

When people are asked to report their monthly income they are likely to refuse to answer. If they answer, they tend to round their income to the nearest fifty, hundred or thousand, or they even completely misreport the value of income. It is well known that the propensity to misreport or to refuse to answer income questions depends on individual characteristics. For example, people with migration background are normally more likely to refuse to answer. Thus, commonly income data collected by personal interviews show non ignorable nonresponse and abnormal concentrations of reported values at certain "heaping points". Using such data to compute, e.g., distribution characteristics like sample quantiles or proportions usually causes severe bias. In order to allow to adequately modeling such kind of incomplete and heaped data, we introduce a general method that allows addressing both, the issue of incomplete data and the problem of rounding. To impute missing values, we suggest using the proven method of multiple imputation by chained equations. The method requires determining a univariate imputation model for each variable with missing values. We suggest specifying the imputation model for the income variable such that it describes the true distribution of the income variable simultaneously with the heaping pattern present in a data set. Monte Carlo simulations are used to validate the novel approach. To illustrate the capacity of the approach we conduct a case study using income data from the adult cohort of the German National Educational Panel Study.

Relationships Between Gender Role Attitudes, Role Division, and Perception of Equity Among Heterosexual, Gay and Lesbian Couples in Israel

Abstract

The purpose of the present study was to investigate the relationships between gender role attitudes, household tasks, and the perception of equity among heterosexual, gay and lesbian couples. One hundred and twenty-four participants (54 heterosexuals, 30 gay men and 40 lesbians) were tested. It was found that same-sex couples had more liberal attitudes toward gender roles than did heterosexual couples. In addition, significant differences were found between the spouses in their responses regarding role division in housekeeping in each group. The responses of heterosexual spouses correlate more closely with each other regarding the role of each of the spouses than was the case for same-sex couples. However, the role division among lesbian couples was more egalitarian than that of heterosexual couples. In addition, heterosexual women consider their married life less equitable than heterosexual men do. Similarly, one of the gay spouses considers the relationship less equitable than the other spouse does. The results are discussed in terms of their relevance to theories of social perception and cultural backgrounds.

ZOLLINGER, CHRISTINE* (University of Zurich, zollinger@ipz.uzh.ch)

Varieties of Policy Design in Swiss Family Policy Adaptation to New Social Demands: Bounded Possibilities of Childcare Services for Social- and Gender Equality

This paper deals with the question of who ends up with what in the process of welfare state adaptation to new social demands in post-industrial societies. To answer this question a new typology of childcare policies on the basis of the social outcomes of those policies in terms of redistribution and gender equality will be developed. The implications of childcare policies on these two dimensions of inequality are of particular interest, given that the internationally literature agrees since a long time that we need a new typology that helps to understand the trade-offs between distributive and socio-cultural goals. Empirically, I focus on the specific design of childcare policies that are institutionalised in ten Swiss municipalities since the 1990s. To this end, I first classify the different policy designs of childcare policies according to their degree of professionalism and the use of childcare services by parents. Second, I develop a new typology of childcare policies that allows to illustrate the potential implications of the design of such policies on gender equality and social redistribution. Whereas some municipalities have institutionalised public support for childcare services with low quality standards, which are provided by daily mothers, others have implemented highly professionalized creches with rigorous quality standards. However, these offers are used differently by parents from different income classes. Whereas the low quality childcare services are used more frequently by parents from low income classes, the more professionalized offers are used more frequently by parents with middle and high income. This segregation in the use of services is notable, not only with regard to the criteria of social redistribution: It is even more striking in regard to the scientific social investment discourse, where it is stated that the reduction of poverty should be obtained by public investment in human capital, beginning with pre-school children.
and the social and economic consequences have been encountered. The 2010 Haitian earthquake occurred within a country with a history of poor child health indicators and outcomes. The indicators include child nutritional status, immunization status, and diarrheal disease treatment. Despite the low performance on many child health indicators, data from Demographic and Health Surveys (DHS) have shown national-level improvements in key child health indicators in the three surveys conducted prior to the earthquake. These improvements continued in the 2012 DHS despite the 2010 earthquake and cholera outbreak. The purpose of this study is to determine national and regional differences in child health indicators in the 2012 DHS following the disaster's impact on child health indicators. Simple extrapolation method was employed to calculate the estimates. The results show a difference between expected and observed values, with observed values indicating poor health outcomes for children compared what was predicted based on the previous three time points. Further, regional variations were apparent and linked to proximity to the earthquake and poverty and family composition. The results provide evidence of the effects of the disaster on child health in Haiti.

ZUCKER, GREGORY* (The Graduate Center, CUNY, gzucker@gc.cuny.edu)
Is Georg Lukacs’ Critique Of Neo-Kantianism Justified?

A recurrent theme in the work of Georg Lukacs is a critique of the prevailing currents of sociological theory and method of his time. For Lukacs, Marxism provided a scientific theory that surpassed social theory modeled on the neo-Kantian distinction between facts and value. Several scholars have argued that Lukacs’ commitment to Marxism blinded him to the contributions made by other social scientific approaches. In effect, Lukacs is charged with dismissing all other social scientific approaches on the basis of his alleged dogmatic Marxism. Moreover, Lukacs is accused of identifying any non-Marxian approach to social science as reactionary. This paper revisits Lukacs’ critique of social theory as well as the ways it has been dismissed. In this paper, I wish to argue that the nature of Lukacs’ critique has been misinterpreted and warrants renewed consideration. Reexamining Lukacs’ critique of neo-Kantianism reopening debates over claims that Lukacs’ notion that prevailing currents of social theory overlook the problems of alienation and reification.

RC36-619.2
ZUCKER, GREGORY* (The Graduate Center, CUNY, gzucker@gc.cuny.edu)
Reification and Racism

Both historians of social theory and practicing social theorists have drawn attention to the prevalence of racist thinking in nineteenth and early twentieth century social theory. They have been increasingly aware of the ways such thought has been embedded in social theory and method and questioned the extent to which the vestiges of such thought still informs contemporany social theory. This paper examines an overlooked chapter in the critique of racist social theory. In particular, it focuses on the seldom-studied work of Georg Lukacs, The Destruction of Reason. In that work, Lukacs develops a critique of racialized social science and political concepts and argues that racist science as reactionary. Further, it argues that Lukacs’ critique should be reconected to the concept of reification, which Lukacs developed earlier in his career. This allows intellectuals to interpret the experience of racial prejudice under capitalism as a form of reification. In this respect, this paper attempts to move toward developing a social theory that can employ the concept of reification in the understanding of racism.

In and Beyond the Visual Gaze of the Tourists: Humanizing Antarctic Wilderness

The objective of this study was to unwrap the Antarctic tourism imaginary and go beyond the oral-visual narratives of tourists in order to understand which other senses and how are activated when touring in Antarctica. What is the growth master plot at the core of the Antarctic tourism imaginary? To summarize, most of the visualization of Antarcctica and Antarctic experience rotates around the theme of “humanized nature”: the penguins are seen as human-like creatures, the icebergs are spoken about as the perfect examples of abstract art and whalebones are static reminders of once prolific whale-hunting industry. Antarctica is the only land that has no myths of origin but compensates this with the heroic stories of its first explorers. In contrast to the “gaze” centered approach to tourism, Antarctcic tourism presents an example of multisensuous, non-ocularcentric geography. Deepest affectual encounters of tourists come from engaging various senses: interviewees talked about the powerful sounds of calving glaciers and meditating

brash ice, the awful smells of penguin and seal colonies, the caresses of Antarctic wind, of refreshing Polar plunge and thick morning mist, which concealed the land and upon seeing which people would start to cry.

Self-Transformation Of Russian Youth Through Work and Travel Program In The USA

In this study I wish to examine the mechanisms of personal transformation among Russian youth through the contact with America as an imaginary and real-life entity in the course of the program “Work and Travel”. I delineate several families of transformation: relational transformations, physical transformation, and attitudinal transformations. I argue that the transformations that occur with individuals during the contact with another culture or as a consequence of the trip are part of the (de)civilizing process of the individual. One of the practical questions behind the study is whether after being a guest in the other culture young people become positive towards others being guests in their home culture. 

Some of the effects of the trip have civilizing effect in the sense that they touch the structures of habits and modes of knowledge. Through lived-in experience young people transit to the state or reevaluation of their distance with parents and intimate partners. One of the important configurational changes is the revalua-

tion of the relationship with parents who initially serve the primary instance in regulating the trip (through financial and emotional support). The physical changes in perception of one’s body and emotional management are reflected with ambiguous reaction: the body reaction to the contact with the fast-food culture resulting in weight gains increases refutation of American civilization; however the behavioural patterns of everyday communication can be adopted and attempted to be transplanted in home culture. One of the leading emotional changes concern the feeling of embarrassment for the behavior prac-

ticed in the other culture. The emotional changes have been well documented in the literature on cross-cultural transitions.

The physical changes in perception of one’s body and emotional management are reflected with ambiguous reaction: the body reaction to the contact with the fast-food culture resulting in weight gain increases refutation of American civilization; however the behavioural patterns of everyday communication can be adopted and attempted to be transplanted in home culture. The emotional changes have been well documented in the literature on cross-cultural transitions.

The globalization of cuisines takes place in sites ranging from the family dinner table to fast food franchises, with the integration of new products, new production techniques, and new taste criteria into traditional formulas. Located between the private, domestic space of the family and the public, mass-market space of McDonalds, neighborhood restaurants and modest takeout food shops provide a middle ground of individual action and collective provisioning where globalization reshapes local identities. Much of the globalization is carried out by demographic changes, with the entry of immigrant and “creative” entrepreneurs who both re-

place old restaurant owners but open new kinds of restaurants and food stores. But globalization is also encouraged by the entry of menus that define traditional cuisines in new ways, repositioning them, on the one hand, in a new global culi-

nary order and, on the other hand, in changing local markets. Recent changes in restaurants in a majority-black neighborhood of Brooklyn, New York, suggest that the global migrations of cuisines help to create more complex social, racial, and local identities.

Memory, Nostalgia and the Creation of “Home”: An Okinawan Woman’s Journey

This study looks at how elderly Okinawan women return migrants created and re-created perceptions of “home” upon their return to Okinawa through the life stories of an Okinawan woman presently living in Naha, Okinawa. Married to Fili- pino base workers during the American Occupation of Okinawa, these so-called “war brides” spent a considerable number of years in their husbands’ country, assimilating into Filipino culture as well as negotiating their identities as Okinawan women amid wartime sentiments against the Japanese in post-war Philippines. Upon return to Okinawa, these women have been returning to Okinawa, creating a significant community – albeit small in number – of Okinawan women return migrants.

For this paper, I seek to explore how migration, memory, and nostalgia came to define these women’s identities as return migrants in an Okinawa that saw the military occupation. Migration involves both individual and family questions behind the study is whether after being a guest in the other culture young people become positive towards others being guests in their home culture. 

Some of the effects of the trip have civilizing effect in the sense that they touch the structures of habits and modes of knowledge. Through lived-in experience young people transit to the state or reevaluation of their distance with parents and intimate partners. One of the important configurational changes is the revalua-

tion of the relationship with parents who initially serve the primary instance in regulating the trip (through financial and emotional support). The physical changes in perception of one’s body and emotional management are reflected with ambiguous reaction: the body reaction to the contact with the fast-food culture resulting in weight gains increases refutation of American civilization; however the behavioural patterns of everyday communication can be adopted and attempted to be transplanted in home culture. One of the leading emotional changes concern the feeling of embarrassment for the behavior practiced in the other culture. The emotional changes have been well documented in the literature on cross-cultural transitions.
Okinawan and Beyond: Okinawan Women and The Re/Creation Of Diasporic Identities

Studies on Okinawan women migrating to the Philippines during the postwar years are scant and not accorded much attention by scholars looking at Japanese/Okinawan migration. Furthermore, the role of women in the maintenance and re/creation of diasporic identities have been significantly overlooked. These Okinawan women married Filipino men who worked on U.S. bases in Okinawa during the early years of the Occupation Period (1945-1972). Many of these women went with their husbands to the Philippines and settled there, raising families and living new lives. Upon migration, many of these women consciously assimilated into Philippine society. Despite this, they still acknowledge their Okinawan selves by passing on aspects of Okinawan culture to their offspring, creating in the process, a diasporic Okinawan identity that contains both Philippine and Okinawan characteristics.

I argue that these migrant women are active agents in the transmission of Okinawan culture, at the same time promoting the culture of their husbands and their adopted land, thus creating a distinct “Philippine Uchinānchu” identity. This particular identity is continuously being maintained and re/created not only within familial and contiguous boundaries, but also across space and time, through various activities these women engage in. I also argue that these women engage in this process of re/creating as they fashion out their sense of a “home” away from home. The creation and re/creation of an Okinawan diasporic identity also relates to a re-definition of Japanese identity, which tends to conflate nationality, ethnicity, and race, and continues to leave Okinawans in an ambivalent position vis-à-vis a Japanese identity.

This study analyzes data gathered from interviews with these women, as well as from participation in meetings/gatherings of the Philippine-Okinawan Society in Manila. Interview data from their children are also pertinent sources of information about their mothers and thus will be utilized in the analyses.

Italian Young People and the Choice of Emigration: Economic Crisis’ Weird Effects

In Italy, as well as in other European countries, the economic crisis and the austerity policies have exacerbated the structural national problems, worsening the already difficult situations of the whole population and, in particular, of the youngest generations. In a country where the unemployment rate touches the 35% among the 18-24yo young people and where the demographic, socio-economic and political disparities between young and adult generations lead to a worrying decrease of the social visibility of the first ones, emigration become again an option for many Italian young people. Although still quantitatively limited, it’s emerging among them a new migration trend which involve extra-European countries such as Australia, where the emigration phenomenon acquires new peculiar characteristics in terms of adaptation plans and future projects. The proposed contribute aims at exploring the new features of the old phenomenon of young people emigrations through the analysis of 25 in-depth interviews - collected between January and June 2013 in Sydney and Melbourne - to a group of Italian young people aged between 18 and 26yo, emigrated in Australia in the last two years. Trying to situate the emigration project within the framework of the interviewees’ transition to adulthood, the analysis will focus on the reasons pushing them to emigrate, on their adaptation strategies and on their future plans. The first results highlight the weight of personal, familiar and socio-demographic characteristics on the choice and especially on the results of immigration, which does not mitigate the starting social inequalities; within the transitions to adulthood, emigration becomes an opportunity of realisation for the strongest and a ‘trap’ for the weakest. Finally, as immigration has a mirror effect on the society, the interviewees’ stories stress the difficulties of a country that seems no more able to invest on its present and future.
