mediated by class inequality and reconstituted by the experiences of immigration societies (Taiwan and US), I explore how the cultural practice of childrearing is class divides. By comparing middle-class and working-class Han parents in two of and class differences within Chinese parenting. Based on in-depth interviews with parents in Taiwan and Chinese immigrants in the US, my paper examines how globalization has differential impacts upon the styles of childrearing across class divides. By comparing middle-class and working-class Han parents in two societies (Taiwan and US), I explore how the cultural practice of childrearing is mediated by class inequality and reconstituted by the experiences of immigration and transnationalism.

Fifty Years after the Social Indicators Movement: Has the Promise Been Fulfilled? an Assessment and an Agenda for the Future

In spite of its dogmatic universalistic pretensions, hegemonic social science and liberal democracy should be understood as one of many possible historical options. These constitute distinct cultural alternatives that do not exhaust the possibilities of forms of knowledge or of the construction of plural and democratic coexistence between the human beings. They are the product of a specific historical experience and a particular mode of production, and specific ways or relating to so-called "nature".

As has been argued by Aníbal Quijano, Enrique Dussel, Walter Mignolo and others who have been working within the modernity/coloniality perspective, the experience of modernity has meant something radically different for the North and the South. What has been characterized as the luminous nature of modernity by the philosophers of the enlightenment is only the bright side of a worldwide historical process that has its dark underside in the existence of the colonies without which the bright side would not have been possible. In the North, modernity eventually lead to material abundance, citizenship, democracy, science and technology. For the majority of the planet's population and in the colonized, subjugated South, modernity has been an experience of imperial and colonial domination, genocide and slavery. This dark underside is as modern, as essential a component of the modern experience as the experience of the North. Colonialism, genocide and slavery were not in any way pre-modern. They are constitutive of the global modern experience. Eurocentric social sciences have overall erased this history and attempted to interpret a self-centered European history as Universal History and to characterized its particular political system (liberal democracy) as the “normal”, “modern” universal template that the rest of the world has to replicate.
the global economic downturn has affected well-being of all employees, the ramifications for individual employees’ remain unclear.

The data used to study these issues were collected in the European Social Survey (ESS), Family, Work and Well-Being (FWW), modules for 2004 and 2010. The study is limited to a sub-sample of Swedish employees. To capture gender differences in perceptions of work-life conflict the research problem is approached from both dimensions; work-to-family and family-to-work conflict as previous research has shown that men and women experience these facets differently. In order to capture class position the study adopts Wright’s class scheme based on ownership, hierarchy and autonomy as developed and elaborated by Leifurfrud, Bison and Jensberg. The study is expected to show that some intersections of class and gender will exacerbate work-life conflict and have a more detrimental effect on work/life balance than others.

What It Needs for a Social Ego: A Survey-Based Comparison of Social Network Measures

In this paper we compare different methods of measuring social capital in conjunction with alters’ resources. Our analysis is based on a survey of two succeeding, complete cohorts of sociology students from one university. This survey includes detailed information on network ties between students. In addition, we use a resource generator and a position generator to assess ego’s social network beyond his/her fellow students. For all social network instruments, we differentiate between relationship strength, the basis for social capital, and the level of resources that are accessible via these social ties. We implement the same distinction with respect to measures of family background.

This unique design allows us to construct methodologically interesting counterfactuals. We can assess how the measured distribution of ego’s network resources differs if the accessibility of resources is not taken into account; how well we approximate ego’s resource distribution when based exclusively on indicators of relationship strength; and under which conditions – regarding ego’s network structure – we can measure social capital and related resources by using solely name generator based instruments. Furthermore, we compare these counterfactuals between different sampling designs. We analyze which path length is necessary to approximate the full cluster solution using a respondent-driven cluster sampling design.

Our study is constructed as a generic methodological study. Based on our results, we can specify which conditions regarding sampling designs and measurement instruments are necessary to adequately represent the social embeddedness of egos. These results are of general importance to researchers conducting large-scale surveys, e.g. international survey projects which rely on cluster sampling designs.

The participants resisted fixed national and ethnic identity ascriptions. Multiple interrelated processes: a complex moral economy of mutual aid and mutual predation within and between homeless communities, acts of often unexpected kindness by agents of the state officially charged with enforcing the camping ban, and the articulation of public and hidden transcripts playing off various tropes of homelessness, helplessness, and self-help.

The New Middle Classes - Drivers of Both Unsustainable and Sustainable Consumption in Developing Countries

During the last decade, in public debates and particularly in the media, unsustainable patterns of consumption spreading also in the Global South developed into a major concern. The focus is mainly on the ‘new middle classes’. They are imputed to lack any sense of responsibility both in civic and environmental respect and, by their sheer number, to undermine any progress made so far in protecting the climate.

Nevertheless, albeit a pilot group, we are aware of growing interest in these developments. The demand of effective measures against climate change and the interest in understanding the underlying processes. Therefore, we are characterizing the new middle classes as ‘drivers of both unsustainable and sustainable consumption in developing countries’.

The participants resisted fixed national and ethnic identity ascriptions. Multiple interrelated processes: a complex moral economy of mutual aid and mutual predation within and between homeless communities, acts of often unexpected kindness by agents of the state officially charged with enforcing the camping ban, and the articulation of public and hidden transcripts playing off various tropes of homelessness, helplessness, and self-help.

Negotiating a Space to Rest: Denver’s Camping Ban and Camping in Denver

On May 14, 2012, camping became illegal in Denver, Colorado. Over the past 25 years, the development of downtown Denver followed identifiable patterns of neoliberal governance. Single room occupancy hotels were upgraded into “loft-living” condos, rundown streetscapes were intensively policied then trendified, a major downtown street was pedestrianized. Urban policies focusing on commercialization and real estate development contributed to Denver’s revitalization while exacerbating the city’s problem with homelessness. As experienced in other cities, concurrently rising property values and increasing numbers of homeless people have led to various municipal ordinances intended to render homeless people invisible to the consuming public. In Denver, a sit-lie ordinance was enacted and park curfews were more strictly enforced to keep homelessness from the public’s field of view. Consequently, for residents without a permanent address, finding a place to rest became increasingly difficult. Then in 2011, playing off of popular distaste toward the Occupy Denver Movement, conservative politicians and the Downtown Denver Partnership, a business improvement district, sought and succeeded in introducing legislation outlawing camping—sleeping in public with any sort of “protection against the elements”.

Increasing the costs to relocate homeless people who were coping with the ban, we focused on a particularly vulnerable homeless community, injection drug users (IDU). Conducting participant and unobtrusive observation as well as in-depth interviews with 24 IDU, we learned that their continuing survival depends on a mixture of three interrelated processes: a complex moral economy of mutual aid and mutual predation within and between homeless communities, acts of often unexpected kindness by agents of the state officially charged with enforcing the camping ban, and the articulation of public and hidden transcripts playing off various tropes of homelessness, helplessness, and self-help.
narrative in-depth interviews were conducted by an HIV-positive gay researcher. In the peer interviews subtle dynamics of a sexualisation of the researcher occurred that focussed on the researcher's sexuality and his sexual biography. The paper addresses methodological ways of dealing with phenomena of sexualisation and effects of intimacy in the research encounter, the interpretation of such data and its implications for writing-up and publishing the respective findings. Referring to psychoanalytic concepts of inter-subjectivity and counter-transference it argues for reflexively bringing in to the research process one's own sexuality as a researcher as a means for a deeper understanding of the production of sexual life stories in the interview situation. The double-bind of being researcher and perceived peer that may lead to exploitations of the interviewee's fantasies of sameness call for the integration of ethical considerations about reflexivity, power relations and responsibility as an integral element of the methodology of biographical peer research.

Mobilizing for Dignity: Recognition and Social Movements

How do we understand the world wide spread of social movement of our age, from various fundamentalisms to the progressive thrusts of Arab Spring to Occupy. How have such movements fared? We will argue that the roots of these movements can be found in the consequences of neo liberalism that has not only fostered greater inequality and hardship for most, but its crises have migrated to the realms of subjectivity, emotion and motivation. Our analysis is rooted in New Social Movement Theory and recent development in sociology of emotion. We will argue that these movements not simply for better economic conditions, but to overcome the adversaries of a lack of recognition of a meaningful identity that in turn has fostered anger, indignation and even hope. But these assaults to one's identity also foster hope that leads people to social mobilizations.

Tokyo: Rebuilding the Global City in a Context of Urban Maturity

Since the turn of the 2000s, Tokyo has been facing issues which deal with urban maturity, a notion characterized by two elements: stagnation of the economic growth, and population peak, associated with an ageing population. Those issues, which threaten the sustainability of Tokyo as a major and attractive global city, necessitate new approaches for urban management, urban finance, and urban rebuilding projects. Nevertheless, in spite of the mature urban profile of Tokyo, the city changed sharply during the 2000s. While demographic and economic indicators of Tokyo are not very favorable compared with those of the other Asian global cities, how could the urban profile of Tokyo change as fast and as dramatically as it did? How was the city able to reorganize its structure, to verticalize its skyline, to vegetalize its public and private spaces? After the « Japanese miracle » which occurred from the 1950s to the 1980s, as a time of prosperity, the 2000s also knew another miracle: an urban miracle in time of crisis, as a result of urban maturity. Two new phenomenons are necessary to understand this urban miracle in Tokyo. The first one is real estate securitization, which allows the financing of the urban rebuilding projects.

Résister à La Précarisation Du Travail Dans Une Sidérurgie Brésilienne : Malgré Le Syndicat ?

En fonction du principe de l’unité syndicale, le Syndicat des métallurgistes de Ouro Branco et base (SINDOB) est le seul syndicat à représenter les travailleurs de la métallurgie et de la sidérurgie dans la région de la Vallée du Paraopeba située dans l’État de Minas Gerais au Brésil. Le SINDOB est notamment le syndicat qui représente la moitié des 6,000 travailleurs directs (et un dixième des 4,000 travailleurs sous-traitants) de l’ancienne sidérurgie Açominas, une entreprise étatique privatisée en 1990 et aujourd’hui détenue par le groupe brésilien Gerdau, 14e producteur d’acier dans le monde. Une enquête par entretiens a été menée auprès de quelques dirigeants syndicaux et de quelques salariés de cette sidérurgie dans le cadre d’une thèse de doctorat sur les formes de résistance non institutionnalisées des travailleurs. Les dirigeants syndicaux interviewés – trois directeurs et le président – affichent leur politique auprès de la Gerdau : « négocier ». Ils expliquent que la relation capital-travail dans la sidérurgie est aujourd’hui « tranquille » grâce à ce « partenariat » établi depuis de longues années avec le gros groupe sidérurgique. Les bouleversements de l’organisation du travail dans cette entreprise – commencés par « l’assainissement » financier et administratif d’avant la privatisation et suivis par la politique managériale du groupe Gerdau – ont changé le schéma du travail et de l’emploi dans toute la région. Dans un contexte de précarisation sociale du travail, nous souhaitons discuter les relations entre la politique syndicale de la « négociation » et la fragmentation des résistances des travailleurs face aux restructurations du travail.

LAPEGNA, PABLO* (University of Georgia, plapegna@uga.edu)

Analyses of Latin America’s “pink tide” (the rise of Left-wing administrations during the last decade) explain the demise of governments that followed the IMF and World Bank’s recommendations as a result of the deleterious consequences thereof. I argue that to understand the rise of Left-wing governments we need to pay more attention to the connections between neoliberal policies and neoliberal politics (i.e. the political parties supporting neoliberal policies), and analyze the massive revolts preceding the rise of anti-neoliberal governments. Drawing on archival research and in-depth interviews, I develop this argument by examining a two-day massive riot targeting political institutions during February 2003 in La Paz, Bolivia. I analyze these events and their contentious performances to suggest that these protests targeted the political system rather than the institutions of neoliberal governance, thus opening political opportunities for the rise of Evo Morales and the Movement Towards Socialism. The Bolivian case illustrates that collective actions performed during massive revolts are underpinned by moral understandings and the drawing of symbolic boundaries, and that they can create turning points in historical trajectories. I examine the methodological challenges of studying leaderless and spontaneous protests, suggesting that the analysis of symbolically charged performances can be a point of entry for studying such events.

Teamwork Diversity

The study of teamwork is facing two opposite traditions – sociotechnical approach, which is more developed in Scandinavian countries, and production team, which first appeared in Japan’s industry. Within the first tradition, the implementation of teamwork is associated with the quality of working life and industrial democracy improvement. On the other hand, lean production management strives to improve organizational performance with the help of teamwork, increasing peer pressure and work intensity. Strengthening democracy or renewing forms of control at work – what is the real meaning of teamwork in today’s workplaces? Does teamwork represent a breakthrough from Taylorism or a strengthening of Taylorism? Does it rather represent both depending on the type of teamwork? Far from constituting a single homogeneous entity, teamwork takes diverse forms and can be distinguished depending on the autonomy workers have and the duties they are responsible for. On the basis of a survey conducted in the Quebec tractor sector (Canada), two types of teamwork – lean teams and semi-autonomous teams – are examined in this paper. These will be compared with a focus on autonomy, work intensity, task complexity, problem-solving activities and task rotation.

Two logics of teamwork adoption are also contrasted. Lean team adoption represents the logic of standardization, labour cost reduction and incentive pay, without employment security guarantees, representation and partnership. On the other hand, semi-autonomous team adoption is based on employment security guarantees, representation and partnership. Finally, semi-autonomous teams represent an improvement of working conditions compared with both Taylorism and lean teams. They also constitute an improvement of democracy at work. However, they require an appropriate institutional context, difficult to implement or to develop in this era of finance-led capitalism. Consequently, it is easy to understand why they are much less diffused than lean teams.

The contexts marked by the reception of migrants, with a high degree of multilingualism, represent a scenario that clearly reveals the symbolic capital associated with the territory. Catalan and Spanish are co-official languages and where significant Spanish and Catalan nationalist synergies linked to languages have developed, and in the case of young Romanians, the aim of this paper is to analyze the predictive power of parental and non-parental variables related to languages in contact on self-identification with Catalonia.

From a quantitative approach, the main results show the importance of variables that refer to the symbolic realm of language – young people's language attitudes toward Catalan and Spanish and their self-identification with Catalonia.

This work is a part of a research project funded by the Spanish Ministry of Science and Innovation (EDU2009-08669EDUC). Ianos, Poalelungi and Popa have a Pre-doctoral Grant funded by Catalan Government (2011 FIB 00490 / 2012 FIB 00379 / 2013 FIB 00347 respectively).

Undeserved Unhappiness: A Comparison of Philippines and Japan

The social relevance of happiness surveys is that they also tell us about unhappiness. To the extent that such unhappiness is due to different forms of economic deprivation, such as hunger or poverty, is socially undeserved. Tracking undeserved unhappiness contributes to the advocacy for alleviating poverty, as well as to the understanding of conditions for happiness.

Social Weather Stations (SWS) has a total of 19 national happiness survey, one in 1991 and 18 in 2000-2011. These surveys found that extremely unhappy was most felt among households suffering severe hunger, and among household considering themselves as poor. The excess unhappiness associated with hunger and poverty is the undeserved unhappiness.

SWS' participation in the 2010 and 2012 rounds of the International Social Survey Programme (ISSP) provided data comparing Filipino happiness with that of 47 other member countries, including Japan.

This paper will compare happiness in Philippines and Japan, and the extent of undeserved unhappiness connected with various indicators of well-being and economic deprivation, such as subjective social class, self-assessed health, access to health care, family roles, and social policies related to work.

Legitimation Work: A Social Theory

Due to processes of globalization, digitalization and cultural democratization, publicly funded organizations in the culture sector are in need of legitimizing their own existence towards three publics. The publics provide different forms of support, that the organizations are dependent on: The producers/artists provide quality and artistic credibility, the government/public authorities provide funding, and the general public provides legitimacy. In satisfying the three publics the actors engaged in preserving the relevance and importance of the publicly funded organizations are conducting legitimation work. Legitimation work is a social process being in motion for as long as there are actors engaged in securing the future existence of such organizations.

In this paper I present a theory of legitimation work. The theory is developed from several empirical studies of various publicly funded organizations in Norway and Sweden. I have studied the legitimation work done in the Norwegian public service broadcaster NRK and the Swedish public service broadcaster SVT, the Norwegian National Opera and Ballet and the Oslo Philharmonic Orchestra. These are all organizations that are in need of legitimizing themselves towards the three before-mentioned publics when conducting legitimation work.
Regulatory carbon markets are one manifestation of international climate change negotiations. Their implementation requires the state intervention at different levels. On the margin of the regulatory market, the voluntary market has developed under which certain standards set claimed ambitious criteria for sustainable development. Such standards govern a commodity of a new kind: carbon credits. These standards have ambiguous relations with the state and put at stake the notion of government. As such, they question the ability of government to ensure sustainability from the private sector.

In my PhD, I analyze the case of a carbon certification programme for improved cookstoves implemented since 2008 in Peru. The standard used is the Gold Standard carbon and sustainable development certification framework. The approach is pluri-disciplinary and accounts for the impact of projects on indigenous communities, the making of and architecture of the chain of actors under the voluntary carbon market and the political economy of carbon offsets.

For this presentation I will look at how the carbon offsets resulting from this value chain are sold to the final consumer. In particular, I will be interested in how Peruvian stove users are pictured in the process. The underlying question is whether the adequate representation of an environmental issue is key in mobilizing offseters. Building on the analysis of various offseters, I will show that the understanding of the Peruvian context is very different for them a is their commitment to reduce emission before offsetting. The presentation will provide insight on the current use of carbon offsetting as a corporate social responsibility practice.

LAURENT, ARTHUR* (Sciences-Po Paris, arthur.laurent@yahoo.fr)

Multi-level Analysis of Standard Governance: Voluntary Carbon Certification and the Peruvian Cookstove Sector

Carbon markets are often seen as one of the best success in environmental markets yet they are also subject to many criticism. On the margin of the regulatory market, the voluntary market has developed under which certain standards set claimed ambitious criteria for sustainable development. Such standards govern a commodity of a new kind: carbon credits. These standards have ambiguous relations with the state and put at stake the notion of non-state governance. As such, they question the ability of government to ensure sustainability from the private sector.

In my PhD, I analyze the case of a carbon certification programme for improved cookstoves implemented since 2008 in Peru. The standard used is the Gold Standard carbon and sustainable development certification framework. The approach is pluri-disciplinary and accounts for the impact of projects on indigenous communities, the making of and architecture of the chain of actors under the voluntary carbon market and the political economy of carbon offsets.

For this presentation I will look at the capacity for a private led initiative to engage with the state and whether any complementarity, crossover or parallelism can be drawn. The way the initiative led is implemented by a private company, claiming a social business orientation, interrogates the capacity to reach further collective outcomes than the mere interest of the private sector. This consideration will be informed with results of three consecutive verifications for three project packages meaning more than a dozen projects from either public or private institutions. Surprisingly, interesting amount of data will enable comparison. Rather than considering the standard as a mere global initiative with local manifestations, this research looks at the national context for informing how standards influence at meso level.

Politique, Memoire Et Changement Social

La presente proposition est fondée sur un ensemble de travaux empiriques qui envisagent la question de la mémoire au point de rencontre de l’individuel et du collectif ou mieux de l’articulation du psychique et du social, à mi-chemin dans l’interaction entre une « sociologie de la mémoire » stricto sensu, telle qu’elle a pu se développer ces dernières années dans un contexte où acteurs politiques et associatifs se sont saisis de cette thématique – notamment dans les contextes de démembrement des États mais aussi plus généralement dans les mémorielles de l’histoire contemporaine. L’idée est de poser en miroir l’importance du ruban de la mémoire à l’instar de la société contemporaine, et d’aller à la rencontre de la mémoire comme une forme de réconciliation, comme une célébration de la mémoire de l’événement, de la mémoire de la mémoire emblématiques.

Economic Growth and Institutions: Gender Equality, Beyond Markets in Brazil, China, and Russia

This paper aims at comparing female trajectories in three BRICS – Brazil, China and Russia – since 2000, when a new path of economic growth opened up new opportunities for both sexes in these new mass-consuming market societies. These countries have some features in common, including their being large economies with a strong manufacturing sector, low fertility rates (under 2.0), an urbanization rate over 50%, and convergent female participation rates in the labor market (between 56% and 65%), but one major dissimilarity in terms of educational attainment: only Russia displays high shares of tertiary education (more than 50%) among the adult population, as compared to China (less than 5%) and Brazil (around 10%) (OECD Factbook 2013; World Bank GHD 2013: Capital for the Future).

In this presentation I will compare the extent to which incomplete social protection schemes, labor regulations, and gender policies.

This paper will systematize major traits of female trajectories and gender gaps in Brazil, China and Russia in the 2000s, gathering statistics from the ILO, OECD, World Bank and other relevant databases. In parallel, it will map how the welfare state has evolved as of late in these countries and how existing norms and institutions either push for or constrain gender equality. After systematizing data and the major characteristics of national social protection schemes with regard to the promotion of gender equality and wellbeing, a logistic regression model will be employed in order to determine the factors that most contribute to explain gender asymmetries in each country.

In financial inclusion As a Basic Human Right? Reframing Inequalities in > the > South

A new wave of commodification “all the way down” (Fraser 2012) is taking shape as a paradigm to enhance basic protection through market provision in the developing world. A shift from principles of equal citizenship to consumers and from risk-sharing to individual risk-taking strengthens private insurance schemes and other financial products and services in detriment of public and universal provision of de commodified goods and services. As a result, inequalities between Western countries and the rest of the world may widen. Worse, some (Schiller) emerging economies have the desire to establish that we need to return to the traditional models that we need to return to models that were just in time. We are also interested in 150 to connect all people to finance.

This presentation will compare the extent to which incomplete social protection schemes are being replaced by the provision of minimum income transfers and some basic services from the social protection floor (ILO 2012) along with a process of “bankarianization” of the poor and the vulnerable. We are that preventing market failures instead of promoting equality of opportunities and further public services mechanisms to market societies more homo- economic and social institutions in order to ensure protective and capital markets whose deployment has been long constraint by domestic market restrictions in the developing world. This trend is likely to reinforce duality and polarity and undermine strategies to achieve broader equality between developed and developing nations, between the wealthy and the excluded. The North-South divide will deepen and we will examine how the development of labor market and of welfare in some developing countries, through an overview of social spending in public and private.

Conseillers à L’emploi Et Politiques D’activation : Une Gestion Patronale De L’accompagnement à L’emploi ?

Le mode de gestion patronale s’est historiquement développé dans un contexte d’émergence du salariat au sein des pays industrialisés. Avec l’extension d’une législation dédiée aux rapports salariaux et la montée d’un Etat social (Castel, 1995) ouvrant non seulement dans le cadre d’une gestion de type assistan- cel, en direction des populations les plus démunies, mais aussi de type assurantiel, à destination des travailleurs réguliers privés involontairement d’emplois, cette gestion réfléchit des rapports de travail, caractérisé par un contrôle social dis- crétoire et personnalisé combinant sécurité et coercition, semble avoir perdu de son acuité, par l’établissement des droits universels.

Nous appuyant sur une enquête ethnographique menée en France auprès de conseillers à l’emploi, nous souhaitions montrer que ce mode de gestion discrimi- néaire et personnalisé d’emplois peut également s’observer au guichet du service public de l’emploi, avec la montée des politiques dites...
d'activation, caractérisées par un projet institutionnel d'incitation à l'adaptabilité aux normes d'emploi (Cassiers et al., 2005). Ce mode de gestion spécifique de relation avec les chercheurs comporte en effet des caractéristiques communes avec le paternalisme : personnalisé, il combine coercition, autonomie et vision du bien commun marquée par une logique de contrepartie (Boismenu et al., 2009). En revanche, une différence importante subsiste à travers le poids de la rationalisation gestionnaire, qui s'incarne notamment dans le profilage des chercheurs. Ces nouvelles formes de paternalisme, qui prennent également pour appui la légitimation de l'asymétrie des rapports entre employeurs et chômeurs au nom d'une rationalisation post-sous-traitée des entreprises, se situent donc à la croisée de deux viesées, la subjectivation et la rationalisation. A partir de 200 observations de rendez-vous entre conseillers et chercheurs, notre communication entend analyser les effets de ces deux viesées potentiellement contradictoires pour examiner comment émergent de nouvelles éthiques dans les pratiques et justifications professionnelles.

New Ethics of French Employment Advisers and Their Clients Coping with the Unemployment Trap

This research work focuses on the transformation of the French Public Employment Service through a sociological pragmatic study of discourse and practices of professional employment counselors. We consider the reconfiguration of this profession is an indicator of changes in the welfare state to an active welfare state, which is expressed in particular by an institutional incentive project to the adaptability to employment standards and market principles. Based on a long ethnographic investigation in seven agencies with 87 counselors, and 200 observations of appointments between advisers and unemployed, the paper analyzes the effects of these two potentially conflicting targets: the subjectivization (individualized assistance vs. standardized assistance) on the one hand, and the management streamlining (profiling, strengthening sanctions) on the other.

By changing the standards, organization, this industrial rationalization of a new type reconstructs the structural professional divisions between socio-clinical and socio-technical standards. It brings out a new professional model, marked by an actuarial management of risks, but also supported by a moral dimension based on the individualization of treatment. However, earlier divisions persist and give rise to ethical dilemmas and polarizations (between ethic of work placement and ethic of empowerment counseling), and strategies of avoidance or neutralization of the most coercive professional acts.

The paper examines also the notion of subjectivity in social policies and the prescriptive standardization of the employment standards and tools that accompany the activation. The streamlining and tightening of supervision of unemployed on the ground give rise to the use of social technologies of adaptability, but the observations of professional practices also reveals some areas of negotiation. They are characterized by a use of the processual dimension in assessing the unemployed recruitability, by the establishment of trusted devices or else by the taking account of a “situated rationality” of the unemployed.

Epistemologies of Professional Leisure Sociology: The Canadian Context of Western European Domination

The category of ‘Leisure’ as an object of academic pursuit has historically been derivative of Western European epistemologies dominating the literature, providing the reason and intellectual spaces that scholars must somehow shoehorn their ideas into and make a feedback loop into policy circles that make concrete differences to how we live. This paper explores the domain of thinking about leisure and work, with a call and argument about extension of epistemological breadth and depth to handle the range of cultural truths constituent of professionalism in sociological pursuits and showing an unequal balance of voices from ways of living. The literature extant from Canadian scholarship provides a viable launch point for the main thesis about epistemological diversity and inequality given the nation’s commitment to multiculturalism, encompassing Aboriginal, Asian and Caucasian cultures under its umbrella.

RC13-235.2

LAW, ALAN* (Trent University, alaw@trentu.ca)

Leisure, Justice and Economic Collapse

This paper explores the roles of leisure to both ameliorate and deepen the catastrophic effects of unemployment. The main issue at stake is the extent to which the distributive justice of time and social legitimacy comes to bear in a way that reproduces social relations that, on one hand lead to social inclusion and on the other, radically marginalize victims of economic collapse. The role of the state is critical in setting the terms of social legitimacy, but the state has become agglomerated in clusters of social and economic practices that mutually regulate legitimacies of diverse peoples. State agglomerations are only one plane of action in a complex of social dimensions that find their roots at the intersections of continuously emergent cultural histories including millennia of globalizations. The paper draws on histories of global economic collapse beginning in the 19th century.

Insights for Healthcare Professionals on Patient Experience of Research Participation

There is limited evidence about why patients might be motivated to share their personal stories about their illness experiences through research initiatives and the impact of participation. Ethics committees and healthcare professionals are sometimes reluctant to support research that involves in-depth qualitative interviews given concerns about vulnerability and/or potential harms. Two studies were undertaken, in Germany and in Canada, to explore participant experiences of participating in qualitative research. The research teams are involved in the DIPEX International collaboration – using common methods to collect and share comparable narratives on an evidence-based web resource. People, who had been interviewed about either diabetes or chronic pain, were interviewed again about the reasons why they chose to disclose their illness experiences. In Canada, 30 people, who had been interviewed about their family caregiving experiences, completed a survey asking about their experiences of the interview. In both studies, participants were asked about their research participation, perceived benefits, what was difficult and what about the research process could have been better. These studies were conducted independently, using different methods and within different cultural contexts, yet there were striking similarities in participants' accounts. Participants argued about the potential to help others with similar conditions cope with their situation and to help healthcare professionals as well as decision makers understand their situation to improve care. Participants were generally grateful for the opportunity to share their story, and although they acknowledged difficult moments in reliving some of their experiences during their original interviews, no one in either study regretted participating. This paper will contribute to discussions about how healthcare professionals, including members of ethics committees, view participation in qualitative research. It may also contribute to discussions between researchers and clinical therapists about the value and meaning for patients to participate in qualitative research studies.

The Financialisation of Food and Farming in Australia

The ownership of Australian food companies and farm lands by overseas investors has become a national debate in Australia, with some politicians and economists arguing that just as Australia's past development was assured through foreign capital, so the nation's future will depend upon continuing (and accelerating) overseas investment. Others are concerned that the present extent and nature of the purchases is not in the nation's best interests. Critics argue that some of Australia's most iconic and successful agribusinesses will become a vehicle for takeover by hedge funds and private equity firms that can then make decisions that may be deleterious to the national interest. Others consider that when farms are run by external sovereign wealth funds and food is 'repatriated', taxes can be avoided: Australia might not derive income from its own productive assets. Finally, it has been observed that the sale of most farmland is going unrecorded: Australians do not know of the extent of overseas ownership and control. Following a discussion of the current debate about overseas purchases of Australian food companies and farms, the paper deals with the phenomenon of financialisation. In an era of projected food, water and fuel scarcity, financial entities are seeking investment in agribusinesses that can be harnessed for global profit-making, and farms that can be owned and controlled directly by financial firms. Speculation in land along with opportunities for more secure food production for oil-rich but land- and water-poor countries, are but two of the motivations for investment. Framed within a political economy perspective, the paper outlines the nature of recent overseas investments in food and farming in Australia, exploring the types of firms investing, along with their motives for investment. The paper concludes by theorizing the sociological 'meaning' of financialisation as it affects the Australian agrifood sector.
Is There a Medicalization of the Facial Appearance?

A partir d'une recherche au sein d'espaces de la réparation faciale en France et au Royaume-Uni, on se demande : jusqu'à quel point la psychothérapie de l'apparence et des thèmes liés est-elle un sujet d'étude? On peut avancer qu'il existe des normes d'apparence que les institutions médicales et judiciaires encadrent. La problématique du normal et du pathologique imprègne les jugements des chirurgiens du visage qui nous rappellent le caractère souvent monstrueux de certains de leurs patients auxquels ils ne cherchaient pas à rendre la beauté mais à rapprocher d'une norme d'humanité. Une posture pouvant aller à l'encontre des associations d'aide aux personnes défigurées, qui militent pour un élargissement des normes d'apparence.

Aussi, sans proposer de typification du rapport entre répertoire social et réponse chirurgicale, en suivant des personnes touchées par une forme de défiguration et les professionnels qui les prennent en charge sur un temps long, on peut distinguer des formes d'expérience de l'anormalité faciale normales et universelles disponibles dans de nombreux pays.

Exploring implications for accountability and democracy related to devolving responsibility for identifying, defining and resolving problems to the community level.

In response to significant policy challenges, such as climate change, health care demands and water availability facing decision makers and the community today new approaches that place the community at the heart of the solution are increasingly being adopted. The consequences of these new approaches and their impact on established governance structures will be a key determinant to their longevity as drivers of public policy solutions.

The research will focus on the three primary subgroups involved in the community engagement process, the community (citizens), senior government decision makers (executive level public servants), and political executive government (politicians, political elite and influencers).

What do different stakeholders (community, senior government decision makers and political executive government) perceive to be the reasons for undertaking community engagement?

What do different stakeholders perceive to be the fundamental outcomes that community engagement can be expected to deliver?

Do stakeholder’s perceptions of the outcomes of community engagement match with the perceptions of engagement’s success?

Are there differences between perceptions of desired outcomes and perceptions of success between stakeholder groups?

The emerging trend to engage with stakeholders to identify issues and collectively decide on action has the potential to significantly impact on perceptions of executive government leadership.

The perception of leadership has the potential to significantly impact upon accountability and democracy as the legitimacy of governments are strongly rooted – at least in part – through the delivery of policies and services. The increased adoption of engagement and community based decision making may devolve responsibility for decision making to a point where the perceptions of governments’ leadership and accountability reaches a critically low point.

Virtual Networks As Tools of Social Justice

The popularization of internet has changed deeply the personal and social relationships, the cultural exchanges and the production of subjectivities. The background is a will focused by the desire of expansion off the capital, creating inequalities that get stronger by the mechanisms of accumulation of wealth. Social justice and citizenship are also influenced by this context.

We want to demonstrate that social networks are tools of social justice by ensuring equal access and a parallel public space of social interaction that are essential tools to enable to everybody, indistinctly, the exercise of citizenship, without the limitations of constituted social political normative structures.

To reach the objective were selected examples of usage of virtual networks from institutional profiles, personal profiles, fanpages, social movements and NGO’s. We analyzed by Qualitative Methods the options like, share and the frequency and content of comments.

Therefore, an important problem is cyber inequality, when an individual having no physical possibility to use the internet, is eliminated from many spheres of social and economic life of the society. It is the low level of economic development that prevents the Internet technology development in some countries. In other countries there is a political or ideological pressure on the expansion of Internet network access. Both of these factors reflect negatively on the ability of the society to move forward.

Cyber inequality can also exist within one country and this inequality can be significant. We can see it through the example of the Russian Federation, where different regions have unequal access to the Internet technologies and the development is uneven. We can claim that the residents of the regions where there is no access to Internet economy, state digital services and virtual social space are discriminated.

LEBEER, GUY* (Université Libre de Bruxelles, glebeer@ulb.ac.be)

Les Droits Du Patient Et La Dépénalisation De L’euthanasie Comme Lieux De Questionnement De La Médicine Contemporaine : Le Cas De La Belgique

La Belgique a connu au début des années 2000 une activité législative intense autour de la reconnaissance des droits des patients. La loi du 22 août 2002 sur les droits du patient et la loi du 28 mai 2002 dépénalisant l’euthanasie en témoignent tout particulièrement. La Loi sur les droits du patient a fixé les obligations des praticiens en matière d’information et devait, notamment, assurer au patient un accès direct à son dossier médical. L’application de cette loi fait encore problème aujourd’hui, et pas seulement en raison de la volonté du corps médical de maintenir son autonomie de pouvoir mais aussi du fait des carences de la loi elle-même et de la représentation qu’elle cristallise des relations entre médecin et patient, représentation qui est loin de faire l’unanimité. La Loi de dépénalisation de l’euthanasie permet à un patient placé dans des conditions très strictes de demander à son médecin d’abréger ses souffrances. L’application de cette loi fait également problème et le corps médical se trouve ici aussi au cœur de la difficulté, notamment par l’entremise de la notion de « clause de conscience ». La question est cependant plus complexe car si l’autonomie du médecin peut apparaître comme un frein à l’exercice de ce type de droit, elle peut aussi constituer le moyen de s’opposer à bien d’autres obstacles d’ordre institutionnel comme la volonté de certains établissements hospitaliers de ne pas respecter la loi, tout au moins dans son esprit. La communication se propose de rendre compte des difficultés d’approche de ces deux lois et des questions qu’elles suscitent – et notamment autour de la rédéfinition de la figure du médecin – et des tentatives entreprises dans les divers lieux de la décision politique en vue de les surmonter.
The Spaces and Times of Youth Culture in the New Century

It is starkly evident that in the new century young people's biographical constructions come to terms with conditions of: rapid social and cultural change, increasing choice and uncertainty, the loss of institutional reference points as models for action and the widespread perception of intensified risk. These phenomena tend to produce a contingent and situational form of identity, with a marked individualisation imprint that is closely related to the here-and-now. This contingent identity finds expression in a re-definition of the relationship with time-space in everyday life – the chronotope. In this process, everyday time-space arrangements progressively lose their traditional meanings in the realm of the taken-for-granted, the home of 'natural attitude'. Rather, young people's creative use of urban time-space assumes the form of a fully fledged strategy of action connected to a contingent and situational type of identity. In this framework of understanding, young people's cultural expressions can be understood as organised not so much as answers to 'problems', but rather as expressions of the active negotiation practices that young people themselves carry out in order to deal with contemporary risks and uncertainties.

The Great Transformation Of Japanese Capitalism

Contrary to the dominant vision, according to which Japan is suffering from 'arthritis', we argue that Japanese capitalism has experienced a great transformation from the early 1980s. We get this result from an analysis at three levels:

- corporate level, characterized by an increased heterogeneity in terms of organization and performance
- institution level, characterized by a decay of previous forms of coordination and a revival
- social compromise level, characterized by a surge of multidimensional inequalities

We also show that Japan is not converging toward Anglo-saxon or European types of capitalism but follow its own original trajectory.

Understanding Welfare Diversity and Evolution In Japan, Korea, and China. A Regulationist Interpretation

In this paper, which focuses on Japan, Korean and China, we argue that these previous analyses of Asian capitalisms have underestimated or ignored in-depth analyses of Asian capitalisms from the viewpoint of welfare, in adopting, at least implicitly, a perspective, inspired by the over-simplified typology of Esping Andersen, which can be qualified of 'welfare orientalism' (Takegawa, 2005). Moreover, we argue that welfare is at the core of the evolving forms of capitalism in these three countries. Our interpretation is that institutional change in Asian capitalism is currently driven by changes in the social compromise. These three economies are experiencing a series of changes that can be interpreted as the manifestations of internal contradictions, which require the development of new welfare systems to be overcome. Among these changes, this paper focuses on the ones that affected such institutions as family and firms, as well as ageing, and rising inequalities. The purpose of this article is to show that effective social policies are the necessary condition in these three countries to promote the emergence of a new regulation mode able to overcome the current contradictions at work. As emphasized by Boyer et al. (2001), these three economies indeed virtually suffer from the adverse consequences of export-led growth regimes. At the level of each country, a new basic compromise should concern the wage-labor nexus, for the sake of both social justice and dynamic efficiency. New forms of welfare are emerging in Asian capitalisms, as political answers to demands from various groups. They may become a distinctive feature of these forms of capitalisms but also the main source of divergence among them.

The NFA Resistance to the KORUS FTA

This paper focuses on the Korean National Farmers Association's (NFA) failed attempt of social resistance to the Korea-US Free Trade Agreement. Located at the intersection of the local and the global, traditional methods of farming be-

came threatened in the rural farmlands of Korea because of the Free Trade Agreement that assured US imported foodstuff to dominate the Korean market. Despite borrowing from the "Nyelani Declaration" from the international movement of food sovereignty, resistance was unsuccessful due to the fact that "larger stripes" of globalized resources did not interweave with NFAs internal strategy and discursive effects. Thus NFAs leadership and policies failed to create a social movement to ensure viable economic food sovereignty in South Korea, as the South Korean government continues to take the path toward a neoliberal and profit-driven agricultural future.

Precarious Working Life and Miliant Activism of Non-Regular Workers in South Korea

From the early 2000s, non-regular employment has become a core labor policy issue in South Korea. Non-regular labor, comprised of a variety of precarious employment patterns, such as fixed-term workers, part-time workers, dispatched and subcontracted workers, home workers, and dependent self-employed workers, has proliferated in Korea, particularly along with changing corporate employment strategies after the economic crisis of 1997. The diffusion of non-regular employment has led to the growing segmentation of labor markets in the country because those workers suffer from not only inferior working conditions and a vulnerable employment status, compared to regular workers, but also social exclusion from the protection of legal labor standards and national safety-net.

Given their precarious working life, non-regular workers came to the fore as a symbol of militant labor activism over the past ten years. They organized their unions even under their employers' harsh suppression and the lack of regular workers union's support. Those precarious workers engaged in the prolonged strike action to defend their unions from the employers' suppression and protest against inhuman discrimination imposed on them. Faced with limited movement resources, they often resorted to extreme struggling actions, such as hunger strike, sit-down demonstration at the air, and even committing suicide, in order to gain public attention and create societal pressure to resolve their issues.

In this context, our paper is to discern why union behavior of non-standard workers are so militant, and to examine causal relationship between those workers' precarious working life and their militancy.

The Impacts of Cultural Heritage Tourism: A Case Study of Ajanta Caves in India

Cultural Heritage Tourism uses the remains of history which the traveler is interested. Cultural Heritage Tourism has positive and negative impact on social-cultural, physical and economic aspects of Indian Society. Ajanta Caves in India which is a world heritage site and caves of Buddhist affiliation have been carved in Deccan basalt. From a social-cultural perspective tourism affects cultural resources through changes in forms and functions of traditional artworks, commodification of living culture, crowded condition and community members. Tourist activities exact physical impacts on precious heritage in form of vandalism, wear, tear and pollutions. On a more positive note, tourism from the increasing number of people, helps in creating jobs and taxes and stimulates entrepreneurialism in heritage destinations (Timothy 2011).

This study recognizes the impacts of Cultural Heritage Tourism at Ajanta Caves and its surroundings region in western India. For this research project, primary data are collected through observation and interviews of local community members, visitors, agents and officers of tourism department and on the secondary data obtained from books, journals, survey reports, publication of government, etc. First part of this paper presents understanding of Ajanta cave as general description and significance of Ajanta caves. Second part of this research analyses impacts of cultural heritage tourism on Ajanta caves through the collected data as well as discusses the multiplier impacts of tourism such as physical, economic, and social dimensions on the Ajanta Caves and tries to study it from an integrated approach. Third part is a part of summary, conclusions and recommendations. Thus, this study about impacts of cultural heritage tourism analyses how for best it can increase the positive impacts and restrict the negative impacts in order to preserve the Ajanta Caves, so that they can be enjoyed by contemporary and future generations on society.
Understanding Stratification in a Global Perspective: The Case of South Koreans

This study distinguishes three perspectives in stratification research based on an unit of analysis. The first is a within-country perspective which has dominated traditional stratification research. It uses data from countries as the unit of analysis with an assumption that stratification takes place exclusively within nations. Modernization school, with this perspective, argues that achieved human capitals play a central role in social selection processes in industrial societies. The second is a between-country perspective that has been taken by development scholars. It focuses on stratification among countries. As the focuses lie on national (not individual) level comparisons, there is a lack of accounts on how between-country inequality shapes stratification and inequality at an individual level. The last is a global stratification perspective. This perspective synthesizes the both within- and between-country stratification concepts in a sense that it perceives stratification as individual phenomena processes taking place globally. Which social mobility strategies are more effective can be different depending on which perspective or unit of analysis is used. For example, emigration to another country is hardly discussed in the within-country frame, but it draws attention as an important way for social mobility in the global perspective. This study aims 1) to introduce the global stratification perspective, 2) to apply it for understanding stratification among South Koreans (including Korean diasporas), and 3) to see how it looks different from the accounts of the within-nation perspective. To practice the global approach, I situate income earnings of South Koreans within a broader pattern of global income earnings, and reassesses the relative weight of categorical attributes (gender, family background, country of residence, etc.) based on achieved characteristics (education, skill, etc.) based on their global income standing. My hypothesis is that, from the global perspective, inequality among South Koreans remains shaped by categorical characteristics (country of residence, particularly) and the role of achievements far more modest than usually assumed.

Relational Skill Assets and Anti-Immigrant Sentiments

This study introduces a new variable in the area of sociology of professions: relational dimensions of occupational skills. Although previous studies have underscored the importance of cognitive skill assets in migration processes and attitudes toward out-group populations, the importance of relational skills has not received much attention. In this paper, we highlight the role of relational skill assets in explaining native workers’ attitudes toward immigrants, by using a General Social Survey module (National Identity 2004). We construct two dimensions of relational skills: interpersonal and instrumental skill assets at the occupational level. We conceptualize the former as an entrance skill barrier and the latter as a pulling factor that attracts skilled or unskilled immigrant work forces. Then, we create a new independent variable, “relational skill specificity,” which is a relative measure of interpersonal skills over instrumental skills in one’s occupation. Our hypothesis is that workers employed in jobs requiring a higher possession of interpersonal skills over instrumental skills are less likely to develop strong anti-immigrant sentiments. The effects of relational skill specificity are highly significant and remain robust against different specifications, controlling for individual-level education and citizenship status along with other conventional cognitive skill-variables, demographic, religious and political variables. The results suggest that differences in occupational skills are less likely to develop strong anti-immigrant sentiments between skilled manual workers (e.g. craftsmen), and skilled non-manual workers (e.g. professionals), originate not only from different levels of cognitive skills but also from varying levels (or compositions) of relational skills.

Overall, the findings of this study provide a novel pathway of causal explanation of how native individual workers develop their anti-immigrant sentiments. It also attempts to advance our understanding of occupation-based social stratification processes, ethnic competition in the labor market, and attitudinal studies of race and minorities.

Gendering the Migration System in East Asia

This paper attempts to do gendering the migration system in East Asia by focusing on the migration. Inter-African migration has been one of the key characteristics in recent migration trends (WMMR 2012). Jones and Findlay (1998) showed migration system emerged in East Asia by examining the various linkages among origins and destinations including FDI aids, trade, and migration. Building upon Jones and Findlay (1998)'s work, I attempt to gendering the regional migration system by examining feminized migration streams: labor migration for care and marriage migration to the major destinations in East Asia including Korea, Japan, Taiwan and Singapore. In analyzing these migration streams, I explore the changes in socio-demographic and economic conditions of the destinations including the gender division of labor, care provision, (care) labor market, and state policies for migration. By comparing the state responses to the seemingly uniformed issues of care provision, I argue that the recent intensification of migration system in Asia is conditioned by changes in mode of social reproduction.

How To Examine Spatial Housing Inequality and Housing Polarization?

To alleviate housing problems including issues of inequality, disparity, and polarization, we need to determine exactly their present status, characteristics, and influencing factors. Hence, this research developed a spatial housing inequality index that consisted of housing wealth inequality (HWI) and housing affordability inequality (HAI); examined factors of spatial housing inequality through a multiple discriminant analysis model using statistics data from 2008 to 2012; and suggested a housing polarization index that consisted of housing wealth polarization (HWP) and housing affordability polarization (HAP). The first finding is that inequality, disparity, and polarization of housing in Korea are distinctly different aspects. Therefore, examining housing problems requires each index or method in terms of spatial base, wealth, and affordability, such as HWI, HAI, HWP, HAP, etc. The second is that comparing patterns of Pilot and the Gini coefficient, affordable housing and affordability of household are more important subjects in Korea than the level of housing wealth, in view of inequality. The third thing is that the spatial concentration of HWP and HAI shows opposite result to each other. In HWI, only Seoul and Gyeonggi are below the total level, while in HAI, all regions except Seoul, Incheon, and Gyeongsang are below the total level. The fourth finding is that common key factors of largest gap in spatial housing inequality are inflation rate, housing price, unemployment rate, in descending order, and unlike HWI, HAI is affected relatively by unsold housing of region, the number of houses, per capita GDP. Final finding is that polarization in housing affordability is more serious than that of housing wealth in Korea. The primary cause of the disparity in HWP is MB (middle-bottom) section, and it in HAP is TM (top-middle) section.

The Transformation of Family Law and Discourses in South Korea: Possibilities and Limits of State Feminism

Since the Korean family law including the family head system was enacted in 1958, the status ‘a head of family’ had been given to the male person- the husband or the eldest son in the legal family institution in South Korea. Women’s organizations in civil society had constantly demonstrated for the abolition of the family head system for 50 years and they achieved their success in 2005. Many research questions have been focused on “why the abolition of the family head system was possible in 2005” and the dominant explanation has been the state feminism. I try to point out the limitation of the state feminism which has orient toward the actor centered approach and overlooked the wider social context as well as by tourism driven by a unique mix of amenities, the non-market features that affect the city. This study details the Dalian model of development by connecting the development trends to the city’s cultural industry and tourism features. This is done by detailing Dalian’s overall urban experience through defining the city’s scenes. The mix of amenities in Dalian provides the lived experience of the city residents who have been the new pole of rapid growth.

Dalian is a good example of a city that has combined both of these trends. The city considers culture to be one of the five leading industries and considers integration of cultural resources and capital, science and technology, and even urban layout and planning. Spending on culture has been increasing from year to year, increasing five times over from 2002 to 2011. The cultural industry is centered contents like animated games, film and drama, media contents, new cultural creation as well as on tourism and has become a new pole of rapid growth. Much of the city’s growth has been driven by the cultural contents industry as well as by tourism driven by a unique mix of amenities, the non-market features that affect the city.

This study details the Dalian model of development by connecting the development trends to the city’s cultural industry and tourism features. This is done by detailing Dalian’s overall urban experience through defining the city’s scenes. The mix of amenities in Dalian provides the lived experience of the city residents who have been the new pole of rapid growth.

Globalization, Localization, and International Coproduction As an Emerging Form of Governance in the Global Animation Industry

This paper examines the interaction of globalization and localization and the rise of international coproduction as a noble governance form in global cultural industries. The expansion of Western media and cultural industries to emerging markets has been intensified since the 1990s thanks to worldwide deregulation and liberalization and the introduction of new media, such as satellite TVs and the Internet, which facilitate the integration of national, regional and global markets. At the same time, the growth of cultural and media markets in emerging countries has presented new opportunities and challenges for both global and local firms. Global media giants have found their strategies should be adjusted to better serve local audience who is not solely satisfied with their global content, and local firms have become more ambitious in bringing their content to overseas. Examining the case of the global animation industry, this paper argues that as global firms seek to tap into local markets (‘localization’) and local producers try to enter foreign markets with their own discursive formations (‘internationalization’), international coproduction, a form of cross-national, inter-firm partnership for animation production and distribution, provides both actors with new opportunities to collaborate for...
a project amenable in markets across different cultures, languages and regulations. It facilitates global leading firms to better address local markets and access talents in emerging economies, while local firms can benefit from newly acquired skills in creative development, marketing and distribution as well as expanding outlets for their content overseas. The paper concludes with discussion of the challenges facing firms in this new economy and the implication of this new form of inter-firm governance to the future of a global cultural economy.

RC31-534.2

LEE, JUYOUNG* (Brown University, juyoung.lee@brown.edu)

This study examines public discourse about migrant workers and migration labor policies in South Korea between 1990 and 2003. Using a content analysis, this paper traces how public discourse that appeared in newspaper editorial and opinion columns evolved over time, in tandem with the transformation of migrant labor policy from the Industrial Trainee System (ITS, 1991-2003) to the Employment Permit System (EPS, 2003-present). In particular, I will contrast the period of 1995-1997 during which the efforts to change migrant labor policies were made but ended in failure with the period of 2000-2003 during which the efforts resulted in the successful legislation of the EPS, highlighting two major discourses: (1) the human rights theme and (2) the national economic development theme. The human rights theme was prominent among the advocates of EPS; the national economic development theme were so among the advocates of ITS. The results show that, while the national economic development discourse remained relatively stable over time, the human rights discourse gained its popularity by tapping into Koreans' historical experiences and further developed by reflecting and changing ethnically homogenous Korean culture. In addition, there were differences in how each policy position (i.e., the Pro-ITS and Pro-ITS arguments) had incorporated these two themes. The Pro-ITS argument relied mainly upon the national economic development theme, and did not succeed in incorporating both two major themes. In contrast, the Pro-EPS argument, which had built on the human rights theme until 1997, later developed to incorporate not only the human rights theme but also the national economic development theme. This study concludes that there were significant changes in public discourse between 1990 and 2003, which may affect the transformation of migrant labor policies in 2003.

LEE, MINJIN* (Rikkyo University, leemj@rikkyo.ac.jp)

The 'People House' and a New Move to Organize 'Resident Workers' in Korea

Recently, a region has become a major area for labor union organizing and its activities in Korean labor movement. The vast majority of workers in small firms located in local regions are both non-union workers and precarious workers. A new move to recognize and organize them as 'resident workers' has appeared. The 'People House' ('minjunguji') in Korean, which provides a space for workers, residents, progressive party members, labor unions, and community organizations to meet and communicate each other to form networks among them, was established in several wards of Seoul, Incheon and Kwangju after 2000. The 'People House' considers that labor market for non-regular workers is formed based on the locality which they live including neighboring towns. Therefore, it tries to approach labor and livelihood issues of regional workers from a point of view of 'resident workers'. It provides a space to workers who want to study labor law and to fight for improving their labor conditions. It holds events for residents to meet and talk about labor rights and current social-economic issues such as rail privatization. It also supports small labor unions in the region which have no union office by providing a meeting space, as well as making efforts to organizing 'resident workers'. This paper has aims to examine practices of the 'People House' to organize 'resident workers' and to discuss implications of the practices for revitalization of Korean labor movement. Furthermore, this paper compares the 'People House' in Korea and 'Worker center' in the United States which is community-based organization that engages in grassroots organizing to provide support to low-wage workers and discusses similarities and differences of the two.

Counter Hegemonic Discourse on New Poor in Japan in 2000s – A Case Study of Two Indie-Magazines

Along with the collapse of bubble economy and following extended economic depression since 1990s, people who failed to labor – or people who could be no longer explained by labor as it was – appeared in Japanese society. They were working-poor, net-cafè refugees, and others who felt into “new poverty.” The emergence of “new poor” who were undefinable but already everywhere alarmed the entire society where poverty had been believed to be eradicated with its dramatic economic growth, and provided a chance to reconsider and discuss “new poverty.” This study aims to investigate two discursive struggles by the young new poor who attempted to produce new discursive counter publics on “new poverty/poor.” In order to do so, two Japanese indie magazines – Fireett’s Fireeet(2007-2008) and Lost Gen(2008-2010) – are analyzed using textual analysis and interviews with editors and contributors, focusing on their strategies in terms of their contents, narratives, styles-genres, the relationship between contributors, editors and readership and etc. In these two indie magazines, the young new poor attempted to problematize public discourses on them and to produce counter-hegemonic discourse by unfolding and re-appropriating their own experience. Moreover, these magazines provided (counter-) publics where the young new poor could reach to self-acceptance, escaping from self-denial and collectively search for alternative ways of life without being captured by neo-liberalcapitalism. In this process, the young new poor – not only readers but also contributors, editors – re-identify their subjectivities as laborers, political subjects, and young generation who are situated in the very middle of the social contradictions produced by late capitalism. In addition, this study explores their alternative ways of publishing as a media movement that created and managed their publishing groups as a collective social enterprise and thus struggled to cross boundaries between discursive and real practices.

LEE, NAEYUN* (University of Chicago, naeyun@suchicago.edu)

Relative Social Standing and Support for Nativism

This paper explores the relationship between relative social standing and one’s attitude towards descent-based national membership using multi-level analysis. While much of the previous research on national identity has focused on the individual-level socioeconomic predictors, little attention has been paid to the role of relative deprivation. In this study, I investigate the effect of relative deprivation on one’s nativist attitudes by exploring the individual-level effects of education and
income in conjunction with the societal level of inequality in 29 countries, using International Social Survey Program (ISSP 2003 National Identity module) data. I create a new dependent variable “ancestry” which measures how much importance one places on ancestry as a core component of national identity. I examine the relationships between country’s characteristics (economic conditions, income inequality, social cohesion, and collective habitus) and the size of indigenous populations (orthodoxy and technological advancements) to reflect on Habermasian post-secular perspectives in the public sphere. In particular, Habermas emphasizes the interactive conditions to reflect on Habermasian post-secular perspectives in the public sphere. Although a highly competitive religious landscape includes many religious institutions and religious leaders work with civil NGOs for the social integration of immigrants. Protestant churches have most number of social welfare centers for the migrant workers in Korea. Catholic leaders work with civil NGOs for the social integration of immigrants, whereas religious leaders who are in charge of these centers. For the purpose of this paper, I focus on two groups of migrant women in South Korea and the contrasting ways in which homes mark the legal boundaries; the community-building association and the East Asia Collaborative Workshop, which engage in festivities and performances, the Old Tokaido Road Shinagawa House Community-building Association and the East Asia Collaborative Workshop, which engage in festivities and performances, to their realization of the public common good. In particular, Habermas emphasizes the critical understanding of the relationships between internal dynamics of religion and external social forces. Although a highly competitive religious landscape includes many religious institutions and religious leaders work with civil NGOs for the social integration of immigrants, whereas religious leaders who are in charge of these centers.

* denotes a presenting author.
Migrant domestic workers, homes are private places from which they can find work and, at the same time, seek refuge from the immigration raid. In this process, one is portrayed as irresponsible mothers who abandon their duty of care of their children while the other is portrayed as victims who have been failed by the economic-nationalist immigration paradigm to pick up after other women. In fact, such perspective has been materialized in real laws and policies which have further reproduced or reinforced migrant women's precariousness. I focus on women's presumed normative position as care-giver, and the role that their supposed abandonment/adoption of this position plays in public discourse in shaping the private/public boundaries of homes. Throughout the paper, I present the process in which nationalistic reproduction discourse, gender norms and uprootedness (experiences of migration) are essentialized into the duty of care in a particularized private/public place called home.

**Precarious Work and New Class in Post-Industrial South Korea**

This paper aims to examine precarious work in post-industrial Korean labour market. Previous studies on precarious work have focused on employment status, working condition, and income. However, we suggest that not only employment insecurity but also insecurity of market, post-transfer and social income should be included in the conceptualization of precarious work. In addition we include how individual workers perceive ‘precariousness’ and how this contributes to the definition of precarious work. Then this paper investigates the relationship between precarious work conceptualized in the paper and the new social class structure in post-industrial Korean labour market. Discussion on class structure departs from the traditional division of class and highlights the structural transition from an industrial to a service economy. Gender and age will also be considered in the analysis. We exploit a mixed method of conventional method and QCA (qualitative comparative analysis) to examine how different configuration of precarious work is associated with new class structure, using Korea Labour & Income Panel Study(1st wave - 13th wave). Results from the analysis suggests how precarious work in Korea is structured within the socioeconomic context of post-industrial Korea.

**The Impacts of Parent-Child Generational Gaps in Family Values on Subjective Happiness Among Korean Adolescents**

Due to South Korea's (Korea hereafter) competitive education system to enter college, in addition to other developmental stressors, Korean adolescents are more likely to experience a high level of stress. Although the degree of subjective happiness amongst Korean adolescents was higher than the median in the happiness scale, recent studies found that Korean adolescents showed the lowest level of happiness compared to Chinese and Japanese adolescents and those who lived in OECD countries. In addition, due to rapid demographic changes in modern Korea, generational gaps in family values particularly with respect to marriage, parenting, and elderly parent support have become more noticeable. Considering positive family relationships is a strong predictor for adolescents' happiness, it is important to understand how parent-child relationships influence adolescents' happiness within the contexts of modern Korea. As part of efforts to answer this question, in this study, we specifically examined how parent-child generational gaps in family values influenced subjective happiness amongst Korean adolescents. Using ordinal regression, we analyzed a subset of the 2010 National Survey of Korean Families data, consisting 91 adolescents with ages ranged from 15 - 18 years and their parents. Results showed that the smaller generational gaps in family values between fathers and adolescents, regardless of the gender of children, was an important factor that predicted adolescents' subjective happiness. For example, when adolescents had similar viewpoints to their fathers regarding values of parenting, they were more likely to be happy. When both adolescents and their fathers similarly assessed their relationship and the amount of communication with each other, adolescent children were more likely to be happy. These results imply the important roles of fathers in parenting adolescents and adolescent children's happiness. In particular, it is worth noting that the consensus in family values between parents and adolescents is important to support adolescents' happiness.

**LEE, SUNHEE** (Tohoku University, ihle@yahoo.co.jp)
looking at work and leisure from the angles of time, place, ageing, gender and ac-
tivity. First, it examines why and how the once clear dividing line separating time
or place between work and leisure has been erased. Then, it looks at whether the
age-segregated life-cycle has been transformed into one that is age-integrated.
Next, it considers women’s entry into the work force and whether the convention-
al values of work and leisure have been changed. Finally, the traditional notions
of labour and leisure activities are challenged by both positive and negative views
on leisure. As conceptual background the concepts of devotee work, which is part of
the Serious Leisure Perspective (SLP), and the labour of leisure are introduced and
compared. After investigating the complex relationships between work and leisure, related implications are then taken up.

Resistance Up In The Sky: New Forms Of Labor Protest In Neoliberal Korea

The continued rise of Korean economy in the world stage is widely recognized by
the presence of global brand-name products such as Samsung Galaxy phones,
Hyundai Sonata, and even by the phenomenal world-hit of Psy’s “Gangnam style.”
However, on the other side of this triumphant story of Asian capitalism, there is
Jin-sook Kim, a female labor unionist, who protested on top of an industrial crane
at the height of a 15-story building for 309 days. In a vibrant economy where auto-
mobile exports contribute a lion’s share, the massive layoff at Ssangyong Motors
pushed 24 auto workers to death either by suicide or by post-traumatic illness.
These are unparalleled cases of labor resistance, which merit a serious scholarly
examination.

This study focuses on the sky struggle (hanelu tooyeong in Korean), like the one
staged by Jin-sook Kim, which represents a new form of labor resistance in
contemporary Korea. In this paper, I first present data on traditional labor dis-
putes and the new sky protest and introduce three major labor struggles – Kim’s
sky resistance at Hanjin Heavy Industry, the suicidal protest of laid-off workers
at Ssangyong Motors, and non-regular workers’ struggle at Hyundai Motors.
Through these instances of labor contention, I discuss how the mode of labor
protest has changed in Korea in recent decades. In the second section, I expli-
cate the structural and political conditions that gave rise to this changed form of
labor unrest by focusing on Korean economy’s neoliberal transformation, the
depowering fracture in the labor market, and democratic institutions devoid of la-
bor representation. The paper closes by discussing the theoretical implications
of these labor struggles in Korea, especially in enlightening our understanding of
contemporary class conflict and collective action in a democratic society.

LEE, YOUNG HEE* (The Catholic University of Korea, leeyoung@catholic.ac.kr)

Technology and Citizens: Case of Citizens’ Jury on National Pandemic Response System in South Korea

Due to their technical complexity, most public policies in today’s technological
society are dominated by expert-centrim and technocracy (an institutional form of
expert-centrim), based on the belief that they should be the exclusive realm of
technical experts. But globally, expert-led and technocratic policy-making culture
is faced with challenges in many countries. The same is happening in Korea in
many different forms.

Based on such awareness, this paper aims to analyze the democratic implica-
tions of the Korean experience of the citizens’ jury, a form of citizens’ participatory
technology assessment activity organized by an NGO called the Center for De-
mocracy in Science and Technology in 2008. In particular, the topic of this paper,
the citizens’ jury on the National Pandemic Response System in 2008, is a note-
worthy case for it represents the first time in Korea that citizens were randomly
selected to make up a jury, a method considerably different from existing forms
of citizen participation.

In identifying its democratic implications, the citizens’ jury will be compared
with another form of deliberative participation, the consensus conference. Com-
pared to consensus conference, citizens’ jury is different in the following ways:
first, the participants are randomly selected; second, the modalities of opinion
collection and transformation are random; third, the presence of non-alignment be-
between the participating citizens. The paper concludes that such characteristics
of citizens’ jury present highly positive implications in realizing genuine democracy
in our society.

LEFEVRE, SOLANGE* (Université de Montréal, solange.lefevre@umontreal.ca)

Religious Diversity Management and Reasonable Accommodations in Greater Montreal Schools

Debates over the place and role of religion in the public sphere have gained sig-
nificant relevance in Quebec, especially since 2006 (Lefebvre, 2008). The arrivals
of immigrants with religious backgrounds other than Christian, distorted public
narratives over minorities religious requests and the post 9/11 context contrib-
uted to this. As a result, the Consultation Commission on Accommodation Practices
Related to Cultural Differences was created in 2007. Education, together with the
field of health, stands as an arena for more potential tensions and more needs for
religious accommodation (Zubrzycki, 2012). Framed within a larger comparative
project, directed by Solange Lefebvre, on the regulation of religion in four national
contexts, and based on a qualitative approach, this presentation analyzes how
religious diversity is being managed in the context of schools in Greater Montreal.

The inquiry pays special attention to the specific “reasonable accommodations”
implemented to respond to religious requests of pupils and teachers – in areas
such as personal religious symbols and dressing, dietary prescriptions, religious
holidays and sports practice – with the aim of disclosing the effects that the so-
called Bouchard-Taylor report has had in such institutional contexts.

Statistical Analysis of the Sport Participation in a Population: Some Sociological and Software Considerations

Estimating the sport participation rate in a given population raises the question
of what it means “to be sporty.” From 1970 to 1990, new forms of sport
practice appeared that forced the sociologists involved in general population sur-
veys to enlarge the usual definition in order to really get a whole understanding
of the sport phenomenon. The goal is now not only to evaluate the hard core
formed by the sociohistorical duet “training and competing” but to go further so
as to include regular and more ephemeral physical activity forms. In fine, a scale
of the respondent investment in the sport and physical activities is designed, re-
presenting a progression from no practice at all to the usual sport participation in its
sociohistorical meaning. To this end, the interviewing mode has changed to an
emic-and-etidual approach.

Sociologists aim to discover the sociocultural, cultural, demographical character-
istics which may influence this sporting scale. A suitable statistical toolkit readily
available in an easy-to-use computing environment is thus needed. No doubt that
contingency table analysis is the fundamental technique used by sociologists.
The distribution-free software proposes some modern approaches for dealing
with two-way tables (Yule’s Q, confidence intervals, local and global effect sizes,
modality profiles) suitable for a sociological quantitative data analysis, and is spe-
cifically powerful in producing statistical graphics.

Finally, explanatory methods appropriate to the researcher’s goals (Wheaton,
2003) enable to detect and visualize (Ely, 1999) the sociological, cultural, demo-
gostructural effects in the 2010 general survey of the sport practices in the French
population.

Does Early Schooling Equalize Educational Outcomes Across Social Origins: Evidence from Pre-School Extension in France

Universal preschool is often seen as the mean par excellence of correcting so-
cial inequality in educational achievement. However, evidence on the short
and long-term effects of preschool is very limited. Over the 1960s and 1970s, France
undertook a large-scale expansion of preschool enrollment. As a result, during
this period, the enrollment rate of 3 years old children rose from 35% to 90% and
that of 4 years old rose from 60% to virtually 100%. This paper evaluates the effect
of this expansion on subsequent schooling outcomes (repetitions, test scores,
high school graduation) and wages. We examine the average benefit of preschool
enrollment and differences across social groups in the benefits of preschool. We
find some sizeable and persistent effect of preschool and this points to the fact
that preschool can be a tool for reducing inequalities. Indeed, the analysis shows
that children from worse-off or intermediate social groups benefit more from pre-
school than children from better-off socioeconomic backgrounds.

Educational Expansion, Earnings Compression and Changes in Intergenerational Economic Mobility: Evidence from French Cohorts, 1931-1976

Over the last fifteen years, an important body of research has investigated the extent of the intergenerational economic mobility. Two main results have emerged from this literature. First, economic outcomes, in developed societies, are much more strongly influenced by family background than was thought two decades ago. Second, the transmission of economic inequality varies considerably across countries and high inequality is generally associated with low mobility. However, beyond the above-mentioned stylized facts, the factors that shape intergenerational economic mobility empirically have not been much explored. Why does the degree of intergenerational mobility vary across countries? To what extent does it change over time? How does the level of economic inequality relate to the persistence of inequality across generations? Have changes in the wage structure affected the degree of mobility? What policy intervention in general, and what intersectoral and intergenerational mobility in particular, may foster equality of opportunity? Such important questions remain largely unanswered.

This paper analyzes long-term trends in intergenerational earnings mobility in France. I estimate intergenerational earnings elasticities for male cohorts born between 1931 and 1975. This time period has witnessed important changes in the labor market and educational system: large expansion in access to secondary and higher education, important compression of earnings differentials. Over the period, intergenerational earnings mobility exhibits a V-shaped pattern. Mobility falls between cohorts born in the mid 1950s and those born in the mid 1950s, but subsequently rises. For cohorts born in the first half of the 1970s, age-adjusted earnings inequality rests between cohorts born in the mid 1930s and those born in the mid 1950s, -20% for males.-

Why does the degree of intergenerational mobility vary across countries? To what extent do specific factors (i.e. traits, skills, competencies, behaviors and styles) are needed for such a role?; 2) How can leadership impact the healthcare sector and what challenges are addressed?; 3) Which efforts are in place in order to educate leaders in healthcare and how relevant are those?; 4) Is leadership in healthcare going towards a systemic, cross-cultural and collaborative approach?

To achieve these goals, we identified the realist review as the best methodology to analyze the relevant researches sample. We have answered questions such as “what works, for whom, and in which circumstances” highlighting: the effectiveness and acceptance of transformational and collaborative approaches; professional, emotional, and good task delegation within operational teams; distributed leadership, relationships, and social responsibility at a systemic level.

The relevancy and need of leadership development programs, framed within a wider strategy, emerged. Nonetheless, gaps still exist and require further investigation: particular needs in public vs. private contexts; professionals’ and women’s differentiating characters; generational gaps; associations between leadership and recruitment HR practices research; how (and if) leaders (should) influence the organizational culture and values; and developing countries specific challenges. Also, a greater proportion of relevant findings should be drawn by empirical and more rigorous studies. Finally, major attention could be paid to interactions happening at the team, organizational, and systemic level among different leaders, and among leaders, followers and external actors.

Who Will Do Science? Implications for Science, Technology and (New) Forms of Social Inequalities

Almost 20 years ago, the authors explored the ramifications for science and society of who practices (and will practice) science in the United States (U.S.) [1]. Scientists determine who will practice science in the future: academic scientists act as gatekeepers in terms of the production and training of scientists (admissions, funding, training and apprenticeships); and the design, implementation, certification and evaluation of curricular content. Moreover, access to and understanding of science and technology are necessary to function in a global, knowledge-based economy. These issues are still critically important to both the scientific enterprise and society.

This paper revisits these issues and implications for policy science in the context of dramatic demographic changes and inequalities in access to science and technology in the US. Currently, increases in the percentages of the U.S. population comprised by historical racial/ethnic minorities are not reflected among the U.S. science and technical workforce; this reinforces and exacerbates inequalities among groups. The authors explore inequalities in science and technology by examining trends in the participation of historical racial/ethnic minorities in science and engineering higher education and the workforce over the last two decades.

LEGRAND, JADE* (École Hautes Études Sciences Sociales, jlegrand@ehess.fr)

Embodying the Other As a Self

Based on ethnography of international relief organizations, this contribution explores one aspect of the daily life of aid workers: how emergency contexts bind people together and eventually melt different selves in a temporary, shared body. First, the body is considered as the biological boundaries of human being, with its vulnerabilities. It then becomes the united entity of an emergency team.

What strikes about life in the field is the level of danger commonly accepted by members of the organization (Roth, 2011). Putting yourself at risk, physically and mentally, is a prior condition to humanitarian career. Incidentally, the fantasy of danger flows into our perception of aid workers as modern heroes living a life of adventures and sell-sacrifice (Dauvin, Siméant, 2002). In concrete terms, kidnapping, rape, beating and robbery are often their reality. While being in the field with the team, one can observe, even experience, that not only may aid workers put themselves at risks but sometimes also others. Life in a mission creates a high dependence between the staff, relying on each other to ensure everyone’s safety. This dynamic is reinforced by the lack of intimacy and the control over individual’s privacy and safety, as well as by the hierarchical and operational nature of the team.

The present study aims to investigate which progresses researchers have done in order to understand: 1) Who are the leaders in the healthcare sector and which factors (i.e. traits, skills, competencies, behaviors and styles) are needed for such a role?; 2) How can leadership impact the healthcare sector and what challenges are addressed?; 3) Which efforts are in place in order to educate leaders in healthcare and how relevant are those?; 4) Is leadership in healthcare going towards a systemic, cross-cultural and collaborative approach?

To achieve these goals, we identified the realist review as the best methodology to analyze the relevant researches sample. We have answered questions such as “what works, for whom, and in which circumstances” highlighting: the effectiveness and acceptance of transformational and collaborative approaches; professional, emotional, and good task delegation within operational teams; distributed leadership, relationships, and social responsibility at a systemic level.

The relevancy and need of leadership development programs, framed within a wider strategy, emerged. Nonetheless, gaps still exist and require further investigation: particular needs in public vs. private contexts; professionals’ and women’s differentiating characters; generational gaps; associations between leadership and recruitment HR practices research; how (and if) leaders (should) influence the organizational culture and values; and developing countries specific challenges. Also, a greater proportion of relevant findings should be drawn by empirical and more rigorous studies. Finally, major attention could be paid to interactions happening at the team, organizational, and systemic level among different leaders, and among leaders, followers and external actors. 
The Self and the Other are linked in the ethical principle of aid itself. But the way it is translated in the field is still to be described and analyzed. It opens the door to a new understanding of humanitarian biopolitics (Fassin, 2006, 2010; Agier, 2012; Redfield, 2013). Indeed, isn't the choice of risking one's life for the others the ultimate way to contest the sovereign power of letting die (Foucault, 1976)?

LEGGRIS REVEL, MARTINE* (University Lille 2, martisan.rev@gmail.com)

Are Civil Society Organisations Doing Research?

Legitimate governance of science cannot be achieved by the research community alone. Science governance should take into account issues of broad public concern. Engaging CSOs (civil society organisations) in research design and implementation more effectively could help address these issues. Publicly funded research has an obligation to produce outcomes beneficial to the public who fund it. In the European Union this obligation is reinforced by a complementary trend toward participatory governance. Momentum is growing to deepen democratic engagement through the participation of citizens, also in the research environment.

Unfortunately, the knowledge base underpinning CSO involvement in research is extremely thin. This knowledge foundation must be strengthened if Europe is to develop a research governance structure capable of accommodating CSO involvement effectively. We need to deepen our understanding of how CSOs are currently participating in EU-funded research – to what extent, in what roles, for what purposes and to what effect...

In a rigorous investigation of unprecedented scope, our study maps these parameters of engagement and analyse their underlying assumptions. The models being identified should allow us to evaluate research outcomes more efficiently and provide contextualized understanding of CSO participation moving forward.

The findings presented in our paper are based on the results of two surveys carried out by the CONSIDER project in 2012. The surveys, which covered all FP7 projects, were aimed at gathering essential information about participation of CSOs in EU-funded research. Survey one was sent to 14,000 FP7 project coordinators and generated 2,959 completed responses. The role of CSOs in research projects is perceived very differently by academic institutions and the CSOs themselves. CSO participation in the FP7 research projects privileges an institutionalized professional type of civil society organisation over grass roots activists.

LEGGRIS REVEL, MARTINE* (University Lille 2, martisan.rev@gmail.com)

Beyond Rational Dialogue: Alternative Modes of Participation

The stumbling blocks of the "dialogical" procedures spread in the political public place and put in the service of the democratic participation of the citizens can be limited, by-passed even by the development of modalities and "post-dialogical" devices of sustainable cooperation in the public and private places, the political spaces and everyday life, with the aim of a both reflexive and constructive democratic governance. The "post-dialogical" way suggests that the "dialogical" devices in the service of the democratic participation are neither a necessary condition, nor a sufficient one. This suggests that at least for some workers, the freedom of marketized knowledge work may be somewhat illusory: the iron cage of corporate bureaucracy is replaced with a self-imposed digital cage.

Do-It-Yourself Finance! a Participatory Action Research on Community-Based Finance Systems in the Netherlands

The contemporary global financial and economic crisis has led to a shrinking Dutch welfare state, which encourages citizens to help and support each other on the grassroots level. This paper provides insights in a community-based savings and credit mechanism, called CAF-group. The rationale of CAF-groups derives from informal savings and credit associations in developing countries and migrants in the west. Since the early 1990s, international and local development organisations have learned from this phenomenon and have developed a methodology for self-funded financial groups to improve the well-being of vulnerable people.

Lately, CAF-groups have been successfully implemented in Spain, Italy, Portugal, Hungary, Belgium and the Netherlands. Based on practical evidence in Europe we can assume that participation has a positive impact on the freedom of need such as the generation of significant economic benefits and the improvement of financial management skills. Participation creates self-confidence among CAF-members which in turn leads to feelings of ownership and responsibility for the management and maintenance of their group.

The implementation of self-funded financial groups in the Netherlands is supported by a participatory action research program. This paper discusses the results of this program by exploring whether and how participation of members can improve their well-being based on the capability approach of Sen (1993). Therefore, the capability approach is operationalized and applied to three CAF-groups in the Hague, the Netherlands: (1) men, 40 plus, ethnically-mixed; (2) women, 40 plus, ethnically-mixed; (3) mixed sex, below 30, Araban ethnicity. Data is collected through qualitative interviews with members, participatory observations of group meetings and evaluation workshops.

This research provides insights into the operational features of community-based financing mechanisms, here three CAF-group in comparative perspective, and demonstrates how grassroots solidarity economy processes can contribute to the general well-being of vulnerable people in a time of global crisis.

Certifying Practitioners and Accrediting Programs: The United States Experience

This presentation is intended to clarify the distinction between the certification of individual practitioners and the accreditation of programs in sociological practice (clinical, applied, research and public sociology).

In the United States the Association for Applied and Clinical Sociology (AACS) certifies individual practitioners at the Master’s or Doctoral level. Certification is earned by a sociological practitioner to document their qualifications beyond an academic degree. It is a process of evaluation by previously certified peers and includes the submission of a portfolio and the completion of a demonstration in which applicants showcase their professional work. Certification is not licensure as granted by a state or commonwealth.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
In contrast, The Commission on the Accreditation of Programs in Applied and Clinical Sociology (CAPACS) accredits programs. Sociology programs can voluntarily seek accreditation to document their quality and performance. It involves a program self-study and external peer review of the program. Programs must meet curriculum standards in the areas of sociological theory, methods, and practical experience such as an internship. Accreditation provides impartial advice on improving the education of students. The Commission accredits programs at the Baccalaureate, Master’s, and Doctoral Level.

This presentation is intended to be an informative one in which both the process of certification for an individual and the process of accreditation for a program will be covered. A closing argument will be made that sociological practice - applied, clinical, and public - can be made stronger if it is populated by practitioners who are certified graduates of an accredited program.

Urban Land Encouragement and the Greenbelt in the Greater Toronto Area

In this paper, I look at the implications of the Greenbelt legislation that was introduced in the so-called Greater Golden Horseshoe Area in 2005 and is coming under scrutiny. The main rationale for the Greenbelt was to protect green space from further land encroachment by Toronto’s massive urbanization pressures; (2) to secure the hydrological system that is important for the Toronto region; (3) to safeguard several ecological sensitive areas and its biodiversity. This get together with the amalgamation of these two provincial legislations came into place with the purpose to direct growth to already built up areas. While it is hoped that the exurban expansion into the countryside will be alleviated with this policy, the provincial pressures on municipalities to support conditions for growth lead to different local perspectives on what the greenbelt constitutes. This paper looks at the two municipalities – Markham and Barrie – of the “inside” of the greenbelt and Barrie on the “outside” of the belt – and how they negotiate and integrate the physical barrier in their growth agendas, while contributing to further decline in biodiversity. By using these two perspectives, one from the inside, one from the outside, I will investigate how far the greenbelt is seen as a limit to growth, a repository for biodiversity or an important hydrological system. For this, I will look at the few remaining agricultural areas and their relationship to urbanization on the one hand and the protected landscape on the other. This paper draws on elite interviews with representatives in two municipalities (Markham and Barrie), review of reports and newspapers. It is hoped to give general lessons from it in regards to questions of biodiversity decline and water regime change in the context of urban development pressures where legislation, discourse and social practices are contradicting each other.

Inclusion and Structural Processes of Young Recipients of “Unemployment II Benefits”

This paper discusses first findings of a research project that tries to reconstruct biographical developments of young adults who are perceived as especially difficult to “include” – due to their precarious status as recipients of “unemployment II benefits”. I am especially interested in turning points of events that appear surprising in the eyes of professionals and of creative “metamorphosis” (Schütze 2001). In terms of biographical analysis a special focus is put on “structural processes” (Schütze 2001) of the young adults. There have been approaches to understand the situation of young people receiving unemployment II benefits in recent studies (i.e. Schreyer/Zahradnik/Götz 2012), but the focus on the biographical context and especially the relationship with relevant professionals is missing so far. Autobiographical-narrative interviews with the target group are being conducted according to scripts (Glasers/Strapsch 1996). Insights into the interaction with the professionals are gained on the basis of spontaneous narratives of professionals (in this case: counselors in the job center etc.) about the history of their working relationships with clients (Riemann 2000).

Schütze, Fritz (1981): Prozesse Strukturen des Lebensablaufs. In: Joachim Matthes, Arno Pfiefenberger and Manfred Stosberg (eds.): Biographie in handlungswissenschaftlicher Perspektive. Kolloquium am Sozialwissenschaftlichen For-
'Covering narratives' are at the foreground, and for certain experiences it appears that there is no discursive space, neither in the family nor in the social context. This has consequences: inclusion and exclusion are almost inextricably intertwined and occur simultaneously inside and outside the bi-national family; and violence and fear find their way, uncontrollably, barely discussable.

BACHER, JOHANN (University of Linz)
Individual and Structural Causes of Neet - a Case Study of Austria

Compared to other EU member states, Austria has one of the lowest youth unemployment rates, an above-average graduation rate, and a well-developed dual system of vocational education and training. Nonetheless, ongoing structural changes induce labor market conditions that particularly bar less well-educated young people from successfully and permanently entering the labor market. Consequently, between 2006 and 2011 the proportion of Austrian youth (aged between 16 and 24 years) Not in Education, Training or Employment (NEET) leveled off at slightly below ten percent.

In order to investigate the phenomenon of NEET in Austria comprehensively, our research is guided by the following questions: (i) How can the social composition of NEET be characterized? (ii) What are the relevant key factors that drive young adults on the pathway to NEET? (iii) How long do young adults remain at NEET-status? (iv) What are the key determinants that help overcoming NEET?

Our analyses are based on the Austrian sample census from 2006 to 2011 and we rely on a descriptive analysis as well as on a regression-based path analysis. First results reveal gender-specific risk factors for becoming NEET including early school leaving, poor health/disabilities, involvement in child care activities, and unemployment experiences at the individual as well as an active labor market policy and a broad supply of suitable jobs at the regional level. The heterogeneity of NEET requires individual measures for young people at risk.

LEITGÖB, HEINZ* (University of Linz, heinz.leitgoeb@iuku.at)
EIFLER, STEFANIE (Catholic University of Eichstatt-Ingolstadt)
Interaction Effects in Nonlinear Models - Testing and Interpreting Core Assumptions of Situational Action Theory

In contrast to the linear regression model, interaction effects—defined as the marginal effect of the moderator variable on the marginal effect of the focal variable on the outcome—are allowed to vary across individuals in nonlinear models. Thus, they do not simply equal the coefficient of the product term variable. Furthermore, even the nonlinear main effects model includes an interaction effect (labeled as structural or model-inherent interaction and/or compression effect) if both covariates contribute significantly to the explanation of the outcome. The presence of the model-inherent interaction is owed to the restricted range of the outcome variable.

However, several scholars have engaged in a discussion whether the model-inherent interaction has a meaningful interpretation. While some scholars argue that substantive interest is only on the interaction that arises from the product term variable and advocate removing the model-induced interaction from the total interaction effect (e.g. Bowen 2012), others adhere to the interpretation of the total effect (e.g. Ai & Norton 2003). So far, the discussion concerning the idea and interpretation of interaction in nonlinear models didn’t result in a common perspective.

To date, there is a lack of a systematically derived justification for one of the options, based on the combination of theoretical and methodological arguments. In order to overcome this shortcoming, we (1) develop a general perspective on the idea and meaning of interaction in nonlinear models, (2) target at developing an application scheme guiding researchers to the appropriate concept of interaction—either including the model-inherent interaction or separating it from the total interaction effect—and (3) propose statistical tests that allow for an analysis of the interaction effect.

Situational Action Theory, a recently proposed and promising criminological theory (Wikström 2006, Wikström et al. 2012), will serve as theoretical exemplification.

“How People Recount Their Life”: Recording and Analysis of Individual Well-Being over the Life Course

Constructing and structuring life courses through the perceptions of those concerned is a promising approach to the study of life-event histories. Pioneering sociologists have developed the qualitative analysis of turning-points based on subjective quality of life-course narratives (Hareven & Masaoka, 1988); we here present data from a quantitative survey which recorded individual life-event histories together with perceptions of well-being over the life course.

This unique dataset allows to explore the evolution of well-being from birth to age 50 among a representative sample of the French population. Respondents were asked to divide their lives so far into periods, and to explain and interpret these significant phases. They identified the turning points, the general tone of each period and what they saw as the landmark events.

Our initial analyses of this abundant material show how individuals’ life courses are structured around certain factual landmarks, especially landmarks in their conjugal and working lives, and the context of historical events. We also identify how individual characteristics influence the subjective description of well-being; the respondents’ subjective experience proves to be varied, non-stereotypical and not readily predictable.

Having established some of the relevant characteristics of the declared turning points, we then explore the changes in reported well-being from one period to the next within individual life courses. To explore the perceived life courses we apply Optimal Matching Analysis to draw out their main features and establish a typology of well-being trajectory types.

Large-Scale Dissemination of Small-Scale Renewable Energy Technologies in Developing Countries

Access to clean energy services is considered as a requisite for any development in rural places of developing countries. In remote places, decentralised renewable generation of electricity has been considered for a long time as a desirable alternative to rural electrification with the extension of the grid. A number of alternative technologies for cooking and heating have been designed and promoted by NGOs. But progress in the dissemination of these technologies has been slow. This paper will first examine some of the myths linked to rural access to energy and how they have been impeding the implementation of renewable energy projects.

The dissemination of small decentralised clean energy technologies in developing countries seems often analysed in the international development literature in terms of barriers to be overcome or institutional gaps to be filled. Considerable efforts have been put in subsidising clean energy technologies with most of the environment to thrive compared to established centralised (and often polluting) technologies.

This paper will finally analyse how innovative business models, but also adapted institutions and regulatory frameworks for private public/partnerships are contributing to accelerate the diffusion at a large scale of technologies that can now be considered as certain.

Urban Planning and Sustainable Energy Transition in Sub-Saharan African Countries

Urbanisation rates in Africa are the highest in the world and in most sub-Saharan countries energy service delivery is inadequate to keep up with the needs. The situation is often dire, with cities scarcely able to provide for their existing population, let alone allocate resources to minimise the longer term environmental risks facing them such as global warming, leading to on-going crisis management and potentially spiralling declines in welfare and economic growth.

Inadequate access to electricity and limited mobility because of deficient public transport services are common in major part of African cities, notably within informal settlements. The demographic trend in sub-Saharan Africa and massive migration from rural to urban areas can only aggravate difficulties and deepen the inequalities between the middle class and the poorest relegated in the margins of urban cities.
Strategies to integrate energy issues in urban planning could be built to mitigate these trends, by promoting energy efficient housing, better spatial planning and public transport and also access to energy by alternative electrification approach. This paper presents a research on organisational dynamics and constraints faced by sub-Saharan cities; it surveys capacity constraints in municipal departments and analyses the gap between policies and implementation of sustainable energy transition measures. This on-going research relies on case studies in Uganda, Ghana and South Africa.

National-Ethnic Identities Of Leaders Of The German Minority In Northern Poland

The main objective of this report is to present the national and ethnic identities of leaders of the German minority organizations in the context of their activities after 1989. Of the leaders (an in-depth case study of social construction, including structure and operating principles, considering internal and external interactions and the dynamics of this system was carried out. The empirical analysis of the leaders' identities are based on the main theoretical concept of ethnic identity that simultaneously constitutes a synonym of ethnicity by John Milton Yinger. The subject of this report includes formal institutions (associations), represented by formal and informal leaders of German minority groups in selected areas of northern Poland. The sample contains associations that operate in Pomerania, a part of Kujawsko-Pomorskie voivodship, the Warmia-Mazury voivodship and the northern part of the Wielkopolska voivodship. The location of the associations coincides largely with former province of West Prussia (1878-1920) and the territory of the former Second Free City of Danzig (1920-1939).

Cross-National Comparative Lifestyle Research: Theoretical and Methodological Considerations and a Two-Country Illustration

In this presentation, we offer a comparison of cultural stratification in France and Israel, with a specific emphasis on the association between the social field and the cultural field. Analysis of cultural stratification is interested in the degree to which individuals from different social groups are able to take part in culture and develop a meaningful relationship with it. In turn, such a relationship affects life chances in the realms of education, occupation, and social status. So, analysis of cultural stratification is a powerful tool for analyzing social stratification systems and to better understand the similarities and the differences between countries in this realm. Research on this topic has developed significantly, both empirically and theoretically, these last fifteen years, but relatively little attention has been granted to research that adopts a cross-national comparative approach and that asks whether patterns of association are similar in different national contexts. Such a comparative perspective will be particularly useful to test theoretical predictions regarding levels of cultural participation and their correlates in societal settings characterized by different social structures, cultural policies, market structures, and historical traditions.

We think in this contribution as joining a discussion about lifestyle spaces and cross-national differences to be complemented and continued with similar analysis in other countries. Since research on cultural stratification focuses almost exclusively on European and North American countries, the comparison between France and Israel is potentially very revealing. As all cross-national research entails methodological complexities, we treat the comparison between France and Israel with caution. The general picture shows that cross-national comparison helps us to understand and further theorize the way lifestyle spaces are linked with social positions.

Contested Multiculturalism in Germany? - the Debate on Circumcision

In the words of Angela Merkel multiculturalism has “utterly failed” in Germany (16/10/2010). Although the former German President Christian Wulff had stated “Islam also belongs in Germany” only a few weeks earlier (03/10/2010) the debate seemed to be settled. In contrast to other European countries adopting official policies of multiculturalism, German politics did not strive to incorporate multicultural elements into policy making or the legal system. However, with this policies of multiculturalism, German politics did not strive to incorporate multi-

involved tax advantages and allowances in place or even implementing new ones), we might see a more permanent policy translation towards a property-based welfare model that postulates the availability and utilization of private housing wealth. On the other hand, social policy research has continuously shown that, depending on welfare regime and timing, endogenous pressures are translated differently into reform processes across countries. Hence, with its comparative approach this study also seeks to contribute to the discussion on whether emergencies and crisis situations lead to the convergence of capitalist and social policy models or whether long-standing regime differences persist nonetheless.

La Fabrique De L'autonomie

Dans le contexte de la mise en œuvre volontariste d'un projet utopique, construction d'un nouveau quartier de ville constitué de mélange, (...) de solidarité et d'innovation sociale », à l'initiative d'une université et de collectivités locales, un « groupe-ressource » pilote les « commissions de mutualisation », lieu incontournable des prises de décisions, de positions ou encore de pouvoir des acteurs. On proposera l'analyse de l'agenda de ce groupe-ressource, les thématiques abordées, les situations et positions, les argumentations, les processus de décision. Les sujets abordés lors de ces commissions vont de la signalisation à l'animation commerciale du site mais sont surtout pour nous l'occasion de questionner les tensions entre les notions de dépendance et d'autonomie. Dernièrement le débat autour de la vente de frites par un « food truck » sur le parking de l'université a montré l'importance de la notion d'autonomie. Doit-on offrir à la personne en situation de handicap, l'être « dépendant », celui qui va à l'encontre de la norme, de l'idéal de nos sociétés (GAUCHET, 2004) qu'il soit en fauteuil, fou ou vieillissant, l'occasion de consommer des aliments riches en graisse ? Celui-là même que l'on pousse à l'indépendance, à participer à un processus de vie, à se prendre main dans la main, en glissade amarice mais que l'on ne reconnaît plus comme possédant des choix diététiques.

Entre une « politique de la pâtée » (ARENDT, 1967) et le paternalisme des décideurs, les commissions de mutualisation peinent à s'inscrire dans une conception capacitaire des individus et creusent un fossé avec les intentions originelles du projet : penser le quartier par et pour les usagers.

Changing Gender Orders and the Variety of Gender Welfare Regimes

The paper considers the present transformation towards a flexibilised gender order in a comparative perspective informed by the variety of gender regimes. The paper will outline three stages of gender orders in modernity: In the first stage of national modernisation and capitalist consolidation, the neopatriarchal gender order was established which assigned public and domestic power to men and defined women as mothers and housewives. The difference based gender order developed as the neopatriarchal authority receded. Formal and legal male superiority was reduced with women's votes, legal reforms for women's own rights of property and decision in the family. The worldwide spread of Fordist/Postfordist production established men as core workers and women as housewives. Emerging Welfare States institutionalised this division of labour with the breadwinner-housewife model. The varieties of gender regimes have evolved in the context of the different welfare state trajectories and the various paradigms of mass production as Fordism and Toyotism, but they also were influenced by the diverse liberal, social democratic or conservative political culture.

The difference based gender order has been evolving by women's educational advancements, by women's movements and the resulting legal and social reforms as well as by postfordism and globalisation and flexibilisation of employment. Postfordist flexible gender order is emerging which is based on a pluralisation of gender and gendered employment and life forms; as various forms of sexuality have become acceptable and men, the integration of women into the labour market and increasing flexibilisation and global mobility of employment. The impact of the diverse forms of gender regimes on these transitions will be investigated.

Soft Power, Reciprocity and Guanxi: Temporary Business Migration, New Media and Belonging

This paper connects two contemporary bodies of literature surrounding the nation that appear to be unrelated. The first is what might broadly be termed, disporadic connections. Although the notion of long-distance nationalism relegates the participation of diaspora in home nations to interference, work on trans-
nationalism and diaspora advocacy redeem these practices by revealing them to be two rather than one-way flows of socio-political influence and eco-cultural goodwill. Increasing migration from traditionally receiving nations such as Canada and Australia has also hastened the realization of diasporas as assets in the service of national interests. The second body of literature can be loosely grouped under the banner of soft power research. Perhaps spurred on by China’s adoption of Nye’s notion of soft power in recent times, these focus on the management of how one’s own nations is perceived by foreign publics and other nations and include literature on nation branding, national reputations and public diplomacy. Besides, both bodies of work in parallel they remain poorly connected. We submit that as their concern is with how individuals understand and relate to nations these bodies of research might be productively viewed as connected through a more specific triadic relationship between diaspora, home and host nation. As part of a new study on temporary business migration from China to Australia, this paper will use examples from new media to explore how theories of reciprocity and guanxi can shed light on this triad. Doing so will allow for a more holistic understanding of the various forces that shape the temporary migrant’s experience, and a grasp of the mechanisms that engender belonging amidst the uncertainties of provisional residence.

**The Dimensionality Of Immigrant Adaptation In Britain: An Analysis Across Generational, Ethnic, and Gender Lines**

Many theories have been put forward to explain the long-term experiences of migrants and their descendants (here termed adaptation), from classical assimilation theory, to multiculturalism and the ‘neo- assimilation’ theories of the ‘new’ straight-line assimilation theory and segmented assimilation. These hold different assumptions as to the concepts that ought to be used to qualify the immigrant experiences, as well as the paths of adaptation, i.e. the number of dimensions that the immigrant settlement ought to take, but are not always clear as to which they are, and how they link together. Moreover, current research tends to focus more on the individual analysis of various dimensions of adaptation (socio-economic, education, political participation) rather than an assessment of the actual number of dimensions of adaptation present across immigrant generations, which has important ramifications for understanding inequalities in the adaptation process across immigrant groups. Research on immigrant adaptation in Britain is no stranger to this trend.

The aim of this paper is to remediate to this issue by analysing recent British data to explore the dimensionality of adaptation that underlie the lives of contemporary Britons and their descendants. The determination of the dimensionality will follow the work of Bean et al (2012) and use factor analysis to determine the underlying number of factors behind variables deemed to be representative of the immigrant adaptation experience and assess the structural equivalencies in the factor analyses across gender, ethnic, and generational lines. The analyses will provide an empirical evidence base to: (1) assess the extent of inequalities in adaptation across gender, ethnic, and generational lines, and (2) examine the extent to which the uncovered dimensions of adaptation in the British context match existing theoretical views.

**LEROUX, LILIANE** (Universidade Estado do Rio de Janeiro, liliane@leroux.pro.br)

**Communities of Sense and the Borders of Art and Politics: Graphic Art, Moving Images and Dancing Bodies in Urban Periphery of Rio De Janeiro**

**Abstract Text:**

Duque de Caxias is a city located in Baixada Fluminense, a peripheral area of the Rio de Janeiro state occupied by many poor northeastern migrants attracted by work opportunities in the emerging 1940s and 1970s Brazilian southeast.

Transformed into national security area in 1971 by military coup [d'état and administered by mayors chosen by the national government until 1985, the Caxias of today is visibly experienced through massive images of floods, garbage and violence. Overshadowed by the beauties of the cidade maravilhosa (marvelous city), the neighbor city of rio de Janeiro, Caxias is, in the words of its youth, “a steamroller crushing all their dreams for generations”[1].

Against the trend we have outlined, a new scene erupts in 2000s Caxias: a youth who perceives the city as absolutely cinematic and responds visually to this finding.

This study aims to approach the intertwining of visual art, politics and everyday life by presenting and discussing the production of cultural activist group carcomangol in Caxias and the city of Duque de Caxias “Da Baixada” that promotes audiovisual productions and free film screenings that end up in large dance parties, widely advertised by posters displayed throughout the city and also shared on the Internet. Our focus is the visible surface of exchange created between the posters, the movies screened, their film productions and the dancing bodies performing on the floor.

Based on Jacques Rancière’s concept of partage du sensible, we address these graphic art, moving images and performances as a montage, a framing of a controversial world within the given world by the clash of heterogeneous elements that are redistributed, their new composition emerging on the fateful political mode of consensus, or otherwise, on dissensual supplements that displace the territories and borders of art and politics.

**LEUNG, TERRY TF** (The Chinese University of Hong Kong, terryleung@cuhk.edu.hk)

**User Participation in Welfare Service Management – Possibility of Authentic Argumentation Between the Welfare Service Users and Welfare Professionals**

User participation is an age-old piece of good practice advice for human services. In Hong Kong, user participation in service management and planning is mandatory for welfare service organizations that receive public funding. Also encouraged by consumerist imperatives, many welfare service organizations in Hong Kong include service users in their governance structures to inform the making of management decisions. However, critics often have doubt on the possibility of authentic argumentation between the welfare service users and welfare profes-
signals in these organizational platforms. Habermas' model of a discursive space that is free from the domination of power remains an ideal to be realized.

The author has conducted a study on the participation of welfare service users in governing welfare service organizations in Hong Kong. The study sets out to interogate the interaction dynamics between the welfare service users and the welfare professionals in organizational decision-making platforms. Drawing from Habermas' theory of communicative action (Habermas, 1986), the presentation will discuss how the welfare service users construct their institutional identity and the institutional power relations, and the ways that their lifeworld and system world interact to influence the communicative actions. The presentation will also explore the ways that discourse orientation and communicative competence of the participants shape the discursive space for organizational decision-making. The discussion will help assess the possibility of authentic argumentation in traditional power asymmetry between the welfare service users and the welfare professionals in the Chinese society of Hong Kong.

Determinants of Effective Cross-Border Cooperation

The world over local communities broach international boundaries. The borders of the Westphalian system of states have a differentiating effect on policy regimes. This article hypothesizes that the degrees of collaboration, coordination and cooperation are a function of these communities' capacity to reduce the transaction costs that differ policy regimes on either side of the border impose. Scrutiny of this hypothesis, however, requires us to control for variation in a local community's interaction. Two phenomena over the past 20 years provide for such variation: the end of the Cold War resulted in new borders that now divided communities that had hitherto functioned as one; the security measures in the aftermath of 9/11 had a similarly deleterious effect on the way cross-border communities functioned. Narva/Ivangorad across the Estonian-Russian border is an example of the former; Stanstead/Derby Line across the Canada-United States border an example of the latter. To explain variation across each case study's outcomes, the paper uses collective-efficacy theory to measure each community's response as a function of existing networks, supportive institutions, spatial dynamics, leadership, rate of change, economic cost, and organizational capacity. The findings not only disentangle determinants of collective efficacy among cross-border communities but also provide the beginnings of a model to facilitate effective cross-border engagement when local communities are confronted with events beyond their control that give rise to national policies with adverse effects on cross-border communities.

Implications of Generational Change for the Armed Forces

This paper investigates how the armed forces might optimize the skillset of the incoming generation of soldiers. Generational cohorts have widely been associated with distinct attitudinal structures and behavioural patterns: Baby Boomers, Gen X, Gen Y, Millennials, and post-Millennials. Each of these generations are said to encompass generalizable proclivities and attributes. This paper surveys the vast body of literature on generational theories which it contextualizes in wider social trends on diversity and technological innovation. With respect to the armed forces, the paper identifies controversies of particular relevance and knowledge gaps that stand to benefit from further research.

Dispossession through Delivery: Informal Settlement Upgrading and Socio-Spatial Confinement in Post-Apartheid Cape Town

The South African state has delivered more than 3 million formal houses since the demise of apartheid. Yet the same period is marked by a nearly ten-fold increase in the number of informal settlements, the gradual peripheralization of these areas, and the introduction of novel forms of socio-spatial containment, most notably temporary relocation areas (TRAs) on the urban fringe. How can a benevolent delivery regime coexist with forced relocations, shack eradication, and the introduction of veritable refugee camps administered by the same municipal state overseeing delivery and allocations? This paradox is particularly acute in Cape Town, where the persistence and augmentation of apartheid geography is generally accepted in the urban studies literature. In this paper, I examine relocation regime coexistence and the relationship between "deserving" and "undeserving" residents: neighborhood groups that successfully gain formal housing, while contending groups are defined as "undeserving" and relegated to "alternative accommodation" in TRAs and other novel forms of socio-spatial confinement.

Natural Disaster Mitigation, Public Opinion and a Propensity to Discount The Future

Despite the growing urgency of scientists’ warnings, much of public opinion remains wary of major expenditures and life style changes to mitigate future dangers from climate change. The impact is said to threaten mainly poorer countries, off the radar of wealthier polluters. Economists claim there is a universal human desire to discount the future, decreasingly valued the more distant. The worst dangers will strike many decades in the future and, even if they last for centuries on, much of the damage can be discounted to zero. Sociologists point to the greater salience of local and manifest experience over seemingly abstract and uncertain models and long term global scenarios, but also note that a cultural and social shift to short term values is recent and not universal or irreversible. A recent increase in manifest and unpredicted climate disasters, which have already struck both rich and poor countries, may in time encourage changes in public perception and a greater willingness to act. Scientists are now focussing on the effect of small rises in average global temperatures on the frequency and intensity of extremes in general, and on the measurable probability of them having already contributed to specific droughts, floods, storms and fires.
Monalisa Chatterjee's study of the Moombai floods, illustrates the potential effectivity between localities around the world which have had similar experiences. Foreign profit making companies that undermine or displace local activities. Poorer countries, with the least resources with which to respond, are often the most exposed to droughts, floods, storms, wild fires or rising seas, but there is no universal correlation between inequality and such vulnerability, which can strike anywhere, as Hurricane Sandy and the flooding of the Japanese nuclear plant have demonstrated. Accelerating climate change, shifting weather systems and poor preparedness for natural hazards undermine the predictability needed for preparedness by even the wealthy, and few nations have the resources or experience to respond quickly without help or advice.

The mechanisms for rapid trans-national or local to local assistance are as yet undeveloped and Naomi Klein and others have demonstrated the dangers of external aid, when it ignores local knowledge, brings in highly paid expatriates and foreign profit making companies that undermine or displace local activities.

On the other hand there has been too little attention to the potential in empowering and channelling aid to local bodies, and facilitating direct communication between localities around the world which have had similar experiences. Monalisa Chatterjee's study of the Moombai floods, illustrates the potential effectiveness of local networks, in contrast with the disastrous and damaging imposed responses to Katrina in New Orleans.

The Growing Unpredictablility Of Climate Disasters - Implications For Effective Responses In An Unequal World

Locally unprecedented and unpredicted natural disasters are already becoming manifest, and will increase in frequency and intensity, around the globe, as climate change advances.

Poorer countries, with the least resources with which to respond, are often the most exposed to droughts, floods, storms, wild fires or rising seas, but there is no universal correlation between inequality and such vulnerability, which can strike anywhere, as Hurricane Sandy and the flooding of the Japanese nuclear plant have demonstrated. Accelerating climate change, shifting weather systems and poorly understood tipping points undermine the predictability needed for preparedness by even the wealthy, and few nations have the resources or experience to respond quickly without help or advice.

Transnational assistance can be equally inadequate or inappropriate as illustrated by the divergence between forces of power and the lack of preparedness for radiation effects on US personnel assisting at Fukushima.

The mechanisms for rapid trans-national or local to local assistance are as yet undeveloped and Naomi Klein and others have demonstrated the dangers of external aid, when it ignores local knowledge, brings in highly paid expatriates and foreign profit making companies that undermine or displace local activities.

On the other hand there has been too little attention to the potential in empowering and channelling aid to local bodies, and facilitating direct communication between localities around the world which have had similar experiences. Monalisa Chatterjee's study of the Moombai floods, illustrates the potential effectiveness of local networks, in contrast with the disastrous and damaging imposed responses to Katrina in New Orleans.

Levin, Jack* (Northeastern University, jlevin@neu.edu)

Blurring the Boundaries: The Declining Significance of Age

This book examines changes in age-related norms, both in their substance and in their declining rigidity. The analysis of changes in age norms is embedded in a wider thesis that informal social norms in general have diminished in their influence. Jack Levin argues that the social and cultural forces responsible for the blurring of boundaries between public and private conduct, and increasing equality by gender and race, are implicated in the decline of chronological age as a determinant of major life decisions. The book address issues of the cult of youth, the relaxation of age constraints, the erosion of childhood, and the argument for a new life stage of 'emerging adulthood'.

Dr Levin argues that the declining significance of age has depended on the same changes in society as manifest in increases in cheating and in noise pollution, declining basic skills, and growing gender equality. Changes in age norms are examined in the broadest sense, from childhood, to youth to adulthood to 'boomer changes'. The book thus takes a comprehensive life course approach to aging.

Urban Resilience and Resistance in the Neoliberal City: The Cases of Comunidade Coliseu (BRASIL – SÃO PAULO) and Es.Col.a Da Fontinha (PORTUGAL – PORTO)

The world is being urbanized; the urban space is being neoliberalized (Peck and Tickell, 2002) (Leitner; Peck and Sheppard, 2007). The space neoliberalized rise up social fragmentation, polarization and unequally urbanities. At the same time however, the neoliberal spirit and practice, akin a contemporary religious, also arouse renewal urban struggle dynamics, renewal place strikes. The neoliberal practices and discourses produces their own spatiality and that reality is in permanent retroaction with alternative, subversive, counter-hegemonic and resilient space production and space demand. Those are the assumptions and questions criss-crossing the present essay which aims is to add some contributes to grasp those processes that exist in the neoliberal scenario. How the neoliberal direction of space production may be revert by the local people activity and their creative urban production visible on social movements, more or less resilient, more or less resistant? How the neoliberalized space interacts with resilient and resistant space, who movement these processes engage and what are fragilities and lines of flight can they offer?

On approaching those questions, we take as case studies the Comunidade Coliseu, a São Paulo’s favela – a brazilian urban slum habitation place – placed on Vila Olímpia Neighbourhood, and Es.Col.a da Fontinha, a squat-eviction process of an abandoned Porto’s municipal school transformed in an auto-managed collective resistant space, what movements these processes engage and what are fragilities and lines of flight can they offer?

Dispossession and Social Theory: Comparing the Politics of Land and Labor

This paper draws on over two years of ethnographic research on anti-dispossession struggles in India to analyze how the politics of land dispossession differs from the politics of labor exploitation. Based on this comparison, it tries to show how core features of Marxian social theory—including theories of the state, ideology, and historical agency—must be reconstructed in light of the recognition that dispossession is an ongoing feature, and not simply a historical precondition, of capitalist development. The paper concludes with reflections on the possibilities for creating alliances between land and labor struggles.
Notwithstanding the theoretical debates about multicultural education, the challenge of bridging these social boundaries has remained the same. In fact, as it became evidenced during the 2011 social protest (again, in Israel but also elsewhere), for a moment it was as if from 'bottom up' has emerged a new vision of society. In this new vision, the challenge for society was to rebuild its unity and solidarity against the divisions. In education, this implied breaking with the 'old' divisions and replacing them with a more cohesive educational vision. In this paper we ask to further explore this vision by interviewing educators (mainly headmasters and teachers) on their conception of multiculturalism in education. Particularly, the research will focus on the Negev area, where we will be tracing the relationship between the structural, spatial segregation of education (and habitat) and the possibility of and interest in multicultural education.

Conceptualizing the Bereavement Hierarchy

Abstract submitted to the RC01 Armed Forces and Conflict Resolution. Session: Death in the Military: Towards a New Paradigm?

Scholars of the syndrome of casualty sensitivity exclusively analyze public opinion and its impact on policies. A few studies argued that the mode of recruitment largely determines the character of collective actors. Different factors such as the extent to which the war is portrayed as successfully attaining its original goals challenge the dominant discourse and influence the war's policy. However, missing is an analysis of the bereavement discourse by which various social groups interpret the loss of their children's lives or the potential risk posed by their military service. The tone of this discourse affects the likelihood of antiwar protest. While manpower policies create a hierarchy of risk by exposing different groups to different levels of risk, this hierarchy is also reflected within the bereavement hierarchy. It is argued that the extent to which a group will develop a subversive discourse of bereavement that can be translated into antiwar protest is highly correlated with several variables: (1) the group's social status and its reliance on the military as a mobility track; (2) the group's ideological stance; (3) the legitimacy to protest as derived from the character of manpower policies - market-regulated vs. state-sanc
tioned death. In general, the lower the position of the group in the social hierarchy, the greater its tolerance for military death, and vice versa. Different levels of discourse can be hierarchically clustered, from subversive to submissive discourse. Thus, mapping the bereavement hierarchy may improve our understanding of how the social composition of the armed forces affects the likelihood of antiwar protest.

Institutional Feedback and Collective Learning in Industrial Waste Management

Heavy industries offer an interesting research subject of complex operational environment of waste management. Due to massive amounts of processed materials, heavy industries also play a crucial role in achieving challenging recycling targets that many countries have set for the future. Major challenge is to increase material recycling between branches of industries. Production facilities should not be seen as bounded units, but as parts of wider industrial symbioses in which secondary material flow from one plant could serve as raw material for another process or as a component of a novel product. Such symbiosis-like industrial networks, however, are difficult to manage. Management and development of industrial symbioses requires that different stakeholders are constantly able to develop new possibilities for recycling. This in turn, requires that stakeholders are collectively able to learn from each other to create nuanced picture of the relationship between debt and changes in life circumstances (especially as re-

Conversing with the Executioners: Denial and Expressed Moral Values in Interviews with Perpetrators from Nazi Germany and Operation Condor

In this presentation, we will expose a research on testimonies of former perpe-
trators of mass violence coming from two contexts (Nazi Germany, Last Dictator-
ship of Argentina), when the latter are in an extrajudicial interview situation with journalists or co-detainees. The aim of this paper is to show the heuristic dimen-
sion of such sources for the understanding of subjectivity within committed State violence and for the study of the question of "moral-concerns" of massmurderers. Consequently, we will bring to light the power relationships characteristic of these interactions, as well as strategies carried out by the interlocutors to lead these "veterans" beyond their face-work (Goffman, 1967) and, through the framework of the encounter, make them speak more consistently about their violent acts. Secondly, we will deal with how documents of this type can give us a privileged access to questions of morality in situations of mass violence. To this end, we will look closely at places in the discussions where the mass-murderer reacts strongly and feels offended, while on the other hand he often asserts the legitimacy of the violence he committed. We will focus here on the thematics of indignation in both contexts and more specifically on the relationships to money and the management of resources that emerge for the perpetrators in the course of their duties.
luted to health status and labor market activity); the association between household debt and the subjective experience of economic hardship; and cross-county variations in the relationship between household dynamics and indebtedness. The analysis is carried out using the first and the fourth waves of the Survey of Health Aging and Retirement in Europe (SHARE). The panel structure makes it possible to study changes in late life (marital status, labor market, and health) and their relationship to household debt in 13 European countries and in Israel. Preliminary findings reveal that household debt is widespread even in advanced ages; it is not limited to households that are asset poor; but it is systematically related to changes in health and marital status. Large country differences exist in the magnitude of household debt. We also find complex effects of country context on household level relationships.

Trade Unions and Whistleblowing: Can They Do More Than Protect Their Members?

The role of trade unions in relation to whistleblowing is frequently seen as reactive and defensive. They often have limited resources and regard their prime function as being to advise potential whistleblowers and to represent both those who feel they have been victimised for reporting concerns and members who are alleged to have engaged in wrongdoing. Research conducted by Public Concern at Work and the University of Greenwich in the UK suggests that trade unions are good at performing these tasks but are not particularly effective in ensuring that allegations are investigated and wrongdoing rectified. A more proactive and collective role for trade unions would be to negotiate whistleblowing policies and procedures at the workplace where employers were willing to do so. Research conducted in several countries consistently shows that whistleblowers normally report their concerns internally first and that line managers are often the first port of call. However, if this manager is not appropriate for any reason (for example, is the subject of an allegation or is regarded by the whistleblower as unsympathetic/antagonistic), the question arises as to whether, for trade union members, a lay or full-time official should be regarded as a suitable alternative to approaching higher management.

This paper will examine the existing data about how trade unions function in relation to the whistleblowing process and will consider the ways in which they could use their collective strength to play a more positive role in dealing with alleged workplace wrongdoing.

Natural Surveillance: Google Trekker and the End of Wilderness

For individuals seeking refuge from the increasingly monitored spaces of urbanized “control societies,” the idea of untamed wilderness has long held a special appeal. Figuring prominently in various strains of ecological writing and literary romanticism, wilderness has also been central to various indigenous belief systems in the Americas, Australia, and New Zealand. In these contexts, wilderness has often been valorized as an aesthetic, moral, and national resource of the highest order, a sacred place for the regenerative experience of living “off the grid” of contemporary techno-culture.

However, new surveillance technologies are rapidly taming the wild, bringing it under the watchful eye of the governments, corporations, and private individuals who want to minimize risk and uncertainty in any environment—even where an element of risk has long been considered a virtue. Indeed, the rapid proliferation of capturing technologies such as UAVs, night-vision, CCTV, GPS and other forms of remote sensing is challenging long-held conceptions of nature as refuge. As the surveillance assemblage expands into the wild, finding an unobserved, or unobservable, spot will become increasingly difficult. While Facebook’s Mark Zuckerberg dreams of an “Open Planet” of total transparency, Google is bringing its “Streetview” concept to nature with “Google Trekker,” a backpack mounted data collection apparatus that is designed to illuminate the hidden layers of the natural landscape. With satellite cameras, drones, and now Google Trekker looking over our shoulder even on the highest mountain peak, will we continue to imagine the regenerative power of wilderness in opposition to the enervating qualities of post-industrial life? Is desert solitude a bygone fantasy? By putting Google’s Trekker into dialogue with concepts of rugged individualism, wilderness, and frontier autonomy, this paper will explore the implications of “rural surveillance” phenomenon for national imaginaries and eco-consciousness generally.

The Unequal Structuring of Healthcare Choice: Perceptions of Australian Healthcare Consumers

The notion of choice in healthcare is a cornerstone of many western developed health policy settings. In the Australian context, choice has been integral to policy initiatives encouraging Australians to take out private health insurance (PHI). Promoted by policy makers and marketed by the health insurance industry, choice of specialist medical provider, hospital, and even complementary and alternative services has become highly valued. This private system coexists with a universal health insurance scheme for medical care and public hospital provision. However, despite the emphasis on healthcare choice, there has been little exploration about to the factors shaping, and unequal structuring of, healthcare choice.

Drawing on Bourdieu’s theoretical framework of intersecting forms of capital (cultural, social, symbolic, economic, and spatial) we explored the structuring of choice by Australian consumers using indepth interviews. Purposive sampling ensured a diversity of perceptions and experiences of healthcare choice, as well as in capacity to draw on healthcare capital when exercising choice. Interviews explored use of healthcare; purchase and use (or not) of PHI; social networks and information sources drawn upon when making healthcare choices. Interviews were thematically analysed.

We found that people have an unequal capacity to make choices in healthcare. Complex, interlinked forms of capital contribute to the unequal structuring of choice. While people’s choices are most clearly enabled or constrained by economic circumstances, it is strongly shaped by social relationships and networks, geographic location and interactions with healthcare providers. Choice represents an individualised rather than communitarian approach to healthcare service provision. Therefore the prioritising of individual choice in healthcare policy and markets contributes to the maintenance of unequal health outcomes across the population.

China in the British Imaginary: Coverage of Beijing Olympics in the UK National Press

Categorised as ‘mega-events’, the Olympics have long been an incredibly elaborate media spectacle in the guise of a purportedly idyllic and ostensibly shared global story, which uniquely reveals about host cultures, carrying real implications for international relations and domestic interests. Such a rich cultural repertoire shared in the media discourse becomes part of the popular imagination that constitutes the collective memory. It is in this sense that British media coverage of Beijing Olympics has shaped how a distant culture is discursively constructed and geopolitically defined. This article will answer the following questions:

-Which themes are focused on in the British press coverage of Beijing Olympics?
-How does the character of reportage vary between different titles?
-What is the general image of China that emerges from the coverage to be analysed?

This paper explores how does media narratives of Beijing Olympics relate to the wider context of an evolving repertoire of Orientalism in a discursive power struggle in the globalised context?

The Trend of Educational Inequality in China during 1940 - 2011

Because Hukou system has been existing for long time which resulted persistent and severe inequalities between urban and rural residents, including educational inequality. In today’s China, urban-rural segmentation is the most
influential factor affecting educational inequality, and educational gap between urban and rural population is much larger than of class, race, gender and nationalities. This paper, based on national survey data of 2006, 2008 and 2010, examines the change of the educational inequality between urban and rural residents over time. It concludes that educational gap between urban and rural children has been continuing to enlarge in spite of rapid educational expansion.

A New Cycle: Understanding the Current Life Course of Rural Families in Western China

Past research has proposed that with the urbanization process, Chinese agriculture is faced with prospects of industrialization and mechanization. However, rather than such transitions, we see more evidence showing a lack of labor and capital investment in agriculture in western China. This article investigates what the economic meaning of agriculture is to the rural families, and describes a generational division of roles apparently stemming from reciprocity. Using logit models and qualitative findings combined, we show that (1) agricultural income is insignificant to rural families compared to what they may earn elsewhere, so only the less capable part of labor remains home and they will not spend much time and capital in agricultural management; (2) a pattern emerges in which a peasant plays different roles at different ages: he is raised by grandparents in the country home where education is inexpensive, works in the city if possible supporting his children and parents, and returns home where livelihood is inexpensive, raising his grandchildren, hopefully with the support of his children who work in the city. We call this pattern the ‘new cycle’ as opposed to the peasants’ traditional life course which dissolved in the tension between rural-urban duality and globalization.

Gender and Power in the Primary Teaching Workplace: Women’s Fight Against Male Power in Taiwan

This paper aims to explore how gendered power manifests in the primary teaching workplace with reference to the context of the teacher surplus issue by analyzing the responses of the teachers in the campaign against male power. In addition to official statistical data, the data presented is derived from an ethnographic case study carried out in a primary school in southwest Taiwan. Non-participant observation and semi-structured in-depth interviews are the main sources of data collection. The non-participant observation included shadowing six subject teachers for one hour per day, and in which interviews were conducted individually with eight teachers, including the six teachers shadowed, one male class teacher and one female subject teacher for a gender balance. The analysis of data from official statistics and state publications identified the seriousness of and impacts from the teacher surpluses issue by analyzing the responses of the teachers in the campaign against male power. The analysis of data from official statistics and state publications identified the seriousness of and impacts from the teacher surpluses issue by analyzing the responses of the teachers in the campaign against male power.

According to my fieldwork data, in the 2008 academic year, 10 out of 13 males (76.92%) held managerial posts, while only 25% of female teachers were in similar positions. 21 (18 class teachers and three subject teachers) of the teachers having no managerial jobs were female, whereas only three of them were male. That is, it indicates the persistence of gender segregation: male dominance in the higher tiers and a concentration of women in the domain of classroom teaching. Furthermore, there are three important points to suggest the preference for men in the school management. First, men are preferred and advantaged to take on the managerial posts because of men’s abilities and availability associated with masculinity. The second is the alliance between men, which were beneficial to their seeking upward mobility. Third, in contrast to men’s advantaged position, women’s domestic responsibilities and roles are suggested as hindrances for their access to higher echelons. Yet, the quotes give evidence that some male teachers did not agree the preference as an advantage, due to invisible pressure from gender norms. In addition, the findings also demonstrate that some male teachers in the study prioritised their family responsibilities, rather than their own professional advancement. Men’s dissociation may imply that men can also enjoy working with children and the solid teaching profession.

Income Inequality, the Welfare State, and Economic Growth Across Time and Space

Sociologists, economists, and political scientists have studied the association between economic growth and income inequality, although with different foci. Some scholars have primarily studied the economic implications of inequality, while others have studied the distributive effects of economic growth. In both literatures, the welfare state is implicated as a key mechanism although with different functions. Some researchers posit that high inequality generates public support for social welfare which ultimately slows economic growth. At the same time, researchers contend that stronger economies with faster growth have greater capacity to reduce inequality via the redistributive effects of the welfare state. Yet, to date, no research has simultaneously tested these theoretical propositions. This paper examines the relationship between income inequality and economic growth through non-reverse structural equation modeling by examining a cross-national, longitudinal dataset. We find partial support for both research traditions.

Parents’ Commute to Work and Children’s Social and Emotional Wellbeing in Germany

Based on a nationally representative sample from the German Socioeconomic Panel Data (SOEP), we examined the relationship between parents’ commute to work and five domains of child emotional and behavioral problems, using SDQ and controlling for family socioeconomic and demographic characteristics and child gender. The findings show that commute to work by both fathers and mothers when their children aged 3 to 4 years was associated with a higher level of emotional and behavioral problems in their children two years later. In both-parent families, father’s daily commute to work two years prior was associated with higher scores for peer problems and, to a lesser extent, higher scores for emotional symptoms and hyperactivity when the children aged 5 to 6 years. Daily long distance commutes (40 or more km each way) in fathers was associated with the highest level of emotional and behavioral problems in children. Mother’s commute to work either daily or weekly was associated with a lower level of prosocial (positive) behavior in children. Analysis including single mothers showed that mother’s commuting 20 km or longer each way was associated with a higher level of conduct problems but a lower level of prosocial behavior in children. This is one of two studies on this topic in the literature and much further research is needed to address causality in a more rigorously way, with more waves of longitudinal data and to examine mechanisms linking parents’ commute to work and child outcomes.

Exploring the Sense of Justice about Grades in Group Projects

This paper provides a comprehensive review of empirical evidence linking parental nonstandard work schedules to four main child developmental outcomes: internalizing and externalizing problems, cognitive development, and body mass index. We evaluated the studies based on theory and methodological rigor (longitudinal data, representative samples, consideration of selection and information bias, confounders, moderators, and mediators). Of 23 studies published between 1980 and 2012 that met the selection criteria, 21 reported significant associations between nonstandard work schedules and an adverse child developmental outcome. The associations were partially mediated through parental depressive symptoms, low quality parenting, reduced child-parent interaction and closeness, and a less supportive home environment. These associations were more pronounced in disadvantaged families and when parents worked such schedules full time. We discuss the nuances, strengths, and limitations of the existing studies, and propose recommendations for future research.

Exploring the Sense of Justice about Grades in Group Projects

The problem of free ridding is ubiquitous in governing the commons. It often leads to injustice in allocating the rewards in any group projects. This paper investigates formal methods in which the instructor may adjust individual students’ grades relative to grades earned on a group project that reflect group members’ sense of justice. Data are collected from 77 college students enrolled in a sociology course. We estimate the just grade function for each and every rewardee student in each group, and show how to use these estimates to grade their grade adjustments. We also engage a recent debate (Markovsky and Eriksson 2012; Jasso 2012) about how to measure the just reward. This paper is motivated by two bodies of literature. The first one concerns the free ridding problem ubiquitous in the social world when public goods are involved (Hardin 1968; Marwell and Ames 1979). Specifically, every instructor must have encountered the difficulty of how to determine individual students’ grades when they assign assignments to be completed and evaluated in groups. While many instructors may have treated it as a nuisance in their grading duties and proceed in various eclectic ways as long as the students do not complain, it is indeed an important issue to address if one takes seriously the idea of justice and the authoritative duty an instructor/grade performs. The second one concerns the social psychology of distributive justice (Berger et al. 1972; Deutsh 1975; Jasso 1980; Konow 2001). Specifically, we argue that theoretical and methodological developments in this literature (Jasso 2007) may be applied to the free ridding problem of allocating rewards to individuals participating in group projects. In this paper, we demonstrate such a particular application in the classroom context.

The Bureaucracy and the Construction of Risk in China

There were three large-loss fires ignited by exterior-wall insulating materials which mark the fire risk of insulating materials a hot topic in the past three years in China. Among means of policies which limited the combustibility of the insulating materials caused a considerable controversy among Housing and the City and Countryside ministry of construction, Bureau of Fire in the Ministry of Public Security and enterprises specializing in insulating materials. Finally, it was the State Council of China that calmed the things down.

This paper is based on a qualitative research mentioned above, which attempts to elaborate the logic of the bureaucracies of China in the process of construction and governance of risk. It shows how the fire risk assessment standards vary across government interventions which lead to the risk conflict first and then risk consensus among the three stakeholders mentioned above. From this research, we can get some conclusions. First, the relations of defining risk depend on the power structure in the bureaucracy, especially when the departments of it involved. Second, the risk is divided with the segmentations of bureaucracy which all try their best or shift their responsibility, and this leads to the “organized irresponsibility” which seems to be a classical term in Chinese politics. Third, although the fire risk of the exterior-wall insulating materials is closely related with the public’s benefit and safety, it’s still a topic existing only in the government and enterprises, not a covered field for the public, which proves that the sub-politics Ulrich Beck expects have not happened in China.

Impact of Conjugal Living Arrangement on Marital Satisfaction in China’s Rural Labor Flows

In the context of rural people floating out for jobs, one of challenges is marital stability of rural couples who are separated. In a traditional society, women stay at home and their husbands go outside for work. And this model of conjugal living arrangement maintains the harmony in the family for thousands years. However, now more and more women have migration experience.

Using the data from the survey “Population Mobility and Reproductive Health / Family planning Services”, which was carried out in 8 counties of Anhui province of China in 2010 by the Institute for Population Studies of Soochow University, this paper analyzes the impact of conjugal living arrangement on marital satisfaction.

The results show that, more than 60% of rural people have the experience of going out for jobs. More than 30% of rural couples live separately. When men interview this paper, I will working at hometown, only a few of their wives float out at present. There are no signs to show that migration experiences, living arrangement or family values have significant correlation with marital satisfaction.

There are almost half of women interviewed whose husbands live apart from them being migrant workers. For rural women without migration experience, living apart has insignificant influence on marital satisfaction. However, for rural women with migration experience, living apart could lead to lower marital satisfaction than living together. On the other hand, family values are significantly helpful to marital stability.

Law and Rebuilding Community In Post-Disaster Recovery In China

Law and Community in the Post-Disaster Recovery in China Abstract: The existing emergency response act of PRC(2007) prescribes many issues with regards to the post-disaster recovery, especially the rights and obligations of governments of different levels, civilians, and NGOs, etc. The efficiency and effectiveness of these articles related to the recovery was not reviewed until the S.12 Wenchuan Great Earthquake took place in 2008. Especially in the period of recovery of the catastrophe, the rebuilding of local community is one of most important problems confronted by the disaster zone, but which cannot resolved practically according to the above mentioned law and demonstrated there existed at least four shortcomings in the law. So the central and Sichuan provincial government took several active measures to make up the shortcomings of the law for rebuilding the community. Firstly, the State of Council made specially and comprehensively the post-disaster recovery regulation. Secondly, different governments were facilitated to build up mutual help relationship so as to restore and revitalize the economy and social development as soon as possible. Thirdly, government adopted many reconstruction disaster policies synchronizing with the planning and rebuilding disaster zone. Finally, in the process of rebuilding, the ability of self aid and help of individual and family was emphasized by the government and community which began to promote drastically to train and educate the civil society’s disaster response ever than before. In sum, the benefits generated from recovery practices of the Sichuan must be very helpful to amend and perfect the existing recovery articles of the act.

Diffuse or Enclosed? the Ethnic Communities of Taiwanese Migrant Workers in China

This paper focuses on how the spatial characteristics of cities influence ethnic communities of Taiwanese migrant workers in China. Although Taiwanese migrants and Chinese both fall under a ‘pan-Chinese’ context, most Taiwanese migrant workers still see themselves as a different ethnic group and thus inhabit ethnic communities that are distinct from those of the locals.

Within this context, this paper tries to answer two questions which are directly related to urban sociology and community studies. First, whether the spatial characteristics of cities affects the openness or insularity of an ethnic community and—if it does—why is this so? Second, to what degree does such pan-ethnicity affects the lives of those living in different cities.

By comparing data collected from 35 interviews, as well as by examining other factors such as the cultural practices of Taiwanese migrant workers in Beijing and Shanghai, the paper highlights either the openness or insularity of such ethnic communities, derived from factors not only based on ecological characteristics (such as physical arrangements for work and leisure), or industrial differences, but also on how Taiwanese immigrants perceive and interact with the local Chinese in different cities in this paper.
bonds, and ethnic relations. I will show that openness/insularity is an idea that I have arrived at by combining Claude Fischer’s (1984, 1995) concept of the institutional completeness of a subculture, Louis Wirth’s (1938, 1956) theory on the cultural heterogeneity of cities, Robert Sampson’s (2012) discussion of neighborhood effects, and the subjective experience of the city in which they live. Continuing, I will list empirical indicators of openness and insularity, such as residential pattern, social/ethnic relation, friendship network, and the perception of local societies.

Down to Earth: Environmental Governance and Flexible Bureaucracy in China

The notion of “flexible bureaucracy” is an oxymoron; by definition, bureaucratic institutions are not amenable to change. The sociological literature on the East Asian developmental state has articulated the processes by which authoritarian states relied on rigid bureaucratic structures to implement development policies during the late twentieth century. Despite historical legacies, the authoritarian bureaucracies in East Asia have undergone substantial transformations in the last decade. This paper discusses the relaxation of bureaucratic rigidity, and devolution of political power towards non-state actors in the face of environmental challenges. This study focuses on the case of China, seeking to understand how environmental issues have brought challenges and opportunities to the regime. How have localities in China devised different strategies to respond to pressures from above and below regarding environmental degradation? As different places experiment with innovative forms of environmental governance, what are the resulting differences in policy outcomes? These questions are not only important for understanding the current state of environmental governance in China, but also critical for contributing sociological knowledge about mechanisms of accountability, institutional isomorphism, and political legitimacy under authoritarianism.

The empirical discussion is informed by ethnographies in four Chinese cities, including Beijing, Dalian, Hangzhou, and Chongqing. It also draws from archival research in Beijing. This paper concludes that, in China, environmental protection is the most politically devolved policy area. Thus, environmental governance exhibits significant diversity across localities, in places where the bureaucracy remains tightly controlled by the central state, environmental governance reflects a genuine commitment to ecological sustainability, even at the cost of economic growth. Contrarily, in places where the local state enjoys higher levels of autonomy and flexibility, bureaucrats are more likely to pursue partnerships with private businesses and other non-state actors. These partnerships tend to promote business development and political maneuver under the pretext of environmental protection.

The State on the Street: Visible Hands in Creative City-Making in Shanghai

Historically, cities are strategic sites for the penetration of state authority. They are critical posts for taxation, defense, and trade. It is therefore no surprise that cities bear extensive marks of the state. With the rise of creative economy, how have localities in China devised different strategies to respond to pressures from above and below regarding environmental degradation? As different places experiment with innovative forms of environmental governance, what are the resulting differences in policy outcomes? These questions are not only important for understanding the current state of environmental governance in China, but also critical for contributing sociological knowledge about mechanisms of accountability, institutional isomorphism, and political legitimacy under authoritarianism.

In this working paper, we bring the state back in. We critically interrogate the role of the state in the creation of the urban creative economy. The discussion is based on a structured comparison of three art districts in Shanghai, including Tianzifang, M50, and Bridge Eight. We develop the comparison along three dimensions. First, we situate the timing of development in the broader context of urbanization. Over the past two decades, the “norms” of urban development have gradually shifted from massive demolition towards historic preservation. The focus on timing enables us to understand how the state shapes the trajectory of creative city-making. Second, we pay particular attention to the various actors that played crucial roles in each of these projects. We attend to the contribution of different actors, as well as relations between actors. Third, we bring to light the importance of spatial attributes of each project area in constraining and facilitating the exercise of state power.

Our empirical evidence points to a more nuanced conception of the state than previously reported in the literature. We explain why, on different occasions of creative city-making, the state exhibits different levels of intervention, from tacit agreement to active support. We advance a relational conception of the state to better account for the rise of art districts.

Class Boundaries in Cross-Class Friendships: A Preliminary Study Based on Social Eating Network Data in China

China’s class structure is changing dramatically after market-oriented economic reforms. Economic marketization and privatization of ownership has created a new pattern of social stratification, which differs from the cadre-dominated social hierarchy in the state socialist era. Based on a national survey in China which reported social eating network among 5000 households, this paper documented social networks structure among 12 occupation-based classes, and examined patterns of friendship ties across class boundaries. In particular, analysis of strength and diversity of cross-class social ties suggests (1) the pattern of friendship is affected by social class structure, and social resources can be mobilized across class boundary through social network channels, (2) Varying degrees of social-network cohesion is exhibited among different social classes, (3) the manual-unmanual boundary is significantly more permeable than authority, expertise and property-based class boundaries.

Living in the Gray Zone: State’s in/Exclusion of Live-in Migrant Care Workers in Taiwan

Since 1992, in order to accommodate demographic necessities—including the increase in the number of double-salary families and the “graying” of the population in Taiwan as fertility rates decline and people live longer—the Taiwanese government has allowed the immigration of domestic workers and care workers as short-term contract labor force to shoulder the responsibilities of caring for older adults, people with disabilities, the sick, and younger children. In 2013, the number of migrant care workers in Taiwan reached a stunning 200,530 compared to 26,233 in 1997. In contrast to their counterparts working in the factories, live-in migrant care workers are not applied to Labor Standard Law that defines the rights of workers.

Relying upon institutional ethnography, in this essay I demonstrate how the specific lived experiences of live-in migrant care workers are shaped by the social organization of carework in Taiwan within the context of labor migration. This study investigates migrant labor policy in general and migrant care labor policy in particular to illustrate how the Taiwanese government includes migrant workers into private labor market to solve the shortage of care labor on the one hand. On the other, live-in migrant care workers are excluded from full legal protection by the Taiwanese government through its practice of state sovereignty.

Exploring the Meaning of Social Justice in Chinese Context

The globalization process has been greatly affecting the development of many professions as well as the young people who strive to become one recognized member of the professions. Among the many professions, social work, with its long tradition in pursuing social justice is the major concern here. This paper attempts to investigate how social work undergraduates in China understand and interpret the key concept of social justice, the value that they should be devoted to defend, and what factors contribute to their understandings and interpretations. As a qualitative research, in-depth semi-structure interview was adopted to collect opinions from 23 social work students in Guangdong province.

The result indicates that this group of interviewed students perceives social justice as a distant ideal which is too difficult to achieve. From the students’ narratives, a strong sense of powerlessness was detected and they feel constrained a lot by current social and political reality in Chinese society. They mostly construct the idea of justice within a nation-state framework by using a resource-distribution scheme.

Their conception of social justice is largely a mixed product of Western-oriented social work education and their growing-up experience in transitional Chinese society. In addition, it is worth exploring the distinctive and long-lasting effect of their received political education (mainly derived from Marxists’ theories) in high school, which offers them vocabulary, standpoint, and theoretical assumptions to develop their interpretations of justice. Based on above empirical findings, this research suggests some future directions for promoting a more inclusive and globalized understanding of social justice among the Chinese youth.
A Text-Mediated Buddhist Conglomerate and Its Practitioners: Using Institutional Ethnography to Explore Lay Followers' Religious Experience in Tzu-Chi

The purpose of this paper is to use concepts of Institutional Ethnography (Smith, 2005) to explore the way in which texts coordinate lay followers' religious activities in the Tzu-Chi Organisation (hereafter, Tzu-Chi), one of the largest and the most resourceful Buddhist civil organisations in contemporary Taiwan. Although it started as a small civil foundation with a few Bikkhunis and a dozen of lay female followers in the late 1970s, it has grown into an international religious "conglomerate" within half a century, and owns subsidiaries across charity services, educational institutions, medical centres, media industry, and so on. Offering a wide range of charity services and voluntary programs, Tzu-Chi organisation transforms the way in which Taiwanese people think about and practice Buddhism. Scholars are aware of the thriving power and transformative structure of this organization. However, not enough debates have been devoted to: a) the way in which lay followers, especially female participants, respond to this new form of religious organization, and b) interweaves the discussion with rapid socio-economic changes of 20th century Taiwan. Therefore, the researcher conducted 10 in-depth interviews on female volunteers of Tzu-Chi in order to find out the way in which the followers adapt Buddhist doctrines and practices through the organisation's modern form. The research findings demonstrate that a) in a rapidly changing society, Tzu-Chi transforms Buddhist groups into a new form of religious organization that offers practices where housewives build up horizontal ties outside the private sphere; b) media texts such as the founding nun's book publications, monthly magazines, TV dramas produced by its own TV network, and so on, as well as lay followers' participations in the organisation's volunteering activities help to consolidate and coordinate lay followers' religious identities.

Religious Sisterhood Among Female Audience of Da-Ai Dramas

The purpose of this paper is to examine the way in which the audience responds to prime-time dramas broadcast on a widely watched religious channel (and another commercial TV network), owned by one of the largest Buddhist civil organisations in contemporary Taiwan—Tzu-Chi Organisation. Tzu-Chi started as a humble civil foundation with a dozen of lay female followers and a few Bikkhunis that offers charity-based services in the late 1970s. Within half a century, it has grown into a huge religious "conglomerate" which owns subsidiaries across charity services, education institutions, medical centres, media industry, and so on. Among its various types of multimedia platforms, the success of its TV network (Da-Ai TV) draws attention from one of the largest commercial TV network (CTI TV) and started to broadcast the Da-Ai's prime-time drama (also known as Da-Ai Dramas) through both networks from June, 2013. As Tzu-Chi has increasing visibility and influence in a competitive TV market in Taiwan, this paper aims to explore the way in which the prime-time dramas are watched and interpreted among followers and non-followers. The researcher has conducted in-depth interviews on 13 female audience who have been watching prime-time dramas on Da-Ai TV for more than six months. The research findings demonstrate that the audience focuses on the edutainment purposes when choosing to watch Da-Ai TV because a) watching these dramas is seen as an easier alternative to acquire sophisticated Buddhist doctrines, and to practice them in everyday life; b) discussing these dramas with female colleagues or friends can be educational and encouraging, and, thus, helps to form horizontal ties among female audience.

Social Desirability Bias and Mode Effect in the Case of Voting Behavior

Response distribution and data quality are influenced by different mode of data collection. Such consequences are seen as mode effect. One significant influence of mode effect on data quality is social desirability bias, which is related to whether an interviewer is involved, pace of cognition process during interviews, sensitivity of survey questions, etc. For example, social desirability bias is more likely to occur in face-to-face interview when compared to telephone interview. Slower pace and the development of rapport in the former encourage respondents to think thoroughly and provide a socially desirable answer. However, previous research on desirability bias did not observe such findings. The problem of social desirability bias is found to be more severe in telephone interview than in face-to-face interview when dealing with voting turnout.

Democracy and Education: A Strategic Alliance For The Exercise Of Future Freedom. The Case Of Argentina

Argentina today finds itself in the midst of a crisis, with a weakening democracy and an education system in decline. Any solution to the country's current problems must focus on not one or the other of these issues, but on the two together, as inseparable.

This study aims to examine mode effect on social desirability bias by comparing CATI and face-to-face interviews on the voting turnout of the 2004 presidential election in Taiwan. Data are drawn from two national representative sample conducted the same year after the election to eliminate recall error, with face-to-face survey data from Taiwan Social Change Survey and CATI data from Taiwan Social Image Survey. After weighting by population characteristics, socio-demographic variables will be compared first to examine the dis/similarity of the two samples. Voting behavior, political attitudes and other related variables will be included in the multivariate analysis. Conclusion and discussion will be provided.
Second, social networks and new technologies will be considered inviting a rethink of the inclusion of these non-mainstream tools in the fields of intensive training.

In fact, both the democratic transition and the educational system can be studied from the political point of view as an alliance and strategy for the construction of citizenship where students now have extended power coming out of the classroom room and are intertwined with the adult world and “control”.

From there, decentralization and participation mechanisms were built in that focused on serving and satisfying the diffuse demands of its citizens. Thus, the expansion of the democratic base with the introduction of students trained in an irreversible process as is the information era and digital culture has led to a dislocation of representation and alliances.

As such, the discussion here will briefly include how new political consensus, access to education and new social networks have strengthened democratic processes around the world.

In particular, it will be asserted that the new school within and with the democratic context in Argentina comprise a strategic alliance that must be ensured in order to discourage the development of undemocratic contexts conducive to coups or destabilizing conflict. In the first part, the current situation regarding democracy and education in Argentina will be presented.

Next, an analysis of this situation will be given.

Finally, conclusions and some ideas for future changes will be proposed.

Stigma, HIV Law, and HIV Testing Among Offenders Under Community Supervision

In 2010, the U.S. Office of National AIDS Policy (ONAP) promoted a national strategy for HIV testing and linkage to care (“test and treat”), with emphasis on communities at risk. Potential barriers to HIV testing were cited, including HIV laws that criminalized non-disclosure to sexual partners. In order to identify such barriers, this study assessed knowledge and attitudes toward mandatory disclosure and HIV testing among 197 probationers and parolees in a southern state. Over two-thirds of participants had heard about the law (69.2%) and most believed that it was fair (85.5%). Most participants also supported HIV testing for offenders under community supervision (68%). Despite this support, 65.6% of participants believed that the law was a barrier to HIV testing because of fear, stigma, and potential for arrest. Perceptions of HIV/AIDS as a crime and non-disclosure as murder suggest increased stigma and resistance to “test and treat” among convicted offenders.

Women Foreclosed: A Gender Analysis of Housing Loss in the U.S. Deep South

Women were a focus of subprime lending during the housing boom, increasing their risk of mortgage foreclosure during the Great Recession of 2007-2011. Following Valentine’s (2007) call for a feminist geography on interactions between social categories and spaces of ordering, this article investigates housing loss among women foreclosures in a southern U.S. county with a history of residential segregation. We collected data manually from legal notices and public access property records between 2008 and 2013, and then combined the information with census tract data for GIS analysis. We found significant differences between women foreclosures in terms of marital status, race/ethnicity, and location. While married women foreclosures typically lived in majority-white areas throughout the county, their unmarried counterparts were clustered in low-income Black neighborhoods close to the county seat. Women’s foreclosure activity followed historical patterns of residential segregation, with privilege and disadvantage in juxtaposition with social hierarchies of race and class. We conclude that housing loss in the U.S. South is complicated by racial history and the subordinate status of ‘women alone’ in the property market.

Public at Risk or Public As Risk? Managing Environmental Concerns through Risk Governance

Public relations, risk communication and participatory approaches to risk management have emerged as means to handle diverging interests in society; not least public perceptions could be a source of risk in the sense that public perceptions and opinions could pose a threat to the legitimacy and stability of existing ways of managing risk. Thus, risk governance focuses on how organizations deal not only with the technical calculation of risks, but also with the actors they perceive as possible threats and potential risks to the stability of the organization.

This paper analyzes risk governance and the implications of it. The empirical material consists of three interview studies and two studies of public records on how Swedish authorities handled citizens and stakeholders’ claims for regulating nature. The analysis finds that the public claims were seen as a particular risk, where public outrage and loss of political legitimacy became part of the risk panorama of the responsible agencies. In particular five mechanisms were used: dissemination of knowledge; naturalization of the problem; development of policy action; inclusion of stakeholders; and individualization of responsibility. Through these mechanisms, governmental agencies succeeded to influence stakeholders and citizens understandings and modify their claims. Thus, what took place was not only a process for governing nature, but also for governing people The paper ends by addressing the question whether this conclusion indicates the end of public participation or if it can serve as a trigger for more radical approaches of public participation.

On The Development Of Talcott Parsons’ Conception Of Societal Community

On the Development of Talcott Parsons’ Conception of Societal Community During the 1950s and early 1960s, Talcott Parsons tried to write a general interpretive book on American society using the analytic methods he had developed with a function paradigm. Around 1960, he was joined in the task by his recent doctoral student, Winston White. Although the work was interrupted when White suddenly left academia in 1962, well over 1200 pages of draft chapters and preliminary working papers were produced. Among the drafts and working papers are Parsons’ first attempts, using the four function paradigm, to develop a conception of the integrative subsystem of society. The initial attempt built essentially on Chicago School ecological notions of community in the sense of local community. It conceived the integration of society in terms of an aggregate of local communities. A later draft, from 1966, explored a range of social institutions that serve to integrate American society as a whole. In this work, Parsons sought to develop in analytical detail and in application to a complex modern society, the conception of societal community that had emerged in early drafts for his Societies; Evolutionary and Comparative Perspectives and The System of Modern Societies. Our presentation will discuss the differences between the two conceptions of the integrative subsystem and American society and will attempt to compare Parsons’ conception of societal community to current analyses of civil society and to Jeffrey Alexander’s The Civil Sphere. Parsons emphasized complexes of integrative institutions that have strongly equilibrating effects, but in contrast to Alexander and others, included as well institutions that have strafing effects. He understood differences in levels of influence among individual actors, collectivities, and associations to be essential to social integration.

Misrecognizing the Modern: Japan and the Failure of Social Theory

Modern social theory rests on a series of misconceptions, the most important of which are ethnocentrism and presentism. That is, classical social theorists equated the modern with the west (and particular parts of the West at that) and with their contemporaneous reality. In so doing, as important as they are, their theorizing systematically misrecognized the nature of the modern. Yet “modernizing” Japan, and especially its social theorists, used the culture-bound and time-bound notions and in so doing not only misunderstood the nature of the West but also of the non-West, including most importantly Japan itself. Furthermore, the Japanese misunderstanding would in turn be absorbed by Western writers who were seeking precisely to overcome the limitations of classical social theory and of modernity. To say, not importantly, Marx and Weber - and consider the genealogy of misrecognitions that continues to hobble the task of social theory today.

Using Factorial Surveys and Stated Choice Experiments to Investigate Discriminatory Attitudes and Preferences

Empirical research on discriminatory attitudes and behaviour grapples with the social undesirability of its object. In many studies using regular survey methods, estimates are biased, and the social context of discrimination is not taken into account. Several methods have been developed, especially to deal with the first problem. In this regard, the estimation of the ‘true value’ of discriminatory attitudes is at the centre of interest. However, methodological contributions focusing on the social context of attitude communication and discriminatory behaviour, as well as the connection between both, are rare. We present two experimental methods which address those issues: factorial surveys and stated choice experiments. In a first study, the usefulness of factorial surveys is demonstrated with data on German anti-Semitism (N=279). We show that the rate of approval with anti-Semitic statements increases if (a) respondents are told that the majority of fellows agree with such statements, (b) the term “Jews” is replaced by the term “Israelis”, and (c) reference to the Holocaust is made. Apart from the main effects of these experimental factors, significant interaction effects regarding the political attitudes and social status of respondents are observed. In a second study, a stated choice experiment on the purchase of olive oil and tomatoes was conducted in Germany (N=440). We find that respondents prefer Italian and Dutch products (control treatment) compared to Israeli and Palestinian ones (discrimination treatments). There are no significant differences between preferences for a so-called ‘Peace product’ (which is produced jointly by Israelis and Palestinians) and products from Italy as well as the Netherlands. Yet, taking discriminatory attitudes (anti-Semitic and anti-Arabic attitudes) into account, a strong correlation between those attitudes and stated behaviour (purchase of Israeli, Palestinian and jointly produced products) can be found. This adds support to the hypothesis that discriminatory attitudes hold behavioural consequences.

Reconciliation of Work and Family Life Among Welfare Recipients in Germany. Determinants of Mothers’ Ability to Leave the Benefit System Via Employment

In the first decade of the 21st century there have been reforms in German family and social policy towards an “adult worker model”, aimed at improving reconciliation of work and family, and linking receipt of welfare benefits more strongly on achievements in the labour market. Mothers receiving welfare benefits are subject to both new policies. In this paper it is investigated how these mothers succeed in entering the labour market, to what extent they are able to end their benefit receipt via employment and what the determinants are. Reconciliation of work and family life is a central area of political debate about reducing poverty among families and lone mothers in particular. Therefore the role of mothers’ child care responsibilities in the process of ending welfare benefit receipt is evaluated while controlling for individual labour market resources. Special emphasis is laid on the impact of child care infrastructure and labour market conditions.

In a first step, the probabilities to take up employment are estimated from administrative data on lone mothers and mothers living with a partner. Care responsibilities in the household and mothers’ labour market resources influence the process of labour market integration. Lone mothers are more likely to take up work when they don’t have young children in the household than mothers living with a partner. For both groups of mothers employment is predominantly not full-time.

In a second step, determinants of the probability to end benefit receipt with the new employment are estimated, taking into account that there is a selection at the first step. Care responsibilities only play a minor role in this part of the process, while household size and characteristics of the new job (occupational prestige, working time) are of major importance.

**Change of Basic Human Values in Europe 2002-2012**

Values research is gaining an increasing popularity among social scientists and there exists several theories, trying to deal with this complex phenomenon. Given study is based on the Basic Value theory by Shalom Schwartz, which while describing a theoretical scale of basic values, has revealed a robust framework for both cross-time and cross-cultural value comparisons.

During last two decades, Schwartz has developed several value instruments, which has been used in numerous surveys around the world. Given analyses uses data from European Social Survey (ESS), which includes one of mentioned instruments - a short version of portrait value questionnaire (PVO-21).

ESS is a comparative social survey with free access and very high quality criteria. It was started in 2002 and is conducted in every second year in most of European countries. Therefore this survey provides a database with nearly 300000 cases from year 2002 through 2012, covering very dramatic period of developments in Europe.

Given study is not analyzing value change only on country level, but distinguishes also major ethnic minorities where applicable, which gives a more adequate picture of real differentiations and enables to describe occurred change in more detail.

The broader aim of this analysis is to fit the change of Europeans basic values into larger societal-change context, following the transition from economic prosperity to regression, which would also allow a better understanding of the value phenomenon in general.

**LILLRANK, PAUL** (Aalto University, paul.lillrank@aalto.fi)

**The New Normal As a System Challenge**

Since the Lehman shock 2008 there has been a growing sense that the economy is out of joint. The world is not as it used to be during the period of Modern Normal, roughly from 1870 to 1970. The growth potential and progress of advanced economies is lost in systemic changes.

There have been several attempts at grand diagnostics. Francis Fukuyama and Avner Offer have described the Great Disruption in the microsystems of social life as a consequence of mass opulence. For the majority of people in the advanced world biological survival is no longer a daily concern, therefore the traditional foundation of morals have been eroded.

The New Normal argument by Tyler Cowen and Richard Gordon has it that the "low hanging fruit" of modern technology, demographics, the cold war, and educational mobilization have been picked.

The fall of the iron and bamboo curtains have opened the world and, according to Moises Naim, created the "more, mobility, and mentality revolutions". Daniel Albert argues that the main disruption is an oversupply of both capital and labor, and a lack of aggregate demand. Edmund Phelps details how massive borrowing is not channeled into productive investments, but absorbed by new corporatism.

Tyler Cowen argues that due to Internet, globalization and smart machines "aversion to regression, which would also allow a better understanding of the value phenomenon in general.

**Rediscovery of Asia – from the Value-Based Orientalism to Strategic Universal Asianism**

The so-called Asian Values debate has long history. In the late 19th and the early 20th century not only in Japan, but also in China as well as other Asian countries (e.g. Korea and India), the Asian intelligentsia had dealt with the modernization. They faced with the essential problem, in which they would want on the one hand to slough off categories of the objectivism such a like an orientalism defined by the western, on the other hand to modernize themselves without loss of their own identity, because the process of Asian modernization at that time had lain between Scylla of nationalisms and Charybdis of imperialism. For that reason, one of the notorious Japanese historian, Tsuda Shoukichi, and his colleagues have contended with traditional Confuciansm and orientalism of linear development evolved between European and Asian characteristics, and have attempted to de-objectivation of Japan and the whole Asia in the name of 'Great Asia'. On the contrary, Sun, yat-sen, the father-figu-ure of modern China, has attempted with his famous three principles of the people(so-called sam-min doctrine) to find the Asian way of modernization, which consist of democracy, nationalism, and welfareism. Despite of brief contents, he has tried with these principles to pioneer the strategic universal Asianism unless falling into a trap of 'Great Asia', which had been identified as the main obstacles in the way of East Asian integration.

Focusing on the past debate inherited in the present to criticize certain version of Asian Values, this paper aims to explore how minority journalists follow their profession in mainstream newsrooms. Japanese academic discourses pivoting around journalism and multiculturalism have criticized their mainstream media for preserving a news frame confined to the national boundaries, which assumes the readership is ethnically homogeneous. Although these works offer valuable suggestions, roles of foreigners inside mass media including journalists have not gained much attention as a research interest in Japan. With increasing diversity of residents, however, a demand for minority participation in the media industry slowly emerges; considering effects of minority journalists as members of mainstream media may redeem an absence of approaching minorities as subjects.

Previous studies in America clarify that minority journalists have two natures called ‘duality’; one engages in the universal professional norm of journalists such as objectivity, the other adopts a viewpoint as a minority in journalism. This study redefines this ‘duality’ as a structure of conflict between ‘professional identity’ and ‘ethnic identity’, and investigates compatibility of this structure for Japan by interviewing 10 Zainichi (ethnic Koreans) journalists in mainstream media, - one of the biggest minority groups in Japan.

As a result, predominance of ‘professional identity’ over ‘ethnic identity’ is ob- served in Zainichi case, so there is no conflict such as previous American studies indicate. This absence of conflict reveals that Zainichi journalists do not necessarily pursue ‘ethnic identity’ as their foremost mission, however utilizing this 'ethnic identity' as a way of reaching their targets.

Social Justice, Philanthropy and Ecology: The Symbolical Legacy of Brazilian’s NGOs
This work seeks to analyze the longstanding symbolical legacy that frames
Non Governmental Organizations’ experience in Brazil. The main objective is
to identify the social values which give sense to the very notion of NGO by an-
alyzing its variations of meaning throughout history. Firstly, I present a macro
sociological approach in order to deal with the emergence of the NGO field in
Brazil. The connexions between church, state and society for the promotion of social welfare generated the three major social values that confer meaning to the NGO’s experience: social justice, philanthropy and ecology. The first two have a
common historical origin, the organizations of lay Catholics which were present in the context of promoting social welfare in Brazil since the colonial period. In
turn, the consecration of the value of ecology concerns a different context, dating
mainly from the decades of 1990 and 2000. I also build on a micro sociological
approach in order to interpret these values in the light of the individual trajectory
of Herbert de Souza, known as Betinho, the major actor in the formation of these
institutions. Betinho’s biography presents individual frames to the macro-histori-

cultural process of transformation of the value of Christian charity into those of social justice and philanthropy. The research results indicate the social values of social justice, philanthropy and ecology as the main cultural codes that give meaning to the contemporary phenomenon of NGOs in Brazil.

Money Matters for Early Childhood Education: The Effects of Education Subsidy on Preschool Child Readiness in Taiwan
For many children, high quality early learning environment can provide lots of
the experiences and skills that help build a foundation for later school success.
Among the numerous measures of early childhood education and care quality,
some closely linked to later success in school are those which assess school readi-
ness. Many researchers have been claiming that education subsidy is a significant
factor related to children’s learning and development. In 2010, the Taiwan au-
thority announced “The Free Education Program for Five-Year-Old Children”. This
program which was expected to benefit a larger ratio of population revealed the
importance that Taiwan government has attached to early childhood education.
However, little information is available about “the effects of this program’s sub-
sidy on preschool children’s school readiness” and “can this program’s subsidy
really minimize the gap between disadvantaged and advantageous children”. This
study used two waves survey for 1073 preschool students who are 5 years old from Eastern Taiwan to construct a longitudinal analysis, in order to examine the relationships between subsidy of the program and the development of chil-
dren’s readiness. The results showed that subsidy of the free education program
has significant influences on children’s school readiness development. Preschool
children who are from lower family socioeconomic status are more likely to ac-
cept extra subsidy of free education program, and further will reduce the school
readiness gap with their counterparts of non-lower family socioeconomic status.
That is to say, the subsidy of free education program for five-year-old children
in Taiwan really diminishes the school readiness developmental gap between dis-
advantaged and advantageous children. The implications of the findings for the
ory, practice, and preschool education policy are also discussed.

Workload and Wage Gain As Determinant Indicators of Constructing a Composite Index Reflecting Worker Well-Being: Evidence from Taiwan Record-Linkage Data of Manpower Surveys
In light of tremendous institutional changes in the labor markets and working
conditions, the research devotes to establish some labor indicators in the hope of
reflecting labor transitions and enhancing international comparisons. Although
existing official statistics help shed lights on recent development trend, they are
not capable of providing us with dynamics and evolution of a complex labor mar-
ket system temporally and spatially at individual level. Based on 900 thousand
individual laborers collected from the 1980-2010 micro data sets of Taiwan Man-
power Utilization Surveys (MUSs), the research uses record linkage technique to link
among records of MUSs, creating the so-called quasi-longitudinal MUS
(QLMUS). QLMUS is not only large in data size, but also rich in labor information,
including demographic characteristics, human capital, work status, employment
dynamics, and individual wage income. On the basis of the constructed QLMUS,
the research aims to study the evolution of labor well-being in the past three
decades. With other factors being fixed, the study constructs an indicator of labor
well-being (ILWB) on the basis of joint distribution of individual wage income and
workload. ILWB is measured by the joint integral with respect to individual wage
income and individual workload, which can not only reflect the collective well-be-
ing of labor by social class, region, labor market institution, but also enable us to
explore the joint effect of labor market flexibility and security, or flexisecurity,
and to reflect various conditions of labor such as individual income, worker’s life, labor’s value and labor market inequality. Research findings serve as the base for the design and provision of evidence-based labor market policy.

Education Faculty Members’ Perceptions of and Responses to the Sci-Oriented Academic Evaluation Systems in Taiwan
The main purpose of this research is first to investigate Education Faculty
members’ perceptions of and responses to the SSCI-oriented academic evalua-
tion systems in Taiwan, and then to analyze the relevant factors of how the facult-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
were conducted with 38 academics in the Field of Education from across Taiwan including 17 full professors, 10 associate professors, and 11 assistant professors. P. Bourdieu’s field theories, M. Burawoy’s theory of voluntary servitude, and neo-liberalism that has become globally dominant in higher education policies were referred to as the primary theoretical frameworks. The conclusions are as follows.

1. In terms of Education Faculty members’ perceptions, the SSCI-oriented academic evaluation systems were established top-down and followed in the logic of natural science. The main purpose and underlying logic of the SSCI-oriented academic evaluation systems are against the professional scholarships of Education, and the resistance of faculties thus is inescapable.

2. What Education Faculty members propose to modify the SSCI-oriented academic evaluation systems reflects authentically their calling of re-emphasizing the education core values.

3. The research contributes mainly to unearthing the difference of practical concerns and responsive strategies amongst full, associate, and assistant professors. Theories of field, capital, and social space proposed by Bourdieu present a substantially analytic framework, while neo-liberalism and Bourdieu’s voluntary servitude theory offer modest explanations.

4. The research provides delicate analyses of relevant factors in the institutional field, although the difference within gender, university types, and dis/advantaged positions are not yet systematically discovered. The relevant factors in the institutional field include the messages embedded in and transferred from the institutional practices, and the hidden rule of the review process. The factors explain why different faculty members share the same response.

Identity Formation and Social Relations on Facebook for Taiwanese College Students

The purpose of my research is to reveal how Taiwanese college students express who they are through Facebook. Based in Taipei, Taiwan, this study applied a multi-sized approach and methods including interviews and textual analysis to explore the identity work and social relations on Facebook among college students in Taiwan which exists under the surveillance of unseen audiences and the influence of technocapitalism in the context of cultural globalization and consumerism.

Facebook has gradually played a substantial role in students’ college life due to its cultural globalization facilitated by information and communication technology, and the international mobility of higher education. Specifically, Taiwanese youth culture embodies a hybrid of American, Japanese, and Korean popular culture because of Taiwan’s historical context and geographic location. This cultural phenomenon thus reflects not only the global influence of American site Facebook but also the cultural interflow within the Pacific Rim area between Taiwan, Japan, and Korea.

32 participants were recruited from the same department of two universities for analytical purposes, as they offer similarities and differences that make for an interesting comparison of dissimilarities not only in urban and rural areas but also in public and private universities. Each university, 8 first-year and 8 fourth-year were recruited to compare changes of identity formation influenced by each university over time. Within each year, there were 4 male and 4 female students for gender consideration. The conceptions of performance introduced by戈fman, distinction proposed by Bourdieu, and surveillance developed by Foucault are referred as the primary theoretical frameworks in this research. The preliminary findings are as follows.

1. It’s all/not only about having fun?
2. Awareness of image management vs. ordinariness;
3. Intersection of gender and class.

The results will be situated in debates on subculture versus post-subculture within youth cultural studies.

LIN, MEI-LING* (National Open University, Taiwan, paulina@kcg.gov.tw)

The Global Crisis, International Migration and Social Change: Increased Needs for Employment Flexibility and Its Consequences for Social Inequalities

The recent global economic down-turn, resulting in insecure and precarious labour markets, is likely to intensify the societal transformations. The paper seeks to provide a deeper understanding of global social inequality and addresses contemporary inequality from the perspective of the multiple discourses of difference. Migration, and porous economic, social and political boundaries burden governance and demand innovative solutions to problems unique to global crisis. Asia is not only a migration-receiving area but it is notable for sending massive emigrants. The author utilizes the mobilities paradigm or integrates it with other perspectives of inequality, such as global cultural and political economy. The paper examines mobility as the paradigm for understanding social life, and explores these new migration situations as well as the attempts of management of this new migration landscape. The author articulates three analytic approaches of migration: (1) to understand spatial-discursive inequalities paradigm or integrates it with other perspectives of inequality, such as global cultural and political economy. The paper examines mobility as the paradigm for understanding social life, and explores these new migration situations as well as the attempts of management of this new migration landscape. The author articulates three analytic approaches of migration: (1) to understand spatial-discursive inequalities
There has been a gendered shift in migration from men to women in the past several decades. This feminization of migration is particularly noticeable with the exclusion of Asian women leaving their countries - to serve as nurses in the United States, as domestic workers in Hong Kong or the Middle East, as hostesses or sex workers in Japan. A precious commodity and valuable export for their countries, these women are compelled to migrate throughout the world, duty-bound to abandon their families in search of economic opportunity. Migration patterns have been studied and established regarding this gendered phenomenon. However, the main objective of my research is to explore the global feminine experience using the methods of visual anthropology and portraiture by working directly with individuals. What are the personal stories behind these women, and how can offering the means of self-expression contribute to their empowerment and to their collective experience? The act of creating self-portraits will offer these women a chance to express themselves creatively and visually while gaining technical skills. The long-term objective is to contribute to their sense of empowerment and awareness of their rights as women and as workers through this process of self-reflection. Through an intimate process of gaining trust and access to different communities of migrant workers, I carefully build and cater a specific format for each group that will encourage them to share their stories. Local and migrant sex workers in Hong Kong will visualize their own voices by participating in making media themselves. This paper will examine the results of this study and the effects of these personalized narratives and the role it plays on the awareness of gender and migration at large.

\textbf{Governing Natural Disaster: State Capacity, Democracy and Human Vulnerability}

The paper discusses how state capacity and democracy interact in affecting human vulnerability of natural disasters. For rule and revenue, political elites have the incentive to build up relevant state capacity preventing disaster impacts on the population and property. The incentive of the elites and the capacity protecting citizens shall be stronger under democratic competitive elections. Thus, strong state capacity effectively reduces human vulnerability especially in democracy. A panel data of 150 countries from 1995 to 2009 are used to illustrate the relationship between state capacity, democracy, and the impact of disaster. The empirical findings from the multilevel models imply that strong state and democracy are associated with the lower disaster death and victim tolls.

\textbf{Politics Of Production In a World Factory: The Global Fragmented Despotism In Foxconn}

In this article we describe some special characteristics of the world's greatest factory (in terms of the number of employees) belonging to the Taiwanese enterprise, Foxconn Group in Shenzhen, China. We argue that the factory regime has been shaped by three key elements: (1) internal globalization: it refers to the global brand names, especially the Apple group's authority and interventions of the production process in the factory; (2) organizational fragmentation: the fragmented structure of corporate governance, that is, the vertical fraction of business group (BGs) and the horizontal segmentation of employees belonging to different nationalities. The fragmentation led to the strong autonomy of BGs and incomplete information between BGs; and, (3) workplace despotism: the surplus of Chinese low-skilled rural workers enforced the arbitrary managerial power on the shop floor. According to the three elements, we name the factory regime as "global fragmented despotism." The organizational structure of world factory may be helpful for explaining Foxconn's poor labor conditions and workers' suicides happened in 2010.

\textbf{Mapping the Climate Discourse Networks: Media Coverage of Climate Change in Taiwan}

There is an increasing media coverage and visibility on climate change in Taiwan. Few studies, however, have been done with regard to how issues of climate change have been reported in the newspapers. This paper intends to examine Taiwan's newspapers from 2007 to 2008 as well as semi-structured interviews with climate experts. Through discourse and relational networks methods, the paper examine how and why the climate change media discourses have been framed and represented, and how they interact or reflect national climate change politics and policies. It concludes with a discussion of how these findings help us understand multiple actor and discourse networks that effect national climate policies.

Emergent Innovation - Towards a Complexity Theory of Innovation Research and Management
During the last decades, there has been a broadening of the field of innovation management. Models of innovation have moved from simple linear models towards increasingly complex interactive models (Rothwell, 1992, Lundvall, 1994, Chesbrough, 2003). Innovation management is moving from an expert function to a more embedded in R&D units towards an integration of technological, market, organizational and institutional dimensions (Tidd, Bessant & Pavitt, 2001) implying a need for broad interaction of a multiple of actors (van der Ven, et.al., 1989, Sawyer, 2005). Innovation is recognized as complex self-adaptive systems with a need for not only all members of organizations but also external partners, customers and other agents in the ecology. Based on these developments the paper aims to clarify emergent innovation as a novel paradigm. It is a perspective that describes innovation as something that is continuous (Burnes, 2009, Weick&Quinn, 1999), can emerge everywhere, and wherein anyone can become an innovator. novelty is understood as emerging through fine-grained human interaction in interaction with containing coarse-grained structures (Gell-Mann, 2002, Hayz&Ashley, 2011) in what Stacey, et.al. (2000) call complex responsive processes. The ways in which human interaction dynamics generate emergent innovative structures can be clarified using complex systems models that include transcategorical interactions and processes. Skeptical and pragmatic epistemology can illuminate the way knowledge and cognition is situated in concrete physical, social and cultural environments and innovation is emerging in spaces from within this ecology (Peschl&Fundneider, 2008). Continuous self-organizing by multiple agents driving innovation need to be accompanied with complexity oriented leadership (Goldstein, Hayz & Lichtenstein, 2010) providing enabling structures from an eco-organizational perspective. We propose a complex system model of organizing emergent innovation.

The International Migration of Nurses and Doctors into Healthcare Systems: A Look into the Philippine Case
The international migration of health professionals, such as nurses and doctors, has been a growing phenomenon in the globalization of the healthcare labor market, with serious consequences on the source countries' capacity in maintaining sustainable domestic healthcare system. One consequence is an estimated shortage of 4.3 million health professionals required for delivering essential healthcare services to populations in need, posing a major barrier to providing the essential lifesaving health services. A significant contributing factor to this shortage is the transnational migration, export and/or recruitment of health professionals from low and middle-income countries.

The general pattern of the international migration of nurses and doctors--where the movement is generally from the periphery/semi-periphery to the core region--has been understood as emerging through fine-grained human interaction in interaction with containing coarse-grained structures (Gell-Mann, 2002, Hayz&Ashley, 2011) in what Stacey, et.al. (2000) call complex responsive processes. The ways in which human interaction dynamics generate emergent innovative structures can be clarified using complex systems models that model transcategorical interactions and processes. Skeptical and pragmatic epistemology can illuminate the way knowledge and cognition is situated in concrete physical, social and cultural environments and innovation is emerging in spaces from within this ecology (Peschl&Fundneider, 2008). Continuous self-organizing by multiple agents driving innovation need to be accompanied with complexity oriented leadership (Goldstein, Hayz & Lichtenstein, 2010) providing enabling structures from an eco-organizational perspective. We propose a complex system model of organizing emergent innovation.

This paper focuses on the Philippines as the top-ranking source country for nurses and doctors, with serious consequences on the source countries' capacity in maintaining sustainable domestic healthcare system. One consequence is an estimated shortage of 4.3 million health professionals required for delivering essential healthcare services to populations in need, posing a major barrier to providing the essential lifesaving health services. A significant contributing factor to this shortage is the transnational migration, export and/or recruitment of health professionals from low and middle-income countries.

Changing Water Cultures To Achieve Water Sensitive Cities: The Importance Of Communities and Households

Achieving the vision of water sensitive cities in Australia (and elsewhere) is a complex task involving simultaneous social, institutional and technological change. In this paper I review key concepts and findings from the socio-cultural literature on domestic water cultures and argue that four key domains need to be considered to enable positive change: 1. more flexibility in systems and infrastructure so the public could escape ‘path dependency’ including flexibilisation of large scale infrastructure such as water meters and sewage systems and water governance systems including water policies and pricing. 2. The development of water sensitive practices in local communities and households. Bringing water sensitive practices to the core of community life in diverse public spaces, enabling community building around local water projects. Developments would take geographic diversity into account and generate a water sensitive system, including local water governance systems and water policies. 3. Enabling and encouraging flexibility around local water projects. Developments would take geographic diversity into account and generate a water sensitive system, including local water governance systems and water policies. 4. Attending to everyday practices and values around water including risk and trust. Enabling the everyday activities of achieving ‘cleanliness, comfort and convenience’ (Shove 2003) while using less water. I argue that we need to know more about the ‘messo’ level of the water sensitive practices of diverse communities and house-holds to effectively promote and achieve change.

Religious Socialization and Dimensions of Spiritual Violence

Young adulthood is a critical period of life in religious communities, with regard to whether a person stays in a community or diverges from it. The continuity of many Christian movements is based on not only the recruitment of new people, but rather the fact that a person remains in the community she or he has been raised in. Joining a religious community in adulthood constitutes a rather dramatic change in one’s life. The situation is definitely different when one is born into a religious community. i.e. a child is socialized, or brought up in a religious community from birth. Socialization in religious communities takes place through concrete activities as well as the spiritual teaching undertaken by the community. In addition, the socialization of children and young people takes place with the help of family, relatives, friends, and acquaintances. The socialization of a young person in a religious movement can occur without problems. In this presentation however, the focus of the examination is in those dimensions of socialization which may show up as being problematic for young persons. Socialization is analyzed as a potential form of spiritual violence, which is understood as a mental or physical violence articulated through one’s belief or existence in the religious community. It is an exercise of power against members of the community, which reduces the ability to determine one’s own future. Birth into a religious movement is not in itself a spiritual violence, but in the socialization process, there is many factors that are relevant, such as the emergence of such violence. Empirically, the presentation focuses on two religious groups: the Jehova’s Witnesses and also Conservative Laestadianism, the largest revival group in Scandinavia. As dimensions of spiritual violence, the presentation examines themes of human rights, ‘non-alternativity’ and the asymmetric use of power.

When Risk-Analysis Needs Hazard-Assessments - Is Risk-Based Regulation Actually Part of the General Risk Discourse?

Beck describes modern societies as preoccupied with the management of novel risks. Recently, this notion of risk was widened by the idea of risk-based regulation as a rational strategy of governance: risk assessments justify the selective regulation process, there are many factors that are relevant, such as the emergence of such violence. Empirically, the presentation focuses on two religious groups: the Jehova’s Witnesses and also Conservative Laestadianism, the largest revival group in Scandinavia. As dimensions of spiritual violence, the presentation examines themes of human rights, ‘non-alternativity’ and the asymmetric use of power.

LINNELL, MIKAEL* (Mid Sweden University, mikael.linnell@miun.se)

Managing Social Unrest through Risk: Reinventing the Debate

Sweden has in no way been spared from riots similar to those that took place in Parisian suburbs in 2005 and in the UK during 2011. Two events well known to the Swedish public were the manifestations of civil unrest in Malmo during the winter 2008 and Stockholm 2013. Recently municipalities in Sweden have begun to include the notion of social unrest in their local risk- and vulnerability analyses. Hence, social unrest is placed at the same ontological level as for example natural and manmade disasters, pandemics and climate change. Put differently, social unrest is managed by being represented as a risk phenomenon which consequently legitimizes specific measures to reduce the potential threat of societal disorder. Within the horizon of Foucauldian theorizing risk is employed here as a technology allowing calculations about probable futures in the present followed by interventions in the present in order to control that potential future* (Rose 2001:7). In documents pertaining to local risk- and vulnerability analyses social unrest is thus considered a phenomenon with an existence in itself, while at the same time specific groups are defined as being both at risk and being a risk to societal order. With this background there seems to be reason for returning to an old sociological debate on the status of social unrest. During the 1970s, Herbert Blumer (1971; 1978) engaged deeply in the nature and role of social unrest, arguing that social problems are fundamentally products of a process of collective definition rather than phenomena existing independently as objective social arrangements. In this paper I return to Blumer’s writings aiming to find out what he has to offer in a discussion on the present development. In addition I describe through a Foucauldian lens the process through which social unrest is made manageable using the technology of risk.

LISITSA, SABINA* (Ariel University, sabina@bezeqint.net)

Digital Use As a Mechanism to Accrue Economic and Symbolic Capital: A Bourdieusian Perspective

The digital divide is a social side effect of the information age. The technological mechanisms enables people to band together also serves as a wall to separate and stratify populations that have access to it, and the skills required to acquire information through it, and those who do not. This study examines the “second level” digital divide, which characterizes the surfacing patterns of those connected to the internet, between the Jewish majority and Arab minority in Israeli society. The goals of this paper were: to examine the digital divide between these two groups; to examine the connection between digital uses and economic and symbolic capital; and to characterize the link between the digital divide and social stratification. The study is based on the Israel Central Bureau of Statistics Annual Social Survey data, collected by means of face-to-face interviews conducted in 2011 among 5,972 interviewees aged 20-65 years old. Jews were found to have an advantage over Arabs in terms of internet access and capital-enhancing digital uses. Capital-enhancing digital uses were found to be useful for predicting between-group gaps in income level, beyond the impact of classic socio-demographic factors such as education and language proficiency. Moreover, capital-enhancing digital uses were the factor that transformed the gap in social benefits at the workplace between Jews and Arabs from significant to insignificant, after controlling for other socio-demographic and labor market variables. In addition, a positive correlation between capital-enhancing uses and occupational prestige was found. This finding indicates that the investment in digital literacy in the Arab sector in the long run may contribute to narrowing gaps on a national basis in Israeli society. However, digital technology can also serve as a mobility channel for the Arab minority group to attain social and economic equality with the Jewish majority.

Resisting the Neoliberal Turn in Swedish Housing Provision

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Sweden is commonly regarded as a country with some of the best housing standards in the world. The provision of ‘good housing’ has been at the core of the Swedish post-war welfare model, but, over the past decades, a systematic process of marketization has led to increasing housing shortage, and the lowering of housing standards, particularly affecting low income groups. A large amount of housing standards, particularly affecting low income groups. A large amount of housing from the late 1960s is also in urgent need of renovation. Those who do not have the possibility to buy a dwelling are dependent on a shrinking rental market due to the systematic conversion of rental housing stock to tenant-owned housing, and the current reluctance of developers to start up new building projects. In most of the nuclearized countries, the public agencies in charge of this development of a technical solution for the safe management of the radioactive waste were confronted to a strong opposition coming from anti-nuclear movements and local populations. These movements of contestation paralysed all the decisional processes, leading the different agencies to transform their approaches and integrate what they call the “social aspects” (or the “problem of social acceptability”) of the waste into their research agenda.

In this context, this paper examines the way in which the nuclear sector has developed different strategies to react to this generalized contestation. It precisely analyses one of these strategies: the setting up of the “Forum for stakeholder confidence (FSC)”. The FSC is an international arena that was created in 2000 within the Radioactive Waste Management Committee of the Nuclear Energy Agency (NEA) at the OECD. The FSC gathers representatives from different national nuclear organizations and aims at facilitate the sharing of experience in order to “ensure an effective dialogue with the public with a view to strengthening confidence in the decision-making processes”.

Drawing from qualitative fieldwork conducted in Belgium, document analysis and non-intrusive participation in meetings of the FSC, I will argue that the setting up of this international arena, in his ability to centralize all the experiments made regarding public participation and stakeholder involvement in different countries, and, therefore, in his ability to develop an effective “good practices” of public participation can be seen as a “strategy of glocalization” as defined by Ulrich Beck (2003). This new kind of multi-level strategy, that is almost invisible at the local and national level, seems to be very effective in preventing the apparition of new wave of contestation and will durably alter the social agency of local actors.

LITTLE, STEPHEN* (The Asia Pacific Technology Network, little@stephenclittle.com)
Social Resilience: Learning From Hanshin and Tohoku
Disasters inevitably expose social relationships and processes that in more normal times are harder to discern. The 1995 Great Hanshin earthquake inspired attempts to address the multilevel governance failures exposed by that disaster. However, neo-liberal narratives still focus on technical and individual responses at the expense of engagement with any broader social context. In 1995 older buildings in low rent areas fared worst and poorer residents faced extended periods in temporary housing. In the 2011 Tohoku triple disaster buildings resisted a more severe earthquake but extensive tsunami protection measures failed. The third component of the disaster was exacerbated by institutional complacency in the administration of nuclear power.

The immediate mobilisation of defence force resources reflected lessons learnt in the hiatus following Hanshin. A flexible, combined military command structure developed to coordinate overseas humanitarian intervention was rapidly redirected to the co-ordination of domestic relief operations. However, the focus remains on physical components of resilience even though technical interventions in the form of tsunami barriers actually eroded traditional aspects of social resilience such as nursery rhymes telling children to ‘go to the hills’.

Effective resilience requires a social dimension which in turn can only be developed in a bottom-up and inclusive fashion. Communities in the area affected by 3/11 created a range of short and medium term fixes for the loss of infrastructure and logistic support, the longer term response of formal governance structures is less clear. As the third component of the triple disaster resolutely fails to respond to residents’ intervention, a continuing institutional hiatus becomes evident.

This paper draws on recent literature on ‘place branding’ and ‘place leadership’ to identify the creativity in national and international grass roots responses, not least in support of the recovery of identity and location, that offers cause for optimism.

LITVINA, DARIA* (Center for Youth Studies, litvina.darya@gmail.ru)
Struggling Against Capitalism: Informal Education, Insurrection and Everyday Life of Russian Anarchists
This paper examines attitudes towards education and explores informal educational structures inspired by the urban community of anarchists and DIY (Do It Yourself) activists. Informal education is one of the parts of lifelong learning that implies the process of gaining knowledge and skills while individuals interchange with their social environment. Many anarchists tend to criticize prevailing educational practices and maintain the concepts of libertarian pedagogy and postmodernist critique of formal education. They suggest that governmental institutions reproduce social inequality and constrain people from getting knowledge in order to produce governable and disciplined subjects. My findings show that anarchists reallocate their values and beliefs. Offering opposition to formal education and suggesting authentic ways of knowledge and skills producing and sharing (distro, workshops, open sources, etc.), anarchists embody them into their daily routine. Their rhetoric, deeds, consumption practices and forms of communication are tightly connected (in dialectical way) with those attainments that are distributed by channels of anarchistic knowledge and skills sharing.

This paper is based on the case study of young people (age 17-30) who identify themselves as anarchists. The empirical data includes 28 in-depth interviews (from one up to five hours), field diaries (app. 100 pages) and video files (more than 20 hours of shooting). The case study was conducted within the framework of international MYPAGE (Memory, Youth, Political Legacy and Civil Engagement) project.

LITS, GREGOIRE* (Université catholique de Louvain, gregoire.lits@uclouvain.be)
The Role of Social Scientists in Dealing with the “Social Aspects” of High-Level Radioactive Waste Management in Belgium. Will Sociologists Tame Resistance?
In most of the European countries that are confronted with the problem of radioactive waste, an important shift in the way decisions are made seems to have recently taken place, labeled by some scholars the “participative or deliberative turn” (Lefebvre & Calvèrs, 2008; Bathe, 2008). While technocratic rationales (based mainly on performance assessment and quantitative risk analysis) prevailed until the early nineties, they have proved to be unsuccessful and reached stalemate, leading to a paralysis of decision-making procedures. Experts identified the “societal aspects” of nuclear waste management (mainly the emergency of international contestation) as the main cause of this paralysis and set up new tools of decision (e.g. SIA, local partnerships, consensus conferences) to deal with this new issue.

The present paper examines this “participatory turn” in the Belgian case. I identify the emergence of a new consensus among policy makers on how to deal with the “societal aspects” of high level waste management: it is claimed that the problem can only be properly handled if the expertise of social scientists is mobilized. Collaboration between nuclear and social scientists is therefore called upon by the actors of the nuclear sector as a way to unblock the decision-making process on nuclear waste.

Adopting a neo-institutional stance, I analyze the genealogy of this new kind of expertise in the field of nuclear waste management, tracking the idea of social scientists in the process back to controversies in the late 1940s in the US. This genealogical account enables me to argue that this use of the social sciences can be seen as a way to maintain the prominence of technocratic rationality in participative decision-making processes.
The Marriage Squeeze for Aboriginal Men in Taiwan: The Impact of Ethnic Intermarriage Between Aborigines and Han Chinese People

Before 1970, the main stream of ethnic intermarriage in Taiwan was the elder veteran from Mainland China marrying aboriginal women, but the pattern of ethnic intermarriage between aborigines and Han Chinese has been changed due to a new economic transformation. In the past three decades, aborigines moved from their native villages to large metropolitan areas increasing their spatial segregation from Han Chinese was decreased substantially. Accompanied by the population redistribution, the intermarriage rate of aborigines and Han Chinese was increased, and many aboriginal women married aboriginal men declined. Although men and women both leave their hometown, the shortage of marriageable partners only appeared in specific local marriage markets, i.e., their hometown areas in the mountain or the peripheral southeastern coast. The spatial distribution of indigenous population becomes unequal and sex ratio generally skewed in some areas due to the migration selectivity of sex and education. The propensity of migration of aboriginal women is higher than men and the well-educated tend to stay in urban areas where they are more likely to marry Han Chinese. With the social constraint of the marriage gradient and mating threshold, the less educated aboriginal men who stayed in hometown are compelled to stay single due to the shortage of marriageable women in local marriage market. Using the 2000 Taiwan population census, we try to reveal the complex relation among intermarriage, migration and marriage market. The ultimate goal is to provide some empirical evidences to revalue the impact of ethnic intermarriage in the perspective of marriage squeeze.

Chinese Elite Higher Education and Reproduction of Educational Inequality

In 2004, China adopted a novel strategy for admission to elite higher education as a reform of the traditional method of enrollment through Gaokao examination only. This new strategy is called Independent Freshman Admission (IFA, or Zhi Zhu Zhao Sheng in Chinese). Whereas ample evidence exists for the social disadvantage of people with low SES in the ability to access and complete elite higher education in Westernized countries, research on educational inequality at elite universities in non-Western countries has remained scarce. This paper presents hierarchical linear modeling (HLM) and 2004 data on educational stratification in a radically changing society. Within the context of social mobility and changes in social structure in Chinese society, we argue that whereas the dearth of previous research can be attributed to the comfortable position of China in the international arena, the most important aspect as a result of analysis was the strong influence of the “father’s occupation” on academic performance of children. Therefore, it was successfully confirmed that economic strata cannot be ignored and Bourdieu’s theory of reproduction, taking a relational ontology, applies to the Chinese case. This paper thinks it short of ethical prudence and sociological insight: it incites moral panic for its effect to legitimizing the drug use without identifying the social attributes of drug user. Seeing these weaknesses, this paper presents a figurational approach to explore moral narrative of different social space, and their response to drug consumption. Data were collected by reinterpreting the existing researches in Taiwan, as well as by the fieldworks implemented in Taipei City and Pingtung County by way of semi-structured interview. It is confirmed that individual pleasure is the reason to take MDMA in both regions and ‘peer pressure’ plays no role in their use of MDMA. Taking a relational ontology, this paper finds that these two kinds of moral narrative in term of their attitude toward the moral centre. Those who live in Taipei City are more interested with, and capable of challenging the moral discourse that MDMA is illegal and dangerous, while those living in Pingtung County take a relatively detached view from the moral centre. In other words, the closer MDMA users to the moral centre, the more likely they take an active way to defy the centre; the farer are they from the centre, the more possibly they take a passive stand without the intention to do with the moral centre. By way of the figurational approach, this paper concludes that there exists two kinds of individualization developed along with the democratization, and their capacity to challenge the moral centre is unequal.

Inequality, Government Trust and Election Participation

It is a hot topic that how to promote Social transformation of the trust in govern- ment and election participation. This paper in China. This paper presents the relationships of inequality, government trust and election participation and why people take part in conventional political participations. The author argues that government trust plays an important role in conventional political participation, but contrary to more traditional models, there is regional disparity of the conventional political par- ticipation, controlling for other related factors. Finding indicates that inequality is the strongest determinant of government trust and that government trust has a great effect on conventional political participations.
Sell the Cow and Drink the Milk: China's Community Building Discourse and Its Implications for East Asia

Despite East Asia's efforts towards integration over the past two decades, political and historical antagonisms and sovereign disputes among powers and stakeholders in the region have greatly hindered the process. Besides direct conflicts among powers, this author argues that the difficult state of community building in East Asia is also a result of the securitization of economic integration by respective states in the region, particularly by great powers such as China.

Based on the concept of securitization developed by the Copenhagen School, this paper examines the case of China and how Chinese discourse in the new century has reshaped state relations in East Asia. Specifically, this author seeks to explain how China's discourse on economic security conflict with its parallel discourse on the establishment of a harmonious regional order. The impact of China's mixed discourse is to re-open the dual debates of Beijing's peaceful rise vs. potential challenge and Beijing's maintenance of status quo vs. lean towards revisionism. The debates entail the possibility of China's re-introduction of a tributary-like system in East Asia, which has significant implications for state relations in the region.

The purpose of this paper is to explain how China plays a critical role in the regional community building process and to draw the connection between securitization and the development of integration in East Asia. This paper proceeds in five parts: part one lays out the main argument of how securitization influences community building and integration in East Asia; part two reviews Chinese foreign policy in the new century; part three traces Beijing's discourse and its implications for regional integration; and part four elaborates on the implications for state relations in East Asia and the response of neighboring states towards China's behavior.

Local Institutions and Historical Contingency: Divergent Paths in Local Economic

This article examines the paths of local economic transition over the past thirty years in Wenzhou and Wuxi of China from an institutional perspective. Chongqing will serve as a minor case in comparison. It argues that local institutions matter in explaining divergent paths of development in the era of market transition. Specifically, the passive nature of the local state complemented with the bridging character in the informal economy and the more independent entrepreneurship of local firms in Wenzhou have contributed to a local transition from a semiliberal capitalism towards a mixed-market economy coordinated by the local state at the turn of the century. On the other hand, with a dominant local state intervention and the weakened business associations and entrepreneurship, Chongqing transformed from a typical path of planned economic system to a semi-socialist capitalism. This article further traces the historical origins of different local institutions in Wenzhou and Wuxi, arguing that a historical contingency of self-liberation in Wenzhou at a critical juncture of the 1949 socialist revolution explains an inactive local state with a more lenient attitude toward the local private peasant sidelines, in contrast to the liberation by Mao's regular Army from north in Wuxi and Chongqing, which disrupted the local status quo and switched the loyalty of local power hierarchy to socialist transition in Mao's era. Thus the initial genesis of institutional arrangements as a result of punctuated equilibrium in localities shapes the way in which local institutions evolve for decades to come.
the psychosocial development of senior middle school students, and whether and how resilience and self-efficacy could serve as mediators for the relation between various forms of social capital and development outcomes. 231 senior middle school students in Zhenjiang participated in the survey. Results show that school quality concerning students' interaction to school and teachers display significantly positive relation with adolescents' mental health, behavior adjustment, clear and positive identity, but not with students' social capacity. Family social capital as parental supervision and community social capital as reciprocated exchange also positively relate to students' behavioral adjustment. Students with more encouragement and reciprocated exchange in the community are more likely to develop clear and positive identity. Moreover, students who scored higher on teacher encouragement, structural bonding and perceived mutual help with peers, and child-centered informal social control in the community are also more likely to have higher score on social capacity. However, not all sources of social capital have significant relations with students' development outcomes. In addition, according to the research findings, resilience and self-efficacy also mediate the effect of social capital on mental health, clear and positive identity, and social capacity, while only resilience could have the mediation effect on the relation between social capital and behavior adjustment. Implications for family service and family policy, everyday educational practice at school, and community development programme are discussed.

**Educational Expansion of the Upper Secondary Schools in Taiwan**

After planning and designing the ‘Twelve-Year Compulsory Education Policy (TYCEP)’ for 30 years, Ministry of Education in Taiwan finally officially announced in 2011 that the policy will be implemented in 2014. However, despite the Taiwanese government’s expansion of Taiwan’s upper secondary schools and to analyze the background and major factors of development of those two structural issues through the literature and field survey. Furthermore, this study scrutinizes ideas, impacts, and challenges of TYCEP’s implementation.

Therefore, this study suggests that for TYCEP, it is necessary to clarify the importance of these two key issues and review the impacts on the educational opportunities for high school students. Thus, this study aims to explore the history of educational expansion of Taiwan’s upper secondary schools and to analyze the background and major factors of development of those two structural issues through the literature and field survey. Furthermore, this study scrutinizes ideas, impacts, and challenges of TYCEP’s implementation.

**The Development of Inter-Firm Trust: Cases from the Animation Game Industry**

Nowadays, technology has played important role in the society and even shaped the way business operates. However, there is also an awareness of the “soft sides” of business, among which is the inter-firm trust. This is particularly observed in the animation game industry where increasingly more inter-organization and inter-firm collaboration takes place. Such topics as “how to select a trust-worthy partner”, “how to continuously maintain good relationships with collaborators” are of great value for both academic studies and business practice. This paper explores the inter-firm trust issues in business collaboration. It creates a trust development process model together with an evaluation system. From literature review, the questions of “how inter-firm trust is developed”, and observation of particular incident in the industry are summarized from interviews and observations, which are further developed into trust dimensions. The main findings are: 16 dimensions to assess three basic types of trust – competence trust, reliability trust and goodwill trust; a 3-stage process model of trust with details of decision making areas – trust formation, trust development and trust continuation. Future research should seek to validate and improve the above models, along with a further linkage between trust and different nation culture contexts.

**Disability and the Limits of Knowledge. Uncertainties of Expert Practices in Insurance Companies**

Disability is one of the most significant insurable risks in human life. Insuring disability, either statutorily or voluntarily, is not an easy task for insurance companies. Ability to work is more or less subjective, but insurance companies are expected to evaluate it objectively and unambiguously. Disability insurance as well as rehabilitation involves different kinds of expert knowledge. Disability is a construct of medical, legal and insurance institutions which are entangled with each other. Experts of these institutions try to prevent disability, define it and control it, and prevent all other issues in different ways. The interaction of these professions entails a lot of uncertain elements. Furthermore, as an increasing number of disability insurance applications and benefits are based on mental illnesses, the situation has become even more challenging than before.

This paper studies expert practices in disability insurance and rehabilitation in Finland. The focus is on statutory disability insurance system. The main question is: how do different experts and institutions interact as they make decisions on disability insurance benefits and rehabilitation? The empirical material consists of interviews of medical, legal and other insurance experts, observation of institutional practices and technologies in insurance companies, and some key documents. The study shows how decisions on disability benefits and rehabilitation are a result of complex and case-specific negotiations between different professions and organizations, including (occupational) health care. Disability is not only a medical condition but thoroughly a social, political and judicial phenomenon. Hence, the ability to recognize the limits of expert knowledge and the related uncertainties has a crucial effect on the practices of insurance companies and the treatment of the insured.

**Conflicts Between Artisanal Miners and the Government in Mongolia**

In autumn 2013, Mongolians witnessed gun shootings and an attempt to blast bomb near the Parliament House, motivated by the Civil Environmental Movement of Mongolia. The country’s basic economic revenue comes from mining sector and since the democratic transition; the country started using the mineral resources with the ratification of ‘Gold Program’ in 1994.

As a result, the number of artisanal miners who exploit gold in abandoned areas has increased extensively and they have been one of the main factors to the environmental degradation as they operate without any legal coordination and official registration for the last decade. The Government made an effort to dissolve those illegal and environmentally hazardous groups in 2005, but it led to extremely acute conflict between the tow sides. Remarkably, not a comprehensive survey was conducted on this newly generated community in Mongolian society.

Accordingly, a research was carried out for determining forms and consequences of conflicts between the artisanal miners and the Government on example of cases in Mongolia. The fundamental conflict theory and approaches were applied in this paper. As a result, the main conflicting parties in artisanal mining were identified as local authorities and the root cause for long term dispute was defined as having no mediation and facilitation in the process. Eventually, the conflicts resulted to unsustainability in artisanal miners’ activities, more risks in safety issues and many people were injured during their rudimentary operations.

The research, carried out deep study on essence of the artisanal miners and process of their institutionalization, has been recognized as significant project which will contribute to effective natural resource management and resolution methods on conflicts over natural resources.

**Leisure in an Unequal World: Gender Differences in Australia**

This paper traces the development of leisure in Australia along gender lines. Leisure in Australia has been male-dominated. Historical analysis paints a picture of women in supporting roles with regard to leisure. They have been placed in an inferior position. The home care role of women has been contrasted with the breadwinner role of males. While men dominated recreation resources, women were expected to facilitate men’s leisure. In contemporary times, the gender gap between leisure provision and participation has narrowed with observations of separate pathways in types of activities and parity in total participation. Development of gender equality in leisure has occurred through research studies; measurement of leisure engagement; and the diversity of recreation offerings and provision. The paper is structured historically with gender activity described in traditional aboriginal life, during colonial times and at post-1945 and contemporary eras.

Employment and Health Consequences of Care-giving for Older Workers in Australia

In Australia there is continuing policy pressure on older adults to remain in paid work. For many, especially women, participation in paid work is undertaken in conjunction with providing care for sick, disabled or frail family members and/or grandchildren. Recent policy developments in Australia such as the National Care Work Strategy (Action Plan 2011-2014) articulate a commitment to ‘recognise and respond’ to the needs of carers including supporting their right to participate in social and economic life. To this end, the Fair Work Act Amendment Bill 2013 extends the right to request flexible working arrangements to mature-age workers over 55 and workers with added caring responsibilities. At the same time, The Australian Human Rights Commission Report ‘Investing in care: Recognising and valuing those who care’ (2013) acknowledges the potential disadvantages, particularly for women, associated with unpaid caring responsibilities and the impact on workforce participation, retirement income and health.

This paper explores the relationship between paid work and care-giving, with a particular focus on Australia’s early baby boomer cohort and the gendered nature of care-giving. Analysis of longitudinal data from the Household Income and Labour Dynamics in Australia (HILDA) survey indicates that being female, having a health condition, higher education, being partnered, and being engaged in paid work and care-giving in 2002 increase the odds of engagement in concurrent activities in 2010 relative to engagement in paid work only. The finding that prior engagement is consistently related to future engagement in the same activity eighth years later highlights the value of examining engagement over a longer time period. These findings will be interpreted within Australia’s policy context and the potential employment and health related consequences of care-giving on those providing the care, their families, employers and the community.

Cyberspace: A New “Fieldwork” Experience For Sociologists

While cyberspace clearly is a new research field, scholars are just starting to study how to grasp the full meaning of social relations in cyberspace. This question puzzles numerous disciplines of social sciences. Traditionally, the explanation of the process of research means that researchers have to go back and forth between the theoretical perspective and the empirical reality. They essentially start from one of these two starting points to get towards the other. But how to do that in the digital world? This space shares characteristics of both theoretical and empirical worlds, but nevertheless, differs greatly from both. The paper proposes a transformation of the tools and concepts used in social research to properly use cyberspace as a tool of investigation and analysis in social research. To do this, the paper addresses a longstanding found in the literature i.e. the lack of a clear definition of the concept of fieldwork in social sciences. Thus, the paper exposes three main reasons why and how cyberspace should be designed as a field of investigation: 1) because it is a place (cyberspace is a space in the geographical sense), 2) there are several methods to do research in cyberspace and 3) there is an ethic of research inherent to it. We therefore believe it is possible to say that cyberspace is not a field like any other. It is rather a new mediator between theory and reality. A better understanding of this cyberspace field should provide better tools and concepts to apprehend the social reality in the digital world. The originality of the paper is based on the current inability of different research methods to understand and analyze cyberspace as a research object but also on their inability to understand and properly analyze the social phenomenon of cyberspace.

Participatory Guarantee Systems: Alternative Ways of Knowing in Agri-Food Systems?

Over the past twenty years, sustainability standards have been used in agri-food systems as a way to link sustainably produced products with consumers who are looking for these types of products. This system of certification has generally relied upon the third-party certification (TPC) model as a way to ensure that producers are complying with standards. Over the past five to ten years, critiques of this model have emerged in both practitioner and academic circles. These critiques focus on the appropriateness of this model based on the type of knowledge that is privileged, the cost of the model and conflicts of interest. This paper examines these critiques by exploring how participatory guarantee systems (PGS) are used to accommodate some of the critiques of the TPC model. We draw upon examples from Japan and Bolivia to illustrate how PGS are rethinking some of these concerns. Through our analysis we explore new institutional arrangements and where there might be spaces for empowering alternative ways of knowing.

Deus Ex Machina? Religious Texts, Spiritual Capital and Inequalities – in Continuation of the Current Debate

This paper is borne from three impulses: broadly, the presently ubiquitous influence of liberation theologies within mainstream Christianities; narrower, the widespread religious assertion that the divine addresses the world through the “Holy Word” of the Bible; most specifically, a current South African debate (in which the author is a participant) on the contextual relevance of scholarly exegesis of these texts. The contention here is that the usual “application” of biblical texts to modern issues of inequality is undertaken in unsophisticated ways. First, the hermeneutical context is often left unacknowledged. Second, the eXegesis is often poor and seldom new, because the prime concern is a pressing modern issue. However, third, with little academic background in socio-political, economic and related fields of study, the pressing issues are often analysed superficially. Thus, good intentions flounder on poor scholarship, based on a critical (by now, clichéd) rejection of the Bible. Nonetheless, the biblical text has a possible role, if combined with an empirical and anthropological world view. Texts can directly be brought to bear on modern issues. The concepts of spiritual or religious capital can ameliorate this. The history and implications of these concepts are therefore reviewed. In constituting the religious identity of individuals, the Bible may well be an influence, but one among many. The thus-molded religious identity of persons so inclined may lead them to address social inequalities, pursuing a less unjust and, usually, more egalitarian society. Agency is mediated by such a constructed religious identity. The issues addressed, almost exclusively socio-political, moral and social issues, have been presented with firm conviction, may in this less instrumentalism engagement with the religious heritage be expanded to include the theological, with greater humility, seeking clarity.

LONGHOFER, WESLEY* (Emory University, wesley.longhofer@emory.edu)

Foundations of Global Giving

Social scientists have long been interested in the origins of generosity, altruism, and compassion in society. However, a relative handful of studies have looked at the effects of social context on organized charitable activity, particularly from a cross-national perspective. This talk will introduce an ongoing study examining the effects of global and domestic institutions on charitable activity among individuals and organizations in a large number of countries. I illustrate philanthropic and charitable activity in what world polity scholars have called a “global moral order” that champions virtue and positions voluntary associations, including foundations and charities, as legitimate actors for solving global problems. The first part of the study draws upon survey data to explore why individuals join charitable organizations in 35 countries. The second part of the study turns attention to the growth of philanthropic organizations in more than 100 countries since the 1970s. Results from the study find that models of charitable activity are structured in the culture of world society.

Educational Changes: The Adoption of Standardizing Reforms

The paper discusses the post-Soviet reform in two educational sectors – general education (lower secondary) and vocational education – from the viewpoint of adoption of standardizing policies by teachers in Estonia. By being inspired by the concept of social innovation we concentrate on two questions: What has been the outcomes/social benefits (e.g empowerment of teachers) resulting from the reform process, and secondly, how the reform policies (i.e. institutional changes) have been adopted by the teachers? We base our arguments on a) analysis of the documents and previous researches and b) empirical qualitative studies on adoption of curricula changes.

In the Soviet time, the education system and curricula development was highly centralised and ideologically controlled by Moscow. In 1987-1988, even before the independence, the transition period in Estonian general education began. The quickest changes were evident in general education where powerful movement of teachers started to innovate the curricula with the aim to de-ideologize it. The general education reform in the post-re-independence time comprised of two radical transformations: from Soviet system towards education system and neoliberal transition from the second half of 1990. The latter period have comprised both standardization and decentralization (e.g. decentralization of school network and growing principals´ autonomy) tendencies. In VET, as compared to the general education, the reform process started later and has been more inclusive.

Our analysis will show that the impact of standardization has been differentiated on two levels: firstly, the different education sectors (general and vocational education) has been affected by reforms differently; secondly, in the course of the reform, teachers have adopted different coping strategies, in other words, the reform has divided the teachers into different adopters’ categories according the meanings attributed to changes. However, to a certain extent, the patterns of adopters’ categories in both education sectors are similar.

Organization within Organization Studies: From Core Object to Unspecified, Awkward Relic

After the outbreak of the financial crises, scholars and public intellectuals have sought to uncover the roots of the current economic downturn. Prominent in this context has been a renewed discussion of the post-industrial balance between state regulation and laissez faire, as well as a critique of the preceding decades accelerated financial deregulation. The current crises, however, should also be seen in conjunction with its organizational dimensions. On the one hand, these dimensions can be traced to the beliefs held and the actions undertaken within a multitude of organizations, including banks, insurance companies, credit institutions, etc. On the other hand, these dimensions should also be regarded in conjunction with a range of historical developments within organization studies (OS) itself, where the core object of ‘the organization’ seems to have been problematized to such an extent that it is rather unclear what remains of this foundational theoretical construct. By attending to these latter historical developments, the paper argues that specific, yet highly diverse, modes of theorizing within OS progressively seem to have undermined organization studies’ core object. This loss, the paper claims, have made OS ill-suited to adequately respond to the organizational dimensions of the economic crisis. Only by re-arranging and re-appropriating this core object can OS relativize itself as a practically useful and relevant academic discipline.

Pharmaceuticalisation and Performance Consumption: Differences Between Young Workers and University Students

In the current modernity, the management of personal capabilities gave rise to a broad market and a booming performance industry. Medications play an increasing role in this offering, focusing mainly on cognitive/mental and body performance. New ‘healing techniques’ such as cognition-based high lifestyle drugs and smart drugs are the most visible side of this modern logic of self-management. The production of both pharmaceuticals and natural medicines/supplements participates in this range of purposes.
La Formación De Profesionales Ante La Inequidad. Desafío ético De La Educación Universitaria

La educación superior en México tiene hoy día el desafío de formar jóvenes ante un mundo altamente inequitativo. La ética profesional en los procesos de formación universitaria puede contribuir a la comprensión de este fenómeno social y, consecuentemente, a desarrollar la moralidad de la juventud tendiente a la constitución del ethos de los futuros profesionales. La racionalidad técnica combinada con la cultura de la rentabilidad inhumana está predominando en la ciencia y sus aplicaciones tecnológicas. En la vertiente marxista porque la ética social y la igualdad, implicó la exclusión de la ética como medio para terminar las formas de producción. En el lado de la ilustración y el liberalismo porque la ética se consideró un elemento subjetivo, no científico y se apostó por la construcción de una sociedad igualitaria a partir de los avances de la ciencia y sus aplicaciones tecnológicas. En este contexto, la educación universitaria tendría que estar sustentada en una capacitación científica y técnica de alto nivel, lo que produciría profesionales que por su práctica promovería una sociedad igualitaria.

El desarrollo histórico demostró el fracaso de ambas vertientes de la modernidad y la imposibilidad de que una sociedad sustentada en el racionalismo eliminara las desigualdades sociales que se han profundizado, produciendo la ética profesional como una disciplina que se ocupa de la reflexión y promoción del deseo estructural del ser humano por vivir para vivir (Morin, 2005). En este contexto, la educación universitaria está recuperando en los planes de estudio la ética profesional como una dimensión formativa indispensable para orientar la práctica profesional hacia la desigualdad.

A partir del principio fundamental de “exclusión de la exclusión” que sustenta la sociología y la antropología que conforman la ética planetaria que propone Edgar Morin, esta ponencia presenta elementos teóricos y metodológicos para una formación ética profesional que contribuya a la construcción de una ética profesional que promueva la igualdad.

Guestworkers Programs in Uncertain Times. Economic Crisis and Seasonal Labour Mobility Schemes in Spain

Since the 1970's, the global economy has been characterized by liberalization of trade and capital, but also by transnational movements of people. Recruitment of migrant workers has become popular in states facing the ever-changing nature of labour markets. Temporary labour migration has become an attractive resource for decreasing low paid jobs within the agricultural, service and construction sectors. Accordingly, there has been a growth in temporary migrant worker programs in several countries in Asia, Europe, and North America. New immigration countries, such as Spain, implemented also TWP during the economic boom in the 2000's.

In this paper we aim to shed light into the process of policy-making and implementation of these programs in the Spanish agri-food industry during the last decade focusing on three dimensions: a) country selection and recruitment process, b) recognition of rights and transitions to permanent migration and c), actors and multilevel governance.

The final part of the article focuses on the impact of the economic crisis on the implementation of these programs since 2008 and its prospects in these new uncertain circumstances.

Self-Fulfilling Teacher Expectations in the Context of Ethnic Educational Inequalities

The role of teacher expectations in pupils’ achievements has been heavily researched during the last 50 years. Experimental research as well as analyses of field data stemming mainly from the US showed that low expectations can undermine academic performance whereas high expectations can have positive effects. On learning opportunities and on the pupils’ academic future. Another line of research suggests that teachers often have lower expectations for the academic performance of children from low socioeconomic status and/or immigrant or minority background. If such low expectations create self-fulfilling prophecies by leading to behavior that undermines intellectual growth, they could be regarded as a subtle type of discrimination contributing to the widening of the achievement gap between more and less privileged pupils. However, despite the fact that there is evidence speaking against discrimination in grading or track assignment against pupils with low socioeconomic background and/or immigrant background on the pupils’ academic future. Another line of research suggests that teachers often have lower expectations for the academic performance of children from low socioeconomic status and/or immigrant or minority background. If such low expectations create self-fulfilling prophecies by leading to behavior that undermines intellectual growth, they could be regarded as a subtle type of discrimination contributing to the widening of the achievement gap between more and less privileged pupils.

We assess the state of Japanese capitalism by taking a fresh analytic look into its labor market. Our findings strongly indicate that the general dictum of "lost decade(s)" stands in stark contrast to economic reality. What is more, we find that the purported view of strong and rigid gender inequalities in the labor market is entirely flawed.

We explore the implementation of the Japanese economy has seen very stable employment conditions in a long-term perspective. In fact, Japanese businesses have created some 10.1 million jobs more than would be expected if the 1988 labor force participation rates of both sexes had stayed constant. 1.4 million of these additionally created jobs are jobs in regular employment, and what is more, 0.9 million of these newly created jobs...
regular jobs are occupied by women. Increasing labor market participation by women reportedly largely went into non-standard employment. While this is essentially true, we can evidence a strong tendency toward closing wage gaps both between men and women, and between regular and non-regualr employment. As the latter effect is particularly strong for women, we cannot draw any evidence for any potential gender inequalities for our investigation period. On the contrary, our findings suggest that women have made significant inroads into formerly male-dominated regular employment.

Hypothesizing about potential reasons for this bias, we suggest (a) that this negative perception stems from a general “adaptation problem” referring to the transition from high to low-growth economy, and (b) that the ongoing strong prevalence of the societal ideal of a male breadwinner in Japanese society effectively forecloses a positive appraisal of young women increasingly finding their way into regular employment where this happens at the expense of men.

Civil Liberties or Civil Rights? Muslim American Advocacy Organizations

This paper considers the extent to which two of the most prominent Muslim American advocacy organizations have been able to follow the pattern of advocacy established by the Civil Rights Movement as they have sought to confront Islamophobia in the USA. These two organizations – the Muslim Public Affairs Council (MPAC) and the Council on American-Islamic Relations (CAIR) – have long been at the forefront of Muslim American advocacy. The analysis considers the trajectory of MPAC and CAIR given the cultural and political context of the current ‘post-Civil Rights era’. I begin with an overview of what I call the “civil rights mode” of advocacy, a race-conscious strategy historically used by many civil rights advocacy organizations. This is then contrasted with a “civil liberties mode,” a race-neutral or ‘colorblind’ strategy that has recently gained favor in contemporary American advocacy politics. My findings suggest that the power of the civil liberties mode in contemporary American advocacy politics has played a crucial role in limiting the effectiveness of Muslim American advocacy efforts.

Etched In Stone: Preservation Of Cemeteries and Cultural Identity

Cades Cove was a thriving Appalachian mountain community in the United States prior to the establishment of the Great Smoky Mountains National Park. The creation of the park effectively brought an end to this community. It now exists within the park as a tourist destination (approximately 2 million visitors per year) with a few remaining ‘primitive’ homesteads and cemeteries. Everyone knows what cemeteries are, but in that familiarity, there is dismissal, for few know that cemeteries are far more than what they know them to be, and in that regard, cemeteries are far more than sequenced repositories for the deceased. Cemeteries constitute libraries of stone and are proxies or microcosmic expressions of the communities they represent or represented and are an important element of community.

The first task of this research has been to conduct a sociological examination of Cades Cove and the associated cemeteries, archiving the socio-demographic data of the former communities and their residents. The second objective has been to collect precise GPS coordinates of all known stones & markers in the cemeteries of Cades Cove.

A major disaster can strike at any time, endangering precious cultural property. Our cultural preservation efforts of these cemeteries are an important component of disaster preparedness in Cades Cove and to members of the surrounding communities with direct familial ties. These cemeteries have tremendous religious and spiritual importance to the families with ancestors buried there and are a significant marker of their cultural identity. Without these preservation efforts, a major disaster could destroy these libraries of stone and they would be lost forever. This would potentially threaten the future continuity of the communities and their cultural identity, destroy the artifacts of their ancestors and their family histories, and hinder recovery efforts.

Role of Sociological Theory in Deconstructing Sociological Phenomena In Africa – the Social Exchange Theory and the Small House in Zimbabwe

Sociological theories continue to illuminate various sociological phenomena found in Africa and act as conceptual and analytical tools in deconstructing sociological knowledge. This study uses the lens of the social exchange theory to analyse the small house practice in Zimbabwe. The ‘small house practice’ is the trend among married men in Zimbabwe to maintain a single woman as a quasi-permanent sexual partner in a ‘small’ marital relationship. This relationship is considered subsidiary (small) compared to the official marriage yet it is important to the welfare of both man practicing it and the unmarried woman being looked after. The study reveals that those engaged in small house interactions are rationally seeking to maximize the profits or benefits, especially in meeting basic individual needs of both the man maintaining a small house and the woman being looked after.

The Spatial Politics of ‘Noise’

This paper attends to sounds and noises as sociocultural phenomena taking place in everyday sonic environments. If noise is considered as sound that is out of place, then how and where does this evaluation transpire in order for noise to qualify as an aural transgression? In defining what constitutes as sound or noise, the process also involves locating how noise is dealt with in different places that we inhabit (public space as shared/private space), at different levels (small/large-scale) and by different social actors (individuals, groups, social institutions etc.). Cases of auditory alterations in urbanity will be analysed in order to demonstrate how sounds and noises acquire socio-cultural valences in the ways that urbanites regard and utilise spaces in city life. By interrogating how places are experienced and contested vis-à-vis auditory encounters, the paper attempts to shed light on the relationship between sound, noise, and sociality in place, and also illuminates how aural information structure social positionings, divisions and hierarchies in everyday life.

Space as Material Culture

The concept of space continues to represent a challenging category in the field of sociology owing to its implicitly referring to the material dimension of things. Following the “spatial turn” in the social sciences, relational definitions of space have prevailed, yet there is still a clear lack of systematic research. However, the concept seems ideally suited to grasp the configurational nexus of complex relations between performativity, iconicity and materiality more accurately. The presentation introduces space as a cultural sociological concept and shows recent examples of how space constitutes social meaning.

Approaching Generational Intelligence: Complexity and Agency in an Intergenerational World

‘Generational intelligence’ (GI) proposes a psychosocial approach to the questions of cultural adaptation to demographic change and a reconceptualization of ageism. It places age related generational identities in the domain of intergenerational relations and contexts such as families, workplaces, in policy development and in civil society. GI suggests three dimensions, key to addressing the degree to which it is possible to place oneself in the position of another age group. These include: the degree to which one becomes conscious of self as part of a generation, a relative ability to put oneself in the position of other generations, and a relative ability to negotiate intergenerational connection.

It is argued that dominant forms of adaptation provide limited opportunities for personal development and for age-specific identities to take shape. The value of empathic understanding, negotiated solutions and complementary roles between generational groups are examined as we move toward the discovery of age-specific contributions that may also throw light on the wider human condition. As such the approach works phenomenologically and is not overly concerned with refraction based on lineage, cohort and chronological age. It also does not trivialize psychodynamic understanding of social relations in so far as a preconscious ‘unthought known’ is seen to play an important role in the maintenance of legitimized social identities and inequalities based on age. Implications for policy and the conduct and training for research are also critically examined.
This exploratory paper investigates the modality between data collected using an online questionnaire filled in on a mobile phone device and a paper-and-pencil questionnaire. An experiment was conducted on 5th of July 2013 in thermal comfort conditions of a lab at the University of Ljubljana, excluding external effects. A total of 75 students were randomly assigned to three experimental conditions. A short questionnaire included questions on knowledge, attitudes and behaviour towards organic food products. The two online questionnaire versions were designed in a way that the visual design was most similar to the paper-and-pencil version. In order to explore the participants’ willingness-to-buy and willingness-to-pay for organic certified food, the paper-and-pencil version involved the actual presentation of a glass bottle of organic apple juice of 1L and a package of organic spaghetti of 500g, while the online surveys involved the video projection of both organic foods. For the online versions, paradata on time and changes of answers were collected. The results or experiences from the three data collection modes will be explored in order to answer questions on the time differences between the modes, on the data quality, and on respondents’ performance. This experiment is one of the first studies on mode effect for mobile phone online questionnaires as the lab conditions guarantee the exclusion of confounding effects of self-selection and non-response which typically limit the measurement of the pure mode effect.

**Evaluating Government’s Environmental Performance: Evidence from China**

While China has achieved miraculous economic growth over the past 30 years, this process is accompanied with numerous environmental problems, which result in substantial economic losses, social conflict, and rising health costs in China. How do the Chinese assess their government’s environmental performance? Based on the survey data of the 2003 and 2010 CGSS data, this article provides an empirical analysis of government’s environmental performance in the first decade of 21st century China. The main results of analysis are as follows: (1) Compared to other countries, 39.56% of the respondents argue that their government has done too little; while 61.7% of the respondents think that their central government has done too much. (2) Environmental performance whether in central government or local government become even worse in 2010 than in 2003 CGSS data. (3) As for central government’s environmental performance, rural respondents give more positive evaluation than urban respondents. However, urban respondents give local government a higher environmental performance score than rural respondents. (4) Multivariate analysis of government’s performance in environmental protection indicates that education is the strongest factor in while negative relationship with the central government’s environmental performance. These results suggest that government’s environmental performance in China today are a mixed system, in which objective environmental problems and resident’s subject perception and social characteristics coexist to determine how the Chinese evaluate their government’s environmental performance.

**The Reproduction of Intangible Heritage Successors in Heritage Tourism**

With the development of heritage tourism, intangible heritage became a kind of tourism attraction, which holds a fascination for the tourists all over the world who try to touch the landscape, human heritage, and customs of other places. In these places, intangible heritage successors become attractions for the tourists. They can tell the legend, the origin, the meaning of the intangible heritage and they can also show some skill about the intangible for the tourists. What’s more, they can get some financial support from the government because of the duty of pass the skill on. Gradually, the way of selection of the successors, the explanation of the intangible heritage and the inheritance of the intangible heritage are changing. For they will inherit the heritage within the ethnic group, they will deal with all kinds of relations outside the group, and then another kind of reproduction within themselves can be seen. In this article, the way of reproduction implies the reproduction of the concept of the Intangible Heritage Tourism.
This study examined patterns and predictors of changing young adults’ attitudes toward gender-role during Taiwan’s social transition in the beginning of 21st century. Based on panel data from 2000 to 2011 and latent growth curve modeling methods, the study identifies patterns and predictors of attitudes formation and change from adolescence to adulthood. The young adults showed an attitude of highly sensitive for gender equality, which was followed by the declining egalitarian outlook during their transition to adulthood.

The findings indicate that the parental characteristics and their gender-role attitudes have significant influence on the formation of adolescents’ gender-role attitudes. The study suggests that the parental attitudes have larger effect on adolescents’ attitudes than does parents’ behavioral modeling as indicated by parents’ household labor pattern. On the other hand, the findings disclose the important source of influence from school and community contexts on both the initial adolescents’ attitudes and the changes that occur along the subsequent years, as indicated by by the significant effects of school track, academic achievement, class interaction, work experience and participation in community activities. Furthermore, the results of the latent growth curve analysis evidence the inter-weaving mechanism of socialization and symbolic interaction. Therein the socialization background has far reaching impact, not only shaping the initial adolescents’ attitudes but also affect the trajectory of the attitudinal change through the various social-interaction contexts.

This study explores the relationship between entrepreneurship and gender relationships in family firms during the global recession in Taiwan. Although previous literature has conceptualized women’s involvement through participation in family businesses, certain studies have indicated women’s substantial contributions and indispensability. The gender dynamics within an entrepreneurial setting remain under-investigated. In this study, the power dynamics within day-to-day entrepreneurial processes in Taiwanese copreneurial firms during the global economic recession are explored from a family embeddedness perspective. Qualitative data generated through in-depth interviews of 24 family firms across economic sectors in 1995 and the follow-up interviews in 2010 show the diversity of the gender relationships and the complexity of the power negotiation between copreneurial and patriarchal roles. The research underlines the importance and the firm’s adaptive strategies provide a context in which women are able to negotiate the patriarchal system and reconstruct their position by using their entrepreneurial capability. The findings show that gender dynamics and wives’ bargaining power in copreneurial firms may vary with copreneur’s entrepreneurial capability, the nature of their specific industry, and family relationships. Wives’ adaptive entrepreneurship based on years of accumulated tacit knowledge and capability, is crucial for firms’ risk management in coping with market uncertainty. Wives’ roles tend to be characterized by greater autonomy in industries that utilize female skills than for wives in other industries. Conversely, wives of copreneurial firms in a strong patriarchal culture, particularly those in an extended family environment, are more likely to work as unpaid laborers and have no say in firms’ decisions.

The observations further reveal that wives’ entrepreneurial identity is shaped by the patriarchal cultural context, particularly those in an extended family environment, which can increase their self-empowerment and improve women’s agency. However, lack of opportunity to cultivate their entrepreneurial identity asserts their gendered identity and reinforces marginality.

From Information to Interaction: A Collaborative Approach to Health Improvement Programmes

Background: The information driven behavioural approach adopted by health promotion programmes has been criticised for focusing on individual agency while neglecting the impact of structural factors on health. Recent scholarship argues for a relational paradigm in public health which emphasises collaboration with citizens and other network actors as a key to reduce health inequalities. There is little evidence how this collaborative interactional process is supported and experienced in a health promotion context. Objectives: The study examines a collaborative interaction model of promoting lifestyle changes to improve health with a focus on how networks, relationships between various actors, including members of the public, public service users, service staff and health professionals, and the roles they assume in this context shape the process. Methods: The paper draws on network and social practices theories, interviews with different actors engaged in a public health programme in England and field-
Rethinking Methods and Ethics in Male Sexual Risk Behaviour Research

Studying sexual behaviour of men is always a challenge to many researchers. This is a qualitative study on the sexual risk taking behaviour of men in the context of HIV/AIDS. The occupational group of seafarers are chosen for this particular study in the port city of Santos, Brazil. Seafaring is a male dominated mobile occupational group at very high risk to HIV with many seafaring countries having reported high prevalence rates of HIV. Ethnographic work in the red light district was conducted consisting of in-depth interviews and nightly observations. Local non-profit organizations working in the field were approached for entry to the site. Results showed that sexual behaviour remains a sensitive topic to discuss. Researchers need extra skills and knowledge to elicit substantial and quality information. Sex of the researcher and the way he deals with the individuals play important roles in data gathering. The study encountered various hurdles in the areas of research and safety given the nature of the study, which dealt with a semi-legal environment of prostitution and drugs. Language, cultural differences, and other idiosyncrasies have to be considered in doing the fieldwork. Ethnography is an effective method to understand many phenomena because this form of inquiry digs deeper into the relationships (with the sex workers). Length of time of researcher's immersion in the field makes him strongly embedded. A rich reflexive account in an ethnographic setting is a major output in a qualitative study. Methodological issues raised in this study provide substantial contribution to the continuing search for appropriate methods in enriching areas of research and safety in both the field and the laboratory concerning 45 different images. All images were chosen on the basis of a content analysis of five Polish color magazines addressed to various audiences.

The main research hypothesis states that individuals with folk cultural capital (inhabitants of rural areas, with low educational level, and low economic status) are more likely to hold proximate (cultural) and ultimate (evolutionary) explanations of the aesthetic taste. The main research hypothesis states that individuals with folk cultural capital (inhabitants of rural areas, with low educational level, and low economic status) are more likely to hold proximate (cultural) and ultimate (evolutionary) explanations of the aesthetic taste.

LUCZAJ, KAMIL* (Jagiellonian University, kamil.luczaj@gmail.com) The Beauty Of Advertisement. Searching For Ultimate and Proximate Causes In Cross-Cultural Study

The presentation summarizes the results of empirical research conducted simultaneously in Poland and in the United States in 2013. The main research questions were related to taste for some aesthetic forms used by the advertisers. 240 subjects in each country took part in the study and filling the questionnaire concerning 45 different images. All images were chosen on the basis of a content analysis of five Polish color magazines addressed to various audiences.

Theoretical underpinnings of the presented study stem from the works of Pierre Bourdieu, but they are not limited to his deconstructive. The most important perspective is evolutionary theory informed by modern biology. Thus, presentation focuses on both proximate (cultural) and ultimate (evolutionary) explanations of the aesthetic taste.

The main research hypothesis states that individuals with folk cultural capital (inhabitants of rural areas, with low educational level, and low economic status) are more likely to hold proximate (cultural) and ultimate (evolutionary) explanations of the aesthetic taste. According to this belief, building on Pierre Bourdieu’s classical under- standing of taste diversification, I presume that a natural aesthetic taste is related to folk-type of cultural capital. In other words, my intention is to verify whether the aesthetic universals as described by evolutionists and cognitivists are related to folk-type of cultural capital. In other words, my intention is to verify whether the aesthetic universals as described by evolutionists and cognitivists are related to folk-type of cultural capital.

TG04-948.2 LUDWIG, SUSANN* (Centre for African Studies Basel, ludwig.susann2@gmail.com) Working on Futures, Reducing Risk – University Graduates in Mali and Their Strategies of Action

The research examines the conditions and opportunities of university education in Mali. The West African state counts two state universities, five state graduate schools and various private universities. The capital city’s University of Bamako with more than 80,000 students is obviously the center of higher education. Facing precarious conditions due to the shortage of means and professors the majority of students manage nevertheless to successfully graduate. Being young and highly qualified, university graduates are still strongly affected by unemployment. Given the problematic conditions of studies and the major difficulties entering the labor market, a university degree does not create the certainty expected, but provides and even provokes risk again. Consequently, the main questions to be answered are: Why do young Malians study nevertheless? And how do young academicians cope with a situation characterized by uncertainty and unpredictability?
The Work of Producing Quality in Changing Academia from the Standpoint of Junior Female Scholars

This paper is a chapter in my doctoral thesis. It builds on another chapter in which I explore the gendered work of ‘boasting’ in the context of changing academia, and how this work is essential for furthering ruling purposes and interests connected to the marketization and global competitiveness of Finnish academia. I pick up from there to study the evaluation ideology from the standpoint of junior female scholars. This involves explicating; how particular managerial texts, textual technologies and artifacts, including those related to tenure track recruitment, hold people accountable in ways that lead to the production of particular notions of quality; how this is part of furthering particular organizational and managerial purposes; and how the work related to producing this quality involves the (re)production of a particular gendered order in academia. I work from there to suggest a reworking of the concept of homo-sociality in academic recruitment. In the analysis I draw mainly on an in-depth interview with one female scholar; the various versions of an article manuscript she wrote as it developed over a lengthy review process for publication in a top journal within her field; the review documents; as well as the correspondence with editors of the journal in question. Furthermore, I draw on interviews with differently positioned scholars and academic managers, field notes from various events, and text material produced over a period of three years.

LUNDBERG, JANNA* (University of Lund, janna.lundberg@uvet.lu.se)

Social Science and Alienation In School

School can in many ways be seen as a place distant from life in general: in classrooms students are kept separate from the familiar parts of life. School and life outside of school follow different schemes so many students seems to put their real life on hold. Social science class ought to be one occasion where life in school became more real and more similar to life outside of school, since it is supposed to be all about life in society. According to the curriculum for the Swedish upper secondary school it is not enough to learn about society, the students should also become a part of society through active participation – by doing democracy, not only learning about democracy (a legacy from John Dewey). In spite of this we do not appear very well equipped for taking an active part in society even after the twelve years in school that the majority of Swedish citizens complete. The importance of active citizenship is emphasized, but in the room where students and teachers do their daily work something stops the development of active citizenship.

My doctoral study focuses on the intriguing tension between what is told, said and written in theory and what is being done in practice within the field of education and democracy in general and active citizenship in specific. Alienation theory can reveal why the well-intended work within the frames of social science is failing. Alienation in school could be seen as one part of the greater social tendency to postpone life by not living in the present. This paper will examine alienation theory and if in addition to how it can be used to understand the tension mentioned above and thereby search for a path that may have the potential to lead to changes of the situation.

LUNDBY, ERIKA* (Linnéaus University, Erika.Lundby@lnu.se)

Young Consumers In Sweden

In this presentation the question of how economic resources influence children’s peer relations will be addressed, with focus on the Scandinavian setting. This question is of particularly importance in times of changing discourses surrounding children’s role in the consumer society. The ways Scandinavian children are portrayed as consumers have gradually changed, from being positioned towards competent actors in their own lives. In total, 48 Swedish children aged 9 were interviewed in focus groups, using a projective vignette technique and pictures. The children were asked if and how children in general could gain new friends through material possessions and money. The findings indicate that children perceive possessions as multi-functional tools in peer relationships. The ability to fit into the peer group, by the use of different possessions, was perceived as especially important. Additionally, the children perceived money as an altruistic tool to demonstrate kindness. As the Scandinavian countries become more liberalized, with higher economic differences between households as a result, we need to address the question of the consequences. We should consider the significant effects of increased consumption on children’s social relationships. If children perceive peer pressure of having “cool” things, and if they believe that they can use material goods to become more popular and accepted, they may be highly vulnerable to the internalization of materialistic values.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Surveillance often sparks responses relating to “privacy.” The era of state surveillance, read through warnings like Orwell’s, makes being watched seem negative, undesirable. We want to escape, to hide, or just be “private.” But this approach seems myopic in a world of mass media and now social media. The world of celebrity makes being seen a matter of privilege, of desire. The consequences for surveillance are far-reaching – from the unwanted eye to welcome watching. The desire to be seen may help to naturalize and legitimate surveillance of all kinds, to encourage new modes of cooperation of the surveilled with their surveillors. The desire to discover (large scale surveillance) meets the passion for publicity in social media. Flexibility, mobility and connectivity are sought through social media but users find themselves tracked and recorded using the same media. How do we account for the apparent willingness to be visible to all, or to have a secure or desirable position, when it is known that daily routines and whereabouts are tracked and traced constantly? While social media allows everyone a voice, at the same time, it also facilitates in fresh ways classic activities of state agencies. Such forms of surveillance penetrate the time-space paths of everyday life (using constant updates, location tracking). This paper explores these questions sociologically and critically.

LYTKINA, EKATERINA* (National Research University, ekaterina.lytkina@gmail.com)

Transformation – Reality or Simulacrum?

In this report the concept of transformational societies will be revised. The concept was widely applied to address post-communist societies and especially vacuum, institutional, normative change and related phenomena. However it is unclear whether the change is accomplished and what a post-transformational society is or should be like. Besides, a broader context should be considered. Are transformational societies only those with the communist past or can other societies, for example experiencing economic crisis or different kinds of social instability such as revolutions or wars, or even those who enter the European Union also experience a transformation? Surely, the contemporary context is totally different from the change meant by Durkheim when he wrote about the transition from the traditional society to the industrial one. Contemporary societies are characterized by pluralism of normative and value systems together with high mobilisation and academization of policing, as well as altering organizational ideals as pertinent in this process.

Unique Societies-Common Alienation? Revisiting Alienation in Contemporary Context

The paper is aimed at examination of the difference of nature and characteristics of alienation and and in post-Soviet and Western countries. Recent findings (Lytkina, Welzel 2013) show that in such post-Soviet countries as Russia and Kazakhstan anomic can be measured by powerlessness and normlessness whereas meaninglessness, social isolation and job dissatisfaction form a measurement of alienation. The linkage of powerlessness and normlessness might be explained by the general Mertonnean assumption of discordance between the culturally defined goals and the means of the social system provides an individual with. Hence, lack of control over desired outcomes (powerlessness) causes anomic behavior (normlessness). Still, powerlessness is commonly used as an indicator of alienation (Seeman 1982, Olsen 1965, Dean 1961) whereas meaninglessness is sometimes used as an indicator of individual anomie, or anomia (Seeman 1982, Legge 2008). These arguments make formulate the following problem: are thus alienation and anomie in post-Soviet and Western countries different? If yes, what are the reasons for its difference and how can the differences be captured theoretically and empirically? Post-Soviet countries can be conceptualized as the ones who underwent the process of social transformation, thus they can be conceptualized in Durkheimean logics. One can assume that in the time of transformation the level of anomie rose significantly. Western European societies, on the contrary, experienced a relative stability. Post-Soviet countries experienced a dramatic change in the value and normative systems which before the collapse of the Soviet Union were characterized by the collectivistic nature, whereas Western societies were characterized by pluralism of normative and value systems together with high level of individualism. Which phenomena and which indicators are thus relevant for the two types of societies? These and other considerations will be taken into account.

LÖFQVIST, LOUISE* (Linnaeus University, louise.lofqvist@lnu.se)

Gender Change and Constants. the Case of Swedish Police and Gender Equality Policy

The aim of this paper is to present the case of gender equality policy and politics within the Swedish Police Service. The main object is to investigate the relation between gender equality change and local gender formations and experiences. The paper provides an outline and a theoretically and empirically informed discussion of specific organizational, historical and socio-demographic factors that are key in an understanding of gender and police work in Sweden, and putting this within a framework of political and policy development. Sweden is often portrayed as world-leading when it comes to issues of gender equality, and state policy has put forward ideals of equal opportunities in all areas of society. In this context the national police service is interesting, as a male-dominated, masculine, state organization where gender change is visible.

Ideals and discourse concerning gender as well as gender equality policy and gender equality projects have been a part of police organization since the 1980’s and the female-male ratio is slowly but constantly evening out. There has been a symbolic change and a statistic demographical change when it comes to women in policing. The issue put forward in this paper is the impact of these ongoing transformations in everyday police work. Rather than evaluating the gender equality regimes, this project investigates into the micro politics of changing gender regimes at the work place. The results show that change is undisputable but unevenly distributed in the organisation with regard to the gendered division of labour and gender symbolism and the grand narrative of gender equality is put under scrutiny. Further the author argues links between processes of professionalisation and academization of policing, as well as altering organizational ideals as pertinent in this process.

Reconsidering the within-Country Digital Divide and the Global Digital Gap: Comparing Students’ Daily Life Experiences with Information and Communication Technologies from 40 Countries

The rapid development in Information and Communication Technologies (ICTs) has drawn scholars’ attention to a new social problem—the digital divide. However, there has been little work examining the link between national contexts and students’ experiences with ICTs. This research combines two groups of literature: micro-level accounts on the inequality of digital usage and macro-level studies focusing on the global digital gap. Using data from the Organisation for Economic Co-operation and Development (OECD) Program for International Student Assessment (PISA) 2009 data, I utilize hierarchical linear modeling to examine how institutional variables at the country-level are associated with students’ digital usage across 40 countries. I use Cook’s distance to diagnose the influence of data points from the cluster level. Three institutional factors are examined: economic development, income inequality, and educational expenditure. Results are twofold: (1) The digital divide between socially-advantaged and socially-disadvantaged students is wider for countries with lower income, higher inequality, and lower educational expenditure. (2) The effects of institutional characteristics on digital usage only matter for low SES students, but not for their high SES counterparts. This research helps scholars identify key national characteristics that influence the inequality of digital usage.

Exploring the Impact of Birth Cohort Size on Education Achievement of Cohort Members

Using the data from China General Social Survey 2005, this research explores the major and modulatory effects of birth cohort size on education achievement of cohort members in China, from longitudinal and cohort perspective. Results show that birth cohort size has significant impacts on education achievement of cohort members, and cohort members in larger size birth cohort have lower education achievement. However, the impacts of birth cohort size on male and female, on urban people and rural people are different, and the reduction of birth cohort size will narrow the gap between these two groups. Besides, this paper decomposes net effect of birth cohort size by simulation and points out that it is the discordant change between population reproduction and education capacity that leads to this result.

Why Should I Know? the Reluctance of Absorbing and Sharing ERP Knowledge

In an ERP (Enterprise Resource Planning) system, all necessary business functions, such as financial, manufacturing, human resources, and distribution, are tightly integrated into a single information system with a shared database. Such a system potentially allows firms to manage their integrated business processes and associated knowledge, and to have more control of information and data in the organization. However, ERP systems are very knowledge intensive and require high levels of knowledge absorption and knowledge sharing between organizational members in order to be used successfully.

In the military organization we study, ERP systems are aimed at improving supportive, secondary processes. This means that many military employees prioritize efforts related to the primary process of the military over actions connected to the ERP system. Still, top management mandates employees to use the ERP system and perform these secondary tasks, leading to tensions/user resistance including the reluctance to incorporate or share ERP knowledge. In turn, this lack of knowledge exchange can become dysfunctional since it prevents the use of it that could benefit the organization.

We applied qualitative methods including 40 semi-structured interviews with ERP users and their managers in three separate business-units, who have been using the ERP for two years. In the study we assess why and how users of the ERP system become averse to the exchange of knowledge and how military organizations are able to overcome tensions between primary processes and ERP implementation/knowledge sharing as a secondary process. By combining theories about user resistance and informal/formal knowledge structures we grasp the underlying reasons of the reluctance. Moreover we contribute to the literature by studying IT as a supportive technology leading to user resistance, instead of focusing on how organizations incorporate core technologies effectively (e.g. Barney, 1986).

Cybercultur @ and Cultural Management For Development

México is a multicultural and mega-diverse country. With this richness and abundance in natural and cultural resources, Why Mexico is a country with a high index of poverty and low social development? How could we work in terms of community development? This paper focuses primarily on a proposal for the development of a thinking culture development as a large system formed by multiple sub-systems. We argue how Sociocybernetics let us understanding and explaining the culture as an ethno-ecosystem. In this proposal, Central System is the culture for development, and each sub-system is related and complemented with each other in building concrete procedures of observation and analysis units, as the elements of a larger system analyzed from a constructivist operational methodology. Specifically each subsystem may have different value and processing degree, and they are part of “culture for development” system. Each subsystem invites communities to making decisions and taking actions with a methodological model by the Sociocybernetics proposal and from a cybercultural perspective. Then, we explain how sociocybernetics allow us to construct a methodological proposal based on an Emerging Community of Local Knowledge system, CECL’s, in order to understand culture and development as an ethno-ecosystem; we explain how the ethno-ecological processes in a community are multidimensional and multi-relational processes. These processes permit the culture to appear as a fundamental component of a sustainable development.

Global Education in Japan

Global education has become a trendy phrase in Japan. A recent international symposium entitled “Primary and Secondary Education in the Global Age,” held in August 2013 by National Institute for Educational Policy Research (NIER) and Japan International Cooperation Agency (JICA), attracted a large audience confirming interest in this area. Among the discussions at the symposium, a central one was the debate about the meaning of “a global person.” For some, especially those in economic circles, diversity is regarded as a source of competition. For others, particularly multicultural educators, diversity is regarded as one reason to implement changes to the social welfare policies and education in an increasingly global society. With these two polarized positions in mind, I examine what Inter-cultural Education Society in Japan has tried to achieve since it first introduced the word “intercultural” into Japan 30 years ago. Because of the efforts of the society, the largest Japanese association in this field, most people in Japan are now aware of the term “intercultural.” However, research from the society has concentrated on promoting dichotomous viewpoints based on comparisons between Japan and other countries such as the U.S. The focus of the society’s research is primarily on the differences between nations, while it has scarcely put any effort into the investigation of diversity or power differences within society. In other words, in spite of the organization’s goals, it has failed to scrutinize the idea of “intercultural” in terms related to internal diversity or issues connected to social justice even though Japan has experienced a number of changes related to these in this age of globalization. In this study, I examine and analyze the context above and consider the reasons for the tendency identified in this field of Japanese education.

Judgments about Inequality and Economic Elite Among the Middle Classes: Discontents and Sociology of Critique

This paper will present the preliminary results of a research on the Chilean middle class and its perception of the socioeconomic elite. The global emergence of the middle class is also studied in different locations (Bourdieu 2010, Klein 2011, Franco et al. 2011, Dobbs et al. 2012, Ferreira et al. 2012, López & Ortiz 2012, Oliveira 2012, Chunling 2012) has created a renewed interest towards “new” middle classes in globalization due to its rapid growth and the socio-political challenges that these poses. How do those who belong to the middle classes in emergent countries feel and think everyday about one of the most salient expressions of world inequalities, the socioeconomic elite – i.e. “the 1%”? Does a perception of injustice, discontent or critique emerge towards the elite? How does that happen – or not? Our team conducted a study using an experimental methodology based on games that replicate similar exercises applied by social scientists through studies in different countries: “unknown persons” and “dictator” games. Starting with a middle-class differentiation through occupation and distinguishing by type of territory where they live and work, the simulation was located in three cities of different sizes in Chile. In each city, six simulation games were conducted with participants from five strata of Chilean middle classes and one from non-qualified manual workers. This method allows the study of feelings and perceptions that arise in simulated situations of social interaction, which could not be observed through surveys or interviews. We will present the preliminary results, especially subjective elements that nourish and give meaning to middle classes, reproducing or challenging inequalities. The paper will contribute on topics that are relevant to stratification in the context of middle and give meaning to middle classes, reproducing or challenging inequalities.

Science and Technology Studies, Africa and the Long Shadow of Unspoken Assumptions

Science and technology studies have injected new blood into social theory over the past 20 years. Their assumption that the workings of science and technology are a good guide into the constitution of (modern) society has played a central role in sharpening sociological thinking over the notion of modernity and its analytical relevance in research. A paradox underlies the importance of science and technology as a social institution. On the one hand, STS seem to provide a very specific type of society, namely highly technological modern society. This would seem to rule out the possibility that STS might have anything to say about societies which do not fit this description. On the other hand, however, and because STS produces social theory, i.e. a vocabulary designed to make the social world intelligible, it can lay claim to the ability to deliver concepts that can be deployed in efforts to make non-modern societies intelligible, even if only by default. This paper will try to address this paradox critically with a theoretical claim. The claim will be that the reason why STS may work well as a research programme may have to do with the fact that it takes the settings within which science and technology operate for granted. In other words, STS research works under a “ceteris paribus” assumption – legal predictability, economic and political stability, etc. – which constrains the translation of concepts into different settings.

Is the Concept of Patriarchy Useful to Comparing the Gender Relations through the World?

This work seeks to develop a critical reflection on leisure from the interaction with natural and cultural landscapes, declared patrimony of humanity, in the city of Rio de Janeiro, in the neighborhood of Copacabana. This site has the second highest concentration of sexual identity tourism, considered by Municipal law “preferred tourist destination of the third age”. The theme will be presented from the theory of complexity, dialoguing with assumptions regarding sustainability and active aging on longevity. The methodology presents the translation of perception of 60 to 100 years of elderly, residents at the site, concerning the relationship between gender and the environment and social vulnerability. I then discuss these ideas in relation to climate change adaptation, making links between gender and food security, both in terms supply and demand. In particular, women’s role in household food security is highlighted. Here, I critically examine these theories and assumptions, within the contexts of existing social, cultural and other vulnerabilities, with reference to projects and research from Bangladesh. I then discuss these ideas in relation to climate change adaptation. Socially just adaptation theory argues that for adaptation to be sustainable, transformative and effective, initiatives need to be responsive to existing social inequalities, while working to reduce vulnerability and create transformational change. Many NGOs, the Bangladesh government and other key stakeholders, have recognised the complex vulnerabilities facing women, both within their households and communities, and are attempting to incorporate these ideas into adaptation responses. However, it is unclear whether these efforts represent
strategic change for women from poor households, involving a transformation of gender structures, or only practical changes, in helping women survive.

The Right to Democracy and the State in Moments of Crisis: Lessons from the History of Radical Unionism

For the last four years square occupation movements have formed the core of a revolutionary wave calling for radical forms of directly democratic organization. It remains an open question to what degree these rights to democratization can be accommodated by states and the larger structures of global capitalism – if at all. Solving this puzzle requires a long-term perspective of a directly democratic mass social movement organization on par with the square occupations. Toward that end, I take a world-historical perspective that allows a comparison of syndicalist attempts at extending democratic rights across two time periods: the early 20th century crisis of British hegemony and the syndicalist resurgence in the current crisis of the Eurozone. The focus is on examining how syndicalist-state interaction differed from the more hierarchical worker organizations putting forward much narrower sets of rights claims. Studying the manner in which crisis-torn states of each period deferred, coopted or adopted the democratization claims of the syndicalists reveals the trajectories of state–movement interaction to be conditioned by processes of global capitalism and the specifics of local structures of dependency and exploitation. Existing social movement theories of democratic movements have been too both enriched and reconfigured by this long-term perspective. In addition, this study reveals how the movement’s rights claims to economic democracy (both inside and outside the workplace) underwent a transition from largely explicit to implicit rights frames, thus facilitating connection with non-labor democratic movements. Finally, tracing state–movement interaction in unstable economic contexts bears on questions of the meaning and realization of economic rights; the crucial test of such rights claims in periods of crisis becomes the degree to which workers and other stakeholders have democratic input on policy and thus avoid “cost shifting.”

The Legal Cultures Observed By and Observed Among the Pioneers of Japanese Socio-Legal Studies

Since Professor Takeyoshi Kawashima provoked the debate by his classic work, Legal consciousness of Japanese, in 1967, theories of legal consciousness and legal culture have kept on to both enrich and reconfigure the issues of scholarly controversies in various fields of socio-legal studies. With an eye to the controversies on the globalization and local cultures, theories of legal culture (and legal consciousness of local population) seem to provide suggestive viewpoints for socio-legal studies on globalization and local adaptation. I would argue that theories of legal consciousness and legal culture serve for studies on globalized law and society in two ways. First, they would provide viewpoints for studies on legal reform and adaptations in various countries. We should keep eye on the culture and social consciousness shared by elites leading legal reforms in our empirical studies on the legal culture adaptation to globalization around the Pacific. We could observe what kind of legal consciousness and legal cultures the leading groups have and what kind of impact they have in molding new legal systems or institutions. Second, we would keep their positions in the socio-legal grand theories on use of law, legal adaptation, legal conversion, and so on, though it would be difficult to test empirical validity of such theories. I would illustrate that Japanese theories of legal culture themselves were reflection of the legal culture shared among the pioneers of Japanese socio-legal studies. I would straight up the key factors of Japanese theories on legal culture and relate them to the social and academic backgrounds and interests shared among the pioneers of Japanese socio-legal studies. I would also try to reconstruct theoretical framework, in which legal consciousness and legal culture serve as key factors for our contemporary empirical studies.

Revolution from below: The IMPACT of Market-Oriented Management of Hospital Employment in Germany

Internationally, health care has seen the advent of (quasi)-market governance in a public service environment and, concomitantly, the rise of organisational policies derived from private business. Hospitals are a case in point. While still being accountable for the universal delivery of medical services, they are expected to behave like enterprises geared towards earning revenue, sometimes in a regulatory environment featuring free user choice and provider competition. Thus, ‘market accountability’ becomes an issue for hospital management. Exploring the case of Germany, the paper explores how this translates into managerial concepts and relate them to the social and academic backgrounds and interests shared among the pioneers of Japanese socio-legal studies. I would also try to reconstruct theoretical framework, in which legal consciousness and legal culture serve as key factors for our contemporary empirical studies.

Completely Included, Partially Included or Partially Excluded in the Labour Market? an Exploratory Schema of Social Vulnerability in Late Careers

Life course sociology corresponds to an area of study traditionally interested in the analysis of vulnerability during early and middle adulthood careers. Yet, given an increasing attention over the last occupational period in Western countries, the current article aims to analyze the vulnerability confronted in late careers, focusing specifically in Switzerland. To this end, a new exploratory schema of vulnerability based on seminal life course notions and an inclusion/exclusion theory, is proposed for the analysis of late careers. Moreover, another aim corresponds to analyze how different life course determinants -such as life experiences in different domains and positional factors- impact the likelihood of confronting, or not confronting, social vulnerability during this occupational period. Longitudinal data comes from the Survey of Health, Aging and Retirement in Europe (SHARELIFE). Used methods are cluster, optimal matching, and discrete regression models. Results allow concluding first that the proposed conception of vulnerability based on an inclusion/exclusion schema has an acceptable empirical support. Second, the likelihood of confronting vulnerability during late careers depends mainly on early life experiences in family and occupational domains, as well as the positional status of workers.

Childcare and Elderly Care in Bologna

Family is the main provider in the Italian welfare system. As a consequence, supports for care in Italy are underdeveloped since care is almost totally delegated to women to sustain its members. Such model had strong influences on women's life and gender equality has one of the lowest fertility rates all over Europe and will be suffering in the next years from an increasingly higher old age dependency ratio, thus worsening the female care overload. Nevertheless, Bologna is a best practice in this worrying scenario. Thanks to a strong social democratic tradition, local welfare policy has been developed on the basis of citizen participation and it has been the first to introduce childcare services in the 60s, while promoting a wider support for dependency in addition to the national provision. The result is that Bologna has the highest female participation rate to labour market in Italy. However, the financial crisis and the consequent reduction of public funds have put in question the sustainability of Bologna’s model in recent years. In the present paper, we will show results from a series of 8 focus groups involving 34 working women conducted in Bologna during 2013, which have been selected because they have care responsibilities. Stemming from an investigation of both individual and social factors, the analysis will focus on the work-life balance of women, assessing the role of their partners, their family and the local welfare system in it. The comparison between women with childcare duties and women with elderly care will also show how the overload of women in their 50s will be the real challenge for Bologna in the next years, as long as they combine the roles of grandmothers, children of dependent elderly and worker.

MAEYAMA, SOICHIRO* (Fukuyma City University, maschiro@aol.com)
Possibility of Area Management Organizations for “Bulwark Against Neoliberal Urbanization – Thorough the Cases of Public Development Authorities (PDAs) –

In some cities in US and in Japan entirely new organizational structures have sprung up to promote urban development in the new contextual situation. In this presentation, a new structure, “Public Development Authority” (PDA) is treated, which has mainly developed in west coast of US, and is getting attention in terms of neo liberal urbanization. PDA is quite unique-style entity that is established by cities (municipalities) as special purpose government for promoting specific purpose (such as area management, or historical and business management of historic market), equipped with business specialist-staffs, and also it is governed by volunteer citizen board members. “half private, half government”entity is run or governed by citizens.

Some PDAs has been observed to behave as “developer” in the “neo-liberal” urbanization process. But considerable PDAs, for securing neighborhood’s core and culture, are trying to build the devices for helping local business owners and individual citizens mentally and physically, as of Seattle Chinatown International al PDA (idea space) and “IDEA Space” project for assisting local small businesses, using “visioning”method . These trials are expected to be effective “bulwark’s against diverting impacts of neoliberal developments. This presentation concretely gaes at the PDAs’ efforts (and the like’s of area management organizations) to keep local core of cultures, local “life economy” with concrete devices from the stand point of citizens eyes and “advocacy”. And the conditions for preventing PDA to fall into “developer” are sought.

Just for accessing the present big picture in terms of area management organizations in neo-liberal trends in US, Japan etc, CDCs (Community Development Corporation) in US and “Machizukuri Kaisha”, special purpose agency in Japanese PPPs are shortly mentioned as well.

Instrumental Action and Rhetoric: Framing Rational Action on Language Field

The paper makes a theoretical reconstruction of a model for instrumental action in language, using the notion of rhetoric. It takes persuasive language to be constitutive of instrumental reason, and analyses the possibility of bring to the theory of social action some concepts from linguistic field. The first step establishes an analogy between instrumental rationality and rhetorical movements like projection of future, or reconstruction of past. In those operations we use rhetoric in order to create the persuasive frames of reality and use them for self-persuasion and for persuade other people to go into a specific course of action. Since deliberation is a problem of collective action and rationality we can understand rhetoric in terms of building a new descriptive model of rationality, in other words, we can describe rationality as a rhetoric operation: it consists in giving different degrees of truth to the information available and then create conditions for choosing a specific way. This approach builds a critical view to the notion of information as objective data collected by rational actors, and points to the deliberation as a cognitive way to deal with framed discourses about reality. Based on this model we can criticize some analytical problems from the theories of rational choice concerning collective action, here represented by M. Olson’s paradox and, in the same way, criticize Jon Elster’s paradox of indeterminacy, based on the concept of optimal amount of gathered information. The concepts of rhetoric give to the theory of rational action a key to understand how in empirical situation words, and sometimes just words, are enough to create action.

Social Norms and Policy Influence on Family Formation in Sweden

This paper seeks to extend existing knowledge about gendered transition to family formation and parenthood by looking at whether and how public policies influence fertility. Our research is part of a larger international project on gender equity and low fertility in postindustrial societies. The theoretical framework is designed to capture the ways in which family- and gender-role norms, institutions, and economic context intertwine with the family formation intentions and behaviors of young adults. We focus on two sets of social norms (family- and gender-role norms) in influencing individuals’ intended and achieved fertility. The two sets are viewed as separate constructs, the first dealing with the definition of the “nuclear” family, and the second dealing with the appropriate roles of men and women in the family and in the public sphere, especially the labor market. Our analytical model seeks to attribute equal explanatory power to men’s as well as women’s opportunities for engaging in positively viewed activities in the spheres of family and work. In our empirical analyses we rely on a mixed-methods approach. In this paper, we combine a quantitative analysis based on data extracted from the Swedish Young Adult Panel Study on attitudes to work, family and gender roles and their possible impact on family formation (intentions) among Swedish young adults in the first decade of the 21st century, with a qualitative analysis of narratives in in-depth interviews (N=80), carried out with women and men aged 24-35 years in two metropolitan areas in Sweden in 2012. The findings for the qualitative part indicate that young adults view Swedish family policies as good even when having little first-hand knowledge of them. We discuss similarities and differences across gender and family status, as well as the implications of our findings for research and for policy design.

Development, Modernity and Nanotechnology: The Challenges Of a Time

This paper aims to raise some thoughts on the present time and the relationship between modernity, environment and development, starting from some questions: if we continue to follow the current economic model, of reverting development and capital expansion, what awaits for us? Is there a future? Will the human species take part in it? How to divert the course of this rudderless ship? Can we command Progress? In search of clues that point to the possible answers, we walk at some tracks left in late 1960s and early 1970s, by Josué de Castro, on the changes that had already been felt in his time and the threat that hovered in the world due to environment imbalances arising from the development model based in the expansionary logic of capital, the rampant belief in science and technology, then to reflect on the reality of our time and the progress and achievements in the field of science and technology, and the challenges we face against the advance of new technologies - and this is the case of nanotechnology. Nanotechnology is a technology that can have and already has numerous applications. It’s, in the point of view of the market, a safe investment for the future. In this sense, we must discuss the ethical and legal issues that should regulate the use of nanotechnology. There is no certainty about the possible impacts that the use of nanotechnology may have, regarding the health of people and the environment. This paper is the result of the research “Nanotechnology: an impact to food and biofuels: recognizing the essential elements for the development of indicators of risk and regulatory frameworks that protect health and the environment” (898/2009), funded by CAPES, a government agency linked to the Brazilian Ministry of Education.
Women's experiences have been the nucleus of domestic violence literature, discourse, and policy, and have shaped the therapeutic and/or punitive measures that are characteristic of domestic violence prevention – measures that research has shown are largely ineffective in curbing violence. Consequently, we still know relatively little about why men batter, and how they make sense of the negative “batterer” credential that corresponds with their offense. The few studies that explore batterer behavior are primarily psychological, reducing their violence to individual pathology that can be “treated” in therapy. Accordingly, non-psychological studies are characterized by evaluations of the utility, effectiveness, and/or therapeutic techniques of Batterer Intervention Programs, thus missing the sociological roots of batterer behavior. Drawing from in-depth interviews with 15 male bathers, my research shows that these men make sense of the offenses of which they have been accused in different ways, both with regard to the role they attribute to the state in their felt disempowerment and emasculation, and the role attributed to the women they batter. These different meanings are attributable to a number of factors – factors I argue must be addressed to the extent that they are linked to recidivistic risks of battering. The analysis presented in this paper therefore provides a foundation for creating more effective social remedies for battering behavior, and it provides an opportunity to reconsider gender-based theories of interpersonal violence more generally.

MAHI, LARA* (Université Paris Ouest Nanterre , laramahi75@gmail.com)

Sentencing: ‘health Determinants’ of Criminal Sanction

Des travaux en sentencing ont mis en avant les inégalités face à la sanction pénale. Que l’on soit une femme ou un homme (Mary-Portas, 1996 ; Cardi, 2007), que l’on ait la peau de couleur ou non (Steffensmeier, Ulmer, Kramer, 1998), que l’on ait un travail ou non (Herpin, 1977), ou encore, que l’on ait un nom à consonance d’origine ethnique (Névanen, 1984) ou non (Jobard, 2007, 2009), on n’est pas égaux face à la sanction pénale.

En matière de santé, la question de l’impact de l’état de santé somatique des justiciables sur les jugements est systématiquement étudiée au profit de travaux sur les déterminants de santé mentale (Thys, Korn, 1992 ; Laborge et al., 1995 ; Cartebbols et al., 2010). Pourtant, le haut taux de prévalence, dans les prisons françaises, de personnes vivant avec une pathologie lourde (6,2%) par rapport à ceux observés en milieu libre (DREES, 2005) interroge l’existence de formes de sur-pénalisation des malades. Y a-t-il un lien entre l’état de santé des justiciables et la peine à laquelle ils sont condamnés ?

Après avoir observé 412 procès correctionnels au tribunal de grande instance de Paris, nous avons analysé statistiquement les liens entre « stat de santé du justiciable » et « condamnation ».

Nos résultats font état d’un contrôle particulièrement coercitif, par l’institution judiciaire, des justiciables sortant de l’incarcération. En effet, nous relevons qu’en moyenne, les justiciables sont condamnés à un processus de soin. Au cours d’un procès pénal, ces derniers sont sur-condamnés à la prison ferme et à de plus longues peines. Aucun lien entre l’état de santé des justiciables et la peine à laquelle ils sont condamnés n’a été relevé.

The Social Fabric of Solidarity Economy Initiatives: On the Emerging Creative and Collective Action Devices

Solidarity economy initiatives are not obvious. They need specific contexts to emerge and develop themselves. We have to better understand conditions under which individual and collective processes of initiatives can emerge, be designed and implemented.

As Hans Joas formulates it, the sense of action builds itself at the heart of the very action. So, we need to consider solidarity economy initiatives as a social construct. This proposition questions and participates in current researches on social entrepreneurship. My point of view emphasizes on the social contexts and conditions of alternative entrepreneurship.

A second idea, continuing the first one, leads me toward two hypotheses. As a first hypothesis, I consider that solidarity economy initiatives find their dynamics within creativity of action develops by alternative collectives of actors and social entrepreneurial communities. We should better know these collective in order to differentiate their actors at the same time social activists and entrepreneurs. My second hypothesis concerns the role of their devices which give it sense to collective actions and the processes of their design and implementation. These acting devices should be observed and analyzed in depth as far as they gather, promote, mutually develop and capitalize solidarity economy initiatives. Then these processes and collective devices permit to female the role of the social fabric of solidarity economic initiatives.

In order to develop and begin to validate these hypotheses, I shall present and discuss first results of a qualitative research focus on several collective action devices as developed by social actors in France. These alternative collective and their acting and learning devices are developed at the very heart of co-working...

Constructing a Gender Discourse inside the OECD: The Working Party on the Role of Women in the Economy

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Global Arenas of Knowledge: Perspectives from the Brazilian Case

The UN International Decade for Women and the four UN Conferences on women helped to put gender equality on the global agenda. Although feminists are rightly critical of the slow pace of change, gender equality retains an important place on official global (and regional) policy agendas. This paper examines the work of the OECD Working Party on the Role of Women in the Economy (ROWITE). Formed in 1989, in advance of the first UN Conference on Women, ROWITE constituted an important site for the consolidation of a feminist agenda for the Global North and, through its support for the Women in Development group within the OECD’s Development Advisory Committee (DAC) supported the promotion of gender equality through its members’ agendas. Although ROWITE was disbanded in 1998, its concerns were, in partly picked up by the Social Affairs Division and thus continues to have a resonance in contemporary debates.

Perceptions of the Concept of Physical Activity Among Older People and Staff in Residential Homes

Annsofie Mahrs Tråff, PhD-candidate
National Institute for the Study of Ageing and Later Life, Linköping University, Sweden

This presentation aims to present parts of my doctoral work focusing on the ability and desire to be physically active when you live in a residential home for the elderly. The aim for this part of the study was to identify and describe variations in perceptions of the concept for “physical activity”.

Physical activity is described as positive and important for all people. My thesis is to investigate how people are interested in, and able to, maintaining physical activities even though they often have significant disabilities. Also and to investigate how older people in residential homes are experiencing opportunities for physical activity and how their physical environment affects these opportunities.

The interviews show that the older people often describes physical activity in on physical work, interviews, documentary work and quantitative methods of citation analysis of the former Prime Minister Rafic Hariri in a car bomb on February 14th, 2005 triggered the largest demonstrations in the history of the country. Hundreds of thousands of hands went to the streets in a show of support for the Synopolitical, as well as accusations of being behind the assassination, or to indicate their alliance to it and accuse the US and Israel of killing Hariri. In the following research I study how the political protests that followed the assassination of the former Prime Minister Rafic Hariri turned into sectarian violence that has been framed as “Sunni versus Shiites”. More precisely, I look at the shift in the political salience and the enmity of political, confessional as well as national identities. I have used official records and newspaper archives in order to compiled a dataset of all protest movements and events of violence/clashes that have occurred in Beirut between 2000 and 2010. I analysed this dataset in order to depict the shift in the political salience and the enmity of political, confessional as well as national identities. I have used official records and newspaper archives in order to compiled a dataset of all protest movements and events of violence/clashes that have occurred in Beirut between 2000 and 2010. I analysed this dataset in order to depict the shift in the political salience and the enmity of political, confessional as well as national identities.
assassination was a "political earthquake" that shifted the attention of the Lebanonese society from mainly pan-Arab concerns, to internal concerns and anti-Syrian activism. The analysis of our findings suggests that a change in political relations leads to sectarian tension when two main conditions are met: (a) the majority of the sectarian group follows one leader and; (b) when the two opposing communities are equal in size and in power.

Australian Carers' Income Support Since 1983 – Changing Frames and Persistent Gender Inequality

Many Australians provide unpaid, informal care for a relative or friend with a disability, illness or age-related frailty, and women are more likely than men to be the main ‘carer’ in these circumstances. A dedicated income support payment for some Australian carers has been available since the 1980s. Unlike many other forms of income support, which have been progressively restricted as part of a wider-ranging neoliberal reform process, eligibility for Carer Payment has been extended to an increasing number and range of carers in recent years.

This paper reviews the history of this policy area, focusing on the manner in which reforms to the social security legislation have been framed. Drawing on Fiona Williams' analysis of the framing and framing of European care policies (2010), we argue that changes to Australian carers' income support have developed within competing frames of social justice and social investment. The social investment frame, which prioritises paid work over care, has become particularly prominent in recent years. This echoes the increasing concern with paid work participation in other areas of social support, such as unemployment benefits, as well as childminders for sole parents. However, the changes to carer policy reflect a unique tension between competing goals of promoting paid work participation for all working-age people and ensuring a supply of unpaid carers in the community.

Neither of the dominant policy frames addresses Australian women's ongoing responsibility for the bulk of unpaid caring, and income support policy potentially reinforces this inequality. We argue that these issues must be addressed in future reforms to ensure that the competing pressures on women to care and to engage in paid work do not lead to greater disadvantage for carers and the people they care for.

Middle Class Women's Work and Childcare in Paris

Today, France draws attention from neighbouring countries because of its high birth rate. French women are also relatively active in their labour work participation. In Paris, the number of women in work is especially high, and the number of nurseries is inadequate. How do women manage to find a place or person to look after their children while they are at work? How are women and class related to the issues of childcare? These are the main interests of this paper. In France, the most widely used form of childcare is the registered childminder, the so-called "assistants maternelles", and not nurseries as in Sweden. The paper will put the emphasis on this French registered childminder system.

According to a French national report on childcare, in 2011, 37% of children under three whose parents worked full time were left with registered childminders who were approved by the local authorities and received children mainly in their own homes. 18% of children had places in nurseries, and 4% were left with unregistered childminders, usually professional nannies who worked in the children's homes.

The French "assistant maternel" system was passed into legislation in 1977 to clarify the undeclared work, and progressed during the 1990s to increase jobs in children's homes.

Japan's economy entered a long period of stagnation, known as the 'Lost Two Decade,' after reaching its peak in the late 1980s and early 1990s. In this period, many politicians, business person, and intellectuals criticized Japanese youth: tending to lose their temper with the darkness of mind, chasing their unplanned dream without regular jobs, and not leaving their nests. Critics also told fragile about his self-consciousness. We focus on points of Japanese youth. But we can get another figure of Japanese youth from the outcome of the research of Japan Youth Study Group, conducted in 1992, 2002, and 2012. For instance, most Japanese youth love themselves, and feel senses of themselves. They are anything but fragile. By the way, one merit of comparison of three or more time point is that we can distinguish between temporary trend and long-term trend. For example, the ratio of respondents of feeling sense of oneself has declined by degrees from 1992 to 2012. The ratio of keeping one's individuality in any situation has declined too. And the ratio of changing oneself depending on the situation, and engaging in superficially, have decreased from 2002 to 2012. These means long-term trend of diversification of the self. On the other hand, the ratio of loving oneself had increased from 1992 to 2002, but has decreased from 2002 to 2012 (temporary trend). What causes for these? We can consider two matters. First, the cultural-social change underpinning long-term trend, for instance, the diffusion of mobile media and social network service accelerating the diversification of the self. Also, we need consider what happened in 2002 (about temporary trend). We try to explain the structure of self-affirmation by comparing the determinant and related item of self-affirmation on each year. Finally, we discuss the effect of intertemporal research on public opinion in Japan.

A Method to Construct the New Framework for the Equitable Water Distribution -the Case Study of the “Water War” in Bolivia-

Why does the water resource problem in Bolivia remain despite the victory of “Water War”? “Water War” in 2000 was an anti-privatization movement towards the public water service and it changed the water law and forced a private company to withdraw. The goal of the social activists who had played a main role in “Water War” was to improve water resource accessibility. However, the success of “Water War” did not solve the water resource problem in Bolivia. Does it mean that the other issue needed to be improved the water resource situation? Existing literature has mainly focused on the strategy of water war, and the water situation not mentioned. In order to investigate a real driving factor that had caused the problem, analysis of the Water War should be revisited from different angle. A water shortage is classified into two factors: “Real scarcity” and “Manufactured scarcity” (Mehta 2003). While real scarcity refers to a shortage of volumetric quantities, incurred mainly from population growth, industrialization and an ecological system, manufactured scarcity is constructed by powerful actors such as politicians, bureaucrats and irrigation farmers to gain profit at the exclusive possession of water resource.

I assume that the goal emphasized in “Water War” was directed towards manufactured scarcity, it prevented its focus from real scarcity, which is also pivotal in order to solve the water resource problem. This study uses the original data of fieldwork and local newspapers from three times of fieldwork by the author. I will use discourse analyses to expose the process of why social activists chose to focus on “Manufactured scarcity” in order to gain the civilian support. I present the importance of recognizing the each characteristic of water scarcity to improve the water resource problem. This research intends to provide a new framework for equitable water distribution.

Pathways Of Aging: Old Women's Gendered Narratives and Cultural-Historical Locations

Pathways of Aging: Old Women's gendered narratives and cultural-historical location

Gerontology has moved away from a focus on old age per se to the recognition of old age as part of the life-course, and more importantly, as the result of a lifetime's experiences. In this paper I explore the themes that old Mexican women themselves identified as important in shaping their pathways towards old age. I do so by employing a thematic-narrative analysis of multiple in-depth interviews with older women aged 60 to 89.

Throughout their life-course the women's personal biographies, their current social, cultural and economic locations have been informed by a range of structural factors, institutions and personal attitudes, choices and opportunities. My intention is to stress the importance of structural and personal circumstances that underpin the socio-cultural construction of ageing and old age: the relation between the objective reality and subjective experiences of ageing. By making refer-
ences to the women's historical and cultural location and their gender socialisation, I contend that not only is there an individual biography, but also a collective story. There is however diversity amongst these women's life experiences. Through some specific actions such as attaining higher education and continuing to work after marriage, they enacted their individual agency and challenged the prevailing patriarchal narrative. Their actions although offering 'liberating' narratives, become more evident in the experience of their daughters and granddaughters. The women’s formal and informal participation in the labour market has not brought them real benefits in their old age, as most of them do not have their own occupational pension, thus making the role of the family central to their well-being in old age. This is relevant in relation to family arrangements and commitments that define the contexts of care and the social and economic capital these women have access to.

MALAINA, ALVARO* (University of California Berkeley, alvaromm@pdi.ucm.es)
The Complex Adaptive Systems Approach, a Sociocybernetic Reading

Since the foundation of the Santa Fe Institute in the United States in 1984, and especially during the 90s, was formed a new wave in the science of complexity: the Complex Adaptive Systems (CAS) approach. CAS is based on modeling and simulation of complex systems using advanced computational techniques such as cellular automata or agent-based modeling. With an interdisciplinary and universal classic, its main methodological approach has dominated the scientific discourse around complexity. Numerous interdisciplinary complex adaptive systems centers have spread throughout the world, from United States to Europe, from Latin America to East Asia.

We need a more reflexive and critical approach to CAS, taking into account its epistemological limits. Sociocybernetics, through authors such as Varela, Maturana, Luhmann or Morin, is very useful here, because of its emphasis on the question of the observer/subject and its construction of the observed/subject. Something that CAS models ignore, seeking to determine objectively and algorithmically probabilistic patterns in complex systems, without considering that system and complexity are primarily attributes of an observer, an operation of "punctuation" in his knowledge of the world. The simulated systems are doubly result of the intervention of the observer: the real system is an "invented reality" (von Foerster) and the system that simulates the real system would be doubly so.

CAS-epistemic limits become more evident in its sociological models called "Artificial Societies". The intervention of the modeler/observer here is even more evident in self-reflexive systems that are able to observe themselves, "self-referential" (Luhmann) systems of meaning in which both the constructed nature of the subjects themselves (Foucault) and the structures or social spaces of objective positions where the subjects are located (Bourdieu) cannot be ignored in favor of a mere behaviorist study of patterns of interaction among agents and their resulting and irreducible emergences.

Not No Place: Fragments of Johannesburg

Not No Place is a collage of visual and written fragments on Johannesburg’s historical, archival, found and self-generated. The book is the result of documentizing and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, as well as fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of Utopia). A montage combining photographs, drawings, archival material and texts, it alternates between the mode of collector, witness, observer and author, taking into account the numerous representations of the city in historical writing, urban theory, film, media and fiction. Not No Place presents a collection of moments in the city’s complex history, its contemporary spatial realities as well as its future projections.

Bettina Malcomess and Dorothee Kreutzfeldt speak to their visual processes and practices informing their book-length investigation into Johannesburg. Not No Place: Johannesburg: Fragments of Spaces and Times. This intriguing and beautiful book is by no means an official biography of the city - it reads more like a richly illustrated scrapbook of ideas and reflections part made up of quotes from a multitude of sources and part made up of the authors’ personal narratives and ruminations on Johannesburg. Mattering Difference Cervical Cancer, HPV Vaccines and Global Health

Vaccines are a contested technology. On the one hand, they have been presented by health policymakers, researchers and practitioners as the most powerful weapon in the war against global disease. On the other hand, vaccines have been an object of criticism and distrust by anti-vaccines social movements. Cervical cancer is a woman’s disease in that it is a deeply gendered disease. It has had an important capacity for embodying historical power relations and material conditions of women experience. Cervical Screening programmes and a general improvement in healthcare services in the “developed” world has meant a significant reduction in its incidence and mortality. However, such improvement has not occurred in the “developing” world at the same rate. HPV vaccines dwell between these worlds. HPV vaccines are not only a good case for understanding the convergence of such tensions, but also they make visible new problems such as co-production between gender, technology and disease.

This paper presents the discourses on cervical cancer and vaccines as the framework used in the production of narratives about HPV vaccines. I use the terms politics of disease and politics of prevention in order to describe the arrangements of objects, narratives and institutions that involve the contemporary perceptions on cervical cancer and vaccines. I describe the tensions that make vaccines a contested technology and cervical cancer a marginal disease. On the other hand, cervical cancer has a particular story as a malady associated with poverty and sexual stigma. I discuss the permanence of these narratives in the contemporary policies and practices on cervical cancer and development. Finally, HPV vaccines establish a connection between the worlds of cervical cancer and vaccines. These technologies not only gather such tensions, but also they make visible new problems such as co-production between gender, technology and disease, the development of “anticipated” cure.

The Impact of Fukushima on Evacuation Preparedness in Case of Nuclear Disaster in Slovenia

Krško Nuclear Power Plant (KNPP) located in Slovenia has met expectations for safety and stability of operation so far. Stress tests conducted by the EU a few months after Fukushima disaster in 132 NPPs in 14 EU member states proved that KNPP was one of the safest installations. However modern technology brings inherent risks therefore failures and accidents are in some way inevitable or even “normal”. The nuclear disaster in Fukushima proved that this can happen in one of the most developed countries in the world. There is no reason to assume that such disaster could not occur elsewhere including KNPP.

Drawing on results of the survey among inhabitants and interviews with the highest representatives of institutions and companies conducted in a 3-kilometre radius around KNPP, the paper seeks to establish the level of preparedness of population, institutions and companies for the evacuation in case of disaster in KNPP. The analysis reveals that despite communication efforts made by the authorities almost three quarters of the population in the potentially most threatened area are not familiar with the locations of reception centres assigned to them in case of disaster, whereas two thirds of them do not know the evacuation routes. The level of preparedness of institutions and companies is also rather low due to fatalistic attitude, and poor nuclear disaster planning, training and coordination. These facts suggest that crisis management actors, including Slovenian military, would face extremely demanding situation in case of nuclear disaster similar to one in Fukushima. The role of the military will be especially scrutinized in this context taking into account previous experiences of military’s involvement in disaster management.

Transnationalization of Labor Mobility Development Trends and Selected Challenges of Its Regulation

Ever since the early development of the industrial mode of production paid employment has been strongly structured by regional or at least national mobility structures until the end of the 20th Century. Ways to the workplace were primarily daily oscillations; spatially varying work assignments concentrated on relatively small groups of experts and construction work.

With the internationalization of value chains, migration and organizations, this picture changed dramatically. Labor mobility becomes transnational for a constantly growing share of the working population. This concerns inner-European labor migration as a crisis-induced labor migration, as well as contract and subcontract work, but also the growing cross-border mobility within profit and non-profit organizations as well as the increase of locally recruited employees who have the nationality of the "parent organization". In our contribution, after conducting an empirical assessment of selected types of new transnational labor mobility, the related challenges of regulating their labor, employment and participation conditions will be discussed. Along with secondary data this paper refers back to the results of a project funded by the German Research foundation (DFG) on cross-border personnel mobility in organizations.

MALLICK, MIRA* (Waseda University, lequin@ruri.waseda.jp)

Leisure based youth subcultures are often depicted and best remembered in the common imagination as the material manifestations that they occupy at the height of their popularity. The styles, behaviors and practices of these subcultures are often thought to reflect how participants feel, what they value and the lifestyles they desire. Oftentimes dismissed as mere ‘fashion fads’ or instances of deviance, subcultural participation is characterized and reduced to a passing period of youth to be outgrown or resolved as one moves into adulthood.

Visual Kei refers to an aesthetic movement in Japanese rock music as well as the subculture surrounding the consumption, production and practices of its performers and fans. This paper critiques such notions of subculture as tied to a temporal period of youth by examining the generational shifts and continuous participation that extend well into adulthood from within an established leisure-based subculture such as Visual Kei, which is now in its third generation of practice and (re-)production.

To this end, this paper will compare the difference between each generation of the subculture by focusing on subcultural symbols and how the meaning attached to these symbols (in the form of dress, discourse and performance) transforms over time. It is suggested that these symbols form both the basis of a common shared history that links the members of different generations and at the same time functions as a resource for newer members to utilize creatively, allowing for the continuation of the subculture, albeit not without contestation as the emerging styles and practices of such symbols varies across the generations. The article concludes that potent symbols that continue to resonate with the values and orientations of people over time say much about people’s feelings regarding larger, hegemonic socio-cultural norms as they do about individual values.

Youth and Social Movements In Japan Characteristics Of The Rebellious Youth and Its Mobilization In Japan

Though not as spectacular or massive as in other countries, recent mobilization of the youth in Japan is however a major phenomenon that triggers the attention of the media and the general public. Especially, the mobilization of young non-regular workers since 2000 had a major role in strengthening the national anti-poverty movement. It supported, for instance, the reform of the assistance for non-regular workers since 2000 had a major role in strengthening the national anti-poverty movement. It supported, for instance, the reform of the assistance for non-regular workers since 2000 had a major role in strengthening the national anti-poverty movement. It supported, for instance, the reform of the assistance for non-regular workers since 2000 had a major role in strengthening the national anti-poverty movement.

However, this phenomenon has been scarcely analyzed or has been simply bypassed by some researchers. As a matter of fact, we still know very little about the social mobilization of the Japanese youth.

By analyzing results of our research focusing on members of the « Union of the Youth of Tokyo », a leading organization of the anti-poverty network, I would like to present new findings concerning two dimensions of this mobilization:

1) What are the characteristics of the young people who mobilize (in terms of age, gender, income and socioprofessional class)
2) What are the characteristics of their mobilization (primo-mobilization or not; short term or long term mobilization).

Our findings are based on quantitative and qualitative data: the archive of the SU (630 entries) and in-depth, longitudinal interviews of 50 members that started in 2008, during and after their mobilization in the « Union of the Youth ».

Uneven Development and Social Equity in American Shrinking Cities: Can the Growing Social and Economic Gap be Narrowed?

The phenomenon of uneven development as a way of differentiating growing and shrinking cities is well-established, but emerging patterns of uneven development within many shrinking cities have been less extensively examined. We find that shrinking cities have long been characterized by internal variation within U.S. shrinking cities, these variations have become markedly more pronounced in the past decade. A conjunction of market shifts, demographic trends, and economic pressures have resulted in some areas seeing regeneration at levels not seen for many decades in these cities, while decline appears to be accelerating in other areas. The evidence of central core revitalization on the one hand and the accelerating decline of many traditional single-family neighborhoods on the other is particularly striking, with population growth, job growth and housing market strength increasingly spatially concentrated in the core, leading to a growing polarization of these cities by race and income, and raising important questions of economic and social equity. This paper will begin by summarizing the evidence from research into economic, demographic and racial change over the past decade in a cluster of ten large American shrinking cities including Detroit, St. Louis, and Pittsburgh. The paper will explore the challenges and implications for policymaking and governance of this increasing polarization, leading to a proposed conceptual framework for how governmental and NGO actors, particularly community development corporations, can foster more equitable revitalization in American shrinking cities. This framework will address the question of the policy space available for more resilient strategies, or an environment of severe resource and policy constraints, and the extent to which that in turn dictates rethinking governance roles and responsibilities in shrinking cities.

Resilient Or Vulnerable? Analyzing Disaster-Triggered Migration Process Of A Tropical Cyclone Prone Coastal Community

The capacity of coping with the effects of a disaster is not only an economic capability; it is also a result of socio-politically constructed vulnerability matter of the survivors. Thus, the migration decision by the disaster victims is not only integrates socio-political values; it is a long-term consequence of societal mechanisms that are determined through unequal distribution of resources, opportunities and power. Consequently, the aftermath intervention programs in disaster affected communities succeed to social inequalities – as well as population displacement. Taking this theoretical and conceptual debate into consideration, this paper explores how the aftermath intervention programs influence the community resilience or social vulnerability in coastal Bangladesh? Do such interventions introduce social disparities, and finally, result to a migration-decision of the cyclone victims? Results are derived from a field survey with 1555 respondents. The survey was conducted during 2009 and 2010 in 48 southwest coastal villages; those villages were affected by cyclone Aila. Applying principle component analysis (PCA) in SPSS, a social vulnerability index (SVI) is constructed and then the respondents are classified according to their socio-demographic characteristics. Findings show that socio-politically vulnerable population is proportionately more displaced than the socio-politically resilient population. Thus, it increases the dependency of powerless on the powerful classes in the society.
reached a plateau and substantial yield gaps still persist. In this context, modern biotechnology tools having potential to improve crops assume significance. The paper focuses on the potential of non-controversial, genomics-based Marker-Assisted Selection (MAS) technology for addressing biotic and abiotic stresses and yield enhancement in agriculture. As a corollary the institutional, organizational and regulatory issues associated with the development, application and deployment of MAS technology for innovations in agriculture in India are important. In other words, the national innovation system especially with reference to agriculture has to be restructured by establishing productive linkages among public R&D institutions, policy making, regulatory issues and large scale production of products including seed based on MAS. Priority setting with respect to which crops and which traits in a given crop has to be made and adequate resources, physical and human, and institutional and organizational arrangements have to be developed to achieve useful results. Further, MAS is a non-proprietary technology, and hence conflicts of interests about ownership and control will be kept to the minimum. The MAS has the potential to promote more inclusive and user-centered innovations in agriculture in all the regions including rain-fed areas.

**Tellling the Stories of Disasters Study Juku: A Series of Workshops in 3 Disaster-Affected Areas in Japan**

What are the ways that disasters are memorialized, and how are the lessons of disaster transferred to future generations though preserving objects as well as the actual experiences of people who experienced the disaster? The **Telling the Stories of Disasters Study Juku** is a series of 3 workshops held in 2013, in 3 areas of Japan that have experienced disaster: Tohoku, Chuetsu, and Kobe. Each workshop includes a tour of the local area, with a focus on the way that local institutions pass on the stories of the disaster experience, involving local community members.

In recent years, large natural disasters are happening throughout Japan: in 1995 the Great Hanshin-Awaji Earthquake, in 2004 the Chuetsu Oki Earthquake, and in 2011 the Great East Japan Earthquake. Yet in the disaster area those terrible memories are not being forgotten. Many efforts have begun to preserve and pass down these memories through sharing experiences, items, documents, video, etc., towards the creation of a future society which is stronger against disasters.

The “**Telling the Stories of Disasters Study Juku**,” visits each disaster area, engages in practical activities related to the collection and preservation of documents in the disaster area, listens to the local people who are involved in passing on the stories of disaster, and learns in the style of a study retreat. Incorporating the discussions of the participants, we consider the ways to pass on the stories of disaster. This paper will review the experience of the Study Juku, along with the different memorialization and disaster storytelling examples from the 3 disaster areas in Japan.

**A Mathematical Extension Of The Resource Mobilization Approach Of The Social Movement Theory: An Analysis Of The Emergence Of The Arab Spring**

This paper proposes a mathematical extension of the Resource Mobilization approach of social movement theory to answer the questions: Why does a particular social movement occur at a certain time of history? Does the social movement inevitably occur at that time? Or is it simply a historical coincidence? Current social movement theories are adapted at providing us with the analyses of social structure of social movements; however, many of them, with several exceptions, do not seem to be ready to answer these questions. In this paper, I incorporate the Resource Mobilization approach of the social movement theory into a mathematical model of the propagation of information and attempt to ascertain that the shock wave of information and the subsequent information vacuum are the fundamental driving forces of the emergence of a social movement. This paper suggests how the shock wave and the information vacuum have played a crucial role in the emergence of the protests in Tunisia that ultimately triggered the subsequent Arab Spring. Prior to the emergence of the protests, social networks and social movement organizations have to be prepared so that the shock wave and the information vacuum can propagate in society. Thus, the Resource Mobilization approach paves a road to the emergence of a social movement. But for a movement to emerge, a shock wave and the subsequent information vacuum need to propagate in society because, during the information vacuum, people are attracted into the “field” of the protest, and the subsequent activities are coordinated there. Thus, this paper argues that the combination of the Resource Mobilization approach and the analysis of the propagation of information clarifies the detailed steps of the emergence of a social movement.

I would like to submit my paper for the Best Graduate Student Paper competition.

**The Making Of “Homo Financius”: The Emergence Of The Financial Literacy Field In Israel**

In the era of financialized capitalism, states not only supervise and regulate financial markets, but also discipline individuals, requiring them to take responsibility for their financial decisions and their current and future economic situation. Attendant to the privatization of risk, varied actors attempt to instill among individuals the knowledge, skills, predispositions and attitudes considered as necessary to function as responsible and wise consumers in the financial sphere, thereby creating a capable and reliable “homo finansicus”. In the last years, the constitutive traits of homo finansicus are being specified and promoted using and diffusing the concept of financial literacy, which refers to a set of capabilities that are seen as underpinning proper and responsible financial conduct. Based on a detailed process-tracing study, this paper examines the emergence of the new institutional field of financial literacy in the last years. Its analysis of the array of actors populating it, and the various notions and practices that are being formulated, negotiated and institutionalized. The emergence of the field has been the result of interactions among actors responding to numerous changes initiated by state agencies in the local financial system and to the institutionalization of financial literacy as a compelling global standard. Following these developments, new opportunities were created for many and varied actors – both state and non-state – most of them existing before the emergence of this field. These actors propose varied notions and practices of financial literacy, drawing different field boundaries and promoting varying rules of interaction between the actors populating it. Patterns of cooperation and conflict among the actors surface mainly around the establishment and institutionalization of boundaries and rules of this emerging field.

**Social Housing in Sustainable City**

The paper investigates how the issue of housing has been treated by urban policy in Brazil to meet the legislation defining the social function of urban property as one of the goals of reaching sustainable city. The object of evaluation is the federal government programs of the past 10 years since the adoption of the Urban Policy City Statute, aimed at reducing the housing deficit of low-income by the use of the instrument of regularization involving, in the Brazilian case, the participation of the community resident in the project area, the implementation of infrastructure and titling of land to families. It is found that urban sustainability in the Statute, has focused on social equity and democratic management, essential aspects for sustainability, but not exhausted. It is noteworthy that much of the land regularization programs occurs in urban areas environmentally fragile, as the results of urban land regularization processes of social interest are unimpressive considering the research on the irregularity of urban occupation. Illustrates the fragility of these results, the confrontation between the database Brazilian Institute of Geography and Statistics 2010, and numbers of the federal program of regularization. The 2010 Census showed that 11.4 million people live in informal settlements, which corresponds to 3.2 million residential units. The program's goal was to serve 364,000 homes, but reached in fact 46,000, which means less than 2% of the total residential units located in areas irregular. As the principal results of the analysis: misconceptions of statistical measures, that considers a single house as different types of irregular, or because there are areas not surveyed in the census; inconsistencies in the definition of program indicators, whose main focus is the titration, not considering improvements in the areas of infrastructure and urbanization; low investments in regularization programs.

From Chernobyl to Fukushima: Socio-Ecological Analysis. Russian Outlook

The authors aimed to analyse the typical socio-ecological problems in contemporary Russia, Belarus, Ukraine and Moldova and the main reasons of their appearance in terms of socio-ecological consequences of Chernobyl nuclear disaster. These tragedies - Chernobyl, Russia 1986 and Fukushima, Japan 2011 - have shown that everything people do is not enough to prevent the damage to environment and societies if the country is not nuclear free. The findings of the expert survey presented by their respondents of the socio-ecological tension in their region of exposure even after 25 years of this event. The data collected in the article is the result of comparative sociological research, conducted in Post-Soviet area since 2006 till the present. Observation, content-analysis of mass-media devoted to ecological problems and expert survey were used during the research. The conception of reflection of ecological environment to social behavior and orientations of different social-demographic groups of population was adapted and developed as well as conception of socio-ecological monitoring and conceptual scheme or origin and development of social-ecological (tension) conflict in Post-Soviet dimension. The conception of reflection of socio-ecological interests in mass behavior of different social communities in transformation was approved. Such important issue as a problem of availability of information on environmental activities is presented. It is characterized by:

- establishment of unified federal unified information system on nature and environment protection;
- introduction of up to date information technologies and systems into the process of the decision making in the areas of nature use and environment protection;
- provision of state guarantees of public participation in solving of environmental problems, development of effective social partnership;
- organization and implementation of the environmental education of population.

Strategies for Change: Immigrant Women Confronting Dekilling and De-Professionalization

This paper is based on empirical data from a research study[1] on the experience of highly educated Chinese and Indian immigrant women who were professional in their home country. In particular, this paper aims to discover how the women utilize their agencies to mobilize a myriad local and transnational strategies to confront and change their situations in the context of neoliberal restructuring and the concomitant de-skilling and de-professionalization of immigrant women in the new country.

The study found that despite their education, immigrant women professionals are routinely being deskilled, and are channeled into precarious positions which are low paid, part-time, flexible, with no security nor benefits. In order to survive in a racialized and gendered globalized labor market, some women lowered their employment expectations, and took on menial, precarious employment in the new country in order to gain “Canadian experience” and to make ends meet. Others tried to improve their situations through formal retraining processes by returning to college/university so as to gain formal Canadian education, knowledge and skill. Our research also found that the immigrant women were actively participating in transnational practices. For examples, some immigrant women who were unable to juggle their paid work and looking after young children, sent their children back to their home country to be cared for by extended family members so they could focus on their job search or engage in paid employment to make ends meet.

(1) The data for this paper is derived from the project “Transnational Migration Trajectories of Immigrant Women Professionals in Canada: Strategies of Work and Family” (2009-14), supported by SSHRC through a research grant to Guida Man (PI), Tanja Das Gupta (CI), Kiran Mirchandani (CI), and Roxana Ng (CI).

MANCILLA, ROBERTO* (UC Berkeley School of Law, robi357@hotmail.com)

Paradigms Of The Social: Current Vis à Vis An Alternative

The idea of the “social” is the foundational paradigm of sociology, one which has been stated, understood and restated several times through its story. In the realm of Sociocybernetics Niklas Luhmann’s social systems theory defines them as “closed” systems. This author human beings don't and can't communicate, only communication can do so, this means that society has to be described on the basis of events. Social systems are autopoietic because they produce their own components and their growth can be explained on terms with second order cybernetics; unlike living systems which is not possible to make a trap that leads to the reproduction of initial inequalities. Intervening in this vicious cycle is government. It has a no-tuition policy for basic education levels and operates more than a hundred state universities and colleges. On top of these, it regulates and sets the standards for the whole education sector. Thus, government policies and programs have the potential to define the possible connections between education and initial inequalities. In this paper, state actions or inactions that strengthen the education-inequality trap are identified through the examination of public policies that impact the education sector in the Philippines. To provide context to the state’s role, this paper also presents the education inequality situation and evidence of the education-inequality connection in the country. This investigation of the different paths systems, which the state actually prevents some sectors of the population from fully enjoying their right to quality education can aid in understanding the complexity of the policy, political, economic, social and historical environment facing the millennium challenge of “education for all.” Viewing high inequality negatively as not only impedes growth but also restricts people’s exercise of their freedom, the paper also attempts to partake in the discourse of inequality and its relation to development.

DENELLI, GUIDA* (Independent Researcher, melenemanalo@gmail.com)

Education-Inequality Trap: State Contributions to the Vicious Cycle

The education-inequality connection is not only apparent but very strong in the Philippines where discussions of inequality, usually in household incomes, almost always never fail to mention the role education plays in maintaining the wide gap among Filipinos. Conversely, this gap accounts for most of the inequalities in education. If the potential of education to increase incomes and allow access to higher-earning sectors of the economy is limited by one’s social standing, the marginalized will remain marginalized, while the dominant and rich fortify their position. Thus, inequalities and education—access to it and its outcomes—form a trap that leads to the reproduction of initial inequalities.

The purpose of my participation is to expound the merits of Luhmann’s theory, indeed open, and the fact that it does not comprehend human behavior in micro scale. The posthuman theory of social systems has been widely discussed and some of its criticisms are that it ignores the law of requisite variety (as it only under- stands the reduction of complexity), empirical evidence that social systems are indeed open, and the fact that it does not comprehend human behavior in micro scale.

The purpose of my participation is to expound the merits of Luhmann’s theory, to criticize it and to propose a new approach to social systems.
As first order cybernetics deals with observed systems which are teleological and second with observing which are teleonomical; a third order of cybernetics studies mutually observing systems and are teleological and teleonomical at the same time. A fourth order of cybernetics can also be expounded as the realm of human cognitive systems which are self-observing systems and have the features of both first and second systems. Third cybernetics has language as a basis, while fourth has cognitive coherence; social cybernetics can be understood as the interplay of third and fourth order cybernetics.

Global labor markets and the internationalization of economies have changed the kind and nature of social risks. Life subject to comprehensive job security systems is questioned in different societies. In this context, the paper considers contradictory hypotheses on occupational life course related with work uncertainties:

- Standardization process: progressive concentration of biographical transitions on specific ages related with tripartition of work careers: education - work - retirement.
- Individualization of occupational life course: pluralization and de-standardization of individual labor trajectories.

The main of the paper is to analyze the links between job uncertainty and life course in Argentina and Mexico, in three cohorts. The aim is to develop an empirical approach to life course perspective linking it with a sequential analysis to:

- Model individual trajectories of occupational status related with job uncertainties (identifying different typologies of risks).
- Assess the social conditioning of these trajectories, namely the influence of socioeconomic status, educational level, family structure and birth cohort.

Optimal Matching Analysis is applied to model time-related processes in order to identify labor trajectories typologies. The premise of this method is to consider empirical sequences of events in labor trajectories and compare them to existing theoretical models rather than defining them a priori on theoretical grounds. Data come from the Retrospective Survey of Labor Insecurity 2011.

The results of the analysis suggest:

- The tripartition model exists but it is gendered and different for each cohort.
- There is no unique model to link individualization of occupational life course and risks typologies. Rather, this link is dependent on: 1. Family and occupational constraints; 2. Social resources and; 3. Institutional performances in each country.

These results indicate new kinds of social inequalities, by means of widespread labor uncertainty and individualization of work trajectories, that implies new challenges for how we do research in the fields of social risks.

The aim of this paper is to analyze, from a life course perspective, changes in certain transitions related to occupational mobility during labor trajectories of young men and women of three generations, in Mexico. Data come from EDER 2012, a national longitudinal survey. The analysis is based on the study of:

1. The first entry to the labor market and the number and duration of occupational transitions between 20 and 30 years old.

2. Mobility tables at the same ages between five specific occupational transitions:
   a. Between “formal” and “informal” jobs.
   b. Between salaried and non-salaried position at work.
   d. Between full time and part time jobs.
   e. Between jobs in industrial and service sector.

3. Discrete time regression models associated with these same transitions. Through the analysis of mobility tables for each of these transitions and the study of the weights associated to their constraints, the objective is to test a hypothesis of social change related with the precariousness, outsourcing and de-salarization processes of work force at early ages in this country, coupled with increased “heterogeneous” labor trajectories in younger cohorts (where the “determinants” factors are more diffuse).

Under this hypothesis, we admit that the processes of globalization and internationalization of the economy enable greater heterogeneity in certain occupational transitions and an increase in the diversity of youth work trajectories.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
the “choices” made by the system (Bourdieu). In public schools, where most of
the students belong to low middle class families, judgments made in this context
are predominantly moral, therefore more social than academic. Learning prob-
lems are considered as being originated outside of the school. Students’ personal
drama influence grades, their families are also subject to judgment. Teachers’
work is not part of the debate, teaching strategies that promote learning are not
discussed, which ultimately leads to school failure. The institution investigated
attends middle to upper class students and has been evaluated as one of the best
schools in Brazil after several national assessments. How would be the trial in an
institution where the student body is already selected socially? It was observed
that the evaluation criterion has an academic origin, but the criterion is not strict-
ly academic. Disposition’s considered fundamental at schools of excellence are:
docility and academic aptitude (Bourdieu). The social selectivity in this school is
a distinctive selectivity. Cutting class will operate in the kind of attitudes towards
school, and the possibility of ascension through school. The student desired pro-
file is the middle class one, whose families adhere more easily to the school val-
ues, since they have the cultural goodwill as Bourdieu defined.

The Price Of Successful Secession: The State, Its Separatist
Challenger and Organized Crime In Serbia and Georgia, 1989-
2012

What role does organized crime play in determining the success of separat-
ist movements? My paper explores the role of organized crime in the separatist
movements of Kosovo in Serbia and South Ossetia in Georgia from 1989-2012, two
cases that share remarkable similarities but have generated different outcomes
in the level of successfullness of the separatist movement. The crucial difference,
I will argue, is that while both Serbia and Georgia were thoroughly criminalized
states in the 1990s, the former took negligible and the latter substantive steps
towards curbing the extent of organized crime. This crucial difference accounts
for Kosovo’s greater success in nearing sovereignty compared to South Ossetia’s
more limited success. Exploring the relations between separatist movements and
organized crime in these two cases sheds light on different opportunities for re-
source mobilization afforded by criminal enterprises, and on differing strategies
of states, crime networks, and separatist movements towards each other.

MANDIC, GIULIANA* (University of Cagliari, mandich@unicag.it)

Cultures of the Future: Habitus, Reflexivity and Capacity to Aspire

Human action, as Schutz observed, is constructed within an imaginative hori-
zon of multiple plans and possibilities. While we move in the temporal domain
“with great agility, pirouetting and swiveling to face both past and future, twisting
and turning in the knowledge realms of perception, memory and anticipation”
(Adam 2009), the sociological understanding of the same process is far from
easy. The analysis of the cultural dimensions of projectivity (Mishe 2009) is a very
important task cultural sociology has to achieve to understand action and social
change.

The imaginative process of projection requires what Appadurai (2004) calls
“capacity to aspire” that is to say the set of cultural resources shaping the ability
to project into the future. In this presentation I try to explore the very complex
field in which the capacity to aspire emerges as stretched out between the forms
of practical anticipation incorporated in the habitus (Bourdieu, 1997) and the
cultures of the future inhabiting the public domain (as produced by technolo-
gies, media, institutions). Strongly connected with the concepts of reflexivity and
creativity the “capacity to aspire” has to be seen mainly as the ability to project
present opportunities using socially relevant narratives. These ideas are explored
through the analysis of ca 200 essays on the future, written by young boys and
girls of age 17-18.

Social Justice and Energy Consumption: The Problem of Fuel
Poverty

The social discourse on sustainable development not only focuses questions of
intergenerational and global justice, but also increasingly questions of social
ecological inequalities in industrialized countries (keyword: environmental jus-
tice). Within this framework, a society’s consumption of resources is associated
with inequalities. When it comes to climate change, the focus is on questions of
responsibilities and persons concerned, inevitably bringing up the issue of social
inequalities and thus a central field of sociology. Likewise, when management
tools towards sustainability are discussed, social inequalities are addressed (e.g.
in consumption with environmental policies). However, social sciences-related em-
vironmental and sustainability research on consumption of resources and social
inequalities is still at its beginning regarding both, theoretical conceptualisation
and empirical research.

In the proposed presentation, one dimension of this topic will be stressed,
namely the relationship between energy consumption and social inequality in
general and the issue of fuel poverty in particular. Insights will be given into an
Austrian fuel poverty project (funded by the Austrian Climate and Energy Fund,
2012-2014) which has the aims of implementing tailor-made measures of energy
efficient housing in fuel poor households in Austria and of elaborating and ini-
tiating programs against fuel poverty. Three different projects (two of them on
a local and one on a nationwide basis) covering fuel poor households from
urban as well as rural regions serve as examples of implementation. The
programmes and measures are evaluated regarding their effectiveness and their
improvement of advice services. Benefits (e.g. mitigation of burdens related to
fuel poverty, reduction of CO2-emissions) and costs calculated. First empirical
results of the evaluation will be presented at the conference and discussed in the
light of social-ecological inequalities.

The Rites of Institution As an Instrument of Public Policy. The
Example of French Municipal Rituals

This contribution addresses the issue of the performance of contemporary
French municipal rites of institution. I will start from the findings of my doctoral
research in political science which is related to municipal rites of institution in
France. A rite of institution (Bourdieu 1982) is a symbolic event marking someone’s transition from one status to an-
other. In my research, I identify four ideal types of municipal rites of institution:
kinds acts, like civil weddings and Mother’s Day; citizenship rites, which include
naturalization ceremonies, coming of age ceremonies, conscription rituals; honor
rites providing municipal or national medals; and work rites, which encompass
welcome receptions and retirement ceremonies.

Through my communication, I will show the importance of these rituals in pub-
lic action. First, I will demonstrate that these rites can be considered instruments
of public policy (Lascoumes and Le Galès 2004). Here, I will focus especially on
two examples: naturalization ceremonies and Mother’s Day. Since their inven-
tion, both rituals have been the instruments of migration policy and family policy,
which aim to make virtuous citizens and mothers from foreigners and women.
In both cases, the rites of institution have been considered the most convenient pol-
icy instruments to let foreigners and women see themselves as virtuous citizens
and mothers, and therefore, behave as such.

Nevertheless, how does it occur? To answer that question, I will focus on the
performative dimension of these rites of institution, that is, on how status and
social roles are assigned to participants in these rituals. Drawing evidence from
ethnographic observations and from interviews that I conducted, I will study the
sequencing of these rituals and the verbal and non-verbal performative practices
that happen during these rituals, as well as the representations of the participants
related to them. Thus, I will consider what social conditions allow for effective
performance.

Reflections on a Rural Community Traversed By the Process
of Globalization: The Case of the Tupé Reserve (Amazon, Brazil)

This paper aims to present preliminary results of a PhD research that focus-
es on the dynamics of social relations of rural population living in a sustainable
development reserve, the Tupé Reserve (Manaus-Amazon, Brazil). In this area,
another dimension related to local and regional tutoriness since 2009, it features a resort – an uprooted space geared towards international lux-
tury tourism. In this context, specific elements of the globalization process are
involved, such as financial (global and regional), touristic and political interests. The
Tupé Reserve appears as an arena of interaction among several actors, being a
bridge of interaction between different production processes of consumer demands and new
lifestyles in which imageries, values and worldviews are shared. Thus, the social
relations there are no longer constrained by the local context of interaction, as
various forces (local, national and global) are at stake. These, far from being seen
as phenomena dually perceived as part of a dialectical process, are instances of socialization
of a particular culture. In short, we propose a paper that discusses the effects and
constraints of the transformations and conflicts in the relations between global

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
social changes and local reality, its cultural representations, and identities of the people who live there. The question of how, and to what extent rural communities produce, and are made by, globalization is central to our work. Therefore, we are led to discuss, among other things, the vitality and renewal of topics related to rural communities.

MANI, DALHIA* (HEC Paris, mani@hec.fr)

Seeing Both the Trees and the Forest: Closure and Social Capital in the Indian Interorganizational Network

The Indian economic context is characterized by the importance of business communities such as the Parsis or Gujarathis. These communities enable trust and norms in interorganizational transactions, and substitute for weak legal institutions. Current research in the interorganizational network context has focused on closure in the local network, and does not do as well in explaining how trust and norms can be maintained within large communities. We go back to the original Colemanian conceptualization of closure and social capital which describes the operation of trust and norms in large communities. In addition, this theory emphasizes the importance of closed structures and also the importance of having “good standing” with closed structures. Hence the theory is two dimensional, and has a positional and structural element. Current interpretations conceptualize closure as a closed triad, but this conceptualization is reductive, and (a) reduces the collective element of closure to a property of actors’ local network, and (b) loses the second positional element of Coleman’s theory. We rely on the latest advances in network methodology and a complete population network of Indian firms to look at macro closure, and position of the actor within macro closed structures. Using this macro conceptualization of social capital, we find evidence for both the structural and positional dimension of Coleman’s theory.

RC44-735.6

MANKY BONILLA, WALTER OMAR* (Cornell University, wm264@cornell.edu)

In 1993, Peru experienced one of the most radical neoliberal reforms in Latin America. In its attempt to attract international investors, the government deregulated the labor market, undermined labor rights and created a non-interventionist legal environment for collective bargaining. As a result, the number of unions, strikes and collective agreements felt dramatically, while the labor movement almost disappeared. Nowadays, Peru is the Latin American country with the best conditions, and has started organizing to bargain with global mining companies. Most of the studies about these efforts have focused on the contention companies to look at macro closure, and position of the actor within macro closed structures. Using this macro conceptualization of social capital, we find evidence for both the structural and positional dimension of Coleman’s theory.

MANKY BONILLA, WALTER OMAR* (Cornell University, wm264@cornell.edu)

Negotiating the Margins: The Trajectories of Subcontracting Laws in Peru and Chile. the Case of the Mining Industry

In spite of their different development levels, Peru and Chile have several elements in common. In both cases the basic principles of the neoliberal reforms have persisted—n the contrast with the political transformations of other Latin American countries— mining is the most important economic activity; and more than 70% of this industry’s workforce is subcontracted. As in other societies, this labor market segmentation has produced precarious employment, from which global companies have largely benefited in the last thirty years.

Additionally, both countries experienced the biggest and longest strikes since their return to democracy in the last decade, and in both cases subcontracted miners organized the main mobilizations. Although miners were not the only group claiming for a reform in the labor legislation, because of the industry’s importance, they were the most visible and powerful one. As a result, both countries changed some parts of their subcontracting laws in the last years.

Based on a comparison between Peru and Chile, this study analyzes the relationship between the labor movement, the state and the global capitalism in state and labor unions; analyzes their main differences with previous strategies. The study shows that, in the industry’s collective bargaining processes between 1993 and 2012, as well as qualitative evidence of two in-depth case studies, this paper analyzes the role that State has in the dynamics and outcomes of the collective bargaining and the labor conflicts.

Using unique quantitative data of all the state’s interventions in the mining industry’s collective bargaining processes between 1993 and 2012 as well as qualitative evidence of two in-depth case studies, this paper analyzes the role of the state in the configuration and outcomes of labor disputes. The study shows that, in spite of the commonplace ideas about the “neoliberal state” and its pro-employer tendencies, Peruvian workers have been able to engage in face-to-face negotiations with public workers and politicians in order to confront global companies. This paper offers a typology of the main negotiation mechanisms between state and labor unions; analyzes their main differences with previous strategies used by workers’ organizations; and discuss its implications for a theory of the relationship between the labor movement, the state and the global capitalism in Latin America.

MANOHAR, NAMITA* (City University of New York, Namita@brooklyn.cuny.edu)

Highly-Skilled Immigrant Women’s Labor Market Access: A Comparison of Indians in the United States and North Africans in France

Using the concept of cumulative dis/advantage, this paper examines how early dis/advantage in immigration generates barriers to and/or pathways by which highly-skilled North African and Tamil (an Indian regional group) immigrant women access professional labor markets in France and the U.S. respectively. It draws on ethnographic projects with North Africans in France and with Tamils in Atlanta, Georgia.

It finds that despite their more advantageous position upon immigration – student migrants, single women, and French-style North African educational qualifications – North African women experience barriers in accessing skilled work – difficulties with French work-authorizations, temporary work contracts, lack of professional networks and of local work experience. They therefore strategize by working in skilled-technical, low-wage capacities or in the ethnic economy. In contrast, Tamil women’s immigration is marked by early disadvantages – their legal status as “dependent” wives, the non-transfer of Indian credentials and re-employment, lack of Indian work authorizations or contacts, and lack of work networks. They therefore strategize through the pathway of gradual ascent – moving from low-wage to high-wage work; (re)employment and direct entry; and skilled entrepreneurial work to successfully access highly-skilled work.

Four mechanisms explain these divergent outcomes: education-work experience, language, interactive effects of local labor markets and immigration policy, social capital in classed social networks, and racialization. For Tamil women, the cumulative effects of these create a “contingent disadvantage” resulting in them becoming highly-paid professionals in America. For North African women, these contribute to the erosion of their early advantages leading to their “categorical disadvantage” - long-term confinement to low-wage work with few ladders into the primary labor market in France. Therefore the
downward mobility associated with skilled immigrant women is not universal, as it is often theorized, but relational across national contexts such that some groups are more successful than others in accessing skilled work.

**MANSOURI, VALI** (George Mason University, vmansouri@masonlive.gmu.edu)

* Similar Roots and Diverging Outcomes: Uprising and Revolution in Iran and Egypt

Recent uprisings in the Middle East have increasingly been characterized by spontaneous mobilization, decentralization, and the lack of dominating charismatic leadership. This research will demonstrate the salience of Horizontalism in contemporary and contrasting the Iranian Green Movement of 2009 with the Egyptian Revolution that started in 2011 through the use of Ideal types. Attention is devoted to assessing the strengths and added resilience of these decentralized movements against their Authoritarian states. Analysis through identification of different processes leading to variations on success, stalemate and repression, this will build on previous studies of revolutions to better understand contemporary social and political change.

The Green Movement, despite months of sustained mass protest and delegitimizing the government, solicited little to no concessions or change from the state; while the Egyptian Revolution within only 18 days was able to topple the head of state, ushering in a struggle for the future polity between shifting alliances and elements of the old regime. Identifying key political institutional arrangements illuminates potential vulnerability or resilience to uprising. Construction of state is key, in that the state is comprised of centers of power in institutions such as the Supreme Leader, the government and Revolutionary Guards, combined with limited but competitive elections allow for flexibility, making for added resilient state. On the other hand Mubarak’s National Democratic Party (NDP) of Egypt was more closely characterized by Patronymial bureaucratic rule, which led to competition and conflicts in interest between NDP members and affiliates who rose since the Infitah and the Supreme Council of the Armed Forces (SCAF). By looking at these social uprisings and the changing states will help to explain the current divergent and potential directions of these two movements and their future.

* Patterns of ICTs Using and Information Flow: A Study of Rural India

Patterns of ICTs Using and Information Flow: A Study of Rural India

Manushi, Ku (JNU) and Prakash Chandra Dilare, PhD Scholars, Center for the Study of Social Systems, School of Social Sciences, Jawaharlal Nehru University, New Delhi, India

**ABSTRACT**

Information and communication technologies (ICTs) are widely acknowledged as important resources in all the aspects of socioeconomic development and this is especially articulated in national policies. Among developing countries, this perspective incorporates ICTs into the development agenda because of their relevance in transforming human activities and in presenting new opportunities for economic growth. Even if ICTs appear ubiquitous in this day and age, it still exists, the growing presence of digital divide and social exclusion. A considerable number of marginalized groups, such as rural folk, women, and low-income youth remain unenriched by the benefits ICTs are supposed to offer. The vision of a so-called “information society for all” as stated in both developed and developing countries’ ICT policy documents today does not apparently include “all” (Chiumbu 2008).

This paper presents the patterns of people’s ICTs using and information flow perceived in India, especially in the rural areas. India is a country of multiple divides as social and economic divides already exists in the country and now with the emergence of new ICTs new divisions are shaped on the basis of many factors involved in its use and access. Today growing ICTs and the telecommunication in country has given opportunities to the excluded sections to be part of this new information society. But the impact of ICTs in rural areas is still very limited, despite its penetration into every corner of modern life. There is need of relatively good flow of information and special skills to make full use of ICTs for socio-economic gains.

* Homeless Diaspora: The Impact of Return Migration on Latin American Japanese Communities

Currently more than 2.5 million Americans living on the South and North American continents are Nikkei or descendants of Japanese migrants. The history of these transnational emigration has often been considerably neglected. Their interest in issues of living in the diaspora, the meaning of ethnicity and citizenship has been renewed by the recent wave of sojourner migration by Latin Americans of Japanese origin into Japan. Virtually nothing is known so far about the impact of “return migration” and the “returnees’ remigration” on the diaspora in Latin America. To what degree have ideas of ethnic or political loyalty, traditional and cultural identity been shifting one way or the other due to the increased proximity to their ancestors’ place of origin and the influx of material and immaterial goods from Japan? And how have narratives on the experience of hostile or discriminatory treatment by the Japanese impacted on the collective image of the Nikkei in Latin America? The Nikkeis’ return to Japan, to the land of their ancestors, has not fulfilled the postulated ‘negation of a diaspora’ (Clifford 1994), it has squared the tension of being diasporic in the sense of being displaced twice and having multiple relationships with distinct nations which are neither just homeland nor hostland. Based on multi-sited fieldwork in Japan, Argentina, Bolivia, and Paraguay, I argue that the Nikkei are entangled in a squared diaspora in which the juxtaposition of homeland and hostland itself becomes questionable, instable and fluctuating.

**MANZO, Lidia K.C.** (University of Trento, lidia.manzo@gmail.com)

* Community Politics and the Middle-Class Desire for Diversity and Difference. Evidence from 40 Years-Span of (super)Gentrification in Brooklyn’s Park Slope

The transformation of New York City into a global corporate city and the consequences of effects on small firms and in dwindling employment opportunities for some and to exacerbate displacement problems for others. By encouraging suburban home ownership, discouraging rental housing construction, and upwardly redistributing income through federal and municipal tax policies, Brooklyn’s Park Slope, at the beginning of the 1970s faced a racial and tenure status division between its neighborhood residents. Reform institutions emerged from neighborhood civic organizations and broad-based interest groups.

Drawing the evolution of its demographic and housing resettlement, I found that different social groups had different class interests and ideologies, and therefore they were differently affected by abandonment and resettlement processes. The involvements and influence in community politics of twenty community organizations were analyzed through archival and bibliographic researches from the late 1960s to the present time; among them four historical institutions – which still exist - and four more recent ones, were followed through the ethnographic activities and other researches and are reported in this work. There is, in fact, a social and ‘moral pluralism’ to understand (Schumaker 2013), especially when a neighborhood has been dealing with racial, ethnic, class, and religious changes.

This longitudinal study on the process of Park Slope super gentrification investigates the middle class’ desire for diversity and difference (Lees et al., 2004), as well as the influences of housing-abandonment and resettlement processes on 1) the types of institutions that emerged to represent different class interests; 2) the types of social groups that came to inhabit the neighborhood; 3) the pattern of that emergence over time; 4) the particular goals, scope, and strategies that these organizations evolved; and 5) developmental changes in the relationships between local institutions, government agencies, and private investors.

* Cool Streets: Attitude or Commodification? What - and Who - Is Driving Gentrification Along Two Changing Boulevards in Milan and Brooklyn

Streets do possess attitude. What usually community preservationists define as ‘spirit’ or the ‘soul of place’, here is re-interpreted both in terms of design attractiveness - human scaled, fine grained, mixed use, or highly walkable – and urban lifestyles (Jacobs 1969, Zukin 1995, 1998, 2010, Parham 2012). Especially during a gentrification process, we can discuss how streets embodied essential elements of ‘coolness’ – showing off trendy styles and great flavors - which seems a reflection of the commodification of cultural production.

Using the concept of ‘tool’ as a framework, understanding it as a cultural category in its own right (Pountain and Robins 2000) – this work explores the way gentrification interconnects with the development of an individual habitus as a...
spatial manifestation in which the street coolness is crucial to the construction of stylish individual personae.

This exploratory paper describes the relationship between aesthetics, symbolic meanings, understandings of street character, and patterns of socio-spatial change on local shopping boulevards in two neighborhoods - Milan and Brooklyn - which are discussed in the context of financial speculation and gentrification. These neighborhoods, once considered a symbol of blight in the 1970s, today are one of the most appreciated places for Milan and New York’s wealthy and educated people. As I have observed, their street practices sometimes overlapped with working class people, drug users and other persons of ‘otherness’ sometimes do not. However, with hip bars and cafes, used-books stores, yoga studios, and renovated townhouses, they are ‘no longer regarded by the public as blighted, but instead are both celebrated as sites of cultural consumption for a new middle class’ (Ossman 2011:8).

Drawing on several years of field research (2007-2013), empirical quantitative and ethnographic data on the current, and historical aesthetic characteristics as well as types of stores, and value-creating practices are considered.

**South Africa within Brics: Emerging Society and Sociological Discourse**

The formation of the BRICS contingent opened up new political and economic debates and discourses. The BRICS members are all developing or newly industrialised countries, and they are distinguished by their large, fast-growing economies and their significant component of culture, namely values, norms and sanctions will also be part of the picture.

Consequently, this paper aims to – in terms of social structure – critically analyse the political, economic, educational and health institutions of South Africa, and the differences and similarities within the broader BRICS contingency. Macro level issues (for example good governance, democracy and social services, developmental state, economic growth and policies, development programmes and projects, literacy and access to education, crises in the health sector (HIV/AIDS, etc.), as well as other issues related to sustainability will be touched on.

In 2010, **South Africa** was the last country joined the BRICS and currently holds the Chair of the Group. Against the afore-mentioned background, as well as South Africa’s strategic position in Africa, facets of the social structure as well as critical processes act as key drivers for social change in the country as well as parts of Africa, and simultaneously, provide the platform for rigorous sociological discourse.

Consequently, this paper aims to – in terms of social structure - critically analyse the political, economic, educational and health institutions of South Africa, and the differences and similarities within the broader BRICS contingency. Macro level issues (for example good governance, democracy and social services, developmental state, economic growth and policies, development programmes and projects, literacy and access to education, crises in the health sector (HIV/AIDS, etc.), as well as other issues related to sustainability will be touched on.

In the final instance, the paper will sought to – from the South African perspective – analyse the contingency (BRICS) as a whole and the role of South Africa within it, specifically in terms of participation (e.g. politically, economically, culturally and militarily), autonomy, inter-dependence, and a designated leader role in certain parts of the world.

**Can the Racialised Other ‘Belong’? Rethinking Race, Racism and Belonging in Australia – Perceptions of Skilled Black African Migrants**

This paper centres the perspectives of a group of black skilled African migrants to interrogate the notion of ‘belonging’ within the Australian context. Specifically, the paper explores how participants’ constructions of belonging are grounded in narratives (and experiences) of racism, racialisation and racial discrimination. There is a significant body of work that explores the migrant’s experiences of mobility and constructions of belonging. However, to date, not much has been done to explicitly link these with experiences of racism and racial discrimination. Drawing on data from a qualitative study on identity and belonging among skilled black African migrants, we argue in this paper that experiences of racism and racial discrimination are entwined with accretions of ‘otherness’ evoke feelings of the perpetual stranger or outsider who does not belong. We therefore interpret the participants’ perceptions of belonging as exposing an ‘other’ perception of black African migrants and the constructs of ‘home’, they also expose the power relations, contestations and complexities inherent in the notion of ‘belonging’ particularly when one has to contend with racism and racial discrimination persistently and consistently.

**Social Innovation in the Housing Policy in Spain**

The context of this research is the economic and financial crisis that has had the effect of exponentially increasing unemployment and evictions across the country. This research has one general objective, and two more specific objectives. The general objective is to explore the impact of social innovation on innovation, social citizenship and public housing policy in Spain, since the beginning of the crisis (2008) to the present. The first specific objective is to review the scientific literature in order to find successful actions at the international level in the fight against the loss of housing that have allowed more people, belonging to the most disadvantaged social groups, to have adequate housing. The second and final specific objective is to identify if there is a presence of some of these successful actions in the field of housing in the context of Barcelona, where I place this research, and how social movements have influenced the implementation of these initiatives. The results show that there has been a change in housing policy and citizenship, and crucially, contributed substantially to this change through innovative solutions and social pressure towards the Spanish political system. The innovation introduced by the social movements are both at the individual level (processes of financial literacy, empowerment, deliberation etc.) and at the civil society level (collective action, collaboration with organization promoting new models of housing, such as cooperatives). These innovations have open a new path for the future development of the housing policy in Spain and also has turned civil society more powerful and a significant actor in the dialogue with the State institutions.

**Female Migration in Greece and Integration Issues: Access to Welfare System and Political Participation**

Greece has turned in recent years into an immigration region. While migration started in the early 1980s, it was only in the early 1990s that significant numbers of economic migrants started arriving and became a new destination country. An additional important feature of the migration process in Greece is the large proportion of women who migrate alone in search of employment. With regard to the integration problem of migrant women many studies indicate that women who migrate for family reasons are less integrated to society than other migrants. In contrast, women from social goods and welfare national system and the non-active participation in social and political life in the countries of residence are of paramount importance. Thus, access to welfare goods is associated with citizenship, while social inclusion and health and system use only in the early 1990s that there is no longer regarded by the public as blighted, but instead are both celebrated as sites of cultural consumption for a new middle class’ (Ossman 2011:8).

In the context of the problematic for the social integration of women migrants in new immigration countries a nation-wide survey on a sample of 600 economic women migrants who had residence and work permit was held by EKKE (National Centre for Social Research) in 2010. This paper refers to some issues related to the integration of women migrants in our country based on the results of the above survey. More concretely we will analyze the access of migrant women to social - welfare services, investigating issues related to social security coverage and the use of public health services. We will also discuss the interest of immigrant women in political life, and their participation in collective political activities and organizational schemes.

L’accroissement des emplois atypiques au cours des années 1990 a ce-
The meaning of transparency is seemingly obvious and simple, however, in political terms transparency is more "the condition of being transparent". It arises in opposition to corruption, secrecy and lack of clarity in the management of organizations and institutions. Today, it is more relevant than ever as a consequence of all kinds of recent scandals. Citizens of democratic societies demand a more open and transparent government.

This requisite of transparency is a political goal, which is supported by the possibilities for openness produced by the microelectronics revolution. This has modified the technological, social and political scenarios. It is more than the Internet; it is creating the global ICTs system where available information is increasing daily, as are the possibilities of accessing and processing data.

In this context this paper proposes, first, an analysis of public policies according to the principle of traceability of decisions. This means that it is possible to identify the full cycle of a public policy and its relationship with the different actors of the policymaking process. Second, imitating food processing traceability tools, it is possible to propose a "policies processing software" for recording all the traces of public decisions and an open system to retrieve and access this data. Third, it describes the theoretical conditions and prerequisites for a "barcode" to reveal who proposed an action and how it was designed, implemented and evaluated.
The Image of the City Between the Local and the Global

Within the global competition among cities for recognition the ‘image’ plays a significant role. Cities work carefully on their iconic representation to attract tourists, knowledge-workers and investors. Therefore, they have the challenge to create a coherent as well as a distinctive image. One can argue that the field of city marketing has professionalized, and operates with standardised practices and similar beliefs. On that account, the images would be quite uniform, displaying rather a global culture than a local one. At this very point, the argument is reinforced by the claim that the ‘self-representation’ of a city is highly contested within the local context. Hence a study of the globally distributed images within their production and negotiation processes draws light on the local ‘urban imagery’ (Strauss 1960).

The presentation is focusing on the image production of two globally intertwined cities: Frankfurt, Germany and Glasgow, UK. Throughout several fieldtrips, city marketers leading to the creation of new images. Therefore the perspective of how city marketing operates in daily business and a critical, independent opinion about the ‘outcomes’ of these efforts could be achieved. In addition, local archives have been combed out to discover how different campaigns are developing, public education, and concrete projects to protect the environment. Although, if they lack a mass support base, they do enjoy significant support. Their accomplishments are real, especially in relation to the obstacles they face; however, they are severely limited by lack of funds, expertise, and equipment. Factors cited above, combined with heavy reliance by the most successful NGOs on funding from international environmental NGOs and international aid agencies, predispose them to avoid confrontation, and only a few engage in it. Our findings suggest that conventional wisdom about environmental movements in developing countries represents a considerable oversimplification and that environmental action can assume diverse forms in developing nations. It also raises important issues about how environmental movements are to be defined, which we explore in the conclusion.

MARIANO, DANICAR* (National University of Singapore, daniar.mariano@gmail.com)
The restrictive Assisted Reproductive Technology (ART) laws and ‘moral safety valves’ in Singapore and their role in creating Singaporean reproductive tourists or exiles

The paper analyses why some Singaporeans are crossing borders to avail of Assisted Reproductive Technology (ART) treatments like In Vitro Fertilization (IVF), Pre-implantation Genetic Diagnosis (PGD), surrogacy, et cetera. A major factor that hinders or discourages couples from getting ART treatments in Singapore is the Bioethics Advisory Committee’s (BAC) strict regulations on ARTs—one of the most stringent in Asia. Formed as Singapore’s counterpart to the UK’s Human Fertilisation and Embryology Authority (HFEA), the BAC prohibits certain technologies like surrogacy, PGD for sex selection as well as “race or traits shopping” through selection of egg and sperm donors. It also denies access to certain people, gays and lesbians, women over 40-45, singles, and women who cannot gestate. The BAC’s ban on payments reveals a logic of racial hierarchy that perpetuates a local versus outsider divide at the guise of protecting “weaker classes” and “not importing Singapore’s fertility issues to other nations.”

As a result of the BAC’s ban on donor payments, there is a huge sperm and egg cell deficit in the country. Many Singaporeans do not want to donate or acquire genetic material within the small city-state for fear of incest or custody issues. Internet is enabling many to circumvent these ‘moral safety valves’ that the BAC had set in place. One exception is Singapore’s public hospitals are lobbying to the government to revise some of the stricter regulations or else “lose out” to neighbouring India, Thailand, and Philippines who are establishing their niche and reputation as fertility tourism destinations. Their lower cost, exotic appeal, and most importantly, loose regulations and “bioavailable” citizens are their major advantages and competitive advantage. Since many technologies and services that Singapore prohibits are allowed in these countries, many of their fertility brokers and clinics report servicing several Singaporean clients annually.

Rethinking Environmental Movements In Developing Nations: The Case Of Cameroon

Conventional wisdom holds that citizens of developing nations rarely participate in movements similar to the “mainstream” environmental movements of the developed world. Instead, like dispossessed groups in developed countries, their mobilization generally takes the form of locally based, confrontational responses to direct threats to their livelihoods and health. A large literature examines such movements, but it generally ignores developing nations where such mobilization is infrequent. This paper examines the case of Cameroon, where mobilization of large numbers of citizens for confrontation with government or business interests over environmental issues has been limited and infrequent. Our data come from an extensive literature search and interviews with 52 NGO leaders from five of Cameroon’s ten regions. We conclude that the relative absence of large scale, clear, and immediate threats to the livelihoods or health of large numbers of citizens, in combination with a resilient, quasi-authoritarian government characterized by patronage, divide and conquer strategies, and mild repression, have mitigated against such movements. Cameroon does, however, possess scores of NGOs and citizens’ groups that address environmental problems through lobbying, public education, and concrete projects to protect the environment. Although, they lack a mass support base, they do enjoy significant support. Their accomplishments are real, especially in relation to the obstacles they face; however, they are severely limited by lack of funds, expertise, and equipment. Factors cited above, combined with heavy reliance by the most successful NGOs on funding from international environmental NGOs and international aid agencies, predispose them to avoid confrontation, and only a few engage in it. Our findings suggest that conventional wisdom about environmental movements in developing countries represents a considerable oversimplification and that environmental action can assume diverse forms in developing nations. It also raises important issues about how environmental movements are to be defined, which we explore in the conclusion.

MARKIN, MAXIM* (National Research University, mmarkin@hse.ru)
The Problem of Opportunism in the Changing Conditions (A Case of the Relationships between Retailers and Suppliers in Contemporary Russia)

The rules of market exchange do not only distribute the value added (Gereffi, 1994) but also reduce uncertainty and control opportunism in business partners relationships (Kelly, 1991). In Russia in the 2000s retailer-supplier contracts included different requirements such as pricing and bonus requirements of retailers, unpaid services and penalties to retailers, compensation for retailers’ services. Those requirements made the behaviour of business partners predictable. But in 2009 the trade law was passed and the most of the requirements must be excluded from the retailer-supplier contracts. Nevertheless, the business partners strive to reduce uncertainty and to control opportunism in their relationships even in the new conditions. The objective of this research is to analyze how retailers and suppliers altered their rules of exchange after the political intervention. The empirical data are two quantitative surveys that were carried out in 2007 and 2010. About 500 managers were questioned in Moscow, Saint-Petersburg, Ekaterinburg, Novosibirsk and Tyumen. The half of them are retailers and the others are suppliers. The findings demonstrate that after the enactment of the trade law the most of unallowed requirements were excluded from the retailer-supplier contracts but they are still used as separate contracts. This practice gives the business partners an opportunity to make each other’s behaviour predictable in the new conditions. Retailers and suppliers also continue to discuss the content of the political intervention and the consequences of its application.

MARKLUND, CARL* (Södertörn University, carl.marklund@sh.se)
Organized Hypocrisy – Disorganized Technocracy: The Assumed Retreat of Politics in Contemporary Governance in Historical Comparison

Today, it is widely assumed that a power shift has taken place over the past few decades – a shift away from politics and in favor of the market. According to this view, neo-liberalism has since the 1970s and onwards reduced the scope of “the political”, limiting the exercise of public power in general and planning in particular.

Despite this assumed retreat of politics, politics is still, at least medially and rhetorically, tasked with providing some guidance for the future, based on scientific evidence, and to generate tangible results in a logic of input and output legitimacy (Scharpf 1999). Public power is still held accountable as if it possessed the power which is by now to have been lost. Political control is still to achieve results as if it would be possible to exercise public power without the use of planning, raising the question: Why do we expect more from politics at a time when it is supposedly able to do less?

This paper proposes that this conundrum – which could be seen as an organized form of hypocrisy (openness) coexisting with an increasingly disorganized form of technocracy (transparency), to paraphrase Nils Brunnsson (2002) – can be analyzed by confronting Karl Popper’s concept of “open society” with Gunnar Myrdal’s notion of “constructive social engineering” and Karl Polanyi’s concept of “double movement”, as generated in the context of pitted conflict between laissez-faire liberalism, totalitarianism, and democratic socialism of the 1930s and 1940s, a conflict which in some ways resemble the contemporary contest be-
between neoliberalism, progressivism, and traditionalist backlash but also provide some instructive contrast.

RC08-160.2
MARKLUND, CARL* (Södertörn University, carl.marklund@sh.se)
Shaping the Things to Come: Concepts of Planning and European Modernity

Planning—in the sense of purposive action geared towards the anticipated future—has usually been seen by anthropologists and social psychologists as a characteristic of universal human reason. As a specific socio-political practice and scientific theory, however, historians and social theorists have often identified planning as a specific trait of European (Western) modernity, for better and for worse. This classic analysis of scientific social and political planning speaks of politicians, revolutionaries, reformers, and scientists infatuated with the success of the natural sciences, dreaming of a brand new world. According to this view, the social sciences would be as closely integrated with politics as the natural sciences had already been adopted by business, medicine, and the military. In some more extreme “technocratic” interpretations, planning and science would eventually replace politics altogether.

Either planning has been seen as a largely technologically determined, if not outright “neutral” response to the complexity of the modern world. Or, more commonly, it has been criticized as a misguided attempt at controlling human relations and social circumstances in the same way as humans have sought to control nature. As such, planning is a key concept in European modernity. However, the many applications and diversions of planning belie any simple categorization, making it an appropriate topic for conceptual historical analysis. Yet, it is a key concept whose conceptual history is yet to be written. This paper maps out points of disjuncture between the historiography of concepts of planning, such as cybernetics, management, planning, rationalization, social engineering, and technocracy on the one hand, and the actual historical usage of these concepts on the other. Thereby, the paper brings previously isolated historiographical and theoretical strands into dialogue with one another with a view of initializing a new take on “critical planning studies”.

Foundational Political Myths in Divided Societies: The Case of Montenegro

This paper provides an analysis of the constitutive role of founding myths in the formation of nation-states. In particular, it aims to elucidate the odd cases of identity formation in complex and ethnically divided societies where it is argued here, the historical and cultural legacies are passed on rather differently than in the case of homogeneous societies mostly analyzed in the literature on political mythology. With the intention to submit a phenomenon that belongs to the family of the most basic and yet arcane and essentially contested concepts of political theory and political culture to an impartial politico-legal investigation, the founding myth is firstly reconstructed with respect to the general theory of myth and political myth. In the second part, the role of mythological legacy in the genesis of the statehood of Montenegro both in the past and present is analyzed. The author argues there are two founding narratives in Montenegro, explaining their ethno-nationalist character and attempts to deduce patterns of their instrumentalization by the rulers of the Petrovic-Njegos dynasty and the current government. The paper ends with concluding remarks about the controversial status of ‘constitutive foundational mythology’ and the need to set forth new and republicanized forms of legitimisation that would disengage the regressive dialectics induced by the myths discussed thus far.

MARKOVIC, PETER* (University of Donja Gorica, Montenegro, petar.markovic@udg.edu.me)
Post-Nationalism in Practice: European Citizens’ Initiative

The discussion on the practical and heuristic value of cosmopolitanism and post-nationalism has informed and shaped the debate on the future of the European Union from the Maastricht Treaty onwards. The recent literature on belonging, allegiance and political identity suggests that cosmopolitanism is too thin of a concept to account for the gradual emergence of a common European public space visible primarily in the convergence of the EU’s civil society movements. In this context, the notion of “constitutional patriotism” is analyzed due to its centrality in the debate. Before proceeding to the central part of the paper, the author argues that social constructivism portrays a more realistic and substantive picture of the nature of the sense of European belonging. The paper concludes with an examination of the European Citizens’ Initiative and attempts to assess to what extent this institutional novelty of direct democracy in the EU has provided empirical leverage for post-nationalist belonging. Through the comparative and case study analysis of the most paradigmatic initiatives submitted thus far, this investigation aims to provide the reader with a possible dynamics of post-national identification in the EU.

MARONATE, J.* (Simon Fraser University, jmaronta@sfu.ca)
When Art Worlds Look to Sociology for Inspiration: A Case Study of Contemporary Art Conservation Strategies

Recent scholarship in cultural sociology has provided new theoretical frameworks and methodological strategies for studying diverse (and sometimes incommensurable) value systems (Boltanski and Thevenot 2005, Heinich 2008). This paper examines the relevance of trends in the sociology of values (or pragmatic sociology) in a case study of recent international initiatives involved with the development of new approaches to contemporary artistic heritage conservation. The paper presents research on the activities of four international initiatives devoted to the development of new strategies for the preservation of artistic heritage. The paper examines how contemporary art conservation networks are attempting to grapple with the increasing realization that diverse value systems and multiple meanings of the arts they care for can be taken into account in new visions of the role of conservators in the preservation of artistic heritage. It examines recent trends in conservation research, in particular the efforts of art conservation scholars to adapt sociological methods and theories for inspiration. Conservators have become increasingly involved with research about the ‘meaning’ of objects and cultural heritage sites when planning interventions. They study records of the creator’s intent, conduct interviews with artists or other authorities, critically analyze the historical contexts of the work’s origins and of subsequent transformation, and seek insights about ways to preserve the integrity of the work that respect its symbolic and cultural significance. These efforts by art conservators to draw on sociological insights provide a compelling example of the relevance and uses of sociological research in contemporary art worlds, although they also raise questions about decision-making, in particular how to use social scientific theory as an affordance for practical action.
Families’ Control and Youth Sexuality As Meaningful to Young People’s Transitions into Adulthood

Nowadays, in Western societies, youth transitions into adulthood are, usually, considered as being a time of identity formation, where young people’s bodies undergo a process of change and they start to interact with the opposite sex, in the context of romantic relationships, in order to create the conditions for reproductive capacities. However, some authors point to the importance of continuities, social positioning and the epistemological fallacy in the lives of young people and in the representations of youth and youth transitions into adulthood. Although the family context tends to be recognized as important to young people’s trajectories, sexuality is often forgotten or, even insignificant in their transition to adulthood. Thus, sexual transitions can be seen as non-important, disconnected from other transitions, and having no decisive consequences; being just a hobby or children’s play.

Based on 60 in-depth interviews conducted in Central Portugal, with 60 white young adults, aged between 18 and 29 years old, I intend to look for possible articulations between family control over young people’s leisure times, sociability and sexuality, young people’s representations and experiences of sexuality, and their transitions into adulthood. I will argue that the family context and the domain of sexuality are not meaningless for young people’s trajectories into adulthood. Instead aspects related with family control, as, piontivity in the analysis of gender relations and sexuality, young people’s control, and family participation in the migration projected for Brazil, both of returnees, as well as international immigrants from Paraguay.

Abstracts are organized by first presenting author’s last name.

The complexity of family arrangements that constitute the return migration of Brazilians from Paraguay can be identified as an important element in maintaining the circularity between the two countries and the consolidation of transnational space brasiiliano. The return plays an important role in migrants’ direction and in the daily interpersonal relationships between migrants and non-migrants, either in Brazil or Paraguay, forming a web of friendship and solidarity that sustains this intense cross-border transit of people, goods and information. Thus, in order to understand the phenomenon of migration as a social product, not only as a result of individual decisions and / or economic and political constraints, it is necessary to consider the key role played by social networks, mostly those related to families and households in the entire process. This paper describes the changes in volume and composition of family arrangements of Brazilian returnees from Paraguay in the five-year periods 1986/1991, 1995/2000 and 2005/2010 and raise some points for reflection and discussion on the participation of transnational families in the migration process and circularity of these migrants. Information from the Brazilian Demographic Censuses of 1991, 2000 and 2010 will be used to do so, and to estimate the direct and indirect effects of international migration return to that country.

H1: It is expected that in the period 2005/2010, there is greater diversification of family participation in the migration projected for Brazil, both of returnees, as well as international immigrants from Paraguay.

H2: Although a structural pattern persists, given the nature of family ties, we expect a change in the roles of families in the return to Brazil and in the entry of foreigners from Paraguay, given changes in economic and political contexts of the two countries.

Social and solidarity economy (SSE) presents a collective project for another way of organizing the production and the society, in which the economy is subordinated to its social function. Thus, the paper discusses SSE as a real utopian proposal (Wright 2010): its institutional design is desirable in terms of egalitarian emancipatory ideals, such as privileging the collective ownership and control of economic resources and integrating solidarity in the core of economic activities as a means to achieve common goals; it constitutes a viable, and to some extent achievable, alternative to capitalist arrangements, since it has been partially implemented and is active on the political agenda worldwide; it contributes to a pathway of social empowerment, as it involves collective actors taking control of the economy over the capital or the state. However, SSE is also a complex field pervaded by tensions and conflicts. If, on the one hand, it embodies a normative vision for overcoming the hegemony of the dominant system, on the other, some experiences have become complementary or even functional to the capitalist world. The paper results from ongoing PhD research and its purpose is to critically examine SSE, in light of an empirical comparative analysis based on one case from the North (Portugal) and one case from the South (Brazil).

Tortured Bodies, Ravaged Flesh, Killing Machines: David Cronenberg and the Sociology of Disgust

Over the past two decades, reflections on disgust and repulsion have been piling-up in Social Theory. Moving away from an analysis entirely centred on biological and/or sensory or emotional expression, theorising disgust became an important instrument to understand moral boundaries and civilizational constructions. Disgust seems to fulfil a position akin to incebt prohibition – adequately universal to be declared biological, and sufficiently particular to be deemed cultural. If the traditional views on disgust revolved around the issues of purity, pollution, and contamination, having the body at the centre stage, some of the contemporary approaches are linked not to external threats to the human integrity but to the transformative capacity of science and technology, breaking barriers, violating interdictions, and destroying moral boundaries. The danger of the body snatchers becomes the menace of the creators of revulsion. Terror and horror movies, tend to epitomise the dimorphism of disgust for their attraction for the mutilated, raped and transformed bodies of the victims of epidemics, and serial killers or on the creative and uncontrolled labors of the brilliant but mad scientist that aspires to play a demiurgic role in a new but demented universe. This double feature of disgust is paramount on the films of Canadian director David Cronenberg, representing both the civilizing and uncivilizing roles that disgust can play, especially when linked to scientific projects. If science is seen as a cornerstone of modernity, a civilizing process and symbol of progress and enlightenment, reducing human suffering and enabling longer, healthier and happier lives, it is also possible to see it as a division of the artificial-natural divide or the human-animal partition. Cronenberg’s filmography is a clear example of how the medical, biological and chemical sciences have entered the realm of the disgust, side by side with porn or sexploitation.

Developing a Pattern Language For Science-Engineering-Art-Design (SEAD) Collaborations

Acknowledged similarities and prospective synergies underlie the work of artists and scientists in perceiving and describing the natural world; however, there are few formalized or easily recognized methods to utilize those commonalities for enhancing art-science collaborations. The notion that observable or archetypal patterns could represent a form of communication or a language among professionals from different fields was explored by architect Christopher Alexander, who introduced a pattern language consisting of hierarchically arranged patterns that are linked together in countless ways. Whereas the use of patterns and rhythms to communicate art or music is relatively straightforward, the utility of spatial or temporal patterns to portray or explain scientific data is less obvious. Some branches of science focus specifically on nature’s patterns and rhythms; however, most scientific data can be expressed in terms of frequencies, cycles, and other common descriptors of temporal patterns, as well as distributions, geometries, and similar descriptors of spatial patterns. The use of a pattern language for art-science communication would initially identify and collect numerous patterns to be labeled and categorized, but discernable similarities among seemingly different patterns could likely reduce this number over time. Distinguishing among natural, ideal, and abstract patterns could be a first step in categorization and might provide a handy framework for users to perceive relationships among different forms of information (e.g., ideas, data, designs). The precise structure or syntax of the pattern language (i.e., naming, ranking, illustrating, exemplifying, and referencing patterns) should be less important than an unambiguous depiction of the collected patterns and their links. Patterns and rhythms may be more recognizable to people than are words, numbers, or symbols, thus providing a means of communicating across disciplines and cultures.

Social Origins and the Access to Public Higher Education in Brazil

According to the well know MMI hypothesis (Raftery and Hout, 1993; Shavit and Blossfeld, 1993), the class inequality on the distribution of educational opportunities tend to decline only when attendance rates reaches saturation at given educational levels for the upper classes. Lucas (2001) challenged this view introducing the EMI theory which proposes that, even when saturation is achieved for a given educational level, inequalities tend to persist in a qualitative sense, with kids from privileged socio-economic background having more chances of going to the better schools or universities. This means that IEO had to be analyzed not only in reference to attendance to a certain educational level, but also in reference to which segment (or track) in the educational system the individual accesses.

This proposal aims at analyzing the association between social origins and educational destinations through the selection process of a prestige public higher education institution in Brazil. Drawing on the notion of tracking, we want to...
evaluate (a) given the high competitiveness of the selection process, how is the association between social origins and chances of obtaining a place at this elite institution; and (b) if this association varies depending on which undergraduate course option the student applied for. Research has already shown how students from private schools have more chances of progression in all educational levels (Ribeiro, 2011; Montalvão, 2011) in the country, but the IEO between better tracks in public higher educational institutions in Brazil has never been analyzed before. Also this proposal relies on the use of data collected in the moment that the application is made, and it contains information on the entire universe of candidates in the selection process of this specific institution, which is another contribution to the empirical literature on the theme in Brazil, based mainly on cross-sectional household surveys.

Examining the Long-Term Effects Families: Preparando La Nueva Generación, a Culturally-Specific Mexican American Parenting Intervention

The purpose of this study is to test the long-term results of the efficacy trial of a culturally-specific parenting intervention called Familias: Preparando La Nueva Generación (FPNG), designed to increase the effects of keepin’ REAL (kiR), an efficacious school-based drug abuse prevention intervention targeting middle school students. Randomized at the school-level, parents and youth in nine schools were assigned into one of three conditions: (1) control condition, (2) youth-only condition -receiving only kiR, and (3) parent + youth condition -receiving FPNG and kiR.

Youth and parents completed a 1 pre-test prior to implementation, a wave 2 short-term post-test 2 months later, the last lesson, and a wave 3 long-term post-test 12 months later. Using a path analysis in Mplus on adolescents whose parents also participated (N=462), both direct and indirect effects of participating in FPNG were examined. Findings indicate that participation in FPNG and kiR had a significant direct effect in lowering adolescents’ amount of substance use. For alcohol and cigarettes at wave 3 in comparison receiving only kiR. These effects, however, were completely mediated by anti-substance use norms - youth whose parent also received FPNG had significantly stronger anti-substance use norms, which in turn resulted in significantly lowered amounts of alcohol and cigarettes used. These results are consistent with the Ecodevelopmental Theory and provide further evidence to the theoretical premise that strengthening parent-child communication of norms can have a positive effect in preventing adolescent substance use. In addition, these results support the assumption that involving parents in prevention efforts has a major effect in strengthening the efficacy of youth-only classroom based intervention. Because FPNG was designed with Latino parents and for Latino parents, FPNG is emerging as a curriculum that can positively influence familial and parent-child influences that characterize Latino youth and families and reduce substance use among Latino adolescents.

NÚÑO-GUTIÉRREZ, BERTHA (Instituto Mexicano del Seguro Social)

Preventing Youth Substance Use and Dependency: The Long-Term Effects of Keepin’ It REAL in Guadalajara, Mexico

Despite high rates of substance use in Mexico, only 43% of young adults report receiving a substance use prevention program. In response, keepin’ REAL (Martínez REAL), a substance prevention program developed in the US for Mexican American youth, was implemented in central Mexico by a bi-national team of investigators. Two middle schools in Guadalajara, Mexico, were randomized into a treatment (N=226) and control (N=206) condition. Students completed a pre-test prior to implementing keepin’ REAL, a short-term post-test after the last lesson, and a long-term post-test 12 months later. Substance use measures were 30-day amount and frequency of alcohol, cigarette, and marijuana use. Baseline adjusted OLS regression models predicted short-term outcomes, while growth curve models with missing data imputation examined program effects on trajectories of substance use. OLS regressions showed significant relative reductions in use of alcohol and cigarettes for youth participating in keepin’ REAL compared to youth in the control group. Growth curve models indicated that over time the effects of keepin’ REAL are gendered. Females in the treatment group drank alcohol significantly less frequently over time. Males in the treatment group drank alcohol significantly less frequently over time in the amount of marijuana used. This pilot study provides support for the global applicability of efficacious substance use prevention programs originally developed in one country, but also the importance of assessing for cultural fit and adapting the programs to achieve maximum efficacy. The results indicate that keepin’ REAL can be an effective tool in teaching drug resistance strategies and reducing substance use and dependency among adolescents in a major urban area in Mexico.

would have been implemented in isolation. To study the impact NGOs have on these questions, we first take stock of their engagement in global social policy and then assess to what extent their role has been adequately captured in the academic literature. In a second step, we examine their potential to influence the institutional integration, norm conflicts, and actor constellations in such a way that either makes policy synergy or policy conflict more likely. Thirdly we draw on the governance literature to investigate the impact this has on the larger field of global social policy.

Ethics As a Professional Responsibility From a Higher Education Perspective

Se presentan reflexiones provenientes de dos investigaciones doctorales en responsabilidad social universitaria. Por una parte el desarrollado en la Universidad de Valladolid en el cual se indaga sobre la percepción de la sociedad (stakeholders) acerca de lo que esperan de la Universidad. El segundo estudio desarrollado en universidades de 4 países iberoamericanos (Colombia, España, Perú y Chile) realizó una evaluación del aporte de la educación universitaria a la formación de una ciudadanía responsable. El estudio mostró datos que cuestionan el fomento de unos valores prosociales desde que accede a la academia el estudiante hasta que finaliza su grado.

Es de interés para esta ponencia el resaltar la necesidad de confluir en la denominada responsabilidad social de las universidades, aspectos que conllevan a la relación de diálogo con el entorno, y promueve en su mismo seno para ser una institución agente de cambio social en conducir a profesionales con sentido ético de responsabilidad y una serie de instituciones que promueven un desarrollo socioeconómico sostenible y que favorecen la progresiva disminución de las desigualdades no tan solo a nivel global si no también en su entorno cercano.

Junto a la presentación de reflexiones sobre los estudios doctorales, se señalarán algunas de las directrices internacionales emitidas por organismos como la UNESCO o la OECD en base a las cuales se señala el necesario rol de que la educación superior se alinee con los objetivos del milenio, y capacite en competencias no solamente técnicas sino de carácter transversal y valores solidaristas. Considera la perspectiva del presente trabajo la necesidad de progresar en competencias no solamente técnicas sino de carácter transversal y valores solidaristas.

Managing Organisational Religious Diversity in Finland

The paper will discuss and analyse how the Finnish public administration copes with religious and spiritual diversity in the 2010s. In the post-World War II times, state's involvement with religious affairs was on a low level with the exception of the two national churches: The Evangelical Lutheran Church of Finland and the Orthodox Church of Finland. During the 1990s and 2000s the presence of different religious traditions and organisations has grown considerably. The main contributors to new religious diversity have been (1) Pentecostal and Charismatic Christianity, (2) religions of immigrants and (3) New Age and similar types of spirituality. Simultaneously the historical churches have experienced continuous secularization. There has been both a novel interest in religious affairs by the Finnish public administration and a shift of governing religions from church law to networks (e.g., representative councils, interfaith associations). The new model does not exclude the historical church-state relations, but it works alongside it. The paper argues that in order to analyse how states’ aim to regulate and manage contemporary religious diversity, we should look at how the historical church-state relations function together with new forms of governance networks.

MARTIN, CLAUDE* (CNRS, claude.martin@ehesp.fr)

Impacts of the Financial Crisis on Family Trajectories: The Case of Living Together Apart Couples

Family trajectories and transitions, union formation and dissolution, are strongly linked to or framed by economic and cultural context. In that perspective, family life has to be considered more as a result or the expression of contextual parameters than a universal phenomenon that could be looked at isolated from these parameters (like work conditions, economic assets, etc.). The 2008 financial crisis and its consequences on housings revealed in different countries such a relationship between external macroeconomic factors and family transitions: the case of couples who continue to live together while considering themselves to be separated. We have studied in parallel some of these “living together apart” situations in five countries with Andrew Cherlin and Caitlin Cross-Barnet. We have collected in different social classes, the main arguments delivered by people concerned with such situations of forced cohabitation. Among them, we identify situations where residential separation is not possible, either because of the need to keep up appearances, often for the children’s sake, or because total separation is too frightening or living in separate homes is unaffordable.

In this contribution, we want to go beyond a typology of these situations to use them as a mean to compare our respective national family culture concerning marriage, divorce, cohabitation, France and USA are effectively two different nations regarding family issues. The common economic trauma of the financial crisis that we are still facing in our respective countries is an occasion to reveal these cultural dimensions.

MARTIN, CORINNE* (Université de Lorraine, corinne.martin@univ-lorraine.fr)

L'appropriation Des Réseaux Sociaux : Des inégalités Sociales Et Culturelles ?

Dans le cadre de la thématique « Technologies de communication et inégalités », nous proposons d'analyser les inégalités sociales et culturelles révélées dans l'appropriation des réseaux sociaux par les usagers.

Pour repérer certaines de ces inégalités, un focus est réalisé sur quelques situations extrêmes de violence et domination sociale dans l'élaboration du processus interactif de construction de l'identité numérique sur Facebook et Spotted/Facebook. Grâce à l'analyse de profils, commentaires et tags, diverses formes de stigmatisation sociale, injure et diffamation (espace à la fois privé/public) sont classifiées, et interrogées comme autant de traces/marques faisant irruption dans ce processus de construction identitaire.

En quoi l'ordre de l'interaction (Goffman) est-il opérant et productible dans la négociation de cette mise en scène sociale ? Comment articuler le concept de face avec cette représentation de soi socio-techniquement contrainte ? Le profil de ces usagers en termes de capital social et culturel – ses déficits ? – en ferait-il les nouvelles victimes sacrifiées dans l'affirmation du lien social ? La complémentarité online/face-à-face est-elle importante ? Ré-explorer le concept d'empathie (avec son corollaire, le partage des émotions et affects), interroger l'éthique du visage (Levinas) et son devoir de responsabilité permettent de comprendre l'évolution de ces interactions à distance. Et si les TIC participent de la montée de l'urgence généralisée (Jauréguiberry, Aubert), nous montrerons combien l'injonction (la fatigue ?) à participer à ce flux informationnel génère diverses formes d'instabilité dans le travail sans cesse renouvelé de cette construction individuelle.

Exploitant l'hypothèse selon laquelle la colère est plus influente pour s'exprimer sur Facebook que la joie ou la tristesse, nous avons ouvert un blog pour recueillir des témoignages d'usagers victimes ou témoins. Ces données empiriques sont complétées par des entretiens semi-directifs (n = 20) et des focus group.

MARTIN, ELOÍSA* (Federal University of Rio de Janeiro, eloisamartin@hotmail.com)

God Is Argentinean, and Also the Popes! Catholicism, Popular Religion and the National Imagination

The arrival of Jorge Bergoglio to the Holy See has introduced a number of changes in the relations between the Catholic Church and the State in Argentina. While traditionally, these relations have been characterized by the preferential status of Catholicism as quasi-official religion and its active presence in the government's decisions, in the last decade it was noticeable a succession of conflicts between the Church and State. However, few days after the coronation of Pope Francis, government discourse changed radically, emphasizing the importance of having “a Argentinean Pope.” The media and various forms of popular expression (graffiti, jokes, cartoons, montages on Facebook, etc.) express how unprecedented and unexpected this situation was, from a key that combines various representations of national culture.

In this new picture, the traditional and conservative homology between Argentina national identity and Catholicism, acquires new features, especially at the level of popular religion.

In this work, I will observe a specific matrix that allows to relate to the sacred and the idea of nation: soccer. Soccer appears as one of the matrices that model the relationships with the sacred: not as metalanguage, nor as religious meta-
their identities. Drawing on the findings from an empirical study acquired to make sense of bodily changes in order to maintain and/or re-negotiate granted nature of embodiment challenged, and people may increasingly be re-
decreased in the second period comparing to the first. 

The difference in the number of years between men and women in life expectancy were greater as the level of education decreased or calculated in two periods (1996-2001 and 2001-2006) .

The aim of the present paper is to examine gender inequalities in health and mortality. This measure also allows separating life expectancy into different daily routines to create a weekly visual diary, which was explored through in-depth interviews to make visible the rhythms, patterns and meanings that underlie habitual and routinised everyday worlds. This paper explores the ways in which lived experiences of gender and ageing intersect and are performed and represented through the visual accounts of participants about their daily lives. In doing so, it focuses on two key aspects: (1) the ‘everyday’ appearance and body practices of participants visually depicted – which include work done on and with the body, through engagements with clothing, hair, make up application and shaving; and (2) representations and discussions of dieting and weight loss. 

The lens of widowhood research has moved from a focus on role loss to challenge dominant public narratives of misery and decline, pointing instead to a complexity of experience rooted in personal biography and in gendered life course.
enous women who work in the agricultural fields. Using qualitative methods, the objective of this research was to recover the voices of the farmworker women regarding the inequalities to which they are subject.

The instability and insecurity of their employment produces and guarantees a docile and inexpensive work force, thereby permitting companies to reduce the financial risk implied by the cost of guaranteeing work and benefits. This situation reflects the invisibility of these women in the eyes of the state, which leaves them in a condition of social vulnerability. The asymmetry of social relations explains how the state can offer low-quality services to this population and reduce their working and salary opportunities. The socioeconomic vulnerability in which this population is found is reflected in job insecurity and the inability to defend themselves against the state.

The crisis has had a big impact in Spain and specially on those who were already in increased precarity situations as women. But in order to understand women’s situations in a time of crisis, we need a longitudinal analysis that show us the weaknesses of the institutions and the precarization of their living conditions in the last years. The aim of this paper is to analyse the evolution of women’s living conditions and the process of precarization in Spain between 1995 and 2010. We will address the common hypothesis that women constitute a more precarious social group than men, and we will try to complexify and enrich that hypothesis. In a first moment, we will analyse women as a precarious group as a whole and with the help of recent research in Spain. This paper tries to show empirically the feminist theoretical proposals around the diversity of women by examining which variables explain more about those differences among women. In a second moment, we will centre our attention on the socio-economical dimension of precariousness (employment, income and education levels) to explain the paradoxes of a high level of precariousness among women in spite of the increase of women acceding the work place. This paradox certifies that the incorporation of women to the work place is always done in conditions of precariousness of jobs (temporality, parcial jobs...). and that this process might not be separated from an analyse of major changes in the work place (politics of temporality, parcial jobs...); and that this process might not be separated from an analyse of major changes in the work place. This paradox certifies that the incorporation of women to the work place is always done in conditions of precariousness of jobs (temporality, parcial jobs...).

Instead, I will emphasise the theoretical framework about socio-spatial structures and the roles of opportunity and protest cycles as the best way to overcome the shortcomings of the abovementioned myths and also to provide comprehensive explanations of this and similar urban movements. Finally, the overlaps and distinctions of this approach in relation to previous theoretical references (Castells’ The City and the Grassroots and different authors about The Right to the City) will be discussed.
and Gracia AC-90 Community Social Support Questionnaire and open questions were employed. ANOVAS analysis showed significant differences in community participation and integration in accordance with socioeconomic, motivational and social interaction variables.

Results show us that given the changes in lifestyle, customs, language etc., the peer group, the family and the neighbourhood provide the base from which feelings of self-esteem and self-efficacy are derived, although contact with local people (Spaniards) is one of the main agents of social support; it is therefore important to examine the relationships that are established between the indigenous populations, the immigrants. Prejudices and stereotypes are easily internalized in a climate of mutual ignorance and isolated rural enclaves are no exception. In addition to policies of control and regulation, Spain's immigrants require support in the development of the processes of integration and peaceful coexistence.

*Science without Borders: An Academic Mobility Program from the Brazilian Government*

At the international level, contemporary higher education has undergone profound transformations in its organization and dynamics due to the globalization process that has reached a majority of countries in various ways. In addition to the worldwide growth in school enrollments from the institutional differentiation of the international circulation of knowledge, a notable increase in the mobility of students, professors, educational institution administrators is being observed. In various parts of the world, national governments have developed specific policies to bolster academic mobility. Ranking sixth among industrial nations, Brazil has a long history of revamping its system of higher education in order to produce highly qualified professional staff. There are currently 7.5 million students enrolled in higher education. Going back to the 1970s, the country has instilled a postgraduate system covering all areas of knowledge. Stemming from this, a scientific community was created with high potentials for academic mobility. In 2011, the federal government created the Science Without Borders Program with the goal of sending 100,000 undergraduates, graduate and science/ technical students to centers and research facilities of renowned international standards located abroad. The program also envisages attracting researchers from foreign locales who want to settle in Brazil. Through intensifying mobility, the Program wishes to stimulate and refine the research applied in the country, seeking scientific and technological development and to increase the competitiveness of national businesses and the country on the global stage. The study being presented analyzes to look at the results of the program as well as the possible difficulties it faces in achieving its goals.

*Collective Rights to Life and New Social Justice: Lessons from Latin America*

For a long time, the basic legitimation of capitalist power was the private power ideology revealed by the rights of the elite to privatize collective and natural resources. This privatization strategy was central to pointing out another dogma, that is, the idea of inexhaustible resources supporting unlimited accumulation. However, the social and political recognition of the exhaustibility of resources is a case to consider. The Program wishes to recognize the exhaustion of resources and to study the reactions to question the general rights of privatization. Additionally, they suggest a new social justice hierarchy that underlines the priority given to collective and natural rights in public policy management. Latin American cases, particularly Bolivia's, are interesting ones to reflect about this change of development paradigms.

*Intelectuals and Development: Reflection from Diverse Latin America Statements*

Intelectuals and development: reflection from divers Latin America statements

**Paulo Henrique Martins**

Summary: In this paper I will try to reflect about two points: the difference between economic growth and development, on the one hand, and the existence of other national statements about development, on the other hand. The first point is important to remark that the idea of development in Latin America is connected to the traditional criticism about imperialism and dependence. This understanding is particular to the region and it was born in the World War II when Latin-American economists such as R. Prebisch who noted that international economic relations was not only an economic problem but a political issue. Thus, it is impossible to generalize this understanding of development to others continents but it is very important to try to compare some different processes. The second point is that the idea of development in the region is linked to the idea of power system, because what is developed is not the country but the power. Then, in this sense, it is possible to define some different development patterns in Latin America that reflect some possibilities of alliances between social and political forces that contribute to organize national power systems in the last decades. To demonstrate our papers we will try to show the differences and similarities between Brazilian and Bolivian cases. It is important to show the relationship and...
differences between economic and political spheres and about global and local views, from different contexts.

Intergenerational Relations in Rural Tamil Nadu: Grandparent – Grandchild Relations from the Perspective of Grandchildren

The bond between grandparents and grandchildren is of special interest as it involves a relationship cutting across generations. Grandparents are in a unique position to offer love, advice and receptive ear enhancing their ability to provide emotional help. Their financial aid at critical junctures is not uncommon. In the absence of a capable adult, grandparents provide care for their grandchildren. In the absence of established expectations, obligations and rights permits both in the dyad have enough flexibility to build their relationship tailored to their needs and wishes while allowing freedom to minimize their contact or withdraw from the relationship.

The present paper examines the intergenerational experiences in terms of proximity, contact, time spent with, engagement and exchange from the perspective of 304 grandchildren residing in 9 villages in two districts of Tamil Nadu, India. The districts and the villages were selected using lottery method and the respondents each village were selected by systematic random sampling from interviews method was used to elicita data. Analysis provided percentage, mean, paired analysis of difference and analysis of variance.

The findings reveal lineage and sex of grandparents are significant factors in shaping grandparent-grandchild relationship. In general, proximity, contact, time spent together and degree of exchange are greater with paternal grandchildren than with maternal grandchildren. Likewise grandparents have greater integration than grandmothers. However, age and sex of the grandchildren play no significant role. The findings also underpin the role of joint family and large family size, which may imply joint living with grandparents, in enhancing the quality of intergenerational relations.

MARZORATI, ROBERTA* (University of Milano-Bicocca, roberta.marzorati@unimib.it)

Making home, becoming neighbours: the effects of immigrant home-making practices on living together in the diverse urban areas of a small city

The paper explores home-making practices of immigrants living in the historical centre of Desio, a small city in Brianza, an industrial district up north of the Milanese metropolitan area (Italy). The process of everyday construction of domesticity is explored taking into account the symbolic and material engagement with the house and the home area. Aspects related to housing tenure, processes of self building and care, forms of cohabitation, various uses and forms of private/publicness of the domestic space, will be analysed in order to account for different forms of belonging and ways of “feeling at home”.

The research question explored in the paper is that different forms of investing in the house and the domestic space - varying accordingly to status and socio-economic gaps, habits and cultural traditions (in terms of gender roles, ethnicity and religion), migratory paths (settled vs newcomers), together with the housing market and policies practice regulation - are crucial elements affecting sociability (neighbours relations and the construction of the neighbourhood as a shared space) social networks (ethnic or non-ethnic forms of incorporation into the local context), social cohesion and the role played by everyday encounters in promeutng interethnic relations and knowledge.

The paper will focus on two of the housing complexes explored in the ethnographic fieldwork: a building housing only Pakistani immigrants, and a courtyard which instead is marked by ethnic and social “superdiversity”. The ultimate aim of the paper is to show how “hard” elements (material and socio-economic conditions) are more relevant than “soft” elements (ethnicity and culture) in shaping cohabitation in diverse urban settings.

Payling Bonuses for Safety: Pitfalls and Proposals

Recent events including the Global Financial Crisis and the BP Texas City refinery disaster have highlighted that incentive structures for senior executives worked against process safety. Equally, the Global Financial Crisis was found to be precipitated by people whose behaviour was a direct consequence of their financial incentive regime. Financial incentives have long been used to influence professional values and practices, and at their core are assumptions about the nature of human motivation. Neo-classical economic theory starts from an assumption that people are rational, self-interested calculators and therefore respond in predictable ways to financial incentives. By contrast, work from within sociology has emphasized a breadth of human motivation beyond self-interest.

This paper engages with this debate both empirically and theoretically in the context of the present and potential role of incentives to manage major accident risk in hazardous industries. Incentive schemes are one way that organisations are seeking to manage risks that have extensively depended on militarization and subsequently relied more heavily on surveillance technologies to monitor its citizens in the name of security. It can be contended that the purpose of surveillance technologies and the militarization of Canadian society post-911, is a precursor to greater government control; constructing ideal citizens that are ‘generalistic’ and can benefit the government by giving up certain freedoms, supporting government initiatives aimed ostensibly at securing citizen safety. This logic fits in nicely with narratives that argue there is no end to the ‘war on terror’ and therefore countries like Canada will continue indefinitely to militarize and rely on surveillance technologies. This proposed paper will examine sociologically the relationships between on the one hand, popular discourses and practices of militarization, and on the other, the adoption of surveillance systems whose software and hardware have become routine aspects of negotiating everyday life for all citizens. While government uses such risk management knowledge to seek security, decisions on pension funding and structure are often driven by economic rationalities, very often at the detriment of adequate, security and equity. This paper will investigate the effects of Canadian political discourses surrounding militarization as the site for government control on the construction of Canadian identity. Using critical discourse analysis (CDA) which specifically emphasizes a sociological (rather than economic) framework, the rise in militarization, its links with surveillance, and its effects on the reconstruction of Canadian identity will be investigated.

MASSALA, THOMAIS* (University of Bath, T.Massala@bath.ac.uk)

Governance of Pension Funds Investment Decisions Between Financial and Social Returns

Funded mode of pension financing has been a common ingredient of pension reform agenda in the context of international efforts to cope with demographic and economic challenges that pension systems face. However, a central concern involves the consideration of additional risks in funding and how these are addressed in order to maintain core pension system objectives, like adequacy, security and intergenerational equity. Governance, including regulation of investment decisions on pension income, rather than upon the governance of pension funds as the strengthening of social solidarity in society. In the case of Afghans, communication in conflict resolution is central to the concept of jirga, which can be interpreted as a mechanism for mediation and resolution among most Afghan ethnic/tribal groups; “it has national currency.” Although the Karzai administration made use of this “national currency” in 2002, the Emergency Loya Jirga, it is evident that it failed in its attempts at national reconciliation due to a multitude of factors. This paper will investigate those factors while examining peacemaking/conflict initiatives in Afghanistan. We argue that the use of Afghan indigens and methods of local dispute-resolution for reconciliatory purposes. While there is a continuing need for jirga in resolving local, tribal and national conflict, the socio-cultural significance and potential potential of jirga is ignored as it has only minimally been adapted to the current efforts in Afghanistan. This paper will investigate the feasibility of a national jirga process and how it can be more inclusive and widely used, representing both men and women, initially from a grass-roots level and ultimately to a national level.
to deal with the challenges of teaching about citizenship, yet without directly confronting the system that requires from them to teach only the official version of citizenship. We specifically explore, based on the teachers' own perception, what practices are used in delivering their own conceptions of "citizenships", and how they confront the explicit and implicit supervision of the Ministry of Education.

Mast, Jason* (University of Warwick, j.j.mast@warwick.ac.uk)

The Ick Factor: The Resignification of the Grasshopper

This paper offers a theory of cultural innovation derived from engagement with Saussurian semiotics, Sahlin's analysis of Western industrial food production, and Judith Butler's performativity of gender. Marshall Sahlin's (1978) set out to turn historical materialism on its head by demonstrating that the industrial complex of meat and protein production is organized around the cultural logic(s) of the edible, around understandings of humanness and cultural proscriptions such as the incest and cannibalism taboos. "Edibility is inversely related to humanity," he argued. Particular animals such as horses and dogs, and the internal organs of edible animals, are closely associated with humanness, and the idea of consuming them precipitates feelings of disgust and betrayal. Sahlin was right that edibility is related to understandings of humanness. However, in addition to symbolic proximity, too much symbolic distance, such as in the case of the grasshopper, may also produce feelings of revulsion and disgust. In this paper I develop a theory of cultural innovation, whereby objects associated with disgust may be transformed from objects connected to diseminent, pleasurable sensations into edible, pleasurable ones.

Variable across time and culture, the signifier of the grasshopper has been associated with pestilence and filth. Nonetheless, efforts to resignify these creatures are currently taking place. The challenge is overcoming "the ick factor -- the eyes, the wings, the legs... people won't accept it beyond novelty," one proponent, or agent of resignification, states. Building on the above as well as on Douglas andKerkheim, I examine contemporary efforts to place bugs and grubs on American and Western European dinner plates, or to turn these creatures into "mini-live-stocks," ones that are interpreted as not merely edible but as desirable.

Building Local Peace in the Middle of a National War. Community-Based Noncooperation Strategies in Colombia's Civil War

Despite of the high risks involved and the high levels of uncertainty, unarmed civilians organize themselves to collectively defy armed groups in order to avoid displacement, seek protection from violence, reclaim autonomy over daily affairs, and/or build local zones of peace in the middle of war. This paper presents findings from an empirical analysis of two communities that, in the midst of Colombia’s civil war, chose noncooperation as a strategy to cope with war and live a life free from armed groups’ violence and rule: the Peace Community of San Jose de Apartadó (PCSJA) and the Peasant Worker Association of the Cararé River (ATCC). Although both are instances of community-based noncooperation strategies, they form this strategy to cope with war while PCSJA declared itself neutral without any bargaining with armed groups, the ATCC negotiated its noncooperation strategy with armed groups. The aim of the paper is, therefore, twofold: explain what drove these communities to choose noncooperation over other possible responses (e.g. flee, obey, actively collaborate) and explain the determinants of variation in the form of noncooperation. The paper explores rational, moral and emotional considerations behind the choice; attention is paid to both the capacity and the desire to defy armed groups, and both pre-war conditions and processes that are endogenous to war are analyzed. A unique dataset on violent events at the village level and two rounds of fieldwork, including individual and group interviews and memory workshops, inform the analysis of the emergence of non-cooperation in warzones.

Japan’s New and Old Concept of Ethnic Policy with a Comparison to a Multicultural Policy

Globalization has changed Japan’s population composition significantly by the 1990s as a result of the arrival of a relatively large number of foreign workers for the manufacturing industry. This prompted the development of the concept of “Co-Living among Many Cultures” to facilitate the settlement of new foreign residents who have come mainly from South America and China. Many of these residents have taken up permanent residence or citizenship, instead of remaining as foreign residents on temporary visas. Japan’s large and long settled Korean community who have been treated unjustly in the past are reacting cautiously to the new concept of “Co-Living Among Many Cultures”.

A new issue affecting the experience of Japan’s growing Chinese population is the rise of China-Japan tensions which also poses a challenge to the new co-living policy. A major aspect of the troubled relation is the emergence of transnational political action, including the Beijing Olympic torch relay incidents. Such incidents, as widely reported in the Japanese media, have triggered concerns among Japanese in general who treasure “Wa”, or harmony and peace, a traditional Japanese value and practice.

In this presentation, I would like to point out what the Japanese new concept “Co-Living Many Cultures”, the traditional philosophy “Wa” and the Australian “Multicultural Policy” concept have the common idea despite significant differences in demographics and ethnic relation policies in the in two countries.

Building the National Identity through the Religious Identity in R. Macedonia

After getting independence, in R. Macedonia the national sense of identity is followed by the religious sense of identity. The religion is classically sacral: “love all other nations as you love your own”. We will emphasize that in fact a nation is an act of faith and believing. Through faith persons better understand characteristics of their own nation. Therefore in R. Macedonia, as a rule, representatives of different ethnic communities follow one faith (almost without exception, each ethnic Macedonian is Orthodox, such as every ethnic Albanian is member of Islam). But, there are a few cases when representatives of different ethnic communities follow the same faith. For example most of the ethnic Macedonians are Orthodox, but still there are ethnic Macedonians who are Muslim. Typical examples for this are Torbeshi who are ethnic Macedonians who follow the Islam religion. But, most of them on the last census declared themselves as ethnic Albanians, even though they don’t know the Albanian language. This proves the fact that the religious identity is a key factor in forming an ethnic identity. The appearance of such strong ethnic expressions, can be expressed only if the religious feelings are weakened. That is what’s happening in the Macedonian state, despite the influence of its basic religious institutions (Macedonian Orthodox Church). The Orthodox Church has the main role in preserving the national identity of the Macedonian people in their entire history. It kept and secured the Macedonian identity in the most difficult times when in 1913 it was forgotten and suddenly everybody in R. Macedonia was proud of being a subject of the Macedonian ethnic community. In that moment the Macedonian state as a world institution took the leading role from MOC, as a sacral institution.

Coping with Risk and Uncertainty in Civil War. Community-Based Noncooperation Strategies in Colombia’s Civil War

Although commonly portrayed as either mere victims or resources to be plundered, civilians in warzones face a wide number of possible responses to armed groups’ demands and war strategies. Studies dealing with the micro-dynamics of civil war have informed us extensively on some of these responses, such as displacement, obedience and active collaboration. However, other responses such as resistance and defiance have attracted scant scholarly attention. Despite of the high risks involved and the high levels of uncertainty outcomes are subject to, unarmed civilians have chosen to defy armed groups through different strategies of noncooperation. This paper presents findings from a theory-driven empirical analysis of two communities that, in the midst of Colombia’s civil war, chose noncooperation as a strategy to seek protection from armed groups’ violence and rule: the Peace Community of San Jose de Apartadó (PCSJA) and the Peasant Worker Association of the Cararé River (ATCC). The aim is to explain what determines communities to choose noncooperation over other possible responses by examining in detail rational, emotional and moral considerations behind the choice. Mechanisms such as pay-offs reassessment, belief (transformation), anger and resentment, norms of reciprocity, and moral outrage are spelled-out. Attention is paid to both the capacity and the desire to defy armed groups, and both pre-war conditions and processes that are endogenous to war are analyzed. A unique dataset on violent events at the village level and two rounds of fieldwork, including individual and group interviews and memory workshops with members of both communities, inform the analysis of the emergence of non-cooperation in warzones.
Subjective assessment of happiness maintains that happiness is a global and subjective measure of whether a person is happy or unhappy (Lyubomirsky and Lepper, 1999). Social support networks and perceived level of satisfaction from support networks contribute to happiness. The present study aimed at exploring relationship between subjective happiness and dimensions of social support (structural: number of persons and functional: level of satisfaction) of ageing respondents classified on the basis of working status and gender. The study was based on a sample of 139 respondents drawn from Jaipur City, (India) identified using snowball sampling, following clear inclusive and exclusive criteria. The respondents completed Satisfaction Scale (Lyubomirsky & Lepper, 1999) and short form of Social Support Questionnaire (Sarason et al 1987).

Results indicated that structural social support is positively and significantly related with subjective happiness (r = .291, p<0.05) for ageing males whereas functional social support is positively and significantly related with subjective happiness (r = .427, p<0.01) for ageing women. Hence, the importance of diverse support networks for ageing males and an enhanced level of perceived satisfaction for ageing women as related with subjective happiness is reflected. Subjective happiness is positively and significantly related with both functional social support (r = .516, p<0.01) for retired persons. However subjective happiness is unrelated with both the dimensions of social support in case of pre-retired and post retired persons. Perceived level of satisfaction becomes critically important when people retire. Conversely, due to changes in family structure, death of spouse and loss of companionships; subjective happiness remains unrelated to social support in post retired years where as a sense of personal liberation and interest in personally meaningful leisure activities surface for both ageing men and women.

Corporate Initiatives for Sustainable Development: Some Case Studies and the Task Ahead

Corporate Initiatives for Sustainable Development: Some Case Studies and the Task Ahead

Sustainable development aims at environmental protection, social well-being and economic development. Over the years, corporate houses have realized that it is in the interest of business to operate within a healthy environment and economy and that sustainable development must be perceived as a component of business. This paper highlights the initiatives taken by leading corporate houses for sustainable development. These corporate include Apple, Cipla, McDonald, Philips, HUL, Reliance, Tata Group, Panasonic, ICICI Foundation and Bajaj Group. The study reveals that environmental excellence has become a part of corporate strategic thinking. However, in spite of all the initiatives with respect to sustainable development, the paper suggests a model which takes into account the economic, social, technological, education, environmental, value-based society, learning and adaptability aspects of sustainable development which rests on the belief that sustainable development is a pervasive philosophy to which every participant in the global technological, social, environmental, value-based society, learning and adaptable development and the relevance of Mahatma Gandhi's Universal Trusteeship concept. The culture and mission of the business enterprise must be aligned to sustainable development and the relevance of Mahatma Gandhi's Universal Trusteeship concept. The development must be incorporated into the vision, mission and policies of business. The paper suggests that operating within a healthy environment and economy and that sustainable development is positively and significantly related with subjective happiness (r = .291, p<0.05) for ageing males whereas functional social support is positively and significantly related with subjective happiness (r = .427, p<0.01) for ageing women. Hence, the importance of diverse support networks for ageing males and an enhanced level of perceived satisfaction for ageing women as related with subjective happiness is reflected. Subjective happiness is positively and significantly related with functional social support (r = .516, p<0.01) for retired persons. However subjective happiness is unrelated with both the dimensions of social support in case of pre-retired and post retired persons. Perceived level of satisfaction becomes critically important when people retire. Conversely, due to changes in family structure, death of spouse and loss of companionships; subjective happiness remains unrelated to social support in post retired years where as a sense of personal liberation and interest in personally meaningful leisure activities surface for both ageing men and women.

Structural Social Support: Insights from Sociograms of Aging Individuals

The objective of the present study was to understand the structural social support and social network of the aging persons using sociograms. The study was based on the interview data on female informal support networks from persons in charge of different social support organizations and the respondents from 108 Indian respondents on who were identified using snowball sampling technique and following clear inclusive and exclusive criteria of selection. The sample was classified on the basis of working status (pre-retired, retired and post retired) and gender. Respondents completed the short form of Social Support Questionnaire (Sarason et al 1987). The items assessing the number of persons in social network, frequency of dependence and nature of dependence. The number of persons remains similar across working groups and gender however the nature of dependence changes dramatically. It is revealed that social network of the pre-retired group is predominantly family centered where spouse is perceived as most important support system followed by children, friends, relatives and siblings. For the retired persons, spouse support is critically important. Contrarily, the post retired depend more on themselves under different situations which require support from others. The importance of supportive neighbors and same sex friendships increase significantly for post retired males whereas family (children, grandchildren and relatives) remains the pivotal support system for the post retired women. Changes in the nature of structural social networks with respect to dependence on others, gender diversity in support networks, frequency of seeking help, availability of support, intergenerational support and emergence of personally satisfying leisure activities emerge as a result of aging process and remain different for both men and women across time.

The Interplay Between CEDAW, the Brazilian Women's Movements, and Global Feminisms Agendas

In this paper we investigate how Brazilian women's participation in transnational feminist networks and the UN Conferences on Women and Brazil's ratification of CEDAW have profoundly shaped the two more recent waves of the Brazilian women's movements; third wave of the 1980's and the ongoing fourth wave. Our paper presents a case study of the interplay of the national and transnational dimensions in shaping women's movements. The third wave of the Brazilian feminist and women's movements encompasses the civic participation of Brazilian women from the traditional notion of a family support dictatorship to a democratic regime as well as participation in the transnational women's movement and Brazil's ratiﬁcation of CEDAW in 1982, during the military dictatorship. The ongoing fourth wave of the Brazilian feminist movements has focused on the institutionalization of feminist demands through public policies for women; the creation of executive commissions for specific policies at the national (the Social Secretariat for Policies for Women), state and city levels. We argue that the reciprocal impact or feedback mechanism between transnational feminism and the Brazilian feminist movements can not be overstated. Brazilian women played a key role in building a broader and inclusive agenda for transnational feminism — currently referred to as the intersectionality of gender, race, class, and sexual orientation. CEDAW also was utilized by Brazilian feminists as a crucial tool to legitimize a very broad intersectional agenda. Based on our case study of the Brazilian feminist movement and CEDAW, we would like to argue that the feedback mechanism operating between local, national and international agendas has proved crucial to the growing intersectionality of gender, race, class and sexuality of the feminist movement world wide. In sum, we would like to suggest that globalizing the local and localizing the global should be at the center of both feminist activism and scholarship.

Informal Support Networks and Female Career Continuity

Female Japanese workers who have chosen to play multiple roles, such as those of wife, mother, and paid professional, often experience difﬁculties in career continuity. Some research and theory suggest that public policies that promote gender equality, childcare, and nursing leaves have positive effects on the career continuity of working women. Nevertheless, the impact of informal support has not been empirically evaluated.

In this exploratory study, I focus on informal networks among female workers. Affirming the importance of supportive networks, I explore how they relate to female career continuity in Japan. In order to accomplish this objective, I collected interview data on female informal support networks from persons in charge of personal or gender issues in 22 Japanese companies or associations. My major ﬁndings are that these informal support networks have three principal functions: collecting and disseminating useful information on career development, offering common
emotional support in times of trouble, and providing role models for working women. Given the countermeasures to the dismissal or resignation of female workers in recent years, these findings can be utilized to examine the effect of informal networks on working women, which, in turn, may improve the social status of female workers and gender equality in the workplaces in Japan.

Reconciling Work and Family: Do Japanese Fathers Take Advantage of Policies?

Japanese working parents today are entitled to various work-family-balance support measures such as parental leave, nursing leave for children, and shorter working hours. However, studies reveal that most working fathers in Japan fail to utilize such policies.

The primary purpose of this paper is to further explore the reasoning for Japanese fathers to reject or abstain from using the aforementioned workplace support measures. Furthermore, some critical factors including workplace culture, and the values and beliefs of Japanese fathers must be analyzed, in order to understand their reasoning for justifying their practices.

This study is part of a collaborative research project of work-life-balance led by B. Hobson and others in the European Union. The data was collected from face-to-face interviews, which were conducted in the Kansai area between April and November in 2010. There was a total 104 respondents, which included 51 women and 53 men. All of the respondents were dual-working parents with preschool aged children.

The results of this study showed a number of ways in which the fathers discussed their work-family-balance related practices. Among the 53 Japanese fathers, an estimated 40% of fathers worked more than 50 hours per week and a majority of them worked longer hours by “their own choice”. Moreover, in most cases, fathers were afraid of burdening their workplace by altering their work plans, due to family needs. Some fathers also had fears of damaging their career by actively utilizing paid leave and child care policies. However, there were some fathers who chose to prioritize family over work. Reasons for this include: wives being distressed or child care needs. These fathers appeared to have more bargaining strength or the ability to overcome workplace critics.

The Issues Related to Care-Giving Conducted By Male in Japan

The issues related to care-giving conducted by male.

-Through the example of a husband and the son caregiver participating in the self-help group-

-Recently, the number of men caring for their wives or their parents has gradually been increasing in Japan.

In this study, I will first summarize current status and difficulties of male Japanese caregivers. Then, I pay attention to a meaning of the care experience of the male caregiver and survey care in Japan and a relationship of the gender.

Traditionally, family care has been thought of as a female role, so the existence of male caregiver has been largely overlooked. However, according to the latest investigation, one of three people of the family caregiver is a male. Therefore this study interviewed it for a male caregiver and investigated it and investigated a meaning of their care experience.

As a result, I understood that a male caretaker faced various problems. Their problem is difficulties with continuing work and doing housework, and the reduction of local relations, enclosure of the care, difficulty of talk of the problem.

So they had a risk of the abuse for the family.

And they got possible to arrest a self objectively by participating in the self-help group and evaded a risk of the abuse.

This study showed that a support function for them that a self-help group was apt to stand alone. This study explained that their problem is affected by a gender model.

And they experienced an identity crisis as the man through taking care of their family. However, there was the man who got new identity as the caregiver after having experienced an identity crisis in them.

The existence of such a male caregiver may reorganize care and relations of the gender.

Structural Disaster and Infinite Responsibility behind Institutionalized Forbearance

This paper attempts to elucidate the hidden social mechanics of “structural disasters” involved in the Fukushima nuclear accident with a particular focus on the aspects of problems that go beyond the widespread dichotomous framework.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
of perpetrators versus victims, from the viewpoint of the sociology of science and technology. In particular, the paper brings out the process through which double under-determination has influenced the formulation, implementation, and evaluation of public policies preceding and following the Fukushima accident.

Three points are made based on the analyses of the guidelines for the utilization of SPEEDI (The System for Prediction of Environment Emergency Dose Information), of the organizational structure of the Governmental Examination Committee on the Fukushima accident, and of the siting of facilities for the disposal of HLW (high-level radioactive waste). Firstly, the social mechanism by which “institutionalized forbearance” to secrecy causes serious damage to third parties without breaking laws or moral ethics is revealed. Secondly, the paper illustrates the way in which the organizational structure made up of both investigators and stakeholders tends to carry over structurally originated problems and reproduce them. Thirdly, the paper highlights the possibility that social decision-making, with a very long time horizon and high degrees of uncertainty, can bring about infinite responsibility, and eventually lead to collective irresponsibility.

Based on the insight into the novel dimensions of these three social mechanisms, which have been difficult to understand by utilizing the framework of perpetrators versus victims and its variants, the paper argues for the importance of evaluating and allocating social responsibility to ex-ante expertise rather than ex-post expertise provided with hindsight. In conclusion, based on an ongoing project by the special committee on scientific integrity in emergency situation of the Science Council of Japan, a policy proposal to redesign institutional structures after “structural disasters” will be made.

Therefore, the study shows that different expression of even the similar words changes the rates of the item nonresponses and questions using abbreviations and non-familiar words may increase item nonresponses. On the other hand, it doesn’t find the strong associations between demographics (sex and age) and trust in nonprofit organizations except religious ones. From the results of multivariate analysis, it can be pointed out that the factors correspond to religious organizations and voluntary organizations (volunteer and civil activities organizations). These findings are found commonly in each country. It implies measurability and comparability of trust in nonprofit organizations.

The postrevolutionary Iranian “Islamic revivalists” (who now call themselves “principlists”) still evoke an early twentieth-century event that—in their collective reconstruction of the past—crucially crafted politics onto religion. A foreign-backed military coup d’état elevated an anti-Islamic modernizer to the position of power, enabling him to tragically crush the only voice that genuinely represented the anti-dictatorial and anti-colonial popular will. “Our religion is the essence of our politics, and our politics is the essence of our religion,” a saying attributed to “Martyr” Seyyed Hasan Madarres (d. 1937), the prominent Shi’i mujtahid and long-term political opponent of Reza Khan, thus serves as the emotional (and formerly counter-) intuitive basis for the continued necessity of an Islamic theocratic state as a bulwark against secularizing forces inside and outside the country. Against this backdrop, religiously-minded postrevolutionary reformists (known in Iran as “religious intellectuals”) who dare to suggest separation in one way or another, of religion from politics run the risk of being labeled as “secularists.” It was not a mere coincidence, therefore, that both the December 2012 issue of the most liberal Tehran monthly Mehrnoume and a June 2013 principlist political documentary featuring them adopted as their title “We are not secular,” a quote from prominent reformist-intellectual Saeed Hajarian.

After reviewing past-evoking claims made both for and against separating religion from politics and dynamic contentious interaction between the two opposing camps in Iran for the last two decades, this paper will reflect on two important questions. Is resecularization, be it generally conceived or analyzed in one national context, simply the reverse process of desecularization? Does historicizing secularities (and, for that matter, de-secularities) serve as means by which not only fresh reconstructions of collective memories are facilitated but also institutional reforms for accommodating pluralistic understandings of the religio-political unit may become possible?
Deciding ‘Quality’ Surrounding Umbilical Cord Blood Treatments in Japan and the UK

Stem cell treatments, such as those derived from umbilical cord blood, are relatively novel in the UK and Japan, compared to other countries, such as Spain and America. Hence, the policy and practices surrounding the treatments are still emerging (Brown et al., 2011), and as a result creating uncertainty in the decision-making of haematologists and oncologists in the UK and Japan. In particular, when do they deem an umbilical cord blood treatment suitable for a patient; and how do they choose between umbilical cord blood banks when more than one unit is available for a patient? In essence, how do they ‘know’ what constitutes a ‘quality’ cord blood sample?

These are important insights to be gained when the cost of a single cord blood sample can reach between £16,000 to £25,000. Factors such as where the cord blood treatments are carried out and by whom have been considered as influential by policy makers in determining the success of treatments. How such a move to establish ‘clinical expertise’ around cord blood treatments would impact upon perceptions of ‘quality’ cord blood in the two countries is significant as it challenges the notion that the success of cord blood treatments is determined by the inherent properties of the cord blood unit. Furthermore, a connection between cord blood collection and banking practices and the perceived ‘transplant quality’ of a cord blood unit for stem cell treatments is also emerging from recent policy discussions, due to the proposed ‘best practice tariff’ to reimburse hospitals for securing high quality collections.

Emerging findings from a three year project, funded by the Great Britain Sasaki Foundation, to explore through qualitative interviews how those working in Japanese and UK transplant centres perceive ‘quality’ in cord blood in a global context, and what factors influence their perceptions, will be presented.
through considering a case of Mike coal mine, which exists in Kyushu, western Japan.

**A National Park Becomes a Growth Machine: Transnational Environmental Politics In Southwest China**

This paper examines the Yunnan Great River Project (YGRP) (1998-2009) in Southwest China, a joint conservation project by the Nature Conservancy (TNC), a U.S. based conservation organization, and the Yunnan Provincial Government. The project was a vehicle for TNC to introduce a standardized model of protected area management to Northwest Yunnan, based on Yellowstone National Park in the U.S.

The study, based on archival research and interviews, has three main contributing areas. First, it sheds light on China's fragmented bureaucracy. Despite TNC's race to save one of the World's ecological hotspots within the project area, it became ensnared, not only in provincial bureaucratic politics, but also in relations between the central and provincial governments in China.

Secondly, the study reveals that global conservation discourses, such as ecological hotspots, may not necessarily create a common conservation goal among key stakeholders (e.g., local governments and people). They attached local meanings to global conservation discourses in order to advance their economic and/or cultural autonomy. In other words, the political, social, and cultural particularities of the ecological spaces in Northwest Yunnan challenged TNC's rationalized way of saving nature under globalization, and they influenced the organization to re-evaluate its conservation methods.

Thirdly, TNC's inability to build alliances with other stakeholders (i.e., provincial governmental agencies, local NGOs, and local intellectuals) weakened its position when an entrepreneurial local government adopted the national park model primarily to create an economic development scheme and turned the idea of a national park into its “Growth Machine” (Molotch 1976). The park ultimately undermined small local businesses and compromised TNC's wish to emphasize community participation.

**Comment/like/Retweet: Public Discussions of Economic Crisis News Information through Social Media and the Mobile Internet**

The rapid popularization of social media services, and the even more current popularisation of mobile internet devices raises important questions about the everyday personal use of new media technologies and trends. In particular, everyday individuals use these new media technologies to access, discuss, share, and engage with current topics on the difficult state of our world, such as austerity, economic crisis, and financial policies that impact everyday inequalities. It is important to explore the everyday use of these new media technologies in order to learn more about how the public is engaging with challenging news topics through recent developments in new media.

Do users really engage with these devices and online interactions in a fleet- ing and less engaged manner, or does the ubiquity of the mobile internet afford greater engagement with news information? Does the algorithmic filtering of online information by new media organisations in control of social media services lead to greater agenda setting by the individual users of news, or does it reinforce established news media organisations as the primary or authoritative sources of news?

This paper aims to explore such questions through initial findings from research using qualitative observations of online social media discussions on austerity, economic crisis, and financial news, in combination with interviews of participants who regularly engage with such information through social media sites and mobile internet devices. The paper aims to explore how current and recently popularised trends in the use of new media technologies may be affording or constraining behaviours and habits of everyday users when engaging with online news and information on issues that impact social inequalities like austerity and economic crisis.

**Knowledge in the Wild - from Mad Cows to Alzheimer’s: How Knowledge Mobilization Works**

This paper presents analysis of interview data from a study of ‘knowledge mobilization’ as a social process. In doing so it contrasts concepts of knowledge transfer with those of ‘knowledge mobilization’ which it sees as a non-linear and iterative process involving social organization, institutional cultures and human interactions. It is based on interviews with researchers from two major science labs who are investigating the way in which misfolded proteins (i.e. prions) produce spongiform illness in animals (e.g. Mad Cow Disease, BSE, Chronic Wasting Disease) and spongiform-like illnesses in humans (e.g. Cruchfeld-Jacob Disease, Alzheimer’s Disease, ALS, Parkinson’s Disease). The focus of this paper is not on these diseases per se, but on knowledge development and transition as social processes. On the one hand, it seeks to provide insight into the way that knowledge is developed and transmitted, as these processes are understood by the scientists who are directly involved in the process. On the other hand, it employs sociological perspectives related to networks, social capital, and new institutional analysis to provide a more systemic insight into the knowledge mobilization process.
MAURI, CHRISTIAN* (Murdoch University, chrisjohnmauri@gmail.com)

The PhD Degree and Weber’s Concepts of Rationality

The decision to pursue a PhD degree is attended by considerable uncertainty over career outcomes. This is becoming increasingly so, as the gap between the demand for full time academics in the university workforce and the supply of PhD recipients continues to widen in many countries. No longer does a PhD guarantee secure employment. Add to this the large amount of time and student fees invested in a PhD, and it raises the question of why anyone undertake a PhD? Using Weber’s concepts of rationality, the paper will argue that attention must be given to the substantive rationality that is involved in the decision to pursue a PhD. The PhD degree has a dual character: as an institutionally based course in which successfully producing an original contribution to a field can result in the award of a certificate that serves as a gateway into a career; and as a powerful social symbol which is associated with certain myths, values, status and aspirations that can be personally rewarding.

As higher institutions increasingly become subject to neoliberal trends that are transforming the way that PhDs are conceived and structured (such as the growing preference towards theses-by-publication over traditional monographs, alignement of research topics with institutional research priorities and a tightening of candidature time limits), the relationship of substantive rationalities of PhD students to more formal rationalities of higher education institutions is becoming increasingly problematic. As pressures grow on PhD students to align their studies with institutional expectations and also those of a competitive career market, this paper will examine the ways in which students and institutions are negotiating the risks and uncertainties surrounding PhD degrees in light of the push and pull of multiple rationalities.

Digital Technologies and Work-Family Boundaries: A Posthumanist, Performative Approach to Family Research

Our paper draws on a research project funded by the UK’s Engineering and Physical Sciences Research Council that explores how boundaries are being made between work and family in everyday practices, and how technologies are implicated in constituting these boundaries.

Our paper will discuss the theoretical and methodological framework that we have developed to study work/family/technology figurations in the home, and that allows us to treat and study social and technological practices as mutually constitutive rather than separate. We draw on varying traditions of scholarship to do so such as: feminist science studies; studies of science and technology; material-semiotics; new materialism; and material culture studies. Our paper discusses how we make sense of family practices around technology use in light of this approach.

Our empirical study uses sensory, visual and participatory ethnographic methods (Pink 2009, Pink and Leder Mackley 2012, Leder Mackley et al 2013; Watts and Urry 2008). An important element of this process is to explore the performativity of these methods, that is, how they are constitutive of particular stories, or versions of reality (Law 2004, 2009; Law and Urry 2004).

Families (with at least one child under the age of 18) are invited to take part in the project as collaborators in the research by involving them in the selection of methods and production of artefacts. These methods include: a video tour of the home; using spaces, objects, photographs, and other artefacts to talk about work, family and technology; researcher- and respondent-regenerated photographs, films, scrap/smash books and diaries; individual and family interviews and conversations; and walk- or go-alongs as ways of participating in ‘A day in the life of...’ our participants.

Our paper will address emerging questions and challenges including: Whether and how visual methods can help us grasp somiomaterial practices; how we can use visual methods in participatory, collaborative and cooperative ways with our families.
The Influence of Sociology on Establishing Social Hygiene in Germany (1890-1920)

In the course of the nineteenth century, epidemics and contagious diseases proved to be a considerable threat to society. Ideas to promote prophylactic medical care that was directed at larger collectives (instead of relying on a curative doctor-patient relationship) were put forward in Germany already in the 1850s. A professionalization of this expertise and an acknowledgement by public and political discourse however only started slowly in the 1890s, with a high phase in the Weimar Republic in the 1920s. Why was “Social Hygiene”, as the new field of expertise soon was to be called, successful in exactly this period of time?

In my paper I propose that this acceptance of Social Hygiene can in part be attributed to the emergence of sociology in Germany. Sociology put forward ideas of a structured society, sometimes with analogies to organisms like the human body. Reinforced by processes of nationalization, this led to ideas of a societal body, or “Volkskörper”. Medical experts could use these ideas in order to legitimize Social Hygiene as a new profession that led to paradigmatic changes in the fight against diseases: Social circumstances needed to be changed. New statistical methods hinted at the stratification of morbidity, therefore fighting germs was not sufficient, instead living and nutritional conditions needed to be ameliorated. Social Hygiene led to a multitude of academic publications, from 1920 onwards medical faculties established professorships in the field. However, as the proposed means were diffuse and hard to apply, the actual implementation of measures varied and was far away from being included in national legislation. Although the interpretative knowledge put forward by Social Hygienists proved to inform the contemporary debates, the actual application of sociological ideas in political and medical programmes remained incomplete.

Japan and Mexico As Global Players in the Horticultural World Market

Abstract. Horticultural trade reflects the major features of current globalization. The first one is the multi-polarization of the economic world, whereas especially three great centers are dominating, namely: the USA, the European Union, and East Asia (China and Japan). The structure and trends of this trade can be explained by the Food Regime analytical approach, which states that during the Third Food Regime, which started in the mid-1980s, vegetables and fruits became the most relevant part of international agricultural trade flows. In this context both Mexico and Japan are playing an important role, Mexico as major exporter of fresh products and Japan as main buyer of these items. Mexico is located in the sphere of influence of the USA and Japan is the axis of the East Asian economic bloc. Mexican exports are depending strongly on the USA market and Japan’s demand of food was satisfied mostly by imports, particularly from USA and China. At the same time, Mexican fresh vegetables are losing competitiveness in their principal market and the Japanese consumer is losing confidence on the safety of imported foods from China and the USA. All these facts make clear both countries need to diversify their markets. Therefore it is necessary to explore the possibilities of enhancing the horticultural trade between Japan and Mexico, and also to analyze the Mexican experience as successful supplier of several fresh products to the Japanese market, for instance, mangos, avocados, melons, asparagus, kabocha pumpkins and others. At the same time it is a good moment for an evaluation of the Free Trade Agreement Mexico-Japan, started eight years ago.

At the same time it is a good moment for an evaluation of the Free Trade Agreement Mexico-Japan, started eight years ago.

Social Systems Form Simulation to Observation

The cognition computing short circuit is still affecting both neuroscience and computer science today. Social systems theories, on the one hand, and agent-based simulations on the other have once more pinpointed the traditional sociological dualism between macro and micro-sociology. However, the advent of “Big Data” has paved the way to new techniques of investigation based on the study of new types of data, such as conversations taking place on popular web sites like Twitter and Facebook, traces left by our mobile devices or data generated by wearable sensors. Thanks to these techniques, we can go beyond simulation and observe the operation within the social “black box” in the same way that neuronal functional magnetic resonance imaging (fMRI) does as regards to the brain. This paper discusses the potential as well as the limitations of these new methods of sociological investigation and their spillover effects on the theoretical development of the discipline.

Career Advancement for Women in the UK Military: Opportunities, Risks and Responses to Gain Acceptance

The number of females holding senior posts in the United Kingdom’s military is around 1% compared to an average of around 30% in the rest of government. This paper reports on a study which sought to examine why the rate was so low using an entrepreneurial lens. As there is a paucity of research on female entrepreneurship in the public sectors and none in the UK military, the study helps to provide some fresh insights into an issue which to date appears to have been intractable.

Using entrepreneurial literature, a model was developed to research the potential barriers faced by female officers in the UK military when seeking promotion to the most senior ranks. The model was designed to examine the relationships between institutional and individual determinants in relation to promotional outcomes. These determinants included structure and agency, social capital, homophily, support and how women deploy a series of other strategies to accommodate institutional and network orientated logics and norms to gain promotion acceptability.

Semi-structured interviews were used to gather data from 48 female officers and a sample of 5 male officers over a four month period in 2013. Candidates were drawn from a stratified sample at the senior ranks. The overall research paradigm was critical realist. All interviews were recorded and transcribed and then analysed using Miles and Huberman qualitative methodology for coding and analysis of data.

The findings from these interviews demonstrated that the interplay between stress and policy played a most influential role in promotion. Factors such as emotional support, conflict resolution, reputation and legitimacy also determined the contextual social capital perceived to be necessary for promotion by deeply embedded bespoke male networks.

The originality of this research is in the use of an entrepreneurial framework to examine promotion within a government agency.
style of governance. This raises the question of who is central to the process of increasing individual's quality of life through leisure activities: users, workers or the state. In exploring this question, this paper provides new empirical evidence that leisure workers are key agents in negotiating the relationship between leisure and quality of life. Through utilising their discretion, ground-level workers can deliver activities that impact individual's quality of life on multiple levels. On the other hand, workers are restrained by managerial, structural and hierarchical limitations. The paper concludes that only by exploring the relationships between users and ground-level workers can insight be gained to the relationship between leisure services and quality of life.

Global Unions, Local Power: Evaluating Labor Transnationalism from North America to the Global South

This paper explores recent campaigns led by global union federations and evaluates different strategies these institutions have employed. The central findings reveal a paradox. Though global unionism is typically concerned with creating parity and universal standards across borders, I show that the local context can either undermine or empower the intentions of global actors, creating varied and uneven results. The question posed here is simple: How can global unions build local power?

This research compares three global framework agreements (GFAs) in different national-industrial contexts in an effort to assess the varied ways they are "implemented" locally. I look at private security in South Africa, contract cleaning in India, and telecommunications in Brazil. GFAs have been studied from a variety of perspectives. The insight offered here is to view them as part of a long-term industrial strategy for national unions, or a component of what Marshal Ganz calls "strategic capacity." This paper demonstrates how GFAs are used in different ways depending on local circumstances. In so doing, I focus on the local sphere as a bellwether for evaluating global unionism. The research is based on about 50 in-person interviews in nine countries, but specifically compares outcomes among unions in South Africa, India, Brazil, and the US.

The process of transnational collaboration promotes grassroots mobilization in South Africa in ways that are different from those in Brazil and India. Both countries have multiinside and multi-purpose plots, and yet they are treated very differently in the union in Brazil. The point is to re-direct our attention to the local arena of transnational unionism, still the place it matters most. Focusing on the local arena also offers an insight into the way that specific contexts help determine the varied outcomes. Rather than a universal global process, I uncover varied local approaches to transnationalism that simultaneously complement and contradict each other at different times.

Comparing the Design and Implementation of IT Skill Standards in Britain and Japan: IT Human Resources, Institutional Innovation and Path Dependency

At the beginning of the twenty first century, government administrations in Britain and Japan pinned great hopes on IT for economic development but feared that the rapidity of technological developments frustrated the effective workings of labour markets, education and training to develop and deploy effective IT labour forces. The speed of technological change meant that employers, educators and IT professionals produced piecemeal solutions and lacked a common language to describe IT skills and guide employment, training, education, and careers. In Britain, the government sponsored the development of a matrix of IT functional areas and levels of responsibility, the Skills for the Information Age (SFA), within which tasks and skills could be appropriately described. This ‘one page framework’ stimulated Japanese administrators to sponsor an IT framework called the Information Technology Skill Standard (ITSS). At first sight, comparing the design of the two skill standards appears to be a case of IT policy transfer and institutional innovation in response to common technological challenges in IT skill formation. However, closer examination of the institutional innovations around the ITSS framework in the two countries underlines the importance of path dependency, for the innovations were mediated through distinctive institutional histories and cultures. Being locked into different institutional histories and resources does not mean that learning from abroad cannot occur, but that policy transfer and institutional innovation will be heavily conditioned by the past and develop different forms and practices. Using official documents and interviews with key participants, the authors demonstrate the continuing importance of different British and Japanese institutional histories on the respective institutional linkages and ownership of the skill standards, the respective provisions for dissemination and updating the skill standards, the respective links of the skill standards to competency, examinations and qualifications, and the international dimensions of the two national skill standards.

Addressing Diversity Trends in Rural America

Background: The new trend in US immigration is an increase in the number of Hispanics, the largest minority population, into rural America. This growing trend in racial and ethnic diversity is found in small and rural America is expected to accelerate in coming decades. This demographic change is highlighted by rural communities that are defined by migrant labor composed primarily of Hispanics. Most often this definition is one of supposed “decline in community.” This presentation proposes one strategy for integrating migrants into these communities in order to strengthen the community and to save them from putative decline. We focus on the differential HIV risks and access to HIV care and treatment of newcomers and long-timers. Migrants who have been in the community for 5 years or more (long-timers) have greater HIV risk behaviors (more risky sexual behavior and greater alcohol use) and have greater access to primary care. Newcomers (5 years or less) report lower HIV risk behaviors and have less access to primary care. Methods: This is an analysis of adapting an evidence-based health intervention utilizing a sociological theory. This discussion will show how community structures can be strengthened by incorporating the social networks of the growing Hispanic minority into the health care system. Fundamental Cause Theory highlights that access to health care resources will improve the health of disadvantaged migrant workers through strengthening social support within the networks, thereby reducing HIV sexual risk behaviors and excessive alcohol use. Results: Amigos Hacen Cambios, the proposed intervention, will assess migrant newcomers and long-timers in order to determine the community and to save them from putative decline. In the introduction to their 2010 collection, New Materialisms: Ontology, Agency, and Politics, Diana Coole and Samantha Frost write of an increase in “scattered but insistent demands for more materialist analysis” (p. 2). While not seeking to “deny [the] rich materialist heritage” (p. 4) that informs their work and the work of others taking part in this scholarly conversation, Coole and Frost call for the development of “renewed materialisms” up to the job of grasping and analyzing our “materially and discursively fast-changing world” (p. 4). This paper examines these theoretical and analytic trends from the perspective of institutional ethnography. I approach this literature with a friendly curiosity and share my discoveries in terms of what it’s all about and what new materialists and IE materialists might have to say to each other.

**Older Bodies, Dancing Together: Gender, Embodiment and Aesthetics in a Canadian Square Dance Club**

Square dance in North America is a social activity primarily enjoyed by older women and men. In square dance, eight people (four couples) move with and around each other, forming elaborate moving patterns in response to on-the-spot instructions issued by a caller. In the structure of the dance moves and the names of the calls, as well as the caller’s patter, square dance encodes an idealized version of heteronormative, “old time” gender relations featuring gallant masculinity and girlish femininity, which is further expressed through traditional 1950s-era square dance costumes: western shirts and bolo ties for the men; full, floury skirts and puff-sleeved blouses for the women. In the present day, these “invented traditions” coexist amidst a range of self-presentational options, as well as frequent urgings from within the square dance community to “update the image” of square dancing.

Since 2011 we have been researching the organization, practices and experiences of square dancing through an ethnographic study of a square dance club in Calgary, Alberta. Although not designated as a seniors’ club, almost all of the members are over 50, and most are in their 60s and 70s, with some in their 80s. Our research has involved participant observation as club members, interviews, focus groups, photographs, and a survey of 200 dancers from 13 square dance clubs in Calgary. In this paper our focus is on square dance as an embodied, gendered activity of aged and aging men and women who meet every week to dance. We examine the gendered forms of square dance (calls, moves, dress) as resources that actual, individual dancers take up, play with, alter, embody and resist. We also consider the ways dress-up and collaborative dancing offer older bodies the almost transgressive pleasure of countering stereotypes of old people as informs and unlovely.

**Duel of the Dualisms: Production and Reproduction Reconfiguring**

The processes and mechanisms by which inequalities are produced and reproduced globally are serpentine and rapidly changing. The standard historical narrative that economic life left the household, leaving nurturance behind in a separate sphere of family and kinship, and moved to another abstract sphere. The two separate spheres of work and family, of paid and unpaid work, a significant blurring is occurring. Work is more often unpaid. Nurturance is more often paid. Economic inequalities leak into and out of care inequalities. Relying on two of the author’s current research programs, on care migration and on life course effects of the Great Recession of 2008-2010 and the dualism of production and reproduction in comparative contexts are explored.

**MCDANIEL, SUSAN*** (University of Lethbridge, susan.mcdaniel@uleth.ca)

**Global Ageing in Precarious Times**

Growing inequalities worldwide and within nation states, global financial crises, massive urban migration, austerity and shrinking public spheres – all contour ageing as a macro, meso and micro process. As the coup d’etat in slow motion, as population ageing has been termed, sweeps across all regions of the world, although in different ways, instances of previously hidden terrains are being revealed. Among these are the globalization of care, the effects of growing inequalities on risks to older people but also on youth and those in mid-life, and counterintuitively the greater availability of potential paid caregivers. In this proposed talk, McDaniell will draw on her extensive research on the policy implications of global ageing, on her comparative research on life course ageing in various countries in times of economic challenge, and her current research on transnational ageing and care supply/demand.

Japanese Olympic Committee complaining of violence by two coaches, including the head coach of the women's team. Both these cases caused a national debate about the practice of corporeal punishment (tai batsu) in sport in Japan.

This paper is based on the outcomes of focus groups that were conducted with students at ten universities from across Japan in 2013. In particular we examine the ways in which the emotionalized action of violence from coaches, accepting them as necessary forms of discipline and, in many cases interpreting such acts as indicative of caring coaching and kindness. Further, we consider the responses of students, which suggest that these forms of corporeal punishment are necessary in the period since is the decline of this kind of action, and the emergence of a new ethic of openness and networking, and argue that such supposed technological qualities can 'reverse engineer' freedom. More nuanced forms of this technological optimism are evident in many sociological studies of internet activism, with themes of network and strategy, considering the body to be an instrument of action. However, in positioning neo-liberalism as the reengineering, rather than the deregulation, of the state, sports such as rugby enact considerable disciplinary capacity over the bodies of minority ethnicity. The disciplinarity of sport is underpinned by bio-racism and commodification inherent to the discourse of post-colonial Australia. The overrepresentation of the bodies of Pacific Island men in the rugby codes, in prisons, in security, and in manual labour, suggests the structuring effects of such discourse. Such effects shape the legitimacy of access to physical spaces and also to the range of agency that Pacific Islanders' enact. Of specific interest to this paper are the ways in which spaces, and the means to occupy them, become naturalized. This naturalization serves to obscure the actual regulating and exploitative function of such sports, instead positing them as exemplars of individualism and self-governance.

Agency and the Vulnerable Body

Sociological approaches to agency have largely been framed in terms of intention and strategy, considering the body to be an instrument of action. However contemporary forms of collective action highlight the increasing importance of embodied experience and the senses, associated with bodies in place, mobility, and embodied publics. Such embodied experiences are not simply acts of claiming place, but experiences of displacement and vulnerability, evident in the embodied experience of strangeness and modes of action where evocative experiences of art are more important than programmes and demands. These transformations are evident in the shift from the incorporating rhythms of the protest march to embodied grammars evident in occupations, from Tahrir Square to Taksim Square. This paper explores this transformation of action, as unity and collectivity give way to an ethical grammar grounded in displacement, vulnerability and embodying another self. The paper considers the implications for an embodied theory of agency, and the implications for the sociology of social movements as older models of identity-action give way to acting as embodiment.

From Indymedia to Anonymous: Agency, Public Spheres and Internet Action

The social sciences are polarised with regard to the internet and communicative action. Some authors see blogging and social media as a form of circulation characteristic of communicative capitalism, shaped by a fear of emptiness and an illusion of action. Others consider the internet to be structured in terms of openness and networking, and argue that such supposed technological qualities can ‘reverse engineer’ freedom. More nuanced forms of this technological optimism are evident in the experimental studies of internet activism, with themes of horizontality, networks and openness widely repeated – themes central to many of the analyses of Indymedia, in particular by ‘scholar activists’. What is striking in the period since is the decline of this kind of action, and the emergence of a quite different form of action evident in networks such as Anonymous. These are grounded in the popular worlds, shaped by a culture of the ephemeral, the hidden and the revealed, with an ethic of luz, the mask and the trickster. This action takes completely different forms from the ‘open deliberation’ attributed to internet ac-

MCDONALD, RUTH* (University of Warwick, ruth.mcdonald@wbs.ac.uk)

Organising Celebrity – Social Mobility and Symbolic Violence In England’s Green and Pleasant Land

According to Cohen (2013), celebrity represents the most distilled form of social mobility. The paper draws on 60 interviews with celebrities from different sectors (entertainment, medicine and business) in which they talk about their life, work and musical tastes. It identifies differences between these sectors in terms of the logic of celebrity and this is reflected in differences in accounts between these different sectors. For example the way in which doctors are constituted as self-sacrificing, collegiate and ‘noble’ is in contrast to the portrayal of individualistic heroic endeavours of celebrity entrepreneurs that justify accumulation of wealth and sidestep questions of exploitation. The constitution of celebrity doctors avoids engagement with thorny issues such as high rates of mental breakdown and drug and alcohol abuse amongst medical professionals, as well as medical errors and financial motivation. In contrast to the white, middle class nature of elite doctors, business and entertainment professionals are drawn from a more diverse range of backgrounds. With regard to the latter, celebrity accounts of mental illness have been viewed as reducing stigma and to be welcomed. However, the constitution of such celebrities is a world away from the lived experiences of ordinary citizens grappling with mental illness. Despite the differences between the different celebrity sectors, there is a common thread insofar as celebrity is implicated in providing reassurance and hope in relation to the existing order and especially the distribution of power and resources in society. In contrast to Cohen, this paper draws on Bourdieu’s Distinction and Giddens’ writings on ‘distanciated instances’ suggests that far from reflecting social mobility, the organization of celebrity contributes to the maintenance and reproduction of societal inequalities on a grand scale.

MCDONNELL, ERIN* (University of Notre Dame, erin.mcdonnell@nd.edu)

Charisma and Subcultural Bureaucracy: Challenging Weber’s Ideal Typical Distinction

What role does charismatic authority play in the inculcation of subcultures of Weberian bureaucratic practice within otherwise non-bureaucratic environments? My research investigates the conditions that support the emergence and flourishing of subcultural niches of administrative excellence, which are characterized by proto-bureaucratic practices uncommon in the broader administrative environment. Subcultural niches facilitate bureaucratic practice by concentrating scarce administrative resources—especially bureaucratically experienced and inclined personnel—and incubating transformative administrative practices. Using interview, observational and documentary data from cases in the Ghanaian state, including more than 100 interviews with civil servants and expert observers of the state, my research documents the critical importance of charismatic leadership in establishing niches of bureaucratic excellence. My research finds that charismatic leaders play pivotal roles in the early establishment of bureaucratic subcultures: their charisma and cultural competence at navigating social networks enables them to attract high quality personnel even in the face of human capital scarcity. Such charismatic leaders strategically offer subordinates “high profile” work that connects them to “big men” who are influential within the larger patronage culture. By strategically leveraging these social capital rewards, charismatic leaders can cultivate meritocracy and the corporatist ethos of maintaining high quality human capital and focusing their efforts on achieving organizational goals, despite operating in low-resource environments with organizational challenges. In this sense, charismatic leaders bridge conventional patronage political cultures and the Weberian bureaucratic ethos. This suggests that, in contrast to Weber’s ideal typical distinctions between charismatic and bureaucratic authority, charismatic authority may be a crucial sequential step in the transition from conventional to bureaucratic organization of power within state structures.

MCDONNELL, TERENCE* (University of Notre Dame, terence.e.mcdonnell@nd.edu)

Cultural Entropy

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This paper 1) introduces the concept of cultural entropy, 2) sketches out the perspective it implies, and 3) discusses the centrality of materiality in such a perspective. Cultural entropy describes the process whereby the intended meanings and uses for a cultural object fracture into a chaos of alternative meanings, new practices, failed interactions and blatant disregard. If entropy broadly describes a tendency, cultural entropy is the tendency toward disorder at the level of meaning. While objects are often thought of as stable, durable, finished things, I argue (by drawing on ideas from anthropology and ANT(IST)) that objects are inherently unstable, contingent, and incomplete because of their materiality. As such, in the long run, entropy is inevitable. This is especially true for objects—drawing on Goffman (1959), I argue that disruptions are much more likely during object-to-person than person-to-object interactions because objects can't engage in “impression management.” As such, it takes a great deal of cultural work to successfully communicate through objects and maintain a consistently clear resolution of meaning over time.

Although any cultural object faces entropy, I find that entropy is most visible in objects that people intend to affect belief and behavior. These instrumental uses of objects are commonplace: health pamphlets, commercial advertisement, protest placards, political speeches and more. As the intended meanings and uses for these objects are knowable, so too are the moments when these objects fail to work according to plan. I build upon my work on the materiality of AIDS campaigns (McDonnell 2010) by broadening the set of material mechanisms that encourage entropy beyond discordant settings, displacement and decay to practices of translation and juxtaposition. Ultimately this work contributes to the growing field of materiality by specifying how material qualities of objects have independent effects, beyond falling back on the symbol-driven work of materiality by specifying how material qualities of objects have independent effects, beyond falling back on the symbol-driven work of materiality.

In Weber's typology, charismatic authority is distinguished from bureaucratic and traditional forms of authority because it derives from the exceptional, extraordinary, and individual personality thought to possess. Being ideal-typed in opposition, charisma may seem to have nothing to do with bureaucracy but, ideal type generalization does not exclude the blurring of elements in practice. As the twentieth century progressed the proliferation of organizational forms encouraged diversification and large bureaucratic organisations incorporating charismatic forms of leadership in adapted forms. These developments haven't made bureaucratic organisations more like pure charismatic organisations, but the idea of charisma offers a way of explaining certain things that happen within bureaucratic organisations yet appear to have little to do with rationality or order.

This paper explores the ways charisma was bureaucratically organised within doorstep finance companies. One of the acknowledged goals of marketing is to 'qualify' products, that is, to equip them with qualities calculated to intensify consumer longings. For doorstep finance companies, agents offered the first available means of endorsing products with more than their face value. Agents began as a distribution device but the peculiar affordances of an orchestrated personal selling force meant they soon exceeded this role. Through agents, insurance and home credit companies acquired an operative, adaptive ‘grooviness’ by virtue of the channel they established between company and customers. In both sectors, the first stage was payment collection but as important was the exchange of information since information was the key to product persistency. The challenge was that agents' capacity to get and transmit useful information was closely related to their personal qualities, their personal charisma.

The Roma community is one of the most marginalized and persecuted minority groups in Europe. Facing hostile policies at home, the rise of right-wing populism, and widespread neglect as an individual belonging to their collective group identity, Roma have been forced to circumvent national political structures in order to address the socio-economic situation of Roma in Europe, by mobilizing transnationally. The key tenet of Roma activism in the transnational political context is that Roma are a ‘nation without a territory’. The articulation of Roma nationalism is not built on a shared ethnic identity, a common language or religion, or a territorial claim which makes fostering solidarity and raising consciousness all the more difficult. Based on these assumptions, this paper explores how Roma nationalism develops our understanding of territoriality (i.e. the use of territory by a state for social, economic protection as an essential ascription of their collective identity), and how they within a state and are geographically dispersed across Europe. Roma nationalism signifies an attempt to make new types of spaces that cut across traditional inter-state borders and has created the belief that Roma are a true European minority. However, Roma nationalism is exclusively a transnational enterprise promoted by ethnic entrepreneurs and lacks legitimacy as well as resources, in terms of local actors and networks, which support the construction of Roma as a European minority. As Roma become figuratively and symbolically removed from the local and national socio-political space they reside in it leads to claims by the majority that Roma do not belong or do not fit in the dominant nation, be that Italy, France, Hungary or Czech Republic. This in turn could lead to further marginalization and persecution.

MCGOVERN, PAULINE*(University of Manchester, pauline.mcgovern@manchester.ac.uk)

An Unequal World: Class, Leisure and Health Outcomes in Older People

In this presentation, we look beyond the direct physical and social effects of leisure activities on health and wellbeing. Instead, we explore the effect of leisure on the health of older people within the context of social class and structural inequalities.

Occupational class, as a proxy for social class, may be less theoretically robust in defining stratification and life chances once people retire. In Bourdieuian terms, it is reasonable to suppose that the secondary properties (lifestyle) linked to occupational class may be more important in determining the life chances of people post-retirement, than the specific occupational capitals that marked their careers. This working paper takes this idea a stage further by exploring the potential of former lifestyles and leisure activities that are linked to their material circumstances, social connections and skills. In this way, the leisure activities of older people may be central to their “space of possibilities” for a happy and healthy retirement.

This presentation outlines the results from a longitudinal path analysis of the relationships between social class, leisure, activities and health status, conceptualised within a Bourdieuian framework. This study used panel data from the English Longitudinal Study of Ageing (2002-2010) with variables lagged at different time points to maintain temporal/cause order. The findings show that the main effect of occupational class on health for these older respondents was indirect, via economic assets, cultural and social activities and perceived social status. In terms of the role of leisure in promoting healthy ageing, the strongest effect from cultural and social activities was via perceived social status. It seems that activities such as museum-going life, in retirement may be more important for older people feel better about themselves and, as a result, be good for their health.

Fighting Complacency and Retrospection: Reawakening Gender Equity Activism In New Zealand

Fighting complacency and retrospection: reawakening gender equality activism.

New Zealand enjoys an impressive reputation for gender equality. It was the first self-governing nation to grant women's suffrage in 1893 and scores highly in international indexes such as the World Economic Forum's Global Gender Gap at sixth out of 135 countries. In recent political history women held the top four constitutional positions:Prime Minister, Governor General, Attorney-General and Chief Justice, for a short period of time. Yet as feminist academic Prue Hy- man(2010) notes, New Zealand has moved from a relatively equal society to one of its most unequal in terms of earnings and income. The paper explores the recent mobilisation of feminist civil society and female-dominated trade unions who are beginning to collectively advocate and litigate on human rights and women such as equal pay. They are using international human rights treaties, such as the Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW), to harness their frustration, benchmark progress and hold the State party accountable for the implementation of women's human rights and their retrogression. The paper explores and analyses the re-awakening of women's civil society activism in social and economic rights in a nation with a strong self-regard for its international reputation for gender equality. It uses data collected from New Zealand's seven periodic reports to the Committee on the Elimination of Discrimination Against Women in relation to Article 11 of CEDAW relating to equal pay and assesses the State party's response to concluding observations and recommendations. It also reflects on the patterns of response of women's groups moving from complacency through frustration to mobilisation legally, politically and at the community level.

The Challenges For Social and Environmental Justice Posed By The Global Panoptican, Penal States and Disappearing States In An Increasingly Vulnerable and Unequal World

Facing up to an Unequal World has praxis implications for sociologists. The most important challenges are understanding the interconnected social, economic and environmental problems pose an ‘existential risk’ to life as we know it. The environment of the problem and the range of inter related ways in which the challenges can be addressed requires not merely transdisciplinary and cross cultural capability when designing policy responses, but the will to grasp the nettle as to why some live at the expense of the majority in this generation and the next. The paper makes a plea for a different form of governance that weighs up the social, ecological and environmental indicators of wellbeing, in order to enable equitable distribution of resources and to ensure that some are not living at the expense of others and future generations of life. It moves beyond a critique to suggesting an alternative form of governance and democracy that spans communities of interest at a planetary level. The study seeks to address the five areas of priority drawing on the cosmopolitan agenda of Danielle Archibugi as:

i) Control over the use of force;
ii) Acceptance of cultural diversity by ensuring internal sovereignty based on rules that enable freedom and diversity to the extent that the freedom and diversity of others is not undermined;
iii) Strengthening self-determination of people based on participatory democracy and the ‘absence of domination’ over others;
iv) Monitoring based on democracy and governance;
v) Participatory management of the global commons as the fabric of life.

Currently the role of the state in Western democracies acts as protector of residual welfare rights in terms of the social contract applied to citizens within the boundaries of a state or federation. Those outside these constructed containers do not receive protection in states that are becoming increasingly like fortresses.

When 'the Other' Poses the Questions: Turning the Tables to Produce Data on German National Belonging

After a change was made in Germany’s census categories in the year 2005, who are German? A national census addresses broad social categories of the population and is used to produce national statistics. The change in the categories was intended to address the population from the perspective of the individual rather than the state. What makes one German? How does one come to belong to the country? The paper adds to a body of literature on the concept of national belonging by using an approach that looks at the census categories to inform research questions. The study was conducted through interviews with a sample of 35 people - 20 German citizens and 15 non-German citizens. The interviews aimed to explore the concept of national belonging and the role it plays in shaping one's identity.

Does It Pay to Play? Gender, High School Sport Participation, and Young Adult Attainment

Despite differences in the cultural meaning of sport for girls and boys, popular rhetoric implies that sport participation is always good for kids. Indeed, many youth sport organizations were built on the assumption that sport reinforces shared values—such as hard work, cooperation, leadership, and fair play—that help prepare youth for their future roles as engaged citizens. While there is ample evidence to suggest that sport positively affects educational attainment (Hartmann 2008), it is unclear whether such benefits extend beyond the college years to impact young American’s career trajectories or subsequent attainment. Evidence from a small number of empirical studies suggests that sport participants tend to report higher earnings, though the bulk of these studies focus exclusively on men. Those studies that do include women are often outdated, considering the influence of sport participation for U.S. women prior to the passage of Title IX of the Education Amendments of 1972 (which prohibited sex discrimination in education, including school-sponsored sports). Using longitudinal data from the Youth Development Study, this study explores how high school sport participation affects individual earnings and combined household income through young adulthood (ages 21 through 34). Multilevel mixed-effects regression analysis reveals that high school sport participation is positively associated with young adult attainment. This relationship is due, in part, to participants’ educational attainment: sport participants are more likely to enroll and graduate from college, which translates to greater earnings throughout young adulthood. At the household level, female sport participants, but not males, report higher earnings than their peers. While male sport participants report the highest individual earnings, female participants report the highest annual household income. Taken together, these findings suggest that focusing on individual earnings alone does not fully capture the gendered effect of sport participation on attainment.

Gender and Cohort Differences in Work-Family Life Courses and Objective Markers of Health in Mid-Life: Evidence from the United Kingdom

The United Kingdom has seen dramatic changes in the nature of work and family life, and related normative divisions of labour over the past forty years. Participation in paid work is now a fact of life for the majority of women, including those with family responsibilities; fathers are more involved in childcare; and family forms have become increasingly diverse. In addition, these processes of change are occurring within the context of, and may be partially driving, increasing socioeconomic inequality between households and between women. While these changes in the work and family lives of men and women are well-documented, their relationship with health and wellbeing remains unclear. This study uses the wealth of longitudinal data now available in Britain to describe gender & cohort differences in work-family life course sequences across the three national birth cohort studies in the UK: the National Survey of Health and Development 1946 birth cohort, the National Child Development Study 1958 birth cohort, and the 1970 Birth Cohort Study. Sequence analysis is used to derive life course typologies. Evidence of increasing individualisation across cohorts and the potential emergence of new typologies is investigated, as are early life predictors of work-family patterns. Finally, the study investigates relationships between work-family typologies and objective markers of health risk in the two
As income and wealth concentration reach historic highs, sociological research on inequality has begun to focus on the social and cultural lives of the world's "one percent." This article presents rare ethnographic data on spending behaviors among the increasingly global elite and documents how the *nouveau riche* convert their economic capital into symbolic and social capital. Central to such conversations are gift giving rituals and exchanges of women. Based on two years of observations at high-end nightclubs in the global VIP leisure circuit, as well as 70 interviews with club owners and guests, I document how gift giving is a central condition of conspicuous consumption among nightclub patrons, who distinguish amongst themselves through the display of beautiful women and the display, wasting, and gifting of high-priced bottles of alcohol in ritualized potlatches. I develop the concept of *girl capital* to describe women as a resource for status-seeking men. Club promoters work to accumulate and mobilize *girl capital* through the circulation of gifts, perks, favors and intimacies to establish reciprocities among the nouveau riche through the display of women and other objects. I develop the concept of *girl capital* to describe women as a resource for status-seeking men. Club promoters work to accumulate and mobilize *girl capital* through the circulation of gifts, perks, favors and intimacies to establish reciprocities among the nouveau riche through the display of women and other objects.

**Visceral Militarism: Embodiment, Intensity and Experience**

This paper provides a critical reconsideration of the notion of militarism that is particularly attentive to how militarism is specifically embodied in specific corporeal dispositions, structures of feeling, bodily performances, and sensory practices that are located both within militaries and beyond. As such, it attempts to move beyond a cognitivist understanding of militarism in terms of an explicit system of martialist attitudes, values and beliefs to trace a more embodied and affective genealogy of militarism that emphasizes the often unconscious, corporeal and sensory practices through which war-preparedness and military valorization is felt to be normal and desirable, through which militarism becomes assumed, and unexamined, as an ‘abstract social norm’ that may inhere within the deepest fibres of our bodily being (Shilling 2007: 13). Drawing upon empirical analyses of contemporary phenomena ranging from the growth of ‘British Military Fitness’ as a popular leisure pursuit in the UK, the technologies of affective captivity of immersive military video-gaming, and the intimacies and intensities of helmetcam footage recorded by soldiers in the on-going conflict in Afghanistan, the paper highlights multiple practices of corporeal and sensory militarization that travel beyond traditional sequestered sites of classical military discipline, reshaping the wider sensorium and bodily pedagogics and projects in numerous domains of everyday social life. As such, the analysis emphasizes how desires for neoliberal self-actualization, thrift and bodily transformation increasingly articulate with wider military imperatives and corporeal practices to produce specific contemporary forms of embodied, voluntaristic and individuated militarism. The paper concludes by discussing the importance of locating these particular visceral militarisms with reference to shifts in the modes of embodiment, somatic apprehension of the world, and deterritorialised flows of affective experience associated with contemporary transformations in war-lighting.

**The Elite Potlatch: Gifts, Girls, and Distinction Among the Global VIP**

The paper examines the transformation of Asian Capitalism tracking innovation policies in China and Japan. Chalmers Johnson’s seminal study of Japan (Boston University, JS-13.1) examined the transformation of Asian Capitalism tracking innovation policies in China and Japan. **The Effects Of Divorce On Children From Life-Course and Family Systems Perspectives: Example Of Denizli In Turkey**

Divorce has negative socio-economic and interpersonal consequences on adults/children consisting of behavioral and emotional problems. They are more likely to divorce, more likely to marry at young ages, to report problems, perceived instability, conflict, lack of trust in their marriages. Many two-parent families do not offer a happy environment for children. Parental divorce may disrupt the life course, with lifelong consequences for children well-being/lowered socio-economic status and problems in interpersonal relationships. Compared with individuals who grew up with both parents, children of divorce have lower levels of education, occupational status, and income, higher levels of economic hardships more often marry young, divorce and remarry several times, find themselves in unhappy relationships, and mistrust people in general. However they do not have lower levels of social support in their life. These relations may vary according to age, minority status, sex, parental education, parental death and socio-economic status.

In our research, we indicate the effects of divorce on adults who live in Denizli. The sample was randomly selected from living with divorced parents in Denizli. The effects of divorce are determined according to the adult's age, gender, parental conflict, post-divorce family stability, parent-child relationships, education, socio-economic status. These variables are significant to understand the effects of divorce on children. We examine the association between child depression and childhood parental divorce using a representative sample of 3548 Denizli (177 male and 177 female). Firstly, in our research, methodological issues area examined. Secondly, the findings are discussed within a theoretical framework using family systems concepts and life-course theories’ arguments. Results strongly support the our research hypothesis. Cultural differences and implications of the study are also discussed. Our research is supported by TUBITAK (The Scientific and Technological Research Council of Turkey). We thank to TUBITAK for supporting to our research project.

**Indigenous Religion, the State and Civil Society in Bukidnon, Philippines**

The paper describes the religion of an indigenous case community in Bukidnon, Philippines from participant observation, interviews, focused group discussions and content analysis of documents from government and civil society organizations and other secondary materials. It analyzes the diversifying role of indigenous religion in the public sphere amidst social change in the uplands with the entrance of migrants, logging companies, the state and civil society organizations. The paper also intends to shed light on how indigenous religion contributes to communal adaptation and sustainable development as well as efforts to protect ancestral domain in the face of increasing commercialization of the economy, as well as engaged in environmental conflict. The increased visibility of religion and the strategies of religious leaders to position themselves in the changing context has implications as well for the relations between religion and the state and
civil society. Theoretical perspectives examining the role of religion in the public sphere as well as political ecology will be utilized as frameworks for analysis.

Poverty and Unequal Development in Central America

The five Central American countries analyzed in this paper (Guatemala, Honduras, El Salvador, Nicaragua and Costa Rica) have a very uneven level of development where it excels Costa Rica, which some have considered the Switzerland of America, for having a great democratic stability and a good standard of living of the people that attracts the migration of his poorer neighbor Nicaragua. The rest of the countries (Guatemala, Honduras, El Salvador and Nicaragua) have very low levels of human development that join Bolivia and Haiti as the continent's poorest nations. This paper provides a brief overview of the emergence of the Central American countries showing different political trends in the twenty-first century governments and offering also a diagnosis of the situation of poverty. The causes are not natural but due primarily to historical internal social groups that have taken for themselves the social wealth of the nation and due also to uneven development scheme where transnational corporations in industrialized countries, especially through the extractive model, have taken over the natural resources of the region. To escape poverty, it is necessary the effective political will of governments, with the awareness that the inequality is not a manifest destiny of nature but a work of men; a best strategy is not only giving a fish to the poor but teaching them how to fish. It is necessary a public policy of redistribution of social wealth but primarily the effort in education with creation of capacities.

The Impact of Social Structures on Adolescents’ Deviant Behaviors: The Study of 402 High-Risk Street Drug Users in Iran

Aims: This study investigates the social underlying factors which impact on substance abuse in Iran’s society.

Method: A comprehensive social approach, a sociological analysis was conducted on the triple dimensions of social structure: institutional, relational and embodied social structures which impact on individuals’ behaviors by using the results of a secondary analysis of a survey carried out on 402 high risk abandoned drug users in 2009 and plus evidence from some documentary findings of sociological studies to confirm the arguments about the impact of social structures on adolescents’ deviant behaviors. The paper is drawn up on theories’ Durkim, Giddens, Putnam and also the evidence related to the situations of social anomie and social capital exhaustion that illuminate the role of society institutional and relational structures on forming the embodied structure or the same actors’ behavioural habits and skills in society.

Findings: The most effective factors of substance abuse were individual factors, bonding with unhealthy social networks, exhaustion of bonding social capital, and lack of social support. During the period of social transition, emergence of uprootedness in modern life and disorientation of social actors in a space of discontinuity of old social bonds creates a ontological insecurity that can lead to the confusion of social actors to organize their social world and to deal effectively with not-so-complicated realities of social life.

Conclusion: Substance abuse is acknowledged as a social deviance which is stemmed from weakness of institutional, relational and embodied social structures during the modern era. The findings indicate the necessity of prioritization of substance abuse prevention by using a comprehensive model which includes interventions, i.e. promoting an established social order by structural policies for improving social capital, emotional and social skills and social support for individuals in society.

MEINECKE, CHRISTOPHER* (University of Oldenburg, christopher.meinecke@uni-oldenburg.de)

Saving Electricity in Private Households: Results of a Field Trial with Smart Meter Based Feedback Systems and Innovative Electricity Tariffs in Germany

In response to the nuclear accident in Fukushima in 2011, the German government decided to withdraw from nuclear power. This turnaround accelerated the transition to the German electricity system from a fossil fuel and nuclear power dominated electricity system to a renewable energy dominated one. The national aim is to reach a share of renewable energy sources of 80% until 2050. However, the major disadvantage of power generation from renewable energy sources like wind or photovoltaic is that they are hard to predict and to control as the availability of these resources is unstable. The challenge is therefore to manage supply and demand of electricity efficiently. In order to meet this challenge, the development of an intelligent electricity grid ("smart grid") has started. This smart grid private households should play a role as adaptive consumers who shift their electricity consumption according to the electricity production (from periods with low production to periods with high production) and who save a significant amount of electricity.

Based on this development my research focuses on the following questions: How to enable private households to play this role as adaptive consumers? Is it possible to make electricity saving behaviours part of the household members everyday routines? To what extend are feedback systems and variable electricity tariff models able to support overall electricity savings?

The results of a field trial on advanced electricity meter (smart meter) with 650 private households from April 2011 to May 2012 in Northern Germany will be presented. Three different types of feedback systems (including an iPod Touch based feedback application) and two different innovative and flexible electricity tariffs were tested. To answer the research questions, multivariate longitudinal analyses with regard to their effect on overall electricity consumption of the participating households were conducted.

MEISSNER, MIRIAM* (University of Amsterdam, m.m.meissner@uu.nl)

Story Telling Debt in Trading: The Topos of Urban Public Space in Financial Crisis Narratives

A major challenge of narratively portraying the 2008 financial crisis consists in representing the debt and the multiple ways in which debt – as the underlying asset of divergent financial derivative instruments – is traded today. In particular, the representation of financial securitization, connecting private and public debt with mechanisms of financial market speculation, requires narrative techniques that make it possible to meaningfully interrelate a multiplicity of private and institutional actors, temporal and geographical coordinates, as well as political and technological influencing factors.

In view of this challenge, this paper explores various filmic and literary narratives that deal with the 2008 financial crisis and its far-reaching socio-economic impacts. In particular, the paper explores how urban public space is portrayed in such narratives. I argue that urban public space in popular cultural representations of this crisis features as a narrative instrument – a topos – that points out how both the individual and organizational risks upon which contemporary speculation draws are obscured due to strategies of financial abstraction and digital trading. However, as a critical gesture, the topos of urban public space often only allows for a partial view to the underlying inequalities that are produced due to financial speculation, while largely leaving its concrete practices and instruments unquestioned.

This paper forms part of a research project that applies anthropological and socio-semiotic conceptualizations of myth to narratives of the 2008 financial crisis. The project explores how certain narratives act as both social and cognitive strategies of dealing with complex phenomena, and as means of ideological communication.

Dans Un Contexte De Crise économique : Tensions Sur L’emploi Et Sur Le Marché Immobilier. Quelles Conséquences Spatiales ?

Dans le cadre de la recherche ANR Transénergie, six sociologues ont entrepris deux enquêtes par entretiens semi-directifs dans les métropoles françaises de Lille et Lyon sur la classe populaire salariée stable (Bihr, Pfefferkorn, 2004) potentiellement affectée par les évolutions économiques des marchés de l’emploi et de l’immobilier.

La première enquête (40 entretiens) s’intéresse aux candidats à l’accès à la propriété. La seconde (30 entretiens) s’intéresse aux salariés travaillant dans des zones d’activités périphériques.

Notre contribution traite des conséquences spatiales de tensions combinées sur les marchés de l’emploi et immobilier et s’articule autour de quatre parties:

– En situation de crise économique, l’attitude la plus répandue est de s’agripper à l’emploi. Au nom de cette sécurité professionnelle, des projets familiaux sont souvent sur-pensés. Qu’est-ce qui permet à certains de s’en sortir alors qu’ils sont abandonnés, y compris des divorces. Traiter des conséquences spatiales des évolutions récentes des marchés passe d’abord par en considérer les conséquences en terme d’immobilier.

– Les marges de manoeuvre que contrôlent les salarié-es sont différentes selon qu’ils rapprochent l’emploi ou se rapprochent de l’emploi. Si la proximité domicilaire travaille en faveur d’une meilleure adéquation entre le lieu de travail et le lieu d’habitation, elle peut être limitée par le financement du logement.

– Les difficultés que rencontrent certains ménages en période de crise pour accéder à l’emploi ou à la location sont amplifiées lors des périodes de crise économique. L’instabilité professionnelle ou les fréquentes délocalisations d’entreprises aboutissent à une instabilité des espaces de vie, qui rendent plus complexe l’accès à la propriété ou à la location (dépôt de garantie) étant donné l’instabilité des emplois.

– Si la ville n’est pas cohérente (Korsu allí 2012) cela ne tient-il pas d’à sa forme urbaine ? Dans une ville multipolaire comme Lille si la possibilité de trouver un logement à distance raisonnable de l’emploi paraît satisfaisante, dans une métropole unipolaire comme Lyon, les difficultés à trouver une localisation satisfaisante sont plus grandes.

Aspects of Measuring National Identity: Insights from Online-Probing

Since 1995 the ISSP runs a module on National Identity. With increasing number of participating countries a need to test the data for cross-national comparability has become necessary. Besides data analytical approaches, cognitive interviewing has become a popular tool to uncover differences in item interpretation. Two studies conducting cognitive interviewing could already detect problematic items in the ISSP module for Austria (see Latcheva 2009, Fleie et al. 2009). However, these studies focused on one country and problems of cross-national comparability may not have been found.

One way to assess the existence of cross-national comparability is the application of online-probing which implements probing techniques of cognitive interviewing within web surveys. The project “Optimizing Probing Procedures for Cross-National Web Surveys” already conducted a cognitive pretest and an online pretest in 2009 in Germany and will run its international survey in Germany, US, Mexico, Spain and UK in January 2014. A variety of items from the ISSP module on National identity are being analyzed. The data from the project give a unique insight into interpretation differences across respondents in a cross-national perspective.

The presentation will present results of the item battery on specific national pride which has been shown to be particularly problematic in the previous studies. The following questions will be addressed: Which problems appear in a cross-national comparison of the data? Which time horizons, for example, do respondents from different countries apply when they judge their pride on their countries history? What do Mexicans understand under the term “social security system” and is this comparable to the definition given by German respondents? How comparable are the understandings of “fair and equal treatment” across countries? How can these outcomes be combined with current data analytic approaches? What recommendations can be derived from the existing data?

Sociological studies have shown that economic and social inequalities are increasing everywhere. Studies have also shown that there is a strong connection between generalized trust and equality (Wilkinson&Pickett 2010). Comparative evidence indicate that strong social institutions prevent free riding and other similar problems. The Nordic countries are in many respect good examples of generalized trust, well functioning social institutions and equality. On the other Russia is an example of low trust, weak institutions and inequalities. However there are clear differences between different social actors both in the Nordic countries and in Russia. In the paper we ask what is the role of social class in this respect? What kind of differences there are between social classes and trust? Can we find one Nordic model, or are there different models? What are the main differences between Russia and the Nordic countries? Our paper is based on 2010 European Social Survey data.

Brazilian Unionism and Global Union Networks: A Shortcut to the New Labor Internationalism?

Internationalization of trade unionism is not a new phenomenon. It is currently presented as a “new internationalism” as opposed to an “old” labor internationalism. Why do unions choose one or the other? How do they use unions as vehicles for cooperation within multinationals and how is this comparable to the definition given by German respondents? How comparable are the understandings of “fair and equal treatment” across countries? How can these outcomes be combined with current data analytic approaches? What recommendations can be derived from the existing data?

MELETTI, MARXIANO* (SUM Foundation - Foundation of the Italian Institute for Human and Social Sciences, marxiano.melotti@gmail.com)

Festivals and Living History. Tourism in the Age of Edutainment

The festivals of living history are perhaps among the most interesting aspects of the new cultural tourism and the new tourist culture based on festivals. These innovative processes of individual and collective identity construction entail complex interaction between re-enactors, tourists and local community; strategies of tourist and territorial marketing; and new forms of exploitation of heritage. At the same time, however, we can single out some salient features of society and tourism in the late modernity: the consolidation of forms of leisure, tourism and cultural fruition intertwining education and entertainment; the increasing loss of historical knowledge; the growing need of territorial and historical authenticity; and the acceptance of new forms of relative authenticity.

The festivals of living history are effective instruments of governance and tourist development and can meet the needs of different types of tourism. However, in many contexts – as in the case of Italy - local authorities and scholars appear unable to take full advantage from the contribution of these activities and do not support them properly. Furthermore, the “seriality” of the festivals devoted to folklore or the new culture of slowness, as well as the inability to properly manage edutainment, are stilling not only the potentiality of living history, but, more generally, of the whole tourist culture related to festivals.

MELETTI, MARXIANO* (SUM Foundation - Foundation of the Italian Institute for Human and Social Sciences, marxiano.melotti@gmail.com)
Heritage and Sensory Tourism: The Long Way Beyond Post-Modernity

The increasing attention to the sensory and emotional aspects in tourism undoubtedly reflects the profound cultural transformations of late modernity and, in particular, the role of societies most influenced by the Western consumption patterns. This attention involves - and at the same time reflects - a new concept of authenticity, of a hybrid and relative kind, more oriented to emotional and experiential aspects and less tied to contents and material aspects.

This change entails effects that appear to be particularly significant in the field of cultural and, even more, archaeological tourism: tactile and sensory museums, light and olfactory installations, practices of living history and experiential archaeology. These and other activities of consumption and leisure, aimed at recovering a supposed historical and territorial authenticity and characterized by forms of historical theming, are profoundly transforming our relationship with heritage and the past.

However, we are in a historical phase of possible cultural change, in which, both as a result of the financial crisis and because of the specific traits of the increasingly important Asian tourism, the current sensory, “liquid” and post-modern orientation could be overcome by a return of “solid” and material aspects.

With specific examples, this paper outlines some characteristics of the new cultural and archaeological post-modern tourism of sensory type, focusing on the relationship between edutainment, consumerism and the processes of identity construction, and tries to single out the possible developments of the current trends.

MENDOZA CORNEJO, JOSÉ* (Universidad de Guadalajara, México, ma.islas.ma@hotmail.com)

Educação Inconsistente e Exercício Profissional Desigual

Educação inconsistente, ejercicio profesional desigual, José César Mendoza-Cornejo

[1] Profesor investigador. CUCBA-UdeG. México

Email: cesarn@cucba.udg.mx

En la historia del hombre centenario, la desigualdad es patente. Crea las condiciones económicas y sociales para ésta “diferencia”.

Este dominio es desigual, el rico aprovechándose del pobre, el estudiado del estudiante, el marginado, el marginado.

Esta desigualdad es parte de nuestro actuar, lo mismo da ignorarla que ejercerla, se presenta en las instituciones educativas al no existir similares posibilidades económicas.

Se debe inducir una educación con sentido humanista, con ideas que convengan en la solidaridad y por consiguiente, hacia una visión de interés colectivo.

Las cátedras sociales no significan minimizar las relacionadas con las técnicas, ambas aportan capacidad crítica, reflexión, análisis, razonamiento lógico para la formación integral del estudiante.

Los egresados despojados de una educación comprometida, pierden interés en retribuir, provocando desigualdad y falta de oportunidades. Esta actitud anatematiza el rol del hombre y su posesión de derechos y obligaciones, que pudiesen haberse recibido en el seno familiar o en las instituciones escolares.

Con el objetivo de evaluar el comportamiento –simulación– de productores y profesionistas se efectuó una encuesta en localidades del Estado de Jalisco.

Resultados

El INEGI 2010 concuerda con la indagación, el esfuerzo por hacer más es poco, desatendiendo a quien radica lejos de los centros, simulación que provoca desigualdad separándolos del resto y de las oportunidades, generando abandono, emigrando en busca de anhelos donde su personalidad es minguada por lo distante de sus familias y costumbres.

Conclusiones

La universidad y su comunidad deben ser ambiciosos y asumir un objetivo humanista y reorientar programas escolares y acciones como el Servicio Social.

Drifters and Borinage: From the Filmic Subject to the Historical Subject

This communication analyzes two important films in the history of sociological films: Drifters (1929) from John Grierson and Misère au Borinage (1929) from Jos vilens. The first show the herring fishing out of the coast of England, in the North Sea, as a struggle between men and boats against the difficulties of the rough sea on the way to find and catch the herring shoals. The second show the very arid and difficult life of the Belgian miners of Borinage, focusing in their hard work by the introduction of the new methods from the industrial revolution by questioning the “natural” approach of a film like Nanook of the North. This new way of labor also makes this process acquire international dimensions showing the British Empire now as a huge commercial and industrial force. Borinage show that against the power of capitalism, that in the process of reproduction of capital all reproduces the miner in the worst living conditions, despite his arduous work, the only solution is the organized working class that struggles against them with their most important weapon: stop using the force of labor and consequently stop making goods and profits.

So, if Drifters is remarkable as the first documentary film in history to put the working class in the central place as a film subject, Borinage is the first one to show the working class in the process to become a historical subject to change the world, like fiction has already made in Eisenstein’s Potemkin (1925).

Cross-Border or out-of-country Voters? Citizenship and Elections Across the Frontier Between Brazil and Paraguay

Brazilians living in Paraguay are the largest immigrant group in that country and the second Brazilian population living abroad. Although Brazilian nationals are allowed to vote from abroad in homeland elections, those residents in Paraguay prefer not to be registered as out-of-country voters in favour to cross the frontier into Brazil to go to the polls on elections days. Furthermore, the Paraguayan residents prefer not to register as out-of-country voters in Paraguay to cast their ballots in Paraguayan elections. In the frontier region, the cross-border ties have a far-reaching impact on the political life among emigrants and their descendants, and it takes a leading role in the construction of a citizenship which merges the local, the emigrant and the extraterritorial dimensions. The paper discusses how the electoral processes blur social categories such as resident and expatriate, analyses the cross-border political ties and the political participation of Brazilian and Paraguayan emigrants in local and national elections of both countries, and then examines the implications of the cross-border and the out-of-country voting in the construction of an extraterritorial citizenship in Brazil and Paraguay.

The Culture of Authenticity: An Empirical Study of University Students from Diverse Cultural Backgrounds

This paper is an empirical study of the influence of individuals’ cultural background on their different experiences of authenticity. Due to a lack of consensus in the definition of the concept, sociologists have only recently started to study authenticity in an empirical way. This paper tries to contribute to this new field of study. It consists of a quantitative analysis of open-ended responses to Ralph Turner’s True-Self Method with 138 students from La Trobe University in 2013. It constitutes a partial replication of, and a complement to, another research study conducted by Turner at La Trobe forty years ago, in 1973. Today, La Trobe’s student body is more culturally diverse than it was at the time Turner did his study. Around 25% are overseas-born students, most of them coming from Eastern societies backgrounds. This is an opportunity to capture experiences of authenticity of individuals from diverse cultural backgrounds and compare them. Building on the works of Ralph Turner and Ronald Inglehart on self-conception and values respectively, this paper establishes two cultural hypotheses that reflect the Eastern/Western societies backgrounds. This is an opportunity to capture experiences of authenticity. Turner found no relationship between respondents’ cultural background and their experiences of authenticity. However, considering the more culturally diverse conditions of contemporary societies, cultural hypotheses seem to be worth exploring.

MENEZES, PAULO* (University of São Paulo, paulomen@usp.br)

Is There a Difference Between a Sociological and an Anthropological Approach to Cinema?

This communication deals with the special construction of reality made by films which acquire significant epistemological interest when we are dealing with documentary cinema, where the confusion and the merge between the reality of

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
images and the exterior “reality” that the camera faces are more fragile and undeniable, based on the theoretical assumptions made by Foucault in What is an author? and by Pierre Sorlin in Sociologie du Cinéma.

It discusses the documentary cinema by analyzing their relationships with the social knowledge possibilities they offer and the access to knowledge of the social reality they allude. This analysis criticizes the positivist foundations that organizes the documentary films and the positivist watch that audience gives to them, fundamental for the misconception of a film as the “real” itself and not a construction about it, inquiring the epistemological potentialities of the kind of information those images suggest. So, if we can think that these films bring information about what is shown by its images and sounds, we can also think that they bring more information about the values, evaluations and hierarchies that institute the filmic narrative made by the film maker.

Finally, I interpret the film Les Maîtres Fous, by Jean Rouch, as a Discourse and not as a documentary. This option force the analyst to catch an epistemological detour where the film is no longer seen as evidence of their stories but inquired in the fundamental concepts of its filmic narrative, dialectic units of form and content. The analysis point out the principles and elements imbricated in the options assumed by the director in order to constitute a filmic narrative discourse that should be seen as a general and natural truth about the “other” (a ritual) and not a discourse that alludes something else (the French colonial heritage).

This is a research about Putumayo, a NY based label of World Music collects. On its own words, the label’s work consists in organizing collection that gather music from “exotic places where the music originated” so the rest of the world could know about that culture “as it is”. But what we observed in the research activity is that the curatorship work of the label brings a strong authorship signature: the label isn’t only (passively) exposing the cultures in their own native terms, but (actively) substantially constituting them based in its New Yorker grammar. In light of this, the article aims to show how passive and disinterested curatorship notions and the active and interested authors of: world cultures are not merely being organized, but formed too. The one who selects, believing that can do it, is also the one that creates. In this way, the article lays on the mediation issue, aiming to analyze how intermediary instances, precisely because they see themselves as capable to live in this between poles, start escaping to this “dia- mediation issue, aiming to analyze how intermediary instances, precisely because they see themselves as capable to live in this between poles, start escaping to this diation issue, aiming to analyze how intermediary instances, precisely because they see themselves as capable to live in this between poles, start escaping to this

diation issue, aiming to analyze how intermediary instances, precisely because they see themselves as capable to live in this between poles, start escaping to this
the problems of recognition of the materials that aimed at promoting extremism and to implement actions that destabilize the political situation in the country. 2000 respondents were interviewed. They are representatives of different social groups.

The study shows that 67% of people consider that extremist information provides different methods of manufacturing explosives. Using it, one can see people, who suggests ideas of how to use it. Thus, the groups of teenagers appear who are able to commit dangerous acts against law enforcement and private citizens. 57% of people believes that extremist information calls for the approval of the advantages of one nation over the other, 53% of respondents believes that extremist information means call for terrorist acts. In this case, 17 % of school students and college students mention the difficulties in discerning which information is really extremist. 65% respondents expresses the need for training, especially young people in order to identify the information in the Internet which encourages extremism.

Local Development Agencies

LOCAL DEVELOPMENT AGENCIES

In order to fight the origins of generational poverty, the Mexican government has promoted the joint participation of the benefitted communities, fostering a culture of co-responsibility.

The Social Development Ministry (SEDESOL) designed the Productive Options Program, the support modes are: Local Development Agencies; Integrating Funds; Mentor Networks, and the Joint Financing Fund. These Agencies focus on developing the skills and abilities of individuals, families, social groups and POs (producers' organizations) that live in areas classified as critical, such as native zones in the rural milieu, which are marginalized and made up of settlements or towns of up to 14,999 inhabitants.

The purpose of this study is to analyze Local Development Agencies as social policy instruments to fight poverty from the micro-regional standpoint.

The structure and legal framework of the Agencies in question correspond to that of a civil society organization, whose challenge is to foster micro-regional development.

This model involved a cut in the budget for social policy and a reformulation of the objectives and scope thereof. From the mid-90's to date, programs to overcome poverty have become income transfer instruments to invest in human capital.

The neoliberal proposal set forth by Milton Friedman, crystalizes on how the State has to face the problem of poverty. That is, it aims to let society know how much it costs to support the poor. Through the Programs designed to alleviate poverty, the Mexican government assumes that the poor are ready and able to overcome the generational poverty status. However, the government is only investing in improving the labor force.

Japanese Artistic Traditions: Mimêsis, Politeia and Re-Interpretation

My paper analyses the representation and perfecting of reality (mimêsis) by visual arts in Japan and how the different traditions of art have been connected to changes in Japanese society and culture. The Japanese state was slow to realize how important visual arts for Japanese the Japanese society and culture and that visual arts have a huge influence home and abroad. The idea of state being responsible for promoting the cultured life of people or the idea of cultural rights of people are rather foreign to Japanese society. However, the whole idea of "being Japanese" is very much a cultural reconstruction and the Japanese state has been actively engaged in shaping that reconstruction together with other pillars of establishment in Japan, such as the educational and economic institutions.

The invention of tradition does not mean that they are all false or invented from a scratch. The refined tastes of upper classes served as a basis for artistic traditions that are officially associated with the essence of Japanese art and culture. The modern Japanese state presented the Japanese cultural traditions as a proof of Japanese cultural superiority and, therefore, there has all along been a tendency also to protect the "Japanese" cultural traditions. For instance, nihogå was seen by the early modern policy makers as more Japanese than yôga, regardless of the theme of painting and without much of critical discussion whether nihogå really is that uniquely Japanese. After all, both Japanese nihogå and yôga are influenced by foreign and Japanese art traditions of each other. My paper reinterprets the tradition(s) of Japanese visual arts and places it in its social and political context, as well as develops theoretical tools that would better suit analysing Japanese artistic traditions.
In youth research the housing transition is considered one important transition to adulthood amongst others. Nevertheless, it is not sufficiently taken into account in academia. As long as young adults have the resources to go smoothly through their housing transition because they have enough resources (financial, social, biographical and educational) this transition tends to be invisible. One of the reasons for this is that it is not as institutionalized as the transition from school to work for example. On this basis the complexities and reversibility of housing transitions, as well their ties to other youth-related transitions and social inequalities, become forcefully visible when the homelessness of young people is taken into account. Within social welfare systems, special housing related aid for this age group is rare, and usually given in extreme situations when housing has already become problematic. Thus, it is also often connected to other requirements, such as involvement in employment, training or education.

In this paper I will present the results of a qualitative study comparing two specific supported housing schemes for young adults in Germany and England. Both focus their support on housing as well as on the labor market oriented transitions of young people. My international comparative approach, which is theoretically informed by the model of “youth transition regimes” (Walther 2006), takes into account how the housing transitions of young people are structured by specific housing markets as well as by the housing related supports within specific social welfare systems. On this basis I will highlight differences and commonalities with respect to how social welfare systems can increase or reduce housing related social inequalities.

MEYER, MICHELLE* (Texas A&M University, mmeyer@arch.tamu.edu)
Social Capital, Organizations, and Disasters: Theoretical Insights from Four Communities

Social capital, especially among community organizations, is central to the US Federal Emergency Management Agency’s “Whole Community Approach” for disaster resiliency, in which four of the six resiliency themes focus on social capital. Organizational social capital benefits the industrial organizations and produces collective benefits for the whole network, including knowledge creation and sharing, generating financial resources, and creating innovations (Cohen and Prusak 2001; Lesser 2000; Reagans and McEvily 2003). Further, it affects efficiency and effectiveness important to social service and nongovernmental organizations (Boersele et al. 2003). In disaster settings, social capital among emergency management organizations fosters more efficient response (Kapucu et al. 2010; Varda et al. 2009).

Yet, social capital research on organizations in disasters focuses heavily on emergency management agencies. Less research includes non-disaster response organizations.This paper proposes a case study of networks for disaster situations (Boersele, Lee, and Chawing 2010). In this paper, I describe theoretical insights for organizational theory and disaster theory drawn from case study research on social capital among community organizations in four communities. The case studies were all completed between 2012 and 2013 and include two communities that had recent disasters, and two communities that have not. Further, three are rural (populations less than 50,000) and one is a small urban area (population 270,000). Based on interviews with nonprofit, emergency management, religious, and social service organizations, I discuss the benefits and difficulties of using social capital for community disaster response and recovery. Disasters present both obstacles and opportunities for the survival and growth of community organizations. Further, I argue that how organizations interact in networks, including legal and mission-related struggles, is key to understanding social capital for community disaster resilience. My results address how the “Whole Community” is practiced as well as contribute to organizational theory about social capital’s effect on organizational and community outcomes.

JS-60.4
MEYER, MICHELLE* (Texas A&M University, mmeyer@arch.tamu.edu)
The Family Burden of Disaster Assistance

One commonly proposed, but under-theorized, component of community disaster resilience is social capital. Social capital describes the resources available through a social network that can be activated to affect the outcomes for the individuals and members of the entire network (Bourdieu 1985; Lin 1999). This concept captures the interactive aspects of a community that imply a capacity to respond, adapt, learn from a disaster, and effectively reorganize community life quickly following an event (Cutter et al. 2008; Norris et al. 2008). Thus, social capital can both be a private and public good that generates resilience for individuals and families along with communities as a whole.

Using surveys and interviews with residents of two Florida counties, one rural and one urban, I discuss disaster social capital and its role in families’ resilience. I apply a common social network measure—the name generator—to address the availability and source of disaster-specific resources in individuals’ social networks. This network-based approach to disaster social capital shows the importance of family to disaster assistance. Individuals turn to family first for all types of assistance, and almost exclusively for financial assistance. This reliance on family shows the complexity of the transformation of cultural identity, which is intertwined with the multicultural home environment, isolation from familiar cultures of origin, gender roles within the family, and the historical and political background of the society in which these women live.
use insurance or savings for financial needs. This result shows the increased pressure on low-income families to help each other “get by” during a disaster (Stack 1997). At the community level, my results indicate that privatized social capital may not result in outcomes for the entire community, instead following familial lines that are often racially and economically homogenous.

Collective Action and Collective Actors in Fields: Some Ontological Clarification of a Recent Debate in Neo-Institutionalism

The concept of “fields” has a lively history. Starting as one of the crucial concepts in Bourdieu’s theory, it became a foundational concept of sociological neo-institutionalism. Today, different attempts exist to transform it into a general concept of collective action (Hoffman 1999, Fligstein/McAdam 2012). This interesting development is, however, accompanied by some weaknesses: Currently, individuals and collectives, especially organizations, are analyzed symmetrically as actors within fields. Collectives are only described as fields nested within other fields. What is urgently needed is an elaboration on how individual and collective actors are constituted, and how they are related to individual ones.

We take the distinction between agency and actors immanent in theories of concepts (especially in the work of Giddens 1984, even Latour 2005), as a point of departure to discuss this problem. Actors – individual as well as collective ones – are special constructions of modernity (Luckmann 1980, Foucault 1984, Luhmann 1984, Meffert/Jefferson 2000). They are often confronted with the obligation to act consistently in line with different kinds of rationality, often stemming from different field-levels. Agency, in contrast, is the essential possibility to make a difference in the stream of daily activity (Giddens 1984: 9), which is grounded in mental control over bodily activities. Although agency and actors are often actualized in an intertwined form, they sometimes only occur in a loosely coupled way. Following this conceptualization, we can offer a more complex and clarified picture of individuals and collectives. It allows for a clearer distinction between (a) the properties of individual and collective actors, and between (b) agency and attributed agency. In addition, it allows for a more elaborate description of how fields are nested within fields, for example how agency and actors are constituted by fields in a similar time as they constitute them.

BESIO, CRISTINA* (Technical University of Berlin, cristina.besio@tu-berlin.de)
Modern Times: How Organizational Time Structures Influence Society

At the latest since Max Weber, we have known that organizations strongly shape modern life – and also time. Modern society has been described as organization society, in which organizations diffuse across every sector. Organizations can, and do, operate with different societal macro-logics that contribute towards operationizing and implementing them: Enterprises strive for economic profit, media organizations disseminate information and schools educate. However, in doing this they use their own specific structures and procedures. Among them are time structures. We focus on such time structures such as projects, deadlines, time frames, time routines and rhythms, and show that these are not necessarily compatible with the societal logics they address. As a consequence, organizations act as Procrustean bed regarding societal macro-logics. In the same way in which Procrustes “adjusts” people to the size of his bed, organizations impose their time structures on society.

As examples, we use the impacts organizations have on media and science. Media logic dictates that new information is provided continuously. However, editorial departments of television channels or newspapers need stable (temporal) routines. So, editorial departments often privilege the coverage of planned events like international conferences or sport events. As a consequence, organizational temporal structures play an important role by selecting news.

The logic of science implies that the time needed for research and scientific findings can hardly be defined in advance. However, organizations, such as universities, have to plan ahead. So they prioritize research proposals which can convincingly promise deadlines. In the social sciences for example, this gives an advantage to time frames, which – in comparison to theoretical analyses – can be more easily planned.

Based on organizational institutionalism and systems theory concepts, we develop a model which allows us to analyze the selective effects of organizational time structures on societal macro-logics.

MICHAUD, JACINTHE* (York University (Glendon), jmichaud@yorku.ca)
The Dilemma of Feminist ‘Double Activism’ and the Pressure of Separatism

Feminism shares boundaries with other political movements, often acting in synergy with many of them. The term “double activism,” coined by Italian feminists, describes the position of feminist activists who are simultaneously involved in political organizations of the left (parties, movements, unions) and feminist collectives. The act of moving across boundaries – between the left and feminism – came to light when this double allegiance was presented as conflicting loyalties in the 60s and 70s by feminists advocating a complete separation of their movement. Double activists who lived this experience, were criticized for not devoting their energies entirely to women and feminism; for not thinking and acting freely outside frames of reference controlled by masculine thought. The pressure felt was described as schizophrenia resulting from being engaged in two opposite worlds and not feeling whole in neither of them. This presentation is based on a comparative research between two types of feminisms which have never been compared before: Québécois (Canada) and Italian feminisms during the 60s and 70s. The paper intends to go beyond the Italian case dominated by the traditional and the New Left and beyond the 60s and 70s period by showing that double activism was – and still is – shedding light on the political evolution of the feminist movement. This is especially the case today, with the renewed synergy found between feminists and other political actors such as young queer, anti-authoritarian, anti-colonial and anti-racist political groups. The paper will focus on the complex consciousness of double activists; the existential aspect of presenting oneself as a member of a political group while helping to create feminist collectives; and the simultaneous activity of bringing social struggles within the frontiers of feminism while seeking to bring feminist principles and feminist struggles within leftist groups.

RC22-391.3
MICHEL, PATRICK* (École Hautes Études Sciences Sociales, patrick.michel@ens.fr)
Elements of a socio-historical study of the relationship between nation and religion – the case of Catholicism

The nation has been, simultaneously, a privileged tool of modernisation (that is of disenchantment) and of the political, and also a potential tool of perpetuation of a new type of enchantment (which is a privileged space for the refusal of modernity). Indeed, should the nation become an object of sacralisation, it is ancient politics, founded on transcendence, that is then maintained.

One of the main actors involved in this perpetuation of enchantment has been the process of forced homogenisation aiming at producing ‘sameness’ in a fictional way. If the nation was calling for a progress of differentiation, it was only...
imposed in the 19th and 20th centuries while (re)producing indifference, and re-
sulting in violence.

Today, the reality of pluralism makes this fiction of ‘sameness’ globally incred-
ible. Should a space which can bring back the current evolutions carried by the
acceleration of globalisation exist, the best option would be the one that car-
ries the resistance against this process. In a situation that is characterized by the
disqualification of the absolute and the passage of ‘sameness’ to plurality, there
should be no surprise to the fact that we are witnessing some actions towards the
reaffirmation of the absolute and of ‘sameness’.

To explore this problematic, this paper will draw on the paradoxical relations and
the successive reorganisation of these relations maintained by the catholic
church towards the nation. In an orientation to follow the sign of the times (if not
to transform it, at least to inhabit it), religion and the nation are both categories
which share with intimacy the avatars of legitimacy, that is the rebuilding (and the
partial over imposing) of complex dispositions to organise the religious. What it
at play around religion and the nation can only make sense when dealing with the
contemporary redeployment of these devices.

MICHETTI, MIQUELI* (Fundação Getúlio Vargas, miqueelimichetti@yahoo.com.br)
The Isomorphism of Practices and Discourses Between the Corporate Realm and the World of Culture in the Flexible Capitalism

Culture plays a central role in the “flexible accumulation”, but does so as a “resource”, as a way of generating economic value. It is in this context that arise no-
tions bringing together seemingly antithetical terms, as “economy of culture” and
“creative economy”. The study aims to show that in this new “capitalism of spirit”,
the world of culture seems to incorporate both practices and discourses from the
new corporate world, which in its turn seems to feed on the cultural sphere. In
this increasingly intricate intertwining between economy and culture, it seems to
be an isomorphism between the practices of companies of the flexible capitalism
and certain agencies of culture. Under the rhetoric of “organizational innovation”,
these agencies replicate business models such as the networking, horizontal, an-
and certain agencies of culture. Under the rhetoric of “organizational innovation”,
these agencies replicate business models such as the networking, horizontal, an-
These new models of “cultural business”, content producers find themselves in
precarious and the promise of every new model of originally to eventually monetize their creative
capital, they experience temporary and outsourced contracts. As Max Weber
teaches us, each form of capitalism needs a corresponding “spirit”, so that will
also be a discourse isomorphism between the world of flexible economy and the
sphere of culture. The discourses about the non-separation between profes-
sional and personal life, between work and leisure that flexible capitalism took
from counterculture is easily extended to current artistic and cultural activities
because such ideas refer to the historical separation between art and work that
founded the very category of “artist”. Through the analysis of similar practices and
discourses into the corporate world and in the cultural sphere, the study will
show how the precariousness has been rhetorically transformed into flexibility
and freedom and how, even under the rhetoric of alternativeness, culture in the
flexible economy has contributed to the reproduction of an unequal world.

MICHOŃ, PIOTR* (Poznan University of Economics, piotr.michon@ue.poanznan.pl)
Parenthood, Well-Being Inequalities and Welfare State. Comparative Study of 20 European Countries

1. Income and wealth inequalities have represented a central issue of social
policy analysis in the past. Nowadays the nature of inequalities and types of
inequalities are changing. The paper aims at analysing the inequalities in subjective
well-being and its relations to life chances and key life course events determined by welfare state. The main questions asked in the pa-
per: Does the welfare state reduce inequalities in people’s overall subjective
well-being? Does the welfare state reduce inequalities in people’s satisfac-
tion in various domains of life such as health or work-life balance?
2. The goal of the paper is to measure and compare, across European coun-
tries, inequalities in overall and domain subjective well-being (SWB) based
on subjective indicators of well-being. Doing so allows for the evaluation of
effects of policies and demographic changes in societies and to provide
information on well-being of different groups in the European societies. So
the first question asked is of diagnostic nature: what are the inequalities
of well-being of parents and non-parents among European countries? Are
there cross-national differences in the level of inequalities in subjective
well-being belonging to the vulnerable groups due to specific life
courses stages (parenthood, marital status)?
3. The paper considers the broadly defined cross national, comparative analy-
sis of contemporary family policy as well as gender regimes. The paper will
assess if the cross-national differences in the level of inequalities in sub-
jective well-being of parents and non-parents can be related to the welfare
state regimes or to specific policies.

MICKELSON, ROSLYN* (University of North Carolina at Charlotte, RoslynMickelson@unc.edu)

The Effects of School Racial and SES Composition on K-12 Reading and Language Arts Outcomes: A Metaregression Analysis

Structural vulnerability theory proposes that educational outcomes emerge as
organizational features of schools interact with students’ individual characteris-
tics. The organizational feature of interest in this paper is school racial, ethnic,
and social class (SES) composition. This paper asks the following question: “Does school racial and SES composition affect individuals’ K-12 reading and language arts achievement?” To answer it, the authors conduct a metaregression of the US social science literature published in the last 20 years on the relationship between reading and language arts outcomes and the racial, ethnic, and SES composition of the K-12 schools students attend. The authors employ a two-level hierarchical linear model (HLM) to synthesize approximately 75 primary studies with 200 re-
gression effects. The tentative answer to this research question is a qualified yes; students attending schools with concentrations of disadvantaged racial minority and/or poor peers achieve less academic progress than their otherwise compara-
ble counterparts in more racially integrated or low poverty schools. Preliminary results indicate that attending a racially isolated disadvantaged minority school has a statistically significant negative effect on reading and language arts achieve-
ment. This relationship is moderated by the size of the sample in the primary study and by the way the independent variable (school racial/ethnic composition) is operationalized. Effects vary for different racial and ethnic minority groups and the effects are stronger in secondary compared to elementary grades. The emergence and widening of the race gaps as students move through the grades suggest that the association of racial and social class isolation with reading and language arts performance compounds over time, illustrating how school composi-
tion effects reflect the dynamics of structural vulnerability theory.

MICKELSON, ROSLYN* (University of North Carolina at Charlotte, RoslynMickelson@unc.edu)
The Role of Integrated Schooling in the Development of Social Cohesion in Multiethnic, Just, Democratic Societies

Schools play a crucial role in preparing children for their adult responsibili-
ties as workers, parents, friends, neighbors, and citizens. Increasingly, in the US
and other multiethnic democratic nations this responsibility is complicated by the
growing demographic diversity among students, a diversity fueled by internation-
al migration. The central argument of this paper is that integrated schooling is
a necessary, albeit insufficient, condition for developing the social cohesion that
just, multiethnic democratic societies require to flourish. Using the United States
as a strategic case study, the paper synthesizes the US educational, social, and
behavioral science literatures on the effects of school and classroom racial, eth-
nic, and social class composition on short- and long-term academic and nonaca-
demic outcomes across the life course, with special attention paid to immigrant
youth. The preponderance of the extant US literature on the topic links integrated
schooling to improved academic and non-academic outcomes, and suggests in-
tegrated schooling is also a necessary, though, insufficient enabling condition for
fostering civic engagement in multiethnic democratic societies. Ironically, despite
this growing corpus of evidence, US schools are segregating by race, ethnicity,
and/or social class. To be sure, because of international and internal migration
trends, the nature of US school segregation has changed so that today it is much
more ethnically complex than the Black-White or Brown-White binaries of the
past. Nonetheless, studies indicate that today, as in the past, schools with concen-
trations of poor disadvantaged minority students generally fail to educate their
students. The paper discusses the implications of its findings for 21st century ed-
ucation in the US and other multiethnic democratic societies (especially OECD
members) to face the opportunities and challenges of geographic diversity and
ternational migration pose for delivering educational excellence and equity to all
students.

MIDHEME, EMMANUEL* (University of Leuven, emmanuel.midheme@asro.kuleuven.be)
Property, Patrimony and Territory: Autochthony and the Politics of Immigrant Place-Making in Peri-Urban Kisumu, Kenya

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The rapid urbanization currently underway in cities of the global South is unfolding under conditions of limited capacity of the state and conventional market mechanisms to avail buildable land at a pace commensurate with population growth rates. In the Kenyan city of Kisumu, there has been a steady conversion of peri-urban agricultural areas into urban land, as residents seek alternative ways of meeting the rising demand for urban housing. These migratory flows and settlements have over time spawned unique spatial structures and power geometries on the urban fringe, as immigrants from the inner city and beyond buy land and settle among the indigenous population. This paper adopts class and autochthony as frames to unravel the socio-spatial transformations underway in peri-urban Kisumu. Using in-depth interviews, focus group discussions and ethnographic fieldwork, the paper analyzes the socio-spatial and political ramifications of land-buying and settlement on Kisian, an indigenous peasant community on the western outskirts of Kisumu. The paper reveals that immigrant-host relations are characterized by uneasy coexistence, features of class and social cleavages. The host community views the ‘immigrant invasion’ as an affront on their indigenous property rights, patrimony and territory—a development they blame for dwindling local fortunes and precarity of livelihoods, as traditional modes of subsistence are disrupted by the new socio-spatial order. Immigrant households have on the other hand devised elaborate socio-spatial strategies aimed at cementing their insertion into the emergent social and built environment. The paper analyzes these adaptive and defensive practices of immigrant households and situates their place-making practices in the broader urban morphogenesis over time. The study addresses vital questions of social inequality and structural power relations embodied in the production of urban space, together with the internal contradictions that typify the urban development process within rapidly transforming cities of the global South.

MIDDLE, EMMANUEL* (University of Leuven, emmanuel.middle@asro.kuleuven.be)

The Mismatch Between Planning Practice and ‘Actually Existing Urbanisms’: Planning Responses to the Phenomenon of Street Trade in Kisumu, Kenya

Street trade has increasingly become an integral part of urban economies in Kenya following the onset of the structural adjustment programmes (SAPs) in the 1980s, and proliferation of informal space production and use. The increased presence of street traders in urban public spaces has however fomented a ‘clash of cultures’. On the one hand are private property interests (of capitalist investors) and the planners’ modernist vision of an orderly city where on the other hand are urban residents seeking alternative livelihood opportunities in the wake of diminishing formal jobs. The aim of this paper is to unravel the conflicts that arise out of these two contradictory worldviews on the use of urban public space. Using in-depth interviews, focus group discussions, mapping and ethnographic fieldwork, the paper interrogates a range of planning responses generated by municipal authorities to regulate and contain the phenomenon of street trade in Kisumu over the past few decades. By extension, the paper situates the politics and spatial practices that have since been devised by street traders to fight back state repression and marginalization and to stake out traders’ claims to urban public spaces. The central argument in the paper is that within a street trade and other forms of informal space production and use constitute the predominant mode of urbanism in contemporary Kisumu, official planning practice is still steeped in prescriptive ethos aimed at producing the ‘modern’ city. There is thus a mismatch between official planning policy and the practical realities of what Shatin calls ‘actually existing urbanisms’. The paper contributes to current debates on inequality, informality, urban citizenship and the challenges of governance, particularly as they relate to contemporary planning practice and scholarship on rapidly urbanizing cities of the global South.

Weber’s Ethic of Responsibility As a Framework for Professional Ethics

Max Weber coined the term ethic of responsibility in his lecture on Politics as a Vocation in 1919. The ethic of responsibility demands to take account of both the means and ends of one’s action. Weber attributes the ethic of responsibility with an ethic of “good attitude”: “there is an abysmal contrast between conduct that follows the maxim of an ethic of ultimate ends—that is, in religious terms, ‘The Christian does rightly and leaves the results with the Lord’--and conduct that follows the maxim of an ethic of responsibility, in which case one has to give an account of the foreseeable results of one’s action.” My paper discusses how Weber’s ethic of responsibility can be turned into a framework for professional ethics. Key bridging concepts are (i) personal/professional autonomy and (ii) the expected degree of performance of professional work (quality, effects, efficiency, invested expertise…). I will explicate how an ethic of responsibility “takes account of precisely the average deficiencies of people” and can therefore be linked to empirical social psychology. Redefining Weber’s ethic of responsibility as professional ethics clarifies some open conceptual issues both in Weber’s approach (justification, evaluation) and in professional ethics (e.g., personal autonomy vs. professional standards).

Public Participation and Deliberation about Nuclear Energy Policy: A Case Study of “National Debate” after Fukushima Accident

This paper explores the possibility of public participation in decision-making on nuclear energy policy through a case study of “National Debate” on energy choices after the Fukushima accident in Japan. Japan has been pressured to fundamentally reform its national energy policy in order to break away from the excessive dependence on nuclear energy. In the summer of 2012, the DPJ (the Democratic Party of Japan) coalition government at that time presented a set of national energy policy options, which ranged from the complete phase-out of nuclear power to partial abolition. In order to stimulate public discussion whether to withdraw from nuclear energy, the then DPJ government introduced the method of deliberative poll and invited about 290 randomly selected citizens around the country to discuss the energy choice. The deliberative poll was the first-ever public participation and deliberation about nuclear energy on a national level, and this paper focuses on the deliberative poll through the “National Debate” on energy choices. Being a researcher, fieldworker, and ex-government official of “Cool Japan” policies and business projects, I will discuss about possible answers to this set of questions.
about connections between public deliberative/participatory exercises and decision-making in energy policy.

Family and Non-Family Support during the Transition to Parenthood

Although today parenting is largely a choice, having children causes stress. Parents, especially of young children, are tired, sleep deprived, and stressed (Evenson and Simon, 2005, Umberson et al., 2010). They experience financial strain (Stanca, 2012) and time pressure. Childcare, an activity slightly more enjoyable than housework (Kahnerman et al., 2004) is in conflict with parents’ leisure, freedom, work demands, and romantic relationships (Angeles, 2010, Lyubomirsky and Boehm, 2010, Nomaguchi and Milkie, 2003, Twenge et al., 2003). Previous studies show that families and other networks provide extensive help to parents of young children (mainly by providing childcare and housework, advice and information, as well as material support; see: Bengston, 2001, Chan and Ermsich, 2011, Coall and Hertwig, 2010, Hank and Buber, 2009). However, longitudinal analyses of buffering effect of family and non-family networks, and the interplay of the two types of support remain understudied.

Our analysis fills this gap in several ways. First, we test if the support available from family and non-family networks actually increases after the transition to parenthood. Second, we test the hypothesis that family and non-family support alleviate the negative well-being consequences of early parenting. Third, we assume the family and non-family support affect differently mothers and fathers’ wellbeing.

We use the Swiss Household Panel to observe a sufficient number of transitions to parenthood together with detailed information on support available from relatives, neighbours, close friends and colleagues. To control for section effects, we use fixed effects (hypothesis 1) and difference-in-difference (hypothesis 2) models.

This is one of the few analyses explicitly testing with panel data the buffering effect of support from various sources during the transition to parenthood. It is also one of the few analyses testing if social support actually increases during the transition to parenthood, which so far is only a plausible assumption.

Changing The Subject: Occupy Wall Street's Achievements and Prospects In Comparative Perspective

Occupy Wall Street burst onto the scene in New York City in September 2011. It was partly inspired by social movements in the Middle East and Southern Europe, and soon after its critique of inequality gained traction with the slogan “We Are The 99%.” It helped to stimulate many similar occupations worldwide. In the aftermath of the eviction of the New York City protestors from Zuccotti Park and the similar evictions around the country, the U.S. Occupy Wall Street movement has dissipated. But similar movements have continued to spring up around the globe, and the social processes that led to the emergence of Occupy in the U.S. remain in place.

This paper explores the sociological roots of the New York Occupy movement, with particular attention to the changing U.S. labor market. Drawing on the results of a representative survey we conducted of New York City Occupy Wall Street participants in May 2012 protest march, we analyze the movement’s characteristics and discuss its achievements. In addition, we consider various comparisons and contrasts between the New York Occupy movement and other such movements before and since, and on that basis speculate about the prospects for the future of such movements in the USA and elsewhere.

Social Conditions of Happiness. the Case of Mexico

Social conditions of happiness. The case of Mexico

The paper is based on a national survey that will be made in Mexico next November by the seminar Subjective Satisfaction about Life and Society. The paper will present the results of a group of variables associated to happiness according to the following levels. At the individual level, it will explore the conscious of freedom in decision making, the expectations horizon assumed, and the perception of control over the future life. At the historical level, it will explore two dimensions: a) social cohesion levels in terms of quality of social relationships (social capital), homogeneity of them, and conflict (family, friends, neighbors, work); c) quality of social relationships and decision practices in organizations (voluntary, club, civic
and political). At the macro level, it will be taken into account two dimensions as well: a) cooperation and public goods (for example, environment care or taxes payment), and b) quality of government. We intend to show that happiness is positively associated with the capability of making decisions freely and with the sense of control of our lives; with the presence of interaction spheres, informal or for formalized, without social fragmentation and regulated by reciprocity patterns; and, with the perception that our lives are built on cooperation with others and with governments that listen to us and consider our demands.

Hospital Board Oversight of Quality and Patient Safety: A Narrative Review and Synthesis of Recent Empirical Research

Context: Recurring problems with patient safety have led to growing interest in helping hospitals’ governing bodies provide more effective oversight of the quality and safety of services. National directives and initiatives emphasise the importance of action by boards, but the empirical basis for informing effective hospital board oversight has yet to receive full and careful review.

Methods: This article presents a narrative review of empirical research to inform the debate about hospital board oversight of quality and patient safety. A systematic and comprehensive search identified 122 papers for detailed review. Much of the empirical work has appeared in the last ten years, is from the US, and employs cross-sectional survey methods.

Findings: Recent empirical studies linking board composition and processes with both patient outcomes find clear differences between high- and low-performing hospitals, highlighting the importance of strong and committed leadership that prioritizes quality and safety and sets clear and measurable goals for improvement. Effective oversight is also associated with well-informed and skilled board members. External factors (such as regulatory regimes and the publication of performance data) might also have a role in influencing boards, but detailed empirical work here is scant.

Conclusions: Health policy debates recognise the important role of hospital boards in overseeing patient quality and safety, and a growing body of empirical research has sought to elucidate that role. This review finds a number of areas of guidance that have some empirical support, but it also exposes the relatively inchoate nature of the field. Greater theoretical and methodological development is required if we are to secure more evidence-informed governance systems and practices that can contribute to safer care.

New Fatherhood? Post-Separation Parenting Roles and Responsibilities In Australia

This paper addresses parenting roles, responsibilities and outcomes following marital separation in Australia (involving 15% of families with children). Recent research suggests a fathering paradox: although the proportion of lone fathers has increased in Australia over the past decades (now approx 22% of families with children) time use surveys show the level of involvement of fathers in every-day child care has changed very little. Despite fathers’ general lack of ‘hands on’ parenting skills, ideological changes to the Australian Family Law Act in 2006 mandated post-separation ‘shared parental responsibility’, which has been widely interpreted by lawyers and parents as a basis for equal (50-50) shared custody of children. However, a 2009-11 qualitative study, entailing three, in-depth interviews found that gender inequity in post-separation parenting responsibility leaves many mothers reliant upon welfare payments. This study included ‘foster’ fathers and mothers – ‘primary time’ parents whose children live with them most or all of the time – as well as parents sharing the care of children more equally. The study underpins policy underpinning the Family Law changes assumed a degree of interaction and cooperation between separated parents predicated on a new construction of gender in ‘doing family’. However, there is little empirical evidence to support this assumption, since (a) most separated mothers and fathers spectacularly fail to successfully negotiate parenting duties on a daily basis and (b) fathers appear more concerned with their own ‘rights’ while mothers shoulder a disproportionate burden of everyday ‘responsibility’ for children (even in ‘equal shared care’ situations where the children live half the time with each parent) – and this inequity mirrors the continuing greater levels of maternal responsibility within ‘intact’ families. Such findings reinforce the disparity between stated attitudes of concerned fathers versus their actual behaviour.

Tourism Promotion and Disaster: Ethical Issues Faced in Promoting Tohoku Since March 2011

The series of disasters following the 2011 Tohoku earthquake severely affected Japan’s ability to attract tourists. This has led to a government-directed international tourism campaign of unprecedented scale for Japan. While international tourist numbers quickly rebounded nationally in 2012, those to the disaster-hit areas remain low.

The primary cause of deflated tourist numbers in Tohoku seems to be fear of nuclear radiation. This concern was also central in Tokyo’s recent successful bid for the 2020 Olympics, and is likely to grow as the Olympics approach. Public and private institutions in Japan involved in tourism, along with guidebook publishers and others, face a serious ethical dilemma: How to promote foreign tourism to the disaster-hit areas and support their economic recovery while being open and informative about potential health and safety dangers.

This paper focuses on this ethically-charged dilemma through examining changes in discourse in international tourism promotion amongst these organizations. The appeal to support both Japan’s and the disaster-region’s recovery of tourism was central to many of these discourses in 2011 and 2012. This included multiple-entry visas for Chinese tourists on the condition that they visit Tohoku, and JNTO encouraging travel agencies to offer tours for foreign volunteers.

In 2013, locally-based internet tourism sites and foreign guidebooks still draw on recovery in disaster-hit regions as a central motif in promotional discourses. However, at the national level there seems to be a shift away from focusing on the disaster-hit regions and of promoting international tourists to these areas to help revive these economies. This paper looks into causes of this divergence in discourses. It considers how these organizations and institutions face differently the ethical dilemma of helping those hit by disaster in guiding the practices of international tourists while keeping tourists aware of potential safety dangers.

Contemporary Greek Myths: Visual Resources for Self-Transformation

This paper focuses on the use of visual media, including music videos, television programmes and films, by young people living in Kinship, foster, residential and secure care in Scotland. It draws on a two-year exploration of practices of belonging that employed visual and musical methods (photo elicitation around spaces and objects; drawings of actual and ideal ‘homes’; recordings of sounds including music tracks then discussed in two interviews). The data produced suggest the importance of such visual media to participants in both blanking out and exploring difficult relational legacies and current circumstances. In particular, like contemporary Greek myths, television shows and music videos often portrayed difficult family situations similar to their own including parental separation, police raids, the absence or loss of a parent. Such representations and their use by participants point to a complex interweaving of absences and presents cross-cutting the private and public spheres, and often reflected and reproduced by academic disciplines. In spite of living in a somewhat ‘confessional’ culture, prevailing normative family discourses generally discourage these young people from open discussion of such family circumstances. At the same time, the semi-public nature of these young people’s family lives is reflected in often voluminous case files, and the static histories they contain, repeated many times over at case hearings. Further such circumstances are often used as exemplars of dysfunctional/troubled families in stigmatising public, political discourses that direct attention from the structural inequalities that often underline them. We argue that such visual media help to provide such young people with more fluid, more culturally accepted and semi-public representations of their experience and potentially provide them with resources for self-valorisation and transformation.

‘Taking Photos? I Don’t Do That Anymore’: Critiquing the Photo-Diary As Method in Ageing Research

Over the past 15 years there has been a burgeoning interest amongst researchers, policy makers, and funders in using methods that encourage deeper engagement with communities and offer participants greater involvement in the research process (M itchell, Milne and de Lange 2012). This desire to use more emancipatory and decolonizing methods (Smith 1999) has led to ‘an explosion of participatory media projects’ (Luttrell and Chalfen 2010: 197). Little has been written, however, about how participants regard (or dis)engage with the visual as a method of choice. Over the past 17 months, a team of researchers from the University of Edinburgh and the Scottish Centre for Social Research have been exploring day to day kindness, help and support and the increasing role it plays as we age www.livingbibles.org.uk. The research, funded by the Joseph Rowntree Foundation, adapted Bartlett and Milne’s diary making method (Bartlett 2011). Following an initial mapping exercise and semi-structured interview, participants were asked to keep a diary for two weeks recording mundane acts of help, support and kindness, offered, received, wished for or rejected. Participants chose the mode of production from a selection of visual (photo or drawing), audio (sound diaries) or textual (written or oral). Based upon semi-structured interviews and 45 diaries, this paper presents a critique of the visual as a diary making method and an exploration of its limitations.

Authoritarianism and Paths of Resistance in Latin America

How does political crisis and, more specifically, repression, transform artistic movements and their evolution? And how do the paths that artists take in contexts of crisis shape the cultural environment in which citizens respond and resist? Authoritarianism in Latin America during the 1960s and 1970s spawned bifurca-

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
tions and the re-drawing of boundaries in and between artistic movements. This paper explores the separation of political from cultural resistance as one such bifurcation among groups of musicians facing military dictatorship in Uruguay and Brazil during this period. Comparison of four musical movements sheds light on how repression transformed artistic trajectories in each country. Politically engaged musicians in Uruguay built on social movement participation and ideological commitment to produce music that could be used as a tool for sustaining anti-authoritarian identities and supporting mobilization. Countercultural actions attacked authoritarianism from a different angle, challenging established national identities by importing foreign styles; thereby also threatening the cultural status quo. The bifurcation of political and cultural responses to authoritarianism produced distinct paths which diverged or converged depending on the institutional conditions in which artists carried out and disseminated their work. In some mediating contexts, competition between the two currents prevailed, producing polychronous and polypolarized trajectories. In other environments, the two paths converged as artists collaborated to combine political and cultural responses to repression. These dynamics in turn shaped the cultural and political environment of resistance to authoritarianism, just as much as social movements and, sometimes, in the absence of openly manifest social movements. Building on this comparison, the author draws broader conclusions on the long-term impact of resistant art on the cultural, political and social landscape in which it develops.

From the Inner Workings of Innovation to Historical Accounts of Artistic Development

What mechanisms drive innovation in art? How does exploring this question incite broader understandings of the history of artistic movements? This paper examines the development of Brazilian artistic movements. A look at the local, regional and international dynamics that impacted these movements reveals repeating mechanisms that both facilitate and limit innovation. The study of Brazilian artists and movements reveals processes relevant to the broader, historical development of artistic movements in Latin America. Methodologically, the focus on innovation in art worlds requires constant shifting among analytical levels in order to grasp transnational influences, the interactions of global and local actors, and the dynamic of change and transformation in art worlds. Adding a relational focus to this multi-level approach helps to unveil the channels whereby artists and their movements develop. The study describes three case studies of the evolution of art movements in Brazil over the 20th century. First, a concern with authenticity that led to explorations of ‘native’ Brazilian cultural heritage; second, a fragmented notion of national culture that built on mid-century populism; and third, the critical and grounded incorporation of diverse cultural elements within an international and, in some cases, global cultural sphere. The identification of mechanisms that repeat over time with each step in the development of an artistic trajectory is a tool that may be applied beyond this case. These mechanisms shed light on widely recognized phenomena such as revivification, nationalism, counterculture and political engagement in art. The paper demonstrates, both empirically and analytically, how it is possible through the study of innovation to build a broader narrative of the struggles through which artists and their audiences build identities within national contexts.

The Socio-Spatial Polarization of Large Housing Estates in East German Shrinking Cities: A Governance Perspective

The paper investigates the influence of local governance and planning practices on the increasing social polarization of neighborhoods in large housing estates in shrinking East German cities.

Despite significant outmigration of middle-class families the housing estates did not experience a collective downgrading as predicted in the early 1990s after the reunification. Instead 20 years after there can be observed a small-scale patchwork pattern of stable and impoverishing neighborhoods. The author argues that the uneven development is not only triggered by the demand-driven housing market in the shrinking cities and by segregation patterns caused by the GDR housing policy. Likewise this development is reinforced by specific planning and governance processes: (1) The Federal Government of Germany supports the development of sustainable urban structures in shrinking cities with large-scale funding programs. The approval for funding is based on defining areas of preferred investment and areas of disinvestment and demolition. (2) There are a growing number of real estate investments in low-quality housing stocks. These growing market actors often pursue investment and rental strategies that are contrary to the municipal development/demolition plans. (3) Municipal social housing policies and the allocation of low-income renters by housing companies are spatially selective.

Hence, the author assumes that the small-scale social polarization in the housing estates is reinforced by conflicting investment strategies of public and private actors, by contrasting rental policies of public and private landlords and by the withdrawal of the municipalities regarding to socially stabilizing measures from areas of disinvestment and demolition. Apparently dealing with urban decline is highly restricted by the unequal distribution of power and resources to the actors, their divergent interests and the lack of incentives to cooperation. To develop these arguments the author analyses the case of the continuously shrinking East German city Cottbus.

MODEL MINORITY AND DISCRIMINATION: CASE OF THE SECOND GENERATION OF COMBATANTS REFUGEES IN FRANCE

It is said that immigrants and foreigners in France posed a problem of socio-political order in the middle of 1970s. While the Maghreb immigrants have undergone the experience of discrimination and exclusion in French society, South-East Asians are perceived to be more considered to be a ‘more cohesive’ or ‘silent minority’ in the integration process at the local resettlement and benefited from a warm welcome (Gilles 2000; Simon-Barouh 2003). They have a conscience to take advantage of their positive image based on ethnic category. It is suggested that for French people, receiving Southeast Asian refugees provides an opportunity to justify the status of non-racist citizens (Roquejoffre 2009:118). With this good reputation, they became a ‘model minority’ in France. As Asians have a fairly positive image compared to other immigrants, it is difficult to say that there is a feeling of hostility and racism against them (Gayral-Taming 2000). However, the idea that Asians can be accepted because they are silent while other ethnic groups without such a personality could be rejected is itself a radicalized stereotype. In the context of French society, the positioning of Southeast Asian refugees as ‘exceptional’ resulted from colonial history and the politics of compassion. But this exceptionality risks generating racialised practices. Regarding Second generation, their educational success in science and their typical choice for the sector of the communication industry has been noticed (Le Hiu 1996; Meslin 2006; Masse 1996). Are they really success in their schooling and professional career? It is doubtful if they...
real benefits from their positive image in their living experience. By examining educational and occupational attainments of the second generation of Cambodian refugees in France, I will show aspects of discrimination encountered by them as a model minority. I use interviews collected from my field research conducted between 2010 and 2011 for this analysis.

How Is Multiculturalism Americanized and Japanized?

The idea of “multiculturalism” has spread globally and impacted on the ways of being “nation-state” since the 1970s when Canada and Australia enacted the official policies of multiculturalism. The United States is one of the earliest adaptors of the idea to redefine its legacies of cultural diversity in the 1980s. Japan, one of the “weak” states in the strength of multiculturalism policies, modified it to a vision of “multicultural coexistence (tabunka kyosei)” for incorporating foreign residents in the 2000s. This paper compares how to accommodate multiculturalism as an image of national society in United States and Japan in entangled three layers: community legacies, national discourses, and global values. Both countries have had historical legacies to incorporate minorities at the level of the local communities. Related to the legacies, national discourses redefine the relation with foreign populations, as well as sexual minorities, are typical examples of domestic scapegoats and objects of violence.

As ultra-nationalists and neo-Nazis themselves are very few in Mongolia, the problem is whether public opinion is tolerant of them. However, some public opinion becomes a threat to the nation. The USA’s liberal modifications help to implant a multicultural ethic on its national image while Japan’s transnationalist interpretations fail to nationalize it. Based on analysis of governmental reports, public polls, and reactions from local communities and minorities, I will discuss the ways in which USA and Japan establish two versions of multiculturalism to adapt it in the different socio-cultural contexts in the era of global migration of idea.

A New Stage In The Fragmentation Of Production: Economic and Social Implications For Development Countries

This paper deals with the implications on production activities, income distribution and institutional changes due to the significant changes taking place in the world economy. One of the more relevant characteristics of globalization in its productive and commercial aspect is the segmented organization of national and international production. A new feature of the present international division of labor is the participation of countries that opened recently to the world economy. This is the case of large countries such as China, India, countries of Eastern Europe, and Latin American ones, like Brazil, México.

The incorporation of these new actors in the global economic stage gives way to deep concerns, analyses and debates on the evolution of the economic specialization of developed countries and the industrialization strategies which are open to emerging ones.

Emerging countries have their own concerns regarding segmentation and the new trade model as it implies a great dependence to the MNCs in terms of markets, technology and organization. The new strategies require the reorganization to modify the structure of specialization and reduce production in sectors with price competition. They need institutions and incentives for the creation of knowledge and innovation. Thus, this paper deals with the following questions: What institutional arrangements are needed in order to make possible the insertion of emerging countries in knowledge intensive activities with high value added? Are the implications concerning employment the same as those of the international trade of final products? Do the observed tendencies towards a more uneven distribution of income, in both developed and developing countries, arise from the interrelation of national labor markets? Does fragmentation increase the negative effects in the distribution of income? Which should be the new economic and social policies and the institutional changes?
Leisure Unites and Strengthens Family Bonds --- a Case Study on Families That Spend Quality Time on Holidays Together

Family will always continue to remain in one form or other as the basic building blocks of society. Today's world is one that is riddled with competition deadlines stress. With high profile jobs to be managed and education degrees to be attained by children to secure their future it's so important that families make quality time for leisure.

The Researcher tries to unfold the following objectives:

To identify the growing problem of families dispersed due to job studies constraints
To identify the importance of making time for leisure to be together
How quality leisure time binds group and contribute to bonding and unity
The impact of leisure on the family life today and the need for families' world wide to do the same
With the above objectives in mind the researcher is analyzing the role leisure plays in building tight family bonds
The study will select few cases where girl students who reside far away from homes in hostels but are still close to their family members and share a strong bond.

Leisure Unites and Strengthens Family Bonds --- a Case Study on Families That Spend Quality Time on Holidays Together

Migration and Gender Inequality ---a Case Study of the Role of MICRO Finance in Mumbai Empowering Women and Transforming Their Lives

Many women in the unorganised sector set up small business, that require very little capital. These are essentially low productivity undertakings. However they are generally relatively more efficient than the small business set up by men because women are able to utilize capital productively. With the expansion of microfinance facilities credit is also now available to many of these small business, enabling the women entrepreneurs to expand their activities. Providing capital to micro businesses, set up by women has emerged as an important means of women's empowerment. Empowerment of women is another important indicator of development of a nation and an economy.

The Researcher tries to unfold the following objectives:

To identify the growing problem of gender inequality in cities.
To identify the need for micro financing.
How micro financing contribute to support and empowerment.
How marginalized women's lives are impacted by micro financing and the importance of replicating this phenomenon.

Exploring a Model of Inter-Disciplinarity Based on Collective Action Theories

The objective is to develop a theoretical model to analyse and facilitate trans-disciplinary dialog and collaboration between art, science, engineering and humanities (SEAD). The model is inspired in key concepts taken from sociological Theories of Collective Action, which is applied to analyse different kinds of collective actions. We propose that these theories can be pertinent to understand the interaction between the main dimensions, agents, resources, contexts and strategies of trans-disciplinary action.

The hypothesis is that interdisciplinary action can be considered as a form of collective action according to the following definition: Collective action is the result of a social action (or collective challenge) carried out by the set of formal and informal interactions established between (1) a plurality of individuals; collectives and organized groups and (2) other social and political actors with which they come into conflict. This conflict is triggered by the appropriation (of), participation (in), and transformation of relations of power to achieve social goals, and above all, through the mobilization of certain sectors of society (Tejerina, 2010).

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Transnational corporations have radically altered the urban landscape of many cities in India. They are housed in gleaming, well-maintained buildings with round the clock security. Within these workplaces, primarily middle class virtually mobile workers interact with clients and customers from North America, Europe and Australia.

This paper focuses on the workers who “service” India’s high-tech workplaces. Based on interviews with workers who provide security and housekeeping services, we trace newly emerging patterns of gendered work. Traditionally female-dominated sectors, such as cleaning, have experienced a large influx of men as a result of the rhetoric of professionalism which is used to promote this work within foreign corporations. Men and women in cleaning make sense of the stigma associated with their jobs (in the context of both gender and caste expectations) while simultaneously stressing the technology-based, standards driven nature of their jobs. Similarly, men and women in security jobs highlight the militaristic precision demanded for their jobs while recognizing the low waged, unstable nature of their work in the context of subcontracting. In making these normative claims, workers define and inscribe new gendered rhetorics of masculinization and feminization. We argue that these rhetorics support the gendered segregations of these occupations, which are poorly paid precarious jobs for primarily male workers.

Rethinking Pharmaceuticalisation from the View of Japanese Context

Medicalisation is a key concept in medical sociology, and is useful tool to capture social control by medical profession. Recently, however, scholars increasingly are focusing on the pharmaceutical aspects of medicalization. Pharmaceuticalisation is defined as ‘the process by which social, behavioural or bodily conditions are treated or deemed to be in need of treatment, with medical drugs by doctors or patients’ (Abraham 2010). In recent years, although the concept of pharmaceuticalisation have been pervasive in some journals, the concept is still primarily a topic explored in scholarly terms. Indeed, according to Bell and Figert (2012), as of June 17, 2011, there were only seven thousands hits for “pharmaceuticalisation” in Google, and only seven for the topic of “pharmaceuticalisation” in Web of Science. However, there is a need for the concept of pharmaceuticalisation, because the empirical phenomena, which medicalization theory cannot adequately capture or explain, are increasing. Though discussion of the concept is increasingly developing in Japan, there is very few research about pharmaceuticalisation in Japan, in this report, by considering the reason for lack of the discussion in Japan, I aim to reconsider the concept of pharmaceuticalisation critically, and to explore the availability of the concept. One of the factors that pharmaceuticalisation is not general in Japan is universal health insurance system. Japanese people can receive the same medical care at anytime and anywhere by universal health insurance system. Therefore, we cannot imagine the impact of pharmaceuticals is greater for Japanese people. That is, generalising pharmaceuticalisation without the point of social system would be hard. However, given that a lot of Japanese people use dietary supplements, pharmaceuticalisation might be affect individual healthisation. Therefore, by using pharmaceuticalisation that is associated with individual healthisation and social system, it might be available to analyse social phenomena of pharmaceuticals better.

Gender Inequality and Education for Women

Due to rapid population growth, poverty and politico-economic reasons, the number of illiterates is increasing continuously in the world. In most society's women have lower status, no access to education, less food and no health care. Work longer hours, have lowered incomes and little or no access to ownership of property. Normally in developing countries, the proportion of women literates is less than that of literate men. Girls receive less health care and food than boys thus girls are malnourished. Due to illiteracy they also mostly work in informal sectors where pay levels tend to be lower. Gender specific inequalities are reinforced by unequal access to education. Girls often are simply not sent to school or drop out later, thus increasing the level of illiteracy among women. Those who live in semi literate families, there is no pressure on women to receive education. Even when the motivation is there, other obstacles are permanently present. Women have to perform so many roles that they do not find enough time for fulltime or even part time educational activities. Fatigue, frequent or early pregnancy, caring for children and families, agricultural and cultural activities and formal or informal employment, are among the many reasons for lack of time. Gender specific inequalities are reinforced by unequal access to education. Girls often are simply not sent to school or drop out later, thus increasing the level of illiteracy among women. Gender specific inequalities are reinforced by unequal access to education. Girls often are simply not sent to school or drop out later, thus increasing the level of illiteracy among women.
This paper explores the nature of health care practices in India. While analyzing the issues concerning the health care, it tries to highlight the major concerns affecting health care in India. An attempt is made to provide an alternative to revitalize the provision of public health care infrastructure in the country.

Quality of life through good health is an essential resource that enables individuals, communities and nations to overcome poverty and develop their potential. Healthy ageing is prerequisite for progress and development. This paper will explore the relevance of equitable distribution of health care services to the poor and unreachable. It creates awareness about the new health care concept of telemedicine (E-Health) which can bring the best health care services to people of remote areas. Changing health and morbidity patterns in rural and urban areas are drawing global attention in recent years. Investing in hospitals with good infrastructure may not be much advisable in poor people of rural areas because of the lack of well qualified and experienced medical personnel. Also people find it too costly. The introduction of Information and Communication Technology in healthcare by some hospitals in India in the form of telemedicine is bringing about a revolution in the health care services. Research shows that such activities have tremendously helped the people of rural and remote areas of India who are not able to afford good healthcare facilities.

San Francisco and The New Economy Of Desire

Based on extensive research and in an ethnographic incursion of seven months in San Francisco, this paper discusses the relations between new forms of work and leisure, the changing urban occupation, technology development and how they shape the search for love/sex partners. Despite the apparent universality of technology it is intrinsically connected to the cultural setting in which it is created. Because of the concentration of high tech industries, start up companies and research centers, San Francisco and its region is a privileged site to explore the interconnections between economic changes, gentrification and the use of mobile digital media. Its local life also allows a clearer comprehension of the rising of a new economy of desire marked by the nomena like the consolidation of the hook up culture, the decadence of monogamy and a rising new morality concerning love and sexual relations. Based on sexuality studies, sources on urban gentrification, and digital media investigations this paper aims to provide an initial analysis about the growing use of apps on mobile devices like smartphones and tablets in search of love and/or sexual partners. One of the main arguments is that this new economy of desire has also created a new sexual ethic and is changing moral patterns about monogamy and partnership. From Agitation to Political Autonomy: Interlinks in Three Movements in a Northern Province of India

This paper attempts explore the impending continuities in people’s mobilization by identifying the inter-linkages in three contemporary movements in a northern province (Uttarakhand) of India. In an empirical study of the three movements; the movement against felling trees (chipko i.e. hugging trees), the movement against alcoholism (Sharab-bandli), and the movement for a separate scale of rice fields was not so large. However, ARUGA does not describe the creation of the lacquer ware which a head family of Isigami produced in those days. It is thought that the production using forestry materials such as the lacquer ware or the Goro was important for the cash flow, because in this area the scale of rice fields was not so large. However, ARUGA does not describe the concrete situation of the lacquer ware production. How was the family system related to the lacquer ware production system?

On examining this question, we discovered some field notes and documents of Isigami research by TUTIYA Takao, who is a professor of economic history and participated in this research as a coworker but withdrew from it in midstream.

In this monograph, the serf system which was presented at Isigami was investigated and analyzed in detail. From this monograph, ARUGA was going to form the “Douzoku (cognate groups) theory”, which is the base structure of Japanese society.

However, when we read this monograph, we feel Aruga did not pay enough attention to the lacquer ware which a head family of Isigami produced in those days. It is thought that the production using forestry materials such as the lacquer ware or the Goro was important for the cash flow, because in this area the scale of rice fields was not so large. However, ARUGA does not describe the concrete situation of the lacquer ware production. How was the family system related to the lacquer ware production system?

On examining this question, we discovered some field notes and documents of Isigami research by TUTIYA. In this report, we try to consider the following points in reference to these notebooks and other documents. 1) Why did TUTIYA abandon a joint investigation? What was the critical issue for him? 2) In this critical issue, what position does the data of the lacquer ware business occupy? 3) Can we see something new when compared to the monograph by ARUGA?

Through these questions, we try to relativize the Douzoku theory and to examine the dispute over the Japanese capitalism.

RC45-741.2 MISUMI, KAZUTO* (Kyushu University, kmisumi@scs.kyushu-u.ac.jp)

Net-Base Theory of Social Capital

The concept of social capital has been widely accepted; however its theoretical significance in sociology is not clear yet. In this paper, we propose a theoretical device in order to make this analogical concept the key to integrate relation-theoretical theories of social relation, social networks, and social structure) in sociology. Social capital is analogy, the aim of which is to capture such mechanism that is similar to capital accumulation process in social structure. Every element of social
structure and every relation-theory as well should have relation to this concept to some degree. As a rule it inevitably has multiple meanings; on the other hand, it should work as a hub by which various relation-theories are consistently connected to each other. In order to extract this unifying power, we introduce the ‘net-base.’ Net-base is a common attribute that provides a basis of social ties. Thus net-base implies a corresponding socio-centric network that consists of all the members who share it; moreover, configuration of various net-bases implies interrelationship between multiple socio-centric networks. We assume that accumulation of social capital is oriented by socio-centric networks embedded in social structure; then, net-base is an indicator in terms of which we can infer how network mechanisms in social structure condition the accumulation process of social capital. In making the inference we often need to access different type relation-theories, which will provide an opportunity of theory integration. Additionally, net-base is easily measurable by questionnaires on personal networks and group participation in ordinal individual-base survey. This makes it possible to locate ‘social capital’ in the storage house of relation-theories and to empirically find valid inference in regard to network mechanisms of capital accumulation. More extensively, it should have integrity with the rational choice research program of social capital proposed by Flap and Völker (2004).

*The Prime Function of Intellectuals and New Conditions of Framing Social Imaginary*

The paper aims to enrich the existing reflection on the political role of public intellectuals by exploring the impact of the changing nature of the political and intellectual spheres on their potential to connect with an audience. It argues that the significance of public intellectuals’ influence in the political arena is determined by their ability to imprint themselves on a wider social imaginary through discursive practices, which are grounded in the social conditions framing its production. The paper critically evaluates theories that assume the significance of public intellectuals’ influence in the political arena. The paper’s theoretically informed empirical exploration of the intellectuals’ prime function, that is, the elaboration of these symbolic configurations, focuses on the fate of East European intellectuals who assumed the role of the creators of the post-communist state. These intellectuals-turned-politicians did not even try of proving that they could ‘live in truth,’ approached politics without any illusion. Yet their most effective performance in politics was not when they were in office but when they were in opposition. Today, East European intellectuals, like their counterparts in modern western democracies, are without much chance to be the practical politicians of tomorrow. The paper argues that the present diminished role of public intellectuals is a result of the new conditions of forming the collective imaginary. Following discussion of these changes as indicative of the new complexities and uncertainties of modern world, the paper concludes that the public intellectuals’ role is being recalibrated through the proliferation of imageries that do not identify a dominant conception of the present and underlying structural transformations and therefore are unable to provide dependable political and cultural interpretations of the present and a reliable guide for knowledge of the future.

**MISZTAL, BARBARA*** (University of Leicester, bm50@le.ac.uk)

*Trust and Modes of Cooperation*

The paper asserts that presently – as a result of the growing importance of networks of interconnected relationships, the complexity of the system and the innovative use of knowledge as sources of productivity gains – there is an increasing demand for cooperation. The paper critically evaluates theories that assume that today’s society increasing depends on externally regulated behaviour, so not on trust, to sustain cooperation (Cook et al 2005) and theories that argue modern society deskills people from cooperative competence (Sennett 2012). It illustrates that although today’s society increasingly ensures their solution to the problem of cooperation by setting their foundations in formal rules, yet attempts to act in the spirit of rational formalism are always complemented by the practical importance of various informal, based on trust, non-hierarchical voluntarily negotiated forms of self-coordination. Moreover, many current processes increase the scope for not role-bound and role-obedient conducts and therefore facilitate trust based social encounters. At the same time, these trends, which lead to the loosening of formal hierarchies, de-conventionalisation of organized practices, and the underestimation of the degree of demand for trust, also create favourable conditions for trust abuse. In order to enhance cooperation, in the context of the growing level of education, expanding access to information, new digital technologies and the process of globalization, we should simultaneously rely on both formal regulations and informal means, such as trust, to secure conditions for socially beneficial exchange. In order to foster a culture of cooperation in which all participants gain a measure of self-respect, autonomy and agency and in which there are neither winners nor losers, we need to search for ways of tuning the formal and informal means supporting social exchange.

**MITA, AKIKO*** (University of Tokyo, happiologist@hotmail.com)

*Qualitative Analysis for Sociological Study of Various Conditions of Happiness*

What I would like to emphasize in this presentation is that now we need to turn our analysis of contents (as well as based on qualitative data for the sociological study of “happiness.” To say it objectively, we need to examine the methods and effects of detective analysis of research data from interviews or open questionnaires.

In this presentation, I will show the result of my examination. The examination has two purposes: open questionnaires treating them as short interviews, made on Mexican university students, who as we all know tend to answer “very happy.” As a result, three clusters were found, according to the regions, with different “conditions for happiness.” Feature keywords for happiness are; In the Capital, “above a certain economical level, nation and politics, charity-like service,” in Chiapas, the most southern border state, “economic problems, close people, religious consciousness,” in Puebla, a city in-between those, “autonomy or self-sufficiency, ‘around me’ or ‘social’ situations.” Naturally, many points are shared as well. Almost all the data used by social scientists for analysis about happiness also replicate measurement and scaling of happiness. We cannot completely solve those problems but can moderate their problem levels by changing the analysis levels from whole happiness to happiness within each cluster.

This result shows two additional points, valuable to the future of sociology. One is the utility of detective analysis and research with a weaker hypothesis; different from the way with a strong hypothesis to prove, test and certify. Another is that open questionnaire, a system we cannot say we have utilized enough, can be an important source of quantitative data. With quantitative data like this, we can effectively classify and objectively treat the elements of “happiness.” Sociology has the method to do it and it must be an advantage to the other disciplines studying “happiness.”

**MITA, MUNESUKE*** (National Association Session, m.mita.vc@gmail.com)

*A Framework for the Sociology of Future: Logistics Curve and the Axial Ages*

Until the later decades of the 20th century, almost “self-evident” image of the history was that of the ever-accelerating progress. That image of history had the objective basis; statistics of the energy consumption, etc. However, it is also evident that this kind of ever-accelerating growth cannot be maintained forever. Biological laws well of the S-shaped logistic curve. We carry energetic, with the 3 stages; 1. of slow foreflow, 2. of rapid or explosive propagation and 3. of the stable equilibrium with the environment. Our species in a finite environment on the planet cannot be free from this curve. Statistics of the increase rate of world population shows the sharp watershed around the year of 1970, turning point from acceleration to deceleration. We are already passing the historical point of junction from the stage II to III. Macroeconomic meaning of the world system crisis in 2008 can be understood as the first crush of the infinite globalized-informatized system with the finity of the reality. “Globe” is a paradoxical geometry; infinite and finite, actual and virtual. The meaning of the “globalization” lies in this paradox. Karl Jaspers talks of the “Axial Age” – simultaneous emergence of major world religions and philosophies; Old basis of Christianity, Buddhism, Confucianism, and Greek philosophers. Sociological background of the “Axial Age” can be understood as the ensemble of the interrelated factors: 1) Emergence of the monetary systems; 2) rise of the cities and liberation from the communities; 3) crisis of lives thrown into the infinity of the world. Monetary system, urbanization, and the infinity of the life world are the very essences of modernity. For that reason, the Axial Age has been the basis of life and world until the final phase of modernity. Modernity can be seen as the stage II. Axial Age was the critical point from I to II.”

**MITCHELL, ANDREW** (University of Kumamoto, andrew.mitchell.leeds@gmail.com)

*Observing Fukushima: A Case Study of Japanese Nuclear Policy through Luhmann’s Social Systems Theory*

Since the Fukushima Daiichi nuclear disaster three years ago there has been much debate regarding Japan’s nuclear policy. These debates usually focus solely on the technological, economic or strategic issues at hand, or on the dwindling public support for a nuclear Japan. Whilst all of these arguments have their own merits, they all also describe what the political system should do to resolve the issues they raise rather than considering how the political system rationalises nuclear policy and the associated risks. By utilising Luhmann’s Social Systems Theory, this paper proposes to frame the different views on the nuclear...
issue as a problem of observation by different observers within a functionally differentiated society. The paper shall discuss the technological, economic and public opinion issues surrounding Japanese nuclear power, demonstrate how these are first-order observations of different observing social systems, and how Japan’s political system acts as a second-order observer of these observations. By understanding the political social system which acts to manage system expectation by introducing binding resolutions upon society (and thus deals in risky decision-making), the limits of Japanese political action when faced with technological risks on one hand and the desire to maintain Japan’s economic and strategic position on the other will be illustrated. This paper concludes that despite the risks of and public hostility towards nuclear power, the rationale of Abenomics and emerging strategic threats in East Asia leave Japan with little choice but to restart its reactors, a conclusion which is consistent with current Japanese nuclear policy.

MITCHELL, RASHALEE* (University of the West Indies, rashalee.mitchell02@uwimona.edu.jm)
The Role of Demographic and Social Factors in the Use of Licit Drugs Among University Students from One University in Kingston

In Jamaica there is a growing concern related to the excessive use of licit drugs among young people. This is due in part to the rapid social changes that have been brought about by globalization and local factors. These factors may predispose young adults to use licit drugs such as alcohol and tobacco. There has been limited research on the role that demographic and social factors play in the use of licit drugs among university students in Jamaica. Socio-demographic factors appear to have little impact on the use of alcohol and tobacco than family influences, the environment of peers, the quality of family relationships, and entertainment practices. The results of this study cannot be generalized to the population of university students in Jamaica.

MITRA, ARPITA* (KIIT University, arpitamitra@gmail.com)
Police-Community Relations in the Capital Cities of the North Eastern States of India: A Study of People’s Perception in the Perspective of Community Policing

Apposite police-community relationship in India is still in a nascent stage owing to the assorted attribute of the Indian society. Caste, communal and religious discords act as a barrier in developing a widespread awareness of the common interests of the community. Community policing in India operates at the level of some programmes and not as a philosophy internalized by police officers. The present study seeks to explore the people’s perception of police-community relations in the north eastern states of India. The study seeks to evaluate whether the awareness, sensitization and participation of the people in the community policing initiatives by the police in the capital cities of north east India has been successful in bridging the gap between the police and the public. The north east of India has not aroused much inquisitiveness in academic research and more specifically in so far as governance is concerned. It has been an area shrouded in mystery due to its geographical locations and unique ethnic culture. The tribal culture has suffered discrimination and has been marginalised because of prejudices. The police too has been suffering from this malaise. To restore the trust of the people, it is necessary to appraise the diverse cultures and involve them in community policing too has been suffering from this malaise. To restore the trust of the people, in so far as governance is concerned. It has been an area shrouded in mystery has not aroused much inquisitiveness in academic research and more specifically.

MITSUI, SAYO* (RC46, s-mitsui@hosei.ac.jp)
Inclusion through Communication: Support Activities for the Learning-Disabled and Autistics in Tama, Tokyo

In Japan people are encouraged to include the disabled in such places as regular workplaces and schools as in some other countries. However, even now, one third of adults with learning disability and autism are placed in facilities for the mentally-handicapped, because many persons concerned do not altogether consent to the idea of inclusion as such, particularly when the learning-disabled and autistics inflict harm on things and people in the community.

This paper is based upon my research conducted in Tama District, the most populated suburban area in Tokyo, to see how those who attend on the learning-disabled and autistics in the district act in response when they are exposed to a variety of such harm in the community. The attendants are apt to assume that harmful doings by the learning-disabled and autistics are connected with what was done by others, including the attendants themselves. Thereupon, they attempt to unravel an unexpected harmful doing in terms of the relationship of the learning-disabled and autistics with other persons, trying to see what caused each individual with learning disability and autism to turn to be harmful. This attempt leads to their attaching importance to painstaking communication with him/her as a measure to include him/her in the community.

I will discuss this way of dealing with the problem in the light of the concept of double contingency first advocated by Talcott Parsons and later modified by Niklas Luhmann, believing that it can empirically be applied.

MITSUI, MARI* (Sophia University, miura-m@sophia.ac.jp)
HAMADA, ERIKO (Sophia University)
Social Investment Strategy in Japan: A Failed Attempt?

A rapidly aging society with low birth rates, an increasing public distrust to the sustainability of the social security system, a high level of child poverty, and a high rate of suicide among the youth all suggest that Japan should embrace social investment strategy. A large gain in social benefits seems possible with the rethinking of an inter-generational redistribution. Yet, social investment strategy has been weak both in discourse and in practice. Although the Democratic Party of Japan (DPJ) government (2009-2012) pursued some policy innovation in the area of childcare and youth programs under the slogan of “children first,” a paradoxical shift has failed to take place.

This paper asks why the adoption of social investment strategy is so limited in Japan despite the fact that its social and economic conditions should provide a fertile soil for such a strategy. We shall explore the political conditions which prevent the full-fledged development of the ideas and practices of social investment strategy. In so doing, we show how the dominant force of neoliberalism constitutes a stumbling block in policy innovation.

This paper will cover major policy changes in the realms of childcare policy (cash allowance and daycare), youth programs for job training and job seeking, and “career education” from the 2000s to the present day. Its main focus will be on the rightward shift of partisan dynamics, legacy of statism, and the persistence of traditional gender roles.

MIURA, NAOKO* (Kanagawa Institute of Technology, miura@gen.kanagawa-it.ac.jp)
Social and Intellectual Antinomies of Information Technology

Information technology is progressing day by day, at a speed which exceeds our expectations. Therefore, the view about information technology is being torn into two conflicting poles. There are some antinomies of various dimensions in today’s highly informative society.

At a socio-economic dimension, Big Data (and data-mining technology) is expected to rediscover the information marketplace as a rich untouched field, and its reactors, a conclusion which is consistent with current Japanese nuclear policy.

RC46-764.1

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
On the other hand, Big Data has been criticized for collecting all the action histories of people and reusing them as industrial resources, giving rise to the social movement opposed to excessive surveillance and marketing. At an intellectual dimension, especially in the field of human science, the appearance of Big Data is expected to enable statistics technology and behavioral science to analyze human data. In order to clarify people’s decision making and mechanism of action selection, and help predict people’s behavior objectively. On the other hand, there is a concern that the development of surveillance society or sales promotion may infringe on people’s free will and humanness, and may seriously change the relation between an individual and society.

These social and intellectual antinomies are homologous to the thought situation of the 1960s in France, the confrontation between objectivism and subjectivism, where Bourdieu elaborated his sociology and the concept of Habitus. Today’s antinomies of information technology could be considered by using Bourdieu’s sociological methods of overcoming dualism.

MIYAKE, TOSHIHO* (Ca’ Foscari University of Venice, miyake@unive.it)

Doing Occidentalism through Mangaesque Convergence

This paper addresses contemporary Japan-Italy relations in the field of popular culture. They were shaped by the asymmetrical and mutually constitutive process of Occidentalism, Orientalism and self-Orientalism. In spite of the hegemonic and diversified impact of modern Occidentalism (F. Coronil 1996, K. Iwabuchi 2002), there is still no unified field of systematic academic investigation on the ‘West’ as a concept, which has become a kind of blind spot in the Humanities and Social Sciences (M. Pellitteri 2008). Occidentalism still continues to be examined through a body of disconnected works on the one hand, or through methodological civilizationism, nationalism and culturalism on the other (the West without quotation marks).

In this regard, modern Italy and Japan offer a heuristic alternative to the center/ periphery model conventionally applied to Occidentalism, due to their ambivalent status of sharing a history both as orientalizing imperial powers, but also as orientalized exotic countries. Interestingly, in the last two decades, Italy has become the most loved foreign country in Japan among the whole young and female population (T. Miyake 2010), while Japan has witnessed a similar boom of popularity in Italy, thanks in particular to the country with the highest number of anime series broadcast on television outside Japan (M. Pellitteri 2008).

The diffusion of Japanese popular cultures in contemporary Italy will be investigated firstly, by situating it within the process of Occidentalism, which will be explained through a theoretical perspective inspired by relational, intersectional and positional sociology (M. Emirbayer 1997, P.H. Collins 2000, P. Bourdieu 1984). Secondly, this study will address more specifically the transmedial constellation of Japanese popular cultures (manga, anime, videogames, character design, etc.) by bringing together an aesthetic theory of the mangaesque (J. Berndt 2012) and a media theory of convergence culture (H. Jenkins 2006).

Differentiating Gender Roles Onstage: An Analysis of the Takarazuka Performance

The Takarazuka Revue Company is a unique musical company in Japan made up of only female performers. The performers are divided into male-role players and female-role players. Many foreign studies have examined the gender dimensions of the company. Adopting a feminist perspective, they have suggested that in the Takarazuka performance—especially with regard to the male-role players—revels new possibilities for challenging traditional gender roles. My examination, however, will show the opposite side and clarify how gender consciousness is reinforced through Takarazuka’s performances. Most studies on Takarazuka have focused on the male-role players and neglected the female-role players. In fact, the latter is more important from a gender point of view because the popularity of the male-role players can only be achieved based on the discrimination or marginalisation of female roles. In this study, I will analyse certain Takarazuka productions and show how the female-role players are treated onstage and off. Even on women-only stages, there is an unequal construction of gender. I will also discuss the audience’s approval of gender hierarchy. The male-role players have far more fans; moreover, their fans seem to wield a kind of power over the female-role players. It should be emphasised that most fans are also women. This preference for the male-role players among female fans is reflected in the staging itself for commercial reasons. It might be said that the Takarazuka stage and its fans contribute to the underpinnings of Japanese society’s gender consciousness.

Musicology in Post-War Japan: German Influence and Social Context

Japan is famous for consuming Western classical music. Since the Meiji era, Japan has eagerly imported Western music and produced many musicians, orchestras, and concert halls. Today, the classical market is large, but it is much smaller than the market for popular music. Nevertheless, extensive studies of classical music have been conducted in Japan.

This research will explore Japanese musicology in the late twentieth century through a case study of the department of musicology at the Tokyo University of the Arts, which has the longest tradition of musicology in Japan. Japanese musical research was strongly influenced by German musicology, especially after the war. The primary interest has been in examining scores and historical documents related to the great German composers, such as J.S. Bach.
Bach and Beethoven, and analysing their compositions, as opposed to cultural studies or ethnomusicology. One of the most influential German musicians was Carl Dahlhaus. His book The Idea of Absolute Music was widely read in the Japanese music world. This highlights the preference among Japanese researchers for instrumental music. From another point of view, however, Dahlhaus's social and ideological background and in post-Nazi Germany. As some researchers in the English-speaking world point out, Germany after the war needed to distinguish the 'great German music' from the country's guilt and emphasise the autonomy and purity of music.

This study clarifies how this situation in Germany influenced Japanese research on music and music aesthetics. Further, it analyses the Japanese social context for the reception of Western classical music.

The Sociology of Fatherhood and Consumption: Empirical Evidence from Soon-to-be-Parents in Japan

Japanese society has been undergoing tremendous transformations in recent years. One of them is the change in family organization and family life and in particular the role and identity of the father. The most well-known example of this is the rise of the so-called ikumen: men who actively engage in child rearing. A government campaign launched in 2010 to encourage Japanese men to take a more active role in parenting is gathering momentum. Seminars aimed at men on how to develop parenting skills are now being held across the country and father figures who take time out of their work to spend time with their kids are currently being applauded in the media.

While Japanese fathers have been studied in the area of family sociology, research on recent changes in fatherhood in Japan and the ikumen in particular is still in its infancy. So far, no study has looked into the issue of consumer behavior of fathers in Japan and how consumption patterns change with fatherhood. Given the state-of-the-field, we opted for an exploratory, qualitative research approach. After a pretest with one couple, we interviewed 12 expecting couples about their current situation-based services-provided, the key risk for terms of their life in general and their consumer life in particular. We first interviewed the soon-to-be parents separately first and then jointly together as well. All interviews were recorded and transcribed verbatim before being subjected to a qualitative content analysis.

Our findings reveal a mix of rational, goal-directed consumer behaviors in combination with the consumption of goods and services in relation to spiritual and superstitious beliefs grounded in Japanese religious traditions or folk culture. We also find gender role and generational differences when probing the social relationships between (expecting) mother and father and between father and his own father.

Institutionalization Among Older Adults in Japan

This study is to explore the risk factors affecting the possibility of institutionalization for the elders after the launch of the Long Term Care Insurance (LTCI) in Japan, 2000. Previous research shows that the level of informal caregiving, and caregiver's capability, rather than the older adult's declining function, were the key risk factors for institutionalization before the LTCI. The effect of LTCI services have been widely examined from both caregiving and the views of recipients and the caregivers. LTCI provides diverse home-based and institutional services for families and individuals, and in our claims data, those who utilized home-based services the most turn out to be the least likely to be institutionalized. And for the elders institutionalized the most, their primary caregivers had expressed their preferences for institutional care services at the time when applying for the LTCI services, and they utilized the least home-based services. Therefore, we gather some evidence that LTCI had provided sufficient home-based services to reduce the possibility of institutionalization due to lack of informal services. Despite the home-based services provided, the primary caregivers' preference for institutionalization is the primary caregivers' preference — whether they prefer more involvement of LTCI services or not, and whether they prefer the services at home or in institutions. Therefore, we conclude that the LTCI services have a double-edged effect on family aging care, and the family has great influence on whether the older adult will be institutionalized or not.

Implications of Social Capital for Family Life: The Case of « Non-Statutory Parent »

My communication is on the subject of the « non- statutory parent », i.e. the person who, within a couple, fulfills the role of « parent » for a child not legally his or her own, but the offspring of his or her mate. The main results I will present is that the family's environment of friends, and kin represents a social capital that plays an integrating role through its validation of the NSP's right to

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
be with the child. This role is rooted in 5 structural dimensions that came to light in the course of the qualitative analysis: selectivity of link choices versus their contingency; balanced mobilization of the parental networks versus skewed emphasis on one or two SPs or NSPs' network; presence of facilitating figures within the broader family circle; presence of individual networks within the network of friends of the non-statutory parent; and the degree of embeddedness of close personal relationships within organized collective practices. The study present an analysis of the social capital of the family environment and its role in shaping, defining and fixing the obligations of the non-statutory parent, stemming from a will to consolidate and increase the parental role despite an unfavourable legal context.

The study is based on a sample of twenty couples living in various familyfigurations, i.e. hetero and homosexual step-families with whom we carried out three successive rounds of in-depth interviews; first with both members of the couple in order to reconstitute their conjugal and parental history; then with the non-statutory or step-parent, to collect information about his or her experience and strategies deployed to consolidate his or her status within the family and in relation with society in general; finally with the couple once again, with the goal of analysing the conjugal and family dynamics.

Inequalities Between Man and Women in Social Work

Inequalities between women and men stem from the assignment of the “care” work to women in Switzerland, in certain fields of social work male professionals are quite numerous, but these disparities are not reduced. They take a different form. My demonstration is based on a study by semi-structured interviews as well as direct observation carried out in various public social work services. The type and intensity with which social workers mobilize their emotional and relational skills within the framework of their professional practices denote two different ways of conceiving the place of “care”. “Care” is a stake in the context of the “active social state”, because social work is now evaluated in terms of its efficiency and productivity. Whilst this management orientation may be viewed positively as a way of heightening the visibility and value afforded to the profession, it may also place an undue emphasis on measurable professional acts versus professional attitudes and relational work – the latter being seen as non-measurable. Professionals are thus faced with the impossible challenge of balancing two alternatives, one being characterized by measurement and focused on efficiency, the other typified by unpredictability and immoderation constitutive of the nature of relational work. Our study shows that when confronted with this dilemma professionals who display typical feminine career patterns take it upon themselves to carry out “bad” care work that takes time and is largely invisible while professionals who exhibit typically male career patterns dispense the “good” care, which can be organized rationally, is measurable, and is thus considered more productive.

Emerging Society and Sociological Discourse in India

The sleepy, slow moving and traditional Indian society which has a historical past of several thousand years is undergoing through a process of rapid social change and unprecedented social transformations. The biggest change has been the emergence and strengthening of democracy. While people in several countries all over world are still struggling and clamouring for a democratic state and institutions, the Indian citizens are exercising their democratic rights strongly whenever occasion arises. The civil society in turn is also becoming stronger and more significant within the society in general; finally with the couple once again, with the goal of analysing the conjugal and family dynamics.

The Work – Family Interface Among Dutch Navy Personnel and Their Spouses

Perhaps even more than other military personnel, Navy personnel and their families face the challenges of managing frequent and often prolonged family separation. The impact of these military demands on the family and of family factors on the readiness and retention of Navy personnel is scarce and nonexistent among Netherlands military personnel. We collected data among sailing Navy personnel and their spouses at home regarding various work and family experiences. This paper presentation presents the first results of this study.

The Middle Eastern Origins of Dictatorship and Democracy

How do we assess Arab Spring/Occupy almost 3 year later- the hopes for the emergence of popular democracy have now faded or have they? We might note that the traditional dynamics of the rise of democracy or dictatorship in West, contestations/alliances of various groups, esp landlords/peasants did/not really apply today. Most of the MENA countries were the legacies of anti-colonial struggles and struggles for independence and democratic self-government, but Enlightenment ideals did not emerge. Contemporary conditions differ, 1) neoliber al globalization has enabled the rise of a transnational capitalist class leading to economic growth-concentrated at the top; 2) there are growing classes and cadres of the discontented, educated precariat youth, (today’s lumpenproletariat and the disenfranchised peasants, wretched of the Earth), but 3) Today most people, even in developed countries have access to ICT/social media. To understand the “waves of democracy” and their receding tides, we need note, the movements took place quite rapidly and following the abdications or implosions of dictatorships, the only groups that were well organized were the various Islamist militants from Moslem Brotherhood to Enhada-who were ill equipped to shepherd a modern economy. But without having experience in actual government as opposed to critics w/o power they did quite poorly. However dismal the short term, and it may get worse, structural factors intersect, with changing subjectivities, embracing openness, equality, empathy and care, portend an optimistic forecast. However undemocratic the post Arab Spring governments may have been/are in practice, they were democratic in form and now there can be no going back to un-elected “presidents for life’. Dictatorships now face growing the popular power of numbers of youth that challenge inequality, authoritarianism, corruption, and corruption, and that demand rights, dignity, empathy community and self-fulfillment with hopes, visions and ICT –social media skills to realize “another world is possible!”

MOGUÉROU, LAURE* (Université Paris Ouest, CRESPPA, GTM, lmoguerou@u-paris10.fr) PRIMON, JEAN-LUC (Université Nice)
Immigrant Access to Training in France

Few studies in France have focused on immigrants’ access to vocational training. This lack of data is surprising in a field which has otherwise been extensively studied. Indeed, one of the stated goals of ‘lifelong learning’ is precisely to compensate for educational inequality, and immigrant access to lifelong learning is therefore essential. The recent study conducted by Gelot and Minni using data from the 2003 FQP survey is a key contribution in this area. They have shown that the rate of immigrant access to continuing education is lower than that of people born in France and that access is determined after controlling for individual characteristics (age, gender, level of education, type of employment). The aim of this paper is therefore to go one step further by focusing on the differences which exist within the immigrant population, particularly in matters of administrative status. The hypothesis tested here is that the category established by the immigration authorities when awarding first residence permits permits is an important line of divide, impacting immigrants’ later access to continuing education.

Descriptive and multivariate analyses will be undertaken using data from the TeO survey (Trajectories and Origins, INED-INSEE 2008-2009), incorporating interviews of 5,000 immigrants who arrived in France as adults, after completing their initial education or who never attended school. Data from the ELIPA survey (Longitudinal survey on the integration of first-time immigrants) conducted on the 14,000 signatories of the 2009 Reception and Integration Contract (CAI) undertaken in 2010, 2011 and 2013 will also be used.
Dysfunctional Schools: A Mentoring Framework

During transformation (1994 onwards), the South African government instituted different interventions within Education as an attempt to redress learner achievement and throughput. However, various researchers and opinion leaders still view Education in South Africa as disfronted as well as characterised by an increasing prevalence of dysfunctional schooling systems. Therefore, this research aimed to design a generic mentoring framework through which transformation within dysfunctional schooling systems can be facilitated. In order to achieve this, a micro-level analysis of schooling systems, using the functionalist perspective, specifically enabled through the contributions of Parsons and Merton was undertaken. In addition, insight gained from a broad range of literature and other secondary resources on mentoring, best practice and quality education was used to develop a number of premises. Based on these premises the generic mentoring framework can be adapted to enable a fit-for-purpose mentoring system within a school to allow facilitation of a process of transformation within dysfunctional schooling systems. This paper examines the impact of social and family constraints on whether and when young people of immigrant background leave home. It first reviews the factors that encourage young people to defer their departure. Then it looks at their projects for leaving home. While it is recognised that more flexible relations between parents and children make it easier to continue living together, the difficulty of finding places to live is a major obstacle to young people's entry into adult life. How do those most centrally concerned experience this prolonged family life? Do they want to leave and what prevents them from doing so?

Young adults of immigrant background live with their parents longer than do those in the mainstream population (Moguérou, Santelli, 2010). The great majority of young people from non-European immigrant backgrounds are from working class homes and often the poorest and most economically insecure segments of the working class (Frickey & Primon, 2002). Research in recent years has shown that unemployment rates are very high among young people from immigrant backgrounds, especially those from African backgrounds. Their disadvantage at the start of their adult lives partly explains why they defer moving out to live independently. Another factor is the cultural and subjective attitudes towards independent living that the young people share with their parents (Hamel et al., 2011). This paper examines the impact of social and family constraints on whether and when young people of immigrant background leave home. It first reviews the factors that encourage young people to defer their departure. Then it looks at their projects for leaving home. While it is recognised that more flexible relations between parents and children make it easier to continue living together, the difficulty of finding places to live is a major obstacle to young people's entry into adult life. How do those most centrally concerned experience this prolonged family life? Do they want to leave and what prevents them from doing so?
Refugee Fathers: Negotiating Fatherhood during Resettlement

The rise of globalisation, visible through the increase of international mobility and advances in communication and information technology, has had a significant impact on families. Currently, the analysis of globalisation has focused almost exclusively on the macro level impacts, especially on politics and economics. There has been a dearth of research focused on the micro level impacts on globalisation via the resettlement of refugees and forcibly displaced families. This gap within the research is concerning as the transfer of knowledge and skills take a particularly direct and tangible form: food and beverage and kitchen. Empirical evidence presented here may qualify “the Hotel” as an advanced social laboratory for the study of ethnic relations. Focusing on social actors, this micro-sociological study shows that ethnic identity, belief and behaviour are not static but fluid. A specific organisational model such as “the Hotel” can help us redefine how we see ethnic differences, not as divisive, but as inclusive, when contingent forces at work trigger “cross-cutting ties” along group boundaries. Transforming these inter-ethnic differences in “the Hotel” may lead to the discovery of ethno nationalism embracing civic behaviour in the service industry.

Poverty Reduction Effect of the Taxation and Benefit Systems in Finland 1993-2013: Comparing the 1990s Depression and Post 2008 Recession

The poverty risk rate, measured as 60% of the median income, increased in Finland from 7 to 14 per cent between 1993 and 2008. The poverty risk rate increased exponentially in the late 1990s, when both benefits and income taxes were cut after the severe depression in early 1990s. The current (post 2008) recession has evoked very different social and fiscal policies compared to the 1990s and the recession has had a little impact on poverty risk rate so far. We use microsimulation models for evaluating the impact of reforms on the poverty reduction effect of the tax-benefit system. We focus on estimating the tax-benefit systems in 1990s and 2008 recession. We have estimated microsimulation models and using the SISU microsimulation model of Statistics Finland. Household disposable incomes are simulated for each year by using the same households but varying the taxation and benefit legislation according to the existing enactment.

The benefit cuts during the 1990s depression had a rather modest impact on poverty risk rates and the impact was nullified during 2000s by series of benefit raises. Even after 2008 there has been several increases in the basic benefits that have reduced the poverty risk rate. Changes in taxation had a considerable larger impact on the poverty reduction effect than changes in benefits. The poverty risk rate would be 2.5 percentage points lower if the tax legislation were the same in 2010 as it was in 1993. However, the level of benefits has decreased compared to the average income level. If the level of benefits would have remained at the same level compared to the average earnings in 2010 as in 1993, the poverty risk rate would be four percentage points lower in 2010.

The Declining Relevance of the Environmental Nation-State

The Environmental state is not a formal category, but a substantive one. It came up in the late 1960s/1970s, changed in character since then and we will have to see how long it will last and in what outlook. A historical analysis of the environmental state in the OECD region should distinguish at least five periods: until 1960 (near absence), 1960-1980 (establishment and institutionalisation of the environmental state), 1980-1990 (state failure and neoliberal debates/debates on pressure), 1990s (redefinition and legitimisation of environmental states internationally). Many scholars note that since the new Millennium a new period has emerged: the environmental state shows a growing irrelevance.

The claim of weakening environmental state institutions seems to be part of wider concerns of the positions of states versus markets under conditions of globalization. Quite some scholars claim that under neoliberal globalisation the strengthening of the power and influence of (global) market institutions came together with declining roles of political state institutions. But that is not clearly evident regarding all agendas, as the recent regaining influence of political institutions on global financial institutions. So, is there something special at stake with respect to environmental state institutions? Is the interpretation of the current waning role and position of environmental state authorities correct? If so, how can we explain this decreasing power and position of environmental state authorities and how is it related with our capacities to cope with environmental problems? And how do we normatively assess this decreasing impact of state authorities in mitigating environmental problems? These questions are central in this paper.

Assessing the Measurement of Science Knowledge in the Wellcome Monitor Surveys: An Item Factor Analysis

The Wellcome Trust Monitor Surveys (2009 and 2012) are fielded to two samples: adults (aged 16+), and young people (aged 14-18). The survey contains multiple items designed to assess science knowledge and engagement with bio-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
medicine. Analysis of the first Monitor Survey yielded a curvilinear relationship between age and high and low levels of scientific knowledge. High scorers were lowest among those aged 65 years and over. The proportion of high scorers for the middle age groups was around three in ten (of those aged 35-49 and 50-64). For low scorers, the reverse pattern holds true, and for young people, 14-16 year olds were high scorers when compared with 17-18 year olds. A possibility is that a given knowledge item has a different probability of generating a correct response from different age groups even if each age group has the same underlying level of knowledge. This study will evaluate the performance of the literacy items and the extent of any age-related bias. The results will feed into the design of the next wave of the survey but also speak more generally to the question of how to evaluate science knowledge in heterogeneous populations. I propose a single group IFA-IRT model to evaluate the performance of the items for a pooled sample of respondents, and a multigroup IFA-IRT model to identify the presence of differential item functioning (DIF) by age group. Briefly, the procedure is to fit a series of IFA models to the data, assessing the adequacy of fit for the scales within each subgroup. The second stage is to look at evidence for DIF/measurement non-invariance on any of the test items with a series of increasingly restrictive nested models. Finally, results from the multigroup analysis suggest that partial measurement invariance across age groups holds.

Examining the "New Normal" and Inequality in the Housing Transitions of Young People in Canada

In Canada, young people's housing transitions have become increasingly protracted and are marked by lengthier periods of cohabitation with parents and returns to the family home. This has been occurring in a context where access to postsecondary education has widened but at the same been subjected to increasing tuition and housing costs in most large urban centres, and especially in some provinces. Most young adults in Canada today are therefore receiving considerable support from their families over the course of their housing trajectories and, arguably, this trend now constitutes the "new normal" in the transition to adulthood. However, young people from lower class backgrounds, those who leave home to work, those who evict child welfare systems at the early stage, and those who often cannot count on parental support for housing, and experience much more problematic housing transitions. Our paper will first provide the context in which these housing transitions are occurring, by focusing on available statistical and quantitative data on youth housing transitions and the housing policy environment. The second part of the paper will present qualitative data based on retrospective interviews with two sets of young people: street-involved youth and young adults enrolled in high school vocational training programs. Using a life-course approach, the paper will examine how these young people depend upon and adapt to changing markets, service provider supports, and discuss how these types of housing trajectories contribute to the structuring of inequality over the course of the transition to adulthood.

MOLITOR, VERENA* (University of Bielefeld, verena.molitor@uni-bielefeld.de)

Excluded By Means of a Broadcasting Language? the Case of Language-Based Minority Construction through the German-Speaking Radio Shows in Poland

The language of diaspora communities and minorities can be considered as a boarder- making instrument, as a mechanism of exclusion and inclusion (or rather of both simultaneously). The minority-or diaspora language media can as well function as mechanisms or mechanisms of border creation, boarder maintenance or inclusions.

The paper deals with media offers for language minorities and especially the German-speaking minority in Poland, focusing on the German-Speaking radio shows in the Voivodships Silesia and Opole. In these regions two stations produce radio shows in German; the very availability of non-polish-speaking media is a transformation phenomenon. Due to the novelty of media offers in German language as well as to the fact, that those, who define themselves as "German minority" partly do not speak German because of the minority languages ban during the socialist period in Poland, the central question to be posed in this presentation arises: Which function does the German speaking radio have in the creation of borders, inclusions, exclusions, interties and belongings?

My research concentrates not on the radio listeners but on how the radio stations by means of programme planning foster a regional identity, create a picture of the self and which role German as broadcasting language plays in these processes. I will demonstrate the integration function of the media and simultaneously its function within a diasporic consolidation, focusing on how the radio stations strive to create a collective identity among the German minority. I will demonstrate, how a strong belonging to the minority and tradition of the group is produced by these radios, while asking, how it is possible, if German is positioned as "mother tongue" which is "to be learned first".

WG01-887.1

MOLITOR, VERENA* (University of Bielefeld, verena.molitor@uni-bielefeld.de)

"Media Diasporas - Diasporic Media" - the Construction of Regional Identities through Radio Programmes

In this paper I will focus on minorities, not often described in the context of media research, namely minorities which reside not from movement of people, but from shift of borders, here especially of the German speaking minority in Poland.

The main focus in my research lies on the German-Speaking radio shows which are broadcasted in a border region in Poland, near the German and Czech border. The situation of the German media there is very interesting because it is a relatively new phenomenon that there are Radio and TV shows available in German. The minority language media were prohibited in Poland during the socialism period, and could be introduced during the transformation period first. Not being based on a continuous minority media traditions, these radios are free in creating the understanding of their mission and their belonging to a community of listeners or to construct their listeners.

My research demonstrates how radio programmes represent a region in order to foster a regional or local identity and how they create a picture of the self and the others. The presentation demonstrates, how the contents and composition of the programmes describe boarders and a strong belonging to the own local group as well as to the traditions of the minority.

The presentation demonstrates the integrational function of the radio and simultaneously its function within a diasporic consolidation, and hence focuses on the challenges of minority radio stations with regard on both creating minority identities and belongings and representing a region or a local community.

Cross-National Policies and Relative Household Income of Families with Children By Family Structure and Parental Education

Focusing on an array of European and North American welfare states between 1985 and 2005, we consider how welfare state policies are related to households' relative incomes, taking into account cross-national and temporal differences in income distributions. We consider work-family policies including public childcare and family leave generosity, tax progressivity, family allowance generosity, and levels of wage coordination. We also consider how two of the central factors that may be driving income inequality at the individual or household level – parental educational level and family structure – may be related to a household's relative income. This research fills a gap in the literature because there are surprising- ly few studies that examine inequality by both family structure and education, and even fewer that examine relative income cross-nationally and longitudinally. Our findings suggest that both structural and policy factors are important determinants of relative income. We also consider how two of the central factors that may be driving income inequality at the individual or household level – parental educational level and family structure – may be related to a household's relative income. This research fills a gap in the literature because there are surprising- ly few studies that examine inequality by both family structure and education, and even fewer that examine relative income cross-nationally and longitudinally. Rethinking the "Exploitation of Self-Realization" Model in Japan

The purpose of this report is to examine the problem of the "exploitation of self-realization." In recent years, it is said that young people increasingly seek self-realization in their work. Masahiro Abe has analyzed the problem based on his own experience as a provider of motorcycle delivery service, and Yuki Hon- da has called the same problem the "explosion of ‘Yangai’" (the word ‘Yangai' refers to the pleasure derived from doing decent work). They point out that cer- tain companies exploit young people who seek self-realization out of work. These days, such companies are called “black companies” and have become a serious social problem in Japan.

However, when we examine national statistics and opinion research about work and employment, we find no evidence that the number of young people who seek self-realization in work has increased in the past ten years. Rather, ac-
cording to surveys by Japan Productivity Center, more and more company recruits claim that they want to work for a single company and do not want to change jobs. It is thus not accurate to say that young people today seek self-realization above all. This leads to the question of why the discourse of the “expansion of self-realization” has become so popular in Japan even though the number of young people who seek self-realization in their work has not actually increased.

In conclusion, this report will bring to light how excessive globalization and the fluidization of employment have made many people feel unstable and unsure about the future. As a result, many people set a high value on stability and relief, rather than self-realization in work. Instead, national opinion surveys tell us that an increasing number of people seek work that allows them to make a “contribution to society.” This viewpoint compels us to rethink the “expansion of self-realization” model.

MONFORTE, PIERRE* (University of Leicester, pm260@le.ac.uk)
Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany

Emotions and Collective Identities in Contexts of Exclusion. The Case of the Protest for the Rights of Asylum-Seekers in Germany.

Since the 1980s, social movements’ scholars recognize that emotions and collective identities are crucial for the construction of collective actions (Polletta and Jasper, 2001). The extensive literature on emotions and identities shows how these two dimensions interrelate and influence social movements’ strategies, grievances, emergence, evolution, and impact. Few authors have analysed these dimensions in contexts in which activists face processes of exclusion. This focus raises however important perspectives (Einwohner, 2006). In particular, it leads us to discuss the strategic dimension of the emotional and identity work done by activists. Moreover, it permits us to relate the analysis of emotions and collective identities with more general contextual dimensions.

In this paper, I propose to follow this perspective through the focus on a network active for the defence of asylum right in Germany: ‘Caravan for the rights of refugees and migrants’. This network mobilizes against what is defined as a context of exclusion: the ‘residence obligation’ law, which strictly restricts the mobility and social inclusion of asylum-seekers and refugees living in Germany. Through the concept of ‘identity construction for emotional benefits’, I will show how activists strategically shape collective identities in order to trigger feelings of empathy towards asylum-seekers and refugees in the course of protest.

Two methods have been used in order to explore the construction and interaction of emotions and collective identities in this network: an analysis of the documents that it published between 2000 and 2010, and a series of in-depth interviews undertaken in the German pro-asylum movement.

MONFORTE, PIERRE* (University of Leicester, pm260@le.ac.uk)
The Symbolic Representation of Borders in the Protest Against ‘Fortress Europe': The New Geographies and Strategies of the Movements for the Rights of Migrants

In the last two decades, the integration of member-states’ immigration and asylum policies at the European Union level has led to a process of transformation and delocalization of borders. In particular, the external dimension of these policies is related with the diffusion of borders across member-states and third countries territories. Consequently, the binary demarcation between the inside and outside of states’ territories is increasingly blurred, and the specific governmental practices and technologies that were once situated at the edges of territories can now be among migrants and refugees in the field of protest.

In this paper, I propose to explore the consequences of these evolutions on the social movements for the rights of migrants in Europe. Focusing on the symbolic dimension of protest events, I argue that the changing nature of European borders has influenced their organization and strategies. In particular, I show that since the end of the 1990s, these movements have represented and used the border as a symbolic space in which new forms of protest are constructed.

This analysis is based on the observation of a selection of European networks mobilizing for the rights of migrants. The evolution of the symbolic dimension of their protest since the end of the 1990s has been investigated through three complementary methods: protest-event analysis, frame analysis, and visual analysis.

Age and Gender Differences in Relationships Among Sociodemographics, Disease, Psychosocial Stressors, and Mental Health in Older Japanese Adults

This study aimed to identify age and gender differences in the relationships among sociodemographics, disease, psychosocial stressors, and mental health status among older adults, using nationally representative data in Japan.

This study included 8733 adults aged 65 years or older, who were respondents in the Comprehensive Survey of People’s Living Conditions (CSPLC) conducted in 2007 by the Japanese Ministry of Health, Labour and Welfare (MHLW). Participants were stratified by gender and the following age groups: 65-74 years (young-old) and 75 years or older (old-old). Univariate and multiple logistic analyses were used to assess the relationships among sociodemographics (living arrangement, household size, and equivalenced disposable household income), disease (the five responses chosen by each group), psychosocial stressors (the top five responses chosen by each group), and mental health.

In all groups, the psychosocial stressors of "one's disease/long-term care," "disease/long-term care of other family members," "income/family budget/debts," and "motivation in life" were found to be significantly related to mental health. In young-old men, equivalenced disposable household income, working status, and the psychosocial stressor of "one's job" were significantly associated with mental health. In young-old women, significant associations with mental health were found for equivalenced disposable household income, eye diseases, lower back pain, and the psychosocial stressor of "relationship with family." In old-old men, the psychosocial stressor of "relationship with family" was independently associated with mental health. In old-old women, lower back pain and the psychosocial stressor of "relationship with family" were related to mental health.

This paper will analyze new citizen participation forms in the field of social welfare in the city of Barcelona. A new form of intervention is emerging in local welfare systems. This new way requires a change of attitude and involvement from citizens, public authorities - at all levels - and private organizations. It can be defined as a “social innovation” in the sense of the implementation of an idea that is new and that breaks with the prevailing routines and structures in a given system or setting. “Social Innovation” is widely used from many academic, political and social perspectives. No wonder that, in a context of uncertainty and transformations, becomes essential to search for new policies. In particular, in the field of social welfare the experimentation of new policy proposals and social practices has begun in a lot of countries.

In this paper we will analyze new participation forms in the field of social welfare in the city of Barcelona from the theoretical perspective of social innovation. The research is the result of work carried out within the European research project WILCO (Welfare Innovations at the local level in favour of cohesion).

The paper has three parts. First, there is the discussion of the concept of social innovation and proposes a methodology to use them. Secondly, following the conceptual and methodological proposal presented, discusses one policy of the City Council of Barcelona, the program: “Citizen’s Agreement for an Inclusive Barcelona”. This program is an example of Social Innovation that increases the cohesiveness and democratic participation of young-old citizens by confronting challenges and opportunities of this municipal policy for new models of work on local Social Welfare.

MONTALVÃO, ARNALDO* (Capes Foundation, montalvao@ufmg.br)
The Interplay Between Work and School Outcomes Among Adolescents in Brazil: The Role of Prior Orientations and Aspirations

In Brazil and other developing countries, empirical evidences usually suggest that the participation of children and adolescents in the labor market tends to hinder educational outcomes (academic performance, high school graduation and dropout, etc.) and, therefore, lead to inequalities in educational and occupational status over the life-course. However, a body of research argues that the interplay between work and school: 1) depends on the intensity (hours) of work;
moderate work (less than 20 hours a week) can actually help the student to ac-
quire professional and soft (sense of responsibility, independence and self-im-
provement) skills; 2) is the result of spurious relations the negative effect of
work on school success is actually result of differences in pre-existing individual
orientations and aspirations that make some students more inclined to pursue
experiences in the labor market than invest in school. This paper aims to analyze,
first, the extent to which preexisting aspirations and orientations toward school
and work can account for the observed negative effect of work on school per-
formance in Brazil. Second, it examines, among workers, how work intensity is
related to these outcomes. In order to achieve these goals, we draw upon data
from the National High School Exit Exam (ENEM) and from the Minas Gerais State
Household Sample Survey (PAD-MG). These data sets combine information on
school outcomes, family background, demographics, labor market situation, and
orientations toward school and work. Results show that prior orientations and
aspirations can predict actual labor market behavior and school outcomes, and
account for part of the effect usually credited to work itself. Research on this issue
in developing countries would benefit from incorporating fundamentals from social
psychology to understand how inequalities are reproduced through orientations
and aspirations.

Old and New Models of Federalism in Europe

The contradictory and complex unifying process of European Union does not
seem to resemble the classic federal model, such as the United States, but rather
refers to the historical legacy from the Holy Roman Empire as argued by Le Rider.
The Holy Roman Empire, as it was defined by the Treaty of Peace of Westphalia,
was a factor of stability, that while preventing to fall back into bloody wars, creat-
ated the set of institutions allowed to control the imperial power.

In the same way the tragic experience of the II World War was at the basis of
the European Union as an antidote to possible future nationalists conflicts. The
European unification process has been an element of law and peace, represent-
ing at the same time an old and new imperial model. According to Khanna Euro-
pean Union is one of three great empires, together with the United States and
China, that are distributing among themselves the global resources and influence
on the world. In his view the EU is by far the most popular and most successful
empire in history because, instead of dominating, educates. Incentives for the
Europeanisation - subsidies from Brussels, the workers mobility, the adoption of the
Euro - are too profitable to not be welcome. In this way the EU is expanding not by
force, but thanks to the attractiveness it exerts on its neighbors.

The idea of Europe has led not only national level but also the local and regional
authorities to research a direct relationship with the European Union institu-
tions. In this way, the nation states have lost a significant portion of their power.
At the moment in Europe there are states with limited sovereignty and increasing
power and autonomy to regional and local administrations.

MONTANÉS JIMENEZ, ANTONIO* (Universidad Complutense de Madrid, amjsociologia@gmail.com)

“Ethnic Relations Between Gypsies and the Majority Populations in Spain during the 21ST Century”

Since their arrival on the Iberian Peninsula during the beginning of the 15th
century, the Gypsy minority is one of the most relevant “other” ethnicities in Span-
ish society. According to the Gypsy Secretariat Foundation, between 750,000 and
1,000,000 Spanish Gypsies live in Spain. The ethnic minority’s history in Spanish
territory is characterised by a singular and intense cultural integration, a course
related to these outcomes. In order to achieve these goals, we draw upon data
from the National High School Exit Exam (ENEM) and from the Minas Gerais State
Household Sample Survey (PAD-MG). These data sets combine information on
school outcomes, family background, demographics, labor market situation, and
orientations toward school and work. Results show that prior orientations and
aspirations can predict actual labor market behavior and school outcomes, and
account for part of the effect usually credited to work itself. Research on this issue
in developing countries would benefit from incorporating fundamentals from social
psychology to understand how inequalities are reproduced through orientations
and aspirations.

MONTANÉS JIMENEZ, ANTONIO* (Universidad Complutense de Madrid, amjsociologia@gmail.com)

“the Global Evangelist Movement of the “Gypsies”. in Spain’s Case”

The aim of the Global is to highlight some of the most relevant phenomena
which occurred to understand the aforementioned expansion, the intimate rela-
tionship of the Pentecostal religion with the articulation, re-composition and ren-
avation of the identities found in ethnic communities, and presents the particular
case of the expansion of Pentecostalism among the ethnic Gypsy communities
in Europe in general, and in particular, Spain. Gypsy Pentecostalism has designated
and transformed the millennial mission of evangelising the Gypsy people throughout the world, offers a
biblical interpretation of the origins of the Gypsy people, placing them in one of the
12 lost tribes of Israel, and a historical interpretation of the unfortunate journey
they faced in this world, culminating with the ethnic genocide during the II World
War. Gypsy Pentecostalism promotes the conservation of some of the most deep
rooted elements of their ethnic tradition and confronts the production of ethnic
identities and collective destigmatised representations.

The proposed paper deals with the expansion of the Pentecostal religion on three
levels.

At the supranational level. The Pentecostal religion’s role in the emergence and
promotion of an ethnic sense of global diaspora, which remains articulated in organisational and institutional networks and movements.

At the national level. The role of Pentecostalism in the renovation of the Span-
ish Gypsy’s ethnic and cultural identities.

At the local level. The role of the Pentecostal religion in the articulation and
re-composition of the different identities among Spanish Gypsies and non-Span-
ish Gypsies (above all Romanians) after the intensification of the arrival of trans-
national migratory waves of European Romanians to Spain in the 21st century.

This paper forms part of the doctoral thesis of the author, funded by the Span-
ish Government (Subprogram FPI-MICIN) as part of the Groupe Européen de Re-
cherche Interdisciplinaire sur le Changement Religieux (GERICR) research program

MONTATEH, GAZ* (University of Manchester, gareth.montateh@postgrad.manchester.ac.uk)

Post-Repatriation Careers of Japanese Knowledge Workers

A key element of the globalization of knowledge work involves the interna-
tional transfer of executives. Yet despite the importance of this process, the re-
patration of business people is still an under-researched area. The majority of
existing research into the phenomenon is based on cross-sectional surveys and
interviews of North American and European business people. The emphasis is
typically on how to make the process more effective for companies, for instance,
by improving failure rates, and largely assumes the existence of Anglo-Saxon style
labour markets for the management of ‘talent’. Consequently, certain empirical
and conceptual elements remain unexplored. We don’t know much about repa-
triation from other nations, and more specifically, about their career perceptions
post repatriation. This paper addresses this gap by looking two Japanese business
people and asking how they make sense of their unfolding careers. To do this,
the paper followed their subsequent careers and career perceptions after their
return from assignments in North America, interviewing them over an extended
time period (seventeen months and twenty four months respectively). The main
finding of the research is that (these) Japanese repatriates do not have explicit
and pre-planned career paths. Furthermore, this lack of a career path does not
concern them. Instead, their careers are subject to a fuzzy career logic that de-
pends on circumstances. Given the extensive literature on protean and bound-
aryless careers, as well as the ‘need’ for individuals to take charge of their own
careers, this is a significant finding. The theoretical contribution of this research
is the idea of fuzzy career logic, and the paper will show how it not only provides
a useful framework for understanding how Japanese repatriates navigate their
careers, but also how it gives an important alternative to, and critique of, the view
that careers should be planned in a strategic manner.

**Active Ageing Research Trends and Population Policy in Iberoamerica: A Critical Review**

The concept of active ageing is being used in recent decades as a line of research in ageing of population studies and as an instrument of public policy, especially since its adoption by the WHO to strengthen health, social participation and security for older peoples across the world. Despite its increasing use, defining active ageing is a complex task as it is related to various theories, constructed from multiple contents and their interactions, linked to other concepts used synonymously and sometimes interoperable (healthy, productive, successfull ageing, ...) and operated following various strategies in both the scientific and public policy design.

The aim of this proposal is to conduct a critical review of the scientific literature on active ageing in relation to other forms of ageing (healthy, productive, successful) in the Iberoamerican settings and in the field of Social Sciences research, to delimit its use, contents, indicators and measurement instruments and the usefulness of its application in order to clarify the confusion to which it is subjected.

**Transnational Aging in Mexico. the Experience about Elderly Foreigners, and Return Migrants. Life Style in Old Age, Health Care, Social Networks and Family Support**

En esta aportación se discuten ciertas formas de envejecimiento transnacional entre extranjeros en México y migrantes de retorno que regresan a México después de trabajar en Estados Unidos. En el trabajo se examinan cuáles son las formas de retiro de vida que tienen estos dos grupos y las formas de vínculos transnacionales que presentan y los cambios en la vejez, cuidados a la salud y redes sociales. Se presentan resultados relacionados a las redes transnacionales de los migrantes y sus conexiones en la vejez. Se analizan dos grupos de migrantes, uno de jubilados procedentes de Estados Unidos que han emigrado y residen en Baja California (México), y el otro lo constituyen migrantes de origen mexicano que han retornado de ese país a sus lugares de origen (Guaynajo y Zacatecas), pero que llegan con contactos y experiencias transnacionales valiosas para este análisis. El documento se basa en análisis cualitativo que pone atención sobre las redes transnacionales a partir de la movilidad, las razones de la migración en el periodo de retiro laboral, los cambios en su identidad y el apego al lugar, redes sociales y prácticas culturales.

La razón para analizar las prácticas transnacionales de los jubilados estadounidenses residentes en México es doble; por un lado, porque es un grupo de migrantes que ha crecido rápidamente en México. Respecto al segundo grupo se justifica porque es muy conocida la intensidad migratoria de mexicanos hacia Estados Unidos, pero no se conoce el papel que juegan los migrantes de avanzada edad al retornar a México; se consideran migrantes de retorno todos aquellos que han regresado de manera permanente o temporal a México.

**Policy Advisors and Scientists’ Mental Models Of Policy-Making: Validating An Elicitation Method**

Policy development is characterized by connecting problems with viable and equitable solutions. Individuals' mental models (cognitive structures that define reasoning, decision-making and behavior) influence how problems are defined and alternative solutions prioritized. We used qualitative (interviews and influence diagrams) and quantitative methods (self-report and repertory grids) to elicit senior policy advisors and scientists' mental models of the role of scientific evidence in invasive species policy-making. Thematic analysis of the interviews revealed four mental model types which suggested that the majority of scientists and policy advisors believed the community was more influential and connected in the policy-making process than evidence; scientists believed evidence was more influential and connected. We triangulated these results with the quantitative data, which showed that the vast majority of policy advisors and scientists believed that policies should be at least 70% evidence-based, and all participants considered evidence to be more credible, and most considered it to be more effective, than input from the general community. For the policy advisors, these results contrasted with the qualitative results. Our research suggests that policy advisors' mental models of the policy-making process were influenced by context, social norms and responsibility, revealing a difference between what they say (espoused mental model expressed through qualitative methods) and how they act (in-use mental model expressed through quantitative methods). Using appropriate methods to elicit and share mental models is critical in redressing complex environmental problems.

**Framing Matters: Effective Framing and Movement Success**

This article examines variations in framing among four different Korean women’s movement campaigns, only two of which succeeded. This study contributes to a more systematic understanding of the impact of framing on legislative outcomes by comparing successful and failed campaigns paired by the same issue area, as well as by overcoming methodological limitations of previous research built on single-case studies. Two cases deal with a family issue: The Abolition Campaign of the Family Headship System (succeeded) and the Revision Campaign of the Healthy Family Act (failed). The other two cases, the Legislative Campaign of the Anti-Sex Trafficking Act (succeeded) and the Revision Campaign for the Special Act on Sexual Violence (failed), are centered on the feminist idea of women’s rights to sexual autonomy. I analyze organizational documents of the Korean Women’s Association United, who led all of these four campaigns, in order to compare the effectiveness of framing in each campaign. My findings suggest that three qualities of frames were common in the successful campaigns. They are articulate frames, empirically credible frames, and de-radicalized frames. The two campaigns with desired outcomes included all three conditions for effective framing while the other two did not. Since these campaigns took place under the same contexts of political opportunity structure and resource mobilization capacity, I argue that my findings highlight the relative significance of framing in movement outcomes.

**Position of Labor in US and Japanese Agrifood Cooperatives: A Class Analytic Perspective**

Producer cooperatives emerged, in part, as a means of protecting the appropriation of surplus value from labor and often involved long struggles to institutionalize this economic form. Today, producer cooperatives constitute a significant component of the agricultural economies of most developed capitalist economies. Much work on cooperatives focuses on agent/principal problems or the tensions between producers and management in directing/controlling the cooperative. Given the historical origins of producer cooperatives in the concerns of labor, surprisingly less attention has been paid to the role that ‘adds value’ to agricultural production in cooperative organizations. This paper raises theoretical questions concerning the class position of various actors in cooperative enterprises. We consider this issue in terms of farmer (production and marketing) cooperatives as well as (food) consumer cooperatives. We ask what possible forms of organization might be introduced to cooperatives to make cooperative ‘labor’ more equal members of cooperative enterprises? We briefly examine these questions with respect to the historical development and current condition of cooperatives in the U.S. and Japan and call for a need to examine this question more systematically and comparatively from a larger international sample.

**Agricultural Mindsets Across Social Networks in Four African Countries**

Smallholder agriculture is coming under increasing pressure to intensify production practices for food security. Conservation agriculture (CA), involving the three principles of (1) minimum soil disturbance, (2) permanent vegetative cover, and (3) rotations or intercropping, has been identified as a sustainable way to do so. However, indigenous knowledge is not sufficient to support a transition
to this new production system; nor is simply the introduction of new agricultural production norms and practices by a transforming agent (extension or NGO). Many observers note that conservation agriculture requires a change of mind-set for smallholder innovation to occur (Hobbs, 2007; Wall, 2007). Successful cases of CA development have also demonstrated the active engagement of a network of producers and their partners throughout the agricultural sector (Coughenour, 2003; Swenson and Moore, 2009). The fundamental agricultural development question is how to bridge the gap between these new mindsets and those of the ‘risk averse’ small farmer that has informed indigenous knowledge for generations. The youth are completing in-depth interviews and taking photographs of elements of their everyday life that they define as particularly “Peruvian” or “Japanese.” Preliminary findings indicate that the youth report a range of identities (Indio, Nikkei, Peruvian, Japanese, Japanese+Peruvian), but they struggle to articulate how being Peruvian is a part of their daily lives. Instead, a Peruvian identity is linked to expression in birthday cakes, Christmas dinners, and occasionally speaking Spanish. The youth plan to remain in Japan, including obtaining Japanese citizenship, with few diasporic ties to Peru. Several factors are encouraging their assimilation, including the declining presence of co-ethnic migrants, the lack of ethnic institutions in the community, the pressure to assimilate in Japanese schools, and the transition to high school and tertiary education, where immigrant youth attend school with few co-ethnics. Nevertheless, this weakening of a diasporic Peruvian identity to symbolic status is surprising, given that Japanese identity is popularly defined as homogeneous and monoethnic. Immigrant and mixed-race people in Japan are also racialized as gaijin (foreigners, outsiders). This has resulted in identity quandaries for many Nikkeijin migrants, including the immigrant parents of the second generation, weakening their sense of belonging in Japan and strengthening their national (Brazilian, Peruvian) or alternate ethnic identities (Nikkei, Okinawan).

MOOREHEAD, ROBERT* (Ritsumeikan University, robertsm@fc.ritsumei.ac.jp)

Am I Japanese, Peruvian, or Both? the Ethnic Identity Formation of Second-Generation Peruvian Youth in Japan

Based on ongoing research, this presentation explores the ethnic identity formation of second-generation Peruvian high-school and college-age youth in Japan. It asks what ties, if any, does the second generation have with the two countries, and what is the nature of those ties? How do the youth interpret what it means to be Japanese and/or Peruvian in Japanese society? What role, if any, do the youth’s parents’ experiences in Japan play in shaping the youth’s ethnic identity? The youth are completing in-depth interviews and taking photographs of elements of their everyday life that they define as particularly “Peruvian” or “Japanese.” Preliminary findings indicate that the youth report a range of identities (Indio, Nikkei, Peruvian, Japanese, Japanese+Peruvian), but they struggle to articulate how being Peruvian is a part of their daily lives. Instead, a Peruvian identity is linked to expression in birthday cakes, Christmas dinners, and occasionally speaking Spanish. The youth plan to remain in Japan, including obtaining Japanese citizenship, with few diasporic ties to Peru. Several factors are encouraging their assimilation, including the declining presence of co-ethnic migrants, the lack of ethnic institutions in the community, the pressure to assimilate in Japanese schools, and the transition to high school and tertiary education, where immigrant youth attend school with few co-ethnics. Nevertheless, this weakening of a diasporic Peruvian identity to symbolic status is surprising, given that Japanese identity is popularly defined as homogeneous and monoethnic. Immigrant and mixed-race people in Japan are also racialized as gaijin (foreigners, outsiders). MOOSAVI, LEON* (UNIVERSITY OF LIVERPOOL, LEON.MOOSAVI@LIVERPOOL.AC.UK)

Flourishing Under Pressure: Islamophobia, Resilience and Muslims In Britain

Muslims in Britain encounter Islamophobia in politics, news media and everyday encounters. Since Muslims in Britain are racialised as non-white, the Islamophobias they face often simultaneously merges with racism. In this paper, I consider the effect that the pervasiveness of Islamophobia has on Muslims in Britain. I will argue that Muslims in Britain are often highly sensitive about the presence of Islamophobia, which leads them to withdraw from participation in social spaces but, perhaps more crucially, from participating in institutions, out of fear of being discriminated against. Thus, it will be apparent that the Islamophobia that some say exists because Muslims refuse to ‘integrate’ is actually a factor in discouraging Muslims from ‘integrating’. The situation is more nuanced than this though as I will also argue that despite Islamophobia, Muslims in Britain are quite determined to assert themselves as British Muslims. Even though they may be labelled as ‘traitors’ by some, British Muslims not only typically declare themselves as loyal citizens, but also show various practical signs of being comfortable reconciling their Muslim identity with life in Britain. Muslims in Britain have shown much resilience towards Islamophobia in the last decade, establishing various groups, campaigns and coalitions which I will argue is proving effective in countering Islamophobic rhetoric. While much still needs to be achieved in tackling Islamophobia, the successes that have been made, and the increasing stigma attached to being a Muslim in Britain, will be argued to be a sign of a Muslim community that is flourishing under pressure. This research is based on ethnographic encounters with Muslims in Britain between 2008-2013.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Steven Vertovec will relate the conditions of super-diversity of present-day urban spaces which affect migrants’ positioning in the host society, their social milieus that cross-cut ethnicities, and cross-cultural social relations.

Ewa Morawwska will reconsider the premises informing our concepts/theories of immigrant integration challenged by a new phenomenon of the continuous re-direction of migration of travellers seeking self-development and an exciting adventure.

Thomas Faist will reflect on the role of class, ethnicity, religion, and sexual orientation in structuring inequalities in present-day multicultural societies characterized by cross-cutting identities and practices of their members, and its implications for integration/assimilation theories.

Peter Kivisto will attempt to interconnect three concepts which have informed theories of immigrant integration/assimilation: that of pluralism which informed the earliest (American) conceptualizations, the notion of ethnic options/optional ethnicity which emerged in the second half of the past century, and the recent idea of cosmopolitan canopy.

MOREKANNOVA, MARINA* (Russian Academy of Sciences, mayurn118@gmail.com)

New Factors of Social Differentiation in Local Rural Communities

The paper addresses the social consequences of proliferation of innovation practices in local rural communities. Particular attention is paid to the susceptibility of different rural social groups to mastering new innovations in the fields of production, consumption and leisure and to the impact of proliferation of information and computer technologies on social differentiation processes.

The paper is based on the results of the sociological surveys of the processes of proliferation of and familiarization with innovation practices in local rural communities conducted by the Institute of Agrarian Problems of the Russian Academy of Sciences in one of the Russian regions (Saratov’s oblast) in 2010-2011 with personal involvement of the author.

Despite the remaining differences between the city and the countryside in terms of availability of modern opportunities and technology, rural residents are increasingly active in mastering innovation goods and practices. The advancement of modern technology per se does not cause the existing differences to blur, but, on the contrary, gives rise to new forms of differentiation, notably to “digital inequality” not only between the city and the countryside, but inside local rural communities as well.

The analysis of the empirical data allowed:
- identify the features of propagation of individual innovative practices, high-tech goods and services in local rural communities;
- identify the principal social groups, differentiated by frequency of use of innovative practices in the fields of production, consumption and leisure;
- make a comparative analysis of the quantitative and qualitative characteristics of these groups, their life and work strategies;
- propose ways to provide equal access to the new knowledge and skills required for mastering new technologies to different social strata and groups of rural population.

Disambiguating and Re-Conceptualizing Social Investment

Since the late 1990s, ‘social investment’ has appeared in the policy discourse of international and European organisations, as well as on the policy agenda of several governments across Europe and elsewhere. As a strategy that aims to combat social risks while enhancing economic performance, the social investment perspective seems to have appealed to a variety of governments. Indeed, policy analyses show how the notion functions as somewhat of a ‘catchall’ strategy. This is true also on the theoretical side, where social investment is both over-determined on the ideational level, and under-conceptualized. This paper aims to contribute to a finer conceptualisation of social investment by 1. assessing the over-determined and under-conceptualized role of social investment in explaining and differentiating factor in the formation of these preferences and values.

Explaining Women’s Employment Patterns in the Local Context: The Role of Education and Local Care Policies in Terrassa (Spain)

Empirical research into the factors determining female employment has given rise to a lot of interpretations regarding the cultural, institutional and individual effects on women’s employment patterns in different countries based on the analysis of individual characteristics and the effects of macro conditions (Del Boca et al., 2009; Fortin, 2005; Hakim, 2004; Crompton and Lyonette, 2005; Pettit and Hook, 2005). However, few studies have set out to combine both macro and micro perspectives by using discourse analysis to explore the heterogeneity of women’s employment patterns across different local contexts and among different groups of women (Steiber and Haas, 2012). In this regard, some studies have thrown doubt on whether institutional and cultural factors have the same effect on women’s employment patterns in different contexts (Rege, 2004).

In the context of challenges posed by different work-family arrangements, using a multidimensional approach and as part of the European FLOWS FP7 research project, this paper examines variations across different groups of women in the way that contextual factors shape their labour supply. In particular, we propose to take a qualitative methodological perspective on how women’s education partly explains differential patterns with respect to employment, work-family balance and access to family help in the city of Terrassa (Spain). The analysis is based on information drawn from focus groups with different categories of women. Qualitative analysis is supplemented by the results of a survey conducted locally providing evidence of the relationship between employment and type of formal and informal care. The initial hypothesis is that women’s employment patterns over the family life course are closely linked to preferences regarding jobs and the family, with education and the local care system playing a key role as both a mediating and differentiating factor in the formation of these preferences and values.

International Couples Shaping Migration to Japan

The Japanese are living longer and having fewer children than any other industrialized nation in the world. Immigration is seen as the key long-term solution to a shrinking tax base and a shortage of workers. Despite the reluctance of the Japanese to allow a large number of foreigners into the country, immigrants have been integrating into Japan via international marriages for decades. Whether arriving in Japan in the 1980s or for love (dating back to 1600), these couples are important because they represent the most intimate relationship possible and are an indicator of social distance and integration, both in how the couples cope and how other Japanese view these couples. I interviewed 40 individuals involved in international marriages in a rural area of Japan (Joetsu, Niigata). I transcribed the interviews and coded them using a computer software program called Dedoose. I analyzed the data using the guidelines of grounded theory, namely coding and memo-writing. I focused on the differences and similarities between those international couples who married for love (typically Western males and Japanese females) and those that were arranged (typically Western males and Southeast Asian females). There are important differences between the race and gender of these two types of couples, as well as the reasons for why they chose to marry a Japanese national and live in Japan. On the other hand, there are many similarities between these couples when it comes to having to adjust to living in a new culture, learn Japanese, raise children, and deal with extended family members. These similarities and differences offer a unique and intimate window into how the Japanese view foreigners living in Japan.

The Utah Minuteman Project and Symbolic Boundaries: Legal Status, Nationalism, Culture, and Race

The boundaries that groups like the Minutemen construct not only leave a record of how these boundaries were constructed, but also a view of what these boundaries will look like in the future. The literal and symbolic meanings attributed to the U.S.-Mexico border were the motivating factor for Utah citizens to go to the border as Minutemen and to establish the Utah Minuteman Project (UMP). We used fieldnotes and interviews with 20 members of the UMP and found that the importance of the literal border gradually faded as the group expanded to include members who had not gone to the border and shifted to symbolic boundaries within the state of Utah as issues centered on crime and employment. In spite of the unifying identity surrounding the literal and symbolic U.S.-Mexico border, individual members of the UMP constructed symbolic boundaries using the following boundary markers: legal status (illegal vs. legal), nationalism (American vs. un-American), culture (English vs. Spanish), and race (white vs. Latino). The legal status boundary is the most salient boundary among the UMP, and became the key symbolic boundary that all other boundaries are measured against. We found that a wide variety of members conflate legal status with nationalism, culture, and race, whereas other members maintain clear distinctions between these symbolic boundaries. In the end, this calls into question the socialization of identity: on the one hand, by conducting “repair” with use of a preference for affiliation with one’s identity, and on the other hand, by constructing these errors without undermining the student’s individuality: on the one hand, by conducting “repair” with use of a preference for affiliation with one’s identity, and on the other hand, by constructing these errors without undermining the student’s individuality.

Religion, Organ Donation and Disparities in Transplantation Among Minority Ethnic Groups in the UK

With a high rate of end stage renal failure and a low rate of deceased organ donation, unmet need for kidney transplantation among Black and South Asian populations in the UK is disproportionately high, with these groups comprising 26% of the active kidney transplantation waiting list. None of the main religious groups in the UK formally prohibits organ donation. Faith-related barriers have however been linked in previous research with a reluctance to donate organs, although there is little detailed knowledge regarding specific ethnic/faith groups. This study explored influences on donation among minority ethnic groups as part of a wider effort to address the inequality of opportunity to receive transplantation services. We undertook two qualitative studies: 1) 22 community based focus groups with five ethnic/faith groups: Nigerian (Christian), Caribbean (Christian), Indian (Sikh and Hindu), Bangladeshi (Muslim) and Pakistani (Muslim) origin, and 2) semi-structured interviews with 19 hospital chaplains representing Abrahamic and non-Abrahamic religions.

The centrality and compatibility of religious beliefs with organ donation varied between ethnic/faith groups and generations. Although few regarded organ donation as incompatible with religious scriptures, there was considerable uncertainty, particularly among older people and people of Muslim faith who commonly required guidance from religious leaders. Hospital chaplains generally accepted the principle of donation. However few had much experience of deceased organ donation and many felt they could not personally endorse this, although variations existed within religious affiliations. Concerns included possible delays to burial, injunctions to modesty, a need for bodily integrity at the time of death, and the belief that the body and soul remain sensate for some time after death. These findings illuminate the gap between formal statements by national religious leaders, the views of chaplains and the lay population. Greater engagement between health professionals and local communities, possibly via chaplains, might address disparities.

World Art Cities: Theoretical Considerations

The presentation will deal with the topic of ‘world art cities’. The main body of research about global cities has primarily emphasised their function in the global economy (with Frankfurt, London, Zurich, Tokyo and New York as the main examples), thus limiting our understanding of the role of urban spaces as a microcosm and breeding ground for cultural and symbolic activities. This paper highlights the production and creation of a global artistic symbolism through a specific configuration of the artistic milieu, where a high number and a mutual interlinking of artistic activities are crucial for the formation of interactions, networks, exchange and collaboration through which a highly vivid, active and innovative atmosphere can develop. Furthermore, the paper discusses how these activities are embedded into a wider symbolic infrastructure of galleries, music venues, fringe theatres, museums and other spaces of the city. These venues enhance and reinforce certain artistic symbols because through a mutual interlinking of many spaces, they can confirm the innovative character of the work, thereby making them well known outside of their immediate locality. The paper will focus on the development of a theoretical framework that incorporates these different aspects, e.g., art districts, artistic milieu, artistic infrastructure, innovation and global reach.

Transformation of Public Housing Policy and Its Impacts on the Residents in Japanese Suburbs

A lot of critical debates relating to Japanese suburb (ageing, juvenile delinquency, absence of local identity, etc.) have not made inroads into the myth of a homogeneous and stable space populated by non-foreign residents from the middle classes. However, with installation of the “precariat”, driven out of the city center by gentrification on one hand, and with transformation of Japanese public housing policy on the other hand, a new face of the suburbs appears: public housing for insecure populations (old people living alone, handicapped people, single-parent households) or semi-public housing hired by companies for their temporary workers including precarious foreigners make it a space of exclusion characterized by welfare and a whole range of “wasted lives” (Bauman, 2003) is concentrated. It is a very-known fact that territorial fixation is one of the major difficulties for the people of segregated districts, who are not able to “escape” from there (Wacquant, 2007). But that should not make one forget another difficulty: that is the difficulty of not being able to stay in one place, by having to be constantly moving. Because staying in one place also means setting down (establishing a family, sending one’s children to school, having regular dealings with neighbors as a member of the local society, possibility of borrowing money from banks, etc.). On the basis of a survey in the Tokyo suburb area, this paper examines the impact of those changes on (semi) public housing residents, especially where they go and how their lives are changed by their movements.

MORI, IPPEI* (The University of Tokyo, chatchan777@gmail.com)

Correcting Errors without Undermining Students’ Individuality in the Classroom

Classroom education is an institutional interaction meant to transmit the knowledge considered “right” by our society to children. However, recently in Japanese schools, emphasis has been placed on respecting students’ “individuality.” How are educational interactions organized to accomplish these seemingly incompatible tasks? We intend to answer this question in the paper.

We analyze video data of a lesson on national language in a Japanese first-grade elementary school classroom from the viewpoint of ethnomethodology and conversation analysis. We focus on the organization of “correction” and “repair” in conversation. Correction is applied to errors of utterance, and repair, to inaudibility or incomprehensibility of utterance. According to Douglas Macbeth, “pair” in conversation. Correction is applied to errors of utterance, and repair, to inaudibility or incomprehensibility of utterance. According to Douglas Macbeth, correction and repair often cooperate in classroom interaction.

Based on the above, we can rephrase our initial question as follows. As teachers must teach “right” knowledge, they must correct students’ “wrong” knowledge. However, this correction threatens to undermine students’ individuality. How can teachers organize the process of correction so as to avoid this undermining as much as possible?

The results of our analysis are summarized as follows. In the analyzed video data, a student read out his imaginary story. There were two errors in the story. However, the students corrected these errors without undermining the student’s individuality: on the one hand, by conducting “repair” with use of a preference for affirmative answer (=implicit correction) instead of explicit correction and, on the other hand, by configuring a cooperation of correction and repair in the order of “repair-applause-correction.”

Toward the Post-Colonial World Connections: Relativizing the Eurocentric Social Movement Theories to Assemble the Citizenship Beyond Nation-States

This presentation examines the Eurocentric social movement theories from contexts of the genealogies of decolonization, demilitarization and anti-develop ment movements on Okinawa Island. Okinawa has its history of the marginality

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
as a quasi-colonial part of Empire of Japan from 1879, under the occupation of the US Forces from 1945 to 1972, and the continuous concentration of the military bases until the present. Facing on the situation above, the people in Okinawa have been seeking to relativize their ontology and change themselves through the external connections of social movements over the world.

Capitalism and Militarism after the WW2, lead by the US, had a significant influence not merely to Okinawa, but also East Asian countries, and the subjectification of Asian people. As Sakai Naoki (2008, Kibo to Kenpo, Ibusuna) clarifies that the regime of the Post-WW2 imaginary space of Japanese people was the inter-epic-artifact by the US-Japanese homo social “complicity”. In this perspective, the power formation after the WW2 has shifted from the Hegelian understanding of the nation-state with the anthropomorphism to the homo-social complicity among the nation-states. Therefore the (cultural) naturalization of representation of Okinawa, Japan and the US has to be questioned radically from this perspective.

Considering two still dominant streams of the social movement theories, namely the European tradition of Marxism and American tradition of the resource mobilization theories, I want to seek to interweave the theories of the Postcolonialism with them. Postcolonialism here indicates three streams of critiques, cultural studies, internal colonialism critique, and the Orientalism critiques (Shoh, Kokichi, 2006, Shakoikoku no Shatei, Toshindo). By doing so, the effect of the colonialism, imperialism and nation-state can be added to those theoretical models in order to trace the ties and networks of the social movements transcending the time and space, cultural differences, and the nation-state borders.

Growing Regional Gaps in Compulsory Education in Japan: A Case Study at an Aging Rural Area

Since the 1990s, mainly in advanced countries, policy makers have been paying increased attention to the terms of school systems that work in partnership with local communities, as the closed nature of the public education system has faced criticism in the context of “neo-liberalism”. Within these global contexts, the Japanese government began prompting a new system of community-based schools named the School Management Council System in 2004. This school council system is extremely different from the existing public school system in that the citizens’ participation into school management is definitely institutionalized.

In contrast, in recent Japan, the advent of an aging society combined with a low birthrate has had a serious impact on whole public education system, making it more important to consider educational policies from the aspect of population problems. Especially, in aging rural areas, the number of abolished schools is rapidly increasing due to depopulation, and there are heated debates on the regional gap in educational opportunities between urban areas and rural areas. Thus, one of the most urgent problems in rural Japan is to design new forms of community-based school systems appropriate to the realities of local residents around the schools in the population-declining areas.

Accordingly, this paper examines, from the perspective of sociology, the problems and the possibilities of community-based school systems by focusing on the collaboration between compulsory schools and the local residents in Japanese aging rural areas, in order to search for the new public education forms open to the local residents.

Understanding Care Giving and Care Taking Experiences throughout the Life Course - a Comparative Study of Older Couples in Denmark and Japan

The systems of providing welfare services interact with older people’s everyday lives in a very complex way. Not only the arrangements of systems as such but also the availability of services influence their possibilities and constraints at an everyday level that roles they play within the social network of their everyday lives. These interactions are long-term changing processes as both the systems and wide-ranging conditions in everyday life are neither static nor immutable. In particular, the present paper draws attention to how older people understand the ways that the welfare systems interact with their everyday lives throughout the life course. Older people’s understandings of their interactions with the welfare systems at the everyday level reflect upon both their past and present experiences and practices, and this reflection results in forming a significant part of their views and expectations for the future.

Guided by life course approach, the analysis focuses on older couples in Denmark and Japan, and explores the following questions: how do older couples experienced care giving and care taking over the life course? How do they perceive these experiences? How have older couples experienced mutual support and communication with children, grand-children, and their neighbors and friends? How do their social worlds change as time goes by?

Interviews with couples aged 65 and over from Denmark and Japan are ongoing and will be concluded by February 2014.

Negotiating Safety in Relationships: Children's Agency in the Context of Family Violence

This paper reports on the findings of qualitative research undertaken in Australia with children (n = 23) and mothers (n = 18) from a primary care population. The participants had all experienced family violence perpetrated by the father or stepfather and were recruited from medical centres and a larger family violence study of women from primary care. The methods included in-depth interviews and focus groups; informed by a theoretical framework of hermeneutic phenomenology, ethics of care and dialogical ethics.

The aim of the study was to hear children’s voices in primary care research about children’s safety and resilience in the context of family violence. The research questions sought to understand children and mothers’ perspectives on children’s safety and resilience; establish how children’s safety is realised in the context of family violence and determine how children’s voices inform a primary care response.
The main findings revealed that children needed to negotiate their safety in the context of family violence and post separation. Key to this was whether the child had agency to negotiate their safety; which was dependent on four interrelated factors. These factors will be presented to explain the ‘Model of Children’s Agency’. Informed by the model, implications for policy, practice and further research will be considered.

MORRIS, BRIGIT* (University of New South Wales, brigitmorris@yahoo.com.au)

Moving Through Space

Spaces in urban geography are rich with signs and symbols related to nation- al as well as personal narratives. Artists who construct public art installations in sites symbolizing hegemonic power and cultural identities are able to rework or reclaim the meanings attached to these spaces. I am interested in artists who engage in performative, site-specific installations that aim to recreate historical or contemporary political events in a symbolic way. I will argue that by reframing the meaning of significant sites using artistic devices of afflect and temporality, installation artists are in a unique position to critically analyse political and social questions which ‘trouble’ our society.

I will examine two case studies. The first is Gregor Schneider’s 2007 work, 21 Beach Cells. This installation involved a series of interactive metal prison cages, symbolizing Guantánamo Bay. The installation was placed on Bondi Beach in Sydney. At the time, the Australian Government supported the US government’s actions of indefinitely detaining so-called enemy non-combatants. Bondi Beach symbolizes the free and egalitarian spirit of Australian national identity – a jarring vision with the landscape of the Guantánamo prison. The second work is Doris Salcedo’s 2007 work, 6 y 7 Noviembre. Salcedo installed a sculpture over the Palais of Justice building in Colombia’s capital city, Bogotá. The work remembered the events of 6 to 7 November 1985 when milita stormed that very building – the High Court of Colombia.

Salcedo and Schneider reclaim these meaningful sites to create afffect between artist and viewer, between citizen and nation. The implicit value of these locations facilitates a conversational or reflexive relationship with the viewer where the past is effective to the present. This dialogical relationship makes the viewer complicit in both the artwork and the subject matter it addresses. Therein lies the transformative power of the artwork.

MORRISON, IAN A* (The American University in Cairo, imorrison@aucegypt.edu)

Secularism and the Foundations of Pluralism: The Crisis of Reasonable Accommodation in Québec

In recent decades Québec, like many other Western states, has been a site of debate regarding the limits of pluralism and freedom of religion. In Québec, these debates emerged within the context of a restructuring of the nature of na- tion and citizenship. Since the early 1990s, the Québec state has undertaken a project of the construction of a citoyenneté québécoise, seen as the culmination of a transformation of the boundaries of the Québec nation that began with the Quiet Revolution of the 1960s, marked by the shift from an ethnic to a civic concep- tion of the nation. The dechristianization and secularisation of national identity in Québec is presented as an expansion of the boundaries of the nation and an opening towards otherness.

Yet, contemporary Québec has also been described as the site of a ‘crisis’ relat- ed to the measures adopted to promote this conception of such a nation. Of par- ticular focus have been the practices of ‘reasonable accommodation’ for religious practices. Opposition to such measures are made on the basis of two arguments. The first suggests the need to narrow the scope of pluralism in order to protect universal values, and secularism itself. As such, it posits the paradoxical need to limit pluralism in order to protect pluralism. In doing so, it appeals to the need to protect the universal (as host body) from the particular (as contaminant). The second argues the need to protect ‘national values’ from the dilutive and assimilatory forces of relativism and multiculturalism. As such, it demands protection of the particular (as host body) from the universal (as contaminant).

The proposed paper examines the manner in which these two seemingly oppo- sitional arguments can be present within a common discourse that problematizes the presence of certain religious subjects and practices within the public sphere in Québec.

MORRIS, VIRGINIA* (University of Oxford, virginia.morrow@geh.ox.ac.uk)

Modern Moralties? Children and Social Change in Vietnam

This paper explores the effects of ‘modernity’ on children’s lives and on their aspirations in Vietnam. It draws on qualitative research undertaken with children and their parents as part of Young Lives, a longitudinal study of children growing up in four developing countries (www.younglives.org.uk). The paper explores how social, political and economic changes are affecting social realities, moralities and norms, especially in relation to intergenerational relationships between grand- parents/parents, and children. For example, there is clearly a rapid process of marketization taking place, with consumer durables like mobile phones and the internet becoming widely available. At the same time children describe clearly the centrality of family relationships, and especially reciprocity in the form of caring for parents, siblings, grandparents, and an expectation of filial duty by parents. Thus, three sets of values are colliding, (a) there is a combination of Confucian notions of filial duty combined with Communist values relating to the importance of reciprocity in relationships, yet (b) there is State-led concern about ‘social evils’ affecting children and youth by parents (while these are nearly universal, they seem particularly marked in Vietnam) and (c) new technologies that are perceived as bringing risks to children. Children themselves are aware of shifting moralities. They perceive there to be corruption among adults – some teachers, and employers - and express concern about unfairness and injustice. The paper explores whether there are ‘new’ moralities emerging, and describes how parents and children are managing these processes.

‘I have to Help and Improve their Life’: Young People’s ‘transitions’ in Ethiopia and Andhra Pradesh, India

This paper explores the lives of young people growing up in Andhra Pradesh, India, and Ethiopia, drawing on data from Young Lives, a longitudinal study of children growing up in four developing countries (www.younglives.org.uk). The paper explores whether there are ‘new’ moralities emerging, and describes how parents and children are managing these processes.

Beyond the Respondent-Interviewer Interaction: Exploring the Performance of a Self-Administered Life-History Calendar

Life-history calendar (LHC) methods have been increasingly used in surveys in the last two decades. There is indeed a general consensus on the fact that the highly structured but flexible approach of the LHC facilitates the memory of past events. Respondent’s past experiences provide a context for retrieval of autobi- graphical memories and they are used as anchoring points and time landmarks for respondents to place events. Respondent- interviewer interaction is a core part of the LHC method. However, there is a general agreement that the LHC methods improve accuracy of retrospective data even for different populations and cultures with a non-linear representation of time, the reasons for this performance (i.e., retrieval processes) are less clear. The literature suggest that the LHC perform- ance is amplified by the interviewer-respondent interaction via conversational and flexible interviewing, either in CATI or CAPI. However, studies using self-ad- ministered LHC on youth sex behavior argued that LHC can be used also used in self-administered modes reducing social desirability bias.

In this study we present data from two surveys conducted in Switzerland (the Swiss Household Panel pilot study and the Family tMes study) and Vietnam between 2011 and 2013. Results show that self-administered LHC could produce equally valid data in terms of completeness (measured with five indicators: number of resi- dential moves, number of intimate partners, number of children, number of jobs, and number of years of unemployment) than interviewer-respondent interactive interviewing. Moreover, self-administered LHC transmitted by mail data had even
higher levels of internal coherence than self-administered LHC completed during face-to-face interviews. We argue that improvements in the layout (i.e., graphical visualization) of the LHC, as well as an increasing popularity of life calendar model in social media, may have increased in recent years the accuracy and feasibility of self-administered LHC for data collection.

**Three Generational Continuity In Achievement Orientations: New Evidence From The U.S. Youth Development Study**

Growing inequality in families has prompted great interest in the intergenerational transmission of advantage. Guided by three complementary theoretical perspectives, we examine the continuity of achievement orientations across three generations. The first posits that contemporaneous parental orientations and attainments influence children. Children of more highly educated parents receive more parental encouragement and observe successful parental role models. A second approach posits that prior parental pathways matter for children. Earlier parental behavior may also provide a model of more or less successful action, and impacts children indirectly through parental attainments. A third “selection model” posits that parents’ stable traits, observed during adolescence, influence parents’ pathways, their attainments, and children’s orientations.

The Youth Development Study followed a cohort of over 1,000 Generation 2 youth from age 14-15 (1988) to age 37-38 (2011), and also surveyed their G1 parents (during G2’s adolescence) and 422 of their G3 children aged 11-21 (2009-2011). An SEM model, based on 384 G1, G2, and G3 triads, provides a three-generational assessment of the transmission of achievement orientations: Confirming the first perspective, contemporaneous parental educational expectations were strong predictors of both G2’s and G3’s orientations toward academic achievement during adolescence (self-perceptions as intelligent, a good reader, and having successful parents). A second approach posits that prior parental pathways matter for children. Earlier parental behavior may also provide a model of more or less successful action, and impacts children indirectly through parental attainments. A third “selection model” posits that parents’ stable traits, observed during adolescence, influence parents’ pathways, their attainments, and children’s orientations.

**What's Another Word for “Ruling Relations”?: Translating IE to Community, Government and Academics in Medicine**

This presentation highlights the work of using institutional ethnography (IE) in applied health research. I illustrate how my IE study on fetal alcohol spectrum disorder (FASD) both facilitated and complicated the process of knowledge translation (KT). I will discuss this in the context of KT with diverse audiences including community stakeholders, government policy and decision makers, and academics in medicine. It is the work of research to contain and limit the amount of data to collect and analyze in order to keep a study focused. Applied health research also commonly includes KT plans to strategically engage target audiences with meaningful research findings. As an applied health researcher, I considered each primary audience as I decided how and what data to analyze as well as how the findings would be disseminated.

The purpose of this IE study was to examine how institutional supports and services are activated and coordinated around youth with an FASD diagnosis. My study included in two Canadian communities – one remote Aboriginal community and the other an urban provincial capital. In each setting, three distinct populations were interviewed: 1) caregivers of children with an FASD diagnosis; 2) front line workers from healthcare, child welfare, education and social services with direct involvement in the lives of children with an FASD diagnosis; and 3) policy and decision makers who manage the interviewed frontline staff. In addition to interviews, I collected and analyzed clinical and service-related forms, training manuals, policies and assessments. This large volume of data required focus and prioritization in order to produce results that meet the expectations of my main target audiences: community, government, and academics. I argue that the utility of IE in applied research is only as strong as the ability of the researcher to “speak IE” in a language that can be understood.

**The Forgotten One of the Triad: Why Did Rene Worms, and Not Emile Durkheim or Gabriel Tarde, Fail?**

Rene Worms (1870-1926) was a brilliant young philosopher who entered sociology at the beginning of the 1900′s with a fresh and powerful perspective. He gathered dozens of intellectuals around these different initiatives. Theoretically, he was at first a strong advocate of organicism, even if he was very open to other theories and currents in his journal and his collection. Very few academic works have been published about this author, considering he played a minor in the history of French sociology. Without rejecting totally this assertion, this communication will try to reassess his role in the development of the discipline, and to provide with explanations of his failure and of his forgotten memory. We will focus on several factors such as his will to internationalize the discipline while it was still very weak nationally, or the consequences of his theoretical choice. We shall also insist on the paradoxes of the durkheimian memory for the writing of the history of French sociology.

**Transformation of Drug Policy in Poland: From Complete Depenalisation of Drug Possession to Its Absolute Criminalization**

Last three decades witnessed crucial transitions in Poland towards market economy and multi-party system. This process severely affected all spheres of life, including drug consumption and public policy in that area. Definition of drug and drug legislation in social structure, new powers and new wealth as well as growing poverty and social exclusion demanded moral justification. A number of social problems have suddenly become moral issues, subject of vivid moral debates and accusations in fight for moral supremacy. In result, legal provisions had to be introduced to symbolise new moral order. In 1997 drug possession was penalised. A number of drug-related crimes skyrocketed from several thousand prior to the penalisation to eighty thousand ten years later. In a decade, several hundred thousand, mostly young people underwent legal prosecution, most of them got convicted in criminal registers which reduces their prospects in the labour market. Despite softening of the drug laws in the recent years, criminalisation of drug possession widened a generation gap and excluded significant proportion of the young generation labelling them as criminal deviants.

**The Micro-Politics of Poverty and Inequality: Implications for the Real “Hidden Abode of Production” in South Africa**

Almost two decades since South Africa celebrated its political freedom; unemployment, poverty and inequality remainundeniably high. The dominant narrative by most South Africans is “awukho umsebenzi” and “asinamali” – there is no work and we do not have money. South Africa’s transition to democracy in 1994 was thus flawed, as it did not bring about economic emancipation for the majority of its people. More than three in every ten South Africans are unemployed. Neo-liberal policies and the welfare system, aimed at addressing economic failures of the apartheid state, have had limited success.

High levels of unemployment and inequality that followed South Africa’s entry into the global economy have shifted the focus of survival and economic activity from the factory to the household. In the absence of an effective welfare state, the poor have retreated to the household and adopted diverse livelihood activities. Contrary to views held by traditional economics, households are not just places of consumption and leisure but significant places of production and the provision of...
services, especially in the context of unemployment and poverty. The household has become the only site of stability for most people as well as their only means of survival – the real “hidden abode of production.” Most households, however, are fragile; they lack resources and are unable, therefore, to effectively alleviate and cushion the effects of unemployment, poverty and inequality.

What emerges, are particular implications for gender relations, gender identities and household dynamics. New patterns of male domination and female subordination intensify, often riddled with conflict. Intergenerational conflict also intensifies in a context where access to income and time use becomes a source of conflict rather than cooperation. Conventional theories of gender relations and households are challenged in this new social and economic context.

Johannesburg's inner-city was once an area notorious for crime, grime and urban and social decay. It has been described by academics as a ‘vacuum of belonging’ (Gottz and Simone 2003) and a hyper-ghetto, home to prostitutes, drug dealers, diseased street children, criminals and their victims (Murray 2011). In recent years, however, there have been considerable efforts to regenerate the urban environment, particularly through the provision of low-income and social housing. These attempts at physical regeneration have coincided with efforts to enhance security in the area as well as foster a sense of community. This presentation examines the relation between urban and social regeneration as well as the practices and methods utilised to achieve these aims. Of particular interest is the relationship between physical and social space and how this structures social relationships and notions of belonging. Furthermore, it explores the ways in which community is formed in a context of urban transition, insecurity and hyper-diversity. Utilising the framework developed by Henri Lefebvre (1991), it examines the perspectives of residents living in the inner-city and the ways in which they are able to or prevented from exercising their spatial imaginations and abilities to appropriate spaces in the inner-city and the effects this has on the formation of community and notions of belonging. Particular focus is on residents living in social and low-income housing's perspectives about what community, security, appropriation and belonging mean in a situation of urban transition, social decay and insecurity, as well as what the limits of community are in these conditions and how these boundaries are drawn and reproduced.

Strategic Collaboration As Means and End: Views from Members of Swedish Mental Health Strategic Collaboration Councils

Mental health care professionals are under pressure – both from their own organisations and professions and from external legislation and policy – to collaborate. This article reports the views of collaboration held by influential mental health care professionals who participated in strategic collaboration councils. Semi-structured interviews were conducted with 31 participants in three groups: personal ombudsmen and managers of social care and health care. The participants presented generally homogeneous opinions of collaboration, although they differed in outlook: the personal ombudsmen maintained an operational perspective, while the care managers had a more strategic focus. All participants saw collaboration as necessary to a functioning organisation. They joined the collaboration councils expecting to form interprofessional relations that would lead to greater efficiency, better knowledge of other organisations, and professional support. The participants’ adherence to a positive norm, together with further institutional pressures, contributed to homogeneity in the participants’ responses. All guardians of their points of view while collaborating in networks adhering to a social norm. Strategic collaboration was thus both means and end.

Neoliberal Reconstruction or Urban Regeneration? the Private Sector and the Provision of Low-Income and Social Housing in Inner-City Johannesburg

In academic literature, urban regeneration is more often than not treated as a code-word for gentrification or dismissed as a term developers use to sugar-coat the commercialisation of space and the destruction of public housing. Reinvestment in urban spaces and public housing is seen as part of a global strategy of capital and both a cause and symptom of the spread of neoliberal politics and practices around the world (Smith 2002). Using the case of inner-city Johannesburg and the provision of low-income and social housing in the area, this presentation argues that more nuanced and contextually sensitive approaches are required. In Johannesburg, the provision of low-income housing has been led by the private sector, who have also taken the lead in the regeneration of the city. However, this has not resulted in a solely revanchist or exclusionary city being created, but has had the contradictory effects of fostering increased social cohesion and meaningful regeneration, whilst simultaneously increasing the cost of land and housing in the area. Utilising Pierre Bourdieu’s notions of field, capital and habitus, this presentation explores the multiple factors which have shaped the reinvestment and regeneration process in Johannesburg and shows how a diversity of outcomes and imperatives are possible and in fact present, even in a context shaped by neoliberal approaches to city-building and housing provision. Cities are part of broader social contexts or milieus and are therefore shaped by competing fields and forms of capital. This presentation highlights the multiple impulses and concerns which have shaped housing provision and reinvestment in Johannesburg’s inner-city and discusses what the effects of these have been on communities living in the area and invites scholars, whilst still remaining critical, to adopt new, more nuanced and context sensitive approaches to questions about urban renewal, particularly in the Global South.

Youth Policy in Ireland and India: A Comparative Study

Contemporary policy discourse about youth is frequently trapped in the dichotomous paradigm of simplistically portraying them as either ‘a problem’ or a ‘human resource’. This broadly applies both in Europe and in Asia. However, while significant comparative research on youth, youth work and youth policies has been conducted within Europe, there is very little research which compares the European and Asian contexts, and there is none to date specifically comparing Ireland and India. Based on recently completed PhD research, his paper explores and compares the youth policies of Ireland and India through the analytical lens of Gough’s (2008) ‘five Is’: industrialization, institutions, research, institutions, ideas and international relations. It examines the major ‘factors and actors’ that have influenced the historical development of youth policies in both countries and situates these in their broader regional contexts.

There are many obvious differences between India and Ireland in terms of location, economy, culture(s) and the economic and social context. However there are also significant connections between them, stemming not least from their common colonial experiences, meaning there are important parallels in political culture and public administration.

The voluntary sector and its relationship with government agencies hugely influences policy making in both countries (the principle of ‘subsidiarity’ in Ireland can be fruitfully compared with that of ‘Panchayati Raj’ in India). In India, however, there is no forum for NGOs and the government to come together whereas ‘social partnership’ has been central to Irish social policy. In both countries most youth have little or no opportunity to participate in making decisions that affect their lives. Many are not aware of their own rights, or the policies and programmes that affect them. New policy initiatives are underway in both countries, however, which hold out the possibility of redressing this.

Gender Differences in Reactions to Coming out: The Reaction of Mothers of Non-Heterosexual Children and Their Roles

In a heteronormative society, disclosing one's non-heterosexuality to others can be very stressful, but it can be heightened considerably when coming out to family members. On the one hand, parents to whom a child has disclosed their non-heterosexuality also struggle with feelings of inability to accept their own non-heterosexual child. Coming out thus causes a "family crisis" (Williamson 1998), because family members have to reconstruct a family model which was previously based on heterosexuality. Yet what does "family crisis" mean to the family members? Family members have to reconstruct their common colonial experiences, meaning there are important parallels in political culture and public administration.

The voluntary sector and its relationship with government agencies hugely influences policy making in both countries (the principle of ‘subsidiarity’ in Ireland can be fruitfully compared with that of ‘Panchayati Raj’ in India). In India, however, there is no forum for NGOs and the government to come together whereas ‘social partnership’ has been central to Irish social policy. In both countries most youth have little or no opportunity to participate in making decisions that affect their lives. research revealed that mothers of a non-heterosexual child were especially afraid of the collapse of the family they created (i.e. “family crisis”), while father did not present such narratives. Mothers react strongly to the “family crisis” due to traditionally given gender roles, in which they are expected to be more accountable for family affairs. Yet interestingly, these gender roles also influence mothers to overcome the “family crisis.”

Contentious Politics and the Global South

Referring to new challenges in the study of contemporary social movements, Tarrow claims that “To the extent to which we have allowed the examples of civil Western movements from 1960s to shape our models, we will not be able to understand them” (2011). The author refers to ethnic wars and terrorist movements, in particular Islamist groups; other movements from the Global South rarely appear as empirical applications of the framework Contentious Politics, but never in the role of challenging it to revisions like Islamists. The thesis of a movement society in two trends, a more contained in the “West”, and a more transgressive in the “Rest”, leaves out many issues around which movements in the Latin America have been contending.

However, attempts to explain the particularities of Latin American social movements has led to the development of specific theories, treating the region as sui generis (Costa 2010). Thus, in the analytical openness and systematic character of the framework on Contentious Politics lie its main virtues: it invites for dialogue and results in a collective process of knowledge construction. It has a serious limitation for that purpose, as Bringuel (2011) objects: instead of its claimed epistemological turn, “Contentious Politics” is an ontological movement, a change on what to study (action and structure, relational dynamics by mechanisms and processes). The second and third world's biggest producers of genetically modified crops (GM crops of GMOs), the social movement struggles that surrounded and developed a strong communication front as early as 1999, with a weekly newsletter and in state agencies and politicians. They engaged in legal mobilization and developed advocacy networks, where frames circulate. Different from many conflicts in the “Rest”, the movement turn is yet to come, by the incorporation of epistemologies from the Global South.

This paper attempts to contribute to this challenge, based on claims raised by Latin American scholars and movements, organized in five elements: the spatiality of contentious politics, in particular subaltern strategies of place based identity building; the commodification and the coloniality of knowledge; the potential of contemporary peasant and indigenous movements; the social question as a cross-cutting issue; legal mobilization based on non-individualist conceptions of rights.

Fighting GM Crops in Argentina and Brazil: Global Constraints, National Opportunities?

When one looks at current figures, in which Brazil and Argentina are, respectively, the second and third world’s biggest producers of genetically modified crops (GM crops of GMOs), the social movement struggles that surrounded and kept revolving around the issue are difficult to visualize. However, the adoption of the technology has been disputed for almost two decades. A major difference was the capacity of Brazilian movements to jeopardize the interests of the pro-GMOs coalition: they had to wait for a decade until soybean production had been converted to GM seeds, what took four years in Argentina. This created a widespread recognition of a controversy over GM crops in Brazil, what never happened in Argentina.

There are many other factors differentiating the cases, but also similarities between them. Frames were similar; because movements participate in transnational advocacy networks, where frames circulate. Different from many conflicts in the Global North against GMOs, in these countries there were not only issue-oriented groups, but also identity politics, as peasant movements were important actors. The Campesina frame “food sovereignty” is very prominent. A major difference lies in the organizational bases and forms for resisting GM crops. The great power of the Brazilian movements lies in the building of a sustained campaign among environmental, consumer rights, agro-ecology, human rights and peasants groups. A coalition was formed with dissident scientists, allies in state agencies and politicians. They engaged in legal mobilization and developed a strong communication front from as early as 1999, with a weekly newsletter and a blog. None of these factors are found in the Argentinean case.

The belief that by acting together there was a possibility of affecting social change makes a crucial difference: Argentinean activists perceive more global constraint to their fight, whereas Brazilians perceive more national opportunities to theirs.

Sociologists and Believers: Alliances and Protectorates in Brazil

In Brazil, probably more so than in other countries, sociologists often hold the Comtean opinion that Sociology stands to religion as the positive stands to the theoretical stance. As secularization, the “holy alliance” of social scientists and cultists, the former often imposing on the latter a kind and subtle theoretical protectorate. Such alliances also exist, in greater or lesser degree, with the Catholic Church (especially with the sectors linked to the theology of liberation) and with the historical Protestant churches. Highly emblematic of this tendency are the graduate programs in “sciences of religion” that have sprouted all over the country and Facebook like sites through which social scientists (who often claim to be believers) and believers (who at times social scientists) engage in dialogue. Conversely, there is in the country a process of open, so far only verbal, warfare between social scientists (again of the highest reputation) and the Pentecostal and Catholic community as authoritarian and intolerant of all forms of individual diversity.

The Protestant Ethic Thesis before Weber: Forerunners in France and Brazil

It is well known that the “Protestant Ethic” thesis had existed for quite some time prior to Max Weber’s own formulation. Some specific cases of anticipation of the thesis are represented by Émile de Laveleye and Napoléon Roussel, in the French speaking world of the 19th century and, in the same century, by Brazilian writers Tavares Bastos, E. Carlos Pereira and a certain number of missionaries of English and North-American background who worked in Brazil, like Zachary Taylor and others. Even details of Weber’s thesis, concerning, for instance, the emphasis on the consequences of sectarianism (“Sektentum”) are present in mid 19th century Tavares Bastos’ “Religiao”. Several Scotch authors (who wrote in Portuguese), or even knew he had existed. While such forerunners do not necessarily reach the same level of theoretical, indeed of theological refinement as does Weber, they view adhesion to Protestantism (albeit, at times, in a rather cultural and secularized sense) as a necessary condition for modernization and economic development. A common source to Weber and, on the other hand, the forerunners, may have been Hegel’s Lessons on the Philosophy of History which, directly or indirectly, did not take long to reach Brazil and, of course, France. Weber’s own formulation of the thesis seems to represent a largely secularized version of a central tenet of Protestant apologetics. Again in largely secularized terms, this is still, in early 21st century, a fully living, indeed burning issue in both France and Brazil, being but a continuation of the Kulturkampf, the culture war, which has for so long opposed the Protestant and Catholic conceptions of society and modernization.

The Challenge of Sociology of Language: Living in Society, Living with Words

Nowadays, « sociology of language » is explicitly identified in the research groups within the I.S.A. although sociological associations all over the world don’t seem to have equivalents at their national extent. Alongside, this domain of sociology has an uncertain situation within the university systems: few scholar jobs and chairs, research programmes, articles and books are clearly dedicated to « sociology of language ». The cause is probably that it is difficult for sociologists to work on language even though by definition, linguistics is a specific disciplinary field aimed at investigate language. Moreover, linguists have developed their general framework from the canonical principles of Saussure for whom language has to be studied beyond the social context ; it is significant that a scholar as influential as Thomsky still follows the « saussurean dichotomy » and considers speakers as basically identical and interchangeable. For their part, sociologists usually keep language questions out from their study domain. Thus, they forget that society is spoken by the individuals and with all the words they have learnt by living and doing; moreover, since Austin, we know that it is often as long as certain things are told that they can perform, change the reality. So, knowing that each science tends to consider its object of study as its exclusive preserve, sociology of language is an academic challenge. However, it is worth the effort because social * denotes a presenting author. Abstracts are organized by first presenting author's last name. Book of Abstracts XVIII ISA World Congress of Sociology 674
realities is always something we reach with language (that is socially constructed) – how could we do things to each other without words? Do we need an autonomous sociology of language indeed? Or should we try to persuade the sociologists that all sociology is inevitably a sociology of language (in the same way, for Labov all linguistics is necessarily social)?

Homogenous or Not?

"Homogenous or Not? Content Analysis of Japanese Anti-Nuclear Editorials, 1954-1970"

Abstract: This research contributes to the debate on Japanese media homogeneity by demonstrating that anti-nuclear editorials exhibit more diversity than homogeneity overall for the period from 1954-1970. Several observers have noted that Japanese newspapers were self-enclosing of the urban elite in "gated communities" is a result of informal and universalist-particularist continua, with the Asahi the most progressive and universalistic of the four publications surveyed. While relative unanimity of opposition to nuclear arms is found, the analysis indicates that nuclear arms were opposed for a variety of motives which could be characterized as either universalistic or particularistic. Further differentiation is observed on contextual issue positions such as aid for hibakusha, United States accountability in the bombings, and the influence of the domestic communist and socialist parties on the anti-nuclear movement.

The Efficiency of Exclusion: Gated Communities, Informality and Social Mobilization in Mexico City

This paper analyzes the double-edged meaning of informality at the intersection of urban inequalities, landed property, and power in urban Latin America. Our study of the Zona Poniente in the fragmented western periphery of Mexico City allows us to identify situations of social interaction in which the narrative use of informality is central to social and cultural distinction. We find that the standard story – and normatively disparaging construction – of urban informality, exercised by marginalized urban poor people must be complemented by an analysis of upper class elite practices, particularly in private-sector real estate development. The real estate development industry occupies a critical place, materially and symbolically, in structuring the urbanization in which wealthy private interests employ the attribute of informality to stave off "Third World" settlements and enable a "First World" lifestyle in gated communities. In the discourses and practices of neighborhood organizations, public planning authorities and real estate developers the referent "informality" takes on defensive and exclusionary functions and serves as referent for social mobilization against the perceived informality of the local elite.

Fieldwork in this peripheral, fragmented and contrasting area provides insights into the link between informality and confinement on various levels. Firstly, the self-enclosure of the urban elite in "gated communities" is a result of informal modes of negotiation between public authorities, neighborhood organizations and real estate developers. Secondly, the spread of such First-World urbanism has negative effects on social and physical mobility of the dis-enfranchised urban population living in deprived islands surrounded by the defensive walls of gated communities. Thirdly, our fieldwork allowed us to identify diverse types of inter-group conflict and to analyze the hidden, implicit network structures among the respondents of these interviews. The proposed analysis is based on the idea of virtual encounters between survey-respondents, which allows to identify relations of conflict or consensus between dyads of persons. The relational information gathered this way can easily be complemented with additional survey-data about the social attributes and the group-membership of the persons representing the nodes of the analyzed network. Hence it becomes possible to calculate inter-group conflict of different status-groups and to compare it with its intra-group conflict. Similarly, by looking for isomorphic coincidences of different types of network relations, this kind of analysis may also be used to identify reinforcing social cleavages.

A standard survey has generally about 1 to 2 thousand interviews, which corresponds to a universe of 0.5 to 2 million possible dyads of persons. Hence, the analysis of virtual network structures requires to focus on samples drawn from this universe. Consequently, this paper also describes the construction of such samples by presenting an exemplary analysis of the European Values Study (EVS) 2008. Among others, this survey contains a political self-evaluation on a left-right scale, which is used in the example for the construction of relational arcs of conflict and consensus: dyads of persons with both a leftish or both a rightist political orientation are linked by a relation of political consensus. Other dyads with very different positions on the left-right continuum are similarly linked by relations representing political conflict. Hence, by this exemplary analysis it will be possible to assess, how much different income groups (classes) are politically polarized and how much consensus there is within each of these groups.

Segregation Of Roma Children In The Czech Educational System

One of the most serious forms of discrimination in the CR is the discrimination against Roma children in primary education. Despite conclusions by the ECHR from 2007 in the case of D.H. vs. CR, which stated that there was discrimination and a violation of the right to education of the Roma children by placing them into so-called special (currently called practical) schools, a third, and in some municipalities one half, of Roma children have never receive education in these type of schools. The Concept of Roma Integration adopted by the Czech government also includes the removal of obstacles in regard to Roma children's access to education and the aim to abolish segregation in education. One part of this is making changes to the work of pedagogical and psychological centers (which have to diagnose a child with disorders in order for it to be placed in a special school) in terms of improving their diagnostic methods and their work with socially disadvantaged children. In April 2010, the Czech Ombudsman concluded that the disproportionally high number of Roma children who are placed in such schools based on recommendations of the school counselling institutions, without being diagnosed with mental disorders, is indirectly discriminatory. Due to the segregation of Roma in education, the CR is continuously criticised by international institutions but, despite this, no efficient regulation has been adopted to remove this type of discrimination. By analyzing governmental policies, the psychological tests, which are used for recognition and by Roma organizations one might see to change the discriminatory practice. I hope to explain in this paper how it is possible in the EU context to carry on with detrimental and costly policy of exclusion of some...
of the Czech citizens from the education process and what are the main consequences of such approach.

Perceiving, Managing and Negotiating Risky Behaviours from Adolescence to Early Adulthood

Young people's transitions from adolescence to adulthood are individualized, risk taking is normalized, and individual choices, behaviours and actions can have significant implications for future social and economic outcomes (Beck, 1992; Giddens, 1991). Yet young people's choices and behaviours are also set within and influenced by their peers, families and communities (Bronfenbrenner, 1986, 1977). While previous research has examined risk taking behaviours of young people and the influences and drivers of these, we have a limited current understanding of how, why and under what circumstances young people from different family, community and economic contexts negotiate and make decisions about risky behaviours and who and what they draw on to make these decisions. Based on an Australian Research Council grant, this paper uses Australian Bureau of Statistics data and interviews with 70 young people from different social, economic and community contexts across Australia to understand how young people define, perceive, manage and experience risk taking behaviours and the supports and resources they draw on in making their decisions. Using an ecological framework, this paper aims to identify areas of support at the kitchen, community and policy tables that may assist young people in negotiating risk as they move through adolescence to early adulthood.

Losing Control in Western Canada: Private Equity Firms and Land Purchases

My paper will investigate the changing nature of land ownership in Western Canada. This is occurring largely because of the activities of Canadian private equity firms in purchasing vast tracts of farmland as investment properties, and the resultant loss of ownership and control of farmland in Canada, with the resultant loss of very real and palpable anxiety of the upper class and upper caste men over the stereotypical images of migrant brides and their children as “inferior others”. These women are facing a situation of paradoxical hypergamy as they are getting married to men of lower status and therefore their status is further low in society. Resource allocation for improving their political, economic and social life in Haryana society needs active citizenry. Unless their cause is taken up by the upper sections of Haryana sociedad must can be expected by way of state induced policies and citizenship rights. The need for policy recommendation towards the protection of these migrant women and their children has been deliberated briefly in this paper.

Between State and Market – Non-Profit Housing Organisations in Four National Contexts

This paper presents the results of an international collaborative study of non-profit housing involving researchers in four countries using a common methodology to collect information from leaders of non-profit organisations themselves in the research process. The paper draws on earlier work on the hybridisation of social housing provision (Mullins, Czischke and van Bortel 2013) and the competing logics of state, market and third sector. It uses a modified Delphi methodology to collect information from leaders of non-profit housing organisations in four countries about how their organisations are negotiating these hybrid influences on their strategy and operations. This method involves collation of responses to scaled surveys from panels of 15-20 organisations in each country, playing back the results to the participants and follow up depth interviews to explore and interpret the meanings of their responses.

Local Construction of Global Standards: How Gender Diversity Has Become Corporate Social Responsibility in Japan

After decades of reluctance and resistance, Japanese firms have recently begun to embrace the cause of workplace gender diversity as part of their response to the emerging global standards of corporate citizenship. We examine how gender diversity has been locally constructed as an urgent CSR issue for Japanese
firms, focusing on the role of two professional groups—corporate social responsibility (CSR) and investor relations (IR) managers. CSR managers have made the case that the CSR performance of Japanese firms lags behind that of their global competitors because of their failure to address the historically low level of gender diversity. In cooperation with IR managers, they have theorized its economic benefits, by arguing that improving gender diversity can send a positive signal to foreign investors. This constructed advocacy of gender diversity by foreign investors has substantive changes. Using panel data on more than 800 major Japanese companies from 2001 to 2009, our analyses show that foreign share ownership and the world firm influence of CSR and IR managers significantly improve gender diversity, especially at the board-director and managerial levels. By emphasizing the role of professionals in translating global standards into local contexts, our study makes a contribution to understanding the role of local actors in generating variation in the outcomes of global diffusion processes.

Resistence or Alternative Alienation?
This paper has the goal of discussing how the political project of Japan, based on its ideology of homogeneity, alienates the Japanese youth, limiting their individualization processes to, instead, focus on a single model of Japaneness.
Through some narratives examined, the Japanese youth showed to be sensing a lack of possibility to fit in society. When analyzing the societal structure in Japan, the flexibility and rigidity of its job-hunting system; the curriculum of homogeneity and individuality suppression that begin in the school and echoes in society; the rigid gender roles played in the classrooms and companies; the work culture of permanent availability to the company, all become apparent as the sources of the lack of belonging perception amongst the youth. Since there is a lack of imaginable structural change, the youth produce narratives of escaping this hegemonic Japan, adopting strategies of marginality (NEET, Freeter, and some counter-hegemonic sub-cultures); or even strategies of actual escape (prioritizing non-Japanese firms to work, or seeking for opportunities to live abroad.) This paper, thus, argues that these strategies come from a feeling of alienation and purposelessness that Japanese youth has for the hegemonic Japanese society. However, through the study of the phenomenon of Visual Kei, narratives of individuality and subjectivity can be composed and professed, both by language as well as by behavior and appearance. Through Visual Kei, it is argued, Japanese youth find a way to resist the opposition of their individuality in the name of the group mentality and the ideology of harmony that causes a lack between what the youth is made to achieve, and the impossibility of fitting this commodified life with no appeal to individuality. However, such communities of resistance bring forth new cases of alienation and normativity that operates in addition to the ones from everyday life.

The Effect of the Great Recession on out-Migration Self-Selection of the Foreign-Born
The scientific literature on the permanence of immigrants in host countries has faced the empirical challenge of measurement and characterization. Along this line, research on the impact of self-selection is crucial for a better understanding of international migration and assimilation process in the host countries. In this paper we present a comprehensive empirical analysis on the (re-)migration of foreigners in Spain. Using panel data from the Spanish Labor Force Survey we explore the relationship between out-migration patterns and the labor market situation. We focus our analysis on the self-selection process of out-migration and its change with the economic downturns. To model out-migration patterns we estimate a detailed event history analysis. Our findings confirm results from previous studies. Preliminary analyses reveal that the likelihood of leaving the host country is strongly determined by family configurations and the labor market situation of household members. Those who are unemployed have a higher probability of out-migrating, especially when other incomes are absent in the household. The findings also show differences with respect to national origin, sex, and education levels. Moreover, the impact of the economic crisis on the less successful foreigners (in terms of labor outcomes) have a higher probability of leaving the country. Surprisingly, its intensity is weaker during the Great Recession than during the expansive economic period.

MÚNOZ COMET, JACOBO* (UNED, jcomet@poli.uned.es)
The Impact of Unemployment on Temporary Workers. Why Foreigners Are Most Vulnerable during the Great Recession?
The current economic crisis is having a strong impact on the whole society in all developed countries, but especially on vulnerable groups such as immigrants. The case of Spain is unique and at the same time remarkable for three reasons. First, because of its high unemployment level, well above those of other countries in the OECD. Secondly, because of the strong incidence of the temporal rate, with levels close to 30% since the first Labor Reform in 1984, and third, for the extraordinary inflow of migrants in the first decade of the XXI century, representing a foreign population of 3.6% in 2000 to 14% only ten years later.

This paper aims to examine to what extent nationality influences the risk of job loss among the most precarious workers, in particular those with a temporary contract. This study seeks to test the assimilation thesis in a segmented labor market during a recessionary economic period. To do this, panel data from the Spanish Labor Force Survey (2008-2010) are used. Analyses based on logistic regressions show that some differences in the socio-demographic profile contribute to understand the initial disadvantage of immigrants. However, controlling for education, time of residence in the host country and tenure does not fully explain the gap between groups. Only after taking into account professional status (occupational level and sector), we can understand their disadvantage since the collapse of the economy. The results of this study show that immigrants are harmed twice. First, by their greater propensity to hold fixed-term contracts; and second, and above all, because the nature of their temporal contracts is associated with activities related to low-skilled jobs and seasonal work, typical in sectors like construction, agriculture and tourism. It seems that the precariousness faced by foreigners is chronic rather than a step towards more stable jobs.

Effect of Economic Crises on Work Orientations Among European Countries
An extensive body of research in social sciences has analyzed the change of values in developed societies, assuming that as populations experience higher levels of wealth and security there will be a shift in their goals to show an increasing emphasis on self-actualization and quality of life. Concerning work, it will be expected a relative decrease of extrinsic work orientations -those related to external aspects of work and based on the notion that work is mainly a means of obtaining instrumental resources- in favor of intrinsic work orientations -those linked to working tasks and based on the supposition that work in itself is an enriching experience that allows one to enhance their personal development and self-expression.-

The current context of economic crisis has brought up a new scenario that could alter the direction of the predicted change in work orientations, producing a relative increase in the instrumental views and turning the expressive work orientations, as a response to the uncertain and risky labor conditions.

The aim of this paper is to compare work orientations in several European countries in two moments of time, analyzing the differences among countries as well as the evolution of work orientations in order to test the impact of the economic crisis on such evolution. Data analysis will consider the impact of the economic crisis on work orientations at a double level -aggregated and individual-, and will be based on relevant data from the European Social Survey (2004 and 2010).

Evaluación Del Uso De Edublogs Desde Una Perspectiva Comunicativa
No nos proponemos analizar exponer los principales problemas y las ventajas encontrados en la aplicación de edublogs en la docencia universitaria. Recuerda que la existentización de las experiencias prácticas desarrolladas en el marco de una red de innovación docente, formada por un grupo interdisciplinar de 43 profesoras y profesores de 9 universidades diferentes, en un proyecto financiado por la Universitat de València. La principal herramienta desarrollada en esta red han sido los edublogs (destinados a asignaturas diferentes), orientados hacia el aprendizaje colaborativo, tanto del alumnado como del profesorado.

Focalizamos la atención en los edublogs en tanto que canales que median en el proceso de aprendizaje colectivo, facilitando la comunicación en un entorno comunicativo. Desde esta perspectiva, describimos y analizamos las cuestiones problemáticas relativas al edublog como canal en las dimensiones del emisor (quién crea el mensaje), el mensaje (los diferentes tipos de contenidos), la recepción (relacionada, entre otros aspectos, con la gestión de los contenidos), el contexto (cómo se inserta el edublog en el programa docente) y el feedback o retroalimentación.

Esta revisión de la dimensión comunicativa es imprescindible para superar la posible emergencia de situaciones cercanas a lo que Adorno y Horkheimer llaman asiloamiento por comunicación: las disruptiones o simplemente las dificultades en el proceso comunicativo dificultarían la efectividad de los edublogs. De este modo, nuestro trabajo pretende contribuir a la mejora, desde la práctica, del uso

Since 2002, under the last Governor of Tokyo, crime prevention has been managed through the Anzen Anshin Machzikuzu Jourei (or Community Safety Development Ordinance) which decentralized responsibility for crime prevention to communities, supported by local (ward) government. However, both National and Metropolitan Police Authorities have also initiated their own schemes, including public display of video surveillance, crime mapping and so on. This paper reports on empirical research from five case study areas in Tokyo with very different characteristics: a central district partly dependent on the night economy and associated disorder, a wealthy central residential ward, a working class neighbourhood with a large traditional outcaste population, and two middle-class suburban areas. It analyzes the different community-based initiatives that have emerged in each area, their compatibility with and connections to central police initiatives, and considers what combination of local or global forces are the predominant drivers in emerging crime prevention policies and practices.

Smart cities combine ubiquitous computing and urban management, and are characterized by pervasive wireless networks and distributed sensor platforms from video surveillance to meteorological stations, monitoring flows from traffic to sewerage and providing information in real-time or in anticipation of risks. These have extended from small projects for example, shopping / business complexes with integrated building control systems combining video surveillance, fire detection and crowd flow monitoring or other kinds of customer tracking, through larger but temporary initiatives like the command and control systems established for sports mega-events, to permanent whole-city initiatives like Rio de Janeiro’s Smart City, sponsored by IBM.

Although largely civic, corporate and managerial, these schemes have strong influences from police and military sources, from crime mapping and predictive policing models, to new forms of urban warfare involving forms of distributed sensor platforms, and computer analytics, to enable forces to get a ‘clear picture’ of the complexities of the urban landscape and its inhabitants. In some cases in the USA, these have come together in overt ways, for example in the new ‘Domain Awareness’ initiative in Oakland, California, which extends an existing port security project way beyond the maritime ‘domain’ into the surrounding city, combining military and conventional civil government.

Drawing on work in science and technology studies, media studies, sociology, geography and surveillance studies, this paper considers the smart city as the archetypal urban form of the ubiquitous surveillance society. The paper considers the place of human rights in a broad sense, not simply privacy but also equity and access to services and justice, and the ability to flourish, in cities in which flows of people are managed like goods or natural resources and asks whether such rights can be ‘designated’ in any meaningful way, or will be written out.

*The Influence of Linguistic Inequality on the Vitality of Two Otompane Languages of Mexico: Chichimeco Jonaz and Tlahuica*

In this paper we explore the influence of linguistic inequality on the vitality of two related Otompane languages spoken in Mexico, Chichimeco Jonaz and Tlahuica, both of which are endangered languages being displaced by Spanish.

First, we compare the similarities and differences in the social, geographical and historical contexts of the two languages. Then we apply international criteria found in the UNESCO Vitality Index which determines degree of linguistic vitality in order to analyze and compare the use of Chichimeco Jonaz and Tlahuica. Finally, the role of language ideology as shaped by Mexican political economies and their institutions is touched upon. How changes in language policy have influenced language maintenance and shift is also discussed.

*Japanese Food: An Analysis Of Culture Through The Values Derived From Attributes*

The Japanese culture has expanded its horizons in many countries and regions. In special, Brazil, where the Japanese immigrants represents the second biggest Japanese descendant group out of Japan, its values and habits has an important presence in Brazilian territory. One of the important aspects of this culture is the Japanese food. The Japanese food is based on the traditional Japanese culture and has always been an important part of the social life of the Japanese people, being a symbol of happiness, affection and friendship. The values derived from the attributes of Japanese food. The research applies the methodology of Theory of Means End Chain - MEC. Within this perspective, product attributes allow the consumer to achieve certain benefits that are linked to a higher level, allowing the ranking of personal values. The latent values cause consumers to recognize products that lead them to achieve their goals and desired end states. Thirty in-depth interviews with consumers of Japanese food were made between the months of November 2012 and April 2013. The ladderising technique is applied, using personal interviews, with questions that express the goal in a game of links between perceptive elements. This technique is based on the implications glimpsed in the Theory of MEC, with the central concept of ‘ladder’, exploring three levels: attributes, values and consequences. This technique provided the construction of an implication matrix and the hierarchical value map, to confirm the main elements of such behavior. The survey results showed, among consumers, values such as openness, exciting life, satisfaction, pleasure, happiness, self-esteem and affectionation relationship. These values suggest an alignment with the Japanese culture mainly happiness, affection and friendship relationship.

*Local Policing in the Global City: Community Safety Development in Tokyo*

In large Global Cities, the ‘command centres’ of the global economy, most aspects of everyday life are subject to surveillance. Forms of Neoliberal urbanism have spread public space video surveillance, homogenized theme-park malls, gated private apartment blocks suburbs and exclusionary policies towards urban others: the homeless, undocumented migrants and so on. I have labeled this as a globalizing form of technocratic surveillance, however in previous work on Tokyo, one of the preeminent global cities, I have argued that in the Japanese capital, particular social forms of mutual human surveillance are still undergoing an uncertain transition in the encounter with global neoliberal capitalism.

Since 2002, under the last Governor of Tokyo, crime prevention has been managed through the Anzen Anshin Machzikuzu Jourei (or Community Safety Development Ordinance) which decentralized responsibility for crime prevention to communities, supported by local (ward) government. However, both National and Metropolitan Police Authorities have also initiated their own schemes, including public display of video surveillance, crime mapping and so on. This paper reports on empirical research from five case study areas in Tokyo with very different characteristics: a central district partly dependent on the night economy and associated disorder, a wealthy central residential ward, a working class neighbourhood with a large traditional outcaste population, and two middle-class suburban areas. It analyzes the different community-based initiatives that have emerged in each area, their compatibility with and connections to central police initiatives, and considers what combination of local or global forces are the predominant drivers in emerging crime prevention policies and practices.

*Smart City, Surveillance City: Ubiquitous Computing, Big Data and Urban Life*

‘Smart cities’ combine ubiquitous computing and urban management, and are characterized by pervasive wireless networks and distributed sensor platforms from video surveillance to meteorological stations, monitoring flows from traffic to sewerage and providing information in real-time or in anticipation of risks. These have extended from small projects for example, shopping / business complexes with integrated building control systems combining video surveillance, fire detection and crowd flow monitoring or other kinds of customer tracking, through larger but temporary initiatives like the command and control systems established for sports mega-events, to permanent whole-city initiatives like Rio de Janeiro’s Smart City, sponsored by IBM.

Although largely civic, corporate and managerial, these schemes have strong influences from police and military sources, from crime mapping and predictive policing models, to new forms of urban warfare involving forms of distributed sensor platforms, and computer analytics, to enable forces to get a ‘clear picture’ of the complexities of the urban landscape and its inhabitants. In some cases in the USA, these have come together in overt ways, for example in the new ‘Domain Awareness’ initiative in Oakland, California, which extends an existing port security project way beyond the maritime ‘domain’ into the surrounding city, combining military and conventional civil government.

Drawing on work in science and technology studies, media studies, sociology, geography and surveillance studies, this paper considers the smart city as the archetypal urban form of the ubiquitous surveillance society. The paper considers the place of human rights in a broad sense, not simply privacy but also equity and access to services and justice, and the ability to flourish, in cities in which flows of people are managed like goods or natural resources and asks whether such rights can be ‘designated’ in any meaningful way, or will be written out.

*Meaning and Frame Resonance in the Linkage of Social Movement Groups - Comparing Three Miller Island and Fukushima*

This study examines why some social movement groups successfully create linkage while other groups fail to do so. Past studies of the development and growth of social movements have provided an explanation from a view of structural and cultural factors. The former theory explains the linkage from existing organizations or networks; the latter employ such conceptual devices such as framing, emotions, collective identity, ideology, symbols, and themes. Comparing the anti-nuclear movement that occurred following the 1979 Three Mile Island nuclear power plant accident and the 2011 Fukushima nuclear power plant accident, this study explores the processes and conditions with which multiple movement groups create linkages. In the 1979 campaign in the US there was a successful linkage between the national movement organizations and the local movement groups, whereas in the 2011 campaign in Japan, such linkage did not appear to be established. The results of the analysis suggest that a successful resonance is based on the linkage between movement groups for such resonance to occur I emphasize the importance of meaning. Frame resonance is necessary to establish the linkage across social movement groups, and to attain the resonance the convergence of meanings each participating group attribute to their activities is necessary in addition to conditions laid out by framing theory. Drawing on the understanding developed in the area of framing theory, I argue that the establishment of such a linkage heavily depends on the extent of frame resonance and that frame resonance is attained through the convergence of meanings attributed to the actions taken by respective movement organizations and groups.
There Are Few Cases Around Here: Structural Problems of the Japanese Nuclear Compensation Scheme

The Fukushima Daiichi Nuclear Power Plant accident resulted in mass evacuations and displacement of wide areas. As a result, 1.5 million people are assumed to have legal claims against Tokyo Electric Power Company (TEPCO). The Nuclear Compensation Act provides a settlement procedure (ADR) based on guidelines issued by an ad hoc administrative committee to be set up after an accident. In other words, the law envisages that such an administrative procedure of paying damages could only be applied to victims of a nuclear accident. However, the scheme of the law has not worked as well as the law expected. As the law did not provide how damages should be paid in case a total amount of damages would surpass the expected amount, guidelines for payment have been issued piecemeal. Moreover, the guidelines have been challenged even in settlement procedures. The nuclear ADR was initially designed for an out of court procedure against the backdrop of the extremely small lawyer population. However, the nuclear ADR has been operated as a rational settlement procedure rather than a procedure of traditional style of compromise, which requires lawyers' involvement to handle cases. The Japanese society has grown to require legal intervention in handling mass claims but the existing structure of the legal system is unable to provide necessary amount of legal services to victims of the nuclear disaster.

Effect Of Men's Educational Attainment On Their Fertility

We are interested whether the effects of men's educational attainment on their fertility diminished over time across welfare regimes and by partnership types. Some research questions will be under study:

1. What is the effect of educational attainment of men on their fertility? Is it different for men in consensual unions and in direct marriages? In which national context men's fertility level specific to consensual union may be close to the total fertility rate of married fathers. Our hypothesis is that, in gender egalitarian societies, with more similar gender equality across welfare-state institutions, the total fertility of men (and women) depend less on their educational attainment but more on the type of union patterns. In more traditional societies the effect of education on male fertility is more important, despite the fact that is often the opposite of what it is for women.

2. GGS data for available countries will be used to compute duration-based total union specific fertility rates in the spirit of parity-progression ratios developed by Hoem and Muresan (2011) and to analyse life-time fertility determinants. The following variables will be included in the analyses: family background, gender, age, social background, partnership status, parental status, educational enrolment, educational attainment, calendar year, etc.

Knowledge Workers' Subjectivities. Precarization and Transitions of Young Highly Qualified

Over the past decades, many EU member States have registered a large raise in the use of temporary employment. Young people are far more likely than other groups to be employed in precarious jobs, independently from their education and skills. In the age of the global economic-financial crisis, the attack to the conditions of knowledge workers goes on. According to the different lines of the neoliberalistic logics, that juxtapose the current precarization processes phenomena like under-payment and misalignment between subjects' education and their working activities (Eurofund, 2011; Standing, 2011; Samek, Semenza, 2012). Liberistic logics, that underpin society's practices when anthropogenic environmental threats for the conflict of value spheres, particularly economic versus environmental benefits. It is expected that a gusher is coming back to life. This paper re-thinks Weberian sociological theory concerning actions of non-humans: the Gulf of Mexico contaminated by the Deepwater Horizon oil gusher is coming back to life. This paper re-thinks Weberian sociological theory in terms of i) his neglected concept of non-social action, hence expectations concerning actions of non-humans and time, space, and scale, and ii) the enduring conflict of value spheres, particularly economic versus environmental benefits. It calls attention to the importance of assumptions about non-human actants that underpin society's practices when anthropogenic environmental threats for the distant future are glimpsed, but not known for certain. It brings Adam's analysis of time to the centre of environmental sociology. It demonstrates how this framework can be used to gain insight into contemporary environmental problems like climate change.
Interlocking Directorates and Transnational Corporate Political Unity

The extent of a dominant transnational capitalist class hinges on whether members of the global business community tend to act in a unified manner. Research on corporate political behavior within a national context indicates that formalized ties in the business community, such as those formed by interlocking boards of directors, function to facilitate unified political behavior by the corporate elite. However, due to differing national identities and class interests within the global business community, the effect of transnational interlocks on political unity is unclear.

Combining data on political contributions to U.S. candidates with information on board of director interlocks among the 500 largest corporations in the world between 2000 and 2006, I test the effect of transnational interlocks on business cohesion. I find that the more connected two firms are through the transnational interlock network, the more unified their political donation patterns are. In addition, I find evidence that suggests that a transnational class-wide rationality is becoming more prevalent in the interlock network, to the point that the group G500 firms that are connected to each other through the transnational interlock network exhibit political unity comparable to that of the U.S. capitalist class.

Position of Women in Sociology or Female Founders in Sociology

Sister’s founders in sociology as a coin term are formed by Mary Jo Deegan, in order to explain, demarginalisation of female stream sociological theory. Even though there are more than 52 women considered to be founders of sociology, they are still not recognized in sociology, especially in Bosnia and Herzegovina. Aristotle’s distinction between male/female, according to authoress Shipley, represents the key moment to ideological foundation of the women exclusion from academia and public life, because their identification with natural and irrational. Results of Wars, global ecological movements, and movements for the rights of the minorities were joined together in creation of significant subversion and counterpart of male stream patriarchal ordained theories in eco feminist movement. Many The women and nature in male stream theories are considered to be the insignificant Other, formed as counterpart for male principal which is culture, resisted theory and activity. Logic of domination over its objection, imperialism, colonialism, patriotism and European West racism must be rendered with the logic of nurturing as the prevailing concept of successful bioregional cooperation and interpersonal relationships, pacification and peace agreements. Key terms: logic of dominance, logic of care, malestream / femalstream, independent man vs. independent women, Aristotle’s misogyny.

Comparative Process-Oriented Research Using Social Media and Historical Text

Process-oriented methodologies place a strong emphasis on linking theory with empirical methods. However, in the digital age, this can sometimes be difficult to do. For example, much of our social lives increasingly occur online and we leave behind an enormous digital footprint. These data can be understood through a variety of empirical methods. The same can be said about the digital archiving of historical data. However, it is all too tempting to study these data without a clear theoretical framework. This paper seeks to understand partiality and perspectivity within comparative, historical technologically-mediated empirical methods. This paper uses two empirical data sources: one contemporary (Twitter) and the other, historical (Google Books ‘n-gram’ data) to make an argument that we can use process-oriented theory to connect empirical research. Specifically, it argues that process-oriented perspectives help bring notions of figuration into data-driven research, which enables sociologists to also see and locate their own figuration. Canonical process-oriented researchers such as Norbert Elias used mixed methods approaches, including visual maps and quantitative surveys. He also used standardized data. This paper argues that quantitative methods are important to process-oriented methodologies and can be successfully used to identify a figuration. Specifically, Social Network Analysis (SNA) does this. This paper uses SNA to visually reveal sub-groups within a figuration using both Twitter data and Google Books data. For example, the Elias work on the diner, this paper examines historical sources and life documents. However, it extends these to Big Data empirical sources and argues that, for example, tweets can be understood as ‘life documents’. Additionally, methods, such as SNA provide important modes to see how a figuration develops over time.

NGOs and New Trajectories of Engagement and Youth Power in the Occupied Palestinian Territory

Youth civic and political engagements are not distinct or separated from each other, and in many cases they overlap and interlink, they result in diversity of youth engagement forms. Youth organizations play an important role in the occupied Palestinian territory (oPt) in terms of being a recourse, catalyst, and supporter for youth engagement, whether civic or political. As youth organizations were trying to cope with changes of sociopolitical context in the oPt, they reinforced different trajectories of engagement than the ones that existed within the Palestinian society between the 70’s, 80’s, and early 90’s. The organization’s type (Social movement organization, politically affiliated organization, youth development organization) is a vital factor in deciding how the organization dealt with changes in the context and the frame and trajectory of engagement reinforced.

This paper aims at understanding the change in the trajectory of engagement in the oPt; how does it differ from the trajectory of the engagement that took place between the 70’s and early 90’s; how does this change impact youth power and position in the oPt; How do different types of organizations provide different strategies, forms, of youth engagement?

Sexual Violence and the Issue of Comfort Women in Contemporary Japan

The “comfort” women, in reality sexual slaves for the Japanese military during the Asia-Pacific War, demand but have yet to obtain an official apology from the Japanese government. Rather, their demands have been met with insisting rejections from right-wingers, including influential politicians, whose main reasoning is: 1) Those women were not forced but were licensed prostitutes; 2) it is a kind of universalism that soldiers of many nations have perpetrated wartime violations of the dignity of women; and 3) therefore Japan’s issue of comfort women is not peculiar in the history of mankind, so it is not necessary for Japan alone to apologize.

This reasoning is not a relic of a bygone era, but sounds familiar and even resonates with current ‘rape myths’ and rape culture in Japanese society which encourage male sexual aggression and support violence against women. Regrettably, tolerance of sexual violence against women penetrates even the law. Consequently,CEDAW, in its 2001, CEDAW’s Observers urged Japan to revise and change for the better the sections of the Penal Code on sexual crimes against women (Paragraph 33-34, CEDAW/C/JPN/CO/6, 7 August 2009). The Government did not address this point in its response issued in August 2011. Furthermore, in recent years the Supreme Court of Japan has overruled several judgments by the lower courts in rape cases, usually deciding that the victim’s witness was not reliable.

My paper will examine in detail the connection between the reactionary response to the issue of comfort women and the reluctance to uphold women’s rights in cases of sexual crimes, and will discuss the deeply rooted misogyny in Japanese society.
Language Shift and Maintenance of Tamil Language in the Malaysian Multilingual Context

The prevailing multilingual situation of Malaysia reflects the gradual shift in the use of minority languages like Tamil, both in formal and informal domains of language use. This is a result of several reasons for language shift to take place in language maintenance, and one such is the existing power that goes with language(s). How far language attitudes, linguistic views and power based policies will foster the use of concerned languages for the benefit of society at large is indeed a challenge and seems to be a question mark. The Malaysian Tamil society is gradually shifting in languages like English and Bahasa Malaysia as media of instruction to achieve education needs in different disciplines of knowledge, considering the modern economic-scientific and technological – occupational-de."
ership with a call for parliamentary democracy. Fourth, the ‘democratic socialist’ vision which sets as its goal a political-economic model which is based on both egalitarianism and constitutionalism.

It is concluded that all of the four visions enjoy sufficient support among different social classes and interest groups to stand a realistic chance of becoming dominant in shaping Chinese capitalism over the next decades: While the two first visions describe a current split within the Party-state elite, the two latter visions represent two different political-ideological shapes for a potential counter-hegemonic social movement from below.

**Music As Youth Culture: Case Study in Japan**

**NAGAI, JUN’ICHI**

The objective of this report is to discuss how Japanese young people relate to music based on “A Generational Comparison Survey on the Lifestyle of Urban Residents and Their Sense of Awareness,” a survey of young people (age 15–29) and middle-aged people (age 30–49) conducted by the Japan Youth Study Group in 2012.

Globally, circumstances surrounding music have drastically changed since the advent of the Internet, continuing to push compact disc sales down. This fact is often interpreted as young people's trend away from enjoying music in Japan, where many people believe that music is something for young people. The survey results indeed show such a trend. However, our data indicate that this trend away from enjoying music is observed not only among young people, but that it is particularly pronounced among middle-aged people. Therefore, I suggest that as people age, they tend to enjoy music less.

---

**A Transnational Movement In Local Context – The Occupy Movement In Germany**

**NACHTWEY, OLIVER**

**BRINKMANN, ULRICH**

The Occupy movement was a global phenomenon. After the advent of Occupy Wall Street (OWS) occupy camps mushroomed to other, in particular western capitalist states. The starting point of our own empirical research was the question, who participated in the Occupy movement. In our contribution we would like to present findings from an online survey of the Occupy movement in Germany. Carried out in autumn 2012 the study is based on more than 1000 voluntary participants (activist and sympathizers) of Occupy – it was announced through the channels of the occupy movement, Facebook and Twitter.

In our analysis we differentiate between three different groups: (a) Campers, the core activists of Occupy, (b) activists, who have been active in the camps and participated at demonstrations, etc. and (c) sympathizers, who have a predominantly positive attitude towards the movement, shared links, etc. but didn't participate in physical actions. We present empirical results for these subgroups about their class/labour market position, their financial situation, their education degree, their (material and post-material) values, their attitudes towards work and society and their forms of critique of the financial crisis. We present both a narrative analysis of the development of Occupy in Germany and an analysis of the political, social, temporal, and spatial aspects. This includes an overview of the specific frames of actions and a field analysis of other groups involved in the protest, media coverage and the advent of "Blockupy", a broader alliance of left wing groups, trade unions and Occupy activists. Thus we analyze the German Occupy movement in two ways: Firstly, we compare it to the empirical results of the OWS-research by Milkman et al. (2012). Secondly, we compare it to the social and political patterns of other recent social movements in Germany.

---

**Reinterpreting the Relation Between Motherhood and Paid Work: Second Generation Women in Norway**

**NADIM, MARJAN**

A pertinent question in contemporary Europe is whether the children of migrants will reproduce the so-called traditional gender arrangements and ideals of the migrant generation, which often include strong expectations that women should prioritise family obligations over the pursuit of paid work. This article analyses the cultural and moral understandings at stake in second-generation women’s reflections on and practices of combining motherhood and paid work, and explores the space for negotiating such understandings in the family. The study is based on in-depth interviews with second-generation women born to Pakistani immigrants in Norway, and interviews with some of their husbands. The findings show that the moral understandings and practices of the parent generation are not merely passed on to the second generation; rather they are challenged and reinterpreted in ways that support mothers’ participation in paid work. The article argues that this change is facilitated by the cultural and institutional context that the Norwegian welfare state represents.

---

**Music As Youth Culture: Case Study in Japan**

**NAGAI, JUN’ICHI**

The objective of this report is to discuss how Japanese young people relate to music based on “A Generational Comparison Survey on the Lifestyle of Urban Residents and Their Sense of Awareness,” a survey of young people (age 15–29) and middle-aged people (age 30–49) conducted by the Japan Youth Study Group in 2012.

Globally, circumstances surrounding music have drastically changed since the advent of the Internet, continuing to push compact disc sales down. This fact is often interpreted as young people's trend away from enjoying music in Japan, where many people believe that music is something for young people. The survey results indeed show such a trend. However, our data indicate that this trend away from enjoying music is observed not only among young people, but that it is particularly pronounced among middle-aged people. Therefore, I suggest that as people age, they tend to enjoy music less.
Obviously, many young people are interested in music. However, it is not their level of interest in music but the length of time they spend with music that has the largest impact on their musical behavior. This is supported by the fact that Japanese young people are often willing to use music as a communication tool.

Focusing on this fact, this report discusses what music is all about for young people and how young people relate to music—how music affects their everyday lives, self-consciousness, and relationships with friends.

**Poverty and Mental Illness in People Excluded from the Labor Market in Japan**

The unemployment rate in Japan remains at around 5%, with the proportion of the long-term unemployed higher than in other OECD countries. Our objective is to examine whether and to what extent labor market exclusion is associated with poverty and mental health, using data from the 2004, 2007, and 2010 Comprehensive Survey of Living Conditions. First, we categorized jobless people as “job-seekers,” “jobless people who have a desire to work, but do not seek a job,” and “jobless people who do not desire to work.” Then, we compared the economic and health conditions of jobless people to those of working people.

The main findings are: first, the proportion of “jobless people who have a desire to work” increased from 2004 to 2010. Compared to job-seekers or working people, these jobless people tended to be single men and married women. Meanwhile, jobless men and women had a desire to work if they were younger and had smaller savings. Second, in 2010, male “jobless people who do not desire to work” were most likely poor or suffering from a mental illness. For women, however, “job-seekers” and “jobless people who have a desire to work” were more likely than those in other categories to be poor or suffering from a mental illness.

In conclusion, we found that being jobless may increase the probability of poverty and mental illness, even if employment is not being sought. Furthermore, we speculated that even if men neither search for jobs nor have a desire to work, they are not necessarily satisfied with their lives as jobless, and therefore they might be socially excluded. However, this is not true for women as Japanese society is based on a strong male-breadwinner model. Therefore, the meaning of being jobless differs for men and women.

**Political Coverage of Japanese Newspapers in Brazil**

Today in Brazil, there are several presses written in foreign languages directed to immigrant communities which appeared in the history of the immigrants. Which characteristics are present in those minority's media? This work focuses on explaining activity of Japanese newspapers in Brazil, which are written in Japanese for the Japanese immigrant community and published in São Paulo, the most important city of Japanese immigration in Brazil. Generally, these ethnic media for minority community have tendency to seek and keep traditional values and culture. However, it is interesting that these Japanese newspapers in Brazil report not only culture events or education's subjects, but also frequently political subjects. In the political subject, they report especially activity of Japanese descendant politics from the Japanese immigrant community. This work tries to describe the political coverage of the two Japanese newspapers, Nikkey Shim bun and São Paulo Shim bun, and to analyze that comparing with immigration's history and context of immigrant descendant's advance in the Brazilian politics. Qualitative content analysis was adapted to analyze the articles. We conclude that during the electoral campaigns, these newspapers represented some subjects with a favorable way to Japanese descendant candidates and showed guidance to vote on them by the journalistic persuasion, especially guiding the readers to concentrate their votes on some specific candidates to elect them with enough votes.

**What Is Social about the Network?: An Analysis of the Application Program Interfaces of Popular Websites**

API (Application Program Interface) is the method of continuous asynchronous sourcing of data between various ‘applications’. It facilitates exchange of data between the ‘network’/‘networking’ society. The promise of communications technology among other things is the democratisation and the user-defined nature of interaction of players constructed by it. But the use of ‘bubble’ (Pariser, 2011) produced in the human-computer interaction to fashion online activities alerts us to a bias in the nature of such interactions while enforcement of technologies like unique identity based governance systems further complicates the digital divide bringing up the question of equality.

This paper is based on the analysis of API codes and its mechanisms, offered by Google, Facebook, Twitter and YouTube. The analysis looks into the nature of the ‘bubble’ generated in order to define the character of the network. This is in a bid to argue that the randomness promised by it is being reined in order to create patterns of interaction that are arbitrary and unequal compounding the problems experienced in infrastructural access and the lack of ‘cultural’ capital.

Technology is best analysed in technological terms in order to arrive at an understanding of its sociological dimensions. Such orientation is politically necessary to make apparent the shift of hardwiring of inequality in the era of big data.

**Costs For Survival**

The necessary cost to continue the life increase year by year. It is said a baby weighed in Japanese assume a debt 7 million one's back just now. A fact is not able to pay to survival cost have not the method unless everybody depend on pitiful death or the help of others with obvious reasons of not income. Our viewpoint has, now a day, a nation must guarantees because of the system is organized by a nation, if the guarantee is not, everybody dies fields or only lives by personal responsibility, however, awareness of the nation is not without persons. For the nation is considering the social-welfare that only taxes increase is able to reform. We examine the cost for survival. This paper continues The 86th Japan-Sociological-Society-Meeting, 2013 in Japan present. We know already cannot adopt finding employment, when companies are not more than initial incomes. Furthermore, we understand the same everything compensation as Expenditures = (welfare, pension, public-works, public-employee-salary, subsidy: childcare-allowance), for Incomes = (bonds, taxes, contribution, monetary-easing). The cost for survival includes expensive structure of various taxes. Why does the cost for survival occur? Who have costs carry on theirs back else way to pay? Can they not pay costs by service and contribution to the society? Our study picks up a 15 villages’ example simulation to answer that question modeled on Japan where a mayor live and a staff who order public works, a youth and an old on welfare, grant a pension and three children. A bank employs president and a clerk. A company employs top and a worker. We understand that the cost for survival increase according to the nation's expenditure and income up as various taxes. Our conclusion is that the best situation on the cost for survival lightens the burden.

**Transformation of Labor Market and Legitimacy of Income Inequality in Japan**

Many advanced countries have witnessed a growth of economic inequality in the age of economic globalization. However, economic inequality is not always regarded unfair. Historical and institutional contexts in each country frame citizens’ perceptions about to what extent and among which social groups economic inequality is regarded as legitimate. If citizens consider it legitimate, such economic inequality is likely to be reproduced. Therefore, transformation of labor market caused by economic globalization has grown inequality between different social groups to different extent according to how each country has legitimated economic inequality historically and institutionally.

The present research focuses on a Japanese case and investigates what inequality Japanese people regard as fair and how it relates to Japanese historical and institutional contexts. Japanese welfare-employment regime has supported the citizens’ life differently according to one’s industry, firm size, and gender. We examine how this condition relates to Japanese perceptions about fair income gap
by analyzing what determines "what amount of income people think that they should earn." To be more specific we investigate whether actual income gaps between social groups such as gender, those with different educational levels, occupations and employment status, are reflected by Japanese perceptions of 'just income gap' between these groups. As a result, we find that gaps of perceived appropriate income between different employment statuses and between different firm sizes are larger than actual income gap between these groups. Furthermore, employment status and firm size play more, or at least equally, important roles than occupation. It shows that Japanese people assume disproportional distribution of income according to firm sizes and employment status is more legitimate than one according to human capital.

Leisure and Mental Health: Sociological Study Of Women Experiencing Leisure During Their Mental Illness

This paper reports the findings from interviews with 194 mentally ill women who are seeking treatment in government hospital, Gurgaon in Haryana State, India. The respondents were questioned about their participation in leisure activities, and also about the overall experience of leisure activities. The results show that the women included in the study, are not a part of the routine activity and hence they do not get benefits of leisure in their mental and physical health.

Further, respondents reported that leisure activities gives feeling of physical and mental health and also provides experience of pleasure and freedom. It is argued that, contrary to the notion that leisure helps in maintaining good physical and mental health, doctor do not insist on participation in leisure activities. It is concluded that leisure and mental health are all embodied in the surrounding social contexts and, indeed, that leisure activities in general are inextricably entwined with their boarder cultural and structural context.

When Poverty Alleviation Perpetuates Inequality. Struggles of the Poor in Johannesburg Post-1994

Although the institutions of apartheid began to be dismantled in 1994, South Africa still bear the scars of inequality and poverty it etched so deeply along the fissures of race, class and gender. Although the African National Congress (ANC) government has committed itself to eradicating poverty and ensuring "a better life for all", it has also embraced an approach to macro-economic policy largely neoliberal in character that has resulted in the enforcement of the duty to pay for basic services (water and electricity) among the poor.

Between 1999 and 2006 in Johannesburg residents in several of its townships (including Soweto, Alexandra and Orange Farm) came together in protests and formed social movements to demand that the municipality put an end to its experimentation with different forms of punishment and prevention of non-payment for the consumption of water and electricity (from cut-offs to prepaid meters). In these struggles, residents identified themselves as poor people and demanded that the municipality acknowledge their inability to pay due to being unemployed or indigent by other means. Growing from illegal reconnections and mass marches and pickets, to include legal interventions and a constitutional court case, these struggles forced the municipality into its own series of policy formulation processes in response. This paper will explore the culmination of these processes in the City of Johannesburg's most recent indigent management policy, which, it will show, puts forward a “pro-poor approach” that brings together a targeted model of partly decoupled access to services for those identified as ‘the poor’, that are nevertheless delivered within a system that is run along market principles overall.

It will argue that the nature of this differentiated system perpetuates inequality even though it might address poverty by encouraging a particular form of life for those identified as “the poor”.

Examining the Impact of Health and Housing on Poverty Among Older Australians

As with most OECD countries, the Australian population is ageing. It is predicted that by 2050, over 20 per cent of the Australian population will be aged 65 and over, compared to 13.4 per cent in 2010. The Australian retirement income system is heralded as an exemplar of the World Bank's three tiers approach, with the means-tested government-funded age pension complemented by occupational pensions subsidised by taxpayers. Home ownership is also widespread among those identified as "the poor".

It will argue that the nature of this differentiated system perpetuates inequality without delivering within a system that is run along market principles overall.

Recent estimates indicate that around eight out ten older Australians are homeowners, with 70 per cent outright homeowners. Much research has focused on evaluating the implications of this high rate of homeownership.

However, research on older public and private tenants has been limited. This paper is part of an ongoing investigation exploring and comparing the life circumstances of public and private renters and the centrality of housing tenure. It is based on 1370 in-depth interviews with older tenants in the private rental market and in public/social housing and a qualitative analysis of socio-economic household and individual data from the Household, Income and Labour Dynamics in Australia (HILDA) survey. The study focuses on the relationship between the cost of the accommodation, security of tenure, type and quality of accommodation, location and proximity of the neighbourhood and financial stress, income manageability, physical and mental health and subjective well-being. The results highlight the central role housing security and cost play in ameliorating or exacerbating the well-being of older tenants and their ability to lead a decent and valued life. The older public housing tenants because their rent is fixed at 25 per cent of their income and their security of tenure is guaranteed are able to lead a decent life and their subjective well-being is higher. However, the subjective well-being of older private renters is generally poor. This is mainly due to their negligible security of tenure and the high cost of their accommodation.

NAIR, MANJUSHA* (National University of Singapore, manjusha@nus.edu.sg)
A Labor Time Bomb? Workers’ Unrest in the Automobile Industry in India

In the Suzuki-owned Maruti-Manasar automobile plant in Gurgaon near New Delhi, in 2011, striking workers immolated a human resource manager. These migrant workers, who were employed informally in the formal industrial sector, demanded the right to represent themselves through independent unions. The insurgency has been one among a series of protests in the automobile sector in India, starting with the contract workers strike at the Honda plant in 2009. In Pricol, an auto part plant of the Toyota in Coimbatore, and in the Graziano Transmission unit at Greater Noida, the vice-president and CEO were killed by agitated workers. Bloomberg news termed these protests as evidence to a ticking labor time bomb. In this paper, I examine how far these protests signify the resurgence of labor movements in India. These protests were remarkable for the show of collectivism, use of disruption and violence, and demands that pertained to the workers as a whole. They implied a move from conventional union-based articulation by formally employed workers, to new demands for independent unions by migrant laborers. These protests were organically linked to production and socialization processes in the informal industrial sector. The protests were inspired by transnational imperatives. However, these protests, especially the disruption and violence involved, were indicative of a shrinking of the democratic space for struggle in India, which were equally evident in the rising number of disputes in the industrial environment. They occurred in companies owned by foreign owners, who have less supportive networks to sabotage and suppress them, compared to local owners. Finally, these protests were cellular in nature, rarely extending beyond the factories to become industry wide associations and coalitions.
In this paper, we examine ijime (bullying) in Japanese schools and, so doing, propose hypotheses about the basis of wholesome civil society. Japanese (especially middle) school adopts the extreme groupism, which forces all people involved to live a highly controlled collective life in a totalitarian and closed environment. It denies not only the civil liberty but also the civil society order that ensures the liberty outside of it. This provides us with the functional equivalent of Philip Zimbardo’s experiment in which he analyzes how human beings are transformed, and what reality and psycho-social order are generated among members under certain conditions, though this kind of experiment is now prohibited from an ethical viewpoint of research. Bullying can be observed in almost any school in the world but the Japanese bullying, ijime, deserves close examinations for those particular conditions that Japanese schools force on the students. Many cases of ijime can be ascribed to the psycho-social order imposed on the students’ everyday life in the classroom. Examining the psycho-social mechanisms that accompany the order above, we can abstract the basic theories about violent and persecutory psycho-social properties of human beings (e.g. various psycho-social explanatory models, ecological models of psycho-social orders, and combination of them with evolutionary theories), which are potentially applicable to various types of violent and persecutory phenomena among human beings. We can expect several outcomes of this study: (1) Psycho-social analysis of and countermeasures against bullying in school; (2) Several findings about psycho-social orders where dense interactions within groups bring about inner changes of individuals, which leads to violent and persecutory psycho-social orders—these processes loop spirally; (3) Based on the aforementioned outcomes, a framework for countermeasures against violence and persecution from domestic violence to genocide as well as for the stable liberal civil society.

Key Words: two ways of inference about power, an “actor-structure-situation-process” model, “conceptual formula” on power, a visual diagram on power. During the last decade, discussions about concept of power became unnecessary complicated and confusing. Some arguments on power such as one of M. Foucault are “philosophical-sociological” theory rather than empirical-sociological theory. This state of affairs resulted in confusion about concept of power among students of sociology. In addition to this, there is not much effort to visually represent concept of power so that students may conceptually and easily understand power.

Therefore, there is a need to reorganize and clarify concept of power. The purpose of this presentation is fourfold. First, two ways of inference about power will be suggested; a “prospective way” that indicates “power as potential” and a “retrospective way” that indicates “power as an effect on the outcome.”

Second, the “situation-process” model will be suggested to understand power conceptually. In this model, an actor means a person (or a group), structure means symbolic-systems, social rules such as customs and laws, and organizational structure in addition to physical structure. Situation means a state in which persons or groups are placed in. Process means interactions processes and communication modes.

Third, the “conceptual formula” on power will be suggested as below:

-Simple Power = (power resources (knowledge) - communication skill - interaction power) = (power resources (knowledge) - communication skill) + (Other's Perception (truthfulness & legitimacy))

Fourth, a visual diagram on power will be made to make it easy for students to understand concept of power.

These four, i.e., distinction of two different ways of inference, an “actor-structure-situation-process” model, “conceptual formula” on power, a visual diagram on power, will enhance understanding of students about power.
Effects of Wives' Relative Resources on Husbands' Gender Role Attitudes Among Dual-Earner Families

This study examines how in Japan, husbands' gender role attitudes among dual-earner couples with children are associated with their wives' relative resources, namely, their educational levels and managerial posts. Japanese men have more traditional gender ideologies compared with their American counterparts. However, gender ideologies among Japanese men are becoming non-traditional. Previous studies reported the threat hypothesis, in which husbands among dual-earner couples insist traditional gender role attitudes when wives' economic contributions to the family income exceed theirs. This paper reports the result of a questionnaire survey conducted in February 2011 on 342 dual-earner Japanese husbands who had children less than 12 years of age.

Two results are obtained through path analysis. First, when wives' educational levels or managerial posts are higher, wives' incomes will be higher. The wives' higher incomes are associated with the husbands' more egalitarian gender role attitudes. However, the wives' educational levels or managerial posts are not directly associated with the husbands' gender role attitudes. Japanese husbands may tend to hold egalitarian gender ideologies when they hold lower breadwinner roles, and their wives have a higher economic status. In this regard, the threat hypothesis is not supported, whereas the benefit hypothesis is supported. In addition, the husbands may not care about their wives' social positions, in terms of educational levels and managerial posts. Therefore, Japanese husbands' gender role attitudes concern their wives' provider roles within the family, but not with their wives' social roles in public. Second, it is speculated that the smaller the difference between husbands' incomes and their wives' incomes, the lower the level of husbands' tendency to adopt traditional gender role attitudes.

The Self Measuring Radiation Movement for Alternative Food Networks

This report argues that measuring radiation by civic groups plays an important role for Alternative Food Networks (AFNs) in current Japan. Since the 1990s, the localized agro-food movements have spread in several countries; the United States, European countries and East Asian countries including Japan. These movements have mainly dealt with economic issues, social justice, ecology and inheritance of indigenous food culture. Today, the AFNs groups in Japan face the new issue, which is contamination of foods by radiation.

On March 11, 2011, the Great East Japan Earthquake and the tsunami triggered a series of serious accidents at the Fukushima Daiichi nuclear power plants. Since then, Japanese have been concerned about the effect of radiation on domestically grown agricultural products. In the cases of AFNs, members tend to connect with each other directly because someone of farmers, consumers or coordinators in them have to check the food secure by themselves. Since the winter of 2011, so many grass-roots groups to measure radiation of foods have emerged. There are 110 groups as of June 2013, and most of them are located in eastern Japan. The total number of samples which those groups already have been measured equals to the number of samples officially measured by the Japanese government.

This report is based on the author’s participatory observed research in one of such civic groups in Miyagi Prefecture from January 2013, where is one of the most severely damaged area. I found the major roles of measuring radiation are that the members can judge the level of safety by themselves based on their own experiences. They can share not only the data of radiation but also the information about how to minimize the effects of radiation. Finally, the implications of this study for AFNs will be discussed.

The Making and Unmaking of the Global Social Movements in the Japanese Sixties

Preliminary scholarships in the field of global social movements more or less has been focusing upon successful cases that were able to create alliances with the movements abroad and/or various transnational activities they conducted. However, in order to comprehend the substantial mechanisms of the global movement, investigation of its difficulties and limitations including various obstacles as well as structural and cultural constraints particularly while the social movements attempt to cross national boundaries is decisive. Thus this paper explores, what makes the global practices possible and how it affects the development of global movement through comparing two social movements that aimed to create a cooperative society during the 1960s and 70s based on the Japanese Anti-Vietnam War movement, which created alliance with the movements in the First World.

Solution To Problem Of Free Rider Through Division Of Production and Sanction

The meta norm (Axelrod 1986, Yamagishi 1990) is one of solutions to the problem of cooperation. The norm requires all persons to be engaged in a production and a sanction at the same time. However, it seems impossible for a person to play both roles because one is different from the other as a professional job. So we suppose the division of roles meaning that a person can’t play both roles, and examined whether the division can solve the problem of free riders. So in a meta norm, introduce two kinds of players. One is a person who doesn’t engage in a production (that is, he/shel doesn’t pay a sanction cost), focuses on a sanction against a free rider with a sanction cost, and is presented a payoff by the other role. We call the player the “guardian.” The other is a player who focuses on a production of collective goods with a production cost, doesn’t engage in a sanction against a free rider (that is, he/she doesn’t pay a sanction cost), and presents a payoff to a guardian. We call the player the “tributary.” With a guardian and a tributary in addition to a free rider, we executed evolutionary simulations to examine whether a guardian can exclude a free rider and a guardian and a tributary work together for mutual benefit. As a result, we found that the division of roles had established and the coalition could exclude a free rider. Especially, it is found that guardians account for up to the same rate of a society as a presented payoff divided by a total production, which reminds us of a kind of tax rate.

Cosmopolitanism, Nationalism, and Colonialism: The Manchurian Motion Picture Corporation and The Production Of My Nightingale (1943)

This paper contributes to emerging studies on cosmopolitanism by presenting a sociological, historical-institutional analysis of the production (and, to a lesser extent, reception) of an arguably “cosmopolitan” film, My Nightingale (Watashi no uguisu, dir. Shimazu Yasujiro, 1943), produced at the height of Japan’s ethnic-nationalist period during the Second World War. I ask the following three research questions. First, what aspects, if any, of the film text can be considered to entail cosmopolitanism? Secondly, whether, how, and why could the possibly cosmopolitan aspects of the film text emerge under the existence of ethnic-nationalist policies, institutions, attitudes, and behavior existent in the Japanese colonial empire? Thirdly, what implications does this case study have on the ongoing debates on cosmopolitanism, nationalism, and political space? By providing answers to these questions, I argue that an ahistorical, normative call for cosmopolitanism may hinder our grasp of the possibility that some forms of claim to cosmopolitanism entail a rationality of narrow ethnocentric nationalism. As a historical hindsight, it is easy to dismiss Manchuria’s slogan of gozoku kyōwa (peaceful co-existence of the five nationalities) and dea rakudo (heavenly place of virtuous rule) as simply political propaganda. But it may also be the case that this apparently cosmopolitan justification might have strengthened the degree of repression and discrimination of the Japanese colonial rule in Manchuria. In other words, I contend that the case study of the Manchurian Motion Picture Corporation and the production of My Nightingale suggests a possible coexistence of cosmopolitanism, nationalism, and colonialism.

The Challenge of Supporting People Suffering Ambiguous Loss: An MPS Case Study

This presentation examines the challenge of supporting people suffering ambiguous loss. “The theory of ambiguous loss” was introduced by Pauline Boss to define the sort of unclear loss that defies closure, such as having a family member go missing during a natural disaster and caring for a loved one with dementia. Boss provides detailed strategies for professional therapists to treat people suffering ambiguous loss, but does not sufficiently explain how supporters with key information should negotiate these delicate situations. In order to evaluate this aspect of ambiguous loss, I observed and analyzed the activities of the Missing Person Search Support Association of Japan (MPS), a non-profit organization dedicated to helping families search for their relatives who suddenly disappeared. Families in these situations experience ambiguous loss, as they do not know if their loved ones are dead or alive.

My analysis shows that MPS volunteers have to provide mental and emotional support to the families of missing persons while assisting with search efforts. The volunteers listen to families’ anxieties about their relatives’ safety almost every day. They primarily try to be sympathetic and receptive to the families’ narratives of loss, like a strategy Boss recommends. However, sometimes they must impose upon or contradict these narratives when they obtain new information during their search. In these situations, they struggle with the decision to inform the families that their loved ones will likely never return to them, despite their hopes to the contrary.

This case study illustrates that clarifying ambiguous situations often conflicts with mental care goals when supporting persons suffering ambiguous loss.

The Meanings of Childhood Mental Health Problems and Children Behaviour: A Comparative Study between Brazil (Santos) and France (Paris 19ème)

Epidemiological studies developed in the last 10 years, mainly in the Western countries, indicate a global trend of an increasing number of mental health problems in children and adolescents, as confirmed by epidemiological studies conducted also in Brazil and France. To understand the phenomenon in these countries, the study had as objective to understand the meanings of mental problems and children’s behavior from a sociocultural perspective, by analyzing children’s experiences beyond adults’ discourse, namely of health professionals and children’s parents.

The research was based on the ethnographic method and took as its starting point the experiences of children with mental health problems who receive care from the health services. The fieldwork was carried out in two mental health services: the Child Mental Health Service of the Northwestern zone (SCV), in Santos, Brazil; and the Medical and Psychological Centre of Flandre (CMP Flandre), in Paris (19ème), France. To apprehend the different meanings of childhood mental health problems in these contexts, in-depth interviews were made with health professionals of both services and with the children’s parents. The discourses about the problems and complaints concerning the children’s behaviour were analysed and grouped by categories to allow the identification of similarities and differences among the adults’ discourses, as well a comparison between the two services.

Adults relate childhood mental health problems to children’s behaviours that they consider as strange, disruptive or disturbing, as observed at home and mainly in the school. The analysis of the different meanings of childhood mental health problems in these countries point to the intertwining between mental problems and children’s behaviour in a common sense, which solutions are sought in mental health services. We observe a displacement of children’s life problems towards mental health field, which makes it possible the solution to general children’s behaviour.

Logic behind Life Reconstruction in the Mt. Unzen-Fugen Eruption Disaster

Areas that sustain damage in a natural disaster are forced to choose between restoring the original area and relocating to another area in order to reconstruct residents’ lives. At the same time, SABO plan (erosion and sediment control) are undertaken in damaged areas in preparation for another disaster. In the initial stage of minimization of disaster loss, people unite and undertake one direction in order to defend their life. However, in the life reconstruction stage, individual issues emerge such as family structure, livelihood, economic conditions, and disparities in degree of damage, making it difficult for the whole community to keep in step.

Following the establishment of the Basic Act on Disaster Control Measures, the Mt. Unzen-Fugen eruption disaster was the first disaster to establish a hazard area in a residential area. This report focuses on the villages that fell within the SABO dam site under the plans to prevent expansion of eruption damage to central city. People in these damaged area faces two major issues. One was that the village was divided up into areas included in the SABO dam and areas that were not. The other was that the villages included in the SABO dam had to make the difficult decision to dissolve their community and vacate their homes. People consented to these unacceptable terms at an early stage because people feared prolonging a decision would cause a delay in the construction and result in a man-made disaster.

Furthermore, villages were against moving to reclaimed land on the coast provided to them by the government. Concerned with the reconstruction of their way of life, they found their own land for relocation. This report seeks to clarify requirements for life reconstruction in this area pertaining to the issue of having to relocate due to disaster prevention projects.

Involvement in Tourism and Bodily Changes: Long Braided Hair and Beaded Neck of the Pastoral Samburu

The body of the pastoral Samburu of northern Kenya is in the process of reorganization under the tourism context. Their beaded adornments or their "traditional" appearances become commoditized. In this presentation, I will introduce examples of heavily beaded neck, long braided hair, and holed earlobes, etc., which have played significant roles in the definition of what it means to be a social unit of that culture. I analyze the influence of various contributory factors such as the differential economic costs, that is, the variance in the actual costs of raising children and also in the economic benefits available. I will also examine the factors which cannot be simply attributed to the economic costs and benefits, such as regional pressures of conformation -- the factor of what is taken for granted on family formation -- how such reinforcement systems vary regionally, and how such conventions are reinforced. I mainly analyze data gathered by the cabinet office: Research on Child-rearing Environment in Urban and Rural Areas.

Factors for Regional Variation in Japanese Fertility

How do people decide whether to raise children? This research examines the factors inherent in the very existence of the family: what explains family formation decisions? In particular, I seek to explain the considerable regional differences that exist in family formation, within the context of the falling birth rate in Japan. I analyze the influence of various contributory factors such as the differential economic costs, that is, the variance in the actual costs of raising children and also in the economic benefits available. I will also examine the factors which cannot be simply attributed to the economic costs and benefits, such as regional pressures of conformation -- the factor of what is taken for granted on family formation -- how such reinforcement systems vary regionally, and how such conventions are reinforced. I mainly analyze data gathered by the cabinet office: Research on Child-rearing Environment in Urban and Rural Areas.

Regional Variation of Gender Stratification Among Japanese Lawyers

This presentation focuses on regional variation of gender stratification among Japanese lawyers. In terms of specializations, Japanese female lawyers seem to be bifurcated in a way. A large number of Japanese female lawyers engage in family law in solo practice or smaller firms than their male equivalent, while an increasing number of female lawyers work for large scale international law firms, engaging in corporate law. Such bifurcation is related to regional differences. For instance, international law firms are only located in major cities, and they provide job opportunities for female lawyers in finding jobs in those areas. Moreover, traditional gender values are stronger in non-metropolitan areas, and it may affect and limit specialization for female lawyers. On the other hand, the relative shortage of lawyers in non-metropolitan areas could lead to better advantages for female lawyers in finding jobs in those areas. Thus, this presentation sets out to statistically examine regional variation of gender stratification among Japanese lawyers. The index of gender stratification to be used includes specializations, current firm sizes, positions, and income. The data to be used is lawyer's census (Keizai Kiban Chosa) conducted by Japan Federation of Bar Associations in 2010.

Social Resources and Accessibility to Care: A Case Study of Persons with Disabilities in Tanzania

In Tanzania, which is one of the low income countries, governmental organizations (GOs) and non-governmental organizations (NGOs) have put more and more emphasis on the rights of people with disabilities (PWD) after 2000s. The National Policy on Disability 2004 and the Persons with Disabilities Act 2010 have put in force, and surveys on PWD are conducted in 2002 and 2012 Census. In 2008, the government carried out the first comprehensive survey on disability in the country. According to the survey, 7.8% of the population aged 7 and above have some form of activity limitation.

However, there is no actual service provided by GOs for PWD. Some PWD get information about the services provided by NGOs and can access to the services, but others may not. The accessibility is dependent to the social resources which PWD have. Social resources include the social network, the physical environment around PWD, and the economic situation of the persons themselves or their care givers. It is apparent that there are many factors cause inequalities in accessibility to care.

The applicant is going to consider what kind of social resources are important to get care in the Tanzania mainland context. The applicant puts the focus especially on the importance of the social network, because in Tanzania mainland people rely on the social network to move and can gather money from the network. The social network gives chance to PWD for changing situations around them, such as the physical environment and the economic circumstances in a temporary basis. The data used in this presentation will be documents on GOs/NGOs activities for PWD, and findings from on-site observation and interviews with PWD in Dar es Salaam and Dodoma, which the applicant has conducted in 2013.

Social Care at Japanese Snack Bars

Snack bar is a special statutory place, where a female attendant (usually there is a female owner called “mama” by customer) is allowed to entertain the customer solely by talking and drinking together. Physical contacts being not permitted, all kinds of talking strategies, including wide range of topics from politics to intimate affairs, are employed to allow the customer feel at home or healed after the day’s hard work.

Most of the customer is married and belong to companies. They go to Japanese snack bar to see “mama” and after talking and drinking (sometimes singing Karaoke), they feel better than before. It’s possible to say “mama” does mental care for Japanese men who needs some kind of care, not physical but mental. So that “mama” has great skills of talking strategies that Japanese men want women to do.

It might be said that Japanese men is not satisfied with communications with their wives or women who is coworkers. “Mama” and this kind of place playing the role of mental care (easier than going to hospital) is necessary in Japanese society and should be positioned one of the social place with guarantee as same as other companies.

Distributive Equity in Waste Disposal Facilities Siting and the Perception of Necessity: In-Ward-Waste-Disposition-Principle in the 23 Wards of Tokyo

What affects the realization of an idea of distributive equity in the siting of waste disposal facilities? This study shows how the realization of an idea of distributive equity in waste management of Tokyo, In-Ward-Waste-Disposition, was significantly influenced by the degree of the perceived necessity for more incinerators. The siting of waste disposal facilities often faces conflicts with neighbors due to the negative impacts on a host community. Distributive equity is one of the most crucial aspects in these conflicts as the facility siting brings the sense of unfairness to those who are told to accept them. In the 23 wards of Tokyo, how to redress inequity in the distribution of waste disposal facilities has been one of the biggest concerns in waste management. In the early 1970s, In-Ward-Waste-Disposition, which meant that waste of a ward should be disposed of within the ward, was adopted as a significant principle in waste management and translated into One-Ward-One-Incinerator-Principle. However, this idea of distributive equity was not completely realized and abandoned in 2003. By comparing the four periods between 1971 and 2003, this study argues that the progress of One-Ward-One-Incinerator depended on how much more incineration capacity was assumed to be necessary given the estimated amount of waste in the future. The incinerators to realize In-Ward-Waste-Disposition was facilitated when the urgent necessity to build more incinerators was perceived by the government under the rapid economic growth and the dominant influence of incinerationism as the policy paradigm in waste management, while the siting became stagnant when the urgency was eased as the economy became sluggish and the influence of incinerationism was undermined by the emergence of Sustainable Waste Management as the new paradigm. When the necessity was denied, In-Ward-Waste-Disposition was abandoned and the attempt to find another way to redress inequity began.

Impact of the Long Recession on Japanese Careers

The aim of this presentation is to examine the effect of the long recession on Japanese careers. After the Lehman brothers economic crisis in 2008, many social scientists discussed the changes that took place in the Japanese labor market and the problems of unstable employment. The smooth transition from school to work has been one of the unique characteristics of the Japanese labor market. However, the number of young people who could not follow the typical career path increased, and it has become more difficult to obtain regular jobs. Additionally, opportunities for regular jobs are said to be unevenly distributed on the basis of educational backgrounds. Many social scientists focused on the lifetime employment system, and they presupposed that continuing in the same workplace was a better option rather than frequently changing jobs. However, the present condition of the labor market appears to be anything but simple. Today, if persons with high educational backgrounds change jobs often, they might still be able to get another regular job easily. On the other hand, even if those with lower educational backgrounds continue in their jobs as nonstandard workers, they may not be considered as regular workers, as nonstandard workers such as those without security under the social security system because welfare services provided by the government are fragile, and companies only provide regular workers with welfare services. Therefore, it is inadequate to focus only on the duration of stay in a workplace. In this presentation, I propose to use the data from the Japanese Life Course Panel Survey that was started in 2007 and is followed up annually. The data includes information on occupation, working conditions, and educational backgrounds, and will help examine the frequency of change of jobs, the duration of stay in a given workplace as well as the other abovementioned issues.

Social Gap in Korea: The Effects of Economic Deprivation on Social Capital and Self-identified Social Stratum

In Korea, the gap between the poor and the rich has become a serious social problem since the economic crisis, 1997. Income distribution has been equalized until 1997, but income disparity has taken a sudden turn for a worse after the economic crisis. The previous studies on social impact of economic crisis include polarization of social stratum, appearance of the new poor population, expansion of irregular workers, popularization of unemployment and dissolution of family, disappearance of social relations etc. How the economic crisis has deepened the social gap in Korean society? The social crisis has directly linked economic troubles after economic crisis. The economic troubles often make people withdraw from social relations and underestimate one's socioeconomic status, and by extension they affect negatively the hope for the future. The purpose of this paper examines the negative effects of economic deprivation on social capital. Furthermore we explore the economic deprivation and reduced social capital has negative influence on self-identified social stratum, life satisfaction and optimism for one's future. The economic deprivation such as difficulties of earning daily bread, unstable housing condition, and overdue educational expenses as well as worsening family financial situation are the critical independent factors which negatively affect on the one's social relations and subjective ethos. The economic deprivation has a bad effect on the social aspiration and upwardly mobile expectation. Thus the financial predicaments have been deepening the social gap among the people in the decline of social capital and lowering self-identified social stratum and social aspiration. We utilize the national survey data which conducted by Institute for Social Development and Policy Research, SNU in October 2012. Interviews were conducted with male and females age 19 and above. The total usable sample size was 1,000. The sample was selected through a process of multi-stage area cluster probability sampling.

**Chance and Risk of Qualitative Interview Methods in an International Comparison**

The study aims to identify problems in conducting and interpreting qualitative interviews in an international comparison and present some solutions. With the help of new communication technologies and increasing cross-border mobility, qualitative interviews enjoy favorable basic conditions. Methodological innovations and quality criteria lag behind. Since foreign language and alien culture come into play, qualitative interviewees need native speakers as interviewers or translators and, in the same vein, insiders as cooperation partners and co-interpreters. To this end, the study suggests that intervention of natives needs more reflection. Researchers should know in which context an insider is situated with regard to age, gender, classification, and social position in his or her own country. In addition, there are usually interest conflicts, perspective differences, trust or mistrust, power distance, and pre-knowledge between two countries. In the light of that, thorough research for cross-border interviews is of great importance. In my study small experiments with interviewees about “civil society” will be conducted. Questions about “global civil society,” “global values,” and “global discourse” will be asked first with insider’s intervention and secondly without. By comparing the two settings, results will show how intervention of an insider works in a qualitative interview and how to reduce one-sidedness, distortion, or misunderstandings.

*Viet Kieu* or Overseas Vietnamese and the Future of Viet Nam: The Case of Viet Kieu Association in Thailand

The Socialist Republic of Viet Nam (SRV) or Viet Nam is one of the countries on the Indochina Peninsula in Southeast Asia which had many times faced severe circumstances caused by colonization. However, Viet Nam finally surmounted all difficulties and has been gradually developed by great help of its own people, particularly overseas Vietnamese, including those who have already returned and who are still abroad. “Viet Kieu” or overseas Vietnamese has a long history closely linked to the protection and construction of Viet Nam. Approximately, there are 4 million “Viet Kieu” or overseas Vietnamese currently living, working and studying around the world. “Viet Kieu” is playing an important role in preserving Vietnamese language, national culture, tradition and knowledge outside the country, contributing to Viet Nam’s economic growth as well as developing the foreign relations of Viet Nam.

The study aims to analyze role of “Viet Kieu” community, particularly in Thailand, in strengthening overseas Vietnamese regime and making great contribution back to the country. The study further highlights view of the Viet Nam State toward “Viet Kieu”, including its distinct policy on nationality management towards these populations, to create favorable conditions for them with a view to integrating them as an integral part of Vietnamese nation. In doing so, the researcher will interview “Viet Kieu” Association in Thailand, analyze case studies of “Viet Kieu” who benefits from the Viet Nam’s policy, and review relevant literature regarding the issue.

With illustration of the “Viet Kieu” Association in Thailand, importance of the “Viet Kieu” or overseas Vietnamese community in constructing and developing Viet Nam will be emphasized in the study. Finally, this study will envisage how Viet Nam avails itself of these “Viet Kieu” or overseas Vietnamese for the forthcoming ASEAN economic integration in 2015 and beyond.

Governance As an Emergent Compromise: Access to State Service Delivery in an Islamabad Squatter Settlement

Compromise between the formalizing imperatives of modernization and local-grounded informal networks can provide the basis for stable governance in the cities of the global south. This paper examines urban governance in Pakistan as seen through the experiences of an Islamabad squatting settlement accessing electricity supply through the state-run electricity utility. After a crackdown on illegal connections, community leaders negotiated a compromise with the utility leading to the installation of two official electricity meters for 600 households, with billing and individual connections handled by a committee of residents established for this purpose. Some households in the squatting settlement did secure individual contracts for service delivery, only to retreat to the communal arrangement when they found that formal contracts could also be used to reinforce patterns of exploitation and inequality rather than simply securing their rights of access and claim-making. The emergent pattern of governance – more stable than its predecessors – is one of compromises between formal contracts and the lived reality of an Islamabad squatting settlement. These local struggles with modernization are echoed at the policy level as well, where the state has retreated from market-ori-
Corporate Interlocks and the Specificities of Indian Capitalism

This paper aims at studying the interlocking directorates among Indian firms as a way to better understand the specificities of Indian capitalism. It draws on a study of interlocks among the top 250 companies of the NSE in 2000 and 2012. It also compares indices of centralization, compactness, density, etc. with those of similar-size networks in other countries in order to evaluate the specificity of the structure of the Indian corporate network and to locate it within a comparative typology.

This paper more particularly intends to bring a contribution to the embeddedness theory. Drawing on existing socio-historic studies, one could argue that the Indian capitalist system distinguishes itself by five characteristics: 1° A very recent liberalization, 2° Networks are still very much shaped by the stakes the State has in PSU companies, 3° Companies belonging to a business group are likely to be more connected to other companies than independent companies, 4° Connections between firms are likely to be structured by caste and family networks, and 5° The density of corporate networks in India is likely to be both relatively low due to the recent liberalization of the country and to show pockets of strong density on the basis of business group, regional, family and caste ties (overall low density of connections but a high number of multiple connections held by specific actors).

Corporate Interlocks and the Specificities of Indian Capitalism

We thus propose 5 hypotheses to assess the impact of these specificities on Indian corporate networks:
1° The 1991 liberalization policies had an impact on the shape and density of networks.
2° Networks are still very much shaped by the stakes the State has in PSU companies.
3° Companies belonging to a business group are likely to be more connected to other companies than independent companies.
4° Connections between firms are likely to be structured by caste and family networks.
5° The density of corporate networks in India is likely to be both relatively low due to the recent liberalization of the country and to show pockets of strong density on the basis of business group, regional, family and caste ties (overall low density of connections but a high number of multiple connections held by specific actors).

Social Objects As Tokens for Social Eigen-Behaviors

This paper puts forward the concept of ‘Social Object’. A ‘Social Object’ would be a sort of imaginary hanger (or better, an imaginary hanger shared by a community of social individuals) which works as a referent consistently targeted by a particular family of social actions and interactions. This set is somewhat fuzzy, and it would be made up by the actions and interactions that satisfy—to some acceptable degree—such social object. For instance, the social object we call ‘greeting’ would be the ‘hanger’ or ‘imaginary shared referent’ of the (fuzzy) set of actions and interactions which satisfy that specific object (namely, which accomplish an acceptable greeting) in a given situation. That set of actions and interactions would exclude those solving (accomplishing) the act of greeting in that situation, and would exclude those failing to do so. In other words, a social object would be the ontological assumption that enables and orients our interactive success (or our interactive failure, in case we misfire and act in a way unacceptable for our interactive partners).

The notion of ‘Social Object’ is cognate to the conception of physical objects as “tokens for (eigen-)behaviors”, put forward by Heinz von Foerster. From this viewpoint, objects are not realities independent from our actions, but assumptions that guide the cognitive and practical processes of the subject—a subject that constructs such objects through his actions. Different types of societies are structured by means of different kinds of social objects. And the sort of social objects that are emerging as typical of today’s global society are Social World-Objects (namely, social objects which define their dynamics as unitary systems on a global scale). Many of those Social World-Objects are being generated within and by the Internet.

Gestion DEL VALOR E Identidad De La Mujer Mexicana

Los procesos de agencia y resistencia de la mujer mexicana se dan dentro de una cultura de la colonialidad que configuran un modelo centro-europeo-norTEAMERICANO; pero las nuevas condiciones de la globalización planetaria hacen que se generen perfiles que rebasan esta primera clasificación por lo que hablamos de una “cuarta mujer”, después de Lipovetsky (1997), que responde a las categorías de contemporaneidad y en tránsito de construcción.

La cuarta mujer en tanto sujeto sostiene posiciones de liderazgo que van más allá de la división del trabajo y sí establece soportes de sus propuestas de vida como un sistema decisional dentro y fuera de la pareja. Aparentemente la cuarta mujer encuentra un campo propicio para sortear las desigualdades. Las desigualdades de la cuarta mujer están delineadas por tres estructuras que obedecen a la educación, productividad y empoderamiento que configuran un perfil estándar del comportamiento social contemporáneo; el ir sorteando las diferentes construcciones de esos tres sistemas la hacen una mujer flexible, educada, ocupada económicamente y con pretensiones de empoderamiento en base al éxito profesional. Es capaz de regresar a valores como la maternidad, pero busca embarazarse sin requerir de la presencia permanente del hombre; es una “mujer emancipada”, “dueña de sí misma y de la situación”; sin embargo, las condiciones de resistencia a los peligros de regresar a la tercera mujer hacen que, a pesar de la eternización, se transformen en negociaciones con la pareja. En este proceso ¿dónde queda la masculinidad? La masculinidad que funciona con la cuarta mujer es la que ha abandonado el disfrute del poder total o del goce de la dominación.

We thus propose 5 hypotheses to assess the impact of these specificities on Indian corporate networks:

Another Look at Sibship Structure and Educational Achievements

Studies have shown negative correlations between both number of siblings and educational achievement and between number of siblings and cognitive ability. These findings are consistent with the Resource Dilution Hypothesis, the Quantity-Quality Trade-off Theory, and the Confluence Model. However, recently some scholars have questioned the causal interpretations of the correlations and have simulated quasi-experimental studies to test the hypothesis that it is largely spurious. The results of these tests are inconsistent so far.

This paper attempts to further the understanding of the sibship size effect and its causality. We employ a retrospective life history data set on some 2000 Jewish Israeli men who were born in 1954 and interviewed while in their mid-twenties. The database includes information on several educational and cognitive outcomes measured at different ages; socio-economic background variables, and detailed sibship and household composition measures. We use fixed-effect models to evaluate the causality of the sibship-achievement association. The availability of detailed histories of household composition allows us to estimate the effects of siblings present (in the household) at different stages of the life course on cognitive and educational outcomes. This is a more precise measure than the measures that have been common in the literature so far.

Preliminary results show that the number of sibling present in the household at ages that precede the measures of outcomes is more detrimental to its achievement than the overall sibship size.

Violence Against Women: The Indian Scene

This paper examine violence against women emanates from the social hypothesis of superiority of men over women. Insubordination of women legitimizes gender violence and grants social sanction to the ignoble treatment meted out to women. Manifestations of violence encompass physical aggression, such as blows of varying intensity, burns, sexual abuse and rape, physiological violence through insults, humiliation, coercion, blackmail, economic and emotional threats and control over speech, action and behavior. In extreme cases the result of this violence is death. The incidence of violence prevalent in man-woman relationship takes place in the context of the family, state and society. In most cases the male aggression towards women and girls remains tacit, hidden or unrevealed.

Prevent or Cure – the New Philosophy of Health Care

Health care systems evolve at the same time in many different ways: in area of developing technologies, the development of the medical knowledge, because of demographical changes and particularly - aging of the society. This induces modifications of the priorities of the health policy, new methods of organization and more complex funding mechanisms. Individual components of the health care system: illness, basic health care, hospital care have different contribution into the health care systems of different countries. The worlds growing awareness that for keeping and improving the population health the governments must create effective and efficient health system leads to the effective illness prevention. It shouldn’t be expected that the health effects and economical efficiency of the health care system will improve, without appropriate expenditures on actions which delay or prevent illness, and also allow early diagnosis and effective (usually cheaper) treatment.

In the first part of the paper there will be discussed issues connected with modern health conceptions which create the fundamentals of the approach to the illness prevention as well as the arguments for the state engagement into health care. Health care is the specific public goods. This induces the choice of criteria, used by policy makers, to allocate public sources. The second part will present characteristics of the prevention actions, rules of the program creations and its place in the health care systems. The crucial significance is to determine the manner of the changes of the health benefits structures financed from the public means. The last part of this elaboration, based on gathered empirical data, will discussed experiences of the selected European countries on prevention of the selected illnesses, indicating the links between expenditures and the effects of the prevention activities.

Modern Social Communication in the School System

Elena Nazarova

Modern social communication in the school system

Information technology today is perhaps one of the most rapidly developing areas, which directly affects the dynamics and to some extent determines the vector of development of a society and a system of communication. The rapid pace of changes in contemporary social and professional spheres determines the need for such specialists, who would have not only availability, but also the ability to equally rapid self-transformation. Modern specialist is in a situation where information and communicative movement causes him to be creative, constantly speaking in a variety of roles. This fundamentally changes the status and purpose of education.

Education loses its autonomy and isolation, losing the functional role of the incubator for growing professionals. In a sense, the whole society is the educational system, where experts will not only accumulate information and knowledge in preparation for life, but also to fully live, applying them in practice in process of development.

Communicative competence and information, creative movement and tolerance come to the forefront in the formation of man, describing him as a specialist, who can be integrated into the mainstream of the movement of professional knowledge, and as a full member of the ever-changing multicultural social reality. This is an important aspect of the communicative component of education.

According to most of the school is the main element in the process of becoming a person, is to teach people to think, to respect labor, to encourage children tolerance, and develop entrepreneurial skills to real life, and not just theoretical knowledge.

The Dynamics of Migration Processes in Modern Russia: Analysis, Problems and Prospects

For the present stage of social and socio-economic transformation in Russia is characterized by sharp increase attention to the migration processes, the dynamics of which every year is losing its momentum, a negative impact on the demographic situation in the country. The immigration influx is now no longer compensatory for the natural decline in population - as it was in the 90s.

However, in today's globalized world for the skilled work force Russia to seriously compete. Thus, according to the UN, the total annual immigration resource in the run up to 2050 will be approximately 2.2 million people. Half of them will qualify for the United States, 200 thousand - Germany and Canada, with 130 thousand - United Kingdom. Moreover, a number of European countries are already developing programs to attract Russian citizens. Russia left more than the 100 thousand scientists involved in such traditionally strong areas of the country, such as mathematics, chemistry, physics, biology. This is mostly educated people aged 35-45 years.

We believe that now in force, with sufficient clarity migration policy came into conflict with the objective needs of the country.

Cohort, Gender and Socioeconomic Inequalities in Trajectories of Frailty: Findings from a Growth Modelling Approach

We have seen a rapid and continuing growth in life expectancy. This, coupled with the baby boomer cohort heading into post-retirement life, has led to significant policy concern with the financial pressures resulting from an increasing proportion in the population of older, non-productive and dependent people. In contrast, the baby boomer cohort is also presented as extremely fortunate, or selfish. As a result of benefiting from social welfare reforms post Second World War, it is suggested that baby boomers are able to retire early and in some luxury, at the expense of younger generations – hence the accusation of selfishness. Coupled with this, there are also suggestions that we are also seeing a compression of morbidity. That is, alongside increasing life expectancy we are also seeing a shorter proportion of later life spent in illness or disability. Baby boomers appear to be a truly fortunate generation.

In this paper we will examine age cohort differences in frailty trajectories to test the extent to which we are seeing a compression of morbidity, and then we will examine the extent to which any change in frailty trajectories is distributed

The concept of financialization has become a prominent issue in sociology and political economy. As a multi-dimensional phenomenon it affects different levels and social spheres - from the macroeconomic level to states, firms, households and individuals. While most explanations focus on the macroeconomic deregulations since the mid-1970's, its cultural aspects and the actors propagating it remain often under-explored. Our contribution represents an attempt of a cultural approach towards the issue of financialization. We interpret the process of financialization as the assertion of a global "market culture", emanating from symbolic struggles between social actors over economic valuations. Thereby we aim at highlighting the role of social actors and cultural narratives in economic transformations. We ask whether the global phenomenon of financialization can be attributed to the formation of a "global financial class".

NEGRI, MICHELE* (University of Tuscia, michele.negri@unitus.it)

Defence and Security Policies in the EU: From Decision Making to Political Culture

What is the contribution made by the armed forces during and in relation to security operations, both in international contexts and to protect public order and homeland security? Based on the assessment of the contribution and skills currently at the disposal of the armed forces, we have identified possible areas of further use of the military force in security contexts. In the international arena, thanks to the growing use of instruments for civil and military cooperation, the military is involved in crisis management, conflict prevention and peace-building processes. As concerns internal security, the involvement of the military - and the use of their logistic assets - is increasingly common in response to threats such as terrorism, environmental disasters, protection of critical infrastructure and other emergency situations which the country has to deal with. This trend is also confirmed by the involvement of military forces in European "Security Research" activities, sponsored by the Commission with the objective of developing technological capabilities, tools and methodologies in "civil" security. The research was conducted through: the consultation of political, institutional and regulatory sources (at national, EU and NATO levels), the academic and scientific literature, the media, qualitative interviews with exerts in the field.

MOREAU, NICOLAS (Université d’Ottawa)

Les Représentations Sociales De La Dépression Et L’accès Aux Services De Santé Mentale Des Jeunes Dépressifs : Une Question D’identité?

La question de l’accessibilité aux services de santé mentale ne peut se réduire à celle de l’offre. D’une manière générale, la demande des services de santé mentale varie selon différentes variables sociodémographiques dont l’âge. Les études démontrent que les jeunes de ces époques ont généralement moins tendance que la population adulte à demander de la faïe.

C’est dans cette perspective de tenter de mieux saisir la question de la demande de soins des jeunes en proie à des troubles dépressifs que nous avons analysé des entrevues effectuées auprès de 31 répondants âgés entre 18 et 30 ans qui ont déclaré avoir souffert de dépression au cours de la dernière année. Cette enquête qualitative panchacanadienne a été réalisée dans quatre sites : Moncton, Ottawa, Sudbury et Winnipe par la méthode du réseau d’associtions et des entrevues individuelles semi-dirigées. L’analyse des résultats obtenus a été effectuée selon la méthode d'analyse intégrée de contenu des représentations sociales.

Le contenu de la représentation sociale de la dépression ayant émergé du discours analysé est organisé autour de deux éléments principaux : désespoir et stéréotype. Ces éléments renvoient à des dimensions descriptives et sociale de la dépression. Le discours activé par ces deux dimensions contraste avec la nouvelle normativité sociale (autonomie, initiative, responsabilité individuelle, etc.). ainsi qu’avec les caractéristiques stéréotypées attribuées aux groupes de jeunes (dynamisme, enthousiasme, joie de vivre, etc.). Cette double tension de nature normative et identitaire mobilise une résistance par rapport à la disposition des personnes à consulter les services spécialisés en santé mentale.

Education As a Key to Tackle Inequalities in Shrinking Cities. Examples from East Germany

In East Germany political and economic transformation after 1990 led to demographic change, massive loss of jobs and high levels of out-migration. Just like in shrinking cities all over the world (see Mallach/Brachman 2013 for US or Fol 2012 for France) outmigration was selective: predominantly talented and skilled people left for better prospects, less qualified and less mobile parts of the population remained. The same migration pattern can be observed on a micro-level. The most fragile parts of the population with lowest educational background are left behind in the least attractive neighbourhoods. In Germany this poses a problem for the future because statistics show that poorly educated parents tend to have poorly qualified children. Bonjte and Musterd (2012) have pointed out, that if there is a shortage of well qualified people in a shrinking city, it becomes less attractive for companies and investors, which may cause more people to leave.

Some cities in Germany have realised that a shrinking society cannot afford a poorly qualified younger generation that is unable to keep or attract businesses and pay the pensions of an aging population. Thes shrinking cities regard investment in education as a key to survival and a key to tackle inequalities. The city Bernburg shall be presented to show how the challenge can be met. In 2005 it had 50% less children than in 1990. 20% of them did not complete school. In consequence Bernburg thoroughly reformed the educational landscape and developed new school concepts. Approaches from other German cities that focus on identity building and link education strategies to urban regeneration, may be presented to complete the picture.

Could it be a positive effect of shrinkage, that more emphasis is put on a just educational system? This argument shall be put forward for discussion.

The Influence of Housing Policies on Urban Fragmentation in Large Brazilian Cities

Urban fragmentation is one of the most important characteristics of the recent urban development in Latin America (Coy 2010, Maricato 2011, Pereira/Hidalgo 2006). Typical patterns are impacts of globalisation on job markets. The emergence of residential fragments is related to the building of gated communities for high-income households as well as the provision of housing for the poor by informal markets (Abramo 2009). The housing deficit in the urbanized areas of Brazil amounts to approx. 5.6 million units, of which almost 90 per cent belong to the target group of social housing (households with less than three minimum wages). Do the strategies for intervention developed by the government for reducing housing deficit help to dissolve residential fragments? Or do urban development and housing policies and/or their execution lead to the emergence of low-income fragments?

The research project of which the concept and first findings of a case study in Fortaleza shall be presented, aims to investigate the influence of housing policies and their implementation on urban fragmentation in Brazil. The study includes the analysis of public interventions in the realm of social housing (new housing estates and regeneration of existing squatted areas) and the influence of development plans and interventions on socio-spatial structures. The objective of the study is to discover which prerequisites assist housing policies’ implementation to counteract urban fragmentation and which parameters (i.e. value of lots, decision-making-structures) or/and original specifications (planning-procedures, restrictions of guidelines for funding) provoke them to fail. The causes are to be examined to broaden the understanding of urban developments’ and housing policies’ potentials to better the attendance of intense urbanisation-processes observed internationally.

Effects of Work Related Factors to the Schooling, Health and Recreation of Filipino Children

Children in the labor force are a social phenomenon that has become link with the third world countries. The Philippines is one country in the developing regions where there are many children who are productively earning. The survey was conducted nationwide to collect data on the demographic and socio-economic characteristics of working children ages 5 to 17. In 1995 and 2001. Four response variables (present attendance in school, dropping out from school, effect of work on schooling and reasons for dropping that characterize education status of working children were modeled. Results in 1995 and in 2001 show that: the nature of employment, working days per week, normal working hours per week and doing heavy physical work affect school attendance. Factors affecting schooling in 2001 are activity during free time, and status of employment. The number of working days and hours per week, increases, the odds of dropping out from school also increases. Factors that help a child to stay in school are engagement in less permanent job, “boss” is a relative, less exhausting work and does not require heavy physical exertion, less activities that the child do during his free time as well as when he is unpaid worker. The health of working children is affected most when they work in the industrial sector. Factors that affect their recreation in 1995 are long working hours, absence of relative supervisor on the job. Similarly, child workers in 2001 with long hours of work affect their recreation as well as work that provides little illumination. Children working in farming, fishing, and mining have less free time than those children working in other industries. However, regardless where the child works it reduces the playing time since in some cases sleeping is preferred than playing.

Globalization and Philippine Labor Migration Phenomenon

Globalization and labor migration from the Philippines accelerated almost at the same time. Three revolutions contributed to Filipino labor migration phenomenon: communication technology, economic integration and widening deregulation between developed and developing countries. The government, to reduce the unemployment levels, liberalization of foreign investments and diaspora communities of the Philippines are factors that affect the migration decision Bernburg thoroughly reformed the educational landscape and developed new school concepts. Approaches from other German cities that focus on identity building and link education strategies to urban regeneration, may be presented to complete the picture. Could it be a positive effect of shrinkage, that more emphasis is put on a just educational system? This argument shall be put forward for discussion.

Family Policy and Child Poverty in Global Perspective

During the past decades, family policies have often been expanded when other parts of the welfare state have been subject to retrenchment. However, research on affluent countries shows that these developments have been far from universal. Instead family policy diverged cross-nationally, both in content and scope. Typically, variations in child-poverty among affluent countries are frequently attributed to differences in broad welfare state regimes: leaving unexplored the ‘black box’ of program specific rich population live. Almost four-fifths of the world’s population live in low- and middle-income countries – additionally including higher proportions of children than most affluent countries. This paper extends the comparative analysis of links between family policy institutions and child poverty to include both high- and middle-income countries in transition. We thus initiate a debate on the role of social policy in reducing child poverty on a more global stage. A multilevel regression analysis is used to investigate the role of different family policy dimensions in reducing the incidence of poverty among families with pre-school children. We use household income data on 38 countries from the Cross-National Data Center in Luxembourg (LIS) and new family policy indicators from the Social Policy Indicator Database (SPIN). Results indicate somewhat different associations between policy and poverty in high- and middle-income countries. Policies promoting female labor force participation have the greatest poverty reducing effects in high-income countries. In middle-income countries, the general level of support appears to be...
most important. The reasons for these differences are discussed in the paper, and ventures for further research are outlined.

Just Generational Welfare Contracts and Poverty

Citizens in affluent countries face a great number of social and economic risks, from birth until the very end of their lives. Many of these risks are associated with specific phases of the human life cycle when the earnings potential of households decreases. How are these age-related poverty risks linked to the often “implicit” generational welfare contracts that are embedded with social policy making? Such generational welfare contracts may seem just in their institutional design if rights for income protection are equally distributed across age groups. We argue, however, that a generational contract cannot be considered to satisfy important demands of fairness if it fails to substantially reduce poverty among citizens in different phases of life. In this paper we link the idea of generational welfare contracts to poverty outcomes in 18 affluent countries. We combine new comparative data on social rights from the Social Policy Indicator Database (SPIN) and micro-level income data from the Luxembourg Income Study (LIS). For some countries we have income data stretching from the 1960s until 2010, something that provides possibilities to analyze long term trends in policy developments and outcomes. The empirical analyses show that there is considerable degree of correspondence between the design of generational welfare contracts and age related poverty risks, particularly in terms of financial vulnerability. Higher welfare state generosity for a particular age related social risk is generally linked to less poverty in the specific target group.

Conditional Cash Transfers: A Social Investment Instrument in Times of Economic Crisis and Austerity?

Conditional cash transfers receive recognition as a way to address poverty within present and future generations while also promoting economic growth by investing in human capital. Such policies have been used extensively across Latin America and are now being promoted as part of the European Union’s Social Investment Package. We assess and compare these policies in Latin America and in Europe. Specifically, we question whether they can be considered social investment policies and, in doing so, illuminate the various factors that condition the success of such policies. We draw particular attention to the need for policy approaches that take into account a life course perspective and the risk of ‘policy crowding out’ in the European context. Finally, we elaborate on the implications of a uniform trend in the passage of these policies, the timing of their implementation in the aftermath of economic crisis.

Living with Uncertainty, Struggling with Possibility: A Study on Radiation Effects from the Perspective of Atomic Bomb Survivors

This paper will examine the reality of radiation effects from the point of view of Atomic Bomb survivors. Radiation is a unique material which people cannot see, smell, and feel the touch of. But it can be harmful for human body. Today, especially since the horrific accident of Fukushima nuclear power plants in 2011, radiation and its effects on human have become a focal point in Japan and the world. Historically speaking, the issue of radiation and its effects has been studied predominantly in medical and physical fields. However, a study on narratives and life-stories of people suffering from and struggling with their anxiety and distress, caused by the uncertainty of radiation. Lastly, I will examine how the survivors’ reality of radiation and scientific knowledge affect with each other.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
However, little is known what the effect of such policies is: Do policies which fa-
vour the traditional marriage family increase marriage rates and stability of mar-
rriage families? Do policies with a focus on single parents, patch-work families etc accelerate the trend to more instable family relations? Do social policies as an
alternative to family security increase cohabitation and divorce rates?
The analysis is based on official national statistics for OECD countries and cov-
ers the time span from 1980 to 2010. The analysis shows that social policies and family policies such as child care services provide alternatives to the traditional marriage families and family at all. Such measure increase cohabitation rates and divorce rates while fertility rates decrease. A generous and benevolent welfare state seems to provide alternatives to the traditional marriage families. Marriage is no more a precondition to avoid or escape poverty. Social security and family policies have lowered the material necessity to enter marriage, and increased the opportunity to exit unpleasant family constellations.

The Ambiguous Relationship Between Middle-Class, Civil Society and Democracy
Debates on processes of democratization create the impression that the mid-
dle-class and/or the civil society are the drivers of democratic change and the
backbone of democracy. Seen from this perspective either these groups fight for
democratic change or once they have a basic political freedom they will quasi
automatically take possession of democracy. This was the expectation in the USA
before the Iraq invasion (what we may call the "Rumsfeld Utopia"). However, we
have learned that in Iraq, after the Arab spring and in many countries that under-
went processes of democratization during the 1980s and 1990s there was no au-
tomatic process towards democracy. In these transitions the middle-class played
an important role and many of the civil society associations, social movements
and especially their political leaders had a middle class background. But the po-
litical groups and the leaders that opposed the ideas of a liberal democracy also
held views from middle class groups. At least in Africa and the Middle East the
middle-class based civil society represent competing concepts of socio-political
order: e.g. liberal democracy, neo-patrimonialism, neo-traditionalism, theocratic
rule (or socialism in Latin America). The claim for democratic elections may be
used to legitimize any of the socio-political orders.

Can Teacher's Gender Explain The Growing 'Boy Crisis' In
Educational Attainment?
Gender inequalities in education have seen much change, with females gaining
advantages over males in ways that have not been anticipated just two decades ago.
At the same time, the share of female teachers has grown in almost all countries
of the western world. There is an ongoing, contentious debate on whether this
growing “feminization” of the educational system, in particular at the lower
levels, can account for the growing educational disadvantage of males. In this talk,
I review the literature on the “feminization of teaching” argument and present
findings from two empirical large-scale studies conducted in German elementa-
ry schools which allow me to identify the effect of having a same-sex teacher
for different scholastic outcomes (gender-blind test scores and more subjective
teacher’s grades) and across different subjects (Reading Literacy, Mathematics,
and Science). My findings suggest that the popular call for more male teachers in
primary school is not the key to tackle the growing disadvantage of boys.

The Validity Of Response Latency Measurement In CatI Surveys
There is agreement among researchers that the measurement of raw response
times from surveys requires a treatment for baseline speed of respondents and
interviewers. There remains disagreement about the appropriate procedure to
transform raw response times to response latency and there is no study that
evaluates the different approaches with regards to their potential measurement
error, which may have an affect on modeling and causal inference. This article
fills this gap by examining the measurement validity of different ways raw re-
ponse times are treated for baseline speed. We apply a Mul-
titrait-Multimethod approach to examine four different operationalizations for
response latencies and their relationship to attitude accessibility and indicators
of response quality. We conclude with remarks about the levels of validity and
potential biases when latencies are used as independent variables.

Trustworthiness As Rational Belief or Unconditional Propensity to
Trust – Evidence from a Telephone Survey
While research on trust and trusting behavior is abundant, less attention has
been paid to the study of trustworthiness itself. This seems to be at least a bit sur-
prising, especially with regards to the theoretical claims about trustworthiness as
"the crucial variable" (Hardin 2001) for understanding and explaining succes-
sful cooperation based on trust. While several authors share the definition of trust-
worthiness as a belief, a probability assessment or an expectancy of Person A
about Person B to do X, distinct measurement approaches exist depending on the
mode of data collection (survey vs. experimental approach) and strategic outset
of the study (one-shot vs. sequential games). Additionally different hypotheses
can be derived depending on whether one treats trustworthiness as incentive

Introducing Technologies in Africa. Between Appropriation and the
Challenge of a Trojan Horse
Current studies on the introduction of technological innovations in Africa un-
derline that we observe a process of appropriation. This is in line with the hypo-
theses of the science and technology studies (STS) claiming that the develop-
ment, use and understanding of technology has to be seen as a social process between
people and (technological) 'actants'. The findings from mostly anthropological
studies focus in the same way as STS on the change of technologies according
to the social conditions of their use and emphasize the influences of the local
context on the technology. Up to this point STS seems to produce in Africa sim-
ilar results as in the Global North (or the industrialized societies). However, the intro-
duction of innovations in Africa is a different process. The development itself plays an
important role. We have to put more emphasis on the notion and function of 'actants'.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
based or as an unconditional propensity to exhibit trustworthiness. Hypotheses were tested with pooled data from two CATI surveys (n=706) conducted in Germany in June 2012 and January 2013. Using the techniques of both response latency measurement and Cox regression models we are able to conclude that measurement of trustworthiness either lack convergent validity or are subject to theoretical deficiencies. Consequences for future research are discussed.

* A Thousand Words: Conducted Energy Devices, New Media Events, and The Public Eye

Between April 2003 and November 2008, 26 men died in Canada during events where a conductive energy device (CED) was deployed on them. The death of Robert Dziekanski, a Polish immigrant, in 2007 at the Vancouver International Airport, was recorded on a mobile phone and its footage subsequently uploaded to the popular video site YouTube. The video, which documented Royal Canadian Mounted Police (RCMP) officers deploying a CED on Dziekanski, was viewed by thousands of citizens of the world and expanded its footprint beyond the Internet as traditional media organizations incorporated it into their coverage of the event. Unlike previous CED-related deaths, the recording of the Dziekanski death was an integral piece of the event’s anatomy and granted members of the mass public, as scrutinizers if not legitimate bystanders, entry into how it unfolded. Following Fiske (1996), we treat the recording, its dissemination via the Internet and broader news media, and its mass consumption as a ‘new media event’—one that amplified and articulated competing narratives of risk. We synthesize the work of Becker (1972), Giddens (1991; 1990), Hall et al. (1978), and Lupton (1999) and others in our examination of the YouTube video of Dziekanski’s death and over 400 reports in three major Canadian newspapers, the Globe and Mail, the Toronto Star, and the National Post. Using a broad critical approach, we assess how groups like the RCMP, government officials, and the general public made sense of the recording. The recording's electronic nature, we argue, complicated an ‘open-shut’ case narrative commonly articulated by law enforcement officials when describing how they respond to and neutralize threats to the public. The existence of the recording allowed for competing assessments of threat and harm while altering the credibility of the police as sole purveyors of risk assessment.

Mainland Chinese Sex Workers in Hong Kong: Multiple Forms of Inequality Both in their Pasts and the Present

Purpose: This research aims to understand the lives and views of sex workers from Mainland China working in Hong Kong.

Design: This research appropriates the theoretical tools of Pierre Bourdieu and uses an ethnographic approach to explore the issue Hong Kong, including expert interviews, interviews with sex workers, participant observation and field documents.

Findings: Results point to gender inequality and various other forms of oppression weaving together to form the past and current experiences of sex workers in Hong Kong from a Mainland Chinese background.

Explanatory Pathways to Party Activism: Case Studies of Hong Kong Young Adults

Young people in many advanced industrial countries are unwilling to join political parties. The situation in the Hong Kong Special Administrative Region of China is even worse as it is a semi-democracy where political parties are relatively underdeveloped and legally prohibited from winning governing power through election. Despite these conditions, there are still a small number of young people choosing to join and take active part in political parties. The aim of this paper is to improve our understanding of how some young people come to get involved in political party activism. Qualitative life history interviews with 23 young active members from five major political parties in Hong Kong were carried out to explore this question. Based on a preliminary analysis of the interview data, I single out four distinct paths to party membership, namely 1) the socialization path, 2) the critical experience path, 3) the occupational path, and 4) the social network path. Informants taking the first two paths tended to initially get involved in party activism for political reasons, while those taking the last two tended to get involved for non-political reasons. Theoretical and practical implications of the findings will be discussed.

Fighting Against Youth Unemployment: The Hong Kong Experience

Fighting Against Youth Unemployment: The Hong Kong Experience

In Hong Kong, the high youth unemployment rate due to the rising uncertainty and volatility of global economy and financial crisis since the late 1990s has driven the Government and various sectors to commit themselves to enforce a series of remedial policies and services to alleviate the problem of youth jobless and to get youth into jobs and work training. The concrete plan targeting at unemployed youth includes two major categories: First, several pre-employment training programs such as Youth Pre-employment Training program, Project Yi Jin, Youth Work Experience and Training Scheme, and Hong Kong Young Ambassador Scheme, and second, temporary employment opportunities such as Special Job Attachment Program, Program Assistant, Peer Counselors, and Summer Student Helper. This paper examines issues relating to those policies and training programs aiming at fighting against youth unemployment and proposes plausible solutions to remedy and improve the present policies and practices in dealing with the problems. The proposed measures are: 1) formulating a long-term youth employment policy to provide youth with appropriate training in occupational knowledge and skills; 2) setting up a centralized system to strengthen the information and communication network of the territory’s labor market in order to facilitate youth to seek employment resources and assistance; 3) building up closer collaboration between the voluntary service sector and the business sector in order to look for more pre-employment training opportunities, chances of temporary employment, full-time job possibilities, community participation and financial support; and 4) using multiple methods to fight against youth unemployment.

Enhancing Employability Through Youth Training Schemes? The Experiences Of Non-Engaged Young People In Hong Kong

The process of globalization, the rate of technological change, the convergence of information and communication technologies, and major changes in government policies are leading to the development of a “weightless” economy, to rapidly growing industries, and to the requirement for new and improved skills. Certainl, the labor market is tilting toward increasing demands in the demand for higher skill levels and the labor demand for low skill levels is weakening. In this environment, young people are hit disproportionately hard, obscuring paths to adult statuses, identities, and activities. As such, many young people have been left behind in the transition from school to work, with more and more of them not in education, training, and employment. This paper seeks to investigate the school-to-work experiences of non-engaged youth—young people aged 15-24 who do not participate in education, training, and employment. Based on data from focus groups involving 50 non-engaged young people in Hong Kong, it seeks to: 1) examine how these young people are being systematically propelled to the edges of conventional pathways to adulthood; and 2) assess the efficacy of governmental training schemes that aim to develop employability as a strategy for engaging this population. The paper concludes by outlining prospects for future policy development, focusing on gaps and weaknesses in current provision and practice. It is suggested that effective guidance to non-engaged young people must pay adequate attention to the social context within which the individual operates. Assumptions behind the government's individualistic lifelong learning policy are called into question. This paper has direct relevance to Theme I.3 “Youth Unemployment/Underemployment and Precarity” of the RC34 Sessions at the XVIII ISA World Congress of Sociology as more and more young people worldwide are now living in economic disadvantaged circumstances and facing problems in their school-to-work transition.

Participation of Women and Girls in the National Science, Technology and Innovation System in South Africa

The importance of documenting data on the inclusion and participation of women and girls in a society’s science, technology and innovation (STI) system cannot be underestimated. The paper presents results from the Gender Equality
and the Knowledge Society Framework indicators: an enabling policy environment, opportunity and capability, and women in Science and Technology and innovation systems to understand the status of women and girls in different spheres of South Africa’s reality as well as their participation in the knowledge society. It is argued that the policy environment in South Africa has ensured that a gender equality policy has been put into place and operates in all the realms of government. A lack of funding, human resources’ constraints and insufficient coordination mechanisms have hampered the effective implementation of some of the policies. Statistics around access to quality education for girls and boys are provided and a discussion around some specific projects and mechanisms that have been put in place to encourage the uptake by girls of science and mathematic at school level are presented as case studies of the opportunities available to ensure gender parity in STI education. Lastly data is presented on women’s participation in the STI system in South Africa. South Africa has an aging, predominantly white male scientific and engineering workforce. In this regard, there is a need to focus on both tertiary level education as well as women in science leadership in the country.

For Our Children's Future: Inequalities in Rural Development in Vietnam

The previous literature on Vietnam's growing urban landscape shows a great deal of rapid change in Vietnam. The 1986 Đổi Mới initiative set up by the central government aimed to prioritize rural development in the hope of building new urban communities. This program had opened up private businesses which incentivized rural communities to urbanize in an effort to modernize Vietnam. These cases of rapid urbanization seem to widen the economic gap of a population over time. Although some people are able to enjoy the benefits which come with urbanization, many are still left in impoverished conditions. These glaring differences in lifestyle and the distribution of wealth which were once reduced by strong government policies are now being superseded by transnational businesses. This structural gap formed by larger movements in globalization, I imagine would create similar differences in personal perception of the world. Differences in experience in this national effort, changes how individuals understand their own identity, their responsibility to the land, and their sense of security for the future. This research is grounded on a 1080 rural households surveyed through an East identity, their responsibility to the land, and their sense of security for the future.

Ecological Disasters: The Political Economy of Floods in Pakistan

“Ecological Disasters: The Political Economy of Floods in Pakistan”

This research is being developed by a team of the Violence and Citizenship Research Group of the Federal University of Rio Grande do Sul, beginning in January, 2013 and expected to end in December 2014. The aim is to comprehend and explain the dynamics of production and exercise of the violence within police institutions based on the power relations amongst men and women. The focus on such a male and use-of-force oriented space is still not well framed in gender studies. The dimensions of analysis cover working conditions, the career of policewomen and the institutional violence of the ambient. Therefore, the study is conducted with mixed methods, specifically, surveys and focus group covering 13 states in the Brazil. The fieldwork is pointing out many challenges for the insertion of women in the Brazilian police forces. The working conditions and environment show that the institutions were not properly adapted, as demonstrated by the lack or precariousness of spaces for women, like bathrooms or accommodation. Regarding the career, many limits related to the professional development can be perceived as well. The data from focus groups also allows for the identification of institutional violence based on daily practices, which sets, sometimes, situations of moral harassment.

Self-Employment in Tourism Business Among Japanese Expatriates in Bali, Indonesia

This study aims to identify the characteristics and motivations of Japanese expatriates establishing their tourism business in Bali, and its impact to local community. Bali as one of the most famous international tourist destination, the number of foreign tourists to Bali is increasing every year. Japan is one of the top five countries visiting to Bali and the number of Japanese settlers in Bali is also increasing. As a result of this, there has been increase in the visible presence of Japanese entrepreneurs, particularly in tourism areas. This study is based on fieldwork with a qualitative research approach. Entrepreneurial activity among Japanese expatriates community is studied in four tourism areas in Bali, such as Jimbaran, Kuta, Sanur, and Ubud. The result of this study showed that: 1) the primary reason for migrating to Bali was amenity factors such as tropical climate, myriad of traditional and uniqueness of Balinese culture, natural landscape, and slow pace of life. This also means for them to escape from drudgery of city living in the country of origin; 2) Tourism experience influenced their decision to migrate and kinds of enterprises established in Bali; 3) High involvement of women in self-employment; 4) They recognize the business chance of their area after settling; 5) To maintain a peaceful lifestyle is a higher priority than to extend their business. Entrepreneurial activities among Japanese expatriates community in Bali make a significant contribution towards tourism development, supports local effort for job creations, and deepen mutual understanding between Japanese expatriates and local community.

Viscences and Gender Relations: Women in Brazilian Polices

This research is being developed by a team of the Violence and Citizenship Research Group of the Federal University of Rio Grande do Sul, beginning in January, 2013 and expected to end in December 2014. The aim is to comprehend and explain the dynamics of production and exercise of the violence within police institutions based on the power relations amongst men and women. The focus on such a male and use-of-force oriented space is still not well framed in gender studies. The dimensions of analysis cover working conditions, the career of policewomen and the institutional violence of the ambient. Therefore, the study is conducted with mixed methods, specifically, surveys and focus group covering 13 states in the Brazil. The fieldwork is pointing out many challenges for the insertion of women in the Brazilian police forces. The working conditions and environment show that the institutions were not properly adapted, as demonstrated by the lack or precariousness of spaces for women, like bathrooms or accommodation. Regarding the career, many limits related to the professional development can be perceived as well. The data from focus groups also allows for the identification of institutional violence based on daily practices, which sets, sometimes, situations of moral harassment.

The Shape of Selves to Come: Selfhood without Sexual Difference

What can the historical persistence of gender tell us about possibilities for future selfhood not defined by gender? Is a more purposive way of being possible that is not reliant on the restrictions of binary sex/gender and if so, how? This paper continues work that proposes that a particular dominant mode of thought (or ethos) about the self and others maintains compulsory sex/gender. This is an ethos of oppositional difference and closure. I extend this theoretical work here to the practical consideration of what a post-gender and queer mode of thought and being, not premised on difference and closure, might look like.

Drawing on a combination of Simone de Beauvoir's existentialist ethics and Judith Butler's ontological and normative impuses, I propose that a non-opposition- al, non-gendered alternative mode of thought and being is ontologically possible or potential (although not inevitable).

I sketch the ontological justification for this, and then move on to more practical implications for social life. This considers what this ontological picture means practically for attempting to re-form identity or selfhood according to more relational and open-ended ethics. I argue that it would entail a particular ‘queer’ subjective mindset, an inexhaustibly reciprocal approach to relationships and the identity of others and sexuality, and enabling social contexts that foster these.

I demonstrate how some of these are already apparent in certain queer social practices. I consider how such social practices may ensure efficacy in their intend-
ed aim of fostering more intentionality in the collective project of selfhood and evade closure or imposition of identity.

Societal Conditions to Produce Effective Knowledge on Sustainable Food Security at Global Level: A System Theoretical Narrative from African Cases

This paper aims at presenting consequences if we conceive the concept of Food Security (FS) as normative. The intention of FS is to create conditions, where no human being is unsecured with food. Such livelihood conditions have to be instituted in social systems. The international community has declared the war against hunger as well as the attainment of the Universal Human Rights - including the Right to Food- over 60 years ago. Still, around 1 billion people go hungry to bed and 2 to 3 other billion suffer from malnutrition. The various disciplines of sciences dealing with FS- agricultural sciences, economy, sociology and others- are far from providing effective knowledge in order to solve the problem. If these observations are correct, than the main question arises: what can be done better within sciences in general and what can sociological observation contribute in particular? We test four hypotheses based on the Luhmannian systems theory but limited to African cases. (1) The normative character of FS has to be enforced and institutionalized in order to guide both science and practice. (2) The full and equal involvement of peasants, farmers, indigenous communities and social movements has to be enforced in all major scientific and technology development processes, in order to repair environmental damages done and enhancing FS. (3) More resources need to be mobilized by the various collectivities in order to educate a new generation of agricultural scientists and citizen enlightened with social sciences methods and ethics, (4) in order to transform the current faulty food and agriculture into sustainable, just and viable systems, languages have to be used which are understood by people. Recognized indigenous knowledge will result as a new regulative force and strengthen not only the functional system of Food and Agriculture, but contribute to more balanced rural-urban relations and sustainable livelihoods.

Aging and China's Silver Industry: Based on a Sociological Survey of Urban and Rural Beijing in 2012

By 2012, China's population reached 1,354,040,000. The 60+ age group accounted for 14.3% while the 65+ age group alone accounted for 9.4%. Every year, the 60+ age group continues to increase by 8.6 million and will reach one third (32.8%) the population by 2050. At this rate, the 65+ age group will equal 14% of the population by 2026 and by 2040 will reach 316,720,000 making China a super-aged society.

While the population ages at an accelerated rate, traditional care provided by families is declining. In response, the 12th Five Year Plan (2011-2015) encourages China's central and local governments to promote the introduction of private capital into the senior care industry, to cultivate growth of related industries and to take active measures to foster a society which meets the needs of the aging population. Preferential measures and tax benefits for private investors in the senior care industry have also been implemented. The industry is wide-ranging with new opportunities surfacing and growth is expected.

However, China's senior care industry, situated in the largest consumer society worldwide, still lags relatively behind in terms of investment, human resources, awareness, and policies or funding. There is a massive potential market and yet demands both soft and hard are overwhelming the supply and China cannot keep up with the needs of the aging population.

From this backdrop we examine challenges facing China's aging population from a macro perspective including an overview of related policy trends followed by the findings of research funded by the Japanese Government and in cooperation with related institutions throughout China. We surveyed over 400 subjects aged 50+ (August-November 2012) in urban and rural Beijing regarding their lifestyle and consumption yielding a glimpse of their current situation as well as potential opportunities.

Current Social Welfare Conditions in China

China's old-age pension scheme originates from the nation's 1951 labor insurance regulation. It was primarily for people unable to participate in the workforce because of age or disability and provided for old-age, disability and survivor benefits. Prior to China's 1978 reform and door-opening, employees of government and state enterprises were entitled to receive pension without paying into the system. Since 1978, the market economy has undergone rapid growth and at the same time the pension scheme has undergone rapid reform.

We will take a brief look at how the pension scheme was reformed and how the scheme is currently organized as a result of the reform. In this context we'll examine how it is affecting people in reality. Based on surveys supported by Grants-in-Aid for Scientific Research from the Japanese Government conducted in two urban and three rural areas from 2008-2011 we'll look first at the present living conditions of seniors comparing urban and rural settings as well as regional differences. Second, we'll look at a survey of the pension system in four major cities where there are working populations and examine the issues between the system and actual reality for workers. Finally, we'll suggest ideas for how existing issues could be resolved.

Rights in the Absence of Recognized Status: Challenging or Reinforcing the Rightlessness of Irregular Migrants?

This paper starts from the assumption that efforts to counter the rightlessness of irregular migrants can be divided into two broad categories. A first strategy would be to extend rights through a shift of status - i.e. through regularization - while a second strategy aims at securing access to a normative regime of rights (often conceptualized as human rights) for all residents regardless of their legal status. Demands for provision of medical care and schooling, as well as ability to access public space without fears, all fall within this latter category. Scholars have conceptualized these claims as an instance where the internal border controls of states are being challenged. This reading stresses the transformative potential of this kind of demands with regard to current citizenship regimes. However, it is also possible to read this strategy as insufficient in the sense that it leaves irregular migrants in a permanent state of exclusion. Hence, the implication of the second strategy remains disputed. Should it be understood as a component in a strategy to undermine border control? Or, rather, to entail the reinforcement of rightlessness and the consolidation of a divided society? Providing irregular migrants with a number of basic rights - while withholding access to full membership - can be seen as integral to the creation of a precarious labour force. Drawing on insights from the Swedish debate about irregular migrants this paper seeks to address these questions. The analysis is guided by the assumption that political demands needs to be analysed contextually as their intervention and implication differ historically and spatially. In accordance with this the paper seeks to provide an account of the specificities of claims-making on and on behalf of irregular migrants in different context with a focus on how this relates to different regimes of citizenship and border control.

Migratory Work/Family-Practices On a Precarious Labor Market

This presentation discusses the complexity of migrant lives with regard to the way they travel and make use of border-crossing activities, the diverse conditions they face on the working sites, and the way they structure their family relations and (endeavor to) achieve accountability and stability within their (heter)formed life planning. This session’s three thematic lines hence are in very fine accordance with the way I approach my investigation.

My current research concerns mainly Polish construction workers who are commuting between Poland and Denmark in order to improve their life conditions. Following the collapse of the Soviet Union many Eastern Europeans during the 1990s began to work (illegally) in Western Europe utilizing the tremendous gap in wages between the two former totally divided economies. Following the 2004 EU enlargement workers from the former Eastern bloc obtained legal access to the entire EU labour market. In Denmark some 50,000 mainly Polish workers are working primarily in construction, farming, cleaning and other low-wage sectors. I follow groups of construction workers at work sites and in their families (in Denmark as well as Poland), in order to understand the complex relationships between migrant work and family life. Since I regard it paramount to understand this bottom-up outlook also in a more overall perspective, my material concurrently consists of interviews with representatives from organizations in Denmark as well as Poland and moreover with politicians on both national and EU level.

In other words – relating to the two poles of scholarly stand mentioned in the session abstract - I am interested in strategies and mechanisms of migratory knowledge (and everyday life as a whole), but regard it equally essential to understand how this is reproducible and must be understood as an element in maintaining societal cohesion.
Neighbourhood Effects on Migrant Youth's Educational Commitments, an Enquiry into Personality Differences

In the neighbourhood effects literature, the socialisation mechanism is usually investigated by looking at the association between neighbourhood characteristics and educational attainment. The step in between, that adolescents actually internalise educational norms held by residents, is often assumed. We attempt to fill this gap by looking at how educational commitments are influenced by neighbourhood characteristics. We investigate this process for migrant youth, a group that lags behind in educational attainment compared to native youth, and might therefore be particularly vulnerable to neighbourhood effects. To test our hypothesis we used longitudinal panel data with five waves (N=4179), combined with fixed-effects models which control for a large portion of potential selection bias. These models have an advantage over naïve OLS models in that they predict the effect of change in neighbourhood characteristics on change in educational commitment, and therefore offer a more dynamic approach to modelling neighbourhood effects. Our results show that living in neighbourhoods with higher proportions of immigrants increases the educational commitments of migrant youth compared to living in neighbourhoods with lower proportions. Besides, we find that adolescents with a resilient personality experience less influence of the neighbourhood context on educational commitments than do adolescents with other personalities.
came part of the EU. They have experienced more negative images after Poland joined the EU while their situation should have improved with the change in legal status. They narrate about their position in Dutch society, the changes they have seen, and the stereotypes they have to face. They confirm that ‘tolerance’ is no longer a key component of Dutch society, and tell about the social and economic barriers they face. Their migration experiences and their encounters with Dutch society reveal a complex image. Coincidence, doubt and hard work are main characteristics of their histories. The in-depth interviews reveal that there was little thought of long-term planning and that choices were made rather haphazardly.

**Space, Time and Symbol in Urban Indonesian Schoolboy Gangs**

This paper uses theories of honour and masculinity to look at the phenomenon of male youth fighting in the urban space of two cities in Central Java, Indonesia. The masculine habitus of lower middle class Javanese schoolboys is referenced in local collective violence. Acknowledging the long history of heroic warfare and factionalism in Java, the data point to the pleasurable sense of oneself as a kind of warrior fighting with a band of brothers on specified ‘battlefields’ in the city. Four points emerge from the analysis. First, peer fighting is a temporally-bounded activity that ends with the school-to-work transition, thus bearing out Messerschmidt’s (1993) argument about the conditional and compensatory nature of collective masculine violence. School plays an important role in amplifying peer conflicts and honour disputes. Third, getting a girlfriend demands the expression of a different kind of masculine habitus from that operationalized in peer fighting. Finally, Muslim schoolboy youth squads (geengs) are intense formations for the construction of warrior masculinities, employing theologically-informed imagery in battles with boys from secular and Christian schools. The spaces of battle are identified with names that anchor them to the global Islamist struggle.

**The Practice of Control in Risk Activities**

In this paper I would like to challenge the dominating understanding of voluntary risk-taking as activities with a focus on risk (Lyng). Instead I am arguing for a shift in focus from risk to control, which is the outcome of a successful interaction with risk. Based on ethnographic fieldwork on climbing and scuba diving, I analyse the practice of control as what Foucault calls a “technology of the self”. With this approach to control, participants in risk activities are understood as practicing a dominating ideal in the post warfare era, where the individual is increasingly supposed to be responsible and in control of his/her own life (Simon).

**Legalizing Internet Piracy through State-Invented Religion? A Case Study of the Swedish State’s Acknowledgement of the Missionary Church of Kopimism As Religion**

In 2011 the Swedish Kammarkollegiet, the oldest public authority in Sweden, acknowledged The Missionary Church of Kopism (Det missionerande kopismfondet) as a faith based community (trossamfund). The Church is built on the idea that copying and the spreading of information is an ethical right. As a registered faith based community the Church qualifies as an organized and by the state approved religion, as such it is protected by Swedish constitutional law where it is stated that freedom of religion is absolute. Regardless of the sincerity of its creators, does this mean that the Church has found a way to legalized piracy for its members? If so, what future implications could this case have? The overarching question we would like to ask in this article is how the category religion enables the state apparatus to produce legitimate and illegitimate subject positions and what the consequences of this production are in relation to power and ideology.

**Network of Support Centers for Gender Equality in Greek Armed Forces**

The paper presents the analysis of data from a research project for gender equality in Greek armed forces. The legal framework of gender equality in armed forces as well as the operation of the network of support centers under the funding of the European project “Artemis – Equal” will be presented.

The specific goals of these support centers were: the recording of inequality problems which take place in the armed forces, the provision of the information of interested parties about legislation and the official procedures in order to face the problems, the information about similar cases and good practices and finally the most important goal is Psychological, legal and Social support.

**Discovering Ideological Codes in the Professional Work of Daycare Personnel**

During the last decades there has been a tremendous growth in the enrolment rate in daycare centers in Norway to the extent that 96% of all children attend daycare centers before they reach school age. Thus, daycare has become an important socialization arena, supplementary to parents, and a place where the demarcation line between ‘the private’ and ‘the public’ is rendered indistinct. The private becomes public when problems associated with the private sphere, for example behavioral disorder, child neglect etc., become a public responsibility. Simultaneously the public is private when normative understandings of what is expected and accepted are transformed into public standards and definitions of ‘the good’ contributing to inform and shape parental socialization goals and practices, and the daycare personnel’s appreciation of parental practices and their gaze on the children. Alongside the increase in daycare centers there has been a demand for increased professionalization of the sector, which in general is dominated by personnel lacking formal education. Important in this respect is early intervention: the obligation of daycare personnel to intervene when a child does not develop adequately or has a worrying home environment. The development of standardized tools aimed at mapping children's cognitive and emotional skills are increasingly being introduced to sort out children who are in need of extra concern. However, daycare personnel report to rely on their own embodied sensitivity in regard to concern for children. In this intersection between standardization and personal ‘stomach feeling’, some distinct ideological codes come into play. What constitutes ‘normality’? Is normality absolute, or are there different definitions for different children? And how is normality and abnormality (not) spoken of? The paper addresses these questions in relation to the concepts of ideological codes' and ‘ruling relations’.

and imperialism. However, we took further analysis on the concept and catego-
istics on transnationalism and people’s practices while referring to
the temporary transnational migrants in Japan. In contemporary Japan since the
1990s, a large number of unskilled foreign workers (+trainees) from East Asian
countries have been introduced to the urban and rural areas as temporary labors
under the foreign trainees’ system. We focus on these trainees, called ‘Kenshusei/
Jisshusei,’ at agricultural villages as well as the fishery manufactures in fishing
villages, severely damaged by the Great East Japan Earthquake and Tsunami in 2011.

Based on the field research, we will discuss a sociological concept named
‘methodological transnationalism,’ in parallel to ‘actual transnationalism’ and ‘ide-
al transnationalism.’ While recalling ‘methodological cosmopolitanism’ (as a cri-
tique on ‘methodological nationalism’ by U. Beck), we will examine the meso-level
perspective between methodological cosmopolitanism and methodological na-
tonialism. In the present situation of North East Asia where nationalism and poli-
tical tensions are continuously rising, the meso-level perspective in methodology
is required, that is methodological transnationalism. This is also a standpoint that
associates with a critical viewpoint against the traditional perspective of sociology.

Another concept we discuss here is the ‘mediators,’ a proximate concept to the
G. Simmel’s. However, we took further analysis on the concept and catego-
rized them according to the level: from informal/sympathic type to formal/ busineslike type. We particularly pay attention to the ‘bridge-type mediators,’ re-
garding as inevitable actors in transnational interactions.

Based on the discussions above, we will examine an implication on concep-
tions of the nation-state and (civil) society as the most decisive points in sociology.
It is the conception of ‘society beyond a nation-state’ along with the perspective
of methodological transnationalism, that is also required to contemporary/future
sociology.

The objective of our presentation is to show the juncture between the socio-
logical concepts on transnationalism and people’s practices while referring to

Politics of Science Online: Discursive Negotiation of Risk and Uncertainty Regarding Radiation Contamination

As the details of nuclear accident in 2011 unfold, many Japanese were forced into the world of scientific jargons that might determine their life. Some believed the scientific assessment of “no immediate hazard,” others alerted the danger of both short- and long-term hazard of radiation contamination. As Beck (1992) notes that “the sources of danger are no longer ignorance but knowledge” (p183), the knowledge itself confused their understanding of radiation and political stance. While the national discourse was seemingly splitting into two “dangerous” and “safe” camps, many attempted to assess the risk themselves by negotiating their ideas about safety, health, and lives through various discussions in mass, print, and online media. Especially the open discussions in the social media, whose popularity is tied to the activities in the triple disaster (Satoru, Nishimura and Kindstrand 2012), is an important sites where laypeople’s experience, knowledge, and logic are contested and negotiated.

This paper attempts to illustrate how popular epidemiology (Brown 1987, 1997; Murphy 2006; Novotny 1994) and scientific knowledge about radiation contamination is negotiated in Japanese online discursive space. I compare and contrast two major rhetorics: one that is skeptical of, and another that claims immediate harm of radiation. I center my analysis to those on Twitter, due to its open architecture and ability to identify individual participants. My aim is to explore the different ways in which participants of online discussion are making sense of the situation, from their living space, food, water to their health, family, job, etc. Furthermore, I look at the debates around Yomoto Taro, an activist politician who was elected to Upper House in 2013 by centering his campaign around an-nuclear policy, and how such online discursive space may have ramification to the transformation of political in Japanese society.

“With a Little Help from Outside” – “Outsourcing” of Domestic Work in Germany

Unpaid household labor and the provision of care within families present an important determinant for individual and collective welfare. However, in the past decades the gendered structure of household labor has undergone significant change. In particular, the increase of dual-earner couples and demographic shifts challenge traditional arrangements of paid and unpaid labor within the household. Households are thus increasingly confronted with the decision whether to produce these commodities by themselves or to buy services on the market. While common explanations emphasize the relevance of time and labor costs for such make-or-buy decisions, empirical results call for further explanations. From a sociological point of view the relationship between supplier and the household contains many issues which generate trust problems. Moreover, the outsourcing of household labor is embedded in a normative framework about family and gender, affecting the choice of what and how to outsource specific tasks. Although time pressures of households are increasingly relevant, the topic has so far been understudied. Especially in Germany there is little empirical evidence about the outsourcing behavior of households. The paper thus analyzes the determinants of outsourcing decisions of households in Germany. The analysis is based on the waves 1992-2013 of the German Socio-economic Panel (SOEP) applying panel data methods. Theoretically the analysis draws upon new home economics, family sociology and economic sociology. The article gives insight into the decision making of dual-earner couples and how it sheds light on the boundary between household and markets and gives explanations for current empirical developments in this realm.

Mobility Decisions of Dual-Career Couples - New Evidence on the “Co-Location” Problem

Working couples in general face a “co-location problem”. Since it is unlikely that both partners will find their individually best job offer at the same geographic location, at least one partner will have to make concessions when joint locational decisions are made. Scientific research on regional mobility of couples has shown that it is mostly women who make these concessions and who suffer disadvantages with respect to career opportunities. A common framework for explaining such gendered outcomes has been proposed by Mincer who assumes that a joint move will occur if the gains of one partner outweigh the losses of the other partner. Since women are (still) mostly in the role of secondary earners, their losses can be outbalanced more easily. However, with the rise in women’s employment participation the potential for couples co-location problem has grown, especially for the higher educated with more specialized careers. One implication of the Mincer model would be, that in particular dual-career couples should be significantly more mobile than other couple types. This contribution aims to explain these contradicting findings and to shed more light on the mobility decisions of dual-career couples by analyzing more thoroughly the circumstances of such migration. In particular it tries to combine mobility research with regional sociology and economics which emphasizes the relevance of regional opportunity structures, especially those of urban labor markets. Theoretically an extension of the Mincer Model is proposed by referring to a bargaining model of household decisions. The empirical analysis is based on panel data analysis of the German Socio Economic Panel, waves 1992-2011. The paper also gives insight into recent developments in urban settlement and the changing social structure of large metropolitan areas.

Institutionalizing ‘Living Heritage’: Ecomuseum Development In Rural China

In 1997, China established its first ecomuseum as a new cultural strategy to safeguard ‘living heritage’ and develop local cultural economies. China has since experienced a wave of ecomuseum projects across the country, developed as ‘museums without walls’ encompassing the entire cultural landscape of a locality with a mission to involve the local population in the interpretation, management and protection of their cultural heritage. The ecomuseum marks an urgent need to address the pressures of modernization on the retention of local cultural traditions and a recent focus of heritage and museum work on intangible heritage preservation. With the features of ecomuseum projects in rural ethnic minority regions, local populations have become a new tourist destination of tourism tourism that aims to integrate them and their ‘living heritage’ as objects and subjects of a modernizing China. In this paper, I offer an ethnographic perspective on the unfolding of the first ecomuseum project in Guangxi in the Yao village of Huaiji. Given the emphasis on the community-based approach to safeguard ‘living tradition’ and promote rural development, I examine how the process of ecomuseum development not only changes the rural locality itself but also the local community's view of its heritage and ability to control it. Particular attention is paid to understanding how the ecomuseum and the intangible heritage discourse impact the local community and shape the system of identity as multiple forms of imagination and authentication of heritage come into play through the ecomuseum contact space.

Blurring Work-Home Boundaries and Their Impact of Work-Home Conflict and Enhancement

Recently, growing interest has been turned toward the inherent boundaries between the work and home domains and how these boundaries are created. There have been discussions surrounding the increasing permeability of these boundaries and even their disappearance. Research on regional mobility of couples has shown that for these tendencies an increased flexibility in the hours and place of work (e.g., teleworking from home), causing work and home to become more intertwined. Other contributing factors include modern technical conveniences, such as the Internets, mobile phones and laptops, which make it possible to work and be reached by others almost anywhere and at any time. In light of the increasing disintegration of work-home boundaries, the question arises as to its consequences. Do blurring boundaries lead to more conflicts or do they have a positive impact? Data for this study were collected through an online survey among employees from large health-care and nanotechnology sector (n=321, response rates between 65 % and 95.5 %). Work-home/ work-home work conflict and enhancement were measured using the four scales of the Survey Work-home Interaction—Nijmegen (SWING) questionnaire (Geurts et al., 2005). The extend of a blurred work-home boundary was measured with 6 items focused on the work to nonwork permeability (e.g., “I am also available during my leisure time for work concerns (e.g., via cell phone).”). A structural equation modeling (SEM) analysis was applied. Work to nonwork permeability showed a positive association with work-life conflict, but no significant effect on life-work conflict and the both enhancement scales. We finally discuss the implications of these results.

La montée en puissance de cette catégorie est à la fois une opportunité et un piège. Elle ouvre la possibilité d’interroger les facteurs collectifs de risque, à la source des difficultés psychologiques et individualisées des salariés. Mais elle peut reférer le débat sur les sources organisationnelles de ces difficultés en mettant l’accent sur la nécessité de « protéger » de ces risques les travailleurs que les membres de l’organisation ont pourtant mis en œuvre pour expliquer le comportement d’efficacité de l’activité n’est pas saisie. Les « RPS » fonctionnent alors comme un piège, tenant éloignés syndicalistes et représentants du personnel des salariés et de leur expertise que ces derniers détiennent sur le travail et les sources organisationnelles de leurs difficultés.

A partir d’une série d’enquêtes de terrains en cours on montera le rôle des contextes d’action qui sont ceux des équipes syndicales dans l’éventualité des situations de conflits. Elles vont de l’intégration à des dispositifs managériaux visant à « soigner les travailleurs les plus fragiles » à des expériences d’écoute syndicale de l’expérience laborieuse, revivifiant à la fois la pratique syndicale et la critique de l’organisation du travail.

“Everyday knowledge” is constructed in the mass media by debating or interweaving actual knowledge and common knowledge. It can be assumed that individuals act and identify themselves on the basis of this knowledge, which is nevertheless continuously socially constructed. Drawing from approaches of the sociology of knowledge, I would like to present preliminary findings of my PhD research focusing on the construction of knowledge of masculinity in media products. Since my methodology is based on the “discourse analysis as well as sociology of knowledge”, my paper is dealing with the issue of how knowledge is produced in non-fiction publications. By revealing the process of knowledge construction, I am going to analyze the role of the social actors, the subjective positioning and the given social positions as important aspects.

Re-Building a Conservation Organization: The National Trust for England and Wales in the 1960s

The growth of conservation organisations was one of the more striking features of post-war social change in Britain. With their roots in late Victorian and Edwardian ideas of preservation and conservation, the membership of these organisations expanded markedly from the 1960s. The two biggest national organisations – the NT and RSPB – saw their combined memberships grow from just under 300,000 in the mid-1960s to over 5M by the turn of the century, making them the two largest conservation organisations in Europe. The increasing size of organisations like the NT and RSPB has given them greater influence as lobbyists in their dealings with policy makers at both the national and supra-national level. It has also, however, generated difficult questions about their relationship to academic and everyday knowledge, which is nevertheless continuously socially constructed. Drawing from approaches of the sociology of knowledge, I would like to present preliminary findings of my PhD research focusing on the construction of knowledge of masculinity in media products. Since my methodology is based on the “discourse analysis as well as sociology of knowledge”, my paper is dealing with the issue of how knowledge is produced in non-fiction publications. Comparative Research on Contemporary Youth Social Movements: The Case of the Genind Project

The year 2011 has witnessed the emergence of new types of social movements, transnational in scope but especially intense in the Mediterranean area, one of which precipitating factors has been the leading role of the new generations and the urban middle classes. The year began with the so-called ‘Arab spring’, continued with the ‘Spanish revolution’ of 15-M, the Chilean students protests, riots in some English working-class suburbs, the Occupy Movement in the United States and ended—at least till date—with riots in Turkey and Brasil. The antecedents date back to the ‘anti-globalization’ movement emerged in Seattle in 1999 and in Porto Alegre after 2001, the revolt of the French ‘banlieues’ in autumn 2005 and the Greek mobilization in winter 2008, coinciding with the start of the international financial crisis. This paper presents the results of a research project funded: The Indigent Generation. Space, culture and power in the youth movement of 2011 (GENIND). While it is early to assess the impact of such movements, it seems evident that they respond to a new cycle of social protests, which manifest in public space (both in the squares of cities and in the Net).The project aims to shed light on the nature, causes and recent drift of such movements, taking the Spanish case as a reference point and comparing it with the mobilizations in four Mediterranean countries (Portugal, Italy, Greece, Egypt), and other territories where there was also mobilizations (England, USA, Chile, Brazil). Although it is based on ongoing ethnographic research, their orientation is primarily theoretical. The main
Labour flexibility is a hallmark of a new economic model marked by the rise of informal and precarious work. Given this structural transformation, many scholars have invited unions to organize the unorganized “at the rough ends of the informal sector”, in response to the labor market changes (Heery and Adler, 2004). The NCEUS have shown that the economic liberalization process of the 1990s have triggered a “jobs’ centrifugation dynamic” that pushed employment towards peripheral labor markets. Since then, Indian scholars have also stressed the importance of unions to refocus on the “organizing model” and invest these segments (Bhowmik, 2005; Agarwala, 2008).

It is in this spirit that LEARN-Dharavi, an NGO, has successfully launched organizing drives aiming to stir collective action involving women working in the slums of Mumbai. Building on our previous research in the shipbreaking industry (Noirot, 2013) and empirical data collected through interviews with representatives of LEARN-Dharavi (local leaders and female workers/members involved in different “industries” i.e. domestic services, canteen workers, embroidery, garment industry, street vending), the paper will present the result of a case study conducted in 2011-13 using the analytical framework developed by Cowen (2005). It will first examine elements of contextualization regarding the State’s role in the development and “regulation” of the informal economic activities, then present the struggle’s chronology and discuss strategies, practices and demands put forwards by the different grassroots unions that emerged from LEARN’s actions. Importantly, it will take a look at the “raising issues” in order to highlight the gap between discourses and practices and identify the difficulties facing traditionally organized labour when seeking to transform itself in order to meet the needs of the so-called “informal workers”.

**Abstracts are organized by first presenting author’s last name.**
explosions and their subsequent act for denuclearization. We try to reconstruct a web of meanings existant in the 2012 campaign, also identifying central meanings and important subsets of meanings. We employ a comparative design, comparing the 2012 campaign against the 1954 campaign, to highlight important features and characteristics of the movement today.

Our major finding is that, while 1954 movement dominantly drew its significa-
tion from collective memory of Hiroshima and Nagasaki and risk on food safety, post 3.11 movement was strongly driven by motherhood mentality to protect a child and a concern over local environmental protection.

Social Movement Transformations in the 20th Century: Japanese Experience

In this presentation we investigate causes and conditions of social movement change in the post-World War II Japan.

Social movements in Japan have experienced tremendous transformations after the World War II. Starting with the movement surge in the 1950s, Japan witnessed a sharp rise in popular protest in the early 60s, culminating in the peak in late 60s. After a sharp decline in the early 70s, the entire civil action has stayed relatively low ever since. Japan also witnessed huge transformations in repertoires of contention. In the 1950s, Japan saw a rise in labor movements, along with anti-capitalist, student, and environmental movements in 1960s.

Why did Japan, as non-western democracy, experience such a huge transforma-
tion in social movements after the World War II? Big shifts in quantity and quality of social movements have been recorded in some other countries. In such cases they often experience huge structural transformations. The Japanese case, with no structural change during the latter half of 20th century, does not allow us to lay out the same explanation. Also the shift is not toward a “social movement society.” Japan seems to have become a society content with what they have.

We employ both qualitative and quantitative methods to investigate into the causes and conditions for social movement change in the post-WWII Japan. Quantitatively we use event data analysis to identify changes in volume and categories. Qualitatively we look for cognitive change that involve shift in values and percep-
tions toward social movements.

Our finding is that change in international politics along with growing global civil society had to do with the change in social movements in Japan. Also past experience of the 60s may have had a negative effect on the perceptions and motives of the later generations to give rise to social movements.

Routines As Competency. New Medical Routines for Hybrid Health Care Professionalism

Organizing health care services increasingly encompasses hybrid forms of medical professionalism. Relations between managers and medical professionals become less binary and oppositional; organizational forms become less perform-
ance-based and less strictly managerial; medical professionalism itself becomes more organizational. In this paper we focus on the latter trend, as most studies on hybrid professionalism tend to focus on the other two. The rise of “organizing profes-
sionals” (i.e. medical professionalism that includes organizational and man-
gerial capabilities) is usually approached in terms of new competencies. New competency models, such as the CanMEDS model for medical professionalism, circumscribe the new roles and acts that (medical) professionals have to perform, with several scholar focusing explicitly on this particular stratum, very little has been said about the relational patterns of the semiperiphery. Rather, in relational (network) analyses, semiperipheral countries are typically those whose relational properties fit neither the core nor the periphery.

Combining a novel approach for blockmodeling of valued networks with a novel el heuristic that identifies dependency and dominance in core-periphery struc-
tures, this paper addresses the following questions: does the semiperiphery, similar to the core and the periphery, have its unique patterns of ties? If so, what patterns? What are the characteristic patterns of ties between the semiperiphery and the periphery? Using pre-determined core-semi-
periphery-periphery partitions of the contemporary world-system as specified in the qualitative literature, the novel network-analytical methods are applied in the analysis of international commodity trade matrices in search of would-be ideal blocks that characterize semiperipheral relations. Finding such would not only allow for identifying semiperipheral countries based on their relational features, as something distinct from similar blocks for core and periphery, respectively, but it would also allow for mapping patterns of dependency and dominance within the semiperiphery and its patterns to the core and periphery strata. Additionally, it would provide the formal network-analytical toolbox with a specification and possible structural definitions of core, semiperiphery and periphery that actually stems from the actual context from which the trichotomy stems, i.e. world-sys-
tem analysis.

Higher Education of Women Between Heterogeneous Logics: Gender-Equality and Scientific Excellence As Conflicting Requirements in University System

At present the German university system is undergoing a number of reforms to improve its models of teaching and research. Equality politics have a high priority in this regards. Gender equality in the higher education sector is still unrealized. Despite the fact that now equal numbers of men and women start studying, there is a big drop out of women in higher level of education systems, known as the “glass ceiling effect”. Because of that, equality politics also have take into regard later stages of university education, namely the doctoral and postdoctoral phase. This contribution is based on a scientific study from 2012, which analyses the benefits of the new measures to promote women within the junior researcher program of a scientific cluster, measures created as part of a new governmental funding policy. The German “Excellence Initiative” is one of the most important initiatives in higher education reform to strengthen international competitiveness and sustainability research. New incentives were created for universities to take into account both scientific and equality policy requirements, in order to reduce the well-known problems of women in this phase. By analysing the situation with the theoretical framework of Neoinstitutionalism, it can be shown that gender equality and scientific excellence are two different logics that came into conflict with each other. These measures partially lead to paradoxical consequences for the careers of women through the constantly changing interplay between hetero-
geneous environmental requirements and organizational structures. Instead of better support for women, new obstructions appeared in their careers. These un-
foreseen consequences arise out of conflicting institutional logics and were never intended by any of the institutional actors involved.
When we think about oppression and global inequality, we also have to ask why it is that many underprivileged groups suffer from oppression without any real resistance? With the analytical framework of Bourdieu's theory of practice I will argue that any theory that draws on the concept of intersectionality has to take into regard the symbolic dimension of society in which social practice takes place and how it reproduces social structures of domination. Symbolic violence, this "gentile violence [...] invisible to victims" (Bourdieu 2001, 1-2), is the key to understand how oppression reproduces and legitimatises itself. It contributes both to the recognition of oppression and at the same time to the misrecognition of its arbitrariness.

This contribution deals with the precarisation of labor in contemporary Germany. This field is mainly structured by race, class and gender. Women, immigrants, disabled persons and lower classes are disproportionately affected by adverse working conditions, lack of job security and lower payments, and are furthermore badly integrated into the social security system.

I want to argue that the precarisation of labor and life is a new form of symbolic violence, which affects different groups in different ways for the purpose of labor exploitation. This process cannot be understood solely by looking at economic constraints or pure violence. Deterioration of working conditions is legitimised by the apparent naturalness and inevitability of economic development.

To theorise the different axes of oppression in the field of precarious work, I will consider not only different categories of inequality but also the very processes of categorisation through labour. Taking into account this symbolic dimension of oppression in society may lead to a better understanding of its invertebrate persistence.

NORKUS, ZENONAS* (Vilnius University, zenonas.norkus@fs.vu.lt)

Moving up and Down in the Capitalist World System: A Qualitative Comparative Analysis of Patterns in Post-Communist Transformation

The relation of Communist world to capitalist World System (WS) is disputed subject, opinions including the views of USSR as semi-periphery power in the capitalist WS, as residual empire resisting integration into WS, parallel World anti-System etc. In both cases one is fuelled by power struggle, peripheralisation and broad populations of joining the core of WS in few years after re-introduction of free market and liberal democracy. After 20 years, analysts describe history of former communist countries in the 20th century as “detour from periphery to semi-periphery” (Berend 1999). After two decades of post-communist transformation, most of them remained in or returned to the positions where they were before Communism, some moved down from the semi-periphery to periphery, and only few managed to upgrade their world-systemic position. According to the ethnological, economic (shock therapy) or political (revolutionary removal of cumulative factors) factors are decisive for the early success of post-communist transformation. The author argues that neither economic nor politiological explanations are sufficient to account for changes in the world-systemic position of former communist states (including China and Vietnam), and highlights the importance of cultural differences described in terms of four orientations (continuous, innovative, restitutive and emulative) of social imaginary and social action on the eve of post-communist transformation. This argument is tested by qualitative comparative analysis of patterns in post-communist transformation.

What Makes Fathers Involved? Exploring the Relationship Between Paid Work and Childcare

Although fathers’ roles have been adapting over the last three decades financial provisioning remains the essence of ‘good’ fathering and the work schedules associated with fathers’ employment is a key factor that shapes their involvement in childcare and domestic work. However, the relative impact of fathers’ and mothers’ employment on paternal involvement in childcare is unclear, and little is known about the longer term impact, that is, whether the way parents’ organise their work and childcare arrangements in the first year of the child’s life impacts on paternal involvement as the child grows up.

This paper, based on work by Norman, Elliot and Fagan (Community Work and Family, forthcoming), investigates some of the tensions between employment and a father’s involved caregiver role. We open with a review of the qualitative and quantitative results from previous studies concerning father’s contributions to childcare and the facilitating influences which state parental leave policies and other reconciliation measures have played in some countries. Then we focus on employed couples to explore the association that mothers’ and fathers’ employment hours have with paternal involvement when their child is aged three. Multivariate analysis using the UK’s Millennium Cohort Study reveals it is the mothers’ employment hours when the child is aged three that has the largest association with paternal involvement in childcare at this stage in the child’s life, independent of what hours the father works. Furthermore, both parent’s employment hours when the child was nine months old have a longitudinal influence on paternal involvement when the child reaches three, but it is the hours a mother works as the child was aged nine months that has the stronger association with paternal involvement at age three. This suggests mothers’ work schedules are more important for fostering paternal involvement in both the immediate and longer term.

NORSTEDT, MARIA* (University of Lund, Maria.Norstedt@soc.lu.se)

The main question I will address in my paper is: what does the use of institutional ethnography help me see analytically that I would have risked not seeing with other methodological glasses? In order to discuss this, I will draw on and exemplify with my first analysis of the empirical material from an on-going workplace study about hidden disabilities and working life. In this moment I am in the process of doing this analysis. The study takes its starting in the experiences and work knowledge of individuals with hidden disabilities in order to understand individual, interactional and institutional aspects of importance for people with hidden disabilities when they decide to tell – or not to tell – others in the workplace. While discourse analysis is a relevant methodological approach in a study about people with hidden disabilities I argue that institutional ethnography (IE) through its methods and procedures can provide a richer account of institutional practices, including the role of language and workplace relations. The IE perspective is a valuable tool to interpret the material consequences in workplaces and on every day experiences. Discourse analysis could stay at the level of representation, not showing what people actually do with discourses and thereby risking seeing neither agency nor material practices. IE enables an understanding of how marginalization works in individual, interactional and institutional practices in workplaces and of how the everyday life and agency of persons with hidden disabilities are impacted by these practices. Another advantage is that IE does not accept an ontological divide between individual and structure and an analysis based in IE thus can provide an answer to the long-lasting paradox among disability researchers: how to theoretically understand disability as a consequence of inequality/social structures without neglecting individuals’ bodily experiences of living with a disability. This is also something I will discuss in the paper with the help of my empirical data.

“What Do I Do Now?” Post-Retirement Leisure in Japan

Japan's dankaisai, the generation that was the foundation of the country’s “economic miracle,” are retiring. As their careers come to an end, Japan’s “greatest generation” seem at last to be in position to enjoy the fruits of their labors. But can they? Japan has the greatest average longevity, but its post-retirement leisure cleaves along lines of class, gender, and age. This paper first reviews leisure trends during the past 50 years, noting how they conditioned inequality in leisure expectations and practices. Three main factors affecting variation in leisure are then investigated in detail. 1) Class. Who actually retires and how? Analysis highlights the roles of retirement bonuses, pensions, and savings, as well as government supports. Japan’s elderly control much of the nation’s privately held wealth and many who are not rich have been lifted out of poverty, but poor elderly continue working out of necessity, while other carry on because work gives meaning in life. 2) Gender. In Japan’s strongly gendered society, retirement often finds two people whose leisure ideas have grown quite apart looking at each other across the breakfast table. The gendered nature of social participation remains evident in post-retirement leisure activities for men and women. Although “retirement divorce” is a danger, couples with sufficient means may find shared post-retirement leisure activities to be grounds for renewed mutual appreciation and affection. 3) Age. Japan’s retirees exhibit significant variation in age (the so-called young olds, middle olds, and oldest olds), which influences leisure practices. As with gender and class, age-related leisure trend differences seen in Japan have parallels across East Asian societies. The paper concludes by considering the usefulness of the framework deduced from the Japanese case for studying leisure other Confucian catch-up economies.

Who is the Terrorist?: Humanism and Moral Ambivalence in the Discourse on Terrorism

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Labeling political enemies as terrorists became the new trend in the new millennium. It has not only become the cornerstone of discourse surrounding US foreign policy, but also a rhetorical tool employed by authoritarian dictators (such as Gaddafi during the Libyan crisis, and Assad during the Syrian civil war) in maintaining their grip on power.

It is argued that the threat of terrorism is successful in garnering public support for military intervention and authoritarian practices precisely because it plays on public fears and anxieties concerning anomie and unpredictable violence. The construction of a terrorist threat reinforces the authority of the State to ensure security and public safety, even sanctioning extreme measures (such as torture, intrusive surveillance and the outlawing of public gatherings) that would normally be viewed as antithetical to the humanistic principles of liberty, justice and tolerance. However, these measures are justified on the basis that terrorism is ‘evil’ and therefore requires a ‘means justifies ends’ rationale where humanist ideals are clouded by the ultimate concern. ‘Terrorist’ groups, meanwhile, also cast their activities in terms of humanist and religious responses to oppression and aggressive foreign policy, even as they reject certain humanist principles and modernization as forms of Western imperialism.

By examining speeches and writings from key political figures, it will be shown how humanism and religion merge in the political discourse surrounding terrorism in ways that indicate uncertainty and/or duplicity over the moral foundations of contemporary political action and State power. Do such tendencies reflect differences associated with an emerging post-secularist humanism, or are they a Machiavellian bricolage of ambivalent and contradictory rhetorical elements? The answer is relevant to understanding to what extent the enculturation of humanist ideals can serve to arrest the violence surrounding terrorism.

*Investigation Social Factors Influencing on Educational Opportunities Among High School Students of Tehran*

This study sought to determine the contribution social factors on creation and maintaining inequality in educational opportunities among students in Tehran. Reproduction theorists believe that strong solidarity exists between family background and the level of access to the educational facilities.

Network analysis theory holds that inequal transfer of resources and opportunities leads to inequal educational opportunities. This means that people have inequal opportunities in achieving social possibilities and maintaining relationship with who control the resources like information and bureaucratic influence, which makes the educational opportunities inequal. Having information of school programs, education and job consultation, friends in upper economy section would be some good examples.

The survey method and questionnaire technic used for this study. The sample volume is 300 and the sampling method is cluster-sample. Face and content validity used for questioner confirmation. Cronbach’s α has been used for reliability and 78 percent is result. According to research data, Tehran school are run 5 ways: heyat-e-omanaye-people specimen, governmental specimen, non-governmental and normal governmental.

In recent years, normal governmental schools that had more facilities or better quality of education became heyat-e-omanayeay or governmental specimen. Low-income families have problem to access appropriate schools while upper class can register to better schools through their connections network and affording the school fees. Stepping up in socio-economic class leads to increasing educational sensitivity level of parents, as well as increase in communicational kills of students and boosting up heir educational motivatin also dire need for access, resulting in educational progress and reducing inequal educational opportunities.

Continuing the recent trend will bring about deprivement of talented students in low-income families from proper educational facilities. This will deprive the society from part of the nation’s talent. Moreover illiteracy and semi-illiteracy portion of society will lead to subsequences such as inefficiency, crime, disorder and in security.

*Social Stratification and Inequality in Japan*

**Social Stratification and Inequality in Japan**

SILVIA G. NOVELO Y URDANIVA

**ABSTRACT**

When we examine the subject of Japanese globalization, it quickly becomes apparent that international migratory movements occupy a special place of interest. This is due to the characteristics of this country, particularly its insularity, both in the physical and mental plane (sokoku). By focusing on the Japanese migratory phenomenon from a historic and structural perspective, this study would analyze possible Japanese population profile scenarios into the middle of the 21st century. The study will focus on migratory movements to the Americas, foreign workforce acceptance in Japan and inter-ethnic relations involving Japanese nationals and their descendants. The analysis has the tentative title of: _The Sociology of Japan in the Post-Globalization Era_.

Within Japan, the labor market as a whole has not been deteriorating. In fact, workers in the most important firms and in the public sector have been protected, while those on the periphery are exposed to ruthless foreign market competition. The nikkeijin, people of Japanese descent living abroad, fall into the latter group. Generally, this social grouping does not work for large institutions and firms. This phenomenon has contributed to increasing inequality between the two types of workers.

Persistent Japanese xenophobia is more apparent during transitional periods and has always been a characteristic of internal and foreign policies of the country. It has acquired distinctive traits with the opening of Japan to the world –Meiji age- and the consequent development of a colonialist mindset and territorial expansion.

Will the nikkeijin of Latin America be able to overcome the deplorable mentality of sakoku and become the solution to the serious demographic problem that Japan is facing?

Key words: sakoku, Japanese xenophobia, Nikkeijin, Americas, Japanese migratory phenomenon.

*Woman Leader, Woman Employee and Ethical Organizational Culture in High and Low Gender Gap Index Contexts*

Considering widely reported differences among countries in terms of innovation development levels, achievements in such fields as gender equality, organizational responsibility and other alike implementations (especially comparing American, African and European, North-South-East-European, Post-soviet-Socialist countries), the paper focuses on women’s and men’s status in modern organizations. More specifically, the paper concentrates on perceptions of women leaders and organizational climate in the organizations working in such societies as Finland (Northern country) and Lithuania (East European post-soviet country).

Quantitative data were collected by a web-based survey in Finland (2011) and Lithuania (2013, still under process). In this study, indicators of 2 scales are in the focus of empirical analysis: the Corporate Ethical Virtues scale of 58 items comprising eight dimensions of organizational virtues: clarity, congruency of supervisor, congruency of management, feasibility, supportability, transparency, discussability and sanctionability; the leadership practices scale of 7 items, depicting interrelations between a supervisor and a subordinate. Striving to ensure reliable comparability, one public Finnish (N=477) and one public Lithuanian (n=76 at the moment) organizations were selected for comparison.

Results of preliminary statistical analysis demonstrate that the respondents’ average evaluation of male leadership practices is higher than female leadership among Lithuanian respondents, but lower among Finns; also gender differences in the evaluations of corporate ethical virtues and effects of leader’s gender on the evaluations of CEV are almost absent among Lithuanian respondents, but rather obvious among Finnish ones. The findings not only indicate effects of gender equality developments in countries with a high and low gender gap index respectively, Lithuania and Finland, but also shed some light on interrelations between such phenomena as gender and leadership, gender perceptions of the ethical dimension of organizational culture, etc. in a comparative perspective. The analysis will be repeated at the end of 2013 after data collection process will be finished in Lithuania.

*Post-Disaster Literacy of a Japanese Local Community*

More than two years have passed since the Fukushima Dai`ichi Nuclear Power Plant accident of March 11, 2011. The first phase after the accident, “collective moral confidence” (Petryna, 2013), suggested that the existing system will overcome the disaster, yet evolved into feelings of desperation and disorientation about actual risk. An escalated sense of the unknown and unexpected fostered a flow of voluntarism and participation in local decision-making processes. Engaged in the process of information sharing, consensus-building, and mobilizing their resources and connections, local activists have been trying to influence local government decision-making.

This paper examines the process by which the Fukushima accident has been dealt with in radiation-contaminated communities, yielding insights into local government responses to the nuclear accident and probing whether government-citizen relation have been altered in the aftermath of such a disaster. Through
fieldwork undertaken in 2013 in Abiko City, Chiba Prefecture, this paper traces the nexus of the community-NGO-government relationship, focusing on the after-effects of the Fukushima Daichi Nuclear Plant accident. Utilizing civil society concepts and the expanding role of civil society in governance, we argue that civil society in a post-disaster community is an arena in which new ideas concerning governance are formulated and citizens' civic education is carried out. What is more, this paper provides what Charles Tilly called the "repertoire of collective action," in which people engage in modern post-Fukushima modes of political protest. While observing how people from a radiation-contaminated community have overcome some of these risk-perception problems, this research gives insight on the modern Japanese capacity to deal with unpredictable human-made accidents, extending previously known scenarios of post-disaster management.

Characteristics of Becoming Sociology in Russia

Russian sociological thought XIX - early XX centuries was closely associated with the ideas of Russian philosophy and literature. The becoming of sociology in Russia was initiated in the framework of social journalism. The first sociological articles were published in the periodical press as a "Notes of the Fatherland," "Business," "Knowledge". One of the founders of Russian sociology N.I. Kareev highly appreciated journalistic contribution to the development of sociology, noting that the "Notes of the Fatherland" was the first in the Russian sub-faculty, which has participated in the creation of generation of sociologists. In the West the institutionalization of sociology, sociological deployment of higher education took place earlier than in Russia. Recognition of sociology at the state level in Russia was only after the February Revolution of 1917 largely due to P.A. Sorokin. The first sub-faculty of sociology was established in 1919 at the general education faculty of 2nd Petrograd State University. Only in 1916 was an attempt to create a "Russian Sociological Society name M.M. Kovalevsky". The Russian government prevented the development of sociology. The desire to prove with the help of positivism, Marxism or another theories led to unreasonable politicization of Russian sociology. On this occasion P.A. Sorokin said: "In Russia the only scientific articles for sociology were: prison, exile and hard labour. Disinterested search for truth and the presentation of the results of this search were impossible". Therefore, the hallmark of Russian sociology was its oppositional political preconception. Probably for this reason Russian sociology was prohibited in 1929-1958 and officially named as pseudoscience.

Emotional Work During Biographical Research: A Researcher's Personal Reflection: Researcher's Experience (ongoing biographical research projects)

Social research are entangled in experience of researchers, who are emotionally affected by the work that they do. Particularly in qualitative research researchers’ engagement could influencing on the resulting of data. Since during the biographical interview facing many difficult situations. So it is in my case. In my biographical research with veterans I am often in difficult emotional situation. I am going to refer how I manage with this problem and provoke methodological discussion in that field. Biographical interviews required hard emotional work of researchers. Therefore in my paper I take a distinctly approach to provide a personal account of my experiences of doing emotional work while conducting my postdoctoral fieldwork. To add context, my research focuses on the biographical interviews with the polish former soldier of the military operations in Iraq and Afghanistan. In my research I define this social category as veterans because respondents identify themselves as such, too. Thus, through collecting stories, the research seeks to explore experiences and understandings of former soldiers wounded and injured on mission abroad, both in terms of these constructions, and the ways in which personal experiences and new identities are incorporated into them. My paper focuses on two ways of biographical research reflections. Firstly, on the considerable emotional challenges encountered during the research process and the ways in which these were managed through both successful and unsuccessful coping strategies. Secondly, I detail the ways in which my identity and biography impacted upon this emotional work and my relationships with participants. In order to embody such discussions I use excerpts from my own research diary and quotes from participants. Conclusions in my paper concern to the ways in which we, as the community of researchers, can do more to share our research experiences with each other for the benefit of ourselves and our work.

Locating the Materiality of Music Artefacts

This paper aims to reframe issues of materiality within the study of music consumption. While music sociologists usually focus on notions of taste, mediation or repertoires of preferences, the materiality of music artefacts are often neglected in the studies on music consumption. From the iconicity of vinyl discs, the hiphers of iPods, to the aesthetic features of posters, artefacts play a major role in how individuals develop and maintain a relationship with their favorite musics, artists and genres. The material interactions between audiences and music artefacts are aesthetic and embody their preferences in return.

In the digital age of music consumption, there is an increasing trend towards the fragmentation of modes of music consumption. Music audiences are driven towards the use of different material artefacts to surround themselves with music throughout everyday life. Henceforth, artefacts relate music to different forms of interactions and associate it with everyday activities.

In this paper, I argue that both fields of sociology of music and of material studies need to be intertwined to effectively account within researches of music consumption. By doing so, it becomes possible to uncover the meaning of differentiated types of music consumption and look at forms of aestheticization of everyday life through music and the objects that embody it.

Reconstructing Processes of Risk Awareness/Regional Development at Tsunami Disaster: The Case of Otsuchi-Town before and after the Great East Japan Earthquake

In this report, I explain how regional developments changed people’s risk awareness and could add to the damage of disasters. I adopt a case study about Otsuchi-Town (Iwate-Prefecture), which was particularly heavily damaged by the tsunami disaster in The Great East Japan Earthquake, and where regional developments in the waterfront were strongly prompted before disaster. Before disaster, reclamation of the waterfront and the location of houses, factories, and tall coastal levees for protecting them in the reclamation areas were the main ways of the regional development, because this area had less flatland when industrial conversion occurred and population increased. Otsuchi-town had been damaged by tsunami disasters historically and old inhabitants had the awareness that living in this area was risky (eg. “My house is located at altitude but the 1st floor was flooded.”). But in the process of regional development, this risk awareness changed (eg. “My house has been flooded but now tall levees will protect me. At the worst, I should evacuate to the 2nd floor”).

In the emergency evacuation phase, because big factories were located within a confined geographical area, evacuees rushed to a particular refuge and evacuation routes to the refuge were crowded. People with the converted risk awareness previously described failed to evacuate the refuge. Now, in the reconstructing phase, for less flatland, in the local governmental reconstructing plan, many of the places of work must be relocated in the waterfront and many of the houses must move to around the mountain. Currently, people are concerned about the risk of landslides.

Conclusion: In the process before and after disaster, regional development changed risk awareness and added to the damage. It’s important to note that developments or ideas that generally reduce risks (levees, lessons learned from past disasters, moving to around the mountain) can add to the damage or bring on new risks.

Shifting and Persisting Forms of Gender Inequality, Higher Education, and Women's Life Trajectory: Views from the United States and Japan

Title: Shifting and Persisting Forms of Gender Inequality, Higher Education, and Women's Life Trajectory: Views from the United States and Japan

One of the most significant worldwide transformations in education over the past several decades has been the drastic increase in women's access to colleges and universities. However, the narrowing gender gap in higher education does not necessarily mean that gender inequalities in various spheres of society are narrowing simultaneously.

This presentation, first, examines comparable data from the United States and Japan, concerning the following questions: How has women's higher education enrollment changed over time in the context of higher education system devel-
A Characteristic of Private Sector in Japan about Climate Change Mitigation Measure – Corporate Culture That Puts Strong Emphasis on Harmony and Among the Sector-

Climate change has received growing attention in both political and public areas, and now, has become one of the most pressing environmental issues. This presentation will focus on private sector in Japan, and analyze their perceptions of global warming and measures to reduce greenhouse gas emission. How Japanese companies act against global warming issue? and what kind of characteristic can be found among the private sector?

The analyses are based on data from an international research project, Comparing Climate Change Policy Networks: COMPN. This project explores characteristics of decision-making process around climate change policies and the Japanese government conducted face-to-face questionnaire survey to 125 organizations during February 2012 to June 2013. In this presentation, special attentions are paid to comparative analyses between companies and industrial associations. Careful examination will show a role of industrial associations that adjust a diversity of opinion among the surveyed companies. On the one hand, each company has its opinion and measures toward global warming issues. On the other hand, the main industries have functions to equalize these various opinions. In the process of summarizing claims within the industrial associations, various opinions tend to become conservative to keep strong solidarity as one industrial sector. As a result, it can be observed strong emphasis on harmony among private sector. This tendency can be explained by Japanese word “Wa”, which means “harmony”, is a key concept to understand Japanese culture and in general imply negative aspect.

Although the surveyed companies and industrial associations agree the fact of global warming on the whole, they disagree to implement some regulations to mitigate greenhouse gas emission. However, the important point is that this corporate culture has a function to prevent a company from emerging as negative actor about global warming issues. This can be a characteristic under the times of neo-liberalism.

A Comparison of Social Process for Wind Farm Construction: The Case of Jeju Island and Hokkaido

As an alternative energy source for nuclear power and fossil fuels wind power is increasingly considered among the most promising energy sources in the twenty-first century. Accordingly, many of nation states have shown a great interest in developing wind power. However, when wind farm construction project is proposed involving local places, different interpretations, values, and meanings are expressed for wind farm construction by local people. Therefore the rejection and approval of wind farm construction in local places are based at different logics depending upon specific context of local situations. In this paper we present two case studies for successful wind farm construction projects in South Korea and Japan. Our observation was made for Jeju island province, located at southernmost part of Korean peninsula and Hokkaido prefecture, the island located at northernmost part of the Japanese Archipelago. In order to collect information as to locally involved process, we have interviewed leaders of local communities and NGOs from the winter of 2012. In this paper we demonstrate that wind energy can mean different things to local people than anti-nuclear and mitigation measure of climate change. The local people accept or reject the construction plan and its operation according to their economic situation and social, historical contexts.

Territorial Behaviours As The Regulators Of Interpersonal Space

Presentation of the research results concerning mental representation of physical space and territorial behaviours of socially excluded people, carried out with the use of visual methods.

Human territories illustrate the interdependent nature of the exchange between the man and the environment. Territories provide order and stability, as well as enable 'mapping' of such types of behaviour or space experienced in specific places. In this way, they help us plan and organize our daily lives. Territorial behaviours understood as such have been the subject matter of my research, the results of which will be discussed in hereby presentation. The research aimed to identify the relationship between occupation of a certain social space and the way of schematization of space, and, on the other hand, it served the purpose of recognition the relationship between knowledge about the environment and territorial behaviours. It sought to answer the question: how do the people who are experiencing social exclusion – either having a house or homeless – shape their knowledge about the environment? How can physical space be perceived as social distance? The mobile method – photo walk, which was used in the study, provided visual material for the analysis of territorial behaviours, and completed descriptive and graphic material obtained through space mapping, projective methods, in-depth interviews and surveys. In the presentation I will draw attention to the way physical space resonates with its ideas and the way of creating its own territories, which are a stage where social interactions are implemented. The ways of perception and organization of the space and the use and creation of its sociopetal and sociofugal character, by which it acquires the regulatory role for interpersonal relations and relationships, will be visualized as well.

A Comparison of Social Process for Wind Farm Construction: The Case of Jeju Island and Hokkaido

As an alternative energy source for nuclear power and fossil fuels wind power is increasingly considered among the most promising energy sources in the twenty-first century. Accordingly, many of nation states have shown a great interest in developing wind power. In this paper we demonstrate that wind energy can mean different things to local people than anti-nuclear and mitigation measure of climate change. The local people accept or reject the construction plan and its operation according to their economic situation and social, historical contexts.
The Extent of Socio-Economic Factors and Its Influence in Mental Health Condition of the Sixth Batch EPA Nurse and Care Worker Candidates

The migration of skilled workers such as health care workers has been inextricably linked with globalization process. Although migration can be a stressful event for migrants (Stillman et al., 2006), people migrate to improve their well-being through an expansion of economic and social opportunities. This research aimed to figure out the extent of socio-economic background and its influence in mental health condition of the sixth batch EPA nurse and care worker candidates.

A six-pages long questionnaire has been distributed to 42 nurse and 106 care worker candidates, during pre-departure orientation. Questionnaire contains of: socio demographics background (education, age, gender, education degree, socio economic status), degree of preparation to migrate, degree of knowledge about Japan, job satisfaction, satisfaction with pre-departure Japanese language training program, motivation to go to Japan and number of social support. The General Health Questionnaire (hereafter ‘GHQ’) was used as a marker of mental health status of the respondents.

The result of this study indicated that the 6th batch EPA candidates indicated healthier mental health in care workers than in nurses (p<0.05), being younger (p<0.05), being economically difficult to survive in Indonesia (p<0.05), being unemployed at the time they applied for the program (p<0.05), having better degree of knowledge about Japan (p<0.001) and having larger number of social support (p<0.001). While language proficiency, satisfaction with pre-departure language training and degree of preparation to go to Japan, had no significant correlation with GHQ scores.

One can assume that the mental health status of the 6th batch EPA candidates mostly influenced by socio-economic status of the candidates prior to the departure to Japan. It can be noted also that sufficient number of information as well as social support must be provided for maintaining a good mental health status before leaving for Japan.

Politics of Representation of the Workers’ Movements in Indonesia

The paper will discuss the politics of representation of union and different categories of its constituency in the post authoritarian Indonesia. Amidst the pressure of labour market liberalisation that erodes the union power in the workplace, an organized union starts to develop the strategy of community unionism and tries to play a broader political role through local electoral politics. The purpose of such experiment is aimed for mobilizing broader support to increase union political bargaining position in front of the state and employers. The union includes other local social groups such as urban poor, informal workers, and peasants as new categories of constituency. Consequently the integration of workers and the non-workers groups into union constituency results in increasing heterogeneity of the constituency. Workers are not a homogeneous category, let alone the non-workers groups. While the union is mobilizing the constituency, groups within constituency are actually still fragmented within their partial identities and interests. The relations between them and the union are vulnerable to contestation. This condition creates vulnerabilities within the body of constituency. This paper will show the interplay between the strategic homogenization and the heterogeneous realities. It will reveal how the power relations within the process of mobilization is dealing with the problems of representation gap. On the other hand, it will also look at how the labour process as well as external social context influence the dynamics. The discussion in the paper is based on a case of study on a workers’ movement in one industrial city in the province of Central Java, Indonesia.

Employ Transnational Experiences for Their Empowerment

Reflecting the imperatives of the global economy, both the Japanese government and private companies have recently begun stressing the need to raise ‘global talent’, especially placing value on English and various other transnational competencies. At the local level, such global forces have led overseas Japanese middle-class families to adopt transnational education strategies, which enable their children to accumulate what is called ‘global cultural capital’ (Kim 2011; Waters 2006; Weenink 2008)—English skills and cosmopolitan sociability particularly, at the same time preserving children’s Japanese language and cultural attitudes (Nukaga 2013). However, the question remains as to how these children are incorporate-into the US host society and how they readapt to the Japanese society when they finally return home. Based on interviews with Japanese adolescents who had stayed in the US with their parents since their childhoods and later decided to return or actually returned to Japan for university, this study examines how they perceive and employ their transnational experiences to increase integration both in the US and Japan. Acquiring transnational habitus, a double consciousness that analyses aspects of both life ‘here’ and ‘there’, these adolescents are capable of assessing the value of their global cultural capital and ‘Japaneseeness’ in the US and Japan respectively. Although feeling a sense of marginalization in both societies, they attempt to maintain transnational connections and learn to use transnational assets in appropriate contexts for their empowerment. From their own experience, these adolescents are often critical toward inequalities in both societies, yet they show a strong preference to become fully bilingual and bicultural by keeping their feet in both societies. Such strategy leads these ‘cosmopolitan Japanese’ adolescents to choose a job that transsects national boundaries and allow them to stay connected to two or more countries.

From International Professional To Caregiver In Rural America

In 2002 my father asked me to care of my mother as he was going blind. This meant I give up professional activities for specialized UN agencies and become a full-time caregiver. Within two weeks, I moved from an Asian city of 13 million to a rural community with 8,000 residents. As I traveled from east to west, I entered a community where I never lived and where I knew no one. A new socio-cultural scene came into view as I saw road signs cautioning drivers about a United Nations take-over of the country. My new responsibilities would be complicated by this environment. In order to care for my parents, I would be forced to employ my sociological imagination while also drawing on all skills I learned while working, living and traveling alone in more than fifty countries.

This paper uses participant-observation as its methodology and, thereby, draws on extensive notes documenting this transition from international professional to caregiver. It discusses methods used to organize support and outreach beginning with the few adult children who also became caregivers for elderly par-ents. I focus especially on the role of the nursing home, medical responsibilities and dietary choices to better nutrition leading to improved health, I used the internet for overcoming obstacles to quality care as well as to address legal remedies for limiting their financial exploitation in this rural community.

Some of my findings may be shocking, but most surprising is the revelation that the elderly are not dependent in this rural community; to the contrary, they form the hub of economic activity and income for a wide range of entrepreneurs. The paper concludes with recommendations for caregivers and policy-makers that take account of the elderly as increasingly forming this emerging economic hub of rural areas, rather than viewing them as economically dependent.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
This discussion is based on more than a decade of participant-observation in a rural community with 8,000 residents and fifty churches. At the beginning of the decade, the author became a resident exclusively engaged in the full-time care of elderly parents. During the decade, a dramatic increase in overt hostility towards the rural elderly was observed and documented as a new culture was emerging to replace respect for the elderly with three main agents: predators, parasitoids and ambulance chasers.

This paper discusses variations among these agents as they accomplish their objective of financial exploitation of the elderly. The predator waits for an opportunity to exploit the elderly by profiting from their limited ability to defend themselves. Older children form a major predator group, along with those associated with assisted living and nursing homes. For parasitoids, economic survival flows from exploiting the elderly through provision of services and products that they are no longer able to access or acquire without assistance. Children and grandchildren increasingly operate as parasitoids. Observation suggests parasitoids at least double their profit flow, and often triple their flow from work for the elderly relative to other age groups. Parasitoids operate from local shops and businesses or as attorneys engaged in servicing the elderly, with financial gain being similarly disproportionate as their primary objective. Medicare beneficiaries are often primary targets of parasitoids. Ambulance chasers may be engaged in provision of health care as well as entrepreneurs who offer people released from the hospital with assistance in selling everything they own, including their home; when met with resistance, phone calls to parasites in social services often facilitates the acquisition of a power of attorney for this final stage of asset appropriation. It concludes with observations suggesting 50 churches serving 8,000 are financially viable with these agents.
A New Analysis of Claims to Identity and Belonging: The Importance of Knowledge within Australian Native Title Claims

Within Australia success in native title cases for Indigenous peoples has come to be heavily based upon the ability of Indigenous groups to establish ongoing connection to land by presenting proof of the continuity of their identity and cultural practices since colonization. This paper explores the processes through which these claims of identity and belonging are made, and challenged, within Australian legal processes. It seeks to extend previous work examining what is creating the difficulties that prevent Australian Indigenous peoples from articulating and presenting their culture and identities in such a way that can be understood within the non-indigenous courtroom. Specifically, this paper will present a sociology of knowledge that enables new insight into these issues by bringing processes that underlie the legitimation of knowledge to the forefront. It will be demonstrated that engagement with the sociology of knowledge can be used to uncover the structural relations that inhibit Indigenous voices within native title claims. In order to do this the Australian Yorta Yorta native title case will be explored in depth using this approach. In particular the paper will deconstruct the arguments that led to the judgment that the ‘tide of history’ had ‘washed away’ the traditional laws, customs and culture of the Yorta Yorta people in direct opposition to their own claims. Through this analysis it will be shown that it was not simply the content of the knowledge itself that affected the final judgment, but a disconnect between two different understandings of the basis upon which knowledge may be considered ‘legitimate’. Finally, it will be argued that the sociology of knowledge can be extremely useful in analyzing the ways in which different groups of people present their identity and senses of belonging, as well as the ways in which these claims are received by others.

Towards a Theoretical Model for the Reproduction of and Change in Gender Inequality in Higher Educational Institutions

This paper identifies key elements facilitating/inhibiting the reproduction of gendered inequality in the professoriate and senior management in higher education. Gender is seen as a social institution (Yancey Martin, 2004) and a multi-level phenomenon (Wharton, 2012; Risman, 2004). It is reflected in the societal allocation of power and resources; in state policies; in gendered organisational cultures, narratives and structures; in intersectional stereotypes and perceptions and in gendered selves. Its multi-layered character can potentially exacerbate the difficulty of initiating change. However, in specific contexts, change at any of these levels may consciously or inadvertently affect change at other levels (Walby, 1990).

Cross national structures are a particularly important potential source of change since gender inequality inhibits economic growth (OECD, 2012; EU, 2012). At national level, the salience of gender issues varies. There is an underlying tension in the fact that women are disproportionately represented among knowledge workers, but are under-represented in those disciplines that underlie the tension in the fact that women are disproportionately represented among knowledge workers, but are under-represented in those disciplines that

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The post-3/11 demonstrations against nuclear power have been regarded as a sensational development in Japan, where disruptive protest movements had been conspicuously absent since the 1970s. In contrast, I argue that collective public protests have been part of the repertoire of urban activists since the early 1990s, albeit rarely noticed by the larger public.

One prominent group is the group Shirōto no Ran in Tokyo, who have been at the forefront of a number of protest movements from the early 2000s in Japan, e.g. the Freeter-movement or protests against urban regeneration and restrictive legislations. Not a pronounced environmentalist group, they nevertheless emerged as the main organizers of the early 2011 anti-nuclear demonstrations, utilizing their network and long-rehearsed creative protest repertoires.

By interpreting their framing of the 3/11 crisis in a larger context of social change, the struggle against precarity and new developments in (proto-)political activism, I will explain how Shirōto no Ran as a non-environmental group did respond so quickly to the disaster – despite their low level of organization and professionalization. The key issues to be explored will be how they 1) organize themselves 2) develop protest agendas 3) mobilize participants, all seen under the larger topical and temporal trajectory within this group. By uncovering the workings of such seemingly “invisible” activist networks who operate outside the established civic organizations, the understanding of current forms of social movements in Japan will be broadened, re-thinking the terms of civic participa-

Care Regimes and De-/Familialization in Asian Seven Societies

As the first paper of the panel based on an international joint research project on care in Asia conducted by Asian scholars from Korea, Japan, Taiwan, China, Singapore, Thailand and Vietnam, this paper introduces the research framework, social background information for comparison and major outcomes.

Care is one of key social issues today. It is usually claimed that population ageing, increases in women’s employment, changes in family life and welfare re-
trenchment are the reasons behind people’s growing concern on care. However, these are phenomena observed in western countries. The social conditions in Asian societies are different. This paper first clarifies social background of growing concerns on care particularly in Asian societies. Then the paper reviews studies on care in Asia which were accumulated in the past decade.

Then the paper introduces theoretical frameworks on care, such as “care di-
amond,” and discusses how to modify the frameworks to apply for Asian cases. The concepts of familialization, face-negotiation, de-familialization and re-familialization are defined and discussed carefully.

The 2000s observed various significant changes in care regimes in all the soci-
cies under consideration. The major findings are;

1) The role of the state is increasing in most societies. However, the state is playing its role not always in a direct way, but more often in indirect ways through promoting market and community. Not only de-familialization policies but also familialization policies are implemented in the Asian region.
2) The role of the market is increasing dramatically in most societies.
3) People’s expectation for the community is increasing in many societies.
4) Socialist countries are showing different paths from other countries. The paths of socialist countries in Asia demonstrate commonalities and differences in comparison to the experience of post-socialist countries in Europe.

From Cultural Globalization to Aesthetic Cosmopolitanism

‘Cosmopolitanism’ is often used in relation to ethics, politics and migration. But it is seldom employed regarding common and ordinary situations, such as everyday cultural consumption (Ciccotti and October, 2013). However, recent research reveals that in France and Quebec (Donnat, 2008; Octobre et al, 2010; Pronovost, 2013; Poirier, 2012), there is a growing proportion of foreign products and contents in cultural consumption, as well as in tastes, norms, references and repre-
sentations, especially among young people. Without eluding the dynamics of local cultures, hybridization and mixing (Amselle, 1992), this “de facto” cosmopolitanism is deeply intertwined with the globalization of cultural industries. It may produce in individuals a feeling of cosmopolitanism regarding interests, attachments and imaginaries (Appadurai, 1996), or a feeling of belonging (Gallant, 2012).

This paper becomes possible via the globalization of cultural products they consume and their cultural habits (information media, cinema and theater attendance, Internet use and language practices, etc.).

This perspective enables a reformulation of the question of “distinction” (D aloz, 2013) in two ways which are central to both the sociology of culture and the so-
ciology of social groups. First, it questions the “cultural distinction” and the cultural legitimacy it is based on, either in Bourdieu’s classical view (1979), or in modernized versions, such as omnivorousness (Peterson, 1996), or individual plurality (Lahire, 2006). Second, it calls into question the “social distinction”, through the recon-
mendation of secondary factors which mark new lines of fragmentation in young people’s cultural universes (October, 2010). This talk will address these question through a comparison between France and Quebec, within a mixed-method (qualitative and quantitative) research program.

Gender Wage Gap in Japan: Comparison Between Regular and Irregular Employment and within Irregular Employment

In the last 40 years, the gender gap in the labor force participation rate has significantly decreased in many Western capitalist countries; however, the gender wage gap remains relatively large. In Japan, female labor force participation rate and years of continuous employment, which are major factors in the lower wages of females, are still fairly lower than those of males. The gender wage gap in Japan is the second largest among OECD countries.

Sociologists and economists have investigated the relevant factors, including the gender wage gap and sexism of the labor market. Previous works emphasized employment status. In Japan, regular employment is full-time and permanent, whereas irregular employment is on a fixed-term basis. Women are largely irregular employees, and this has become a major source of gender inequality in wages. Further, the gender wage gap is not only seen in the bias in regular and irregular employment, but also within irregular employment types.

This study examined how the gender wage gap in Japan is affected by employment status using data from the Employment Status Survey conducted by the Ministry of Internal Affairs and Communications in 2002. I analyzed micro data using a multiple regression model: the explained variable is personal income; explanatory variables are sex, age, other human capital, employment status, and family situation, including marital status and number of children. I likewise established the interaction between sex and other variables.

Results showed that differences in the gender wage gap mechanisms between regular and irregular employment are not significant. In the wage gap between regular and irregular employment, the female gap is smaller than that of males. In factoring in the families of employees, having children makes males' wages go up and females' wages fall.

Japanese Brazilian Migrants’ Views on the Status of Ethnic and National Categories in Japan

Recent studies have tried to avoid the pitfalls of essentializing international migrants as homogenous ethnic “groups” or “communities” by focusing on the transnational spaces and the hybrid practices that connect migrants’ sending and receiving countries. However, by restricting its attention to a duality between the country of origin and the country of destination, these efforts frequently neglect other important relations that lie beyond this dualism. Some scholars have responded to this difficulty by adopting a new kind of transnational approach that investigates migrants not based on ethnic or national categories, but on aspects that are more comprehensive and diverse, such as the religious practices of migrants.

In this presentation, however, I examine the specific case of Japanese Brazilian migrants in Japan, and argue that one other possible strategy to deal with essentialist or national categories that are rather essentialist at a starting point, but then, by critically examining the way they are interpreted by migrants themselves, develop a perspective that undermines the very essentialism of these categories. Based on fieldwork and life stories interviews, I investigate how Japanese Brazilians in Japan often make use of essentialist categories about Brazilian and Japanese identity, but at the same time produce discourses that connect these categories to a much wider and even surprising horizon that includes other ethnic and national categories such as other migrant groups from Asia, North America and Europe. While also treated in an essentialist fashion at first, these unexpected new categories also allow Japanese Brazilians to move beyond this essentialism, for as they unveil new kinds of conflicts and relations, Japanese Brazilians are able to point out and make sense of social spheres that are not restricted to ethnic or national boundaries. These include, for instance, issues related to urban lifestyles and consumption culture.

Disaster, Violence and Women: The Case of Van Earthquake 2011 Turkey

the debates concentrated on the relationship between disaster and violence assume that in case of disaster the rate of violence increases: this is also true for the case of intimate and domestic relations; particularly men are the dominant actors in this disaster related violence. In order words, since the loss of economical, social, and cultural power men feel the high level pressure on themselves. The reflection of this pressure can be seen in domestic relations. The violence emerged that time can have some different aspects such as physical and psychological violence. beating and sexual harassment (including incest) are some of them.

In this presentation the relation between disaster and gender is examined in Van Earthquake 2011 Turkey by depending on the assumptions above

The Influence of Population Growth on Land Tenure and Ethnic Conflicts in Benue State of Nigeria

The high growth rate in human population and the increasing scale of human activities on land have resulted in tremendous environmental degradation and climatic change which have grievous consequences on the security and life of people. Benue State today faces with ecological and demographic problems for which they are largely responsible. The most recent are the flood disaster resulting from the over flow of river Benue and incessant conflicts with Fulani herdsman. Man’s activities with the environment have led to problems such as global warming, ozone layer depletion, loss of biodiversity, desertification, deforestation and climatic change. What these translate into is decreasing landmass that will be available for farming and grazing Benue State is an agrarian society with rapid population increase. The high poverty profile in the state has aggravated stress and appetite for natural resources such as plants, animals, water, minerals, air and land and so on. The aftermath of such activities is the disruption of the ecosystem. Benue State today is experiencing recurrent communal and ethnic conflicts as a result of competition over land. There is unequal access to land in the State. These problems have great effect on the health and security of the people. The paper examines how the increasing population growth, utilization of primitive technology, pressure on the natural resources etc. are affecting the land tenure system and social and food security in the state.

Forms of University Elite Sport in South Africa

The paper looks at the phenomenon of elite sport at a university in South Africa, for possible comparisons with other types and institutions, and how this has unfolded at such a university. It seeks to distinguish such sport in the context of three university core competencies that foreshadow typical university institutions. There is the enlightened context of sports practices, and there is the resistant context that sees forms of resistance against such ‘elitism’ of sports, and there are the benign forms of elite sport practices or contexts.

While all three types are not strictly of the mode that they occupy, they do have the main characteristics of such types. Due to the fact that even if S.A. sport is competitive, it’s organizational base is low, universities see a growth sport in sport through private-public understandings (e.g. ‘Varsity Sport’), and thus the changing nature of the public university from a position outside of its traditional core or academic work, even though there are taught courses and modules in sports related fields (Sport Science, Human Movement Science and the like). Most of these are predominantly natural science and functionalist oriented, though there are exceptions.

The paper will examine the trajectory of one or more of these sports types at a particular institution(s) in South Africa, in the three dominant spaces of this country, i.e., soccer, cricket and rugby from which a comparative perspective can be gained. While sport remains non-core to most universities globally, it has shifted somewhat on the ground, particularly with elite sportspersons emerging from that level. Various forms of elite sport thus need to be studied in terms of the forms they assume in different university contexts.

Improving Quality Education/Learning Using the ESD Learning Performance Framework

The Education for Sustainable Development (ESD) concept, although strongly linked to quality education is still outside of mainstream education and learning. And with the future of education tilted towards more qualitative, bi-directional student-centered learning than uni-directional teaching, the Decade of ESD which was launched to promote and integrate ESD in all areas of learning and hence quality education has made progress although more improvement is needed. This is particularly in the area of continual implementation and strengthening and evaluation of ESD by offering guidance on identifying the important factors and characteristics that lead to effective ESD learning performance and ultimately quality education.

This paper investigates the qualitative achievements of ESD and presents ESD learning performance as a tool for enhancing particularly ESD-based quality education/learning. Through an action-reflection process cycle of relaying the ESD elemental characteristics to the local ESD practice cases of ten regional centres of expertise (RCEs) selected from East and Southeast Asia) and the educational/learning theories and methodologies grounded in the literature, both process and content characteristics that underpin quality education were clearly and comprehensively identified and developed into a learning performance framework (LPF).

The framework therefore has the capability of 1) fostering the evaluation of ESD best practices at the local level through better identification and subsequent translation of the ESD agenda into a new global education/learning framework, and 2) enhancing quality education in the formal education sector, particularly a) developing a holistic and relevant school curricula with transformative educational contents and teaching approaches, b) improving teacher competence in relation to the LPF elemental characteristics, and c) providing a safe learning environment for students. Furthermore, recommendations are made for users identified through their links to aspects of the framework where their areas of operation are strongly associated.

Experiment Workplace Innovation in Elderly Care

By order of the Dutch national association for long term care, ActiZ, the Utrecht University of Applied Science has carried out an Experiment of Workplace Innovation (EWI) in a Dutch care institution. The project aims to achieve, among other things, to initiate a new innovative organizational design that is meant to improve the quality of care, work efficiency, and BrabantZorg, a large care provider in the South of the Netherlands, was the pilot organization for the experiment. The result is a general instrument that should enable other care providers to initiate a similar innovation process in their own organization. The experiment was finished in the summer of 2013.

The Experiment of Workplace Innovation is unique as the innovation is initiated and developed bottom up by the care professionals themselves together with the patients and/or their families. Managers, board and back-office are required to react on the change process started from the work floor and need to reflect upon their role and adapt it accordingly in order to facilitate the process. The project combines organizational design with change and implementation. The project consists of three pilots at three different nursing homes of BrabantZorg.

The Type to Train? Impacts of Psychological Functioning on Further Training Participation

Evidence is plentiful that especially level of formal schooling and occupational rank determine access to and participation in employment-related training. However, the paper shows that training participation during adulthood is not only stratified by classic markers of social inequality, but also by indicators of psychological functioning, namely personality characteristics. Research shows that personality traits drive attitudes and behaviors, and determine socio-economic life outcomes like educational attainment, labor market participation and income. Thus, I conceptualize participation in further training as stratified by intra-individual differences in the Big Five and Locus of Control beyond socio-economic markers; generally I ask what sorts of individual personality traits lead to successful psychological career-related functioning over time.

This research proceeds in two stages using data from the German Socio-Economic Panel from 2000 to 2010. Following the debate on stability or change, I first show that intra-individual personality characteristics are remarkably stable between two measurement points in 97% of the population sampled. In a second step, I apply random-effects logistic panel regression models to 39,833 observations of 4,981 individuals. Findings reveal that those who are more open to new experiences and have high internal control beliefs are more likely to participate in further training, and this holds true under different model specifications. Contrary to the predictions of personality hypotheses, Agreeableness, Extraversion and Neuroticism do not impair training, whereas the trained foster of Conscientiousness is more complex. I also show, regarding reverse causality, that further training does not lead to significant changes in psychological functioning. I conclude that in addition to the classical determinants of further training such as education and occupational status, there are personality traits which characterize individuals and psychological functioning at work, meaning that personality differences lead to stratified training and career outcomes.

Transitioning through Recession? Labor Market Entry Patterns for Hard and Soft Fields of Studies before and during the Financial Crisis
Transitioning from higher education into the labor market is a major life event for graduates and determines and stratifies paths of future career success. However, labor market entry patterns are different by field of study with those from hard study areas (science, technology, and engineering) following a smooth transition, whereas graduates from softer fields of study (humanities and social sciences) experience a longer, more winding road into employment where spells of marginal employment and unemployment are frequent.

This research looks at Germany, a country which is highly standardized and stratified, and compares these subject-specific school-to-work transition patterns before and during the financial crisis. It analyzes how pathways into employment are more diverse during times of economic paucity such as after the Great Recession; however, this should not be the case for all subject areas. Instead, hard fields of study are less impacted by economic downturn as they are more protected by their specialized knowledge, showing a clear and direct link between higher education and the labor market, while graduates from softer areas suffer more from the crisis and show even more diverse and fragmented transition patterns.

Using data from the German Socio-Economic Panel and employing methods of sequence and cluster analysis, I look at differences and similarities within and across fields of study before and during the economic crisis within the first 24 months after graduation. I demonstrate that there are distinct labor market entry trajectories between hard and soft studies, which differ substantially for latter before and during the Recession. I explain the diversity of career transition patterns as produced by differences in human capital specificities which favors specialized over general laborers. Economic fluctuations have a similar impact on demands of general skills which translates into more fractured transition patterns.

Unequal Distribution of Surveillance: Data Processing of Nuclear Workers in Japan

Inequality has been a central question in surveillance studies because personal data have been sorted to categories and the data-subjects have been treated differently depending on the categories in which they are placed. The word of "social sorting" shed a bright light to those activities of dividing people behind the curtain, although data-collecting systems are usually established in the claim of everyone's benefit, either all customers or all citizens.

Surveillance does not serve everybody. Furthermore, surveillance society inevitably contains times and places that are intended to be outside of intensive scrutiny. It is as if its ubiquitous appearance, distribution of surveillance differs with the targets, more precisely, with the relations between watching power and watched population. In turn, such times and places disclose whom the surveillance system serves.

In the Japanese context, such sites, particularly unveiled after the earthquakes on March 11, 2011, are nuclear power plants. Nuclear power plants are operated using numerous electronic monitoring systems. But the workers are not consistently surveilled. Their data of exposure to radiation have been often unrecorded, underestimated, or distorted. The government has tracked their data only for research purposes, never using the data for the workers' own safety. The lack of reliable records allows electric companies to keep hiring the workers temporarily and contributes to reproducing labor power at the plants.

Based on the research of data processing on nuclear workers in Japan, this paper shows how the unequal distribution of surveillance plays a part of surveillance society. The workers at risk seem to be most in need of monitoring, but are excluded in the middle of highly-wired plant. The mass surveillance and interlaced society. Employer Evaluation and Transition from School to Work: Reexamining the Impact of Institutional Linkages on the Japanese Labor Market

The purpose of this study is to investigate how employers evaluate high school graduates and make hiring decisions. The process of job-attainment includes two components: one is the entry of job seeker into the labor queue and the other is the assessment made by employers. However, past studies that used a simple regression model typically assumed supply and demand sides were in equilibrium. Such a model may not be appropriate for the analysis of a highly-structured labor market like Japan. This study makes a distinction between job seekers' preference and employers hiring decisions by using partial observability probit model(Sakamoto and Powers 1995). This model assumes two underlying equations for each observable outcome and can make a behavioral process more explicit. Using a nationally representative data, we analyze how high school graduates' attain their first jobs. Previous studies have shown the importance of long-term networks among schools and employers(Rosenbaum and Kariya 1989). We examine whether employers in fact highly appreciate such institutional linkages. Dependent variables are the attainment of regular employment, white-collar jobs, and large-firm jobs. The result observes institutional networks are important for employers' hiring decisions, rather than students' vocational skills or academic achievement. Moreover, the result doesn't confirm the impact has weakened after the economic crisis since 1990s. This suggests in Japan, where vocational signals are weak, employers exclusively rely on social relations that are embedded(Granovetter 1985) in the labor market.

Coping with the Ageing Society?: Migration of Care Workers to Japan and Taiwan

Challenged by the demographic change of low fertility rate and rapid population ageing, Japan and Taiwan are trying to cope with the crisis of care in a very different way regarding its policy to introduce migrant workers to undertake long term care. Taiwan has started to invite migrant caregivers since early 1990s and approximately 200,000 migrants from Southeast Asia are currently working mainly in private homes. Japan started to introduce the migrants since 2008 under the bilateral agreements with governments in Southeast Asia under the condition that they have to pass the national exam on caregiving in Japanese within a certain period of time.

Unlike migrants in the highly skilled sector or productive sector, care work performed in intimate spaces entails not only the political economy of care but a normative value underpinned by cultural notion of what care ought to be in each specific context. The comparison aims to situate the Southeast Asian migrants within the nexus of migration regime and care regime in Japan and Taiwan and discusses the discursive construction of the migrants as well as care work in East Asia. The presentation will compare Japan and Taiwan which receives migrants from the same sending countries in Southeast Asia namely Indonesia, Philippines and Vietnam and situate the globalisation of care in East Asia within the nexus of care regime and migration regime. The paper argues that even though Japan and Taiwan receives migrants from the same countries, the ways in which the migrants are situated within the two regimes reveal different construction of care work as well as different entitlement of migrants. It aims to unpack the otherwise naturalized notion of care work and suggests to perceive migrants as a ‘regional common good’ in order to raise both the status of care work and the migrants at the same time to ensure the safety and security of the elderly and migrants alike.

JS-12.6

OGAWA, REIKO* (Kyushu University, reiegawa@law.kyushu-u.ac.jp)

Searching for the Nexus Between the Care Regime and Migration Regime

The discussions on the nature of welfare states in East Asia tend to focus on the link between the economic development and social policy or emphasize on the historical changes on the family to provide care. However, what has not been explicitly discussed is the role of migrants in providing long term care. As the population aging accelerates care work has been increasingly undertaken by migrants who constitute an integral part of the care workforce in East Asia. The presentation will compare Japan and Taiwan which receives migrants from the same sending countries in Southeast Asia namely Indonesia, Philippines and Vietnam and situate the globalisation of care in East Asia within the nexus of care regime and migration regime. The paper argues that even though Japan and Taiwan receives migrants from the same countries, the ways in which the migrants are situated within the two regimes reveal different construction of care work as well as different entitlement of migrants. It aims to unpack the otherwise naturalized notion of care work and suggests to perceive migrants as a ‘regional common good’ in order to raise both the status of care work and the migrants at the same time to ensure the safety and security of the elderly and migrants alike.

The Working Mother and the Access to Childcare

In Brazil, the attendance in daycare and preschool are guaranteed by the Federal Constitution, as well as the Statute of Children and Adolescents, as a right of all children from birth to six years.

In a research with interviews of mothers who work in various capitals of Brazil (SOS Corpo, Data Popular, 2012), the main difficulty, reported by 34% was to get nursery vacancies, and this demand does not vary with social class.

Objective: To understand the trajectory of teenagers who became mothers during training period for insertion in the labor market at Campinas.

Methods: Eight mothers aged 19-23 years who were part of the 17 teenagers who became pregnant between 1992 and 2009 were interviewed. Qualitative methodology was used for analysis.

Results: Three mothers stopped studying and working. Of the other five, four finished high school and one was studying. Two were unemployed and three...
Social Historical Context Of Health and Illnesses Attributions In West-African Countries: A Comparative Analysis

Undoubtedly, people of diverse cultural backgrounds often make different attributions of illness, health, disease, symptoms and treatment. Cultural differences in health attributions have major implications for medical professionals because of overtime; attributions play an essential role in the formation of beliefs concerning health and illness. Different cultural groups have diverse belief systems with regard to health and healing in comparison to the Western biomedical model of medicine. For instance, with regard to health beliefs in the United States, African Americans may likely to attribute illness externally to destiny or the will of God and believe in the healing power of prayer. But West African patients may be more likely to attribute illness to a spiritual or social causes rather than a physiological or scientific cause and thus expect health practitioners to provide an experimental and a spiritual reason why they have been afflicted with illness. With these findings in mind, it is becoming important for health practitioners to be familiar with the cultural concepts of illness in order to effectively treat these illnesses, remedies must be both material and spiritual that is (herbal remedy and amulets Vaughn, Jacquie & Baker (2009)). This paper therefore attempts several aspects of how culture affects the health and well-being of patients in West African countries which are significantly different from those of Western world. Because cultural issues have increasingly become incorporated into medical care as there has been greater recognition of the intimate ties between cultural beliefs and health beliefs.

Students’ Learning and Career Choices in the Vocational Course of a General High School in Japan

The aim of this study is to consider the new concept of vocational education in secondary education in connection with the labor market in Japan, by focusing on the vocational course of a general high school.

Previously, the importance of academic education was emphasized in Japan, and the significance of vocational education was downplayed in comparison with other countries. However, in recent years, a growing body of empirical research has positively reappraised vocational education, and the idea of retrieving the vocational significance of secondary education has gained ground.

Furthermore, there is a serious problem that must be addressed here. This is the dichotomy between academic education and vocational education. In Japan, academic education in general high schools has been viewed as education for entering college, while vocational education in vocational high schools has been regarded as education to prepare students for the labor market. Recently, an increasing number of students in vocational high schools aspire to enter college, but their academic performance is not sufficient to do so, due to focusing on the acquisition of specialist skills.

In this situation, it is necessary to consider the unification of academic and vocational education, but previous studies have particularly lacked this perspective. This study attempts to fill this gap by focusing on the vocational course of a general high school.

In the vocational course of a general high school, it is difficult for students to acquire sufficient_vocational skills, but because that can take more academic classes required to students in a vocational high school, more of them are able to enter college or vocational technical schools. By revealing how the actual practice in this kind of school affects students’ learning and career choices, this study aims to consider a new concept of vocational education that bridges the dichotomy described above.

OH, HAK-SOO* (Ins Labour Policy and Training, m1zuk1chon@yahoo.co.jp)

Change of Employment Structure and New Labour Movements in Japan

The aim of this panel session is to share with the audience the outline of changing Japanese employment practice. Japanese employment system has been classified as one of the “organization-oriented,” and it implies that it ensures long-term employment within the same firm. Japanese industrial relations system, the main feature of which is the enterprise union, appears to have reinforced the employment security. Japanese practice of transition from school to work has been regarded as enabling even graduates to immediately begin their occupational lives as regular employees.

As with the employment systems of other countries, Japanese employment practices are confronted with major issues. For example, it is becoming difficult for it to maintain high level and as wide a range of job security as it used to be. In this presentation, I will focus on shrinking union membership and its bargaining power in Japan.

Healing Programs for School Bullies and Their Parents in South Korea

This study presents several social problems related to the South Korean government’s effort to decriminalize bullying at school to be one of the four major forms of violence (sexual abuse, domestic violence, school violence, and harmful foods), and addresses why only the bullies and their parents are faced with legal liabilities and social responsibility. In particular, this study addresses the problem of schools and the government shifting the responsibility for school bullying onto bullies’ families. School counselors and policymakers hope for “deviant” families to transition into a “normal” condition through healing programs. Recently, healing programs are springing up for a wide variety of psychological problems. In this social context, school bullies and their parents are being required to participate in healing programs.

This study employs ethnography and in-depth interviews with participants in art healing programs. The interviews target healers, program staff, bullies and their parents. The bullies are 14- to 16-year-old middle school students. Findings report that staff and participants in the healing programs do not regard bullies as “deviant.” In addition, participating students and parents believe that schools have great social responsibility for the bullying problem.

The importance of this study lies in its exposure of the fact that bullies and their parents receive recognition as “normal” in the healing program, but this is a context outside of school. Therefore, after they complete their course美术 healing program, they are still treated as bullies and potential perpetrators of school violence. Consequently, they are confused about their social identity. Bullies and their parents are confronting the problem of liminality (i.e., the psychological threshold when transitioning from one stage to another) or social normality.

Is There a Path to Well-Being for School Bullies?

School bullies and their parents are stigmatized as perpetrators, separated and excluded from the school community. They are wounded by this situation and need socio-psychological stability. Therefore, they try to restore their well-being and life satisfaction through healing programs outside the context of school. Such programs help them reconstruct a new identity, and they experience the process of transitioning into their new identity, which implies a state of liminality (i.e., the psychological threshold when transitioning from one stage to another).

This study focuses on art healing programs targeting middle school bullies and their parents. By employing ethnography and in-depth interviews with participants in these programs, we find that these adolescents and their parents feel freed from depression and a sense of guilt. In fact, healing programs provide a hospitable atmosphere, and healers approach participants holistically. The problem is that although bullies experience the recovery of their identities through these programs, which act as passing-rituals, their success is not guaranteed within the school system. In healing programs, bullies win trust and show the potential to become good people; outside of the programs, however, they are still treated as potential criminals. Consequently, this study demonstrates the limit of healing programs in that wounded students and their parents have no choice but to drop out of the school system and find alternative education centers for the sake of their well-being and social integration.

What Determines the Parent-Child Relationship?: Filial Piety, Economic Dependency, or Intimacy

Family structure and culture have been rapidly changing in Korea. Whether to follow traditional values or individual autonomy seems to be the crucial issue of family problems in the modern world. Previous studies explored the significance of various factors such as filial piety, autonomy, communication, intimacy, etc. in a parent-child relationship. But, what factors can positively affect the building-up of a harmonious parent-child relationship? Previous studies did not examine the significance of such factors that may contribute to and account for the harmonious parent-child relationship.

This research aims to answer the question what factor influences most positively on harmonious parent-child relationship during the process of child's future decision making of selection of a spouse, which is still the greatest family issue in Korea. Therefore, we (research team) conducted an online survey of 262 college students in Seoul in 2013. The survey questionnaire includes parental economic support, psychological intimacy, communication, social network, filial piety as the traditional Confucian-family value, and other socio-demographics. Findings report that the communication, intimacy, social network are all positively related to harmonious parent-child relationship. Consequently, this research, thus, implies that the communicative rationality and social intimacy based on reciprocity is far more important for building up a harmonious family than family duties stemming from traditional values or instrumental rationality which may force one to pursue only individual interest in a family culture.

Religion, Trust and Public Society in the United States

Social integration beyond constituents’ diversity becomes a pivotal theme in the public sphere of a democratic society (Charles Taylor); the major conundrum for a post-secular society (Jürgen Habermas). Although religions have played a crucial role for collective consciousness in a traditional society, their roles for social integration in a modern and pluralistic society have been put into question. Hence, I, therefore, focus on “trust in immigrants” as a particular socio-psychological phenomenon which could reflect a religious orientation and their public attitude toward social integration.

In this study, using the Baylor Religion Survey (2005), examines empirically how trust in immigrants is related to various dimensions of religiosity and spirituality. Besides socio-demographic control variables, explanatory variables include (1) various forms of religious identities (including theists, spiritualists, and non-affiliation), (2) cognitive types of belief (including images of God, New Age interests), (3) ideologies (religious pluralism, moral liberalism), (4) experiential types (traditionally religious experiences and spiritual/mystic experiences), and (5) practices (religious service attendance, prayer, civic group participation).

The findings demonstrate all forms of religious identities other than affiliated theists (i.e., affiliated spiritualists, atheists/agnostics, and the unaffiliated) show significantly higher levels of trust in immigrants. The image of God as judge appears to be related to the lower levels of trust in immigrants whereas New Age interests do not have a significant relationship to trust in immigrants (p<0.05). Neither religious pluralism nor moral liberalism appears significantly related to religious experiences. Religious experiences and trust in immigrants whereas spiritual/mystic experiences leads to higher levels of trust in immigrants. In terms of practice, both religious service attendance and civic group participation – not merely prayer alone – appear to be highly related to trust in immigrants.

Cross-Border Japanese Culture in the Changing Media Environment: Focusing on Japanese Popular Culture in Korea

When the animation Attack on Titan aired on Japanese television, it ranked No.1 on the Internet hit list in Korea and received much attention through CATV and Internet. Also, a number of parodies have made on television and the Internet. Japanese popular culture is being consumed and reproduced across national borders by various media devices. In the process of media-globalization, Japanese culture was banned over 30-years in Korea owing to the historically particular condition between two countries. This paper purposes to find out characteristics of Japanese popular culture in Korea in this changing media environment and effects of media.

In Korea, Japanese popular culture was officially opened in 1998~2004, meanwhile in Japan, it has rapidly proliferated in 2000s, young users share manga or animation on cyberspace. Namely, media convergence and diversification have enhanced cultural contacts across borders with dynamics of policy, media industry, it effects on the space and patterns of contacting Japanese culture. Particularly, this transition appears in line with pre-existing fandom and extends throughout the new-media as Attack on Titan can indicates. Moreover, new-media phenomenon has observed on new-media such as translating contents, parodying, using as signifier. Japanese popular culture on the Internet also interacts with existing media, and shows connection among various media, for example, reproducing on television like Hongyoroi-dango.

Recently, Japanese popular culture can be seen through formal platform IPTV or Internet contents-store besides pirate copies. However, there is limitation on interface because of language, lack of content diversity, and people who cannot use new-media tends to be excluded. Considering impacts of new-media, it is required to provide interface with easy-access and diversified contents based on translation service to share culture and to create interactive cultural space. This paper represents how media environment impacts on Japanese popular culture and suggests possibility of cultural space in new-media.

Acquisition of Ballet Technique: Collective Teaching in the Ballet Studio and Social Control

This paper examines the acquisition of body technique in a ballet studio from the perspective of social control theory (Hogetsu 2004). To achieve this objective, I conducted participant observation at a ballet studio in Takasaki, Gunma Prefecture, Japan, and interviewed 3 teachers and 10 students who belong to this studio. There are three notable characteristics in the institution of the ballet studio.

Firstly, students are divided into classes according to their skill level. This division is practiced primarily as the prohibition of students from joining classes intended for higher skill levels. Secondly, since there is only one instructor in each class, the instructor does not always pay attention to every student, but normally addresses particular individuals to correct her posture with words and gestures. Thirdly, even when the instructor is addressing individuals, those who are not addressed and react as if she were addressed individually each student responds as if, even though, in reality, another student being the focus of attention by the instructor, the instructor is personally addressing her. On the basis of the dimensions, students acquire ballet technique through what we might call “over-understanding” of teacher’s coaching.

Influence of Childcare Experience on Women’s Dietary Habits: Analysis of Public Opinion Poll on Health

In Japan, food and people’s eating habits have changed quickly in the postwar era. Externalization of household functions has reduced domestic work; however, people have lost the opportunity to acquire sufficient skill and knowledge in cooking. Notably, a social problem of children’s unhealthy dietary habits has arisen. Furthermore, some studies have found that mother’s food consciousness or dietary behavior affects the related dietary habits at home. However, few empirical studies have examined the correlation between women’s dietary habits and whether they have children or not. This study examines the effect of childcare experience on women’s dietary habits by focusing on their food choices and dietary habits. Analysis of a public opinion poll on health data with logistic regression reveals that childcare experience affects dietary habits in women. Compared to childless women, women with children “eat all three meals” more regularly but are not conscious of “avoiding eating snacks.” Moreover, women who are more conscious of their food choices tend to be older, unemployed, and have a higher standard of living. The research revealed the following points. First, women equate the responsibility of nurturing children to disciplining them rather than caring for their children’s physical health. Second, childcare experience has both positive and negative effects on women’s dietary habits. Therefore, these factors should be considered when encouraging and promoting improvement in women’s dietary habits.

Past, Present and Future Of Japanese Cultural Sociology

This paper examines the historical development and the theoretical features of Cultural Sociology in Japan. By discussing the past works such as views of ShotonYONEDA(1873-1945), Jun’ichiro Matsumoto(1893-1947), Kazuta KURAU-CHI(1896-1988), the present works such as Keichi SAKUTA(1922- ), Munensuke MITA(1923- ), Shun INOUE(1938- ), and the contemporary several movements towards the future cultural sociology, we will elucidate the historical and theoretical characteristics of Japanese cultural sociology in the following way.

It is true that Japanese cultural sociology has been influenced by the Western sociological thoughts such as German sociology (in particular, Alfred WEBER, Max WEBER, Georg SIMMEL, the French sociology (Emile DURKHEIM, Gabriel TARDE), the American sociology (Talcott Parsons, Jeffrey ALEXANDER), the English CULTURAL STUDIES, etc.,). However, today, Japanese cultural Sociology is going to present its originality or uniqueness by fusing these Western cultural theoretical impacts with the Japanese cultural tradition and contemporary social situations in a globalized world. That is, Japanese cultural sociology should advance from “moon-light sociology”(Yasujiro DAIDO)—a passive mode of sociology—to “sunshine sociology” —an active mode of sociology. Thus, we will make clear one aspect of Japanese cultural sociology.
OISHI, AKIKO* (Chiba University, oishi@le.chiba-u.ac.jp)
Social Exclusion and Health Outcomes of Single-Mother Households in Japan

Single-mothers and their children are one of the most economically-disadvantaged groups of people in industrialized countries. Japan stands out from other OECD countries with regard to its high incidence of poverty and the high employment rate of single-mother households. Previous studies in the Western countries have shown significant differences in physical and mental health between single-mothers and their married counterparts. They also have found that children of single-mother households are more likely to have health and behavioral problems. However, it is still unclear to what extent these differences are attributable to low-income or lack of social support. Employing a unique panel survey on women with children, this study investigates how poverty and lack of social capital affect health outcomes of mothers and children in single-mother households in Japan.

Major contributions of this study are as follows. First, it employs multiple measures of poverty. In particular, it uses not only the poverty line but also the Minimum Cost of Living calculated by the Public Assistance system to define the poor. Second, subjective as well as objective measures of health outcomes are used. Third, the effect of past experiences that may affect health (such as childhood abuse and family dissolution in childhood) is examined to control for unobserved heterogeneity.

Tentative results confirm significant health inequality between single-mothers and their married counterparts. Although poverty has a significant negative effect on health of married mothers, it has no significant effect on health among single-mothers. In addition, even after controlling for age and other socio-economic factors, mental health of single-mothers significantly deteriorates as their children grow up.

OKADA, SOSUKE* (University of Arizona, sokada@email.arizona.edu)
Structure of Cultural Rejection

What does it mean to dislike a piece of culture? This study explores the idea that culture is being used as the focus of coordination among individuals. The central topic is cultural rejection. The proposition is advanced that individuals reject cultural practices as the proxies of disfavored groups who are perceived to be associated with them. In turn, this will allow individuals to distance themselves from disfavored groups and maintain the identities separate from disfavored groups. This study argues that the pattern of cultural rejection can be seen as a reflection of individuals’ perception of differentiation within society. Using data on musical preferences from 1993 General Social Survey, it applies blockmodeling – the methodology originally developed in social network analysis – in a new way, to analyze the structure of cultural rejection within U.S. society. The results indicate that blockmodeling based on cultural rejection is effective in uncovering sociologically meaningful positions among the respondents, while providing unique insights into the structure of cultural divisions within U.S. society. In addition, the identified blockmodel correspond with individuals’ perception of the degree of unity (or lack thereof) among Americans, consistent with the theoretical assumption of this study. The results also show the important roles that popular culture occupies in U.S. society.

The Relationship Between Financialization and Accounting Standards: A Japanese Perspective

This study considers global financialization in terms of the dynamics of corporate accounting standards. Accounting standards play a crucial role in financialization by measuring corporate financial performance. Since the definition of “financialization” is ambiguous, this interdisciplinary study can benefit future research. Taking the perspective of Ryuji Takeda, a legendary Japanese accounting researcher with knowledge of sociology, this study focuses on the transition from production-oriented accounting to finance-oriented accounting. This transition is analyzed using Jean Baudrillard’s concepts of “simulacra” and “hyperreality.” This study also analyzes the recent changes in Japan’s accounting standards as a backlash against excessive finance-oriented accounting. Further, the backlash is considered from Takeda’s “spiral development” perspective. Although this study is essentially conceptual, data are presented in support of its argument, and its interdisciplinary perspective can further financialization studies.

This paper is structured as follows. The first section reviews studies on financialization and summarizes their essential points. The second section describes the relationship between the financialization process and accounting regulations (particularly accounting standard-setting) based on Takeda’s framework, which distinguishes between production-oriented and finance-oriented accounting. This framework introduces Baudrillard’s concepts of “simulacra” and “hyperreality” to explain the financialization mechanism by considering the transition from the former to the latter type of accounting. The third section focuses on the new dominance of finance-oriented accounting standards in Japan. Post-financial crisisJapanese accounting regulations such as the development of accounting standards for small and medium-sized enterprises are reexamined using Takeda’s theoretical framework. Finally, this paper argues that new accounting regulations have emerged through a spiral development within the bipolarity between traditional material production-oriented accounting and finance-oriented accounting as a reaction to excessive financialization and finance-oriented accounting standards.

A Comparative Study of Effort and Examinations in Japan and England

This paper compares Japanese and English emphases on effort from two analytical perspectives: cultural and institutional. The cultural perspective examines the Japanese cultural belief that natural gifts are equally distributed in society, while the institutional perspective examines the competitive entrance examination selection system, colloquially known as “examination hell.”

It is clear that an emphasis on effort has permeated Japanese society. However, recent rapid economic growth has made Japan more affluent, which in turn has undermined cultural emphasis on effort. On the other hand, English culture reflects the concept that natural gifts are unequally distributed, which also undermines cultural focus on effort. In this paper, I will discuss the similarities and differences in these two societies’ approaches to effort and examinations.

Giving Sense to Social Policy Implementation and Its Evaluation
Analyzing the Institutional Work: The Case of a French Social Security Local Organization

Social security and its solidarity policies play a central role on poverty reduction. To analyze how does it work in practice and its limits to reach its aim, it is interesting to wonder how it is elaborated, implemented by organizations and actors, and how it is questioned by policy evaluations. Hence, examine the institutional work (Lawrence, Saddaby, Leca, 2009) is a good way to better understand the complex institutional configuration where different actors interact to conduct and question policy. Studying the case of institutional work in a French social security local organization commissioned on family and solidarity policies, this paper is intended to analyze how organizational context, economic crisis and New Public Management affect social intervention and its targeted public.

This paper is based on a three years ethnographic immersion in this organization with participant observation as a policy evaluator, a research on a minimum income scheme non-take-up, with some forty interviews and document analysis. Firstly, it explains how does the organization work, its missions, partners and professional cultures. Secondly it examines how in time of crisis, this social organization has not only to deal with an increasing demand to mitigate crisis negative effects on most disadvantaged people, but also with important budgetary restrictions and performance management optimization which impact the service delivery. Then, it analyze how do street level bureaucrats (Lipsky, 1980) react in front of these paradoxical injunctions and elaborate collective and individual performance strategies which are not always focusing on social right accessibility for vulnerable people. Finally, it study how policy evaluation question this situation, giving some preferential for improvement without really put into question the institutional work influence on actors strategy. More broadly, this paper tries to understand how institutional configuration impacts policy implementation focusing on internal preoccupations more than in policy potential outputs for beneficiaries.

ways in which these programs of temporary work are an aspect of the shaping of relations between Australia and these neighbouring regions.

In Australia as elsewhere, temporary work carries inherent vulnerabilities. These are likely to be felt more keenly in the lower skilled sectors of the workforce. It is not insignificant that there are concentrations of temporary migrant workers at the lower-income states in Asia and the Pacific working in lower paid work, in casualised sectors of the economy. While not surprising, this is a way global and regional divisions of labor are constituted and that this migration is temporary, is one of the ways regional patterns can become embedded in the workforce. The argument is not that there is a singular economic logic to the formation of these patterns but rather a number of regional factors at play. These issues are explored in this paper drawing on an analysis of the different categories of temporary migration in Australia.

Transnational Engagements: Footscray, Transnational Migration and the Making of Place

Footscray is an ethnically diverse and rapidly transforming suburb in Melbourne's inner West, formed in part by overlapping waves of migrants. The Vietnamese diaspora and more recently migrants from African countries, influence the contemporary mix of people. Migrants' engagements with more than one society and in various forms of transnational networks are an evident in the way migrants make place in the suburb. The voting and electioneering of South Sudanese migrants in the referendum establishing their nation indicates involvements in transnational networks. Participation in networks in Asian commerce is demonstrated in shops through the suburb. Indian students undertaking a transnational education work in Footscray, including at the Vietnamese market.

Migrants' transnational experiences, connections and networks are part of the uneven relations available to different groups and individuals as they become embedded in places. For migrants, such networks can be understood, to degree, as contained but geographically disparate "ethnical worlds" (Werbner 1999: 25). But the places in which these networks are located shape the forms of these networks and the resources they offer. Drawing on Smith (2001), these networks "criss-cross" and in doing so interact, challenge and shape one another. To take economic examples, transnational connections provide some migrants with access to capitalisation. But for other migrants their embeddedness in more than one society is a financial constraint, as the payment of remittances can be. More, the resources available to different groups and individuals as they become embedded in places. For migrants, such networks can be understood, to degree, as contained but geographically disparate "ethnical worlds" (Werbner 1999: 25).

ABSTRACT

This study assesses the perception of security operatives on the challenges they face as security operatives in the fight against corruption in Nigeria. The study adopted both primary and secondary sources of data collection. Primary sources are observations of security operatives at security checkpoints; questionnaires were distributed to 120 security operatives in Kaduna metropolis and 6 in-depth interviews were conducted with key informants. For secondary source, data was sourced from Security Operatives Disciplinary Records on corrupt practices emanating from complaints lodged against them by victims (members of the public) or caught by officers /colleagues while on visiting or visiting rounds to assess performance. Findings show that causes of corruption among security operatives includes over-centrality of authority within operatives structure, recruitment process, characterized by poor screening, nepotism, lack of integrity, lack of training, and lack of good pension scheme. However, some of the challenges facing security operatives as found in the study is that the general public initiate corruption, bringing returns by junior officers, victimization by very important personalities (VIPs), issuing counter orders by superior officers and lack of adequate accommodation. Also, some of the consequences of the above includes lack of good governance, marginalization/frustration of public officers and diversion of public funds. Moreover, it is recommended that in order to win the war against corruption, there is need to reduce government involvement in all economic spheres as well as improving accountability and transparency in financial disclosure. This will eliminate opportunities for corrupt dealings.

What Is Diagnosis?: Medicalization of the Children with Developmental Care Needs in Medical Checkups and Preschools in Japan

Background: A nationwide study reported that 6.3% of normal class students seemingly had developmental disorders. These students or children in Japan called as “kininaru-kodomo” or children with special care needs. However, there is no legitimate definition of children with special care needs. Therefore, its relationship with professionals’ viewpoints is ambiguous according to the professionals’ viewpoints. This study explores its definition through the hybrid model of concept development.

Methods: The hybrid model is composed of a combination of literature review, fieldwork and analysis. The databases Japan Medical Abstracts Society (1983-2013) and Citation Information by NII (1991-2013) were systematically searched. Participant observation was conducted at multiple parent organizations. Moreover, narrative data was gathered through a key informant interview. These theoretical and fieldwork data were analyzed to hypothesize the relationship between the term’s concept and the presence of medical diagnosis.

Results: A literature review revealed that medical professionals used the term of “kininaru-kodomo” as the synonym of children with developmental disorders. On the other hand, teachers of preschools and primary schools regarded them as children with troubles in group actions regardless of the presence of diagnosis. Moreover, the term of “kininaru-kodomo” was considered a children who could not be diagnosed because of their normal intellectual ability. Over the transition, the distinction between “kininaru-kodomo” and normal children was considered blur.

Conclusion: The hybrid concept analysis demonstrated the arbitrariness of the application of the diagnosis of developmental disorders to children with special care needs. Making a common definition of “kininaru-kodomo” is necessary to allow professionals from overlooking the care needs of children with or without developmental disorders.

Young People with Debt Problems: Uncertain Transition to Adulthood in Finland

Gaining financial independence is a part of becoming an adult in Finnish society and culture. In this paper, we discuss the debt problems faced by young people who struggle to gain agency in their early adulthood of age 18-25. The aim of this paper is to see what the transition to adulthood means in relation to debt problems. Official data on registered debt problems by young people will be analyzed in this paper. The data was gathered by using the official debt enforcement register of the Finnish Legal register center (on debt collection rulings, fines and other sanctions). The analysis of this register-based data concentrated on showing how debt problems start to accumulate and how kind of specific debt problems young people are facing. Socio-demographic background is taken into consideration in the analysis. Our results show the debt problems of minors under 18 years of age result mostly from fines or other sanctions imposed upon them by public agencies, or because of their parents. Approximately at the age of 19, debt problems increase dramatically and involve most importantly debts from public agencies, or because of their parents. Approximately at the age of 19, debt problems increase dramatically and involve most importantly debts from public agencies, or because of their parents. Approximately at the age of 19, debt problems increase dramatically and involve most importantly debts from public agencies, or because of their parents. Approximately at the age of 19, debt problems increase dramatically and involve most importantly debts from public agencies, or because of their parents.
Patriarchal and Medical Discourses Shaping HIV/AIDS-Related Stigma and Its Management in Turkey

The paper explores the discursive formation of HIV/AIDS-related stigma and its management by people living with HIV (PLHIV) in Turkey. Based on biographical narratives of 24 PLHIV, semi-structured interviews with 32 key informants, participant observation in PLHIV networks and documentary analysis, the paper focuses on the role of medical and patriarchal discourses in shaping HIV/AIDS-related stigma at the state and societal levels and highlights the implications of stigma on PLHIV's agency in managing the physical, emotional and social aspects of living with HIV in Turkey. The findings are overviewed in two sub-sections:

First, I identify the two conflicting discourses around HIV/AIDS in Turkey: 'cultural immunity' and 'rights-based' discourses, at the state and civil society levels, respectively. Here I investigate the role of medical profession and of patriarchy in the formation of these discourses in relation to the socio-political context of Turkey, particularly referring to the perceptions about sexuality, 'modernisation' and religious discourses.

Secondly, I focus on the ways in which PLHIV understand, reframe and challenge stigma individually and collectively. I focus on family and healthcare as the main institutions where the context-specific ways in which HIV/AIDS-related stigma interferes with the formation and management of HIV-positive identities. Participants' reconstructions of HIV through narratives of 'injustice' and 'neglect' are shown, to address the links between the subjective understanding of and resistance to HIV/AIDS-related stigma and the overarching discourses shaping stigma.

The paper aims at contributing to further Understandings of HIV-related stigma by focusing on the power relations in the formation of stigma from a discursive and intersectional approach, by exploring the understandings of stigma from the perspectives of the stigmatized, with a specific focus on the agency of PLHIV in negotiating and challenging stigma and by offering data from a cultural and geographical setting which remains under-researched.

Reconstructions of HIV and Its Stigma through Biographical Narratives of People Living with HIV in Turkey

The paper aims at exploring the subjective perception of living with HIV and its stigma through the biographical narratives of people living with HIV (PLHIV) in Turkey. Biographical narratives of PLHIV are analysed to understand the implications of the discursive structures surrounding HIV/AIDS in Turkey for PLHIV's construction of personal identities. The analysis is guided by the literature on illness narratives for the identification of narrative forms and by an intersectional approach for the identification of power structures that combine with HIV stigma.

PLHIV's biographical narratives demonstrated the ways in which the meaning of HIV/AIDS and its stigma is being reconstructed through PLHIV's interactions with healthcare professionals, with civil society workers in peer-counselling services and with the overarching concept of 'the state'. The paper focuses on three types of narratives, with respect to these three milieus: Narratives of 'uncertainty and distrust in medical profession', the 'positive reconstruction of being HIV-positive' and the narratives of 'injustice and neglect' reflecting a politicised illness identity.

Finally, the implications of the above-mentioned narrative reconstructions of HIV on the social identities of HIV-positive individuals are pointed out: A reconstruction of illness detached from fear and self-blame is framed through support networks. However, the potential empowering effect of this perception of illness is hindered by the stigmatising practices faced in healthcare settings and by the perceived denial and inaction at the state level.

A Variation Study of Dialect Contact and Obsolescence in Japanese Community in Mexico City

Ever since the first migration to in 1897, Mexico has hosted the mass influx of Japanese immigrants, resulting in the formation of the largest Japanese community Mexico City. Although Japanese is often used for communication amongst the community members even today, linguistic aspects of the language used there have not been well investigated in previous research. Since the first generation of immigrants in the community migrated from various places in Japan, there must have been a contact between the Japanese regional dialects among them. This study intends to find out what sort of dialectal features are used in the current community as a result of contact between different dialects which were brought by the first generation. The data consist of over 5000 minutes of collected through fieldwork in 2012 and 2013 in the largest Japanese community in Mexico City. The interviews involved more than eighty of Japanese immigrants and their families. The linguistic variable examined in the analysis is negation suffix. The negation form is realized in different forms according to dialect. The major variants are ~nai and ~n, the former is mainly used in...
eastern dialect speaking region of Japan and the latter in the western. My ongoing variationist analysis on the negotiation system in Japanese spoken in Mexico City reveals that both the Founder Principle (Mufwene 1996) and Dialects in Contact (Trudgill 1968) helped account for the negotiation system in this diaspora variety of Japanese.

Edgewise Community: Real Estate and Asian Settlers in Tokyo

After the latter half of the 1980's the number of Asian people has increased as "new comer" in the inner area of big cities. As more than 25 years have passed since then, a question appeared if there was an appropriate term which expressed the situation of the community. In this paper, two area in Tokyo: Ikebukuro and Shin Okubo, are examined as case studies, and they are called "edge-wised community." Edge-wised community is a community which has plural cultural basis, in which there exists a system designed from the bottom, and in which there exists a circuit which makes the system function.

This paper consists of the research regarding the foreign residents' motives in acquiring the housing and in having relationship with the network and other surroundings. Especially focusing on the function of housing land and building dealers in the ethnic community, the actual condition for foreign residents to purchase the housing is clarified.

Focusing on the above mentioned two themes, this paper aims at the structural understanding at the mezzo-level of the society. According to Hughes (1931): Chicago School third term, in his research of "Chicago real estate Board" housing land and building dealers are classified in five groups. In this report, combining both Hugh's classification and the reporter's classification of the number of renewal times of license of housing land and building dealers, characteristics of gate keepers are clarified. There, the phenomenon of circuit-izing between "cooperative channel" and foreign customers is seen.

Then, what promoted foreign residents to acquire residence? In addition to "cooperative channel" centering housing land and building dealers in "edge-wised community," improvement in the civilty in foreign residents is thought to be a factor. In this regard, the actual condition is reported referring to the case studies of Ikebukuro and Okubo.

The Medicalization of “Depression” Across the Globe

Recent decades have witnessed an increased reliance on the American approach to mental illness as a global script. These definitions of and treatment responses for mental health problems have been transmitted despite classic and new concerns from consumers, professionals, and scientists about the categorical schemas used. Yet, little data exist to show whether and how individuals, across societies, construct the set of symptoms that are used in formal psychiatric diagnoses of depression. Specifically, this question of global medicalization raises a set of questions about the differences in diagnostic criteria across countries, and new concerns from consumers, professionals, and scientists about the categorization of individuals. Using latent class analysis, we construct the patterns of suggested actions that individuals who meet a criteria for a depression diagnosis. The ability to examine what individuals should do, if anything, in response to a vignette describing an individual meeting a criteria for a depression diagnosis. The ability to examine the social construction in a standardized survey results from the design of the instrument. The vignette was followed immediately by an open-ended question, without prompts or lists of possibilities, asking what actions should be taken. Using latent class analysis, we construct the patterns of suggested actions that make up the cultural toolboxes of lay diagnosis of depression across countries, examining their similarities and differences cross-nationally. Our results show that lay diagnosis is embedded in a broader context of national medical cultures and individual cultural beliefs about mental illness.

Housing Well Being and Social Inequality in Europe: A Comparative Analysis

Two phenomena characterize, in a seeming contradiction, housing conditions in Europe over the last three decades: on the one hand there has been an extension of home ownership and the spread of a high standard of living, on the other hand there is an increase in housing costs and in social inequality. Through an analysis of the perceptions of a part of Europe’s citizens on their housing and maintaining a home have continued to rise and cannot only jeopardize housing security and quality, but can also stand in the way of life projects. The paradox is that home ownership does not exclude housing deprivation.

The hypothesis is that households’ social class plays a role in enabling owners to combine home ownership and well-being. On the basis of Eu-Silc (European Union Statistics on Income and Living Conditions) data a comparative analysis is carried out about housing conditions in European countries by focusing on social class. This perspective provides further insights about the divergences/convergences hypotheses stemming from the analysis of trends of living/housing conditions throughout Europe.

To support this claim, two main dimensions of housing inequality are identified: tenure and housing well-being. A micro level data analysis is performed, in order to take account of individual family costs and the performance of maintenance of ownership in settings and in periods (such as the present day) of rising housing prices and income resources that decrease in terms of amount and stability. The aim is to demonstrate that, despite differences in well-being in Europe between owners and non-owners (on the average the firsts are better off), home owners can still be regarded as a privileged category per se. It represents a paradigmatic case in this respect: a longitudinal analysis (2005-2012) will be provided to investigate the crisis effect on facing housing costs.

Social Mix in Deprived Areas: A Solution to What?

Social mix in deprived areas: a solution to what?

The research study refers to the results of a housing mix policy in Turin (Italy) based on the comparison of the real estate complexes built at the time of the 2006 Winter Olympic Games into a residential housing and aimed at creating a housing mix capable of generating a social mix. Social mix policies put together two main approaches to urban/housing policies: the people based (addressed to empowering and supporting people in their crucial life-housing transitions); area based (addressed to improving physical and social infrastructures of the neighborhood). The policymakers’ expectations about mixed districts can be listed in four points: 1) providing opportunities for housing career in district since it gives residents the possibility to move to better, more expensive and even owner-occupied dwelling; 2) improving social contacts and social cohesion, since mixed districts are supposed to foster contact between different groups of people and through that enhancing social cohesion; 3) increasing social capital since mixed neighborhoods should developed bridging, reciprocity, norms and trust; 4) providing positive role models especially to lower income and minority groups. The hypothesis is that households in mixed neighborhoods experience better outcomes of this specific attempt have been investigated. In the observed neighborhood social mix has not produced all the hoped-for effects. The greatest benefits have been...
Using a combination of migration literature analysis and practical experiences of Ukrainian migrants in Australia this paper examines systemic differences in actual mechanisms for incorporation and integration, depending on the period in which Australia accepted immigrants and Ukrainians left Ukraine. Particularly, it explores the role of Ukraine/Australia structural factors in generating post-integration Ukrainian immigration experiences. The paper suggests there are three distinct periods of post-independence Ukrainian immigration to Australia: the first decade: from 1991 until 1999; the second decade: from 2000-2009 and the beginning of the third: from 2010 until 2013. 51 “personal” stories enable to understand determinative structural factors that deeply influences migration, such as state policies, economic situations, and transnational networks, through comparative perspective in effecting the capacity and choices made by each migrant depending on his/her immigration period. It puts forward the idea that these factors strongly influenced and shaped migrants life strategies and mechanisms of integration in recipient society as well as formed the way this ethnic minority incorporated itself in labour market of Australia.

The challenges and the scope of organised crime and gang violence (including outlaw motorcycle gangs) in Denmark have increased during the last years. This critical development has led Denmark to toughen the anti-gang laws and caused a more interdisciplinary approach to police work (also called the Al Capone Method). The Al Capone Method combines monitoring and registration of high-risk-profile gang members. According to my research the method in a Danish context.

Taking the viewpoint of the gang members I will highlight and discuss these unintended consequences and examine their impact. My research is based on interviews and follow-up-interviews with 16 gang members, carried out in Denmark during a 2.5 year period. In-depth insights into the ex-prisoners’ indebtedness and living conditions confirm that ex-prisoners share a passive attitude towards the labour market and the education system. The pay-profit of having a job, compared to receiving government transfer income, does not have any (present) effect to the indebted ex-prisoners financial flexibility or everyday life in general. So, the financial boundary between the welfare poor ex-prisoners and the workforce poor ex-prisoners is unclear.

Legal regulation based on indebtedness will serve as an argument, to consider debt as an indirect criminal risk factor, which makes the preventative factors less effective, and drives the indebted ex-prisoners’ farther from the legitimated socio-economic advantages because of their debt to the state.

The Al Capone Method in the Danish Police

Ex-Prisoners Debt: An Indirect Criminal Risk Factor

Studies of criminal risk factors illustrate that the ex-prisoners, who successfully stay employed or begin an education, are less likely to find their way back on a criminal path.

However, the aforementioned preventive factors of criminal relapse become less effective due to the ex-prisoners debt. According to the Danish Administration of Justice Act, the state has a right of recourse against criminal offenders to recover legal costs (expenses to defense lawyers, DNA-tests, technical and academic investigations etc.) Denmark is the only Scandinavian country, and the only country in the European Union, who does not take the income level of the convicted into consideration, when calculating the legal costs. Nor do they have a common practice of remitting convicted's considerable legal costs.

Thus, we must regard most ex-prisoners in Denmark as highly indebted to the state. The ex-prisoners debt is generally understood as causing dynamics of regime change in Ukraine and changes in Australian migration policy, the paper suggests.
itself when policemen and staff members of the Tax Authority e.g. execute visita-
tions and confiscations, tries to levy distress and conduct stop-and-search zones
in high-risk areas.

Social Movements and Transnationality: A Conceptual Discussion

In June 2009 a short grainy video shocked people all over the world. The video,
recorded by a bystander, showed a young Iranian woman, Neda Agha Soltan, dy-
ing from a gunshot inflicted by a regime related shooter during protests against
the fraudulent Iranian presidential election. Neda almost instantly became a
transnational injustice symbol representing the unjust nature of the Iranian re-
gime. The case of Neda is interesting for social movement scholars for a variety
of reasons, including the role of new media and the power of photography and
citizen journalism (Olesen, forthcoming).

The present paper, however, employs the case to ask a range of conceptu-
al as well as methodological questions about the transnationality of transnation-
al movements. Because while Neda's televised death, motivated various activist
organizations and interest organizations to act and criticize the Iranian regime,
the activities around the Neda injustice symbol was much broader. Apart from
activists, three categories of actors in particular were vociferous and active: poli-
ticians/political parties, media, and networked citizens all expressed outrage and
demanded reforms on the basis of the footage.

This propels us to ask how we can best conceptualize the activities surrounding
Neda's death. Was it a transnational social movement – or something else? In the
paper I argue that it was in fact a social movement. Accordingly, I contend that the

OLIVEIRA DIAS, PATRICIA* (PUC-RS, rappatiro@gmail.com)

Generational Change and Persistence: Gender Equality in the Life
Course of Low-Income Brazilian Women

Social, economic and political changes in the Brazilian society since redemoc-
ratization have strongly impacted relational and material conditions of low-class
families. Acute transformations took place especially in the realms of mother-
hood, women's participation in the labor market, division of domestic labor and
domestic violence throughout the last decades, as reflected in the life course of
women. This paper presents results from qualitative research with two or three
generations of women in urban, low-class families in Brazil. The interviews were
conducted with several families as part of two research projects in recent years.

The reconstruction of women's life stories and biographical self-presentations
will highlight the reproduction or transformation of social patterns against the
backdrop of new socioeconomic configurations and social policies. This recon-
struction will trace, on the one hand, the changes in the perception of women's
role in family as it relates to gender equality. On the other hand, it will be
discussed how women experience their embeddedness in family structures as
influencing decisions on migration, access to labor market and to education.

For that, the life paths of two or three generations of women from large cities
in Southeast-Brazil will be presented. The analysis of the narrative interviews,
followed by the reflexive-reconstructive biographical method, focuses on how the
interviewed women define their life course between opportunities and constraints.
This is seen in close relation with the social developments taking place around
the subjects, as postulated by the biographical policy analysis. The research results
can also cast a light on different patterns of generational intercontingency found
in the same social milieu.

The Experience of Disrespect and the Genesis of the Recognition
Paradigm: Empirical Research and Normative Philosophy in Axel
Honneth's Critical Theory

Together with Charles Taylor, Axel Honneth is among the most important pro-
ponents of a theoretical paradigm for the social sciences centered on the idea
of “recognition.” This notion has, of course, entirely different meanings in the vari-
ous contexts in which it is called upon. In Honneth's specific case, it is of decisive
importance the fact that his theorizations around the centrality of recognition
relations for human self-realization are rooted precisely in the negative expe-
riences of denial of recognition: disrespect or misrecognition. Despite the more
than twenty years that separate us from the publication of Honneth's Struggle for
Recognition, however, it seems that the theoretical genesis of this important book
has not yet been grasped in its full potential for understanding today's modern
societies and for a revitalization of the social sciences in general, and of Critical
Theory in particular. This is due, as I see it, to the misreading of Honneth's works
as much as to the author's insistence on making the philosophical work of Hegel
the logical point of departure of his theory.

In this presentation, I intend to cast light on other motives that animated
the formulation of this recognition-theoretical critical model, aside from the Hege-
lian works from the period of Jena: namely, the sociological and historiographical
studies that convinced Honneth of the undeniable moral character of social strug-
gles, that the American and especially British Quals, and the Werter Class-
esthats that flourished in the 1980's. This influence reveal a closer relation between
Honneth's work and empirical social research than is made visible in his books. I
argue, finally, that this connection is a most fruitful one and that Honneth, howev-
er, partially abandons it in his recent works – despite its precise meta-theoretical
formulation under the name of “normative reconstruction” in his latest book, Das
Recht der Freiheit (2011).

Indicators for the Social Impact of Social Sciences and Humanities
Research: The FP7 IMPACT-EV Project

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
There is a big concern in the international scientific community to guarantee that Social Sciences and Humanities research (hereafter SSH) has a social impact in relation to the major concerns shared by all its citizens. This is in fact a key goal of all SSH research, on the one hand, because citizens and politicians are interested in research outcomes which serve to improve society, and on the other hand, because the creation of SSH knowledge will be appreciated and maintained if it is relevant for society, and not only for researchers. Nonetheless, these impacts have recently been critically contested. Lack of adequate tools for comprehensively assessing impact, particularly concerning social impact, and indicators of poor impact are present in SSH research has been the object of concern for the European Commission, and it is being discussed today in academic forums. In that frame the IMPACT-EV project has been selected by the 7th Research Framework Programme of the European Commission to develop a permanent system of selection, monitoring, evaluation, (ex-ante, in itinere and ex-post) and comparison of the impacts from SSH research. Taking into account the lack of quantitative and qualitative evaluation tools, identifying new ways of implementing them and exploring new standards and indicators that complement existing impact assessment processes. As special attention will be paid to the analysis of social impact of SSH research, the IMPACT-EV project will analyse and systematize indicators for both ex-ante and ex-post evaluation of the social impact of SSH research. In this paper, first results of the IMPACT-EV project will be presented to an international audience.

The Student Movement in the (Mexican) Democratic Process

Recent waves of global movements agree, among others, on three demands: to abandon neoliberal policies, media democratization, and advance the public nature of education. Mexican student movement is part of this trend.

In the democratic transition from a seven decades hegemonic party rule to a right wing government: Mexican citizens believed that the presidential alternation, reached in 2000, would be the alternative to authoritarianism and for an institutional renewal. However, the young democracy was soon eroded with electoral fraud and social protests. 2012 elections erased any possibility of improvement when the old party burst with renewed signs of corporatism and complicity with the media.

In this context, neoliberal education policies fragmented the youth access to higher education. The expansion of the private sector in this field was the cornerstone of social polarization, because it deepened inequalities both in opportunities for access to education and the struggle for democracy. Part of the explanation is a differential educational discourse, between public and private. This makes perceptions on democracy and social justice impact contradictory the identity of student groups.

Thus, in the middle of the election campaign the student movement “#yosoy132” emerged. It claimed the defense of democracy and faced the imposition of the old-regime candidate, due to his intricate web of complicity. The movement, originated in private universities and extended to the public, could articulate demands of social justice and democratic liberties: radical transformation of mass media, for better education and against neoliberal economic model. It was expressed in a wide repertoire of demonstrations, rallies and plural networks with working and middle classes.

The differential impacts of this movement on the national politics and media democratization, based on the previously discussed, is in the present debate contradictory. These are the aspects that will be developed in this paper.

OLLINAHO, OSSI* (University of Geneva, ossi.ollinaho@unige.ch)

Ontologies of Matter in Sociological Institutionalism

I study ontologies of matter within sociological institutionalism and discuss their political implications with regard to environment and inequality. I categorize these ontologies in four distinct classes: 1) materiality as action; 2) materiality as a stage for social interaction; 3) materiality as tools employed in social interaction; and 4) materiality as required and transformed within social interaction. I refer to these ontologies as, “immaterial”, “solid”, “stuck”, and “loose”, respectively. Marx saw materiality as technology and metabolic “ribs” – “stuck” and “loose” matter. In Veblen and Weber materiality takes mainly the form of “solid” matter to which adaptation is achieved through habituation and cultural refraction. However, they certainly also saw humans as affecting this materiality. For Durkheim material was mainly physical objects – “stuck” matter. Due to the cultural turn, materiality was subsequently neglected; at best, materiality was the “solid” background of institutional impacts. Materiality was rejuvenated in the end of 20th century as actions that together with cognitive dimension constitute institutions. This ontology left physical matter outside the picture.

Recently, this “immaterial” conception has been problematized by conceiving materiality as physical objects – “stuck” matter. Scholars have analyzed how technology affects and is embedded in institutionalization and institutional change. This ontology, however, fails to perceive the human influence on the environment. It belongs to the human exemptionalist paradigm, in which technology is seen to give any problem that the “progress” might produce. I propose to integrate physical matter required to run social practices (e.g., food, energy, raw materials) and transformed within practices (e.g., to, waste, pollution) to institutional theory. Without “loose” matter institutionalism cannot perceive the growing “rifts” that humanity is producing, most prominently embodied as climate change and the depletion of raw materials. The ontology of “loose” matter has direct implications on institutional change and indirect ones on inequality.

Austerity amidst Affluence: Cross-National Contrasts

Austerity amidst Affluence: Cross-National Contrasts

Poverty has long been one of the most pressing social problems across the nations of the wealthy, advanced capitalist world. The poverty in wealthy countries is not on the same order of magnitude as in many less developed parts of the world, where grinding impoverishment is ubiquitous, and its impact and death toll staggering. Yet poverty is not only a “Third World” concern. It is often suggested that many poor people in wealthy lands would be considered relatively well off if they were living in a poorer developing nation. But they are not, and the social and economic circumstances of the poor in rich nations often requires a much higher level of income, and access to many additional goods, amenities and services just to reach similar levels of capability and inclusion as those of many poorer people in developing countries.

This paper examines this urgent issue in Canada, the UK and the US where, despite their great prosperity, the rates, severity and consequences of poverty have intensified under neo-liberalism. It also provides cross-national contrasts examining poverty in the Nordic nations which, despite notable increases in inequality and social policy restructuring, still outperform their Anglo-American counterparts. This paper also critically examines dominant and popular theoretical perspectives and explanations that have been advanced to explain how poverty is generated and sustained and assesses the possibility for its eradication.

Distributed Expertise and Professional Collaboration: Recognizing Relational Interdependence in Healthcare

Background

Healthcare work in the context of the hospital is characterized by the need for collaboration. There are several reasons why this is the case; for example that the demands involved in modern diagnostic and therapeutic practices require highly specialized services as well as health professionals with a multitude of expert knowledge. Brining this knowledge together in every instance of patient care requires, amongst other things, that individual professionals acknowledge the mutual dependencies and collaborative needs that arise from the distributed nature of expertise in clinical settings. However, professional cultures, hierarchical relations and differences in communication practices may give rise to inequalities in the recognition of expertise and hamper the open exchange of knowledge in decision-making processes.

Study and methods

The paper is based on two separate studies of professional work in hospitals. The studies were carried out using a qualitative design. Data were collected by participant observations as well as by individual and focus group interviews with doctors and nurses. The professional groups were interviewed separately, and compared to nurses than doctors part, which presents the collaborative roles of nurses to doctors.

Outline of paper presentation

The purpose of the presentation is to describe how different modes of expert knowledge gives rise to relational interdependence between doctors and nurses, using the management of oxygen therapy and mechanical ventilation of preterm newborns as illustrative cases. Based on findings from the studies, questions to be discussed are; how is the collaborative relationship experienced and performed by the two professional groups and what determines the exchange of knowledge between nurses and doctors in concrete clinical situations? The discussion is informed by a theoretical framework that captures the relational aspects of professional work performance.

Party Nomination of Candidates and Under-Represented Groups in
Ibadan: A Study of Local Council Elections in Enugu State

This paper is premised on the nomination of 17 council chairmen (not Chair-
women) by Peoples Democratic Party (PDP) for November 2, 2013 local council
election in Enugu State. The issue of underrepresentation of certain groups, par-
ticularly women, brings to fore the contradiction of the party’s policy of equitable
representation of women in party organs by using affirmative action of at least
35% of women. The claim to be a democratic nation cannot be sustained when polit-
cal elites are not inclusive, and the candidates they nominate for all the
elections remain male dominated. Most worrisome, is the grave yard silence from
the marginalized women group of the local communities. The paper will centre
attention on the process of candidate nomination by PDP, highlighting the par-
ticular obstacles that women face in the process. The paper examines the likely
relationship between the prevalent culture of political ‘godfather’ and women un-
derrepresentation in municipal politics in Enugu state since 1999.

Patronage in Pre-Colonial and Colonial Ibadan, Nigeria

This paper conducts a comparative analysis of patronage in pre-colonial and
colonial Ibadan, Nigeria. Starting up first as a camp of marauders and later a mili-
tary settlement after the collapse of the Oyo Empire, Ibadan thereafter emerged a
military entity, where the elites were not only over a large spectrum of wide, but the
end of the 19th Century. Ibadan developed a unique patronage structure based on the
babaogun clientelist system. The babaogun system entailed a network of military
warlords who had clients who provided military and civil services in exchange for
protection. Indirect rule introduced by the British integrated the babaogun system
into governance, equipping the chiefs with economic and coercive powers, which
of course sustained a transformed clientelist system that was only subverted by the
educated elite by the 1950s in preparation for independence. Hence the foun-
dations of contemporary patronage system in Ibadan in particular and Nigeria in
general are the political economy of colonial patronage and sur-
ceeding neo-colonial system. Using archival and ethnographic methods, this pa-
per provides the context of patronage in Ibadan in pre-colonial and colonial eras.

Interrogating Social Inclusion: Preliminary Notes on Micro-Credit
Institutions and the Quality of Living in South Africa

The notion of social exclusion has featured prominently in poverty and social
reproduction discourses. Perhaps there is a sense that its obverse, social inclu-
sion could ameliorate the deprived conditions and improve the quality of living of the
excluded. However, the notion of ‘unfavorable inclusion’ suggests that inclu-
sion does not necessarily translate into an improved quality of living. Therefore,
there seems to be a skewness of emphases on employment as important for in-
clusion and improving the quality of living of the included. This thinking has led to
the neglect of other institutional structures that may be imperative for the quality
of living of the excluded. This study aims to consider the institutional insights that
are ambivalence. In Japan where a modern family ideology and a love marriage
ideology are left firmly, it could make not only marriage but also “romantic love”
difficult.

Transformation of Framings of Seafood Sustainability Certification
Schemes

International sustainability certification schemes have been widely accepted
at industries and markets partially because of their common basic structure repre-
sented by transparency, science-based measurable standards, and third-party
auditing. In result such certification schemes provide alternative regulatory mech-
anism goes beyond borders depending on types of commodities targeted. Particu-
larly certification schemes dealing with seafood, both wild and farmed, have
been showing great expansion in the world. As they come to the fore, the number of
research pointing out their shortcomings also increases.

While maintaining common basic principles of third-party certifications firmly
for their credibility purpose, the framings of each scheme shows gradual transfor-
mation corresponding to criticisms. Drawing on three different international sea-
food certification schemes namely Natureland’s organic seafood, Marine Stew-
dardship Council and Aquaculture Stewardship Council, this paper analyzes the
transformation of framing of seafood certification schemes in which each scheme
integrates knowledge other than scientific ones into standards and structure of
scheme. In other words, it is a new function in certification framing to achieve fine
balance between credibility and critical mass.

Comparative Sociology of 11 to 18 Examinations in
Thailand, England, and Japan

This paper proposes a comparison of 11 to 18 examinations and the changes
they have undergone in Thailand, England, and Japan. This has valuable signifi-
cance as a focus of Comparative Sociology; this series of examinations has had
common and persistent importance in various societies, which makes them an
appropriate frame of reference for comparison.

The first objective of this paper is to demonstrate, by using the socio-cultur-
ental network concept, that there are profound similarities and differences in the
changes in 11 to 18 examinations in these areas. These results will reveal a process
that have not been detected by previous single-case studies.

The second objective of this paper is to propose methodological innovations
for Comparative Sociology. It combines qualitative and quantitative methods, not
by simple mixture but by close connection. Through this innovation, the Compa-
rative Sociology of 11 to 18 examinations will serve as a way to resolve the eternal
tension that sociologists face between science and literature.

Reconstructing Sustainable Communities through Mutual Help
Networks in East Asia: A Comparison of Mutual Help Networks in
Japan, South Korea and China

One way that man has maintained society throughout history is through net-
works of mutual help. The purpose of this paper is to show that such traditional
mutual help persists in East Asia, but has been transformed in the transition to
modernity and has contributed to the development of both South Korean and
Chinese modern society. Mutual help in these two societies is compared with the
already well-studied Japanese case. The phenomenon is divided into three cate-
gories. One is reciprocity in helping to plant rice and re-roof houses by exchanging
labor. The second is redistribution. In exchange for the right to get goods from a
common store, local people have the obligation to maintain a common pool of
resources. Finally, unidirectional help refers to support in funeral and wedding

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The objective of the present study is to clarify the competency of private midwives through examination of how midwives help mothers gain autonomy in childrearing. An empowerment approach was used as a conceptual framework. This research was conducted with midwives working at three facilities. Data were obtained by observing each encounter between mothers and midwives; that was realized from the 30th week of mothers’ pregnancy to 3 months after their delivery. In addition, the midwives and the mothers were interviewed. Data were analyzed by qualitative and inductive analysis. Recorded data were coded and categorized, and a total of 7 categories and 39 subcategories were extracted. The results showed that midwives build relationships of mutual trust with mothers, empowering mothers through psychological and educational support and helping them to be independent. The competency of midwives in independent practice could be classified into the following five types: 1) based on mutual trust, the midwife builds a relationship with each client to facilitate friendly interactions as a health-care provider; 2) the midwife evaluates situations and assesses the skill set of each client; 3) the midwife becomes close to each client and provides individual assistance; 4) the midwife provides reliable techniques in various situations; and 5) the midwife offers information beforehand to prepare each pregnant woman to become a mother and then supports the new family after birth.

International / Military-Public-Private Cooperation in Disaster Relief / Lessons Learned from Great East Japan Earthquake in 2011

The Great East Japan Earthquake which occurred on March 11, 2011 was a complex disaster including the massive earthquake, enormous tsunami and large-scale radiation leaks from the Fukushima nuclear power plant. It was the one of the most serious natural or man-made disasters in the history of Japan.

On the occasion of this tragic disaster, various military, public and private actors from inside and outside of Japan were engaged in disaster relief. These international/military-public-private actors conducted various activities and made remarkable accomplishments. However, we noted that numerous survivors endured immense suffering, chaos and deprivation in the affected areas. We wondered whether international/military-public-private actors responded to the urgent needs of the survivors as quickly and effectively as possible. This question was the basic motivation for our research.

Our research summarized several issues concerning the state of affairs and lessons learned regarding trilateral cooperation from the viewpoint of the MOD and JSDF. First, it was discovered that there was considerable room for improvement in the U.S.-Japanese bi-lateral and joint military operations in the event of a large-scale disaster, even though they have a half-century record of collaboration under the Japan-U.S. alliance. Concerning other foreign military forces, construction of framework for cooperation is also desirable.

Collaboration with local governments produced a lot of lessons. Although local government should assume a leading role in disaster response, in some cases damage caused by the disaster were responded to the urgent needs of the survivors by the various actors. This led to a dramatic increase in the volume of aid needed and demands on local organizations following the Great East Japan Earthquake. A framework for collaboration between JSDF and the private/public aid sectors is also necessary in order to properly prepare for the next large earthquake.

ONODA, SHINJI* (Hosei University, shinji-0219@hotmail.co.jp)

After spending more than two decades for consideration, Japan introduced the carbon tax (officially named “Tax for Climate Change Mitigation”) on October 1st, 2012. Japanese carbon tax adds a tax rate of JPY289 per ton CO2 emissions above tax rates to the petroleum and coal tax. Compared to the carbon taxes in European countries, its features can be seen in its low tax rate, revenue increase and earmarked for energy-oriented CO2 emissions.

Generally, a policy is established through a certain policy making process where not only rationality of policy contents are considered but also the interests of various stakeholders under political, social and economic circumstances are adjusted. In order to introduce appropriate policies for achieving a low-carbon society, it is essential to find problems of policy making processes and constantly strive for their improvements. Therefore, this study aims at approaching for elucidation of the characteristics of Japanese policy making process by investigating the carbon tax consideration history.
The analysis will be divided into three stages: (1) from start of consideration (beginning of 1990s) till the establishment of the petroleum and coal tax (2003); (2) from 2003 till the change of government (2009); and (3) from 2009 till the enforcement (2012), so that it makes easier to grasp the trends of discussion. For this analysis, the chronological method and a sociological theory called “organization theory” forwarded by Michael Crozier and Erhard Friedberg will be applied. The organization theory is one of analytical methods for organizations/systems, which assumes that individual persons/groups pursue “rational strategies” under “structured conditions” defined by various factors such as political systems, procedures, historical legacies and international trends. Data will be corrected from materials of study commissions for carbon tax, the Diet and related organizations as well as from interviews with politicians, ministerial staff, industries, NGOs and researchers.

Politics As Life-Sphere: Youth Activism and the Question of Multiple Transitions in Mubarak’s Egypt

Vibrant debates have emerged on the role of young people in revolutionary movements since the so-called ‘Arab revolutions’ in 2011. Some attribute the young protagonistic role more agency than the latter would themselves consider having. Others point to a certain hype around youth in this context and argue that the role of complex and contradictory social, economic, and cultural processes should be acknowledged in the making of popular uprisings in Tunisia, Egypt, and beyond. Young activists are, however, depicted often as somewhat one-dimensional social actors. This paper argues that locating young people’s activism in the wider context of their everyday experiences helps to unravel the multiple and at times contradictory transitions the young have to negotiate when engaging in youthful dissent under authoritarian settings. Although it is important to recognize that political activism in late 2000s provided crucial formative experiences for many young Egyptians, it is useful to remember that periodic street protesting, online campaigns, awareness raising stunts, and other forms of public dissent occupied only one aspect of their everyday lives. During in-between moments, that is, most of the time, they engaged themselves in other spheres of life such as studying, leisure, work (or finding work) and family. Thus, multiple life-spheres and trajectories within them represent an everyday dynamic in which the young had to navigate in their transitions to adulthood. For instance those, whose parents were opposition politicians, who had secured a job in civil society organizations, and whose friends were supportive of their oppositional activities, benefited from crucial synergies between work, family, friends, and activism. But others were not so privileged, while sustained participation in pro-democracy movements was further structured according to gender, class, region, connectedness, etc. The paper bases on 12 months of ethnographic fieldwork in Cairo between 2007 and 2011.

Taming the Uncontrollable Situation?: Towards a Critical Re-Examination of Cosmopolitan Modernization from a Socio-Spatial Perspective

What are the significance and problems in Ulrich Beck's concept of cosmopolitan modernization? How do the particular characteristics of a society change in relation to the influx of 'outsiders' across the nation-state? This paper aims to develop a new theoretical approach to the concept of cosmopolitan modernization by integrating a socio-spatial perspective that moves beyond nationalism and the nation-state as the relevant social actors. Beck’s argument has important implications for conceptualizing the role of complex and contradictory social, economic, and cultural processes associated with the influx of ‘outsiders’ across the nation-state? This paper aims to develop a new theoretical approach to the concept of cosmopolitan modernization by integrating a socio-spatial perspective that moves beyond nationalism and the nation-state as the relevant social actors. Beck’s argument has important implications for conceptualizing the role of complex and contradictory social, economic, and cultural processes associated with the nation-state. While Beck’s argument has important implications for conceptualizing the role of complex and contradictory social, economic, and cultural processes associated with the nation-state? This paper aims to develop a new theoretical approach to the concept of cosmopolitan modernization by integrating a socio-spatial perspective that moves beyond nationalism and the nation-state as the relevant social actors.

How We Cope: The Study of the Gendered Dimensions of Conflict on Women in the Niger Delta Region

Recent conflict events in the Niger Delta region have seen the changing faces of the impacts of the conflicts on women. There is an increasing use of violence and rape of women as a tool of warfare by both the militaries and the State security forces, thereby exacerbating the rise in new HIV infections in the regions. Also a number of women have become widows with enormous family responsibilities to cater for. Thus there is an increase in the number of female headed households (FHHs) in many parts of the Niger Delta region and Nigeria due to the death of a spouse in the conflict. A key argument advanced in this paper is that the women in the Niger Delta and Nigeria as a whole bear the brunt of the conflict in the region due to their low socio-economic position in the patriarchal society. Their limitations and resulting conflicts affect them disproportionately. Women constitute the most vulnerable group since they have limited access to land and resource, which is a crucial determinant of their access profile. This places women in a vulnerable position in terms of adaptation and resilience to shocks and stresses associated with the conflict. Despite their limitations, the women are not impassive observers of their situation in the conflict, but are active actors in the quest for survival and peace. By studying the gendered dimensions of social conflict, armed violence and peacebuilding we will be able to understand the gendered relationship which goes on from the household level to the general society, and how these relations invariably affect women’s vulnerability to conflict and conflict resolution.

Structurally Heightened Structurally Heightened Mobility of Population and Community: Case Studies from the Suburbs in an Indonesian Metropolitan City

Based on both qualitative and quantitative data of Indonesia, this paper is trying to accomplish two goals. First, the author grasps the current condition in the suburbs of Asian metropolitan cities whose mobility of population is structurally heightened. Second, the author examines the community in detail whose members are changing dramatically and whose old community it has replaced.

The rapid development process of Asian metropolitan cities is one of the most important issues in recent urban studies. Industrial products for global markets are produced in these areas. It turns out that the driving force of this development is deeply embedded in suburban areas which have newly developed towns and cities as Illinois. Professional social actors.

Governing Sustainable Seafood

The worldwide consumption of seafood is increasing year over year leading to more pressure on the remaining fishstocks and to expansion of aquaculture. The environmental consequences are substantial and create growing pressures for more adequate environmental governance responses. Recently, market-based approaches to sustainability seafood governance have gained considerable traction in global seafood provision. Born in part out of perceived failures of the state, a range of private-led governance approaches using price signals and market access as incentives for changing production practices have emerged. This paper provides an overview of these approaches in fisheries and aquaculture, including but not limited to NGO-led initiatives such as the Marine and Aquaculture Swell...
ardship Councils (MSC and ASC), and industry-led initiatives such as GlobalG.A.P. and the Global Aquaculture Alliance (GAA). The paper then discusses how these arrangements have led to the inclusion of new categories of private actors in the regulation of sustainable seafood (e.g. auditors), and to a new round of contestation between NGOs and industry actors such as retailers, who are seeking to counter the residual risk through a series of benchmarking exercises. The paper concludes with a discussion of whether and how the investment made in these market approaches have supplemented (or even replaced) state governance arrangements in promoting sustainable seafood production and consumption in the context of globalisation.

The Role of Social and Cultural Factors in the Involvement of Physical and Sports Activity in Mexico

Mexico is the greatest consumer of carbonated drinks and has the highest percentage of people who are considered overweight. Government actions have not adequately considered sports as a factor that drives social development. Part of this weakness in Mexico is a lack of specialized studies that identify the needs for physical activity, as well as the capacity of large corporations to exert influence on legislation through lobbying thus limiting the national Government’s possibilities to foster social development.

This paper presents results from a study that identifies some of the social factors that influence the possibility of a population’s involvement in practicing sports and physical activity, such as infrastructure, socialization experiences and different needs by gender, age, regional and cultural conditions. The study was carried out in the central-south region of Mexico, with students of upper high school of a semi-rural community. It is an exploratory study using a mixed methodology that was conducted between September and December 2012.

The results show differentiated consumption of physical and sports activities among the student population. The important role that public institutions play in marginal communities with low economic resources regarding health care, and the promotion of physical and sports activities within this population is highlighted. The results also suggest the vulnerability of these groups when growing with the economic interests of corporations due to the lack of regulatory policies to mitigate health risks.

Canadian Police and Legitimization Of Conducted Energy Devices (CEDs)

This paper focuses on the increasing adoption and deployment of Conducted Energy Devices (CEDs), one of a range of ‘less-than-lethal’ force options, by Canadian police. The paper explicates the legitimation of CEDs as a function of the intrinsic interaction of organizational dynamics, such as growing professionalization and concomitant credentialism of police practice and the agency of CED manufacturers. Four landmarks in the policing field generated by CEDs legitimation are enunciated as gatekeeping and structuring ideational processes. The paper concludes with a tritacta of resultant effects of the symbolic institutional value of CEDs in the policing field in Canada.

El Ocio Como Agenda Para Nuevas Políticas De Vida

Mi propuesta de ponencia para este panel aborda el tema del ocio en el siglo XXI, uno que merece mayor atención adscribiéndose así a una agenda de políticas de conciliación social de corte internacional. Lejos de pensar en las prácticas tradicionales de luchas políticas locales e internacionales, mi trabajo se centra en una estrategia molecular, rizomática que pudiera desplazar al campo nacional e internacional. En la medida que muchas de las sociedades contemporáneas confrontan serios problemas sociales en los cuales se observa una burocratización de la vida cotidiana, niveles de violencia altos, desempleo, multietnismo, precariedad socioeconómica y economías informales, como actividades que copan los tiempos y generan niveles significativos de ansiedad y salud. Ante este escenario, el ocio parece aparece como un resquicio cotidiano. En este sentido, propongo analizar aquellos factores socioeconómicos, políticos y culturales que deben reenfocarse para producir unas políticas de conciliación social donde el trabajo asalariado, no remunerado, informal, doméstico, la recreación, el consumo, la cultura y el ocio se recompensen con otra economía digna y sostenible de los tiempos e imaginarios sociales.

The Role of Leisure in the Reproduction of Inequalities: Puerto Rico Case Study

In the contemporary context of enduring economic crisis the concepts of poverty, inequality, inequity, and exclusion claim great discursive visibility and relevance in both, the academy and the media. The global reorganization of capital has intensified capitalism’s increasing trend of labor force exclusion and the possibility of a jobless future for younger generations and displaced workers. This is not the only phenomenon that threatens quality of life and social polarization in societies particularly hit by the economic crisis. Leisure practices and rituals have changed in this economic climate. After a brief analysis of the structures of inequality in Puerto Rico, relying on key socioeconomic indicators, recent government policies, enduring colonial-political arrangements, evidence of an increasing deterioration of the public arena and our participants’ testimonies on their consumer and leisure styles, we will like to argue that (1) the nature and meanings ascribed to leisure by Puerto Ricans have an impact on the reproduction of economic and social inequalities and (2) some of the activities that are identified as leisure constitute an important part of the strategies deployed by the disadvantage to lessen and neutralize the personal effects of social and economic inequality. Our conclusions will be supported by state of the art quantitative and qualitative research conducted by the Grupo de Estudios del Trabajo (GET) from the University of Puerto Rico during 2013. We will discuss our preliminary findings (a) on the allocation for leisure and (b) the most common activities taken as such (c) the meanings ascribed to them.

Fukushima Nuclear Disaster and Theories of Tort Law

The Fukushima Nuclear Disaster brought widespread and long-term damage, which forced traditional theories of tort law face with many difficult challenges. According to the case law, a wrongdoer should compensate any damage claimed by the victim, if the victim can proof that the wrongdoer’s act was a legal-sufficient cause of such damage. However, certain types of damage from the Fukushima Nuclear Disaster are not fit into the traditional theories of damage. For instance, how to calculate non-pecuniary loss suffered by an evacuee followed by the governmental instruction? As of August 2013, 81,300 residents (28,800 households) were still restricted their access to their home in varying degree. Among them, 24,800 residents (9,200 households) have their houses in the areas where the annual integral dose of radiation is expected to be 20mSv or more within five years and the current integral dose of radiation per year is 50mSv or more. How to calculate their fear during the evacuation? How to calculate their concern over their temporary housing? How to calculate their loss of hometown? In addition, statute of limitation put another hurdle for the victims. Moreover, the government liability is called into question. Some victims have filed lawsuits against the TEPCO and the government, even though the Dispute Settlement Center for Nuclear Disaster Compensation was established to assisting the victims. Thus, in my presentation, I will discuss the recent developments of tort law after the Fukushima Nuclear Disaster.

Moralist Trust and Rationality: The Individualization of Trust
This study discusses the individualization of trust. In the literatures on trust, there are two conflicting views on the definition of trust. Hardin (1992) argues that trust is based on the prediction about the behavior of other people. In contrast, Uslaner (2002) and Mansbridge (1997) assert that trust is based on moral values or altruism beyond the prediction.

We can apply this argument to generalized trust, or trust in strangers as well. Previous studies consider that institutional confidence and voluntary association membership are the two main explanatory variables to determine generalized trust.

Institution-centered approach asserts that monitoring and sanctioning the law-breakers by order institutions facilitate trustworthiness of people’s action. Therefore institutional confidence can enhance generalized trust. This approach assumes that generalized trust is based on the prediction about the behavior of strangers.

On the other hand, society-centered approach claims that voluntary association membership creates trust to members in belonging group, and it is generalized to strangers outside the group. This approach implicitly assumes that generalized trust cannot be explained by prediction, but it is based on moral values.

Thus, generalized trust has the predictive and moralistic aspects. We can call the shift from trust based on the prediction to trust based on the moral value as "individualization of trust." Then, what is the condition of the individualization of trust?

This study focuses the post-materialism argued by Ronald Inglehart. We can expect that trusting based on the prediction is rational for materialists who emphasize the existential security. On the other hand, trusting based on the internalized moral is to be rational for post-materialists who emphasize the more autonomous choices.

To test the hypotheses above, this study will make the quantitative-analyses based on the questionnaire survey data in Japan.

The Migration and Development Nexus: Gender Insights
Research on development and migration has mostly stemmed from an economic perspective (assessing the volume, cost and contribution of remittances to local development), largely overlooking women and gender issues. The New Economics of Labour Migration (NELM), the transnational paradigm and the livelihood approaches are known to have enlarged the scope of the migration and development nexus (Haas 2010). One aim of our paper is to review how gender approaches have also contributed to the shifts in the debate on migration and development and how gender issues have been incorporated.

On the other hand, over the last decade, abundant literature relating to the globalization of social reproduction (the so-called ‘global care chains’) has helped to make women’s work more visible. This literature has tended to highlight women’s crucial contribution to transnational reproductive labor (Hochschild 2000). However, it largely fails to capture the articulation of productive and reproductive strategies. This paper defends the necessity of rethinking the migration and development nexus according to the articulation of transnational households’ productive and reproductive strategies.

We will review the literature on migrations, women/gender and development. Then, on the basis of case studies, we will assess to what extent do migrants’ productive and reproductive strategies (care and remittances, saving and consuming, housing, health and education) determine the gender relations and the social mobility of migrant household members.

Social Networks, Networking, and Ethnic Group Membership in a Talent Pool
Even among highly educated professionals, minority ethnicities are disadvantaged relative to dominant ethnicities in access to organizational resources, power, and rewards. Social capital is an important factor in reproducing such disadvantages, as minority ethnicities have less access to and reap fewer benefits from social networks. While the general positive relationship between social capital and career success is well established, limited research has been conducted on how social capital is acquired following organizational entry, and how this process is affected by social group membership. Using a survey and ethnography methods, we conducted semi-structured interviews with a total of 16 ethnic engineers. Based on life history interviews, we address the common critique that focusing on structure and omitting agency fails to enhance our understanding of how practices and behaviors serve in (re)producing differences in network structures and their consequences.

Canadian Immigrant Women Engineers’ Work and Life: Experiences and Change
The number of women in engineering, in Canada, is growing, yet men and Canadian-educated women engineers continue to outnumber immigrant women engineers especially at the upper level of the profession. For the last 10 years, the majority of immigrants to Canada have been mostly comprised of highly educated, internationally trained professionals, many of whom are women. Many of these women hold university degrees in engineering and other academic disciplines and almost all of them have work experience in their professions. Yet few immigrants in the engineering profession are the first generation immigrants, and only a handful of them advance in their career, despite a decade long effort by Canadian educational institutions, the Canadian government, and Ontario’s engineering regulatory body to involve more women into the profession.

In this paper, I introduce the analytical complexities that I will examine in my doctoral research whose theme is an intersectional analysis of the changing experiences of immigrant women engineers in Canada, from various educational, ethnic/race/national origin and social class backgrounds. Based on life history interviews, completed by statistical and other research literature, this paper proposes research which will explore influential social and environmental factors that have

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
shaped immigrant women's professional and life experiences and contributed to their underrepresentation in the profession in Canada for the last 10 years, in an intersectional analysis of gender, race/ethnicity/birthplace, and class relations which considers changes or their absence over time.

*New Ways of Recruiting – an Interview of the SAF Efforts of Recruiting Ethnic Minorities*

The transition to an all-volunteer force in Sweden has meant that the Swedish armed forces (SAF) need to try different ways to recruit personnel. For countries that already have a volunteer army, there are almost always arisen recruitment problems. The new direction for the SAF, going from an invasion based defense to a more operational defense force with international focus, puts demands on cultural awareness and language skills among soldiers and officers to another extent than before. In November 2012 the SAF, together with the Swedish Public Employment (SPES) Service, started a joint project called preparatory military training. The aim of this project was to attract 500 individuals with a cultural background from outside the European Union, and language skills in other languages than Swedish and English, to start a 10 weeks long preparatory military training. Preparatory training was given to all participants at an insulin from another direction in the armed forces would look like, as well as get the opportunity to develop academically. Out of these 500 individuals, the SAF aims at recruiting 300 individuals to start the basic military training in the SAF. All participants live at the military barracks and receive free meals and they are allowed paid travel home four times during the course and are paid activity support from the Swedish Public Employment Agency. Men and women live separately with some facilities. The SAF and the SPES share 50% of the education and training at the barracks.

Phase two of the project starts in the autumn of 2013 and aims at attracting 300 individuals to start the preparatory military training. The paper assesses the effectiveness of this new and original project.

*Comparative Analysis of Regional Governance*

This presentation illuminates regional variations of industrialization through comparative analysis of governance for resource management on porcelain industry in Japan. The presenter analyzed how specific arrangements were formulated that designated the ways of managing resources for porcelain production and distribution. With comparative analysis of arrangements of porcelain manufacturing in three regions, the presentation shows how the relationships of political authorities and those who were engaged in the industry shaped the distinctive ways of governing resources in each of these regions. Analysis illustrates regional variations of managing resources for porcelains conditioned by different ways and degrees of involvement by regional political authorities and those who were engaged in porcelain production and distribution. The pre-existing practices and relations shaped the ways of organizing resources for industrialization in each of the regions even after the regime change in the late 19th century. In the region where the regional authority had claimed a strong command over resources for porcelain production and distribution, producers and merchants relied on guidance and support from the political authority to receive funding and other support for a further development. In the region where the political authorities did not interfere the way of using resources, producers and merchants organized resources to enlarge their activities on their own without little public support. The ways and degrees of involvement by the regional political authorities and their relations with those who were engaged in production and distribution shaped the distinctive styles of managing resources for porcelain production in each region. Comparative analysis illuminates different ways of governing resources for porcelain production within Japan at the end of the 19th century. The presentation will invite a further discussion of social changes by bringing other experiences in the world.

*Les Protestations Brésiliennes De Juin 2013*

Cette exposition a comme objectif présenter une morphologie critique des protestations brésiliennes de juin 2013 pour mettre en cause les sens politiques qui ont été dévoilés à partir de la visibilité du pouvoir des formes d'organisation horizontale et de l'action directe. Un des sujets plus significatifs est la question sur la mobilisation tant des militantes que des gens qui, en général, sont allés à la rue sans aucune unité idéologique ou de solidarité. Le « journées de juin » ont démontré le carrefour et la masseuse intensification d'un procès de mobilisation de la subjectivité, qui a été accumulée par les savoirs et technologies créées pendant la consolidation de la démocratie. Cependant, ceci a été produit à côté d'un déclin croissant des mouvements sociaux et des organisations de classe ouvrière. Les « journées de juin » présentent une problématique stratégique pour comprendre mieux la centralité de cette injonction généralisée à la participation et responsabilisation, de laquelle la mobilisation subjective est son principal effet politique actuel.

*Quality of Lawyers in Civil Litigation in the Era of Drastic Changes in Legal Education and Lawyer Population in Japan*

My presentation is based upon our empirical study on the quality of lawyers conducted in Yokohama District Court and Tokyo District Court. The number of lawyers in Japan has been rapidly increasing in the 21st century, e.g., 17126 in 2000 to 32088 in 2012. We have introduced the U.S. style graduate law school system on top of the traditional undergraduate law faculty system in 2004. The legal aid system has been drastically expanded with the completely new system called “Furusato.” These reforms was intended to enhance the lawyer’s access to justice and improve the quality of legal services, so that the Japanese legal profession is able to satisfy the increasing demands for quality legal services caused by the globalization. But these judicial reforms have been criticized by the bar association and many lawyers. The rapid increase of lawyers is most severely criticized. One of the main reasons of criticism is that the increase yielded poorer quality of lawyers. We have been doing several empirical researches to test this and other claims. The study I will report at this session is modeled after Prof. Richard Moorhead’s study on the quality of legal aid lawyers in U.K. One of the
striking results of our research is that the quality of legal services in civil litigation by younger lawyers is better than those of older lawyers.

The Participation of Women in Farm Management in the Development of Sustainable Food Safety: Case Studies in Switzerland and Austria

Family-managed farms form the heart of Asian and European agriculture and are essential for the stable supply of safe food. In Japan women are deeply connected with food safety and consumption activities (Nakamichi, 2010). In Switzerland and Austria, women's participation in farm management is also related to food safety. This paper examines specialized education for Swiss and Austrian women that encourages participation in farm management, which is in turn related to food safety.

In alpine Switzerland and Austria, Direct Payments support helps to maintain small-scale family farm management, and in particular, organic farming receives higher supports.

Austria has the highest percentage of organic farming (16.5%) among EU Member States, and in a semi-mountainous area of small-scale management, it is especially high. Direct Payments support is higher than the EU average, resulting from the structural Agricultural Policy (OPUL). In addition, women comprise 36% (2012) of farm managers, a high percentage within the EU.

Organic farming is carried out especially in mountainous regions of Switzerland, and farm incomes receive a high degree of direct support. In a semi-mountainous area of small-scale management, organic farming holds the highest percentage. Over 11% (2011) of farm households in Switzerland are organic, and among women managers, the figure shows higher.

Examples from Switzerland and Austria indicate that women play a large role in the stable supply and safety of food, but both countries traditionally favor sons for farm succession. Women are rarely treated as successors and usually enter farming by marrying farm successors, however both countries have well-established systems of vocational training for female successors. Some women trained in home economics have achieved Meister status as farm managers. Reforms in vocational education are encouraging more women farm successors, and the number of young women receiving specialized agricultural qualifications is increasing.

Struggling Against Water Environmental Inequality through Dialogue and Cooperation: Micropolitics Under Suppressed Public Sphere

China has enjoyed rapid economic growth for decades, while not controlled environmental pollution effectively, even brought pollution accidents and conflicts frequently. Especially water environmental pollution has brought sever conflicts in rural area to challenge local governance in which government and industries maintain sizable advantage to convert local natural resources into their own wealth on the one hand washing their wastes to downstream farmers on the other hand. Journalists, NGOs and scholars have been aware of this water environmental inequality in rural China as a “structure” to be changed by any institutional reform, however, more endeavor to find a fundamental approach to deepen the reform should be investigated in both theoretical and practical way. Referring to experiences in Japan where severe pollution hazard like Minamata and Haitai disease caused by untreated industrial wastewater under rapid economic growth in 1950s to 70s, it reminds us a series of lawsuits by victims with their supporters were followed by institutional reform for pro-victims. However, such lawsuits succeeded in Japan not only due to growing of social movements but also due to growing of public sphere to allow broader people to join in. Although political reform has been discussed for many years in China, the public sphere is still suppressed by social control of communist party and the government. In this study, promoting “dialogue and cooperation” as an alternative approach to struggle against such a structure in China will be discussed through a field survey on NGO activities in one basin and participant observation on a pilot project of “community roundtable meetings” in another basin where water pollution has been serious. Toward mitigating an inequality under the suppressed public sphere, we could find a possibility of breakthrough by “micropolitics” among local stakeholders, while revaluing socio-ecological relations which residents/NGOs have woven through their own practices.
What lessons have been learned from this pilot program? Jack Ox will discuss the problems we encountered and what is necessary to move forward. These issues will be discussed in context with the art-sc world as it develops at breakneck speed. What are the dangers art-sc collaborations will be likely to confront in the cycle of art-world attention and what that means? What is the best mix of art and science? Should one domain dominate the other? A most important question is how do we judge the collaboration; are some collaborations between an artist and a scientist not art/science? Supported by the National Science Foundation under Grant No. 1142510

SHAW, ISABEL (Imperial College London)

Accountability To Environmental Policy: Renewable Technologies and Sustainable Housing Development

Complying with policy requires of practitioners that their actions are held to account; how does this context of sustainable development of the social housing sector and its use of renewable technologies. The building of ‘sustainable housing’ is integral to UK government initiatives to reduce energy consumption, fuel poverty, and carbon emissions, and to generate renewable energy. In this article, we examine how ‘accountability’ is promoted by both the UK government’s environmental policy and local councils in their planning criteria. We investigate how accountability is enacted in, and generative of, the practices of sustainable housing development by housing professionals. We identify a key process of accountability – a politics of making environmental sustainability visible through demonstrating the utilisation of renewable technologies. For housing developers, the choice to install such visible renewable technologies is part of their practices to strategically and creatively meet the policy criteria and the local council’s target for planning permission. These practices reveal much about the competition and politics that underpin how local planning authorities and housing professionals work together to achieve environmental accountability in a bid to comply, win building contracts, and demonstrate their sustainability credentials. We demonstrate how these practices have implications for potential energy provision and consumption.

RC23-416.1

OZAKI, RITSUKO (Imperial College London)
SHAW, ISABEL* (Imperial College London, isabel.shaw@imperial.ac.uk)

Transforming Energy Provision and Reducing Carbon Emissions

Our society is increasingly using more electricity. We have recently seen many changes in consumer and domestic electronics: mobile phones, tablets, and Internet hubs are, for instance, now part of our everyday scenery. It is also expected that radical changes in heat and transport services, such as domestic electric heat-pumps and vehicles, will happen in a near future. As a result of this change, it is anticipated that domestic and commercial electricity consumption will rise, which then will increase a level of carbon emissions. The problem is how our society will cope with it? Various actors are engaged in initiatives seeking to tackle this problem. Engineers are developing a number of possible solutions by, for instance, an analysis of how transformation processes in energy systems are affecting and a scientist not art/science?

But there also exists sex work which includes “unpaid” sexual intercourse, such as “Soap land”. In soap lands, CSWs have sexual intercourse with their customers but this problem has been left vague for a long time in Japan. In 1990s, there was a heated discussion about “Should prostitution be made legal?” in Japan. But little attention was paid to the feelings and opinions of CSWs. Presently Soap land seems to coexist with society in harmony with Japanese original culture and law system. It is an important challenge for the future sex work in Japan how to keep this harmony unchanged.

Masculinity, Racist Experiences and Repudiation Of Homosexuality: How To Deal With Research Results In A Racist Public Discourse?

The results of our empirical studies about male youth in Germany show that young immigrants are often confronted with institutional and everyday racism, experienced as a form of stereotype threat. At the same time, they are actively stereotyping and discriminating others. As researchers, we are challenged to not only take our research experiences but also to deal with the young men’s discriminatory practices, in particular the rejection of homosexuality and homosexuals, closely connected with complex images of masculinity and doing masculinity in peer-groups. Additionally, the experience of homosexual immigrants who with discrimination must be taken into account.

However, the publication of such results is problematic: In some European countries a tolerant and open attitude towards homosexuality has become a cornerstone of judging the potential ability of immigrants’ successful integration. In these discourses often two racialised images are constructed: the native ‘own people’ are contrasted by ‘Muslim immigrants’. While the former constitutes the ‘tolerant’ side, void of any negative attitudes towards gay and lesbian people, the latter is constructed as deeply homophobic. These discourses have polarizing effects and facilitate exclusionary attitudes towards immigrants. In this constellation the publication of research results about the intersectionality of masculinity, racist experiences and negative attitudes towards homosexuality becomes a walk on the ridge. We have noticed that the focus of attention is shifted to ‘their’ homophobia which is constructed as an effect of Muslim culture and its primitive and uncivilized patriarchal values, while the racism experiences of the young men are then usually pushed into the backgrounds.

In our paper we will present key findings of our studies and we will share our experiences with the publication of such results. Our aim is a discussion not only about ethical considerations and responsibilities but also about how to actively engage in altering the racist public discourse.

Sociality and Individuality of Language in Durkheim and Bergson

The purpose of this presentation is to discern the role of language which we use to recognize ourselves and objects, and the phase of the sociality and individuality which language has. With this intention, I’ll compare the category theory of Durkheim with Bergson’s language criticism.

Human being differs from animal in that he uses language. The man synthesizes the special, the individual and the by the sign did a man became a human being.

Bergson opposes two plans of the object recognition method, that is, the analysis of abstract concept and, by exchanging this concepts, he can communicate with others who have their own experiences.

About this language, Durkheim emphasizes that it is given by society. A concept is a kind of specific concept. He thinks that the concept is essentially an imperfect representation. The sign is a system preceding the individual’s birthand given by the society. Not until he thought abstractly by the sign did a man became a human being.

Durkheim, a contemporary of Bergson thinks that the self is socialized itself, and the soul of the society is immanent in the language supporting our thinking. But Bergson opposes two plans of the object recognition method, that is, the analysis that comes from the outside and the intuition that come from the inside. He doesn’t consider that the essence of the object can be perceived from the outside, express itself by symbols, being incommensurable with something else. In opposition to it, he considers that what is gotten by the analysis of the outside
is only inert, translatable in words, the common elements given by the whole society, therefore impersonal and abstract state. In order to recognize the aspect of the concrete and lively human life and society as it is, we have to inquire critically again the sociality which language has.

OZEN, HAYRIYE* (Attilim University, hozen@atilim.edu.tr) OZEN, SUKRU (Yildirim Beyazit University)

Environmental Movements Against the Coalition of the State and Capital: Anti-Gold Mining Struggles in Turkey

This paper focuses upon the question of how interactions between environmental movements and corporations and the state shape environmental conflicts and influence the consequences of these conflicts. It comparatively examines three cases that involve different levels of conflicts on the issue of gold-mining in a range of local settings in Turkey, namely, Artvin, Usak, and, Izmir. The data of the study is collected by conducting field research that includes in-depth interviews with the protestors, local people, company managers, and local governmental authorities, and by doing document analysis on the basis of the news in the daily newspapers, company reports, and web sites. Our findings indicate that state authorities and mining multinationals form a ‘anti-mining’ coalition against environmental protesters, developing common strategies and tactics against the protests. The intensity of conflicts between the environmental protest movements and the anti-mining coalition is highly related with the effectiveness of the strategies and tactics that each party to the struggle followed. In those cases where one party is highly effective while the other is not, particularly Artvin and Efemcukuru cases, the conflict is at the lowest level. While the protest movement was the dominant in the Artvin case, the anti-mining coalition has been the dominant actor in the Efemcukuru case. In Esme case, both protest movements and anti-mining coalition are effective to some extent, making the conflict relatively more intense. Accordingly, environmental movement in Artvin is the most successful one in terms of producing intended outcomes, whereas the movement in Efemcukuru is the least successful one. In Esme, both parties to the struggle have some successes and failures.

OZEN, HAYRIYE* (Attilim University, hozen@atilim.edu.tr)

Radical Left Wing Groups and Environmental Mobilizations in Turkey

A number of protest movements emerged in Turkey over the last decade against big investment projects such as hydroelectric power plants, goldmines, thermal power stations, nuclear power stations, and dams. Envisaging these struggles as part of the broader anti-capitalist struggles, left wing groups heavily involved in these mobilizations in order to direct their opposition to neoliberal capitalism and corporate globalization. This study focuses on two environmental protest movements that emerged under the leadership of the radical left wing individuals and organizations: the movement against hydroelectric power plants in the eastern Black Sea region, and the movement against goldmines in the Aegean region. Examining the effects of the leadership of the radical left figures on these two movements, it argues that while the involvement of the left wing individuals and organizations proved decisive in the generation of these grass-roots mobilizations, it also simultaneously undermined the same movements in various ways. The leftist figures played critical roles in the emergence of these mobilizations by raising critical awareness in local people concerning investment projects, by providing them discursive frames to view investments and environment, by providing resources in the form of information and materials, and by connecting local protestors to the leftist networks. Yet, they also influenced the movements in negative ways by preventing the involvement of liberal groups to these movements, and by carrying over the cleavages and clashes between the leftist groups. Moreover, the involvement of the radical left groups is used by the state as a pretext to criminalize and stigmatize the protestors as well as to repress the environmental movements.

Interlocking Directorates and Capitalist Class Formations in Turkey: A Study on the Listed Firms in Istanbul Stock Exchange and Istanbul Chamber of Industry (ISO 500)

In recent years, corporate networks and board interlocks have drawn considerable attention in academic works and are the subject to growing research worldwide. This paper aims to contribute the existing literature with a modest exploration into the structure of the corporate governance network and interlocking directorates in Turkey on which systematic research are extremely limited. Unsurprisingly, a few number of existing studies merely focus on technical/practical issues such as problem of coordination and innovation, building the ways to decrease transaction costs, experience sharing and so on, in dealing with the corporate networks of Turkish companies. In this study we will, at first, develop a critique of those mainstream approaches to the corporate networks in Turkey on the basis of their shortcomings in explaining/discussing the political economic consequences of those ties. On the other hand, through an empirical study investigates the interlocking directorship and the capital relations among Turkish companies listed in Istanbul Stock Exchange and ISO 500 (Istanbul Chamber of Industry) respectively, this paper question whether those corporate-corporate connections have played significant roles in the process of capitalist class formation in Turkey.

What Does Gezi Park Resistance Mean in Turkish Democracy?

Justice and Development Party, which has been in power for eleven years in Turkey, has its roots in Islamism. From the beginning, it has been a source of suspicion toward secularism for most of the modernists in the society. The party managed to increase its votes in three consecutive elections, and it had the support of half of the voters in the 2011 elections. The rising popular support for the party also triggered the short falls and threats of majoritarian democracy. The belief that democracy was under threat, and the fear of authoritarianism gained prominence. Consequently, wide-spread populist dissent erupted in the summer of 2013, after protestors in Gezi Park were brutally suppressed by the police force. Gezi Park protests were an expression of the ‘pluralist’ anxieties and democratic hopes of the people. Gezi Park Resistance revealed at least two important things. First, they showed that the opposition in Turkey is not weak, but fragmented. Second, and more importantly, they showed that the popular opposition cannot adequately express itself through conventional political channels. The disconnectedness between the protests and the institutional/traditional politics makes the democratic role of the opposition more critical. There is need for discussing (new) methods and instruments to make fragmented popular opposition politically more effective on a pluralist democratic basis. The outcomes of these discussions may be helpful in analyzing the social movements of the 21st century. In this presentation, a qualitative analysis of the texts which appeared during the Gezi Park events on pro-government and non pro-government press will be used to discuss the structure and the aims of the popular opposition in Turkey, and to investigate the similarities and the differences of Gezi Park protests with other social movements of the 21st century, such as the Arab Spring, and Occupy Wall Street.

The Culture of Women's Soccer in Senegal: Reconciling Dissonance Among Representation

What does it mean to be a “footballeuse” (a soccer player) in Senegal? In Senegal, women's soccer is more than a game; it is a counterculture that promotes egalitarianism and promotes exchanges between the new Pentecostalism coming from the former Third World and Charismatic movements present in many Christian denominations and churches in Europe, including the Orthodox Church as is well documented in this paper.

When we speak of the need to reconcile or harmonize the work life and the world of the family, we assume that we speak of a theme that involves absolutely all the women, specifically those who work outside the home. But the reality is much more complex, it is not only a matter of the scope of the individual, but also of the corresponding mechanisms for the good of individuals and society.

The transformative effect of ongoing consumer advocacy efforts is also reflected in the value regulation etc. I want to focus on the basic mechanisms of self-organization of the emerging social system.

This paper reports on a project exploring the institutional design of a new national regulatory system. It draws on an analysis of government drivers for reform, including instances of regulatory failure that led to patient harm. It also incorporates a literature review of key practical texts including the regulatory impact statement and the consequential legislation to explore how the reforms were designed to affect relations between patients and professionals.

The introduction of the National Registration and Accreditation Scheme for Health Professionals in Australia in 2010 consolidated arrangements across fourteen professional groups who were previously registered separately across each of Australia's eight jurisdictions. Each state and territory also had separate arrangements to assess the qualifications and experience of health professionals who qualified outside Australia. These new arrangements brought into place consistent requirements across continuing professional development, criminal history records, English language, insurance and recency of practice for over half a million practitioners.

The transformative effect of ongoing consumer advocacy efforts is also reflected in the legislative requirement for community members to sit on all decision-making bodies that administer the Scheme. Another significant outcome of the Scheme has been the provision of a single register of practitioners that provides improved transparency with patients now able to directly access information about the registration status and qualifications of their health professionals.

Dialectic of Enlightenment's Critique of the Civilizing Process As Aufhebung of a Debate

During November and December 1941, the Institute of Social Research delivered a series of public lectures at Columbia University on the question of how National Socialism should be characterized. The positions within the debate could roughly be divided into two major groups: on the one hand stood the conclusion that capitalism has gone through a major transformation, leading to a new order, that of State Capitalism (Pollack); and, on the other hand, a depiction of the current capitalist system as a totalitarian-led monopoly economy (Neumann and the others). Dialectic of Enlightenment – written by Adorno and Horkheimer in 1944 in exile in the USA but first published in 1947 by the small and actively anti-Nazi Querido Publisher in Amsterdam – followed this debate and is, in a way, a response to the questions posed in 1941, developing however yet another interpretation. I would like to argue that the book does not make use of the State Capitalist thesis, as forwarded by most literature, but can rather be understood as a liquid democracy. People should have the opportunity to participate in political affairs complementary to delegating the powers of the sovereignty to a body of human elected from time to time for four or five years. "Liquid Democracy" will give people the possibility to campaign effectively and collaboratively for the issues they are concerned about. The paper will show which social, political and technological concepts for such a liquid democracy exist. Which discourses in different areas and scientific disciplines occur, and which experiences and evaluations are available.

PAGLIUSO REGATIERI, RICARDO* (University of São Paulo, ricardopagliuso@hotmail.com)

Dialectic of Enlightenment's Critique of the Civilizing Process As Aufhebung of a Debate

The paper will start with a zoomed-out investigation of the urban socio-environmental problematics in order to a) identify and untangle the intertwined economic, political, social and ecological processes that together form uneven and unjust urban assemblages, b) trace and clarify the concepts of vulnerability and resilience and c) uncover their underpinning discourses. This "zoomed-out" identification of the socio-ecological urban problematics and vulnerabilities and the discourses behind them will be instrumental to "zooming-in" on possible entry points for new discourses for disaster resilience and institutional change in disaster intervention. Through the lens of the long-term reconstruction period, I will analyze the potential of the development and implementation of alternative housing policies in a) enhancing empowerment and social resilience, b) promoting integrated modes of urban development, and c) revealing new institutional perspectives in dealing with disaster governance.

The paper will end with a discussion on the potential of sustainable platforms of dialogue which necessitates a strong presence and proactive reproduction of social capital. What is the long-term potential of social mobilization in a) sustainably and collectively building-up of social memory for future resilience, and b) identifying and addressing possible weaknesses and challenges faced by the different bottom-up agents in their relations of cooperation, including with the state?

Systemic City Interdependencies In Advanced Producer Services: The European Space In Transition

The paper reports on an analysis of systemic city interdependencies generated by key agents in world economic transformations - global advanced producer services (APS) which use global/cities as nodes for flows in their worldwide occupational networks. The analysis draws on and develops work undertaken in a major study funded by the European Spatial Observation Network (ESPLAN) which set out to examine Europe's position in the networked global economy and the implications for policy: TIGER - Territorial Impact of Globalization for Europe and its Regions.

Europe provides a unique contemporary territorial frame through which to observe the success of policy transfer and upscaling relevant to sustainable cities in globalization. EU urban and regional cooperation programmes and funding has been a major strand of cohesion strategy for over a decade, moreover European geo-political rescaling in successive waves of enlargement has extended policy collaboration to an ambitious supra-state/regional level.

The authors identify two intersecting spatial processes in European APS-generated city interdependencies: A process of intensifying city-network links and functional specialization at a macro-region scale; and a process of extending city links and scale specialization connecting urban Europe to distant economic macro-regions. The interaction between these two processes points to the complex nature of city interdependencies in economic globalization and a need to de-territorialize urban sustainability prescriptions.

Positive Aging and Leisure: Role of Leisure in Healthy Ageing of the Elderly in India

The ageing of the population is a world wide trend; anticipated to have wide spread and significant social, economic and infrastructural impact. WHO defines healthy ageing as a state of complete physical, mental and social well being; and not merely the absence of disease and infirmity. Healthy ageing depends upon genetic, environmental and behavioral factors, as well as broader environmental and socio economic determinants. It is particularly important for the elderly to remain physically active as this can decrease the risk of many age related conditions. The study aims to find out the role of Leisure in promoting healthy ageing among the elderly in India urban society.

Hypothesis constructed to direct the study are:
1. Involvement in Leisure activity results in healthy ageing.
2. Type of Leisure activities play a role in enhancing healthy ageing person.
3. Every Leisure activity does not have a positive role in healthy ageing.
4. 206 respondents aged 60 and above from urban settings of a fast developing town of India were selected through a stratified disproportionate random sampling. Semi structured interview schedule was used to collect the data; there after statistical method was used for the data analyses. Findings reveal that:
   - Health has two broad parameters, mental health and the physical health.
   - Type of the leisure activity affects the mental and physical health differently.
   - Passive leisure activities may have a positive role in the mental health but can negatively affect the physical health.

In the kibbutz culture and changes in the plant through life cycle theories and studies of kibbutz plants. This is done by studying the interplay between changes between processes occurring in many kibbutz communities by analyzing two case between 2009 and 2013. This enabled us to better understand the social and organizational processes that occurred in the community and in the plant.

The main findings show that both kibbutz communities underwent far reaching changes and at the same time so did their industrial plants. But, while the kibbutz communities limited their steps towards privatization the plants went all the way – the one plant has diminished in size as it sold out most of its manufacturing activities and now it concentrates mainly on selling and servicing products it used to manufacture. The other plant has grown and thrived but abandoned most of its democratic characteristics in favor of bureaucratic ones.

What Are the Opportunities for Social Investment in the Continental European Welfare States?

With their passive, employment-based, status-preserving, social insurance and male-breadwinner oriented welfare states, continental European countries are the least likely cases for social investment policy innovation. Nevertheless, some continental welfare states have introduced social investment reforms. While both the Netherlands and France have a similar legacy of a typical continental European passive social insurance-based welfare state, they have changed in various ways since the early 1990s. The Netherlands has made a strong social activation turn in social security, coupled to a more “flexicure” service-based labour market. In France, there has always been a strong policy legacy of pro-natalist child-care support. Recently, an important policy focus has been paced on the Youth in France. In both these countries, social investment policies have come under pressure after the 2008 financial crisis. Some policy areas (like work-life reconciliation policies) seem to have been hit harder than other areas (active labour market policies).

Moreover, there is also substantial variation across countries. How to account for this? By analyzing the reform trajectories with respect to social investment both before and after the 2008 financial crisis, the paper assesses the (variable) opportunities and related feedback effects for social investment in continental Europe.

PALMBERGER, MONIKA* (Inst Study Religious & Ethnic Diversity, palmberger@mmg.mpg.de)

Feelings of Ambivalence: Ageing Labour Migrants in Vienna

This paper analyzes feelings of ambivalence first generation migrants in Vienna are confronted with, particularly in relation to their sense of belonging and place in society. It focuses on the two biggest migrant groups in Vienna, who came as labour migrants from Turkey and former Yugoslavia. Most of them immigrated to Austria as young adults and – despite of the original plan to remain only for a short period of time – they stayed and grew old there. These labour migrants have now reached retirement, a phase of life that is characterized by reflecting on the personal migration history as well as by thinking about plans for late life.

Vienna’s labour migrants have long held the dream of returning to their country of origin, at the latest when they would retire. By the time of retirement, however, feelings of estrangement from the home country prevail and many labour migrants realize that the old home is only preserved in their memories. On the other hand, they do not fully feel at home in Vienna either, even when their children and grandchildren live there. This is complicated by the status loss many experience with retirement. Once welcome as important work force, in the post-retirement phase labour migrants face marginalisation and a lack of state responsibility for ensuring their well-being in old age (e.g. inadequate state pensions and lack of culturally sensitive care). The paper analyzes these feelings of ambivalence among ageing migrants in Vienna and the strategies they assume in dealing with them. Finally, the potential of the notion of ambivalence for the experiences of migrants beyond the particular case study is discussed.

Informalization of Labour: Recent Trends in India's Urban Economy

Informalization of labour: Recent trends in India’s Urban Economy

Urban way of life is generally considered to be associated with industrial production. Reality in most third world cities, however, indicates otherwise. Only half and sometimes less of urban population finds employment in factories or similar organizations. Rest all are engaged in ‘informal’ economic activities which are casual, unskilled, with no fixed working hours, low income, with nature of work largely fluctuating and seasonal. Several studies and reports have come

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
out in last twenty years, which depict the miserable working conditions of India's informal sector workers. While workers in the informal sector contribute a considerable amount of output to the country's GDP, the conditions under which they labour are usually deplorable. Although precise data is not available, we can safely say that nearly all workers in the informal sector lack any form of social security. India has a labour force of nearly 400 million persons, about 13 percent of the entire world's labour force. More than 70 percent of the nonagricultural labour force is in informal employment. If we include agriculture into this, it will be over 90 percent. Work in the informal sector is so common today that it is almost a norm. Today, due to policies of globalization, facilitated by advances in technology, labour is losing its formal and organized character. Workers are divided into two groups, who are employed and who are in the reserve army of labour, willing to do anything to obtain employment. Large number of workers in India, who form this reserve army, miserably wander to and fro between cities, town and villages, living in different phases of employability in seasonal cycles. This paper attempts to understand, based on available literature, trends of informalization in the fast changing employment scenario in Indian urban economy.

Examining the Manifest Function and the Latent Function of Japanese Class: Focused on a Example of Public Middle Schools in Osaka

This presentation examines, from the viewpoint of the manifest function and the latent function, extensive adaptive function that Japanese classes could potentially play. To better understand this issue, the author conducted an investigation at public middle schools in the Kansai area in Japan from 2009 to 2012. The investigation combined participant observation, semi-structured interviewing, and description-type questionnaires. M-GTA technique was used to analyze the field research data.

Results obtained from data collected via participant observation and interviews suggest the follows. Besides functioning as a supplementary lesson for Japanese language and other subjects, the Japanese class also provides a place for "feeling of security" as well as "maintenance of mother tongue and native culture". We can say this is the manifest function of Japanese Class. Apart from such conventional role, Japanese class has demonstrated a crucial role in facilitating intercultural understanding and cultural exchange. Newcomer students, sharing the mutual identity of a minority in class, were observed helping one another to cope with problems and thus create a more comfortable learning environment in school. Then, Japanese class also offers a career role model which could potentially affect newcomers' career choice in the future. And this is the latent function of Japanese Class that we cleared.

In summary, the Japanese class offers a place for interaction with Japanese students to share their experiences; an opportunity to re-identify one's own root; a place to obtain sense of self-realization and recognition; as well as a channel for resource procurement. Hence, it is not only the manifest function but also the latent function of the Japanese class has been observed in this study.

Cyberspace and Cross-Cultural Relationships Online

Previous studies claim that intermarriage dating sites are new digital technologies that have transformed the mail-order bride business. It is generally assumed that, when women from developing countries turn to intermarriage sites, economic deprivation and opportunities are the main driving motivation. What is ignored in such accounts is the role of desire for love and intimacy. Does the presence of economic and social gain in cross-cultural relationships exclude the fact that women are seeking intimacy in online contexts?

This research seeks to understand why women in Thailand turn to intermarriage dating sites to pursue relationships online and why intermarriage dating sites appear to be displacing other ways of meeting foreign partners. It draws in-depth online and offline interviews with 24 Thai women who have experienced online dating. The research shows that the development of ICTs and increased accessibility of the Internet in the context of globalization and transnational networks allows women to consider a wider set of possible lives and partners than they ever have before. Although some women might be confronted with dilemmas or stereotypes of seeking cross-cultural relationships online, almost all of the women interviewed perceived intermarriage websites as an important channel leading them to meet and fall in love with Western men in the Internet era.

Delivery Of Quality Education In Global Era

However, education and skills have also played key roles. Education has generally supported rapid economic growth through encouraging foreign investment, enabling technology transfer, promoting productivity and progressively upgrading the skills base as required for each successive economic shift to higher-value-added manufacturing and service industry. Education has also played generally positive role in promoting relatively cohesive national identities. Our key tasks in relation to each of our target countries were four-fold. The first was to identify the points in recent world history at which each country made a deliberate choice to forge a stronger integration between respective domestic systems and the global economy; the second was to understand and determine the trajectory of progress towards each country’s goals; the third was to provide an assessment of the contributions made by education and education policies to each of these goals. The fourth was to analyse past policies for their impact on these goals and current and proposed policies for their likely impact in the future.

While many of our most important challenges have their roots in our history, there are important new opportunities and challenges emerging in the new century. However, to underestimate the new opportunities and challenges, or to locate ourselves as victims, would be an historic mistake. While some commentators despair at the complexity of the current global environment, particularly with reference to the welfare of developing nations, we take a slightly different view. While cognizant of supra-national developments, we cannot stand by and watch the erosion of our efforts to build a democratic society.
forms are leading China from one unequal citizenship regime to another unequal citizenship regime.

'Supply Chain Solutions' at All Costs: The Case of Linfox and the Transport Workers Union in Thailand

Linfox is Australia's largest privately-owned logistics and supply chain company which provides transport and delivery services across the Asia Pacific region for the world's biggest consumer goods companies and retailers. In Thailand, Linfox provides services for four distribution centers of Tesco Lotus (a joint venture between Thai conglomerate, Theoma, and Tesco PLC, the world's second-largest retailer after Wal-Mart). Work conditions have steadily deteriorated over the past ten years (serious injuries including deaths caused by stress, exhaustion and falling asleep at the wheel) and reached a breaking point in January 2013 – the same time as a nationwide minimum wage policy was put into effect on January 1st 2013 – a controversial policy that prompted many companies to increase working hours, reduce benefits, lay off workers and/or close down their factories. The Linfox truck drivers had no choice but to go on strike but their action only resulted in the dismissal of fifty-six union members and refusal from management to further negotiate with the workers. This paper examines the 2013 dispute between management and 430 members of the Transport Workers Union who work as truck drivers for Linfox – a multinational transport company which first started its operations in Thailand in 1992. Based on interviews conducted in the field, this paper will provide an analysis of the struggles confronted by workers (whose several attempts at forming a labor union were shut down by management) with the aim of better understanding global corporate strategies and the challenges posed to worker solidarity. Since these are not new challenges, are there really opportunities then for new forms of resistance?

PANTUMSINCHAI, PENN* (University of Hawaii at Manoa, ppantum@hawaii.edu)
The Future with Powerful Consumers: A Case Study of Kickstarter

In our technologically advanced modern age, the power of production has shifted from the producers to the people. Everyday consumers are taking a more proactive role in the way they buy, use, and mold products to their needs and purposes. These new-age consumers are changing the way corporations produce products and are forcing corporations to acknowledge the wisdom, knowledge, and creativity that consumers have to offer. As part of this developing phenomenon, crowdsourcing has become a new practice of corporations and small-time producers. Crowdsourcing is the idea of soliciting contributions (be it money, ideas, or labor) from a large group of people (such as a virtual community). Kickstarter is an American-based, private-for-profit company founded in 2009 and dubbed "the world's largest funding platform for creative projects" (http://www.kickstarter.com). A platform in which producers of any kind (films, games, music, art, technology) can ask for donations for creative projects, Kickstarter puts the power in the consumers' hands. People have the option to donate not only how much money as they want to the over 100,000 projects open for funding. The design seems to have won yet with controversy. Kickstarter does not provide any regulation in terms of completing the projects and delivering to the consumers. Unsurprisingly, there have been numerous projects that have been funded but not finished and delivered to the backers' (i.e. funders). By analyzing the Kickstarter community through Consumer Culture Theory, particularly focusing on the top funded projects that have not been completed, the sociological expectations and desires of the backers are understood. As new-age consumers supporting local businesses or individual creators, they have a desire to have creative and funding control over the production process. Conversely, the goals of the producers are also analyzed to provide a larger picture on the effectiveness of a possible future of consumer-sponsored production.

Participation in Voluntary Organizations and Civic Integration of Immigrants in Crisis-Stricken Greece

During the last two decades Southern European countries, which were in the past a labour reserve for Western Europe and North America, experienced migration transition to host societies. A number of factors explain this transformation; their geopolitical position, the improved socioeconomic situation and the fact that they are part of the European Union. The recent economic crisis seems to have affected the size of immigration flows in Europe while it raised new issues related to the integration of immigrants in southern European host countries and the challenges faced by the latter for maintaining social cohesion.

Migration research in Southern Europe focuses on the immigrant characteristics and the integration opportunities of immigrants. The recent emergence of immigrant associations and voluntary organizations has not been accompanied by an extensive study of the interactions between immigrant and intermediary groups. Immigrants in voluntary associations and civic integration in Southern European and more particularly in Greece. Moreover, the ongoing economic recession has had an immense impact on the participation and civic engagement of immigrants in host countries.

The paper aims at unveiling the factors which are related to the participation of immigrants in voluntary associations and the implications of immigrant participation for their social and civil integration in host countries. Firstly, the paper will review the relevant literature in Southern European countries and then the situation of immigrant participation and civic engagement in Greece will be presented. The paper will be solely based on a comparative analysis of research findings emanating from two consecutive research projects aiming at the study of immigrant participation in voluntary associations at the start (2009-2010) and in the midst of crisis (2013) in Greece. Both quantitative and qualitative data will be used to reflect on the deficits and the challenges of the EU and Greek migration policy towards immigrant participation and civic integration.

PAPAKOSTAS, APOSTOLIS* (Södertörn University, apostolis.papakostas@sh.se)
The Creation of Peaceful Neighbors and Calm Swedes

The Creation of Peaceful Neighbors and Calm Swedes

A discreet aspect of everyday life in Scandinavia is the relative absence of feuds between neighbors and the peaceful atmosphere that prevails in neighborhoods. It is rather difficult to find shouting Swedes and in criminal statistics there are rather few incidents of killings between neighbors. Another aspect of Swedish everyday life is that that, when asked, two of three Swedes state that they trust other people.

In this short historical expose the author connects the absence of feuds between neighbors in everyday life and the high degree of trust prevailing in everyday life in Swedish society. It is argued that the regulation of "neighbors war against neighbors", in essence the regulation of the inter-human space between neighbors, early in Swedish history pacified the relations between neighbors and created a fertile ground for the generalization of trust from few people to many people and for the creation of an atmosphere of trust. The author argues that it was the spread of topography and cartography through agricultural reforms before industrialization that created objective representations of property and thus eliminated boundary feuds between neighbors. By examining topographic maps before and after the reforms the author discusses how the regulations and objective representations of the physical space regulated the inter-human space.

PAPASTEFAVNOU, GEORGIOS* (Leibniz Institute for Social Sciences, georgios.papasteфанou@gesis.org)
The Day after: The Effect of Diary Timing on Time Data Analysis

As proved in psychological research, human memory is deceiving and we tend to forget certain events (see e.g. Kahneman, 2004), especially if they were of little importance – such as daily chores or random housework-related tasks. However, these minor episodes are important in time data analysis, as they can tell much about the differences in time-use patterns or time allocation across the society. This fact has important implications for the time-data validity. If filling in of the time-use diary is postponed by the respondent until, for instance, the day after the activities took place, the record is already subject to substantial distortions. Some episodes are simply being forgotten. It results in diminished sequence variability, and extended episodes of the typical activities - at the expense of the less usual ones. What is more, it has an effect on the differences in time allocation as shown in cross-sectional analysis. The day when the diary was filled in can thus have a significant impact on the results as well as conclusions drawn from time-use research. Using the German Time Use Data 2001/2002 and Polish Time Use Data 2003/2004 (both surveys conducted within the Harmonized European Time Use Survey framework) we show how gender differences in time allocation differ depending on when the diary was filled in by the respondent. By means of multivariate analysis we also show how sequence specificty (such as number of episodes and their duration) differs depending on whether the diary was filled in on the same day as the recorded one – or the day after.

From the Global South to the Globe: Pathways to Participatory Budgeting

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
In 1989, the city of Porto Alegre in southern Brazil implemented the world’s first experiment in participatory budgeting (PB). Twenty years later, an Alderman in Chicago established the United States’ (US) first experiment in PB in the city’s 49th ward in 2009. Over that time, PB has spread to over 1500 municipalities in countries across Latin America, Asia, Europe and North America (Baiocchi and Ganuza, forthcoming). In my presentation, I conceptualize the factors that influence the differential spread of PB’s implementation possible in a given location. Drawing on social movement diffusion literature, I conceptualise the factors that influence the differential spread and success of PB, particularly in relation to current experiments in the US. I argue that the study of the diffusion mechanisms for PB provide important insights for activists and civil society actors seeking to promote transformative change.

Participatory Budgeting in the US: The Role of Key Actors in Shaping Turnout

Participatory budgeting (PB) has largely been studied in the context of the Global South, with particular attention given to the case of Porto Alegre. Only in recent years has PB begun to gain traction in the United States (US), beginning with Chicago’s 49th ward in 2009. While the PB projects in the US resemble in some respects the familiar structure of Porto Alegre, the many unique contextual factors suggest that the American experience of PB is likely to be quite different.

A central claim of democratic theorists is that PB provides opportunities for participation to citizens who are marginalized by or excluded from typical democratic processes (Fung and Wright, 2003). In the Porto Alegre case, high participation amongst poorer citizens led to a more egalitarian allocation of resources as compared to those citizens who are marginalized by or excluded from typical democratic processes. The Chicago’s 49th ward example, PB has been particularly successful in increasing participation amongst minority citizens and this has led to a more equitable allocation of resources within the 49th ward. This is an important finding as it suggests that PB may be a more equitable and effective way of allocating resources in US cities.

In this paper I consider the interplay between state and civil society and their impact upon participation, since both sets of actors shape PB outcomes (Wampler, 2008). I explore the case of Chicago, comparing the experiences of the four administrative districts that implemented PB in 2013. Using data collected from participants across these sites, and an analysis of outreach efforts, I examine the correlation between who participates and the engagement of civil society and the state. The aim is to understand the actors that shape the implementation of PB in the US, as well as their impact upon its success as an inclusive practice.

Narratives Of Exclusion In The Discourse Of The Great Terror In The USSR

The Great Terror in the USSR of the mid-1930s was actually an implementation of a social engineering strategy aiming at exclusion of certain social, political, and ethnic groups by means of their extermination or isolation. This strategy was based on and partially produced by a very specific ideological discourse. Its key element was a semi-fictional image of the ideal Soviet society enclosed within multiple semi-imaginary boundaries that various “bad” and “enemy” “elements” were constantly trying to trespass. Identification/production of the above-mentioned “elements” was realized within the framework of the discourse of the Great Terror by means of the complex of narratives of exclusion. In my presentation, I will focus on three main components of this complex:

1) Narratives about traitors, spies, and other “foreign agents” actually or potentially trespassing real or symbolic external borders of the Soviet space. These were used for excluding foreigners-emigrants, certain national minorities, Russian re-immigrants, Soviet diplomats and spies; people who contacted foreigners or simply foreigners, etc.

2) Narratives about saboteurs, “socially dangerous elements”, and anti-Soviet conspirers, terrorists, and propagandists acting from beyond the symbolic borders of the ideal Soviet social, political and ideological structure. These were used for excluding “kulaks”, criminals, tramps, “bourgeois” engineers and scientists, openly religious people, former members of the long-defunct Russian political parties, former members of oppositional groups within the Bolshevik party, suspended officers of the secret police, and others.

3) Narratives about “monsters” and “scum of the earth”, who trespassed all sorts of symbolic borders. These were used for excluding suspended high-rank Bolshevik party leaders, both opponents and proponents of Stalin. Narratives of this type were built in the framework of the special ideological meta-narrative based upon archaic mythological imaging of witches and shape-shifters – apparently innocent creatures that turn out to be demons.

Hidden Ethnic Inequalities. a Possible Global Educational Exploration Using PISA

The international educational evaluation programme PISA analysis the variances of school achievement of different countries. In several PISA reports there are described the criteria of successful schools, and the ways the social backgrounds can be overcame. In the PISA framework educational opportunities are distributed unequally if the student’s education is independent of their own family background. Based on PISA reports one can have a detailed picture about the school integration of migrants, the factors which have impact on their educational outcomes.

It is important to underline at the same time that based on PISA results there is no detailed analysis of non-migrant or native national minorities. In some countries the results are presented following the (regional) minority language of test (e.g. Belgium, Spain, Canada), however a comprehensive analysis of native national minorities is failed.

Using PISA databases one can gain some relevant information about national minorities’ school outcomes (in at least 20 countries). By a cross-tabulation of the language spoken at home and of the language of test (state language or minority language) one can distinguish at least three main students groups: minority students who learn in their mother tongue (language spoken at home: minority language), minority students who learn in state language, and majority students (who learn in majority language, of course).

Having these students subgroups one can test two basic research questions: 1. rather the mother tongue education or the mainstream language education outperform among minority students? 2. rather the native national minority or majority students outperform? These comparison could tend us to interpret the variance in student performance in linguistic/ethnics terms. Moreover if after accounting for socio-economic background these variances still remain we can assume that exists hidden, ethnic-linguistics inequalities among students.

The Fluidity of Texts and Structures: Exploring Institutional Ethnography of the Child Protection System in Dominican Republic

This presentation discusses the challenges experienced in using Institutional Ethnography (IE) in a context other than Global North. I discuss the challenges in attempting to translate both linguistically and culturally some of the important concepts of IE into Spanish and the culturally different institutional structures of Child Protection System in the Dominican Republic (DR).

Based on a five year international collaborative project (Canada-DR) this presentation discusses some of difficulties in pursuing a national study of the child protection system, when institutional structures were not clearly identified, and when institutional texts were not clearly defined outside the legal discourse –Child welfare Act. The team of researchers used different IE means of data collection: 1) Mapped out the “fluid” structures of the different (minority language), minority students who learn in state language, and majority students (who learn in majority language, of course).

Having these students subgroups one can test two basic research questions: 1. rather the mother tongue education or the mainstream language education outperform among minority students? 2. rather the native national minority or majority students outperform? These comparison could tend us to interpret the variance in student performance in linguistic/ethnics terms. Moreover if after accounting for socio-economic background these variances still remain we can assume that exists hidden, ethnic-linguistics inequalities among students.

The Managerialization of International Collaboration: The Silencing of Social Justice Solidarity

There is an extensive literature on the process of “overmanagerialization of academic work” (Todt et al. 2013). Academics’ programs that continue to engage on programmatic issues such as social justice or global solidarity face difficulties in negotiating the disjunction of the entrepreneurial university and solidarity of international collaboration. “Internationalization” of programs has become a buzz idea that most universities in North America are pursuing, but the question remains “What kind of internationalization? And who is benefiting from this process?”

Using Institutional Ethnography, this presentation discusses the negotiation process with which the author has become involved with in the development and implementation of an “international Youth Right project” during the past two years. The author discusses the steps taken to textually transform the “realities” of the everyday experience of youth advocating for the protection of their rights into textual instruments of control-financial, managerial as relations of rulings that reflect the managerial realities of the Northern institutions (the entrepreneurial university and its funders). Through mapping out the different “project managements processes” required to develop and implement international projects within the entrepreneurial university context, this presentation will discuss the disjunction of local realities of those who are supposed to benefit from this kind of project -children and youth and the institutions that are supposed to manage them.

The following questions are discussed: What challenges children and Youth face in achieving their rights? What are the consequences of extremely legitimized discourses of rights on the everyday living experiences of youth in the Global South? How is the managerialization of international collaboration within university context affecting the everyday practices of solidarity?

SEMI*SIS Y Procesos De Constructo*En De Significado EN La Prensa Digital Colombiana

La adaptación de los medios de comunicación a las dinámicas de la globalización tienen repercusiones sobre los procesos de producción de significado. Las transformaciones han propiciado formas de interacción comunicativa, sustentadas en los valores de la globalización. Esta manera de construir el significado tiene distintos de efectos sociales que repercuten, en la interlocución y las formas con las cuales los ciudadanos construyen criterios para participar de la vida colectiva y democrática. Esto es relevante en países con industrias culturales monopólicas y oligopólicas que centralizan el proceso de producción y difusión de la información, y que fomentan lógicas de consumo en lugar de formas de participación directa en los asuntos públicos.

Se propone explorar las formas como la prensa digital construye interacción a través de la organización de las páginas web. Se reflexiona sobre el formato, el componente multimedia y la multimodalidad en los procesos de producción de significado. Se identifican las formas como gráficamente se construyen marcas de deíces, orientadoras del proceso cognitivo y mecanismos de construcción y reproducción ideológica.

El corpus de esta investigación son los print de las páginas web de inicio del periódico ELspectorador.com y la revista Semana.com. El corpus se toma el 1-07-2013, tomando como punto de referencia el conjunto de recursos de interactividad que se aproprien para construir significador con el fin de identificar cómo se propone la interacción comunicativa entre productores discursivos y usuarios-lectores.

Palabras clave: medios de comunicación, formas de interacción, multimedio, multimodalidad.

Precarious Politics: Struggles Against Insecurity in the Global North and Global South

My discussion will complement Standings' general analysis by focusing on the collective struggles of two insecurely employed, low-income groups at opposite ends of the globe: low-wage immigrant workers in California, United States, and citizens living in poor communities in Gauteng, South Africa. Both groups compensate for their lack of economic leverage by organizing around demands for recognition, dignity and inclusion. Because these demands are largely directed towards the state, their struggles for economic survival become entangled with struggles around citizenship status. These cases affirm Standing's emphasis on the importance of citizenship and recognition, but paint a more optimistic vision of the precariat's capacity for struggle, and underscore the need for greater attention to differences between the Global North and Global South.

The 1988 Seoul Olympic Games and Habituating Developmentalism in Korean Society

This paper examines social impact of the 1988 Seoul Olympic Games on South Korean society. It attempts to explain the event not as a facilitator to the democratization, but as a means of justifying developmentalism derived from dictatorship government in Korea. The 1988 Seoul Olympics have been regarded as an event that not only displayed the state of the rapid economic growth, but also carried out a positive role in the peaceful process of democratization.

However, the current political situation in Korea raises a question whether the democratization is really successful or not because authoritarian style developmentalism is continuously supported by Koreans, even after the transformation into democracy. Some people claim that a certain level of the authoritarian rule are restated and legitimized. This study argues that the hosting gave the former dictators hegemony, a persuasive power which works in peoples’ everyday life.

First, huge amount of urban regeneration promoted Korean Chaebol (conglomerates) to build skyscrapers in the center of Seoul. Some of the buildings functioned as popular attractions and showed the most citizens the fruits of the economic development by the Chaebol and the dictatorship government.

Second, a huge number of apartment buildings were constructed by Chaebol’s construction companies and ‘Apar’ became a typical dwelling form of middle class in Korea. The middle class people dwelling in the ‘Olympic village’ invented their own consumer culture and lifestyle. That is, ‘distinction’ in Bourdieu’s term began among the citizens.

The middle class’s everyday life depends on the products by the Chaebol and the narratives on the growth of their households identify with the narrative of economic growth of Korea. This serves as a principal of supporting successor of the dictatorship in Korea, even beyond the democratization.

A Sequence Analysis of Career Pathway of College(University) Graduates Youth in South Korea - Focus on Variation Across School Locations -

This study intends to analyze career pathway of youth who graduated college/university in South Korea. The aim of this paper is to show dissimilarity in transition pattern in labour market within youth by the variation across school locations. In order to analyze it, Korean Labor and Income Panel Study data collect in 1998-2009 is used. The dataset is divided by school location (Seoul & Gyeonggi, Incheon & Non-Metropolitan areas). I examine sequences of labour market statuses using explorative methods of sequence analysis and optimal matching algorithm. The main results of this study are as follows. Pattern of youth’s work careers is different by firm-size and occupation. For example, youth who graduated from provincial college(university) get job in smaller firm than any other groups. And, labour market entry time is also different. For instance, youth who graduated from Gyeonggi, Incheon college(university) prefer entering the labour market to applying for a job although it is unstable job. In contrast, youth who graduated from Seoul college(university) prefer applying for a job to entering second-hand labour market. In addition, level of exposure of unemployment instability is different. Youth who graduated from provincial college(university) have difficulties finding stable job. They face high risks of job termination. Also they expose to repeat of (re-)entry and exit labour market. Especially, it is distinct between Seoul male group and Non-Metropolitan areas/Hen group. As results of this study show, we need to consider gap of career pathways within youth. And institutional support should be provided by goup characteristic.

Solidarity and Empowerment of Women Workers in Asia

Solidarity has been stressed as one of the most important tools for powerless and marginalized groups of people let alone labor movements. Pressures from globalization create additional demands for workers and activists to extend their solidarity cross the borders. This is not only because globalization has created new problems that connect people’s lives across national boundaries, but also because it has produced many situations and cases in which workers, and activists face similar problems and circumstances, making sharing and learning from each other useful. Based on my experience working at the Working Women Academy
(WWA), I will discuss some of challenges and key issues of cultivating international solidarity among women workers in different countries. WWA is a women’s group in Korea that provides training for grassroots female activists in Asia such as worker-to-worker exchange, capacity building trainings and political education on issues such as gender inequality. The programs are carefully designed in advance to meet the needs and interests of participants as much as possible through pre-visits and pre-surveys. For example, Chinese workers visited Korea to learn and discuss issues related to organizing women workers in 1970s and 1980s, which they could apply to their current organizing efforts. The training programs, which contain a combination of field visits and intensive discussions in participant methods, have prioritized the continuity of participants over a series of trainings which take place over a 7 to 9 month period. During this period, participants are encouraged to exercise training contents and to bring their experiences back to the next training. Language barriers have been one of biggest challenges. But the programs always provided translators and utilized focal persons for in-between communications.

Poverty and Inequality of Korean Elderly People: Life Long Effects of Labor and Welfare Systems on Old Age Income Support

Very low fertility is regarded as a serious social concern in South Korea. Korean government has contrived diverse policy approaches to provide various incentives for reproductive behaviors. More or less, the public response to low fertility tends to be basically in a framework of rational choice, and assumes that reducing the constraint and cost for reproduction would increase fertility rate. In this regard, the new government of president Park Keun-Hye pledged to provide financial support for child birth and education more extensive than ever before. Setting aside the question whether the promise could be fulfilled given the limited budget, this paper aims to examine the individual rational choice would achieve its intended policy outcome without proper checks to the endlessly rising cost of reproduction.

Instead of the individual rational choice, this paper proposes a structural and historical perspective on the demographic transition and proper policy and prac- tices. In this regard, this paper examines the origins and development of the fam- ily planning, which was established as the primary national policy of economic development through the 1960s and the early 1990s, and discusses its implication on social change and the subsequent fertility decline in South Korea. Fertility declines have proceeded in complex rationalities on which people felt responsible for their own destiny and family, such as the Malthusian ethical check. But also the strong desire for material well being and preferred children’s success contributed to the strict birth control and ignorance for unwanted births.

Life History and Family Changes in Korea and Japan

This study examines important characteristics of family changes and modernities embedded in the life history of Korean and Japanese elders born in the 1920s and 1940s. The elderly born between the periods of the 1920s and 1940s underwent very compressed social changes, such as the imperialism, political turmoil after liberation and ferocious national building, wars, diaspora, and the high economic development. Modern families have been developed and transformed in this vortex of social changes. Reconstructing the memory of the elderly people’s own life history, this study aims to discover characteristics of family changes and modernities in Korea and Japan.

Surveys and interviews were conducted in Seoul, Korea and Nagoya, Japan from 2009 to 2011. Questionnaire covered detailed information about family in origin, educational experiences of seniors, experiences of adolescence, marriage and their own family, work, and later life. 100 cases in Korea and Japan respectively were collected considering age, gender and economic status of the elderly. In-depth interviews were then followed for the cases with importance in the study and elders’ willingness to interview.

Several important concepts of modern and family changes are interpreted by comparing life histories of Korean and Japanese elders. Modern construction of patriarchal family and its change are compared. In regard to the period of child- hood and the youth, the mixture of kinship and modern rearing, gendered edu- cation, and influences of imperial war and Korean war, diaspora and repatriation were intertwined. In the interplay between the individual adulthood and the social period of high economic growth, mixed relation with extended and nuclear family and ideas of gender role division were compared. Finally, attitudes in inheritance, after-death, and family support in later life and social changes were compared.

The Structured Dynamics in the World-System: A Network Analysis of Trade Patterns 1985-2004

The purpose of this paper is to analyze the hierarchically structured dynamics of the modern world-system using the network analysis. While the modernization theory presumed that the increase in international trade lead to economic growth for all the participants, the world-system perspective argued that there is per- sistent underdevelopment among the Third World because all the nation states participating in the world economy are unequally structured. These conflicting perspectives have continued to debate the matter of development. Of all the researchers concerning international relationship, those who used the network analysis did made a great advance in empirical field due to the relational nature of world system. However, previous studies have shown the static character- istic of the network of the world-system. In this paper, using bilateral trade data of Standard International Trade Classification(SITC) over 133 countries, we focus on the dynamics in the world system; the range and effects of the international division of labor depend on the sort of commodity. We used three commodities of SITC over 20-years for making clear our research question. We confirmed the main theme of the world-system perspective; a) The relationships between the core were denser than the periphery, b) The semi-periphery acted as a broker mediating the core and the periphery. Also, we found that there are differences among trading commodities in the world-system; a) Machinery(SITC-71) had been transmitted from the core to the periphery, b) Plastics and synthetics(SITC-58) maintained their superior status as the core industry, c) Footwear(SITC-85) showed secondary transmission and division of labor in the periphery and semi-periphery. This dynamics in commodities need to be more sophisticate ar- gument in the field. The long-term changes in the international trades explained how the nation states were structured and also fluctuated by their structural position in the world-system.

Social Patterns of Energy Consumption and Lifestyles: Towards a Low Carbon Society? a Study in Chilean Society

The growing demand for primary energy consumption in many Latin America (LA) countries is carbonized raising a challenge to move towards low-carbon economy. Promoting social patterns of low-carbon energy consumption involves analyzing the lifestyles associated with the current energy consumption. Indeed social patterns of primary energy consumption (lighting, cooking, heating / cooling and transport) are associated with lifestyle. According to the thesis of Heaton (2000) environmental pro would be a more typical of affluent societies, typical of a post-materialist era. Following this thesis...
social patterns of low-carbon energy consumption would not be found in developing countries, or be found only in its upper-middle and upper classes. The few sociological studies do not allow to a conclusively answer.

Sustainable development in Latin America is being challenged. Population growth is not driving the increase in GHG emissions, but rather growth in consumption (Satterthwaite, 2009). In this global context, Chile is an example of an emerging economy whose growth affects the environment.

It is possible to hypothesize that the energy consumption in emerging countries (in AL) is associated with the family socioeconomic unequal position. But what happens when we study social patterns of energy consumption of families of similar social positions?

Research on households energy consumption, their views and behavior is complex (Lutzenhiser, 1993). No sociological studies seem to be available for answering this question in AL. This paper aims to shed light on this issue based on qualitative and quantitative empirical sociological research recently conducted in Chile.

‘Must the Subaltern Fight?: Resistance and the Art of Forming Your Masters’

There are many instances from the history of colonialism – not confined to the experience of successful anti-colonial conflict – of the impact of the subject’s on those who purport to be their masters. With this reformulation of Spivak’s classic question from 1988 set alongside the anthropology alluded to by a version of James C. Scott’s book title from 2008, the paper focuses on the subaltern’s alternatives to open, violent resistance. Thus the paper attempts to map the interplay between top-down power (the paradigm of ‘power over...’) and the bottom-up capacity of the subjects to maintain a degree of autonomy, or even effective shape the power which is ostensibly exercised ‘over’ them.

How can a ‘power to...’ be shaped into an enabling power which facilitates human activities from the subaltern side? The answer is to be found in the combination of three further dimensions in power relations over and above the top-down will: the resistance of the subject; the practices which actualize activity in a society; and the structuring of conceptions which is traded in discursive exchanges.

Scott (plus Hirst 2005) and the historical sociology of resistance provide an access point for the first of these; Foucault for the second; and Bourdieu an account of ideology that illuminates the third. The paper will draw empirically not only on the history of colonialism and its end, but also on the many histories of popular resistance. The purpose is to read the historical sources with this particular blend of theory, showing the contradictory impulses within which actual power develops.

Predictive Policing: The Case of Burglary

This study is designed to utilize large amounts of data from previous time points in the City of India, Ca., to analyze the predictors of burglary rates, commercial and noncommercial, to test the idea that a predictive model of burglary could be developed. Using predictions as to sub areas in the community that are expected to have the highest burglary rates, based in part on an observed relationship, lagged across time, between truancy and burglary, we develop an intervention model and apply it most heavily on the predicted high burglary areas. Evaluation is designed to see if we can reduce these predicted high burglary areas to areas with below city wide means for burglary in the previous year.

Future Energy Landscapes in Canada: Discursive Renderings of Renewable Energy Alternatives through Q Methodology

The transformation of energy landscapes toward more sustainable energy futures is often fraught with challenges, not the least of which is public opposition to the altering of treasured spaces and places. Drawing on Charles Taylor’s social imaginary, Zebravale’s socialization theory and Nassauer’s notions of culture and landscape, this paper identifies the discursive and visual structures that anchor the socio-ecological world to existing modes of energy production and limit the potential for energy landscape transformation. Within this analysis, culture is understood to be inextricably linked to landscapes and energy development – from wind mills and solar arrays to oil sands and hydroelectric facilities – having a profound effect upon landscape preferences. The landscapes humans create as they meet their needs and desires are not always beautiful or healthy, but they comprise heritage that contributes significantly to an individual’s sense of place or identity. Therefore any meaningful transformation of these landscapes toward sustainable futures will require careful and incisive analysis of these social and cultural anchoring points. These points are examined in this study through Q method analysis of 48 statements on energy production in Canada. Research involves diverse case study areas (Alberta, Ontario and New Brunswick) aimed at gaining insights into the discursive underpinnings of energy production. Results offer nuanced and regionally specific understanding of citizens’ deeply rooted and often conflicting values surrounding landscape change, aesthetics, governance, ownership, renewable energy alternatives, and identity with the energy sector.

The Link Between Disaster and Violence Against Women

There is compelling evidence that violence against women increases following large-scale disasters. Yet there is a research gap on why this happens, and how increased violence may relate to disaster experiences.

This presentation reports on the first Australian research into this – a phenomenon previously overlooked in emergency planning and reconstruction after disaster. In the absence of reliable quantitative data, interviews with 30 women in Victoria following 2009 Black Saturday bushfires provided evidence of increased domestic violence, even in a context that silenced women. Community members, police, case managers, trauma psychologists and family violence workers empathised with traumatised and suffering men – men who may have been heroes in the fires – and encouraged women to wait it out. These responses compromised the principle that women and children always have the right to live free from disaster.

Violence provides an opportunity to reinforce traditional gender roles, and this presentation considers the concept that social cohesion relies on women’s sacrifice. Further, it identifies that male privilege plays an important role in ensuring many interests are prioritised.

The launch of the research findings in 2012 brought this highly sensitive issue to the attention of disaster managers and inspired changes within key emergency organisations to improve the safety of women and children in the aftermath of disaster, beginning with improved data collection and training for disaster personnel. A partnership project was then funded to explore men’s experiences after Black Saturday, with a focus on men’s harmful behaviours to themselves and to those around them. The role of gender and the cost of patriarchy to both women and men are examined through interviews with 32 men.

The Cost of Living Longer: Projections of the Effects of Prospective Mortality Improvement on Economic Support Ratios for Eighteen More Advanced Economies

The aims of this paper are twofold; (1) to forecast mortality for a wide range of more developed countries from 2010-2050 and (2) to simulate the effects of the forecast mortality patterns on economic support ratios under the continuation of current fertility, migration and labour force participation. The mortality forecasts are prepared for eighteen countries using the Poisson Common Factor Model proposed by Li (2013). The effects of mortality on economic support ratios are estimated by comparing the results of projections under the best estimates of the forecast mortality change to the results of projections which assume that mortality remains constant over time. The results of the mortality forecasts show that the projected gains in life expectancy for both sexes are greatest in Japan, Israel, Andorra and in East-Central Europe, and are least in the Ukraine, Netherlands, North America and Sweden. Preliminary results show that the ratios of total hours worked to age-weighted populations are projected to fall most in Japan, East-Central and Southern Europe, and least in Sweden and Australia. In all countries the forecast improvement in mortality accounts for less than half the projected reduction in support ratios.

The results show that mortality improvement has the greatest effect on support ratios in Japan and in East-Central European countries. Anticipated mortality improvement is of far lesser significance to Northern and Western European and English-speaking countries. The paper discusses the dependency of the estimated effects of mortality improvement on support ratios on the assumed levels of fertility, migration and age-specific labour force participation and the age structure of the initial population.

Nature Grabbing or Successful Practices for Nature Conservation? Blurred Boundaries in Chilean Protected Areas

Literature on protected areas (PAs) constantly reanimates an ancient debate that opposes conservationist scholars, considering the world history of PAs, as a testimony of human progress, to critical voices counting this history as a record of failure (Brockington et al. 2008; Stolton, Dudley 2010). For, as several social scientists have emphasized, conservation regulation has in many cases been part of coercive colonial strategies and disempowerment of indigenous groups. More recently, contributions on “nature grabbing” have joined the debate, revealing processes through which property rights and control over natural resources are transferred from ‘poor’ to powerful hands (Fairhead et al. 2012).

Based on case-study research in two Chilean regions, the Atacama Desert and Green Patagonia, this paper examines the shades of grey between what may be acknowledged either as a success or a failure in the contemporary governance of PAs. This paper argues that there is a need for examining PAs and their governance by using more sophisticated analytical frameworks that help to capture the social complexities in which these areas for nature conservation are embedded and reproduced.

This paper is structured in five parts. Part one combines literature on socio-ecological systems, environmental sociology and political ecology to discuss critical social sustainability issues in the contemporary governance of PAs. Elaborating on these theories, part two offers an analytical framework drawing attention to the social embeddedness of PAs, including politics and power dynamics, economic forces, institutional transformations, as well as culture, discourses, values and justice in local histories. Section three discusses conservation policies and land uses in a neoliberal country that has allowed a wide proliferation of private PAs. Section four zooms into two Chilean regions and the remaking of their PAs histories. The paper concludes with reflections on the blurred boundaries between successful conservation and nature grabbing leading to injustice.

Rio Museum of Art in Times of Trouble

Given the growing diagnoses of musealization processes, of the spreading of cultural centers and of the new status assigned to curators, this research investigates the emergence of expository institutions as instruments for intervention in the urban space, in times of social change. I shall here analyze the foundation of the Museu de Arte do Rio, in March 2013, at the Rio de Janeiro harbor district. The aim of the research is discussing the possibility of building an art institution, taking on account the formation of social networks and the negotiations for the emergence of a shared project. To think about these issues, I have been investigating the debates and the controversies and to build consensus around the concepts of modern, contemporary, and a global (and / or creative) city. Built through a decade of disputes, the Museu de Arte do Rio seems to be revealing both of the place destined for museums in contemporary times, and of the negotiations between organized groups and institutions in Rio. Proposed in times of optimism and prosperity in expectation for megaevents such as the World Cup in 2014 and Olympic Games in 2016, the museum was conceived as a new icon for the city's image. Nevertheless, just when it was founded in March, 2013, the museum was, however, the target of demonstrations that anticipated the massive protests that spread in the country since mid-2013, taking to the streets of the city more than a hundred thousand of people in June 17, 2013. This paper seeks to understand how the institution has been the target of new disputes in the city and has been incorporating new categories to face the demands for change.

A Social Critique of Religious Judgment

This paper examines the concept of symbolic violence through an analysis of class-based religious judgment within Muslim minority communities. It draws specifically on two-year ethnographic comparative study of religious communities in France and India. Across the cases, middle-class and elite practicing Muslims overtly judged poor and working-class worshippers as “fundamentalist” and regressive for their gendered and other practices. Practices like the burqa, for example, were prominent among the poor and subaltern. In France, the poor and subaltern Muslims while also showing how this is a symbolic struggle for religious (and other) recognition — in which the terms of the struggle are set by the language of the state. The comparative design of the larger study allows a deeper exploration of symbolic violence. In France, my subaltern companions in the field were far less complicit in their domination, or unlikely to internalize the ‘classifications’ of the middle-class. In India, class judgment was interwoven with a long-standing culture of loving paternalism that feeds cross-class alliances and a vast network of Muslim philanthropy. In this context, impoverished Muslims are thereby more complicit in their domination. These differences force us to consider the cultural embeddedness of symbolic violence. They also force us to ask: what is to be gained analytically by viewing such culturally and politically specific dynamics as symbolic violence? The paper explores these issues with reference to Bourdieu, Weber’s focus on conscious belief in the support of legitimate domination, as well as Franz Fanon's theorization of internalized inferiority.

Fukushima, Tsunamis and Earthquakes: The Meanings of Risk in the 21st Century

The most significant nuclear disaster since Chernobyl in 1986, struck in Japan on March 11, 2011 as the Fukushima Daiichi nuclear reactor failed in the face of a tsunami and subsequent earthquake. In Fukushima we witnessed a combination of natural disaster and human error that resulted in local devastation, national trauma, and global consequence. In a global landscape, the representational practices through which the events of Fukushima have gained meaning are central, both within and across national boundaries.

The representational practices of major media outlets gain even greater hegemonic significance when travel to such catastrophes is restricted or complicated by the catastrophe itself. Representational practices not only produce specific forms of knowledge, they also construct what comes to be understood as legitimate forms of inquiry.

In the United States, the presence and meaning of "risk" in relation to Fukushima reproduced very specific relations of power/knowledge. This paper examines over 2100 articles about the catastrophes at Fukushima published in 4 major U.S. media outlets between March 2011 and March 2013. The analysis includes articles from two newspapers, the Washington Post and The New York Times and two nationally prominent blogs, Politico and The Huffington Post.

The representational practices that construct “risk” cannot be fully understood without asking “risk for whom?” and “risk to what?” Using a close textual reading and a poststructural discourse analysis, the paper deconstructs the representational practices that construct “risk” for plant workers, the general population of Japan, economies, ecosystems and energy resources.

Among the many consequences of the increasing globalization of “risk,” is the reality that the presence and meaning of “risk” will continue to be highly mediated. This paper contributes to the discipline through nuanced discussion of representational practices and the increasing globalization of risk. It suggests implications for social theory and social research more broadly.

Affective, Symbolic, and Family Ties Among Palestinians in the West Bank and Israel: A Multi-Sited Ethnography and a Transnational Research Agenda

Melding insights from recent works on the affective, embodied, and symbolic dimensions of transnationalism with multi-sited fieldwork in Palestinian localities across the Green Line between the West Bank and Israel, this paper aims to develop a transnational research agenda on Israeli and West Bank Palestinians. It argues that a focus on emotional ties, symbolic practices, and subjective views can help overcome the scholarly tendency to use the spatial and legal divisions imposed on differently situated Palestinians as boundaries for research and to assume that these imposed divisions are the most salient factors in the everyday lives. It also sketches a transnational research agenda on these two segments of Palestinians, discussing how a focus on everyday life and a multi-sited research design can help explore their various transnational engagements from the expression of feelings of solidarity and the pursuit of cross-border family practices to the reproduction of border and national differences. Second, beyond the case of Palestinians under Israeli rule, this paper problematizes the privileged focus on mobility in transnational studies and calls for more attention to the role of transnational histories and forms of belonging in the lives of people experiencing forced spatial immobility and legal exclusion.

“He Is Not Clean:” an Ethnography of Surveillance and Emotions Among Palestinian Arabs in the West Bank and Israel

Drawing on insights from works on the affective dimension of the law and on recent theorization of emotions as transpersonal and collective phenomena, this paper explores the politics of surveillance in the material life of the modern state. Security agencies can shape emotional relationships among members of targeted populations. Specifically, based on ethnographic fieldwork within and across a West Bank refugee camp and the Arab districts of an Israeli city, I explain how the state practice of recruiting “collaborators” (informers) produces distinct meanings and emotions in these two localities. Camp dwellers react to political informing through collective informal social control, personal investment in the camp residents’ reputation, and support for the physical expulsion and even violent death of alleged “informers.” City residents experience political informing as a form of “symbolic dirt” that circulates in all public and private spaces, ambiguously mixed with criminal forms of informing, and mediates affective and social ties among neighbors, friends, and family members. I also explore the distinct predicament of former “collaborators” who were relocated by the state’s security apparatus from the West Bank to the Israeli city where I conducted fieldwork. By focusing on the entanglement between political informing, moral claims, feelings of belonging and betrayal, and practices of physical expulsion and relocation among differently situated Palestinian Arabs, this paper aims to theorize the role of the state’s security apparatus in shaping emotional relationships and responses among targeted people.

Returns to Higher Education after the Bologna Process: How Different Are Italian Tertiary Degrees?

This paper analyses the short term occupational returns of different tertiary degrees provided by the Italian educational system after the implementation of the ‘Bologna process’.

The University reform has entailed a great vertical differentiation of higher education and resulted in the transition from a unitary system - based on four-to-six years courses - to a new sequential system of ‘bachelor/master/doctoral program’ structure. The bachelor/master reform has been accompanied by the introduction of long courses (‘Ciclo Unico’), which lasted five years and reflects the old unitary structure. In this scenario, the public decision-maker has determined the tertiary qualifications to be considered equivalent. On the one hand, bachelors are legally less valuable than masters and long degrees, and does not give access to doctoral programmes (ISCED 6). On the other hand, masters and long degrees are legally equivalent and give direct access to doctorates.

In the empirical analysis we use data from the ISTAT-2011 ‘Survey on the transition to work of University graduates’ to examine the early labour market returns of young graduates from bachelor’s, master’s and long degrees in terms of employability, class position and wage. By means of binomial, multinomial and OLS multiple regression, the empirical results show that the labour market rewards of the three types of degree do not reflect precisely the legislative arrangement. According to expectations, four years after the completion of studies, bachelor’s graduates are less prestigious and rewarded occupations than masters and long degrees. However, labour market outcomes of long degrees and masters vary widely, although they are legally equivalent. Net of other relevant personal characteristics, graduates from long degrees are less likely to be employed, but gain higher wages and have higher probability to reach the apex of the social hierarchy compared with graduates from master’s programmes.

Literate and literateTribal Youth and Leisure

Literate and iliterateTribal Youth and Leisure

The Education is the one which teaches the educing many ways of spending his leisure usefully and constructively. The various objects of culture such as literature, music, art, religion and philosophy are the creation of leisure. But it is not developed automatically follow if leisure is provided. The role of Education will be seen here. One can perceive the difference if one observes the different ways in which the educated and the uneducated youth around one spend their leisure hours. The uneducated can be seen consuming their leisure in useless gossiping, smoking, quarreling, sleeping, indulging in alcohol or at the most spending their time in visits to the cinema. On the other hand, the educated individual puts his leisure to better use.

Evidently, then it is only the educated person who can utilize his leisure properly. I have kept this concepts and select so tribal youths for sampling. In this fifty tribal youths 25 are literate and 25 are illiterate. Those who are literate mostly are graded and past graded. I choose some variables to measure difference between them. These variables are following below. Economic Condition, Morning activity, Noon activity, Evening activity, their talking subjects, drug addiction, visits of cinema, gossip places, their desires, etc. I found tribal youth spend their leisure time an average 3 to 4 hours per day. Educated youth spend their leisure time in positive activities. Always they are thinking in positive way where iliterate tribal youth mostly do negative activity and thinking negatively. Literate youth mostly meet in a public places like bus stand, grocery shops, near by schools, near by temple, etc. when literate youth meet mostly their parents house. Where parents can watch their activities and some time guide them.

Colonial Legacies, Low and Discourses of Inequalities. An Analysis of Poverty Alleviation

The paper uses the example of a revolutionary poverty alleviation programme (which is now given legitimacy as a law) to understand and assess the discourses that structure inequalities in India. The focus is on a law called National Rural Employment Guarantee Act which provides as a right, employment to one member of a poor household for 100 days of a year.

On the basis of case studies, this paper argues this discourse does not have a language which can comprehend the complexity of the cultural forms and processes that organize inequalities in India at three levels. First, the attention of this Act is on objective quantifiable attributes of inequalities and wealth disparities such as poverty line, income and food consumption, an understanding which it inherits from 19th century colonial liberal discourses. It thus cannot recognize the fact that the poor work and labour in economies that combine and exchange low value labour goods and services which are rarely quantifiable in terms of the rational economic language created by contemporary capitalist discourse. Second, this colonial legacy has further frozen a range of differentiated cultural practices of domination and subordination that organise inequalities into a few standard Orientalist categories. We argue that not only are these practices varied but they range from stigma, discrimination, intolerance, prejudice and hatred. These may manifest as individual discrimination but are moored in group based representations of domination which are reconstituted from colonial classificatory systems. The Act has little comprehensions of these differentiations and cultural practices as these remain invisible and thus unquantifiable. Third, these representations are unevenly organised across localities and regions defining the nation state creating a complex pattern of exclusionary intersections that manifest differentially in varied economic and social contexts of the territory. These cases help to rethink and understand the theory of inequalities.

The Global South and Postcolonial Perspectives in International Sociology

A powerful current development in our discipline is the emergence of postcolonial and global-south sociologies. This is not a new specialization, but a change in perspectives that will affect all fields of sociology. New possibilities are currently being explored in sociological theory, sociologies of disability, education, gender, modernization, the history of sociology, and more. This session is planned as an interactive event in which leading colleagues in this movement of thought will debate issues raised by the participating units and by other ISA members. In the later part of the session, comments and questions from the floor will open a dialogue with members of the panel. Among the themes for the session are questions of centrality and marginality, changing methodologies, changing agendas for research, new audiences, and changing curricula for teaching sociology.

Gender Inequality and Women’s Health: Indian Perspective

Indian women face most of the health problems due to discrimination. The high risk groups in their lives are early childhood and reproductive age inadequacy and poor nutrition, non-access to primary health care, poor reproductive health and discrimination against girls are major causes for higher female mortality between ages one and five and high maternal mortality rates. The practice of sex determination tests and subsequent induced abortion, small family size are added to increase sex ratio. Sex-selective abortions are indicative of the low value to girls. Gender disparity in nutrition starts from infancy to adulthood. Girls are breastfed less in infancy. Malnutrition is an underlying cause of death among girls below age five. Nutritional deprivation amongst girls leads to improper growth and anaemia. Anaemia is more prevalent amongst girls, pregnant, and lactating women. This not only complicates childbearing and result in maternal and infant deaths, maternal depletion and low birth weight infants, but also severely affect women’s productivity and quality of life. Infertility poses a serious social and emotional threat to women.

Women also face reproductive tract infections and related infertility. The reasons for maternal deaths include sepsis, abortion, haemorrhage, and anaemia, etc. Sexually transmitted diseases, HIV, have serious implications for women. Women tend to seek medical help only if an illness is advanced, thereby reducing their chances of surviving. Many deliveries take place at homes, with untrained assistants in proportion of moderately skilled workers by automation and lower status, women are not involved in decision making including use of contraceptive, family size, etc.

The objective of the paper is to analyse current health status of women and give recommendations to policy makers, health workers to take steps to improve women’s health status. The paper is based on secondary data.

PATIL, DR. N. H.* (HKES College, Aland, nhpatil1953@rediffmail.com)

Globalisation, Technology Transfer and Growing Inequalities in India

Globalisation and transfer of technology in the recent past have brought about significant changes in the process of production of goods and services providing services to the ever growing size and variety of clients which is looked upon as a positive development. But the fact that needs to be looked into is, what implications it has for the workforce in terms of wage inequalities which is an equally important issue. Increasingly advanced technology applied to various sectors in service and manufacturing is assumed to call for new skills and tasks, normally of higher sophistication and complexity which may result in increased real wages for highly skilled sections of workforce. Another outcome of this development is steady decline in proportion of moderately skilled workers by automation and low status, women are not involved in decision making including use of contraceptive, family size, etc.

The paper based on the secondary data focuses on the population growth and other factors responsible for Panchaganga river water pollution and how it influenced on human health.

PATNAIK, PRANTA PRATIK* (Central University of Rajasthan (India), prantaprakat@curaj.ac.in)

The Politics of ‘other’ Women in Indian Cinema

The category of women has never been a homogeneous one. In Indian cinema, a division has always been made between an ideal woman, who has to be necessarily docile, submissive yet standing up for her rights without transgressing her limits, and the ‘other’ woman who is seen as a threat that would disrupt the supposed normality of social order. The politics of ‘othering’ the women in terms of her sexuality, dominance and capacity to lure/distract has put the vamps, courtesans (tawaifs), lesbians, call girls under the ambit of ‘dangerous women’. The paper would like to analyse how further divisions are made within the category of the ‘Other’ women thereby conveying a message to the society that the place of women needs to be defined and determined within the confines of home. It is essential to undertake a critical analysis of such politics of representations particularly in the Hindi cinema because it has the potential to highlight the plight of such women. The paper would like to draw attention to these issues against the backdrop of recent cases of banning dance-bar girls in Mumbai hotels, reluctance of the government to legalise prostitution, where it has almost become a source of livelihood for several poor women and most importantly not recognising the rights of the sexual minorities i.e. lesbians. Based upon a critique of Laura Mulvey’s theory of male gaze, the paper goes beyond simplified versions of patriarchy to a more nuanced approach to understand the political, religious and cultural nexus behind such portrayal of women in Hindi cinema.

Municipal Solid Waste Management In Kolhapur, India: Need For Decentralized Composting

The management of municipal solid waste is emerging as an environmental issue in India. Under Municipal Solid Waste Management and Handling Rules, 2000 and directives of Hon’ble Supreme Court, all the citizens are to segregate the waste into three categories: organic, recyclable and hazardous. But the contract was done by Kolhapur Municipal Corporation (KMC) with Zoom Bio fertilizer Pvt. Ltd. in 2000 and since 2003-04 it used to segregate biodegradable solid waste and for recycling of this waste. But as the company went into liquidation, this project was in 2000 and since 2003-04 it used to segregate biodegradable solid waste and for recycling of this waste.

Along with the increasing population more land is required for the disposal of solid waste and today there is no reserved piece of land for the treatment plant in the city. The place at outskirts of the city, Top quarry is under dispute. There is resistance from people of that area and there is a stay order from Hon’ble High Court not to use that place for dumping waste. A land at Halsawade is allotted for sanitary land filling but it is under dispute and stay order has been given by Hon’ble High Court.

The centralized collection and processing has been failure and created environmental issues. There is a need to adopt decentralized composting at homes, apartments, colony, garden, institutes etc.

The paper reviews the Municipal Solid Waste Management in Kolhapur and also shows the attempts made by citizens for decentralized composting.

Causes and Social Implications of Educational Inequities in Indonesia

Educational inequities in Indonesia has been existed for many years. Two major challenges with respect to educational inequities are access to and quality of education. Access to primary education is almost universal, while access to junior and senior secondary are still far from the government target. Let alone the tertiary education. The quality of education occurs at all levels of schooling. The twin problem of educational inequities is a major concern of the Government of Indonesia (GoI). Over the past decade GoI has allocated 20 percent of its national budget towards education sector. GoI has made numerous attempts to overcome the inequity issue through, such as regulating the functional assignment between central and subnational governments in providing primary and secondary education, and issuing the minimun service standard for its implementation. Apparently these regulations were not prepared in a systematic and integrated fashion. This
paper analyzes the causes and social implications of educational inequities in Indonesia. In terms of causes, this paper focuses on the socio-economic background, culture, and access to resources. While on social implications, it will cover four issues. The first two deals with the fact that educational inequities will increase inequality in income and competitive ability among individuals in labor markets. Thirdly, educational inequities will widen inequality of vertical social mobility chance among social strata. The more educated have higher probability to advance to higher social strata than those with lower level of education. This may give rise to social exclusion, which is the final impact to be discussed in this paper.

Mobilizing from Appropriate Technologies to Sustainable Technologies (based on Grassroots Innovations)

This paper offers an understanding of the concept of Appropriate Technology (AT) and points out its historic relevance from the standpoint of developing countries. The paper focuses on the evolution of AT movement in India and ideological contributions by various thinkers like M. K. Gandhi, E. F. Schumacher, J C Kumarappa, and others to this movement. It stresses that AT movement as a discursive one is not about mobilizing activities and people but is about academic discourses on AT. And the paper presents an empirical case study of a social movement organization named Honey Bee Network, emergent of the said movement that does not represent the original discourse of the movement any more rather represents the later turning point of the discourse, i.e., the thrust toward sustainable technologies. This drift is perceived on the basis of experiences of a developing country like India with regard to misgivings of western industrial technologies and their non-sustainability. Noteworthy, that this case study of the Honey Bee Network at Ahmedabad is in fact a network of three organizations namely, SRIISTI, NIF, and GIAN which are to scout, document, register, and incubate the grassroots innovations that are based on traditional and indigenous knowledge systems and are likely to transform these grassroots innovations into commercialized technologies. The Honey Bee Network as a social movement organization has been analyzed from the vantage of the well known resource mobilization theory of social movements. Lastly the paper brings out the socio-cultural embedded character of the grassroots innovations and their resultant technologies. And it is further argued that, this bottom-up approach of technological development paves the way for sustainable technologies that are socially and culturally embedded and are founded on social participations. Such technologies are perceived to be representative of an alternative paradigm to that of modern western technologies.

Rise of Self-Help Groups As a Social Movement: Experiences from the Indian State of Odisha

Studying and participating in the process of development has been the approach of governments in developing countries and Non-government organizations (NGOs) who have taken plethora of initiatives following both top down and bottom up approaches. Some of those (initiatives) succeeded while others failed. But no programme for socioeconomic development was so wide reached and popular than the Self-help group approach. Self-help group (SHG) is a social, economically homogeneous and affinity group of poor people who come together to save some amounts regularly, mutually agree to contribute to a common fund, meet their emergency needs, adhere to collective decision making, resolve conflict through collective leadership and provide collateral free loans on terms decided by the group. These groups try to empower the least empowered sections (mostly women) socially, economically and politically. Involving millions of women (through SHG), thousands of NGOs, MFIs, and bank branches give this phenomenon a movement perspective.

This paper is an earnest attempt to examine the evolution and development of the phenomenon of SHGs from social movement perspectives, it is an effort to examine the phenomenon as a social movement at all and the applicability of different theoretical perspectives to study it. The paper uses the resource mobilization theory and constructivist approach as the analytical frameworks to explain the emergence and working of SHG system. The political and cultural opportunity structure in Odisha has been very much supportive to make the movement wide spread. At the same time operation and control from the top (Government of Odisha) affects the rigor of the movement. The paper discusses some such complex issues of collective actions.

The Transmission of the Chineseness to Chinese Descendants in Thai Society through the Understanding the Meaning and Religious Symbols

The research entitled “The transmission of the Chineseness to Chinese descendants in Thai society through the understanding the meaning and religious symbols” aims to investigate the existence of Chineseness in Thai society focusing on the transmission of the Chinese symbols and how Chineseness is being transferred to the young Chinese generation born in Thailand, which include the transfer of knowledge and understanding of the meaning of important Chinese festivals and traditions, problems related to the transmission of Chineseness, and the factors supporting the success of the transmission of Chineseness. This study is an applied research integrating both quantitative and qualitative data which collected by questionnaire and an in-depth interview. The findings are that a majority of the research participants still have their beliefs and faith in gods and sacred or holy items. Most of them still pay their respect to gods on Chinese Sabbath Days as well as to their ancestors. Chinese New Year and Chinese Autumn Festival are two Chinese traditional practices inherited to every Chinese family in Thai society. Chinese New Year, Chinese Autumn Festival, Vegetarian Festival, Moon Festival, God’s Thanks Giving Day, and Fifth Moon Festival are among the most important festivals which the young Chinese generation agreed that these festivals should be inherited to the next generation. Most of participants have knowledge and understanding of the meaning of Chinese New Year, Chinese Autumn Festival, Vegetarian Festival and God’s Thanks Giving Day. The transmission patterns of Chinese festivals and traditions are either direct or indirect. The problems regarding the transmission to the younger generation relate to social, cultural and economic factors. The factors supporting the success of the transmission of Chineseness are accurate information given by the old to the young generation, a refining process in a family, encouragement of the sense of Chineseness to the young generation.

A Generalisable Promise of Risk? Risk-Based Self-Regulation and the Inherent Limits of State Intervention in German Occupational Health and Safety Governance

In Anglo-Saxon academic discussions risk-based governance (RBG) has been identified as a method for rationalizing corporate and public governance processes, which are top-down, i.e. offering a central management vision that can be colonized by other domains and organisations in regulatory processes. As such, risk seems to entail a universally applicable promise for central governments to remedy failure while managing tight budgets. But does this hold true in distinct institutional settings?

Starting from the empirical observation of occupational health & safety policies (OHS) in an international research project (HowSafe), we find that, in Germany, risk approaches largely emerge in arenas outside the central state, with normative justifications, governance forms and organisational logics that seriously contrast Anglo-Saxon state-centric RBG notions. Moreover, regulation of workplace risks in German policies is characterised less by a coherent risk strategy than by pockets of risk-based governance. These have emerged, for instance:

- in the funding structure of the public accident insurance (classifying companies into risk groups)
- in research priority setting and prevention campaigns of mutual trade associations
- in inspection strategies of the Landers (risk-rationalizing the use of limited control resources)
- in the distribution and scattered risk approaches in German OHS raise the issue of risk-based self-regulation as a so far rather misrecognised form of risk governance. To enlighten this blind spot, this paper examines the role of territorial self-regulation by the sixteen Landers in OHS policy enforcement and public self-regulation by nine para-public organisations which govern the accident insurance, compensation and prevention in specific economic sectors. We show how self-regulation absorbs blame for failure and cost-bearing and contains RBG relatively unencumbered by the state. We argue that self-regulation inherently limits accountability pressures for central government, thus dismisses the promise of risk, and challenges some key conceptual and empirical claims of the Anglo-Saxon risk regulation research.

Restorative Justice Approaches in US-American Cities – Smart Responses in Stressful Times?
In 2010, about 750 adults per 10,000 of the US population were incarcerated. Mass incarceration in the United States affects nearly solely poor urban communities of color. US American cities are focal points of racial divide. Since years, the withdrawal of public welfare and intensified criminal prosecution are two sides of one medal. Current processes like urban gentrification and the on-going econom- ic crises are widening the gap between upper and lower strata of urban societies further. As social cohesion is harmed and cities are bankrupt, the level of stress experienced by the responsible and mostly local authorities increases. Does this stress turn the responses of authorities to the most vulnerable groups towards more innovative approaches to meet minorities needs best? Restorative justice approaches may offer more effective avenues to conflict resolution and enhance social cohesion and the communities’ capacity to build up resilience against crime and victimization. The main objective of the case study based research is if authorities in US cities made experiences of implementing new approaches of democromacy and community-oriented police practices in urban areas that were experi- enced by the responsible and mostly local authorities increases. Could new practices guide the way for general improvements of the relation among police and minorities in the US? The cases under qualitative study will be northeastern rust-belt cities, where industrial decline and financial austerity triggers further social divide and structural disadvantage of the urban Afro-American population. As it transpires that the predicted differences in the basic structure of police-citizens relations between Anglo-American Common Law cultures (where Restorative justice philosophy first originated from) and continental European Civil Law societies can be observed very clearly as a common de- nominator, results enable a comparative perspective among policing minorities with regard to Restorative justice in urban settings in Europe and the US.

PAVLOVA, ELENA* (University of Saint Petersburg, pavelava@mai.liru.sir)
The Struggle Against Injustice: Towards an Alternative Theory of Normative Power

The concept of “Normative Power Europe” is one of the most actively debated among international relations scholars. It is usually presented as an alternative way to conceptualize the role of the European Union as a new type of interna- tionalactor. According to Manners (2002), the distinctive feature of normative power is its “ability to shape the conceptions of ‘normal’”, and thus provide classify certain actions as legitimate or illegitimate. Achieving the status of a normative power is considered by most scholars and politicians as the greatest success of European integration, which has opened new perspectives for the EU as an actor on the global political arena.

The concept of normative power has been developed to account for the EU’s distinctive role as a foreign policy actor, but this paper is based on the premise that its applicability is much wider, and seeks to explore the conditions for the emergence and functioning of normative power in non-European countries by comparing discourses and political practice in the EU and Latin America. Using qualitative discourse analysis (Hansen 2006, Hopf 2002, Laclau 1991, Töpfing 1999, 2005) and taking the EU as the model case, it then looks at the normative as- pects of foreign policy discourse and practice in Latin America. This paper focuses on the pan-regional discourse, later to be complemented by individual country cases. The hypothesis is that a strong and independent counter-hegemonic discourse, based on the struggle against world neoliberal injustices, exists in Latin America, which contributes to the emergence of normative power.

PAWLUSZ, EMILIA* (Tallinn University, emilia.pawlusz@gmail.com)
In Search for Collective Identity. The Production of Estonianness By Means of Choral Singing in Contemporary Estonia

This presentation explores the role singing and performance of national song plays on the (re)-production of Estonian national identity (Estonianness). Start- ing from the revitalization of the ethnic-civic debate (Brubaker 1996) in Eastern Europe, most scholars have assessed Estonian nation-building as being preva- lently ethnic (Laitin 1998, Mole 2012). In particular, choral singing tradition that in many cases is closely related to a vocabulary of historicism is interpreted through the prism of nationalism (Bohman 2011). This paper initiates a critique to the above ap- proach by introducing three new dimensions: globalization, Europeanization, and multiculturalism. Informed from a structuralist constructivism (Bourdieu 1989) it combines analysis of social structures and institutions with perceptions of in- dividual social actors. The main focus is on power relations incorporated into singing as a tool for identity production. In particular, it will be explored how the singing tradition responds to identity tensions between ‘ethnic Estonians’ and ‘non-Estonians’, namely Russian speakers who constitute 26% of the population (census 2013). Considering singing tradition (1) in a network of social spaces – national and supranational, as well as (2) from the joint perspective of individual experiences and objective structures such as the state, allowing us to examine collective identity building mechanisms in post-socialist context in a nuanced and less deterministic way.

PAVEZ, ISKRA* (Universidad Autónoma de Barcelona, iskrapaz@gmail.com)
The Immigrant Childhood in Chile

This paper presents part of the results of a FONDECYT investigation, conducted by the author who has been financed with public funds, and whose objective is to analyze the integration of the immigrant children and adolescents, addressing the public policy and social interventions carried out by the State and ONG with migrant children.

The study is based on the Sociology of Childhood that covers the childhood as a three dimension concept. The first one, as a social construction, which is dis- tant from the essential idea of the childish being, and expressed in different ways across the history in every sociopolitical context.

The second one, as a permanent sociological category of the social structure, although his members are constantly renewed, and the third dimension, which comprises children as “social actors with an agency capacity”, that open- ended generational and gender relations of power with other actors, both within their families and in other social areas. Nevertheless, that social role is not often recog- nized in society and in academics. This is due to the adultcentrism that discrimi- nates against them because of their age and economic dependence (Jenks 1982; Qvortrup 1994; James and Prout 1997; Mayall 2002; Gaitán 2006; Unda 2009).

Across semistructured interviews to migrant children aged 8 to 15, and by par- ticipant observation in offices of Rights Protection, and in an ONG, the social integration of the migrant childhood is analyzed and taken to be the exercise of its rights and the development of transnational practices and how the social inter- vention hinders and/or provides that integration.

Finally, it is comprises that migratory trajectories and diverse social factors (such as gender, age, language, place of birth, nationality, social position among others) have an impact on the accommodation and social integration of the new immigrant generations, living in Chile.

PAYA Y PASTOR, ALICIA* (Université Lille 2, CERAPS, aliciapaya@hotmail.fr)
Doing Social Sciences on the Military Field: A Special Operation?

The purpose of this paper is to analyze the production process of scientific knowledge on the military and to reveal the complex and diverse relations – and their effects - between: the researcher and the military staff he or she is studying (depending on the social background, the age, the gender, the academic level and the military socialization of the former)
the researcher and the military institution (understanding of the functioning of the hierarchical organization and its values)
the researcher's academic environment (university or think-tanks affiliations) and the armed forces

The present paper aims at giving a thorough understanding of the complexity of the researcher social position during his/her social sciences investigations in the army. It is based on a personal experience as a Ph.D Student working on the French Land Forces. Being at the same time a female Ph.D Student in political sciences working on the French Army, a junior academic and a reservist who enrolled as a private and evolves now in a high level headquarters, generates a very particular inquiry context and can be used as an asset if and only if the researcher is fully aware of the consequences of its presence on the military field. This paper will also debate the importance of a personal and physical commitment from a methodological viewpoint and will discuss the opportunity of developing a comprehensive approach based on the simultaneous use of qualitative (sociological interviews, ethnographic observation), quantitative (questionnaire inquiry) and comparative methodologies. The usual case-selection problematic will be treated by focusing on a specific population: the French reservists. Lastly, the “specificity” of the army as a special social field that requires specific scientific tools (to gain access, to evolve in the institution) will be pondered.

Ecological Modernization as Discourse: A Media Analysis of Irish Newspaper

Ireland has had a very mixed response to the challenges arising from the fact that climate change is perhaps the greatest threat to this planet and to our current way of life. This research investigates how Ireland’s most important newspapers have raised awareness and disseminated information about the issues related to the challenges we face. An analysis of the trend in the coverage of climate change between 1997 and 2011 was undertaken in order to map the peaks and troughs in the media coverage of the issue, and to see if there was a correlation between the peaks in newspaper coverage and significant climate change events. A second stage of the analysis sought to uncover how the issue was framed by the newspapers. Issues of climate change were a common theme, but the specific types of issues were most commonly discussed. The final level of analysis sampled and coded the statements made by the actors whose views appeared in the Irish newspapers in 2007 and 2008 in order to generate the affiliation network database. This database was used to create four separate discourse clusters, each of which represents a different sub-discourse network within the overall climate change discourse network. Within these clusters actors are tied to each other through their shared positions on related issues. An analysis of the clusters and the complete discourse network found that the climate change debate was dominated by key economic and political actors. The discourse of ecological modernization was used to reconstruct the issue of climate change as a technological and economic challenge rather than an environmental one.

PEACOCK, DAVID* (University of Queensland, david.peacock@uqconnect.edu.au)

Institutional Ethnography and The Uses Of Critical Discourse Analysis

For Dorothy Smith, IE is both a social ontology and social scientific procedure that seeks to empirically investigate discourse as social relations that are organized by the activities of people. Such an approach creatively connects ethnographic methodology to the local accomplishments of the social with a Marxist insight into people’s active participation in extended social relations that can ‘override’ and implicate them in wider ‘ruling’ relations and injustices. Critical discourse analysis has often been used by Institutional Ethnographers as a means to examine certain texts as they are embedded within a field established through sequence of institutional action. Yet the discourse analysis performed in much Institutional Ethnography to date has not paid close linguistic attention to the way the specific local actors utilise texts and discourses in an active appropriation of the ruling relations established by official discourses. Using data from an Institutional Ethnography in Ireland on student-equity practices in Australian higher education, this paper illustrates how a Fairclough-Inspired Critical Discourse Analysis of the hybridity of a sample of institutional texts and interview transcriptions is able to provide greater analytical purchase on how texts are actively appropriated within an institutional field of action. Retaining Smith’s focus upon texts and discourses within ongoing and daily interactions, I seek to analyse within this analysis how genres, discourses and styles (Fairclough) are assembled within a text within a given (higher education equity) social practice. This paper demonstrates how this kind of linguistic focus, when joined with an analysis of the functions that texts play in organising and sequencing a field of institutional action, offers possibilities for more nuanced accounts of individual and collective social agency in the process of semiotic and social change.

HANSEN, VIBEKE HOLM (University of Copenhagen)
The Emergence of Trust in Clinics of Alternative Medicine

The demand for the services from practitioners of alternative medicine has increased within the last decades in those nations in which Western scientific evidence has not been available through the media or healthcare systems. The purpose of this paper is to examine how trust between practitioners and users emerges in clinics of alternative medicine where practitioners are self-regulated and the users pay out of their own pockets for attending non-authorised treatments with very limited scientific evidence of effects. Trust is a key concept for healthcare outcomes and is increasingly widespread in research of health. However, most studies focus on formalised institutional settings and only few sociological studies of trust have contributed knowledge into how alternative practitioners win their clients' trust. Drawing on three qualitative studies (in sum 124 in-depth interviews and 3 focus groups) of different forms of alternative medicine, conducted in Denmark from 2008-2009, we explore how uncertainties are managed and trust emerges in the treatment encounter. By informing the empirical findings with a concept of intersubjective trust (i.e. Barbato 2009), experiences among clients and practitioners are in focus to contributing new empirical insights on how trust is performed since the basis for trust is not evident. The analysis demonstrates that trust in the alternative encounter comprises relational, bodily as well as material aspects.

PEDERSEN, INGE KRYGER* (University of Copenhagen, ikp@soc.ku.dk)
The Lifestyle & Health Jurisdiction: A Danish Case about Reducing the Development of Lifestyle Related Chronic Diseases

The objective of this paper is to contribute new insights on the intra- and inter-professional responses to, and dynamics within, an emerging jurisdiction of health problems related to lifestyles. It is examined how health professionals and hospital managers mobilised to reduce the risk of developing the most common and deadly lifestyle related chronic diseases. How are socially contested issues such as dieting, smoking, alcohol intake and physical activity (in Danish the so-called KRAM factors) defined and managed in terms of medical problems? A Danish case to illustrate the issues of disease prevention as they emerge in clinical practice in Danish publicly owned hospitals is: "KRAM screening & intervention", that is registration and detection of patients' so-called risk factors to strengthening the efforts on disease prevention. This intervention program followed up by disease prevention counseling is a free service provided by publicly owned hospitals, as present in the Northern part of Denmark, eventually all over the country. One key jurisdictional dynamic to be analysed in this paper is: jurisdictional disputes and professional settlements (Abbott 1998, 2005): What is the division of labour between medical doctors and other professional groups within the interventions programs, and how is this division of labour maintained in professional practice and organization? Empirical materials include documents (standard procedures, registration forms a.o.), qualitative interviews with patients and counselors about goals and practices, and observations of counseling situations. It is discussed how medico ideas feed into the policy process and how governance networks are linked to explain why lifestyle problems are turned into the medical area, nationally as well as in international spheres, i.e. WHO.

PEDERSSON, ANDERS* (University of Gothenburg, anders.pedersson@liu.gu.se)
Old Ways and New Ways: The Relation Between Criminology and Sociology in Post-War Sweden

The trajectory of criminology in 20th century Sweden can be described as that of a discipline under the influence of medicine in the first half of the century, and of sociology in the second. The change from one scientific perspective on crime to another took place in the decades following the Second World War. This shift has been explained by factors such as the decline of medical explanations of society and human behavior following the atrocities committed by Nazism, and the growing influence of American sociology on Swedish academia during the post-war decades. The validity of these explanations is still to be proven. And even if there is truth to them, the question of how the shift came about is still to be answered.

In my investigation of the relation between criminology and sociology in post-war Sweden, I will argue that changes can be discerned at three levels in the process by which sociology came to dominate the field of criminology: in the theoretical content of Swedish criminology, in the infrastructure for the production of scientific knowledge, and in the Swedish political discussion on crime. These levels are not separated, neither from each other nor from the society surrounding them, but nevertheless theoretically and empirically distinguishable. An analysis of each of these separate levels will contribute to a better understanding of the relation between them, and of the issue of the relation between criminology and sociology.

On a more general level my investigation will address questions of disciplinarity and interdisciplinarity. It problematizes the relation between sociology and other disciplines of social science. Finally, it illustrates the complex character of the interdisciplinary relations needed to produce a fundamental change in the scientific perspective on a social problem.

PEDERSON, THOMAS* (Wayne State University, Pedroni@wayne.edu)
Urban Restructuring and the Educational Politics of Race and Place in the Global Niche City

While Detroit is not a center of global finance and has declined as a global production center for the automobile industry the changing relationship among cities, nation-states, and the global economy is manifested in struggles over urban development strategies in Detroit as its leadership attempts to position the metropolitan area as a global niche city. In the process of reimagining the city, the region's largely neoliberal corporate and political leadership deploys particular urban development strategies in the areas of education, housing, public infrastructure, and governance. While such deployments are framed as both inevitable and in the best interest of everyone, they are also deeply implicated in the restructuring of social and educational exclusion, particularly among the cities overwhelmingly impoverished Black and immigrant residents.

My paper analyzes Detroit's neoliberal policy complex in relation to education, urban development, and governance, drawing on documentary analysis pertaining to the crafting of policy. Recognizing the devastating impact of massive home foreclosures, urban flight, rampant segregation and poverty, and the closing of many public schools, I also reference ethnographic work I am beginning in public schools in the city's suburban and inner city neighborhoods, Detroit, and the ways in which, they raise the racial imaginary and issues of territoriality play out in broader struggles over the city and the metropolitan region's resources, cultural representations, and power.

Lifecourses, Pensions and Poverty Among Elderly Women in Belgium: Interactions Between Family History, Work History and Pension Regulations

The precarious financial situation of many elderly women in developed countries is well-established. Nevertheless, in-depth insight into the persistent vulnerability of this group remains largely absent. In this article, we demonstrate how a specific focus on the interaction between work history, family history and pension regulations can provide greater insight into the mechanisms that produce poverty among elderly women in Belgium. To that end, we make use of register data on some 9,000 women aged 65 to 71. Data on the poverty risk of these women is linked to career and family data, spanning over 45 years. We find that pension policy can indeed account for the higher poverty risk of some groups of elderly women (e.g. divorcees) as compared to others (e.g. widows). Similarly, pension policy can, to a large extent, directly or indirectly explain how previous lifecycle events, such as marital dissolution or childbirth, affect old age poverty risk. However, our study also reveals some unexpected findings. Most notably, pension regulations fail to account for the beneficial situation of married women. Indeed, our analyses suggest that capital (income) may prove more decisive than pension rights to explain the low poverty risk of married women when compared to other marital groups. Drawing from our findings, we conclude with some suggestions as to where pension policy should go from here.

Conflicts within Finance Capital and Implications for the Climate Crisis

Particularly in the era of financialisation, the logic of financial capital is to focus on (short-term) profits, often at the expense of environmental concerns in general and, climate in particular. Indeed if this were not so then there would likely be no climate crisis. Yet in recent times many groups, including elements of finance capital, have called for greater emphasis on long-term considerations including on climate. What is it that makes some parts of finance capital focus on climate issues while other parts eschew them? What motivates climate-interested investors and what is their potential for addressing the climate crisis? We address these questions through a combination of qualitative analysis of interviews and
Perceptions, Sleep Management and Risk

This paper aims to discuss the management of sleep as a focus for performance investments among youth, through the consumption of pharmaceuticals or other therapeutic products, such as natural medicines or supplements. In this context, sleep plays a particular role as a depharmaceuticalized resource to achieve a certain level of (cognitive and/or physical) performance. While being an object of normative discourses about “healthy lifestyles”, sleep is simultaneously presented as a feature that can be artificially optimized through performance consumptions that place it at the frontier between treatment and enhancement.

The investigation that shapes consumption patterns directed at sleep management not only reveals particular risk gradations attributed to therapeutic resources for those purposes, but they also express forms of management whose instrumentality organizes differentiated consumption practices, which are context-dependent.

Our analysis is supported by the results of an ongoing research about therapeutic consumptions to enhance physical, intellectual and social performance, among young people in Portugal (aged between 18 and 29). A mixed-method approach was used, including a nation-wide survey (n=1500), followed by semi-structured interviews (about 50 individuals, selected from the questionnaire respondents). On the one hand, the survey originated a set of quantitative indicators about youth sleep patterns, consumptions and predispositions to consume sleep management products, as well as perceptions of risks associated with them and ways of dealing with those risks. It also revealed how these indicators were socially distributed (in terms of gender, education level, occupation and scientific area of study). On the other hand, the interviews enabled the qualitative exploration of the specific purposes that lead to the consumption of products to help one sleep or stay awake, and provided information about the manner in which young people weigh between risk and effectiveness and between the immediate and the deferred benefits regarding these consumptions.

Ontological Struggles: New Materialisms and the Challenge of Impotence

According to Giorgio Agamben, the most devious operation of power today is not its hold over our potentiality – what we can do – but over our impotence – what we can not do. Following this insight the paper interrogates the recent turn in cutting-edge social theory from cultural constructionism to new materialisms and naturalism. On one side the emancipatory import of deconstructing traditional accounts of knowledge, reality and subjectivity is questioned for its eventual ineffectiveness against domination and inequality. On the other, cultural constructionism is deemed incapable to account for the materialities emerging from technoscience advancements. Traditional ‘negative’ modes of critique are replaced by ‘affirmative’ orientations which celebrate the dynamic, ‘vital’, ‘agential’, ever-changing character of the organic and inorganic world, and therefore indicate a direction towards reflection. Are we in front of a much-needed renovation of social theory vis-à-vis rapid sociotechnical and environmental change, or are we rather in front of a ruling imaginary which simultaneously supports and obfuscates a major socio-political, perhaps even an anthropological, transformation?

Eating Organic, Growing It Yourself

There are many things to talk about when discussing organic food, from class to gender, ethics, health, cross-border supply chains, environment, food-security. In Cambodia the discourse of organic food has emerged during this past decade, especially as result of the increasing unregulated food import from neighboring countries. It has become even more worrisome as local farmers widely use chemical inputs without proper skills and State control.

Ironically, for many rural Cambodians, the question of organic food seems to be less relevant. For them, organic food is normal. It is what they produce or source locally in the village. Instead, their important questions are about feeding their families and balancing this immediate need with caring for nature, ensuring that their land remains fertilized and cultivable for the younger generations.

This paper focuses on organic rice, the main agriculture crop in Cambodia. Even though the country is self-sufficient at the national level and produces surplus for export, pressure to reach export targets leads to big farms using more chemical inputs, which they can easily get from the market. Hence rice is not always organic as local people have thought. As such, many high-income households carefully source it from local markets or directly from farmers they know, creating a unique network of producers-consumers. Interestingly, some people have started farming rice for their own consumption and have minimize purchasing it from the
market. We have also seen increasing number of ethical organic food suppliers, those managed by non-governmental organizations or private owned businesses.

This paper uses two contrasting cases of organic rice farming from two provinces in Cambodia to illustrate how this organic rice is produced differently and how social status, household incomes, and community development programs influence and shape the decision of producing and consuming organic rice.

PEN, RANY* (University of Sydney, rpen2122@uni.sydney.edu.au)

Securing Food While Caring for the Field: A Case of Rice Farmers in Kampong Speu, Cambodia

Since the adoption of Rice Export Policy, Cambodian rice export market has emerged and the country recently joined the top ten rice exporters. While nation-ally it produces surplus, many poor rice farmers cannot produce enough for home consumption. Small farmland, unfertilized soil, unsecured land ownership, limited access to irrigated water and unpredictable precipitation are some major causes of their low productivity.

Furthermore, around 43% of rural population depends on purchased foods. The increase of export volume potentially puts more pressure on these consum-ers, especially the poor, because it is uplifting local prices to as close as the interna-tional prices.

Facing food insecurity and having to cope with agricultural production chal-lenges, some smallholders still continue their conventional approach of sustain-able land use. Instead of trying to increase productivity through using chemical inputs, these rice farmers choose to preserve and improve their soil quality using organic fertilizers. This is particular for poor smallholders interviewed in Kam-pong Speu province.

Because rice farming alone is not enough and with limited supports from Government, alternative coping mechanisms that these farmers have adopted include diversified agricultural activities i.e. vegetable home garden, crops farming, livestock raising; seasonal agricultural and non-agricultural works within the village, in nearby villages, or in neighbouring countries; and work related migra-tion to industrial towns.

Using data from a fieldwork conducted in Cambodia early 2013, this presenta-tion will examine these above approaches undertaken by farmers in a district in Kampong Speu province. All interviewees, except two, are part of livelihood programme supported by a local organization, Action for Research and Develop-ment, which recruits these beneficiaries based on their economic and social status: families without or with small farm land; families with many children; families that are heavily indebted; poor families with disabled members; or elderly people without support from their children.

PENG, ITO* (University of Toronto, itopeng@chass.utoronto.ca)

Reshaping and Reframing Gender, Care and Migration: With Focus on Asia-Pacific

In the recent decades, changes in economic structures and women’s shift into paid labour have strained the family’s capacity to perform care, while worldwide population ageing has led to increased demand for paid care workers. The result-ing “care deficits” represent a challenge for individuals seeking to reconcile work and family as well as for national policymakers who must balance demands for care with those for equal opportunity for women, and for the full development and utilization of human capital. The need for care has also reinforced “global care chains” that draw women from poorer nations into employment as care workers in wealthier ones, creating not only care deficits but also a “care drain” in sending countries. This highlights the changing global context for care and migration, the new forms of gender and global inequalities, and critical roles that policies can play in reducing inequalities while providing essential care to those in need.

The paper examines political, institutional and cultural factors that have shaped, and are reshaping, ideas and norms of care, focusing on Asia-Pacific context. Definitions of care determine what care is and should be, and who will provide care – family members, communities, and/or paid workers; native-born people or migrants – and the extent to which care may become commodified. How do these definitions shift and adapt as conditions change? How do migration regimes (the laws, regulations and practices surrounding immigration) shift in re-sponse to changing demands for care workers?

The “New” Social Investment Policies in Japan and South Korea: Social Inclusion through Social Care Expansion?

China’s internal labor migration has attracted worldwide attention during the last three decades. While studies on rural-urban migration and its implications for China’s development proliferated, the reverse flow of these migrant workers and their lives in rural villages or townships upon their return have been largely ignored. In China, many women migrant workers have chosen to return to their rural villages upon their marriage and pregnancy. This paper explores the meaning of city working experience for migrant women and the role of women play both in decision-making of return migration and in establishing their new lives in the changed rural context after staying in cities for an extended period of years. It challenges the stereotypical images of Chinese migrant women who are always depicted as passive recipients of the structural constraints such as the patriarchy system, capitalist market and state policies. Rather than severing their connections with rurality and upholding the modernity they gained from urban experiences, many of them are actively trying in their own ways to reconcile their familial identity by working on “ruralizing” some “modern” values while others are “modernizing” the “rural” values. Either way they are reconstructing a collective identity for themselves with meanings only they themselves would understand and appreciate. Besides, through critically employing Bourdieu’s theory of practice, it puts forward a multi-field perspective in understanding these returned women’s identity reconstruction and daily practices and highlights the importance of localization of western theory in Chinese context.

From Motherhood Penalties To Husband Premia: The New Challenge For Gender Equality and Family Policy, Lessons From Norway

Given the key role that processes occurring in the family play in creating gen-der inequality, the family is a central focus of policies aimed at creating great-er gender equality. We examine how family status affects the gender wage gap using longitudinal matched employer-employee data from Norway, 1979-1996, and with extensive expansion of family policies. The motherhood penalty dropped dramatically from 1979 to 1996. Among men the premia for marriage and fatherhood remained constant. In 1979, the gender wage gap was primarily due to the motherhood penalty, but by 1996 husband premia were more impor-tant than motherhood penalties.

Relocation and Perceived Social Support Among Elderly Persons in Rural China

In China, recent relocation policies have seen millions of people moved from their homes in efforts to reduce poverty, address ecological and disaster-related concerns, and make way for major construction projects. Many of those who are being relocated are older adults, moving for the first time in their lives away from their rural ancestral homes and villages. Yet, little is known about the implications of relocation for older adults, including its implications for access to social support and mobilization of social capital. However, this is an important outcome in the Chinese context where, for centuries, older individuals have relied on family members for support. This study addresses theses issues using data drawn from the 2011 Ankang Study of Health and Well-Being (ASHW) conducted with a representative sample of 613 rural residents aged 60+ living in the Ankang region of China. Over the last 10 years, the provincial government has implemented policies designed to relocate 2.4 million residents or 80% of the total population in the region.

Multivariate regression analyses show that construction-related relocation has no impact on perceived support. However, poverty-reduction and disaster-relat-ed relocation are associated with a reduced level of perceived support available from others with the exception of social interaction in the case of disaster-related relocation. Ecological relocation also had a negative impact on emotional support.

These findings support the view that relocation reduces older adults’ perceived access to social support. This is particularly evident with regard to poverty-reduc-tion and disaster-related relocation. Possible explanations for these differences are discussed as are the potentially important implications of these findings for future health care policy in rural China.

"If You Have a Giving Heart": The Framing of Post-Disaster Need and Donations

The material convergence that occurs in disaster-affected areas is well documented, as are the associated complications that arise. Among these challenges, research has documented the arrival of donations in excess of the need, of material donations instead of monetary contributions, and the donation of items inappropriate in the time, place, or cultural context (Holguín-Veras et al. 2007; Neal 1993; Neal 1994; Rodriguez et al. 2006). Despite the discrepancy between what is needed and what is donated, people continue to make these kinds of contributions. This paper examines the subjective meanings and understandings that people who participate in disaster relief give to donations and need. Using Entman’s (1993) definition of framing, this research examines how donors frame post-disaster needs, including their problem definitions, causal explanations, moral evaluations, and treatment recommendations, as well as what information and sources inform those frames. Preliminary analysis suggests that participants frequently construct involvement in disaster relief as a moral obligation, though the source of that moral obligation can vary in form, including religious motivation, the mission of the organization to which they are a member, or a personal connection to the area. The donation is not only the treatment recommendation to meet a subjective construction of need developed by internal rationale and information attributed to other sources. Some view the donation of material goods specifically as a treatment for the perceived problem of recipient misuse of monetary donations (be they a disaster relief organization or the individual identifying as a disaster victim). Though not always explicitly stated, participants see the cause of the need as external to those affected by the disaster. Donations are determined accordingly based on these frames. Thus, how these frames are constructed has implications for disaster response.

PEOU, CHIVÖIN* (University of Melbourne, peouchivoin@gmail.com)

Interconversion of Capital and Structure of Inequalities – Managing Transition Toward Adulthood in Transforming Society

This paper draws on Bourdieu’s concepts of ‘capital’ and ‘field’ to examine how different social groups of young people negotiate the transition into the labor market and toward adulthood – particularly the interconversion of various forms of capital, in the process contributing to the reproduction of inequalities. The transformation of the Cambodian society toward a modern industrial and service economy has entailed an altered structure of inequalities. The emergent occupational and mobility field has become characterized by the stratification of passages into poorly-paid, labor-intensive workers and university graduate workers, and by a dual youth policy discourse of promoting the enterprising subject and protecting the ‘at-risk’. Based on a study of the life experiences of young Cambodian urban migrant labor workers (n=20) and university students (n=31) in Cambodia in 2011–2012, this paper demonstrates how different forms of capital are drawn upon by differently positioned youths in managing their transition toward adulthood. The rural youth rely heavily on their social network and embedded cultural capital to produce economic resources for mobility and future security. On the other hand, those with relatively higher economic capital, mostly the urban youth, concentrate on accumulating institutionalized cultural capital, and sometimes developing new embedded cultural capital, for mobility and successul adulthood. The results are to be interpreted in the context of quickly transformed social space, the absence of a welfare state, and the instrumental family of Cambodia. At the interactional level, the transforming society has entailed two differentiated capital conversion strategies for the rural poor and the (often urban) resourceful in the transition toward adulthood, but neither group/strategy is insulated from new risks and uncertainties of the life course. At the socio-structural level, the process contributes to an alternative structure of inequalities broadly tantamount to the emerging working and educated middle classes.

PEOU, CHIVÖIN* (University of Melbourne, peouchivoin@gmail.com)

Life Course Opportunities and Uncertainties in Transforming Society – Managing the Transition into the Labor Market in Late-Developing Cambodia

The generalized ‘late’ modern change, including post-industrial capitalism and increased individualization, has by now become a powerful tool for youth and life course sociology to describe emerging patterns, risks and uncertainties of modern lives. Although research has increasingly been focused on the risk and uncertainty experienced as part of personal biographies via their socially differentiated positions, a Eurocentric standpoint remains influential as recent life course changes and risks are seen as diverging from the modern industrial ‘normal’ life course. This paper attempts to assess the embeddedness of opportunities and risks in the individual’s social context and biographical experiences. First, I will position the contemporary transformation of Cambodian society in the context of modernization theory (Beck 1992; Giddens 1990) and debate on the varieties of modernity (Chang 2010; Eisener, 2006). Second, based on a study of young people (n=51), will be used to illustrate how the opportunities and uncertainties in the new life course are differently managed based on socio-cultural and individual resources during the transition into the labor market and toward adulthood. This shows that in the context of compressed modern transformation, not only does the life course encounter both new risks and opportunities, but it also requires a mix of traditional and modern frameworks and resources to deal with inherent uncertainty.

A Brief Historical Overview of Gender Studies in Our Region: The Cases of Argentina and Brazil

In recent years, the term “gender” has gained visibility in social discourse. That is why expressions such as “gender violence”, “gender identity”, “gender equality”, “gender others” appear everyday in mass media. Such discourses proliferation can not be properly understood without taking into account the discussions held within feminism as a social movement and an academic stream.

The area of knowledge we now call “gender studies” was first consolidated at the universities of the central regions (United States and Western European countries). Our Latin American region has not been left out of this epistemological, theoretical and methodological renewal. Therefore, in this paper I am looking forward to: 1) exploring the origins of the category “gender” as a tool for analysis in contemporary social sciences and humanities and 2) focusing on the historical configuration of this interdisciplinary field in two national cases, Argentina and Brazil (and also highlighting some similarities and differences between them).

PEALES, FRANCISCO* (The University of Queensland, perales@uq.edu.au)

Who Settles For Less At Work? Subjective Dispositions, Job Characteristics, and Job Satisfaction

In recent years there has been growing interest in individuals’ self-perceptions of their wellbeing on the grounds that these complement well-established objective indicators of welfare. Wellbeing in relation to work, captured for instance by measures of job satisfaction, has not been an exception. The discourse on work in post-industrial societies has shifted from perceiving labour as a means for subsistence to conceptualising it as an important aspect of individuals’ identity and self-realisation. Consequently, the utility people gain from their work has become a feature of modern working life and subject to increasing academic attention. However, individuals’ assessments of this utility depend on the objective circumstances that they experience at their jobs and workplaces and their subjective, idiosyncratic dispositions, such as their aspirations, expectations, or personal evaluation criteria. We add to the literature by formulating and testing a modelling strategy that uncovers how the latter subjective dispositions differ across population groups. We do this by estimating a within-job fixed-effects model which, by controlling for all objective characteristics of the job and workplace, enables us to explore how subjective judgements concerning job satisfaction and other work arrangements are made by different types of workers. To achieve this, we use data from a large-scale matched employer-employee dataset covering the UK – the 2011 Workplace Employment Relations Survey (WERS). Following reference group and relative deprivation theories, we expect different significant differences in the way in which individuals with different socio-demographic characteristics rate the same objective working conditions. More specifically, we expect female, young, elderly, and migrant workers to be more satisfied with their work arrangements.

Emotional Control in the Financial Marketing

In the scope of a major research program about emotional normatization in the contemporary capitalism, I would like to focus on the emotional normatization of the financial investor. By analyzing Behavioral Economics texts about the emotions of the economic man in the financial market, I pretend to show how this bibliography: 1) explains economic crises as consequences of emotional based decision taking, an irrational behavior of the economic subjects responsible for breaking the market equilibrium; 2) normatizes emotions of the investors and offers self control techniques; 3) teaches how to predict and to use the emotional conduct of others investors to obtain economic profits. This bibliography, recognizing the investor as a emotional being, converts emotions in a professional competence that requires previous training to develop human capital. In this way, emotions are regulated and subordinated to a economic logic.

The Potential of Telecare/Aal Technologies for Enabling ‘Ageing in Place’ in Rural Areas in Poland and Germany

The vast majority of older people wants to continue living independently in their own homes for as long as possible. This preference poses a particular challenge in rural areas where family members are often not available for support since they moved to the economic hubs in the big cities for earning a living and care providers have to travel long distances. Telecare and other ambient assisted living (AAL) technologies can provide an alternative if linked to emergency care services. This paper will explore the potential of these technologies for enabling older people in rural areas to ‘ageing in place’ in two regions in Poland and Germany with a particularly high share of older people – the Malopolska region surrounding the city of Cracow and Upper Lusatia (“Oberlausitz”) – to the east of the city of Dresden. Both areas are characterized by outmigration of the younger generations, declining fertility and growing shares of older people.

This research analyzes the potential of telecare/AAL technologies for improving older people’s quality of life based on two explorative pilot studies focusing on the provision of telemedical services to senior citizens. Thereby, the analysis considers opportunities as well as risks of telecare/AAL application in older people’s homes. In the Małopolska region, a group of older people was provided with telecare/telehealth equipment monitoring bodily functions, such as ECG or blood pressure, which are monitored by telemedical/telecare systems enabling remote examination, consultation, and diagnosis. The German study takes a slightly different approach in focusing on matching older people with an interest in AAL/telecare technologies with providers of the latter. The process will be evaluated in a longitudinal user survey measuring their experiences before, during and after using the technology, which in turn will be compared with findings from an independent sample.

Auntie Does Not Know What Sociologists Do. Do Not Blame Her: A History of Professionalisation of Sociology in Argentina (1960-2010)

The main goal of this paper is to describe the professionalization process of sociology in Argentina during the last five decades. First, it examines both the role of sociologists in Argentina during different historical stages and the situation of the teaching of sociology, trying to identify different traditions and tendencies. Second, the paper additionally describes diverse organisational frameworks in which local sociologists have tried to set their professional and academic issues. Third, it presents some data from a research that focusses on the working conditions of sociology graduates in Argentina from three different cohorts. One, a group graduated from 1961 to 1974. It had an early and successful professional insertion, linked with teaching and state planning. Two, another group which received their degrees from 1984 to 1992 had more problems in searching for jobs, but new opportunities in public opinion polls and consultancy were expanding. Third, a young cohort of graduates since 2002 who found an institutional scenario of new social demands and researches for sociological knowledge at academia, state and private sectors. The paper looks for an answer to what were their jobs and how they started and followed a professional career in sociology, trying to identify the socialization process of their actions and the political and social networks to which they were affiliated. Methodology combines the use of previous data, the job situation of sociologists in Argentina at different historical stages with a survey, trajectories reconstruction and in-depth interviews. Finally, this paper reflects upon the multiple challenges that sociology in that country faces at the present: institutional expansion, funding opportunities and social recognition combines with institutional fragmentation and lack of consensus on sociologists as workers and professionals.

PEREZ, LAURA* (Av. Universidad Paramillo Ciencias Sociales, laurap@unet.edu.ve)
Revisiting La Cooperacion Desde La Transferencia Tecnologica

La transferencia tecnológica no es solo hoy día aceptada como un elemento dinámico en el crecimiento de las capacidades materiales de los países de “menor desarrollo relativo”, sino además como un proceso fundamental asociado a cambios en la cultura y la historia. Ha adquirido relevancia en las agendas de los distintos foros de negociación – multilateral y regional, en una vinculación positiva a las necesidades de desarrollo de los países – recientemente se ha tomado conciencia sobre la diversidad de problemas que se generan por la exigencia de factores concretos de asimilación, aprendizaje, apropiación y adecuación, a contextos culturales, regionales, locales, específicos, donde se contribuye al análisis sobre los avances en la cooperación internacional venezolana con países de la Región y como contribuye a la mejora de las circunstancias que rodean la construcción, aplicación, operatividad y consecuencias asociadas a la transferencia tecnológica. Esta investigación, descriptiva, sigue dos vías de análisis, por un lado, desde el planteamiento de “soberanía tecnológica”, donde la decisión sobre el país o tecnología fuente se reconoce en el ámbito de lo público, tiene una dimensión política y una nueva agenda de negociación defensiva fuerte controversia sobre la liberación de los servicios de educación y salud por afectar la protección de bienes sociales que son derechos humanos. Por otro lado, desde las prácticas e instituciones presentes en la complejidad industrial y tecno productiva nacional. Ambas vías desafían la comprensión multidimensional del papel de la cooperación internacional en los procesos de transferencia para reconstruir estratégicamente hacia capacidades tecnológicas propias. Finalmente, se determina la ausencia de “infraestructuras de interface” que permita la interacción y en la que se ha hecho falta un marco plausible efectivo formalmente los aprendizajes, establecer las relaciones de complementariedad necesarias y concretar los resultados convenidos.

An European Mining Boomtown Case Study. Toward a Sociological Theory of Boomtowns in a Global World?

By mean a case study, this paper aims to test many of the William Freudenburg’s theories on boomtown phenomenon. Apart from his contributions to the understanding of the social impact during and the following years after the construction of the large scale projects, his theory has been enriching to describe the long term social consequences in the so called boomtowns. Judging by the results, the apparently boom experienced might not be such in many cases. It might be simply a rapid urban growth in the vicinity of the large scale project, but in contrast, the region as a whole, i.e. including municipalities around, might suffer not only after the natural resource exhaustion but also the shrinking of the activity, from shrinking. Secondly, results confirm Freudenburg’s theory on the addictive character of the natural resources dependent economies. Judging by the in-depth interviews conducted among social actors, the concept of development is truly limited to the hope of a new boom as those lived in the past. This hope is nurture by political institutions and trade unions who despite the closure of the mine and the fewer chance to repeat such boom, still struggle for attracting large scale industrial projects. The formers know about the electoral benefits and

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
the latter would have more difficult its action in a more dispersed labor market. In other words, addition might not be limited to new mining boom only, such as Freudenburg suggests, but to merely “large companies”, like nuclear or celluloses. Additionally, evidence suggests that the boom might give way to a very particular community culture that overestimates the importance of the grandiosity for any kind of change. Therefore, these are some of the conclusion that will allow to build (upon Freudenburg’s legacy) a more consistent and global sociological theory on the boomtown phenomenon.

Work Social Representation Among Young People and the Ambiguity of the Development Policy in Poland

This paper aims to examine the perception of the meaning of a “good job” among young generations in Poland. The economic policies implemented in recent years have emphasized the importance of entrepreneurship among new generations. The immobility of generations raised during the communist period is usually seen as an inconvenience that stop a major development. This is very clear judging by the number of public advertisement that encourage students to start up their own business, the invitations to take part in competition for the “best business idea”, the highlighting of entrepreneurship related subjects in the universities’ curriculum and the emergency of certain entrepreneurship icons within the political spectrum. By mean the conduction of focus groups, in-depth interviews and participant observation, the current research inquiries on the idea of a “good job” among young people, with a special stress on how entrepreneurship is seen. Despite the permanent and dominant discourse about the low wages, working in some of the many foreign corporations that has invested in the country in recent years is seen as the “top of the mind job”. This accounts for the importance given to the symbolic meaning of belonging to an “international” organization, the social status provided by it and the need of constructing a “modern” identity of themselves. All these things, despite the usual low wages and lack of career opportunities provided. Asked directly about the possibility of becoming entrepreneur, it is seen as a step subjected to first success in a corporation. Entrepreneurship incentive policies might not have the expected results. The fault might be, among other reasons, the contradictory of the public discourse between, on one hand, the importance given to entrepreneurship and, on the other hand, the persistence for attracting globally-driven investment by established corporations and elites via tax break and low salaries policies.

Mobilization and Performance in the Public Space in 2011: A Comparative Approach

From the Tunisian Revolution onwards the increase in social mobilizations around the world shows not only a significant shift in the political sphere but also some heavy evidences of social change. Young people who have been at the center of those mobilizations, are especially susceptible to provide evidence of change when cultural, moral or attitudinal issues are involved. Furthermore, such mobilizations possess significant symbolic and cultural dimensions, and constitute a vector of experiences in which a great charismatic power, able to trigger off social and cultural change, is generated.

These experiences may or may not have a ritual nature. According to J. Alexander, in the less complex and differentiated societies, social cohesion is generated by rituals, understood as periodical repetition of symbolic interaction in which participants fuse in the whole. However, in more complex and differentiated contemporary societies, the ritual is unable to keep fusion by itself, thus allowing for social performance to achieve the re-fusion of those social elements no longer cohesive.

The main goal of this paper is to approach some of these mobilizations in which youth occupied the streets as social performances, and to explore its consequences for social change. The four 2011 cases to be analysed are: the Egyptian Revolution, the Spanish Revolution (15-m), the London riots and the Youth World Day in Madrid (MYD). They are analyzed following the basic elements that shape social performances: actors, audience, collective representations, means of symbolic production, mise-en-scène and power.

The Values Of Scientific Ethics: A Way To Face Inequality

Scientific work is one of the most socially valued activities, as it is a complex task that requires specialized professions and very specific knowledge and skills. Science characterizes itself because its permanent growth and its self-regulation. It means that any proper or formal research has to be necessarily subject to scrutiny, refutation and peer approval. Scientific work can be profitable and advantageous. In fact, nowadays, science and technology are usually considered as strategic areas to the economic growth, innovation, productivity and competitiveness.

However, impacts of scientific research cannot remain only in the economic field; on the contrary, it must also help the social, communal and personal development. In this paper, we talk about the social responsibility of science and how their results can contribute to improve the living conditions of individuals and to reduce inequality. At first, we analyze the values that support scientific ethics and then we discuss about the ethics of commitment and social responsibility.

We focus mainly on three principles: 1) the observance of the integrity and the respect of the human rights, 2) the social commitment of research and 3) the satisfaction of the individuals’ needs. The research is carried out then. We present the results obtained from a study developed with a group of professors-researches from the Juarez Autonomous University of Tabasco. The objective was to identify the values that distinguish their work as researchers.

The results showed us that, regarding scientific ethics, some values such as objectivity, self-regulation, confidentiality, professional collaboration and the pursuit of knowledge are deeply seated in the researchers’ practices; however, social commitment and responsibility seem to be less important to the researchers’ work, especially when they have to compete for funding or when complying with the deadline and amount of production.

Vulnerability and Educational Opportunities in Higher Education Students from Mexico

Higher education enrollment in Mexico has increased considerably since the second half of the 20th century. Nowadays, it is estimated that 33% of school-aged young people attend tertiary education. However, the educational system still has many limitations; two of them are the restricted access to vulnerable people and the low rates of retention.

In 2013, the Law to Prevent and Eliminate Discrimination was issued. Regarding education, this Law seeks to eradicate any kind of discriminatory behaviors that might hinder or limit access to public or private education, scholarships or other educational incentives. However, until now, vulnerable people in higher education are underrepresented and there are no official data about the proportion of vulnerable students that are actually registered in tertiary institutions.

This paper is the result of a study that aims to understand the possibilities and difficulties faced by vulnerable people to enter, remain and graduate from higher education. Specifically, we focus on three vulnerable groups: ethnic people, disabled and women heads of households. We also encompass four dimensions: 1) Personal features, 2) Family conditions, 3) Institutional constraints, and 4) Public policies. Each dimension covers an array of factors or variables.

The results showed us that factors such as prior educational background, interpersonal relationships with other students, with teachers and administrators, parents’ education, family income and the lack of inclusive policies either public or private tend to affect the rates of admission, retention and graduation of vulnerable students. In contrast, geographical origins and institutional action plans affect retention and graduation, but not admission. This latter is especially true in the case of ethnic people and women heads of households who have family responsibilities and low economic income.

Working Circumspectly: What Are the Implications for Teaching in Multicultural Australia?

Migration, in the era of globalisation has created unique learning environments in Australian schools. While teachers’ chatter and media debates focus on the merits of current education reform agendas a deadly silence reigns over the question of teaching and learning in culturally diverse communities. Government reforms increasing emphasise the importance of national testing regimes as a measure of student achievement, school performance and teacher quality. Such emphases have, according to recent research, impacted negatively on curriculum and pedagogy (Duller et al, 2102) and created classroom environments that are neither responsive to the needs of students nor inclusive (Thompson, 2013).
This paper presents a methodology for investigating teachers’ everyday practice that draws on Institutional Ethnography, Critical Discourse Analysis and Ontological Inquiry as a means for uncovering, not only the being of social relations in everyday practice but also how that relation can be understood ontologically. It addresses, in particular, how the mediation of teachers’ work relates to the influence of others by tracing the constitution of social relations disclosed in relations that emerge between teachers’ perceptions of practice and their enactments. In doing so, the being of the social comes into view. IE’s recognition of being in practice is acknowledged. To better understand the impacts of this ontological dimension on practice, analysis of data, extend IE by drawing on Heidegger’s (2005) conception of ontological inquiry. This has been chosen for its dual focus in explaining the significance of Being, itself, and to reveal explicitly the Being of people and equipment in teachers’ work. Analysis of research data offered by practising teachers, confirmed textual mediation in everyday practice as revealed, too, teachers who practised circuitously. In doing so, the ontological significance of who we are to how and why we enter into social relations was exposed.

PERLSTADT, HARRY* (Michigan State University, perlstad@msu.edu)
The Making Of Obedience To Authority: From Binet To Asch To Milgram

The design of Milgram’s Obedience to Authority can be traced back through Asch’s classic experiment on conformity to Binet’s experiments on memory and suggestion. Binet and Milgram used what is now termed exploratory experimentation which is not guided by theory or hypotheses but consists of carrying out systematic variations to formulate empirical rules. Binet conducted two experiments. Milgram and Henri (1894) wondered what would happen if school children were given a suggestion so slight that they did not notice its existence? Children were shown a model line on one board and then had to identify the model line on a second board that contained a set of lines including the model line. When the student picked a line on the second board, the experimenter would quietly ask, “Are you really sure? Is it not the next line?” In a second experiment Binet (1900) showed a group of three pupils six objects on a poster board for a few minutes and then asked them a series of questions about what they remembered about the objects recently been asked. It revealed that the students performed this task jointly and the students competed with each other to be the first to give an answer. Years later Asch (1951) would combine Binet’s two experiments in his classic study of conformity to groups. The group viewed a model line and then the naive subject would find himself disagreeing with the others on matching the model line. Milgram knew of Asch’s experiment but wanted to generate sufficient social pressure on an individual in a one-on-one situation. The Binet and Henri experiment with its questioning of the choice of line provided the bridge between Asch’s group conformity and Milgram’s (1974) researcher/experimenter prodding the teacher/learner “to please continue” and “the experiment requires you to continue.”

Transnational Solidarity Of Trade Unions In Europe: Two Cases Of Institutional Work Against The Background Of The Euro-Crisis

Trade unions and labour movements have emphasized solidarity as a universal principle that transcends common interests of all workers, regardless of borders and boundaries. Despite this rhetoric they have primarily organised national or sub-national collectivities and contributed to establish common identities and moral norms in these contexts. Modern notions of solidarity are thus firmly established at the national level, while at the European level liberal market principles and social indifference predominate. This prevailing social indifference has been challenged by at least two developments: (1) the introduction of a common currency, and (2) European economic governance in response to the Euro-crisis. Both developments have led trade unions to transnationalize their strategies: (1) As an integrated union the Euro crisis unprecedented the option to devaluate, re-institute, or devalue currencies as a strategy for the internal competitiveness, wage setting institutions have come under pressure. This in turn induced trade unions in some sectors to coordinate their wage bargaining policies across borders. (2) Far reaching austerity measures in EU countries had a big impact on labour market and social policies - trade unionists responded to these pressures by organizing and mobilizing resistance to the transnational level, e.g. the European Action Days.

Our empirical research in both fields (wage bargaining and protest movements) is guided by the following question: What constrains and opportunities have trade unions in Europe encountered in their strategic attempts to create and maintain solidarity enhancing institutions at transnational level?

Our central argument rests on two assumptions proposed by the classic sociologist G. Simmel (1908): He states that conflict is an important step from mutual ignorance to social integration. However, the integrative impact of conflict is dependent on legitimized institutions and practices of conflict resolution (Yoruba 2013), which themselves are contested. To explain union strategies in multi-level fields we use sociological institutionalism (Scott 2008; Lawrence/Suddaby 2009) and power resource theory.

Collective Practices of Low-Paid Latinos in London: Challenging the ‘ethnic Lenses’ of Migration and Labour Studies

This paper discusses collective practices of migrant workers in Britain who organise to improve their disadvantaged work and life conditions. It will draw on ethnographic data and cultural productions about labour organising initiatives in the clearing sector such as ‘The 3 Cosas Campaign’ and ‘Justice for Cleaners’ whereby migrant workers have been struggling for more dignified and equitable working conditions with the support of their communities, within and without formal and recognised trade unions. This discussion will critically consider the complex relationships that developed between these workers (many of whom are from Latin America) and local labour and community organisations, focusing on the tension between the class-based and so called ‘ethnic’ identities of these groups under study.

The paper aims to contribute to the theoretical debate on how to apply the framework of intersectionality (Yuval-Davies 2011) to the study of migration and labour movements. Inspired by recent critiques of the resilience of methodological nationalism (Glick Schiller and Caglar 2006; Glick Schiller 2008), our examination will question prevalent theorizations of collective action and migrants’ forms of political engagement persisting in the broader mobilization literature. It will also question the ethnocentric and institutionalist focus of traditional industrial relations literature highlighting the benefits of an interdisciplinary approach to the study of migrants’ politics across the literature on migration and labour relations.

Our central argument rests on two assumptions proposed by the classic sociologist G. Simmel (1908): He states that conflict is an important step from mutual ignorance to social integration. However, the integrative impact of conflict is dependent on legitimized institutions and practices of conflict resolution (Yoruba 2013), which themselves are contested. To explain union strategies in multi-level fields we use sociological institutionalism (Scott 2008; Lawrence/Suddaby 2009) and power resource theory.

Challenging the ‘Ethnic Lenses’ of Migration and Labour Studies

This paper discusses collective practices of migrant workers in the global South. We use sociological institutionalism (Scott 2008; Lawrence/Suddaby 2009) and power resource theory.

conditions the interaction. The paper aims at answering the following research question: How can the interaction order that is developed on an Internet chess site be understood given that the social interaction between the chess players is restricted to the game itself and to a rudimentary chat function? The paper contains a detailed description of the chess play and the chat function at an Internet chess site. What possible interpretations can, for example, be made of one player's offer to end the chess game with a draw? And, how can one understand the expression “Oooops!” in the chat given the different contexts that present themselves in a chess game? And, finally, how can one use Goffman’s division between expressions given and given off to understand the two mentioned and other interaction situations in Internet chess?

**Members Vs. Experts in Czech Political Parties. Reflections on a New Dimension of the Party Membership**

Our main research theme is the Policy-related Expertise in Czech political parties, this theme allows us to focus on such topics as the place of experts in the parties, especially in terms of concurrence between old members and experts proposing other resources and legitimacy.

The capacity of expertise is now generally considered as a common and obligatory need and good for every party which try to get into the government, based on the idea of less political and more technical problems to solve on the national or local level.

For this paper we will focus on some aspects but we will discuss mainly the thesis of a practical mix of intraextra-party legitimacy in the sense of the response to the need of new members seen as specialists or experts. For instance a problem can occur at the time when party came to the power and it gives to members some places or functions (retributions).

Our hypothesis, facing the question of intraparty democracy, are first that there should be a conflict between two diverse legitimacies but over all that such a need for experts contribute highly to undermine the importance of intraparty socialisation and, at the end, weaknesses the party organisation: the members have not to be active for the party as itself, but they have to be experts immediately useable without being “real” members. Secondly this concurrence of intraextra party legitimacy can be understand practically also as a better and quickest application of experts in the state or local management to the detriment of classical members. Thirdly the other side of this phenomenon is that the less party socialized experts are less disciplined or that they are more prone to defections or change of party affiliation during their mandate.

**Socio-Geographic Effects On Higher Educational Choices**

The main object, in this presentation, is to explore the relationship between socio-geographic background and higher educational choice. Social space can’t be isolated or ignored when it comes to understand human action. The individual socio-geographic setting permeates the way individuals understand and act in the social world. It contributes to social possibilities and constrains, often understood as habits. This presentation put a socio-geographic focus on a special group of students in a special municipality in the south of Sweden. The municipality is characterized by low progression rate to higher education and a high, but diminishing, rate of students with blue-collar jobs. The educational level is below national average. Despite these traditions a minor group of pupils do attempt educational education and receive high grades from upper secondary school. Most of these students progress to higher education. An observation made is that in this group most of the students are attending and applying to low prestige higher educational programme at local, private universities despite the high socio-geographic possibilities. This goes for students with middle-class backgrounds as for students from working class. One suspicion is the existence of a sociogeographic effect on higher educational choices that makes it possible to talk about a sociogeographic habitus, collective in the same way as class-habitus but also unique in relation to other geographically areas.

In this paper this is discussed in relation to in-depth interviews with students representative to the above described group.

**The Ontology Of The Global City-Regions**

The ontology of global city-regions.

The global world is made of hundreds of city-regions interconnected and networked. Yet the ontology of the global city-region is still to be defined.

It includes a different substance than the XXth century metropolis, or the generic and endless city of today. It is a web of contracts much wider and global than in the National epoch. In the past the contract was Principal-Agent: the Principal being the State, the Agent being the City. Whose main role was to provide streets and social housing, schools and welfare. Today the agglomeration substance of global city-region is relational contracting among actors which are global in many cases: enterprises, services, networks. Their places have a variable geometry and geography, functionally defined and no longer territorially bounded.

Relational contracting is a partnership contract where asymmetries arise. The main asymmetry is about information access, which is selective among and within cities in the digital era. A second asymmetry is about mobility which is still more selective: those who can move (financial markets, multinational enterprises, big buyers, world experts), those who simply cannot (sub-contractors, client enterprises, contingent labour). Within global city-region governance mechanisms should include new constitutional orderings by bridging social capital and linking divided actors and fields.

**Migratory Experiences of Portuguese People in Macao during and after the Portuguese Administration of the Territory**

Migratory experiences of Portuguese people in Macao during and after the Portuguese administration of the territory
who settled in Macao in the beginning of the XXth century? Did they keep the same benefits - concerning leaving conditions and life styles - that Portuguese people used to have during the Administration period? What kind of relationships have they developed with the local people (mainly Macanese and Chinese) in this 'new' political, social and cultural living context? Were they more prone to assimilate local references than their counterparts who lived in Macao in the 'colonial period? Basing our study on a qualitative research supported by interviews to two groups of Portuguese migrants - those who lived in Macao during the Portuguese Administration and those who moved to the territory after that period - it is our purpose to analyse and compare their migration experience (in social-economic, cultural-symbolic and identity terms) highlighting the continuities and changes observed.

RC31-526.11

PESSOA, INES* (ISCTE - IUL, inespessoa@yahoo.com)

Portuguese Youngsters on the Move after the Macao's Migratory Experience

Macao has been for the last two decades of the XX century the host society of young Portuguese people, whose parents, mainly high qualified workers, have preformed professional functions in the public or private sectors of the territory. Once this migratory cycle came to an end, and after their return to Portugal, a large number of these young Portuguese has migrated again, some to Southeast Asia, others to different places, this time as protagonists of their own flow. Basing our study on life stories, our purpose is to analyse to what extent the migration experience of these individuals in Macao has contributed to the formation of their cosmopolitan identities, as well as to create a predisposition to re-migrate.

PETERS, VERA* (Institute for Climate Impact Research, vera.peters@pik-potsdam.de)

The Carbon Footprint of German, Scottish and Czech Households and Its Determinants – the Influence of Infrastructure, Lifestyles and Socioeconomic Conditions

Climate change is on its way, and individual consumption decisions contribute substantially to it. About 40% of all GHG emissions come directly from private household energy consumption, and the figure is even larger if indirect effects of private consumption are included. In order to further explore the conditions that lead to smaller GHG emissions, we present results from a quantitative household survey (n=1.532) in three European countries (Germany, Scotland, Czech Republic), which was conducted within the framework of an EU FP 7 project (GILDED) in 2011 and 2010.

A CO2-calculator and its items on self reported behavior were used to estimate households’ carbon emissions in the field of residence, mobility and nutrition. Beside site specific conditions such as infrastructure and socioeconomic factors, major individual and social motives for sustainable behavior are explored by applying psychological and sociological concepts such as the 'Schwartz value inventory', people's perception of climate change and a lifestyle segmentation.

We focus especially on the explanatory power of the lifestyle approach for predicting carbon footprints. Lifestyle or 'milieu' segmentations represent popular analysis tools especially in German sociology that aim at a modernized concept of social inequality encompassing the 'subjective' dimension (attitudes, values and preferences) as relevant aspects for social differentiation. We applied this concept by connecting values and preferences with the households' income, thus trying to identify different 'social milieus', i.e. like-minded social groups that are characterized by distinct mental frames and economic status. Previous lifestyle research suggests significant group differences on factors influencing energy use, e.g. the amount and kind of electronic appliances used or leisure mobility patterns. However, it has yet to be shown if different energy patterns result in different levels of overall consumption and emissions between the groups.

PETERSSON, FRIDA* (University of Gothenburg, frida.pettersson@socwork.gu.se)

The Stigmatizing Semantics of Methadone Maintenance Treatment

People who use heroin are often described as one of western society's most stigmatized and marginalized groups. In public discourse, people associated with heroin use are construed as unruly, lacking self-control and generally bad persons. Negative representations of the heroin addict are also reflected in the regulatory framework surrounding Swedish methadone maintenance treatment (MMT) – the most common treatment practice for heroin addicts – which is based on a basic idea that the treatment not only could, but also should lead to a normalization of the clients’ lives.

In this paper, the everyday semantics of Swedish MMT is put under scrutiny. The analysis based on a local, qualitative study exposes that the professional power is not as objective, neutral and fair as portrayed by national guidelines, policy documents and the professionals’ talk. Methods developed in critical discourse analysis and discourse psychology are used in order to analyse a number of key concepts used in everyday clinical practice. For example, at the clinics, ‘drug-free’ and ‘drug-abuse’ are two frequently occurring concepts that are difficult to define because they are not related to the drugs themselves, but to the question of when and how the narcotic substances have been used, as well as who has decided that these concepts should be used. Analysis shows, that according to the professionals’ talk, it is possible to live a ‘drug-free’, ‘normal’ life with methadone, as long as it is distributed by the clinics and ingested according to the staff’s recommendations, while taking the same amount of drugs obtained from a source other than the clinic is defined as ‘drug abuse’, legitimizing sanctions of more disciplinary kinds. However, the effects of the disciplinary exercise of power are counteracted by the clients’ modes of resistance, such as subversive interpretations of staffs’ arguments or ‘narratives of resistance’.

How and When Belongings and Living Conditions Is Made (in) Visible in School

This paper explores how and when principles of categorizing groups related to residential area and living conditions, are present and are of importance in educational and social relationships in school practice. The background to the study is that on the one hand, there is openness and a welcoming of immigrants in Swedish society and in schools, for example, through policy and political objectives. On the other hand, there are clear structural differences and segregation in schools related to the area affiliation and ethnic origin. Interest in gaining an understanding of and explanations for the ambiguity that emerges between policy and what happens in the school’s daily life have contributed to the study’s aim. The aim of this study is to investigate and analyze whether, and if so, how and when students in a secondary school in a medium-sized town in southern Sweden, are identified and categorized in relation to the belonging residential area and living conditions within education and social relationships, as well as its relevance for pupils in school practice. The focus is on how the changing demands and social relations are managed, organized and perceived by different actors, when school is becoming a common arena for students from different areas and with different living conditions. The analysis is based on an ethnographic study based on observations, interviews and informal conversations in school practice. The study’s result show that pupils belonging and living conditions is made visible and contributes to categorization in certain contexts in school practice, while it is made invisible to categorization in other contexts, where other factors connects pupils to a group or network. It is also found that the different categorizations overlap each other.

Does Social Economy Reallyconstitute a Solution Against Poverty and Social Exclusion?

This paper examines the correlation between poverty, social exclusion and social economy at the local level. Particularly, it attempts to discuss the appropriate conceptual and theoretical models of social economy at the local level and to establish multidimensional poverty and social exclusion indices under a relative perspective.

The research question is: “Do social economy initiatives contribute to the fight against poverty and social exclusion at the local level and what is their impact?”. The analysis is based upon the results of both qualitative and quantitative research of selected areas in the broader area of Athens. More precisely, statistical data and the results of the focus group interviews with key informants, stakeholders and vulnerable people will be discussed with a view to focusing on the appropriate design of social policy and social protection at the local level.

Mass Media Representations Of Multifarious Violence During The Greek ‘crisis’ In 2013: A Qualitative Approach

The multifold violence observed during the Greek ‘crisis’ corresponds to the many-faceted character of the recession and to its intensity, as the country continues to reel under the shock of cultural, societal and political rifts. The following
presentation focuses on internal forms of violence and specifically on behaviours of suicidal or quasi-suicidal character. Our primary aim will be to outline the many different ways this type of violence is presented by the Greek media. The study has been conducted with a qualitative methodology utilizing content analysis, through the prism of which we examine the way internalized violence is represented by two of the mainstays of the Greek media, namely the press and internet. Specifically, we will introduce a number of popular blogs and sites with a high traffic volume of traffic and some well-known newspapers with a large readership. Secondly, through the method of qualitative content analysis we will focus on the construction between violence and social inequality and the diverse ways in which these social phenomena have been approached by the news information media. Thirdly, we will classify these representations on the basis of content analysis of representative excerpts from articles and reports on the particular self-destructive form of behaviour that has come to be associated with the 'crisis'. Finally, we will analyse the ways in which the electronic and print media target the social status and ethnic background of victims.

PETROV, VLADIMIR V.* (Novosibirsk State University, v.v.p@ngs.ru)

High Quality Education: Globalization and Problems of National Educational Systems

Requirements of the Information Society and Knowledge Society determine the need for significant improvements, structural changes, shifting priorities in the social system. Such a trajectory of development is already represented not only in the educational systems in North America, Western Europe, countries of the Confucian and Buddhist cultures but also in the Eastern Europe and Russia. While comparing educational systems of Russia and the United States primarily from the aspect of high quality education development there we can see deep differences between these systems that are connected with different historical traditions, regional and local education programs is necessary. Particularly sensitive should be the attitude of the state towards high quality educational institutions: it is necessary to take into account their specificity, to seek additional resources including financial in the form of various additional scholarships for the talented students, and grants to effectively developing educational institutions etc. and at the same time maintaining their maximum autonomy.

Cross Country and Intergenerational Comparison of Income and Wealth using Luxembourg Income Study (LIS)

Abstract
The aim of this paper is to analyse the income and wealth among the elderly (65-75 years old) and people in their prime age (35-45 years old) in a cross-country comparison. Which group is more likely to be at risk of poverty? The novelty of this paper is that includes not only the disposable income (defined as the sum of total revenues from earnings, capital income, private transfers, public transfer net of taxes, social security contributions and other obligations such as alimony) but also a proxy for the net wealth including the net value of the dwelling in the analysis. Within each age group, we will identify the subgroup most at risk of poverty (based on gender, citizenship status, education level). We selected the countries that have information on wealth from the last wave of LIS, centered around the year 2010: Colombia, Ireland, Israel, Italy, Luxembourg, South Africa and Japan (with available data from 2008). The paper will contribute to the existing literature through a cross-countries comparative analysis of income and wealth from an intergenerational perspective.

Factors Influencing the Careers of Young Scientists during the Period of Their PhD. En Ethnographic Case Study

The underrepresentation of women in science and the question of reasons for their relatively frequent resignation compared to their male counterparts is a much-studied topic of increasing relevance. In this area there are – nevertheless very few ethnographic studies comparing various disciplines. This paper intends to show the potential of such a discipline-comparative, ethnographic study of doctoral students: With a focus on everyday practices the study researches embedded practices of gender differences and their gender codes, as well as differences in specialized cultures. Thus, a contribution should be made both to explain the proportionally higher exclusion of female scientists from academia compared to their male counterparts as well as for research about the professional culture.

In two ethnographic case studies, the production of gender disparity shall be captured at the level of everyday operation of scientific practices and in habitual actions. The participatory observation is supplemented by interviews. The focus of this investigation are the everyday practices of researchers, since we assume that a number of gendered and gendering practices and their incorporated implicit attributions, are not made consciously by the actors, but happen interactive.

The research examines scientific working groups, whose research is part of an excellence cluster. In particular PhD students in the subjects of physics and chemistry are accompanied through their academic life. Several factors have an impact on daily work and facilitate or hinder coping with the demands during the period of promotion. The studied situations were therefore divided into four categories: time, space, material resources, and social interactions. In all these areas, gender differences can be identified in both disciplines. Furthermore, differences are visible in the methods of scientific working of the two disciplines.

The Impact of Contractual Relationships to the Identity and Values of Religious Organizations – a Pilot Study in Sweden

Part of the growing impact of new liberal economic market rationality is an increasing demand of religious organizations to establish partnerships or contracts with the state. Deregulation and liberalization of (public) welfare services in Sweden since the 1990s resulted in greater attention to civil society as a resource in welfare provision. While the previous state-based welfare model advocated financial solidarity and equal rights to welfare services, the new market-based model is based on the idea of the individual's right to freedom of choice and accepts different individual financial capacities. From being advocates for a comprehensive welfare system equal for all, religious organizations are presently invited and enrolled as contracted parts of a system accepting inequality in welfare provision related to the financial capacity of the individual. Indications from previous research show that tensions between their identity and the implicit values of contractual relationships might lead to internal contradictions of their specific profile and qualities of religious organizations which was an initial stage was an important part of the distinctive value of their contribution as social agents, as perceived by both parties. A reduction of the religious organizations profile may be caused by e.g. a demand for professionalization of the contracted services, a demand for prioritizing or contract with public authorities. One specific question is if these relationships are new forms of state-religion regulation? The paper build on results from the research project Welfare and Religion in a European Perspective (WREP) and a recent pilot study in Sweden analysing formal contracts and written agreements of partnership between religious organizations and public authorities.

Corporate Social Responsibility Practice in Russia and in Western Countries

The aims of study is to determine the dominant practices of corporate social responsibility in Russia and to compare them with the features of the model of corporate social responsibility of business-minded countries. This study will quantify the nature of corporate social responsibility in Russia and to find the advantages and disadvantages of the domestic model of corporate social responsibility. The empirical base of the research was information on websites of 570 largest companies in Russia. In study it were examined sections of sites about the activities of companies in the field of social and environmental protection. The specific profile and qualities of religious organizations which was an initial stage was an important part of the distinctive value of their contribution as social agents, as perceived by both parties. A reduction of the religious organizations profile may be caused by e.g. a demand for professionalization of the contracted services, a demand for prioritizing or contract with public authorities. One specific question is if these relationships are new forms of state-religion regulation? The paper build on results from the research project Welfare and Religion in a European Perspective (WREP) and a recent pilot study in Sweden analysing formal contracts and written agreements of partnership between religious organizations and public authorities.
Despite the growing significance of anti-aging, its impact on the users’ everyday life has hitherto been under-explored. This presentation focusses on users of anti-aging products and services in Germany and is based on 15 narrative interviews conducted in the context of the research project “Biomedical life plans for aging.” The interviews show the profound impact of anti-aging on the individuals’ biographies: Although users cannot observe the effectiveness of their practices, they are invested with biographical meaning. Therefore, it is supposed that the persistence and attractiveness of anti-aging practices goes far beyond their scientific persuasiveness. Within the reconstruction of the significance of anti-aging for the interviewees’ biographies, the symbolic and emotional potential of the practices are to be examined: Anti-aging turns out to be an ideal staging ground for presenting oneself as a rational actor and a self-caring subject. Anti-aging can thus be described as a form of lifestyle that is committed to an ideal of scientific rationality and the moral values of individuality and responsibility.

PEUCKER, MARIO* (The University of Melbourne, mpeucker@unimelb.edu.au)

Seeking a Voice: Muslim Organisations in Australia and Germany and Their Struggle for Civic Recognition

Post-war Germany and Australia have, like many other Western societies, seen the emergence of fragmented and heterogeneous Muslim communities. In both countries these ethno-religious minority groups have established a diverse landscape of community organisations, which used to be occupied primarily with the maintenance of their religious identity and internal community ties. This inward-looking nature of Muslim communities in Australia and Germany has begun to change, and more fundamentally, since the early years of the 21st century, triggered by partly similar, partly country-specific developments. An unprecedented number of community groups in both countries have sought to become recognised civil society actors, eager to contribute to the society at large, to engage with non-Muslim groups, media, governments and other opinion leaders and to offer a more accurate public representation of Islam.

This paper explores the motives, strategies and achievements of Muslim community organisations in Australia and Germany, based on extensive desk research and a series of in-depth interviews with Muslim community figures in both countries, conducted between 2011 and 2013. It argues that, while Muslims in Australia and Germany have shared (and continue to do so) similar experiences of social marginalisation, public questioning of their willingness to belong and increasing political scrutiny, their collective struggle for civic recognition has unfolded in different ways. The research findings suggest that Australian Muslim community groups have been much more successful than their German counterparts in utilising and expanding their collaboration and lines of communication with policy-makers and civil society opinion leaders and in establishing themselves as an important voice in the public and political debate. The paper concludes with a discussion of the reasons for these country-specific differences, identifying a combination of historical, political and social factors, including the divergent political opportunity structures and the different socio-economic resources of Muslims.

Tool, Toy or Therapist? the Relevance of Emotion Stimulating Robots in Elderly Health Care

Our main interest is the professional use of “social assistive robots” (Kolling et al. 2013). We call them “emotion simulating & stimulating robots” as they are designed to fulfil “experiential aspects of belonging” (Klein et al. 2013). Our empirical study focusses on the baby harp seal Paro developed by AIST, a leading Japanese industrial automation pioneer. Whereas this as interactive robot with highest therapeutical effect praised machine is getting usual in Japanese private households, in Germany it slowly finds its way into Elderly Health Care Institutions. According to that we are interested how the robot becomes embedded in the carer-resident relationship.

To which aim use carer the robot in their caring activities and routines? Which tool, toy or therapist is the robot for them to assist and support them in their daily lives? This paper introduces the theoretical approach of the “gender arrangement” of the robot, which is employed here to illustrate the mutual, and in part contradictory, interrelations and dynamics between culture, institutions, social structures, economic structures and actor constellations and action, which form the societal context for the structures of care work in a society. The paper applies this approach for the explanation of the differences in the work-family relationship of women with children below age three in eight European countries. The comparative analysis finds that the countries of the study cluster into four different patterns of the combination of women’s employment and care for children under three. It is shown how the differences in the cultural, social and economic context and in welfare state policies in different European societies, and the ways in which they interact, make a particular contribution to explaining cross-national differences in the patterns of mother’s employment and childcare. This analysis demonstrates that family policies alone cannot explain cross-national patterns for organizing child care, and that considering cultural models, family policies and socio-economic differences together leads to a more satisfactory explanation of the societal relationship between women’s employment and child care.

Erosion of the Boundaries Between Public and Private – New Forms of Care Work in European Welfare States

The paper discusses the ways in which changes in the structures of care work in European welfare states can be analysed and explained. So far, concepts of dual terms predominate with regard to the concept of care, in terms of the comparison between public and private and between paid formal care and unpaid informal care. According to such thinking, care work takes either place in the private sector where it is informal and unpaid, or it takes place in the public sector where it is formal and paid. It is argued here that the clear embedding of care work into one of the two spheres can easily become a conceptual cul-de-sac and tends to hinder the recognition of changes concerning the informal care work itself.

Welfare states have established new, paid forms of semi-formal and formal care work within the family household. This change has led to an erosion of the boundaries between the two spheres. These new forms are also connected with a new type of social rights. It is argued that in order to capture this change appropriately, care work can no longer be viewed as a change within a dualistic model; as a shift from private to public care, or as a formalisation of care. Instead it must be understood as a multidimensional change.

In the paper, a conceptual approach for analyses will be introduced. Moreover, it will analyse the development of the new forms of paid semi-formal and formal care work in childcare and care for senior citizens in European welfare states in a cross-national comparative perspective. Finally also it will explain the development with social change and cultural change.

The Sociological Discourse on Inequality and Social Class in France

The Sociological Discourse on Inequality and Social Class in France
Over the past decades social inequality has grown in France, as in many other countries. Paradoxically, however, during that same period the dominant discourse, both in the social sciences and politics, has tended to conceal this growing social polarization and to eliminate any reference to class. Indeed, since the beginning of the 1980s, sociologists and politicians have vied with one another to invent clever words and expressions to describe the structure of French society. However, these substitute discourses were soon gained by the growing social disparities prevalent within French society, and which existed in spite of the rhetoric which obstinately denied the reality of class. Indeed, in France, the notion of ‘class’ had, at best, changed and become more complex, but remained as present as ever.

This paper will, first, explain the background to this increasing social polarization of French society. This polarization is not unique to France, and can be found in varying degrees in most capitalist countries in Western Europe. The widening wage gap has had far-reaching consequences for all significant aspects of people’s lives, and a number of indicators converge which allow us to expose this tendency, and demonstrate the existence of a system of inequality characterized by segmentation, hierarchization and conflict. After this presentation, some thoughts will be put forward on the words and categories that are used in certain sociological theoretical frameworks. This alternative sociological discourse was pervasive between 1980 and 2000 and continues to be used today, even though it has long since been largely refuted by the facts. We will focus on the discrepancy between the rhetoric of these theories, which deny the existence of ‘social class’ and the undeniable reality of a growing polarization within French society.

Women's Empowerment As a Determinant of Fertility Change in Southeast Asia

The fertility levels of Southeast Asian countries have been dropping dramatically since the 1950s. The case of Southeast Asia challenges classical theories on demographic transition, which suggest that economic development is the key to demographic changes, whereas, in Southeast Asia, even low- and middle-income countries also experienced rapid fertility declines long before the socio-economic development. This paper suggests a relationship between the empowerment of women and fertility decline. Despite decades of standing in the literature as one of the key indicators of social development, the concept and measurement of women's empowerment has not reached a consensus. Women's empowerment is a multi-dimensional concept, which includes measurements at both country and individual levels. At country level, measurements of women's empowerment include the percentage of women's education in relation to men, percentage of female labor force participation, proportion of female in parliaments, and percentage of women's holding manager's positions. At individual level, women's empowerment can be measured by women's educational attainment, their involvement in household decision-making process (including fertility choices), contraception use, and employment status. Cultural factors such as son preference and preference for high fertility should also be taken into account while measuring women's empowerment. Most studies have been focusing on women's empowerment in either at country level or individual level but not at a comparative regional level. In this paper, the key debates in the concept and measurement of women's empowerment and the framework of relationship between women's empowerment and fertility changes will be reviewed. Furthermore, the current situation of women's empowerment and the amazing fertility decline in Southeast Asia will be examined. A closer examination of fertility change and women's empowerment indicators in Cambodia, Indonesia, Philippines and Vietnam suggests that women's empowerment plays a role in the region's demographic change.

Kāpo Māori Counter Narratives: Transformative Research Practice

Recently a research paper on the eye conditions of Māori children was published in New Zealand. The paper sensationalized the reasons for non-accidental eye injuries by highlighting the role physical abuse plays in vision loss and blindness in Māori children which in turn was picked up by the media. Not surprisingly, the kāpo (blind and vision impaired) Māori community was not only unhappy with the authors’ conclusions but also with the way the ‘story’ was covered in the media. The community’s view was that this was another example of ‘Māori bashing’ that could potentially undermine kāpo Māori whānau engagement with science. The twin aims of this presentation are to: 1) critically reflect on the methodological implications of doing research bereft of its socio-political and cultural contexts and undertaken by ‘outsider’ researchers who persist in deficit theorizing to produce a ‘story’ of cause and effect; and 2) argue for a kāpo Māori approach by kāpo Māori approach to research that leads to socio-politically and culturally nuanced readings and understandings of the issues that face kāpo Māori and their whānau. We do this by discussing the methodology and outcomes of the recently completed research project ‘Growing up kāpo Māori: accessing paediatric eye care services’. This project provides a counter narrative to the standard story and as such is more likely to transform social spaces and health practices.

PHILLIPS, KRISTIE* (Brigham Young University,
Kristie_Phillips@byu.edu)

Social Inequality & Academic Achievement Gaps in Developed Countries

International comparisons of cognitive skills suggest that equitable educational performance is just as important as high performance. Therefore, minimizing achievement gaps between wealthy and poor students is important for countries’ economic growth (Hanushek, et al. 2008; Coulombe and Tremblay 2006). Even within high-income countries that share similar levels of economic development, socioeconomic-based achievement gaps vary in size and shape. Nevertheless, the direction of these achievement gaps is consistent—with wealthier students having both greater opportunity and greater achievement (Hampe...
Our preliminary results suggest that developed countries with the smallest achievement gaps are likely to have higher performing low-SES students, and high performing high-SES students. Preliminary results also suggest a relationship between income inequality, social safety nets, and gaps in student achievement. Because our work identifies social and economic contexts that contribute to achievement gaps, our study demonstrates both barriers and possibilities that influence academic mobility.

PHILLIPSON, CHRISTOPHER* (The University of Manchester, christopher.phillipson@manchester.ac.uk)

Ageing and Class in a Globalised World

Discussions about the role of social class in the lives of older people have often occupied a marginal position in social research into ageing. Despite the importance of themes linked with inequality and latterly social exclusion, the tendency has been to examine these only loosely through the lens of social class, with researchers often preferring to emphasise individual characteristics or life histories, other statuses (e.g., gender and ethnicity), or more general features associated with the social organisation of age. In consequence, social class has had limited influence on many of the concepts deployed to understand the lives of older people. This paper challenges the view that social class is a unit of analysis that has been marginalised by the new economic order, and provides a new perspective on the role of social class in shaping the elderly through urbanism and the variety of ageing experiences, to the extent that it questions the stability patterns, activities, services and the spatial and material form of the urban matrix. The methodology includes, on the one hand, more traditional research methods such as policy and research reviews, survey data analysis, qualitative case studies, fine grain studies of person / environment interactions, and, on the other hand, participatory, trans-disciplinary and trans-sectoral panels for scenario development and assessment. This presentation focuses on the wide variety of and numerous discrepancies in discourses and representations encountered in the process, and how old age is socially constructed through numerous power relationships shaping these representations and the interactions between discourses. The analysis confronts the discourses and representations of individuals, communities, experts and institutions in terms of what may be possible. It illustrates the wide gap between normative discourse aimed at reforming and shaping the elderly through urbanism and the variety of ageing experiences, to the point that one must ask: "who needs age-friendly cities?" In conclusion, a word will be said on how participatory and trans-disciplinary research can contribute to reducing this gap and innovate in how we approach age-friendly cities.

The New Political Economy of Generations: Social Class and Social Divisions in Old Age

Increased inequalities within nation states have influenced social structures in a variety of ways. For older people, one consequence has been greater differentiation within generations driven by contrasting experiences of economic recession and life course events. Generations, in western society from the mid-20th Century, were underpinned by near full employment, orderly transitions into and out of work, intergenerational mobility, and declining levels of inequality. These processes ground to a halt during the 1980s and have continued to be affected by a combination of austerity and accelerated globalisation. The paper will examine how a combination of globalisation and long-term economic change is re-structuring core social relationships in old age. The consequences arising from this include: the weakening of the idea of generations as a meaningful unit of analysis; the emergence of new political and social identities in later life; and the growing importance of divisions operating within generational and related social groups. The paper will explore the implications of these developments for theoretical work in the sociology of ageing.

Beyond Alternative/Conventional: Māori Worlds of Food

Within popular understandings of the food crisis, the global food system is often perceived as a clear differentiation between ‘alternative’ and ‘conventional’. These two constructs generally distinguish between means of provisioning and consuming food according to narrow and readily measured economic, social and ecological criteria. This categorisation results in a strict dichotomy represented by antipodal views and explicit characterisations of value – what in terms of convention theory would be organised within orders of worth. In fact, the reframing of popular understandings of the food crisis require a more open engagement with food (its production and consumption) that recognises the diverse sites of action at which change can be enacted and realised. Such an approach sees continuity from mainstream activities to the small individual, independent and value-oriented ones.

This paper uses the theoretical framework of regimes of justification from convention theory (Boltanski and Thévenot 1986, 2006) to elaborate a Māori world of worth in order to demonstrate the potential for marginal economies (Gibson-Graham 1996, 2006) to reframe popular understandings of food and society. Within the New Zealand context, there has been some ferment around Māori groups – a minority whose culture is based on the concept of sustainability as a cornerstone who recently implemented economic activities around a western-values frame in terms of economic organization. Using two case studies, both expressions of the Māori community but with two different approaches in terms of strategies, a reflection is presented on community organisation, food systems innovation and the role of market in food relations.

Who Needs Age-Friendly Cities? Exploring Representations through Participatory and Trans-Disciplinary Research

This presentation bears on the first two years of a six year participatory and trans-disciplinary research programme exploring what an ageing society means for the city (facts), what the latter could become (ideas / scenarios), what can be done (actions / what is feasible) and what should be done (ideals). The programme stems from societal concerns in the province of Québec (Canada) regarding the rapid absolute and relative increase of people aged 65+ and 80+, and the projected impacts this will have on collective services, manpower, and public as well as private financial programmes such as pension funds. It specifically examines how these concerns and trends might transform the city, including housing, mobility patterns, activities, services and the spatial and material form of the urban matrix. The methodology includes, on the one hand, more traditional research methods such as policy and research reviews, survey data analysis, qualitative case studies, fine grain studies of person / environment interactions, and, on the other hand, participatory, trans-disciplinary and trans-sectoral panels for scenario development and assessment. This presentation focuses on the wide variety of and numerous discrepancies in discourses and representations encountered in the process, and how old age is socially constructed through numerous power relationships shaping these representations and the interactions between discourses. The analysis confronts the discourses and representations of individuals, communities, experts and institutions in terms of what may be possible. It illustrates the wide gap between normative discourse aimed at reforming and shaping the elderly through urbanism and the variety of ageing experiences, to the point that one must ask: “who needs age-friendly cities?” In conclusion, a word will be said on how participatory and trans-disciplinary research can contribute to reducing this gap and innovate in how we approach age-friendly cities.

Austerity and The University In Britain

Austerity and the University in Britain

Over the past decade, young people in the United Kingdom have been facing a variety of factors which have impinged on their opportunities to enter higher education and their chances of finding a job once they have graduated. Whilst the higher education sector was not a direct target of government policy, the ongoing economic crisis resulted in the introduction of austerity measures following the 2010 general election. Notably, the Conservative-Liberal Democrat Coalition Government enacted a sizeable cut to public spending on higher education and it raised substantially the cost of annual university tuition fees starting in 2012-2013. At the same time, the rate of unemployment among graduates has been rising and getting a degree is no longer an automatic boost to one’s life chances. For many it results merely in unpaid internships and/or employment schemes.

This talk will examine British “youth in austerity” regarding prospects for studying in higher education and subsequently entering the labour market over the past decade. It will include young people’s responses to the recent decrease in higher education funding and increase in university tuition fees.

PICKARD, SARAH* (Université Sorbonne Nouvelle - Paris 3, sarah.pickle@univ-paris3.fr)

Divided and Ruined: The Failed Student Protests In Great Britain

The current decade has been marked by both the global economic crisis and a growth in social movements around the world spearheaded by young people. In particular, we have witnessed collective action – demonstrations, direct action and civil disobedience – regarding higher education. In Britain, there was a series of demonstrations and sit-ins in the winter of 2010-2011 about the Conservative-Liberal Democrat Coalition Government’s plan to cut dramatically public spending on higher education and to raise considerably university tuition fees. In fact, both of the policies were enacted and the ceiling on annual fees went up to £9,000 (approximately 1,500,000 JPY) in 2012-2013. Just after their introduction, a demonstration took place organized by the National Union of Students (NUS).
This paper considers the meanings young members of the 'new far right' English Defence League (EDL) attach to their activism. Based on an ethnographic study (2012-13) including interviews with over 30 grassroots activists, it argues that the movement's trademark slogan 'Not racist, not violent, just no longer silent' denotes more than a cynical PR strategy. In contrast to a 'politics' they reject (understood as 'debating', 'listening' and 'reading the Sunday Times'), participants in EDL actions provides young people with a way of 'getting your point across', 'speaking out' and 'standing strong'. This, it is argued, is indicative of the experience of the political sphere by some young people as characterised by a 'politics of speaking out' in which legitimate political distance between 'politicians' and 'people like us' and the legal and cultural circumscriptions on 'acceptable' issues for discussion. Drawing on Mouffe's (2005: 6) argument that right wing populism has made inroads in those places where traditional democratic parties have lost their appeal to an electorate no longer able to distinguish between them in the 'stifling consensus' that has hobbled the political system, the paper traces the resonance of these tropes in the narratives of 'the political' among a broader sample of (non-activist) young people in the UK (based on representative survey and interview data gathered for the FP7 MYPLACE project of which the EDL ethnography is also a part). The paper asks whether the desire to engage in politics in a 'loud and proud' way might confirm Mouffe's argument that a democracy that 'works' for 'the people' may not be one based on a 'universal rational consensus' managed through institutions that 'reconcile all conflicting interests and values' but rather one in which there is a vibrant public sphere of political contestation (ibid. p.3).

National Cultures Reconceptualized for the Social Sciences: Basic Elements for an Analytical Framework

Globalized state-societies in the twenty-first century are framed by national cultures. This cultural metaframe is insufficiently understood by sociologists and other social scientists. Yet national cultures are full of social mechanisms that shape domestic politics, economic success and failure, and the evolution of global society. To make use of this framework for explanatory purposes, it needs to be underscored that nationalizing mechanisms are sociocultural mechanisms that work in conjunction with better known political and economic mechanisms. Based on a novel conceptualization of national cultures, the contours of which this paper will lay out, it quickly becomes evident why and how in general terms nationalizing mechanisms operate in a broad range of social systems from small groups to large movements and organizations. Whether, where and to what extent the inclusion of nationalizing mechanisms can make a substantive contribution to explanation is an open empirical and theoretical question. The argument presented here reconceptualizes existing empirical and theoretical knowledge on nations and societies in order to open up a fresh perspective and sketch out a new analytical framework for the social sciences.

PIERIDES, DEAN* (University of Melbourne, d.pierides@gmail.com)
Institutional Contradictions and the Organization of Emergency Management

This paper provides an institutional analysis of Australian emergency management from the early twentieth century to the present and highlights the institutional contradictions that generate conceivable barriers for effective organization. Drawing on the literature in organization and management theory that focuses on institutional logics, I argue that to understand why emergency management is riddled with these contradictions it is useful to describe the different logics that are elaborated in organizations. Institutional contradictions in emergency management carry traces of tensions between the church and entrepreneurs from as early as the twelfth century, traces of a style of statistical reasoning that emerged in the seventeenth century and traces of the ongoing struggle to produce a legitimate form of government for the state. Since the 1990s, Australian emergency management organizations, like many other organisations, have adopted and implemented previous theories that focus on institutional logics, with the understanding that emergency management needs to pursue strategic goals, to meet performance objectives and to ensure accountability. The reliance on risk calculation and management has intensified in the aftermath of disastrous floods and fires in the early twenty-first century. These technologies of risk bring into effect markets that deal with the uncertainty of different objects such as weather and social factors. Emergency management organizations are also tasked with the sovereign responsibility to protect the population, a task that is arguably at odds with the dynamics of markets. When the sovereign and entrepreneurial logics are elaborated in emergency management, risk can materialise in monstrous ways, well beyond the reach of formal organization.

‘Loud and Proud’: Youth Activists in the English Defence League

From Being Excluded to Becoming a Triumpher: Higher Education Massification Policies in Venezuela and Their Biographical Meaning

In 2003 the Venezuelan government started to implement a variety of social programs known as “Bolivarian Missions”. These Missions addressed a variety of social problems that the traditional systems of education, health and social services had failed to overcome. The creation of these programs rapidly became one of the distinctive symbols of the new revolutionary government and the promise of a better life for the poor and excluded groups. In the education sector, different “Bolivarian Missions” offered literacy programs, basic education, high school and higher education for all. Over the years, these educational programs have been strongly linked to the political legitimation and support of the government by those who have perceived the missions as a benefit. Official reports claim to have solved a historical debt with some marginalized groups of the country, which has shaped the lives of those who have been recently included to both the education system and the Venezuelan society as a whole. This article seeks to explore how this process of inclusion has been experienced by those who have been educated, which represents an important gap in the literature that deals with the Venezu-
From Exclusive Meritocracy to Differential Inclusivity: What Has Changed in Venezuelan Higher Education?

Since the beginning of the Bolivarian Revolution in 1999, a constant comparison between the so-called “4th Republic” and the rise of the Bolivarian Revolution has divided the history of Venezuela into two major periods. When it comes to the education system, since 2003 the government has implemented a variety of educational programs and a constant process of unprecedented expansion has taken place. At the higher education level, the system has been expanded through the municipalization of higher education. This process occurred in the framework of a political system that aimed to tackle social inequality and its educational repercussions. These reforms and initiatives worked under the assumption that the previous organization of the educational system was meritocratic and exclusive. Although some official statistics suggest that the participation of students in higher education in Venezuela has been widened for all, I argue that the inequalities are inscribed into two parallel systems of education with different quality standards and student conditions. This paper will reconstruct the creation of Venezuela’s Mission Sucre and will analyze the paradox of inclusion in the Venezuelan context from a sociological perspective using insights from Bourdieu’s work. I conclude that the implementation of a parallel offer to include students from disadvantaged environments or backgrounds may exacerbate the educational gap, as well as, the social and political polarization in a system like the one under consideration. This analysis is based on my ongoing doctoral research and presents some reflections coming from the literature review, as well as my empirical work in Venezuela.

Subaltern Tactics and Spaces for Decommodification: Non-Institutionalized Political Practices in a Tokyo Working-Class Neighborhood

This paper draws upon a 2-year ethnography (2012-2014) in a Tokyo working-class neighborhood, with a focus on subaltern political practices. Building upon the distinction between the two meanings of the “political” (Claude Lefort, Essais sur le politique; Manuel Castells, La Question urbaine) – one related to the institutionalized sphere of the ruling, the other to the social system of power relations and its transformation –, subaltern political practices can be defined as practices that allow their actors, collectively or individually, to free themselves from such-and-such subordinate positions in the net of power relations. Through this theoretical lens, one can observe an array of collective or individual political practices that contest, bypass or elude unfavorable power relations.

With the ever-increasing commodification of society, quite blatant in large cities like Tokyo, domination often make oneself feel as economic domination. In this sense, subaltern political practices take notably the form of practical tactics (Michel de Certeau) aiming at getting loose from economic dependencies through the building of small and frequently temporary autonomous spaces.

Since these dependencies are experienced more strongly as we go down the social ladder, this paper will focus on tactics devised by homeless people living in the area I’m engaged in, before showing that practices that are most easily discernible in this radical life-situation can also be noted among working-class neighborhood inhabitants. Urban agricultural practices found among homeless groups and individuals as well as in working-class neighborhoods are an especially interesting case. Growing their own food allows the persons involved to build a small autonomous space, both real – one get a fair amount of “free” food – and symbolic, as they constitute de-commodified spaces in which other types of relations and non-monetary practices can take place (exchange of seedlings between homeless groups, fruits and vegetables’ gifts to visitors or neighbors…).
itism is new and was desired and such movements are not deeply rooted and emerged in the last 25-30 years.

This paper is based on ethnographic fieldwork conducted mostly in Poland, also in the Czech Republic and Hungary where I collected numerous in-depth interviews with squatting activists, made several participant observations and analyzed activist movements (both mainstream and activist / independent media). In the paper I want to focus on the intersections between the radical squatting movement and moderate movements such as tenants movement to show the transformative power of the squatting movement on other actors. I will be basing primarily on the case studies from Poznań and Warsaw complementing them with examples from other countries from Central and Eastern Europe and the results - in my opinion - can be addressed to other developing societies.

PIOTROWSKI, GRZEGORZ* (Södertörn University, grzegorz.piotrowski@sh.se)

Young Social Movements and Democratization

In mid-1980s Central and Eastern Europe have witnessed an interesting aggregation of anti-communist struggles. Parallel to the pro-democratic dissidents new movements populated by young people and connected to youth subcultures have emerged, in particular the anarchist and environmental protection movement. These new movements were not only inspired by groups from Western Europe and the US but were also an expression of critique of the dissident movement slowly shifting to (neo)liberal positions and loosing the touch with the workers base as well as those whose demands (i.e. etc. regarding compulsory military service) were largely ignored. These newly emerged movements were capable of bridging structures and agency in an unique way. The popularity of these youth movements partially lies in attractiveness of the subcultures that were the vehicles of the new ideas and not in the topics they were bringing. Moreover, this subcultural-political connection seems to have an impact on today's radical movements making them mostly a young people's domain and activity. This has far-reaching consequences and recent mobilizations in the region (anti-ACTA protests in winter 2011/2012, many protests in Bulgaria in 2012 or the earlier alterglobalist mobilizations) prove the point that coalition-making possibilities and support from other actors are limited.

The paper is based on long-time research and fieldwork among social activists (alterglobalists, anarchists, environmentalists, squatters) and former dissidents that took an active role in the 1989 transformations for various research projects. Empirical data were collected from in-depth interviews, participant observations and from movements' publications (printed and online) collected over the years.

Potential, Strength and Weakness of Argentinian Social Sciences to Analyze Contemporary Society

This paper attempts to describe the current state of the Argentinian social sciences in terms of institutionalization, research capabilities and agenda. It is framed within a research program called PISAC, implemented by the National Council of Social Sciences and co-financed by the Ministry of Science and the Secretariat of University Policies. PISAC has three main objectives, each one linked to a specific research project: a) a critical assessment of the Argentinian social science system (institutions, agenda, researchers' profiles, publications, etc.); b) a review and systematization of the research findings produced in the last decade with regards to key issues addressed by the Argentinian social sciences; c) a structural study of current social, political and cultural trends in the country.

In this paper, in particular, we present some preliminary findings and discussions related to the first research project (a). In this sense, we maintain that Argentina's scientific field is currently featuring by a dynamic, predominantly public and professionalized system that has witnessed a geometrical growth in the last decade. Both the public universities and the National Scientific Council (CONICET) have benefited from this growth. Accordingly, social sciences have experienced an expansive phase visible in the consolidation of postgraduate studies, international publishing and collaborative research. However, some important problems still persist:

1) In terms of institutionalization, professionalization and full-time research positions the social sciences are still weak behind the natural sciences;
2) the structural heterogeneity of Argentina's scientific field, featured by the split between CONICET and the public university system;
3) the national political circuit of the social sciences is still weak, both in terms of domestic and international circulation of knowledge produced locally.
4) There are significant differences in the levels of institutionalization, professionalization and internationalization that the academic activities related to the social sciences bear in different regions of the country.

Domestic Workers As Agents for Development? the Migration-Development Nexus Debate Revisited Though The Decent Work Agenda

At the global and regional level, the current policy discussion of international migration is dominated by a revived interest in the linkages between migration and development. To date, this debate has left out certain forms of migration and alternative understandings of development, and remained especially unfavourable to particular forms of migration that women undergo. Despite the evidence that domestic workers are numerous and that domestic work is increasingly an important source of waged employment for women, domestic work is often specifically excluded from national labour instruments such as the labour standards or the minimum wages mechanisms in many countries in Asia. Moreover, many migration regimes purposely exclude domestic workers from accessing rights that other labour or skilled migrants in the country are entitled to. With growing interest in return migration and its relationship to development, there have been efforts to place domestic workers ‘back’ on the trajectories of the ‘productive’ economy, especially in the form of entrepreneurial programs and the teaching of return migrant women to use their remittances money productively by becoming petty entrepreneurs. Common failures of such programs requires us to question the fundamental bias in creating such programs and the placing of emphasis on productive labour, instead of re-examining the importance of reproductive labour in development.

This paper will provide a systematic deliberation on the meaning of decent work for non-industrial, reproductive work, focusing on fair wages, working conditions and industrial relations. Its overall objective is to trace discursive and research frameworks around gender and labour migration from a development perspective to test the place of domestic work within it and to prompt greater attention needing to be paid by development studies to the realm of reproductive work. We will base this on the specific experience of domestic worker migration in Southeast Asia.

PIRK, REELIKA* (Tallinn University, reeliika.pirk@gmail.com)

The Role of Social Movements in Youth Political Participation

In the debate of youth political engagement social movements have a crucial role to play. In many contemporary democratic societies political culture is facing a crisis of legitimacy. Scholars around the world have stated that the level of traditional political participation is decreasing, especially among young people. On the other hand, there are opposite views, claiming that instead of being politically disengaged, young people are looking for (new) forms for participating in society, as they simply address social issues differently. Thus, new social movements (as well as Internet and single-issue activism etc.) are considered to be new platforms for young peoples’ political activism. This paper is based on case study of ethical-moral values promoting animal rights movement in Estonia. A youth group that consists of politically minded young people who actively participate in and address different issues of the society. The paper explores the importance of social movement activism in sphere of political participation. Especially, it first analyzes how young people conceive their participation and role in society. Secondy, how young activists address political issues through social movements. And thirdly, what challenges they face when participating in socio-political sphere through social movements. The empirical data set includes open-ended interviews and informal conversations as well as participant observations and secondary data sources.

Orthodox Online Communities in Social Russian Nets As an Object of Social Research

Social nets is new social communication environment and the majority of people are involved in them all over the world. The leader among existing social nets in Russia and Russian-speaking area is VKontakte.

In the social net of VKontakte there is an orthodox audience which consists of approximately 10% on the part of active audience of this social net. The most active and numerous representatives of the orthodox audience are three age groups which expose relevant portraits of the orthodox audience in VKontakte: under 18-24, 25-34 years and 18-24.

Communities in the social net is main communicative core around which users’ interests are formed. For our purpose all orthodox communities in VKontakte can
be divided into four groups: communities of general orthodox theme, communities where the main content is presented by the quotations of revered fathers and modern members of clergy, and also parables and cautionary tales, issue-related communities (question to priests, for youth, family, devoted to beneficence, etc.), and at last territorially united communities (the communities of bishops, youth orthodoxy districts, etc.).

Each orthodoxy group in VKontakte and its own unique target audience on the basis of which the group administration chooses content: by format (articles, news, fillers, quotations), by form (text, photo, audio, video), by the functionality of VKontakte social net (discussions, meetings).

In orthodoxy communities VKontakte the model of social interaction ‘online-offline’ is actively developed. Within the framework of this model the participants of communities are informed about offline events running (rapidly erected temples buildings, beneficence, meetings with interesting people, etc.) via VKontakte functionalities (messages, meetings). Due to communities participants high degree of loyalty the information about future events is spread by ‘virus’ method by the means of likes and repost system.

PITASI, ANDREA* (Gabriele D’Annunzio University, profpitasi@gmail.com)

The Fourth Paradigm

The paradigm shifts which featured the systemic thinking from the 1980s to the end of the last century and the very beginning of the 21st lead to some radical epistemological changes at the crossroads between communication sciences and sociology. This paper on one side reconstructs the key paradigm shifts in system theory from the whole/part one (P1) to the system/environment one (P2) and then to the autopoietic paradigm shift (P3). Kuhnian normality was rather unlikely in systems theory and still the key global economical, technological, social challenges of our times required revolutionary shifts. The other side of this paper is essentially focused on theorizing a fourth paradigm shift which selects the fragments of the late XX century epistemological debate turning them in a systematic (i.e. the Mertonian meaning of the term) redesign of the concept of system itself revealing that design and evolution are two faces of the same coin.

“In any event, we have changed our own evolution but not ended it”

“Some increase in plasticity is to be expected [...]. It represents the extrapolation of a trend toward variability already apparent in the baboons, chimpanzees and other cercopithecoids what is really surprising however is the extreme to which it has been carried. Why are human societies this flexible?”

PITASI, ANDREA* (Gabriele D’Annunzio University, profpitasi@gmail.com)

“Hypercitizenship” and the Evolution of a Global Identity

The idea of the citizenship paper moves from the consideration of autonomous agents and global flows eventually converging by means of autoptic systems.

This work reframes the topic of the reconfiguration in the evolving social scenarios within Pitasi’s concept of HYPERCITIZENSHIP, sketched out by designing a multidimensional and multipolar convergence among different kinds of citizenship.

With its four conceptual dimensions, Hypercitizenship, features the strategic attitude of those areas in which capitalism is turning into turbogencitism. Its main features are the following: Cosmopolitan, scientific, societarian and entrepreneurial.

The Hypercitizenship concept is focused on the fact that communication about key challenges of our times is increasingly meaning communication and public understanding of science and technology for governance and policymaking on a global, global and cosmopolitan scale.

From this point of view, law becomes one of the à la carte products to be bought by browsing a global “catalogue” (Mundus) surfing on a technological global platform (Globus) of which the internet is the best metaphor and which can be seen as the most important platform for convergence developments and as a driver of several, key, changes. This new media platform is cosmopolitan and global while the mass media often still fall into the methodological nationalism trap. Indeed, the emerging scenarios are more and more shaped by supranational (UN, EU, NAFTA) or multinational (Standard & Poor’s, Moody’s...) entities and by new localisms which cannot survive outside a global network.

Thus, the emerging glocality is witnessing that the “national state” citizenship is too big -bureaucratically speaking, but too small -in competitive terms-, to be strategic in the merging scenarios.

Hence, the importance of a new conception of citizenship in the global age is rising, which we refer to as “Hypercitizenship”.

PITTI, ILARIA* (University of Bologna, ilaria.pitti@gmail.com)

Contemporary Adults: Understanding Youth through Intergenerational Comparison

Although sociology has already deeply analysed the profound changes occurred to youth and paths of transition to adulthood in the last decades, it is often possible to notice two glaring deficiencies in many sociological works: firstly, young people are frequently conceived as a category of its own, a specific social group that is somewhat isolated and studied separately, making it most a comparison with the previous young generations; secondly little attention has been payed to adulthood, the final destination of youth. Adults should be a model for young people’s transitions, but within the contemporary context this stage of life’s standard model is threatened by contemporary transformations and late-modern processes of individualisation, flexibilisation, globalisation, juvenilisation and it’s become more and more complex to define what is ‘young’ and what is ‘adult’, where youth finishes and where adulthood starts, which functions characterise these two ages and which are their reciprocal connections. All that has huge consequences on the (individual and social) identity both of young people and adults, on their intergenerational relationship and their human transitions. The intent of the proposed contribute is to think youth in a generational way by studying young people in relation and in comparison to the co-present adult generation, lighting up the contemporary features of adulthood. The proposed contribute - based on an empirical research which involved 30 Italian young people aged between 18 and 24yo and their significant adults through semi-structured interviews- aims at contrasting the specific interpretations of adult identity emerging from the representations and practices of adulthood of two generations: the baby boom and the millennial one. Through this comparison the presented research highlights the processes between contemporary intergenerational dynamics inside and outside the family, allowing a deeper knowledge and understanding of contemporary youth.

PITTS-TAYLOR, VICTORIA* (Wesleyan University, vpitts231@gmail.com)

The Embodied Mind and Epistemic Difference: Lessons from Disability Studies

Embodied mind theories in neurocognitive science and philosophy of mind are increasingly cited as a conceptual bridge between neuroscientific and social
scientific epistemologies. Theories such as enactivism, embodied realism, and extended cognition share a preoccupation with grounding mind and consciousness in the lived, active body, with situating these in environment, and with challenging the abstract, disembodied Cartesian subject. In this sense, they echo sociological and feminist views on the epistemic significance of the body. Yet sociologists and feminists argue that an embodied view of mind must involve the recognition of differences between knowers, while neurocognitive theories assume a generic or universal body and pay little attention to epistemic multiplicity. In this paper I argue for the importance of epistemic multiplicity in forging interdisciplinary theories of embodied mind. I also put difference in more literal terms by addressing corporeal variation. How neuroscientific embodied mind theories come out on the epistemic significance of phenotypical variation can be gleaned from the debate over multiple realizability, or the idea that the same mental state can be achieved through multiple physiological processes. This debate focuses on difference only to restate epistemic sameness. For more considered reflection, I look to disability studies, particularly the work of Jackie Leach Scully, Tobin Siebers, and Rosemarie Garland-Thompson, to consider what phenotypical variance teaches us about the embodied mind. Disability scholarship shows us that all bodies are variant in some way; this work puts pressure on assumptions of biological universality. The example of disablement also shows not only how problematic it is to assume a generic body, but also a generic fit between body and world. I argue that embodied mind theories can best grasp epistemic difference by resisting an a priori body-subject whose relevant properties are fixed in advance.

Central Bank ‘Independence’

The global financial sector still has very little regulation over its capacity to manufacture money (or to refrain from doing so), even though the credit crash occurred nearly seven years ago. Many hopes are placed on central banks but surely they have been forced to play an ‘unfair game’, as Hyman Minsky said years ago. This paper investigates ‘independence’, not only as a sociological misnomer, or a form of central bank ‘dependence’ on what financial markets think (as Fed officials do), but also the effects of central bank quantitative easing since the crisis. The Fed’s QE has enormous impact on most other economies. The ECB is (or was) a test case for hopes of international agreements over the control of money creation. Although the field shifts rapidly, it appears to be dominated still by bond vigilantes and the prime minister of central bank quantitative easing since the crisis. For the Fed, such as that taken by the Swiss National Bank. In 2012 it called the bond trading firms’ bluff; in contrast the Bank of Japan is under some ‘control’ by Treasury. I report on my current interview material in Europe with central bankers and treasury officials.

Barrier and Risk Free Environments for Older People. a Survey Applied to State Provided Units in Chile, the Need of a New Policy Approach

Increasing ageing and urbanization are two tendencies which together characterize the 21st century as an unprecedented demographic revolution. In this context a large proportion of older people, particularly in Latin America, will live in vulnerable social, economic and cultural conditions in inadequate habitats which should be addressed by public policies. The effects of the built environment has been the less attended in Chile, despite its relevant impact in both the physical and perceptual dimensions of life affecting its quality reflected in inclusion, social participation, autonomy and independence of this age group. Adequate habilitation of housing and urban space should be provided allowing aging in place as long as possible. Urban and rural senior population of Chile have focused in providing housing for those unsheltered through the provision of new units which have not considered the needs of older persons. Considering than more than 80% of seniors in Chile own their homes(SENASA-INTA 2010); the addition of public policies focusing in improvement of existing housing is relevant. Considering the high accident and mortality figures related predominantly to falls due to aspects of the built environment and the high personal and economic costs for families and the medical assistance system, design issues become relevant issues. This paper presents findings related to the design and use of an evaluation instrument developed for the detection of risks and barriers in a sample of housing provided by the State of Chile, using objective and subjective techniques. Direct observation of performance of Basic Activities of Daily Living, (BADL), focus groupings regarding findings and dimensional evaluation both of users and spatial conditions), Findings reflected barriers and risks mainly associated with Mobility, in around 30% of BADL operations, due to inadequate object and architectural design mostly related with height, presence of uneveness or lack of elements.

Care for dependent family members has become an important policy area which requires substantial reforms in many European countries. Care policies are increasingly restructured, where the trend towards new forms of care governance can be recognised, with a sustainability of care system becoming an important driver of reforms. Still, the policy answers countries opt for and their modes of implementation fairly differ. These are reflection of country specific institutional, political, socio-economic and cultural circumstances, and transnational ideas. Trends and Challenges in Care Policies Development in Croatia and the Czech Republic

Care for dependent family members has become an important policy area which requires substantial reforms in many European countries. Care policies are increasingly restructured, where the trend towards new forms of care governance can be recognised, with a sustainability of care system becoming an important driver of reforms. Still, the policy answers countries opt for and their modes of implementation fairly differ. These are reflection of country specific institutional, political, socio-economic and cultural circumstances, and transnational ideas.

This paper addresses the main reform trends in care policies in Croatia and the Czech Republic. In socialism both countries predominantly relied on state provision of eldercare and childcare, however, due to the lack of care facilities, the informal/family provision of care was quite widespread. With economic, social and political changes during the transition period new ideas and principles become present at the political level such as growing tendency towards increased pluralisation of care providers and enhanced family’s responsibility in care. Nevertheless, they varied between the policy areas and countries, and were not fully realised in policy reforms, what resulted in different consequences for both, persons in care need and care providers.

In order to unravel similarities and differences in care policies development in Croatia and the Czech Republic, the structural, organisational, quality and financial aspects of childcare and eldercare are discussed as well as the main discourses and principles behind the reforms. They are additionally placed in the context of accessibility and affordability of services. The paper aims to explain what circumstances led to the reforms and under what logic were the childcare and eldercare systems redesigned and reorganised since the 1990, and what were the reform consequences regarding the access and delivery of care services.

How Can We Characterise National Sociologies?
National sociologies are often referred to, either directly or implicitly, but the methodological basis for doing this is normally taken for granted rather than discussed, and relevant data are not evaluated critically. The commonest formulation is probably in terms of the thought of those identified [in ways not specified] as leading national social thinkers, though there are also some cases where the contexts of national journals [identified as in such ways not specified] are treated as sufficiently representative to be used. There are also problems about what to define as the nation. What if the state and its sociology are divided in important ways, for example by having different language communities? What if the sociological work done within state boundaries is closely integrated with sociological work done elsewhere, or significantly influenced by the work of recent immigrants? Such questions raise issues about what could be defined as a 'national' sociology. This paper explores the practical possibilities of empirical work on the characteristics of national sociologies as variously defined, giving special attention to some sources which have not commonly been used in this context.

Public Trust in Health Information Sharing and Health Systems in the United States: A National Survey

Background: The U.S. Institute of Medicine’s Report, Digital Infrastructure for the Learning Health System, calls for “weaving a strong trust fabric” among stakeholders, including the general public, to facilitate broad data linkage and sharing. The texture and quality of this “fabric” is understudied, particularly with respect to attitudes and beliefs about information sharing held by non-experts. This presentation adds to a growing body of trust research by measuring trust at the individual, institutional, and system level. It examines four key dimensions of trust—fidelity, competency, integrity, and global trust—and key determinants such as awareness, beliefs, and previous experience. Methods: To understand the dynamics of public trust in broad data sharing as a common practice in the context of the U.S. health system, we are administering a 232-item questionnaire (n=1000) using probability-based web panel designed to be representative of the United States and administered by the GfK Group (formerly Knowledge Networks). Findings: Preliminary results from a pilot survey (n=500) indicate that 60% have a somewhat or generally favorable view of information sharing among healthcare providers, hospitals, public health, and insurance companies. 62% feel that it is fairly or very likely that the quality of health care will be improved with increased data sharing, while 49% see health information sharing as likely to benefit personal health care. Most feel that the health system is inadequately regulated (54%) and that the public trust would be improved by independent oversight (63%). Discussion: The public’s trust of technological change that promotes information sharing in the U.S. health system is not a foregone conclusion. Until we know more about the ethical and legal implications of these ethical dilemmas, the everyday ‘messiness’ and ‘sense of failure’ that commonly occurs with qualitative research practice (Horton 2008). I show how engaging with these processes aided my research development and analysis of the project data, as well as the implications of these ethical dilemmas for a social justice research agenda.

PLEYERS, GEOFFREY* (Université de Louvain(UCL), Geoffrey.Pleyers@uclouvain.be)

Concepts and Practices of (Counter-)Democracy in the 2010s Movements

This paper proposes a cross-analysis of democracy as demand and practices as defined and implemented by young activists in recent social movements. It draws on first hand empirical material from three qualitative research: democratization movements in Mexico (12 interviews, 2012-2013), Moscow (23 interviews, 2013) and Rio de Janeiro (32 interviews, 2013); progressive activists in Europe (7 countries, 37 interviews and a focus group, 2012); and ecological transition activists in Brooklyn (22 interviews, 2010-11) and Belgium (34 interviews and 2 sociological interventions, 2012-13), as well as 7 interviews with Occupy Wall Street activists.

Text analysis (NVivo) and consolidated methods of discourse analysis suggest that four dimensions of democracy can be isolated in young activists’ discourses: direct democracy, responsible democracy, argumentative democracy and protest democracy. Direct democracy at the local level is notably connected to experimentation in horizontal and participatory deliberation processes as well as medocracy which leads to stress citizens’ responsibility, whether in their consumption practices (the local transition movements) or in monitoring elected representative and civil servants (often mentioned in Russia and in Brazil). Argumentative democracy is mobilized by committed experts, who trust in the impact of rational and well-developed arguments and popular education. Finally, many activists insist on protests, popular movements and mass demonstrations able to influence policies.

The paper will briefly analyze each of these forms of (counter-)democracy, the cultures of activism it refers to, their subjective dimensions and their relation to institutional/representative democracy. It will underline the heuristic potential of these forms of counter-democracy and representative democracy. Taken together, they offer concrete ways forward for a multi-dimensional approach to deal with structural limits of representative democracy and to explore paths towards more democratic societies.

Reducing or Reproducing Inequalities? Ethics and the Researcher’s Role in Negotiating Power Relations Between Young People

A key concern of youth research is the ethical issues that arise through the inherently unequal power relations between adult researchers and young researchers (Brooks 2013, Matthews 2001). However, less attention has been given to the ethical dilemmas that arise for young researchers when confronted with negotiating their own role in witnessing and responding to unequal power relations and oppressive behaviours between young people during the research process. We know little, for example, about how youth researchers respond to racist, sexist or homophobic behaviour (Curtis et al 2004) or negotiate the exclusionary practices of young people towards each other (Morris-Roberts 2001). For youth researchers concerned with and committed to challenging issues of injustice and exclusion and/or to adopting a non-authoritarian role with participants this can be particularly troubling (Morris-Roberts 2001). Ethical dilemmas involve the choice between two or more alternative actions all of which may test an ethical belief or cause some potential harm (Banks 2010). Reflecting on some of my own experiences of ethical dilemmas, as a participant observer in a Scottish youth group for a 12 month period, I analyse the basis of my reactions, actions and inactions to potentially harmful, exclusionary and oppressive behaviours between young people and how this connects with broader theorisations of young people’s agency and conceptualisations of challenging interactions.

Like others, I advocate for ongoing reflexive engagement with ethical issues as they emerge in the research journey (Sime 2008) and for openness about the everyday ‘messiness’ and ‘sense of failure’ that commonly occurs with qualitative research practice (Horton 2008). I show how engaging with these processes aided my research development and analysis of the project data, as well as the implications of these ethical dilemmas for a social justice research agenda.

POLENSKAYA, MARIA* (St.Tikhon’s Orthodox University, yamap@yandex.ru)

The Models of Orthodox Christian Parishes within Post-Soviet Russia: The Influence of Social Environment

This presentation forwards the new analytical concepts of cosmopolitan and culturally hybrid, and culturally essentialized, solidarities. This is to account for the access to professional, family, and/or friendships/lifestyles resources of 25 Chinese-Singaporean transnational migrants—who lived in Hong Kong—in their respective transnational spaces, which they formed by subsequently living in several countries. While the two forms of cultural characteristics the Chinese Singaporeans acquired through bilingual education in Singapore to establish cosmopolitan solidarities in their contexts of work and friendships in Hong Kong with English-speaking people who were from the West, and Asians who had lived in the West; and ‘cosmopolitan’ work solidarities with colleagues in mainland China (the PRC). However, the Chinese Singaporeans mostly maintained essentialized solidarities in their families, and they were largely excluded from the (differently) essentialized solidarities of local Hong Kong people, propelling them—paradoxically, to more highly values cosmopolitan solidarities with other non-locals in their contexts of work and friendships.

Shifting Spaces of Hope and Power: Facing Increasing Inequality and Crisis in Asia

For the past two decades, the Asian region has experienced rapid economic growth. While countries like China, India and Thailand have reported double digit growth rates in their economies, the region has experienced increasing poverty and inequality. Complicating this contradiction is the region's high score in the Global Risk of Hotspots for Disasters (2013 Global Risk Index). This paper will discuss the region's challenges and responses to this multi-dimensional crisis, highlighting the varying contexts of inequality among countries in the region and their social innovations.

POHNI-WEIDINGER, MARIA* (Institute of Sociology, maria.pohni-weidinger@univie.ac.at)

‘seduction: A Pattern of Interpretation

My talk centres on the ways in which experiences of sexualized violence are dealt with biographically; an experience of violence, which, in the context of National Socialism, for the biographer was raised to the fear of being killed. This fear of being killed is an expression of the real - and fantasized - potential of their National Socialist parents to annihilate experienced by children. The biographical case construction I want to present concerns the life story of a woman born in 1928. Her socialization took place in a family with National Socialist values and within Nazi institutions, and she experienced sexualized violence as a child, by her father and a priest. Based on the diary written by the biographer from 1944 to 1954, and on her life story told 60 years later, I want to show in which manner the biographer addresses her suffering from sexualized violence and her past experience as a young National Socialist believer in her diary, and to which discursive patterns of interpretation her discussion of these issues is bound. My particular focus will be the reproductive pattern of ‘seduction’, which is structured along gender relationships. With it, the biographer manages to work through her experiences of sexualized violence as well as to embed her National Socialist convictions into her biography after 1945. It is important to take a closer look at two aspects: in which specific way does this pattern of interpretation unfold over the course of a life? And in which way does it enable her to speak about her experience? The pattern of interpretation of ‘seduction’ allows her to discuss the charged experience of sexualized violence, but also to obscure and to deny her own participation in Nazi society as a teenager, as well as her fear of being killed.

Asian Prosperity and Inequality: Gains and Injuries of Success

During the past decade or so, the Asian region has experienced rapid growth and expansion. While rising prosperity has led to poverty reduction, social inequality has also widened within and across societies. This paper will interrogate and differentiate the drivers of growth and inequality and its varying consequences to different income groups in the region. In particular, a sizeable lower middle class is fueling the growth of urban economies. By examining the differential gains of economic success within and across income classes, particularly among the emerging middle class, the paper characterizes the intersecting/interwining social injuries of prosperity, poverty and inequality. In doing so, the paper extends the understanding of injuries of income inequality from the physical to the social and political.
Our examination of testimonial accounts from the oral archive Memoria Abierta has shown that a number of survivors who were illegally imprisoned during the World Cup recall and express feelings about this event. While we expected concomitances spaces to be fully hermetic and insulated from outside information - as total institutions (Goffman, 1961) -, we observe, in contrast, the precarious and jarring conditions through which the prisoners accessed and either celebrated or scorned football and nation. Indeed, rather than having been censured or concealed by the repressors, the World Cup, as a national festivity and media event, was to some extent integrated to repressive practices.

We will discuss a number of situations evoked by the survivors in which the World Cup and its media broadcast intervene in the power logics of military personnel and their relationship to the inmates (better described as ‘disappeared’) in the case of clandestine detention centres. We will also discuss the effects of the ‘informational porosity’ of the total institution in the inmates’ experience. Our presentation will be centered on the subjectivity of social actors: their opinions, expectations, and causes of suffering. We will also discuss the limits of such an attempt to reconstruct these positionings, given the passage of time and the controvetorial nature of this international sports event.

Renegotiating Social Policy through Informality: A Post-Socialist Perspective

This paper demonstrates that informal practices may allow for the participation of a wide variety of citizens in policy making processes. In particular, it focuses on the renegotiation (at the formal and informal level) of social and welfare policies in postsocialism.

Two main paradigms, informed by development theory, have characterised the study of social policy and welfare in transitional countries. The first one, springing from modernisation theory maintains that developing countries will eventually converge into the path of industrialised ones. As a result, research has been preoccupied with the question of how the process of formalisation of informal institutions takes place, and the lack of movement towards a more formalised welfare system. Two main paradigms, informed by development theory, have characterised the study of social policy and welfare in transitional countries. The first one, springing from modernisation theory maintains that developing countries will eventually converge into the path of industrialised ones. As a result, research has been preoccupied with the question of how the process of formalisation of informal institutions takes place, and the lack of movement towards a more formalised welfare system. The second paradigm, represented by the concept of ‘social inclusion through informal action’, suggests that informal practices may provide an alternative, and more equitable, system functioning parallely to state-driven welfare distribution. When a substantial number of actors engages systematically with the informal economy, the alternative system generated may be seen as persistent and unofficially reshaping national policies, especially when not tailored for a given context, place, or category of citizens.

By doing this, this paper proposes a differentiation of corrupt practices: those harming the state (like fiscal fraud or bribing) and those harming the fellow citizen directly (trafficficking, narco-traffic). Although both ‘illegal’ the first one might allow redistribution of welfare in areas where the state is absent or ineffective. Survival of such practices lies in lack of strict control by the state, that lets the citizens relatively free to act. When this happen, even if the state is not ineffective, the society re-regularises itself and there is no need to put forward political or economic claims. However, when an ineffective state tries to control too much, the main effect could be to boost deprivation without proposing any viable alternative.

POLESE, ABEL† (Tallinn University, ap@tlu.ee)

Information and Policy Making: Evidence from Post-Socialist Spaces

Informed by participant observation in public places, informal interviews and a large scale survey this paper explores the ways informal practices may impact on policy making in the post-socialist region with case studies drawn from Lithuania, Poland, Russia, Ukraine and Uzbekistan. It offers a new perspective on what some have defined as a “culture of corruption” to introduce the concept of (non-) state socialism, defined as a system for redistribution of welfare based on human interaction rather than state agency, replacing state agency where and when this latter is ineffective or absent. (Non) state socialism refers to the fact that informal practices of redistribution are so complex, and comprehensive, that they may be seen as an alternative, and more equitable, system functioning parallely to state-driven welfare distribution. When a substantial number of actors engages systematically with the informal economy, the alternative system generated may be seen as persistent and unofficially reshaping national policies, especially when not tailored for a given context, place, or category of citizens.

By doing this, this paper proposes a differentiation of corrupt practices: those harming the state (like fiscal fraud or bribing) and those harming the fellow citizen directly (trafficficking, narco-traffic). Although both ‘illegal’ the first one might allow redistribution of welfare in areas where the state is absent or ineffective. Survival of such practices lies in lack of strict control by the state, that lets the citizens relatively free to act. When this happen, even if the state is not ineffective, the society re-regularises itself and there is no need to put forward political or economic claims. However, when an ineffective state tries to control too much, the main effect could be to boost deprivation without proposing any viable alternative.

POLESE, ABEL† (Tallinn University, ap@tlu.ee)

The study explores trajectories of migrant inclusion and exclusion in Belfast, Edinburgh and Wroclaw – the economic centres in the two host 2004 migrant destination countries. Northern Ireland (NI) and Scotland became new in-migration countries in the early 2000s. A significant share of their immigrant population is composed of workers from Poland – a country that itself is becoming a destination for a growing number of migrants.

Previous literature has developed different conceptual understandings of migrant integration into host societies. However, there has been less research about critical biographical junctures at which individuals stop being migrants and become settled in their various communities, migrant and host. By taking a leap into migrant workers’ subjectivity, this study investigates, through the analysis of in-depth interviews, how migrants develop and negotiate their belonging and sense of place, and how their understanding of what home is evolves over time. It builds on previous studies on migrant settlement but adds to it by exploring qualitative differences in settlement thus arguing for a more nuanced understanding of the concept that sees it not as a state but a changing process with different shapes. The study also tries to explain how different settlement trajectories are affected by the nature of employment and the import of political economy.

The research is set in several political economy contexts of new immigration destinations. Being part of the UK, Scotland and NI share many features of liberal welfare states such as liberal immigration policies but at the same time NI has been characterized as retaining strong elements of Keynesianism. By contrast, Poland is a Dependent Market Economy with a welfare regime that combines elements of both conservative and liberal models supplemented with unique post-communist features.

The study is funded by the European FP7 Marie Curie Training Network “Changing Employment”. Website: http://www.changingemployment.eu

POMA, ALICE* (UPO and EEHA-CSIC, alice@u-paris10.fr)
Local Resistances and Social Change. How Local Environmental Protests Lead To Citizens’ Empowerment and Democratization

Currently, thousands of communities and collective groups all over the world are struggling to defend their territories from devastation which leads to the construction of the industrial park, energy and hydraulic infrastructures, only to mention a few. Both in Europe and Latin America, the complicity of the institutional left wing is engaged in the construction of infrastructures and in the limits of the transnational social movements focused on following the agenda of power rather than the problems of the local communities, has led to the emergence of thousands of autonomous experiences of struggle that arise from below.

In our article we will show that these experiences are social and political laboratories where self-organized citizens are experimenting new political practices and are also proposing new discourses, turning these resistances to defend their territory into experiences of democratization, political participation and empowerment.

Focusing on the subjective dimension of protest, we will show the role of emotions, such as place attachment, motivation to action, participation and radicalization of discourses and practices, in order to describe how the experience of resistance produces a transformation of consciousness and behavior.

We will base our analysis on an item of empirical research carried out during experiences of resistance in Spain (the struggle to defend the Riaño valley and the Grand river) and Mexico (the struggle against the reservoir of San Nicolas) all of them analyzed with techniques of qualitative research. The approach selected has been from below, in other words, centered on the experience of participants and activists of local communities.

Finally, what we intend to highlight is that these resistances are struggles for a significant democratization of territory and resource management, and eventually, of society.

Images des latino americains dans la direction de la composante militaire de la MINUSTHA (Mission des Nations Unies pour la Stabilisation en Haiti)

The United Nations Security Council, through Resolution 1540, adopted in 2004, decided to send a multinational force in an effort to reestablish civil stability in Haiti after the political crisis of the Jean Bertrand Aristide government, which erupted on February 29, 2004. More than eight years since the implementation of the United peacekeeping force, the opinions presented here are of two national sectors of Haitian civil society, namely, educators and farmers, and are investigated in relation to the perceptions each group holds about the presence of military force in Haiti through the United Nations Mission for the Stabilization of Haiti (MINUSTAH). The opinions of the two organized civil society sectors researched, the perception that MINUSTAH could be interpreted as a military occupation characterized by neo-colonialism, a humanitarian mission or a mission to support and reinforce institutions in the country. In confronting these different thought current with the historical trajectory of the Haitian people, represented in the time after the foundation of the Nation-State, in 1804, by the antagonism and divergence of viewpoints between the elites and the masses, it is possible to note that the image that the two researched groups have of MINUSTAH result, in the first place, in the way in which each group constructs the idea of the Haitian nation or of the “imagined Haitian nation.”

Gender Roles In Television Commercials In Asia

Television advertisements are a rich source of data for social scientists to investigate because they can be seen as a reflection of prevailing cultural values. Gender value is also one of the critical factors in developing marketing strategies via advertising messages.

Advertising gender role stereotyping has been a prominent topic in literatures since the 1970s. Over the past decade gender stereotyping in television commercials has received particular attention. Most studies reveal that advertisements reflect the construction of gender roles in society. However, research of gender roles in advertisements is plentiful in the United States. There has never been any comparative research concerned on the gender roles in television commercials between Asian countries. Therefore, this paper compares the gender roles in Japan, Korea, China, Taiwan, Thailand, and Singapore.

This comparative content analysis of 2,205 sampling advertisements, collected randomly during August and October in 2012, suggests that the image of gender roles in television commercial does not correspond with the construction of gender roles in reality. In contrast, advertisements create the attractive image of gender roles in society. However, the most findings of this research are similar to the previous result of literature in term of gender of main character, voice over, age, and roles of male and female character in television commercial.

Equidad Étnica Y De Género EN LOS Estudios De Posgrado. Casos EN Las Universidades AUTMás De Chiapas Y Yucatán

Lo que aquí se expone forma parte de una investigación más amplia realizada en México bajo el título “Ética profesional y posgrado. Valores presentes en las prácticas de generación y transmisión de conocimientos y que llevan a cabo cuerpos académicos y grupos de investigación educativa”, buscando comparar experiencias de formación ética profesional en programas de posgrado que ofrecen instituciones de educación superior en distintas entidades federativas.

Chiapas y Yucatán son dos estados de la República Mexicana con diversos grados de desarrollo socioeconómico en los que habitan pobladores pertenecientes a diversos grupos étnicos. A lo largo de los años, las inequidades sociales que caracterizan a las sociedades poscoloniales por motivo de la etnia y el género han mostrado algunos cambios en ambos estados, sin embargo persisten rezagos en materia educativa que se hacen más evidente en los niveles de educación superior. En esta comunicación nos realizamos un análisis comparativo que muestra cambios ocurridos del año 2000 al 2013 en la composición de la matrícula que estudia en programas de posgrado en las universidades públicas más importantes de la región sureste de México, las cuales se ubican en estos estados: la Universidad Autónoma de Yucatán (UADY) y la Universidad Autónoma de Chiapas (UACH).
An “Area Studies” Program in France: Scientific, Institutional and Geopolitical Rationales

Institutionalizing and developing “area studies” programs are commonly associated with the Cold War context, while the strengthening of knowledge about foreign areas became a goal of public research and educational policy. These developments came within scientific, academic and geopolitical rationales. Their importance could vary according to the strength of the national intellectual traditions in studying specific foreign areas, the connexions between disciplines, and the need for expertise due to the position of a particular State in the international relations. In the case of the US, these evolutions are less explored for the Western European countries, and that would allow probing their particularities. The paper focuses on the set up from the mid-1950’s of the Area Studies, and particularly of the Russian and East European Studies, by a specific actor of the French academic field: the 6th Division of the Collège des Hautes Études. Outlining the national and international conditions determining such a process, it also points out the particularities of the local (academic, scientific, political) context and of its main initiators’ background. Thus, it questions the specific path taken by the implementation in France of this new scholarly infrastructure. Furthermore, the paper takes into account the social, professional, political characteristics of the team initially recruited for working on a “sensitive” geopolitical area and their productions, while it explicates the scientific content of research, documentation and teaching programs. They are meant to implement interdisciplinary approaches relying all the same on various disciplines, which were differently connected to the State and political power. Finally, the paper questions how the knowledge elaborated in this framework was placed in relation to approaches implemented by pro-communist committed social scientists and to what extent it could be itself of use not only in the academic milieu but also in political and economic circles.

Des articles issus de la presse quotidienne et hebdomadaire française sont ainsi étudiés à travers la méthode de l’analyse du discours. Nous tentons par la suite de mettre en évidence les liens qui s’établissent entre des catégories d’individus et les actions et les caractéristiques qui leur sont attribuées.

Nous observons ainsi que l’individu handicapé est celui qui bénéficie d’une prothèse et dont les performances sont augmentées par ce dispositif. Au final, la personne n’est plus proprement dite déficiente. Elle est "en situation de handicap", mais elle est capable de s’autodépasser, devenant de cette manière un membre de plein droit de la société néolibérale.

Generation and Reproductive Health in Newfoundland

This paper presents a linking piece between a comparative study of the Reproduction of meaningful secondary. It finally points to another research (Painted Cultural Indonesia) and the proposed study on how gender is negotiated between generations in transnational families. In this paper I look at the particular experience of negotiating ideas about sex and reproductive health between three generations of families in the province of Newfoundland in Canada. The oldest grandmother participant was born in 1910 and the youngest granddaughter in the mid 1980’s, which provides a broad historical perspective to their experiences. More interesting is how the grandmothers, mothers, daughters and granddaughters negotiated their changing needs and opportunities and how they balanced tradition, duty, affection and innovation.

Several evidences point to changes in Brazilian consumption practices that might be interpreted as a growing greening and politicization of consumption, similar to what has been occurring in other countries. In this process, consumption practices are perceived and used as a way of political pressure to improve social and environmental conditions. In this article we present the results of a research aiming to map political consumerism phenomena in Brazil, focusing on young people. The research was divided into two different methodological phases, a quantitative and a qualitative one: (1) a survey conducted in 2010 among 457 young people aged between 16 and 25, belonging to upper, middle and lower middle socio-economic segments, all living in the two biggest cities of Brazil, Rio de Janeiro and São Paulo; and (2) a focus group with a total of 51 young with the same socio demographic characteristics, conducted in 2012. The research shows that involvement in sustainable consumption among young people in Brazil is low. It can be explained, partially, by the way that young people in Brazil remain under the influence of the family much longer than in Europe and North America, and therefore do not have to perform household tasks or face the dilemma of making consumption choices at their daily lives. It also can be explained by the importance and activism of Brazilian social movements that are responsible for many social changes, thereby rendering individual action in daily lives secondary. Further, we point to another relevant cultural aspect of Brazilian society, namely the way that individuality and a sense of responsibility are formed. We conclude, therefore, that while global tendencies may be identified in many countries, the way these developments depend on the institutional configuration of each society.

An Epistemological Look at the Concept of Transnational Families

The study of transnational families is a recent one, and although many contributions have been produced in the last decade, it is still necessary to look at the theoretical and epistemological characteristics of the concept. Transnational families are not only an outcome of family member's strategies, but they are also part of broader transnational dynamics particular to global capitalism where a hierarchy of mobility rights exists, depending on skills and talents. As stated in recent literature, the constitution of transnational families is part of contemporary mobility trends. But the use of the concept presents some difficulties that in my point of view need to be addressed. First, it's hard to find a unique definition general enough to take into account the diversity of families (different migratory conditions and mobility dynamics); for instance, to determine who are involved in the transnational family practices. Second, the predominance of the network's approach (informal connections, remittances, individual strategies)

"Transnational Families" Analyzed through the Intersectional Prism

This communication stands at the crossroads of the sociology of migration, the sociology of family, and the sociology of gender relationships. It focuses on Latin American women and men who migrate unaccompanied to Canada and examines the intersection of their gender and migration experiences. The presentation will include an analysis of the impact of migration on the family and gender relations of these migrants.

The i-sation of society and post-secularism: towards new inequalities?

In Jameson’s classic work, the end of the 20th century was claimed to face the third phase of capitalism, that of late capitalism, the world space of multinational capital. Around the same time, Ritzer wrote about the McDonaldisation of Society which refers to the permeability of (what Weber made reference to) rational bureaucratic into our everyday life. This paper will argue that we are now in a fourth stage of capitalism, the cyber space of ‘denationalised’ capitalism, and the interaction with the Internet facilitated by various i-technological applications and (2) in which capitalism is not only dominating our lives, but also permeating every aspect of our daily lives. linkages between migration and inequality are evident, and the paper will discuss the implications of these linkages for society and policy.

Public Religions and Same Sex Marriage

It is widely recognized that marriage, and more generally family life, has changed profoundly in the last half century. The causes of change are very diverse...
but one important issue has been legal change. The introduction of no-fault divorce in the post-war years contributed to the rapid increase in divorce, and more recently the idea that same-sex marriage will be sanctioned by law has stirred up significant public controversy. Debates around the legal recognition of same-sex marriage and other related matters such as parenthood in Germany and California that circumcision constitutes physical abuse of the child have only served to unite and unify otherwise separate and disconnected religious groups – fundamentalist Christians, ultra-orthodox Jews and conservative Muslims. This eruption of religious issues into the public domain – over creationist teaching in schools, veiling in public, circumcision, gay marriage, and Shari’a law – illustrates the ideas of ‘public religions’ (Casanova, 1994) and appears to confirm recent commentaries on post-secularism. The argument presented by Habermas (2008) of post-secularity will be used as a framework to examine the impact of religion as a cultural resource in debate and decision making in the public sphere. The proposed paper seeks to examine whether the inclusion of religious and spiritual arguments in the public debate on same sex marriage positively influences, as Habermas claims, the democratic quality of deliberative outcomes and contribute to the enhancement of social cohesion or whether on the contrary public religions play a divisive role in democratic debate. Our paper draws on an Australian research grant to study the same-sex marriage debate in Australia and New Zealand, and on a second grant proposal to undertake a comparative study of legal change in relation to marriage in Australia, France and the United States.

Political Decisions in the Area of Public Security and the Action of Death Squads: The Case of the Violence Crisis in 2012 in São Paulo, Brazil

The purpose of this communication is to present our findings of an original research that is being conducted at the Center for the Study of Violence of the University of São Paulo, regarding the cycle of violence that took place in the Metropolitan Area of São Paulo, which among other incidents, led to a crisis in the public security sector in the State, in the year of 2012.

Since there is no official data on the matter, our data were mainly collected from the media. According to it, during the second semester of that year 30 state agents, (specialy Military Police officers) and 274 civilians were killed and 200 injured in similar situations - hooded men, shooting their victims from a motorcycle or a car in movement. This suggests that death squads or equivalent group strategies of execution were used. The novelty here seems to be, amongst others, the organization of groups oriented to killing out of duty police officers.

The research aims at identifying the trigger(s) of these sequences of actions, around which a dynamics of action-reaction seemed to be installed. For now, our main hypothesis is that previous political decisions, taken in the realm of public security policies, worked as the main trigger to initiate a process of mutual killings between members of the State of São Paulo Military Police and members of the PCC (First Capital’s Command) organized crime group.

Truth and Politics: The Case of the Truth Commissions in Brazil

This presentation will seek to clarify the underlying principles as well as the routines and different sources of tensions surrounding the politics of truth commissions that are currently convened in Brazil by systematically cataloguing them and presenting reports from their public sessions and interviews with commission members and deponents. Unlike similar initiatives convened in other countries that have transitioned from authoritarian regimes, the truth commissions in Brazil did not occur at the onset of the emerging democratic regime. Instead, they are such as the particular phenomenon, appearing in the context of an already mature democracy, and acquiring a multiplicity of forms, as they are established at different levels of governments, legislatures, universities and many other forms of organization of civil society. Established by Brazilian president Dilma Rousseff in May of 2012, the National Truth Commission (NTC) forms the main axis of a large net of independent commissions. Through the NTC, the Brazilian State takes upon itself the responsibility of investigating the human rights violations that were perpetrated by its own agents during past military governments (1946 to 1988), but does so without revoking the Amnesty Law of 1979, which explicitly prevents any criminal investigation or punishment of any transgressions of human rights that may have occurred during this period. Therefore, the NTC holds the clarification of the historical human rights record as a value in itself, and not as a means of informing judicial action. However, this paradigm is not uncritically accepted by all the auxilliary commissions, which, despite operating under the same legal framework as the NTC, often question the general amnesty principle. The value of historical truth as either a goal in itself or as a potential instrument to legal reform and judicial action remains the topic of much controversy, and forms the main analytical thread of this presentation.

Ranking Regimes, “World Class”Universities, and the Impoverishment of Intellectual Life

This paper considers the pressure felt by scholars publish in journals that are highly ranked according to their “impact factor.” A world-wide movement has pushed scholars to publish in English-language journals, to the detriment, we argue, for intellectual life at the national level. We first document evidence for this pressure, then discuss the consequences of funding mechanisms and research assessment for higher education. Then we review several factors in this movement: 1) the rationalization of expertise as a feature of Weberian bureaucratic authority; 2) the politics of higher education regulation and control, as manifest in the new managerialism and standardized research exercises; 3) the prize structure and finance of commercial scholarly publishing, which takes advantage of the preceding developments by charging high prices to maximize profits; 4) decisions by editors and their journals to play by the new rules even when they are personally opposed to them and when they value journals for a different purpose. We draw on national case studies from Japan, Taiwan, Argentina, Singapore, the UK, and South Africa.

The Overseas Chinese Population in Circa-2011

In circa-2011, there were over 40 million Chinese people living outside China (broadly defined). We discuss the data on the overseas Chinese; we show their distribution among the world’s countries and regions. We discuss their patterns of change in past decades. We present recent data on the larger of the non-Chinese diasporas to enable us to better evaluate the significance and importance of the Chinese diaspora. We discuss the major patterns of previous Chinese emigration. Then we present our data on and analyses of the overseas Chinese around 2011. The overseas Chinese population in the world in 2011 is larger than the population of Poland and Canada, and almost as large as Argentina. The Chinese diaspora is the third largest in the world, behind Ireland and Germany. The overseas Chinese continue to have important and significant influences in many host countries and are certainly not an inconsequential population.

The Residential Segregation of Homosexual Households from Heterosexual Households in Metropolitan Areas of the United States, 2010

Residential segregation is a major area of research in demography and sociology. Most of the research has focused on the segregation of racial/ethnic minorities from the majority race/ethnic group in cities of the United States and several other countries. Few if any analyses have dealt with the spatial segregation of sexual minorities from the majority. In our paper we analyze homosexual-to-heterosexual household segregation. There is a void in the literature about the extent to which gay men and lesbians are residendially segregated from heterosexual households. There are some studies of “gay spaces” and enclaves, but most are case studies of single cities (e.g., San Francisco) or analyses of gay enclaves and political force and activism. There are no systematic empirical studies of metropolitan areas in the U.S. (or elsewhere) of the degree to which gay male and lesbian households are residentially segregated from heterosexual households. Our paper addresses this void. We use two dissimilarity measures of residential
segregation with the same-sex partnering data from the 2010 U.S. census to calculate segregation scores for the 100 metropolitan with the largest homosexual populations. We show that there is a sizable amount of residential segregation between these two groups. We also show that gay male households are more segregated from heterosexual households than are lesbian households. And we show that the level of segregation varies positively across the metropolitan areas with the size of the gay male and lesbian population. Our research contributes to the general literature on residential segregation by focusing on a non-racial minority that has heretofore received very little attention.

Towards Better Education and Less Inequality? Trends in Geographical, Generational and Gender Inequality in Education

In our paper we provide an overview of past, current and possible future trends in disparities in education following the traditional patterns of inequality along gender, generation and geography. Magnitude and recent trends in inequality vary across regions and countries. Educational differences by generation indicate the speed of change in human capital formation over time and we identify different patterns of educational transitions that are closely connected to societal, educational and political contexts. Differences in educational disadvantage spread across gender, inequality and new forms of inequality. The closing of gender gaps is typical mostly of developing countries, where recent gains in education are often more pronounced for women compared to men, but are not always sufficient to remove the limitation in access to education; whereas the issue of male disadvantage especially in higher (i.e. post-secondary) education emerges in developed countries of the North, as well as countries in Latin America, East and South-East Asia. It must be emphasised that gender inequalities are an important aspect of “over-education”. For the future of potentially “over-educated” societies, especially in Europe, demand for innovative educational reforms are necessary and not always achieved.

HIV, Dating and Matting: An Analysis Of Stigma In Self-Presentation

While the Universal Declaration of Human Rights counts among its fundamentals the right to marry and found a family (Article 16), it is often informal societal discrimination that inhibits this right (UN 1948). Gay men living with HIV/AIDS deal with the stigma of their status from both external to and from within the gay community. Often they are legally required to disclose their status due to sexual activity, in essence moving them directly to what Goffman (1963) calls “stigmata”. Beyond the obvious discrimination on their sexual orientation and their HIV status, this paper examines the process of narrating a collective self-identity through narratives of gay men and their relationships with one another. Our research indicates that gay men living with HIV/AIDS can effectively manage HIV transmission risk through safer sex practices, positive men must negotiate their status in a dating landscape often characterized by stigmatization language that polarizes gay men in to “clean” or “dirty” states, the latter referring to men who are HIV positive; in effect making their sexual history their calling card. This paper begins with a critique of Goffman that offers an alternative for those who are perceived to be inherently and irreparably discrepant, and then presents an analysis of a comparative sample of three hundred personal advertisements across three differently populated American cities: large metropolitan, medium urban, and rural. Extracted from the free and open website craigslist.org, the advertisements are qualitatively analyzed for stigmatizing language such as “clean only,” “drug and disease free (DDF),” and other text used to communicate sero-status. The paper concludes with a discussion of implications and suggestions for researchers interested in studying inherently stigmatized groups.

Persistent School Segregation or Change Toward Inclusive Education? the Convention on the Rights of People with Disabilities and Reform Mechanisms in Germany

The United Nations Convention on the Rights of People with Disabilities (UNCRPD) was ratified in Germany in 2009. Article 24 requires that nation-states implement an inclusive education system. This ambitious goal poses great challenges for the implementation of institutionalized and special education systems can facilitate—or hinder—inclusive education. Germany is one of the countries worldwide that, to achieve the UNCRPD’s goals, must transform its highly segregated education system. In fact, for decades Germany has maintained one of the most differentiated and segregated education systems in Europe. Inclusive education contradicts not only contemporary special education structures, but the entire highly-stratified general education system, addressing a core conflict in German education policy. The consequences of segregation, such as social assistance receipts over the life course, are dramatic even if they have not often been calculated.

Thus, this neo-institutional analysis examines both the barriers and the reform mechanisms that impact the implementation of the UNCRPD in a decentralized national context. German federalism guarantees the sixteen Bundesländer authority over educational matters; however, ratified human rights conventions demand fundamental reforms regardless of regional policymaking preferences and priorities. Based on historical process-tracing and expert interviews (with policymakers, administrators, scholars, and advocacy groups), we contrast “leader” Schleswig Holstein with “laggard” Bavaria. In the northern state, inclusive education has diffused broadly since the 1970s. In the southern state of Bavaria, implementation is just beginning; indeed, the laws’ intents are being subverted by government actors, exhibiting considerable backlash.

Comparing these cases enables an investigation of specific mechanisms of institutional persistence and change: power-based, legitimacy-based, utilitarian, and functional. This analysis contributes to the theoretical literature on institutional change and path dependence, to studies on the human rights revolution in education (UNCRPD) in particular, and to research on inclusive and special education, long marginalized in the sociology of education.

Becoming Worldly: Developing Global Cosmopolitan Perspectives On Diasporic Homeland Tours

Diasporic tourism—structured group tours to natal, symbolic and ancestral homelands—is a growing industry where globalization, migration, leisure and the symbolic economy converge. Using ethnographic material from three diasporic tourist populations, this article examines the process of narrating a collective self-identity through diasporic homeland tourism. While tourists travel through space to homelands in order to travel through time and discover ancestry, they also move in scale by claiming membership in a global community. Framed within the theoretical intersection of tourism and diaspora, this comparative project reveals the utility of cosmopolitanism—as a category of practice—for domestic displays of identity and community.

No One “Likes” Sandy: Facebook and Post-Hurricane Recovery In Long Beach, NY

Technologies, like social media sites, have made it easier to communicate and can capture the “ephemeral” cultural artifacts found during periods of upheaval and change (Stallings 2006). However, due to its relative newness, social media’s role in recovery efforts after natural disasters has not yet been thoroughly explored. This report adds to existing literature and demonstrates how social media technologies supported and facilitated localized recovery efforts and memorializations from below in Long Beach, New York. The Long Beach Hurricane Information Facebook page, created by two transplants to keep out-of-towners informed has since morphed into a virtual bulletin board that provides support and information for local residents. Residents both near and far see this site as a place to share information, organize local responses, and importantly remember. Referencing their personal memories of Long Beach, posters reference local symbols and sayings to perform solidarity and community in this virtual space. This site bears witness to the resiliency, frustration, strength and as well as the shortcomings and failures of institutional recovery efforts. While they struggle to rebuild, they work together; defined and connected by the “Long Beach sand in their shoes.”

Crisis and (re-)Informalisation Processes: The Cases of Barcelona and Berlin

With the economic crisis and the retreat of welfare services, European cities are witnessing the reemergence of informal practices creating reciprocity mechanisms and informal markets as well as non-formal, reciprocity-based models of provision of housing, healthcare and other services. Nevertheless, the strength and the emergence of these practices takes place unevenly across these cities, depending on the impact of the crisis, the nature of the state and its multi-level governance and the institutional culture on the provision of policies.

This paper brings forward through historical and qualitative analysis, the role of informal practices in the provision of resources in two European cities in crisis: Barcelona and Berlin. As in many other southern European cities, the emergence of informal practices in Barcelona is key to understand the capacity of its inhabitants to overcome the perverse effects of the crisis. Historical analysis will show how the scenario of informal practices until the eighties and that part of these practices are reappearing now. In Berlin, which fell into a deep economic and financial crisis with the reunification of the city in 1990, informal practices have been an element explaining the redevelopment of the city. Local administrations have tried to formalize informal activities negotiating and tolerating certain practices.

Both case studies show that processes of informalisation taking place in the current crisis are rooted in previous practices and the historical development of cities, that never saw a complete disappearance of these practices. Besides, the analysis shows that these practices have been selectively allowed by local administrations to ensure certain form of social cohesion.

Fourier, Yuri (California State University Northridge, Yuri.Fourier@csun.edu)
Socially Innovative Forms of Renewable Energy Provision: Towards a 'Commons' Approach to Sustainability in Barcelona and Catalonia

With the financial crisis, responses to environmental problems in European cities are increasingly based on privatization of water and energy companies, and the promotion of technological approaches to increase efficiency and reduce pollution and energy consumption under the policy concept of 'smart city'. This paradigm promotes energy efficiency without discussing the systems of production and supply. Nevertheless, there also exist alternative approaches from civil society fostering new models of energy production, distribution and consumption.

This paper focuses on these proposals and their institutionalization possibilities through the analysis of a cooperative initiative (Som Energia) spreading in Barcelona and other Catalan cities. Following the experience of initiatives in northern Europe, this cooperative proposes new relations with green energy through the redistribution of both decision-making and energy power. This brings an increase and diversity of actors in the field of renewable energy, moving from traditional large private corporations and public companies to common citizens, who act both individually in the private-domestic sphere and collectively through socially innovative experiences.

The paper analyses a) how the cooperative emerged in its institutional and governance context, strongly dominated by an oligopoly of large private electricity companies and a complex and inefficient regulation that entails economic, social and environmental deficits, and b) the potential of this approach to create a greener and more democratic model of production and supply. Despite this apparent unfavourable scenario, it develops different strategies for ensure its activity paving the way for the strengthening of alternative forms of organization led by civil society that go beyond state and market-oriented logic. These experiences demonstrate the limits of technological innovation in moving towards a post-carbon society. Urgent changes in how socioeconomic activity is organized are also claimed.

Rovit, Michael (University of Salzburg, michael.rovit@univie.ac.at)

Individuals and communities live in a globalized world, defined by supranational institutions, companies and civil societies, while global travel and information streams expand. Yet they are part of specific nations that have experienced very specific events, which became part of very specific cultural figurations that are shaping strategies of those political and social actors. These narrative structures are figured and refuged to continue to be included in the on-going struggles and challenges – e.g. economic or political crisis and developments – that are experienced in the context of a nation state. And the national media – in all their forms and distribution channels – are a primary channel where those processes can be observed. Yet when discussed in the media those figures are often used as tools to discuss contemporary issues and anticipate further societal developments. But how are those ideas included when further events happen that may or may not match those anticipations?

The proposed presentation will discuss how the Austrian quality press ("Die Presse" and "Der Standard") did discuss potential futures in relation to international terror from 2001 to 2011 and how those futures were continuously included into national narratives of a country which never took an active role in the international war on terror. How do those predictions brought forward from strictly national media differ from the forecasts found in the New York Times, an internationally recognized information source? How do the Austrian journalists build those international futures and how do they think about them later on? Do their reference those figures built within the national context again?

Those questions will be discussed, using 25 narrative interviews with Austrian journalists and a qualitative comparison of 1377 Austrian newspaper articles with 1983 from the NYT, published in 5 two week sampling windows from 2001 to 2011.

PRATA, ANA* (California State University Northridge, ana.prata@csun.edu)

The recent economic crisis affecting Southern European countries has been singular in both its intensity and complexity, and as such, it has had a profound impact on the economic, political, social, and institutional realms. I compare how the Spanish and Portuguese governments, women's state agencies, parliamentar y members, and activists in both countries have inserted issues of gender equality and women's empowerment into narratives about the economic crisis and the austerity measures intended to mitigate it. The fiscal consolidation in Spain and Portugal has had a more severe impact on female employment rates, working conditions, wages, and welfare provisions than in the rest of Europe. In this comparative research I address the following questions: What policies have the Spanish and Portuguese governments pursued to mitigate the economic crisis on women's position in the labour market and in the domestic arena? How have these governments framed the various problems and the solutions directed at increasing gender equality and empowering women? Which political groups or social movement organizations have voiced women's interests on these issues and what strategies have they devised to deal with those challenges? Which problems affecting women are these groups framing as a priority (e.g., employment, poverty, violence) or even as 'a problem' at all? And finally, how are these groups framing potential solutions? Findings show that it is mostly women's state agencies (not parliamentary members) that highlight how the economic crisis has impacted women disproportionately.

The agencies' focus seems to be more the increase in domestic violence, and less on issues of women's unemployment or the gender pay-gap. The print media does not highlight how the recession is affecting women, although some articles mentioned the strains families have had to deal with since the crisis and the strategies they adopted in response.

Residents’ Responses to the May 1-4 2010 Boston Water Contamination Incident

This study used the Protective Action Decision Model to examine local residents’ warning sources, warning receipt times, message content, warning confirmation, risk perception, and consumption of untreated tap water, boiled water, bottled water, and in-temperature foreign worker programs. The majority of those coming through the LCP are Filipino women, part of a vast labour diaspora of over nine million Filipinos working in roughly 200 countries. An unusual feature of the LCP is the opportunity it affords to migrate permanently to Canada if the worker completes 24 months of live-in care work within a 48-month period. In 2010 the Philippines displaced China and India to become Canada’s top immigration source country; by 2009 40 percent of Filipinos migrating to Canada came through the LCP. I report on research carried out in collaboration with the Philippine Women Centre of BC that documents the long-term effects of this program on Filipino families settling permanently in Canada, with a special focus on the challenges faced by Filipino youths reuniting with the mothers in Vancouver.

Testimonial Theatre, Transnational Debate and Filipino Labour Migration to Canada

I have for many years worked with the Philippine Women Centre (PWC) of BC to document the experiences of Filipina migrant domestic workers and their families in Canada. Our latest project, a collaboration with Caleb Johnston and theatre artist, Alex Ferguson, involved creating a testimonial play based almost entirely on verbatim transcripts of interviews conducted with migrant Filipino domestic workers, their children, Canadian employers of domestic workers and nanny agents. In the first instance, we turned to theatre to put disparate experiences of care and need into dialogue and to stimulate wider public debate within Canada. But for domestic workers involved, the theatre project also solidified their desire to contribute to a complex transnational debate about Canada’s Live-in Caregiver Program.

Workplace Innovation and Consequences for Employees and Organisational Performance in the Netherlands

Based on ‘Netherlands Employer Work Survey’(NEWS) data this paper investigates the consequences of workplace innovation for employee and organisational performance in The Netherlands. The NEWS is a unique, two-yearly held survey among 5,000 establishments of public and private organisations on policies and practices of Dutch employers, concerning work related issues, such as working conditions, employment relations, HR and innovation management.

PRENTOULIS, MARINA* (University of East Anglia, M.Prentoulis@uea.ac.uk)

Emotions and Values: From the Greek Riots of 2008 to the Movements of 2011

It is not uncommon for theories of collective action to differentiate between ‘conventional’ and ‘unconventional’ protests. This paper argues, however, that although riots are ‘unconventional’ protests, they are an important element in the process of collective identity construction. They signal a crisis in representation and the need for improved or renewed participatory politics, as practiced in social movements. Riots, although lacking the clear demands, degree of organisation and duration of social movements, offer an insight into the network of emotions and values that subsequently crystallize into more coherent forms of collective action. In this respect they should be thought of within the theoretical framework of social movements. The intense and extended riots in Greece in November 2008 was one of these instances which, although not purposeful in the traditional sense, provide an insight into the networks of values and emotions leading to the movement of the ‘Aganaktismenoi’ (Indignants) responding to the economic crisis in Greece in 2011.

PRENTOULIS, MARINA* (University of East Anglia, M.Prentoulis@uea.ac.uk)

Responding to the Greek Crisis: Social Media, Horizontal Organization and Networks, then and Now

The use of social media during the first wave of protests responding to the crisis and the pending agreements in Greece, enabled the emergence of a new political discourse. The main website of the Greek ‘Aganaktismenoi’ (Indignants) was anchored around the concepts of horizontality, autonomy and leaderless (www.real-democracy.gr). The analysis of the website reveals an attempt to divide the political field in pro and anti memorandum forces and expresses the widely felt hostility and suspicion towards the existing forms of democratic representation (Pren托ulis and Thomassen, 2013). Although the lack of coherence and permanency of this movement points towards processes of identification (as failed attempts) rather than new forms of collective identity, this paper is concerned with the influence of the ideological and organizational elements emerging from the use of social media during the protests and their displacement on a variety of socio-political sites: First, the ideological and organizational influence of social media for the creation of Solidarity Networks. Second, the use of social media by the radical left coalition Syriza, which is currently the opposition party in Greece.

**What Drives National Differences in Intensive Grandparental Childcare in Europe?**

Grandparents play an important role in looking after grandchildren. The provision of intensive grandparental childcare varies considerably across Europe, with figures ranging from less than 4% in Sweden and Denmark, to almost one quarter (24% in Greece). This paper investigates whether contextual-structural factors (such as formal childcare and labour market structures) and family cultures influence the level of informal childcare support from older parents to their adult children, using data from the Survey of Health, Ageing and Retirement in Europe. Multilevel analyses suggest that grandparental childcare variations are mostly driven by macro-level factors. Both parent and grandparent socio-demographic and economic characteristics were associated with intensive childcare and were consistent with existing literature. However, even accounting for socio-economic and demographic differences between national populations, country-level variations in the level of provision of intensive grandparental childcare remain. Most of such variation can be explained by structural and cultural factors. In particular, in those countries where both parents and grandparents are expected to work, formal childcare is generally well provided and appears to be the norm; thus, there is a lower level of grandparental childcare. In contrast, in countries where there is a high percentage of women who are not in paid employment, maternal care for pre-school children appears to be the preferred norm. In such countries, provision of formal childcare is limited as care is expected to be provided by family members, and mothers in particular rather than grandmothers. If, however, mothers are not expected to work (but to look after children), she tends to rely on grand-maternal support on an almost daily basis. Recent European policies which encourage older women to remain in the labour market are likely to impact on mothers’ employment, particularly in Southern European countries where there is little formal childcare.

**Being Active As a Route to Health and Happiness:**

A key feature of what has been called the epidemiological transition is that a fundamental shift occurs in mortality and disease patterns whereby pandemics and a new wave . Analysis with the 5th wave demonstrated that individuals’ willingness to sign a petition, join a boycott, and participate in peaceful demonstrations was lower in the Middle East than in any other region of the world. Nearly 70% of respondents would never sign a petition; 75% would never join a boycott; and 72% would never participate in a peaceful demonstration. Counter to this finding, the Middle East, especially Egypt and Turkey, has seen high levels of political action over the last 4 years. We aim to understand political action in the Middle East by examining change in the percentage of individuals willing to participate to the 5th and 6th waves of the WVS. In addition to description, we will examine the role of individual personal characteristics and geo-political attitudes in willingness to participate. Analysis with the 5th wave demonstrated that geopolitical beliefs have the most predictive power. Individuals’ views regarding government and its institutions, particularly their beliefs about governance in their own nations, mattered. Personal characteristics (demographic and human capital) did not have as much effect as would be expected from earlier studies on different (mostly Western) populations. However, men and those with less education were the most willing to engage in political action.

**The Politics of Intergenerational Conflict: A Comparative Study of the UK and Japan**

Internationally we are witnessing renewed conflict over political settlements and attempts to forge a new moral economy of welfare in economically straitened times. In some (but not all) advanced economies these disputes are crystallising around the concept of intergenerational equity with a noticeable re-positioning of older people as the selfish welfare generation. In this paper we consider the recent resurgence/emergence of discourses of intergenerational conflict in the politics of financing later life, especially pensions and social care, in the UK and Japan. In both countries there are calls in government and public life for a re-balancing of public expenditure in favour of youth, while age-­divisive policies set up the intellectual and political debate as a matter of intergenerational tension. Both are wealthy, advanced democracies, with old and ageing populations, facing prolonged austerity. Yet in many cultural, political and institutional respects they are quite different and have historically combined different modes of governing in the interests of social welfare. The UK emphasises free will, individualism and market solutions, whilst in Japan, the emphasis is on balancing free-market thinking with some sense of social responsibility and community, along with calls for reforms of existing collectivist policies, all in the context of strong traditions of intergenerational solidarity and filial piety. We consider how and why this policy prescriptive language has emerged in both countries, what purposes it is serving, and what the consequences might be for the distribution of resources in later life. We then assess analysis of each country in comparative perspective, highlighting factors that contribute to differences or features that transcend national boundaries. We conclude that publicly framing the allocation of financial resources as a matter of intergenerational conflict masks inequalities in the social distribution of resources within all age groups that arise with the increased marketisation of late life welfare.

---

**Childcare in Europe?**

In the 1960s I visited one of the first racially mixed primary schools in the Netherlands. Half of the 200 pupils were second generation Moluccan children, whose parents felt forced to leave their home country in the aftermath of the decolonization of the Dutch East Indies. Some forty years later I recorded the lifestories of 35 of my former classmates. This paper will focus on the extent in which the native Dutch, as members of the ethnic majority, and the Moluccan-Dutch, who perceive themselves as second generation political exiles, identify with Dutch society. More specifically, it will analyse how their accounts tap into but also resist dominant discourses of race, ethnicity and culture. While the stories of the native Dutch contain a range of images of the ‘other’, from special or pitiful to unsettling or inferior, and often express concern about the ability or willingness of ‘foreigners’ to adapt to Dutch culture, the Moluccan accounts appear to be devoid of any imagery of immigrants as ‘other’, as well as any concern about cultural integration. On the other hand, while most native Dutch emphatically emphasized that they consider Moluccans to be part of ‘us’, the Moluccan accounts testified that, due to their different culture or outward appearance, they cannot but identify as ‘other’.

---

**Being Active As a Route to Health and Happiness:**

A key feature of what has been called the epidemiological transition is that a fundamental shift occurs in mortality and disease patterns whereby pandemics of infection are gradually displaced by degenerative and avoidable diseases as the chief form of morbidity and primary cause of death. One of the consequences of recognizing such a transition is that the health policies of rich nations have incorporated a concern to promote ‘healthy lifestyles’ and a personal sense of ‘wellbeing’ with the ultimate aim of reducing mortality and morbidity rates across the life-course. One component of a healthy lifestyle is said to consist of sustained physical activity for at least 150 minutes every week, but according to the WHO only around 1/3 of people in Europe achieve this; the reasons why are numerous and complex. In this paper we explore lay thinking about what ‘activity’ is and what might promote or detract from it. We gathered qualitative data from 15 people in 14 focus group discussions. The data were collected in the course of researching the use and potential use of a linear park designed for an inner city area stretching across
a range of deprived and affluent neighborhoods in Belfast (Northern Ireland) - see: http://www.communitygreenway.co.uk/. Using novel methods of data analysis that focus on semantic networks and how ‘things’ are connected, we explore lay views about the use of the park as a ‘therapeutic landscape’, and indicate the implications of our work for health policy and civic governance in general.

PRIOR, NICK* (University of Edinburgh, UK, n.prior@ed.ac.uk)
Voicenail, Virtuality and Vocality: The Case of Hatsune Miku
Where does the voice go in contemporary culture? How is it composed, decomposed, constructed, reconstructed and made apparent? What are its signs and dislocations, its logics and movements? What are the expectations and reasons for the voice’s presence as a particular kind of expression and information? In exploring how we might set out to answer these questions, this paper is divided into two parts. In the first part, and drawing on insights from the sociology of culture and technology, it argues that the birth of modern popular music is also the birth of a permanent coalescence of the voice and technology. For the voice does not sing alone, it is always accompanied by, is implanted in and mediated by technologies. Paradoxically, just as it attains the status of a unique expressive carrier and index of unnameable perpetual and personal sound, so it is a whole plethora of machinery that reveal that carrier to be radically hybridised.

The second part takes the form of an exploratory scene assigned to a particular vocal modality. It aims to show how, in the case of the Japanese virtual idol singer, Hatsune Miku, complex entanglements of human and non-human entities are not only radicalised, but also played with, ironised and turned into aesthetic forms that unsettle the foundations on which the voice sounds out. Here, not only does the voice become a pliable object of information, enmeshed in machinic vocalisations and subject to the microscopic transformations of digital technologies, but it also represents a simulacrum of the hyper-sexualised female body as a performative object and act. From the Miku phenomena we learn much about how the body, the voice and digital technologies fold into one another in an era of global transformation.

PROFIT PACHIONI, ALENA* (University of Brasilia, alena.linguas@gmail.com)
Negotiating Masculinities in the Context of Transnational Bolivian Families
The transformation of gender identities and family models within migration projects increasingly highlights the gender perspective as an elementary variable of migratory processes, preferably of various practices, identities and by institutions (“Hondagneu-Sotelo, 2000). While scholarship on Latin American migration and gender has concentrated on women, less research has been undertaken on migrant men; particularly in the research on transnational families.

Thirty percent of the Latin American immigrants to Brazil are Bolivian. Based on the theories of intersectionality and hegemonic masculinity, the paper draws on my research project aiming to understand how transnational Bolivian migrant men residing in the Brazilian capital Brasilia negotiate their masculinities in a context of transnational family relations. To explore this issue, the paper draws on D’Aubeterre’s (2001, p.32) observations that suggest to understand the transnational family as “a locus of social and emotional support but also as a field of conflicting movement of power relations between different members that constitute the family.”

Moreover, according to Sinatti (2013) an intersectional understanding of family relations allows researchers to grasp how masculinities may be redefined as people move across cultural, social, and national borders, and as they encounter and cope with different regimes of power at the intersection of other social categories. The different dimensions the masculinities are negotiated in challenges as associations with hegemonic masculinity and intersect with other variables such as ethnicity and class. In the context of the Bolivian migrant men and their families, the multiple localities they are finding themselves in influences the negotiation of the masculinities involving family-, care- and intimate relationships, fatherhood- not only within their family structure but from multiple perspectives.

PROZOROVA, YULIA* (Russian Academy of Sciences, yulia.prozorova@gmail.com)
“Intercivilizational Encounters” with the West and Modernizing Moves in Post-Soviet Russia: Civilizational Perspective
The present paper considers civilizational analysis as an appropriate theoretical framework for the study of transformations and modernization in the post-Soviet Russia. Unlike the conceptions of linear westernization, ‘transition’ or modernization theory and its variations (‘catch-up modernization’, ‘convergence’, etc.) civilizational analysis and multiple modernities theory do not disregard in-depth analysis of local traditions, sociocultural settings, internal contradictions and historical background. The changes in contemporary Russia and the distinction of Russian modernity are mainly shaped by the post-Soviet encounter of the Russian society with its legacy of the “soviet project of modernity” (J. Arnason) and imperial traditions with Western modernity. The first post-Soviet decade was a period of the ultimate ‘opposition’ to the western modernity and the domination of Westernism in political discourse. Acquired Western institutional models and cultural ideas (capitalist free-market economy and democratic policy with liberal ideology, to name few) have been originally interpreted and mutated while being assimilated into the Russian context. Following Arnason, the encounter between the West and the rest is seen as a ‘global projection of the problematic’ that remains open to diverse alternative interpretations. To illuminate the outcomes and impact of the Western borrowings and reveal factors affecting their adaptation, the paper proposes to conceptualize contacts between the post-Soviet Russia and the West as “intercivilizational encounters” (J. Arnason and B. Nelson) with a focus on the interaction between different “civilizational complexes” (B. Nelson). The post-Soviet “encounters” induced changes in cultural orientations, interpretation of power,
institutional forms and design, patterns of reciprocities and “structures of consciousness” (liberal world-views, new concepts, rationales and logic of action, market rationality, individualism, etc.). These borrowings are considered with the regard to the peculiarities of the Russian civilizational complex (inclination toward the organization of political power in a centralized, authoritative manner, role of political and ideological/religious orthodoxy, distinct rationality, etc.).

PRUISKEN, HENRIK* (Bielefeld University, henrik.pruisken@uni-bielefeld.de)

Locus of Control and Cumulative (Dis-)Advantage in the Labor Market

The relationship between Locus of Control (LoC) and occupational outputs has already been shown in several cross-sectional studies. The belief to have control over the achievement of the own goals, as do people with internal LoC, seems to be an important property for the career opportunities. Thus, people with an internal LoC get more pay, and take higher vocational positions in the average. This paper, however, has a longitudinal perspective and investigates the mutual influence between labor market experience and the development of LoC. More specifically it is assumed that there is an accumulation of (dis-)advantages for people with an external locus of control. In this case the external locus of control leads to worse employment opportunities and the worse employment opportunities leads then to a strengthening of the external LoC over time. On the other hand, an accumulation of advantages could be assumed for people with a stronger internal LoC.

The analysis is based on household panel data from the German Socio Economic Panel (SOEP) for the years 1999-2010. The SOEP includes a multi-item scale which measures the LoC in the years 1999, 2005 and 2010. In addition, the SOEP contains much information about the employment history, so that the employment situation can be modeled in detail.

On the basis of “Fixed-Effects-Models” I estimate the effects of labor market outcomes, like unemployment or the decrease of income, on a possible change in the locus of control over time. First results show that a deterioration in the individual labor market situation leads to an increase of an external LoC. The assumption of the accumulation of (dis-)advantages can so be confirmed on the basis of the previous analysis.

PRUISKEN, HENRIK* (Bielefeld University, henrik.pruisken@uni-bielefeld.de)

The Effect of Inequalities within Families on Work-Values of Adolescents

The occupational aspirations and work-values of adolescents strongly influence their career choice and therefore are formative for their status attainment. The importance of the family for adolescents’ development of work-values has been mostly studied in terms of direct intergenerational transmission of work-values from parents to their children. In contrast with this approach the paper investigates to what extent the sibling constellations and inequalities within the family affect the formation of work-values. It is assumed that differences in supportive parenting between siblings reduce the social work-values of the child that is less supported. Based on the assumptions of the theories and research on social parisons it is further assumed that these effects are stronger for more similar sibling pairs, because the individual social comparison orientation is stronger and a “de-identification” is harder within these pairs.

The analysis is based on household panel data from the German Socio Economic Panel (GSOEP) for the years 2000-2011. In the GSOEP adolescents are interviewed at the age of 17, including questions on their vocational goals or their perceived parenting behavior. The great advantage of the data is that the siblings are also surveyed at the age of 17.

On the basis of “Sibling-Fixed-Effects-Models” I estimate the effect of the differences in the perceived parenting behavior. First results show that a supportive parenting style increases the social work values, but that higher support of the other sibling leads to a lower formation of social work-values. The results also reveal a stronger effect for same-sex siblings in comparison to opposite-sex siblings. In particular, the effect is stronger for sisters than for brothers.

Neoliberal Rationalities in Vocational Higher Education

The increasing function of universities as institutions for mass education might affect democracy and the universities’ contribution to society. Students as choice-agents need to be involved in these processes. This paper scrutinizes how students’ practical considerations for future choices in education and occupations correspond to policy objectives of socially productive educational choices. These objectives currently follow neoliberal rationalities regarding how to divide the responsibilities between the state and its citizens. In this context, choice-agents have to learn to identify themselves as economic subjects able to cope with economic transformation.

The aim of our research is to examine the correspondence between educational policy objectives and students’ educational choices in practice. The research questions are: Are there any gender differences in students’ choice-agencies and motives that reflect a (neo-)liberalinstrumentality? Is there a resistance against such rationalities in students’ actual choice-strategies? This issue is empirically investigated via a semi-structured questionnaire (n=840) with students from 14 vocational Swedish Human Resource programmes in higher education. The case of higher education programmes was chosen since weak professional university programmes tend to stimulate rationalities amongst students that ritualise the role of education in terms of its formal credentials. Vocational programmes are also a significant growth sector in higher education, with large proportions of non-traditional students.

What is unclear, however, is whether these forms of education reinforce a desired policy ambition with regard to instrumental choices in education. These are policy rationalities that are questioned in the paper from a critical semantic approach indicating that the policies fundamentally rest on manipulative powers where human agency is forced into instrumental decision-making. The results of the study point to patterns where students tend to resist instrumentality and integrate their decisions in education as reflexive and relative autonomous personal projects in relation to the recognized social powers of the labour market.

Interrelation Between Organizational Trust and Organizational Innovativeness from a Context Perspective

The paper explores the interrelation between organizational trust, which is defined as an attitude combined from affective and cognitive components (McAllister, 1995), and organizational innovativeness, an organizational capability to create new ideas, experiment and engage in creative processes and which is operationalized as a five-dimensional construct consisting of product, market, process, behaviour and strategy innovativeness (Wang and Ahmed, 2004). We study the interrelation from the perspective of innovation context and take Lithuania as a case of a low innovation context and Finland as a high innovation one according to the Global Innovation Index 2013. The research questions are whether different components of organizational trust can result in different organizational capability to engage in creative and innovative processes.

The empirical data for this study were collected by means of a standardised electronic questionnaire from 3 organizations in Finland (n=719) in 2011, and so far 4 organizations in Lithuania where a survey is still carried on since 2012 (current n=536, survey to be completed December 2013). Based on preliminary findings of regressional analysis, the emotional component of organizational trust has a much more significant effect on organizational innovativeness than cognitive one. Its affect on the dimensions of behavioral, process and strategic innovativeness exceeds its impact on market and product innovativeness. These findings imply that creativity may be malpracticed in organizational setting and more self-purposeful rather than result-oriented.

The research findings will have theoretical implications concerning the role of emotion to organizational innovativeness, discussing the need for golden mean in practicing organizational trust. From a managerial perspective, potential risks arising from high organizational trust and certain dimensions of organizational innovativeness will be discussed considering the innovation context.

Successful Educational Actions in Southern Europe: From Marginalization to Educational Inclusion

The recreation of the successful social and educational actions is achieving the transformation of social contexts with strong indicators of exclusion. These actions have been identified through the INCLUDE-ED project, the only Integrat ed project about schooling from the Framework Programmes of research until its ending in December 2011. There have been 15 universities from 14 countries participating in the project and case studies have been conducted in Spain, Italy, Malta or Cyprus, among other countries, where the successful educational actions (SEAs), universal and transferable, have been identified. The case that we are pre-
senting here is the one in the La Milagrosa neighbourhood, at the outskirts of the city of Albacete (Spain). The educational centre in the neighbourhood presented low academic performance, high levels of absenteeism, serious problems of coexistence among students and high levels of conflict between teachers and the families. Through the implementation of the SEAs advocated by the international scientific community, a transformation started which was extended far beyond. The academic results experimented a rapid improvement and the diverse social agents (university, administration, professionals-officers and neighbours) carried out a Dialogic Inclusion Contract to re-creates the SEAs and to carry out the transformation process. This process has become a model at a European level to exit the ghetto. The key resides in the design of policies based on scientific evidence; and on the inclusion of the voices in all the decision-making processes.

**New Alternative Masculinities Against Gender Violence**

This paper presents a South's contribution to overcoming gender violence. Recent scientific evidence about the perpetuation of the traditional heterosexual model of masculinity upon gender violence shows that 1) there are in the history many examples of men that have fight together with feminist women for the eradication of gender violence; and 2) often and according to an existing socialization to be egalitarian does not promote a desirable image (in terms of sexual attraction). It stands out the differentiation between three types of masculinities: Dominant Traditional Masculinities (DTM), Oppressed Traditional Masculinities (OTM), and New Alternative Masculinities (NAM). DTM and OTM contribute to perpetuate violence against women, while NAM allows preventing it and, thus, overcoming it (Flecha, Puigvert, Rios, 2013).

This theoretical contribution was presented for the first time in Barcelona (Spain) in a conference organized by Homes en Diàleg (Men in Dialogue), a men's organization, based under the context of Dialogic Feminism and which main objective is to promote and strengthen other models of masculinity based on equality and dialogue, as an alternative to the hegemonic masculinity. From the theoretical perspective of Dialogic Feminism, defined by Puigvert (Beck-Gersheim, Butler & Puigvert, 1990), and the new conceptualization of DTM, OTM and NAM, it is possible to contribute to the eradication of gender violence in different countries. Thus, this paper proposes how this conceptualization could be transferred to all cultures and contexts and fight gender violence in a global way.

PULA, BESNIK* (Princeton University, bpula@princeton.edu)

**From Reform Socialism To Transnational Capitalism: The Political Economy Of Foreign Direct Investment In Postsocialist Central and Eastern Europe**

The existing literature on postsocialist transformations in the former communist ruled states of Central and Eastern Europe (CEE) argue that paths of market reform in the region were largely determined by policies implemented at the moment of transition. This paper, by contrast, argues that reform paths were heavily constrained by each state's inherited industrial structure and ties to the world economy prior to 1989. Examining flows of foreign direct investment (FDI) in the region during the initial liberalization period, the paper shows that the density of East-West inter-firm ties in the 1970s, and rates of international state indebtedness during the same decade, are better predictors of how rapidly postsocialist states amassed FDI stocks in the early 1990s, than their economic, institutional or policy characteristics during the transition period. However, the paper also finds that while the inter-firm ties of the world economy form a powerful structural basis attracting FDI, post-Communist political coalitions were key in enabling or hindering the advancement of foreign investment. The combination of industrial structure and political coalitions at the time of liberalization explain divergent pathways in transitions from state socialism in CEE.

SOCIAL IMPLICATION OF INEQUITY IN HIGHER EDUCATION

A comparative study of formal and non-formal Mode of Educatio in Andhra Pradesh of South India  
*Dr. P. Koteshwar*

Social implications of different modes higher education has been gaining lot of importance in contemporary times. This is because of growing important for higher education and its consequent skill and talent required for management of complex issues and problems emerging in the era of post liberalization. As such Higher Education has been considered as necessary tool for social transformation by using increasing knowledge in science and technology. As a result in post globalized era developed and developing countries initiated establishment of institutions of higher learning across the world. In this consequence the Government of various Nations have been liberalizing the higher education and imparting education through formal and non formal means. India is one of such countries which has been liberalizing higher education and expanding its institutional activities through formal university education and non formal system of open university education and distance mode of higher education to reach all the sections of the society.

However, there is a lot of disparity in the content, quality, curriculum and mode of teaching etc. Further the socio-economic profile of the students are also varies. Hence there are number of consequences on the students due to various systems of education for the same degree.

This study aims at to understand comparatively the system of formal and non formal higher education and its implications and the students of various backgrounds. For this study Kakatiya University and its formal and non formal system of education has been chosen to understand the implications of the system inequity in higher education.

**A New Age of World Factory: Monopoly Capital and the Struggle of the New Generation of Chinese Workers**

A startling 18 young workers attempted suicide at Foxconn production facilities in China in the year of 2010, attracting worldwide attention. This article looks at the historical development of Foxconn Technology Group as a case to demonstrate the advent of rapid capital expansion in China and its impacts on the lives of Chinese workers. It also provides an account of the role of the state that facilitates to Foxconn’s production expansion as a form of monopoly capital. Foxconn is important and typical of this phenomenon due to its speed and scale of capital accumulation in all regions of China which is incomparable to extant enterprises. We argue that this new form of capital generates a global factory regime and a distinctive managerial mode that further leads to workers’ suffering from work pressure, anxieties and desperation at an unprecedented level.

PUN, NGAI* (Hong Kong Polytechnic University, punngaai@gmail.com)

**Communism Revisited: A Third World Perspective**

As an idea or philosophy, Communism died in the West when the mature form of capitalism didn’t succumb to a communist revolution. As the result of the transfer of capital, with the support of militarism and class conflicts in the Third World, socialist revolutions arrived there in the 20th century. This is the history of communism, the first wave, if you would like to name it.

Since the movements of the 1960s, the state or party-politics has usually been represented as the enemy to be attacked. But from a Third World perspective, as Lenin highlighted, the highest stage of capitalism was imperialism. The first half of the 20th century focused on national liberation that required a state machine. This proved to be the foundation of communist struggle in the context of the Third World. After the revolution, the state didn’t vanish but this didn’t put an end to the struggle – as many in the West thought – since we see communism as praxis rather than an idea of History.

There are three reasons for the continuing existence of the socialist state: The failure of Western communist movements to liberate their own working class and their counterparts in the third world. The Cold War required the strengthening of socialist states and develop the socio-economic conditions for socialism. The lack of grass roots democracy and the lack of substantial class forces which could counter-balance the bureaucratization of the party-state. Although it failed, the Chinese Cultural Revolution was an attempt to address these historical predicaments. Capitalism has conquered most Third World countries and enveloped their life-worlds, thereby creating the social conditions for the final capitalist crisis and the second wave of the communist revolution. A new sociology of communism needs to revisit the politics of class, collective and human emancipation.
Classification and social valuations of culture and the arts vary cross-nationally and historically. Recent studies have questioned the role of classical highbrow culture and an intellectual marker in Western countries and suggested that the self-evident bourgeois “good” or legitimate taste is becoming less hierarchical and more open. The famous idea of cultural omnivorousness, that the taste of the high status groups is no longer exclusive but inclusive, is one way of conceptualizing this trend. Omnivore scholarship, however, has concentrated mostly on the consumption rather than the production side of culture. Changes in the social value and composition of the legitimate taste as expressed in people’s dispositions and preferences should nevertheless receive support, or even be preceded, by transformations in cultural institutions which consecrate legitimate art. Since art journalists and intellectuals play a crucial role as cultural intermediaries, the changes in dominant taste patterns should be reasonably recognizable in their evaluations and writings, i.e. in how cultural classifications and aesthetic standards are represented in the media. Sociological studies of such cultural institutions that would include both the cross-national and cross-temporal dimensions have so far been rare. This paper presents the first results of a research project examining cultural pages of the main newspapers in five European countries, Britain, Finland, France, Spain and Sweden, from 1960 until 2010. Since we are interested in changes in the legitimate taste and the processes that have created space for omnivorous tastes, we pay special attention to the appearance of new (and the disappearance of old) cultural genres and art forms as well as the weight of popular culture in these pages and the boundaries between entertainment and “serious” art. By using both quantitative and qualitative content analyses, we focus here particularly on two countries and the respective newspapers, Britain (The Guardian) and Finland (Helsingin Sanomat).

*Into the Great Wide Open? a Comparative Study of Cultural Legitimacy and the Arts in British and Finnish Newspapers, 1960–2010*

The present contribution stands as a deeper and wider sociological reflection of some empirical evidence resulting from a national research project entitled “Federalism, Local Autonomy and Quality of Democracy”. In an attempt of understanding the reasons for the substantial halt of the federal reform process in Italy, the content analysis of the interviews addressed to privileged witnesses of the administrative and local political system emphasized two central aspects: the increasing role played by technical knowledge and the persistence of a ruling-class es political culture geared toward a parochial/individual dimension of interest, more than according to general and collective aims. On the one hand the increasing complexity and technical nature of the regulatory framework “imposed” by a higher level of governance (European Union), on the other a network of relationships between politics, society and economy – both at national and local level – that is oriented to the defense of the achieved benefits through what we can describe as familialistic (or neo-feudalist) mechanisms of interaction.

In this paper however, I raise another issue. To what extent are our theories related fields, and analysis of labour migration related policies and programs, the formation of the new “migrants’” identity and its representation in print media. The present contribution stands as a deeper and wider sociological reflection of some empirical evidence resulting from a national research project entitled “Federalism, Local Autonomy and Quality of Democracy”. In an attempt of understanding the reasons for the substantial halt of the federal reform process in Italy, the content analysis of the interviews addressed to privileged witnesses of the administrative and local political system emphasized two central aspects: the increasing role played by technical knowledge and the persistence of a ruling-class es political culture geared toward a parochial/individual dimension of interest, more than according to general and collective aims. On the one hand the increasing complexity and technical nature of the regulatory framework “imposed” by a higher level of governance (European Union), on the other a network of relationships between politics, society and economy – both at national and local level – that is oriented to the defense of the achieved benefits through what we can describe as familialistic (or neo-feudalist) mechanisms of interaction.

Having Lost Collective Goals for Fear of Loosing Personal Benefits. Political Culture, Individual Interests and the Negative Spiral of the Italian Case

The labor market is complex in every society. Along with one’s movement from one place to another, his/her life becomes vulnerable. Though migrants are to be treated not as workers but as human beings with human rights, reports state that labour migrants have been facing a lot of problems not only in receiving countries but also in their own soil. Generally, labour-sending countries in Asia are confronted with a dilemma between “promotion” and “protection”. In the face of bleak employment prospects at home and the economic gains from foreign exchange remittances, countries would like to see expansion in overseas migration of national workers. At the same time, they cannot turn a blind eye to the rampant abuses of basic human rights suffered by their nationals abroad. Nepal, being one of the newly emerged countries in sending its labour force to the international market, especially in Asia, has been one of a witness of such dilemma. On the one hand, it exports its labor in order to take some pressure off local unemployment. On the other hand, it has to deal with exploitation and even death situation of its citizens as the recent case of Qatar shows.

Within this background, this paper explores the reasons behind Nepal’s reluctance not only to put the labor migration in its policy priority but also to sign/rectify the UN Convention. In other words, examining the link between political ideology of major political parties in Nepal, and its reflections in introducing governamental policies including the labour ming its labour force to the international market, especially in Asia, has been one of a witness of such dilemma. On the one hand, it exports its labor in order to take some pressure off local unemployment. On the other hand, it has to deal with exploitation and even death situation of its citizens as the recent case of Qatar shows.

The paper argues for the importance of making a distinction between gift-giving and ceremonial gift exchange. Ever since Marchel Mauss and his pioneering...
essay *The Gift*, sociologists and anthropologists have considered the gift largely on the basis of exchange. However, there are also forms of giving that are not reducible to the reciprocity of exchange. While in ceremonial gift exchange (e.g. Christmas and birthday presents, reciprocal dinner invitations, etc.) gifts are perhaps best conceptualised in terms of reciprocal recognition (Hénaff, 2010), the practices of giving presented by self-sacrifice and humanitarian aid, for instance, escape or at least suspend the strict economy of exchange. What is more, the paper suggests that modelling the gift solely according to exchange significantly undermines the giving (up) involved in the gift. Whenever what is given is given only ‘in exchange’, so to speak, the giving with abandon is annulled already by definition. Nevertheless, it is not that giving would be completely separate from reciprocity. The paper argues that gratuitousness and reciprocity comprise two dimensions of the gift that at once presuppose and exclude each other. The gift of ceremonial gift exchange needs to involve some generosity and thus at least be guided by the ideal of the pure, absolute gift, if it is to avoid being turned into sheer market exchange. And, from the other way around, even the gratuitous giving in pure loss seems to presuppose at least a minimum of reciprocity – insofar as the gift is accepted by the givee – if it is not to remain illusory, utopian, and abstract.

The paper reports on a theoretical and historical research project comparing two contrasting social movements that shaped China’s immediate and long-term futures, the post-World War I May Fourth Movement and the Cultural Revolution of 1966-76. The May Fourth Movement grew out of the betrayal of China by western powers at the Versailles Conference, and was the culmination of a renegotiation of Chinese indigenous traditions. It led to political reform and intellectual strengthening. The Cultural Revolution can similarly be situated in China’s international isolation during the Vietnam War but rather than a popular expression of future-orientated optimism it was a party-led mobilization of inexperienced young people directed to internal factionalism. It led to chaos, lost opportunities and isolationist cultural closure. The paper explores the characters of these very different movements and also considers some similarities which they share. One common element that will be developed in the analysis in addition to international context and qualified rejection of indigenous traditions is the possibility of characterizing each movement in terms of representative collective commitments. By focusing on the macro-level commitments internal to each movement the paper will relate the movement-level engagements of participants and their psychic investment in socio-cultural and political development in these two quite different but crucial phases of Chinese history.

With the rapid development of China’s urbanization, industrialization, expansion of urban population, housing becomes a growing problem, especially the growing problem of settlements decline. At present, our old settlements regeneration are mainly used in large-scale reconstruction of the tear down, and it has brought up housing prices, the differentiation of urban living space, the loss of urban form and urban culture and other issues. Under the impacts of the living environment development of the 21st century, the harmony of “Man and Nature” became the theme of urban development, which requires the city old settlements to provide a sustainable development of rehabilitation programs, the sustainable development concept of “Reconstruction – renewable urban settlements came into being. It is designed to improve the living environment, optimize the layout, and enhance the quality of the living, and inject new vitality to the healthy development of the city, while also promoting China’s housing market in the context of rapid healthy urbanization and stable development, to build “eco-society”.

Through the study of the planning of Wuhan City and the state-owned mining shantytowns regeneration from the planning and material transformation level, proposed to construct an ecological society proposed to try new ideas to improve the living space for vulnerable groups such as the shantytowns, and other cities.

What are the communalities and differences between religious and nonreligious organisations? With ‘nonreligion’ I am referring to groups that are generally considered to be not religious but are nevertheless related to ‘religion’ in important ways. Obvious examples are atheist, rationalist, and secular humanist organisations. Despite their roots in the 19th century, their apparent growth in many parts of the world and their realignment in the contemporary world make them in many ways new forms of (nonreligious) organisations. My engagement with such groups will primarily draw on a long-term study of rationalist and atheist organisations in India (Quack 2012) as well as data from atheist groups in the Philippines and humanist associations in Sweden and Germany. These organisations try to spread an explicitly secular worldview, provide secular alternatives to religious life-cycle rituals, and stand in direct and indirect competition and contest with religious organisations in various ways. To analyse these relationships, I will critically engage with the ‘theory of religious and secular competition’ deve-
oped by the sociologist Jörg Stolz (2009) to complement the ‘religious economies approach’ within secularization theory. Based on a relational approach to study ‘nonreligious’ groups and organisations (Quack 2014), I will further engage with the organisations’ struggles for various kinds of capital within institutional and field-related ‘logics’. On this basis, I discuss the ways in which nonreligious organisations can be situated within the ‘surroundings’ of a religious field, thereby complementing Bourdieusian studies of specific religious fields.

Reconfiguring Personal Communities in A ‘Divorce Biography’

Scholarly discussion on divorce has largely focused on the detrimental consequences of divorce. This scholarship inadvertently constructs divorce as a tragic life event that destroys individuals and a social problem that threatens the very fabric of society, reinforcing and reflecting common attitudes towards divorce. However, there has been an emerging field of research challenging such academic and popular discourses about divorce. My study is situated within this new sociology of divorce. It departs from the perspective that divorce signifies moral decay and allows me to focus on the ways individuals organise their family life and practices. My research argues that divorce creates spaces, however fraught, for individuals to construct what I call ‘a divorce biography’. These spaces include the ways in which individuals seek to cope with the crisis, organise one’s personal relationships and make plans for the future. In this paper, I focus on how Singaporean divorcees, as part of constructing their divorce biography, negotiate their post-divorce relationships with family, friends and other significant others. My paper explores how they exercise choices and navigate around cultural norms and take into account practical considerations as they reconfigure their personal communities for survival, intimacy and belonging. This study shows how divorced individuals might continue to build and enjoy strong and close relationships even after the rupture of their marriage and disruption of their nuclear family unit.

*Estimating Societal Trends from Heterogeneous Cross-Sectional Time Series Surveys – Some Challenges Demonstrated on the Example of Church Attendance Trends in Europe*

Sample-based social science surveys have initially been a tool to collect data for analyses with a limited time horizon. With the advent of long-standing survey programmes such as Eurobarometer, EVS/WW, ESS, or ISSP, the option of deriving society level trend information from cross-sectional data collected over different time points has come into the world. It has often been demonstrated that larger trends can be observed from repeated cross-sectional surveys within the same survey program, when some methodological homogeneity can often be taken for granted. It is however much less clear whether data from different survey programs, with different methodological details, are sufficiently homogeneous to be granted. It is however much less clear whether data from different survey programs, with different methodological details, are sufficiently homogeneous to be granted. It is however much less clear whether data from different survey programs, with different methodological details, are sufficiently homogeneous to be granted. It is however much less clear whether data from different survey programs, with different methodological details, are sufficiently homogeneous to be granted. It is however much less clear whether data from different survey programs, with different methodological details, are sufficiently homogeneous to be granted. It is however much less clear whether data from different survey programs, with different methodological details, are sufficiently homogeneous to be granted. It is however much less clear whether data from different survey programs, with different methodological details, are sufficiently homogeneous to be granted. It is however much less clear whether data from different survey programs, with different methodological details, are sufficiently homogeneous to be granted. It is however much less clear whether data from different survey programs, with different methodological details, are sufficiently homogeneous to be granted.

The present study uses a database of responses to church attendance questions in European surveys, compiled from the survey programmes named above. This database is analysed with respect to possible problems arising from the requirements of harmonisation across time and countries, given the variety of languages, question and questionnaire formats, and other design properties of the individual surveys. The database presently comprises more than 800 time/country samples from 32 European countries or regions and covers almost all years from 1986 to 2010. Analyses aim to establish the presence or absence of particular national and supra-national trends, identify aberrations of samples from trend patterns and investigate possible methodological factors behind such aberrations. Further, the analysis may eventually contribute to answering such questions as what the effects of different response formats, sampling design, administration modes etc. on reported average attendance levels are.
across countries in the nature of those policies. The HIAD is a repository of policy indicators offering harmonized policy data on public coverage and the regulation of private expenditures. The standardization process used for collecting these indicators allows for comparisons over time (from 1990 to 2010), across health services (data are collected on 8 health services, for instance prescription drugs), and across 10 countries of the OECD (Australia, Canada, Denmark, Finland, France, Germany, Italy, the Netherlands, United Kingdom, and United States). These countries were selected to provide a range of variation (and thus to allow for contrasts) with regards to Esping Andersen’s Welfare Regime classification (Liberal, Social Democratic, Conservative) and the OECD’s type of health system (comprehensive, welfare oriented, entrepreneurial) and the OECD’s typology of the role of PHI within that system (primary, primary substitutive, supplementary, duplicative or complementary).

This research will inform and feed the current debate on the future of health care in developed countries and on the interplay between the public and private sectors in these changes.

Quality of Data Collected from a Vulnerable Population: Using the Calendar Method and Third-Party Help

In the field of social sciences, collecting extensive retrospective data such as life histories has been fraught with recall errors compromising the quality of the data. Collection of life histories gets even more challenging when it has to be done among vulnerable groups, such as poor households who are victims of involuntary displacement and resettlement due to disasters or infrastructure projects. Recognizing this, a tailor-made life history calendar was designed to gather data from households in Indonesia who were involuntarily resettled in a newly-built community. The substantive focus of this study is to obtain ‘social capital’ histories on the level of neighbourhood, households, and heads of households. In addition to the usual aided recall features the calendar procedure included the option to allow, in certain parts of the interview, the help of “third parties” in the recollection of the requested information. These “third parties” are either household members or friends of the respondent who also reside in the same community. Collaborative recall generally increases due to disasters or infrastructure projects.

The problem of “third parties” is that they may remember different aspects of the memories. A natural field experiment was designed in which data quality was compared between the conditions ‘with help of third parties’ and ‘without help of third parties’. Data quality was assessed regarding ‘numbers’ of household related transitions), ‘names’ of community leaders) and ‘dates’ (years of public services). The study examines whether integration of “third-party help” in the calendar method can enhance the recollection process among respondents and may lead to better data quality. In addition, it was also discussed how “third-party help” may interact with calendar procedures and what consequences arise for related data collection procedures.

Los Egresados De Los Posgrados En Educación

Los egresados de los posgrados en educación

En esta investigación participaron cuatro instituciones pertenecientes a la Secretaría de Educación Jalisco que ofrecen estudios de posgrado en el ámbito de la educación, se aplicó un cuestionario en línea y de manera personal a 82 participantes de generaciones 2003-2008 que contestaron de manera voluntaria. El cuestionario contó con 14 secciones que abarcaban las posibles actividades que desarrollan en su ámbito profesional. Tales como experiencia laboral, valores, reconocimiento, relaciones interpersonales, experiencia en la práctica educativa, desempeño profesional, evaluación, experiencia en la formación continua, en el entorno educativo, en la producción académica, en el ámbito administrativo, en la satisfacción del programa, en la formación de docentes y en el ámbito social. Los resultados del análisis estadístico manifiestan que el perfil de egresos de los egresados es congruente con lo esperado por las instituciones, la información generada será útil para la toma de decisiones de las autoridades estatales de educación. El proyecto fue financiado por el Consejo Nacional de Ciencia y Tecnología.

Transformaciones y Retos De La Función Social Del Académico

El trabajo se desprende de un proyecto de la Red de Estudios Sobre Instituciones Educativas (RESIEDU) todavía en proceso denominado: “Modos colectivos de producción de conocimiento de los académicos en Universidades Públicas Estatales”. Parte de 3 ejes problematizados enmarcados en la sociología del desarrollo: 1) la sociología de la universidad y la sociología del académico, éste último abordado tanto en su vertiente individual, como en su vertiente colectiva. En este marco analizamos el papel evaluador que la política educativa confiere al estado, bajo el discurso de calidad y profesionalización de la planta académica mexicana, y la manera que impacta en los procesos de gestión institucionales y las dinámicas de los propios académicos y grupos de investigación. El abordaje empírico se llevó a cabo a partir de acercamientos cuantitativos por medio de un cuestionario aplicado a 630 académicos de 49 Universidades Públicas Estatales en México, y acercamientos cualitativos a partir de grupos focales y entrevistas en cuatro universidades mexicanas de los estados de Hidalgo, Chiapas, Tamaulipas y Jalisco. A partir de los hallazgos, se discute el papel de los académicos en las nuevas reconfiguraciones del orden mundial, en el que el mercado va teniendo un papel cada vez más protagónico. Se analiza la manera en que la función social de la ciencia y la función social de la universidad, presentan nuevas configuraciones que impactan en una redefinición de la función de los académicos. Se concluye con algunas interpretaciones de las tensiones que enfrenta el académico entre lo individual y lo colectivo; tensiones entre las demandas sociales, empresariales y del estado que ponen en entredicho su función social; tensiones entre sus formas de organización al interior de la institución (departamentos, academias, cuerpos académicos) y al exterior (redes, colegios), entre otras, y se enfatiza el papel y los retos de la política educativa en estos procesos.

The Problematic of Gestión in the Soft Industry

The problem of gestion in the soft industry is a central matter in the construction of relations within the organization. This confluence, a fuerte diferenciación de las estrategias de gestión de RRHH de este sector respecto a otros más tradicionales pero también una fuerte diferenciación al interior de la actividad.

Esta dinámica la pensamos en función de cómo las organizaciones del software resuelven y articulan tres dimensiones problemáticas: un modelo normativo: Supone dar cuenta de la construcción de normas internas desde una perspectiva amplia que considere tanto las normas formales como las informales, las reglas autónomas como las de control, las normas jurídicas como las de tipo ético. La dimensión es relevante en un mundo que parece poco estructurado en relación a otros sistemas productivos, b) performativa: Esta dimensión tiene relación con el concepto de eficiencia, de su construcción en situ. En ella cobra relevancia la distinción entre las concepciones de productividad, más acorde al mundo industrial, y el de performance, más acorde a la dinámica del sector. C) Cognitiva: Refiere a la reflexividad que emana de la institucionalización normativa y la dimensión performativa aportando una mirada dinámica de los procesos de gestión. Importa en esta dimensión la construcción social del conocimiento y las identidades construidas en torno al mismo.

VILLARESPE, VERONICA (Universidad Nacional Autónoma de México)
Guidelines for the Creation of Laws and Intuitions in Order to Eradicate Poverty in Mexico

Mexico has principles that are set forth in the text of its Constitution. Said legal principles encompass: the concept of the power of the state regarding education, human rights principles, the dignity of the agricultural workers, the right to work, the right to a decent salary, the right to housing, and social welfare in general. Accordingly, all the citizens have the same constitutional rights and obligations. So, the existence of poverty is inadmissible, as it actually establishes an inequality between the citizens. We are talking about an inequality that does exist and that is not contemplated in the Constitution.

In the present lecture, we propose a review that (even though superficial) is fundamental, as it reviews the English Poor Laws that were in force in England from the XVIIth to the XIXth Century. Its results allow us to recover the relevant aspects that said Laws played as an institution against poverty.

The situation is different in Mexico, and we try to reuse some transcendental aspects of the old English Poor Laws by adapting them to the present context; or what kind of laws may be adopted to solve the growing and searing problem of poverty. As implied by the previous information, in Mexico there are neither laws nor institutions to eradicate poverty, but only a Program related to conditional cash transfers. It is obvious that a mere program does not guarantee the rights that are set forth in the Constitution. What we would like to posit is that actions, both legal and institutional, are required in order resolving this problem: actions that take into account the economic/social context and that contribute to transform it.

Social Discourse about the Kind of Spain and Freedom of Speech. Pragmalinguistic Analysis of Slander

Discursos sobre el rey y libertad de expresión. Análisis lingüístico pragmático de la injuria

La monarquía sigue siendo hoy por hoy el primer gran tabú informativo en España. Pese a la libertad de expresión que garantiza la Constitución, el artículo 490 del Código Penal singulariza la figura del Rey con especial protección contra calumnias e injurias. No resulta difícil encontrar ejemplos de discursos públicos (tanto periodísticos como políticos), que han sido denunciados como injuriosos contra la Corona, siendo sus autores procesados y sentenciados, algunos con pena de prisión.

Pero ¿qué es exactamente una injuria? Su valor semántico no es estable, y depende del contexto su determinación. La definición de diccionario no nos resuelve mucho en este sentido (según la RAE “agragio, ultraje de obra o de palabra”, “hecho o dicho contra razón y justicia”, “daño o incomodidad que causa algo”, “delito o falta consistente en la imputación a alguien de un hecho o cualidad en menoscabo de su fama o estimación”). Y la interpretación jurídica no es única dada frente a los mismos hechos o dichos, como demuestra la existencia de sentencias categóricas que identificaban un discurso como injuria, posteriormente revo- cadas por eróreos por tribunales de superior rango, con el consiguiente debate judicial en torno al valor del término.

Mediante el análisis del discurso de algunos casos importantes (como el caso Otegi y el caso Martínez-Íñiguez) podemos acercarnos al estudio de la injuria como hecho comunicativo y lingüístico. Un método pragmalingüístico que toma como base la teoría de la relevancia de Sperber y Wilson permitirá adentrarse en el proceso inferencial de interpretación de la injuria, con especial atención al contexto en el que se produce y se recibe.

Posibilidades EN La Base De La Pirámide

Los estudios sobre la base de la pirámide se han centrado, de forma tradicional, en comprender las causas estructurales de la pobreza, así como sus aspectos psicosociales. México lleva a cabo numerosas campañas para apallar los niveles de pobreza en el país, desde los programas OPORTUNIDADES hasta la “Cruzada contra el hambre” Ambas suscitan las dudas en las instituciones y el gobierno e interesa- den las aspectos estructurales de la pobreza y en el impacto comunitario.

Este libro propone una visión alternativa a la percepción dominante en México de la situación de la pobreza basado en los estudios realizados por C.K Prah- alad. El concebir a los integrantes de la base de la pirámide como consumidores genera una estrategia de doble dirección. Por una parte permite a las Marcas ampliar sus nichos de mercado. Por la otra ofrece a los más desfavorecidos la oportunidad de acceder a bienes y servicios a precios asequibles, proporcionan- do dignidad y empoderamiento a las familias de bajos recursos.

Este libro propone una metodología en tres fases:

- Por un lado una investigación sobre los distintos programas gubernamentales y sus efectos reales sobre los individuos y las comunidades.
- Por el otro una investigación en los datos estadísticos como los índices de pobreza del INEGI o el reciente estudio sobre “Pobreza y bienestar subjetivo” realizado por el INEGI y FLACSO México.
- Finalmente es una serie de estudios cualitativos de carácter etnográfico en diversos estados de México realizados en los años 2007, 2008, 2009 y 2013. El uso de las herramientas antropológicas permite comprender los hábitos y motivaciones de los grupos sociales situados en los umbrales de la pobreza, al mismo tiempo que da cuenta de sus mecanismos de supervivencia y proyecciones.

Contested Claims over Space: Discourse and Politics Among Fishers and the Oil Industry in Mexico

This paper examines hybrid forms of resource governance and the involved struggles over space and subjectivity among coastal fishers, the Mexican government and the state-owned oil industry in Tabasco, Mexico. The analysis builds on the study of contested claims over rights to off-shore space in an area established as a security measure exclusively for the use of the oil industry by the Mexican government in 2003. The study is based on research material collected during intensive ethnographic fieldwork among coastal fishers, government actors and oil industry representatives in Tabasco in 2011 and 2012.

The study focuses on the “how” of hybrid mechanisms of resource governance, with particular interest in the strategic use of legal measure, corporate social responsibility programmes and political discourse in the claims over resource space. The research takes part in post-Foucauldian theorizations of space as social arena, constructed in political frictions between private capital, state, society and nature.

We argue that fish-oil governance in Mexico operates as a combination of different logics and technologies that work towards the displacement of fishers as legal subjects from politics and their subjection to ideologies of entrepreneurship. Simultaneously, the multiplication of transnational actors in the oil industry’s CSR programmes provides a new political venue for the continuance of the fishers’ subjection to clientelist arts of governance while it makes the identification of accountability and responsibility diffuse. In this context, the fishers’ resistance is constructed through individual networks and opposition to mechanisms of self-responsibilisation and through fragmented political resistance which keep the extractive politics volatile. Our study of these less visible struggles over resource redistribution and political representation seeks to provide new perspectives to the prevailing forms of environmental governance and the contestations regarding them.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Participatory environmental governance is framed as contributing to the equity ambitions of sustainable development. The trend of formal delegation of power to decentralized institutions of various kinds has been extensive. It can be questioned, however, if these more pluralistic approaches can adequately deal with and balance uneven power relationships between stakeholders or if existing power relations are reproduced through these processes. As a result of pre-existing inequalities weaker actors may risk getting ignored, neglected, manipulated or even abused. Marine governance has also adopted these democratic ambitions, but empirical examination of practice has been severely neglected by the social sciences. Arguably, as a result marine governance has not been exposed to sufficient reflection regarding its social purpose, process and implications. The focus of this paper, democratic aspects of governance of the Baltic Sea, is especially understudied.

In this paper, I draw on the concept of procedural justice linked to power to examine and compare the establishment of St Anna archipelago and Gräsö archipelago nature reserves in Sweden. The former case has been characterised by authorities as consensus oriented while the latter has been seen to be conflictual. By employing the procedural justice concept over time in this under studied and novel empirical setting the present paper aims to develop new understandings and formulations of justice and thereby contribute to the literature on participatory environmental governance, marine governance, nature protection, and environmental justice. The paper will show that issues related to legitimacy, identity and representation are substantial in both cases, as well as conflicts between public and private interests and that a long-term struggle for ‘independence’ is being played out in the setting up of nature reserves.
to address the question if the need for collective organisation is necessarily subordinated to the capitalisation of cultural production via the valorisation of city quarters in terms of real estate prices, or if shared spaces are an opportunity for enhancing participation in the shaping of urban environments.

What are the gender and age related risks? Who does what, to whom? What are the risks to children and young people at different ages from different perpetrators? How much abuse and violence is committed by children and young people? Is the world a more dangerous place where children experience more violence and commit more violent crime than ever before? Are adults fears about and responses to child abuse and children's violence part of the problem? What are the challenges and opportunities we face in putting children's experiences of abuse, neglect and violence and their rights and agency at the centre of thinking and practice?

RADFORD, LORRAINE* (University of Central Lancashire, lradford@uclan.ac.uk)

**Domestic Violence, Coercive Control and ‘Risk Parenting’**

This paper will consider the concept of risk in relation to parenting in the context of domestic violence. Since the ‘discovery’ of domestic violence in the nineteenth century the ‘re-discovery’ associated with the birth of second wave feminism in the 1960s, definitions of ‘violence’ and ‘child abuse’ have expanded in high income nations. In the UK the official definition of domestic violence has been changed to include the concept of ‘coercive and controlling behaviour’ defined as ‘an act or a pattern of acts of assault, threats, humiliation and intimidation or other abuse that is used to harm, punish, or frighten their victim’ and ‘of acts designed to make a person subordinate and/or dependent by isolating them from sources of support, exploiting their resources and capacities for personal gain, depriving them of the means needed for independence, resistance and escape and regulating their everyday behaviour’. In this paper, Stark’s (2005) concept of coercive control will be applied to fathering in the context of domestic violence. Child care after separation or divorce has become a gendered political issue. The implications of applying the concept of coercive control to fathering for equality, safety and justice in managing violence and risk in post separation relationships between parents and children will be discussed.

**RC03-858.5**

RADFORD, LORRAINE* (University of Central Lancashire, lradford@uclan.ac.uk)

**The Victimisation of Childhood – Understanding Children and Violence**

The media and campaigning organisations have influenced public perceptions of violence and young people by focusing on rare and sensationalist events such as homicides, extreme cases of child abuse and young people orchestrating riots from smart phones in inner city areas. Representations of children and young people as either ‘victims’ or ‘villains’ has consequences for their wellbeing – their experiences of violence are misrepresented and over simplified, fragmented accounts of the causes and consequences hinder progress in policy and practice. Taking a feminist approach to the sociology of childhood and drawing on recent research findings, this paper will consider what is helpful to know about the risks of abuse, neglect and violence when working with and interacting with children and young people.

Key questions addressed will be:

- What is known about the prevalence and impact of abuse, neglect and violence in the lives of children and young people today?

At the beginning of XXI century Europe is subject to the internal integration on a scale having no historical precedent. In the widespread opinion the very important factors facilitating the process of integration should be sought in a historical-cultural reality of a kind of common European identity as well as in a redefinition of the risk of national identity. The more, several interesting questions may get our attention: To what extent the countries forming the European community differ, and to what extent are similar in so called national attitudes? What is the nature of European patriotism and a sense of national identity? Are there any divisions here? If so, what is their nature? The author tries to answer these questions by analyzing data from two studies on “National Identity” (1995 and 2003) conducted within the International Social Survey Programme. Description and classification of the European countries on different dimensions of national attitudes leads to the conclusion that Europe is divided into two fundamentally different national-cultural clusters. Their origin results from a huge disparity in the level of collective self-esteem, which is an expression of civic pride in a quality of liberal-democratic state in various aspects of its functioning. It also turns out that the basic division corresponds almost perfectly to the “cultural shift” on a dimension defined by R. Inglehart as survival vs. self-expression culture. What is important and not so obvious, the other central dimension of cultural values, defined as tradition vs. secularization-rationalism, in no way contributes to explanation of the nature of two basic national-cultural European clusters.

RADL, JONAS* (Open University UNED, jradl@poli.uned.es)

Does the Great Recession impact inequality of educational outcomes? Although contributions on the effects of the global crisis on a number of social aspects have started to emerge (e.g., Grusky et al., 2011), little is known about how inequality of educational attainment is affected by macro level trends such as changes in the economic cycle or in unemployment rates. This paper aims to elucidate the interplay of family background, educational expectations (conditional on cognitive skills) and the economic context. Our main research question is, hence, has the impact of family background on offspring’s educational outcomes become stronger because of lacklustre economic growth?

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Using pooled data from TIMSS 2003, 2007 and 2011 – an international survey project of competences among 8th grade students—we estimate a set of (multi-level) random constant linear regression models on the expected level of educational attainment. The study covers 24 affluent countries. The recent economic downturn has affected advanced economies to a different extent, producing substantial variation in the contextual conditions in which educational expectations are formulated. This longitudinal and comparative setup thus provides the opportunity to improve our understanding of the driving forces of unequal educational trajectories of children at the end of compulsory education. Moreover, by examining changes, we take a look into the future of educational inequalities.

Our results confirm the existence of systematic cross-country regularities and suggest that economic down times lead to an overall reduction in expectations among students. Recessions also boost educational inequalities by meaningful indicators of student background. Furthermore, our findings indicate that the influence of economic resources on educational expectations is less sensitive to economic growth than the influence of parental education. At the same time, cognitive skills emerge as a crucial mediating variable of the relation between economic context and family background effects on educational careers.

RAFAEL, ERWIN* (University of the Philippines, Diliman, okosipang@gmail.com)

Building the Case for CSR: Four Decades of Philippine Corporate Discourse on the Role of Business in Social Development

Corporate social responsibility (CSR) is a fluid and malleable concept. The dynamics surrounding it would even say ambiguous, conceptualization of CSR stems from its social construction nature which opens it to the influence of discursive practices and contestations of several actors including business, social development practitioners, civil society, government, and the academe. This paper traces the spotlight on the business side of the discourse on CSR. The paper shows how Philippine companies, through their public communications, contribute to the construction of the CSR concept and the role of business in social development. The paper achieves this through a discourse analysis of corporate communications in the annual reports and some select public documents of Philippine Business for Social Progress, the largest corporate-led social development foundation in the Philippines. The study is an attempt to offer a theoretical interpretation of the political and social dynamic of mobile technology practices in the context of digital inequalities in the 2009 post-election uprisings in Iran. It shows how the interactions and communications Iranian protesters created with the practices of texting, photographing and live video recording served to characterize not only distinct kind of contentious performances, but also a new sense of everyday life as embodied action in the public sphere. Unlike the Habermasian public sphere of rational consensus, the mobile recording practice is described here as interactive performances which reimagine the public in affectively contentious ways. Yet the emotive is not “invented” in the sense of being present or experienced as an emotional performance that dramaturgically communicates through mediated interactions across mobile networks with both local and translocal ties. However, the study also shows how such dissident performances are situated in the context of a complex and unequal distribution of information and technologies in urban and rural settings, largely determined by the flow of information capital and state building through technological developments. The mobile media practices, along with its close connection with online social media, during the 2009 demonstrations, I argue, foster embodied engagements through distinct camouflage practices, largely hidden from the official order of state surveillance. However they do so in the public that dramaturgically communicates through mediated interactions across mobile networks with both local and translocal ties.
and practices throughout the region and the exclusionary principles accentuate this convergence in Asia migration policy.

Gender and The Migration Process: Bangladeshi Migration To The United Arab Emirates

Drawing on the experiences of Bangladeshi female and male migrant workers in the UAE and the members of their families left behind in Bangladesh, this study examines the gender differentiated migration outcomes among Bangladeshi migrants. In particular, the study seeks to address patterns of recruitment, experiences on foreign soil, and remittances for Bangladeshi migrants in the Bangladesh-UAE migration corridor. The study argues that we need to broaden the study of temporary migration and gender issues to include major spheres in the temporary labour migration and see migration as a process. This research identifies three major spheres where gender matters: recruitment, experiences on foreign soil, and remittances. Total sample size of the study is 250. Fifty female migrant workers and 100 male migrant workers in the UAE were surveyed through face-to-face interviews. Fieldwork in Bangladesh involves interviewing 50 selected UAE male migrant households and 50 selected female migrant households. These two-way surveys are complemented by participant observations and focus group discussions.

Institutional Change Of Indigenous Peoples In Response To The Forest Policy In Indonesia

This study is about the institutional changes of the indigenous people as a response to resource tenure conflicts, to take a place in Kasepuhan Community in Halimun Salak Mountain National Park and the Dayak Iban community in Sungai Utik forest. Legally, forest are controlled by the State. Through existing authority, the State can provide some of its authority to private (Company/ concession holder) to commercialize forest. But in fact there are local community (indigenous people) who have been living for generations in and around the forest. Community has knowledge and institutional governance of forests. The existence of state institutions as a clearly hegemony to local institutional, which had an impact on the local institutional change. In Kasepuhan Community institutional change is a response of hegemony of the state, while in Dayak Iban Community, institutional change has strengthened local communities in the face of the State resulting in counter hegemony.

Cluster Dependency, Social Capital and Social Innovation: Insights from the Engineering and Plastic Clusters in Chennai, South India

In most developing countries a focus on the development of MSME or Micro, Small and Medium enterprises is evident. Operationalising this goal in the Indian context is a conscious planning has been adopted not only to strengthen existing enterprises, but also to create ‘clusters’ of such enterprises. The formation of individual clusters is not new and it has been imitated successfully in the creation of the service clusters – the IT and Biotech industry. However, the traditional manufacturing clusters are still very significant in their contribution to the economy both in terms of labour absorption and capital investment.

In this paper we discuss the nature of functioning of two such clusters – engineering and plastic in and around the city of Chennai, South India. The city however is well known for its automobile clusters. Significantly different in size, technology used and labour utilised, these ‘clusters’ have innovative practices to mobilise labour, access technology and capital and sustain productivity. Sharply different in terms of their sensitivity to regulations by the state, they nonetheless manifest some similarities in terms of operation. Significant differences are also observed. The plastic clusters face regulations and sanctions to a greater extent in the context of the environment where they are located. As most of their labour is unskilled ‘social capital’ in mobilising continued labour supply seems essential and predominant in hiring practices.

The paper discusses some of these aspects based on insights obtained from a sample survey of these clusters. Questions raised include:

- How do they ensure continuity of labour?
- How do they access capital and technology?
- How do they sustain production and marketing?

Essentially the paper highlights the strong inter-dependency of units among the cluster in a domain of high competition. The insights drawn highlight the innovative practices at the workplace in a developing country like India in the context of MSME.

The Poverty in the Midst of Plenty: The Case of Fisher People

The urban poverty being widely discussed among the discourse on urbanization and poverty, the present paper attempt to shed light on the pockets of poverty in the urban area with specific reference to coastal belt and among fisher people. The fisher people living along the coastal belt are subject to all urban poverty problems notably of housing, water and sanitation, health and education. Their living environment is of poor quality and social security measures unsatisfactory. This is in spite of facts that they live in permanent settlement regions i.e. the coastal areas are skilled labourers in marine fishery defying the general conviction that urban poverty has direct linkages to migration and unskilled labour. The paper is based on the data from the census of households in the coastal wards of Thiruvananthapuram Corporation, urban local body in Kerala. The fisher people dwell in the coastal belt are generally backward in terms of basic amenities and socio-economic conditions. The coastal belt of urban area is also not an exception. This paper highlights backwardness of fisher people in the survey area in education, health, basic living amenities like water, electric power, and clean living environment. Does the Corporation need to usher in more inclusive programmes, efficient management, and delivery mechanisms? Do Policy makers and implementing personnel be sensitized for fair and judicious practices? These are some of the pertinent questions addressed in this paper.

Re-Establishing the Nexus Between Sustainable Development and Disaster Risk Management: Exploring the Scope and Challenges in Stakeholder Participation

The stakeholders involved in sustainable development are also involved in risk and disaster related activities. Disaster situations bring together multiple stakeholders. This is one of the complexities of disaster response and management in general in which many actors ranging from public to private come into play. Governmental agencies create new roles to respond to disaster needs. Similarly,
non-governmental organizations with varying interests and objectives interact in new and unplanned constellations. These actors face different challenges in the different phases of disaster management, ranging from organising relief and rescue to help in recovery and disaster risk reduction. While coordination features in all phases, its characteristics differ significantly in terms of stakes, urgency, complexity and transparency for those involved.

With increasing numbers of natural disasters handling economic stress post-disasters becomes extremely challenging. One of the reasons for such losses is the failure to establish a clear nexus between development programs, disaster risk reduction and disaster preparedness programs. Given the process of repeated learning, after disasters, it calls for mainstreaming disaster risk reduction with sustainable development. This helps in reducing economic losses and various impacts during disasters. It also reveals the importance that states place on issues of vulnerability. It is therefore important to address issues of development during disaster reconstruction. If recovery helps communities to build back better, resilience helps to face future hazards and minimize loss. When disasters are seen as isolated events, disaster response becomes more prominent than building a culture of preparedness and addressing developmental concerns. The paper explores the challenges in mainstreaming risk reduction with sustainable development and thereby the factors affecting participation of stakeholders in the process.

Economic Globalization and Feminization of Labour: The Case of Domestic Servants in India

This paper discusses the consequences of economic globalization for women in India. It analyses the neoliberal policy frame from a gender perspective to bring out the impact of economic globalization on the women’s work. Economic globalization has generated sources of livelihood and opened up new vistas of opportunities for women in the labour market. Regulations based on the neo-liberal ideology have negative impacts on women such as feminization of labour as well as poverty, low-income, exploitation and health hazards. In India, the number of women has increased most in labour-intensive, informal and unorganized and casual job sectors, besides the huge number of those educated women who are working at low level IT jobs. Most of these women such as domestic maids are living in abject poverty and therefore they seek the job of domestic maids in urban areas. As a result of globalization, women in urban middle class families have shifted their burden of home management on to these poor women and they themselves engage in leisure activity or low paid white collar jobs. Poverty makes the maids and the female labour of their likes vulnerable to gender-based violence and HIV/AIDS due to greater susceptibility to infection during unprotected sex, the lack of education, employment and economic opportunities and inequitable inheritance laws, the cultural and gender norms restricting women’s sexuality and prevent them from availing themselves of information on sexual and reproductive health and unwillingness of government to publicly discuss the empowerment of women in gender relations and sexual practices. The negative impacts of neo-liberal economic policies have often failed the large segment constituted by the women in India. There is therefore the need to institutionalize regulations and structures. Women in social relations and sexuality practices in a patriarchal and historically male-dominated society of multiple hierarchies like India.

Examining Child Mobility and Transport: Challenges for Theory and Practice

This paper provides an outline of the ways in which general theoretical concerns in the Sociology of Childhood relate to child mobility and transport. This paper raises various kinds of knowledge and insights from the perspectives that the research can offer transport experts and decision makers. The argument proposed here is that the study of children and childhood is incomplete unless mobility and transport issues are located in an understanding of the complexities and varying realities of children’s everyday life. The paper (1) examines children’s social representation, including mobility within South Africa’s transport and intervention, and (2) the extent to which these frameworks incorporate national data on children’s daily transport and mobility activity patterns. This paper also contributes to the growing scholarship on the social perspectives on child mobility. This emergent field has occurred alongside the child rights movement and shifts towards evidence-based policy developments and practice interventions. Consequently, contemporary mobility and transport discourses promote the idea of transport as a public good and human right and this implies that all citizens’ interests and needs are of equal importance. Yet, within the sector there is still a bias towards shifting the impact of child mobility on adults’ mobility, their daily lives and schedules with children’s voices, experiences and needs remaining obscured. This empirical marginality and invisibility fuels knowledge gaps and generates a passive, univocal and constrained view of children. It certainly impedes the development of child-centred and participatory transport policies and interventions.

International Migration: A Study of Gender Equality Among Tibetan Women in Mysore India

Tibet, a peaceful country situated in the Himalayas faced changes with the occupation by China in 1951, since then exodus of the Tibetans began to take place to India, Nepal and Bhutan. The largest number of refugees came to India in 1959 along with his Holiness, the Dalai Lama. There are about 94000 Tibetans living in different settlements all over India today. In South India, all the five settlements of the Tibetans are located in the state of Karnataka out of which four settlements are very closely located to the city of Mysore. After the completion of their schooling in the settlements, most young Tibetan youth move to Mysore for their Union city education. During their stay away from the settlements, the students are exposed to several new socio-cultural forces.

They are always told that they will return to their land and therefore Tibetan Buddhism is strictly practiced. Contact with the outside world has led to tensions in maintaining their identity since they are a drop in the ocean outside. Tibetans are a highly religious group but their religion is facing a competition from western influences. There have been changes in the lifestyle of the Tibetans along with generational differences. Attempts have been made to preserve and modify Tibetan culture.

The study is based on the sample of Tibetan women studying in the colleges of Mysore University. The study attempts to examine the impact of migration on gender equality, fertility, family size, treatment of women in the community and the efforts made by Tibetan women to adjust to the new social spaces. The paper tries to examine the gendered changes.

Gender Segregation in Hospitality Sector – Extent and Consequences

Hospitality is one industry in which women are prefered and are found in large numbers. However allocation of responsibilities based on gender in hospitality organisations appear to be not in consonance with their indispensability to this industry, as evidenced by high rate of turnover and lower participation in decision making process. Disadvantages they could be facing at work due to segregation. Present study investigates into the extent and implications of such gender based segregation in hospitality industry, specifically focusing on hotels and restaurants. Data are collected from a sample of 56 ITDC recognized hotels and 48 restaurants in cities of Bangalore, Hyderabad and Chennai in South India employing a survey and interview schedule. The analysis indicates to definite pattern with regard to gender segregation of roles, responsibilities and wages at the intermediate levels where women staff tend to be concentrated. Their salaries do not commensurate with duties they perform. Such segregation follows no predictable pattern at lower levels where women staff is in minority. Further positions at higher levels involving responsibilities and decision making tend to be held by male counterparts. It is the women staffs who are made to face and absorb the idiosyncrasies of the clients, who are mainly strangers, requiring them to work under stress, strain and risk. The findings further indicate that the extent of segregation appears to vary significantly with the size and sector of the establishment and the negative implications of such segregation appear to be more marked in smaller private establishments.

Women in Indian Immigrant Communities in Canada: A Case Study Among Families of Karnataka Origin

There has been an unprecedented increase in opportunities for migration form India to other parts of the world, especially after the economic liberalization regime set in. Canada is among the countries that are seeing a growing number of Indian immigrants. Even by 2004, Indo-Canadians were the most rapidly growing ethno-cultural population. Though there have been a number of studies on Indian diaspora in Canada, they have concentrated on themes such as issues of culture conflict, adjustment dilemmas and institutional networks. The gendered impact of migration has not formed the main subject of most studies. However, it is important to take up studies on questions of changing gender relations within the family and community, participation of women in public sphere, creation of women’s support networks to address issues of gender based violence.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The paper focuses attention on the shifts that have taken place in the lives of women in families of Karnataka origin in Canada. Such issues as changing nature of role allocation and power sharing in families, inter-generational changes as measured by women's performance in such areas as education, employment and freedom from violence (physical, cultural and mental) and control over familial resources in Canada and India also need to be addressed. This study is primarily based in Edmonton city in the Alberta Province. Both primary and secondary sources of information would be used in generating the study data.

Microcredit and Poverty Alleviation In The Mexico Contemporary

Microcredit as strategy for poverty alleviation grows stronger in the last decades of the twentieth century, from successful experiences in different parts of the world, both in developing countries and the developed, numerous studies beginning to emerge about microcredit; however these studies are mostly empirical. Muhammad Yunus, founder of Grameen Bank, believes that the persistence of poverty is not because the poor have low or no schooling, but because many people lose business opportunities by not having access to a loan. For Yunus poverty can be alleviated if you pay money to the poor.

Yunus raises to credit as a human right and the prospect that the key in overcoming poverty through this financial instrument, are the economy and private initiative. Microcredit provides to people poor self-esteem and empowerment, addition, it creates new jobs. This is consistent with the idea that the state should move away from social welfare issues and concentrate on the proper functioning of the economy.

Microcredit has been incorporated into the social programs of the governments of various countries. Thus, in Mexico, the Ministry of Social Development (SEDESOL) has the social program called “Opciones Productivas”, which supports productive projects of the population poor.

This paper presents a historical review of the development of microcredit and analyzes to the loans granted for the government in contemporary System.

Social Changes and Social Responsibility

Responsabilidad social y su impacto en la sociedad

Como bien se conoce la responsabilidad social es un modelo de gestión que está siendo aplicado por las empresas y organizaciones a nivel mundial. En este proceso de incorporación de políticas, acciones y estrategias de responsabilidad social en organizaciones de tipo público, privado y del tercer sector es preciso entender el cambio que estas acciones ocasionan no solamente en la propia empresa, sino también en la sociedad y en particular en sus grupos de interés o stakeholders.

Para poder explicar las variables de impacto, presentaremos el caso de estudio realizado en el contexto peruano. Para esto presentaremos resultados de la investigación desarrollada para el IDIC de la Universidad de Lima, sobre los casos de tres organizaciones que tienen presencia en el Perú, como son: BBVA- Continental, Petróperu y Caritas del Perú.

Greening in Construction: What Chances for Workplace Innovation?

This paper investigates how construction companies innovate their organisations in response to the shift to energy-efficient construction. The changes in product and process induced by green construction confront companies with detailed technical instructions, severe accuracy requirements for all operations and no room for improvisation. As a result, construction involves more specialisation, a growing length and complexity of the value chain (with more contractors involved), more standardisation, the modularisation of construction components, a shortening of lead-times, etc. Overall the process becomes highly sensitive for disturbances and requires rigid coordination and logistics. To investigate the impact of these changes, case studies were carried out in two Belgian construction companies. Each included interviews with 6-7 management representatives, 5-6 workers and on-site visits. Two contrasting work organisations were observed. The first can be characterised as an ‘enlightened’ employee-centred organisation model based on participation. The work organisation combines the centralised design and off-site prefabrication of some components with on-site empowered teamwork and investments in skills of the workers. These aim at reinforcing decentralised process coordination and regulation capacities. Subcontractors are included as partners in the on-site construction teams. The need for contextualised knowledge, decentralised problem-solving and high involvement of all dominates in this corporate strategy. The second company, in contrast, opts for high levels of division of labour, standardised and short-cycled off-site preparation of prefabricated components, centralised and bureaucratised process coordination, risk-transfer based subcontracting and a strategy of constant productivity increase and rationalisation. High levels of control and process-orientation are the key-words in this corporate strategy. It appears that the ‘greening’ can as such not be identified as a main driver of workplace innovation in construction. The second corporate strategy may be the reason for concerns for new risks affecting the sustainability of jobs in this industry against the background of an aging work force.

Vivimos en un mundo en donde las relaciones causa y efecto han dejado de ser insignificantes, la capacidad de reciencia del planeta ha venido disminuyendo con el paso del tiempo, resultado de las fuerzas productivas a lo largo de estos últimos treinta años que a diferencia de décadas anteriores las consecuencias son cada vez más importantes sobre la calidad de vida y diversidad ecológica del planeta; en la re-union del club de Roma, se advirtió a los líderes mundiales la necesidad de poner límites al crecimiento debido a las posibles consecuencias irreversibles que su acción traería sobre la vida en el planeta, especialmente sobre los más jóvenes. Fenómenos como el calentamiento global, la escasez de agua, la perdida acelerada de biodiversidad, el aumento de la violencia e ilegalidad serían realidades pre-sentes de no asumir límites y formas de distribución justas frente al crecimiento. Frente a esta situación las ciencias sociales desarrollaron conceptos sobre salud pública, individual y colectiva, que sin embargo no han logrado una adecuada conceptualización de las relaciones salud/enfermedad, especialmente porque el paradigma mecanicista, newtoniano y el dualismo mente/cuerpo no ha sido su-perado completamente en dichas perspectivas teóricas que si bien abogan por una comprensión holística y relacional de los fenómenos sociales vinculados a las relaciones salud/enfermedad, no son suficientes para comprender de mane-ra adecuada estos fenómenos. Ellos no permiten comprender la complejidad de la “trama de la vida” las complejas interrelaciones existentes entre ecosistemas, especies y sociedad. Ante esta situación vale la pena preguntarse ¿qué nuevo paradigma, qué nuevos conceptos y maneras de estudiar la realidad se necesitan para solucionar la situación por la que atraviesamos en el mundo actual?

Palabras clave: salud/enfermedad, crisis ecológica, mecanicismo, modelo ecológico.

Does Violence Begets Violence? Evidence from Mexico

One familiar argument to explain violence rates is the common sense affirm-aion that violence begets violence. Imported from the biological sciences, this organic metaphor is well rooted in the discursive explanation of crime. However, the empiric evidence around this supposition is quite scarce. A typical combina-tion of the “violence begets violence” argument with the lack of proper empirical evidence is easy to find in countries dealing with recent outbursts of criminal vi-olence. This is the case of Mexico where the recent trend of criminal violence has been explained with a wide array of arguments including the spread-contagion argu-ment. This one in particular has gained presence among the media and policy makers. Moreover, this assumption is being increasingly used to justify the design of prevention programs where significant amounts of public resources are being invested. In view of this, this paper presents the results of a study on the empirical validity of the hypotheses behind the “violence begets violence” assumption. For my research purposes I have selected a set of relevant hypotheses on the conta-gion of violence to verify its empirical validity for the case of Mexico. With a combina-tion of different quantitative techniques I have analyzed homicide rates at the local level for the city of México from 1990 to 2010. The results of this work will throw light on the empirical pertinence of the contagion of violence hypotheses, and it will help to inform public debate and public policy about the characteristics of criminal violence in México.

Placing Food and Nutrition Security: The Co-Production Of Land, Dietary and Livelihood Relations In Four Sites Of Northern India

Patterns of land distribution in association with local agro-ecological conditions play crucial roles in shaping the dynamics of food and nutrition security in the global South. The relevance of the local is highlighted in this paper, which exam-ines the differences existing between four rural communities in northern India. Using evidence from 389 in-depth household interviews, the paper identifies the connections which exist between household assets, nutritional outcomes, and livelihood strategies. The paper argues that the considerable differences found by the study are due to the case study communities using different strategies for determining the importance of processes of local social embeddedness in determining food and nutrition security outcomes.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
sociological accounts; (2) characteristics of their networks of connections that encourage and enable their work, and then contribute to its dissemination; and (3) features that give performative strength to their narratives. The study is based on works written by these authors and others, and interviews to the authors themselves and other members of the network of production and dissemination. The analysis considers relations between local and global production of knowledge and discuss approaches such as those who assert the existence of epistemic dependency and epistemological obstacles for the production of knowledge in peripheral or semiperipheral countries.

Uncontested Science and Boundary Work: The Conceptualization and Measurement of Poverty in Chile (1987-2013)

This paper addresses the social scientific construction of the poverty in Chile, whose measurement is coordinated from the State, being of great relevance for the design of social policies and programs, and to monitor government action. The currently applied theoretical and methodological construction remained uncontested from 1987 to 2012. Despite that long period in which the measurement was a tightly sealed black box, there were many aspects that could have been questioned, but which, because of their technical and political nature, the controversy took place regarding this process. As a result, the Chilean government appointed a committee with the task of making changes in it. A first goal of the presentation is to study the factors that led to that great stability of the instrument, in spite of significant socioeconomic changes that long ago made changes advisable. Special attention is given to: (1) the origins of the measurement, in which the Economic Commission for Latin America (ECLAC) participates in an outstanding way and transferred a methodology developed for the whole region of Latin America; (2) the boundary work made by experts involved in the measurement; (3) the calculation of this epistemic construction between academic centers, state institutions and the public sphere, all of which strengthen its character of reality and hinder its questioning. A second objective is to analyze how the 2012 controversy was generated and developed. Attention is given to the intertwining of political and scientific concerns and to the rhetorical handlings associated to the boundary work done by rival factions. A third objective is to analyze the outcome of the controversy, in which the scientific demarcation is still used to hide political dilemmas and complex normative choices. The study gathers information through interviews and document reviews, and by following key players in their participation in the controversy.

Gender Inequality in Higher Education: A Study of Girl Students of Conventional Courses in Nasik, India

Keywords: Gender inequality, Higher education, Girl students, Nasik India

Gender discrimination in developing world is a crucial reality. In modern times women are performing exceptionally well in different spheres of activities. The problem of gender inequality still prevails in all spheres of life. Though Indian constitution has granted equality to women in principle, in reality majority of Indian women are facing the problem of inequality and discrimination.

The paper tries to focus on gender discrimination in higher education in India where the situation is paradoxical. On the one hand girl students are performing very well in all faculties of education, many of them are topping the merit lists, the percentage of passing is more than the boys, but at the same time according to 2011 Indian census, 35% women are illiterate. Out of the remaining 65% literate women the percentage of higher education is very low. Again there are educational disparities on the ground of rural-urban, poor-rich, higher-lower caste etc. Government has provided various facilities and concessions to facilitate education to women and decrease the disparities.

The paper tries to highlight the challenges in education before the girl students of the Department of Sociology, their ambitions, career choice and hurdles in their education, their experience about gender discrimination in the family, family background, use of facilities or concessions given by the government, etc. The data is collected by the primary techniques like questionnaire and interview. The study will be limited to the students of conventional courses. It will be conducted in one of the leading women’s college in Nasik city.

Abstract
As god is a creator of flora and fauna, a woman is a creator of family which leads to society and Nation. The Indian society considered women as weaker sex. Such sociological and cultural traditions have kept women dormant for quite a long time. Despite of all hurdles Indian women stand tall from the rest of the crowd and are applauded for their achievements in their respective field. The aim of this study is to discuss the issues regarding women entrepreneurship in Kanpur. Different stakeholders are playing pivotal role in women’s economic development. This paper is mostly based on Primary, secondary data and some observations as and when required. The paper talks about the status of women entrepreneurs and their competitive skills in world of business environment. Skill, knowledge and adaptability (SKAs) in business are the main reasons for women to emerge into business ventures. The paper also focuses on the problems in front of women during setting up a business enterprise and running in the competitive world. Some issues related to lack of financial support , availability of resources as well as support of stake holder etc. are major barrier in development of women entrepreneurs in India. It will also suggest the way of eliminating and reducing hurdles of the women entrepreneurship development in Context of Kanpur.

Keywords- Women Entrepreneur, Socio-economic, Small and Medium Scale Enterprises, Competency.
The paper seeks to address health care, early marriage practice, reproductive health status, awareness about small family norm, housing conditions and health, role of media in health, awareness, utilization of medical facilities, habits and health etc. The paper explores that health of tribal women is affected by many inter-related socio-economic and cultural factors. The study reveals that women in general and tribal women in particular are the worst sufferers. Despite modernization, medicalization, globalization, marked improvement in global health and other ongoing developmental processes, the exposure of tribes in general and tribal women in particular, to modern system of medicine is not significant. The paper spurs the paradoxes of continuity study and change in the tribal health-care practices and interventions. This could also be observed as the contrast between ethnicity and modern-post modern changes. Thus different patterns and levels of health inequalities could be identified among Indian tribal women. The findings will be a contribution to Medical Sociology, Sociology of Gender Studies, Social Anthropology, and to the health of tribal women.

Open Your Own Data - Creating Individual High Value for Little People from Big Data

The Open Data movement signifies availability and access to data as a prerequisite for the exercise of individual democratic rights. Data are now Big Data with large numbers of attributes, transactions, relationships, complexities, and individuals. Government data are typically viewed as aggregate data. However, plenty of examples show that your individual data is required for the administration and planning of your tax, your pension, your health etc.

Individuals using electronic devices and applications leave electronic traces. When using the World Wide Web, your phone, or applications you leave traces. Data in the form of electronic traces are also fruitful for commercial companies because profiling based upon the detailed registration of individual behaviour can be used to target the right product or service to the right customer. Profiling can remarkably improve the success of invitations from a company to individuals. Seemingly, the individual also benefits by only being disturbed by offers containing more relevant information. The issue of privacy and confidentiality is discussed and high-level precautions are implemented in order not to disclose individual data to a third party. However, the individual data should be available to the individual. To open and own your own data should be the general rule in all areas. Big Data implies an information asymmetry that disfavours the individual. When individual data are not available to the individual, the individual's decision making is based on insufficient data. As an example your phone company knows precisely your behaviour regarding phone conversations, text messages, and data traffic. If you had your individual data - "know yourself" - you could generate more individual value when approaching a company. With full availability of individual data and development of capable software applications and agents the individual can gain the rightful ownership and effectively act in the individual's own interest.

Children’s and Preschool Teacher’s Photographs of New Preschool Architecture: Issues of Participation and Interpretation

Children's and preschool teacher’s photographs and experiences of new preschool architecture Kim Rasmussen

In an ongoing project (2013-2014) about children’s and preschool teacher’s interactions with and experiences of new architecture/physical environment, young children between 2-5 years and their preschool teachers has photographed the preschool and social environment. A numbers of photo-elicited interviews with the preschool teachers had been held over the summer too. These actions have created increased awareness of the relationship between the physical and social environment and generated a lot of communication and interpretations among all involved. The project continues during the wintertime.

The aim of the project, inspired from action research, new childhood sociology, phenomenology, is to create knowledge (on basis of experiences, narratives, observations/field notes, photos/visual knowledge) about the preschool environment, which might qualify the discourse of kindergartens and the new architecture.

The architecture in new chilcare-institutions breaks on several points with the former idea of “kindergarten” (small environments with an emphasis on domesticity, development and play). The new preschools in Denmark are bulky, contains many children (some more than 200 children), and are highly transparent (wide use of glass in both exterior and interior walls). The new architecture is based on (neo)liberal ideas of flexibility and puts the emphasis on early childhood learning. But one thing is the ideas of politicians, architects and builders, another

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
is how the buildings are “lived” and coded/decoded (Bernstein) and experienced by the participants.

The paper and presentation will focus on issues of interpretation visual data and dilemmas experienced during the process of cooperation with the preschool teachers and children. A key issue is the symmetry between children and adults: preschool teachers play a key role in the interpretation of children’s photos, while it is difficult to invite and involve children (2–5 years) to interpret their own photos and words.

Public Sociology and the Impact Agenda: A Case Study

This paper explores the interface between two areas of debate high on the agenda of contemporary sociology. On the one hand, there are concerns as to the relevance and significance of the discipline in the 21st century; on the other, the imperative of displaying ‘impact’ (in accord with the current neoliberal agenda demanding accountability and ‘value for money’). The concepts ‘public sociology’ and ‘impact’ are interrogated briefly but the core concern of the paper is to illustrate the complexity of operationalizing impact in a research project that demands the deep, and unwavering, involvement and commitment of a sociologist and researcher driven by the imperative of progressive social change. Deploying as a case study the attempt to use public procurement as a vehicle for promoting the employment prospects of racialised minorities (and other marginalised groups), the paper explores the dialectical relationship between various forms of social agency and disparate structural factors at macro, meso and micro-levels. It concludes that the ‘messiness’ of the demonstrable ‘impact’ mirrors that of the research process itself, and the pursuit of a ‘public sociology’ in this context conflicts with dominant characterisations in the literature.

La Strada Network As an Example of Transnational Mobilization Against Trafficking in Women

My presentation will explore mobilization around trafficking in women for the purpose of sexual exploitation in the Central and Eastern Europe (CEE). I will focus especially on the La Strada Network (LS) that is a network of non-governmental organizations from CEE and Netherlands. La Strada was developed in the mid 1990s as a result of cooperation between Dutch, Polish and Czech activists and since then developed in a European network and is a recognized actor in anti-trafficking movement both on the national level as well as internationally.

This network because of its roots as a cooperation between activists from the Western Europe and from post-socialist countries is a fruitful example to explore the processes of transnational mobilization. Firstly, I will use the concept of transnational activism networks in order to examine the role of the exchange of information and knowledge as well as the patterns of cooperation between activists form Netherlands and CEE.

Secondly, I will give a closer look to the framing of trafficking by the network as a whole and by particular members of LS. Trafficking is linked to migration policy, national and international security, politics of prostitution etc. Framing of trafficking by a NGO depends on the location to the actor, the votes on prostitution, the source of funding etc. Using the example of La Strada I will investigate of the way particular LS members manage to reconcile a moderate framing of trafficking with gaining audience and support in local contexts.

Poland will serve as a case study for the analysis of the interplay between framing of trafficking by activists and relations between NGOs and the state agencies.

Mapping the Consumption of Distance Across the Life-Course: Connecting Individuals’ Mobility Milestones to the Histories of Mobility Practices

Life events and life-course transitions can dramatically impact on people’s consumption practices. There is ample evidence that key life events (e.g. arrival of first child, relocation, transition from education to work, retirement) coincide with more or less radical changes in consumption patterns (cf. Schaefer, Jaeger-Erben and Bamberg 2012). Understanding the role and significance of such ‘tipping points’ in people’s consumption biography has the potential to significantly advance our knowledge of current patterns of (un)sustainable consumption and how to either encourage or transform them.

At the same time, individual consumption biographies reflect wider structural conditions in society, including prevailing ‘systems of provision’ (Evans 2011) that organise the delivery of goods and services and their subsequent consumption. Linking individual consumption biographies to the histories of particular practices can thus cast new light on the causes and consequences of (un)sustainable consumption and pave the way for more promising policies that work with rather than against people’s established socio-environmental practices.

This paper argues for the development of longitudinal theoretical and empirical approaches to the study of everyday physical mobility and the associated ‘consumption of distance’. The ability to adequately capture important mobility mile- stones across the life-course, that is, moments of radical change in how (much) people travel, must be central to these efforts. These milestones must in turn be linked to the history of key mobility practices such as walking, cycling and car use. Drawing on documentary evidence, policy papers and qualitative interview data from the Republic of Ireland, the paper identifies key mobility milestones in individuals’ lives and connects them to the development of the modern Irish transport system and its implications for different mobility practices.

Voluntary Risk-Taking As Habituated Action: How Can a Practice-Theoretical Approach Contribute to Risk Research?

Abstract
Within the sociology of risk, the last 25 years have witnessed a development from viewing risk as something to be avoided towards viewing risk-taking as part of one's self-development. Researchers have argued that routinised everyday life compels us to make 'escape attempts' (Cohen & Taylor, 1992) in which we deliberately put ourselves at risk. Central in this line of theorizing is Stephen Lyng's notion of 'edgework' (Lyng, 1990; 2005). We will use the initial findings of the 'Study of Individual and Conjugal Trajectories' survey conducted by INED and INSEE in 2013 on a representative sample of 8000 persons aged 25-64. Focusing specifically on the couple formation process, the survey will be used to study couples formed from the early 1970s up to today. It includes a specific set of questions on rituals for detailed studies of engagement and bachelor/bachelorette parties.

COURTEL, FRANÇOISE (Inded)

This paper presents the new survey on couple formation in France. It was conducted by the National Institute for Demographic Studies and the National Institute of Statistics and Economic Studies in 2013 on a representative sample of 8000 persons aged 25-64. Focusing specifically on the couple formation process, the survey will be used to study couples formed from the early 1970s up to today. It follows on from two previous studies on couple formation. The first took place in the late 1950s and concerned persons who married in or after 1914. The second, in the 1980s, focused on persons who were married or in a consensual union. The economic, legal and social context has changed dramatically since these first surveys were conducted: fewer people are in couple relationships, time spent in education has increased, more women are in employment, divorce is more common, and new forms of union – including the PACS civil partnership – have emerged, along with new ways of finding a partner, such as online dating for example.

The new study aims to update our knowledge about the lives of people with a partner. It looks at how people are living alone, from youth to old age. We will use the initial findings of the “Study of Individuals and Conjugal Trajectories” to show how this new survey will shed light on continuity and change in couple formation and living arrangements, and also reveal how attitudes to couple relationships have evolved by age and by cohort. In this way, we would like to promote future collaboration and develop new opportunities for comparative research.

Gender Socialization of Youth in the Family
India is the second most populous country in the world, with over 1.2 billion people (2011 census). According to the provisional figures of the 2011 census, the youth population in the country including adolescents is around 550 million. This phenomenal rise in the youth population has made India the youngest nation. The family on the young. The study also shows that there is quite a good relation between patriarchal system and inequality of socialization.

The study makes a number of recommendations for action.

Navigating the Myanmar–Thailand–Malaysia Border: The Escape Strategies of Burmese Refugees from Chin State, Myanmar, to Battle Creek, Michigan

Forced migrants who flee their home countries as part of a mass movement face significantly different realities than ‘refugees’, as conventionally understood and legally defined in the West. Forced migrants typically lack secure legal status and access to any form of welfare system. Additionally, because they lack social structures that support international migration, they often engage in ‘step-migration’. Before arriving at their final destination, they move to nearby countries where they can obtain assistance from other migrants, employers and smugglers who are absent in their native communities. Scholars who study forced migration and/or illegal migration focus especially on how migrants use resources at their points of origin or destination or both, but they always overlook the actual border-crossing experience of these vulnerable migrants.

Based on twenty-one biographical narrative interviews with Burmese refugees in Battle Creek, Michigan, in 2012–2013, this paper examines how illegal border crossing from Myanmar’s Chin State to Thailand and then to Malaysia (and later to the United States after migrants are accepted as refugees by the UNHCR in Malaysia) is a migration strategy rather than an ‘end state’ and, among other factors, is related to the enormous difficulties of migrating legally to Malaysia. The paper examines hazardous border crossing (which requires clandestine agents and smugglers for crossing and documentation) and ‘irregular migrant’ status as defined by the lack of legal residence in a nation-state as essential components of forced migration, which is no longer related only to labor migration and is an expensive, much longer process. Thus, drawing on the concepts of increased border control, stricter immigration policy and definition of citizenship by nation-state, this paper considers the agency of Burmese migrants and raises the question of whether their ability to migrate ‘irregularly’ can be regarded as a resource in the particular context of forced migration.

Negotiating Risk in Intimate Labor: Domestic Workers and Night Nurses in Urban India

A recent spate of violent sexual assaults in Indian metropolises shocked the conscience of the nation and sparked a conversation about women's safety on the streets of urban India, further reinforcing the view above that women were safest at home. Indeed, one reason domestic labor remains a major occupational category for poor women is because it is done within the confines of a home. Yet, most types of intimate labor in the private sphere are unregulated and potentially unsafe, especially when women are young. This paper looks at how two types of workers who perform intimate labor -- domestic workers and night nurses -- seek to navigate physical and "moral" risks as they move between their homes and their place of work.

To Violate with Impunity: Legal Constructions of Marital Rape

ToViolatewithImpunity:LegalConstructionsofMaritalRape

Law is one of the important tools through which the state claims to ensure that women are treated as equal citizens. However, literature shows that though, women across India face myriad forms of gender based violence everyday, law has not proven to be an efficient mechanism to control such violence. Further, it is also well documented that not all violence is condemned by the law. One such violence is that of marital sexual assault. ‘The Protection of Women from Domestic Violence Act 2005’, does include sexual abuse within the definition of domestic violence, yet, it does not clearly criminalize marital sexual assault. On the other hand legislations on “rape” including the new Criminal Law Amendment Act 2013 continues to uphold legal exemption of “marital rape”. This paper attempts to understand such exemption of “marital rape” from Indian legal lexicon.

Legal constructions of “marital rape” is traced through analysis of legislations on “rape”, observation of cases at two Mahila Police Stations (All Women’s Police Station) at Odisha and through in-depth interviews of legal personnel from Odisha. This paper brings forth how despite campaigns and sensitization by women’s groups patriarchal notions continue to influence legal understanding of “marital rape”. Patriarchal and parochial notions such as “wifely duties”, “marriage as inherent consent to sex” “wife as property”, “divine ordinance” and others are invoked to justify the exemption of “marital rape”. It is argued that, while certain legislation may provide scope for pro-women interpretations to include marital rape, yet given the history of legal interpretations of law in India, such attempts would be far from real. Therefore, a need to amend the existing laws on sexual assault and bring in a comprehensive legislation against “marital rape”.

Bulgaria Case Study: The Challenges of the 2013 Social Protests in Bulgaria

The contemporary technologically determined information and communication environment is not only facilitating users’ participation in the process of generation and dissemination of content, but is also creating new opportunities for democratic citizenship. A variety of texts on new communication characteristics (Carpentier, Castells, Deuze, Friedman, Jakubowicz, Jensen, Lash, Patriarche, Todorov, etc.) offer multiplex approaches to this phenomenon, elucidating the interrelations between the audiences, the traditional and the social media.

The proposed text will discuss some major political and social implications of the new modes of the audiences viewed through the prism of the media activism in Bulgaria. It is based on comparison of two case-studies, focused on recent social events in the country that had significant political effects. The first one, triggered by the high electricity bills, is connected with disapproval of the living standards. Although it resulted in resignation of the acting government in February 2013, the cost of electricity has not changed. The second one has moral purpose – for sustaining the democratic standards. On June 14, about 10,000 people summoned spontaneously via the social networks to protest against the Parliament for the non-transparent appointment of a controversial media mogul as a head of the State Agency of National Security. Although the Parliament withdrew the appointment immediately, since then (nearly three months) hundreds of activists are every day out in the streets protesting against other controversial measures of the new government. Both events enjoyed extensive mainstream media coverage.

The aim of the proposed research is to answer the question in what ways the ongoing audience transformations challenge the contemporary media mix in Bulgaria.

Cross-National Differences in Early Family Instability By Socioeconomic Status

Extensive research has shown that family instability has negative consequences for children’s well-being. At the same time, there is growing evidence that differences in children’s experience of family instability by parental socioeconomic status are growing—at least in the U.S. Less well understood is the extent to which such differences are also occurring across industrialized countries more broadly.

In this paper, we add to the literature by evaluating the extent to which the gap by education in family instability during childhood appears to be growing in cross-national context, using data for 17 industrialized countries with multi-state life tables and country-specific hazard models. To the extent that our preliminary results hold true, this research suggests that inequality in children’s family experiences may be an important feature of life across the Western industrialized world, and that protecting child wellbeing for those born to less advantaged parents may be a growing concern.

REBUGHINI, PAOLA* (University of Milan, paola.rebughini@unimi.it)

Democracy, Social Movements and Rights: The Challenge Of Pluralism

In recent years social movements around the world have been more and more explicitly related to the issue of democracy. Since the 90s and the triumph of neoliberalism, transnational movements have struggled for an idea of democracy focused on human rights and inclusive citizenship, and not simply on the freedom from authoritarianism and from consuming. With the alter-global movement, and more recently with 15-M and Occupy, the focus of collective action has shifted from the search of individual freedom – as in many post-1968 mobilizations – to collective rights as main goal of a democratic project compatible with an idea of global justice in a pluralist world. On the one hand, digital technologies have enhanced transnational communications and cross-fertilization of mobilizations situated in contexts still deeply differentiated in terms of culture, history and politics. On the other hand, social rights and human rights have become a general framework of reference hiding different internal positions and interpretations about rights themselves. In this presentation I will focus on the theoretical issues raise by pluralism in the recent history of social movements fighting for democracy and rights.
Subjectivity and Human Rights: A Theoretical Investigation

In spite of an enduring attention for ethics and morality, the interest of sociology for human rights is recent, although lively and prolific. Power, violence, domination, the idea that “Whoever says ‘humanity’ wants to betray” (Carl Schmitt), have been at the core of critical sociology much more than the analysis of subject’s capability to struggle for human rights through social movements and everyday personal choices. Hence, not only positivistic tendencies have brought to mistrust towards the issue of rights, but critical and emancipative sociology as well – from Frankfurt School, to Foucault, Bourdieu and others – has been sceptical towards the topic of human rights. Indeed, a sociology of human rights is related not only to ethics, social justice and social inclusion, citizenship rights and critique of discriminations, but also to a sociology of the acting subject. A full sociological understanding of the issue of human rights needs as well a reflection on subjectivity in a pluralist, multicultural and globalized society. After a philosophical phase during which the concepts of subject and subjectivity have been criticized, deconstructed, reduced to the immanence of situated practices and abandoned, the empirical part of the paper draws on a 8,500 cases survey and 160 in-depth interviews with EU citizens living in six different countries (Denmark, Germany, Italy, Romania, Spain and the UK) as part of the EUCROSS project (www.eucross.eu).

Post-, Trans-, or De-Nationalization? Fine-Tuning Political Identifications Above and Beyond Nation-State Allegiances

The literature on emerging global identifications tends to use ‘post-national’, ‘trans-national’ and ‘de-national’ as convenient synonyms. However, these terms are better employed to single out distinct forms of disalignment of political identifications from historically solid national identities. The paper describes these forms one by one and illustrates ideal-typical contents and conditions of such diverse configurations of detachment from nationhood in practices and attributes.

Upper Classes, Wider Horizons? the Social Stratification of Travelling in Europe

Social stratification research on leisure tends to focus on class differences in cultural consumption patterns. In this literature, seldom is travelling taken into account as a dependent variable, even if international journeys are exponentialiy rising worldwide. But how is the experience of travelling sorted across social strata? Do they increase linearly as we move up the social hierarchy, as a reflex of higher income and cultural capital? Or are they more than proportionally an elite prerogative, while the bulk of the population keeps nation-wide travel horizons? And are there societal differences in the association between social class and travelling?

In addition, this paper investigates differences in meanings of travels. We thus expand the cultural-sociological debate on the social stratification of cultural tastes to mobility behaviours. Is international travelling a form of ‘omnivorous’ consumption, to use the famous concept of Peterson, for the better off and most educated? Is it meant to incorporate holidays, business and sociability experiences among the upper class, while being more focused and limited in scope among lower classes? Do these differences help characterize class-specific cultural capitals? Are they a different form of reproduction of social inequalities?

We address both sets of questions – the social stratification of the quantity and quality of mobility experiences – by analysing the distribution of national and international travels across social strata with data from the EUCROSS survey, covering six EU countries (Austria, Germany, Italy, Romania, Spain and the UK). Preliminary results of EUCROSS data suggest that SES is an important predictor of mobility experiences; however, there are differences in motives of travels. Higher SES is associated with more travel for both holidays and professional trips. Furthermore, travelling patterns vary significantly depending on the countries from which they originate.

Becoming Each Other: Interculturalisms, Grassroots Resistance and Cultural Creativity in Post-Colonial Trinidad and Tobago

In addition to the overarching context or grand narrative of ethnic competition and contestation over cultural space, resources and recognition in multi-ethnic Trinidad and Tobago, there is also a little tradition of working class and grassroots interculturalisms and structural convergences taking place at the same time. In this paper, I examine cases of subordinate level interculturalisms that occur below the surface, often with little conscious awareness by the majority of the society. They include the often unnoticed adoption /adaptation by all members of the society of common aspects of religious practice, language, food, music, styles of being, and celebration of special days. I argue that Trinbagonians construct and perform the narrative of plurality as well as that of hybridity or creolization accepting the dissonance and contradictions as part of the everyday complexity of life. So while a grand narrative of difference and ethnic competition prevails the two major competing collectivities - Afro and Indo-Trinidadians are becoming more and more like each other.

Capitalizing on Nigeria's Demographic Dividend

Nigeria is the most populous country in Africa and the eighth most populous country in the world, and thus whether or not it realizes its potential demographic dividend is critically important. Nigeria is entering a period of potentially rapid economic growth due to the increase in the working-age population—the so-called demographic dividend. At first glance, Nigeria’s age structure appears promising, with a large cohort of young people entering adulthood (and, presumably, the labor force) while fertility rates are presumably falling. The dependency ratio suggests that the working age population will support the dependents (children and elderly) of the population, and in fact produce a surplus. In order to do that, however, working-age adults must be employed. Unemployment has declined since 2003, but most of that decline is due in agricultural work, which is high productivity and ecologically sound. Unemployment remains high across nearly every region and every subgroup in the population, but with Nigeria’s resources and oil wealth there is potential to invest in some creative forms of education, training, and job creation to realize the potential demographic dividend. Moreover, Nigeria’s mortality and health indicators continue to lag far behind other countries as well. Life expectancy lags severely, due to the HIV/AIDS epidemic as well as other infectious diseases, and suggests a need for investment in public health infrastructure. Without a healthy population of workers, Nigeria cannot attain the demographic dividend.

Race and Patriarchy: Gender and Migration in South Africa during and after Apartheid

Apartheid was not only a racial project, but also a patriarchal project that encouraged family separation. By design, black men and women in South Africa had different experiences under the apartheid regime, although many times they did not follow the strict patriarchal and racial laws. There is not much good historical data about gender differences in migration in South Africa, so I use a unique data set (2000 South African Migration and Health Survey) that includes both retrospective and prospective life histories for a nationally representative sample of the black population to investigate the impact of apartheid policies on both men’s and women’s past and present migration patterns. Overall, I find that both women and men became increasingly likely to move over time, both during after the apartheid years and that women were more likely to move with their families, contrary to conventional wisdom and unlike migration patterns in other contexts. Women may not have moved at the same rates as men, but this paper gives evidence that despite apartheid’s intended effects of family separation, both women and men were moving as families. Gender and migration patterns are relatively understudied, especially for historical populations, so this paper has the potential to add to our understanding that suggest that historical and current gendered migration patterns, particularly in South Africa.
Modernity Reconfigured, or, Empire and the End of Habermas Versus Foucault

Central to debates in social theory about the relationship between modernity and critique has been the opposition, variously construed, between Foucauldian and Habermasian perspectives. Particularly in the 1980s and 1990s, and into the 2000s, these iconic figures stood for differing positions on the nature and purpose of human rationality, the workings of power in modern (and perhaps post-modern) capitalist societies, and the meaning and purpose of "critical theory." As many papers and advanced course syllabi show, the opposition itself became a tool for thinking about democracy, capitalism, violence, and so on.

However, this opposition was underwritten by a surprisingly similar theoretical narrative of modernity informed by a comparative-historical sociology of national states and economies, and this narrative is in important ways incorrect and incomplete, for it excludes empire and colonization from its causal stories and cultural interpretations. A reading of the explicit and implicit historical sociologies of Foucault and of Habermas is presented, highlighting these absences. The paper then explores the recurrence of this absence in other theories of modernity or modernities, including Wittrock and Eisentadt.

What, then, is the alternative? Too often, alternatives are themselves presented in terms informed by "Habermas versus Foucault," modern versus postmodern, etc. In an effort to resist this tendency, instead of proposing a new all-encompassing position, this paper examines how three concepts that are simultaneously analytic and normative would shift in their meaning and use, if we were to incorporate the sociology of empire into our understanding of modernity and critique. First, the relationship of the concept of power to the concept of instrumentality or instrumental reason is reconsidered. Second, the concept of fantasy, and the possibility of a hermeneutics of modern fantasies, is explored. This leads to a final reflection on the concept of modernity itself.

Overcoming Institutional Barriers: The Relationship Between Basic Human Motivations and Immigrant Integration Across European Societies

Research on the incorporation of immigrants into host societies has paid particular attention to the question of who is most likely to integrate, by distinguishing between individual, country of destination, and country of origin effects. Most of these debates have largely overlooked the question of why some people are more likely to integrate. In this study, we analyze integration at the micro-level by identifying what basic human motivations lead to greater socioeconomic success, cultural adaption and political participation. Social psychological research has identified four higher-order universal human values that are consistent with specific types of motivations: self-transcendence (motivation = social justice), conservation (motivation = social order), self-enhancement (motivation = self-esteem enhancement), and openness-to-change (motivation = creativity and independence of thought). Although each exists in every culture, there is much variation in regards to the distribution of these values within and between countries (Schwartz & Bardi, 2001). In this study, we posit that immigrant integration should depend on whether immigrants have the same values and motivations that are dominant among native residents. Moreover, we expect self-enhancement values in particular to be strongly correlated with integration. Yet, because immigrants are more likely than native-born citizens to experience discrimination, we expect this motivation to be more important for immigrant outcomes than for natives. Further, we hypothesize that the relationship between these values and integration will be strongest in societies that have additional institutional features that make immigrant integration more challenging (i.e. weaker welfare states, societies without multicultural policies, and societies without inclusive immigrant integration policies).

To test these hypotheses, we analyze the 2002-2012 cumulative file of the European Social Survey, which includes the Schwartz’ Portrait Values Questionnaire in addition to a number of social and political and attitudes and behavior.

Welfare Magnetism within Public Opinion. Evaluating Welfare Opinions Among First and Second Generation Immigrants

Invoking the metaphor of the magnet, an oft-heard concern about the sustainability of the welfare state is that generous social welfare provisions serve as an important pull-factor in immigrants’ consideration of their preferred country of destination. With their accumulated social risks, immigrants are on average more likely to claim welfare benefits, fueling the idea that such generous provisions reverse migration flows. If this concern would be justified, then the analysis of attitudes towards social welfare programs among immigrants would reflect such magnetism effect, namely that immigrants would exhibit stronger pro-welfare attitudes compared to the non-immigrant population, particularly in countries with higher per capita spending. To evaluate the extent to which immigrants reflect the idea of welfare magnetism, we analyze the 2008 ‘Welfare Attitudes’ module of the European Social Survey, fielded in more than 20 countries. This survey allows us to untangle the extent to which self-interest motivations determine welfare attitudes among immigrants equally as they do among non-immigrants. Further, we evaluate if pro-welfare attitudes are a function of the size of the welfare state immigrants reside in. While our analysis indicates that immigrants are indeed slightly more pro-welfare than the autochthonous population, it also shows that their welfare attitudes are an imprint of the welfare opinions of the majority population of the country they are living in. We conclude our contribution with the implications for the future of the welfare state, the theory of welfare magnetism, and the consequences for public policy.
We will thus highlight that the French public health campaigns, claiming to be universal, seem destined to fail: in order to raise a strong mobilization when it comes to obesity, public health campaign have neglected social disparities. In consequence, they may have deepened social inequality further because they have ignored – at least until recently - the social dimension of dietary consumption.

La Crise Racontée Par La Télévision Française

Cette communication se présente en forme de décryptage et d'analyse, sur une période d'une année, des programmes de la télévision française (grandes chaînes historiques, TF1 et France Télévisions) concernant la représentation de la crise selon deux catégories d'émissions: fictions télévisées d'une part, et émissions de débats politiques, d'autre part, illustrant et légitimant conjointement un discours de l'inégalité.

S'agissant des fictions télévisées (séries et téléfilms), sous réserve de quelques notables exceptions qui donneront lieu à un éclairage spécifique, le modèle régulièrement dupliqué ignore la crise, en ne représentant que des milieux sociaux qui y échappent. Les exclus, lorsqu'ils apparaissent font figure d'accidents individuels. La télévision publique n'apparaît pas, à cet égard, fondamentalement différente de la télévision privée. L'exemple emblématique, de la série quotidienne Plus belle la vie (France 3), alors même qu'elle a la vertu d'illustrer les grandes questions sociétales du temps présent (racisme, homophobie, mécompréhension, problèmes familiaux… ne comporte parmi ses personnages ni chômeur, ni ouvrier, en claire opposition avec les séries britanniques comparables. Les inégalités de représentation y apparaissent bien comme des inégalités de classe.

Des tendances comparables caractérisent, selon d'autres voies, les émissions de débats politiques, nombreuses sur les chaînes publiques : la première tradition d'inégalités concerne les experts et « intellectuels » invités, quasiment toujours les mêmes, fondant la distinction entre une minorité « visible » et la majorité des « invisibles ». Et ces mêmes experts partagent le même discours néolibéral d'appréhension de la crise, imputée à l'adaptation des salariés aux nouveaux principes du marché du travail.

Public Transport in Times of Individualization

Public transport is recognized by policy makers as a main tool in the combat against greenhouse gas emissions, and a key factor in sustainable urban development. Yet in Stockholm, the European Green Capital of 2010, systems for private transport are given a significant portion of space and funding in policy making and regional development plans. A recent prognosis shows that by 2050 Swedens will be far from reaching its zero-emission climate target for road traffic, given hitherto decided measures. This implies a gap between the rhetoric and set targets, and the physical plans made to reach these targets.

This paper is focused upon transport policy strategies for facing and responding to climate change in second modernity, and how modernization pressures are reconciled with sustainable development in policy for urban transport. As a major driver for policy changes, the second modernity has resulted in a step further towards individualization and a step back for the collective planning of the first modernity. How do the second modernity and sustainable development relate to each other and how they affect urban transport policy? An assumption is that the mechanisms of the second modernity encourage “light” private, flexibility-enhancing solutions over those heavier collective solutions laden with distributive justice that the 1987 Brundtland Report promotes, making weak social or ecological modernization more attractive as a policy direction.

I will relate Stockholm’s urban transport policy to the regional development plan, to consider how policy relates to modernization and how well the theory of second modernity can explain the gaps between targets and prognosis for emissions. My hypothesis is that ecological modernization is a way to reconcile modernization and sustainable development, and that a bias towards modernization results in gaps between sustainability targets and the effects of plans made.

Labour Market Re-Entry of People with Disabilities after Vocational Rehabilitation in Germany

Employment is one important aspect for societal participation as well as social well-being. Besides providing a living, employment gives access to benefit entitlements in case of unemployment or retirement, but it also provides social prestige and social recognition.

Vocational rehabilitation, as an instrument of the German social welfare state designed to support societal participation, aims at (re)gaining employment for people with disabilities. Due to a lack of data, there is little empirical evidence on the degree and quality of labour market integration of vocational rehabilitation in Germany.

Based on a three-wave panel survey of the Institute for Employment Research on vocational rehabilitation and the life course, our research focuses on rehabilitants in the financial responsibility of the German Federal Employment Agency (FfA), who require reintegration into the labour market. These people already have several years of working experience, but cannot continue their prior occupation due to health problems and thus, mainly participate in further training, retraining and/or integrational measures. We analyse employment transitions and respective determinants for the re-entry into the labour market and the sustainability of employment using event history analyses.

Results show that two third of the population obtains (mostly unsubsidised) employment only a few months after vocational rehabilitation and on average stays employed for almost three years. The transition in employment is highly determined by structural factors, but also by the type of measure attended during vocational rehabilitation. Integrational measures, like e.g. employment subsidies, are most successful for the placement in employment. Surprisingly, the type of disability does not play an important role in labour market integration, but the subjective well-being appears to be of high significance for both the transition in and the sustainability of employment. Those who report a (very) bad health condition have significantly worse employment chances and thus, reduced chances of social well-being.

REIS, ELISA* (Federal University of Rio de Janeiro, epreis1@gmail.com)

The Transformations of the Nation State As Challenges to Sociological Theory

The great changes the world experiences in recent decades have had profound consequences for nation states. Yet, the impact of such changes has been under theorized. This theoretical deficit makes it difficult for us to contemplate the prospects of the historical fusion between national solidarity and state authority. Relevant as the criticisms directed to methodological nationalism were, their further implications remain poorly explored, giving marginal to misplaced assessments of the future of the nation caught between the global and the local.

In the paper I discuss two issues that bear a direct impact on the changed ways we conceive of the nation-state today: (a) the emergence of the idea of civil society as a third element, that together with market interests and state authority constitutes a third ideal type of societal resource organization; and (b) the idea that the presumed equality of the citizens of a nation-state can be compatible with the recognition of social differences. I argue that sociological theory must take into account the two aforementioned cultural-ideological changes to be able to provide sound guidance to empirical research on the future of the nation. I conclude with the argument that contributing to account for the cultural ideological changes in the way society sees the interactions between authority, interest and solidarity today, sociological theory will also contribute to a better understanding of the prospects nation-states confront.

Biliomedia: Journalism Ethics and Ideology in the Age of Open Participation

Throughout the world, news is becoming a more open, collaborative project. In “We The Media” (2004), David Gilmore re-imagined journalism’s role in society as a joint conversational process achieved by citizens and professionals. Later, the term “Participatory Journalism” was conceptualized by journalism scholars in order to transcend the citizen vs. professional journalism dichotomy.

“Participatory journalism” has been discussed in recent years in various contexts. First, there’s the cultural change defined as “convergence culture”: the gathering, filtering and editing of news produced by professionals transformed into a participatory culture of news in which the audience became “users” or “produsers”, and arguably achieved more control over content production and distribution. Second, is the social erosion of journalism as a profession: its boundaries, its gatekeeping function or the ideology and ethics which accounted for journalists authority, legitimacy and autonomy. And lastly is the Marxist view of the ramifications of these developments: digital serfdom or exploitation manifested in user generated content, precarious labor patterns (freelance contributors and news aggregation sites) and cultural work.

Despite overwhelming print circulation numbers, subscription base and advertisers revenues, Japanese newspapers experience a steady decline in profits. * denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Recently, major newspapers began developing participatory platforms such as Asahi Shimbun’s “BilliMedia”. Newspaper reporters from the Asahi were also encouraged to open official Twitter accounts, converse with the audience and debate with their peers and competitors on-line. Albeit limited, these actions are transforming the culture of news production, gathering, and gatekeeping functions. Based on Japanese reporters interviews, my research focuses on these newly emerging participatory practices and the challenge they present to professional ethics and ideology. Employing concepts as user generated content, social curation or big data manipulation, Japanese reporters attempt to redefine professionalism in order to reclaim their credibility and jurisdiction at a time of crisis and uncertainty.

**Muslims Social Exclusion in Canada and France: Does National Context Matter?**

This paper compares the experiences of Muslim minorities in three contexts: France, Quebec, and English Canada, and in so doing helps illuminate a number of issues of significance to current debates on immigration and multiculturalism, including the role of public attitudes, national integration ‘models’ and advantages of transnationalism. ‘Nationalisms of immigration’ over recent European experience, and language and culture. The rise of an anti-Muslim sentiment in most of Western European societies, and especially in France, has not reached the same level in Canada, however Quebec’s is clearly distinctive in this regard and more like France. How these differences among public opinions and in political discourses affect social integration prospects of Muslim minorities in the three settings? Both quantitative and qualitative data are used. On the quantitative side, for France the new government-mandated “Trajectories and Origins” (TeO) survey conducted in 2009 (over 21000 interviews) overcomes many limitations in existing statistics for identification of ethnic minorities. The comparable Canadian source is the “Ethnic Diversity Survey” conducted in 2002 by Statistics Canada (over 42000 interviews). The paper also draws from structured encounters between Muslims and non-Muslims conducted in Paris, Montreal and Toronto.

**REME, JACOB*** (SUNY Empire State College, jacobremes@gmail.com)

**Transborder Disaster In The Progressive Era**

What can disaster teach us about diaspora? What can diaspora teach us about disaster? This paper explores two early 20th-century disasters in the U.S.-Canada borderland. One, the Halifax Explosion of 1917, took place in a region that sent migrants south to the United States; the other, the Salem Fire of 1914, mostly affected French-Canadian immigrants to the U.S. and their descendants.

Each disaster illuminates experiences of migration and diaspora. The Salem Fire—which started at a fireworks patent-leather factory and spread through the tenement districts, eventually rendering 18,000 homeless or jobless—shows the relative unimportance of the Franco-American diaspora to the lives of its members. Contrary to what the historiographical literature would have us expect, Franco-American survivors mostly stayed near Salem, going neither to other New England centers of the diaspora nor back to Quebec. Local and regional communal organizations did little fund-raising or relief work. In contrast, the Halifax Explosion—which began as a fire on a munitions ship, killed 2,000, and left about 25,000 homeless or jobless—shows the importance of the Nova Scotia diaspora. Nova Scotian migrants to the “Boston States” donated money for relief and through their donations built a transnational political community that sought to influence relief and recovery efforts.

Likewise, attention to diaspora and migration can help us better explain the experience of disaster. As Erikson (1976) and others have recognized, displacement is a key to trauma. Prior “displacement”—that is, migration—means that disaster refugees have more access to aid from outside the affected community and have a greater willingness and ability to relocate. These two historical disasters help shed light on the uses of diaspora and migration in disasters’ aftermaths.

**Intergenerational Coresidence and Electricity Consumption: Age Effect, Retirement Effect and Scale Economies Effect**

Many studies have found that, even in the most modernized urban areas in China, intergenerational coresidence still account for a large proportion. Intergenerational coresidence, low retirement age, high female labor participation rate can make the household activity and the related energy consumption patterns different from western countries. In this paper, we analyze the impact of intergenerational coresidence on energy consumption. Taking electricity as an example, we find that there are significant differences between intergenerational coresidence household and single generation household. Electricity usage of single generation household is much higher than other intergenerational coresidence household.

The paper also draws from structured encounters between Muslims and non-Muslims conducted in Paris, Montreal and Toronto.

**The Statistical Construction of Alterity: Governing National Population By Numbers in France and Germany (1860-1900)**

This paper is aimed to contribute to the history of statistics as science but also as a tool (Foucault 2004). This abstract explores the role of official statistics in the nation building process in the second part of the 19th century in France and Germany. Following the analyses of Desrosières and Foucault the study asks how science produced “imagined communities” (Anderson 1983) by using and constructing statistical categories on migration. By doing that official statistics constructed a universe of migrants in order to produce differentiation between national and foreign populations, which both aim to be governed differently.

In the first step I will argue that the historical development of official statistics in the 19th century in France and Germany led to its use in both countries as a governing tool to administrate population, but in different national ways. In the second step, the paper recontextualizes and deconstructs the statistical categories of foreigners and citizens, to show how official statistics took part in the historical process of nation building.

**RENARD, MARIE-CHRISTINE*** (Universidad Autónoma Chapingo, mc.renard@gmail.com)

**Behind the Label: Always Fairly Traded?**

Since Fair Trade entered the mainstream market, a label symbolizing the quality of being “fairly traded” has mediated between the producers and the consumers instead of the more direct relationship existing when fair trade was an alternative trade organizations business. With the lengthening and a larger opacity of the commodity chain, the label is supposed to give information and a guarantee to the consumers about the conditions of trade offered to the producers. A system of standards and certification has been developed to deliver the label. On the other side, as the literature on Fair Trade demonstrates, the corporations have developed multiple strategies to occupy the promising market niche that fair trade represents, through favoring competing labels that induce consumers’ confusion or being themselves certificated by the fair trade institutions for a small part of their purchases.

Based on a case study in the Sierra Madre de Chiapas, South of México, the paper pretends to demonstrate how a single label, the Fair Trade International label (or FLO), covers (or hides) very different and opposite realities on the side of production and supply: on one side, autonomous cooperatives of coffee peasants, that have sold under Fair Trade conditions to Alternative Trade and Fair Trade Organizations in the North for long time; on the other side, producers organized and financed by one of the largest coffee trade corporations, engaged in a multi-label strategy in order to occupy all market niches, that buy up their coffee to be sold under the FLO label.
time for public transport users has been, on average, double the time it takes for car riders to move in the city. Automobiles take up more than 80% of road space in rush hour in São Paulo.

Data indicate that the two policies investigated here have redistributed road space and travel speed towards buses. The Sistema Integrado (2001-2004 ad

Information Sharing in Contemporary Operations: Lessons from Special Operation Forces

Due to the complexity of contemporary operations, efficient information sharing has been identified as one of the main challenges of multinational coalitions. Today’s operations are conducted by military personnel from a diverse background often operating in a foreign environment alongside host nation military and police forces. Drawing on the experiences of the special operations community in “counter-network operations” in Iraq and Afghanistan, some western military organizations are capturing the lessons of these units. By flattening their command structures, leveraging state-of-the-art technology and adopting a mindset of “need to share” instead of “need to know”, these organizations strive for a shorter “sensor to decision time”. Military organizations, while experimenting with the new possibilities of information technology such as Secure Video Tele Conference (SVTC) and collaborative chat rooms, at the same time are re-learning the importance of the human dimension. The age-old lessons of mission command still apply. The commander giving broad guidance and trusting the judgment of his subordinates seems to be the only alternative. This paper examines these trends in information management in modern military command centers and puts them in a broader societal and cultural context.

On Weather Disasters and International Migration: Empirical Model and Worldwide Forecast to 2060 Under Business As Usual
Weather Disasters (WDs) have played a role in promoting internal and international migrations in a number of episodes, but it is unclear if they play a systematic or idiosyncratic role. Part of the problem is that the statistical literature on migration has essentially ignored their impacts. This research question is important, for the intensity and frequency of WDs are expected to grow due to global warming, and there are reasons to suspect that large waves of immigration may lead to violence between natives and newcomers in destination areas. We provide a step in the right direction in exploring this issue by developing statistical models that anticipate the potential for heterogeneous migration responses to disasters and policy levers that might modify these responses. The unit of analysis for our models is the country–pair–dyad-year and we employ panel data for bilateral migration flows between 190 countries from 1980 to 2009. We use the estimated model to develop a conservative forecasts for the total number of people that might migrate worldwide due to WDs as climate change progresses to 2060, assuming all else remains the same. Finally, we examine implications of our findings for illegal immigration, the possibility of violence between native and residents in destination countries, and adaptation and mitigation policies.

Competitive Edge of Filipino Teachers in Selected Countries
Recent history tells us that a number of Filipino teachers have extended their territorial milieu in teaching from the Philippines to various countries of Asia, the Middle East, and North America. This paper examined the global movement and experiences of Filipino migrant teachers vis-à-vis the qualifications of the Filipino teachers as a result of institutional competencies of Teacher education Institutions (TEIs) in the Phillipines. Most importantly, it explored as well the phenomena of gendered migration. As the Philippines looks forward to be more competitive, it is important to analyze the nuances of what makes a Filipino teacher globally competitive. Results of this research could be a good benchmark for improving the quality of teachers that the country produces.

There were four important migration phenomena about Filipino Teachers that were explored in this paper. First, it surveyed the migration and employment profile of teachers who usually worked in abroad as teachers. Demographic and socioeconomic profiles were also dealt with in this paper. Second, it analyzed the experiences of teachers as regards their motivations in working abroad, finding and applying for teaching jobs, teaching experiences, and adaptation and adjustments in a foreign country. This part was highlighted by competitiveness level of teachers, their perceived increases and gains while teaching abroad. Teachers' competitiveness was indicated by their salaries, promotions, incentives and other benefits received due to their services to the host institutions. Third, the standards and required competencies among teachers from home country and receiving country were analyzed. Lastly, this paper examined as well the competitiveness of Filipino teachers using gender lens.

Heritage As a Global Counter-Development Strategy to Fight Transnational Mining Projects in Wirikuta, Mexico
Wirikuta is a vast desert located in Northern Mexico. It is the place in which Wixaritari (Huichol) ethnic group have been depositing votive offerings for centuries in order to reproduce their worldview, named one of the purest amongst American natives since colonization. Wirikuta also hosts relevant desert flora and fauna. The region is protected as a Natural Sacred Site and as Protected Natural Area by state laws; however its conservation is currently being threatened by the plans of two Foreign Direct Investment projects concerning gold and silver mining. Different kinds of resistance movements have appeared. Some of them have focused in creating global counter-development strategies to preserve Wirikuta from new environmental impacts related to large scale mining. A notorious resource used in struggle is to get Wirikuta inserted in the list of World Natural and Cultural Heritage Sites before Unesco. Local actors believe this action can stop the extractive projects. Due to global pressures Mexican government has initiated and supported a counter-proposal, which would lead Wirikuta to be enlisted under an intangible Heritage scheme, putting aside the relevance of matter (nature) in conflict. This would give way to mining companies to drag the metals with any method, obviating particularities of territory and culture. By analyzing this case we aim to elaborate on: the role of institutional heritage in conflictive contexts, UNESCO's role and limitations of heritage schemes, state trends in solving—or not—local conflicts and social innovations that actors perform in policy-culture realms in order to preserve the environments they live in.

Comparative Sociology As an Inquiry and As a Teaching Discipline: An Attempt of Comparative Analysis
Andrey V. Rezaev, Chair, Comparative Sociology Department, St. Petersburg State University
Paper to be presented at the XVIII ISA World Congress, Research Committee on Comparative Sociology, RC 20
Session: Comparative Sociology: Present Status and Future Directions
The exponential growth in affirmation of or claims to comparative research have risen to multiple discussions in recent years. The paper is an opportunity to analyze a very old yet really stimulating topic in scholarly production. It explores into understanding the ‘similarities’ and ‘differences’ between “comparative analysis”, “comparative method” in social sciences, “comparative sociological studies”, “comparative sociology”. It tries to show the real novelty of a ‘comparative sociology’ in a nowadays sociological business.

The paper examines the reality of comparative sociology in the classroom as a teaching discipline and its specifics as a scholarly enterprise.

The paper argues that a broad discourse on the role of comparative sociology for the intellectual life has not yet occurred in academia, despite many valiant efforts to help it take place.

The paper has two foci: the first is theoretical and methodological; it tries to depict general theoretical frames, methodological orientations for the current debates on “comparative analysis/method/sociology” issues in nowadays sociology.

The second aim is to retrieve comparative studies’ production within policy practices. The output of academia is no longer confined to a pure intellectual/ideological debate but is increasingly part of a current policy activity, a part of a broader public domain.

The specific data and field research materials come from the longitudinal researches developed by the research teams and teaching instructors during last
seven years (2006-2013) at the International Center for Comparative and Institutional Research (InterComCenter) and Comparative Sociology Department of St. Petersburg State University, Russia.

Macro Conditions of Class and Micro Patterns of Social Interaction: The Problem of Studying Labor Migrants’ Discontent in the Time of Economic Instability

Paper to be presented at the XVIII ISA World Congress, Research Committee on Sociology of Migration, RC 31

The paper aims to focus not only on the limited control over migrants’ external situation in host societies, cultural discrimination or accessibility to legal protection, but to examine the problem of migrants’ everyday life practices in their uncertain condition, specifically in the time of economic instability. We try to conceptualize this emergent experience within the framework of the sociology of emotions, with the aim of understanding, on the one hand these emotions, (a) determined by the structural conditions, (b) created by and transmitted through the everyday social interaction, and (c) capable to result into collective action. This analytical move allows us to study ‘discontent’ at both macro- and micro-levels without losing its specific content.

In terms of theoretical and methodological foundations the research is orientated toward ethnographic institutionalism. We try to provide theoretical groundings and empirical evidence to justify an approach that link the micro experiences with the macro institutional arrangements through the detailed studies of migrants’ everyday life practices.

The data come from the three longitudinal field research Projects jointly supported by Vietnamese state foundation (2008-2010), CARE - Greece (2010-2012), and Russian state foundation - RGNF (2013-2016). The field researches dealt with everyday life practices (including ‘alternate practices’) of transnational labor migrants in Athens, Greece and St. Petersburg, Russia.

Constructing the Virtual and Material Public Spaces: The Cases of “We Are All Khaled Said” Facebook Page and Tahrir Square during Egypt 2011 Revolution

Social movements use urban spaces for their representation. They demand a spatial setting for their full effectiveness. However, spatiality of social movements has entered into a new phase since the mid-1990s. The prevalence of the Internet as part of the daily lives of people has challenged traditional theories of social movement and political public space. Recent revolutions and social movements in the Middle Eastern countries, the Arab Spring, as a reaction to the economic crisis and austerity programs of governments in different parts of the globe have created a new phase of research on the relationship between online activism and social movements. Scholars focus more on the role of social networking sites (SNS) and try to articulate their contribution to social movements. This essay has argued that Hannah Arendt’s concept of public space can contribute to the definition of material and virtual public spaces in contemporary social movements. By investigating Tahrir Square as a material public space and ‘We Are All Khaled Said’ Facebook page as a virtual public space during the Egypt 2011 revolution, this essay has studied the relationship between these spaces and the events of the revolution. It has shown that Arendt’s concepts of action and speech can theorize the virtual and public spaces of the Egyptian revolution.

What Makes Low and High Income Families Apportion Their Children's Education and Care to Early Childhood Education?

Why do families apportion their children's education and care to Early Childhood Education? Are there motivational differences between low and high income families? Prompted by these questions, research was carried out on four families - being 2 low income families and 2 high income families, who enrolled their children in Early Childhood Education in Brasilia, Distrito Federal, Brazil in 2013. Two interviews were held with parents addressing both family and Early Childhood Education topics. Using the concept of family arrangement (FONSECA, 2005) as a basis - which apart from the nuclear family, encompasses several other family structures and the idea that Early Childhood Education in Brazil is not only in the parents' right but the child's, one can observe tendencies towards change in the standard of education for children aged 0 to 3. Previously exclusive to the family environment, the tendency now considers environments beyond the domestic parameters without considering the family a bearer of any social pathologies (ROSEMÉRIO, 1995). The care and education process is neither natural nor exclusive to families. Given this scenario, it is possible to highlight some reasons for this change like alterations in peer relationships, modifications in the perception of children aged 0 to 3, universalisation of education in an institutional context - prior to mandatory formal education, co-responsabilisation of the State in care and education as well as socialisation processes beyond the family environment. This research discusses the reasons behind families apportioning their children's education and care to Early Childhood Education and seeks to pinpoint explanatory categories for the changes in the standard of education and care of young children. The final intention is to identify motivational convergences and divergences between low and high income families.

Religion As an Important Factor in the Composition of Ethnic Identity in Ex Yugoslav Countries

In many countries religion is one of the most important factors in the composition of ethnic identity. Balkan is one of the regions of the world where ethnic identity was made by religious belonging. That was obvious during the 1990-ies breakup of the state when federation disintegrated by its religious and national borders. The religious border was especially important in case of relations between Serbia, Croatia and Bosnia and Herzegovina. The fact was obvious given that all three main religious groups speak the same language today and they have same origin. The most important difference among them was religious. Almost all Croats are Roman Catholics, all of them who declare themselves today as Bosnians are Muslim and almost all Serbs are Orthodox.

Music As a Factor of Social Cohesion: At What Conditions?

Music as a factor of social cohesion: at what conditions?

Music is often considered a universal language. As the most abstract of all arts it can easily be listened without considering the language as a boundary to its appreciation. As every artistic expressions is connected with a given social context, but also music has a code belonging to a certain relation to language and its sound. Each social context has a unique relation with imagination and the role of the arts in such context is the outcome of such peculiar relationship. Besides cultural and aesthetic values, every artistic expression has a potential social function: art and music can create a sense of belonging improving social cohesion as well as its contrary; art can also contribute either to the change of cultural taste opening the way to new social order conceptions, or confirming traditions and identities. Moreover, music as culture can play a crucial role in the process of understanding cultural dynamics acting in a given place. According to the results of a field research carried out in a trilingual land: “Music culture and social function of music in Alto Adige”, this paper will go through a possible typology of the social role of the music, as well as the relation between language and music starting from the different repertoires, traditions and pedagogies in the three different languages (Italian, German and Ladin). Is it possible to trace a social relation to music according to the different traditions and values? Is it possible to understand the culture of a place also through its music choices? Is music a generation factor of cohesion or a culture factor of cohesion? Can music preferences be influenced by the dimension of a society/community and its dominant language?

On-Line Communities, Real Life Social Networks and Mental Well-Being in Senior Citizens: Results from a Two-Wave Survey in Three European Countries

This paper reports results from a two-wave survey which has been conducted as part of the Third Age Online-Project (TAO) in the Netherlands, in Germany and in Switzerland. The research aimed at analyzing the psychosocial consequen-
ces of going on-line and of joining social media. In the first wave of the survey, more than 3,000 participants could be recruited, and were then categorized as either ‘onlineers’ or as ‘offliners’. The questionnaire contained sociodemographic variables, real life social inclusion variables and Internet usage variables. Mental well-being was assessed using the ‘Mental Health Index –5’ (MHI-5). Logistic regression models were used to analyze associations with Internet usage and with social media usage. After one year, the same participants were again approached to provide data for the second wave of the data collection. 670 on-liners provided sufficient data that could be matched with the wave one survey. Logistic regression models were again utilized to find out which variables from wave one would serve as predictors of wave two outcome indicators (mental well-being, real life social inclusion).
The results of the wave one data revealed that senior on-liners were very well socially included and had a high level of mental well-being. However, in the longitudinal analyses, Internet and social media related variables did not predict mental well-being and social networks. It was concluded that going on-line and joining on-line communities may, at best, help to maintain quality of life and social networks rather than enhancing seniors' psychosocial conditions.

Verbal Aggression Against Health Care Staff – Mixed Methods Study

Clinical staff in various settings has to cope with aggressive behavior from patients and visitors. In recent years, physical aggression has received a lot of attention and many prevention programs are available throughout Western societies. However, verbal aggression against health care staff is much more prevalent than physical aggression.

This paper reports on a mixed methods study which was conducted in the following settings in Germany: mental hospitals, forensic hospitals, acute care hospitals, nursing homes and residential homes for mentally ill residents. Eight focus group interviews were conducted with a total of 74 staff members (nurses, physicians, psychologists and nursing assistants). The interview guide contained questions about any kind of verbal aggression which had been experienced, about the differences between physical and verbal aggression and about the coping strategies of health care staff. Subsequently, 1,053 staff members from the various participating settings filled out a survey which focused on the frequency of verbal aggression and on the severity of aggressive acts. The results revealed that verbal aggression is a very common phenomenon among health care staff. The following types of verbal aggression were identified: threats, verbal abuse, use of rude/sexual language, continual loud vocalizations (e.g., shouting, questioning), remarks which questioned the competency of the staff, refusal of cooperation and the ridiculing of staff. 16 percent of staff reached outcomes different from those of Italy. Drawing on evidence from an empirical perspective, we argue that past states of financial markets and mass media. From a systemic perspective, these processes are part of the structural coupling of two social systems, which perceive and implement new information, but only through their own systemic logic.

By examining the structural coupling we reveal patterns and causalities that are crucial for the understanding of financial market coordination through mass media products and vice versa. Especially the so-called “state debt crisis” and its media coverage can be empirically viewed as the cause for major changes in the configuration of the financial markets. During that process state bonds get more and more volatile, deviating from the century old long-term investment cycles. No longer are interest payments the only way to gain profits with bonds, instead, short-term speculation becomes possible due to the heavily pending bond prices of crisis states like Greece, Portugal or Spain. The starting point for those fluctuations strongly correlates with the international media coverage about the possibility that states can actually fail financially. As a consequence, traditional evidence of financial stability like macroeconomic indicators or debt ratings have no measurable impact after the crisis on the increasing bond volatility. The process underlying this development is that media publications are much faster and already incorporated in the market prices when the reactions of states or rating agencies get published.

Towards a Science of Past Disasters

Extreme climatic events are forecast to become more frequent in the future. This contribution argues that the past may hold clues to efficient, cost-effective, and culturally sensitive adaptations to and relief measures following such events. It is widely recognised that disasters emerge in the interplay between extreme climatic events and the human communities affected by them. Whilst detailed knowledge of a given event is critical in understanding its impacts, an equally thorough understanding of the affected communities, their economies, ecologies, religious structures, and how all of these have developed over time is as important. Many extreme events leave methodologically convenient traces in the geological and archaeological records. This contribution focuses on two volcanic eruptions that have significantly affected Europe – the eruption of the Laacher See volcano (Germany) in the 13th millennium BCE, the eruption of Thera (Greece) volcano in the early 17th century BCE and the eruption of Vulcán Ilopango (El Salvador) in the 6th century CE – to illustrate the power of a quasi-case-control compara
tive method for examining vulnerability and impacts in the near- and far-fields of these eruptions. Although issues of data resolution often plague the study of past disasters, these limitations are counterbalanced by the access to unique long-term information on societies and their material expressions of livelihood, as well as a similarly long-term perspective on the critical magnitude/frequency relation.
ship of the geophysical trigger(s) in question. By drawing together aspects of di-
sasters science, archaeology, volcanology and historical sociology, this contribu-
tion offers a programmatic statement and methodological roadmap for a science of past disasters that can make historically informed, evidence-based statements on general processes of cultural adaptations to climatic processes and events, and on contemporary vulnerability and impact from a deep time (historical and prehistoric) perspective.

RIEDEL, SASCHA* (University of Cologne, riedel@wiso.uni-koeln.de)

Drawing a Line Between Immigrants and Transmigrants

The changes of international mobility are apparently visible in all immigration countries of the world. Today’s migratory movements challenge classical concepts of labour- or forced migration theories. The pattern of permanent immigration lost its long lasting predominance in describing individual changes of location be-
tween countries. One of the most influential competing concepts in migration literature constitutes the idea of transnationalism. In this approach, individuals engage in lives, cultures, and activities in more than one country to the same extent. Although Germany is one of the main immigration countries of Europe, quantitative studies seizing the relevance of this conceptually new phenomenon are scarce. This is mostly due to the lack of data as the appropriate identification of transnationals requires multi-sited, mixed methods approaches with specific, often non-randomized, sampling procedures. But what can be done if there is no such data at hand? This study tries to answer this question by presenting and discussing strategies of quantitatively operationalizing transnationalism with existing, secondary survey data.

In this respect, the primary objective of this paper is to discuss the strengths and limitations of a strict distinction between immigrants and migrants in contrast to a more continuous definition of transnational lifestyles. To this end, the research is arranged in three stages:

In a first step a multi-item measurement is developed in order to distinguish between immigrants and transmigrants in the most unambiguous manner possi-
ble. In contrast, the second step aims at accounting for gradual differences in the individuals’ ways of living. To this end, a transnationalism index is constructed. Finally, results of bi- and multivariate analyses on the adaption of immigrants and transmigrants in Germany are presented. The paper closes with prospects for the future research of transnationalism.

RIEDERER, BERNHARD* (University of Vienna, bernhard.riederer@univie.ac.at)

Children: Pleasure or Pain? Effects of Parenthood on Subjective Well-Being

Against the background of numerous public and academic debates on de-
cline in birth-rates and problems of reconciling professional work and family life, the present research addresses the association between children and subjective well-being. Most people believe that parenthood should make us happy. Notwith-
standing, happiness research suggests that children are not important for the well-being of people living in contemporary western societies: Children might at most have a slight positive effect on parental well-being. However, a closer look at existing research reveals that some studies report positive effects of parenthood on subjective well-being while other studies report negative effects.

The present research aims at contributing to the explanation of this variation in children’s effects. Therefore, in line with social ecological theory, we identify sev-
eral factors on individual level, couple or family level, and societal level that might affect the association between children and subjective well-being. The respective hypotheses are proved by means of multilevel modeling and structural equation modeling using individual data from 30 countries participating in the European Value Study 2008/2009 and couple data from a project covering three countries (Austria, Germany, Switzerland).

Results illustrate that both, factors on individual level as well as factors on so-
cietal level moderate the association between children and subjective well-being. On individual level, among other factors, the stage in one’s life (age) proved to be relevant. On societal level, the welfare state based childcare system and dominant family values seem to be most important. In addition, individual level factors and processes on couple level mediate the association between children and subjective well-being. For example, the strain resulting from childcare that women feel indirectly affects men’s subjective well-being via relationship conflict perceived by men. Findings are relevant to potential future parents (timing of first birth, divi-
sion of work) and welfare states (childcare policy, existing norms).

RIEDERER, BERNHARD* (University of Vienna, bernhard.riederer@univie.ac.at)

Parenthood and Subjective Well-Being within Couples: The Division of Work, the Relevance of Mutual Appreciation, and the Role of Partner Effects

Sociological and psychological theories point to parenthood as means to personal development and social embeddedness, discuss its function for societal integration and highlight its meaning in structuring people’s lives and providing purpose in life. But the widespread belief that parenthood promotes happiness and satisfaction with life seems to be contradicted by a bulk of research discussing problems of reconciling professional work and family life. Quantitative studies primarily report negative effects of children upon parental well-being and qual-
itative research often highlights that especially women are confronted with an additional burden and the second shift at home.

Current research argues that children have both, positive and negative effects on parental well-being. Analyses conducted by the author with data from the Euro-
pean Value Study 2008/2009 reveal that individual factors (e.g., the stage in one’s life, living conditions) as well as societal conditions (welfare state policy, dominant norms and val-
ues) contribute to variation in children’s effects. But consequences from paren-
thood directly affect the couple and the relationship between spouses. Therefore, effects of children on well-being and life satisfaction should also be dependent on the spouses capability of mutual perspective taking, and their support for each other.

The present research uses data from dual earner couples with young chil-
dren to analyze the mediating role of (a) the division of household work, child-
care tasks, and professional work, (b) positive and negative spillover from work to the spouses, and vice versa, (c) the appreciation spouses have for each other, and (d) relationship conflict. In addition to actor effects, partner effects are also considered. Results are in line with the qualitative research that points to the im-
portance of giving and receiving gratitude. Furthermore, the quantitative findings support what A. R. Hochschild wrote: “If men share the second shift it affects them directly. If they don’t share, it affects them through their wives.”

Life Strategies of Families in Marginalised Urban Neighbourhoods: Dealing with Social and Educational Inequalities

Migration families often face challenges in Europe: unemployment issues, low income and the threat of poverty as well as an unequal education system, where children and young people are disadvantaged and consequently, their access to higher education and job perspectives is limited, hindering their chances and op-
portunities with regard to participation in society. These families frequently live in urban areas strongly influenced by migration movements and faced with pro-
cesses of marginalization.

In our research project (within the framework of a larger, European research project), we focus on life strategies of families in marginalized urban neighbour-
hoods in Germany. Migration is frequently a family project, and family is an impor-
tant resource in dealing with educational, job-related and social challenges. In our theoretical approach, family members are seen as actively dealing and negotiat-
ing with societal circumstances and social meanings (Wacquant 2006). Their strat-
egies are analyzed, taking relevant explanation contexts into consideration, which shape each person’s scope of possibilities (Holzkamp 1983). Our research project aims to transcend beyond the deficit-oriented perspective without neglecting the social and societal challenges families have to deal with (Riegel/Yldiz 2011).

In this paper we will present analyses from biographical interviews, group dis-
cussions, and ethnographic data, on how family members describe and interpret educational pathways and which life strategies can be observed. We analyze bi-
ographical meanings and dynamics within a family and with regard to experienc-
es centered on education, an area accentuated by the intersections of migration, class, gender and generation. First findings show that family members develop strategies and creative pathways to deal with challenges posed by everyday rac-
ism and the education system, using unconventional ways to negotiate solutions for structural challenges, demanding participation and inclusion. The ambivalenc-
es of these strategies - dealing with processes of inclusion and exclusion – within circumstances of social inequality will be discussed.

RIEGEL, VIVIANE* (Goldsmiths University of London, viviane.riegel@terra.com.br)

A Reflection on the Main Challenges of Comparative Research on Global Consumption Studies

We face several methodological challenges once we are involved with compar-
ative research. The scope of study to its phenomena demands a dialogue with writers from different nationalities, theoretical and methodological affiliations,
whose interests converge to collaborate in the comparison of different contexts. Specifically, the main discussion when comparing different contexts is whether to discover an underlying grammar to social life which is applicable globally, or to pay attention to the detail of local differences.

The complexity of social research on global consumption studies can be understood as the idea of a complex system that combines both issues related to the idea of a global culture, as well as specific characteristics concerning local contexts. Following Law and Mol (2002) ideas over complexities in social studies, it is necessary to face multiple domains and the complexity related to consumption practices that are research objects for sociologists today.

Comparative research on global consumption studies faces a changing significance of empirical research, as it happens with contemporary social studies. This means that traditional methods, and the most conventional ones are increasingly dated research methods, which are unlikely to provide a robust base for empirical sociologists. In the future, it is why it is important for sociologists, to get involved with a 'politics of method', renewing their interests in methodological innovation, mixing methods and renewing critical reflection (Savage and Burrows, 2007).

Following this methodological discussion, the goal of this study is to discuss the main challenges of comparative research on global consumption studies, considering both the hypothesis of a global consumer culture (Ritzer, 2004) and of localization/heterogeneity of consumption practices (Featherstone, 1991). In order to present these challenges, I am going to analyze three different research projects focused on global consumption practices that aim to compare the reality of these practices in different countries.

Global Consumer Culture: A Theoretical Discussion Between The Centrality Of Consumption In The Contemporary Society And Its Possible Localizations As A Result Of Cultural Differences

How can we understand the theoretical discussion concerning global consumer culture? Is it possible to affirm that such culture exists as global representation, central to contemporary society? Or should we consider possible localizations of consumption practices as a result of cultural differences from different individuals? Early in modern social theory, consumption has been object of discussion and, with the advent of post-modernist theory, its centrality has become a topic of concern in social analysis. Furthermore, contemporary studies presented mainly two different perspectives: the centrality of consumption in society or localizations of this practice according to cultural differences. In order to understand global consumer culture, this paper proposes a theoretical discussion and to present different perspectives. In the first perspective, there is a claim that begins with modern social theorists, and their focus on production systems (Marx, Weber, Smith), and that moves to the study of consumption (Simmel, Veblen, De Certeau), whether celebrating or demonizing this practice. Post-modernist ideas have detailed this context in order to understand the structure of the consumer society (Baudrillard, Bauman, Lipovetsky), with consumption as the central practice of contemporary life. This centrality would also explain earlier studies that demonstrate the capillarity of consumption, not disjointed from the production system, but as a continuum that can be translated as possession (Ritzer).

The second perspective, present in most contemporary studies of consumption (Bourdieu, Campbell, Featherstone, Miller) has tried to steer a middle course between the centrality of modern social theorists, and their focus on production systems (Marx, Weber, Smith), and that moves to the study of consumption (Simmel, Veblen, De Certeau), whether celebrating or demonizing this practice. Post-modernist ideas have detailed this context in order to understand the structure of the consumer society (Baudrillard, Bauman, Lipovetsky), with consumption as the central practice of contemporary life. This centrality would also explain earlier studies that demonstrate the capillarity of consumption, not disjointed from the production system, but as a continuum that can be translated as possession (Ritzer).

In my research I wanted to find out what people do with on the Internet and how this is changing the life of the users. I visited three different cybergafés in different areas in Nairobi. One cybergafé was in a big shopping mall, the second in the city centre and the third in the so-called slum area Mathare. The inequalities were obvious but it was also very surprising how widespread the Internet already was and how different the people used it.

Another aspect of the presentation will be the function of Facebook before, during and after the presidential elections in March 2013. During the post election violence in 2007/2008 over 1100 people were killed. Everybody was watching the election 2013 with worries and tension. After the results were announced everything remained more or less peaceful on the streets but on Facebook there started an ethnic war with words.

Social Inequalities in Preventive Care and Healthcare System Organization: The Case of Gynecological Cancers Screening in France

Socioeconomic inequalities in health are high in France compared to other developed countries. This is an unexpected considering that the National Health Insurance offers universal access and free care for disadvantaged people. Considering the case of gynecological cancers screening, we intend to analyze the genesis of these inequalities in relation to the features of the healthcare system.

Screening status was analyzed according to socioeconomic status among a random sample of 1819 women with logistic mixed models. We observed marked social gradients for cervical cancer, but lower ones for breast cancer for which an organized screening program alongside the individual one exists. However, the last prescriber was socially differentialized: gynecologists for the upper class, general practitioners for the lower class.

The modeling role of the healthcare system in producing inequalities through social norms it contributes to establish can be specified. Organized screening contributes to catch up patients with low social status. Gynecologists often ask for unregulated fees and receive patients with good socioeconomic level, whom they tend to overscreen. GPs are supposed to have a gatekeeper function toward specialists, but direct access to gynecologists is possible without referral. Although GPs involvement would be necessary to improve participation and lower inequalities, they lack legitimacy and tend to divert of these screenings. In addition to these suboptimal task division, information sharing and coordination between professionals are limited. This confusing situation has been settled by socio-historical processes, without any global vision of the interactions and perverse effects it would induce. Few people (patients, physicians or policymakers) are aware of this distribution of such an organization to inequalities. Despite the pressure on health funding and the bad demographic perspectives, it seems difficult to remodel professionals’ routines or to re-regulate the screening of women on a more equal basis.

Aetiology and Social-Historical Sociogenesis of Psychiatric Illnesses

The social hegemonization of the biomedical perspective in the beginning of the 21st century has been heavily criticized. But as pointed out by Kuhn (1962), criticism alone has never brought about major paradigm shifts (Kuhn 1962). Paradigm changes require a realistic, viable, research able alternative – a paradigm candidate, as Brante phrases it (2005). Therefore, one obvious question is, what the most feasible alternative to the existing neuropsychiatric modes of explanation is, and what challenges must be faced in trying to establish a viable and qualified alternative.

The dominance of certain forms of knowledge does not exist within an institutional and societal vacuum. It is produced and reproduced through political, managerial and economic discourses, institutional solutions and organizations, which should be taken into account to gain a complex understanding of the cur- 21st century’s changes require a realistic, viable, research able alternative – a paradigm candidate, as Brante phrases it (2005). Therefore, one obvious question is, what the most feasible alternative to the existing neuropsychiatric modes of explanation is, and what challenges must be faced in trying to establish a viable and qualified alternative.

The year of 2011 marks both the Fukushima disaster in Japan, and a one-generation time distance from the nuclear disaster in Chernobyl in 1986. Does it also mark any new emergent – perhaps more reflexive, inclusive and participatory modes of nuclear power in CEE countries? Have these expectations of participatory governance materialized in new structures and modes of more inclusive decision-making? This paper examines these questions by addressing the public controversies around new and old nuclear power facilities in divergent post-Soviet societies, particularly Lithuania, Belarus and the Ukraine. What are the lessons (if any) reflected in the public attitudes and public policies in terms of participatory governance of nuclear power, and “renaissance” of the EU new Comers, whereas the others are still characterized by rudiments of totalitarianism? Have they triggered environmental, climate and energy policy change towards more inclusive, participatory mode stemming from possible social trauma? By contrast, this paper concludes on the basis of empirical evidence from Lithuania and neighboring countries that the processes point to the opposite direction. This direction is geared towards privatization of the public domain, towards new forms of state-private oligarchy in the nuclear power sector, epitomized by the establishment of LEO LT nuclear power conglomerater in Lithuania. Instead of any new off-springs of participatory governance, as paper indicates, there are tendencies of the opposite. Inter-twined with the recent nuclear power “initiatives” by Russia and Belarus, these tendencies could be described as leading towards emergence of a nuclear “renaissance” as some observers have termed it. This is “renaissance” a reflection of public attitudes towards energy security in the period of economic crisis? Or is a more general tendency of societal neglect of the Fukushim and Chernobyl lessons vis-à-vis globalizing uncertainties in the fields of economy, ethno-centric politics and climate change?

Housing and Built Environment in Shrinking Cities: The Role of Housing Vacancies

Housing and built environment in shrinking cities: the role of housing vacancies. Dieter Rink; Annette G Haase; Chris Couch; Robert Krzyżtofik; Katrin Großmann*

Contact: dieter.rink@ufz.de
1 Helmholtz Centre for Environmental Research – UFZ, Leipzig (Germany)
2 John-Moores-University, Liverpool (UK)
3 Silesian University, Katowice (Poland)

Across Europe, since the late 20th century, urban shrinkage has become a normal pathway of urban development for many cities. Shrinkage results in a mismatch between supply and demand of built structures, urban space and infrastructure. Urban shrinkage impacts on almost all areas of urban life, one of them is on housing markets and the built environment. Typical for shrinking cities is a situation of disinvestment, since revenues from investments in housing are uncertain or improbable. The consequences of disinvestment in housing markets are undermaintenance, lacking modernization, housing vacancies and abandonment with subsequent physical decay. Mostly this concerns not the whole territory of a shrinking city, but distinct areas. What areas of a city are affected is dependent from the specifics of the respective local markets, the same is true for the concrete impacts on the built environment. The paper addresses specific problems related to vacancies, how they are perceived, what are typical impacts on the affected neighbourhoods and what are strategies to deal with them.

Based on the European project “Shrink Smart”, different shrinking cities in Northern, Central and Eastern Europe will be dealt with related to different housing markets. The paper draws on research undertaken within the EU 7 FP project SHRINK SMART (04/09-04/12; grant agreement no. 225193; www.shrinksmart.eu).

The paper uses empirical evidence from Liverpool (UK), Leipzig (Germany) and Bytom (Poland).

Rethinking Localism in the Global Risk Society: The Ethics of Care and Coalitions of Anxiety Confronting Gas Fracking in Lithuania

Rethinking Localism in the Global Risk Society: The Ethics of Care and Coalitions of Anxiety Confronting Gas Fracking in Lithuania

Focusing on the global dimension of risk society, Ulrich Beck has made a case that earlier social and economic formations are increasingly replaced by the world risk society where risks and uncertainties are no longer bound by particular locales, but are distributed globally. To conceptualize this new political organization, Beck and others have developed the notion of cosmopolitanism that refers to the emergence of new alliances and social movements that challenge and transform the nation state and its institutions. At the same time, scholars have also underscored the growing significance of localist movements that are actively promoting regional and national sovereignty agendas, while working to unplug from global economies and political infrastructures. The purpose of this paper is to articulate the connection between these two contradictory processes by employing conceptual tools developed in the scholarship focusing on political care ethics and politics. Building on the work by N. Noddings, E. Kittay, and J. Tronto, we argue that care as a justification for political action links particular constellations of actors to coalitions organized through anxiety concerning particular issues or emphases on particular participations of “disability” by J. Zinn and “discoalition participations” by M. Hajer. As a case study, we focus on the case of resistance against gas fracking in Zygaiciai community in western Lithuania, to highlight the ways in which the groups frame their civic and environmental anxiety under conditions of uncertainty “in-between” of calculable risks and in calculable social anxiety translated into bioethical care and specific sub-politics pertaining to local economic, political and environmental context. This case study and theoretical accounts connect local and national sub-politics with similar cases in Europe and elsewhere around the world.

Subjective Time to Retirement in Older Workers: Gender Differences in the Role of Social Networks and the Importance of Reasons to Retire

Subjective Time to Retirement in Older Workers: Gender Differences in the Role of Social Networks and the Importance of Reasons to Retire

Research has shown that males’ and females’ life course experiences in relation to work and family usually result in different retirement transitions and timing. Previous research has focused mainly on the effect of childbearing and caring responsibilities on females’ labour force participation and retirement transitions. However, little is known about the influence of the importance of reasons to retire and social network characteristics – particularly social support and engagement – on older workers’ expected retirement timing and how these differ for males and females. Therefore, this paper aims to identify gender differences in the determinants of subjective time to retirement, with a particular focus on social networks and the importance of reasons to retire.

The present analysis used the first wave (2010-2011) of the SNAP survey (Social Networks and Ageing Project, based at ANU), a nationwide survey of 2,122 Australian older people. The analytical sample includes 662 older workers aged 50 years and over. Multiple regression was used to identify the factors that have a significant effect on subjective time to retirement. (Run separately for males and females.)

Results show that several variables on the importance of reasons to retire are significant, illustrating the priorities and concerns that older workers have – different for males and females – when they balance personal life, work and retirement. For males, only work-related reasons had a significant effect whereas for females, work-related, personal and family-related reasons were significant. In addition, a number of social support and informal engagement indicators had a significant effect on females’ subjective time to retirement. On the contrary, only formal engagement was significant for males. In sum, this study demonstrates that traditional gender roles are still present in the transition to retirement, particularly in relation to subjective time to retirement.

Mandated Breastfeeding: Women’s Bodies As A Solution to Global Poverty

Mandated Breastfeeding: Women’s Bodies As A Solution to Global Poverty

As a means to address high rates of child malnutrition, stunting, and infant mortality in Indonesia, 2008 Ministry of Health Law No. 36 stated that all children have the right to be breastfed. Thus, exclusive breastfeeding is now mandatory until infants are 6 months old. To add teeth to the law, in 2011 the Indonesian legislation added strict fines and potential jail time as penalties for employers, relatives, the general public or others who pose barriers to women’s ability to achieve this goal (Soejarjo and Zehner 2011).

In February 2013, the U.K. NGO Save the Children launched their campaign to promote breastfeeding in poor countries with their report “Superfood for Babies: How Overcoming Barriers to Breastfeeding will Save Children’s Lives.” Like a superhero, breastfeeding was touted as one of the most important solutions to the problems facing the most innocent of all victims—infants in developing coun-
tries. Fingers were pointed at formula companies, policy makers, grandparents, fathers, and health care providers for posing barriers to breastfeeding. The report focused on the heroic efforts NGOs and other actors can make to "empower" poor women to make the "right" feeding decisions; however little recognition was given to women as possible heroes. Rather, women were portrayed as either victims of their environments or ignorant villains doing the wrong thing.

In this talk, I will explore the implications of legislating women's bodies as a solution to structural problems, as well as the problematic structural barriers posed to women being able to do what they are told to do. By exploring the Indonesian success and the framing of breastfeeding campaigns, I aim to demonstrate how breastfeeding promotion can be both empowering and detrimental for women. I will conclude with a possible way forward drawing on an ethic of care and a praxis of humility.

Labour Precarity and Other Structural Forces Affecting Migrant Workers’ Health: The Case of the Undocumented Workers in Ontario, Canada

This paper will discuss the ways in which the labour dynamics that have emerged in the agricultural production in Ontario during the last decade have been organized and the particular forms of precarity that affect the physical and mental health of the undocumented migrant workers and other migrant workers of precarious status (UMW and MWPS) that are employed in such industry. Likewise, it will analyze how this phenomenon of labour precarity, along with legal and linguistic barriers, fears of deportation, and perceived forms of racial subordination in the local health institutions, have prevented the workers from seeking and receiving medical services. Finally, the paper will discuss some of the ways by which the workers have contested the social forces affecting their health, and will offer some reflections on why such forms of collective action have been entirely unsuccessful.

This paper draws upon the analysis of twenty in-depth interviews with UMW and MWPS, as well as upon field notes generated as part of a sociological, ethnographic research carried out in Ontario, Canada.

Capabilities and Missing Users: Progress In Gender Analysis In Transport

The paper uses a normative framework of transport justice to recognize the link between mobility and “capability enhancement” as articulated in Sen’s writing and empirical work on gender and transport (Bezayit, 2011; Crede, 2004) (Martens, 2012). Transport justice reveals the mode of thinking and institutional mechanisms behind a nation’s transportation planning and delivery systems (Vasconcellos, 2001) (Litman, 2012) to elucidate how and why particular social groups (e.g. low-income women and minority communities) often face the brunt of negative impacts of decision-making to show how concerns of users from low-income groups and how gender differentials in preferences, choice and agency are yet to be taken seriously by planners.

Recognizing methodological pluralism as important in interdisciplinary research, the paper uses a combination of methods which have distinctive roles. The survey captured similarities and differences among 360 transport users, mostly of women traders and workers. Focus-group discussions with various sectors, field observations and in-depth interviews with a subsample of 8 brought deeper insights on meanings of “safety” and “security” from the perspectives of women. Textual analyses looked into issues of misrepresentation and invisibility.

Ouvrir La Boîte Noire Des Peurs Féminines : Encadrement Parental Des Pratiques Urbaines Des Enfants Et Dimension De Genre

Interrogeant la spécificité urbaine dans le cadre familial, l’approche comparative de l’encadrement parental des pratiques urbaines des enfants permet de mieux saisir la genèse de cette différenciation généee de l’expérience des espaces publics. Menée auprès de parents de 123 enfants âgés de 8 à 14 ans à Paris et Milan, une enquête par entretiens (n=78) montre ainsi que les filles font face à un encadrement parental différentiellement intentionnel. La forte prégnance de la représentation des espaces publics à dominante masculine et hétéronormée conduit les parents à mettre en œuvre des précautions spécifiques pour les filles, qui recoupent largement celles prises par les femmes dans les espaces publics : évitement de lieux, recherche d’une escorte, contrôle de l’habillement et de manière plus générale de la présentation de leurs enfants.

Pour reprendre la typologie d’Albert Hirschman, les filles sont socialisées à l’évitement (exit) et à la discrétion (loyalty), mais pas à la remise en cause des normes de genre (voice). La transmission de normes genrées semble ainsi pouvoir être considérée comme la clé de voûte de la vulnérabilité ressente et perçue des femmes dans les espaces publics urbains, l’encadrement parental contribuant dans cette perspective à la (re)production d’inégalités d’accès à la ville mais aussi à l’incorporation du genre par les enfants.

Geopolitical and Personal Influences on Willingness to Participate in Political Action in the Middle EAST

This paper examines individuals’ willingness to engage in political action in five Middle Eastern countries (Egypt, Iraq, Jordan, Morocco, and Turkey) using the 5th (2005-2008) and 6th (2010-2014) waves of the World Values Survey. We will also analyze the sixth wave once it becomes available in spring 2014 in order to draw comparisons with the 5th wave. Analysis with the 5th wave demonstrated that individuals’ willingness to sign a petition, join a boycott, and participate in peaceful demonstrations was lower in the Middle East than in any other region of the world. Nearly 70% of respondents would never sign a petition; 75% would never join a boycott; and 72% would never participate in a peaceful demonstration. Counter to this finding, the Middle East, especially Egypt and Turkey, has seen high levels of political action over the last 4 years. We aim to understand political action in the Middle East by examining change in the percentage of individuals willing to participate between the 5th and 6th waves of the WVS. In addition to description, we will examine the role of individual personal characteristics and geo-political attitudes in willingness to participate. Analysis with the 5th wave demonstrated that geopolitical beliefs have the most predictive power. Individuals’ views regarding government and its institutions, particularly their beliefs about governance in their own nations, mattered. Personal characteristics (demographic and human capital) did not have so much effect as would be expected from earlier studies on different (mostly Western) populations. However, men and those with less education were the most willing to engage in political action.

The Road To Revolution and Egyptian Youth: Findings From The Value Surveys

The Arab Spring that began in late 2010 captivated the world’s attention, particularly in Egypt with the uprising that began on January 25, 2011 in Tahrir Square and ended Hosni Mubarak’s reign as president 18 days later. Before December 2010, protesting against repression and injustice was risky and often seen as futile. El-Gohbasy (2011) argued that it was when the main protest sectors of the first decade of the 2000s finally came together, united in their demand for “bread, freedom, and social justice”, that Mubarak was forced to resign. Both the media and scholars alike have noted that youth were some of the key players in the uprisings of 2010-2011 wave of the WVS. In addition to description, we will examine the role of individual personal characteristics and geo-political attitudes in willingness to participate. Analysis with the 5th wave demonstrated that geopolitical beliefs have the most predictive power. Individuals’ views regarding government and its institutions, particularly their beliefs about governance in their own nations, mattered. Personal characteristics (demographic and human capital) did not have so much effect as would be expected from earlier studies on different (mostly Western) populations. However, men and those with less education were the most willing to engage in political action.

ganizers of the January 25th uprising has been clearly documented, their changing values over the decade preceding the uprisings have not. This paper will examine how sociopolitical and cultural values that reflect the three demands of the January 25th uprising—bread, freedom and social justice—changed among Egyptians in the decade preceding 2011 and whether Egyptian youth exhibited attitudes that were more supportive of these goals than the rest of the population. We will use data from nationally representative value surveys conducted in Egypt in 2001, 2005 and 2008 to address our research questions.

Multinational Companies, Social Responsibility and Human Resources Manager

This communication analyzes the situation of six multinational companies’ policy of “social responsibility” and of “sustainable development”. The purpose of this communication is to define how these companies, especially the subsidiaries, are socially responsible and take into account environmental issues. This exploratory and qualitative study is based on the analysis of official discourse of six firms and those of human resources managers. We highlight different types of “social responsibility”, the “stakeholders” that are taken into account by companies and the means to achieve the policies of “sustainable development” and of “social responsibility”. Our purpose is to show, beyond the official discourse, which role the subsidiaries play and which autonomy they have in their policies’ implementation. We wonder in conclusion about the hypothesis that a new way of human resource management of organizations is likely to appear through this new “social responsibility” and, conversely, if the new management involves the emergence of a new social responsibility. We will show that the types of responsibility, shown through the web site and in the HR discourses, are “ethical” (stands for the respect of the values, the standards and the requirements that stakeholders find fair) and “economic” (focuses on the production of goods and services). Those classifications depend on the firm’s sector.

The Human Resources can be even more regardful for the legal aspects or for the political aspects, especially in crisis situation. The human resources play different roles and highlight different priorities: respect of fundamental values, actions of the subsidiary that are presented as models, transparent communication, gather the employees around values and projects.

The Embedded Economy and National Income Inequality

The ubiquitous growth of national income inequality in developed and less-developed countries has raised major concerns amongst academics, policy-makers, and the general public. In response to this trend, researchers have offered a multitude of explanations for the persistence and growth in national income inequality. Despite these efforts, a substantial disagreement over the proximate and fundamental mechanisms of economic inequality. Drawing on insights for world-systems, world polity, and institutional theories of inequality, I develop and empirically evaluate an integrative theory of inequality. According to this perspective, the emergence of global production networks indirectly affects income inequality by reshaping national labor laws and practices. This study evaluates this proposition using multi-level structural equation modeling and unbalanced panel data on 70 developed and less-developed countries over the 1985-2002 period. According to preliminary results, economic globalization exerts both direct and indirect effects on income inequality. In developed countries, global economic integration indirectly affects income inequality by inducing processes of de-industrialization and labor market flexibility. In less-developed countries, investment-based global economic integration indirectly reduces inequality by promoting the development of collective labor laws and practices while trade-based integration indirectly increases inequality by hindering the development of these laws. Overall, the study suggests that researchers need to account for the interaction of economic globalization and labor market institutions to explain the recent growth in national income inequality.

The World Has More Leisure! so What?

The sociology of leisure (and leisure studies more generally) were born amid confidence that leisure would continue to grow and become a larger component of people’s lives. This confidence has proved justified. Leisure has grown in time, spending on leisure goods and services, and hence participation rates in many leisure activities. Meanwhile, researchers have identified and distinguished the various ways in which leisure plays a role in people’s lives. Apart from re-creation – restoring body and mind to states fit to return to other social roles – leisure can enhance well-being (or ill-being), it can be a source of social bonds and belonging, identity, and capabilities that enhance performance in other social roles. How- ever, this paper argues that the sole sense in which its growth has made leisure functionally more important is economic – as an object of investment and consumer spending, and as a source of employment. The paper explores the implications for leisure’s additional functions, and its future in the twenty-first century.
