Introduction

Currently, there is a trend in higher education towards formative assessment practice in the hope that assessment can serve as a feedback tool for learning rather than of learning (Hounsell et al. 2006). In this context, criteria-based assessment is often advocated on the argument that it provides students with transparency and clear articulation of learning goals – facilitating deep approaches to learning (Nicol and Macfarlane-Dick 2006; Yorke 2003). However, some studies point to potential difficulties associated with criteria-based assessment in that it might undermine students’ ability to act independently post education, and thus ironically hinder deep approaches to learning (Nicol and Macfarlane-Dick 2006; Bailey 2009). Also, there is increased scholarly interest in the question of how different forms of criteria-based assessment and feedback channels impact important affective factors of successful learning, such as motivation and learning climate (Nicol and Macfarlane-Dick 2006; Värlander 2008). Currently, there is a trend in higher education towards optimization of assessment designs, with the aim of generating an assessment strategy serving both short-term and long-term learning outcomes.

Aim and research questions

In light of the challenges involved in designing successful formative assessment practices, our study presents and evaluates an assessment design in a first-year university writing class for academic purposes. The set-up combines two different types of criteria-based assessment: formative assessment practice in the form of in-text commentary and rubric-articulated feedback. We asked the following research questions:

• How do students understand, integrate and act on the two feedback channels: in-text commentary and rubric-articulated feedback?

• Are there benefits in a combination of feedback channels or would just one suffice?

• How effective is the current assessment design for a combining the two feedback channels?

The assessment design

Learning activities involved process writing and peer-assessment and writing assignments included two essays: first a single-draft compare and contrast essay (CC), and later a multi-draft descriptive essay (DE). The two essays involved different activities and received different types of feedback in the form of in-text commentary and rubric-articulated feedback.

Method and Material

We used action research methodology to investigate our own professional practice through systematic and reflexive study of student data. We looked at three sources of data for triangulation of data collection methods: 46 reflective acts, 46 questionnaires and 7 semi-structured interviews. Data analysis involved a hermeneutic method where we identified key themes and interrelationships and patterns in students’ comments.

Results

In-text commentary included editing symbols and teacher comments in the margins of both higher and lower concerns, and a paragraph of general comments at the end of the paper.

The rubric assessment sheet indicated the assignment’s achievement in the form of criteria linked to grades.

Students connected the two forms of feedback to different functions. In-text commentary was experienced as referring mostly to lower-order concerns and language proficiency issues, while rubric-articulated feedback emphasized higher-order concerns related to writing development achievement. Further, students generally found that both channels were necessary, but even though we tried to balance comments in the two feedback channels, some students experienced difficulties in navigating between feedback channels. Thus, there is room for improvement and optimization of the assessment design.

Looking ahead

As a way of looking forward, we list a number of strategies for creating synergy effects between the two feedback-channels, with the aim of generating an assessment strategy serving both short-term and long-term learning outcomes:

• Supplement in-text commentary and rubric-articulated feedback with a third feedback type that can serve as a bridge, e.g. recorded oral feedback or screen caption.

• Color code in-text commentary to the rubric category it corresponds to.

• Ask students to write reflective texts on the relation between the two feedback types received.

• Ask students to write a short memo describing changes made between drafts.

• Time self-assessment differently for a more gentle introduction of this activity.

• Follow-up early assessment activities with teacher-student discussions of feedback.
