Paying attention to the history of the concept of intersectionality is essential if it is to be used to illuminate rather than disguise the dynamic politics of multiple inequalities in particular sites. The European borrowing of an originally US-centric term raises interesting questions of the kind of political work it is intended to accomplish. The naming of certain issues as “intersectional” (which implies that others are not) and the frequent use of the term “diversity” as a near-synonym to intersectionality as a process (which tends to remove it from a political to a managerial context) are two of the potential problems that arise in transplanting this intersectionality as a process (which tends to remove it from a political to a managerial context) are two of the potential problems that arise in transplanting this term from one specific context to another. Intersectionality arose as Crenshaw’s means of naming the exclusions in US antidiscrimination law targeting race and gender separately; what work does intersectionality do instead in a context in which diversity is framed as an addition to gender mainstreaming (“gender plus”) or as localizing and individualizing culture as “differences” in Europe? Can intersectionality travel transnationally without either obscuring the distinctive history of racialized nationalism in the US or encouraging avoidance of confronting modern forms of racialization in Europe? Looking at several specific cases illuminates this argument about the “traveling discourse” of intersectional feminist policy discourse.

Global Environmental Change: Environmental Policies in China with Reference to Brazil

Global Environmental Change: Environmental Policies in China with reference to Brazil

Abstract

The environmental issue has assumed the status of global problem, mobilizing civil society organizations, media sectors and governments around the world from the last two decades of the twentieth century. Among global environmental changes, climate change has proved to be structuring the debate in recent years, characterized as one of the main challenges of the global society at the entrance of the XXI century. Both Brazil and China still have many challenges to be addressed with respect to the set of problems that make up the environmental issue in a world characterized by high modernity, by the risk society and by the context of global environmental changes. These two countries have been noted for their international importance and, above all, the importance of environmental issues at the core of their political processes. In this context, this project aims to investigate the different European countries and welfare regime models by which Brazil-China have internalized the environmental issue, especially with regard to the climate issue, primarily analyzing two social spheres fundamentally present in this process: the sphere of government and the scientific community. The study of the pillar Science-Policy in Brazil-China is of fundamental importance, and consequently one of the innovations proposed in this research project is that by which Brazil-China have internalized the environmental issue, not only addressing methodological aspects, but also the possibility of investigation will be adopted, including, in particular, the systematic analysis of primary and secondary sources, such as the bibliographic and documentary research, and semi-structured interviews with government and scientific agents. We have a team of Doctors and Postgraduate students who will participate in the activities described in this research project, contributing to the realization of the proposed study in this project.

Key words: global environmental change, climate change, environmental policy, Brazil, China.

Climate and People in a Region of Tension Between High Urbanization and High Biodiversity: Social and Ecological Dimensions of Climate Change

Single policies adopted at a global scale are unlikely to cope with risks, impacts and uncertainties associated to climate change (Ostrom, 2009). Stakeholders of science, police and civil society recognize that dealing with environmental global change requires a multilevel and interdisciplinary approach to identify gaps and needs, and promote collective action. While climate change will expose regions to similar impacts, the extent of those impacts and effective response at the local level will be determined not only by the location’s sensitivity and vulnerability but also by local groups and individuals’ capacity, including their institutional links, social networks and motivation to actions. Considering this perspective, a research project is undertaken on São Paulo Coast, Brazil, a region of tension between high urbanization and high biodiversity. The São Paulo Coast exhibits the socio-ecological dilemmas of contemporary economic development. The combined pressures of tourism, industry, oil extraction transport, and sustainable development are increasingly difficult to resolve. The prospect of climate change exacerbates this problem. Drawing on an empirical research on this area, our study aimed to set groundwork research on the environmental consequences of climate change along the coast of São Paulo, including the investigation of how solutions may require better understanding of local and regional government stakeholders’ knowledge, concerns and actions related to climate change. Our results points out that are different arenas and conflicts around the local environmental issues. The identified arenas are characterized by different interests and aims, and asymmetric capacities to mobilize resources. The results highlight how local stakeholders and residents perceive climate change risks, indicating that the social and economic context and government support are determinants in the way people responded to risk threats. Our results also indicate how climate change issues are being framed by local governments in terms of policy strategies and instruments.

The Dynamic Equation Between Social Conflicts, Natural Resources and Environmental Disasters: The State of the Art and a Theoretical Proposal

In the recent years, environment, risk, biodiversity and climate have been among the main intellectual dilemmas presented by the social reality and conflict studies. The most urgent challenge is to transcend the sociological investigation. The social sciences field has not only sought to theorize these dilemmas, but also to analyze empirically recent objects of the contemporary societies, in order to deal with the super complexification of social dynamics in a polycentric and polypolyphonic world. Considering this perspective, recent studies on conflicts demands a robust intellectual substratum which involves a review of classic and contemporary approaches from authors affiliated with Sociology and Anthropology areas as well as efforts from social scientists to be opened to the power of the investigated social reality. It means that social scientists are called to better understand social groups who live or work on affected areas by different natural limitations or arbitrages, such as: (i) legal issues, related to the use or appropriation of natural resources; (ii) scarcity related to quantity or quality of resources; (iii) natural disasters or disasters caused by human activities; (iv) issues related to the exclusion of territory or resources provoked by disputes among different social groups and among social groups and species. This paper seeks to clarify the state of art on social conflicts focused on natural resources and catastrophic events that have been debated in the international literature. We also seek to present and debate our theoretical affiliation which has been hold our studies on these issues.
Reflections about Work, Time and Subjectivity in the Contemporary Culture

The obsession for innovation, planned obsolescence and the consequent discardability have become conditions of the contemporary culture. A culture of consumption and the commodity form have impregnated our way of life, even people and their relationships. In this article, methodologically inserted in the dialogue between psychoanalysis and social theory, we will start from the premise that in this new version of capitalism, people can be considered as commodities in the labor market. And if we are commodities, in this endless shelf of products, we need to remain saleable because we are also disposable (or, to use common expression in business: we must invest, continuously, in our employability). It is precisely this point that interests us. The rules are unfair but clear: we must uninterrupted upgrade to keep up with the frenetic speed of technological change. As well as the products, we have to innovate ourselves to keep our chances of future working time and lifetime. And all of this is necessary, but it is not enough. We are and this include adapt our behavior, our moral values and also our beliefs and our personal values have been incorporated as a skill by the labor market. Meeting the Challenge of Global Corporate Power: A Strategy for Global Unionism

Today, unions around the world are struggling to fulfill their role as voices of the political interests of working people. In a world of outsourcing, offshoring, flexibilization and casualization of work, the loss of union power and the deregulation of labor markets has flourished and opened the way for increasing precariousness and agency work. While continuing to fight to protect their hard-won regulatory instruments within their national domains, trade unions have also begun to look for transnational approaches to combat under- developed international competition that is fed by a race to the bottom over labor costs. The challenge for global unionism is in developing a strategy that will serve as a political and organizational answer to the dilemma it faces – namely, how to bring the power of unions, as locally or nationally organized entities, to bear on the historically productive aspects of the world economy. The challenge is the importance of education in the South African agricultural sector as a tool to maximise beneficial outcomes. The results of a blended mixed method research project, which involved farmers and governance stakeholders in South Africa, are presented as empirical evidence highlighting the positive roles education, in particular university education; have in regards to increasing sustainability. Interactions between farmers and governance stakeholders emphasised the important role that education will play in building the capacity of farmers and having positive outcomes on the future development of the South African agricultural industry. It was also found that higher levels of formal education contributed to farmers: having greater confidence in their respective communities; being more likely to prioritise their environmental stewardship roles; being less concerned about the risks posed by large agri-business corporations; feeling there was less need to regulate the agricultural industry; and restricting imports; and, looking for more support from government to adapt to a changing climate. Most importantly, however, it was found that the dramatic reduction in farmer concerns with government support programs as education levels went from secondary or less, through to vocational qualifications, and finally university degrees. These results suggest that further education provides farmers with the capacity to compete effectively in a liberalised economy.

Shale Gas in South Africa: Regulating a Resource Grab

A number of transnational oil companies have recently been given the go-ahead by the South African government to initiate hydraulic fracturing for the exploration of shale gas in a semi-arid part of the country, the Karoo region, despite a lack of robust regulatory procedures being in place. When she lifted an earlier moratorium in September 2012, the minister of mineral resources provided no indications of the source from which the substantial quantity of fresh water necessary for fracking would be derived. Existing economic sectors fear the contamination by the oil companies of local groundwater, on which all farming and tourism depend, and a substantial local opposition has developed. In the race to exploit the resource, encouraged by the National Planning Commission, a grab will be made for up to 20 per cent of South Africa’s land surface.

RC24-433.1

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The country’s mineral rights are not vested in landowners but in the state, which has allocated them to the oil transnationals. Taken together with scarce water resources, the cost of the industry’s activities will be far higher than the temporary energy dividend. Yet government uses the language of energy security, lower carbon emissions, and local economic development, all of which concepts have been questioned by civil society, pointing to shale gas as typifying the ‘resource curse’.

The presentation looks at potential socio-economic and environmental impacts of shale gas exploration and mining, raises questions about the functioning of the New South African democracy in deciding on controversial new technologies, and proposes legal and regulatory instruments steps that need to be put in place.

Inscribing Dance: From Embodiment to Digital Media

Inscribing dance: from embodiment to digital media

The ephemeral aesthetic of dance, in comparison to other art forms, contains no tangible corpus. It’s matter - body and motion in live performance - are transitory and defy any attempts to record the practice in order to create an accurate transcription and permanency. Since the beginning of the 21st century the accessibility and proliferation of digital media has influenced the way we document and archive the practice. On one hand, it has contributed to recording unique traditional dance forms that are considered to be in danger of disappearance due, mainly, to socio-political and ecological disturbances. However, though video recordings do preserve intangible cultural heritage through the documentation of the interpretation of dance works, it cannot be taken for the work itself (as is the text of a book or a painting). It will draw upon research conducted on US, UK, Jordan, the Dominican Republic, Sri Lanka and South African cases. It will focus on the role played by national union federations, national unions, global union federations launched in recent times and the underlying impetus for these efforts including the strategies and specific types of organizing efforts that have been adopted “pro-migration” policy positions, approaches to organizing and representation have varied depending upon the individual culture, structure and ideology of specific national and local unions. Of course unions do not act to influence policy or organize migrant workers in a vacuum, rather they do so within specific state contexts. This paper will focus on some of the key debates concerning migrant issues that unions have engaged, as well as the strategies and specific types of organizing efforts that have been launched in recent times and the underlying impetus for these efforts including the role played by national union federations, national unions, global union federations and NGOs. It will draw upon research conducted on US, UK, Jordan, Dominican Republic, Sri Lanka and South African cases.

“Movements Wrestling: Union Engagement with Migrant Worker Policy and Organizing in Comparative Perspective

Migrants crossing borders in search of better economic opportunities are often able to utilize their social networks to gain employment but they face the deprivations of the labour market alone unless unions and other non-governmental organizations become involved in supporting voice, not only in the workplace but in the policy sphere as well. An institutionalized labour movement can provide protection, support and the possibility of ongoing representation for migrant workers. Indeed, migrant workers are taking advantage of increased opportunities to partner with unions, but this is happening at a time of great peril for the labour movement. Historically, unions have engaged in vigorous debates regarding labour migration; even when they have adopted “pro-migration” policy positions, approaches to organizing and representation have varied depending upon the individual culture, structure and ideology of specific national and local unions. Of course unions do not act to influence policy or organise migrant workers in a vacuum, rather they do so within specific state contexts. This paper will focus on some of the key debates concerning migrant issues that unions have engaged, as well as the strategies and specific types of organizing efforts that have been launched in recent times and the underlying impetus for these efforts including the role played by national union federations, national unions, global union federations and NGOs. A State/Society Approach to Labor Standards Enforcement

Given the tremendous gap between passing laws and outcomes for workers, how can labor organizations improve enforcement? We contrast two sets of strategies for labor organizations which align with distinct conceptions of the state and enforcement. On the one hand, labor organizations can advocate for laws to be passed and then push state to enforce them using its own capacities. This strategy accepts a view of enforcement as primarily a technical problem to be solved by regulators. Once there is political will for implementation, it is up to the state to provide the resources and choose the best strategy to ensure compliance. On the other hand, after getting legislation passed, labor organizations can work to create conditions for partnering with agencies in enforcement and can become directly involved in the operational aspects of enforcement. This approach is based on a fundamentally different view of state capacity, which is constituted by a combination of the regulators and organized groups in society that complement the state. Such a view challenges the assumption that setting enforcement right is a technical problem that can be solved with the right strategy or correct internal organization of the bureaucracy. By contrast, it treats enforcement as a political problem of constructing institutions that can facilitate collaboration across the state and society divide, thus ensuring greater enforcement capacity. U.S. cases from historically different political contexts (US and Argentina), we contend that the latter approach has the potential to help

Is There a Sociology of the Body Itself in Brazil?

The sociology of the body can be understood as a fruitful research field, whose goal is to understand human embodiment (Csordas, 2008). By defining three research fields, Le Breton (1992) aimed to instigate reflections on how the phenomenon of embodiment is understood in the context of the social sciences and to build some sort of disciplinary matrix by mentioning many authors who are devoted to the study of the topic within the sociological field. Our work aims to answer whether there is a sociology of the body itself in Brazil by performing a bibliographical study of the period between 2000 and 2012. We used the journals A1, A2, and B1, classified by Qualis/Capes, from the fields of sociology and physical education. The keywords were: body technique; Mauss; and body. A total of 728 articles were found in sociology journals, of which two referred to body techniques, 36 to Mauss, and 690 to body. Of the total, 220 articles were selected (30%). With respect to physical education journals, a total of 1,791 articles were found. Of the body technique, 285 referred to Mauss, and 1,700 to body. Of the total, 199 were selected (11%). Considering the range of works for the interpretative analysis, we selected 53 articles that referenced the term ‘body technique’ coined by Marcel Mauss. We aimed to identify: object of study; theoretical framework used; methodological approach; researcher’s academic field; and the field covered by the journal. We found that there are scientific publications in Brazil, mostly from the social sciences and physical education, using the terms ‘body technique’, ‘Mauss’, and ‘body’. In addition, we found that there is an important theoretical-methodological effort for establishing a sociology of the body itself.

The Dances and Their Meanings in the Kalunga quilombola Community in Goias/Brazil

Paraphrasing Almeida and Saussuna (2010, p. 59), the stories and social relations that constitute the group are revived during the dances and, while dancing, people take their places in society, revealing the identities of their ancestors and mechanisms of resistance or acceptance regarding new cultural patterns. Based on this understanding, this work intends to comprehend the meaning of dances for young people belonging to the Kalunga community of Teresina de Goiás (located in the State of Goiás, Brazil). We sought to analyze the transitional processes that have been taking place in the daily life of the Kalunga community in relation to the reception of the dances (values and practices) between the generations of older adults and young people. An ethnographic research using interviews and direct observation as techniques was carried out in the community. The interpretation of the information took place on the grounds of authors who discuss the topic in the field of social science in dialogue with physical education. As a conclusion, we can affirm that the bodies intertwine in the feasts and dances and promote dialogues established between generations. The ritual system, constituted by means of feasts and dances, reveals the senses and meanings of the dances as a cultural resistance strategy, while allowing for the reconstruction of the past and the re-signification of the present of this social group analyzed. This way, we observed the establishment of hybridization processes between traditionalism (older adults’ dance - susa) and modernity (youth’s dance - forró), revealing multiple influences between traditional culture and the cultural industry, resulting in other cultural patterns.

Distrust and Law-Evasion in Iran (Case study: Tehran city)

Distrust and law-evasion in Iran. Case study: Tehran city

Social capital is basis of development and stability in every society. Trust is one of the most important social capital indicators. Distrust is sign of erosion of social capital in every society. Erosion of social capital is named as Weak Intergroup objective and subjective relations in society, can issue disorder or law evasion in society. Therefore distrust to other (people and the authorities) about law-obligation can enforce law evasion in society. So this article explains distrust effect on law-evasion. In this research is used Putnam and Fukuyama theory to analysis social capital erosion. This method is survey research the study population of this study of women and men over 24 years in Tehran. And the data collected by questionnaire from a sample of size 384 people in Tehran. Method of sampling is Multi-stage sampling. After data collecting, research hypotheses examined in two inferential and descriptive levels by Amos and SPSS package. Law evasion is divided in two dimensions: objective law-evasion (behavior) and subjective law-evasion (orientation). In contextual variables, it is seen meaningful relation among gender, marriage position, type of job, age, education, economic position with two dimensions of law-evasion. Basic variables in this research with their total effect on dependent variable consist of, civil distrust (0.44), generalized distrust (0.21), disbelieve to law (0.26). Generally, these independent variables with subjective law-evasion explain 43% of the dependent variable variance (objective law-evasion). Whereas these variables explain 40% of subjective law-evasion variance. So social capital erosion has more effect on subjective law-evasion (orientation) into objective law-evasion (behavior); hence to support inter group social capital in society can issue revival of law orientations and hence obey the law in society.

Keywords:
Distrust, subjective law-evasion, objective law-evasion, disbelieve to law,
Emotions and the Self's Past and Future

A Canadian philosopher, Charles Taylor, spoke of emotions, such as love and loyalty, as revealing to oneself and others what one strongly cares about. He argued that they play a role of a moral compass and in this capacity are constitutive of one's identity and morality. Many of his examples make it difficult to distinguish them from particular strong anger and fear. A British sociologist, Margaret Archer, proposed that in our inner conversations about our future commitments our memory of our past experiences and of the emotions that accompanied them contribute to the very process of decision-making about the future. Also in this case emotions seem to help in the process of teasing out one's preferences and, once these are chosen, of buttressing them. Discussing one form of reflexivity, however, Margaret Archer puts her finger on how the propensity to value strong emotional attachments can standardize personal responses to a great variety of situations, often with disastrous effects to the self. In my talk in contrast I want to show how specific emotions or, better yet, personal emotional geographies, are constitutive of unique individual identities in a sense of fixing or freezing the way an individual relates to her or his self, others and to the past, present and/or future.

Explaining Women's Employment Patterns in the Local Context: The Role of Education and Local Care Policies in Terrassa (Spain)

Empirical research into the factors determining female employment has given rise to a lot of interpretations regarding the cultural, institutional and individual factors that influence women's employment patterns. As a result of studies on the effects on women's employment patterns over the family life course in different local contexts and among different groups of women (Steiber and Haas, 2012), the factors that have the same effect on women's employment patterns in different contexts (Raff, 2004).

In the context of challenges posed by different work-family arrangements, using a multidimensional approach and as part of the European FLOWS FP7 research project, this paper examines variations across different groups of women in the way that contextual factors shape their labour supply. In particular, we propose to take a qualitative perspective from which women's education partly explains different patterns with respect to employment, work-family balance and access to family help in the city of Terrassa (Spain). The analysis is based on information drawn from focus groups with different categories of women. Qualitative analysis is supplemented by the results of a survey conducted locally providing evidence of the relationship between employment and use of formal and informal care. The initial hypothesis is that women's employment patterns over the family life course are closely linked to preferences regarding jobs and the family, with education and the local care system playing a key role as both a mediating and differentiating factor in the formation of these preferences and values.
International Mobility of German Diplomats and Their Families: Direct and Cross-over Effects on Quality of Life, Family and Partnership Outcomes

International work assignments are often found to be stressful and to affect employees' and their accompanying partners' well-being. However, whether this applies also to diplomatic personnel who are relocated regularly is unclear. The study surveyed the health-related quality of life, work and family life, and the partnership satisfaction of German diplomats. Potential risk factors are the duration of international mobility (years spent in the diplomatic rotation scheme; number of postings abroad), perceived stress, and employee's attitudes towards working/diplomatic rotation. Potential protective factors include cognitive coping, internal control beliefs, self-efficacy, preoccupation with the host country's culture, and social support. As a key aspect, crossover effects between employees and accompanying partners are analyzed. N=2,433 active diplomats in the German Foreign Service were assessed using self-rated online questions. Corresponding assessments were obtained from N=321 accompanying partners. While perceived stress had negative effects on all three outcomes, the number of years passed in diplomatic service and the number of postings had no effect. Diplomats who saw more advantages over disadvantages in diplomatic rotation reported better health, easier reconciliation of work and family life and better partnership satisfaction. Cognitive coping, self-efficacy and social support had several positive effects on the outcomes. Additionally, cognitive coping moderated the effects of stress on health. Crossover effects revealed that accompanying partners' stress levels and their attitudes towards living in diplomatic rotation are among the determinants of expatriates' quality of life, family, and partnership outcomes. Implications are drawn for personnel management, development and health promotion. The importance of considering families within employer's prevention strategies is emphasized. Examining the highly mobile group of diplomats and their families is an important aspect in the understanding of the major issues and challenges for spatially mobile societies.

‘cultures of Sick Leave’: Institutional Categorization, Legitimacy, and Moral Order at the Intersection of Research and Politics in Sweden

In line with what has been described as a ‘cultural turn’ in the social sciences over the last decade, ‘cultures of sick leave’ has become an important concept in Swedish social insurance studies as well as in political debates. ‘Culture’ has been used for understanding variations in sickness benefit usage between groups and between different geographical areas in Sweden. Examining how the concept is used and what it does, this study offers an ethnemethodological understanding both on the empirical level and on a meta-level. It is found that ‘culture’ tends to be used (or refuted) as explanation, without much theoretical or methodological grounding. Instead, culture is often applied in a commonsense manner, rarely problematizing how it translates into empirical studies. The paper discusses how the concept of culture works to negotiate the institutional category ‘sick absentee’ in the intersection of research and politics, positioning the individual in relation to the welfare state and bringing notions of accountability, legitimacy and morality into play: whose fault is a ‘culture’ anyway, and what can be done about it? As an ethnomethodology approach, the paper suggests ethnomethodology’s way of studying culture as it is being ‘done’. Seeing culture as constituted in discourse, and placing culture in action rather than action in culture, opens up for a bottom-up analysis in which members’ situated practices are in focus. Furthermore, conversation analysis provides an empirical framework for analyzing institutional categorization processes by closely attending to linguistic detail in interaction. Drawing on a Swedish study of meetings between people on sick leave, their doctor, and the state official administering their sickness benefit, the paper illustrates the use of such an approach, showing just how the legitimate boundaries of the sick absentee are co-constructed and negotiated: how ‘cultures of sick leave’ are done in the fine details of interaction.

the fact that it appears to have occurred at the same time that the number of migrant detainees has increased. Is there a correlation between the institutionalization of detention regimes and the increasing reliance of this method of migration control? Using data on detention regimes from the member states of the Council of Europe, where human rights norms appear to have had an important impact on how detention practices have evolved in recent years, this paper seeks to address this question through differing theoretical approaches to state behavior. For example, has pressure from human rights actors been a key driving force for the institutionalization of detention? If so, what implications might this have for how rights actors view the long-term consequences of certain liberalisms? On the other hand, does a Weberian model of institution-building provide a better explanatory framework for how detention regimes have evolved? Do theories of policy diffusion shed light on the spreading of these practices across the European region and beyond? Or, is growth in detention institutions more the result of increasing private-sector involvement in state functions, including incarceration? Ultimately, the paper seeks to provide some initial guideposts for investigating immigration detention institutions while making clear the broader implications of this phenomenon.

Frontier Societies: Culture and Social Institutions

The paper presents a cross-cultural study of contemporary frontier societies, based on analysis of World Values Survey data from the USA, the Russian Federation, Canada, Australia, Argentina, and Brazil. Consistent with Turner’s “frontier thesis”, we find that frontier societies carry a common syndrome of socio-cultural attributes, ranging from higher levels of membership in voluntary associations and civic activism, to greater libertarianism and skepticism of government. The “how rights actors view the long-term consequences of certain liberalisms?”

Globalización y Construcción Identitaria. El Caso De Los Jóvenes Universitarios En México

La globalización ha generado diversos procesos que permiten la movilidad de productos, mercancías, personas, información e ideas sin que las fronteras de los países sean un obstáculo, salvo en algunos casos. En el proceso identitario, las costumbres, valores y significados de una determinada región eran los que conformaban la identidad de una persona o colectivo. Con los procesos de movilidad resultados de la globalización, la permanencia física en un lugar no son necesariamente determinantes en la conformación de la identidad, ya que al estar en contacto con los productos, valores e ideas de otros lugares, éstos van formando parte de los significados que se construyen. La globalización crea una nueva manera de construir identidades. Lo anterior puede observarse con mayor facilidad en las ciudades, donde existen los recursos que permiten este intercambio de ideas. Dentro de los centros urbanos, los jóvenes por sus características, resultan consumidores ideales de las propuestas surgidas en el entorno global. En este sector, quienes entienden un grado universitario puede contar con mayores elementos de asimilación y mayor movilidad para integrarse en un sistema global. Por esto, resulta pertinente estudiar cómo es que la identidad de los jóvenes universitarios se construye. La poción que se propone es parte de la investigación que se realiza para integrar la tesis de grado dentro del programa del Doctorado en Ciencias Sociales. Se busca explicar cómo se da la construcción identitaria a través de los agentes socializadores presentes en la vida de los jóvenes. Los medios de comunicación y las tecnologías de información resultan de gran importancia en este proceso, ya que es gracias a ellos que se facilita el intercambio de ideas. Para entender cómo una persona ha construido su identidad con base en la interna-
css which enables the gradual recognition of “the others’s others”, the women, through the evolution of the political rights of women at the global level.

In this context, the descriptive representation of women (understood as the increase in the number of women elected in order to reflect the composition of the electorate), as well as their substantive representation (women's political representation which advances women's human rights), and their voices within civil society in the North and the South highlight the fact that feminism is undergoing a process of cosmopolitanization, albeit very slowly and in a sporadic way.

In order to present our argument, we adopt a postcolonial feminist reading together with a research method based on national, regional or transnational al NGOs’ data or on data provided by the Inter-parliamentary Union, UNIFEM and U.N.-Women.

Our article is divided into four parts. In Part One, we precise the meaning of the process of cosmopolitanization as applied to feminism. In Part Two, we describe this process as a “cosmopolitization” referring, among other things, to electoral data from around the world and to International Law which, today, guarantees the political rights of women - more or less successfully. Part Three analyzes the cosmopolitanization of feminism “from below” and refers to feminist theories, cyberfeminism and to the global civil/feminist society . Finally, in Part Four, the conclusion, we discuss the common future of feminism and cosmopolitanism.

FONTAINE, JULIETTE* (Univ Paris I, Sorbonne, CESSP CRPS, Juliette.Fontaine@univ-paris1.fr)

When Symbolic Violence Changes: The Example of the Educational Reform of Vichy

This paper aims to understand the mechanisms of symbolic violence through the capacity of the State to impose a specific social order by means of public policies. Public policies are, according to Houba, “the modalities and means which the State uses for the exercise of symbolic violence: as much as the government justifies and legitimates its intervention, it legitimizes the dominant representations of the social world. From the example of the educational reform of the Vichy regime, we illustrate the kind of symbolic violence that characterizes the regime of the State and the role of intellectuals in this process.”

For over twenty years, a wide range of research processes and activities have been developed in response to demands brought forth by representatives from local initiatives working toward social innovation specifically by means of social transformation. Among the main organizations that embarked on this undertaking are the Service aux collectivités (SAC) of the Université du Québec à Montréal (UQAM), the Alliance de recherche universités-communautés en économie sociale (ARUC-ES), the Centre de recherche sur les innovations sociales (CRISES) and the Incubateur universitaire Parole d’excluEs (IUPE). In this context, collaborations were formed with labour representatives (to commit workers in the revitalization of the Angus brownfield in Montreal-
al), with community organizations (working to provide social housing in the fight against poverty and social exclusion) as well as with the social economy and solidarity-based economy (through Quebec government support for the new social economy).

With this historical backdrop, we present a summary of our reflections on the capacity of such initiatives to impact social change. When evaluating initiatives, we proceed in three steps. To begin, we examine the extent to which an initiative is able to respond to social or socio-economic emergencies, thereby testing its reformist capacity. We then look at its institutional impact on the production of societal frameworks, namely through its ability to contribute to the determination of new path dependencies. In a third step, we identify the conditions that would allow it to increase its reformist or restorative capacity as well as its potential to act as an agent of change within the societal framework.

Consumption and the Social Organization of the Illusion

CONSUMPTION AND THE SOCIAL ORGANIZATION OF THE ILLUSION

Isleide A. Fontenelle

Associate Professor - Fundação Getulio Vargas - Brazil

idefontenelle@uol.com.br

In order to reflect on the reach and limits of the social organization of the illusion that constitutes the very nature of capitalism, and based on the transformations that are occurring in contemporary capitalism, this article analyses how consumption lies at the very heart of the operation of this illusion. This analysis adopts the Marxist approach with regard to consumption's place in expanding value within the context of industrial capitalism. It also looks at the history of marketing strategies that aim to produce a consumption that is subject to new forms of subjectivity, who is moved by a desire to consume. Resorting to the dialectical method as developed by Marx, i.e. based on the idea of movement and contradiction, the article tries to reveal the contradictions that surround the consumption sphere in the predominant financial and immaterial operating methods assumed by current capitalism, which may result in the possibility of over-consumption, which in turn leads to the non-realization of value. While this points, on the one hand, to the possibility of capitalism coming up against something that is in itself impossible, like the infinite self-expansion of capital, on the other, the solutions sought, also in the field of consumption, point to a hyper-commercialization of the spheres of life and knowledge, which sets in motion new merchandise expansion mechanisms through the privatization of culture, creativity and human life itself, leading to an equivalent of the “enclosure of the commons”.

SANTOS, ANA CRISTINA (Centre for Social Studies - University of Coimbra - Portugal)

Disabled Women and Sexual Violence in Portugal

When compared to the general population, disabled people present a higher risk and incidence of violence (UN, 2006; EU, 2011). National reports have highlighted the higher vulnerability of disabled women and people with learning difficulties either living in institutions or with their families (OPM, 2002; INR, 2010). Despite the great investment by Portuguese public authorities in programs designed to prevent violence there are no intersectional studies of violence in Portugal, emphasizing discrimination factors and highlighting the situation of disabled people in particular.

Based on the Social Model of Disability and drawing on the research project “Disabled Intimacies: sexual and reproductive citizenship of disabled women in Portugal” (funded by the Portuguese Foundation for Science and Technology - reference PPI/M/G/0005/2008) and on my post-doctoral research on disability and human rights in Portugal (funded by FCT – Reference SFH/BPD/8059/2011) developed at the Centre for Social Studies, University of Coimbra, this paper considers the issue of sexual violence targeting disabled women in Portugal. In this paper we begin by introducing the Portuguese context in relation to citizenship rights and outlining the phenomenon of sexual violence targeting disabled women in Portugal. The data was gathered from public reports, media coverage, and original empirical data collected in biographical interviews and evidences that family and close neighborhood members constitute most of the perpetrators. We continue examining the legal dispositions already in place in Portugal in order to protect disabled women. And we conclude, assessing the effectiveness of the existing laws and exploring the potentialities of the legal recognition of disability hate crime in Portugal.

What’s New about New Social Movement in a Time of Economic Crisis? Reflections about the Portuguese Disabled People’s Movement

Until the 1960s, social movements were comprised mainly of workers’ movements, focused on class and economic issues, highly organised in trade unions and political parties and using strikes and demonstrations as their main action tactic. The 1960s and 1970s witnessed, however, an increased variety of social conflicts, with the workforce’s political participation in Europe and North America, and the subsequent emergence of numerous social movements around new ‘post-material’ issues. The emergence of these new social movements (NSMs) did not only push for a multitude of issues based on identity, but also the investment on civil society as a key location, organised in non-hierarchical structures and networks and embracing direct action and protest.

As with other social groups, the failing of disabled persons by the welfare-state made them especially active since the 1960s. This was especially true of the UK and USA, where disabled people struggled “for equality and participation on an equal footing with other citizens” (Driedger, 1989: 1). This action was made possible by the creation of the Disabled People’s Movement composed of diverse organizations of disabled people. Most current debates on the Disabled People’s Movement included the discussion of whether this is a new or an old social movement.

Drawing on my PhD about social citizenship and the Disabled People’s Movement in Portugal (completed at the University of Leeds - UK), this paper investigates the ways in which this case study may contribute to the theoretical dispute between old and new social movements. I will begin by examining significant characteristics of the Portuguese Disabled People’s Movement. Then, I summarize the theoretical dispute within disability studies on whether the disabled people’s movement is an old or a new social movement. In the last part, I explore the ways in which the Portuguese case study may contribute to this theoretical dispute.

Violence Against Female International Students and the Need for 'Gender Security'

Violence against women has become a pressing global concern that represents significant social and economic cost. According to the World Health Organization, more than one in three women worldwide are victims of physical or sexual violence. While some progress has been made there remains much to be done to increase the understanding and amelioration of this vast social problem. Within this context, females make up approximately half of the estimated 3.6 million international students undertaking tertiary education in a host country. Previous research has addressed issues of safety and security for international students generally with only passing mention of gender-related concerns. This paper explores the problem of gender-based violence against female international students in their host country and the pressing need for ‘gender security’. Focusing on the United States, the United Kingdom and Australia, the paper draws on empirical research to understand the experiences of gender-based violence amongst female international students and other key informers who work closely with international students. The paper presents knowledge about stalking, rape, assault and domestic violence against female international students. The study also presents ideas about education and response programs that address the issue of gender security. The study uses an intersectional analysis and a claim for human rights to argue for an expansion of preventative and response programs relating to violence against female international students. Findings indicate that female international students are far more likely to be victims of violence than male international students. It is also suggested that low reporting of gender-based violence is exacerbated within the international student cohort. The findings of this paper will be of value to female international students and their families, wider communities including in particular women from diverse backgrounds, practitioners and scholars concerned with the issue of violence against women, the international education sector, and host education institutions and nations.

FORNO, FRANCESCA* (University of Bergamo, francesca.forno@unibg.it)

Personalized Engagement in the Current 'New' Wave of Anti-Mafia Grassroots Mobilization

This paper discusses the social mechanisms set in motion by a new anti-Mafia organization called Addiopizzo (Goodbye, Pizzo) which has been able to successfully encourage a growing number of entrepreneurs and shopkeepers to refuse to pay racket fees to local mobs in the city of Palermo, Italy. By using communication technologies that enable personalized public engagement as part of a new interpretative frame which has brought political consumerism into the repertoire of the anti-Mafia movement, Addiopizzo activists – a group of post-grad students formed in 2004 – have succeeded in creating a range of collective and selective incentives that have made it possible for local businesspeople to overcome the problems of collective action and build new social bonds of solidarity. Referring to social movements and diffusion theories, the paper discusses how a relatively small and locally based SMO succeeded in bringing about important changes by operating itself locally as well as globally, and via internet. Data for the analysis came from several sources of information, such as interviews with the activists themselves, participant observation, media analysis and a unique dataset reporting the answers given to a structured questionnaire with more than 70 closed questions, distributed in 2011 to 277 entrepreneurs who had joined the mobilization campaign entitled ‘Change your shopping habits to fight the pizzo’ at various points in time.

United We Buy: Re-Embedding the Economy into Society for a Sustainable World

It is increasingly argued that the environmental and social problems that afflict industrialized societies cannot be resolved without a change in citizens’ lifestyles and consumption practices. In recent years, the inability (or unwillingness) of institutions in both the public and private sectors to offer solutions and implement policies to address these issues has stimulated the development of new social movements that, while increasing general awareness on the social effects of consumption practices, have favored the emergence and spread of forms of procurement based on the direct relational and solidarity between consumers and producers. The paper focuses on some new grassroots initiatives promoting alternative forms of consumption as a way to protect the environment and the right of workers, which have been very successful in Italy in the latest decade. Born in 1994 “Solidarity-based Purchase Groups” (or “Gruppi di Acquisto Solidale”) count today more than 900 groups. The study, based on 146 in-depth interviews with international students and other students undertaking tertiary education in a host country. Previous research has addressed issues of safety and security for international students generally with only passing mention of gender-related concerns. The paper explores the problem of gender-based violence against female international students in their host country and the pressing need for ‘gender security’. Focusing on the United States, the United Kingdom and Australia, the paper draws on empirical research to understand the experiences of gender-based violence amongst female international students and other key informers who work closely with international students. Breaking through or Locked in? Global Unions and Their Institutional Articulation with Trade Unions in Asia

Both leading labour geographers and theorists of transnational activism have noted that there is a weak understanding of the articulation between global institutions and networks, institutions and social formations at other geographic scales. Aitken (2005) has suggested, what is lacking more generally in discussions of globalisation and civil society is recognition of the specificity of the mechanisms necessary to confront the concrete experiences that could dissent into specific grievances against specific targets and the ability to ‘negotiate boundaries’ between ‘domestic political settings, national governments and international institutions’. This paper takes up these concerns with regard to the articulation between the Global Union Federations (GUFs) and trade unions in Asia. The GUFs have all addressed issues of safety and security for international students generally with only passing mention of gender-related concerns. The paper explores the problem of gender-based violence against female international students in their host country and the pressing need for ‘gender security’. Focusing on the United States, the United Kingdom and Australia, the paper draws on empirical research to understand the experiences of gender-based violence amongst female international students and other key informers who work closely with international students. The paper presents knowledge about stalking, rape, assault and domestic violence against female international students. Housing and Social Re-Stratification

This article looks at transformations in the role of housing in social stratification. During the ‘golden age’ with high-speed economic growth and generous government subsidies, social inequalities were mitigated by the expansion of middle class home ownership and redistributive schemes of providing social rented

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
dwellings to lower classes. However, with the ascendance of neoliberal prescrip-
tions in the ‘global age’, new housing systems oriented towards accentuating the
role of market economies in providing and financing housing have increasingly
evacuated, rather than alleviated, social disparities. There have been widening
gaps between the market-included and the market-excluded in terms of housing
conditions. Moreover, within market spheres, various variables such as the timing
of housing purchase, the appreciation and depreciation of housing assets, the
nature of housing investment, the condition of mortgage borrowing, family sup-
port in acquiring housing, intergenerational transfers of residential properties,
architectural profile and location of dwellings and the number of houses owned have
been becoming more definitive in creating social cleavages. In varied fields
of social science, position pertaining to labor markets has been regarded as most
important in explaining the formation of social classes. However, housing and
property ownership have increasingly been becoming, and will be, more definitive
in reshaping social inequalities. This paper will identify housing related key driv-
ers for social re-stratification and explores housing situations in some exemplar
countries such as Britain, USA and Japan in arguing the importance of housing in
creating new contours of social inequalities.

Coalition Patterns in Labour Market Policy – How Activation Policies Restructure the Political Contest in Western Europe

Activation policies became the means of choice to address typically post-indus-
trial unemployment rates in a context of “permanent austerity” (Pierson 1996).
However, comparatively little is known about these “novel” policy instruments influence the political contest and the coalition formation mechanisms in this policy domain.
First, in line with the debate on multidimensional modernising reforms (Bonoli and Natale 2012; Häusermann 2010; Classen and Cleng 2011) this paper investig-
gates the nature of the political conflict in the domain of labour market policy and addresses the question whether the political elite’s preferences pertain to more than one dimension.
Second, the analyses address the political elite’s coalition patterns by focusing in particular on the political left testing the hypothesis whether social democrat-
ic parties address rather insider or outsiders’ interests (Rueda 2007, Schwanger
2012).

The empirical analyses are based on a novel elite survey which captures labour market policy preferences of all actors involved in the political decision-making process, i.e. parties, state bodies, unions, employers’ and social movement organi-
sations in three dualising (France, Germany, Italy) and in two flexicurity-oriented
countries (Denmark, Switzerland). The analytical strategy relies on factor and clus-
ter analyses of preference measures weighted by the respective issue salience (cf.
Kriesi et al. 2000).

The empirical findings suggest that politics is essentially shaped by policy. In other words, the political elite’s preference and coalition patterns are determined foremost by the regime specific institutional legacies and are structured on a re-
distributive and on an activation dimension. Interestingly, the most salient and controversial patterns related to policies which are part of the traditional repertoire of the labour market regime at stake. Finally, the results support scholars arguing that mainstream left parties support the interests of both insiders and outsiders (Schwander 2012), however, it results that the precise nature of coalitions is regime specific.

‘Belonging’ in The Land Down-Under: Insights from Three Methodologies

This paper considers differences in articulations of belonging in Australia generated using three different more or less innovative methodologies among different populations. Results from face to face interviews plus a photovoice ex-
ercise among refugee settlers are compared and contrasted with data generated in 20 focus groups with migrants and non-migrants across Australia using a set of images designed to elicit discussion around national, transnational and post-
national identities. Membership Categorisation Analysis is used to interrogate the presumptions included in the prompts used to generate the data (interview ques-
tions, themes for photographs, and images for focus group discussion). The range of parameters of belonging from the political (citizen and ethnic belonging) to the interpersonal (family, friends, place) are noted, as well as the limits to belonging, particularly the category work done discursively to identify insiders and outsiders. The paper concludes that each method is useful in different ways to gain access to different experiences of belonging and un-belonging.

The Discussion to Implement Charging for the Use of Water Resources: Challenges in Participatory Management

The participatory discourses appear as one of the greatest innovations oc-
curred in Brazilian democracy since the 1980’s, and have as a principle the joint
action between state and civil society and the sharing of responsibilities in the design and management of public policies. São Paulo State’s Water Resources Policy has the premise that water management should be decentralized, inte-
grated and participatory, through the Watershed Committees. One of the tasks
of the Watershed Committees is to establish the charging for the use of water, the economic instrument of water resources policy, which aims to encourage the rational and sustainable use of water. This study aims to analyze the discussion for the implementation of charging for the use of water in the Basin Commit-
tee of the Upper Tietê, located at the Metropolitan Region of São Paulo, in the period 2006-2010, order of the work was and how the participation of the state, municipalities and civil society occurred. This article aims to identify the specificity of the participatory process through the analysis of Watershed Committee meeting’s minutes and to compare it with a theoretical reference. The hypothesis is that the state failed to provide equalitary conditions for the representation of participants in the Watershed Committee of the Upper Tietê in the drafting and implementation of water use charging. Fur-
thermore, the inaction of state institutions may have contributed to the slowness
of the process. The evaluation of the discussing process for water charging in the Upper Tietê Basin corroborates to the debate about the actual influence of participatory institutions in public policies and the prospects for improving the existing relationship between government and civil society and the conditions for the exercise of democracy in environmental issues.

El Concepto De Comunidad: Teoría Sociológica, Historia Conceptual e Historia Intelectual

Desde hace al menos tres décadas la noción de comunidad se ha vuelto cen-
tral para una variedad de disciplinas asociadas al campo de las humanidades. El
llamado “renacimiento de la comunidad” supuso la tarea de retrazar la historia de esta noción desde sus orígenes griegos hasta el presente. Como es
sabido, el surgimiento de la teoría sociológica a mediados del siglo XIX impactó
decisaiva la formación y el desarrollo del concepto de comunidad. La
región de las transformaciones en los usos y significados de dicho concepto a lo largo y a lo ancho de la tradición sociológica parece requerir de una exploración, discusión y evaluación de las potencialidades de diversas herramen-
tas y propuestas teórico-metodológicas convenientes de perspectivas no espe-
cíficamente sociológicas. En este trabajo en proponemos, entonces, analizar de forma crítica y descriptiva las posibles confluencias de la investigación teórica
y metateorética en torno al concepto sociológico de comunidad con dos enfoques de uso generalizado y cada vez más extendido en las ciencias sociales y humanas contemporáneas: la “historia conceptual” y la “historia intelectual”.

FRANCE, ALAN* (University of Auckland, a.france@auckland.ac.nz)

Youth in the Age of Austerity

This paper will draw upon international evidence of how ‘youth’ and the youth ‘question’ within social and public policy has been (and is) changing as a result of the global disruption to international capital. It will examine how ‘financial re-
structuring’ in different countries is impacting on public and social policies aimed
at the young and how the concepts such as youth’ ‘age’, transition ‘diversity’ ‘risk
and ‘inclusion’ and citizenship is being restructured and reconfigured in policy
discourses. Since the early 80’s ‘neoliberalism’ has been seen as the major driv-
erg to national and international policy frameworks in western type states. This paper will argue that the recent ‘crisis’ does not create new responses but has accelerated neoliberal strategies that see public and social policies and practices
help western states implement a range of new ways of managing young people and the ‘youth question’. The focus of the paper will therefore be on how youth

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
layers of understanding that question the very meaning of land rights. Strate how personal stories and oral histories often reveal symbolic and temporal

However, doing so requires embracing all forms of human distress, while at the same time making moral assertions that it is possible to conceive of suffering as part of the human condition and to acknowledged people whose hardships seem comparatively trivial. We argue that when scholars do not pay attention to the survivors of Hurricane Katrina and the other on middle-class parents are re-shaping the life course for the young through the implementation of austerity measures.

This paper examines a set of intellectual and ethical dilemmas that stem from efforts to define and analyze suffering. Drawing from two separate studies, one on the survivors of Hurricane Katrina and the other on middle-class parents whose children have a wide array of problems, we highlight the gap between sociological and self-referential claims to suffering. How do we conceptualize the experiences of people who appear to suffer but are reluctant to identify themselves as suffering? Should studies of suffering include the experiences of privileged people whose hardships seem comparatively trivial? By addressing these questions, we call attention to the politics of suffering and scholars’ participation in the construction of what constitutes “legitimate” distress. We also consider what scholars might gain from comparing the lived experiences of seemingly disparate groups of “sufferers.” We argue that when scholars do not pay attention to how people make sense of their own situations, they risk dehumanizing their participants. Sociologists’ adoption of psychological and psychiatric vocabularies of suffering is particularly problematic in this regard. In the end, we suggest that it is possible to conceive of suffering as part of the human condition and to embrace all forms of human distress, while at the same time making moral assertions about whose situations warrant political action. However, doing so requires scholars to be explicitly reflective about the political assumptions that underpin their research.

In rural areas of southeastern USA, African-Americans have fought to maintain land ownership in order to protect independent farmers and maintain economic and political freedom. Struggles over property rights carry a heavy history from enslavement to contemporary racial discrimination. Landownership among African-Americans peaked around 1910, after which there has been a steady decline in the construction of what constitutes “legitimate” distress. This approach suggests that perceptions of what is good and just differs from group to group and from nation to nation because of differences in preferred cultural standards.

This paper elucidates these similarities and differences and the ways in which the two levels interact. First, it draws on Niklas Luhmann’s analysis of uncertainty and contingency along with his phenomenological distinction between trust in people and confidence in systems and institutions. Second, it draws on K. E. Loestrup’s phenomenology of trust as the default attitude within familiar social worlds.

Two fundamentally different ways of dealing with uncertainty are conceptualized. Trust, it is argued, is related only to alterity but depends on confidence in systems/institutions in order to bracket the contingency associated with any intersubjective encounter. Trust is possible only when preceded by a trusting orientation, a sense that whatever future is in store will not be a bad one. This orientation is it is an expectation of a more or less wide array of possible futures all within what is familiarly relevant to at specific situation, delineated by confidence. However, trust also provides the foundations for building confidence. Confidence can only be established once the issue of human agency invariable linked to institutions and systems has been settled the in form of trust. Consequently, confidence is learned from trusting. The contribution of this paper is two-fold. First, it brings together otherwise disparate writing on the relationship between trust in institutions and trust in people, helping to clarify this point in trust research. Secondly, it provides conceptual tools to describe and analyse the relationships between trust in intersubjective relations and the ways that familiar institutional and organizational backdrops provide the confidence to trust the other.

The great values similarity between the Nordic states seems to be a fact beyond dispute (Kildal and Kuhnle 2005; Svalfors 2003; Svalfors 2006). However, since contemporary research primarily focuses on the historical and socio-economical causes of these attitudes, the Nordic inhabitants reasons for having these perceptions are all but unknown. This paper seeks to contribute to an understanding of these reasons.

Identifying macro level drivers is crucial to explaining the development and continued existence of welfare states and institutions. Nonetheless, these are inadequate for understanding why people hold values and perceptions supportive of specific institutional structures: people express egalitarian ideas because this is important and meaningful to them, not because they have a working class upbringing.

The analytical framework applied in this paper is drawn from the Sociology of Valuation and Evaluation (Hall and Lamont 2013; Lamont 2012) emerging in the intersection between political sociology (Boltanski and Thévenot 2006; Wagner 1999) and comparative cultural sociology (DiMaggio 1987; Lamont and Molnar 2003)

The project research is a comparative cultural study of Sweden and Denmark focusing on issues of social justice. 60 semi-structured interviews are carried out in each country with people between 25 and 70 currently employed.
is balanced in terms of age, gender and class. The interviews explore the four subject areas: social justice, redistribution, work, and institutional legitimacy and trust.

Sustainable Credit Guarantee Associations

Purpose of the paper
This research analyses credit guarantee associations and their contribution to financial solutions for local societies. Credit cooperatives aim to guarantee bank loans for micro, and small and medium-sized enterprises.

Research method
Qualitative data were gathered through semi-structured interviews and direct observation with organisations, public authorities, businesses and bank institutions to conduct a case study of Upper Norrlands Credit Guarantee Association (ONKGF), in Sweden.

Research Findings
Cooperative enterprises have been democratically owned and controlled by their members and have taken economic and social responsibility for the development of local societies and businesses for the benefits of the members and the society. The research shows that ONKGF creates relations with the members by communicating their value base as a cooperative organisation. They develop cooperation with local banks to support commercial business and entrepreneurs who want to start and finance their own businesses. The get advantage to attract new members by emphasising democratic management and members’ sovereignty, educate members, network with authorities and bank officials in charge of handling loans and with local and global organisations using mouth to mouth marketing. For the cooperative credit guarantee association we can see an enlargement of the market and members’ participation and also need for innovations to sustain its business. New entrepreneurial activities face difficulties because of lack of stable financial resources.

Main Contribution
The study contributes to the literature of credit cooperative financial sector, by presenting a model of successful operation of ONKGF. We recommend managers to develop networks of members and other stakeholders to promote cooperative collateral financial activities in the local economy to legitimate and sustain their business in the local society.

Social Memories In South America: Generational Narratives In Times Of Political Youth Activism

Social memories in South America: generational narratives in times of political youth activism

Raimundo Frei (PhD Candidate)
Humboldt Universität zu Berlin

Given the recent, extensive political youth activism in Argentina and Chile, these two post-authoritarian countries provide fertile grounds in order to explore identity boundaries and those born after the dictatorships in the Southern Cone. Against this background, the main research questions are whether and how generational narratives have emerged in the context of political democratization.

Generational narratives link life course experiences with sequences of collective events. This connection must not be regarded in terms of Mannheim’s idea of ‘participation in the same destiny’. Rather, by sharing stories of a common past, people narrate a generational identity. Put briefly, generational narratives are attempts to bestow coherence and connect biography and history.

My analysis draws on sixty narrative interviews with people born in two different age-cohorts (1965-1974 and 1985-1994) in Buenos Aires and Santiago de Chile. It will show that whereas long-standing politics of memory in Argentina have created a discursive homogeneity and continuity between generations, the cycle of youth mobilization in Chile during 2006-2011 opened up the opportunity to create new narratives through collective remembering.

My analysis will thus illustrate how ordinary members of the respective society create (or not) generational identities by narrating past and present. That is, I will show that Argentina is an extraordinary social space to observe continuity between generations which risks perpetuating historical divisions, while the Chilean youth movement has contributed to shed light on the country’s undemocratic past.

Consumidores Críticos, Pacientes Informados y Pacientes Tradicionales: Visiones y Prácticas De Cuidado De La Salud Entre Usuarios y No Usuarios De Medicinas Alternativas En Buenos Aires

Unos de los rasgos de las sociedades occidentales es el énfasis en la responsabilidad individual en el cuidado integral de la salud. Conservar y mejorar la salud se ha convertido en una medida del logro personal en un contexto epide-miológico en el que se han incrementado la mortalidad y morbilidad debido a nuevas transmisiones y el envejecimiento de la población. Sin embargo, los sistemas de salud se han caracterizado por su falta de transparencia, participación de los ciudadanos y compromiso con la salud de las personas. La multiplicidad de prácticas de cuidado se acomodan o se contraponen, o acomodan de manera complementaria, los de las medicinas alternativas que destacan su capacidad curativa, el bienestar psicofísico y espiritual, y el rol activo del individuo en la salud holística. Basándonos en el análisis cualitativo de 6 grupos focalizados con varones y mujeres de clase media de entre 20 y 50 años de edad realizados en el Área Metropolitana de Buenos Aires en el 2013, analizamos sus concepciones de salud y riesgo, la credibilidad otorgada a los distintos sistemas expertos y saberes populares, y las autocímeras emergentes en torno a las prácticas de cuidado. Entre estas imágenes identificamos, la del consumidor crítico frente a la “moda de la vida saludable” y la creciente com-mericalización de productos y servicios bajo esta rúbrica, así como respecto el uso de fármacos; la del paciente informado que a partir de la experiencia personal y de terceros, la información disponible en Internet, los medios masivos de comu-nicación, y la literatura de divulgación, opta por distintas alternativas de cuidado –y buscando la complementariedad terapéutica– o bien descarta la opción de recurrir a medicinas alternativas; y la del paciente tradicional que se siente bien cuidado por los especialistas de la biomedicina y que participa de redes familiares y sociales en las que no se cuestiona el paradigma biomédico.
surveillance, comparative effectiveness research, etc.), thereby improving quality while also lowering care costs. Yet, while HIEs stand to transform systems care in some significant ways, they also generate new risks associated with the ubiquitous flows of personal health information. Using documentary evidence (and informed by debates in content- and discourse-analysis), this paper considers how HIEs are conceptualizing, addressing, and attempting to manage emergent risks. With particular attention to the ways that patients are rendered transparent—and focusing on how they are made responsible for managing the risks associated with flows of their personal health information—this paper critically examines potential the unintended consequences of HIEs in the US.

Solidarity (and alternative) Economy and Its Anarchist Grammar

This paper demonstrates the value of French pragmatist sociology, and particularly the methodological device of a 'grammar' to articulate the normative macroelements that underpin the organizational principles of the solidarity economy movement in France. Our grammatical analysis demonstrates that the loosely coupled movement is held together by a shared libertarian imaginary. We identify as its core four principles about an alternative organization of economic activity: creativity, conviviality, self-management and political activism; and we trace their historical roots in 19th century libertarian socialism and their renaissance in radical social movements in the 1970s. Analyzing the theorization of the libertarian imaginary provided by Pourovod in the 19th and movement protagonists in the 20th century, we argue that the values of the libertarian imaginary have become recombined into a composite construct of complementary, yet potentially conflicting grammatical elements. Presenting a case of a solidarity economy organization, we illustrate how organizational practices are evaluated through a grammatical lens, but also how the movement can lose its critical edge when the grammar is 'extrapolated.' 'Extrapolation' offers an alternative explanation for movement instrumentalization, a frequently observed and deplored phenomenon in social movements, and suggests that it takes place not by co-option of an external and conflicting value logic, but by over-emphasizing a value that is constitutive of the grammar itself.

Solidarity Regimes and Individualization: Institutional Change In Social Security Schemes

Since the 1990s so-called mature and incoming welfare states have undergone fundamental reforms. These reforms are related to social, demographic and cultural changes, and they are at the same time strongly influenced by a currently leading political concept: i.e. that of the self-responsible social citizen. Concurrently, it is widely assumed that welfare institutions will align and finally lead to institutional convergence, in our case to institutions based on the concept of self-responsibility.

Concepts, however, find entrance into institutions in very different ways. Actors, for instance, interpret self-responsibility in terms of individualization on the one hand, or subsidiarity how the movement can loose its critical edge when the grammar is 'extrapolated'. 'Extrapolation' offers an alternative explanation for movement instrumentalization, a frequently observed and deplored phenomenon in social movements, and suggests that it takes place not by co-option of an external and conflicting value logic, but by over-emphasizing a value that is constitutive of the grammar itself.

FREUDENBERG, MAREN* (Free University Berlin, freudenberg@gsnas.fu-berlin.de)

The Emerging Church Movement in the USA As A Critical Response to the Neoliberalization of Religious Organizations

The unprecedented decline in formal religious adherence and sharp increase of religiously unaffiliated Americans at the turn of the 21st century have led to critical assessments of the ways in which neoliberalized religious organizations respond to the spiritual needs of society in an age of fragmentation. The church model with its consumer-oriented, feel-good individualism and emphasis on entertainment and choice is a prime example of the encroachment of neoliberal, for-profit organizations employing private sector business strategies on the religious market. This model is increasingly rejected by those people seeking more 'genuine' ways of practicing their faith in 'authentic' faith communities.

The widespread opposition to the neoliberalization of religious organizations has resulted in the surge of a novel religious movement in the United States and elsewhere: the Emerging Church Movement (ECM). In the American context, the ECM is born as a reaction to mega-churches and seeker sensitive approaches in the late 20th century. Its followers question and critique existing religious organizations and the influence of neoliberalism on their practices and theologies. Interestingly, the ECM's flat hierarchies and localized organization are themselves characteristic of neoliberalism, which raises the question to what extent the theologies and variations of orthopraxy represented in this group are also influenced by the spillover effects of free market ideology into the religious sphere.

This paper discusses the ECM as a manifestation of the rejection of neoliberalized religious organizations in the United States in the 21st century. It presents empirical examples of emerging church practices in the Midwest and shows how not only which element of neoliberalism-inspired religion the followers of this movement oppose, but also the kinds of alternatives they envision and implement. It addresses the question of whether the ECM is able to leave neoliberalized religion behind at all on its search for 'genuine' and authentic faith.

FREUDENBERG, MAREN* (Free University Berlin, freudenberg@gsnas.fu-berlin.de)

The Emerging Church Movement: A New Form of Religious Organization?

The last 30 years have seen an unprecedented decline in formal religious adherence in the United States that has affected a range of religious organizations. As a result, institutionalized religion has undergone heavy scrutiny regarding its ability to respond to the spiritual needs of society in postmodernity. With the deterioration of grand narratives and absolute truths, institutionalized religion is rapidly losing its monopoly on interpreting the faith and prescribing the ways in which it is to be practiced. Instead, local religious communities are claiming the right to redefine what it means to lead a faithfully Christian life in their individual contexts.

The widespread criticism of institutionalized religion has resulted in the surge of a novel religious movement in the United States and elsewhere: the Emerging Church Movement (ECM). The ECM has no institutional structure or unified beliefs, instead spanning across a range of religious orientations from conservative to liberal, post-evangelical to neo-charismatic. It is often described as a ‘conversational’ in that its followers question and criticize existing religious traditions and theological and experiment with alternative ways of practicing their faith. They seek to overcome polarizing labels and preconceptions and the institutional and
At The Leading Edge – Does Gender Still Matter? A Qualitative Study On Successful Coping Strategies and Prevailing Obstacles In Academia. Analysing Female Careers In Austria

At the leading edge – Does gender still matter? A qualitative study on successful coping strategies and prevailing obstacles in academia. Analysing female careers in Austria

Although academic science in Austria is still male-dominated to a great extent, recent development evidences change especially in higher positions. Statistics on the Austrian setting show that the share of female scientists at upper levels of the career ladder is shifting slightly but steadily. This article deals with explanations for this development and analyses crucial biographical aspects of female academic careers in leading positions. For this reason, the paper focuses on three key research questions: Which obstacles hinder successful female careers? How do successful female scientists overcome these obstacles and which long-term strategies are used to acquire or hold leading positions? The findings are based on eleven qualitative interviews with the most successful female scholars in Austria (i.e., rectors and vice-rectors). The findings are arranged in three sections: (1) The results emphasise obstacles impeding female scientific careers. The analysis reveals that informal encounters, (male-dominated) social networks and the requirement both to be geographical mobile and to handle family issues at the same time are important obstacles. (2) The analysis concentrates on the underlying mechanisms in terms of how successfully female scientists manage to overcome these obstacles. With regard to informal encounters, it appears to be important to keep the distance from one’s environment, while pursuit of change can be seen as a crucial mechanism in terms of coping with the negative effects of (male-dominated) networks. Planning and organisational skills are decisive in conciliating geographic mobility and family obligations. (3) Finally, this paper elaborates on different long-term strategies applied by women in order to achieve leading positions.

Increasing Low-Paid Employment in Germany, Austria and Switzerland Between 1995 and 2011. Who Are the Losers of Recent Labour Market Flexibilization?

Since the 1980s, Western societies have been experiencing an increasing flexibilization of their labour markets, which led to a massive expansion of non-standard jobs. Interestingly, and this is the starting point for the present paper, there has been relatively little research done on this topic in German-speaking countries such as Austria, Switzerland and Germany over the 15 years. Taking up this research desideratum, we discuss the growth of low-paid employment in these countries.

For the empirical analysis, we use GSOEP, EU-SILC and SHP data from 1995 to 2011. Besides descriptive time series analysis, we present results from logistic regression models and decomposition analysis. Our results confirm a growing trend towards low-paid work in all three countries. Compared to Austria and Switzerland, the German rates are quite low (25% of all jobs in the labor market in 2012), indicating a substantial change in the historically dominant form of labour market regulations towards a liberal labour market regime. By contrary, Switzerland and Austria only show a moderate enlargement of the low-paid sector and therefore pursue the traditional path of strong regulation.

Against this background we highlight the most significant differences and similarities at a national level and display historical trajectories of regulatory processes leading to the emergence of particular regimes of precarious employment.

Moreover, our analysis shows that risks of low-wage employment are not evenly spread across the workforce. In fact, we can observe strong and increasing inequalities between and within special groups. Especially temporary work, part-time employees and workers with fixed-term contracts belong to the losers of the prevailing dynamics on the labour market in those countries. We conclude that the already disadvantaged workforce has to bear special risks produced by recent labour market changes.

Environmental Destruction and the Social Impacts of the Fukushima Nuclear Disaster

The Fukushima nuclear disaster is sometimes called as the worst environmental pollution in Japan. However, the social impact of the Fukushima nuclear disaster has particular features different from other previous environmental pollution cases such as Minamata disease. In this paper I’d like to point out the problems of the refugees from the highly radiation-contaminated area in Fukushima from the perspective on the social structure of pollution victims based on the sociological study of the cases of the ‘kogai’ or the industrial pollution in Japan.

In most cases of kogai, although it took many years for a human damage to be identified as a pollution related disease, the seriousness of the human damage was perceived. Whereas in case of the low dose exposure in the Fukushima disaster, it’s impacts to human health have not been clarified yet and still controversial. At this point, in Fukushima prefecture, more than 150 thousand of people were forced to evacuate from their community soon after the accidents. Recently the national government is trying to shift a focusing point to return and rebuild the communities.

In this paper, I will start with two case studies of environmental movements which are related with ‘kogai’ and have continued. I-tai-i-tai disease (or ‘ouch-ouch’ disease, cadmium poisoning) is the first pollution related disease certified by national government in 1968. The grass-root movements I-tai-i-tai disease have continued to work for more than forty years. They have also affected the cadmium regulation policy in Japan and have support-ed the residential movements occurred in other cadmium contamination area. And they have enforced the environmental measures of the mining company which was a defendant of the trial filed by the victims of I-tai-i-tai disease in 1968. Recently they have succeeded to reduce the cadmium emission to nearly zero lev-el. The long-term corporative measures between the residents and the company have attracted considerable attention from some East Asian Countries.

There are some movements to inform Asian people of the experiences of pollution problems in Japan. Asia Arsenic Network (AAN) organized after the settlement of Toroku Arsenic Poisoning low suit in 1991 is one of the most important groups in this respect. AAN supports the people who are suffering from arsenic pollutions caused by natural water flow, mainly in Bangladesh.

At the final section of this paper I’ll consider the meaning of these movements, referring to the grass-roots movements following Love Canal case in the USA.

Do Increasing Attorneys Mean Increasing Poor Attorneys?

In this paper, I will analyze the income distribution of active attorneys in Japan using the decennial income survey data from 1980 to 2010 collected by the Japan Federation of Bar Associations and the Civil Society Corruption Survey of the 62nd Legal Apprenticeship Cohort (registered in 2009) conducted in 2010 and early 2014 by myself and other legal sociologists as well as the yearly tax statistics compiled by the National Tax Agency Japan. The number of Japanese attorneys is rapidly increasing, especially since Japanese style of law school was inaugurated in 2004. Not only this time, but also whenever an agenda to increase the number of attorney...
neys was at stake, critics argued that the larger number of attorneys would have too much competition and yield many poor attorneys, and in turn debases the quality of legal services provided. Indeed media have repeatedly reported some new attorneys are so poor. I found that the income distribution of attorneys has not changed so much as critics argued even in the latest data available, controlling for the age and gender compositions of attorneys. However, the percentage of lower middle income attorneys are slightly larger in the 2010 survey compared to previous data. Based on these analyses, I will argue that current sentiment shared by many attorneys, like "the more lawyers are, the poorer they are," is not strongly supported by the fact but it would be a necessary sentiment of the transitional period from the age of the litigation lawyer to that of socially permeated lawyer.

Work Motivation and Social Networking Development in Professionals' Job Change Behavior: A Comparison Between the U.S. and Japan

As professionals' work-related knowledge is not dependent on the organization to which they are employed, professionals are thought to be able to move between organizations more easily than non-professionals. However a great number of professionals in Japan enjoy a lifetime employment system and never change organizations as many large companies in highly professional fields such as science and technology, etc. adopt internal labor market-type employment systems. Therefore, Japanese professionals tend to hope their growth in the same company, and not to change jobs even if the work is not interesting enough. In the U.S. on the other hand, professionals in Silicon Valley, California found new ventures one after another and frequently change jobs. They dislike to continue the same job for three years, because they always are anxious to the opportunity which makes them grow. They have a lot of interesting to the new projects which satisfy their curiosity. For this purpose, they are extending their network not only in the same professional area, but also with other professionals or even non-professionals to meet new idea. They are also looking for colleagues with whom to collaborate to realize such idea.

As a result, professional social networking development in Japan tends to be confined to professional groups such as affiliated companies and academic conferences, etc. Meanwhile, as professionals in Silicon Valley are in a high-risk situation with the fear of bankruptcy and dismissal lurking behind success, a wide variety of social networks consisting of former colleagues, persons in the community, PTA members, and members of the same ethnic group, etc. have developed. These differences in the social environment surrounding professionals have impacted the development of social networks; while employment in Japan divides networks into public organizational networks and private networks, Silicon Valley professionals acquire job opportunities through mixed public and private networks.

Coalition-Building Process Between Socially Heterogeneous Organizations in Japanese Biodiversity Movements

This paper explores how and why social movement organizations build coalitions from the perspective of multi-organizational fields, with a particular focus on coalitions between socially heterogeneous organizations. While researching the interaction between social movements and their opponents, most scholars tend to pay less attention to coalitions/alliances between other movement groups or organizations in different sectors, despite suggesting their importance in social movement dynamics. In this paper, existing analytical approaches toward inter-organizational coalition/alliance—namely “coalition work” (Staggenborg 1986), “mesomobilization” (Gerhards & Rucht 1992), and “resource dependence perspective” (from the sociology of the organization)—are comparatively examined and tested. In a case study, this paper attempts to reorder the determinants of coalition building proposed by these analyses.

The case study examines the environmental movements in Japan, particularly organizations involved in advocacy activities for conservation of biodiversity since the 2000s. These biodiversity issues involve many different sub-issues—for example, preservation of wildlife, sustainable development, access to genetic resources and benefit sharing, and biosafety of living modified organisms—whereby coalitions among many different actors have been critically important. The following specific movements are reported in this paper: (1) movements for alien fish problems in the early 2000s, in which environmental citizen groups, and fisheries associations and academic committees built some coalitions; against sports fishing groups (2) nongovernmental organizations (NGOs) alliance for the tenth meeting of the Conference of the Parties to the Convention on Biological Diversity (CBD/ COP 10) in Nagoya city during 2010, in which there was coalition building between environment groups, consumer organizations, and business companies. In discussing these cases, I focus on the interaction between framings and counter-framings, and on resources distribution among these actors.

Japanese Youth “Inward Tendency”: Analysis of Surveys of Japan Youth Study Group

This presentation aims to discuss “inward tendency” of Japanese youth based on the analysis of social survey of 2012, and a secondary analysis of social surveys of 1992 and 2002, all of which were conducted by Japan Youth Study Group. The term “inward tendency” refers to Japanese youth attitudes that is more “domestic-oriented,” rather than “internationally-oriented” in character. However, up-to-date, its usage is not clear: it refers to both the decrease of youth travelling overseas, and the decrease of students studying overseas. Since the “inward tendency” of Japanese youth started to be considered a social issue in the beginning of 2000s, there is no previous studies, as well as statistical analysis, dealing with it. Therefore, I will review studies on youth in Japan in terms of methodology, examine some government surveys, and discuss which social factors contribute to “inward tendency.” This presentation will attempt to address the following issues in dealing with the study of youth. Though in terms of methodology, it is important to make comparison with other age cohorts in order to understand the characteristics of youth (16-29 years of age), there was no such arrangements in previous surveys. Also in order to own for changes in youth attitudes, it is necessary to carry out repeated cross-sectional surveys. Though its necessity was pointed out, the age, period and cohort were not distinguished (Fujimura 1995). Furthermore, it is assumed that “inward tendency” correlates with other attitudes, such as intimacy, conservatism, and moral issues. The analysis of data makes it possible to clarify which factors correlates to “inward tendency.” And, consequently, it will be discussed that it is not sufficient to analyze the issue of “inward tendency” just as youth attitude, but it is also necessary to consider other macro factors and policies that have an impact on society.

An Integrative Approach to Understand Resource Investment, Livelihood and Food Security Nexus in Laos

The paper draws attention to an integrative approach of studying the nexus of resource development, livelihood and food security in resource rich but economically poor developing countries. The paper illustrates an example of applying mixed method approach, which incorporates spatial analysis, community and household survey to study the links between resource development, livelihood and food security in Laos, a least developed country in the mainland Southeast Asia known for its resource wealth. The paper highlights the linkage between the declining resource base and the problem of food insecurity in Laos. It also highlights the inequitable effects of resource investments on people’s access to food and wellbeing, and the ways in which different population groups are adapting to the changing social and natural environment.

Fujiyama, Hideki* (Dokkyo University, fujiyame@dokkyo.ac.jp)

Network Effects and Activities of University Students in a Seminar

University seminars require students to be involved in intensive activities that require cooperation with each other and also develop their own skills and abilities. In such activities, their friends are also an important factor for their activities—we call these network effects. This is similar to activities pursued within modern organizations such as companies and non-profit organizations. Using Bonacich centrality and Gini index, we can take account of these direct and indirect network effects. The aim of this paper is to empirically examine the determinants of activities in a university seminar. In addition to network effects, we included other factors such as the “Fundamental Competencies for Working Persons” that is promoted by the Ministry of Economic Trade and Industry, the “generalized trust” and students’ GPA. Results indicate that Bonacich centrality has a positive and significant effect on students’ activities and its magnitude is as the same as that of GPA. In the Fundamental Competencies for Working Persons the competency of “discipline” is both positive and significant. For generalized trust results are negative and significant and this effect is interpreted by Uslaner’s (2008) generalized trust as optimism. These three significant factors are consistent with Putnam’s (1993) definition of social capital.

The Structure of the Bangladesh’s Economy
Bangladesh is described as the “Next 11” or “Frontier 5” and it is expected that it will grow to be a key player in the world economy. Macro-economic dates, such as GDP growth rate which keeps as high as 6% since 2000’s, are indicators for the potential of Bangladesh’s economy. The Ready-Made Garment (RMG) sector is the country’s most dominant industry as well as its leading industry to earn foreign currency. It plays an important role not only in domestic economy, but also international market. The thriving RMG sector accounts for approximately 80% of total exports. As a major apparel products exporter, Bangladesh is ranked in 4th place behind China, Hong Kong, and Italy in the supply of apparel goods to the world market.

Even though RMG sector in Bangladesh is making remarkable progress, the industry stands on a fragile base. The following aspects should be taken into account when evaluating the real circumstance surrounding RMG sector: (1) RMG sector is highly dependent on imported raw materials specifically from China and India; (2) RMG which is divided into two categories, woven and knit, can only self sustain in knit sector. While knit sector supply meets most demands, woven sector that make higher value add-on products is far behind at about 20%; (3) Bangladesh’s competitive advantage is found largely in lower wages among other competing countries such as China, India, Cambodia, Vietnam and so forth. This fact is strongly linked to working condition of RMG workers, which represent current tragedies in RMG factories; (4) Sourcing countries has been changing and it depends on international market trends. The possibility of Bangladesh remaining in its current stage is uncertain due to changing conditions in the external environment.

PR or Social Movement?: Against Climate Change Campaigns in Japan

This presentation examines the national campaign against climate change in Japan through the “frame alignment process” with from the state to the public based on the frame analysis in the social movement research.

State sponsored global environmental campaigns have been blamed for its policies that hide the economic disparity and political-social inequality underlying global environmental problems and trivializing it into matters of personal effort. However, specific analysis of these campaign activities had yet to be conducted.

Thus, I investigated one of the national campaigns against climate change, Team Minus 6% (2005-2010) and Challenge 25 (2010-2013), in order to clarify problems that had been focused on and strategies that had been adopted. The results showed an overall preference for “frame bridging” and “frame amplification” in the frame alignment process in order to hide conflicts among stakeholders. They repeatedly represented and stressed unity in the fight against climate change through “All Japan.” In particular,

1. They focused on non-eco-friendly lifestyles as the major cause of increasing carbon dioxide emissions while lobbying efforts, against politics delaying the solution of climate change, receded into the background.
2. They presented the value of “individual environmentalism” in which the efforts of every individual adds up to a major force against climate change. As proof, they would quantify carbon dioxide reductions in accordance to numbers mobilized in a campaign or of individual actions.
3. They adopted a “personal interest strategy,” whereas individual interests and climate change issues are connected.

Uses of the Future: The Problem of Theodicy in Nagasaki

How is it possible to construct a meaning for the collective trauma among various social groups? This paper explores how people in Nagasaki respond to the collective suffering of the atomic bomb attack through a different approach to the problem of theodicy. The paper focuses on the religious mode of theodicy which can be seen among the catholic community on one hand, and “tragic mode of theodicy” (Simko 2012) observed at the Nagasaki City Atomic Bomb Memorial Park in other hand, to investigate a way to deal with collective suffering in contemporary public arena. Urakami, ground zero of the bombing, was one of the residential areas for catholic communities that historically have suffered discrimination in Nagasaki. Immediately after the bombing, religious theodicy could be seen among the community that attempts teleologically to interpret the collective suffering as a “burnt offering” by providence. Although the catholic community found solace in this theodicy at that point, it was later criticized in public not only because it acquits the responsible of the bombing but it also creates semantic conflicts among a variety of social groups that were affected. In contrast with the theodicy of the catholic community, narratives of suffering in the non-catholic community were more likely to be oriented toward the future by realization of the ideal of the “world peace” and “abolition of nuclear weapons.” 68 years after the attack, the latter mode of theodicy is predominant in the public commemorations of the Nagasaki atomic bomb attack. It is implied that the secular mode of theodicy oriented toward the future is more prevalent in contemporary Japanese society than the religious mode of theodicy that justifies the past.

Social Inequality of Immigrants in Old Age: Exploring Multiple Dimensions of Social Network and Resource Flow during the Great Recession

This is a qualitative research project whose data comes from 10-month ethnographic field work at two senior centers in Phoenix, Arizona that respectively consist of at least two predominant ethnic groups and that the majority of Asian or Latin background minority seniors are of foreign born. The project examines the access to social support and flow of resources among the older foreign-born population relative to their ties to the community as well as to their family. The primary goal of this study is to understand how the current sociopolitical context in Arizona affects the lives of old immigrants and might channel different ways of involvement in their social networks which are shaped by their living arrangements, relationships with younger generations in family/household, participation in community activities and in the labor market, and access to social welfare and services. The project tries to capture various ways in which immigrants in old age navigate their everyday lives when faced with economic and physiological obstacles as well as opportunities, and by doing so, it seeks to understand how they not only access and utilize but also contribute to the pool of resources. The secondary goal is to understand the life course impacts of quality and quantity of social and economic resources that are available to immigrants—individually and as a whole—as an ethnic community. The project examines the factors that encourage the expansion of social networks and reciprocity throughout a life course as they impact well-being in old age. It also explores how individual experiences may cumulatively contribute to well-being of the members who share the social networks. With these goals in mind, the project seeks to investigate probable factors that are associated with persistence of social inequality in old age at community level which may be further impacted by the sociopolitical context of Arizona.

On the Potential of the Classic Japanese Theories of Social and Law

After the end of the Cold War, since early 1990s, the structure of the world society has been greatly changing under the pressure of globalization. The world society is politically multi-polarized, economically covered with the global market and the law becomes complex and hybrid on the global level. Every national society becomes multi-lingual and multi-cultural. Worldwide information
networks make the global transaction much easier than in former times. Legal scholars are as if on an uncertain voyage.

However, against all expectations, I insist that we can find a helpful compass for the voyage in the discussion by classic Japanese socioc-legal theorists. The modern Japanese law had been constituted under the pressure of the global colonialization in the second half of 19th century, since opening the country in the late Edo era. Still in the first half of 20th century, Japanese legal scholars had to be strongly conscious of the global pressure to harmonize between traditional Japanese/Asian laws and modernized Western laws. Even Japan’s defeat in World War II was regarded as a result of less attainment of the legal modernization in Japan. The pioneer theorists of sociology of law acted in that age.

History repeats itself. Global legal issues similar to that of in the age of colonialization have been revived since 1990s. Current hot issues relating to the interface between the global economic laws and domestic civil laws are quite similar to that of the transplantation of western law into Japanese/Asian society. The discussion on the support for the development of laws in underdeveloped countries is also a revived issue in the colonialization age. Of course, the discussions on the polarization between traditional Japanese/Asian and modernized Western law are outdated. Nevertheless, it seems that we can extract valuable indications from the classic Japanese theories of sociology of law.

Representation on the Experience of Suffering in Urban Space: Wall Murals in Belfast

The purpose of this presentation is to show how hostility and empathy have been expressed in post conflict Northern Ireland society by using an analytical framework of visual data in sociology.

Visual culture has been widely argued in various disciplines. Although many disciplines have reflective analyzed visual representation, my focus here is to apply a sociological method of urban studies on the analysis of the visual representation.

My research interest is to examine the collective consciousness and memories of two communities where their identities have been in part shaped by the images and icons shared in their communities. To do so, I will deal with and discuss wall paintings in Belfast. Mural can be seen as a community medium (Rolston 1998), since the approval of the community is needed in order for a mural to exist in the community for a long time.

My focus is on production, circulation and reception of murals in the urban space. In particular, I will look at the emplacement of murals in order to assess the positioning of each image in community.

The points that have been revealed in this study are 1) Making use of images from famous pictures, murals on national histories usually express confrontation and tend to be located along main roads in the communities, 2) Remembering the dark side of the history of their communities is considered to be expressed (not covered up) in both communities, although some of them are usually seen in residential areas, 3) “Empathy” between the two communities can be seen when they deal with the experience of sufferings under the authority.

Emerging Child Care Services in France and Japan: Public, Private or Associative?

Early childhood education and care (ECEC) system comes to the front in three contexts today. First, quality child care services are indispensable for parents to continue working after their child birth. Second, quality child care services are important for young children to develop their sociability. Third, the quality of the child care services depends on the working conditions of child care staff. In many countries, various child care services are emerging: municipal day care center, on-site day care center, family day care, small day care, parental day care and so on. There are also some facilities such as information center for families, open space for parents, toy museum for kids and so on. Looking at the child care providers, the private sector and the associational sector are growing instead of the public sector. What are the factors of this change? How shall this change influence the quality of ECEC system?

I selected two countries for comparison: France and Japan. First I will outline the historical development of the ECEC system in both countries and compare the present situation on the basis of national data. Second I will show some examples of good practices in education and care system provided by the associative sector as well as the private sector from my fieldwork in both countries. At last we will discuss about the conditions for quality child care.

From Field To Theory and Back - The Biographical (re-) Construction Of An Unconventional Family Through A Multi-Variant Range Of Data

By use of the case-related reconstructive method, I will show how various types of data can be integrated in the research process. The topic of interest is an unconventional family, whereby unconventional means the absence of the biological parents. Instead of the conventional family structure, the parental role is fulfilled by a homosexual female couple, who realised their wish for children with the help of a sperm donation. The central method of data collection is the family-historical interview as a core component of the ethnographical access to the world of children. From that, other methods of data collection are needed to ensure that every case is incorporated in the analysis from various angles. This approach is based on the following principle: case reconstructions are not fulfilled in their entirety if only the transcribed interviews of the family history are considered. The set of data also consists of observational data (e.g., the constitution of interactions and rituals of welcoming gestures, the seating arrangements, door bell nameplates), but also family indicative documents such as family photographs. Furthermore, data is obtained concerning the family of origin and the life course. This data is collected in a genogram, which is sort of a genealogical tree displaying the family in a generational context. This approach allows the investigation of the „biography as a life context of the milieu“ (Richard Grahnoff). The aim is to explain biographical constructs, which are limitedly accessible to the own reflection, as an act of negotiation with the family of origin. However, case-reconstructions serve as a basis for theory development. The aim is to overcome the description of isolated cases. I will also discuss in my lecture the interpretation of the results in the context of theory development.

Network Diversity and Educational Inequality: A Case Study Of China

Following the line of James Coleman, this paper focuses on how network diversity influences educational inequality. Social capital is positively related to one’s academic performance. One way to gain more social capital is having a diverse social network as we can access to various kinds of social capital from within the network. However, individuals with different social backgrounds disadvantage students tend to have a less diverse social network. However, if students from a disadvantaged group have a less diverse educational support network, then why would some of them still be able to achieve academic success, such as attending an elite university? This study examines the case of students from both disadvantaged and advantaged groups in China as an example to answer the above question.

In the summer of 2008, we conducted in-depth interviews with 30 undergraduate students from two of the most prestigious universities in China – Peking University and Tsinghua University. Twenty were rural students, and the other 10 urban. By comparing the educational support networks of these two groups, we discovered that the educational support network of rural students is generally larger than that of urban students. This is because rural students face more barriers than urban students and their network members are less able to provide them with resources, so they need more supporters than urban students in their journey to elite colleges. This indicates that rural students cannot get much help from the state and therefore have to rely on their own resources to achieve academic mobility.

Nervous System: Media, Communications and the Fight for the City

As conventional communities confront the specter of austerity budgets, growing inequality and a diminishing public sector, the question that organizers encounter is how to shift from multiple autonomous movements in a city to one movement for the city. This paper details and analyzes the role of media and communications in the process of developing a united front of people and organizations fighting for urban social change. Specifically, we look at the practices of the Media Mobilizing Project (MMP) in Philadelphia. MMP is both a community-based media and communications network and a network of organizations across the Philadelphia region that aim to “build a movement to end poverty led by the poor and working class, united across color lines.” Through MMP’s use of media and communications we argue that communication technologies can be reimagined as a tool of engagement, a system that connects different parts of the urban social body, bring students together with janitors, teachers, and community members fighting displacement.
In this paper we use the concept of the nervous system to analyze the manner through which media conjoints people across the fragmented political topography of the region. In this sense at the core we argue MMP utilizes an independent media and communications infrastructure to collapse isolation between groups throughout the city. The concept of a communications nervous system that serves to build a unified front politics, challenges the long held assumption that media is the arm of an already pre-existing movement, instead showing how through specific media and communication practices (social media, radio, video) new organizational forms and collective identity processes can emerge. In this sense, the paper provides a conceptual framework of how to study and understand the relationship between social movements and media in a contemporary urban setting.

Norms, Hierarchy, and Market Order: A Study of Closed Auction Markets for Antiques and Secondhand Goods

This study explores how market order emerges in Japanese closed auction markets for antiques and secondhand goods. Most auction markets for antiques and secondhand goods are exclusive to dealers in Japan. The Antique Business Act (Kobutsu Eigen Ho) states that participants in auction markets must have a secondhand goods dealer license. Participants also need to obtain a reference from an existing member to enter the markets. Dealers belong to auction markets and associate with other members to establish their reputation as reputable dealers, although the members compete to acquire articles at the auctions. This paper presents the norms and hierarchical relationships in closed auctions that bring order to the markets.

Norns in markets are beliefs about the expected behavior of market participants. The norms alone are not sufficient to engender market order; enforcement mechanisms are necessary. A hierarchy is a typical enforcement mechanism. Authorities observe members and then sanction those who deviate from the norms. Although markets and hierarchies have been regarded as opposing governance mechanisms, hierarchical relations emerge in markets as well as in groups. Market participants in the same marketplace differ in terms of status and power.

The norms in Japanese auction markets require participants to bid based on their own evaluation of items. Buyers who do not have much expertise on auctioned articles may try to follow experts' bidding. Such bidding is condemned by authorities. We compared the behavior of members to that of top buyers who have significant influence in the markets. Their status is earned by their contribution to the markets. They make great efforts to attract dealers and goods to the markets. Participants accept their authority because they know that the markets do not function without their contributions. Although their influence will distort market competition, the hierarchical structure ensures orderly function in markets.

Youth Justice Programs in New York City

Youth justice programs have been part of the fabric of urban landscapes since Civil Rights. During the 1960s and 70s such programs were explicit in helping young people, particularly young people of color, fight oppression and participate in democratic processes. Today, some argue that the sociopolitical aims of such programs are falling by the wayside due to the focus on "youth development" which emphasizes the growth of individual young people, rather than the growth and health of urban communities (Ginwright & Cammarota, 2002). Not only can we not expect young people to lead healthy, productive lives when growing up under abhorrent conditions, we believe young people can be a part of the solution for transforming their environments. Youth justice programs engage young people as active agents of change in their own lives. While the outcomes of youth justice programs have been examined (e.g., Austria, 2006; Ginwright and Cammarota, 2002; Hill, 2004), there has been a lack of analyses of the processes critical to determining how they work, how they are implemented, or why such processes are effective. The purpose of this research was to examine such processes by examining how youth workers conceptualize the inequities facing urban youth today and how those conceptions translate into practice (e.g., into methods for engaging young people in social justice). We wanted to understand the key inequities staff identify as critical in the lives of urban youth and how young people are engaged in understanding and responding to such inequities (what processes are used). We interviewed key staff from youth justice programs in the Northeast of the United States in order to obtain rich qualitative data for addressing the research questions.

Probability and Timing of Having a Second Child in Japan: Does Gender and Characteristics of the First-Born Matter?

This study examines whether gender and characteristics of the first-born child predict the probability and timing of a second birth among Japanese parents. I examine two explanations.

Daughter preference has become common among Japanese couples since the mid-1980s (National Institute of Population and Social Security Research, 2011). In 2010, 69% of couples engaged in second births if they were to have only one child. Past research reveals that having a child of the preferred gender is associated with a higher probability of a subsequent birth and a shorter birth interval if they choose to have an additional child (e.g., Larsen et al., 1998). Therefore, given wide-
spread daughter preference, I investigate whether Japanese parents with a first-
born son tend to not only have a second child but also have one sooner.

Previous research shows that having a first child with socioemotional and
behavioral traits that make parenting easier is associated with a second birth (e.g.
Jokela, 2010). It is commonly known that young male children are more difficult
to raise than females because they are more prone to illness and injury. Also, boys are considered more physically active and require parental attention. Then,
parents with a first-born son may rather hesitate to transition to a second birth or postpone having another child.

Using the Longitudinal Survey of Newborns in the 21st Century, a nationally representative survey of children born in 2001 in Japan, I explore the above explana-
tions. I use Cox regression to model the hazard of progression to a second birth among parents of first-born children surveyed. I especially focus on how
gender of the first-born child and measures of parenting difficulty (i.e. occurrence of illnesses/injuries, accidents, perceived parenting burden/ anxiety) as well as other characteristics affect parity progression. Interactions between gender and par-
enting difficulty on parity progression will also be considered.

RAWLINSON, PADDY (Monash University)
Child Trafficking in the EU

The paper presents findings from an empirical study of the trafficking of Roma
children into the UK, involving the establishment of the first EU wide police Joint
Investigative Team (JIT) to investigate the illegal movement of humans in Europe.
The paper draws on 12 months of UK-based research and four research visits to
Romania and Bulgaria yielding more that 100 hours of interview data collected from
interviews with senior actors within policing and justice agencies, Roma ad-
vocacy NGOs, and child protection organisations in the UK, Romania and Bulgar-
ia. This paper will also investigate the problems of policing and protecting mar-
ginalised populations across different jurisdictions and how vulnerabilities are
exacerbated by the diverse and often conflicting remits of the various agencies
involved. The paper discusses how the impact of structural issues such as poverty
and exclusion, and the resulting conflation of the criminalisation and victimisation of
the Roma, has not only limited the effectiveness of available responses to child
trafficking, but also served to aggravate the increasingly adverse conditions faced by
Europe's favourite scapegoat. The paper additionally seeks to progress a the-
oretical space by linking such analysis to sociologies of mobility, marginalisation
and the pluralised rendering of criminalised and victimised 'others'. Here and are the
myriad ways in which (national and organisational) borders are imagined, gov-
nored and represented to by diverse groups of criminals, victims, criminal justice
and social services agencies.

TG04-945.4
FUSSEY, PETE* (University of Essex, p fussey@essex.ac.uk)
Security, Surveillance and Space: Contested Topologies of
Anticipatory Urban Counter-Terrorist Surveillance

Drawing on data generated from ethnographic research and two years of in-
terviews with counter-terrorism practitioners this paper analyses practices and
arrangements of domestic security surveillance operations in two empirical case
studies: the London Olympic security programme and, also, urban counter-ter-
rorist surveillance measures in a British city. Particular emphasis is placed on the
anticipatory turn in security practice and how collapsing distinctions between
internal and external security draw multiple new actors and agencies into the dis-
patch of counter-terrorism and attendant surveillance practices. With them come
diverse practices, orthodoxies, values, techniques, weightings of risk and ambi-
tions for security and surveillance. The paper argues that topological approaches
informed by Foucauldian notions of 'security' (2007) and biopolitics (2008) provide
theoretical underpinnings of these heterogeneous configurations, tech-
niques and practice of surveillance. Such approaches not only provide conceptual
tools to articulate the diversity, plurality, conflict and cohesion within CT practice
but, also, capture how power simultaneously operates at different scales and for
varying (sometimes competing) purposes. Moreover, the paper argues that such
conceptualisations of security represent a move beyond territorial control to the
management of circulations, where subjects are left in situ, but their mobilities
are monitored, delineated and assessed and, ultimately, reclaim elements of
Foucauldian surveillance-focused debate from the shadow of panoptics analyses.

Parental Leave Policies in the French Work Family Regime: Inno-
vative Formulation, Disappointing Implementation

Theoretically, this proposal hinges its analysis around the concept of Work
Family Regime - which at the same time draws from the knowledge acquired from
large European comparative studies and from those which come from the fem-
nist critique of these works. It then makes a study of the French Work Family
Regime through family policies and, in particular, the formulation and implement-
ation of parental leave.

France has formulated parental leave that is neutral and very innovative in its
formulation but which does not fundamentally question, in its implementation,
the unequal position of men and women in employment and within the family.
Consequently, despite the fact it is very innovative and well founded from the
point of view of a better hinge point between Family and Work, the use of the
device remains almost exclusively female, puts the employment of women at a
disadvantage and reinforces gender inequalities. The world economic crisis, by
making available employment and the means of the social investment more scarce, has only reinforced such a dynamic.

In fact, the real sociological question is less to understand how the crisis is
putting the brakes on (or even destroying) acquired experience in terms of recon-
ciling working life/family life than to measure the growing discrepancies between
social practices and normative frameworks that cause dysfunction and inconsis-
tency phenomena within most contemporary societies. The discrepancy between
standards and practices are reinforced against three contradictory phenomena:
one that refers to the process of homogenising employment ratios between men
and women; a second that refers to the permanence of a sexual allocation of
productive and reproductive activities (sexual division of social activities); and a
third which expresses the desire of women and men to be able to be reconciled
without wearing down their working life and their family life.

fuwa@tmu.ac.jp)
Gender Inequality: Work and Family Conflict in Contemporary
Japan

The number of dual-earner households has increased during the last several
decades in Japan. Nevertheless, women still perform most of the housework,
despite being employed full time. The issue of work and family conflict—particu-
larly for female workers—has drawn the attention of policy makers, because
it has often been associated with the issues of low marriage and fertility rates.
Thus, in order to create family-friendly work environment, many Japanese com-
panies have recently begun implementing policies such as overtime work restric-
tion for employees with young children, enhancement of employees' discretion
over the pace and schedule of work, and introduction of various work-life balance
measures. On one hand, these policies are expected to facilitate the continuous
employment of women. On the other hand, their effects on household manage-
ment—how spouses divide housework and communication with the other—are
uncertain, because these policies are often created taking into account women's
responsibilities at home and aim to reduce women's work and family conflict.
Gender biases may affect the way spouses divide the housework and communi-
cate with each other. This paper examines the impact of friendly-work envi-
ronment on (1) the division of housework between spouses and (2) the frequency
of communication (conversation and having meals together) between spouses.

The Japanese Life Course Panel Survey (LPS), a national longitudinal survey
of the youth and middle-aged in Japan (i.e., individuals from 20 to 40 years old),
was used in this research.

De-Pharmaceuticalizing Sleep? Patient and Professional Perspective on Prescription Hypnotics in UK Primary Care

In this paper we look at UK General Practitioners’ (GPs) views of prescribing hypnotics in primary care and compare and contrast these with patient perspectives and experiences, in the context of debates about the (de)pharmaceuticalisation of sleep. Data are qualitative in nature, drawn from focus groups with chronic users of sleeping pills and semi-structured interviews with GPs. We examine the degree to which the views of patients with respect to both aetiology of their sleep problem and prescription of pharmaceuticals converge or diverge with medical discourses on these matters. We discuss the role of so-called ‘lay expertise’ in the therapeutic management of sleep problems, the perceived value of pharmaceuticals, and the importance of building mutual trust between GPs and patients in the medical encounter.

We argue that in practice, medical views on the value of hypnotics, beliefs about ‘deserving’ and ‘undeserving’ patients and corresponding prescribing practices have permeable borders which regularly break down the partitions between these categories, turning GPs into reluctant prescribers of sleeping pills. In the doctor’s view, the recognition of lay expertise is thought to enrich medical encounters, give patients a voice of their own and increased responsibility for their healthcare practices. From the patients’ perspective, enacting the identity of ‘informed patient’ is not straightforward or easily accomplished. In this study the boundary between medical expert and patient was still fairly robust. The patient perspective emphasizes a split between lay and expert views on the value of pharmaceuticals versus non-pharmacological therapies in the management of sleep problems, as well as in the assessment of risk of becoming addicted to sleeping pills. Our patients therefore contribute to recent work on the (de)pharmaceuticalisation of society, the changing nature of the doctor–patient relationship in the digital age and lay experiences of chronic illness.

Politics and Bureaucracy in Poland: Political Patronage in Senior Civil Service Posts Appointment

An effective, transparent and accountable public administration is one of the key aspects of rule of law. However, public administration in post-communist states is particularly vulnerable to political patronage and cronyism, due to unequal status of political and administrative spheres and underdevelopment of professional civil service. Although the aim of public administration reform in Poland was to shape the civil service corps in such a way as to allow an independent, objective, apolitical and competent group of officers selected in open competition to carry out their tasks regardless of any political changes, political parties try to limit the autonomy of civil service and subject it to their own interests by extending their control of personnel policy into the public administration.

The aim of the paper is to assess to what extent the actual relation between politics and administration reflects the principles contained in the consecutive Acts on civil service. The paper concentrates on the policy towards senior posts in civil service, especially directors general and directors of the departments in ministries, other central institutions and regional offices as these positions are critical to gain direct control over civil service by politicians. Special attention will be dedicated to identifying the practices of subsequent governments aimed at employing political appointees in senior positions in public administration. Such analysis will allow for evaluation of the practical effects of the respective Acts on the professionalization of the Polish civil service as well as to determine the institutional model that serves best the autonomy of Polish public administration.

The paper is based on the results of the research project financed by the Ministry of Science in Poland; the empirical data gathered from a series of in-depth interviews with public officials, press content analysis, expert reports analysis, and analysis of legal framework of civil service functioning.

Secularizing “Traditional Culture” or Sacralizing “Popular Culture”?: Charisma, Community, and Commodification in Contemporary Subcultural Pilgrimage Practices

As religious institutions and practices continue to decline in Japan, a number of young men and women have begun traveling long distances to gather at shrines, temples, and other holy sites. In groups or alone, these pilgrims pay respects at holy altars and purchase votive tablets, protective charms, and other religious paraphernalia that have long marked religious consumption practices in Japan. At first, “this seems to be a reversal of the process of secularization that has intensified around the world under the forces of modernization and late capitalism. However, what draws these individuals is not the charisma of the gods enshrined at these sites, but rather the charisma of fictional characters who inhabit the fantasy worlds of particular manga and anime stories which take these actual holy sites as their settings. These subcultural pilgrims are part of a community of fans who pursue a multi-dimensional connection with two-dimensional, fictional storyworlds. While some scholars view this as the further commercialization and secularization of “traditional” religio-cultural practices, these practices reveal how both “modern” and “traditional” cultural forms—i.e., religion and the popular culture forms of anime/manga—in fact share overlapping cultural idioms of individual effort, charismatic devotion, practical reciprocity, and contingent sociality. In this paper, I analyze the kinds of personal attraction and interpersonal relations formed through participation in subcultural pilgrimages. I suggest that “anime pilgrimage” reveals how religious and secular practices in Japan are neither mutually distinct in a Kantian sense nor dialectically progressive in a Hegelian sense, but rather reciprocally shaped through cultural modes of both ethical sociability and self-deception. This further calls into question conventional views of distinctions between “traditional” and “popular” cultural forms by revealing how new technologies and pop culture media can be reshaped into augmenting and intensifying previous cultural practices of pilgrimage, self-deception, and sociability.

High, Lonesome, and Sociotechnical: The Corporatisation of American Bluegrass Music in Japan

In August 2013, the Takarazuka Bluegrass Festival in Japan marked its 42nd year, making it the world’s second-longest running bluegrass festival. That bluegrass – a quintessentially American popular folk music from the poverty-stricken, rural backwoods of the Southeastern United States – has found such solid purchase in Japan is noteworthy. The continuities and reconfigurations that have marked bluegrass’s transplantation into Japan have sparked discussions on the legal and cultural implications of an artistic style that is not only an option among the country’s youth, but also draws heavily on “traditional” and “modern” expressions of bluegrass culture. In this paper, I argue that the development of bluegrass in Japan is the result of complex interactions of foreign and domestic elements, and that the bluegrass music in Japan necessarily diverges from the American bluegrass scene.

While bluegrass and American folk music more generally have been studied to varying degrees as markers of (transnational) sociohistorical transformation, the embodied, sociotechnical quality of bluegrass music – and indeed of music – has garnered less attention. A key but understudied component in the performance and consumption of bluegrass, in both American and Japan, is its corporeality – the ways in which human bodies instantiate the ideas, identities, relationships and values assigned through bluegrass music to the actors, human and material, who comprise its sociotechnical cosmos. Central to this analysis is the examination not only of the work of human bodies, but also of the agentive work of non-human actors – specifically, the acoustic instruments whose material qualities work recursively with human agents to produce specific physical attitudes, interactions, and limitations. In this paper, I show how the embodiment of bluegrass music in Japan offers important insights into the sociotechnical development of American bluegrass music, as well as the micro-analysis of bodily practice with transnational and transregional movements of goods and ideas. Using ethnographic and historical data and the sociotechnical insights of Bruno Latour and others, I argue that Japanese bluegrass allows performers and consumers to engage explicitly with questions of cultural identity through intimate embodiment and networked practices.
her friends to join a tent protest in Tel-Aviv on “14July,” an initiative that spread throughout Israel with even families and elderly people joining demonstrations, marches and gatherings. Some 800,000 protestors -10% of the Israeli population (nearly 8 million) - comparatively the highest number, even internationally, participated in civilian demonstrations (Schechter, 2012). Public support was 91% (July 2011 Peace Index). Israeli mainstream media - printed, online and electronic – supported the protests, opening live studios on main TV channels (participant observation; Schechter, 2012).

Research questions seek the modes and reciprocal relationships between activists, journalists, new and mainstream media audiences; through a combined methodology: offline and online ethnography and netnography; in-depth interviews with activists and journalists; and quantitative and qualitative text analyses.

The Great Recession Washes Across the Desert: A Study of Neighborhood Organizational Resources and Social Disorganization in the Phoenix-Mesa Urbanized Area

The Great Recession (2008-09) impacted urban communities in the U.S. in many different ways. This paper focuses on the role of organizational resources in mitigating the impact of the recession on one metropolitan community, the Phoenix-Mesa metropolitan area. Our research questions are: did areas' organizational resources mediate the effect of the Great Recession on neighborhood outcomes? From Wilson (1987), Small and McDermott (2006), and our own research we know that some neighborhoods in the metropolitan area have considerably more organizational resources than others. Logan (2012) labels this spatial inequality. Our hypothesis is that areas that had more organizational resources prior to the recession were better able to cope with the crisis than areas with fewer resources (Sampson, 2012). These intermediate structures enabled communities to absorb the shock and stay intact. People could turn to neighborhood establishments for social services, amenities, health care, religious support, and social support. The counter-argument is that this recession was so severe that it destroyed organizational resources that gave some areas advantages over others. The economic crisis not only undermined the capabilities of the household sector, it also destroyed establishments. It was truly an economic tsunami.

The units of analysis are 943 census tracts in the Phoenix-Mesa urbanized area and we use spatial econometric models. We examine data for 2003, 2007, 2008, and 2009 from the U.S. Census, Dun and Bradstreet, the Urban Institute, and phone directories. These data are collected and geocoded. The dependent variable is a composite measure of social disorganization: crime (homicides), poverty rates, school dropout rates, and underweight births. The mediating variables are the number of youth serving organizations, schools, congregations, membership clubs, parks, and health care facilities in the census tracts. The independent variables are housing values, unemployment rates, and population change. Finally, we control for racial/ethnic composition and socioeconomic characteristics.

The Politics of Research on ‘popular’ Culture in Japan

At the beginning of the new millennium, Japan, then still the second largest economy in the world, was suffering from a decade of recession and watching as geopolitical interests shifted to east Asian neighbors. At the same time, Japanese games, cartoons and comics were circulating around the world, and business and government leaders rushed to support the creative industries. The subsequent strategy to win the hearts and minds of the youth of the world through mega-popular franchises such as Pokemon was dubbed “Cool Japan.” While the success of this strategy has been widely debated, and drawn its share of criticism, in June 2013, Japan’s Upper House sent out a statement that were redoubling their Cool Japan efforts, giving the go ahead to the Ministry of Economy, Trade and Industry to earmark $50 billion for promoting the cause over the next 20 years. With Tokyo gearing up to host the Olympics in 2020, many expect the charm offensive to gain momentum. However, with increasing interest and investment in branded popular culture, local geek subculture has become an issue of national concern. What is “cool” about Japan, and who decides? How do gamers, comic-book nerds and animation aficionados fit into that image? Is it cool to include such people in projects focused on “Japan?” What sort of research is acceptable, popular and cool within this paradigm? What research is “uncool?” What is the role of the Japan researcher in negotiating all of this during a “crisis” in the field, which is to say declining opportunities for funding and employment? This paper seeks to unpack the politics of popular culture in Japan through the case study of Akihabara, an area in Tokyo that some think is geeky and gross, and others position at the center of Cool Japan.

Missing Bodies? the Visual Landscape of Home and Its Meanings to Solo-Living People

Not only presence of other bodies, but also the absence of bodies of others has a significant effect on the contemporary experience of domesticity and belonging. In her classical study on home as a tyranny, anthropologist Mary Douglas (1991) addresses solo-living only once, mentioning that conflict between persons is just transformed into conflict of wants within one person. In that sense, the normativity of home in terms of routines created via the relations of its various members is produced by the single member who has to discipline him- or herself. Goffman’esque “backstage” of home becomes a highly important “onstage” via internalized social norms or aesthetics. In our research we focused on home-centred and home generating practices performed by the occupants themselves, or between the occupants and the materiality of their dwellings and other non-human players (e.g. things, animals). In this paper, we will present the photo essay based both on 1) visual diaries, where photographs and texts were taken and written by participants dwellers focusing on mundane routines and everyday situations (of “doing nothing”) as well as on the moments of significant ruptures and changes, and 2) on visual material collected by participating researchers during the research events using go-along ethnography in the dwellings. Both are then interpreted in relation to other written or oral narratives produced within different phases of home generating practice aiming to extend the meaning of home, to construct it by solo-living men and women, which practices they use to create, maintain, experience and imagine their homes in space and time, and how they position themselves within wider social networks, family and society. We are seeking for more fluid, open and empirically grounded concept of home based not on essence and normativity, but rather on performativity and it’s becoming-into-being through active bodies, dynamic meanings and mundane aesthetics.

The Perception of Leisure By Grandparents in the Era of Active Ageing: Conflicting or Complementary Roles?

Family, education and work in later life, care for grandchildren as well as the imperative of “active” and “healthy” ageing are framing and structuring the everyday life and decisions of the Czech ageing population. The paper aims to bring new insights into the problem of the role overload, i.e. “the stress generated within in a person when he either cannot comply or has difficulty complying with the expectations of a role or a set of roles” (Burr 1973 in Lee 1988: 776). Based on triangulation of quantitative (representative survey) and qualitative (open-ended in-depth interviews) data generated within the research project “Role overload: grandparents in the era of active ageing”, the perception of various and dynamic roles played by the grandparents will be examined, focusing, for the purpose of this paper, mainly on the perception of leisure time and leisure activities in the context of the interpretation and experience of other role expectations and role performances. We perceive leisure as a specific integrating field in which the particular roles may be perceived both as complementary as well as conflicting, depending on the self-positioning, available resources and the interpretation of the grandparent’s role itself by the grandparents as well as by other relatives and members of relevant social networks. The attention, then, will be paid to the ways how the possible challenging intersection of these different levels are coped with and actively shaped and lived.

GALE, NICOLA* (University of Birmingham, n.gale@bham.ac.uk)

Knowing the Body and Embodying Knowledge - the Practice of Complementary and Alternative Medicine

Bringing together findings from several empirical studies I have conducted over ten years with students, practitioners and teachers of complementary and alternative medicine (CAM), I will define and illustrate the concept of ‘embodied knowledge’. I will argue that the concept has significant implications for practice and scholarship in the field of health care research, and give specific consideration to the ways of spatial/bodily boundaries and timescales in practice.

While health professionals of all types have been traditionally viewed as (more or less) credible brokers of knowledge about the human body in health and illness, the embodiment of the practitioner him/herself is an important counterbalance to the focus on knowledge of the bodies of ‘others’. The philosophies of different CAM approaches are enacted in day-to-day practice within their social context, with an impact not only on the recipients of CAM treatments but also on those delivering them. The bodies on both sides of the CAM therapeutic encounter are often not primarily constructed as medical bodies; they may be ‘energetic’, ‘emotional’, or ‘spiritual’ bodies. The ‘disease’ of biomedicine becomes instead framed as ‘dis-ease’, an imbalance or disturbance of energy. In these models, biomedical timescales and spatial/bodily boundaries are not necessarily relevant. Touch can be ‘energetic’ rather than physical, and the focus of the subjective therapeutic illness, and that experience can be crafted during the clinical encounter into body-stories (Gale 2011) that actively integrate personal, lay, medical and CAM concepts of aetiology and healing.

I will present an overview of the embodied pedagogies in practitioner training, the challenges of making the transition from training to professional practice and the embodied experiences and practices of being an established and expert practitioner. I will argue that the concept of ‘embodied knowledge’ is vital to our understanding of the knowledge base of healing practices internationally.

Post-Nationalism or Transformative Transnationalism: Beyond Cosmopolitanism and Narratives of Change Across Borders Among Australian Students and Volunteers in India

This paper is a case study on the possibilities of personal transformation through transnational experiences based on the narratives of Australian students and volunteers working in India. It examines the possibilities of change through transnational experiences with a focus on Australia young people and their experiences of India and challenges to commonly held ideas and understandings of the Other. The research is based on a methodology of participants telling personal stories of experiences across national borders. The paper contrasts the many different narratives exploring what contributes to a transformative experience and the circumstances that contribute to what can be identified as post-nationalist, or an ethic of transnationalism. The paper is part of a project supported by the Australia India Council that focuses on the relationship between Australia and India through Australians involved in aid and development projects in India. The project particularly focuses non-Government aid organizations and Australian students and volunteers who have been visiting and working as volunteers in India over the past 25 years.
contexto, se hace imprescindible que los investigadores mantengan una postura ética manifiesta, entre otros valores, en la búsqueda incansable por el verdad y el trabajo en colaboración, que les permita generar nuevos conocimientos y aplicarlos a los problemas complejos del mundo actual. Contrariamente al es- píritu ético que tendría que guiar este quehacer científico, en los últimos años se ha incrementado el plagio académico, como una práctica no ética de los in- vestigadores. En tanto que esta práctica fraudulenta se ha evidenciado a partir de las publicaciones, el presente trabajo busca analizar este fenómeno en tres niveles. El primero versa sobre la normatividad y políticas institucionales para promover la producción y la evaluación cuantitativa en la promoción de carrera y la obtención de mayores niveles de remuneración. El segundo se centrará en la fi- losofía de publicar o perecer (publish or perish philosophy) y los valores del sistema de producción académica. El tercero busca concretarlo en estudios de caso. Con estos tres niveles de análisis, se propone hacer un acercamiento a este problema de pérdida de valores en la producción académica, así como sus implicaciones en la formación de investigadores y en la generación del conocimiento necesario para la comprensión y la solución a los problemas de nuestro tiempo.

**Human Well-Being in a Media Multitasking Environment**

The paper discusses the relationship between media multitasking (MM) and human well-being. Media multitasking (MM) is changing the way people think, talk, learn, socialize and view the world. MM has both cognitive and behavioral consequences on hu- man beings. On the one hand, it drains the brain altering memory, linguistic abil- ity, and learning process and, also, overwhelming humans with a huge amount of potential information, it can lead them to a feeling of being paralyzed and un- able to make decisions. On the other hand, being pervasive in people’s lives, MM shapes their social interactions creating new “social aliens”, and let them experi- ence a weaker capability of being connected with their own self. Generation gap makes a big difference in the perception of how profoundly MM is affecting human well-being. And in this respect, in an evolutionary frame- work, does the “digital immigrant” (M. Presny) original mould risk of disappear- ing, to leave the place to the “digital native” new mould, shaped with new cogni- tive and behavioral characteristics? Are the digital natives going to create a new meaning for human well-being? Or the digital immigrants will be able to drive to a third model?

The paper reviews the literature on the topic, examines the above issues and, based on some empirical results, proposes some perspectives for the future.

**The Role of the Communities of Care in Promoting the Social Reintegration of Ex-Offenders: An Account of Restorative Practices in the Philippines**

There is a growing literature on prisons and restorative justice; however, cre- ating social groups as a restorative practice remains underresearched in the field of Sociology. This study argues that the key to successful rehabilitation is in cre- ating communities of care (the media, the government, the business groups, the Churches and the family) that will support and reintegrate the ex-of- fenders in their re-entry to free society. It employs a local-based model of rehabili- tation following the concept of restorative justice – the Care System Model (Gamo, 2007). Furthermore, it utilizes a case study approach whereby data was gathered through semi-structured interviews patterned in a storytelling manner. The find- ings of the study reveal that: a) rehabilitation should start with the community acceptance of ex-offenders; b) the Communities of Care (Gamo, 2007) functions as one in addressing the needs of ex-offenders; and c) the programs and policies created for ex-offenders should respond to their needs. This implies that com- munity acceptance and involvement is significant in promoting the reintegration of ex-offenders as a restorative practice. The What this research reveals is that there seems to be a weak functioning on the part of the communities of care in terms of carrying out their specific functions. It recommends that further studies on ex-of- fenders, on recidivists and on the communities of care (Gamo, 2007) should be conducted as an addition to the growing literature existing on Prison Sociology.

**Inequality in Intergenerational Closure As a Barrier to Social Capital Formation**

Intergenerational closure – a term coined by Coleman (1988) to represent a closed social network of parents and children – is a key marker of social participa- tion, as it serves as a basis for social capital formation. There are no financial bar- riers to intergenerational closure, so one may have expected to see similar levels across economic and ethnic groups. Yet there may be social barriers, especially in disadvantaged populations, where young children’s friendships formed in school do not necessarily cross over to relations among their parents. This paper examines economic and ethnic differences in intergenerational closure during the course of first grade. Data come from a large-scale randomized trial in which SZ schools were randomly assigned to a family engagement program intended to boost so- cial capital in a control group. The schools in this research in rural U.S. communi- ties with high proportions of Hispanic immigrants. Comparison of treatment and control schools reveals differences between the “natural” development of social capital in the control schools and social capital formation stimulated by design in the family engagement schools, with the essential assumption minimizing the confounding role of self-selection in social capital formation. Key demographic differences linked to social capital formation include whether family members are English-dominant or Spanish-dominant Latinos, whites, or African Americans, and whether students are eligible to receive free or reduced-price lunch, or not. Data are analyzed with multilevel models appropriate for the cluster-randomized design of the study. Results indicate that families that were most disconnected prior to the interven- tion experienced the smallest gains from attending a school assigned to the in- vention, suggesting that family engagement programs may not be an effective tool for breaking down social barriers to intergenerational closure.

**GAMORAN, ADAM** (William T. Grant Foundation, agamoran@wtgrantfdn.org)

**The Rise of Privatization in Tertiary Education, and Its Implications for Teaching and Research in Universities**

Increasing privatization in tertiary education is a world-wide phenomenon. In many countries around the world, developed and developing, this takes the form of an expanding private university sector. In the U.S., expanded privatization oc- curs in the form of sub-baccalaureate for-profit institutions, on-line degree-grant- ing institutions, and the privatization of many functions in public institutions. What do these changes mean for the future of teaching and research in univer- sits? This paper identifies distinctive forms of privatization and discusses the implications of each. An expanded private sector is likely to increase inequality of access to prestigious universities but does not threaten their standing. Moreover, the net effect of privatization on access depends not only on whether families are able to meet tuition demands, but also on whether privatization leads to a general expansion of the tertiary sector, which could increase access overall. Privatization in the form of on-line institutions and for-profit sub-baccalaureate institutions may challenge the ability of universities to maintain their place, but quality distinc- tions are likely to override the challenges. Privatization within public institutions

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
constitutes a more insidious challenge and may shift the balance of resources within universities so as to threaten their ability to provide a well-rounded liberal education.

Elections and Territorial Inequalities in Post-Revolutionary Tunisia
Elections and territorial inequalities in post-revolutionary Tunisia By giving a comfortable advance to the Islamist party of Ennahda (around 37% of the votes), the first free elections of independent Tunisia on the October 23, 2011 have taken by surprise most observers. In this paper, we identify the categorial and socio-territorial bases of major Tunisian parties through combining quantitative analyses at different scales and field surveys in specific localities. Although most interpretations have focused on the cultural modernist vs. conservative cleavage, hence obscuring the class cleavage, our analyses highlight very differentiated socio-territorial electoral bases for the main parties and indicate deep social differences in voting behavior between peripheral and core areas, as well as within cities. While allowing for a better interpretation of electoral results, our analyses also provide tools to understand possible evolutions within the Tunisian political space.

Key Words: election, democracy, Tunisia, socioeconomic inequalities

PAIS, IVANA (Department of Sociology, Università Cattolica del Sacro Cuore)
The Reputation Economy: Knowledge Workers and Freelance Networks
A decade after Richard Florida’s ‘creative class’ manifesto we are now confronted to labour markets in the knowledge economy where professionals are increasingly independent and networked. The project-based and freelance nature of contemporary knowledge work enhances the necessity of constructing a solid reputation within a professional network, which appears to be a determinant element to build successful careers. This combines with the use of social media for professional purposes and the increasing importance of digital marketplaces where reputations become visible and, under certain conditions, potentially measurable.

Based on a doctoral research combining mixed methods within an ethnographic approach, this contribution dwells upon the networked dynamics of creative labour across both offline and online environments, to discuss the existence of a Reputation Economy whereby reputation management becomes the determinant element for the professional success of networked knowledge workers. This has implications at the level of subjectivity and hybridization of skills within highly fragmented labour markets.

GANDY, OSCAR* (University of Pennsylvania, ogandy@asc.upenn.edu)
Placemaking: Inequality By Accident or By Design
Placemaking: Inequality by Accident or by Design
This paper seeks to extend the literature on the neighborhood effect by examining the myriad ways through which surveillance of the past, present and future in the service of urban planning works to reproduce different types of inequality through cumulative disadvantage. We understand the “neighborhood effect” in terms of the association between poverty and disadvantage and spatially located and colloquially named places within cities. The tensions between socio-structural, cultural, and individualistic explanations for the scope and stability of these correlations are described before an analytical approach that combines three is presented.

A key focus in this analytical strategy is the role being played by geographic information systems (GIS) in the development of plans for the transformation of urban spaces. It begins by reviewing patterns of growth in the spread of GIS technology beyond its traditional borders, in part through the popularization of tourism and professional relocation services that make use of maps, labels and index numbers to facilitate the evaluation of cities and neighborhoods in terms of characteristics commonly understood as amenities, opportunities and risks. The assessment of educational systems at the level of schools, walkability within user-determined boundaries, public safety or “dangerousness” on the basis of levels of exposure to crime, and motor vehicle accidents or pollution are just a few of the indicators to be described.

On the basis of this background review, this paper will shift its focus to the consequences for inequality that are inherent in the uses of spatial analysis as aids to public participation in the planning of neighborhood and community change, especially as they relate to an emphasis on public transportation as a feature of so-called “smart growth” initiatives.

(Mis)Recognition, Ressentiment, and Dualism: Challenges for a New Sittlichkeit
In this presentation I shall argue that the category of ‘recognition’ (Hegel, Honneth) and its approach to social justice can be enriched if we address two major issues: a) the first problem posed for any theory of recognition is to forge a theory of social institutions embedding social justice. Following Axel Honneth’s recent shift towards the work of Durkheim and Parsons, I shall defend this pattern arguing that a new theory of Sittlichkeit is indeed pressing for an adequate approach to social justice through the lens of recognition. Yet, and this is issue (b), Honneth’s theory leaves largely unaddressed the issue of ressentiment, a powerful index of recognition and disrespect. I shall thus attempt to fill this void in Honneth drawing on Max Scheler’s configuration of ressentiment. It seems that ressentiment is pertinent to a theory of just social institutions in many ways. For instance, I shall address Parsons’ inclusion of ‘sour grapes’ pathology in his theory of modern society. Instead of regarding it to the rationalization of social structures, like Luhmann is important because he locates, perhaps unwittingly, a space in society where ressentiment may be cultivated. This is no other that the inelastic binary code which sets a social system’s self-definition in motion. Rigid, and systemically coded, dualisms give rise to feelings of ressentiment between categories (‘left-right’, ‘progressives’-‘conservatives’, ‘public-private’, ‘pro-globalization-anti-globalization’ advocates) and shipwreck important reforms that would mitigate injustice and would improve patterns of intersubjective recognition. Augmenting the category of ‘misrecognition’ to include the ressentiment problematic can help social theorists to theorize better significant empirical findings (e.g. Wilkinson and Pickett, The Spirit Level) that bear on the issue of contemporary social institutions and their approach to social justice.

GANGAS, SPIROS* (Deree-the American College of Greece, sgangas@acg.edu)
Human Rights and Agency: Sociological Opportunities in the Capabilities Approach
In this article I shall argue that Amartya Sen’s capability approach offers a promising renewal of sociological approaches to human rights. Sociology has only recently turned towards the capabilities approach. I shall suggest that, on the one hand, any new normative understanding of action, like the one that Sen and Nussbaum offer, can gain from sociological theory simply because the program’s one hand, any new normative understanding of action, like the one that Sen and Nussbaum offer, can gain from sociological theory simply because the program’s central categories have a precedent among many social theorists. Seeing this affinity as an opportunity for creative theory-building in sociology, and drawing on sociology’s accomplishments, I argue that normative components of Sen’s ideas have been prefigured primarily by Parsons and to a lesser extent by Giddens. The capability approach mediates, I shall suggest, the formal aspects of Parsons’ idea of ‘capacity’ with Giddens’ idea of ‘capability’ in the context of the latter’s theory of structuration. On the other hand, many theories of agency in sociology are normatively wanting. If configured along the tracks of capabilities, sociological categories, like agency, can signal a progressive shift in sociology attentive to human rights, a core component of Sen’s research program. Compounded with capabilities, a new notion of agency can offer the appropriate normative justification to the ‘public sociology’ paradigm which re-introduces normative considerations in sociological discourses. If this proposed reconstruction is plausible, then it can contribute to regenerating the capabilities approach sociologically, reconfirming its progressive explanatory capacities, the merits of which have already been successfully tested and implemented across diverse sites, movements and organizations that promote human rights.

The Role of NGOs in (de-)Constructing ‘Flight’ Migration at the Mediterranean Borders

Since its inception of the 1985 Schengen Agreement, internal borders within the Schengen space have been abolished. No doubt that this has bolstered the freedom of human mobility within the Schengen borers, which went hand in hand with the southbound, and more recently eastbound, EU enlargement. Observers speak of transnational mobility, commuter/shuttle migration, moving away from the presumed linear nature of migration in the study of immigration. But this is just one part of the European migration landscape: the mobility to the southeastern and southern external borders seems no less vibrant yet the entry into these has become severely hardened owing to the ever tightening border control, as widely reported by the media.

However, we still know very little about what the Mediterranean member states’ migration regimes have in common. Even lesser analyzed is the role of NGOs in supporting these migrants as well as responding to the media coverage about forced flight from Africa and the Middle East. The aim of this paper is threefold: firstly, we shed light on the practices of NGOs in Southern Europe, particularly focusing on their reaction to, and collaboration with, migration policies and the government and EU level. Secondly, we explore the role of meso-level social networks among NGOs in not only supporting migrants but also (un-)making flight migration, by contemplating on the question whether the difference between the “forced” and “voluntary” migration is only a theoretical one. Third, we envisage visualizing our findings through Google Earth. This paper draws on expert interviews and documents collected in our research-based seminar at the University of Bochum.

Info-Communication Culture, Cultural Crisis, Social Media and New Technologies; The Model ‘Info-Communication Cultural Management (ICCM)’

New technologies exert strong pressure on traditional cultural organizations and institutions to digitalize theirs cultural management and administration structures. In economic crisis, some of the most important and widely debated issues in the areas of digitization of cultural policy are administration of cultural organisations and cultural rights of cultural organizations in the info-communication landscape (ICL). In order to cope with the recent crisis and to protect cultural policy and cultural management, all countries should collaborate to create and offer a dynamic regulatory mechanism in info-communication globalization. This paper examines and analyses cultural management, social media, new technologies and info-communication culture. It focuses on cultural management, public interest and regulations of digitized cultural products and services. It proposes a new dynamic model for cultural management ‘Info-Communication Cultural Management (ICCM)’ in cultural anad economic crisis.

GANTZIAS, GEORGE* (University of the Aegean, ggantzias@yahoo.gr)

A new digital revolution is coming, this time not only in management of cultural activities but also in the administration systems of cultural organizations and institutions. Digitization of cultural management and administration will allow cultural managers and administrators to develop and manage real/physical cultural events on demand, wherever and whenever they need them in info-communication globalization. This paper examines and analyses the cultural events and activities in recent cultural and economic crisis. It examines cultural management as a very important issue of organising cultural events and activities both locally and globally. It focuses on cloud computing, digitization of cultural activities, cultural strategies and crisis management. It explores digitalisation of cultural administration structures and proposes a new dynamic model, the ‘Dynamic Perception of Cultural Activities’ (DAP).

Energy-Related Consumption in France: Policy Influence, Socio-Technical Structure and the Role of Practices

The issue of the public policies related to sustainable consumption changes has been recently raised in France, emphasized by the “Grenelle of the Environment”. However, since the 70s, France has faced the matter of behavioural changes in energy consumption. That is why we propose to treat the question of the behavioural changes impelled by the energy policies, in France. This analysis will be embedded in the history of the public policies (energy and other domains of consumption) and their effects on the behavioural changes. Nowadays, the energy issue returns in top of the agenda, after having known eclipses at the end of the 70s. It is built in a context of the European energy market deregulation. The resulting policies highlight the importance of the individual behavioural change through the “consumer” representation (energy savings, smart grids, market choice of appliances, supplier choice according to the sources of energy production, etc.). The market tools are privileged, but the French State remains the dominating actor. Within this framework, isn’t the notion of the individual behaviour partly rhetoric? Indeed, other upstream factors encourage in a decisive way the levels of “households’ energy consumption (e.g. offer construction, infrastructure choices, thermal regulation, at the French and European level). Moreover, the succession of upstream factors of the policy devices that have partly opposite objectives may lead to conflicts in norms and contradictions in the energy practices. Our analysis will be developed through examples related to “sustainable lifestyles”, such as: energy label, low consumption bulbs, carbon tax, choice of the means of transport, waste sorting and water consumption.

Efectos De Los Muertos Por Causas Externas En La Estructura De Población De Venezuela, Años 2001-2011

Diversos estudios han señalado el aumento de las muertes por causas externas en Venezuela los últimos años, dos de sus principales tipos: accidentes y homicidios, han escalado rápidamente entre las primeras cinco causas de muerte en el país. Este trabajo tiene como objetivo presentar los efectos de las muertes por causas externas en las tasas de crecimiento por edad y en la estructura de población de Venezuela entre los años 2001 y 2011. Para ello, se utiliza los datos de mortalidad publicados por el Ministerio del poder popular para la Salud de la República Bolivariana de Venezuela en los Anuarios de Mortalidad de los años antes mencionados, y los Censos de población y vivienda de los años 2001 y 2011. Para evaluar la incidencia de las muertes por causas externas se obtienen las tasas de mortalidad publicado por el Ministerio del poder popular para la Salud de la República Bolivariana de Venezuela y los Anuarios de Mortalidad de los años antes mencionados, y los Censos de población y vivienda de los años 2001 y 2011. Para evaluar la incidencia de las muertes por causas externas se obtienen las tasas de mortalidad publicada por el Ministerio del poder popular para la Salud de la República Bolivariana de Venezuela y los Anuarios de Mortalidad de los años antes mencionados, y los Censos de población y vivienda de los años 2001 y 2011.
Catastrophes such as that which struck Japan early 2011, as a result of the accident in the Fukushima nuclear power plant, the most serious accident ever in the history of nuclear power plants after Chernobyl, demolish claims to extremely small risk probabilities for complex systems and upend the delicate balance between costs and benefits argued by safety experts. The Fukushima disaster demonstrated that in contemporary societies, vulnerabilities and threats are difficult to locate or predict, being both incalculable and impossible to offset. The natural tsunami that ravaged Japan was also a technological tsunami with ecological, social, economic, and political consequences. The Fukushima disaster may be thought of not just as a disaster for Japan, but for the technological order.

Our analysis of the March 11th disaster begins with a simple narrative showing how a natural disaster in a country at the forefront of technological development precipitated an accident in a nuclear power plant that in turn led to a chain of calamities at multiple levels. How did we become constructors of a world such as this catastrophic potential? Section two responds by considering how the nuclear threat is played down as a result of the euphoric notion that human vulnerability can gradually be overcome by the increasing ability of science, technology and probability analysis to control and predict events. The final section retrieves the idea of “forsightenmess” as the basis of a political and social approach that can take on not only the uncertainties of the world, but also those generated by technical systems, in order to illuminate our choices and decisions. When faced with calamities and damages that appear to arise out of the blue but are the outcomes of our technological systems, their interactions, and our dependencies, foresightenness emerges as a response both rational and virtuous, however difficult.

According to Norbert Elias, the loving relationship between two people is, at the same time, subjective and objective. It is so because the relationship is related to three different yet overlapped dimensions, namely: the experience of love from the ‘Y’ in relation to another person; the experience generated in the ‘US’ which implies observation and bonding of the loving relation; and the ‘THEM’ experience regarding the observation, experience and bonding of ‘others’ with those who are in the loving relationship.

In the first part of the paper, we will develop the “US” dimension of love relationships in heterosexual couples. The aforementioned dimension implies not only a discursive story, but also a story of experiences. Experience here relates to a mutually created process that involves the existence of two or more embodied psyctic systems which “grow old together” (Schutz, 1932) and persistently irritate each other (Luhmann, 1984).

The observation of a particular “US” story is thus made possible through the evaluation of these conditions. Once we identify the “US” in a continuous present which includes social discourse (power, gender, class), relational moulding or what Goffman studied as ‘interaction’, and synrhythmy between what the mind/bodies create whilst together.

In the second part of the paper, we will observe the “US” dimension through the interaction process (Goffmann, 1983) using a finer level of analysis: sensible proximity (Simmel, 1908). Our starting point is that in interaction with others and specifically in the ‘sensible proximity’, bodies produce Sinn which is mutually interpreted (Sabido, 2012). We will develop this through the example of the loving interaction in a heterosexual couple. The presentation will finish with some examples that illustrate this sensible process.
new perspectives for study. In that way studying the study of the process of secularization, its modalities and its particularities, become a pertinent subject.

Likewise, it is suitable to indicate that during the first two decades of this century the paradigm of secularization began to be questioned and the idea of a return of religion or a re-enchantment of the world began to emerge. It is possible to speculate that in large Mexican cities, especially in Mexico City, the process of secularization remains constant only in members of a middle class who can be considered carriers of an international subculture; these are people who have received a Western-style higher education, particularly in the humanities and social sciences.

Brazilian Long-Term Migrant Women in Japan. Work, Family and Subjectivities

This paper aims to present the first results of research initiated in January 2013 about Brazilian women migrant in Japan. Japan has accepted Brazilians of Japanease filiation and their spouses as labor force for over twenty years. The Brazilian community in Japan remains the third largest foreign community (population of just over 210,000 in 2012) in that country. If studies of the Brazilian community in Japan have emphasized both continuous and slow migratory processes, a qualitative analysis of gender relations in migration context is still incipient. Women's role in the migration process is often naturalized as complementary to male migration. However, studies of social and historical approach indicate that decisions to emigrate depart often from women's decisions, and that women's history is excluded from the analysis of migration and its impact. Therefore, several studies in Brazil and Japan have been analyzing how gender arrangements and the processes of naturalization of gender roles in migration have evolved, particularly in the context of an increasing feminization of migration and the gender diversity in the migration process.

This study is based on the research of the Centre for the Study of Gender and Globalization (CIGG) of the University of Minas Gerais and was supported by the Fundação de Amparo à Pesquisa do Estado de Minas Gerais (FAPEMIG). This research is part of the project "Japanese Migrants: Gender Dimensions and Social Inclusion" of the Centre for the Study of Gender and Globalization (CIGG) of the University of Minas Gerais and was supported by the Fundação de Amparo à Pesquisa do Estado de Minas Gerais (FAPEMIG).

Resistance Struggles and Movements in Puerto Rico: Towards a New Politics for Life and Work

This paper is a product of research conducted between 2008 and 2012. The research centers on the analyses of the resistance struggles in Puerto Rico during 2009 to confront the layoff of 30,000 public employees. As a result of these layoffs, the union movement confronted six challenges. I discuss the potential insurgencies of unions and other social movements regarding the fiscal deficit, led to an unemployment rate of 16.9% in 2010. Employment rate decreased to 33% in 2011. In the medium term, the massive layoffs and resistance struggles held in 2009 were analyzed in the conjuncture context of the economic, political and social crisis from 1968/1972 to the present (Wallenstein, 2004). Considering the experience of the people and groups who participated in these resistance struggles, six challenges are discussed for unions and other groups. The potency of these and other groups to become anti-systemic movements is discussed. These movements can contribute to create new principles and politics for work and life. These principles and politics will be discussed supporting a new world-system beyond capitalism, the long term temporality presented across the research.

Academic Language Barriers: Professional Stigma or Recognition and Success?

In the last decades, university language policies have strengthened the use of English for publishing papers, books and articles, even in non-English speaking countries such as Spain and Mexico, for example. This fact has led to a series of academic precarization that may place both academics and students at stakes with countries such as Spain and Mexico, for example. This fact has led to a series of academic precarization that may place both academics and students at stakes with countries such as Spain and Mexico, for example.

Something Is Changing: Italian Young People Between Religious Indifference and New Form of Believing

Several studies on youth and religion stress how only a very small proportion of the youth population has anything to do with organized religion. There has been, on the one hand, a growth of interest in alternative forms of spirituality and, on the other, an increasing estrangement from the various religious aspects (believing, practice, involvement in religious associations). In this framework, the paper will focus on the outcomes of the socialization process, investigating how young people debate, follow, refuse or interact with religion in the Italian scenario.

Are we looking at an Italian version of religious modernity which, on one hand, reflects the typical expectations of living in a pluralistic society and, on the other, forms them within the long tradition of culture and religious socialization which are typical of the country where both Catholicism and church are strong? Or are we looking at, among young people, the emerging of a generation characterized by religious incredulity? In this paper we're going to present findings of a qualitative study carried out with 150 young people aged 18-24, in order to better understand, in the framework of socialization outcomes, what are the key determinants of believing or not belonging among young people. The cases, the main reasons of their taking distance from the religion. The collected interviews allow us to define a typology, defining mainly four kinds of youths according to their religious definition and their religious practice, to their opinion on the Catholic church and to their religious socialization.

*Mouvements Sociaux Et Sociétés Civiles Dans Les Processus De Démocratisation : Le Cas De Conflits Armés Négociés*

Le processus de négociation de paix actuellement en cours en Colombie entre le gouvernement et la FARC pose le problème de la participation des mouvements sociaux et de la société civile dans des négociations dans lesquelles le passage de la guerre à la paix suppose également une évolution vers des régimes plus démocratiques, par une inclusion de forces jusque là en marge de la politique institutionnelle. Or cette participation est face à un paradoxe : d’une part, elle contribue aux processus au-delà des parties négociatrices, mais de l’autre sa présence peut altérer des négociations marquées par le secret et la confidentialité. Or en Colombie le processus actuel de négociation est face à une importante mobilisation socioculturelle, avec plusieurs expressions, d’une part des mouvements agraires et paysans, autonomes des guérillas, et de l’autre des collectifs de victimes du conflit armé. Les mobilisations s’adressent au gouvernement mais elles ont aussi un effet sur les guérillas qui négocient. Le cas colombien contemporain sera analysé au regard d’expériences similaires par le passé dans le reste de l’Amérique latine, pour le comparer avec des cas où la mobilisation collective a été écartée du processus de négociation (Salvador) et des cas où au contraire elle a été fortement associée (Guatemala). Cette réflexion visera à rehabiliter le rôle des mobilisations sociales dans les processus des démocratizations, rôle trop longtemps négligé par des approches théoriques centrées sur la négociation institutionnelle. Elle contribue à légitimer le processus de négociation par délais les seuls négociateurs et à fournir à ces processus de changement une légitimité autant que par rapport au parlementaire.

*Foundational Dimension of Social Movements in Latin America? : The Case of Chilean Students and Other Mobilizations in Recent Years*

The paper discuss five dimensions of recent mobilizations in LA: democratizing, anti-liberal, citizenship, identity and foundational, according to the predominant dimension in the movements. This is done comparing with other mobilizations in the world. The main thesis is that behind the different mobilizations and social movements in recent years, underlies a foundational dimension aiming to reconstruct the relations between State and society broken after globalization, neoliberal reforms, dictatorships and democratizations processes. This hypothesis is examined in the Chilean case considering three main aspects: the type of society emerging after the process of democratization that we define as a post pinochetist or post authoritarian society linked to the past by the neo liberal model and the Constitution inherited form the dictatorship, the type of mobilizations that emerge since 2006 and mainly since 2011 and the window opportunity for new relations between politics and civil society opened by presidential elections in 2013 and possible constitutional processes.

*Cold War 2.0 Visual Conflicts: American Visual Constructions of the Chinese ‘cyber Threat’*

Soft power is a contested and volatile resource. Nations cultivate, expend, and exhaust soft power through hegemonic visual struggles within the international order, especially those at odds with the dominant soft power actor, the United States. Embedded within the notion of soft power and soft power conflict is the power of images for conveying political messages and values, and fostering or contesting the construction, (re)presentation, and diffusion of national brands. In recent years, an escalating dynamic of debates and narratives surrounding soft power conflict over the putative decline of the U.S. and concomitant rise of the People’s Republic of China. While simultaneously disputing America’s waning, many U.S.-based critics of Chinese soft power moved past traditional China bash- ing exercises over censorship, democracy, and human rights, and now attempt to delineate China’s post-opening up and reform achievements – key elements of the so-called “Chinesification” of Chinese political culture – as a form of “soft threat” in the international political economy. China’s foreign policy has been characterized as a global media campaign adopting a ‘propaganda offensive,’ and ‘peaceful development’ model as smokescreen, a challenging disengagement from the former hegemonic world order – especially those at odds with the dominant soft power actor, the United States. The new Chinese soft power is best exemplified in the extraordinary claims of former senior U.S. intelligence, law enforcement, and defense officials in late-2011/early-2012 accusing China of wholesale cyber espionage. Extending into 2013, American broadsides escalated to attacking the very premise of red China’s cyber success: ‘socialism with Chinese characteristics,’ asserting Chinese malfeasance and thievery were at the heart of the ‘China miracle,’ not any innate superiority of the Chinese system. Though manifested primarily in textual discourses, subver- tive visual imaginaries of China have been increasingly evident in Washington’s efforts to degrade Chinese soft power. This paper examines the production, circu- lation and reception of these popular culture and political visual confrontations.

estrategies. The roles of unionising and collectivisation have therefore changed in recent years. In many ways, the fragmented nature of the workforce weakens collective strength resulting in rampant violations of their rights. Yet, fragmentation of the workforce leads to new strategies and combinations of forces. This is mainly due to the creative and dynamic responses of those suffering its consequences in developing ways to combat these violations present hope for the local-global labour movement.

My study focuses on the work of a trade union of female workers in Mumbai’s informal sector. By way of two cases, one of domestic workers and the other of home-based establishment workers, I show that organizing in the informal sector is in fact possible. More importantly, I point out that while new-age globalisation and traditional conservatism join hands to make the employers and the institutions of the state anti-poor and anti-women, new forms of collective action bringing together different kinds of workers (engaged in various trades and from diverse backgrounds), are creating a space for making space for a dialogue between the poor and with these local and global institutions directly for demanding their rights.

Comparing Latin American Migration in Different Urban Settings: Theoretical and Epistemological Issues

This paper offers a epistemological reflection on comparing Latin American migration in different urban settings. We provide a framework of analysis that is at the same time theoretical and epistemological. Migrants are simultaneously emigrants (thus coming from a certain “society of origin”) and immigrants (that are bound by a new set of structures). Therefore we examine the characteristics that have to be taken into account when researching Latin American migration in different cities. Among the circumstances that configure the emigrant experience we should take into account the historical evolution of the country of origin, which originates different social spaces (in the sense of Bourdieu) and fields (ibidem) where the migrant occupied certain positions. We also address what it means to become and immigrant, that is, a person bound by a new set of structural conditions in the host society. Therefore we examine the characteristics that have to be taken into account when researching Latin American migration in different cities. Among the circumstances that configure the emigrant experience we should take into account the historical evolution of the country of origin, which originates different social spaces (in the sense of Bourdieu) and fields (ibidem) where the migrant occupied certain positions. We also address what it means to become and immigrant, that is, a person bound by a new set of structural conditions in the host society.

This paper analyzes comparatively the language use of Latin American migrants in different urban settings. The main problem is to compare cities and countries, and not nationalities. Therefore we examine the characteristics that have to be taken into account when researching Latin American migration in different cities. Among the circumstances that configure the emigrant experience we should take into account the historical evolution of the country of origin, which originates different social spaces (in the sense of Bourdieu) and fields (ibidem) where the migrant occupied certain positions. We also address what it means to become an immigrant, that is, a person bound by a new set of structural conditions in the host society.

What does Europe mean for Europeans, of many parts of Europe or of places outside Europe where are social groups of European origin? The paper looks for to reply to these questions through a research carried out on fourteen samples of ethnic minorities and majorities of Europeans (about 2700 interviews of people), living in the Italian region of Friuli Venezia Giulia (Italians and Slovenes, Friulians), in the Spanish region of Vizcaya (Sorbas and Hungarianians, Slovaks), in the Ukrainian region of Kharkiv (Ukrainians and Russians, Belarussians, Jews), and in the Siberian region of Tjumen (Russians and Ukrainians, Caucasics, Tartars). To each sample the attitudes towards Europe and its meanings were requested. The main motivations (through attitudes) of Europe were: an area included between Atlantic Ocean and Urals, a Christian civilization, the European Union (EU), a common family, the West, the overwhelming some peoples, a common culture, a vague idea. The paper considers the intensity and the relations of all these meanings between the macro-regions, between ethnic groups, and between minorities and majorities. The meaning of the Euro is first of all, and inside each region between minorities and majorities. Besides at the same level of macro-region also the structure of the meaning is very different. For example, the more important factor (Factor Analysis) in the Friuli Venezia Giulia is very simple (West, EU, common culture); on the contrary in Vizcaya the first factor is more complex. In the Kharkiv region the structure of the first factor is simpler, but different than the Italian content (that is: Europe is overwhelming some peoples and vague idea); so as the most important factor (first) is simple for the groups of the Tjumen region, but the structure of the meanings of Europe is composed of West and vague idea.

Abeyance Structures for an Environmental Social Movement: The Case of the US Bases Cleanup Campaign in the Philippines

This paper aims to extend the concept of abeyance structures to the case of the US bases cleanup campaign in the Philippines and US. Abeyance structures refer to various organizational arrangements that absorb the spillover of activities after a social movement declines. In this paper, I outline four routes by which former partners took after the decline of the said campaign. I use in-depth interviews (n=31), secondary data, and internet archives in drawing themes on the routes taken by core activists of the disbanded campaign. I define these routes as follows: (a) Route 1 wherein former partners were absorbed by their original affiliations prior to joining the campaign and which they have maintained while taking active part in the campaign; (b) Route 2 wherein former partners sought new affiliations with other nongovernmental organizations and networks of similar or parallel advocacy as the campaign; (c) Route 3 wherein former partners remain in the spirit of the campaign hoping to renew it in the future; and (d) Route 4 wherein a US-based partner-organization structures itself by adopting a transnational environmental justice framework of action, and cultivating an organizational culture to promote its ethnic identity as collective identity. The results offer insights on the internal dynamics of an environmental social movement. The least-resourced partner, which is the community of victims, resorted to being absorbed by other nongovernmental organizations to provide for their daily welfare. Other partners, who include mostly nongovernmental organizations and professionals, have followed different routes in pursuing their goals. The degree of their success is tied to their initial resources in terms of material, cultural and symbolic legitimacy in either the US or the Philippines. This suggests that stronger partners also fare better following the decline, which in turn raises questions on the ability of networks to overcome inequalities among partners.

Latin American Migrants in Bilingual Cities: A Comparison Between Barcelona and Brussels

This paper analyses comparatively the language use of Latin American migrants in two bilingual cities: Barcelona (Spain) and Brussels (Belgium). Both cities share some similarities but also have some differences. Bilingualism in Barcelona is based on two cooficial languages Spanish and Catalan. While Spanish is the official language for all Spain, Catalan it is only the official language in Catalonia (the region). Latin American migrants from most countries (with the notable exception of Brazil) are already Spanish speakers and therefore have little incentives to learn Catalan. However, nationalistic policies in Catalonia and Barcelona encourage use of Catalan and give preference to those who can speak Catalan in the labour market. On the other hand, Brussels is the capital of a country strongly divided amongst linguistic lines. In Belgium only Brussels is bilingual while the regions of Wallonie (French) and Flanders (Dutch) are monolingual. Migration policies depend on municipality, meaning that in Flemish speaking municipalities Dutch prevails while French is dominant in the French speaking. Latin American migrants in Brussels, native speakers of Spanish or Portuguese (brazilians) do not speak any of the two as mother tongue and have to learn. Choice of language learnt is related to the context of settlement and social networks. The paper concludes with a reflection on the features of Latin Americans and the likely outcome of the migrant integration in the two cities.

Theory of Engaged Collaboration Across Borders: Alternative Perspective on Transnational Advocacy Networks

This paper proposes a theory of engaged collaboration across borders to explain the process by which local environmental campaign initiated in a Third World setting transforms into a transnational advocacy network. I use grounded theory as tool for analysis in examining archival documents and interviews (n=31) with key stakeholders, including environmental organizations in the Philippines and US. The paper builds on Wu's (2005) Double mobilization model. I theorize that the nature of relationships among partner-organizations within transnational advocacy networks can evolve from an initial information sharing into a more engaged collaboration based on various dimensions salient to the ongoing processes in the network. The emphasis lies on how domestic NGO organizes a TAN so that external advocates become in-

 Emerging Agrarian Crisis and Farmers Suicides; A Study of Telangana Region of Andhra Pradesh in South India

Changing agrarian structure and labor relations, Consequent crisis and farmer suicides is an important area for the study of social scientists in contemporary times all over India. It is a well-known fact that India is mostly an Agrarian country and even today 70% its population inhabits in rural India by depending on agriculture and its related occupations despite rapid progress in science and technology. It is a paradoxical situation which prevails only in India where large chunk of population lives even today in rural India with or without land by pursuing agriculture and its related subsidiary occupations resulting rigid social and cultural bond. This complex social structure which constitutes deferent layers which creates consequent inequality hierarchal structured in terms of caste, class, ethnicity and gender etc.

Further, increasing modernization in agriculture and consequent growing capitalist mode of production coupled with an unstable returns due to change in climatic conditions resulting the farmers entering into debt traps which leads to help less condition and hopeless life unlike in the past. Lack of timely help from Kith and Kin and indigenous institutional support and constant pressure of ruthless market financiers resulting in large number of farmers to attempt suicides this phenomenon is increasing day by day particularly in the state of Andhra Pradesh in the era of post globalization.

This study aims to understand the changing agrarian structure and emerging labor relations since post liberalization era and the reasons for increasing farmer suicides and its causes and consequences. For this study Telangana region of Andhra Pradesh in South India has been chosen where large number of farmers are attempting suicides.

To Embark and/or be Embarked ? Emotion As Element of Method Digressions Around the Pathic VS Epistemic Connection

“This to move someone around, he has to be emotionally moved.” said Régis Debay. Sociology is above all a question of vision, perspective, lighting, angle, depth of field, focus and of course fine tuning. Do we not recurrently talk about the “sociological eye”? This issue is of course also relevant to the sociology of art and it is in this context that the question of “sociological eye”? This issue is of course also relevant to the sociology of art and it is in this context that the question of emotion as an element of method will be an excuse to draft a reflection on the idea of emotional risk taking (gamble) drawing the film Embrace of the Serpent as an illustration of the emotional risk. Embrace of the Serpent is an adventure film produced and directed by Wim Wenders in 1987. Embrace of the Serpent is an exercise in semiotic narrative analysis which will be used to reflect on the potential of the narrative to think, to write about emotion as an element of method.

Litterary Cognition and Scientific Fiction Literature As Subject of Knowledge Digressions Around the Pathic VS Epistemic Connection

This presentation aims to consider on one hand science as narrative, as fiction, and on the other hand literature as production of knowledge. We will therefore talk here of literary cognition and scientific fiction by analyzing the confrontation of two areas: literary and scientific (sociological).

The analysis will be organised around four cases (two for each area):

- For the area of literary fiction:
  - On one hand the case of T. S. Kuhn who addresses this issue by the introduction of the science of Nature (so called explanatory, to use Weber’s distinction) by constructing the concept of experiment of the thought;
  - And on the other hand the case of Julio Cortazar (who incidentally translated Poe) who for his part stages the theme of the most everyday aspects of social life, in a neo-fantastic way, aiming to make us question the functioning of this social life.

- For the area of scientific narrative:
  - On one hand the case of T. S. Kuhn who addresses this issue by the introduction of the science of Nature (so called explanatory, to use Weber’s distinction) by constructing the concept of experiment of the thought;
  - And on the other hand the case of Julio Cortazar (who incidentally translated Poe) who for his part stages the theme of the most everyday aspects of social life, in a neo-fantastic way, aiming to make us question the functioning of this social life.

To Embark and/or be Embarked? Emotion As Element of Method Digressions Around the Sensitive VS Intelligible Connection

“This to move someone around, he has to be emotionally moved.” said Régis Debay. Sociology is above all a question of vision, perspective, lighting, angle, depth of field, focus and of course fine tuning. Do we not recurrently talk about the “sociological eye”? This issue is of course also relevant to the sociology of art and it is in this context that the question of emotion will be examined here.

Thus, along with John Dewey, we will consider that aesthetic emotion is not a form of feeling that exists independently, but an emotion that is caused by an expressive material inducing a transformation of the initial feelings. What will interest us here is how emotions are then functioning as mediations between the different actors in the process of artistic production.

To this end, the semiotic narrative analysis of a scene of the Wim Wenders film **Der Himmel über Berlin** will be an excuse to draft a reflection on the idea of intellectual risk taking (gamble) drawing the pathic dimension into its path. We will speak here about the cognitive path which characterizes the socio-anthropological posture. Emotion does not exclude reason and to that extent we therefore cannot afford not to take into account the issue of emotion in the sociological method.

At the heart of the creative process, emotion and the gambling concept will thus enable us to recall that thinking, also in science, is working from a fictional construction of reality (itself fictional construction of the “real”) as an intrasubjective, empathic and heuristic process, where emotion, omnipresent, must necessarily be taken into account.

Political Parties and Community Organising in an Era of Membership Decline

At a time when formal party memberships are declining across advanced industrial democracies, political parties are experimenting with new ways to re-engage members and reach out to party supporters. Adapted from the experience of American party organisations and campaigns, political parties in the United Kingdom have adopted community organising techniques as a means to address the resource and linkage implications of declining party memberships and to engage supporters (and not just party members) in the community. This paper analyses the character of and motivation for these techniques, how they have been implemented by the Labour Party, the Liberal Democrats and the Conserva\n

The research of young intellectuals takes on special significance in the conditions of Russia's transition to the information-oriented society. Attention concentrates on the cultural characteristics of the observable social group because of the "cultural lag" which takes place in the most part of Russian province cities. The main role in cultural reproduction and translation plays the young university tutors as the most active and mobile group. They were considering as either main subjects of the cultural work in the social space of region. It is necessary to find out their cultural needs and general condition of incorporated cultural capital because of their influence on young people's values and aims.

The empirical base of research is presented by the mass poll and the focus group interviews with the young tutors of the institutes of higher education located in the Ural federal district. The investigations were conducting within the bounds of grant project "Professional potential of young tutors in Russian province". The analysis contains information about basic components of young academics incorporated capital: leisure structure and the place of cultural practices within the art forms and styles which prefers the researched group, the perception of province cities' cultural infrastructure, opinions about necessity of higher art education preservation.

The results of research let us tell about hyperrealitarian in the behavior of young academics, which concentrates on their professional responsibilities and forget about cultural self-development. They constrict their functions to the information translation and don't feel themselves as the active subjects of social changes. The main component of the "cultural lag" doesn't think of themselves as "a cultural class" and don't regard their lifestyle as different from life of the majority. Unstable identity of young scientists and tutors, consumer attitude to the cultural space, passivity and lack of self-organization reduce their creative potential.

The Idea of Age-Friendly Cities and Communities As the Answer for Global Trends of Aging Societies

The aging process is great and unheard of in the past, challenge for governments, economies and societies. This means the need to meet the needs of the growing group of people with specific requirements, with full rights and legitimate aspirations for decent quality of life and mobility.

Effective management in this area is primarily a matter of the reform of health insurance, tax and retirement system, or other distribution of funds. Of course, these changes are important, but we should take various measures to create friendly environment for the elderly: social solutions conducive to maintaining an active lifestyle and innovative projects allowing for broad independent.

The answer to this can be the concept of Age-friendly Cities and Communities (AFC) which was conceived in 2005 at the XVIII IAGG World Congress of Gerontology and Geriatrics in Rio de Janeiro. It immediately attracted enthusiastic interest, and in 2010 has transformed into The WHO Global Network of Age-friendly Cities. This paper is based on an ongoing Ph.D empirical study in sociology about the treatment of the social question in and by public hospitals in France through the analysis of the PASS.

The Appearance of a Sub-Field of Medicine of Poverty in France

This paper aims to tell and analyze the processes and historical background which gave rise to a sub-field (in a Bourdieusian understanding) of medicine of poverty in France from the early 1980's to the 2010's. The main contribution of the research is an analysis of the PASS. In France, the PASS arises from a combination of the social and political context of economical crisis and new poverty. The bill and the PASS were both an institutional acknowledgement of a growing reality of health care practices. It brought a new ethical understanding and practice of health care to modern public hospitals based on an idea of a global patient, multidisciplinary work combining social and medical work, networking, and recognition of the social and cultural determinants of health. However, it raises the specific question of priorities and practices of health care, which rely on evidence-based medicine, technical health care, and profitability.

Inclusion in Society through Religious Orientation? Biographies of Male Students Participating in the ‘Gulen Movement' in Germany

The so-called ‘Gulen movement’ (Ebaugh 2009), a global network revolving around a Turkish-Islamic preacher, has become increasingly visible inside Germany. Founding private elementary and secondary schools, as well as centers for private coaching, supporting intercultural and interreligious dialogues, and separating organizations such as “Our Jihad is education”, the movement acts to render possible the educational success of children of Turkish immigrants. By referring to themselves and their practices as hizmet (service), network participants also aim to alter the common view of ‘backward Islam’, a view perpetuated by popular discourse, and to contribute to a perception of a ‘moderate’ Islam, which can be synthesized with the natural sciences and with globalized multicultural meritocracies. And so, to lead a Muslim life the ‘Guleni’ can be understood as a promise to become successful, educated members of society.

In our lecture, we wish to present some reconstructive results of an analysis of biographies of male students who attend a weekly religious sobheit (discussion circle) in hizmet. By this we wish to discuss how inclusion and exclusion can operate as productive concepts for understanding the students' narratives about becoming members of hizmet. Our claim is that participation in the hizmet functions not only as a religious orientation, but also plays an important role in resolving crises among young Turkish adults. These crises result from discriminatory discourse in the public sphere in Germany against Turkish migrants and Islam, and from the construction of cultural, religious and ethnic difference in schools and

Health Care Reform and Creation of an Excluded Category of Patients

The will to universalize the French health insurance system at the end of the 90's created a new marginalized category of patients: illegal migrants. Splitting them from the other insurance holders by the establishment of a special health insurance (Aide Médicale d'Etat, State Medical Aid), this population was put at the edge of the health system. It led to unequal health practices and increased the difficulties to access health care providers and health insurance. These two levels of barriers have been underlined by the empirical research based on the study of a department in the French public hospital, named PASS (Permanence d'accès aux soins de santé : Department of health care access). The PASS is specialized in taking care of patients without health care insurance which are mainly illegal migrants. Aide Médicale d'Etat from the other insurances made possible for the administration and practitioners to have discriminating practices. The administration uses the processing of the applications (delaying them for example), while some practitioners exclude those patients from their practice. These barri...
classrooms. In this sense, becoming a member of hizmet also means acquiring specific cultural, social and symbolic capital, which is used in the students’ stories to explain their own place in hizmet and in society.

Geopolitical Southwest? The Decoupling Between Latin America and East Asia In The World-System

For the last couple of decades, since the collapse of the Soviet Bloc, much of the debate about south-south relations was captured by the idea that there was a "Geopolitical South" which, if heterogeneous from many perspectives, could be envisaged as being composed by countries equally positioned inside the capitalist world-system, as semi- peripheral areas with shared interests in their relations with core countries. In this paper, I challenge such assumption by showing that Latin America and East Asia have drifted apart inside the architecture of the world-system. In order to do that, I present qualitative and quantitative data to sustain three main lines of reasoning:

First, I show that while Latin America has remained basically a provider of commodities and consumers to core areas, East Asia has become a main provider of manufactured products even to those areas situated in the core of the system. Secondly, I demonstrate how Latin America and East Asia economic relation has changed from a relatively unimportant one to an intense but asymmetric relation with all characteristics of core-semiperiphery relations: while Latin America keeps being mainly a provider of commodities to East Asia, it has also become an importer of East Asian manufactured products. Not only that: the amount of foreign direct investment from East Asia to Latin America has been intensely increasing, while investment in the opposite direction is tiny.

Finally, I analyze specific cases inside the geopolitical framework of the world-system that are good examples of how such transformation took place: China-Brazil economic relations, Chinese investment in South America's natural resources and the evolution of the BRICS group.

I conclude by sustaining that the expression "Geopolitical South" must be re-defined, if it is to keep being meaningful. What we have today is a 'Geopolitical Southwest' that is increasingly positioning itself as a 'double semi-periphery'.

Towards a Methodology of Visual Analysis on Twitter. the Earthquake in Northern Italy

The catastrophic event represents a relevant and interesting place of observation of communication practices and narrative strategies started by media.

Traditional media represent the catastrophe with almost known strategies – both in the entertainment frame and in order to fulfill their informative role we see a well known tendency towards evanescence. Furthermore, the new forms of leadership emerging in contemporary movements raise serious risks of opacity and unaccountability because of their very 'liquidity'.

Drawing on my ongoing research about the popular protest wave of 2011-13 in Egypt, Spain, the US, Brazil and Turkey, and developing the argument presented in my book Tweets and the Streets (2012) I describe contemporary leadership as 'soft leadership'. This form of leadership makes use of the interactive capabilities of social media, tapping into the imaginary of participatory culture (Jenkins, 2006). Leadership comes to revolve around community management and facilitation, rather than outright 'direction' of collective action.

This paper will look at the specificity of emerging forms of leadership and their connection with the informal and 'liquid' practices of organising performed by contemporary movements. Specifically I point to the limits of this format of organising, arguing that while soft leadership is powerful in nurturing social movements at their inception, it also runs the risk of exacerbating contemporary movements' well known tendency towards evanescence. Furthermore, the new forms of leadership emerging in contemporary movements raise serious risks of opacity and unaccountability because of their very 'liquidity'.

GERBAUDO, PAOLO* (King’s College London, paolo.gerbaudo@kcl.ac.uk)

The Squares Movements and the Resurgence of Popular Democracy

This paper argues that the squares' movements of 2011-12, a protest cycle comprising the indignados in Spain and Greece to Occupy Wall Street in the US and the UK marks a turn in collective action with a renewed majoritarian ambition and the aim to refund democratic institutions. I attempt to capture the nature of these new popular movements by contrasting it with the countercultural identity that dominated the anti-globalisation movement. Analysing materials originating from a long term ethnographic research, I identify two fundamental traits of the squares movements, a) majoritarianism and b) emphasis on unity, opposing them to the majoritarianism and emphasis on autonomy of the anti-globalisation movement. These new squares movements appear to realign the majority of the population rather than to an idealistic minority, calling citizens to embrace a new 'democracy 2.0'. Furthermore, they put much emphasis on unity, in contrast with the emphasis on internal autonomy and diversity of anti-globalisation activists. The article proceeds to gauge the significance of this popular turn and its reflection of the democratic crisis of contemporary societies.

Globalisation, Market Value and Cultural Diversity and the Predictability of Football Leagues

Processes of globalisation have changed the nature of professional football in two different ways. Firstly, football clubs revenues’ from different sources have multiplied over the past decades. Today’s football clubs need to be regarded as commercialized globally operating companies. Secondly, football clubs have been attracting foreign players to sign for their teams, leaving only little room for recruiting exclusively from own national ranks. Hence, teams have become more multinational.

This paper examines the extent to which such processes impact on a team’s success. 1) Due to commercialisation processes, the market value of a football club has become the decisive factor in determining their chances of success. The market value of a club is defined and measured as the sum of the market value of each individual player on the team. The higher a club’s overall market value, the higher is the probability of their success. 2) The increasing multinationality of football teams influences their chances of success negatively, because coordination within the team might become more difficult to realise. At the same time, however, multinationality can also have positive effects on their performance because players from different nationalities can bring new techniques and qualities that can complement the already existing ones.

We have collected and statistically analysed data from the 12 most successful European football leagues, yielding the following results: 1) A team’s market value has a very strong (positive) influence on their success rate – indeed, ‘money scores goals’ seems to be more or less true. 2) Only to some degree does the multinational composition of a team determine their success. Teams that are composed of some players from different national backgrounds perform better, on average, than nationally more homogeneous teams. However, the direction of association is reversed when there are players from many different nationalities – multiculturalism, then, influences a team’s chances of success negatively.

Transnational Linguistic Capital. Explaining Multilingualism and English Proficiency in 27 European Countries

Since the second half of the twentieth century, the extent, frequency, and speed of exchange and interconnectedness between different nation states and different world regions have increased enormously, a process described in the literature as globalisation. As the world system consists of multiple nation state containers and as most nation states have different official languages participation in globalisation is among other things dependent on people’s ability to speak the languages of others. Those who only speak their native language are, in contrast, tied to their home country and can only take slight advantage of the perks of a globalised world. Transnational linguistic capital therefore might become a new measure of social inequality in today’s increasingly globalised world.

The question central to our study is to what degree citizens in different countries possess transnational linguistic capital and how to explain the differences in multilingualism both between and within the countries. Using a survey conducted in the 27 member countries of the European Union we analyse the respondents’ proficiencies in foreign languages.

We present a general explanatory model for foreign language proficiency, create hypotheses from this model and test them empirically by using multilevel techniques. We find that the size of a country, the prevalence of a respondent’s native language, the linguistic difference between one’s mother tongue and the foreign language affect foreign language acquisition negatively, whereas a country’s level of education has a positive influence. Using Bourdieu’s theory of social class, we show that besides other factors a respondent’s social class position and the level of education are important micro-level factors that help to increase a person’s transnational linguistic capital.

After the Insurgency: Changing Strategies for Countering Political Inequalities in Bangladesh

To what extent so-called minority populations gain access to decision-making processes in national government structures is one of the crucial questions for understanding the causes and consequences of ethnic conflict. Especially when nation-building processes are determined by the nationalist projects of majority populations, thus a state for autonomy has emerged, a state of “ext”, replacing “voice”. This paper argues that the strategies for tackling such political inequalities have changed recently, which goes also to the credit of more efficient transnational and global networks. Based on empirical findings from Bangladesh, it argues that “voice” has become a matter of strategic concession, which has not only caused by shifting power relations and expressions of solidarity within the region and globally, but which is also related to social transformations within the conflict region itself: the rise of a new generation with quite diverse individual and
collective aspirations leads to social transformation at various levels. First, better educational assets and new job opportunities lead to an erosion of revolutionary ideals. Second, globalization processes have reinforced diverse mobilities: migration to metropolitan centres and new forms of knowledge giving way to alternative visions of a future society, have become more prevalent than before. These are particularly voiced by activists who are increasingly acquiring a new social status within their immediate social context as well as nationally – a process which is highly dynamic and conflictive. This paper inquires into these dimensions from an empirical perspective and discusses the social transformations in relation to the options for expressing demands within the national framework, as members of the minority population see for themselves. Finally, this leads to an examination of broader visions of society and of the scope for fostering social inclusion and an eradication of political inequality through political participation at different levels of society.

Towards a New Security Culture 2030

This paper presents results from a Real-Time Delphi Study which focuses on the following research questions: What are the important trends with high impact on public security in Germany until year 2030? What will be the most relevant risks within the next 15 years? How do security or risk research and research policies deal with these challenges?

The aim of the survey is to initiate a broader discussion about the future of public security. Therefore we need to discuss the perspectives of five main expert groups: politics, science, economy, media and end-users (e.g. emergency assistants).

Theoretical and conceptual framework
Theoretically we have two perspectives on security and risk that will form the conceptual framework. Firstly, we know from risk research, that risk is often understood as the probability that something occurs combined with comprising negative outcome (e.g. Bechmann 1993, Renn et al. 2007). Even if this is criticized (because risks aren’t objectively determinable), it is relevant for security research due to the fact that arguments for political decisions are justified by these calculations. Therefore the paper secondly discusses the empirical findings in the theoretical framework of “security culture” (Daase 2012), which understands security and risk as social constructions based on norms and beliefs.

Methodology
The survey will be conducted as a Real Time Delphi Study, a foresight method that collects data from experts in iterative rounds (cf. Gordon & Pease 2005). After the first round the aggregated results are communicated to the experts immediately so that they can change their first rating. Within the presented Delphi Study 1200 experts will be invited to take part in the survey which takes place in November 2013.

Results
The results address the above stated questions and will be displayed as statistical numbers and figures.

Sustainable Agriculture and Regional Development in Western Mexico: Lessons Learned, Challenges Ahead

Globalization is an advanced process in Mexico, profoundly transforming the endogenous properties of the countryside, including its sustainability. As a consequence, many farmers can be identified who have been developing alternative development models, based on agro-ecological farming practices and the valorization of the local territory, organization and knowledge systems.

In western Mexico, many farmers have been transiting towards agroecological farming practices. Following international trends these transition processes are based upon two main strategies. On the one hand, farmers perceive agroecology as a way for substituting external inputs for locally elaborated ones, while, on the other hand, agroecology is seen as a means for developing an ideologically-based farming style.

This presentation describes the different transition processes towards sustainable agriculture, including motivations of farmers and their perceptions of its possibilities. Furthermore, it describes the regional context of sustainable agriculture. Based on both strategies encountered in our region, recommendations are made for promoting sustainable regional development.

The “Incest-Beast” of Amstetten

Durkheim has shown that the atonement of crime creates solidarity among those who condemn it. Therefore, crime contributes to sustain the social and moral order, although and because the deed questions them. Nevertheless, there are violent acts that transcend this order in a way that makes it impossible to classify them as acts of “normal violence”. Cannibalism, incest and senseless cruelty not only evoke refusal but strong emotions such as disgust and hatred. We want to argue that crime becomes polluting and unclassifiable when it “amalgamates” different kinds of violence – for example imprisonment, incest and cruelty (Jan Philipp Reemtsma termed them “locative”, “raptive” and “autotelic” violence). If there is “only” one transgression the crime is more likely to be integrated into society. In this paper we want to address the case of incest committed in Austria in 2009 by Joseph Fritzl. He held his daughter captive for 24 years in a self-made cellar in the house he lived in with his wife, telling her, the daughter had run off to join a religious sect. He abused and raped his daughter thousands of times fathering seven children. Some lived with their mother in the cellar, the others lived with their “grandparents” as Fritzl told his wife, his daughter had left them at their doorstep. The case of the “incest monster” was of international interest. At the end of the conviction in March 2009 Fritzl was found guilty and was sentenced to life imprisonment. He was thought to be both sane and mentally abnormal. In this paper we want to analyze the case of the “Incest-Beast Fritzl” as a deeply polluting act of violence that was scandalsized throughout the media. Transcending the notion of “normal violence” by combining various transgressions the crime had to be framed as an extraordinary, monstrous act.

GETZ, SHLOMO* (Academic College of Emeke Jezeel, shlomog@yvcc.ac.il)

Place of Residence and Higher Education Choice

It is generally assumed that the lower class faces restricted access to higher education and that opportunities of college choice and choice of field of study are restricted for lower class students. Differences of students’ choice by place of residence are usually explained by the socioeconomic status of the place of residence.

Studies conducted in Israel examined the effect of living in four types of locations (city, small town, Jewish village and Arab village) on higher education choices. Those locations may be ranked from high SES in the city through small town, Jewish village and finally the lowest SES in the Arab village. Those studies do not treat place of residence as a monolithic entity. They examine students’ patterns of college and field of studies choices controlling for individual SES and academic achievements. The hypothesis is that place of residence is not only a geographical attribute but also a social place that influences self-identity and plays a role in students’ choice regardless SES or academic abilities.

Findings show that the place of residence has a net effect on students’ choices, and it interacts with SES and with academic abilities. This effect is differential. “Successful” students from cities tend to enroll in more prestigious universities and in prestigious fields of study, like medicine and law. Students from Arab villages tend to enroll in less prestigious universities and choose lower status fields and in prestigious fields of study, like paramedical studies. Students from towns and Jewish villages are similar in their choices. Less “successful” students are less influenced by their residential place.

It is argued that those differences show an influence of residential place as a way of life, and create a ‘habitus’ based on locality. This ‘habitus’ lead to differential college and fields of study choice, interacting with academic achievement and SES.

Open Source Professionalism: Changing Forms of Professional Expertise

Public professionals often complain about their lack of autonomy and the pressures put on their work by ‘outsiders’, such as managers, politicians, inspectors, clients and the press. They experience red tape, bureaucratic burdens and accountability pressures that curtail them and their service provision. But when professionals are set free and when bureaucratic and managerial standards are dismantled, public professionals might become insecure.

In this paper we show that the problem public professionals face is not standards per se but inappropriate standards - standards that are not meaningful for doing their job, and not legitimate.
We argue that public professionals might take the lead in developing appropriate standards. These can no longer be based on professionals’ expert knowledge, including ‘evidence-based’ standards, technical guidelines or strict protocols. The problem is that professionals are confronted with new, uncertain, messy and ambiguous situations less able to handle these problems in a technical manner. Moreover, the problems call for more adaptive approaches. Professionals’ expertise as such is no longer sufficient; it needs to be complemented by other types of knowledge from so-called relevant outsiders, i.e. stakeholders.

Public professionals might tap into several sources of stakeholder knowledge, scientific as well as experiential, and deliberately create effective and legitimate professional action. We label this ‘open source professionalism’. In this way, public professionals open up their professionalism; with stakeholders (networks) they co-produce meaningful and legitimate standards that help them to deliver valuable and valued public services.

Incomparable Pay-Offs and Rationality - the Parallel Games Approach

The reason why sometimes people make suboptimal decisions from the point of view of not maximizing wealth has been an interesting question for researchers for a long time now. This question is apparently embedded only in a rational choice theory, but throughout time researchers have given different answers. From the suggestion that people make suboptimal decisions because bounded rationality is bounded to their cognitive abilities (Simon, 1965), researchers went on to suggest that suboptimal decisions happen because people are committed to a task with long-term implications (Sen, 1977) and because they tend to be biased by the use of certain judgement heuristics which lead them to make systematic judgement errors (Kahneman and Tversky, 1979; 1981; Kahneman et al., 1982). Later on, scholars noticed that the actor’s choice is only suboptimal to the observer, while being perfectly optimal for the actor (Tsebelis, 1988; 1990; Frisch, 2001) because the actor tries to maximize the outcome of multiple situations, some developing in different “arenas” and others developing around the rules and institutions that govern each situation. Our contribution to this body of research proposes that actors make apparently suboptimal decisions because they have to decide between categories of pay-offs which are not comparable. These categories of pay-offs generally appear in parallel games, that is games played at the same time. An ultimatum game experiment conducted to reveal two parallel games and two nested games was undertaken. Results showed that the presence of a relationship exterior to the experimental game determined a suboptimal behaviour in the experimental game as well as in another game. Further analysis revealed that non-monetary pay-offs, pay-offs from obeying rules and the norm of fairness, as well as the perception of other parallel games accounted for in the design of the experiment motivated such sub-optimal behaviour.

Biographies and The Doubleness Of Inclusion and Exclusion

Most research on diversity is often showing either exclusion or inclusion practices at work in the integration process. Yet biographical research provides the possibility to see the layerdness that is often involved in the process of societal participation which is rather paradoxical than straightforward. With the term ‘doubleness’ we hope to grasp these paradoxical processes in which inclusion and exclusion overlap. In this paper, we explore two paradoxes that show this doubleness: namely the language paradox and the economic integration paradox. Through biographical narratives of women with a migration background we show how the language paradox (language inclusion) could lead to a decrease of sense of belonging (emotional exclusion) when they get access to the national discourse which is negative about migrants. The second, the economic integration paradox, demonstrates that women who were successful to integrate economically (via study and work), felt excluded through everyday negative experiences with others. The case of the majority group in those environments.

This study shows the limitations of a linear conceptualization of the integration process by policy makers (and scholars), assuming that language and economic inclusion would be the crucial step towards social and emotional inclusion. The narratives of women in this study gave us the opportunity to discover how the growing access to the local ‘mainstream’ has had an opposite effect on their sense of belonging. This paradox is even more visible for women who are most eager in their quest for inclusion, willing to belong to the society. For them the level of disappointment is even higher when they are able to read and hear about the dominant perception of migrants and thus feel excluded based on their growing level of participation in various levels in society.

Shaping Body By the Food: Perceptions in Chileans and Mexicans Adults

The incorporation principle is the common belief that the food ingesting by humans is structuring the body and identity of the eater, and for this reason, the control of food is central in the control of the self (Fischler, 1996). Using this concept, this work show how people think the food like a way to shaping body and the role given to the individual and environmental factors in the control of this process. From 70 semi-structured interviews in Santiago and Mexico City, I identify the categories of pay-offs which are not comparable and how actors make apparently suboptimal decisions because they have to decide between categories of pay-offs which are not comparable. These categories of pay-offs gen

erally appear in parallel games. These categories of pay-offs which are not comparable are in two main categories: namely the language paradox and the economic integration paradox. In this paper, we explore two paradoxes that show this doubleness we hope to grasp these paradoxical processes in which inclusion and exclusion overlap. In this paper, we explore two paradoxes that show this doubleness we hope to grasp these paradoxical processes in which inclusion and exclusion overlap. In this paper, we explore two paradoxes that show this doubleness we hope to grasp these paradoxical processes in which inclusion and exclusion overlap.

Due to recent important developments in the energy field in the Eastern Mediterranean over the last few years this region is becoming the focus of a growing geopolitical tectonic shift affecting all neighbouring countries, especially Turkey, Cyprus and Greece. Important developments are, however, expected not only in the energy field in which the EU will take the lead. These developments will include geopolitical and economic integration processes as well as the EU Neighbourhood Policy. Existing and future alliances as well as conflict potentials deriving from the Eastern Mediterranean region will likely have an important impact on still unsolved political-conflicts in the wider region such as the political conflict in the still divided island of Cyprus, the dispute over the Aegean between Turkey and Greece as well as the on-going conflict between Israel and Palestinians. The proposed paper seeks to analyse what kind of energy strategies is this fragile world region could produce structural instability and thus additional conflict that could arise from these structures and mechanisms that will greatly affect the EU integration and enlargement processes as well as the EU Neighbourhood Policy. The presentation summarizes an ongoing research regarding scientific communities and social inequalities in Latin America: The Chilean Case

Social Relationships in Later Life: The Role of Childhood Circumstances

There is an established body of research in social epidemiology which links both health and emotional wellbeing to social relationships across the life course and in later life. However, there is surprisingly little evidence on how differences in the nature and quality of these social relationships arise. It is not known, for example, whether existing social gradients in the prevalence of social engagement, social network size or quality mirror gradients in childhood socio-economic status (SES) and/or health.

This paper investigates the long-term impact of childhood conditions on social relationships. We use data from SHARE (the Survey of Health, Aging and Retirement in Europe), a collection of nationally representative surveys of the over 50s in 13 European countries. Combining novel objective and subjective measures of current social networks with retrospective life history data on childhood health, cognition, SES and household environment we examine the long-term impact of childhood conditions on social network size, social network satisfaction and emotional closeness in older age.

Using regression techniques, we show that there is a strong but differential association between each aspect of childhood circumstance on social relationships in later life. Therefore we critique the index approach to measuring childhood conditions which gives equal weight to SES, health and social environment over time. We find that emotional closeness mediates the relationship between childhood circumstance and social network satisfaction.

Technique, Instrumental Formal Organization and the Hinge in Exercise Physiology Research

This presentation outlines results from a 12-month multi-method investigation of how exercise physiology research focused on physiological mechanisms and markers of sport performance is enhanced, curtailed, shaped and ultimately deployed, by broader sociological, political, historical and technological trajectories. In doing so, this presentation follows the theoretical leads of Jacques Ellul, Erving Goffman, and Norbert Elias in briefly reviewing three discrete but connected issues. First, the social and political factors that affect the conduct of lab-based research and how they shape knowledge processes from discovery to development, delivery, and use in the sports world; second, the processes of identification, construction, and resolution of bioethical problems in sport and exercise physiology research; and finally, the ways technologically mediated understandings of people developed in the lab and manifest in sporting endeavours facilitate the emergence and transmission of cultural logics and societal values. Throughout the presentation special attention is paid to the recursive relationship between biology and sociology in order to understand how people and their political, social, and moral potentialities are interwoven into historical trajectories of cultural production and societal organization of their bodies.

The Allies of the Front National: A Sociological Overview of the French Nationalist Groups and Parties

Since 2002, when the Front National (FN) suddenly entered the final stage of the French, presidential elections, the rise of nationalism, embodied by the rise in the polls of this party, is a concern in France. However, there are many ideologies that are not the actual FN National label, and they are, in a paradoxical way, not necessarily compatible altogether, and can even be totally opposed: radical Christians, « identitarians », anti-sionists, sovereignists, anti-muslims, conspirationists, a few neo-nazis...people voting for the FN don't necessarily abide by the same doctrine.

Who are the voters of the Front National and why do they unite, in spite of the large differences that exist between their beliefs and socio-professional categories, is the question to which this communication will try to answer. First, by describing the sociological history of the different groups or categories of voters, and how they came to ally themselves with the FN. Secondly, by analyzing in detail the communication strategy of the Front National and the external elements that supports it, especially the large internet nationalist network: websites supporting one ideology or the other, linked between them by affinity, some even violently criticizing each others (for example, identitarians and the anti-sionist groups), but every single of them pointing to the Front National website, creating a galaxy of beliefs where a great number of voters can recognize themselves.

This work will be based on interviews with members of the Front National, but also activists of different groups voting for the FN without subscribing to the current main political line of the party (conscriptionists, anti-muslims, anti-sionists, neo-nazis), on periods of observations in events organized by these groups, and on the study of the nationalist internet network, as well as on a large bibliography on social movements, populism and nationalism.

Does Deregulation Help? the Impact of Employment Protection Reforms on Youths’ Non-Employment and Temporary Employment Risks in Europe

Previous comparative research argued that, across Europe, youths face increasing unemployment risks and insecure labour market positions in the course of globalization and related macro-structural changes. Besides macroeconomic conditions, system-specific employment protection legislation (EPL) has been blamed as the root of youths’ employment problems in Europe. Against this background, many European labour markets have reacted with the deregulation of employment protection laws, often targeted at the group of youths. However, doubts on the effectiveness of EPL reforms occurred. Against this background we investigate whether EPL reforms in integrating youths into labour markets, or whether they were ineffective and just promoted temporary employment as a crucial new social inequality in Europe.

The empirical analyses are based on a pooled cross-sectional design by using yearly micro-data from the European Labour Force Survey for 14 Western and 8 Eastern European countries for the period from 1992 to 2011. This database provides unique large-scaled, standardised micro data. We apply multilevel models with three levels (individual-, country- and time-level) implemented in a two-step estimation procedure to investigate contextual influences on individual age-related temporary employment and non-employment risks. At the micro-level we use cross-national and cross-temporal variation to quantify the impact of EPL reforms under control of other macro-institutional and macro-structural factors. Further, we control for country and time fixed-effects to account for unobserved heterogeneity.

Our analyses reveal heterogeneous inequality trends in youths’ temporary employment and non-employment risks in Europe. Moreover, our results cast doubt on the effectiveness of EPL reforms.
Talk the Talk and Walk the Walk: Analysing Changing Urban Governance Practices in response to Climate Change

As nation-states are further lowering their climate ambitions in response to the economic crises, a neo-liberal ideology of a small state, and an ecological modernisation rationale, the challenge seems to have been picked up by lower tier governments such as cities. The C40 Cities Climate Leadership group of mega cities addressing climate change is an example of this new reality. They group indicates that the cities combined have about 4700 actions directed at mitigation and adaptation. However, the question remains whether these actions have resulted in different practices within the cities’ institutional setting. This research uses a survey of the C40 cities in order to investigate the lasting impact of participation in a global network aimed at combating climate change. We use practice theory to analyse how well embedded these new practices are in the urban governance regime. We also analyse what dimensions are particularly relevant to these changing practices of the preliminary results seem to indicate cities more at the centre of the C40 network are also impacted the most in their daily governance practice.

Consequences of the Ambiguous Relationship Between State and Societal Actors in the Management of Risks and Crises

In France, public policy risk prevention and crisis management still rely on the state. A role is assigned to local authorities and civil society. But only the state appears to have the ability to prevent risks and cope with exceptional situations. More disasters are considered, more state intervention is legitimate. The representation of the state attach importance to these powers (corresponding to the “state of emergency”).

The predominance of the state in the field of risk and crisis is however being challenged. First for economic reasons: central governments no longer have resources to support alone public policy in this area. A divorce occurred between policy-makers who challenge our conventional thinking that fundamental differences between soldier and civilian? These questions will be considered alongside the example of pandemic influenza threats).

How Much Is a Dead Soldier Worth?

How much is a dead soldier worth? This paper will interrogate the monetary value ascribed to the death of soldiers in the 21st century, and the narratives of sacrifice and heroism that inflate military fatalities. Rather than focus on public funerals and burial, I explore the more intimate (yet no less social) acts of valuation and compensation that are navigated by surviving relatives. Questions regarding the price of death are particularly interesting to consider as civilian compensation has become a regularized component of counterinsurgency strategy. Monetary payments have been made in the event of the ‘inadvertent’ death, injury or property damage of civilians in Iraq and Afghanistan, as a way to win the ‘hearts and minds’ of the population, and demonstrate the compassion of the international forces. How are the lives (and deaths) of civilians and soldiers of different countries valued differently, and for how much? What logics of compensation are articulated? And does compensation in contemporary warfare reconfigure the distinctions between soldier and civilian? These questions will be considered alongside the increasing pressure to reduce deaths, of both soldiers and civilians, as a result of the targeted and remote-controlled strikes of the revolution in military affairs. As tensions regarding death in war increase, how does this impact on how lives are valued, and on our understanding of military service in contemporary warfare?

The Mercurial Piece of the HIV/AIDS Puzzle: ‘Stigma’ and HIV/AIDS in South Africa As a Social Scientist’s Challenge

‘Stigma’ and its relationship to health and disease is not a new phenomenon. However, it has not been a major feature in the public discourse until the emergence of 'oral narration' to be a specific type of argumentation about highly controversial settings as gendered biographies in transnational settings.

Based upon my model my analysis shows how biographers, while conducting an external dialogue with their listener; re-positioning themselves over and over again in a hegemonic position in the interaction, are simultaneously preoccupied with an internal dialogue around in which they try making sense their own experiencing of themselves in the world. In this way the question: “how have I become to be who I am today?” gains new and dual meanings.

The transcultural context of the analysis not only extends between the inter-view interlocutors (secular vs. fundamentalist) but as the narrator is implicitly involved in a project with transcultural construction aspirations, aiming at ‘restoring tradition’ in a way that would appear as absolutely contemporary to the inter-viewer. And as the analysis shows, gender plays a crucial role in such a framework not only through the identity of the participants but within the subversive cultural project as a whole.
gence of HIV/AIDS. The range of negative responses associated with the epidemic placed ‘stigma’ on the public agenda and drew attention to its complexity as a phenomenon and concept worthy of further investigation. Despite the consensus that stigma is one of the major contributors to the rapid spread of HIV and the frequent use of the term in the media and among people in the street, the exact meaning of ‘stigma’ is ambiguous. Therefore, its conceptual complexity and its embodiment in the reality of HIV/AIDS in South Africa present a formidable challenge for social scientists who continue to grapple with the questions it raises.

The main aim of this presentation is to briefly re-visit some of the scholarly deliberations and further interrogate their relevance in the HIV/AIDS-related stigma evidenced in South Africa. Although it provides more nuanced understandings of the concept, most of the literature reviewed adds a level of complexity that requires further investigation and renders measuring stigma more problematic. The presentation argues that the fact that there is such an abundance of scholarly articles on the concept and its definitions is testament to the fact that they do not provide adequate explanations for the various manifestations of stigma. In addition, the explosion of studies looking at ‘measuring’ stigma and reducing its impact is evidence that ‘stigma’ exists out there and continues to be a threat to the successful implementation of public health programmes.

GILINSKY, YAKOV* (Herzen University, yakov.gilinsky@gmail.com)

Social and Economic Inequality As Deviantogenic Factor

There is no only “reason” of deviance and crime. There are many factors - economic, political, cultural, demographic and others, influencing upon state and dynamics of different forms of deviance. It is important theoretically and practically to define the specific “weight”, “power”, value of each factor in genesis of deviance and its separate types.

K. Marx, R. Merton and many others wrote about a role of an economic inequality as “reasons” of crime and others of negative (deviant) acts. The ever-growing economic polarization of the population in Russia – is a main source of continuing social conflict. The differentiation between the incomes of the 10% least prosperous and the 10% most prosperous increased from 1:4.5 in 1991 up to 1:15 in 1999 and later up to 1:11.8.

Empirical researches of multiple-factor model of the reasons of deviance and crime are conducted in Russia by criminologists S. Ol'kov, I. Skifsly, E. Yuzikhano-va. From many factors influencing crimes and suicide - extent of alcoholization, demographic structure of the population, consumption of drugs and the economy inequality, the last factor it appeared the most considerable. The Gini index (i.e., index of economic inequality) in Russia increased from 0.289 in 1992 to 0.422 in 2007. According to S. Ol'kov, during 1990-1999 the index was at its maximum in 1994 (0.409) and the number of homicides was at a maximum (32,300) and suicide too (61,900); the index was at its lowest in 1990 (0.218) and the number of homicides was also lowest (15,600) and suicide too (39,200). According research of I. Skifsly (dynamics in 25 years, from 1980 to 2004), the correlation coefficient between homicides and Gini index was the highest 0.9253, between violence crime and Gini index 0.843. The catastrophic economic and social inequality serves in Russia as the main factor of deviant manifestations.

Bringing Workers into View: The State and the Emergence of Industrial Conflict in Myanmar

This paper examines the emergence of open industrial conflict (strikes, various forms of worker protests) in Myanmar (Burma), with special reference to industrial clusters/special economic zones in the urban periphery of Yangon, the nation’s largest city. In recent years, Myanmar has shifted towards quasi-democratic governance and this has led to significant change in both external relations (i.e. the suspension of most international trade sanction measures) and internal institutional development. The paper will explain that although worker initiated protest and strike actions in various industries preceded democratic reforms, these changes have enabled more prevalent and open expressions of dissent. Indeed, the growing incidences of conflict, alongside the reformation of institutions and governance, mean that the labour ‘problem’ has for the first time in contemporary Myanmar come into view as an important area for intervention and management by the State. Arguably, however, the development of mediating labour institutions (law, dispute resolution agencies, trade unions, employer associations) has lagged behind the expression and management of conflict in the industry, leading to ambiguity as to the capacity and role of the state and workers’ conceptions of forms of collective association, citizenship and dissent. Moreover, industry development and forms of labour regulation have emerged not only via shifting relations between the state, capital and labour at a national scale. Geopolitics and international institutional actors (IGO, Global Unions, INGOs), forms of supra-national regulation (for instance, the impact of international trade sanctions) multi-scalar production and economic networks (investor and supplier relations) have also played an important role in institutional formation and reformation and the dynamics of industrial conflict.

DISTINCTION AND IDENTITY IN LATER LIFE

The cultural turn in the social sciences during the 1980s brought new prominence to sources of distinction based on the body, such as disability, gender, race and sexuality. We argue that many of the embodied practices associated with these newly privileged bodily distinctions were further developed, sustained and...
extended by consumption and consumerism. Drawing attention to aspects of social identity that had been previously overlooked, the new social movements brought into central focus and ‘liberated’ what might be deemed marginalised identities. The identity politics and associated new social movements of the 1960s and 1970s however were situated in the counter-cultures of youth. In this paper we explore how the ‘ageing’ of those youth cultures have affected the contemporary experiences, narratives and performances of age and in the process brought new ways of thinking differently about ageing and the body. This ‘cultural turn’ is exemplified in contemporary research into ageing lifestyles, ageing and exercise, ageing and fashion, ageing and sex and more generally the performative identities of ageing. Rather than developing a transgressive ‘age liberation’ movement however, much of this embodying performativity seeks to resist the purchase of ‘agedness’ on fashioning lifestyles oriented as much to not becoming old as to still being gendered, racialised, able-bodied/disabled, straight or gay throughout one’s adult life.

How Are Social Relations and Locality Connected? New Ambivalences in the Research on Migrant Families

Research on transnationalism is an attempt to avoid methodological nationalism by focusing on families and its members, which do settle at different places or move between these places. In this perspective not only national belonging becomes relativized, blurred and diminished, but local, regional and national attachments of individuals and social groups as well. Here questions of belonging arise anew for the subject of research. This research is challenging, because there are not only life strategies of migrant families do often experience social intertwining relations, which are not bounded to one single national territory, but interact in a multi-local situated context. At the same time the existing boundaries of the nation-states do still influence a lot the mobility and opportunities of individuals.

The proposed paper discusses the ambivalence of social belonging and local/regional attachment under modern conditions of social fluidity and multi-local attachment in social relations. First, the paper starts with the elaboration of the theoretical framework to be developed and explores methodological questions related to that. Second, referring to empirical research on migrant families, the paper analyses family practices in which social and cultural boundaries are negotiated with reference to the places to which family attachments exist. Empirical findings show that there is no social belonging to a community or society without local/regional attachment(s) and it precisely the new constellation between the social belonging(s) and the local/regional attachment(s) which can be seen at the basis of ‘the migrant condition’ of human beings. Situating the self and the family in a context of fluidity and constant change entails developing family practices in which belonging to a community or society is constituted and performed self-reflexively.

The paper outlines the principles of a new theoretical approach to studying ‘transformative ideological visions’ and ‘regenerative social counter-currents’ that may significantly influence debate and practice around constructing new radical and democratic alternatives to existing systems of domination and hierarchy embedded in capitalist social relations. When dealing with transformative ideas and practices, a critical account of cosmopolitanism can be employed in two ways: (1) as a critical analytical framework, that helps us examine alternative ideologies to the social relations of capital, in terms of their capacity to create historical “moments and conditions” for other alternatives to flourish; and (2) as a normative framework that can facilitate debates and research between rival transnational methods and political agendas. Such a critical account of cosmopolitanism requires a ‘dialectical mode of criticism’ that needs to be self-reflexively applied to our understanding of the cosmopolitan and its history. Nascent elements of such a cosmopolitanism already exist among some synthetic contemporary radical ideologies, such as eco-feminism and radical economic democracy, as well as some forces amongst the global justice movements, including within the World Social Forum, the Occupy movements, and in the recent anti-austerity social movements and popular uprisings.

DEPOY, LIZ (University of Maine)

Design, Undesign and Redesign: Eliminating Embodied Inequality

Over the past several decades, design and branding efforts for social justice and democracy have exponentially increased. Designers have apprehended and applied market strategies to create products and images to change the world. However, to date, design and branding have not been analyzed to understand and reassign their power in creating, labeling, and affixing differential worth to bodies that are disenfranchised because they are atypical, untruth or alters. This vacuum leaves designers with a huge gap in intellectual development and guidance necessary to harness design image to challenge and diminish social inequities that have prevented local through global social acceptance for the full range of bodies. In this presentation, we argue, and illustrate through a targeted analysis of embodied design, its epistemic and aesthetic foundations and its praxis that design and branding are tacit yet powerful influences on the creation, reification, and perpetuation of the acceptable human corporeality and its opposite. We illustrate how design and its byproducts in advanced capitalist global, national and local environments are significant social influences on determining and reifying embodied worth, internalized and assigned identity of category members, social status, and comparative flourishing of members of diverse social groups. Given this understanding, we conclude with the constructs of undesign and redesign as the power tools to advance symmetry, inclusivity, and equality for diverse bodies.

Towards a Democratic and Emancipatory University: Feminist Popular Extension and New Relations Between University and Society in Brazil

Popular Extension is a key element for comprehending the relationship between society and universities in Latin America. By making possible a close col-
laboration between universities and social movements. Popular Extension is a valuable tool for pursuing the construction of a contextualized university capable of opening its walls to the social reality that surrounds it. However, little has been researched regarding the outcomes of this practice on building a real alternative to the hegemonic models of university and rationality. Recognizing the centrality of Popular Extension for universities and community development practice in Latin America, the paper looks upon the experience of the Popular Extension Project “Popular Legal Promoters” on coping with gender based violence in the outskirts of Brasilia, Brazil. Established jointly by feminist movements, the University of Brasilia and the Brazilian Public Minister, the project is based on a freirean approach to popular education on human rights focused on the formation of community leaders able to engage themselves on tackling gender based violence within their communities. By resorting to collected data regarding the project implementation and outcomes, we argue that Popular Extension Projects can be an important tool not only for coping with social issues, such as gender violence, but can also be the founding point for the emergence of an alternative toward an emancipatory and democratic University, marked by a production and circulation of knowledge where the surrounding community becomes an active agent of this process and a constitutive element of University itself, which assumes a more contextualized role as an important stakeholder on participatory development practices.

GIORGINO, VINCENZO* (University of Torino, vincenzo.giorgetto@unito.it)
The Contemplative Turn in Sociological Imagination

In my presentation I will address some epistemological and theoretical aspects related to the integration between sociological and contemplative methods. The latter are social practices originating from the wisdom traditions of human culture, maintaining a profound spiritual background. Their recent secularization (going back to the 70s) enables non-experts to achieve specific knowledge skills. The most successful attempt in this translation is currently found in the so-called mindfulness programs, oriented to integrate the biomedical approach and nurturing the subject of the so-called integrative or behavioural medicine; it has also brought recognition in psychological therapy. Through the 80s and 90s they constituted a growing bulk of research, recently testified by the birth of the scientific journal Mindfulness, not to mention its growing influence in education and management, especially in the literature about learning organizations.

My aim is to focus on the conceptual backdrop in which such kinds of integrative programs can be developed in social sciences, outlining some implications for transformative sociological as well. The core discussion is focused on the re-definition of experience, self and action, taking into account an established tradition of first-person inquiry and narrative research.

From my point of view, the attempt to set up such an integration calls for an enactive approach: via introducing an embodied and interactional perspective, it challenges the dominant representational model of knowledge. In this direction, it could also be of help in broadening and reshaping what we intend by change, contributing to a pragmatic “social transformation from within” and alleviating such challenges the dominant representational model of knowledge. In this direction, an enactive approach:

THOEUMES, JENS (CERTOP, CNRS)
Time Saving Account, Capitalization To Improve The Work Life Balance?

The time saving account was introduced in 1994 in France. At first underutilised, this mechanism allowing the employees to accumulate extra working time on an individual “time account” to be utilised later, became the nodal point of the time-reduction national policy bringing legal working time from 39h to 35h a week in 1998 and 2000. While time reduction was relentlessly pointed as a central cause of French companies loss of competitiveness in regards to international competition, it remained untouched. National Policies focused on giving more flexibility for the companies to respond to the market fluctuations.

After presenting the principles and evolutions of the TSA in the last 20 years in France, this paper aims at presenting the result of a study conducted through in-depth interviews with companies’ management, unions and employees of large and medium firms and public entities. It focuses on the current use of TSA and on the opportunities to “save” time in order to improve the personal work-life balance.

We will show the close link between economic issues related to the company, the collective bargaining and the individual use of TSA. The fundamental questions rising form this study: is time to be saved as money over the whole working life? How the personal effort should be compensated and accompanied by security and redistribution mechanisms? What means working time capitalization for the every day life?

REY, FRÉDÉRIC* (CNRS-CNAM, frederic.rey@yahoo.fr)
Comparing Employment Policies in a Globalising World: New Challenges and New Methods

Globalisation is an overwhelming phenomenon that transforms individual identities and social affiliations as well as it destabilizes the three basic policy-making functions traditionally associated with the nation and the nation-state: public problem formulation, public problem solution, and the definition of citizenship rights to the form of social inclusion and political participation as well as a key symbolic resource (Giraud, 2005). As such, globalisation undermines the validity of the basic assumptions of the comparative method as we have known it so far.

In the paper, we will elaborate on three complementary methodological solutions to address the formulated dilemmas, and will test and discuss them in the case of self-entrepreneurship as an unemployment policy in two countries: France and Brazil. In the first place, we will consider the comparative method in terms of most different cases (for example: Gerring, 2007, Tarrow, 2010). By confronting the basic characteristics of the object to be compared in very contrasted national contexts, this methodology sheds new light on the functions of the object of comparison as well as it reveals its boundaries and its significance. Second, we will focus on the scalar dimension of the policy under scrutiny, i.e. on the logics of power relations at the various relevant policy levels and on the vertical bounds linking those various policy scales (Scarpa 2009, Anderson, Ostrom 2008, Mahon, 2006). Finally, the focus on the transnational character of comparison shows a third dimension of the objects to be compared (Walby 2005, Dobbin, Simmons, Garrett, 2007, Hassenteufel 2005, Kettunen, Petersen, 2011, Gilardi, 2010, 2011). It demonstrates the exchanges and mutual influences between cases as well as the way specific cases integrate supranational or global recommendations, such as the ones formulated by the OECD or the ILO in the case of self-entrepreneurship as an unemployment policy.

Ignou- Paradigm Shift for Higher Education in India

IGNOU-Paradigm Shift for Higher Education in India

India’s higher education system is largest in terms of number of institutions and third largest in terms of enrollment next to China and United States. Total number of institutions imparting higher education in India is 62,000 whereas it stands at 6,706 in USA and 4,000 in China.

Despite massive expansion, there is mismatch between the demand and supply of higher educational institution in India. Gross Enrollment Ratio (GER) for higher education in the country is very low at 16.23 per cent as compared to the world average at 27.06 per cent.

Open distance learning is one of such strategy which aims at universalization of higher education, to address the barriers of higher education.

IGNOU-Indira Gandhi National Open

The Indira Gandhi National Open University (IGNOU), established by an Act of Parliament in 1985, has continuously strived to build an inclusive knowledge society through inclusionary education. The mandate of the University is:

• Provide access to higher education
• Offer high-quality, innovative and need-based programmes
• Reach out to the disadvantaged by offering programmes at affordable costs
• Promote, coordinate and regulate the standards of education
• Adopting a variety of media and latest technology

IGNOU, the National Resource Centre for Open and Distance Learning, with international recognition and presence, provide seamless access to sustainable and learner-centric quality education, skill up-gradation and training by using innovative technologies and methodologies and ensuring convergence of existing systems for large-scale human resource development.

IGNOU has been conferred with awards of excellence by Commonwealth of Learning (COL), Canada, several times. Recently, it was listed 12th in the webometric ranking of Indian Universities, based on the caliber of its presence on the Internet.

The University is committed to quality in teaching, research and extension activities through ODL system.

GIUDICI, FRANCESCO* (Columbia University, francesco.giudici2@gmail.com)
The aim of our paper is to analyze trajectories in hourly wages between the ages of 30 and 50 for five different birth cohorts, using the PSID data. More precisely, we focus on processes of intra-cohort stratification by tracing patterns of income as individuals age. Our analysis is informed by the cumulative dis-advantage hypothesis as a process of intra-cohort stratification. Using growth curve models, we seek to describe and explain the patterns of income stratification within and between cohorts. We hypothesize two key patterns: Simple interindividual divergence and path-dependent interindividual divergences. Simple interindividual divergence is indicated when the relation between initial hourly wage and its slope over time is positive (in contrast to convergence, where this relation is negative, and stability, where there is no relation between initial hourly wage and its slope over time). Path-dependent interindividual divergence is indicated when hourly wage differences between men and women, or between whites and non-whites, increase as individuals age. Our analyses will reveal if the patterns of wage divergence over the life course are constant across cohorts, or whether the extent and form of wage divergence is shifting over time.

The Impacts of Brazil and India’s Development Dialog on Poverty Alleviation Policies: Knowledge Sharing and South-South Cooperation

Since the beginning of the 1990ies a South American approach to Conditional Cash Transfers policies for poverty alleviation has been in development. Although widespread throughout the continent two main experiences can be singled out as most significant for their characteristics, range and influence: the Mexican Oportunidades and the Brazilian Bolsa Familia. Poverty rates have declined in Latin America during the last decade and in the Brazilian case the most intense fall is concurrent with implementation of the national CCT program. Due to the results of these policies the model has spread beyond the continent and is currently encouraged and financed by the World Bank to alleviate poverty and brake its generational cycle. The spread of this model of poverty is currently in discussion in many south-south forums around the world like BRICS and IBSA. As part of this current discussion in 2012 the city of New Delhi started a pilot program focused on poverty reduction as a result of the on-going National Debate about Cash Transfer Policies. The Latin American experiences were important base for the Indian discussion and the results exposes challenges to the south debate and its proposed horizontal dialogue.

This article presents the results of a research done in Brazil and India asking what can be disseminated from this south-south development dialogue. It exposes the challenges and opportunities as well as the different approaches that each society gives to the same set of policies as well as the discussions about poverty and development.

Questioning Development: Global Integration and the Ecological Efficiency of Well-Being

The author investigates the extent to which sociological theories of global integration, including political economic, military, and world polity theoretical orientations, help explain differences in carbon emission in the U.S. The analysis utilizes statistical techniques, addresses core sociological issues of inequality, human well-being, and development, and explores questions of sustainability and energy use key to environmental sociology. This is a burgeoning area of research and yet looking at the effects of political economic, military, and world society integration is relatively unexplored in the sociological literature. Results indicate that varying forms of integration have an impact on states’ abilities to provide environmental protection and well-being for citizens, and therefore unequal levels and various types of global integration are important to consider in environmental and development planning.

Migrant Nannies In French and German Households – Insights From a Care Worker’s Point Of View

This presentation focuses on migrant nannies working in two European countries: France and Germany. The main interest of this comparative analysis is to evaluate social policies of these two nation states through biographical research with migrant care workers who take care of small children in private households on a regular basis. This is a crucial task as nowadays the industrialized countries are highly interested in finding adequate solutions to their increasing care-deficit. European countries like France and Germany are structurally close and face similar problems such as demographic aging and the pluralization of life and work forms. However, their efforts to guarantee the production of human beings themselves in a globalised and capitalised world differ remarkably. At this juncture, migrant care workers are important key actors, because they represent a significant resource. Therefore it will be interesting to analyze how dimensions of class, but also national belonging and national norms and values influence the relation to local families. The analysis of field studies illustrates not only that nannies use their labor force to fill the local care deficits, but also helps to gain new insights into the care and work ‘realities’ of their employers: from a nanny’s perspective.

GLAUSER, ANDREA* (University of Applied Sciences and Arts, andrea.glauser@hsu.ch)

Photography and Society: Lessons from Susan Sontag

In recent years, scholars have often criticized the exclusion of art works in current sociological explorations of the arts. In contrast to classic arts works, foremost of which are those of Georg Simmel, which placed interest on the relationship between a particular art work and society, more recent approaches have primarily focused on art as a social universe, called “art-world,” or considered it as a specific social “field” or “system.” Although these perspectives typically involve theoretical concepts applicable to art works, based on exemplary discussions and modes of observation in society, the main interest is in systematic theoretical questions or institutional aspects of artistic production rather than particular art works and their social significance.

This paper discusses Susan Sontag’s approach to art works and her view on the possibility of gaining knowledge on the social world by analyzing art works. Sontag’s approach is particularly interesting as on the one hand, she was highly skeptical of attempts to diagnose contemporary culture and to discuss the social history of “ideas” through art works. On the other hand, particularly in her preoccupation with photography, she offers sociologically illuminating insights on the way photography is historically related to social experience and modes of observation in society. The main argument of this contribution is that Sontag’s perspective is sociologically interesting, particularly because it relates the analysis of particular art works to reflections on the history of the respective medium. Furthermore, it is remarkable that her lack of interest in constructing a general theory on the social aspects of the arts involves a remarkable openness to take particular art works as a starting point for inquiries and to raise a wide variety of questions on social experiences related to art.

Entre Les Différentes Figures Du Client, Quelle Place Pour Le Travaveur De Première Ligne ? Enquête Auprès De Guichetiers De La Poste Et De Consultants En Intérim

Aujourd’hui, le client et sa satisfaction apparaissent dans toutes les politiques managériales, du monde industriel jusqu’à celui de l’action sociale, en passant par le secteur marchand où l’injonction managériale du “client-roi” trouve sa voix d’expression première. Dans cette logique de « globalisation » de la relation de service, nous proposons d’étudier deux mondes du service a priori fort différents. D’une part, le guichetier de la poste est face à une figure du client fortement standardisée (Hanique, 2006), où l’usager cède la place au client-roi. Ce renversement des relations de pouvoir accorde une place nouvelle au client, sans donner les moyens aux travailleurs de première ligne de résoudre les contradictions organisationnelles engendrées par cette division sociale du travail (Dujarier, 2006). Le guichetier se trouve alors en tension entre des injonctions paradoxales du même client. Pourtant, la violence symbolique reste la même. Et, alors qu’un guichetier « fait carrière » à la poste, le consultant en intérim moyen le reste deux ans.

GNEVASHEVA, VERA* (Moscow University for the Humanities, vera.cos@rambler.ru)

**Value Identity of Russian Younger’s**

The study on value orientations in Russia has been conducted from the middle of the 1960s. When the theoretical works by a psychologist B. G. Anan’ev, sociologists A. G. Zdravomyslov, V. A. Iadov and others appeared, as well as empirical studies. The biggest one was the sociological and social-psychological study on workers’ value orientations (including young people), carried out by Leningrad scientists under the direction of V. A. Iadov [1] in the beginning of the 1970s. During the Soviet time the study on youth value orientations to a considerable degree was directed toward the revelation of their accordance with the communist ideal, to the socialist lifestyle [2]. At the period of the Perestroika (1985–1991) the problem field was noticeably extended due to the studies on the informal youth associations (actually it was the way to the switch to study on the youth subcultures). Finally, during the last 15 years value orientations of the Russian youth have been investigated by considerable number of individual scholars and scientific groups. The situation of social order change and “re-comprehension of values” on the national scale has encouraged the scientists to interpret the transformation of value orientations of the Russians. The extensive study on dynamics of the value orientations of the Russians that was conducted under the direction of N. I. Lapin [3] is of a great scientific significance. There have been dozens of empirical studies carried out in Russia for the last 15 years, several hundreds theses defended on the problem of the youth value orientation [4]. Although quite often the scopes of such studies, their methodological correctness and opportunities for the data comparison remain to be a subject of criticism.

**Can ‘Religion’ Provide a Response to Today’s Climate Challenges?**

The very recent report published by the United Nations confirms unsurprisingly that around ninety five per cent of the current climate issues are man-made. This illustrates more than ever the significance of various dimensions of people’s everyday life, such as policy, religion and education that influence their practice of environment.

Environmental concerns are growing in Iran. Some of them are related to increasing dryness of rivers (such as Zayandeh-rood) and lakes (such as Urmieh and Hamoun) and expansion of sandstorms even to the mountainous area of north-west Iran. Having said this, intense air pollution in Tehran and other large cities is probably the most urgent concern. The main reasons for the pollution are: population growth, rural-urban migration, the poor quality fuels used by mostly old cars on the road, and industry – mainly due to the economic sanctions and the geographical location of cities – and, more importantly, a lack of awareness of the environment and of a positive attitude towards it. Islamic government policies that have been used to deal with at least some of these concerns have not always been systematic. The Islamic government’s disregard for the environment is also reflected in the state education system. Education in general, and in particular religious education, do very little to deal with these concerns.

It is expected that ‘Islam’ informs policy, state-provided education, people’s attitudes and practices towards sustainability in Iran. This paper concludes that this is not the case and aims to provide an explanation for this. Is ‘Islam’ really incapable of tackling climate challenges in the context of Iran? A social constructionist approach of ‘Islam’ will be presented.

GODRY-PRESSLAND, AMY* (University of East Anglia, a.godry-pressland@uea.ac.uk)

**The Question I Would Never Have Asked Federer Or Nadal**: The Sexuality Of Sportswomen In British Contemporary Print Media

The sexualisation of sportswomen was well documented by sport sociologists and feminist media scholars alike in the 1980s and 1990s (Creedon 1994; Lenskyj 1998). However, in the 2000s research claimed that a shift was taking place in sports media. Amidst cries of increasing gender equality in sports coverage, this paper explores whether claims of significant inequality in the form of the sexualisation of sportswomen continues to exist at the end of the first decade of the new millennia. Using five British Sunday newspapers over 24 months (Jan 2008-Dec 2009) this paper attempts to construct a comprehensive categorisation of how sportswomen are sexualised by British contemporary print media. The sexualisation of sportswomen is classified into five categories which consider: 1) sexualised bodies in text and images, 2) a specific and singular type of sexuality, 3) stripping and nudity, 4) sexed bodies and sexual partners, and 5) flirting as sexiness.

GODRIE, BAPTISTE* (University of Montreal, godrie_baptiste@yahoo.fr)

**Shaping the Contour of Psychiatric Intervention. Peer Support’s Contribution in the at Home Project, Montreal**

To what extent does the integration of peer support workers (former service users) in mental health services contribute to the renewal of clinical intervention among homeless people with severe mental health illnesses? This presentation is an analysis of the integration of three peer support workers in two intensive care management teams and one assertive community treatment (ACT) team of the At Home project, Montreal, Quebec, Canada (2009-2013). This housing first project (also conducted in four other Canadian cities) compares clinical and housing support services to conventional services. An important feature of the project is the participation of service users in the governance and the clinical intervention. We’ll discuss the clinical practices developed within the teams by the peer workers in collaboration with the clinical staff, placing a particular emphasis on two of their contributions: 1) bringing their experience of severe mental illness and their broader experiential knowledge into the understanding of the service users’ situation and the thoughtful application of coercive measures, contributing to the improvement of the existing services; 2) challenging the classical definition of clinical distance with the service users, contributing to the redefinition of support services in the At Home project. These two contributions will open the debate on the professionalization of peer support workers and their ability to shake the professional psychiatric hierarchy and the traditional practices.

The qualitative data was collected during a PhD field work through observation and individual and group interviews conducted during the year 2012 with 25 peer support workers, clinical staff, managers and psychiatrists of the At Home project in Montreal.

GODZIK, MAREN* (Fukuoka University, godzik@fukuoka-u.ac.jp)

**Changing Life Course, Changing Housing and the Housing Market**

Since the 1960s, a shortage of lodging in city centers has led to high prices and the development of suburban housing estates. The problems of aging suburban populations are attracting considerable attention in Japan, a society of long longevity. The decline in mobility among elderly homeowners is a main problem in aging suburbs because an aging population and the accompanying social prob-
lems have begun to threaten residential environment there. The increase in housing vacancies, which is closely connected to a lack of security, sustainability, and human bonds among residents in a community, is one example.

This study aims to examine local responses to the increasing number of vacant houses in suburbs. We pay attention to the influence of local regulations on vacant housing; several local governments, including that of Usiku City, have enacted regulations to promote appropriate maintenance of vacant houses since the late 2000s. Then, we discuss institutional structures that have caused the problem. We also identify the generative process of housing vacancies in the Tokyo suburbs, and we examine the results of field surveys of several old housing estates in Usiku City, Ibaraki Prefecture. Based on interview surveys of residents, we clarify the mechanism that produces housing vacancies there. We conclude by examining the attitudes of local communities toward vacancy problems.

Sequestering Public Housing Policy and Research

Sequestering the Poor: Budget reductions and housing policy change in the US and UK

Public housing in the United States has had a long history of both being pressured for financial solvency as well as for redressing the racial and poverty concentration of its residents. In 2013, a fiscal cut-back of substantial size occurred as the budget “sequester” took effect. In New York, for example, the loss of funding amounted to over $200million for the year (Chaban; Dawsey). Politically analogous budget cuts have also occurred in Britain as the Conservative government has pursued fiscal restraints over the social rental sector.

This paper will examine the intersection of the various formats of the US-UK fiscal crisis and its impacts on housing policy and related national housing research. A series of major housing research experiments have been recently launched in the US to learn how to better manage with less, while at the same time, the translation of actually incommensurable goods like money, affection, or care. In the idea of generalized reciprocity, and models were assembled that allowed the double-pole relation was extended to a three-pole relation, time was neutralized over enormous spans of time, and that donors often are not rewarded by the receiving side in a short time. The research got confronted with growing problems. It became clear that the “goods” cannot be exchanged between generations and that the translation of actually incommensurable goods like money, affection, or care. Thus, the initially attractively simple conception became pretty complex and confusing.

Intergenerational Reciprocity – the Idealization of the Interchangeability of Phases of Life

Among the prominent concepts used for the sociological description of intergenerational relations is the one of cyclical reciprocity. Adopted from predecessors in cultural anthropology, the term was coined by thinkers like Gouldner in the perspective of exchange theory, thereby ignoring other traditions of thought. The course of time, analyzing intergenerational relationships in terms of exchange theory got confronted with growing problems. It became clear that the “goods” exchange between generations is not equivalent, that this exchange extends over enormous spans of time, and that donors often are not rewarded by the original recipients. Theorists reacting by introducing additional elements: the double-pole relation was extended to a three-pole relation, time was neutralized in the idea of generalized reciprocity, and models were assembled that allowed the translation of actually incommensurable goods like money, affection, or care. Thus, the initially attractively simple conception became pretty complex and confusing.

**Consideration and Meaningfulness of the Educational Scientific Research: The Explicit or Implicit Concealment of Social Class**

The present paper is concerned both with the limits and dynamics of research tools in the specification of theory, in data categorization and in the final representation of the educational incidents or situations schematization and meaningfulness. In particular, the issue of investigation is how meaningfulness is rendered, through the single-side focus on the variable of gender or nationality, to a uniform society which is typically or atypically conceptualized as a homogeneous collectivity, partially differentiated in terms either of gender or nationality.

Social inequality, differentiations in economic, educational and cultural capital raised through the categorization of individuals in the various social classes was concealed by the argumentation about the in-depth study with focus on one of these variables. There is a thorough analysis of the system which, as the dominant scientific paradigm, was gradually promoted in the capitalist, liberal structures as a model of blunting social inequalities by the projection of new collectivity schemes such as social stratification. The latter actually substituted social class by eliminating the concept of social inequality, different educational opportunities and the individuals’ different present and future based on their social class.

The exemplary implementations depict how non-reference to social class was conducive to an enfeebled theoretical approach, because social consideration, the actual social situation and the social class reproduction model were not elevated, in which the variables of gender and nationality should be co-examined by co-formulating the issue of study within the expanded schema of social class.

Within a mature phase of post-consideration, the restoration of social class in the educational research and in education is suggested, being conducive to the promotion of the policy of rights, especially during an economic crisis period.

**Social Movements and Protests in Brazil in 2013-What’s New?**

Social movements and protests in Brazil in 2013-what’s new?

The paper analyzes the new cycle of demonstrations that have taken place in Brazil from June 2013, which took about one and a half million people to the streets and earned international media headlines. The text examines three relevant moments: June 2013-July 2013 and September 2013. It examines three questions: First: who are the actors who make up the demonstrations, which the movements, organizations and social collectives in action; what are your proposals and differences, what is the role of young people and the use of media and social technologies. In the second block: what are the main practices, which like feature role of cooperation and of political confrontation; what are the social impacts and innovations produced in society and political institutions. Third block: what the character and sense of the demonstrations, what’s the point of the ongoing democratic process, what are the main ideologies present, which social theories that have been used to explain them, as these are dovetailed with similar demonstrations at the international level.

**Different Cultures - One Mandate: Integration of Military and Civilian Personnel within Defence Organizations**

Most defence organizations are comprised of both military and civilian personnel working in partnership with each other towards the realization of defence goals. Civilian personnel (i.e., civil servants) in defence organizations often work closely with their military counterparts (e.g., in headquarters, on bases, on missions, in academic settings. Although the issue of civilian-military personnel collaboration within defence organizations has not historically been explicitly considered in the context of ‘collaborative work arrangements’, it is indeed an important issue that affects both operational and organizational effectiveness. This presentation will examine several related international initiatives to examine collaboration between military and civilian personnel across defence organizations, including a NATO Human Factors and Medicine Research Task Group (HFM RTG-226) and a cross-national survey initiative. Further, results from the Canadian Defence Team Survey will be presented. Civilian personnel in the Department of National Defence (DND) and military personnel in the Canadian Armed Forces (CAF), referred to as the Defence Team, work in partnership to meet the mandate of the CAF/DND. Together, personnel in this integrated represent a unique group dynamic allowing the DND/CAF to draw upon the expertise of military personnel who have specialized skills and knowledge about military and operational functioning, as well as upon civilian personnel trained in a variety of occupations and possessing a range of knowledge and expertise. The Defence Team Survey, presenting the results of 644 Regular Force military members and 1,149 DND personnel, was designed to examine unique issues central to the partnership between civilian and military personnel. Recommendations will be provided for developing strategies and practices for enhancing the quality of collaboration between military and civilian personnel working within defence organizations.

**Oh, Didn’t Anyone Tell You? the Importance of Intra-Organizational Information Sharing in Defence Organizations**

Organizational justice, or the extent to which people perceive organizational procedures as being fair and equitable, is a fundamental organizational value. While justice perceptions have been shown to impact on personnel outcomes, such as job satisfaction and commitment, and ultimately to impact organizational outcomes such as performance and retention. In the study to be reported here, based on survey data from 6,503 Canadian Armed Forces (CAF) personnel, analyses were conducted to determine members’ perceptions of informational justice within the CAF, and the role of informational justice on key outcomes of interest. Results indicated that informational justice was indeed highly related to a range of important factors, including overall perceptions of organizational justice, organizational and unit leadership, career management in the CAF, trust in the CAF, and employee psychological wellbeing. Moreover, mediation analyses indicated that military personnel’s perceptions of informational justice were related to outcomes such as commitment and leave intentions even after controlling for other key variables such as perceptions of overall justice and satisfaction with leadership, further emphasizing the importance of informational justice. Implications for information sharing within military organizations are discussed.

**Fertility Stall and Social-Demographic Risks Of Humanitarian Disasters In Tropical Africa, and Means Of Their Prevention**

The recent decade has witnessed remarkable success in various aspects of socioeconomic development in Tropical Africa. However, contrary to the “development is the best contraceptive” expectations, fertility in many countries remains stalled, frequently at very high levels of 5 and more children per woman. We investigate the values and behavior pattern underlying African persistent “pro-natalism” to reveal that some of the best-recognized fertility inhibiting aspects of development, such as female primary education and female labor participation, are far less efficient for accelerating the fertility transition in Africa than they were in the rest of the developing world. This sharpens the necessity of urgent introduction of effective measures of accelerating the fertility decline, as otherwise the rocketing population numbers will result in burgeoning youth cohorts, tremendous pressure in rural areas, hyper-urbanization, and greater risks of political violence and humanitarian catastrophes. Our analysis shows the most effective ways of accelerating the fertility transition in Tropical Africa to be the introduction of universal primary education (with particular attention to enrolment of women in their 20s and early 30s) accompanied by re-introducing family planning campaigns as a development priority.
Why the Arab Revolutions of 2011 Are True Revolutions: Implications and Prognosis

When they began, there was hope that the Arab Revolutions of 2011 would be like the peaceful "velvet" or "color" revolutions in the USSR and Eastern Europe in 1989, or the peaceful Ukraine in 2004. Instead, with the possible exception of Tunisia, they have turned out to be more like true, classic revolutions with civil wars, counter-revolutions, high levels of violence, and extended periods of turmoil and sudden shifts in government. There are a number of reasons for this difference, including (1) the greater youth of populations in the Arab revolutions; (2) the role of ideological contenders for power – Islamists alongside the secular liberal revolutionaries; (3) the major interventions of outside powers; and (4) greater internal regional, ethnic and tribal divisions.

Climate Change and Coastal Adaptation: Planting the Seed for Adaptive Governance in Portugal

The most recent IPCC report confirms that climate change is very likely to increase coastal risks. This means that all vulnerable coasts will be required to adopt innovative adaptation strategies. In countries such as Portugal, economic austerity may result in reduced funds for rising coastal defence expenditures. Therefore, coastal management will have to confront a geomorphological and social process of creative and progressive adaptive governance if future economies and societies are to remain viable and resilient.

Social scientists will be heavily involved in this challenging prospect. This was the experience of a three-year research - CHANGE - Changing Coasts, Changing Climate, Changing Communities (2010-2013). The project used climate scenarios for the coming decades to promote a meaningful dialogue between a range of interested parties and coastal managers regarding possible planning and financing options in three different coastal locations in Portugal.

The research identified a high awareness across the stakeholder spectrum of coastal risks and climate change. But it also discovered a dominant feeling of hopelessness towards future solutions for coastal protection and funding. Furthermore, all previous attempts by coastal managers to engage stakeholders are widely perceived to be failures.

These critical gaps in processes, action and communication have been analysed in a set of interactive workshops. Representatives from regional government and municipalities, private companies, universities, fishermen, among others, met together to discuss science and communication; social and economic impacts; public participation; financing and adaptation solutions.

The presence of the team, coupled a detailed public opinion survey at each location, demonstrably raised awareness on coastal change and sowed the seeds for creating an inclusive coastal forum, engaging local stakeholders in the mission of spreading the adaptation message. The research paper will sum up the results of the CHANGE process, aiming to offer a contribution towards new models of adaptive coastal governance.

Brain Drain and Academic Mobility

Emigration of high-skilled professionals from less developed countries to developed countries leaves the sending countries economies with a reduced supply of skilled people. The resulting brain drain would limit the use of educational investment in the sending countries, creating conditions for their re-use by the more developed countries. Skilled emigration has been analysed according to two contrasting models: the model of the Exodus that stresses the idea that more skilled individuals are forced to the exile, allowing them to get a job and a remuneration corresponding to their training; the model of the Diaspora that stresses the mutual benefits of intercultural exchanges opened by the circulation of cosmopolitan elites.

This research aims to test the comprehensive power of each of these theses referencing to the mobility of highly qualified Portuguese professionals to Europe in the last decade. Portugal is one of the European countries where the drain is more accentuated in the last 15 years of the 20th century, to the point that leads to insert primary or secondary segments of the employment system of the receiving European countries.

Since at least the 1990s, representatives from several Ecuadorian indigenous communities have sought to obtain redress for an environmental disaster attributed to a consortium of oil concessionaries that operated in the Lago Agrio oil field of the Ecuadorian Amazon between 1964 and 1990. The alleged harm includes an unprecedented environmental degradation, and all sorts of health-related injuries to the inhabitants of those communities. The legal battle comprises a complex web of court, arbitration -both investment and commercial- and administrative proceedings in Ecuador, the US -where more than twenty courts and several administrative agencies are involved. Legal remedies have also been pursued in other countries. The centerpiece of this gargantuan battle, however, is the $18.2 billion judgment issued by an Ecuadorian court in early 2011 against Chevron. This judgment is the largest and most complex award rendered against a multinational oil company in Ecuador, and perhaps in the entire region. The Chevron saga has rekindled an interesting debate on the development of mechanisms for the protection of diffuse rights involving the environment, indigenous peoples, and human rights in general; the role of the courts in supervising compliance with judicial remedies, and their engagement in activities that go beyond their traditional role as simple adjudicators; and the role of privately-formed entities in the administration and supervision of monetary awards. My presentation will address these issues insofar they contribute to help understanding the current landscape of environmental and indigenous rights litigation in Latin America, and the interplay between the social, economic, and political factors in the development of large-scale litigation.
national approach applied to conceptualize 'race' as transregional inequality and the central role of law in this regard. The second part presents some articulations between law and ‘race’ in Latin America as conditioning ethno-racial discourses, social hierarchies and inequalities during European rule and the most significant continuities of such articulations after independence and in subsequent regime transitions.

GONOUYA, ROBERT* (RC34 Member, r.gonouya@londonmet.ac.uk)

Double Troubled-Young People Struggling to Cope with the Conjoined Status of Neet-Youth Homelessness in Times of Austerity

Despite the established body of work in sociology illustrating the diversity of youth experiences, there are gaps in understanding the challenges faced by young people whose lives are framed by the duality of NEET-Youth homelessness, particularly in times of economic austerity. As such, the NEET youth homelessness conceptual framework developed in the mixed method study conducted in Essex, Kent and London and reported here, allows for a particular and more nuanced understanding of the nature of this onerous status, including the coping strategies and or tactics of those affected. This encompasses associated aspects such as their attitudes to work, the welfare state, family and training.

One of the central tenets of the NEET-youth homelessness framework presented herein is that irrespective of the importance of micro-level factors and personal preferences in shaping young people’s lives, individual situations can only be fully understood by drawing on perspectives which also recognise the impact of broader social change and its role in structuring opportunities and choices available to young people (Russell, et al., 2011).

Importantly, the NEET-Youth homelessness conceptual framework introduced in this paper, marks a shift from the hitherto, dominant ‘silo approach’ to understanding both NEETism and youth homelessness separately, despite their acknowledged links (Smith, J. and Ravenhill, M. (2006); Quiggin et al, 2008; Jones, 2009). This paper posits that those afflicted by the conjoined status are doubly troubled as they not only struggle to cope with the challenges of living in austere times whilst yoked by external influences such as welfare state access conditionality, but also experience debilitating social exclusion linked to their severely compromised personal capacities and turbulent, liminal adulthoods.

RC55-884.2

GONTHIER, FRÉDÉRIC* (Université de Grenoble, frederic.gonthier@iepg.fr)

Public support for welfare state has been shown to be sensitive to economic conjuncture; e.g., to lower with increasing unemployment or inflation rates, and to raise with gross domestic product (Erikson, MacKuen & Stimson, 2002).

Contrasting with the comparative welfare state literature, that usually focuses on social indicators’ annual figures or covers only short time spans, we will adopt a long period perspective and explore how social indicators’ overtime evolutions influence support for state since the 80s. We will use multilevel modeling with pooled data from the ISSP Role of Government, a survey module that has been repeated four times in an increasing number of countries since 1985.

This presentation will deal mainly with global inequalities and public policies indicators. Mixed findings stem from the exploratory analysis. Strong income inequalities are found to fuel support for government, thereby expressing a growing demand for state protection. But more subtle variations appear when we consider the Gini evolution. Support for state appears to be less important in countries where the Gini has increased, suggesting a threshold effect (increasing inequalities usually lower public trust in institutions, and hence dwarf support for state intervention).

The impact of social expenses is only partly as expected. Europeans are all the more in favor of state since they live in countries with low social expenses. However, when social expenses increase, support for state also increases. It indicates that the general public tends to react when political elites answer to social demand, but does not necessarily react according to a “thermostatic” pattern (Wlizeen, 1995). Thus, our findings will also raise substantial issues regarding welfare sustainability and democracy responsiveness; e.g., help to understand how public opinion is shaped by previous levels of policy outputs and how government policies answer to prior changes in mass opinion.

RC33-579.4

GONTHIER, FRÉDÉRIC* (Université de Grenoble, frederic.gonthier@iepg.fr)

Comparing the Evolution of Attitudes Toward Government: Cross-Cutting Substantial and Methodological Issues

While many scholars have used cross-national data to investigate attitudes toward welfare state in a comparative perspective, this topic has seldom been explored with pooled waves of surveys. A long lasting survey module such as the ISSP Role of Government, repeated four times since 1985, permits to gauge whether or not state attitudes have moved since the 80s. But it is also particularly useful to question aggregate data analysis and its limitations. The goal of this presentation is to address the overtime evolution of support for State from both substantial and methodological perspectives.

First we disentangle the different dimensions of attitudes toward state, so as to compare the global trends across countries and assess the “values convergence” hypothesis (e.g., people are supposed to be less supportive of State due to global- ization, individualization and postmaterialism). Hence we raise the issue of aggregate measures of public opinion and their reliability through time and space.

Then we use multilevel modeling to look at the evolutions among subpublics, especially among middle classes and “transfer classes”, which have been found to be widely in favor of public policies. Complying with the literature showing that statist attitudes are linked to narrow personal interests, we find that demand for welfare is more important among the disadvantaged social groups. Thus we also face with the problem of harmonized data and comparability of national contexts.

Our results finally provide evidence that support for State tends to move slowly and uniformly among subgroups and countries, thereby confirming the “parallel publics” thesis but strongly contrasting with the idea that welfare retrenchment has a direct impact on values and public opinion. Here we are faced with our last challenge: how global inequalities and public policies indicators can help to understand attitudes toward government?
GONTHIER, FRÉDÉRIC* (Institut d’Etudes Politiques - Universidad de Grenoble, France., frederic.gonthier@iep-grenoble.fr)
Comparing the Evolution of Attitudes Toward Government: Cross-Cutting Substantial and Methodological Issues

While many scholars have used cross-national data to investigate attitudes toward welfare state in a comparative perspective, this topic has seldom been explored with pooled waves of surveys. A long lasting survey module such as the ISSP Role of Government, repeated four times since 1985, permits to gauge whether and how statist attitudes have moved since the 80s. But it is also particularly useful to question aggregate data analysis and its limitations. The goal of this presentation is to address the overtime evolution of support for State from both substantial and methodological perspectives.

First we disentangle the different dimensions of attitudes toward state, so as to compare across countries and assess the “values convergence” hypothesis (e.g., people are supposed to be less supportive of State due to globalization, individualization and postmaterialism). Hence we raise the issue of aggregate measurements of public opinion and their reliability through time and space. Then we modeling to look at the evolutions among sub-publics; especially among middle classes and “transfer classes”, which have been found to be widely in favor of public policies. Complying with the literature showing that statist attitudes are linked to narrow personal interests, we find that demand for welfare is more important among the disadvantaged social groups. Thus we also cope with the problem of harmonized data and comparability of national contexts.

Our results finally provide evidence that support for State tends to move slowly and uniformly across subgroups and countries, thereby confirming the “parallel publics” thesis but strongly contrasting with the idea that welfare retrenchment and individualization among subgroups and countries, thereby confirming the “parallel statist attitudes are linked to narrow personal interests, we find that demand for welfare is more important among the disadvantaged social groups. Thus we also cope with the problem of harmonized data and comparability of national contexts.

Role of Government Cutting Substantial and Methodological Issues

Our results finally provide evidence that support for State tends to move slowly and uniformly across subgroups and countries, thereby confirming the “parallel publics” thesis but strongly contrasting with the idea that welfare retrenchment and individualization among subgroups and countries, thereby confirming the “parallel statist attitudes are linked to narrow personal interests, we find that demand for welfare is more important among the disadvantaged social groups. Thus we also cope with the problem of harmonized data and comparability of national contexts.

Most studies show that the arrival of the first child produces a gender balance within the couple, and frequently initiates long-lasting gender inequalities. This paper investigates how first time parents deal with the reconciliation problem (combining paid and unpaid work), which are the consequences of adopting different reconciliation strategies (use of family policies, informal networks and couples’ time) on gender inequalities, and to what extent different strategies are based on individual attitudes and societal constraints in Spain. This study has two peculiarities. The first one is the sample selection. We interview couples which had a fairly egalitarian division of labour when they were expecting the first child, and we interview them again one and a half year later; when most couples have already made the decision to return to paid work. The second one is the historical moment in which the interviews were conducted, marked by a deep economic crisis and a sharp weakening of men’s working conditions. The study is based on a sample of 33 egalitarian dual-earner couples interviewed two times firstly in 2011 and secondly in 2013. Results indicate that mothers elaborate more realistic expectations during pregnancy about their chances to combine work and care, while fathers tend to expect more and less the reality. In terms of strategies, both men and women express a clear intention of maintaining a gender balanced division of labour. This study highlights the importance of a good policy design in order to favour gender balance over the life course, even in the worst socio-economic circumstances.

Male Homicide and Life Expectancy in Mexico

Objective. To determine the impact of homicide on male life expectancy in Mexico and its 32 states during the three-year periods 1998–2000 and 2008–2010 and the weight of the different age groups in years of life expectancy lost (YLEL) due to this cause. Methods. Based on official death and population data, abridged tables for male mortality in Mexico as a whole and its states were created for the three-year periods studied. Health-adjusted life expectancy and YLEL due to this cause for men aged 15 to 75 were calculated by selected causes (homicide, diabetes mellitus, and traffic accidents) and age groups in each three-year period. Results. In the years between the 1998–2000 and 2008–2010 periods, YLEL due to homicide increased; this increase was more evident for the youngest age groups. YLEL due to homicide declined between the two three-year periods, the YLEL due to homicide increased. From 2008 to 2010, homicides were the leading cause of YLEL among men aged 20–44. YLEL due to homicide among those aged 15–44 increased between the two three-year
periods. **Conclusions.** The increase in the rate of homicidal violence, especially among young people, is impeding an increase in male life expectancy in Mexico. In several states, such as Chihuahua and Durango, this violence appears to be the main reason for the decline in life expectancy among men aged 15 to 75.

**Sociedad, Violencia y Demografía En América Latina**

Los cambios sociales y económicos vividos en tiempos recientes por América Latina (democratización política, crecimiento económico, reducción de la pobreza) no han evitado que sigan existiendo notables desigualdades sociales, y que la violencia alcance niveles insospechados décadas atrás. Obviamente esta situación ha influido en la demografía latinoamericana: si bien el aumento de la esperanza de vida y la disminución de los niveles de fecundidad han propiciado un acelerado proceso de envejecimiento poblacional, lo que ha llevado a que la proporción de personas con 60 años y más se haya incrementado sustancialmente, simultáneamente en la mayoría de los países latinoamericanos hay todavía un numeroso grupo de población en las edades más jóvenes, lo que en la práctica genera una coexistencia de demandas sociales que difícilmente han sido satisfactas en las sociedades del continente respecto a un buen trato de una población de seguridad social y de pensiones adecuado -y por ende, la existencia de un amplio número de adultos mayores pobres-, así como la alta mortalidad entre los jóvenes debe a hechos violentos -y su impacto en la esperanza de vida- son prueba de ello. Este trabajo pretende analizar la relación entre cambios sociales y características demográficas en América Latina en las últimas décadas.

**Language Diversity at Work: Guidelines to an Interdisciplinary Approach**

Communication at work is a complex process in which there is much more at stake than information exchange. How can such an element be analyzed in order to understand both its nature and relevance inside organizational culture (Velázquez Valadéz & Gonzalez Trejo, 2013)? How can we introduce a sociolinguistic perspective to approach it? The answer might conduct to consider firstly a renewed concept regarding language diversity. Namely, it could be conceived as a performance landscape or development area emerging as a result of dynamic forces affecting the linguistic repertoire. Inside companies, language diversity would enable individuals to perform exchange and balance functions (particular registers) and ultimately contribute to the company’s place in a society’s linguistic repertoire. The latter would imply, secondly, a new perspective to be introduced into a typical analysis of communication at work in order to analyze speaking events considering the following elements (Hymes, 1974): setting and scene, participants, ends, act sequence, keys, instrumentalities, norms and genre, among others. Such approach would also result from the integration of concepts from the so-called Economics of Linguistic Exchanges (Bourdieu, 1985) into what is called “Economics of Language” (Grin, 1996). Investigation in the latter field pay special emphasis on: reasons why some languages must be taught and learned rather than others, level of proficiency in different languages that companies desire in their employees, evaluation of benefits for individual learners or for society of learning and teaching second languages, language policies in education promoted in organizations and their relationship with macro policies (Grin, 2002). Finally, it is the purpose of this contribution to present results from interviews analyzed during the qualitative stage of an investigation conducted in Mexican companies using the concepts and approach described to inquire about the relationship between diverse sociolinguistic functions and positions individuals hold in a company.

**Human Rights and Political Governance. Using the Sociological Theory Tools to Address the Monitoring and Compliance Problem of the Human Rights NORM at the National LEVEL**

The monitoring and compliance with human rights norm in domestic political contexts still is a core research problem in the human rights arena. I intend to present results from a recent research that suggests that political governance structures could be a major improvement with regard to this problem. Political governance is defined in institutional terms as a negotiation structure between state and non-state agents that works as an interface between the domestic political system and regulation processes of the human rights problematic outside this system, mainly at the international level.

I present a case study of a negotiation process between the Colombian government and non-state agents from the system of international cooperation for development, the international human rights system, international NGOs and domestic civil society aimed at the regulation of human rights problematic in Colombia. The outcomes of this negotiation show how a political governance structure can emerge as a change in the political regulation model of this problematic at the national level.

This kind of negotiations entails the participation of plural social agents that act at different scales (national and international), with different interests and power capacity and that must solve a problem of inter-sectorial coordination (state agents and non-state agents) in order to overcome political conflicts and get at some point of agreement with regard to how regulate the problem under consideration. In this research, I used a combination of the structuration theory and the Coleman’s macro-micro-macro loop in order to explain how this governance structure could emerge as a new model for addressing the monitoring and compliance problem of the human rights norm by the Colombian government.

**Family and School Effects in the Explanation of Migrant-Native Differentials in Performance and Educational Expectations in Spain**

We examine the effects of school context on educational outcomes and outcomes of the children of immigrants, in comparison with natives in Spain, an under-represented case in the international literature and a fast growing immigration destination in Europe. Using two recent datasets, 2011 Chilean School Survey and the Secondary Schooling Evaluation Survey, which cluster students across schools, we investigate the factors that contribute to the migrant-native differentials in school performance and the formation of long-term educational expectations, and propose an explanation to migrant optimism. We look at three dependent variables: performance is here studied from both an [1] objective (test scores) and [2] subjective perspective (estimation by children and their parents of whether their performance allows to reach tertiary education) and [3] the adjusted educational expectations (controlled for prior performance). Our results reveal the different way that school context works for immigrant and native origin children. Although immigrant children themselves understand the constraints that such disadvantage imposes on their future educational careers, immigrant parents seem to hold on to a rather unrealistic position. This parental optimism in turn seems to boost the career expectation of immigrant children independent of school effects. Thus while school context determines the performance of immigrant origin students to a greater extent than those of natives, the opposite is true for expectations. The formation of aspirations is more family-oriented among im-
migrants, and thus more positive, than among natives. Whether the long-term educational careers of immigrant children are as successful as they expect is a matter of how they do cognitively in schools, in which there is a greater role for schools to play.

A New Crisologie after 2008? Crises and Cognitive Autonomy

This paper is an attempt to address Morin’s (1968) plea for a sociology of crisis, focusing particularly on the issues of the sociology of time and intellectual change from the vantage point of intellectual responses to a crisis.

Most current sociology characterizes our epoch as one of incessant acceleration, which precludes social agents from being able to weave a lasting narration where to situate their life-worlds in the context of an ever-changing society. This insight brings together thinkers as diverse as Rosa, Sennett, Bauman and Castells. Nonetheless, when moments of heightened uncertainty occur and faced with a context of pressing time – the classical definition of crisis as a turning point, from the Greek krino (to cut, to select, to judge) – narrations do frequently appear, for without a minimum of foreseeability, action is impossible and the future unbearably cowering insights.

If, precisely at the moment in which narrations are the most unstable we need them ever more urgently, we face a tension where the role of intellectuals becomes fundamental. Already Gramsci had acknowledged this. Furthermore, as Morin had already argued, intellectual reactions to a crisis are in no way readily predictable, for they raise forcefully the issue of the justification of normality. This might even mean the ascent of ‘regressive’ responses to a crisis – plagued with dualisms – or a newfound sense of complexity.

From this starting is that I attempt to weave together the tension between cognitive autonomy and narration after critical events. I argue that in order to fathom intellectual change and crisis, sociology must meet at least two characteristics: First, it must understand cognitive autonomy as a relational (not absolute) characteristic of intellectual actors and second, it must be particularly attentive to the issue of time in a self-reflecting way. I.e. it must become a ‘temporalised’ sociology.

Think Tanks As Public Intellectuals? Recent Developments in the Sociology of Think Tanks

This paper’s aim is to contribute to the sociological literature on think tanks by drawing insights from the sociology of intellectuals. I first proceed by describing and establishing links between some of the latest contributions stemming from sociology and political science: Tom Medvetz’s Bourdieusian framework and Hartwig Pauz’s neogrammian approach. From there, a discussion ensues on the potentialities and limits of those perspectives to study intellectual change, independence and stability within think tanks. Herein positioning theory, previously used to study public intellectuals (Baert) becomes relevant, as it highlights the relationship between a public intervention, its context and other actors. In the case of think tanks, it highlights how these organisations must ‘juggle with’ diverse forms of capital, competing inside and outside, criss-crossed by institutional and economic constraints. Since within think tanks individuals and institutions are embedded in various public debates and connect to a range of people and organisations, alliances are crystallised in the public sphere through the think tank’s intellectual reputation (and the form we understand a think tank’s intellectual function: based on technocratic expertise, on being a critical voice, etc.). These resources can in turn be mobilised in the form of allegiances and distances, economic constraints and intellectual resources. This reputation thus becomes a think tank’s greatest asset, its depository of symbolic capital. A public intervention is then the exercise of weaving together the intellectual image of a think tank, “talking”, as it were, through its experts in every public intervention and across platforms and publics. This stretches the concept of cognitive autonomy in interesting ways, as organisations themselves generate an image vis-à-vis the image of those who talk on its behalf. In order to exemplify this I expose the case of the British think tank ‘New Economics Foundation’.

Beyond Environmentalism: ‘living Well’ and ‘bio-Civilisation’ at the UN Rio+20 Summit

Concepts of ‘living well’ are re-framing the ways in which global justice movements challenge market globalism. In the 2012 counter-mobilisations against the United Nations Rio+20 Summit the vision for an alternative future was centred on the idea of a ‘bio-civilisation’. The concept was introduced to challenge the idea of a marketised ‘Green Economy’ as promoted by the UN outcome document - ‘The Future We Want’. Against commodification, a bio-civilisation was defined as a paradigmatic social and ecological commons, and was embodied in the alternative World Social Forum document - ‘Another Future is Possible’. In the process of countering the UN’s free market environmentalism, the bio-civilisation concept was elaborated in some depth, across a range of policy fields, as a form of ‘living well’. This paper outlines the political contexts in which the bio-civilisation concept has emerged, and how it has been used to signify a clear break with green neo-liberalism. The paper identifies sources of agency for bio-civilisation, both as a lived practice and as a transformative program.
demonstrates how the effects of both gender and obesity can be explained by considering them as status characteristics which have the potential to create subsequent status beliefs. Finally, the current study reports empirical findings that support obesity as a status characteristic. This study finds an effect for obesity on ratings of diffuse status, and effects for both obesity and gender on ratings of influence and persuasion.

GORDON, SARA* (UNAM, arasnodrog@gmail.com) TIRADO, RICARDO (UNAM)
Social Productivity. Advancing a Concept to Think about Contributions of Social Organizations

The paper deals with social productivity as a useful criteria for assessing the contributions of social organizations to civility, solidarity and quality of life. Commonly social organizations are evaluated with these criteria: a) results, b) the impact of their actions on the world, and c) organizational capabilities. These criteria focuses on examining contributions in a field rather intangible: values and the quality of social relations. The concept points to a poor explored field, although some notable authors wrote about it.

The social productivity concept points to consequences that are not always deliberately sought, since they are often unintended byproducts of organizations behavior. One important aspect is that the image and action of organizations is broadcasted into the civil sphere and it constitutes a role model, that is, it has an effect of social pedagogy. Another important aspect is that organizations social performance can sometimes be negative, deteriorating social life. Social performance can be seen in these dimensions: 1) From the point of view of the objective or performance materiality and concerns to the contributions of the material and social welfare of the stakeholders. This includes the production of benefits, training of participants in joint decision making, the implementation of the decisions and setting and enforcing rules. 2) From the point of view of the factors affecting the formation of sociality, it focus on the relationship with the environment in which the organizations operate and interact, and covers the image projected by the organization, its actions and how all this stuff interacts with other institutions and actors. These are issues which impact on social connectivity, civility, the public sphere, and the construction of the meanings which are shaping society.

GORGES, IRMELA* (Free University of Berlin, I.Gorges@gmx.de)
The Two First Paradigms of Empirical Social Research in Germany

Irmela Gorges
Abstract: The two first paradigms of empirical social research in Germany Empirical social research in Germany evolved from the necessity to get information about the impact of the industrialization on the social conditions in Germany during the 19th century. At the example of the Association for Social Policy, founded in 1872 in Germany, it will be exemplified how the founders of the Association developed a strategy to conduct empirical social research with which they could collect data which they could use to realize their political views of a functioning society. In front of the peak of the industrial revolution, the second generation of members of the Association, among them Max and Alfred Weber, developed a different political view of a future society. As a consequence, they fought for a different strategy to gather empirical data. Because both strategies of empirical social research differed from one another not only with regard to the methods to collect data but also in view of the political goals, i.e. with regard to their epistemology and methodology as well as methods to collect data, it seems to be justified to identify the two approaches to empirical social research as two different paradigms.

GORSHKOV, MIKHAIL* (Russian Academy of Sciences, irina1-tourina@yandex.ru)
Civil Society and Civic Culture in Modern Russia: Experience of Sociological Diagnostics

It is hard today to speak of a common and well formed civil society in Russia. Civil society exists, but it is fragmentary and divided across both horizontal and vertical sections of the population. The paper contains the results of sociological researches, including a description of the strengths and weaknesses of Russian civil society and the environment in which it develops, as well as recommendations on strengthening civil society in Russia. The author draws a complex, and in many respects inconsistent, picture. The condition of civil society in Russia is not subject to unequivocal judgments in terms of good or bad. The breadth and variety of the information allows the author to depart from simple, sometimes speculative perceptions about Russian civil society. A sincere interest in civil society can tempt to make too many a priori assumptions, but when the empirical base is rich enough, it is impossible to draw black and white conclusions. The author of the paper felt obliged to inform international audiences not so much about his own points of view as about empirical facts and expert judgments. Certainly, the picture is not complete. As will be shown, the research tools capture different aspects of the development of civil society unevenly. Nevertheless, the data obtained are sufficient to assert with confidence that Russian civil society is in a difficult process of development, and it has considerable, if yet unrealized, potential.

Youth Studies in Russia under the context of globalization

The paper is concerned with the problem of the Russian youth, with a special emphasis on the history of the theoretical and empirical researches devoted to the youth issues. The authors attempt to provide a comprehensive account on the development of theories on youth in Russia and the thesaurus conception of youth from the early 1920s up to the present time. The research delineates the term thesaurus and its connection with the formation of modern youth's outlook. The results obtained during analytical work with the literature and empirical data will become the basis for general conclusions and recommendations regarding the development of future research in the area of youth and youth policy. In particular, they determine the main trends in research regarding Russian youth, especially in relation to the so-called «new Russian reality» of the market economy, the institutes of democracy and law-based government (demographic problems in Russia; status of Russian youth in the context of its development; description and sociological analysis of various problems related to its educational opportunities for young people in Russia; Russian youth identities, etc.). At the same time the paper reveals some certain problems in youth studies, conducted by Russian sociologists under the context of globalization. Not the central focus of the research is social and cultural value orientations of the young Russian. The study presents a detailed analysis of impact that traditional Mass Media and information revolution plays in socialization of Russian youth, its generations, its influence on public opinion formation, etc.

GORUR, RADHIKA* (Victoria University, radhika.gorur@vu.edu.au)
Uncertainty As an Asset in Education Policy

Education policies around the world are responding to increased perceptions of risk by attempting to reduce uncertainty. They are attempting to gain clear information and identify ‘guaranteed’ solutions by finding out ‘what works’ to develop policy accordingly. They are setting up clear measures of accountability and transparency. In order to understand states of affairs and identify policy issues,
huge machineries of calculation have been mobilized. Regular surveys are used to track progress and to respond to the first sign of 'decline'. In this sense, we could say that the complexity and uncertainties of the world are transferred to the processes of calculation, which in turn render clear and less uncertain accounts of the world in the form of numbers.

In this paper, I take the notion of 'uncertainty' to the statistical translations of the education world and the attempts made through these translations to erase uncertainty and ambiguity and provide clear, certain accounts. I explore how complex such operations are, and how the uncertainty and complexity of the world constantly challenge and stymie the attempts to tame it. I support my thesis with several empirical examples from my research on the Programme for International Student Assessment (PISA) and on Australia's Education Revolution.

I explore the dilemmas involved in these attempts to contain uncertainty (including through mathematical devices such as calculating 'confidence intervals'), and the ways in which the world exceeds these attempts to contain its uncertainty.

Using Callon et al.'s (2001) notion of 'acting in an uncertain world', in particular their argument with regard to 'hybrid forums', I argue in this paper that keeping uncertainties alive can have the beneficial effect of bringing more resources and expertise forward and adding new voices into the discussion. Uncertainty can thus be an asset rather than a problem to be solved.

GOTO, MINORU* (Tokyo Institute of Technology, mgotou@jcom.home.ne.jp)

**Toward a Synergy Society: Beyond Reflexive Modernization**

The purpose of this paper is to consider the reality of synergy society criticizing the theory of reflexive modernization and third way. Though positive welfare oriented third way politics has acquired greater importance in creating active civil society and wealth, it is too Western because reflexive modernization implies the project of political subject concerning the ideal of attaining synergy in social collaboration beyond boarders. It lies in seeking the social well-being accompanying with rethinking process of modern values. The rise of communication sector where consultant, adviser, planner and religion play an important role in empowerment is a characteristic of synergy society. Instead of public sphere, we focus on the process of communication in which communication media such as the standard of fair trade and eco-label circulate and create the networks of social resonance. This has political, economical and cultural meaning simultaneously. Synergistic modernization is not a progressive project which has political and historical end. It just exploits the potential of synergy in an atmosphere of continuity and non-linear change. Synergy has an influence of utilitarianism and excessive individualism. Then we reevaluate the Japanese semantics of happiness (nihonlawa) and research the activities of Japanese Buddhism after 311. Arguing the everyday life with suffering and joy, we realize that a contextual succession of accidental meetings build necessarily social relationships which have potential to form the networks of social resonance generating to germinating aspects of another modernity beyond the risk society. Synergy society promotes social diversity and well-being against the increasing liquidity. But fragility is unavoidable as resonance contains contingent process. Therefore we conclude that stable social commitment and sustainability are possible when institutional embedding of synergy develops to construct interactive partnerships with synergy networks of well-being.

GOTTFRIED, HEIDI* (Wayne State University, heidi.gottfried@wayne.edu)

**Re-Regulating Reproductive Bargains**

This paper proposes a framework integrating varieties of capitalism and transnational approaches with feminist theories of gender regimes. A road map of the varieties of capitalism literature charts conceptual building blocks for the comparative study of economic governance models and related labor and gender relations. Varieties of capitalism theories implicitly refer to work and social regulations designed for standard industrial work and a corresponding form of standard family life. As such, these theories neglect how gender relations are embedded in the way major institutions are organized, creating blind spots in their political-economic models. Without an awareness of gender relations and their embedded structures of social relations in which the gendered patterns of nonstandard employment and its variation across countries. National variation in gendering of nonstandard employment becomes more intelligible with reference to what I call the varieties of reproductive bargaining. This bargaining constitutes embedded structures of social relations that contribute to the differential integration of women and men in the labor market. Discussing empirical trends across four advanced capitalist countries, including the United States, the United Kingdom, Germany and Japan, typically praised as being exemplary of gender development, reveals a complex picture of the gendered character of nonstandard work in each country. I argue that the type, the density, and the interaction of labor and gender regulations over working time, both directly and indirectly, shape the conditions affecting the supply and demand for particular types of labor and the quality of these arrangements. An examination of the European Union and the International Labor Organization also suggests that supra-national institutions influence the transfer of regulatory norms. Yet, employment outcomes and workplace practices still largely depend on a country's type of welfare state, coordination mechanisms of employment relations, and varieties of reproductive bargain.

GOTTLIEB, AVI* (Tel Aviv University, gottlieb@post.tau.ac.il)

**Climate Change Policy: The Role of the World’s Cities**

The community of nations has struggled in vain to shape a coherent and effective framework to eradicate the global emissions of greenhouse gases. Rather than advancing toward the modest emissions reduction targeted by the 1997 Kyoto Protocol, we have witnessed a dramatic increase in global emissions. Concurrently, climate change policies have devolved to non-governmental actors and to sub-national levels, often with far greater effectiveness. Particularly noteworthy is the role of climate change action around the world in adapting to climate change. Already home to over 50% of the world population and routinely major players in the global economy, the world's cities are primary consumers of energy and other natural resources and account for an estimated 70% of global greenhouse gas emissions – a ratio likely to increase dramatically in the future. Moreover, many of the world's cities are acutely vulnerable to the effects of climate change, such as rising sea levels.

In light of these profound challenges, it is hardly surprising that many cities are vanguards in reducing GHG emissions, increasing energy efficiency, and adapting to the social, economic, and social risks of climate change. Hundreds of cities around the world have successfully established and implemented climate action plans with ambitious emission reduction and energy efficiency targets, and many are taking preventive measures to cope with climate change-related risks.

In light of the unparalleled challenges to urban planning and economic, social, and environmental policy posed by climate change, the articulation of a theoretical model that defines the key elements that contribute to the success of climate change policies is of utmost importance. The current study elaborates such a model and tests it empirically by examining several case studies in cities around the world.

**Towards Better Education and Less Inequality? Trends in Geographical, Generational and Gender Inequality in Education**

In our paper we provide an overview of past, current and possible future trends in disparities in education following the traditional patterns of inequality along gender, generation and geography. Magnitude and recent trends in inequality vary across regions and countries. Educational differences by generation indicate the speed of change in human capital formation over time and we identify different patterns of educational transitions that are closely connected to societal, economic and institutional contexts. We focus on pathways from female disadvantage to gender equality and new forms of inequality. The closing of gender gaps is typical mostly of developing countries, where recent gains in education are often more pronounced for women compared to men, but are not always sufficient to remove the limitation in access to education; whereas the issue of male disadvantage especially in higher (i.e. post-secondary) education emerges in developed countries of the North, as well as countries in Latin America, East and South-East Asia. It must be emphasised that gender inequalities are an important aspect of “over-education”. For the future of potentially “over-educated” societies, emphasis on gender differences is important for education policies.

We base our analyses on a unique global dataset on educational attainment – encompassing the reconstruction and projection of educational attainment from 1970 to 2060 for 171 countries by age and sex – developed at the Wittgenstein Centre for Demography and Global Human Capital.

**Natural Law, Human Rights and Sociological Theory**

Barnett has argued that the requirements of organized social life are the principles of natural law. These laws are “as fixed and unchangeable as the laws which operate in the natural world.” For Barnett, the (normative) force of natural law is found in “if-then” propositions. “If you want to achieve Y, then you ought to do Z.”

There are three dimensions of sociological theory integral to a natural law argument, which is essential in the formulation of a human rights agenda. Barnett’s characterization of the normative force of natural law requires that sociological

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
theory have a functional dimension, specifying propositions that are held to be valid for all social systems. Second, analyses of social relations must focus on patterns of interrelationship and these patterns will differ depending on the nature of the social structure under analysis. Social theory formulates universal-class propositions about more particular types of social structure. Third, if, for example, a functional theory enables us to say we must do X if we are to avoid social disorder, it does not suggest that we ought to do X. If we are to have hope of providing guidance about how we ought to act, we need to introduce a developmental dimension into our argument. A developmental model characterizes immanent possibilities for social and individual development, where later stages are hierarchically-ordered progressions capable of generating earlier ones, but where the reverse is not the case. The last stage in this progression may then serve as the critical standard judging earlier stages.

A characterization of the stages of social development culminates in a stage that constitutes possible social relationships. Here, Barnett’s standard for cultural law is in play, and the theory that guides our selections is contestable. This theory articulates a natural law standard for human rights.

Multiplexity in Personal Networks: Comparing Three Cohorts of Portuguese

Personal networks are paramount for the wellbeing and social integration of individuals, by providing a sense of belonging though the multidimensional interdependencies that occur within configurations. These interdependencies can be symbolic and/or material, ranging from expressive support - such as daily contact or giving advices and comfort - to instrumental support, such as helping in household tasks, lending money or giving supplies. These webs of exchanges are likely to vary according to the composition of personal configurations in which individuals are surrounded. Traditionally, friends are known to be confident and providers of emotional help, whereas relatives are more likely to exchange practical support. Our point of departure is not to consider friendship and kinship relations in a separate manner, but to look at the personal networks as a whole. A configuration can fulfill both types of support, by including persons who provide different or overlapping types of support. Moreover, these exchanges can be reciprocal or not, in a long or short term, as well as people can give one type of support and receive in another. In this sense, we hypothesize that the pluralization of personal configurations, - mixing primary kin with distant relatives, ex-kin and non kin - has an impact on networks’ multiplexity. Multiplexity is understood as the existence of overlapping exchanges and affiliations within a network of relationships. The pattern of interdependencies are construct within the frame of macro structures (gender, social class), but also by the diversification of life course and family status. Do different configurations provide different types of interdependencies? Data is drawn from a Portuguese national survey applied to cross-sectional samples of Portuguese born in three different cohorts (1935-40; 1950-55; and 1970-75) in which respondents provided information about their personal networks and mapped the exchanges of emotional support and material goods between them.

Unemployed Youth: South Africa’s ‘tickling-time bomb’ or ‘democratic dividend’

Young South African’s make up 72% of the unemployed. Organized labor’s reference to the problem as the ‘tickling-time bomb’ has become an emblem attached to young people. Political and social comment insists that there is reason for alarm and consternation. Even government planners refer to youth unemployment as ‘the greatest threat to social cohesion’ and the ‘single greatest risk to social stability in South Africa’.

Amidst this dark discourse, government believes that young South Africans may in fact become a ‘democratic dividend’, rather than present any immediate risk or future threat.

The paper will analyze both claims for their respective merits. It will locate the analysis within an educational and labour market framework. However, given such a framework, equitable social relationships. Here, Barnett’s standard for cultural law is in play, and the theory that guides our selections is contestable. This theory articulates a natural law standard for human rights.

The Study of Hindu Woman Problems in Morden Society

The mother India notion of downtrodden women of India, helpless, exploited by men, worn to and early death; and the erotic sensual women of the orient, who make maharajas happy with their beauty and talent, are somehow in the picture too.

Indian women of dignity, charm, simple beauty in all classes- form women in the cities, middle class women in the cities, government women in New Delhi- women who were neither helpless and downtrodden nor absorbed in erotic gratification. Of pampered husbands. Some of these intelligent and still graceful, feminine women were in legislatures, some were running others sector.

Mother India a mother culture, goddess worship, and in a general cultural veneration of the feminine. The study of the Morden societies the Hindu women problem indentified. The major source of data for the study is descriptive material from ten Indian informants, women graduate student in university coming from educated, urban and middle and upper-class backgrounds, representing various geographical areas.

Literary sources include translations of original Indian literature. The research paper focus if discussion of the Hindu women problem connected with the single women, older women, widow, divorce, mixed marriages, and friendship live-in-relationship and NRI friendships etc. Most of these problems are related to the Morden age and its impact of traditional patterns.

Some of the problems involved in modern Indian womanhood. Except for widowed, they are related to changing times and the impact of the globalisation.

Professing Hegemony: Consensus Building in the Chinese Higher Education Sector

This paper proposes that the economic, political and social transformation of the People’s Republic of China in the post-reform era is an example of ‘passive revolution’ or a state-induced development. We refer to pre-empting a revolution froelow following the disastrous Cultural Revolution. Building upon deeply-held structural hegemonic beliefs, the leading Communist Party has, especially in the aftermath of Tiananmen, sought to build consensus to a teleological project: the rejuvenation of the Chinese nation.

Moreover, that overarching vision for the rejuvenation of China has proved to be durable and robust, changing at pace with the shifting needs of China in a time of dramatic transformation. It has grown to envelop ideas rooted in China’s ancient philosophical traditions as well as more recent historical experience and new concepts designed to characterize the post-reform era.

In doing so, this paper views contemporary China as one characterized as much by consensus as coercion; identifies the overarching vision to which consensus is sought, and defines those actors with whom consensus is sought and also the process through which such consensus can be negotiated.

Globalization and New Communication Technology in a North Indian Rural Setting

The process of globalization in India has brought many changes not only in the sphere of Indian economy but also brought ample scope for the mass media communication to expand its network at global level. The advent of satellite television in the early nineties and new communication technology in the latter part of nineties have shape the process of globalization of mass media in Indian rural areas. Communication from private and government organization has not only improved the performance of these organizations but also helped in the growth of service sector in India. The number of internet users and mobile phones has increased tremendously in the recent past. It has enabled fast and uninterrupted communication between the masses located even in remote areas. These new communication technologies are giving rise to new patterns of communication and culture and have great impact of the style of life of their users. The present paper is aimed to understand the social background of the users of new communication technologies and the patterns of mass media exposure as well as patterns of using new communication technolo-
phone. The use of mobile phone was relatively wider than the accessibility of the internet. The connectivity of mobile phone is spreading cutting across all caste, class and gender categories but internet connectivity is still confined to some selected sections of the mobile users.

SZAWIEL, TADEUSZ* (University of Warsaw, szawiel@uw.edu.pl)

Religion and Church in Times of Social Change

In post-communist countries, during the last quarter century two processes have overlapped: the shaping – after communism – of church-state relations and the global trend to strengthen the presence of religion in the public sphere. This is why they are important and difficult to study.

1. The communist system – for ideological and political reasons – repressed churches and believers, who remained in open or covert opposition to the system.

2. However, the countries on which a relatively uniform communist system was imposed differed in many aspects. There were different religions, denominational compositions, relationships between religious and national identities, and the power of the churches (including an assessment of their policies during WW II). That's why communist authorities had to take into account the "local conditions": the policy towards the church(es) and the faithful had to be different in the relatively secularized Czech part of Czechoslovakia, the religiously divided Hungary and the uniform, religious, Poland.

3. With the collapse of the communist system the situation changed. Churches and believers regained autonomy, able and willing to stand up for their rights, and the democratic government accepted them or even sought their support.

4. So, institutional and legal measures in selected Central and Eastern European countries will be analyzed.

5. These problems should be analyzed in the triangle: state – church – society. For this reason the position of the Church in society will be included in the analysis, as will society's attitudes – its religiosity, opinions about state-church relations and the sensitive issues in these relations.

6. The analysis will concentrate on Central and Eastern European countries, with comparisons to selected western countries. The main data sources are the WSS and EVS data sets. (These data sets contain many indicators of religiosity, but attitudes on-state-church relations and sensitive issues are not represented equally well).

RC33-582.5

GRABOWSKA, MIROSŁAWA* (University of Warsaw, grabomir@is.uw.edu.pl)

DURLIK, JANUSZ* (Public Opinion Research Center, j.durlik@cbos.pl)

Social Conditions of Survey Research

The analysis will include two aspects: (1) social conditions of conducting surveys, and (2) social conditions of obtaining meaningful, accurate and reliable answers. These first are very difficult to influence, but researchers have to analyze it to know what the situation is. When it comes to getting reliable answers to sensitive questions, a number of indirect measurement strategies have been developed. In both cases we will present the results of analyses of Public Opinion Research Centre (CBOS) data – treating them as an illustration of the broader processes rather than as a basis for more far-reaching generalizations.

Ad 1. The CBOS (along with the Institute of Sociology of the University of Warsaw) has analyzed participation in survey research and the “escape from the field of the questionnaire” (significant answer like “it is difficult to say” or refusal to answer). We attempted to determine whether these responses depend on how and they depend on the questions’ issues (closer and easier, or more distant and more difficult for respondents), the characteristics of the respondent (gender and age, education and interest in politics, the place of residence), the attitude of the respondent to the interview, and finally, dependence on historical time – the analysis included a quarter century – the period 1985-2011 – including the transformation of the system.

Ad 2. Because asking questions about sensitive issues carries risks, and even a high probability of distortion of answers to comply with social norms (social desirability bias), and in Poland the abortion issue is very sensitive, so the randomized response technique was used to get to the actual experiences of abortion of women. Field work lasted six months (November 2012 – April 2013), and the research procedures included a total of 3576 Polish women. The results of this technique will be presented.

The Life Course and Individual Time Styles of Elderly People in Cross-Cultural Perspective

The life course and individual time styles of elderly people in cross-cultural perspective

Our contribution presents the conceptual framework as well as preliminary findings from a cross-cultural qualitative study, focusing on life course-related time perceptions and time-related agency of older persons in Germany and the United States. Both countries are similarly affected by demographic change, but reveal significant differences regarding life course structures and the institutionalization of old age. Our epistemological interest centers on the interaction between the wealth of everyday time and biographical time poverty in old age. A special focus is set on the relationships between experienced time sovereignty during the life course and the perception of one's own finitude in old age, i.e. the potential tension between a more autonomous disposition of time in daily routines on the one hand and the necessity of handling the limitations and unavailability of one's own life time on the other. How do both forms of time management interact with each other – and to what extent does the specific individual time style in old age relate to the internal temporal ordering of the life courses elderly people experienced in younger age? Based on problem-centered interviews including large biographical-narrative parts with retirees from various social milieus and different cohorts, we investigate individual experiences with managing ageing, lifetime and everyday time. A special focus is set on the effects of culture (e.g. regarding the relevance of autonomy values or the societal handling of death and finitude). In doing so, the common self-restriction in ageing research with its still-dominating focus on the cultural “own” is overcome. Simultaneously, we aim at gaining a deeper understanding of the peculiarities of different cultural contexts and their specific impacts on the structure of life courses and individual experiences with time and aging.

Unhappy Souls at Work: Subjective Narrations about Psychosocial Working Stress

Since the end of the last century new types of work, employment and management have caused substantial changes in contemporary subjectivity. In the meantime, an increasing social consciousness about psychosocial problems caused by working stress can be observed. In public and media discourses, the „diseases of the soul“ are increasingly linked to flexibilized working and living conditions in late capitalism. On the other hand the reality of „the exhausted self“ (Ehrenberg) is questioned – at least in Germany – on the part of psychiatrists and employers’ associations. At the same time, the “psychomedicalization of the social“ is gaining significance in almost every area of social reality.

In my research I aim to contrast these complex socio-discursive interpretation schemes with the subjective knowledge about psychosocial working stress people develop under flexibilized working conditions. I want to know how affected individuals experience and interpret the experience of emotional stress caused by work. By conducting narrative interviews with persons from different working areas (education, health, industrial production, financial services) who have been suffering from incapacity to work due to psychological strain, the interpretive patterns in which this experience is subjectively framed are investigated. The analysis shows how and to what extent psychological vocabulary and interpretation schemes frame subjective interpretations of stressful working experiences – and that they are used in multifaceted and often creative ways, oscillating for example between criticism of working conditions on the one hand and an psychologically “informed” self-ascription of causes on the other. In my contribution I will explore the types of narration and implicit knowledge individuals concerned by working

Age and Knowledge As Challenging Factors for the Energy Transition in Germany

The German federal policy for phasing out nuclear power and supporting a
shift to renewable energies exerts a strong influence on energy supplying com-
panies. They are forced to readapt their business strategies fundamentally. This
is a challenging task as German energy suppliers are traditionally very stable
and only step by step changing. This reality is reflected in an outstandingly
long duration of employment contracts, leading to a high average age. Thus,
companies need to rearrange their business by mainly relying on personnel
that embodies traditional knowledge and orientations. Furthermore, the recruit-
ment of new, well trained personnel is limited and it is particularly difficult as it is
not quite clear what fields of knowledge and which qualifications will be required
in the future. The paper explores how energy supplying companies try to find
their way into a more sustainable and ecofriendly future of energy supply and
use under the given conditions of an aging workforce and predominant conven-
tional orientation and skill sets towards these new energy technologies instead of
innovative capacities. Adopting the neo-institutional concept of legitimacy we investigate which
requests for radical or incremental changes are recognized by people in the man-
gement of energy companies and which symbolic and cultural resources they
deploy to legitimate (unpopular) decisions that affect groups of employees. The
main question is, how the required changes are processed through the existing
organization and how employment structures and relationships as well as work
organization and qualifications become reorganized. Our qualitative data show,
that employees become grouped into newly defined categories of those that are
seen as being part of the “future” of the company and those that represent the
“traditional” identity of energy suppliers as conservative realms of primary sector
stability and security – be it in terms of employment or in terms of infrastructure.

Eco-Innovation – a New Paradigm for Latin America?

Global phenomena of climate change on the one hand and not predictable
technological risks of energy supply on the other hand are challenging not only
Germany and the European Union but society, politics, science and industry
worldwide. The answers to these challenges are very different. Some countries are
screening their existing energy concepts and are searching ways of alterna-
tive energy, such as legislation on clean technologies, so-called eco-innovation.
It is especially this shift to eco-innovation that catches our attention. It is not
reserved for energy technologies, sustainable production can also be found in
other industries, such as textile. But in the ongoing of the energy turn policies
promoting renewable energies increasingly subsumed the concept (Cook 2010).
In the last decades energy policy lived a process of securitization. The connotation
of energy policy with the field of security policy automatically led to a change
of steering variables and thus the idea of innovation policies. The shift towards
innovation policy therefore means not also a reorientation of concepts but also a shift
of governance towards multi-level-governance (Kern und Bulkeley 2009) – so far
the debate in Europe. How is this concept discussed in Latin America? While the shift
 towards renewable energy is a quite new debate for Europe, Brazil had already a
share of 58,4% of renewables on total energy production in 1970 (Maihold und
media, particularly in (so-called) developing countries.

At the same time, these global developments pose quite a challenge for any
government. In terms of national policies, the current Bangladesh government
and their “Digital Bangladesh” policy places a strong emphasis on modern Infor-
mation Technology services. In their Election Manifesto, they point out their past
achievements, and argue that these “made it possible for Bangladesh to enter the
digital age” (ibid. 2009, 2). In their “Vision 2021” they have epitomized this policy
as “Digital Bangladesh”. Yet, the Bangladesh Youth Survey “Giving Youth A Voice”
provides data that strongly question the success of this policy.

Democracy and Inequality in the Philippines and Latin America:
Historical Patterns and Political Values

This paper explores the case of the Philippines in light of the Latin American
democratization experience. Being a catholic country, with Spanish heritage and
a recent authoritarian past, the Philippines may provide a ‘hoop test’ (i.e. a test of
necessary conditions) for theories on Latin American politics. Latin America’s frag-
gmented political landscape is a result of the post-colonial transformation of
extension and the relegation of the Iberian political culture and the effects of a stat-
ist ideology among elites. These theorized causes are present in the Filipino case
as well. Located in Southeast Asia, the Philippines share several cultural and po-
litical features with many Latin American countries, such as social and political
inequality, patronage and state inefficiency. Despite such problems, the Philip-
pines and most Latin American countries have managed to sustain a democrat-
ic routine since the mid-80s. The Philippines and Latin America also face similar
challenges, for instance popular dissatisfaction with political elites, high levels
of uncertainty and also circumscribed political violence. In order to sustain our
argument of case similarity, first we compare historical patterns of development
in the Philippines and Latin America. Then we compare available survey data on
Latin America and the Philippines in order to test whether political values are in
fact compatible among them. Our main goal is to evaluate if theories on Latin
American politics effectively apply to an external case. If the similarity remains
tout court, we may say that the Philippines in fact provides a ‘hoop test’ for Latin
America. If not, the challenge becomes to incorporate findings in our understand-
ing of Latin America and the Philippines.

The MatthewEffects of the Canada Research Chairs Program: Do
Women Enjoy the Same Benefits As Men?

In a classic 1968 paper Merton described the “Matthew Effect” as the ten-
cendency among elite scientists to accumulate advantage. Using National Science
Foundation analyses, Zuckerman and Cole (1975) documented the experiences of women scientists
and found women’s productivity was routinely eclipsed by men’s. This, they ar-
gued, accounted for the propensity for men to reap disproportionate rewards
over their careers. In the years since, the gendered nature of academic work has
been the focus of significant study around the world. Recently, the Council of
the Canadian Academies’ Expert Panel on Women in University Research (2012)
found that women continue to face obstacles in their appointment to faculty posi-
tions and their progress through the ranks. Structural and individual discrimina-
tion continue to have adverse effects on women academics.

In 2000, the Canada Research Chairs program was established to attract and
retain research leaders across all disciplines. Initially, most chairs were awarded
to men. More than a decade after the program was established, only 26.2% of
RCs are held by women. In this paper, we are interested in the way in which the
Matthew Effect plays out for women and men RCs. We have previously ar-
gued that on many dimensions of professional achievement, status, and rewards,
women and men RCs enjoy similar experiences (Grant and Drakich, 2011). Yet,
critical differences do exist and these centre around the gendered nature of aca-
ademic work and workplaces. In this paper, we focus on measures of research
productivity (specifically, research grants and publications), career advancement,
and awards and honours. As well, we examine how the dynamics of accumulated
advantage vary by discipline. Findings based on 60 qualitative interviews show

that men are more likely to enjoy greater benefits. We explore the reasons for the enduring pattern of inequitable distribution of rewards amongst women and men.

GRANT, SANDRA* (Queensland University of Technology, sandra.grant@qut.edu.au)
DANBY, PROFESSOR SUSAN (Queensland University of Technology)
Investigating Teachers’ Decision-Making about the Use of Digital Technology in Kindergarten

To secure its place in the global economy, the Australian government (2009) recognises that its citizens require highly advanced Information Communication Technology (ICT) skill sets to meet the demands of global ‘knowledge’ economies. Political incentives to introduce digital technology in educational settings have seen the emergence of digital technology educational outcomes within the national early childhood curriculum, The Early Years Learning Framework for Australia (2009) and in Building Waterfalls (2nd edition, 2011) the curriculum framework used by Queensland Creche and Kindergarten teachers. Although emerging in early childhood curricula in the prior-to-school sector, digital technology is not yet visible as a policy priority with a plan for funding of digital technologies and infrastructure for support, or for teacher professional development about the integration of digital technology into classroom practice. Against this backdrop of government political imperatives to become a digitally literate nation, new digital technology curriculum accountabilities and an absence of early childhood education digital technology policy the question arises, “How do teachers make decisions about the use of digital technology in Kindergarten classroom practice?”

To address my research interest in teacher decision-making about the use of digital technology in Kindergarten classrooms, this paper draws on interview data gathered from nine teachers working with 3-5 year old children in Creche and Kindergarten classrooms throughout South East Queensland, Australia. The interviews form a subset of PhD research data collected as part of the larger Australian Research Council Discovery Project “Interacting with knowledge, interacting with people: Web searching in early childhood” (Danby, Thorpe, & Davidson # 1100004180). Institutional ethnography provides a means of scrutinising how teachers use digital technology is organised and shaped by the discourses embedded in current early childhood curricula and technology policies.

GRASSI, MARZIA* (University of Lisbon, marzia.grassi@ics.ul.pt)
Places and Belongings: “Circular” Conjugality Between Angola and Portugal

In the context of contemporary studies of families and transnational lives, we study the emergence of new forms of conjugality among heterosexual couples living apart (one in Portugal, the other in Angola). Considering the importance of gender stratification when the domestic space is transnational rather than shared, we seek to understand how the construction of masculinity is reformulated in the couple when the man migrates to the other country to find work. The data gathered under my coordination in the ongoing project Places and belongings: “circular” conjugality between Angola and Portugal (PTDF/ACR/191194/2010) capture the repercussions of mobility on conjugality as well as the self-perception and representations of those involved of the domestic space – here understood in its physical, affective, and social dimensions. When a conjugal pair separates as a result of the migration of one person, fluid forms of conjugality arise, demanding realignment of gender roles. The “circular” forms of conjugality that are emerging today can also be studied from the point of view of Post-colonialism Theory – seen in the continuities and ruptures in Portugal’s colonial imagination, the gender-role building, and the migrations between the two countries. The paper contains a first lecture and analysis of the data already collected in the before mentioned project.

Clouds over Spain: Work and Family in the Age of Austerity

Purpose – This paper aims to contribute to the academic literature in two ways. Firstly, the paper will analyse the impact of the financial crisis on the level of flexibility, autonomy and stress of Spanish employees. Secondly, this study aims to identify if the impacts of an economic crisis on the work-family balance differs by sex, educational level, economic sector and regions across Spain.

Design/methodology/approach – The article reviews relevant literature in work-family balance. Two databases (2005 Ad-hoc Module on work life balance; 2010 Ad-hoc module on conciliation between working life and family life) were analysed in order to characterise work-family balance before and during the economic recession.

Findings – The findings revealed that (a) economic crisis had a negative impact on the control and autonomy that Spaniards had of their jobs, (b) economic crisis diminishes the level of flexibility at work (c) economic crisis had a negative impact on the level of stress among Spanish employees.

Originality/value – Despite the explosive growth in the work-family literature, it is not easy to find empirical evidence showing the relationship between financial crisis and work-family balance. Moreover, the case of Spain is very interesting given the very specific circumstances of austerity there.

Invisible Assets: What Working Fathers Learn from Their Families

Within the work-family balance literature little is known about the benefits and rewards perceived by working fathers in combining their work and family roles. As literature revealed, research on work-family balance has primarily focused on negative outcomes between work and family domain. The conflict perspective is rooted in scarcity theory (Goode, 1960; Marks, 1977), which assumes that human resources of time, energy and attention are finite. Work-family researchers (Barrett, 1998; Greenhaus and Parasuraman, 1999) have called for an approach or theory that examines the positive side of work-family balance.

Greenhaus and Powell (2006) did an effort to fully capture the mechanism of enrichment. During the same year, Carlson et al. (2006) published a work-family enrichment scale, based on Greenhaus and Powell’s construct. The recent valid work-family enrichment scale is helping us to examine and determine whether employed parents are gaining knowledge, acquiring skills or having new perspectives in one role that can have a positive impact on the other role. However, neither the theoretical arguments nor the work-family enrichment scale are shedding light on which specific skills, knowledge, resources, values or perspectives are working parents developing or learning in one role that can be transferred in another role and vice versa. Qualitative research methods seem useful for this aim.

Thus, the purpose of this study are, first, to examine if the rewards and benefits perceived by working fathers in occupying both roles fits in the work-family enrichment construct proposed by Greenhaus and Powell (2006), second, to examine if there are differences between the rewards and benefits developed at home and rewards and benefits developed at the workplace; third, to extend the work-family enrichment theory to new samples in Catalonia.

GRAVANTE, TOMMASO* (Seville University, f.gravante@gmail.com)
When People Fight By Themselves. Anarchist Practices and Values In Grassroots Groups

From the early 21st century, protests in Argentina led by the slogan ‘They all must go’ opened the door to a new cycle of mobilizations, both in Latin America and other places around the world, which were led by social subjects excluded from the analyses and definitions of collective action traditionally centered on the institutional and structural dimension of protest. Recently, increasing attention to the cultural and subjective dimensions in the study of social movements has raised the academic and political visibility of grassroots groups, characterized by a social and self-managed organization and proposals where social discourses and practices of anarchism can be observed.

In this paper we wish to contribute to the comprehension of these experiences by putting forward an analysis of the ethical values of anarchism, based on a piece of research work regarding movements such as NOTAV and NOMUOS in Italy, los indignados in Spain and the insurgency in Oaxaca in Mexico. We aim to highlight that the anarchist values and practices do not arise ‘abruptly’ or as the ‘ultimate’ possibility for change after the failure and the cooption carried out by the ‘civil society’ and leftist organizations, but consist of a cultural and practical repertoire of protest that has always been present in grassroots organizations.

Based on the direct experience of more than twenty years in the anarchist movement in different countries, such as Italy, Spain, UK and Mexico, and also on ethnographic work, we will show that this interconnection between anarchism and grassroots struggles are not new. As for the anarchist subjects who make themselves present in many of these protests, whatever local or national, they have always valued the space of daily practice as a room for struggle and social change.

Domestic Abuse in the British Military Community: Structure, Discourse, and Help-Seeking

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This paper employs a feminist analysis to explore civilian military wives’ experiences of domestic abuse in the British military context. Although military families do not live their lives in complete isolation from the civilian sphere, their lives and communities are shaped to a significant extent by the gendered structures and discourses which construct military culture. Following Stark (2007), I conceptualise domestic abuse not as a case of dualism, but as a gendered pattern of power and control in which a perpetrator attempts to entrap his/her partner in a state of “unfreedom” through the micro-regulation of his/her everyday life. I suggest that the particularities of life in the British military community reshape the tools and opportunities for, as well as the barriers to, both the perpetration of and the resistance to such a pattern of control. This has implications for help-seeking and the provision of support services.

This paper draws on interviews carried out with civilian women who have experienced abuse in marriages to British servicemen, servicemen who have perpetrated domestic abuse, and military and civilian support workers with experience of supporting either/bot both of these client groups. I tease out the ways in which a range of factors including the material structures of military life, militarised constructions of the public and private spheres, wives’ disempowered position on the borders of the military community, and discourses around heroism, duty, protection, and precarity produce particular vulnerabilities to abuse and particular help-seeking needs. In concluding, I explore the contributions of this work for the provision of services to this particular group of women as well as its wider implications for understanding the challenges faced by military families in the 21st century.

Systems Theory and the Constitutionalization of International Law

In this paper, I propose a critique of the Habermasian model of the legitimacy of global institutions, drawing on Luhmann to explain how legal systems multiply, recreate and maintain themselves in worldwide social system. Recently, legal theorists have drawn on Habermas work to suggest that it is possible to imagine a constitutionalization of international law and legitimation of international institution along broadly Habermasian lines (Von Bogdandy 2012; Von Bogdandy, Dann and Goldmann 2008; Von Bogdandy and Dellevalle 2009; Von Bogdandy and Shams 2010). The broad trend has been to theorize the development of legitimate international law in terms of processes of will formation outside the state that mirrors the distinction drawn by Habermas and Fraser between strong and weak publics – where strong publics are parliaments and other deliberative institutions, and weak publics are those public spheres which influence parliament and international organizations such as the EU, international courts, NGOs, etc. Similarly, the tendency is to treat the role of law in terms of the hinge theory of law as outlined in Between Facts and Norms – law is a ‘transformer’ which transforms commands from the public sphere and the lifeworld into a specific language of commands for the economic and bureaucratic fields (Habermas 1994).

I will argue, against the Habermasian, in my paper that the model of international law proposed here is empirically incompatible with law making in the international arena. Luhmann and Teubner’s model of law formation does a better job of describing both meaning formation in law (Teubner 1989) and the relationship between different branches of both public and private international law, and the public sphere (Ladeur 2005; Teubner 1997). I will make reference to the so-called Solange Decisions in making this argument.

Religiosity, Spirituality and Happiness In Buddhist Thailand

Thailand, a Buddhist country in Southeast Asia, has experienced deep social division and political conflict since 2006. The predominance of Theravada Buddhism is considered an important aspect of the Thai setting since it influences Thai people’s attitudes, thoughts, and ways of life. The purposes of this study are to explore whether the level of happiness is changed over the period and whether religiosity and spirituality has a significant relationship with happiness among Thai people. The pooled data of population age 15 years and over from the 2009 and 2011 National Cultural Situation Surveys in 2008 and 2011 were utilized. They are the national representative sample surveys. The sample consisted of 25,950 population in 2008 and 23,670 population in 2011. Based on binary logistic regressions, the results reveal that Thai people were happier. Religiosity and spirituality were associated with happiness statistically significantly after controlling for study-year, demographic factors (age, sex and marital status) and socioeconomic factors (education and occupation). Those who always undertook all five precepts and meditated in Buddhist holy days and other important days were more likely to be hap-

New Forms Of Transnational Organisation On Access To Medicines: The Global Activist Response To The Imatinib (Glivec) Case

In the late 1990s and early 2000s, global AIDS treatment activism had been characterised by innovative forms of organisation, including the construction of transnational ‘networks of influence’ (Grebe 2011;2012) incorporating activist networks and broader coalitions comprising national and intergovernmental bureaucrats, scientists, the media, etc. These networks were built and deployed in order to expand access to patented antiretroviral drugs priced beyond the means of developing country governments, with significant success. Following its successes, however, the movement largely demobilised. The recent patent dispute between Novartis and the Indian patent office over the rejected patent application for the cancer drug imatinib (sold as Glivec)—the rejection eventually confirmed by the Indian Supreme Court in 2013—spurred existing activist networks into action for a globally-coordinated campaign in support of the rejection (especially after the United States placed India on a trade “watchlist” in response). The mobilisation described in this paper illustrates the innovative characteristics of activism on access to medicines in the context of globalised corporate power, as well as global trade and intellectual property rights regimes. These forms of organisation include North-South and South-South collaboration and horizontal forms of organising across geographic and sectoral boundaries—representing what Ferguson (2004) might have termed ‘horizontal topologies of power’—in order to deploy influence and social power at the global level. The paper further develops the ‘networks of influence’ theorisation of transnational civil society mobilisation previously described.

**Immigration and Public Opinion in Japan: Keys to Fostering Integration**

It is often hoped that efforts at integrating foreign immigrant populations on the part of both local communities and government will bring about a more favorable perception by the public at large. Yet as immigrant populations increase, public opinion may not only lag behind—when it has not already done so—but will often prove refractory to change. In such cases, research examining public opinion on immigration in Japan is surprisingly rare. Public opposition to immigration is often unquestioningly taken as a given with little subsequent analysis, either due to language barriers or a lack of interest on the part of Western scholars. Utilizing data from nationally representative public opinion polls, this paper aims to bridge this gap. We propose to dig deeper into public opinion on immigration in Japan, arguing that while the public perception may remain negative overall, there are a number of important mitigating factors that can elicit more positive associations with immigration in the country.

*Criminal Careers: Discrete or Continuous CANCELLED*

Numerous empirical studies of criminal careers have made use of finite mixture modeling to analyze sequences of events such as crimes or arrests. We represent a set of individual event sequences with a number of discrete trajectories. Individuals are typically matched to the trajectory that is most likely, given the distinctive pattern of that individual's sequence. We use hierarchical linear modeling and individual time series techniques to test the assumption that arrest trajectories are meaningfully and usefully classified into a small number of mutually exclusive discrete classes, using data for 332 males released from the California Youth Authority in 1981 and 1986, and followed for several decades after release. In this data set we find little evidence of sharply discrete arrest trajectories.

*The Local Construction Of a Human Right To Democracy*

Is the idea of a human right to democracy coherent? Sociologically oriented human rights studies can usefully identify civil society processes that show why and how particular societies have come to embrace, to some extent, various kinds of human rights standards. These empirical studies in vernacularization, i.e., the translation of human rights norms into local practice. Did any part of the Arab Spring, which took place in non-democratic communities, vernacularize democracy in any sense? Did any part make the idea of a human right to democracy plausible? A right is plausible only given some connection to specific duty-holders and their obligation to ensure the practice and defense of that right. If, as it appears, in the Arab Spring there were no democratic institutions or powers obliged to ensure a human right to democracy, could any conceivable foreign institutions or forces be so obliged – and obliged, perhaps, to intervene? Intervention ranges from “soft” forms, such as scholarships for dissidents, to “harder” forms, such as financial support of domestic opposition groups, to conditions on aid packages, to the “hardest form”: unilateral military intervention. From a social constructionist standpoint (in distinction from, say, a theological or metaphysical one), while human rights might be thought to involve obligations toward humanity as a whole, for any given individual in a particular political community, a human right to democracy imposes obligations only on fellow members of that community. The idea of a universal human right to democracy makes no sense, and outside intervention toward encouraging local democracy would not be sanctioned on human rights grounds. Still, the local vernacularization of human rights could possibly influence the vernacularization of democracy. Then a human right to democracy would be a local, domestic construction by the participants themselves rather than a foreign import or imposition.

*What Cognitive Sociology Can Contribute To Human Rights Diffusion*

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Because many a social construction appears parochial from standpoints outside and beyond the community of origin, one wonders: On what basis might one parochialism ever justifiably trump another? Specifically, how might particular human rights be made widely plausible from within communities in which they currently appear implausible for local cultural reasons? The words “from within” already suggest a central aspect of my thesis: a parochial idea is legitimate for the community that embraces it. Human rights can be legitimate for any community that comes to embrace them. But how can particular human rights become persuasive within cultural communities tomorrow that today regard them as alien or misguided? The concept of the sociology of culture; practically for the human rights project. My approach aspires to redeem both possibilities. As theory, it combines cognitive sociology with normative philosophy. With practical intent, it would facilitate human rights diffusion through a new conceptual insight. It construes human rights as a cultural phenomenon and (5) as a social system. These steps render human rights, understood in the least taxying way as merely parochial social constructions, nonetheless spreadable across cultural and political boundaries through a technique of “cognitive reframing.”

On Spaces of Hospitality

Although specialists in hospitality have worked extensively on hospitality with respect to relations between different nations or between nations and individuals of a different nationality, for instance when they seek asylum, Jacques Derrida preferred to focus instead upon the relationship between the guest and the host. This has provided a much-needed rethinking of how to understand hospitality as a way of relating, as an ethics and as a politics. Within this work, there have often appeared discussions of ‘spaces of hospitality’, but these spaces have remained largely abstract. This is where this paper comes in: It will re open discussions of ‘spaces of hospitality’ and (5) as a social system. (6) These steps render human rights, understood in the theoretically least taxying way as merely parochial social constructions, nonetheless spreadable across cultural and political boundaries through a technique of “cognitive reframing.”

GREGORY, MICHELE* (City University of New York, mrgcpw@emailink.net)
Body, Sports and Work

Organizations, from financial institutions, government bodies to hospitals are important spaces for understanding the relationship between sports, bodies and production. This relationship is particularly vital when employers use competitive sports to construct hegemonic masculinities, which sometimes affect workplace opportunities for the disabled, immigrants, working classes and ethnic, racial, gender and sexual minorities. In a recent lawsuit filed by former female employees of Goldman Sachs, one alleged that ‘golf’, ‘push-up contests’ and ‘other physical pursuits’ represented the culture of the trading floor (Lattman 2010, p. B1). Other lawsuits as a form of cultural capital, excluding women and possibly ‘others’ who have no interest in sports who and do not fit the athletic male model of fitness.

Using empirical case studies, I will apply the concept that I call ‘sportswork’ to describe and analyse how white collar professionals in non-sport organizations use sport in the workplace to engage in a number of practices, such as symbolic practices, actual practices and exclusionary practices. Sports is not devoid of power and social relations – class, disabled, gender, immigrant status, racial and sexuality. (van Ingen, 2003) – therefore the paper will also illustrate how sport work is used by employees to manage their bodies and how it shapes employees’ perceptions of their and others bodies.

Facing Secularization and Diversification: The Role of the Catholic Church in Public Institutions in Spain

Spain, together with Portugal and Italy, is part of a ‘family of nations’ (Castles, 1993) where the Catholic Church has historically had a monopolistic role in the religious field. However, rapid transformations have displaced the Church from its old hegemony and have drawn a new scenario in Southern European countries. In Spain, the constitutional disestablishment, the detachment of a great part of the population from the traditional Catholic structures and the significant increase in religious diversity have compelled the Church to reconsider its own position, role and strategy within the Spanish society. Two lines of content are the secular/religious divide and the religious mono/poligreligious diversity division. In this paper we analyse the effects of the changing religious landscape for the Catholic Church’s symbolic and practical role in public institutions. The paper draws upon the fieldwork (interviews and observations) carried...
out in public institutions (hospitals and prisons), where religion meets the secular and the old religious monopoly meets religious diversification. Educational Accountability, Safety, and Youth

Abstract:
Young people who feel unsafe and disconnected from their neighbourhoods are most likely to engage in violent or unsafe actions, themselves (McMurty & Curling, 2008). Students designated as ‘unsafe’ through Ontario’s Safe Schools legislation are pushed out of their neighbourhood schools through suspension, expulsion, and proactive relocation processes. In this way, Safe Schools and other institutional processes that are designed to mediate the unsafe behaviour of particular young people also serve to exclude these youth from their neighbourhoods and neighbourhood institutions, increasing the risk that the young person will engage in further violence. During our presentation, we will describe a project that seeks to understand how young people’s transitions between programs and between systems (e.g., education and youth criminal justice) influence their own experiences of safety and unsafety and their connections to their neighbourhoods, to community-based organizations, and to mainstream institutions.

Research for this project is being conducted in collaboration with a community hub organization – Promoting Education and Community Health (PEACH). PEACH is located in a designated priority neighbourhood in Toronto. It houses a Safe and Caring Schools program for the Toronto and the Toronto Catholic District School Boards. The research – an institutional ethnography – documents and analyzes inter-institutional accountability processes, policy, and programming that shapes young people’s experiences of safety and unsafety in the neighbourhood. Focusing on young people’s transitions within and between institutional systems, we aim to generate findings that will be useful to researchers, practitioners, institutional leaders, and policy decision-makers interested in the integration of service delivery for marginalized or “at-risk” youth.

Finding a Language for Mental Distress: Narrative Accounts of ECT

Electroconvulsive therapy (ECT) remains one of the most controversial treatments in mental health today. It can cause permanent loss of some personal memories. ECT if often given to people with severe depression who have not responded to other treatments or for people who have responded to ECT treatment previously. The effectiveness of this so-called drug-resistant depression vary from 40-70%. The decision to have ECT is viewed seriously by clinicians and ECT remains one of the most intrusive clinical practices in modern psychiatry. The issue of “capacity” to make a decision is viewed by the medical establishment in the UK as the ability to (a) understand the issues and (b) to weigh them in making a decision. However under the Mental Capacity Act, a doctor can declare that it is in their best interests. Alternatively, they may be detained under a section of the Mental Health Act. If, on the other hand, they are capacitous, then their wish not to have ECT must be respected: they cannot receive ECT, even if they are detained under the Mental Health Act.

However comparatively little qualitative research has been conducted into the decision-making process, experience of ECT or a fuller narrative investigation of the effects of ECT. This paper presents this decision as located in the wider context of someone’s feelings about their mental health, their social care and support networks and their experience of mental health treatment – including their experiences of compulsory care. Through the analysis of the narratives of 30 people who have been offered ECT, and 13 carers, (collected by the Health Experiences Research Group at the University of Oxford) the broad social context of this decision is described and analysed with some surprising results.

Educational Inequalities in the Access to Higher Education at the Intersection of Gender and Migrant Background: Results from Switzerland, Germany and France

Gender inequalities as well as migrant-related inequalities in education have been profoundly analysed in sociology during the last decades. While gender inequalities were shown to have been reversed during the last decades (Buchmann et al. 2008), youths with a migrant background appeared to generally perform lower in most European educational systems (Heath et al. 2008). However if it is controlled for social origin and school performance – and in line with migrants' higher educational aspirations - many studies reveal increased transitions of migrant youths to the more demanding educational tracks available to them (Jackson et al. 2012).

In spite of these studies, the question of a possible interaction between gender and migrant background has been rarely investigated so far (e.g. Fleischmann and Kristen 2011). Given this lack of research, the paper focuses on such educational inequalities at the intersection of gender and migrant background at the transition to higher education.

In order to formulate the theoretical expectations, we refer to decision theory. An application of the analysis stands a comparison of Switzerland (data source: TRES), Germany (HIS-Studienberechtigte 2002) and France (Panel d’élèves du second degré 1995). Multivariate regression models were run in order to investigate the research questions.

Preliminary results indicate increased transition rates to Higher Education for second-generation males from socially disadvantaged migrant groups for Switzerland and Germany, if controlled for social origin. A deeper analysis for Switzerland thereby also reveals that such advantages are largely driven by the high occupational aspirations these males pursue.

However, the assumption that second-generation females originating from countries characterised by a rather patriarchal culture would encounter disadvantages at the transition to higher education was not backed by the data for none of the countries under consideration.

Sociologist of Religion: Insider As a Professional Outsider, on Professional Competence and Potential Engagement

This type of research is about understanding concealed internal meanings of a religious belief and religious action from the viewpoint of Max Weber’s interpretative understanding of social action. This method helps to reveal subjective presumptions, incentives and personal foundations for religious belonging and religious service. This research requires specific conditions and specific methods: “ethnographic”, “anthropological” and phenomenological methods. Typical sociologists of religion face numerous problems when they study unknown communities as outsiders. The difficulties are about generating the studied group, duration and continuity of staying in a group, the difficulty of understanding the internal worlds of believers, etc.

Contemporary religious communities involve people of every social class, educational level and intellectual abilities. Sociological education per se does not always result in high quality research. It can be argued that an ‘original insider’ cannot avoid religious engagement or that they cannot be completely objective, an important rule to observe in any research. The author explains that every society member has a greater or lesser degree of religious engagement caused by their initial attitude to any religion (Max Weber, ‘Intellectual Honesty as a Principle of Religious Cognition’). Speaking generally, each of us is ‘engaged’ by our temperament, nature, experience, beliefs, prejudices, etc. Being objective might be a theoretical objective for any researcher with a bit of self-discipline and an honest attempt to distract from their personality. A ‘professional outsider’ is not especially different from an ‘original insider’ in this respect.

The problems might be mitigated if original insiders could become professional outsiders. They could be members of a studied community by birth, education, conversion and, essentially, they would have the necessary level of intellectual, culture and training. The paper discusses some methods of finding, attracting and training such researchers.

Sociology of Corruption

Corruption under the perspective of its effect on the stability of macro-social democratic societies shall be discussed. It appears as deviation from normed functionalities in spheres of society with the aim of taking advantage for all parties involved in the corruption relationship. In the theory of differentiation this is an effect of dedifferentiation, a throwback of modernity, because their superior, to functional differentiation and specialization based operation has been abandoned. Corruption appears to herein as functional equivalent of subsystem-specific function logics. It appears from the normative point of view of democratic theory and a corresponding democratic political culture as a system in jeopardy context. The reference to the political culture may be enough to highlight that corruption in every day life and its many small, non-significant standard violations begins with each individual. The studies of Morlok and Tänzer refer to so-called ‘functional structuralizations’, which promote structural level corruption. In the sociology of domination and social theory, where corruption with respect to the functioning of organizations or subsystems have no relevant role. They operate as criminalized forms of deviant behavior and not as a functional equivalent to...
The paper focuses on the migration of women from Latin America and Eastern Europe to work with home care of the elderly in Italy. Through an ethnographic approach and based on field research conducted in Bologna with caregivers and their employers the aim of this paper is to discuss: (1) the configuration of this new growing market that responds to the rapid aging of the world’s population; (2) how gender, age and nationality produce categories of differentiation and inequality; (3) how the visibility gained by the duo combining two unwanted characteristics - ideal-typical, but normative desired logic system. However, as much corruption as related phenomena are widely used as exceptions to a normal social function performing display operations. Another conceptualization is advisable in my view, e.g. of democratic rule of bureaucratic administration and the rule of law, which is not based on the model developed by Webers ideal type of legal authority. Corruption should be seen as “normal” even if socially disapproved and criminal sanctioned appearance have been recorded. Having the opportunities explored at the same time, the redefinition of social areas (such as private vs. public) and system specific logics which provide a better theoretical perspective on gaining corruption.

Comparing Occupy Movements: Global Mobilizing Power, Local Political Context and Dynamic
A new wave of mass mobilization and popular struggle has spread all over the world since 2011, traveling from Tunisia and Egypt to Spain, Chile and Israel and the USA. When the wave arrived to the US the New Yorkers gave to name to the global new repertoire of resistance - occupy movement. Although the events in one place encouraged activists in other places, the content and impact of the new movements was determined by the local political conditions. It is my argument that despite all the differences and peculiarities of political context and dynamics, there is a common pattern to all movements: the need to occupy the public space in order to be recognized and to talk in the name of the people, the masses or 99%. All mobilizations are resisting the economic damage caused to middle and lower classes by the neo-liberal economic policies. Two main effects of neo-liberal policies gave rise to the occupy movement’s new repertoire: the individualism that destroys social solidarity, and the weakening of political parties as the focus of negotiations between civil society and the state. Occupying the public space is an innovative repertoire designed to reconstruct social solidarity and “peoplehood” that have been destroyed by the neo-liberal policies, and to make claims in its name. The paper will compare various the most salient cases of popular mobilization, and the specific political contexts that facilitate the movement, and the different political dynamics they provoke.

Orthodox Christianity and Mixed Religiosity Among Russian University Students
In the early 90’s of XX century Russia adopted the law on freedom of conscience and Russian people were enabled to express their religious views. Religion became an opportunity to gain inner stability in the midst of a social chaos. All that in a very short time contributed to a higher percentage of formal Orthodox Christian believers but a lower proportion of practicing believers. In this paper we analyze the social phenomenon of university students’ mixed religiosity in post-Soviet Russia. Results for our research are based on interviews conducted with 323 Russian university students, between 18 and 25 years old. Nearly 68% of the respondents stated that they believe in God, however religious faith comes second to last out of 14 most important life values. 11% of those respondents can be attributed to a ‘practicing Orthodox believers’ group. In the course of our research, we have identified three religiosity types of the university students: formally religious, actively practicing and spiritual. We argue that a significant gap between formally religious and actively practicing Orthodox students has occurred mainly because of a prevalent mixed religiosity among the students and might be explained in terms of uninstitutionalized forms of religion. Mixed religiosity is defined as a combination of different elements of traditional religious concepts and spiritual ideas and practices. The processes of secularization at macro- and meso-levels are analyzed in the article and viewed as preconditions for a mixed religiosity at the micro-level.

GROSHEVA, LYUBOV* (Tyumen Military Institute, Mardukotten@gmail.com)
Obstacles and Opportunities of Self-Employment of Young People in a Modern Society
In the modern society the elimination of the problem of youth employment becomes one of the main tasks for every country despite of its level of development and income. It is absolutely clear that developing countries and countries with transition economies have more difficult situation and have less institutionalized conditions for providing enough possibilities for young people. One of the most perspective trend that is considered as a reliable solution to this problem in the world is the self-employment youth.

Through international experience is of great help for some young current and potential entrepreneurs, the extent of its efficiency in countries like Russia is still questionable. The author suggests a hypothesis that these difficulties can be solved by elimination unnecessary institutional formations and correction of youth policy as a whole. The author had conducted a survey that was aimed at identifying the main obstacles to the creation of youth business. There were surveyed 800 university full-time students aged 18 to 25 years. The results of the study showed the most significant barriers to the startup. For example “unofficial payments at the opening of business” were checked by 46.8% of respondents, while 59.2% were concerned about “additional fees to inspection bodies” though there are some ways that make possible to avoid such fees students consider them as something inevitable. This imbalance shows that there are some problems with information support of youth startups while students themselves are not too bothered by this problem (19.2%). Further analysis of the results showed that some of the essential elements of the current policy of the country are neglected. Author believes that such situation is represented in many regions and countries and offers some recommendations in order to reduce the dysfunctions of current programs for business-active youth.

GROSJEAN, SYLWIE* (University of Ottawa, sylvie.grosjean@uottawa.ca)
Many practices within organizations are centered on the visual capacities of the agents. For example, in the field of architecture (Ewenstein & White, 2007; Styre, 2011), construction (Nicolini, 2007), medicine (Montada, 2003; Alac, 2008), scientific work (Daston, 2008; Vitteret, 2012; Vertesi, 2012), researchers have shown how the members share a “professional vision” (Goodwin, 1994). These studies investigated visual practices in professional communities and demonstrated their role in the production, creation of knowledge, expertise and so on. Following the work initiated by these studies, my objective is to analyze and understand how an organizational “way of seeing” is interactionally constituted and shared as a means to sustain the production of expertise. To do so, I conducted an organizational ethnography (Ybema et al., 2009) in 2012 in a firm of land surveyors. The video recording of the daily activities was privileged (Heath et al., 2010) in order to grasp the multi-dimensional dimension of the interactions (Montada, 2008). I studied the survey work as a situated activity and an interactive activity based on a variety of multimodal resources such as speech, gestures and manipulation of objects or technologies. In this study, I analyzed how organizational members progressively and jointly build expertise about a property, and, in particular, how specific “practices of seeing” (Styre, 2010) are constituted through the daily work activities. My goal is to reveal how materiality, corporeality and language play a key role in the constitution of a collective “way of seeing” in organization. In this presentation, I would like to contribute to the discussion of the role of “socio-technical arrangements/agencements” (Callon, 2004, Latour, 2005) in processes of constituting an organizational “way of seeing”.

GROSS, DINAH* (University of Lausanne, Dinah.Gross@unil.ch)
Representations of Desirability and Accessibility of Jobs in the Transition to Vocational Training in Switzerland

Transition to vocational training in Switzerland is still characterized by social inequalities, in particular in terms of gender, social origin and nationality. In this paper I wish to explore how the theory of social representations can help us understand the way in which young people still in obligatory school imagine their future jobs, and how their representations impact on their professional aspirations and choices. In particular I wish to explore how two different characteristics of an imagined job, its desirability and its accessibility, can be differently emphasized among different social groups. I will explore the factors that contribute to this different emphasis, in particular the consequences of belief/disbelief in the possibility of social mobility, of degree of self-confidence, of school results and of the representation of the capability to access a particular profession are, on evaluations of accessibility and the consequences of representations as to social prestige of jobs, as to school and acquiring new competences, as to parent expectations and as to gender roles, on evaluations of desirability. This research is based on a dataset that was gathered from over 3000 13-15 year-olds in five Swiss cantons in 2011.

GROSS, TOOMAS* (University of Helsinki, toomas.gross@helsinki.fi)
Marathon Running, “Bodies for Others,” and Social Class in Post-Communist Estonia

Like many other countries, Estonia has in recent years experienced a veritable boom of recreational long-distance running. Since the turn of the millennium, the number of people running at least one marathon a year has grown nearly twenty-fold, and year-on-year growth rate of marathon runners in Estonia has been constantly over twenty percent. This paper, based on an ethnographic study, seeks to understand the corollaries of this process and links the marathon boom to wider socio-economic and value changes in the post-communist setting. The paper pays special attention to the phenomenon of the body in the context of novel ideals of health, welfare, and success in post-communist Estonia. Bourdieu’s notion of “bodies for others” is particularly helpful when trying to make sense of the runners’ perception of their bodies in the new social and economic environment. As will be argued, long-distance running as a bodily experience is related to class identity. Running as a socially legitimate sport is more adopted by a social class if it does not contradict that class’s relation to the body at its deepest and most unconscious level. The paper demonstrates that subjecting one’s body to regular physical strain when training for and running marathons corresponds to various class-specific ideals of self-discipline, motivation, success, and perseverance. Also, runners now increasingly subject their bodies to constant self-monitoring and measurement by means of modern technology. Such technologically enhanced and informed “optimization of the self” constitutes a new form of bio-politics that fits with the neoliberal values of efficiency and productivity.
Socio-Spatial Inequalities and Socio-Spatial Policies in Shrinking Cities

Socio-spatial segregation – the question of the uneven distribution of social groups in urban space – is a classic of urban research literature. The extensive body of literature was elaborated set against the background of growing cities all pointing to the growing spatial separation of social groups in todays cities. Less is known about the dynamics and patterns of socio-spatial segregation in shrinking cities that is cities which loose population over a longer period of time due to a bundle of causes, ranging worldwide from de-industrialization or other economic restructuring, urban and rural de-urbanization, political change or conflict, natural hazards or demographic change. In our paper, in a first step we analyze how urban shrinkage impacts on the process and patterns of socio-spatial segregation. These are based on empirical work in three of the case studies of the EU 7th Framework research project “Shrink Smart”: Leipzig/ Germany, Ostrava/ Czech Republic and Modena/ Italy. The loss of inhabitants due to far reaching de-industrialization, experience, job migration, urbanization and steepl drops in fertility rates impacted on urban structures in a variety of policy fields, socio-spatial segregation being one of them. With the support of selected data, we shed some light on how urban shrinkage influences the social make up of cities. We will show that in all case studies, population decline acts as a catalyst to socio-spatial segregation leading to pockets of rapid change and decline. Set against this background, in a second step, we examine which policies are promised to solve problems such as ethnic segregation, ageing, and socio-spatial inequalities. The results show that even though policies to tackle them appear to be secondary priorities, sectoral (i.e. Beck, 1996). The effect of de-institutionalisation seems to be much stronger in Central and East-European EU member states, also in Poland, where the collapse of the strictly regulated old system has considerably increased flexibility and vulnerability of youth transitions if compared to the old EU members. The economic recession starting from the late 2000s has further worsened the process of young people’s transitions towards independent living. Becoming NEET is the risk for a young people and for society.

The main question of the paper is on the scale and dynamic of the Polish NEET population and its heterogeneity in perspective of ways and barriers of transition to independent living of the young. I also discuss the consequences of being NEET for young people and for societies. The analysis are based on quantitative data of Polish Central Statistical Office and the Eurostat the disclosure of the scale, dynamics and differentiation of socio-economic characteristic and on qualitative data collecting of own research to show the reasons of the decision of the young people’s life during the transition from childhood into independent adult life from education to employment, leaving parental home, family formation, etc.

The Ambivalence of Memory and History - the Case of Kosovo and Serbia in the Biographies of the Kosovar Serbs

The main topic of my presentation is how Serbian and Kosovan histories are discussed and negotiated in the biographies of the Kosovar Serbs living in the displacement in Serbia. I am drawing on the biographical interviews collected in Serbia in 2012, and my ongoing doctoral research on the intersectionality of national, gender and religious facets in the social and political realities of the war and belligerent nationalism caused migrations. In particular, I want to focus on the interrelatedness between political (national) and religious dominant discourses on Kosovo as “Heart of Serbia” or “Serbian Jerusalem” in the biographies of the Kosovar Serbs. Therefore, I am looking into the period after the North Atlantic Treaty Organization (NATO) bombing of Kosovo and Serbia in 1999 (when majority of the Serbian population left Kosovo), and the social and political situating of Kosovo in the Serbian national-religious (Serbian Orthodox) memory practices relevant to this event and the wider understanding of the “Kosovo conflict”. The question of history has emerged in my research as significant topic, and I am currently analyzing its relatedness. First, there is an ambivalences of knowledge(s) and memories on the Kosovar and Serbian histories - both on the individual and collective level, and second that the history of the former Yugoslavian conflicts and therefore “Kosovo conflict” is often orientalized and balkanized, both in the scholarly work and the media reporting.

My findings are that personal and collective histories are intertwined in the religious and national discourses on the collective (nation, religious community) histories. Moreover, I am arguing that in the case of the wars and conflicts this entanglement becomes more visible and prevailing, leaving the individual almost hidden in the biographies.

Who Are Kosovar? Multifactored Positioning of Internally Displaced Persons (IDPs) from Kosovo in Serbia

In my paper I discuss the politics of belonging and multifaceted positioning of the internally displaced persons (IDPs) from Kosovo in Serbia and the racialized images of a “Kosovar”, as a part of the IDP from Kosovo group, in the Serbian society. Internal displacement in Serbia is not only a political category but as well a financial category, based on the analysis of ethnic (nation), gender, class and housing arrange-ments. I am drawing on the biographical interviews and participant observation conducted in Serbia in 2012, and a further data analysis of my ongoing doctoral research on the intersectionality of national, gender and religious identities in the contemporary Serbia. I argue that the notion of a “Kosovar” carries a negative imaging and ambivalent notions of belonging to the national imaginary of the Serbians and the Serbian community as the “other kind of Serb”. In addition, the political community of belonging for the Kosovo Serbs is the Serbian community, but in the politics of belonging of the Kosovo Serbs living as IDPs in Serbia are visible significant referential and discriminative points as localities of belonging – in terms of language, region and ethnicity. Although, in the studies on social exclusion and boundary-making this could be described as a “classical” examples of the tensions between the “newcomers” and “locals”, or “established” and “outsiders” leading to different aspects of belonging and marginalization, in the case of the Kosovo Serbs (IDPs ethnic majority) it is paradoxical. Namely, Kosovo-Serbia displacement/emplacement politics of belonging shows a significant gap in relation to the dominant (right wing) nationalist discourses on Serbians and Serbianhood – describing Kosovo as the most important topic of the Serbian national history, and Kosovo Serbs portrayed in as a “Serbian martyrs” while Kosovo is a Serbian Jerusalem.

Financial Independence of Mothers upon Returning to Work

Welfare states increasingly foster policies that individualize risks over the life course. This applies to individuals, non-familially formed households, and households in which family members may be unable to support themselves financially throughout adulthood (financial independence). Employment interruptions and career adjustments in favor of child care have short-term and long-term consequences for an individual’s ability to maintain economic independence. In this paper we investigate German mothers’ financial independence before and after the birth of a child. In particular, we assess how long it takes for mothers to re-attain financial independence after the birth of a child. We also identify individual and group characteristics which speed up the re-attainment of economic independence upon return to employment. Empirically, we focus on employed women in the eastern area of Germany who entered motherhood between 1992 and 2009. We operationalize financial independence in two ways. We first measure how long it takes for mothers until their earnings (re-)approach the minimum living wage (Existenzmin- mum). Second, we estimate the duration until mothers are back on their pre-birth earnings level. We apply event history techniques, using a novel longitudinal register data set (BASiD data). Our findings show a deep East-West divide in the speed with which mothers re-attain financial independence. Within ten years upon starting a family, less than 25% of West German mothers have re-attained their pre-birth earnings. Just about 50% reach the minimum living wage or higher. Eastern German mothers regain financial independence much faster and at higher rates. More than 60% reach their pre-birth earnings within ten years. About 80 percent reach the minimum wage threshold. Our findings are in stark contrast with the general idea that German mothers first reenter employment part time and regain financial independence when children get older. The defining moment for re-attaining financial independence is the moment of returning to work.

Higher Education Reforms in Post-Soviet Russia: Problems, Contradictions

The current stage of social development, which is characterized by objective global trends, marked by significant changes in the economic, political, social, and cultural spheres of contemporary society. Almost everywhere, also are highly-developed countries the situation shows that together with growing complication of state, social, technical, informative and global problems we observe the decline of competence of elite, specialists. Due to this and other reasons everywhere intensive reforms in the system of higher education are being held. Russia is an important actor in the international arena and it involved in these processes. Russian higher education in the frame of Bologna Declaration, subjects to reform, transformation, in order to integrate into the European educational space. The field of higher education institutions becomes increasingly hierarchical in post-soviet Russia. Different universities (state and private) give diplomas of different quality. It leads to the problems faced in educational and labor markets. The research focused on the problems of transformation of higher education in contemporary Russia and its implications for labor and educational markets. The research objectives are to explore students' attitudes to higher education, to explore the demands of students, to determine the demands of labor and educational markets in contemporary Russia. The research methodology combines qualitative and quantitative methods. Depth interviews with experts are applied on purpose to identify central issues of concern to the problems of higher education in modern Russia. Representative sample consists of 1000 students. Students are trained in various specialties. Yekaterinburg is a typical Russian city, it has 16 types of higher schools. Therefore, the sample is representative. The author uses factorial, structural-functional analyses to investigate these problems.

Precariousness in Mexico: Labor Trajectories and Meanings of Work

In the context of the processes of globalization, productive restructuring and labor flexibility, data from international and national studies on the topic shows that contemporary work features a spread precariousness condition. In order to contribute to the discussion, in this paper we present the main findings of a study about work precariousness in Mexico which is based on the heterogeneity of the phenomenon. In creating an account of the diversity of development of work precariousness, we compared the labor situation of workers from three contrasting occupations in different regions of the country: garment workers, call center workers and orchestra musicians. Empirical research was based on a mixed methodology which allowed us reconstructing workers’ labor
itineraries through a non-probabilistic survey and qualitative data from in-depth interviews. The analysis of the work trajectories shows that uncertainty and instability are part of most of these itineraries, with the exception of some groups of garment workers from big transnational factories, technical and professional workers of higher hierarchy in call centers and tenured musicians from the most stable orchestras. While precariousness in garment industry is multidimensional, in the call centers precariousness is mainly based on quality metrics, and among musicians multiactivity is the main feature of this phenomenon. In these conditions the meanings of work are multiple and require from workers constant adaptations along their labor trajectories.

Adapting To Climate and Biodiversity Change: The Case Of Large Canadian Cities
Adaptation is generally thought of as a successful response to a changing situation. For the social sciences, adaptation is the outcome of a long series of deliberations, decisions and negotiations. One cannot take for granted that adaptation will normally follow changing conditions. Adaptation must be seen as a social process whose outcome is not known before hand by the actors and institutions. The paper starts with a critical examination of what adaptation is for sociology. A multidimensional model is proposed wherein adaptation is conceptualized as a process which is both controversial and cooperative and is the result of interacting actors and institutions which come to a common understanding of a problematic situation and of its solutions. To understand this process a combination of different theoretical approaches are necessary. The overlapping elements are the following: 1) governance process where ecological uncertainty is pervasive, and where structural and social diversity has deep implications for decision-making; 2) controversy analysis, which focuses on debate on common understanding and on the choice of courses of action; 3) cultural theory to explain how people perceive and organize the changing world (natural as well as social) they live in; 4) since some, if not all, adaptation measures are likely to be innovative solutions, an understanding of how innovations are produced, diffused and adopted, even co-produced by all the actors involved; 5) finally, one may ask to what extent models and instruments of environmental governance are sensitive to social and ecological justice. This approach will be applied to problem-definition and policy-making in adaptation to climate and biodiversity change in a selection of large Canadian cities.

Conditionality: The Cure Or The Cause? An Exploration Of The Psychosocial Impact Of Cash Transfer Programmes Across Five Settings
The use of cash transfers within the anti-poverty policy domain has witnessed a ‘quiet revolution’ across the Global South over the past decade (Barrientos and Hulme, 2010). At the same time, conditionality – the granting of cash transfers or services on the condition that the recipient carries out activities or meets certain behavioural requirements – has been increasingly applied in social assistance programmes in the Global North (Griggs and Bennett, 2010). It is, however, a relatively new strategy to anti-poverty efforts in the Global South. Yet reflecting a contemporary neo-liberal agenda, conditional cash transfers, with some success stories in Latin America, are now being advocated as a policy model for these regions as well (Dornan and Porter, 2012). A comparative, qualitative study across five settings – two in the Global North (Norway, the UK) and three in the South (China, India, and South Korea) – has explored the psychosocial impact of anti-poverty measures aiming to make citizens ‘productive’. The measures studied in welfare settings in the Global North have been specifically structured around an ‘activisation’ aim, and those in the Global South have moved away from poverty reduction to a focus on investment in productive citizens (Surender and Walker, 2012). The paper presents findings from a targeted policy analysis and an analysis of interview data with measure recipients in the settings under investigation. Specific focus is placed on the potential for measures to shame or heighten the dignity of the measure recipients. It demonstrates how, despite the new possibilities offered by the existence of new transfers, the conditionalities that are attached have the potential to create new spaces for shaming. When claimants are already vulnerable, this may then undermine the efficacy of the measure offered.

The Personal Impact of New Activation Possibilities on Social Assistance Claimants in Norway, Austria and Belgium
Studies of the psychology of poverty report on the psychosocial barriers – including shame and stigma – that may be experienced in tandem with financial instability within the Scandinavian (Angelin, 2009; Jonsson and Stallrin, 2008; Underlid, 2005), Austrian (Die Armutskonferenz, 2008; Leibetseder, 2013) and Belgian settings (Raemyaekers and Dierckx, 2012). While social assistance may mediate shaming and stigmatisation, it may also exacerbate them, undermining the agency of users. Across Europe, a new emphasis on work activation has taken place in the realm of social assistance. New requirements have been added to a previously established set of social contract entitlements (Lødemel and Moreira, forthcoming, 2014). While new activation approaches may heighten the stigma attached to the socially constructed categories surrounding social assistance, Norway, Austria and Belgium are three settings in which the activation landscape for social assistance has resulted in a publicly promoted offer of more for the claimant. Norway’s approach has been characterised as a best-case scenario for the social assistance claimant and has since the mid-2000s provided those eligible with a programming claimant approach more commonly associated with state level unemployment services. In the same period, Belgium has also moved towards active inclusion and tailor-made approaches, as reflected in a pilot project (‘Public Centre of Social Welfare’) with intensified collaboration between the regional employment agency and social assistance authorities. A 2010 federal and provincial agreement in Austria was to provide claimants with better access to jobcentres, but with local responsibility for activation. Drawing on interview data with social assistance claimants, we explore and contrast the personal impact of the approaches in these three settings. The paper highlights the crucial place of the claimant in the evaluation of activation strategies and offers preliminary conclusions concerning its impact on claimants and suggests several lessons to be learned.

GUELBEYAZ, ABDURRAHMAN* (Osaka University, guelbeyaz@lang.osaka-u.ac.jp)
On the Concept of ‘human’ and the Aporia of Social Sciences
It is to be ascertained by way of a simple juxtaposition that the set of concepts “human / human being / humanity / humanness”, which forms the very core of modern scientific production in its entirety, belongs to a category that qualitatively differs from all those morphologically, lexically, pragmatically comparable concepts. The concept of “human” does not assign any manageable features, or assessable parameters, to those phenomena subsumed by it. It belongs to a class of concepts that I provisionally call “hoax”. A concept of this category pretends to indicate a set or subset of conspecific phenomena in that one or more shared accidents are applied as differential features of the construct. The concept “human” is the best and truest of this kind. It is the epitome of “hoax”. Withal, it doubles its uniqueness by appointing itself to both the source and the guarantor of its own legitimacy and virtuousness. To top it all, one of the most significant features of “humanness” and human existence consists in the circumstance that the humanness of the concrete units of human society is determined heteronomously. The simple, but nonetheless devastating, consequence of this briefly described construction and operating principle of the concept “human” is that the whole edifice of modern social science, no matter the path taken, no matter how sublime the respective motive and objective may be, is doomed to always end up in a cul-de-sac of some type of biology. Parallel to a radical critique of the central conceptual edifice of the modern social sciences, and, within the framework of a theory of modified and extended semiotics, and a qualitatively different mode of knowledge production developed on the basis of this, my paper offers a radically new line of approach to the texture and the mode of operation of human society.

Reflecting/Reflexive Surface: An Ethno-Gender Observing Experience

Practicing sociology as an art of resistance offers an unusual vantage point on what may seem to be the hidden agenda of the sociological duty: locating the other sociologist from within. Beyond empirical and routinized practices, this paper aims at giving an account of oneself as a sociologist at the margin or as a minority sociologist. Recording and narrating various encounters of the othering processes, it will explain and discuss the kind of knowledge built under such guise and the way in which it can add some value to the sociological experience. Undou-
ting the disciplinary process still considered central to the existence of sociology is an intellectual itinerary and a collective platform for change in times of enduring inequalities. Reconciling the individual and intimate, here considered as a reflect-
ing/reflexive surface, with sociology as a discipline will be one of the challenges of this paper, as it is one for sociologists in a common world of uncertain paths to equality.

GUERORGUEVA, PETIA* (New Bulgarian University, petiagueorguieva@gmail.com)

Party Members in Bulgaria, Slovakia and Czech Republic

Political parties in ECE countries are assessed to be unstable, weakly en-
trenched into the civil society, very much attached to the state (Hafner: 2001) and with low levels of members (Brezen and all.). Political parties in ECE countries are even described as “party with no members” (Cabaña: 2013). This is problematic for the parties, the level of representativeness and the legitimacy, the expression and the support in the institutional field of interests. In general, parties in ECE countries are not implementing formal rules for equal representation of young people, woman and minorities. According to some researches the bound-
aries between statutes of formal party membership and other forms of activism like sympatric involvement are blurred because the members don’t matter. Parties in ECE countries are also pointed as based on clientelistic net-
works and patronage. The paper proposed aims to analyze party members and party policies and practices to sustain and extend the membership in compar-
ative perspective in the case of Bulgaria, Slovakia and the Czech Republic. The comparison will be focused on:

1. Forms of involvement in the political parties in Bulgaria, Slovakia and the Czech Republic (formal membership, peripheral organizations of youth, woman, and other)
2. Practices of attracting party members in Bulgaria, Slovakia and the Czech Republic: statutes, rules, new innovative techniques
3. The social-economic, age and gender profile of party members of the three countries

The comparison will encompass parliamentary parties represented into the last three parliaments in Bulgaria, Slovakia and the Czech Republic. The main research question is how do political parties in studied countries deal with low membership issues?

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
In this paper, we propose a discussion around the relationship between music and society. Considering that the core object of the Sociology of Arts is, at last, the musical practice (its derivation of meaning, development, and context), we look to analyze of the identity features present in the Portuguese music editions of the years 2011 and 2012. It is important to understand the established relations between music and society: how far music expresses themes, subjects, emotions? How far the social context is reflected in music? The social reality, its attitudes, its values and norms, and their development in music. Reckoning music as a social phenomenon, sociology must consider music and society interaction, their own symbols and norms without neglecting the importance of external factors that come in line with it. In this sense, this paper intends to make a plural balance of the sociological reflection on the sounds aspect of the Portuguese musical field. In the recreation of the contexts of discourse and practices production around music, the following dimensions will be addressed: center/periphery, past/contemporaneity, tradition/modernity, unity/diversity, local/global, endogenous/exogenous, heritage/cosmopolitanism, emigration/immigration, power/contestation. This approach will be done through the analytical analysis of content coming from approximately 100 phonographic registers within the popular music (pop rock, metal, punk, folk, indie rock, reggae, rap, hip hop).

The Effect of the 2008 War on Estonian Public Confidence in International Organisations: A Mixed Methods Study

When the so-called 5 Day War between Russia and Georgia occurred in the summer of 2008, the Estonian public reaction was especially passionate. Two major explanations stem from the strong identification of Estonians with the situation of Georgia (post-Soviet state, small country, Russian citizens/speakers on Georgian territory) and the question of existential insecurity (will the EU and NATO guarantee our security in case of necessity?). Using a mixed methods research design, in this study we investigate how the 2008 war between Russia and Georgia affected public confidence in international organisations in Estonia. Data for this study derives from three different sources. Firstly, the European Values Studies (EVS) conducted in 2008 offers a unique value for this research because fieldwork for the survey in Estonia coincided with the military confrontation between the Russia and Georgia on 8-14 August. EVS, among other domestic and international institutions, inquired about the level of confidence in the United Nations (UN), the European Union (EU), and the North Atlantic Treaty Organization (NATO), which serve as the dependent variables of the current study. Using propensity-score matching technique, respondents who were interviewed in a time interval before the war are designated as the control group, whereas those respondents who were interviewed after the war started, can be designated as the treatment group. Secondly, the information from this dataset is further supplemented by observations and in-depth interviews conducted in Estonia both in the period around the Russo-Georgian conflict, and after it. This will enable us to go deeper into the embedded meanings of trust that Estonians exhibit towards international organisations, or the West more generally. Thirdly, we will offer a brief review of how the 2008 conflict was framed in Estonian media at the time, and how this may have shaped the perception of the Estonian public.

International Comparisons of Health Systems: Tools of Learning or Tools of Power?

International comparisons have become unavoidable for anyone who wants to govern health systems, including health organizations and professions. Because comparisons can be evidenced-based, health policies are also be evidence-based. In parallel, since the early sociologists it is believed that comparing is the better way to produce "evidence-based social science". As a consequence, comparing is believed to be the better way to conduct efficient policies to face health systems challenges. But the many and recurrent flaws of these comparisons can doubt on their actual role and effects. Among the most common deficiencies are the comparability of the data, the lack of clear definitions of terms (like "shortage" or "nurses") and the state-centrism of comparisons (while issues are more and more either decentralized or global).

Why thus such a success of international comparisons among health policy-makers? The argument developed in this paper is that behind their technical substrate and their apparent neutrality, international comparisons carry values, interests and power relations. Under the guise of rationalizing and depoliticizing decisions, international comparisons are less a tool of learning than a tool of power. This is probably the fundamental reason for their success. First, comparisons hide that health policies choices are always value-laden. Indeed, comparisons are in themselves "scientific" and thus deliver the "truth". Furthermore, the language through which comparisons are presented (tables, histogram, etc.) create effects of truth. As a consequence comparisons rule out any debate. Moreover, international comparisons create political pressure, not least because this language is easily understandable and particularly well-suited for the mass media.

This gap between the official and unofficial role of international health comparisons can contribute to explain the tension between the apparent convergence and persistence of country-specific arrangements.

This paper will develop all these points on the basis of case studies from Europe, the USA and Asia.

Redefining The Public Space Through Art and Culture Events—The Case Of Bat Yam City In Israel

I propose to examine the ways in which contested images are inscribed in the public space behind and beyond art events. The city of Bat Yam in Israel was chosen as the location of this study because, in recent years, it has been the municipality of Bat Yam to promote diverse cultural enterprises such as the Biennale of Landscape Urbanism, and the street theatre festival that has taken place since 1996 along other art projects. According to the extensive research about the link between art and gentrification (Freeman and Braconi, 2004) and in keeping with the social profile of Bat-Yam—a medium—lower class city on the Mediterranean coast south of the Tel Aviv-Yafo metropolis—this policy evidently constitutes an explicit attempt to improve the town’s prestige and attract potential new residents and investors. The groups of artists that participate in the municipal projects have a different aim: to empower residents and their identities in the public space behind and beyond art events. The many and recurrent flaws of these comparisons can doubt on their actual role and effects. Among the most common deficiencies are the comparability of the data, the lack of clear definitions of terms (like "shortage" or "nurses") and the state-centrism of comparisons (while issues are more and more either decentralized or global).

This gap between the official and unofficial role of international health comparisons can contribute to explain the tension between the apparent convergence and persistence of country-specific arrangements.

This paper will develop all these points on the basis of case studies from Europe, the USA and Asia.
the economic and social regeneration of the area, and the groups of artists, who propose to empower residents and their identities in the public space and attain the rehabilitation of the actual community.

Trade Unions As “Contested” Legal Intermediaries? Reflection on British Unions’ Legal Mobilisation for Equal Pay Since 1970

Since 1970, British trade unions have been involved in the obtaining of a national equal pay legislation, in the pursuing of significant claims and in the implementation of the law through collective bargaining and job evaluation schemes. This legal mobilization did not developed in a consistent manner over time and across unions though. In the 2000’s, unions have been heavily criticized for having consistently colluded with the employers to minimize the effects of equal pay legislation, while being forced to support massive litigation on behalf of their low-paid female members. To understand this contrasted story, I will use a conceptual framework that defines trade unions as “contested organisations” which highlights the disputes both between and within unions as to what constitutes the central trade unions’ “project”. To understand why union legal mobilization for equal pay has been very controversial within the trade union movement and challenged by lawyers, I will argue that trade unions can be characterized as “contested legal intermediaries”. Drawing on a multi-methods approach combining 34 interviews with trade unionists, legal practitioners and experts, union archives analysis and legal case study data, I will argue that union legal mobilization needs to be understood in the context of the contentious (and gendered) relations existing between members with different interests, the competing relations between union officials and their base, and the often adverse relations between trade unions and employers. I will also claim that litigation strategies need to be apprehended in their complex and sometimes constrained relationships with other types of legal and non-legal strategies such as collective bargaining. Finally I will reflect on the effects and limits of massive litigation on union agenda and practices, pointing out the potential risk of marginalization and de-politicization of pay inequalities issues.

GUILLAUME, OLIVIER* (EDF R&D, olivier.guillaume@edf.fr)

Fishing in River, Confrontations at Risks and Ambiguous Situations

The contributions dealing with industrial risks bring to light the organizational and sociological causes which provoked accidents (Perrow, 1984; Vaughan, 1996) or those who prevent them (Laporte, on 1996). They also reveal the controversies which denounce the presence of the works modifying the living environment of the local residents (Lolive, 1997), or externalities are denounced as being risks (Chaureynaud and Torny, 1999; Borraz, 2008). But what about cases where the local residents do not denounce the industrial risks and confront themselves with the risks? And what can be their incidence on the risk management?

Not feeding controversies towards the industrial works and their risks, the local residents can even develop practices of leisure near the industrial works, minimize the incurred risks and go against rules. If the theory of the perception of risks (Slovic, 1992) and opportunities (Star, 1998) are first useful theories, sometimes the ambiguous role of rules and the political positioning of actors around them, allow to understand better the confrontation of the local residents to the risks.

To develop these points, we shall approach the confrontation of fishermen at the risks generated by the hydroelectric exploitation of rivers. Beginning with a description of rivers (i), the contribution will analyze the reasons bringing fishermen's specific segment to confront with their risks (ii). If their limited recognition, their rhetoric of underestimate and their perceptions bring them to trivialize the risks (iii), risk practices are facilitated by multiple rules which create ambiguous situations (Lot, 2008). They clarify the situations by establishing “cognitive compromises” (Amalberti, on 1996) or by mobilizing “techniques of neutralization” (Sykes and Matza, on 1957) to justify their practices (iv). The ambiguous situations are maintained by the associations of fishermen in order to develop their practice.

Children's Participation in the Promotion of Their Right to Health: The Specialists' View

More than 20 years after the Convention on the Rights of the Child, the right to participation is yet to become common practice. This article has analyzed the concept that scholars and NGOs specialized in child health have about the role of the children's participation in promoting their right to health. The General Comment on Article 24 by the Committee on the Rights of the Child was organized through a requested contribution from experts, who submitted 36 comments. Among these, 19 addressed the issue of child participation with a view to have their right to health realized. Results indicate: a) a consultative participation, limited to the institutional and political reorientation of health services; b) the access to information as a prerequisite to participation in the promotion of the right to health; c) the consideration of health education as an instrument of information dissemination; and d) the domains of social interaction and intergenerational relationships in the family, school and community are not appreciated as health promotion areas. In summary, experts believe that the right to information is the sine qua non to the right to participation. Because valid opinions are conscious, participation is manifested when they are formulated. This perception does not include ‘learning by doing’, which is centered on the development of personal and social tools. One text alone mentions the importance of the children’s awareness and knowledge about their own rights, as well as that of exercising their citizenship.

Household Carers and Gender Inequalities: A Comparative Perspective on Care

Domestic services are now on the global policy agenda. In Europe, there has also been a development of varied forms of domestic work that recall periods such as the eighteenth and nineteenth centuries where domestic help spread beyond the nobility to merchants and farmers’ households. In fact, then as now, the recruitment of domestic labor is an important expression of social relations, including social class and status, as well as a means of reproducing them. Household work has been understood as a solution of the “Great Transformation” of recent decades that involves ageing of the population, changes in family structure and gender roles, with the masculinisation of women’s employment patterns, in a context of shortage of public care services, in-migration and de-institutionalisation which in turn calls for the development of the services sector. This article examines policies that encourage (through fiscal policies mainly) the hiring of domestic workers thus has a political economy aspect since labor market regulations and welfare state policy legacies will influence responses to socio-demographic changes. It focuses on gender inequality: Domestic workers relieve women from doing this work themselves and avoid gender conflicts over division of the domestic work but can reinforce inequalities amongst women and reproduce gender roles. Finally, domestic work is often performed by migrants or minority women from previous migration waves although some activation policies have emphasized the retraining of women native workers. Notwithstanding what is the consequence for the household service sector on the question of ‘gender inequality’? This paper focuses on political debates relating to domestic work during the last quarter of century and the policy measures adopted, their stated goals and their actual consequences in France, Belgium and at the EU level.

Although the growth of GM crops has been dramatic, its uptake has not been the smooth transition predicted by its advocates. Unless we examine why GM crops have not been universally accepted as a good public, we will fail to understand the conditions under which „GM crops can help to feed the world”. To answer this question we develop a research programme of fieldwork within and across India, Mexico and Brazil. Our research looks to contribute: (1) to enrich the debate at the level of culture and ontology; (2) to attend to the meanings of GM crops and foods and how they are embedded in practice; and (3) to develop deliberative methodologies to engender a broader set of options for GM policy and agenda setting. The main objective is to highlight the distinctive political, anthropological and cultural dynamics to the debate on GM crops across the 3 countries. Through this research, founded by The John Templeton Foundation, we identified some gaps in the literature: (1) little in-depth research examining the impacts of GM crops on farmers’ communities and their culturally-specific farming and related practices: how GM crops have been embedded into everyday life contexts, how benefits and risks have been assessed from diverse cultural perspectives, how they have affected at all farmers’ social situations, practical knowledge, and their engagements with the land and food. (2) little in-depth examination of public perceptions of GM foods, and (3) little attempt to engage farmers (particularly female), citizens, regulators and scientists in deliberation, to assess how and under what conditions GM crops can be developed fully cognizant of social, cultural and spiritual values. In the research we developed a) stakeholder structured interviews; b) stakeholder qualitative questionnaires; 3) Ethnographic fieldwork with farmers and researchers and 4) focus groups with urban consumers.

The Role of the Court-Reforms in Transforming Azerbaijan Society

Both in the judicial system and in the minds of the population, there are still problems with the past communist regime in modern Azerbaijan. The conducted survey of the character and the essence of this problem can allow us to identify the ways of improving the judicial system in the country in line with the requirements of a democratic society.

The majority of the surveyed believe that democratic transformation of society cannot be successful and private enterprises cannot develop without legal base and perfect judicial system that are capable of effective protection of private property rights, control after execution of the agreed responsibilities, protection of the rights of economical subjects, foster creation of market relations.

One of the reasons for the judicial power not to be able fully satisfies demand for the services is the fact that this demand is artificially lowered because of the distrust of the population to the judicial system. The other reason that lowers the demand for the judicial services is lack of economical growth, which doesn't foster growth of the need in resolution of economical arguments.

It is evident that the observed tendency for activation of the commercial activity and successful implementation of the economical reforms will foster increase of demand for the services of the judicial system.

Some of the opinions of enterprise managers, representatives of the general population, judges and employees of the court machinery, analysis of their judgments and proposals allowed to reveal the most relevant problems related to the work of courts and render of the judicial services, to determine the paths for extension of population's and business sector's access to the judicial services, which will help to further improve the judicial system and will become a cause of the more effective implementation of the goals of the judicial reform in Azerbaijan.
ties for women and men on a labor market, expansion of opportunities for career growth women, appointments them on senior positions.

The state supports strengthening of social protection and protection of mother and children, baby sitting simplification for working parents according to the ratified in the Workers with Family Responsibilities Convention of the International Labour Organization increase in number of kindergartens, and also development of services on to family planning.

For the purpose of realization of noted directions the parliament of Azerbaijan accepted a number of the target documents. The parliament accepted such important documents, as “Strategy of the Azerbaijani families”, the National plan of action on gender equality, Children’s code and National children’s strategy. Along with it, in the country are created institute “Family psychologist”, the help and shelter centers for the women who have undergone the household to violence, and also system of monitoring of violence against women, evasion of women from education and early marriages.

The study of Indian joint family system and Leisure is assuming importance, especially developing countries of the world in general India is in particular. The children are the most precious asset of any nation & deserve the very best of man kind has to offer. They have not only a right to full health, phigically development but also the right to grow to full their potential intellectually, socially, morally, & culturally all efforts and resources mobilized to wards the end by any society or country are a necessary and crucial. At present 80 % of disabled live in the developing countries where less than 1% received any trained help. Of the 146 million disabled children under the age of 15 year, as many as 106 million are in asia & africa. According to senses of 2011 figures, 5.7 million children in INDIA are disabled in which means 1 out of every 4 children suffering from one or the other kind disability. Hence, it is extremely important focus on their urgent needs, allowing such children to lead a reputable & life quality in the society recognizing their leisure rights. The present study is aimed to know about the socioeconomic status and the effective utilization of leisure time & well-fare service measures of the disabled children in Hyderabad Karnataka region of India.

This study data has collected on the basis of empirical survey & detailed interview with the respondent interactive method of interpretation is adopted to interpret qualitative as well as quantitative data.

students from diverse academic programmes and disciplines of the University of Hyderabad in India. The survey method, selected individual and focused group interviews have been conducted in order to map out the rationale behind supporting and opposing reservation based on ascribed and achieved identities. The opponents of reservations felt that reservation is nothing but the exclusion of the meritocracy. In both talented students from the higher education, employment. On the other, the reservation policy gets support as a compensatory justice mechanism for the historical exclusion and multiple forms of deprivations and discriminations against the marginal groups of the Indian Society. The study also brings the personal narratives which demonstrate how reservations enables the social mobility for the marginal caste/groups and works as a mechanism in the case of students from upper castes, male and normal students. Therefore, the paper brings debates and (dis) contents associated with reservation and suspension of reservation policy within the framework of public policy and development discourse.

Since the late 1970s, Kawashima’s approaches to Japanese law that attribute significant explanatory value to culture have been in Retreat. Recent sociolegal scholarship share a skepticism about efforts to explore Japanese law through the lens of culture, which they see as conceptually weak, undefined. With cultural translation theory, this paper argues that vagueness of Kawashima’s theory has consequence for the salience and scope of legal problem, by focusing on the link between legal professional, media literacy and local culture.

A case study of Communicational Impact in Kawashima’s Legal consciousness theory is analyzed in two part: the first, to compare the form of Kawashima’s communicational work and this discourse on public, with a paperback book called Ni-honjin no ho ishiki (The Legal consciousness of the Japanese), shows that legal profession and layman culture has different types of legal information. The second is to confirm the possibility of comparative understanding of legal theory; by following Kawashima’s Legal consciousness debate in Japanese, American, Chinese legal review from 1967 to present.

Understanding Swedishness and Conceptualizing the Self: The Perspective of Young Women of Middle Eastern Backgrounds Living in Sweden

Searching for a sense of belonging and defining one’s sense of self has become a complex task in this globalized world. The way we define ourselves, for instance along ethnic lines, has consequences for our understandings of others in our everyday lives. This presentation will depart from a project that uses semi-structured qualitative interviews – with 24 young women of Middle Eastern backgrounds aged 15-22 – to explore the ways in which identity can be constructed. The reason why these women’s identity is in focus is that they have been the subject of heated debates on honor related violence in the Swedish news media in recent years. Against this backdrop, questions about the implications of being regarded as ethnic ‘Others’ can be explored. In this presentation, the focus will be on social identity processes and the interplay between self- and public image, with specific regards to ethnic identity. The presentation will draw attention to the way in which understandings of Swedishness play a role in these women’s conceptualization of self. These understandings include, among others, assumptions regarding Swedish peers’ liberal approach to norms on sexuality and the informants’ relation to the Swedish society as a home, yet, not a ‘homeland’. As such, the presentation problematizes how sense of belonging and definitions of the self are constructed when identity is contested and negotiated in everyday life settings.

Freedom with Constraints: A Journey of Five Mothers from South Asia to the UK

South Asian comprises of one of the major immigrant groups in the UK since many decades, especially post 1950s. Though the rate of immigration has drastically reduced because of much restrictive immigration policies, the proportion of South Asian population has increased in the UK from 2001 to 2011. In this article, I will be focusing about the experiences of five South Asian mothers, who have recently (less than five years) migrated from India, Pakistan and Bangladesh to the multicultural society of UK. These mothers were living with their husband and children in a town situated in the north of England. These narratives are based on an empirical case study of five South Asian mothers who had at least one child at the time of migration.

Although each one of the participants had different experiences in each stage of migration and assimilation in the ‘British culture’, some of the their experiences are shared, perhaps due to relatively similar culture in the home country and rather different one, and mostly perceived as challenging by each one of them. Hence their individual life stories makes a case for the processes of cultural shock, assimilation, elements of hesitation and yet their experience of freedom in the UK. Nonetheless, however constraining the home culture might seem to them, there appeared to be a self – contentious argument of returning and somehow pretending to make spaces for exercising their ‘own culture’ in the foreign spaces.

An Emerging Social Movement in China: Frames and Activists in Dog-Rescue Actions

A series of dog-rescue actions intending to save dogs from being slaughtered and destined for restaurants have been occurring quite regularly in China in recent years. As seen activists’ actions, ‘protesters’ in recent years have taken action on highways to demand dogs to be released from the trucks, interrupting traditional festival in Yulin, Guangxi Province celebrating eating dog meat, and exposing illegal slaughterhouses for dogs. In China where dog meat has been a common source of meat and where dogs have been socially and culturally regarded as lowly creatures, these activities should deserve closer examination. For one thing, do these activities indicate an emerging movement advocating animal welfare rights? Or do they reflect some broader changes in the values and practices of a new generation of Chinese growing up in post-reform affluence and Western influence? And how has such a movement been able to exist and expand, especially in a social milieu that is generally conservative and authoritarian?

Adopting the lens of frame theory, this research endeavors to answer these questions by inquiring into the participants and organizers of these activities and the frames they share and develop in spearheading their organization and movement. In turn, a critical analysis of the broader social, cultural and economic changes in post-reform China will be carried out.

A case study of an Animal Rescue Organization, which has organized two dog-rescue campaigns has been conducted in Kunming, while 20 depth-interviews with activists in Kunming, Beijing and Chongqing were carried out as well.

The Social Role of Legal Theory: Kawashima’s Theory in Japan, the United States and China
The paper is based on the study of college fraternities rooted in traditions of bonding and loyalty at the University of the Philippines Diliman (UPD), the country’s premier state university campus. Tracing their roots in the early 1900s, UPD fraternities have built a vast network of brotherhood ties connecting various generations of men, from college students to professionals who now occupy leadership positions and status in government, private and corporate sectors in the Philippines. The study looks into the identity formation of young men, including the quest to be part of a trust-based social network to affirm masculinity, survive the competitive challenges or enjoy the adventures presented by college life, and assure paths to social capital and professional status.

The paper discusses how young men gravitate to fraternities for constructive aims such as academic excellence and socio-civic service, on the one hand, and become ennobled in anti-societal violent behaviors within their group or in conflict with rival fraternities on the other. Such violence in gang fights and hazing rites has claimed the lives of at least eleven, and injured hundreds of young college men in the history of the university. The concepts social capital, identity and masculinity are utilized to understand the meaning of “brotherhood”, the origin and shifts in orientation and behavior of the group and individual members over generations. The study analyzed documents supplied by fraternities, and examined the narratives of fraternity “bros” or members from various generations or cohorts since the 1950s to the present.

Brotherhood, Masculinity, and Social Capital: Fraternities At The University Of The Philippines Diliman

GUTIERREZ, FILOMIN* (University of the Philippines Diliman, fc.gutierrez09@gmail.com)

Ethnic Conflict and Internal Colonialism: Theoretical Reflections for the Indigenous Mobilizations of the 21st Century

This paper discusses why ethnic conflict in Latin America is not related to secession or ethno nationalism, rather it is characterized as a renewed political activism of indigenous peoples denouncing violence and threat in a context of defending territories and natural resources. The concept also implies the revision of “internal colonialism” as a theoretical guideline that inspires intellectual and political projects of ethnic mobilizations. Finally, the paper argues what are the main characteristics of ethnic conflict in Latin America: a) low tendency to rebel against the state, b) low use of violence form indigenous peoples, c) very high use of violence and threat against indigenous peoples and d) widespread social exclusion and racial discrimination.

Immigration Key for Immigrants in Spain 2013

According to our recent research study/survey, it shows that the immigrants in Spain 2013 (Romanians 19%, Moroccans 18.8%, Ecuadorians 9.4%, sub-Saharan Africans 6.3%, Colombians 6.1%, Bolivians 9.4% and those with dual nationality 16.9%) 77.6% of them live in rental housing, 27.3% work in private labour market with temporal contracts and 21.1% with fixed or permanent contracts, while 26% are unemployed although they have worked before, 57% of them have the intention to stay definitely and in general terms, they are highly satisfied with the services. They are also highly satisfied with their interpersonal relations (88%), with their family life (80%) and at work/studies (63%). Nevertheless, only 44% of them are satisfied with the economic situation. 83.5% consider their cultural contribution as positive and 75.3% consider their economic contribution as positive and 69.8% consider their demographic contribution as positive. 50% of immigrants surveyed think that they should keep their civil traditions, specially if they can. However, 68% agree that the languages which are majority should be included in the academic curriculum and 37% agree with the headscarves ban in classrooms. Integration for 78% of the surveyed is a society issue, and those with more difficulties are the Magreb population 36.9%, the sub-Saharan African countries 13.8% and the Chinese 13%. We conclude with the affirmation that, according to the immigrants, 50% of them agree that the economic aids should exist for Spaniards and immigrants; they reject already from their legal or illegal administrative status and for 97% of them, they should have the right to live with their families, 95% think they should collect their unemployment benefits after paying their social security taxes, 80% think they should be able to vote in local/municipal elections and 85% think they should be able to obtain the Spanish nationality.

The Muslim Religion As a Strength of Ethnic Identity: The Case of Chamuslim in the South of Mexico

In the early years of the 70’s a Muslim Spanish family arrive to the South State of Chiapas and encounter the Tzeltal indigenous ethnic group. The result of this interaction in the last 40 years has been a religious conversion that have been going up to a 600 hundred people and continue to grow (from 800 hundred that exist today in all Mexico). Since then different Muslim divisions have been creating communities around the Tzeltal communities (at least seven different groups). Some sociological religious theories focus a lot in the conversion process, and less into the strength ethnic identity as a main factor to understand what some wrongly named “popular religion”. This case will be a great example that the community identity passes before Ethnic Identity and even religious conversion. Even though a monolithic institutional religion conversion serve more to maintain and fortify the communal ethnic identity than a spiritual meaning. The key here is that the community identity provide more central meaning that the religion itself.

GUY, ANAT* (The College of Management, g1anat@colman.ac.il)

Between Ideology and Practice of Child Rearing: Differences Between Men and Women in Two Cultural Contexts

The third wave of feminism declares that the most important mission in becoming a gender equal society is to encourage men to take a greater part in the family life, and especially, take greater responsibility toward their children’s upbringing and education. Some scholars suggest that this revolution has yet to take place because women still guard their traditional roles and refuse to share them with their spouses.

Our study indicates that although women ideologically declare their wishes for a more supportive and active partner and for a more egalitarian division of household labor and child rearing, when these ideas were turned into practice and examined, we found that men define these practices as far less feminine than women. This tendency appears both for secular men and women and for religious men and women.

Thus, while ideologically, women are more liberal and feminist than men, in practice, they tend to hold a traditional view regarding child rearing daily practices, as they view these practices as feminine.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The report deals with the revival of Islamic identity in the Republic of Tatarstan which is an ethnic republic within Russia and the Muslim informal organizations of Tatars. Sociological research shows that religion is more important for Tatars than for other ethnic groups who traditionally do not profess Islam. There are more believers among the Tatars who observe religious customs and ceremonies; there are less non-believers and non-believers. As far as religion is concerned, sociologists used to argue that women were more religious than men, older people more than youth, the uneducated more than people with higher education and people from rural areas were more religious than citizens from urban areas. However due to processes of post-modernity the situation has changed and another tendency has become apparent, which is sometimes the reverse. One of these trends is Tatar youth. The research data reveals that desecularization has increasingly affected young people, and their degree of religiosity does not depend on the level of education or place of residence (there is even more rapid Islamization among the educated youth of big cities). A group of strictly observing young Muslims has been pointed out. They are about 5% of all Tatar youth. They are very religious and they confirm it by their behavior. The report focuses on some initiative groups and informal organizations of Muslim young people in Tatarstan classified as 'analogue' and 'digital'. It's given a lot in social life (Consciousness, 'Altyn Urta', 'Ikhlas', 'SAMI'). They were formed in 2004-11 and gained their activity uniting Muslim students of Tatarstan cities. The report is based on the results of sociological research, 2008-2013 in Tatarstan, Russia. The methods comprise of two surveys by 1500 respondents each and about 80 in-depth interviews.

Effects of Interview Mode on Self-Reported Well-Being

This study explores the differential effects of face-to-face interviewing and web-survey self-interviewing on subjective well-being questions. The analysis employs individual data from traditional surveys (e.g. the World Values Survey, the European Social Survey, and other representative national surveys) and data obtained from a web survey posted at WageIndicator websites in more than 30 countries. In the second mode, interviews are conducted and the fieldwork is performed by the survey company. In the case of a non-profit oriented, community based project in the south of Germany, we compared the two modes with different costs. The results show that interview mode does not affect the self-reported well-being levels. However, the mode choice influences the interviewee's interview experience, and the interview situation. The paper also contributes to the ongoing debate on web survey data quality, reliability, and validity for scientific use. It demonstrates how social sciences can benefit from the use of web survey data in order to overcome the limits of traditional information sources.

Changing Identity: Istanbul Clubs during Gezi Protests

Galatasaray, Fenerbahçe and Beşiktaş are the biggest sport clubs in Turkey. Even they are sport clubs their main focus located in football and football has an obsession level love and hate relation within Turkish public. But even %90 percent of Turkey's population see themselves as fan of these 3 big clubs which are opens their obsession level love and hate relation within Turkish public. With schools being the main educators of Christian beliefs, parents quite often challenge to questions of meaning and identity formation. However, churches can become a space for social commitment provided that it is linked with the characteristics of being voluntary, unrestrained, and discursive. On the basis of group discussions with Catholic youths, I want to show how the participation in a church-based project oriented towards the common good can initiate an involvement with religiosity.

The Socio-Economic Implications of Kidnapping in Port Harcourt, Nigeria

Kidnapping seems to be growing as an industry involving every level of the society. However, studies on it have been relatively a recent phenomenon, with much of the literature coming from Asian, American and European continents. There is very little empirical research carried out on kidnapping in Nigeria and yet there are series of media reports of daily incidence of kidnapping in the country. In port Harcourt, the commercial and oil Hub of Nigeria's Niger Delta, kidnapping was/is generally said to be a fearful and threatening crime. While in other places, the problem is more or less an occasional thing, that of Port Harcourt is generally observed to be habitual, sporadic and spontaneous that happens almost every day. It is against this backdrop, this study examines the nature of kidnapping and the socio-economic implications of kidnapping in Port Harcourt, Nigeria. Using the multistage cluster sampling method, a sample survey of 350 households was administered. In addition, official crime statistics on kidnapping from the police was collected and 15 in-depth interviews (IDI) including victims, police officers, traditional rulers among others were conducted. The findings show that, kidnapping takes a violent dimension and it has been established, operated and executed in form of business empire; two, there is the development of independent negotiating between the victims and perpetrator of kidnapping; three, there exist paucity of official reported cases; fourth, there is general behavioural modification of residents on socio-economic activities and relationships. In conclusion, the study confirms that kidnapping has negatively influenced people's behaviors and that cases are grossly underreported to the police as government does little or nothing to stamp out the menace.
show specifically how the implicit dimensions of knowing how to use ‘new’ and ‘old’ media becomes visible and obtains agency in each of the context of the other generation.

The paper is divided in three steps. First, I will discuss the moments when members remember how to use either ‘new’ or ‘old’ media and discuss the implications for memory studies. Second, I will show what happens when the implicit knowledge of using these objects is being translated to the other generation. I will follow how the rhythms of bodies in interaction with their environment change, and how the use is being remembered and reinterpreted. Third, I will discuss the implications of such an intergenerational view on the enactment of social time in each of the generations’ body rhythm.

GÖBEL, HANNA* (University of Hamburg, hanna.goebel@uni-hamburg.de)

*Unpacking Sensual Ruptures and Rhythms in the City: Methodological Devices for a Sociology of Sensual Translations*

Studying urban sensual experiences through film and photo cameras is one of the most intense settings through which an argument about the performativity of methods and their epistemological and ontological consequences can be developed. Drawing on the recent developments in the realms of a ‘sociology of translation’ and the methodological devices offered by the ontologies of ‘urban assemblages’, this paper wishes to unpack the specific case of visual, acoustic, haptic, taste and smell related ruptures and reconfigurations of body rhythms in the city.

The case will be unfolded in three steps. First, I will focus on specific moments when sensual ruptures occur and reorder the body rhythm of movements through the city. I will draw on ethnographic field work in the cities of Hamburg and London introducing different moving crowds in political settings of protest, shopping related activities and transport practices in which the five sensual activities are challenged in various ways, overlap, interact and compete. The rhythmanalysis as offered by Henri Lefebvre is going to be applied in a fresh way showing how sensual translations become social makings and unmakings. In the second step, I will stress the epistemological consequences when extending the agency of observation through film and photo cameras and show how to follow the new ontologies that occur through these lenses. In the third step, I am going to argue for a sociology of sensual translations offered when taking into account the methodological agencies of film and photography in settings of urban experiences.

*In the Name of the Rule of Law and Democracy: Institutional Restructuring of the State and Women’s Rights in Iraq*

The nature of international involvement in improving the status of women in Iraq has been ironic, inconsistent and controversial. Since the initial years of the war, women’s oppression has been rhetorically used by Anglo-American coalition forces as an excuse for the military operation. Ironically, the US has been accused of trading women’s rights for cooperation from the Islamists and reports by foreign governments, the UN and human rights organizations have until recently ignored the deterioration in the status of women and the rise in gender-based violence in Iraq. The tendency within the international community is still to consider culture, underdevelopment or religion as the root cause of women’s subordination and to push for “modern” changes in society and law in compliance with a western liberal model of law and gender egalitarianism. This article investigates the nature of negotiations among international actors, governmental authorities and local politics for institutional restructuring and the implications of this international endeavor for women’s rights and solidarity in Iraq. The article argues that the implementation of specific social and legal models/reforss based on the norms and systems in western liberal states, targeting disadvantaged groups such as women, in a socially and politically precarious context like Iraq might raise serious problems and contribute to social inequalities and violence if the complexities of local politics of gender are not analytically taken into consideration. The article aims to contribute to activist efforts to enhance women’s status in war-effected societies, promote women’s solidarity against ethnic polarization and empower women to be active agents in advancing peace and justice in the face of radical transformations taking place in society, economy and politics that are dominated by men at all levels including local, regional, national and international.

*Interrogating the Role of International Actors in State-(Re)Building in Iraq: Implications for Ethnic Politics, Youth Discontent and Social Justice*

A significant consequence of the military intervention in Iraq has been the active involvement of international actors and agencies (e.g. foreign governments led by the US, the UN, EU and INGOs) in the institutional restructuring of the country. Substantial changes inspired by western neoliberal (political, economic and legal) models have been introduced to the institutional system of the country, ultimately to establish democratic institutions, encourage political participation of youth, reconstruct the economy, achieve ethnic reconciliation and implement the rule of law (e.g. Legislative Strengthening Program sponsored by USAID and UNAMI -United Nations Assistance Mission for Iraq). This international endeavor entails a rather controversial role for humanitarian actors like the UN, as their role has been to mitigate the discrepancies between the priorities of foreign agents (e.g. fiscal and security reforms, modernization, economic growth and so on) and daily injustices suffered by Iraqis. By analyzing the three significant lines of action by the international community, i.e. “ethnic reconciliation”, “youth empowerment” and “social justice” in which the UN and foreign governments are actively involved, the paper investigates the scope of international interference in Iraq, more specifically the nature of negotiations among international actors, governmental authorities and local politics in the course of state-(re)building since 2003. It argues that the discrepancy between the priorities of international state-building efforts (based on international norms, humanitarian causes and self-interest) and the complexities of national and local politics in a highly militarized multi-ethnic context like Iraq has contributed to the institutionalization of social injustices, marginalization and frustration of youth and consolidation of ethnic fragmentation between Arabs and Kurds. The paper aims to provide insights about the international involvement in domestic politics in the Middle East and contributes to the analytical discussions on the complex repercussions of state-building and institutional design through military and humanitarian interventions.

*Power Shifts and Transnationalization. a Comparative Study of Long-Term Changes in the Swedish Power Elite, 1990 - 2013*

Based on three surveys with a few thousand decision-makers each in top positions in all areas of Swedish society (in 1990, 2001 and 2013), we analyze changes over a period of more than 20 years in the composition and internal power relations of the power elite. It is to our knowledge the first time that a historically oriented study has been made, where three points in time are studied using the identical research design. Also, it is possible to analyze the entire elite stratum (not just a sample) as it is small enough, while at the same time it is big enough to allow statistical analyses.

Comparisons are made both over time and in social space, that is, between different parts of the field of power, characterized and ruled by different logics and relations. The previous studies have shown systematic differences between fields and also between the genders in various respects. Our paper has three parts: the first part gives an overall perspective of the long-term development and changes, and the second part discusses some important results. The third part discusses methodological problems, emerging especially in connection with the growing transnationalization of fields and of elite groups. With the increase of international ties, migration and the merging of big business as well as of cultural arenas, INGOs, and economic and political cooperation, important power seems to be moving from Sweden as a European periphery to the big financial and industrial centers and cultural arenas. What is a national elite group these days? Also, several sites of power are gender-balanced (or de-gendered) in Sweden. How will the scope, force and hierarchy of the gender-order be affected in the meeting with other gender-orders as part of a transnationalization process?

Competition over Expert Authority in the New Field of Human IVF

Is human IVF (in vitro fertilization) the extended version of animal IVF or is it human fertility? Such a question may seem odd today. Nevertheless, the question intrigued contemporary scientists in the 1980s when human IVF began to take root as a new field in Korea. Here I refer to human IVF not as a discipline but as a field because IVF is “an amalgam of thoughts, a mixture of habits, an assemblage of techniques” (Mol & Berg 1998), not a coherent, prime face. The process of mixing and assembling that which is originally different is neither simple nor peaceful. The new establishment of a field inevitably requires a process of determining the “dominant professional” (Oudshoorn 1994) through competing with rivals and making the field appealing to outsiders. The human IVF field in Korea was settled down by OB clinicians who had the capabilities to motivate a wide range of resources; E scientists entered the field with the help of these first players.

This paper aims to provide insight into the human IVF field of the 1980s in light of its developmental history through analyses of academic journals, in-depth interviews with experts, and analyses of discourses over the issue, all of which reveal how the experts regarded this new field as an extended version of their own expertise. Expert authority is not self-evident but results from social politics. This insight is gained when we consider human IVF as a social reality and when we pay attention to the construction of that reality, not regarding it as a natural object. To that end, a sociological analysis is required.

Urban Shrinkage As a Travelling Concept

Urban shrinkage as a phenomenon has globalized during the last years: worldwide, including also the global South, cities have faced population decline and its manifold consequences for urban space, fabric and society. In terms of urban theory, shrinkage as a phenomenon or way of urbanization was disregarded for a long time, or shrinkage was looked at through the lens of urban growth as the basic trend of urbanization: as deviance from the norm, a bad or false development or a temporary appearance to be overcome.

Shrinkage as a concept was used first in the German discourse and got onto the national scientific and public agenda with the extreme population losses of East German cities during the 1990s and early 2000s. Shrinkage got accepted as an international term with the growing number of comparative studies and projects from the mid-2000s onwards.

The concept of shrinkage today faces a twofold challenge: On the one hand, it still struggles for recognition as describing a common pathway of global urbanization. On the other hand, research shows an overwhelming diversity of contexts which challenges the essence of what shrinkage was hitherto defined as. The recent crises in the US and Europe, however, represent a context where expertise must be a reciprocal process. It is especially problematic in regions with substantial Aboriginal populations, where their visibility make race relations a matter of everyday experience and discussion.

There has been considerable research on how mainstream Australia views Aboriginal people but little is known about how Aboriginal people view non-Aboriginal people or mainstream institutions. This paper is based on an Australian Research Council project undertaken in partnership with Larrakia Nation Aboriginal Corporation. It aims to reposition the racial gaze by investigating how Aboriginal engineering profession is in a process of re-examining and re-legitimising their knowledge-base.

In spite of a general agreement on the need for future engineers to be broad thinking and hybrid, the engineering education system has been reluctant to part with traditional knowledge regimes focusing primarily on “hard core” scientific and technical competencies. An empirical investigation of a year group of engineering students in Denmark finds that a great deal of the professional status and legitimacy of the engineer is based on the symbolic value attributed to the engineering knowledge base. The experience of hardship and endurance in relation to the demanding workload of the science and technology disciplines and a high degree of difficulty of these subjects are seen as ”tests of manhood”, ritualising the professional initiation. This anachronistic way of legitimising the profession may bolster the self-confidence of the engineering students making it through to graduation, but it is also likely to be an obstacle to the stated objectives of engineering education systems of attracting more women to the engineering profession and of providing engineering professionals able to address challenges of a dynamic, global society.

Self-Selection and Economic Assimilation Of Immigrants: The Case Of Iranian Immigrants Arriving To Three Countries During 1979-1985

Self-selection and economic assimilation of immigrants: The case of Iranian immigrants arriving to three countries during 1979-1985

The study is designed to evaluate the impact of the interaction between patterns of immigrants’ self-selection and the context of reception at destinations on the economic assimilation of Iranian immigrants who came to the three countries during 1979-85. For that purpose we studied immigrants at the age of 22 or higher upon arrival by utilizing the 5 percent 1990 and 2000 Public Use Microdata files (PUMS) of the US census, the 20 percent demographic samples of the 1983 and 1995 Israeli censuses of population, and the 1990 and 2000 Swedish registers. The results indicate that the “most qualified” immigrants – both on observed and unobserved variables, who arrived in Iran right after the Islamic revolution, arrived in the US. Their positive self-selection led them to reach complete earnings assimilation with natives there. Iranian immigrants who arrived in Sweden and did not achieve full earnings assimilation at ages 22 or higher in the 1980s, points to the need to improve public understanding between Aboriginal peoples and the Euro-Australian mainstream. But the unevenness of race relations has meant Aboriginal perspectives on race relations are not well known. This is an obstacle for reconciliation, which, by definition, must be a reciprocal process. It is especially problematic in regions with substantial Aboriginal populations, where their visibility make race relations a matter of everyday experience and discussion.

The Making of Green Engineers

Repositioning the Racial Gaze: Aboriginal Perspectives on Race, Race Relations and Governance

In Australia, public debate about recognition of the nation’s First Australians through constitutional change has highlighted the need to improve public understanding between Aboriginal peoples and the Euro-Australian mainstream. But the unevenness of race relations has meant Aboriginal perspectives on race relations are not well known. This is an obstacle for reconciliation which, by definition, must be a reciprocal process. It is especially problematic in regions with substantial Aboriginal populations, where their visibility make race relations a matter of everyday experience and discussion.

There has been considerable research on how mainstream Australia views Aboriginal people but little is known about how Aboriginal people view non-Aboriginal people or mainstream institutions. This paper is based on an Australian Research Council project undertaken in partnership with Larrakia Nation Aboriginal Corporation. It aims to reposition the racial gaze by investigating how Aboriginal
peoples in Darwin recognize and understand who is Euro-Australian, who is Ab-
original, and Aboriginal views on Euro-Australian values, priorities and lifestyles.
We argue that a necessary ingredient for improving race relations in Australia
is for dominant cultures to understand the relative nature of their own cultural
attachments. Through interviews, social media and survey with Aboriginal peo-
ple this research provides a basis for Euro-Australians to discover how they are
viewed from the outside. It repositions the normativity of Euro-Australian culture
which is a prerequisite for a truly multicultural society.
Aboriginal disengagement from mainstream political and civil law processes
and institutions contributes to their social exclusion but the reasons for this distan-
tion are not well understood. Through ideas of agency, recognition and resistance
we also explore how Aboriginal people view and understand the gap between
Western-style governance and traditional Aboriginal approaches to deci-
sion-making and the impact this has on patterns of compliance and participation.

Attitudes Towards Patriotic Education and Armed Forces among

Slovenian Youth

Contemporary democratic societies are encountering many demanding challenges
such as decreasing political participation in the democratic societal sphere. In most
European countries one can detect an almost annual drop in citizens’ political participa-
tion. Due to the dramatic changes in political, security and societal conditions in
Europe in the last decade, today’s youth is being brought up in a fundamentally differ-
et spirit. Simultaneously, more participating citizens for the future, there is a debate in Slovenia regarding civic and patriotic education, as well as active citizenship
among the youth. Differing opinions may be found on how to realise this education,
and what forms and methods should be involved. In general, two different concepts are
at odds: a discipline of patriotic education, introduced in rather limited way into the
Slovenian elementary schools in 2009; b) second concept attempts to cultivate a sense of
taking responsibility and of the acceptance of democratic culture while si-
multaneously maintaining a critical stance on the very political system; this concept is
traditionally not synced with military tradition, but was introduced into school curric-
ulo in 1990s. The proposed paper will analyse attitudes of youth towards patriotic ed-
ucation, and try to ascertain, whether the concept of patriotic education is has been
dable to deliver its goals. When analysing trust of youth towards different institutions of
democratic state in the last decade, one finding is relatively high trust of youth in the
armed forces and school as an institution on the one side and relatively firm distrust
into various political institutions of democratic state. Research question will ask how
patriotic education has been accepted by the pupils and teachers and how patriotic
education is affecting pupils trust in the armed forced and school as an institution on
the one side and distrust various political institutions on the other.

A War without Images?

A “war without images”? : Secrecy, information and communication during the
war in Mali

As the international operation is still under way in Mali since January 11th 2013, the
French armed forces played a huge role in the defeat of the jihad’s fighters. From
the first days of the French commitment (i.e Operation Serval) to the Mali
presidential polls (August 11th 2013), this paper will deal first with the information
and communication policy conducted by the French forces during this new “war on terror” both on the political and organizational sides (political discourses and
structures). Is the war in Mali a “war without images and without facts” as French
and foreign reporters described it? How the French authorities dealt with this
traditional dilemma: the (French) people’s right to be informed and the need of
secrecy, especially on the front line? Based on the analysis of the political an insti-
tutional discourses and on interviews, this paper will explore all these questions.

Coherence; Art Content & Society

Some claim considering the content of art is a task for art critics & historians.
However, this may be relevant also for sociologists, to reveal information on so-
ciety. Contemporary art is dominated by conceptual art with a broad range of
art expressions, diverging from traditional art. Many consider this tendency to
express democracy and art diversity; others regard it as a breakdown of rules
claiming it creates art anonymity. Durkheim describes how anonymity appears in times
of crisis. However, he also describes how anonymity may appear in times of sudden
wealth, which is the case in Norway, which has grown tremendously rich during
the last decades. Simultaneously there has been a breakdown of norms in the
society, which obviously has created some features of anonymity. Additionally the art
interest has increased, as well as governmental support to artists, on principals
of democracy and freedom of speech. Today Norwegian artists have great free-
dom to create whatever they like, including controversial political art, such as a
Norwegian artist who creates art performances in North Korea with North Korean
artists. Although he is criticized by many, as his performances probably requires
some connection with North Korean authorities, others defend his performanc-
es. According to Benjamin, art criticism is crucial for art development. Although
Norwegian media often provide art articles, art criticism is rather weak and art is
seldom criticized in a critical way. Norwegians today seems liberal to controver-
sial art, perhaps more than people outside Norway. My PhD-thesis on corporate
art and architecture (2011), also reveal that Norwegian art collectors seem more

liberal to controversial art than collectors absorb. This makes me wonder: is it a coherence between art liberalism and features of anxiety in a society caused by sudden wealth? May this be reflected in the content of art in the current society?

R3C7-631.4
HAGEN, MALFRID IRENE* (Previously affiliated to Buskerud University College, moliren@online.no)
When Art Becomes an Emotional Burden

Art influence our emotions, usually positively. However, art may also appear as offending and become a burden. Here I discuss so-called “offending art”, defined as art with improper sexual, violent or blasphemous content. I use empirical examples from my PhD-thesis (2011) and new observations. My thesis reveals different practices for corporations collecting art in four countries, including the USA and Norway. Although related cultures, the policy for collecting art diverges regarding offending art. While most of the American corporations express that they avoid art that can be experienced offending by employees and visitors, the Norwegian corporations are more liberal. Although most art in the Norwegian collections are not offending, they also contain offending artworks that creates emotional reactions among employees, who experience this art as a burden. Due to the emotional impact on employees and visitors corporations have had to remove artworks from public areas, for example a painting regarding blasphemous. An artwork still hanging contains a digital text about sexual abuse and is described by employees as depressing. The employees have got used to it and suppress their emotional reactions. Corporate collectors can easily avoid offending art, as they are in their work with art to show their interest and support art. They also like to appear as democratic organizations and will probably not risk being accused for censoring art. Sometimes art seems prioritized on the cost of people. This applies also to commissioned art. Some new paintings in a governmental building in Oslo show falling paper and skeletons between flying buildings. Employees experience the artworks as an emotional burden, because they give associations to the terrorist attack on the government buildings in 2011. Seemingly there is a gap between art censorship and consideration to employee emotions worth examining.

KRISTIANSEN, TRULS TUNBY* (UiT The Arctic University of Norway, truls.tunby.kristiansen@uit.no)
Institutional Change through Rational Collective Action

The paper seeks to establish an analytical framework for the study of institutional change. Its main components are drawn from sociological systems theory, rational choice theory and institutional theory. The distinctive theoretical maneuver is assuming that modern, functionally differentiated societies can be analyzed as communities, more or less capable of collective action. The analytical core of the framework is a concept of collective action characterized by the conflict between collective and individual rational lines of action. This subjectively experienced conflict is also a social dilemma because the outcome of an action is codetermined by the choices of other actors. Mutual interdependence creates a particular social dynamic that can be applied to the study of institutional change.

We take modern society to consist of several self-referential social systems that operate through unique social media and binary codes. However, we also conceive of differentiation among spheres, fields, systems, discourses or sectors. The concept of organic solidarity particular to modern society. Society is a community or even collective, because of legitimate institutions, shared social norms and a common culture. In the Marxian tradition the other subsystems are regulated by capital and power, with the market and the bourgeoisie state as the real centers of society. All three perspectives have their merits and can claim empirical confirmation either in a world society of global financial markets, art and science, or nation states as embodiments of solidarity and power.

However, all three perspectives share a common weakness: They are unable to explain how mutual interdependencies among subsystems lead to problems of performance or function that are also problems of collective action, and thus conceived as a collective regarding its own cohesion or societal integration. The reason for this shortcoming is an ontology of the social based in spatial metaphors which reflexes collective phenomena. When this epistemic obstacle is identified, we might create an alternative ontology that enables a new understanding of modern societies as communities or social wholes with varying capacity for collective action on local, regional and global levels.

Renewal of Organizing Strategies for Child Care Workers?: Union Responses to Neoliberal Child Care Reform and Downgraded Care Work in Japan

Child care work, mostly performed by women, is almost always poorly paid. Unionsizing child care workers is an important strategy for securing fair compensation and better working conditions for child care workers. This entails social movement that re-evaluates care work and women’s work.

In Japan, certified child care teachers have been relatively well organized under the All Japan Prefectural and Municipal Workers Union (Jichiro). This is because local governments act as major care providers at least until the 1970s, and they employed certified child care teachers as local government employees for public care. Child care centers, organized teachers have also played a critical role in improving working conditions for child care teachers as a whole. However, their influence has been on the decline both in the policy-making process and in the union with the arrival of neoliberal reform policies such as the privatization of accredited care centers, and the deregulation of the workforce such as lifting of the limit on the number of part-time teachers per center. Certified child care teachers employed by local governments, once regarded as secure and decent jobs for women, are disappearing, and child care providers, including certified teachers, are now becoming members of the working poor.

How do union responses renew their capacity to organize child care workers? How will teachers respond to lost occupational homogeneity? Furthermore, will the union’s survival be compatible with sustainable care provision? The paper describes some of the history of the organization of the child care teachers and their activism, and focuses on and compares the current struggles and functions of two unions: Jichiro and the Union of Workers of Welfare and Child Care. The craft union for teachers and non-certified teachers affiliated on an individual basis.

HAGEN, ROAR* (UiT The Arctic University of Norway, roar.hagen@uit.no)
The Whole of Society and Society as a Whole

Sociological theories of modern society conceive of some form of horizontal differentiation among spheres, fields, systems, discourses or sectors. The concept of organic solidarity particular to modern society. Society is a community or even collective, because of legitimate institutions, shared social norms and a common culture. In the Marxian tradition the other subsystems are regulated by capital and power, with the market and the bourgeoisie state as the real centers of society. All three perspectives have their merits and can claim empirical confirmation either in a world society of global financial markets, art and science, or nation states as embodiments of solidarity and power.

The tradition emerging from Weber conceives of a modern society consisting only of parts. This view is epitomized in Niklas Luhmann’s theory of a modern society characterized by functional differentiation. In the tradition emerging from Durkheim, mutual interdependencies among the subsystems create a social bond of organic solidarity particular to modern society. Society is a community or even collective, because of legitimate institutions, shared social norms and a common culture. In the Marxian tradition the other subsystems are regulated by capital and power, with the market and the bourgeoisie state as the real centers of society. All three perspectives have their merits and can claim empirical confirmation either in a world society of global financial markets, art and science, or nation states as embodiments of solidarity and power.

However, all three perspectives share a common weakness: They are unable to explain how mutual interdependencies among subsystems lead to problems of performance or function that are also problems of collective action, and thus conceived as a collective regarding its own cohesion or societal integration.
of Mexican migrant workers in Canada's largest cherry orchard conducted by Elise Hahn on behalf of the Lake Country Heritage and Cultural Society. In conjunction with our paper, ten original photographs of migrant workers in the Okanagan Valley, products of the aforementioned case study, will be presented. Together, these experiences have challenged our pre-conceived notions of who migrant workers are, the lives they lead, and their cognizance of the racialized processes to which they are subject in Canada.

“Planning the Unplanned” - Trajectories of Managing the Informal in the Urban North

This paper will present research on how informal activities and practices in Berlin’s public spaces are tackled. The global trend of proliferating informalization in urban centers as a result of ongoing neoliberalization is not solely a contemporary reality in cities of the Global South but encroaches as well on North-Western cities. Especially in multicultural societies of reeding welfare states, many people’s possibilities have become confined to informal economic opportunities as they have been denied access to more formal spheres. As such, the street vendors and bottle collectors that are working in many of Berlin’s parks are faced with various regularization strategies in a city that otherwise is known for its “anything goes” attitude. While on the one hand tightening the possibilities for diverse informal practices to develop and proliferate, the city government on the other hand also promotes its “urban pioneers” that have informally appropriated various spaces in the city. Right after the fall of the Wall, the abundance of vacant lots and buildings, perceived as weakness in the new urban development processes, however, today are endorsed and proclaimed as strengths and idiosyncratic features of the urban landscape. Hence in current governmental strategies “planned informality” is an important pillar to develop urban space that is otherwise lacking financial investment.

Overcoming the informal/fORMAL duality and stimulated by this debate which emanates from the Global South, the paper will show how informality and formality are intricately intertwined in the researched cases in Berlin. Furthermore, it will talk about the ambiguous role of the city government that on the one hand, embed in the neoliberal agenda, is promoting certain kinds of activities, while on the other hand, evoked by the image of the modern and orderly city, is regularizing undesirable informal practices.

Circular Labor Mobility in the Central European Region: Job Finding and Labor Market Outcomes of Cross-Border Commuters from Hungary, Slovakia and Czech Republic in Austria

Circular labor mobility within the EU has been strongly promoted through several institutional programs since the 1990s. However, so far the given circumstances for participants in these emerging transnational labor markets have not been investigated in depth. This is especially the case for European cross-border commuters. Our paper aims to close this gap by taking the Central European region (CENTROPE) as an exemplary instance. Therefore we investigate job-search strategies and related labor market outcomes of cross-border commuters in the regions of the Czech Republic, Slovakia and Hungary in the EU (1). Theoretically, we build upon a model developed by Aguilera and Massey on the nexus of social networks, job search methods, and related labor market outcomes. Methodologically, we use a brand new longitudinal survey on employment careers of cross-border commuters conducted in 2013 (N=2,550). Empirically, the focus of our paper lies on three research questions: 1) What do cross-border commuters in Hungary, Slovakia and the Czech Republic use in order to find employment in Austria (1)? What are the labor market outcomes of these job search methods in terms of wages (2)? 2) Our results strengthen the hypothesis that human and social capital resources serve as key factors for finding job strategies and successful labor market integration. For example, we can show that far family and friendship ties are more intensely related to job finding than near-family contacts. However, near or far social ties do not influence wages of cross-border commuters. Furthermore, there are substantial gender differences and differences related to previous occupational status and migration experience in regard to the job searching methods and commuters' wages in Austria. Overall, our results reflect cross-border commuting as a new form of social practice in Europe, and demonstrate the fundamentally unequal opportunity-structure of CENTROPE as a transnational labor market.

Gender, Ordination and Socially Engaged Buddhism in Australia

While women have played a prominent role in Buddhism in Australia, at least since the 1880s, they have received relatively little scholarly or public attention. These women include prominent nuns, teachers, community leaders, scholars
and activists engaged in environmental and human rights issues, such as Marie Byles, Natasha Jackson, Venerable Robina Courtin and Judith Snodgrass. Courtin, has frequently featured in the Australian press and been referred to as ‘unconventional’, given her forthrightness and dynamism. On October 22, 2009, four women received Theravada Bhikkhuni Ordination in Perth, in the Thai-Forest Tradition, which has generated a considerable amount of controversy. Members of the Australian Sangha Association, including prominent nuns and monks such as Rev. Chi Kwang Sunim, Ajahn Braham and Bhante Sujato have, and continue to, be at the forefront of promoting gender equity in Buddhism in Australia. This paper explores the contribution of Buddhist women and men, and also Buddhist organisations, in addressing gender disparities in Australia. It argues that stereotyping Buddhists, and Buddhism more generally, as passive and pensive, negates Buddhists’ commitment to the Bodhissatva ideal, social justice and social engagement, evident in both traditional and contemporary Buddhism.

Mortgage Households As Carry Traders: The Social Life Of The Swiss Franc In Poland

The recent innovation of mortgage credit in Poland has been rearranging property relations, stimulating construction and enabling new middle class aspirations. There are more than 1.5 million active contracts; there exists no significant population who paid off. Half of those contracts are adjustable rate mortgages denominated in Swiss francs. They draw households into the currency market, making foreign, and especially franc, debt a part of the fabric of the family and a favorable exchange rate between the Polish zloty and the franc. “Franc people,” as they have to be known, enjoy the benefits of this speculation, but are also subjected to unprecedented risks. As the recent crisis attracted investors worldwide to the “safe haven” of the Swiss franc causing its strong appreciation, the mortgage holders living with a sharp plunge of equity on their houses and an increase in monthly payments. Based on ethnographic fieldwork this paper traces the dual productivity of the Swiss franc in Poland through the lens of the groupmaking effect of currency: “Franc people, or “currency spread generation.” Economically, the franc is capable of producing independent effects that contradict the conventional wisdom that money is “just a veil” to economy. Symbolically, as a discursive site, or locus communis, the franc and its people become a vehicle of debates about post-socialist transformation, capitalization, and the legitimacy of speculation. What are the practices of domestic living with multiple currencies engendered through a complex long-term contract? How do charts, exchange rates, and the LIBOR index become objects of attachment both in intimate household economies and in the public discourse at large? While based on the Polish case, this paper also uses data on the social life of the Swiss franc in Croatia, Hungary, and Spain for a more comparative and theoretical perspective.

Design Experiments As Intervention: How May This be Rendered Visible?

Building on empirically based visual experiments in the form of design interventions and co-designerly processes this paper seeks expand the field of visual sociology. This is done through an exemplification and discussion of how we might visualize interactive, multisensory and process based aspects within fashion and identity studies. Furthermore, the paper address how visual, expressive and design ways of constructing and representing sociological insights affect our understanding.

Visual sociology is based on the notion that valid scientific understandings of our world can be attained by observing, representing, analysing and theorizing its visual signs: manners of people and material artefacts of culture. (Pauwels 2010). Equally, fashion, like the arts, is often considered a visual phenomenon and the creation of aesthetically appealing artefacts is frequently described as one of fashion design’s main goals.

Design disciplines (including fashion design) have, throughout their histories, activated and engaged visual methods in the form of photography, moodboards, sketching etc. (Boradkar 2010). Furthermore, fashion design and the study of fashion & identity have been moving towards a broader definition than mere object making by being concerned with activism, social and cultural life (von Busch 2008) - elements that historically have been the core of sociology. This points out some of the blurred parallels between visual sociology and the study of fashion which make it prima facie plausible that visual sociology has a potential for social and cultural fashion studies.

Through visual design experiments conducted within a specific case-study concerned with troubled youths, fashion, and identity, this paper seeks to investigate whether it is possible to grasp meanings of fashion beneath the visual surface and re-frame these meanings in a visual and designerly manner.

Vulnerable Workers: The Significance of Trust and Uncertainty in Coping with Workplace Hazards

Based on a qualitative study of 120 Canadian born and immigrant workers in unorganized and non-unionized workplaces this paper explores the different ways in which workers manage and cope with workplace safety hazards in contexts of varying forms of employment vulnerability and insecurity (Vosko, 2006). I examine the rationalizations, beliefs and identities that workers employ to dismiss or make sense of their risk-taking, while also considering the ways in which they seek to construct levels of control over hazards and security in their employment, in part through the building of knowledge and trust with other workers and supervisors. I also consider the contradictory nature of workers’ actions which are frequently in tension with each other, including taking safety risks to build employment security, as well as taking employment risks to establish limits to their acceptance of safety risks. In this latter part of the analysis, I explore the contradictions and actions which limit worker compliance to certain levels and kinds of hazardous conditions, arguing that some workers are relatively successful in working either individually or with other workers to build what they see as a balanced level of safety and security.

Where Is Japan in the Global Land Grab Debate?

Some of the main explanations of the “global land grab” implicitly suggest that Japan should be close to the center of the phenomenon. Japan, after all, has the world’s third-largest national economy, is extremely dependent on imported food and fuel, is a massive capital exporter, and has multinational corporations with vast international experience. In fact, however, the main land grab inventories show few cases originating in Japan; instead, Japan’s role is scanty, and the land grab literature has little to say about the country. This paper seeks to explain both why direct Japanese investment in overseas land might be limited and why whatever land grab-related activity Japanese actors are engaged in might go relatively unremarked. I argue that 1) the international experience of Japanese multinationals has predisposed them to avoid large-scale overseas land acquisitions; 2) the Japanese government is prioritizing and supporting forms of international agricultural investment other than direct land acquisition by Japanese actors; 3) the avoidance of sub-Saharan Africa by private and public Japanese actors (with the major exception of the ProSavana project in Mozambique) lowers the visibility of Japan’s actions; and 4) more generally, that little attention is paid to Japan in broader discussions of world politics. I also suggest that Japan’s experience shows that there is much more to “land grabbing” than land, and that the literature needs to pay more attention to areas like investments in agriculture-related infrastructure, control over shipping, and technology transfer where the Japanese role has been quite prominent.

HALL, JEFFREY* (Waseda University, jeffhall@gmail.com)

Internet Media and Radical Conservative Activism in Japan: The Battle Against “Anti-Japanese” Enemies

Focusing on right-wing groups in Japan, this paper addresses how radical conservative activists use internet media to build collective identity and mobilize support for their campaigns. In particular, this paper will examine the online activities of two closely affiliated “grassroots” organizations: Nihon Bunka Channel Sakura, an internet broadcaster, and Ganbare Nippon, a conservative activist group. Both organizations are involved in a wide range of activist movements, such as opposition to “masochistic” history teaching, opposition to voting rights for foreigners, promotion of awareness about “fascist” Chinese foreign policy, and protests against perceived bias in Japanese newspapers and television programs. Through content analysis of the organizations’ websites, videos, blogs, and social media usage, I argue that they have embraced the latest forms of internet communications technology, and are skillfully employing the internet to spread their message. Their online activities have helped create a virtual community of supporters, many of whom also engage in offline forms of activism. In addition, this paper will explore how both organizations encourage the formation of a collective identity that sees Japan as a victim of powerful foreign and domestic “anti-Japanese” entities, and depicts their campaigns a moral struggle for truth and justice.

HALL, MICHELLE* (Queensland University of Technology, michelle@emplacement.com.au)

Throwing Together Experiences of Belonging within Public Space
This paper examines place-based belonging as a construction of thrown-together experiences within the public spaces of two gentrifying neighbourhoods. It draws on Massey's (2005) concept of throwtogetherness and Amin’s related work on situated multiplicity and collective culture (2008), to examine the manner in which such belonging can be generated through everyday negotiations of the multiple trajectories of people, objects and symbols, that make up the contemporary city. Massey argues that because of the multiplicity of these trajectories, places should be thought of as unfixed, their meaning instead constructed within these moments of encounter. In this paper I apply this perspective to place-based belonging, to consider how the experience of mobility may be constructed within these negotiations. In doing so the paper also seeks to shift the focus from dichotomies of public and private, or inclusion and exclusion, that often characterise discussion of public space in gentrifying areas, to instead consider ways different practices of coming together are encouraged by these intersections.

In this paper I particularly focus on quasi-public spaces - cafes, bars, and shopping centres - where publicness is always ambiguous, and where much potential for both inclusive and exclusionary experiences resides. Drawing on qualitative research conducted within two gentrifying Australian suburbs, this paper describes the throwing together of interactions, representations, and interpretations to construct personal and collective identifications. These can work to enable belonging and create opportunities for diversifying exposure; both of which have the potential to communicate the presence of the community across time and space. In doing so this work seeks to demonstrate the ways in which geographical and temporal boundaries of public space are blurred, breached and yet also reinforced, as we throw together placed-based experiences of belonging.

HALL, TOM* (Cardiff University, hallta@cf.ac.uk)

City Streets, Dirty People and the Politics of Cleaning

This paper reports from empirical research on the work of urban patrol, in particular the physical work of street cleaning and the social (although similarly physical, messy and material) work of ‘outrach’ and street care. We consider a team of council employees in the city of Cardiff in the UK whose job it is to make repeated tours through the centre of the city, day and night, looking to establish contact with and minister to ‘vulnerable’ adults who may otherwise struggle on their own to access mainstream (social and healthcare) services; the street homeless make up a significant proportion of this target group, but take their place alongside assorted others, including sex workers, all of whom outreach workers aim to assist and enrol as clients. We also consider the daily patrols of teams of street cleaners, again employed by the local council to patrol the city streets – picking up litter, emptying the bins and sweeping surfaces clean.

This paper develops two frameworks of analysis. The first examines the ways in which street cleaners and outreach workers – the latter ‘moral’ street sweepers, of a sort – employ and engage the senses in pursuit of their tasks and are drawn, alike, to the same ‘dirty, grimy, cluttered, smelly and unsightly’ places as they do. The paper’s second contribution, building on the first, considers the ways in which the expected outcomes of street cleaners and street carers (outreach workers) are often equated with the appearance and look, and feel, of the places and people in, on and with whom they work. This linking of care and upkeep to appearance – as the desired outcome of work that tends to and mends place and people – signals a politics of repair, enacted with ‘deviant’ groups in frequently dirtied city places.

Gender Differences in Academic Careers in Sweden

Gender differences to women’s disadvantage are evident in most branches of the labour market, so also within academia (Danell & Hjerm, 2012, 2013). Research on Swedish data shows that women have difficulties reaching the highest academic positions. Among other things, women’s likelihood of becoming professors are significantly lower compared to men (given PhD obtained in the same year) (Ibid.). Gender differences to women’s disadvantage are evident in most branches of the labour market, so also within academia (Danell & Hjerm, 2012, 2013).

HALLER, MAX* (University of Graz, max.haller@uni-graz.at)

Ethnic Stratification and Income Inequality Around the World

The paper starts from the assumption that inequality within countries is a very important topic for research also in the area of globalization. Data show that there exist huge differences between countries and world regions (continents) in this regard, with Latin America and Sub-Saharan Africa exhibiting extremely high, most European countries and Japan rather low income inequalities. Neither sociological nor economic research have theorized and investigated this issue systematically. The general hypothesis of the paper is: Economic inequality can only be explained if we see the close interaction between class stratification and ethnic differentiation. For a test of these hypotheses, a new aggregate data file has been produced, including characteristics about the ethnic structure and history, the socio-demographic and economic structure (population, level of development etc.), and the political system (democracy, federalism, welfare spending) of 130 countries around the globe. A regression analysis shows that both ethnic diversity and a history of slavery are significant determinants of income inequality; the same is true for land distribution, democracy and welfare spending. Some implications of these findings for policy and further research are discussed.

HALLER, MAX* (University of Graz, max.haller@uni-graz.at)

Socioeconomic Inequality, a Comparative, International Analysis

Social inequality in sport is an important topic in Sociology. Ever since modern sports were established there have been differences in the type and frequency of sports practiced by different socio-economic classes. Do these socio-economic differences in sport participation still exist today? Or are other horizontal dimensions more important in determining who is participating in which type of sport and how often? In this presentation these questions will be examined using the 2007 International Social Survey Programme (ISSP) on “sport and leisure time”. The relevance of three dimensions of vertical stratification (education, occupational position, and income) is investigated as well as of two horizontal dimensions (gender and age) for 34 countries around the world by using descriptive and causal (regression) methods of analysis. The results are surprising and even spectacular. Contrary to the widespread thesis that the vertical dimensions of stratification are losing in importance in favor of new, horizontal dimensions, we find that if anything it is the horizontal dimensions that have lost in importance. Participation in sports is much higher in rich countries than in poorer countries, also, the more affluent the country the lower the relevance of the horizontal dimensions. Indeed, in the most affluent countries the effects of horizontal dimension are even reversed.

Searching for European Values

Since 1981, the European Values Study group is searching for the values of the Europeans by means of surveys in an expanding number of countries. The latest wave took place in 2008 and included all 45 countries (with more than 100,000 inhabitants) on the European continent. We aim at a repeat survey in 2017.

It was attempted to identify value systems, but in general values appeared not to be clustered coherent patterns, but the patterns found and values that could be identified were domain specific. It means that values could be identified with regard to various life domains and it is hard if not impossible to find overarching values.

What also was revealed in and repeatedly found since the first wave in 1981 is that Europe is far from homogenous when it comes to basic values. Despite its common Christian history, the values of the people in the European countries appear rather diverse and the European unification has not (yet) resulted in a converging of the values of the Europeans. Ideas of multipe or varieties of modernities (e.g., Eisenstadt; Schmidt) and path dependency (e.g., Inglehart) seem to be confirmed by such data.

In this paper I focus on European values in 2008 and in elaborate on our efforts to find patterns in values distinguished in various value domains (religion and morality; politics and society; primary relations; work and leisure time). The data allow to identify one or two more fundamental orientations which appear to be underlying the orientations in the distinctive value domains. Perhaps such results are disappointing but they illustrate the wide variety in values that exist in contemporary Europe despite its ongoing process of unification.

Why Independent Elderly Prefer to Continue Living in Their Home Even When They Become Frail?

Frail old people have three options for care (informal, formal, mixed): move in with one of their family members (usually one of their children); live in a nursing home or in assisted living setting; continue to live in their home and receive private care or care services (based on the Long-Term Care (LTC) Insurance Law). As a multicultural society, Israel serves as a natural laboratory for identifying similarities and differences between various groups. The present research compared independent Jews and Arabs aged 65+, who live in the community, on various aspects of their preferences for care.

The study included two stages, a quantitative one, in which closed-ended questions were administered to 200 old Jews and Arabs, followed by a qualitative one, in-depth interviewing 20 respondents. The study found that Jews mostly preferred nursing or sheltered homes, whereas Arabs preferred mostly to remain in their homes. However, approximately 40% of both populations preferred “mixed care,” staying in their home with a live-in worker or with one of their children.

Three main aspects were identified: a macro-level aspect of social and cultural context (collectivism vs. individualism); a meso-level aspect of family patterns and norms (reciprocity and exchange in intergenerational relations); and a micro-level aspect of personal attributes and values (psychological meaning of family/house; dignity vs. honor). Although main aspects were in general similar between Jewish and Arab respondents, the initial meanings of these aspects were different, reflecting social contexts, past experiences, family norms, and the importance of home in late life.

Results revealed the need for developing culturally sensitive and tailored programs and services that take into account these aspects. Providing such services would allow old people to continue living in their homes, even when they become frail and need care and support.

At Home and Elsewhere: How to Handle Daily Life Growing up with parental mental illness or substance abuse

This is a description of growing up in families, including one or both parents suffering from mental illness or substance abuse. Growing up is the process of taking on a persona and building an identity. This includes playing a variety of roles, changing from one role to another. The role takes on a new meaning during the process of developing a sense of self. The role may be taken on or rejected during this process.

There is a large body of research on children living in families with parental mental illness or substance abuse focusing on parental failure, adverse outcomes and risks imposed on the child. The risk and harm perspective is however less suitable to study children as participating agents. There is a gap of knowledge and risks imposed on the child. The risk and harm perspective is however less suitable. The paper discusses how the Nordic countries have responded to diversity in the youth population and whether country differences in policy measures may account for the differences in unemployment and NEET rates in the Nordic countries. The paper demonstrates that the Nordic countries have responded differently to the concerns about the public expenditures and financial disincentives for the individual to participate in the labour market, the need for an up-to-date and relevant educational and vocational training services and social regulation of the market to ensure an inclusive labour market.

The paper argues that gender, ethnicity and disability represent social categories of high policy relevance for understanding the present challenges to the Nordic welfare states, including their efforts to promote the inclusion of new generations of men and women in the workforce. While the Nordic countries have been at the forefront in adopting policies to promote gender equality the Nordic countries have been more reluctant to adopt policies to ensure equal opportunities independent of disability and ethnic origin. The paper identifies the challenges for the Nordic countries and concludes by identifying the policy lessons for non-Nordic countries.

Proffessions and Multilateral Organizations: OECD

OECD professions and multilateral organizations. As professions globalize by creating their own international organizations, they also diversify and become more hierarchical. In this paper I focus on how professions are becoming more hierarchical through the support and prestige of multilateral organizations. The case is OECD, whose broad influence makes itself felt also in areas outside its kernal economic activities is in focus. OECD gives status to some experts and professions as the cost of others.

The paper discusses how the OECD/profession - link elevates some parts of the profession to position of authority beyond the status of the general professions due to the status of the solutons and choices of OECD. And on the other hand: Are there certain combination of equation, work carriers and professional networks that manage to promote themselves through OECD? If that is the case, what consequences does this have for the professions in general as these professions now become more an globalized? The focus in in particular on the economist, accountants, agronomists and environmental science.
However, in this paper I argue that in order to improve global social justice in relation to basic human rights, rather than a purely private and individual matter. In the US context, not only do these migrant mothers offend the right to joint custody, but the cases also involve the right to joint custody of the American partner, which is different from the Japanese national. Frequently the cases involve Japanese women who are international marriage migrants abducting their children to Japan after the breakdown of a marriage. In the US context, not only do these migrant mothers offend the right of joint custody of the American partner, but they also breach the child's right of access to both parents and violate the Convention rule against unilateral removal of the child from its habitual residence. Japan's accession to the Hague Convention is likely a progressive step indicating that Japan has begun to see the issue as a matter of basic human rights, rather than a purely private and individual matter. However, in this paper I argue that in order to improve global social justice in relation to family disputes, accounting for the particular situation of migrant woman in both public and intimate spheres is crucial. Taking this new rights talk into account, I attempt to sketch a more nuanced concept of social justice in relation to the cross-national family, pointing out possibilities for further international legal refinements.

Late-Alain Touraine's Theory of Modernity, New Subjects and Cultural Movements: Toward Theorizing Social Transformations in Contemporary Asia

The purpose of this presentation is to theorize social transformations in contemporary Asia from the perspective of late-Touraine's theory. The "compressed modernity" theory (Chang) is often used, which is based on the theory of "radicalization of modernity" (Giddens, Beck) that focuses on the institutional level of modernity. However, the latter is partly criticized by the theories of "multiple modernities" (Aminon) and Touraine, because the cultural orientations characteristic of modernity are embodied in institutions, but not reducible to them. Its founding gesture is a break with the widespread assumptions that there is one main pattern of modernization and modernity.

This presentation explores the insights that emerge from the exploration of Touraine's major works after 1990s that are highly appreciated by the theorists of multiple modernities. Touraine does not justify modernity institutionally and does not anchor it in the market economy, the government administration, or democratic organs. Instead it brings other regions of the world into the debate over modernity.

Touraine maintains that modernity was characterized from the beginning by the two poles of reason and the resisting subject. In a world best defined by multiple process of change, there exist no other means of combining economic strategies and identities than through the individual. It is not the individual as consumer or member of various organizations, and even less as citizen, but the individual as subject, in the desire for individuation, which constitutes the only principle able to mediate between the instrumental world and the world of identity: the collective situations that protect the uniqueness and individuality of collective situations that constitute cultural movements.

These conceptualizations can be applied to Asian societies, however to that end it should be developed into institutional analysis based on a new theoretical model from the theories of welfare regime, new social risks, social/cultural movements, and social governance.

Contested Rights of the Cross-National Family: Recent Cases of International Parental Child Abduction Between Japan and the United States

This paper aims to explore conflicting rights claims of cross-national family members. Based on multinational case studies of recent international parental child abductions involving Japan and the US, it discusses the ways in which the realization of the basic human rights of each party of a cross-national family (father, migrant mother and child) involves fundamental challenges to the achievement of social justice in the absence of a universal legal system.

In May 2013, the Japanese Diet passed a bill approving Japan's accession to the Hague Convention on the Civil Aspects of International Child Abduction. Signatories to the Convention such as the US had for many years criticized Japan for showing little interest in the increasing number of international parental child abduction cases by Japanese nationals. Frequently the cases involve Japanese women who are international marriage migrants abducting their children to Japan after the breakdown of a marriage.

In the US context, not only do these migrant mothers offend the right of joint custody of the American partner, but they also breach the child's right of access to both parents and violate the Convention rule against unilateral removal of the child from its habitual residence. Japan's accession to the Hague Convention is likely a progressive step indicating that Japan has begun to see the issue as a matter of basic human rights, rather than a purely private and individual matter.

However, in this paper I argue that in order to improve global social justice in relation to family disputes, accounting for the particular situation of migrant woman in both public and intimate spheres is crucial. Taking this new rights talk into account, I attempt to sketch a more nuanced concept of social justice in relation to the cross-national family, pointing out possibilities for further international legal refinements.

Taking Action for the Recognition of a Lay Expertise over the Body: A Narrative Based Activism? the Case of Breast Cancer Patients' Organisations

For thirty years, biomedicine is characterized by the development of clinical, organizational and legal structures that promote the "narrative based medicine". These structures are expected to strengthen the "humanization of care" and the "patient participation in decision-making"; but they also inherently contain a risk of strengthening the social control of the patient, especially in cases where these narratives are used to assess the legitimacy of the patient's demand for a medical intervention. According to Memmi (2003), a consequence of the development of the "narrative based medicine" for the therapeutic activism is the focus on issues related to the body, evidenced by the emergence of feminist and LGBTQ movements. More recently, the mobilization against the AIDS epidemic and the increase of patients' organisations. Therefore, how to think, in the same analytical framework, the incentives to produce subjective narratives of the body in the privacy of the medical practice and the public claims for recognition of a lay expertise over the body from the patient's organisations? My PhD thesis focuses on the shaping of an experiential expertise in and by the French-Belgian breast cancer patient's organisations, a pathology strongly subject to the incentive to produce narratives because of the impairment to the performative femininity. In this paper, I propose on the one hand, a reflection on the theoretical and methodological challenges that seem to be facing the researcher when (s)he studies both the resilience of this medical context and, on the other hand, based on examples from my fieldwork, an illustration of how these activists frame their critique of the system through their personal awareness of the illness experience, transforming this awareness into a "politicized collective illness identity" (Brown et al. 2004) holding legitimacy from the discursive operation of generalization - from the singularity to the collective experience.

Risk Perception and Risk Governance in East Asia

El propósito de este artículo es examinar salientes características de la percepción de riesgos en Beijing, Seoul, y Tokio como capitales de tres grandes regiones de Asia y a la exploración de múltiples enfoques para reflexivo riesgo gobernanza en East Asia como un importante condicionante para segunda modernización en transformación. Basado en el 2012 survey data from Beijing, Seoul, and Tokio sobre los problemas de la relación de la sociedad, el riesgo, la gobernanza en East Asia, y segunda modernidad, los autores verán 1) el consenso general de los ciudadanos de Asia Oriental sobre las consecuencias de la modernización y el futuro desarrollo; 2) las diferencias y diferencias en la percepción de riesgos en tres capitales; 3) los factores de las formas que pueden formar una conciencia compartida de riesgo gobernanza en cada país. Reflexivo gobernanza de riesgos en el presente es moderno en que solo puede no ser más de adecuadamente ser percepción y manejar riesgos en cada país; reflexivo gobernanza de riesgos en el futuro en que puede continuar para la futura política se eficaz y eficiente en política. Los autores argumentan que es necesario para Asia Oriental a delinearse y combinar con la estratificación de los riesgos, que es local y cosmopolita, dependiendo de los tipos de riesgos a ser regulados. Para hacerlo, los autores desean representar la existencia de una relación de cooperación entre los países de Asia Oriental y explorar los caminos a reflexivo gobernanza en East Asia.

Transforming Legal Professions in Scandinavia

In Scandinavia, the legal profession has been regarded as the midwives of the modern state; the legal profession was totally dominant in the most important position in society. However, with the development of the welfare state and with neo-liberal management methods in various branches of the public and private sector the legal profession has been replaced from the most prominent positions. With globalization new markets have opened for Scandinavian lawyers, the question is however, if the profession at large gains from the new opportunities or if the profession is stratified. This paper examines how different parts of the profession react to new challenges for the legal profession.

Transitional Justice and East Asian Community: Two Patterns of Civil Engagement

This paper deals with two salient patterns of civil engagement in South Korea and China as a collective response, first, to the lack of transitional justice on the part of Japan concerning war crimes committed by its imperial army and its colonial rule and to the difficulties in forming East Asian community in its genuine sense as we can see in European Union. Confronted with, and challenged by, this unfortunate legacy of the past which is still wielding enormous influence on the domestic politics and international relations in East Asia, the authors want to delineate contrasting patterns of civil approaches to this problem via discursive analysis: one is driven by a nationalist ideology and emotional mode of confrontation in various forms of popular movement, another is characterized by civil discourses and NGO activities aiming at mutual understanding and solidarity among civil society of East Asian countries rejecting a state-centered and politically motivated nationalist drives. The authors argue that the advance in transitional justice in Japan is an important condition for East Asian community. At the same time, the authors also argue that retributive justice is not enough for creating a new future but a genuine care by Chinese and Korean citizens over the pains of the Japanese wars and colonialism of the war (created by atomic bomb) which continue to challenge the possibility of mutual understanding and solidarity among citizens and eventually overcoming the ghost of the past and establishing East Asian community.

Incorporation of Urban Differences in the Tokyo Metropolitan Complex

Differences mark an essential element of urbanity. In the case of Tôkyô, differences seem to appear beyond significant income disparity, migrant or ethnic minorities. On the local scale differences create a finely grained, heterogeneous urban condition. This contribution asks, what are the modes and practise leading to an incorporation of these particular social and cultural elements, which give a locality certain irreplaceable urban qualities, into the dominant logics of space production.

I will investigate the process of incorporation by looking at two case studies: Shimokitazawa and Kitamoto. In Shimokitazawa accumulated efforts of citizens devengan en científicos. Se presentan resultados parciales sobre las entrevistas de los egresados de estas disciplinas sobre su participación e integración en las actividades propias de la comunidad científica; se analiza la reconstrucción de sus experiencias en la formación doctoral y las posiciones que ocupan en los ámbitos de inserción laboral que reflejan su formación como científicos; finalmente, se reflexiona sobre el futuro de la socialización para la emergencia del científico.

La Socialización En La Emergencia Del Científico De Bioquímica y Ciencias Sociales. Consideraciones Para El Futuro

The concept “Middle Class” conventionally invoked to refer to a social class that are drivers of social change both in economic and in Political terms in the west and in developing world.

Ghana, like many African countries has had its share bit of political instabilities particularly in the aftermath of independence, in the 1960’s, 1970s and 1980s. But since the return to constitutional rule in 1992, it has steadily established itself as the beacon of democracy with multi party elections every four years and serves as an example for other African countries to emulate.

This paper will explore if the current political stability in Ghana since the return to constitutional rule in 1992 had been a result of its middle class. It traces the Ghanaian middle class from independence, post-independence era of military rule to date and the role the middle class played especially in the 1990s and 2000s to ensure the political stability prevails. Drawing on a field work carried out in Ghana in 2012 with a varied sample from different social backgrounds to gauge out who these middle class are? What classify them as middle class? To borrow Bourdieu’s social classification typology: is it their economic, political, education and cultural capitals that make them middle class? And what economic or political role do they play within the Ghanaian political sphere?
have produced a neighborhood with socio-spatial qualities contrasting those of the dominant centralities near by. An incorporation of these differences has been initiated by local magazines, tourism agencies, and ministries: differences produced in a incremental and bottom-up process have been turned into an attraction for people beyond Shimokitazawa and a mainstream compatible youth culture, whereby the space is being deprived of its experienced dimension. Kimakino in the north of the city is struggling with an aging population, economic issues as well as questions of identity, similarly to other peripheral areas. Due to this change, its dependency on the central area of Tôkyô is transforming and demanding a new consciousness for place. This is leading to the emergence of an active production of differentiating elements in the city, driven by the local authorities and inhabitants: an intended commodification of local assets, such as the natural environment, seasonal changes or local goods is aiming at creating local, socio-cultural value and identity.

By looking at production of differences as part of a dialectical process of production of differences this paper aims at capturing the complexity of everyday life as a backbone of urban society. To achieve this, my research encompasses an open methodological approach and methods from different disciplines.

The emergence of novel products and processes of biotechnology in medicine, industry and agriculture has been accompanied by promises of healthier, safer and more productive lives and societies. However, biotechnology has also served as the natural environment, seasonal changes or local goods is aiming at creating local, socio-cultural value and identity.

By looking at production of differences as part of a dialectical process of production of differences this paper aims at capturing the complexity of everyday life as a backbone of urban society. To achieve this, my research encompasses an open methodological approach and methods from different disciplines.

**Islamic Environmental Activism in the United States and United Kingdom**

Social Movement theorists have, until recently, accepted after Marx that religion is the ‘opium of the masses’ and inherent opposed to social or political change. The small but growing involvement Muslims in the environmental movement in the US and UK is a challenge to this belief. The emergence of specifically ‘Islamic’ environmental organizations (IEOs) in both the UK and US shows the engagement of certain Muslims in the Diaspora with grassroots activism, and with the contentious politics associated with environmentalism. This paper is based on the study of four IEOs and their participants, two from the United States and two from the United Kingdom. The IEOs participate in actions and projects that are remarkably similar to their secular counterparts, and show a similar critique of the effects of capitalist economics and industry upon both the environment and a society at large. However, there are at least two dimensions of their ideology that are grounded in a unique interpretation of Islamic scriptures emphasizing the role of humankind as God’s representative on earth; the environment as a ‘sign’ from God in perfect, divinely ordained order, and the necessity of following Islamic teachings in everyday life. The secular environmental movement and its organizations have heavily influenced IEOs, both in the framing of environmental crises, and in terms of their organizational structure and forms of action. Utilizing Social Movement Theory and comparative analysis, this paper argues that Muslim environmentalists bring an Islamic voice into the environmental movement, calling for significant social and political change based upon Islamic principles, while sharing with secular environmental organizations methods of mobilization, organizational structure, and aspects of ideological framing.

**Growing up in a One-Parent Family: Families and Child Wellbeing**

**Background**

A large body of international literature has documented that children who grow up living with both biological parents fare better on a range of outcomes when compared to children not living with both biological parents. Researchers continue to disagree as to whether the association represents a true causal effect. The main finding is that the socio-economic disadvantages resultant in different lifestyles, including factors such as rates of smoking during pregnancy and lower rates of breastfeeding.

**Results**

Marriage has significant positive effects on child health outcomes, educational scores and psychological wellbeing. Selection effects however account for a non-trivial proportion of the differences in child outcomes at age 9 across families but hidden bias remains an important issue. The main finding is that the socio-economic disadvantages inherent in childbearing outside of marriage account for a non-trivial portion of the effects of family type.

**Conclusions**

The selection argument assessed in this paper maintains that childbearing outside of marriage does not necessarily cause negative consequences for child development. The majority of Irish mothers who give birth outside a traditional married setting come from impoverished backgrounds so that much of the adverse consequences on child development are an artefact of pre-existing socio-economic disadvantages resulting in different lifestyles, including factors such as rates of smoking during pregnancy and lower rates of breastfeeding.

**Punitive Trends in Germany: What Role Does the Media Play?**

In criminology there has been an active discussion about rising punitiveness in the United States and other Western societies (e.g. Garland, Wacquant). The present contribution aims to examine the factors that drive individual punitive- ness. Studies have shown that the mass media play a significant role in shaping public attitudes towards crime and punishment. Therefore our interest focuses on the role of the media. The paper assesses to what extent the media can explain trends in punitive attitudes over time.

This is done in a twofold way. Firstly, we look at patterns of media consumption and punitiveness at the micro level. The empirical analyses are based on three waves of a nationwide representative survey conducted in Germany in the years 2004, 2006 and 2010 by the Criminological Research Institute of Lower Saxony. Second, a content analysis of German newspapers assesses the way crime and criminals are represented in the media and to what extent this has changed over time (e.g. if newspapers evoke more empathy for victims). Therefore we analyzed articles on crime of three different types of newspapers (quality press, local press, yellow press) for the years preceding the surveys (2003, 2005, 2009). This strategy allows examining how trends in punitive attitudes can be explained by changes in individual media consumption patterns and by changes in the quality of media coverage.

The results confirm the impact of the media on punitivity. Other factors on the macro level, for instance trends in the crime rates, which also may drive punitive attitudes will be discussed.

**From Enclaves to Citadels: A Dynamic and Contested Transformation of Informal Settlements in Urban China**

The economic reforms of the late seventies led to a massive urban expansion in China as villages were swallowed by the urban sprawl. The most striking example is Shenzhen, an area with 300,000 inhabitants grew into a metropolis of 14 million people over a couple of decades. Today only 3 million are formal residents of the city, and the rest of the people without local residency are excluded from subsidized amenities like education, health care and social housing. Most of the people that move into the city find accommodation in one of the 320 villages that have become embedded in the urban fabric. These urban villages provide rough-
ly half of the total residential floor area in Shenzhen, although they only cover 13% of the total built-up land. Over time, these multifaceted spaces of informality have shaped a landscape that is clearly different from the formal city; however, their transformation follows a logical trajectory which continuously contests social and market-driven demands. As the city further develops and infrastructure improves, the expected economic rents of urban village land will keep on rising. For those villages, market-led redevelopments are almost inevitable. Large-scale land acquisition and redevelopment are beginning to transform urban villages into upscale private apartments, luxury hotels and malls—citadels of the rich. This process diminishes a great deal of affordable housing stock in the central city, further marginalizing the low-income groups. Moreover, this works as a domino effect where the redevelopment of one urban village drives the process for other urban villages in the proximity to fall on the same redevelopment path.

Similarly, the practice of producing scientific knowledge is no longer solely in the hands of experts, and the boundary work (Geryn, 1983) between experts and non-experts has been recently challenged. This tendency is more visible in “scientific” knowledge that is contentious, such as climate change, alternative medicine, hybrid cars, child vaccinations, and alternative and renewable energy sources. There is no “correct” knowledge, but rather what exists is contentious knowledge through its co-production among experts and laypeople. With these situations in mind, this paper examines how contentious knowledge is constructed in a social media environment, namely Wikipedia. More specifically, this study empirically investigates online discourses on the Fukushima Nuclear Power Plant Disaster that occurred in March 2011 in Japan as well as child vaccinations (i.e., MMR and Thiomersal). Wikipedia is an online encyclopedia with over 280 different language versions and over 4 million articles just in English. In addition to the articles that are more visible to the general public, Wikipedia provides an online discussion space for each article. This offers a rich space for examining how scientific knowledge is negotiated in an open online environment.

This study aims to examine who is included and who is excluded in the co-production of knowledge in a social media environment and to discuss the mechanisms in which co-production of knowledge occurs. The implications of the findings are relevant to studies of scientific knowledge as well as consumers of scientific knowledge.

Understanding Boundaries For Knowledge Sharing in Online Communities

Online knowledge sharing activities are flourishing with the advent of social media. Websites such as Facebook, Twitter, and Wikipedia facilitate knowledge sharing in online communities that extend beyond the constraints of existing organizational boundaries. This phenomenon has been especially pronounced in online social media as it allows individuals to share knowledge and collaborate online. This paper aims to explore the usefulness of employing existing boundary frameworks to facilitate knowledge sharing and collaboration. To test and modify existing theoretical frameworks of boundaries we analyzed Wikipedia entries about the Japanese nuclear power plant accident triggered by the Tōhoku earthquake in March 2011. This event attracted attention from around the world and is useful for our research because the case involves multiple boundaries and various processes of boundary-crossing. Based on the data and the literature we propose a refined framework for boundaries and boundary-crossing, and by doing so this paper advances our understanding of boundaries for knowledge sharing in online communities and identifies how these boundaries facilitate or hinder equal participation.

Japan As a Shrinking Society: What Is the Condition for Recovering the Replacement Level of Fertility?

This paper focuses on the phenomenon of shrinking society emerging in Japan and its sociological meanings, such as the possible historical consequence of demographic transition from high birth and death rates to low ones. First, we used the Historical Statistics of Japan (Statistics Bureau and the Director General for Policy Planning of Japan, 2006) and Population Projections for Japan (National Institute of Population and Social Security Research, January 2012) to show the past and future development of the dependency ratio from 1891 to 2100. Second, utilizing the life table population and Net Reproduction Rate (NRR), we observed separately the effects of the increasing life expectancy and declining fertility on the dependency ratio. Finally, we analyzed the historical relations among women’s survival rates at reproductive age, the theoretical fertility rate for maintaining the reproductive level (NRR = 1), and the recorded Total Fertility Rate (TFR). Important findings are as follows. (1) The effects of the rising longevity on the dependency ratios were stable until the average life expectancy reached around 70 years. When the average life expectancy at reproductive age reached 80 years, the maximum level near 100%, the dependency ratio began to grow swiftly according to the extension of life expectancy. (2) Historical observation showed TFR as adapting to the theoretical level of fertility (NRR = 1) at a certain time lag and corresponding

Unequal Housing Choices and the Residential Segregation in Urban China

The growth and transformation of cities in China continue to absorb migrants from both ends of the economic spectrum, giving rise to socially mixed cities. Concurrently, the elevated level of residential segregation owing to new forms of enclave urbanism such as gated communities and urban villages. Factors including historical legacy, land institution and property-led development have contributed to a divided residential pattern at the neighbourhood level, but the divisions are not necessarily as significant at larger spatial units. This paper, by analysing the distribution of both urban population and housing provision in Shenzhen, explicitly unravels the spatial logic of the divided pattern of the population. As expected, migrants and local hukou holders are largely segregated by different housing choices; however, due to the relatively even distribution of a vast amount of migrant enclaves, at the sub-district level a rather low degree of segregation is manifest. This residential pattern is salutary as it maintains a spatially equitable setting which enables deprived groups to reside within short catchment areas of jobs and amenities. Nevertheless, urban renewal programmes that target urban villages and old neighbourhoods are likely to jeopardise the somewhat reason for the concentration and distribution of housing choices, aggravating segregation on a large spatial scale.

Left and Right, and Organic and Critical: Understanding the Politics of China’s Intellectuals

In today’s China, intellectuals continue to play important roles in social, economic, and political development. Much has been done on the roles of the public intellectuals in China in the reform era (Cheek 2006; Goldman 1994, 1999; Edward Gu and Merle Goldman 2004; Zhidong Hao 2003; Kelly 2006). But the intellectual scene is developing so fast with increasingly clearer demarcations between the left and right that it remains an interesting and daunting challenge to describe the commonality between the left and right intellectuals. Finally I will speculate on the possible political roles, the organic intellectuals’ living for or off politics, and the subjectivities, in terms of organic, critical, and professional. Then I will define the left and right intellectuals. Thirdly, I will examine the historical legacy, land institution and property-led development have contributed to a divided residential pattern at the neighbourhood level, but the divisions are not necessarily as significant at larger spatial units. This paper, by analysing the distribution of both urban population and housing provision in Shenzhen, explicitly unravels the spatial logic of the divided pattern of the population. As expected, migrants and local hukou holders are largely segregated by different housing choices; however, due to the relatively even distribution of a vast amount of migrant enclaves, at the sub-district level a rather low degree of segregation is manifest. This residential pattern is salutary as it maintains a spatially equitable setting which enables deprived groups to reside within short catchment areas of jobs and amenities. Nevertheless, urban renewal programmes that target urban villages and old neighbourhoods are likely to jeopardise the somewhat reason for the concentration and distribution of housing choices, aggravating segregation on a large spatial scale.

Contentious Knowledge in Online Environments

This paper addresses “co-production of knowledge” (Jasanoff, 2004) in the context of social media. With the prevalence of Web 2.0 applications, such as Wikipedia and Twitter, laypeople are more often contributing to knowledge production, which ranges from sharing travel tips to product assessment (e.g., Allen, 2010). The method of analysis in the paper is typological, i.e., I am categorizing intellectuals into left and right, and organic and critical. The representative texts I am analyzing are likely to be organic to the government, and the right intellectuals are more likely to be critical of it. Fourthly, I will examine the complexity, subjectivity, and dynamics of intellectual politics in terms of the changeability of their political roles, the organic intellectuals’ living for or off politics, and the commonality between the left and right intellectuals. Finally I will speculate on the possible future development of intellectual politics and their implications for China’s democratization.
with women's survival rates at reproductive age. (3) For women, their expanding lifespan and survival rates at reproductive age could have induced reproductive decision making to minimize the risk of childbearing; even if the theoretical fertility rate meets the reproductive level, women's views may remain unchanged. In Japan, fertility is lower than the replacement level because women's cost-benefit imbalance for childbirth is too high.

Social Capital of Seven Countries/Areas in East Asia: From the Questionnaire Approach

The Center for Social Capital Studies of Senshu University, Japan, chaired by Professor Hiroo Harada, have made the questionnaire research about 'social capital' both in rural and urban areas of seven countries/areas; Vietnam, Cambodia, Laos, South Korea, China, Taiwan, and Thailand, and at Shinjuku Ward and Kawaasaki City in Japan, from 2010 to 2013. In this report we will focus on the research of seven countries/areas.

The hypothesis is that 'social capital' might differ from the degree of economic development and urbanization. We define 'social capital' as the index of four components; social trust, maintaining and improving livelihood, risk and social safety-net, and social rituals, consisting of 56 questions and 18 items of face sheet.

We are quantitatively examining the outputs so that we have not reached the final result and conclusion, but 'social capital' differs in urban and rural areas, families, communities, and so on. This may also suggest that 'social capital' differs with the economic development, market capitalism and globalization in prevailing at the present age. We also focus the examinations on the history of the families, communities and countries/areas. These would be the qualitative analysis.

We have to carefully treat the outcome of the questionnaire, because the degree of 'social capital' does not imply the superiority or inferiority, nor the positive or negative of 'social capital' just declares the type of social relation and evaluation in the society of community conditioned by the history and geography. Therefore the policy implications would be differently induced.

Civil Movements in Low-Recognized Disaster Affected Areas

We discuss how civil movements have developed to protect children from radiation pollution in local communities after the March 2011 Great East Japan Earthquake and Fukushima nuclear disaster. We focus on those areas that have not been classified as ‘Affected Areas’ by the government, although local residents have sought to gain institutional recognition of the damage due to nuclear accidents.

In this article, these areas are defined as Low-Recognized Disaster Affected Areas (LDRAA).

It is important to pay attention to LRDAA in mega disasters. Existing research suggests that local communities with low-level impacts were peripheralized and neglected by both the government and society in the face of tremendous negative impacts as a result of the earthquake and nuclear accidents. In seeking institutional recognition, residents in LDRAA have difficulty showing the causal relationship between the level of pollution and its impact on health. This makes it difficult for residents to justify damage claims. The level of success of social construction around radiation pollution in low-level impacted areas determines how far and to what extent the Fukushima nuclear disaster impacted communities.

As a case study, we examine a civil movement in Ibaraki, a city near Fukushima. A series of petitions were filed by dozens of newly established citizen groups against local governments and legislatures, and the government of Japan. We analyze how Ibaraki local citizen groups have established their network, to which extent they have achieved their claims to gain legitimacy in social and political process, and the roles the professional experts played in those processes. We point out that the establishment of the Law to Support Child Survivors of Nuclear Accidents of June 2011 in the National Diet changed the character of the local political situation by transforming the local government's attitude toward citizen groups from oppositional to cooperative.

Toward the Inclusive Resilience for Both Individuals and Community

This presentation focuses on the different kinds of social conflicts between local people/individuals and the communities/local governments arising in the process of disaster rebuilding. It signifies that the cases of Hurricane Katrina and Fukushima Nuclear Power Plant Accidents are so much different, but there are a few similarities between two cases. One of them is contradiction between community resilience and individual resilience.

First, we would like to consider the case, for instance, that the poor and social minority have been excluded in the process of community rebuilding, while community prosperity are achieved to some extent and community resiliency increases in the aftermath of disaster.

The city of New Orleans after Hurricane Katrina could be considered to be one of these cases. Since Hurricane Katrina, the city of New Orleans has been seeming inactive and in attracting more industry and younger generation. Although it is a town with its overall population than 2005. Over the same period, the population of African Americans is decreased the most among other racial and ethnic populations. Under New Urbanism, the role of public sector in education system, the medical and welfare services, and housing services have been drastically decreased or extinct.

In case of Fukushima, the local governments seem to have a strong and inherent demand of restoring the community as soon as possible, while some families, especially those with small children, may choose not to return, concerned with concern of health risk due to radioactive contamination. The more families choose to stay away, the less resilient the community will be. Contradiction between community resilience and individual resilience could happen in both natural disasters and technological disasters. We will discuss these cases in depth at the presentation.

Conspiracists’ Longings for a Pure Science

Conspiracists’ Longings for a Pure Science

Conspiracy theories have in recent decades become a popular and widespread cultural phenomenon in the Western world. Although conspiracy theories come in all shapes and sizes, a communality can be found in the challenges they pose to the epistemic authority of science. The social sciences have, however, simply conceived of conspiracy theories as bad science, making a parody out of the respectable scientific tradition, but in their moral condemnations these scholars leave unexplained how we can actually understand these critiques. In this article I draw on the ethnographic research conducted in the Dutch “conspiracy milieu” to explore what conspiracy theorists claim about science, scientists and the knowledge they produce. On the most abstract level is modern science critiqued for its dogmatism that excludes deviant forms of knowledge and leaves many terrains of inquiry unexplored. A second line of critique is directed to the knowledge scientific experts produce which in practice is not living up to its a-social ideal of objectivity and disinterestedness. The last strand of critiques then centers around the powerful social position scientific experts have established in relation to outsiders that subordinate laymen and protect their in-group. In sum, what these critiques articulate is a (partial) public understanding of science. Despite a strong critique of science, conspiracy theorists are not against science, but hold a rather ambivalent position: science is at once sacralized for its intentions but profaned for its social functions.

I conclude by showing how these critiques resonate with both pre- and post-modern scientific understandings of science, and argue that the frailty of modern scientific ideals of the universality and disinterestedness of science paradoxically instigates those critical longings for a pure science that characterize contemporary western conspiracy theories.

Strategy and Identity in the “Conspiracy Milieu”

Strategy and Identity in the “Conspiracy Milieu”

Conspiracy theories have in recent decades become a popular cultural phenomenon, and its discourse is now an increasingly normalized idiom for many people to account for the occurrence of (seemingly ungraspable) phenomena in contemporary societies. The social sciences have nevertheless conceived of “conspiracists.” In rather ambivalent roles they have paraded as a voice of an outdated worldview and endanger the body politic. Although the moralism in these studies is already problematic for the sociological understanding of who these people are, what I challenge in this paper is the uniform identity these scholars construct of conspiracy theorists. I draw here on ethnographic research in the Dutch “conspiracy milieu” to explore what differences in beliefs and practices can be found and how they are related to dynamics of identity formation. While a communality can be found in the societal change all conspiracy theorists want to bring about, I dissect three different strategies with which people think these...
changes should be accomplished: withdrawal, activism and mediation. Strongly influenced by New Age beliefs, adherents of the first strategy assume change is to come from within: by changing oneself, the world will change accordingly. The activist strategy is informed by the notion that a different world can only be established by overthrowing the old order, practices therefore take place on the barricades. The mediators at last argue that societal change can only be achieved in cooperation, adherents therefore want to bring people together by making visible societal and political problems. I conclude by showing how the identity of conspiracy theorists is much more complex and dynamic than social scientists generally assume: it is multiple and formed in relation to the general public and other conspiracy theorists alike.

HARDERING, FRIEDERICKE* (Goethe-University, f.hardering@soz.uni-frankfurt.de)
Alienation and Meaningful Work – Subjective Strategies of Ascribing Meaning to Work

This paper speaks to current debates about new expectations of meaningfulness at work and new forms of alienation pathologies (Rosa 2012). Current scholarship generally agrees that defining work as meaningful is an important strategy against the feeling of alienation. But still little is known about the mechanisms and processes that individuals themselves use to create meaningful relations to work (Rosso, Dekas & Wrzsniewski 2010). This paper investigates the mechanisms and processes of how employees ascribe meaning to their work.

The sample consists of 21 employees who had changed occupations. I conducted in-depth narrative interviews about their work biography and their work orientations. Four distinct types of ascription of meaning emerged from the data: 1) reference to basic identification with work, 2) reference to meaningful aspects of work, 3) reference to the purpose of work for a greater good, 4) reference to values beyond work. The results show that current understandings of work or job orientations need to be extended and elaborated. Furthermore, the empirical findings invite more detailed questions on alienation, for example, in how far alienation can be interpreted as a gradual phenomenon.

Mindful Living, Mindful Working? New Understandings of the Role of Work in Post-Growth Society

In discourses about post-industrial, post-growth societies (Paech 2012), emerging questions of the “good life” and appropriate, sustainable consumption have invited a general inquiry about new lifestyles. Two archetypes of the new lifestyle styles include “Lifestyles of Health and Sustainability” (LOHAS) and “Lifestyles of Voluntary Simplicity” (LOVOS). The research about these lifestyles focuses particularly on the consumption behaviors of these lifestyle groups, but questions of how these lifestyles and philosophies affect the understanding of work remain understudied. Because work and consumption are closely linked, we expect that those involved with these new lifestyle models may also have a notably different orientation to work.

We investigated the understanding of work held and articulated by members of these new lifestyle lifestyle groups. We reconstruct the understanding of work using the responses from four narrative interviews, two from representatives of the LOHAS lifestyle and two from the LOVOS, collected in Germany in 2012 and 2013. These four cases are a selection from a larger sample of 21 job-changers who described themselves last year as job-changers. The central analytical foci of the research are health, sustainability, work-life balance, and simplicity. Our results show that the understanding of work as expressed by these new lifestyle representatives deviate strongly from common understandings of “normal work” or “occupational careers.” The respondents report that it’s very important that their work mirrors their broader values on the dimensions of self-sufficiency, de-ciding for themselves rather than being driven by outside forces and demands, health-consciousness, and meaningfulness.
processes. It is noticeable that, within these codes, the same expressions were

dancing competitions and the extent to which their manifestation is linked with gender.

This paper analyses family life and social change from the perspective of par-
ets and their daily routines of preparing lunchboxes for their children. In this
study lunchboxes are understood as an artefact linking together discourses and
practices of doing and displaying families, marketplace and government discours-
es of feeding children and broader issues of care and surveillance in private and
public settings. At a time when the roles of men and women are experiencing considerable change, this paper explores family life and gender roles by consider-
who is responsible for preparing children’s lunchboxes, how they feel about it
and how this daily practice connects with workplace considerations. Drawing on
photo-elicitation interviews and focus groups with British parents with children
aged between nine and eleven years old, we explore majority and minority ex-
periences in order to contribute a greater understanding of how traditional and
non-traditional families negotiate family display through children’s lunchboxes.

Researching Racism: Reflections on Different Methodological
Approaches to Recording People’s Experiences of Racism

This paper combines two contrasting and complementing methodologies to
explore young people’s experiences of racism in everyday life. The paper will
reflect on how the use of qualitative and quantitative methods can lead us to
different understandings of experienced racism. The first method uses ethnogra-
phy and non-structured interviews which do not directly ask respondents to talk
about their experiences of racism. The second method examines data from the
is known about their everyday practices of conviviality and belonging. Through an analysis of research with youth in some of the most multicultural and disadvantaged neighbourhoods of 5 Australian cities, this paper explores the local spatial practices through which belonging and productive intercultural relations are negotiated. It provides an insight into the ordinary processes by which youth get along in multicultural neighbourhoods, and suggests that practices of conflict and distanciation must be part of the discussion about conviviality in order to properly capture the complexity of productive relationality in the lives of young people.

Alternative Food Networks in Monterrey Mexico

The agri-food system in Monterrey, Mexico is structured by three segments. One segment consists of the "traditional" Mexican diet of corn, beans, rice, chicken and pork. For residents of Monterrey, these foodstuffs are usually purchased at local mercados from local vendors who have acquired the foods from long supply chains. The second segment consists of the rapidly growing middle class and upper class. They purchase their foods at national and transnational supermarkets, and they tend to consume a more international middle class diet.

Before and Beyond Neoliberalism: The Development Of Precarity And The Emerging Alternative

In this paper we contend that, to understand what might exist beyond neoliberalism, we need to rethink processes of capitalist development before neoliberalism. We make two arguments.

First, for poorer countries, processes of commodification which are highlighted as evidence of neoliberalism often predate the neoliberal era. Third World development policies tended to make social and economic life more precarious as a corollary to capital accumulation, before neoliberalism as an ideology took hold.

Second, intense theoretical focus on neoliberalism obscures a recent shift in the global South towards a tendential and tangible de-commodification of social
life. In fact, during the height of what is widely accepted as the period of neoliberal triumph in many countries across the global South, the relationship between work, land, and welfare has begun to transform in ways that look quite different from what the dominant paradigm leads us to expect.

The most salient examples today are state-led social protection programs which have been implemented across the former Third World. For those who lament that the post-2008 crisis has produced no Polanyian double movement, we argue that these state-driven social assistance policies are precisely such a mechanism. These emerged not only out of technocratic fixes from above but often out of political and social struggles from below. The rise and spread of these programs are not only in stark contrast to popular conceptions of a neoliberal reinforcement, but are specifically targeted at social strata whose precarity has been largely generated by developmental policies which predated the neoliberal era.

Our paper presents a macro-level quantitative survey of the rise and spread of social protection programs over the past two decades in the global South, and qualitative comparisons of these programs in the BICS – Brazil, India, China and South Africa – as evidence of our argument.

**Two, Three, Many Middle Classes: Theorizing Middle Class Power From a Global Perspective**

Analyses of the post-2008 global wave of social protest have generally celebrated the rise of educated middle classes as a driver of historical change as eagerly as they deplored the destruction of the democratic project. In the global South, middle classes are analyzed as both object and subject: the goal of economic growth is a middle-class society and the middle class is assumed to be the most suitable base for political development. Yet public discussion about the middle class occurs with a set of implicit assumptions which underpin this sort of teleological thinking, many of which derive from the application of late 19th-early 20th century sociological theory to the 21st century world economy. As an intervention in contemporary debates over class and protest, in this paper I reconstruct the concept of the middle class for the purpose of analyzing the current political economy of middle-income countries. To do so, I historicize middle class formation as part of wider parallel and cyclical characteristics of class formation on a world-historical scale over the past several centuries. I argue that a key secular process of the history of capitalism is the production of “middling” classes, yet these classes themselves are transformed along with the capitalist world economy. Social theory has tended to rely on a particular instance of this process, the rise of the 19th century European bourgeoisie to state power, as a general theory of class formation. This Whigish story is arguably the main cause of confusion within the debate over the post-2008 global protest wave. To analyze what is actually new about the “new middle class” of the late 20th and early 21st centuries for the global South, I create a typology of four ideal-type middle classes and identify their specific position and structural power vis-à-vis the state and economy.

“disaster Capitalism’, Regular Capitalism, and the Search for a Big Mac: Undermining Assumptions of ‘What is to be Done’ for Marginalized Communities in the Aftermath of Disasters.”

In the aftermath of Hurricane Katrina and the federal levee failures the EPA declared 100% of the homes in the Lower Ninth Ward uninhabitable. Nearly five years later there was no police or fire station, no continuously operating health clinic, no grocery store, no community center, and one school where before there had been schools and the homes were waist deep in mud. The Depredation of New Orleans, residents of the Lower Ninth Ward were dealing with what Harvey (2013) has called “secondary violations”—social policies that have resulted in the hyper-marginalization of the community. In the midst of this abandonded non-profits and volunteers have fought to fill the void left by the State. These non-profits have been staffed mainly by non-residents who have brought ideas on rebuilding sustainable communities and environmental justice, and who have been weary of what Klein (2007) has called “disaster capitalism”—which involves, in part, corporations (with the aid of government) using the “shock and awe” of natural disasters to seize taken-for-granted rights and raid the public sphere. Rather than embracing the social justice mission of many visitors and volunteers, residents simply want their neighborhood back. In many instance these ideas and efforts have been rejected as urban experimentation. Rather than a green-grocer residents want a Wal-Mart. Many have opposed projects like rebuilding homes with permeable concrete. These decisions were cast as a way to save government, Conr-merk’s markets, and the widespread use of vacated lots for guerilla gardening. This paper, based on thirteen months of field-work in the Lower Ninth Ward, looks at the problems of rebuilding marginalized communities through volunteer labor in the aftermath of disasters. Ultimately, I suggest that these problems result in a process of misrecognition whereby rebuilding efforts stall.
is only bringing public works of long lines of a huge coastal levee like the Great Wall. Despite being a fisherman's village, new life will start away from the ocean and with no ocean view. Among residents, there are a lot of clashes of interests. Within a household, we can find a generational gap between the retired elderly with a pension and the younger generation who seeks a job and is raising children. While the former wants to stay within the village, the latter hopes to move out of the village, to an inland area more convenient for getting higher income, shopping, transportation and education. The town forecasts the population aging rate of over 65 years old will increase to 38% in the year of 2033, from 28% before the tsunami attack. The population will decrease to less than 13,000 from 17,000. How can we support the recovering process?

The Non-Nationalized Narrative of Two Korean School Graduates

In April 2010, the Japanese government began a tuition-waiver program for high school education. In February 2013, after many twists and turns, Korean students (zainichi) were excluded because of their connection to North Korea. In the media and through popular hearsay, Korean schools have often been identified with North Korea, and Korean school students are exposed to the outside prejudice that they are “brainwashed, anti-Japanese children.”

In this paper, based on an interview about whether it was appropriate to exclude Korean students from the waiver program, I present the complicated realities of an insider’s life story. The interviewees are a couple living in a local Japanese city with their 6-month-old baby. Each member of the couple is a third-generation zainichi Korean, born in the 1970s, and attended Korean school for approximately ten years. While the interviewer is a Japanese who is an outsider to the Korean school system, I have known one of the interviewees for a long period of time. Thus, when this interviewee characterized our interview as "the occasion to put my life in order," I could hear these insider’s life stories about Korean school without the interference of a mindset gap between insider and outsider.

Though the two interviewees’ reasons and experiences are different from each other, the opinions they arrive at in this interview are similar: 1) Because of their own difficult experiences, neither interviewee wishes to have their son attend Korean school.
2) Neither interviewee entirely denies the value of Korean school itself.
3) Both are against the exclusion of Korean schools from the tuition-waiver program.

Do these opinions run in contradiction to one another? Although it may seem so to outsiders, it is possible to understand these opinions as consistent if they are not viewed as part of a national (i.e. North Korean) framework.

Generations and Globalization: Shifting Family Relations in a Postindustrial Society

This presentation provides a cultural sociology of changing intergenerational relations in the face of globalization, focusing on a historized account of shifting family relations that have dramatically altered the landscape for elderly people in Japan today. The demographic and economic transformations that have impacted expectations of social welfare and the ground rules of social obligations will also be examined as part of a broader trend in postindustrial societies. Drawing on these findings, we may be able to see the difference of how it could work as a social organ, and some others.

By finding out the difference of Japanese examination and American testing, we may be able to see the difference of how it could work as a social organ, and then get to the reason of how people's understanding of assessment and evaluation of both culture differ.

What Explains the Rise of Ethnic Minority Tensions in China?

In the past few years there has been a rise of flash ethnic violence in the relatively developed areas of China such as Beijing and Shanghai, to the far-reaching Western provinces of Xinjiang and Tibet. While the state’s response to ethnic unrest oscillates between ‘soft’ (e.g. funding ethno-cultural activities) and ‘hard’ (e.g. increasing security mechanisms) policies, this paper suggests that this strategy will do little to address the underlying causes behind ethnic minority tensions in the long-term. Instead, it will argue that the most culpable factor behind current ethnic tensions is socio-economically rooted: Minorities are increasingly experiencing ‘ethnic penalties’ in the labour market, whereby their comparable educational attainment and training, akin to the majority ethnic group, Hans, do not match similar labour market outcomes. While intuitively, overt discrimination insofar as one’s physical appearance or linguistic abilities, and first generation migrant status, are often cited as prevailing reasons to explain this ‘penalty’, the findings presented in this paper will suggest that explanatory factors such as an individual’s social network, a firm’s working culture, and social trust in a community are equally important considerations. Moreover, the interactive role of non-cognitive skills in minority labour acquisition will be discussed. Finally, the
paper will consider the policy implications of these findings for ethnic minority management, and the lessons learned for other multi-ethnic jurisdictions.

Cooperation In Marine Governance: The Case Of Eutrophication and Over-Fishing In The Baltic Sea

Over-fishing and eutrophication caused by agricultural nutrient run-off comprise two of the most severe environmental threats to the ecological integrity of the Baltic Sea, located in Northern Europe. This article takes its theoretical point of departure in Elinor Ostrom's work on design principles, arguing that a selection of these principles fruitfully can be scaled up to serve as analytical tools at the international level. The principles of conflict resolution mechanisms, nested enterprises and monitoring are adapted to a multi-level governance situation where international conventions, EU directives, national strategies and stakeholder involvement all contribute to setting the stage for collaborative initiatives. Because of the tensions between environmental protection and natural resource use in fishery and agricultural sectors mutually acceptable agreements are especially difficult to reach and thus constitute hard cases in relation to the broader spectrum of marine environmental disturbances. Moreover, collective action problems often emerge among the Baltic Sea States where free-riding is an ever present threat. It is shown that although formal conflict resolutions largely are missing at the regional level, forums for deliberation where broad spectra of stakeholders are invited are slowly emerging as mechanisms to facilitate conflict resolution among countries as well as sector interests and other stakeholders. Furthermore, it is shown that even though different layers of institutions for regulating fisheries and agricultural runoff typically exist at local, national, regional and global scales, nestness is often incomplete, that is, the intuitive fit between the layers are frequently not fully adequate. Finally, while monitoring is part and parcel of modern environmental management, broader models of integrated monitoring of biophysical as well as social parameters and processes in collaboration with relevant stakeholders are still in their infancy.

The Co-Construction of Identity As 'Japanese Women Living Abroad' in Interview Narratives

This paper aims to illustrate how Japanese women living in London as permanent residents co-construct and represent their identities. As a recent trend of the social science of language, narrative has been analysed as talk-in-interaction. Following this perspective, narrative should not be analysed as a mere representational-past events, but should be understood as a process of co-construction influenced by the social norms of their new/previous communities.

In this presentation, the presenter will focus on aspects of co-construction in the narratives of Japanese women who were indirectly affected by the Great East Japan Earthquake in 2011. The interview narrative data collected in London in 2012 have been analysed from the perspective of positioning theory (Bamberg 2011). The three main points this presentation will address are: 1) what the recipients of the funds themselves want in reading experience is not the same; some know only characters' behaviours and their situations but also signs used in panels, as well as social parameters and processes in collaboration with relevant stakeholders are still in their infancy, 2) how the narrative message can be conveyed by not only language, but also other semiotic resources, 3) the participants of the conversation put much value on collaboratively constructing their mutual identities in the 'here and now' situation, rather than the contents of their storytelling, 4) they inevitably encounter aspects of internal conflict derived from their representation of their feelings in view of the social norms of their original and current community and the pragmatic constraints on expression in their mother tongue.

HATA, MIKAKO* (Hananouzou University, hata.mikako@gmail.com)

Reading Comics with Ears

Comics is an art form of visual storytelling, which means a page of comics cannot be reduced to texts in speech balloons and narration boxes. Facial expressions of characters, onomatopoeia, emanata, and even gutters convey meanings non-verbal. Reading comics is mostly an experience of looking at and interpreting visual images drawn on a page.

Based on this understanding of comics, this paper investigates comics for people with visual impairment. Recently some volunteer groups in Japan have made translating speech of comics catering for visually challenged people. Although translating images to voice information has been already practiced on speech translation of films, in comics to speech translation it is necessary to bring not only characters' behaviours and their situations but also signs used in panels, as mentioned above, to speech. Also, because comics literacy of the readers (listeners) differs, what they want in reading experience is not the same; some know comics as an art form from their former reading experiences and thus want to read comics as comics, whereas others have never seen pages and read comics as entertainment-oriented stories, in other words they are not so interested in the visual aspects such as the layout in a page. Translators try to grant these requests as far as they can, and at the same time, give sufficient consideration to authors too, not to spoil what authors place importance in their art works. The focal points of this paper are both on translators' experiences of reproducing comics with oral language and on readers' experiences of reading comics with ears.

This paper describes how comics communicate with readers without using images, via translators' modest intervention, and examines what for people read comics.

Reflections on the New Patterns of Exclusion within the Working Class: Exclusion As "Omission" and the Struggle of Homebased Workers Union in Turkey

Home-based work, one of the most expanding work forms in the context of globalization, has been one of the most invisible forms of work in the world including Turkey. This invisibility can be related to its women concentration in the male dominant world of existing organisations and systematic negligence of the second. This is why home-based workers, like other informal workers, have found ways to organizing themselves as new agents with different aims and scope, and consequently organizing strategies, have entered to the fields of social movements and formal social policy.

This development has not only an important effect on the field of social movements and public social policy, also marks a significant transformation in the patterns of exclusion: a shift from mere exclusion to an "inclusive one, at least in Turkey. In the past, exclusion was mainly in the form of almost complete denial of the existence of home-based work and these workers, now their acceptance as full workers do not make a sense in the decision making processes of social policy on the context of social movements. Almost every concrete instances, they are forgotten to be invited to involve in. This negligence can also have several forms: to forget they are workers, union is not a charity association, they are not experts working for it... In some instances, when they make corrections, they are formally treated as "hysterical", over-emotional women expressing anger improperly.

This paper describes these new patterns and takes the "omission", as the most common form of exclusion in the case of home-based workers' organizing in Turkey. By exploring the perspective of the representatives of social movements/organizations who omit systematically, and then, by discussion of these data with union members, aims to contribute the exploration of grounds of solidarity and action.

HAUG, CHRISTOPH* (University of Gothenburg, haug@gu.se)

"We Want to Report about Everything!" How the Technologies of Results-Based Management Protect the Comfort Zone of Donors in International Development Cooperation

Donor agencies legitimize their existence by producing activity reports which show that they are making a difference. Evidence needs to be produced that links the donor to the results achieved by its partner organizations. Such evidence usually comes in the form of reports which the partners are obliged to deliver before they receive the next slice of funding. The present paper examines this practice of exchanging funds for reports, asking how it affects the relationship between the development partners. The focus of the analysis is on how reporting requirements of Results-Based Management (RBM) structure the communication between donors and recipients and thereby organize global social relationships in asymmetrical ways allowing donors to appropriate the credits for the work done by the recipients of their funds.

Based on a case study from donor funded HIV/AIDS work in South Africa, the analysis finds two conflicting languages: the language of results and the language of giving. The paper shows that a significant source of donor power lies in their ability to structure the communication between the partners in a results-oriented way and thereby frustrate attempts of grievances-related storytelling. However, the study also documents the urge of some community based organizations to "report about everything", meaning: not only what the donor wants to hear. Awareness of "telling the whole story", including grievances outside the scope of the donor's program, is interpreted as expressions of dissent aimed towards the construction of a dialogic relationship between donors and recipients. It is discussed whether this is possible within or alongside with RBM, or whether dialogue based on local experiences implies a rejection of the RBM framework.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Consensus Decision-Making in Meetings As an Interactive Accomplishment: Silence without Silencing?

This paper starts from the observation that most of the literature on decision-making is anchored in a methodological individualism: at least in the western world, it seems that a decision can only be understood as the outcome of an individual act or an aggregate thereof (voting). Nevertheless, genuinely collective practices of decision-making (consensus) are widespread across institutional and cultural settings, but the collective dimension of these is inadequately understood, leading to a confusion between unanimity (everyone agrees) and consensus (no one disagrees). Both researchers and practitioners of decision-making have largely avoided this issue, so that empirical studies often remain unclear about how exactly a decision was made, and decision-making groups sometimes find themselves in the paradoxical situation of disagreeing whether they have reached consensus or not.

Based on participant observation of numerous meetings among global justice activists using the consensus principle, this study seeks to untangle some of the conceptual confusion through a detailed interactive analysis of meetings as communicative events. Focusing on the final stage of the decision-making process, the paper identifies four types of consensus: imposed, acclaimed, hasty, and considerate. Drawing on previous findings from conversation analysis, it is argued that although they all observe the absence of voiced disagreement, they differ significantly in how this absence is constructed interactively. Therefore, what appears to be the same mode of decision-making – consensus – should be treated as different modes, both by researchers and practitioners.

The paper concludes by discussing the consequences of this analysis for radical democracy and anti-hegemonic practice, wondering whether it is possible to produce silence without silencing.

Towards a Post-Hermeneutic Phenomenology

The kinds of attention that have less to do with intellectual analysis than with our senses, emotions and bodily responses to our immediate experiences are generally recognized as important among field-researchers. Still when it comes to reporting there is an urge to turn the indistinctness of sensory and emotive experiences into identified and accountable registrations. Bodily and affective reactions to the surroundings are most often perceived as something to be interpreted in order to lay bare an underlying and absolute meaning. Thus we tend to subject the multidimensional meanings of lived experiences to different kinds of selection and reduction implied by that production of knowledge aiming to render the world in clarity.

Nevertheless, the blurriness of emotive and physical reactions to the world can be said to be due not to their impreciseness but rather to their richness in nuance and complexity. Hence, they may be much precise vehicles of meaning not in spite of but on account of their indistinctness.

In this paper, we ask what epistemological potentials might be revealed if we explore our lived experiences in their own right rather than try to explicate them and make them conclusive. Based on empirical research of our own, we turn our interest towards the possibilities of understanding bodily reactions during the process of research as being informative in themselves and discuss possibilities for transforming them into scientific writings that likewise invite a reading not only with the intellect but also with the senses. We propose an approach to both the making and communication of knowledge, which could be called post-hermeneutic – a phenomenology not aiming at fixation of identified significance, but at a knowing that includes and even takes advantage of the fluctuating and manifold ways we experience the world when we move in it instead of stopping to make analysis.

Hormone Decline and Aging: Sociology of a Medical Promise

The promise of slowing down, stopping or even reversing the aging process is, in a sense, medicine’s hyper-promise and the ultimate victory of science over human nature. And indeed this desire has been expressed, in particular through the myths of the immortality of youth, for thousands of years and in a great many civilizations. This idea emerges regularly in the public and scientific space, from the early 20th Century attempts to transplant animal glands in order to restore the vitality of people’s youthful state to the forecasts made about “regenerative” medicine in the wake of the isolation of embryonic stem cells and the cloning of Dolly the sheep.

Since the mid 1990s, research and practices aiming to fight the aging process have even intensified and become more structured, with the development of so-called “anti-aging” medicine. One hypothesis played a key role in this dynamic: that of hormone replacement therapy. The underlying idea is that during life, the production of certain hormones, which are essential for many of the body’s functions, tends to decrease and that by compensating for this decrease, it is possible to tackle the very process of aging. Different hormones were targeted: melatonin, the growth hormone and DHEA (dehydroepiandrosterone). In France, it was above all the latter that was promoted as a possible “youth pill”.

It this presentation we will first examine the construction of DHEA’s anti-aging promise, its underlying roots, the conditions under which it emerged, and the changes it has undergone. We will then analyse the reception of this promise in France, the impact on the representation of the body and on anti-aging practices. A last section will show how this promise was called into question from the mid-2000s onwards but managed to survive.

Hayashi, Mawumi* (King’s College London, mawumi.T_hayashi@kcl.ac.uk)

Across the globe, societies face pressing challenges to address the needs of their rapidly ageing populations against a background of austerity. This is particularly true of Japan, Britain and Sweden, all of which face significant challenges of reforming welfare states, where each government has attempted to expand and diversify public care services. This paper reflects on the respective new and reformed public care systems. However, none of these countries’ systems have succeeded in meeting all care needs, and recent austerity and budget cuts have exposed further difficulties. Accordingly each government has been painstakingly exploring new and cost-effective methods of providing care. Specifically, there has been optimism that civil society organisations might step in to fill the gaps left by public provision.

This paper, drawing on empirical research involving detailed interviews and participant observation, will examine and compare successful and innovative models of civil society organisations that have developed ‘gap-filling’ services for older people in Japan, Britain and Sweden. Key findings concerning each model will be contrasted briefly with their national context, highlighting specific features. Analysis of models at a national level will then be placed in a transnational and comparative perspective, underscoring best practice benchmarks together with the challenges encountered by organisations. For instance, while the standardised and universalist Japanese model mobilises traditional quasi-governmental civil community resources, the British model emphasises partnership working and recognises innovation and professionalism, and Sweden’s model is characterised by localism and sensitivity towards the employment of conventional labour, with volunteers being discouraged. In conclusion, this paper will discuss suggestions for future care policy making and possible refinement of the care market, potentially transcending national boundaries. It will also consider how experiences and best practice from the models examined here could be utilised in other countries to pursue evidence-based sustainable care policies and promote civil society.

On 9th September, 2010, a high pressure natural gas transmission pipeline ruptured under the suburb of San Bruno, near San Francisco, California. The result was a fire that burned for two days. Eight people died, and thirty eight homes were destroyed because a weld in the buried pipeline failed. The weld had been poorly made in 1956 when the pipeline was first constructed.

Using document analysis (investigation reports, transcripts of evidence and other primary source materials), in this paper we focus on the experts in this organisation who were responsible for pipeline integrity management. Clarke’s work regarding fantasy planning in the face of uncertainty explains both how and why the integrity management system had taken on a symbolic, rather than practical, form. Using participant observation, we will examine the intersection of North American racialization in the context of Ecuadorian social order, thus potentially reproducing existing inequalities. The paper then identifies strategies or practices that lifestyle migrants in Ecuador have adopted in the face of their Gringo identity, or ‘Gringuidad.’ First, some North Americans have begun to police the behaviour of the North American community in a bid to optimize Ecuadorian perceptions of ‘Gringos,’ reinforcing their racialized self-identity rather than deconstructing it. The second strategy consists of individual attempts to further integrate into Ecuadorian society, particularly by learning Spanish. These practices illustrate a fantasy of ethnic mobility.

The paper explores the position of the “Gringo” in the racial order of Ecuador. The paper is based on 69 qualitative interviews conducted in 2011, 2012 and 2013 with lifestyle migrants from North America now residing permanently in Ecuador. They are supplemented with ethnographic field notes. North Americans in Ecuador are particularly concerned about their ethnic identity there, and describe their growing community in racialized terms, as Gringo. I posit that the “Gringo” is a racial category, and while it does not carry the same negative connotations in Ecuador that it does elsewhere in Latin America, it refers to a particular phenotype, often also marked by cultural symbols, such as clothing. The paper discusses what racial gringuidad supposedly means for North American lifestyle migrants in the Ecuadorian context. These narratives tell us more about the lifestyle migrants themselves than about the real meaning attached to their apparent physical differences. The paper then identifies strategies or practices that lifestyle migrants in Ecuador have adopted in the face of their Gringo identity, or ‘Gringuidad.’ First, some North Americans have begun to police the behaviour of the North American community in a bid to optimize Ecuadorian perceptions of “Gringos,” reinforcing their racialized self-identity rather than deconstructing it. The second strategy consists of individual attempts to further integrate into Ecuadorian society, particularly by learning Spanish. These practices illustrate a fantasy of ethnic mobility.

Violent Natures: From Coercive Conservation to Climate Change in Africa

Since the colonial era, African natures—both external landscapes and internal human dispositions—have been conceptualised as violent via the parallel ideologies of wildlife conservation and climate change. Both address the human impact on, responsibility for, and stewardship of the environment through the lens of violent nature. During the colonial era in East Africa, ‘natives’ were relegated to specific areas, their lands usurped for white settlement and the conservation of dangerous wildlife. Today, conservationists continue to violently evict residents of East and Southern Africa from apparently precarious landscapes. In colonial and contemporary conservation, both ‘native’ and nature appear unruly and potentially violent. Under the ideology of climate change, as well, poor, non-white populations usually bear the brunt of catastrophic natural (or unnatural) disasters, at the same time that they are blamed for contributing to the underlying environmental causes of such events. African environments and peoples are therefore constructed as inherently violent and in need of external intervention via the rhetoric of both conservation and climate change.

Each system of thought employs science and technology to cast the power-stricken, racialised ‘other’ in the role of the enlightened noble conservationist; evil instigator of anti-conservationist or climate change-inducing practices; or victim of the violent environments engendered by conservation and climate change. The paper then identifies, at a basic theoretical level, the character of ‘native’ nature, and both ‘native’ and nature, as violent. ‘Violent Natures’ thus explores the racialization of nature by connecting the parallel stories of conservation and climate change in Africa.

Multiple Disadvantage in Midlife and Old Age - Exploring the Associations

To explore multiple disadvantage – the simultaneous occurrence of disadvantage such as health problems, lack of economic resources or social isolation – implies reduced possibilities for people to manage daily life. The prevalence of multiple disadvantage has been found to be much higher among older adults (especially those older than 80) than among younger age groups. In this study, we investigate whether multiple disadvantage in old age was preceded by multiple disadvantage in midlife, or if the accumulation of disadvantages may have happened later in life.

Previous research has established that individuals’ health and resources in old age are strongly correlated with their health and resources in midlife, making midlife a crucial starting point for the study of old age. However, old age is often associated with a decline in resources such as health and social resources, making it plausible that this is a period of life when disadvantages accumulate.

In this study, we test the association between multiple disadvantage in midlife and multiple disadvantage in old age by drawing on longitudinal, nationally representative data from Sweden from 1974 (when respondents were aged 40-59) and 2011 (age 77-96). Preliminary results go in two directions. On the one hand, results indicate that people with multiple disadvantage in midlife were likely to experience multiple disadvantage also in old age. On the other hand, around one-third of those who experienced multiple disadvantage in old age reported no multiple disadvantage in midlife. Thus, for a considerable proportion of those reporting multiple disadvantage in old age it may be a relatively recent experience, suggesting that there are different pathways into deprivation in old age. Further analyses will aim at describing the plausible pathways and target the issue whether certain pathways are associated with certain kinds of disadvantages.

HEARN, JEFF* (Örebro University, jeff.hearn@oru.se)

Autoethnography, Theorizing and Transnational Movements and Moments

This paper is in three parts: a brief overview of the relevance of autoethnography for transnational sociological theorizing; critical interrogation of my previous work on autoethnography; re-evaluation of their implications for transnational sociological theorizing.

The second part investigates four different interpretations of my own personal, work/employment, political, and theoretical change over time. In this, I build on previous autoethnographic work to examine how theorizing develops and changes with transnational movements and moments. The first is based on different relations to nation and nations: England, Ireland, Finland (Autobiology, nation, postcolonialism and gender, Irish Journal of Sociology, 2005). The second focuses on changing relations to children, family and household (The personal is work is political is theoretical: continuities and discontinuities in (pro)feminism, Women’s Studies, men and my selves, NORA, 2008). The third concerns changing relations to transnationalisations, transdisciplinary and transinstitutional developments (Opening up material-discursive (trans)forms of life ... politically, theoretically, institutionally, personally, in M. Wojtaszek and E. Just (eds.) Quilting Stories: Essays in Honor of Elizabeta H. Oleksy, 2012). And the fourth highlights the relations of men, intersectionality, organizations and (pro)feminism in research and fieldwork in the diversity and equalities field, with a focus on gender and intersectional dynamics and research processes (Equality, Diversity and Inclusion, 2014).

In the third part I discuss more general implications of these four perspectives for the analysis of intersectionality and intellectual biographies, in terms of: the politics of location; reflexivity and its limitations; critical positionality of members of superordinate groups; the problematisation of the male “I” (“Contradictory masculinities/men’s “I”: the unwriting of men, and the concept of gex”, Revista Canaria de Estudios Ingleses, 2013); and the relation of body and writing (Writing as intimate friends ... how does writing (pro)feminist research become methodologically challenging?, in M. Livholts (ed.) Emergent Writing Methodologies in Feminist Studies, Routledge, 2011).
and New Synergies*, organised within GExcel Collegium for Advanced Transdisciplinary Gender Studies (Orebro-Karlstad-Linköping Universities), with specific focus on violence seen as inequalities (Hearn, Sociological Review, 2012; Current Sociology, 2013). The larger project examines intersectionality in gender studies, in relation and dialogue with the diverse, sometimes conflictual, theoretical and political positions in feminist debates (Wabey, Armstrong, Strid, 2012; Strid et al. Social Politics, forthcoming). The project is designed against this background of rich, diverse feminist traditions for theorizing of intersectionality, and informed by tensions between these traditions. This paper takes up this challenge in terms of violence, specially violence against women, and state policy thereon, addressing the place of violence in contemporary state regulation and intersectional gender relations. The paper examines the complex, situated and spatial relationship between theorising on violence against women and state policy on such violence (Hearn and McKie, Policy & Politics, 2008; Violence Against Women, 2010). This focus continues discussions on multiple linkages between multiple policy, policy and theory, in local, national and transnational contexts. More specifically, drawing on extensive comparative European data at local, national and transnational, it explores the concepts of gendered intersectionalities and intersectional gender by examining how multiple inequalities, long been prominent in feminist activism and intervention on violence, are made (invisible) and conceptualized in state gender-based violence policy and debates. Attention is paid especially to tendencies to degendering strategies in violence research and state policy. A key aim of the paper is to investigate how analysis can be a starting point for assessing if, how and why polygamy outweighs this concern . Thus, in the name of protecting women from the religious freedom of fundamentalist Mormons, the potential harm caused by polygamy perpetuates inherent harm to women, children, and society. It begins with the contract workers hired to “clean up” the Fukushima meltdown, then move back in time and across oceans, to consider the subcontractors hired to conduct ordinary reactor maintenance and refueling in Japan, France, and elsewhere. Maintenance is the unseen, decided unremarkable work essential to keep any technological assemblage working—work so invisible and unglamorous that most scholars avoid studying it, preferring instead to focus on acts of creation and construction. Yet without these workers, sociotechnical systems could not function: they may be socially marginal, but they are technopolitically central to the production of nuclear power (and all other industries).

In nuclear and other systems, subcontracting has consequences for occupational health, as well as for transnational knowledge production (about the effects of low-level radiation exposure in the nuclear case). Contemplating these consequences, in turn, takes us to another apparently peripheral part of the global nuclear industry: uranium production. After a quick comparative consideration of knowledge production about the dangers of radon exposure in mines, the paper discusses uranium mining in Gabon. It examines labor and occupational hazards there, including the efforts of Gabonese mineworkers to make themselves and their illnesses visible on the global technoscientific stage.

The possibility of rebellion is a check – sometimes the only check – on authoritarian rule. Although mutinies in which crews seized control of their vessels are rare events, they occurred throughout the age of sail. To explain the occurrence of this form of high-risk collective action, this paper provides a theory which holds that shipboard grievances – related to material deprivation, poor governance, and the inadequate provision of health and welfare -- are the principal causes of mutiny. Yet such grievances can only lead to rebellion when obstacles to collective action can be overcome. Whereas seamen usually could count on an ample supply of informal organization, their ability to engage in collective action was increased by factors that facilitated coordination and provided a critical mass of ringleaders. Using a unique database drawn from extensive archival information about Royal Navy voyages from 1740 to 1820, this study employs the case-control method and random-forest classification to show why shipboard social order shifts, sometimes tipping crew members toward the high risks of mutiny. The findings have implications for the role of grievances in generating rebellion and for an exploration of work and workers commonly considered marginal to nuclear safety.

Global Atomic Inequalities: Marginal Work in the Nuclear Sector

The practice of polygamy by fundamentalist Mormons and Muslims presents the potential for competing rights where arguments concern autonomy, cultural integrity, and religious freedom are pitted against the right for gender equality. In 2010, the Canadian Supreme Court of British Columbia embarked on an unprecedented reference case to test whether Canada’s prohibition against polygamy is consistent with the freedoms guaranteed by the Charter of Rights and Freedoms. Of 1982 guarantees freedom of conscience and religion and the right to equal protection and benefit of the law without discrimination based on race, national or ethnic origin, color, religion, sex, age or mental or physical disability. The practice of polygamy by fundamentalist Mormons and Muslims presents the potential for competing rights where arguments concern autonomy, cultural integrity, and religious freedom are pitted against the right for gender equality. In 2010, the Canadian Supreme Court of British Columbia embarked on an unprecedented reference case to test whether Canada’s prohibition against polygamy is consistent with the freedoms guaranteed by the Canadian Charter of Rights and Freedoms. A central concern is whether polygamy perpetuates inherent harm to women, children, and society. In contrast, arguments were made that some women freely choose to enter into polygamous relationships, and that criminalizing this family form offends their right to religious freedom. In 2011, Justice Bauman ruled that, although the law violates the religious freedom of fundamentalist Mormons, the potential harm caused by polygamy outweighs this concern. Thus, in the name of protecting women from harm, women who practice polygamy as part of their religious commitment are not criminalized under the law. This paper examines the treatment of competing rights and societal values in the BC Supreme Court case that pits an individual’s right to act on “sincerely held beliefs” against the equality rights guarantee in Canada’s Charter.

Social Order and the Genesis of Rebellion: Mutiny in the Royal Navy, 1740-1820

Theorizations of violence and militarism, especially violence against women and the role they play in humanitarian crises, have received significant attention in recent years. Yet, little is known about the specifics of how gender is both constructed and experienced in these contexts. The paper explores these intersections by examining the experiences and impacts of women living in polygamy in France, a country where polygamy is legal and where women who practice polygamy as part of their religious commitment are protected by law. The paper focuses on women living in polygamy in France, a country where polygamy is legal and where women who practice polygamy as part of their religious commitment are protected by law. The paper explores these intersections by examining the experiences and impacts of women living in polygamy in France, a country where polygamy is legal and where women who practice polygamy as part of their religious commitment are protected by law.
The Global Corporate Elite Uncovered

The transnational orientation and organization of corporate elites has for long attracted the attention of those who expect that ongoing globalization goes hand in hand with transnational elite cohesion. The laborious nature of compiling reliable network datasets has hitherto forced scholars to focus on those arena’s where we expect transnational corporate elites to emerge, notably the largest (often stock listed) firms in the western industrialized world. This systemic bias disregards the role of non-western elites in the global regime and neglects a possible multi polar architecture of the global corporate elite. Applying state of the art tools and techniques, we are able to overcome this burden by analyzing the entire network of interlocking directorates between a set of 100.000 corporations across the globe in 2012. This allows us to uncover the extent to which western and non-western corporate elites occupy similar social circles; which firms, countries, sectors, and cities serve as linchpins within the global corporate elite, and as such reveal the sites and spaces where transnational corporate elites organize themselves, both in the west and beyond.

Networks and Institutional Rules On Stock Quotations

Prices in market economies are based on supply and demand processes. I challenge this common economic sense by comparing stock price movements and their causes in the US and Germany, arguing that stock valuations also depend on the historical traditions of trading and corporate structures. I test this field theory by comparing the setting and interaction of institutional regulations, network positions and cultural frames. Empirically, I test this field theory of financial markets by comparing the setting of stock repurchase laws in Germany in 1998 and the national peculiarities of firms, that foster (USA) or impede (Germany) the implementation and success of repurchase plans.

Rethinking Child Welfare Policy

Studies on children's welfare have been pursued in a separate strand from the welfare state literature in general. Welfare state theory has been blind to children’s welfare: Sweden has been described as a forerunner in children's rights, being the first nation in the world to ban corporal punishment. Sweden was moreover one of the first countries to sign the UN Convention of the Rights of the Child. This notwithstanding, studies on children’s participation in Sweden indicate that interpersonal inequalities remain. The paper examines, as a first step, the Swedish legislation with regard to vulnerable children's right to voice. We find that vulnerable children’s right to voice in proceedings that directly concern them is governed by a complex of regulations and institutional rules.
surprisingly weak in Swedish legislation, with negative implication for the welfare of vulnerable children. Signing of the UN Convention has in this respect not left any clear imprint on Swedish legislation. The findings show the need to formulate new policy strategies: We may resolve the tension between children as ‘beings’ and ‘becomings’ by recognizing that it may be necessary to invest in children's education and child care but that this is not sufficient as long as we do not consider children's rights to voice.

Hunting the Northern Lights

This work in process explores gendered landscapes imbuing the increased use of ‘hunt’, ‘hunters’ and ‘hunting’ in the language of northern lights tourism in Northern Norway, aimed at English speaking markets. The development of this tourism product, as winter tourism as such, started in earnest with Finnmark Relselv’s (county DMO) winter project in 2002. The evolvement of the last decade’s hunting metaphors has become very important in the marketing of northern lights tourism in the region and is has been adapted by tourists in their blogs (trip advisor). Hunting the northern lights tours, at least in their commercialised forms are highly planned by tour operators and aimed at soft adventure tourists (Beedie and Hudson, 2003). These hunters thus do not need any skills, experiences and knowledge to take part in the hunt. Therefore the link to hunting as a symbol of masculinity (Bye, 2003) and masculine social values such as hierarchy, physical toughness, rationality, emotional distance and risk taking (Haenfler, 2004) is lacking. This paper thus discusses how commoditisation of hunting metaphors in relationship to northern lights tours contributes to demasculinisation of hunting and hard adventure tourism discourses. It also explores partly overlapping discourses between big game hunt and the hunt for the northern lights. Whereas the former event today is mainly a masculine pursuit which requires preparation and good physical strength the latter is available to masses of tourists regardless of gender, skills and knowledge (Houston, 2008), References

Winter People: Constraining and Motivating Factors for Attracting Winter Tourists to Northern Norway

Based on 116 qualitative interviews with domestic and international tourists visiting Oslo, Norway in the summer of 2013, this paper explores constraints and motivators regarding winter holidays in Northern Norway. Preliminary findings suggest that not all tourists are winter people. Perceptions of coldness and darkness, however, are positive and negative. Some tourists are excited about experiencing an arctic winter climate; in particular those interested in winter activities such as skiing and northern lights hunts. These tourists emphasise the pureness and biteness about the role and function of the endangered language in the present-day world must be delineated. It must be done so convincingly as to ensure that such reframing aligns as many people as possible to the task of language revitalization. This paper discusses this process on the case of the Ryukyuan languages which are spoken in the extreme southwest of the Japanese Archipelago. These severely endangered languages are often described by the lexical and phonological richness. As an effect, the task of ideological clarification is being pursued. This is urgently needed, because the Ryukyu languages have huge lexical gaps, lack styles for public debate or for writing specific genres. They also maintain social varieties characterisic of its past use in a feudal society. Its large number of regional dialects, 70 in total, also reflect boundaries of community which no longer exist today. Dialect levelling is rampant. Mixing of formal and informal styles, and of high and common social varieties is also frequent in the language use of those seeking to revitalize Ryukyuan languages. In the view of criticism on their language use, they are highly planned by tour operators and aimed at soft adventure tourists (Beedie and Hudson, 2003). These hunters thus do not need any skills, experiences and knowledge to take part in the hunt. Therefore the link to hunting as a symbol of masculinity (Bye, 2003) and masculine social values such as hierarchy, physical toughness, rationality, emotional distance and risk taking (Haenfler, 2004) is lacking. This paper thus discusses how commoditisation of hunting metaphors in relationship to northern lights tours contributes to demasculinisation of hunting and hard adventure tourism discourses. It also explores partly overlapping discourses between big game hunt and the hunt for the northern lights. Whereas the former event today is mainly a masculine pursuit which requires preparation and good physical strength the latter is available to masses of tourists regardless of gender, skills and knowledge (Houston, 2008), References

The Role of Victim Witness Testimonies for Collective Memory Formation, Recovery from Trauma and Future Reconciliation

Title: The role of victim witness testimonies for collective memory formation, recovery from trauma and future reconciliation.

In this paper the author argues that witness testimonies in war crimes and genocide trials play a crucial role even though they may not be related to the indictment of the prosecution or help to establish justice. In her book Eichmann in Jerusalem, Rebecca Solnit mentioned that the survivor accounts were not helpful in collecting legal evidence against Eichmann. This author thinks however that witness accounts are crucial not for legal purposes but for purposes of collective memory formation and victim trauma recovery by using the example of the witness account of the Auschwitz survivor Alfred Oppenheim who gave a testimony at the Eichmann trial.

The paper refers to other reconciliation attempts such as the truth commission in South Africa or the Comfort Women issue in Korea and Japan and seeks to identify conditions that make future reconciliation possible.

The example of the comfort women in Japan shows that witness testimonies alone cannot lead to positive change and reconciliation as long as there is no recognition of wrongdoing and guilty behavior in the first place. In other words witness accounts can only be effective and fulfill their purpose if there is an opposition not only individual or a political body who acknowledges his wrongdoing. In the case of the Eichmann trial and the South African truth commission the perpetrators were physically present whereas in the case of the comfort women nobody has assumed responsibility.

From Traditional Religiosity to Religious Diversity - Youth and Religion in Post-Soviet Latvia

Traditionally Latvia has been described as a Lutheran country with a Catholic Latgale region in the South Eastern part of the country. During the Soviet period between 1940 and 1990 religion was in a marginal, and only after the collapse of the Soviet Union the revival of the religious life became possible. Now, twenty years after the new independence, there are three main denominations (Lutheran, Catholic and Orthodox) and several minority religions making the religious field pluralistic. According to youth researchers, young people in the Western and Eastern Europe today are increasingly similar. Important difference among the youth in the West and the East is economic resources which is causing obligatory cohabitation in the family of origin which is influencing more widely attitudes of young people. The qualitative and quantitative data that has been collected among the university students in 1999 and 2010/2011 in the city of Riga will answer to the question what is the role of religion for emerging adults in a post-soviet society. The paper examines youth and different dimensions of religion (e.g. belief, practice, affiliation) and what are the differences among the attitudes of young people with ethnically different backgrounds in the country where approx-
Initial Teacher Education – Who Gets in and What Are the Implications for Students, Schools and Society?

Teachers Matter (OECD, 2005). Through their influence on the young (academic, personal, emotional, social) they contribute to diminishing educational disadvantage as well as broader inequities of society (Gay, 1993; Sleeter, 1996; Villegas & Lucas, 2001; Zeichner, 1993). Attracting and selecting individuals to the teaching profession who have the potential to ‘teach for social justice’, equipping them with the necessary skills during their training, and retaining them in schools are important tasks for policy makers and teacher educators.

This paper offers a critical analysis and discussion of currently administered selection criteria and procedures for initial teacher education (ITE) programmes in Ireland and internationally. It presents first findings from the Diversity Profiling Initial Teacher Education (DITE) study which explores (i) the impact of selection criteria and procedures on the composition of student teacher cohorts as regards their socio-demographic, motivational and educational profiles and (ii) ITE applicants’ perceptions of teaching, learning and second-level education in Ireland.

Researching teacher candidates’ diversity profiles is important and timely since contemporary school contexts have ignited concerns about the mis-match between the ethnic, cultural and language backgrounds of pupil and teacher populations. Furthermore, a small number of studies (King, 1993, Su, 1997) found that minority ITE candidates have clear and strong visions for social justice and for their own roles as change agents in the school and society (which differ from the motivations and conceptualisations held by mainstream students).

In Ireland and internationally, it is argued that access and widening participation policies will be explored with motivations and conceptualisations held by mainstream students. This is especially the case in Ireland and internationally, where many minority candidates held strong religious and political beliefs and focused on social justice.

However, the study found that many minority teacher candidates had clear and strong visions for social justice and for their own roles as change agents in the school and society (which differ from the motivations and conceptualisations held by mainstream students).

The findings suggest that the use of low-value nonmonetary incentives is a cost efficient strategy to improve data quality, especially in the context of intimate or personal topics. Because of their more subtle character, small gifts may even be more appropriate than cash or money-related incentives in certain contexts.

Distinction Practices and Socialization Of “Native” and “Foreign” Elites In Mexico

The paper summarizes the results of an empirical research project on “native” and “foreign” elites in Mexico in a comparative perspective. The focus is set on the elites’ different attitudes, socialization and distinction practices (in particular “completeness” versus “synecdochism”). Furthermore, the relations and interactions between “native” Mexican elites and “foreign” expatriate elites in Mexico are taken into account.

Similar to other ‘emerging market’ countries, Mexico has gone through profound changes in the last 30 years. Some Mexican enterprises have become large multinational enterprises operating on several continents and some Mexican business men are now among the wealthiest in the world with Carlos Slim Helú being the richest business man in the world.

Simultaneously, during the economic liberalization process which culminated in the North American Free Trade Agreement in 1994, many foreign multinational enterprises have set up major operations in Mexico, resulting in ca. half of the 500 largest enterprises active in Mexico being foreign — bringing to Mexico their own foreign top managers (expatriates), cultures and distinction practices.

The question how the different attitudes and distinction practices of foreign and native elites in Mexico co-exist, interact and whether they mix, will be addressed.

It will be argued that it depends to a significant degree on the home culture, socialization and nationalities of the foreign expatriate elites whether they blend into the Mexican elite milieu. Concerning the distinction practices, it will be argued that the Mexican upper class leans heavily towards synecdochism.

The Effect of Non-Monetary Incentives on Unit and Item Non-Response in Surveys on Intimate Topics

The Effect of Non-Monetary Incentives on Unit and Item Non-Response in Surveys on Intimate Topics

The use of noncontingent incentives constitutes a well-established technique in order to reduce both item- and unit-nonresponse in self-administered surveys. While the lack of research clarity indicates that monetary incentives included in the initial mailing should be the method of choice, the use of nonmonetary incentives might be more appropriate in at least two situations: Depending on the study area, various regulations on data protection or budget restrictions might prohibit researchers from sending multiple follow-up reminders as suggested in Dillman’s Total Design Method (TDM). Current research indicates that low-value nonmonetary incentives can serve as a substitute for the absence of follow-up mailings to a certain degree. Secondly, the use of monetary incentives might be disadvantageous in interaction with certain survey-topics (e.g. topics that correspond to reciprocity, morality or other social desirable norms as well as intimate questions) and might even turn out to provoke reactance on the respondent’s side.

The contribution renders the adequacy of nonmonetary incentives under these two conditions and presents the results of an experimental design study. With a target sample of 400 work respondents, who received a survey on “Morality and Conscience in modern life”, the initial mailing of a ball pen showed significant effects on the following criteria:

- Response rate (unit and item non-response) and response-speed
- Sample-composition
- Data Quality (Elaborateness of answers to open-ended questions and Reduction of Acquiescence Response Patterns)

The findings suggest that the use of low-value nonmonetary incentives is a cost efficient strategy to improve data quality, especially in the context of intimate or personal topics. Because of their more subtle character, small gifts may even be more appropriate than cash or money-related incentives in certain contexts.

Intra-State Conflicts In Activation Reforms: Authority Delegation and Bureaucratic Centralization In The "Privatized" Implementation Of Welfare-To-Work In Israel

Based on the Israeli case, this article highlights the role of intra-state conflicts between bureaucratic actors in the politics that surround the reform of the government of public employment services and the ways in which these conflicts have shaped not only the reform process, but also the institutional makeup of the reform itself. We analyze the politics that surrounded proposals to change the governance of long-term unemployment in Israel (1997-2004) and shaped the institutional makeup of the reform (2004-2010). We highlight how intractable conflicts between state agencies—the Ministry of Finance (MoF) and the Israeli Employment Service (IES)—brought about the delegation of administrative authority to private agents in a state that had previously been characterized by a strong bureaucratic control over the management and implementation of a welfare program that targets the long-term unemployed who are entitled to social assistance benefits. We suggest that the delegation of administrative authority to private agents in no way represented a rolling back of the power of state agents, or a transition to a “regulatory” or “steering” state. On the contrary, we argue that this delegation of authority actually enabled state agents to strengthen their intervention in the routine management of the program, bringing about a process of bureaucratic re-centralization. We conclude that the initiation of “partnerships” between state and private agents does not necessarily signal a transition to a steering state or towards a collaborative mode of governance, but may also function as a strategy through which certain state agents seek to impose their projects, thereby marginalizing alternative or competing conceptions of the role of the state in society.

HELMRICH, ROBERT* (Inst Vocational Education & Training, helmrich@bibb.de)

TIEMANN, MICHAEL (Inst Vocational Education and Training)

The Renewable Energy Expansion and Its Effects on Vocational Education and Training and the Labour Market in Germany

In Germany, the sector of renewable energies (RE) is currently experiencing enormous growth. Besides first estimations about the type of the expansion, energy mix, resulting demand for workers and new requirements for firms, the effect of the RE sector’s growth on the job structure and on skill requirements has not been sufficiently examined.

Our proposal exemplifies results from an ongoing research project. Theoretically and empirically the study is based on a combination of three frameworks. We want to examine requirements on the level of the working place: Firms will have to structure their working places according to new requirements. Being able to describe occupational content and its links to new qualification demands will put us in a position to examine a) what the new requirements for firms and employment are and b) what their effect on the occupational structure is.

The first reference framework draws on work by Prediger and others (c.f. Prediger/Swaney 2004) who developed dimensions — namely „people vs. things“ and „data vs. ideas“ - which are used to describe certain aspects of occupational contents and for grouping occupations. The second is the requirements on knowledge work by Volkmol and Kochling (2001), where the working population is partitioned according to the type of knowledge work of their employment.
.range from qualified workers to task flexible and innovative workers. The third reference framework is the task-approach by Autor and others (2003) about the share of routininess of occupations, which is an enhancement of the “Skill-Biased Technological Change” approach.

Questions we address empirically (analyzing primary data of surveys of employees and firms) include:

- What is the extent of RE on the labour market?
- What characterizes jobs in RE?
- Are there unequal chances for working in RE as opposed to other occupations?

Uncertain Transitions: Changing Attitudes, Values and Lifestyles of Young Finns

This paper is based on empirical comparative and longitudinal studies of young people in times of economic crises and uncertainty in the Finnish context (Helve 2013; 2002 and 1993). It will present results of the research project “The changing lifestyles and values of temporary employed young people in the different labour markets of Finland” analyzing data from 2009 to 2011 including in-depth narrative interviews (N=20) and ethnographic observations among young people working temporarily, and the survey data gathered on-line from Finnish students in higher education (N=689). The attitude scales measured attitudes towards education, working life and society, and the future orientation and meaning of life. The paper places its focus on the research question: How uncertain employment affects attitudes, values and lifestyles of young adults? The study shows that young people working with short-term employment contracts, or who are temporary unemployed are not doing much long-term future planning. The short-term and temporary employment is changing work attitudes and values of young people. Drawing on these results with the biocological model of human development through life-course (Bronfenbrenner, 1995) the paper discusses about the impact of uncertain transitions on coping with shifts between dependency and independency as a result of prolonged transitions (C.f. Du Bois & Stauber 2005, “yojo transition”).

Leaders’ Enhancement of Leader–Member Exchange (LMX) Relationships: An Examination of Leaders’ Cognitive Support and Knowledge Resources in Research Group

The quality of leader-follower relationships has repeatedly been associated with positive individual and organizational outcomes. But how can leaders improve on the quality of the relationships they have with their followers? We examined the effects of the Cognitive Support and Knowledge Resources that leaders provide their followers in a sample of 166 academic and commercial researchers in Sweden. Our goal was to investigate whether these two task-related variables were antecedents of followers’ perceptions of leader-member exchange (LMX) in research settings. Specifically, we investigated the effect of leader-provided Cognitive Support and Knowledge Resources in relation to the four sub-dimensions of LMX (LMX-MDM): Affect, Loyalty, Contribution, and Professional Respect. As we hypothesized, we found that both Cognitive Support and Knowledge Resources, with one exception, related to the four sub-dimensions. The exception was the failed association between Cognitive Support and Loyalty. We conclude that in creative knowledge environments, Cognitive Support and Knowledge Resources are possible means for leaders to influence the quality of their leader-member relationships.

WERNLI, BORIS* (FORS, boris.wernli@fors.unil.ch)

Leaving the Parental Home and the Material Conditions of Entering Adult Life

Youth sociologists usually note different stages of transition to adulthood, which are often understood as access to autonomy and financial independence (Galland, 2009; Harnott, 2000). However, synchronization and irreversibility of these stages in the course of contemporary life have been questioned and some scholars insist on distinguishing autonomy from financial independence (Hamel 1999; Singly, 2000). We focus on a particular stage of the passage to adulthood – leaving parental home, which is often described as a way to gain autonomy – and we examine the impact of this emancipation process on living conditions of youths.

We use the waves 1 to 13 from the Swiss Household Panel, a representative longitudinal annual survey of the general Swiss population, to study the economic impact of leaving the parental home for several hundred young people aged 18 to 29. Several objective and subjective indicators of financial situation, as well as debt and material conditions, are used as dependent variables. Analyzes are performed controlling for a series of socio-demographic (age, sex, nationality, region) and economic characteristics (job income, occupation, education level), as well as life-events (end of training, first job, entering into a couple) of both the interviewee and his/her parents.

Much more than a portrait at a given point in time, the use of the SHP longitudinal data with appropriate analytical methods can significantly enrich the analytical perspective on young people leaving their parental home, especially by taking into consideration other context life-events and information about their family background. Our preliminary analysis suggests that for a number of young people access to autonomy through leaving their parents’ household is correlated with a decrease in material well-being. In other words, for some young people in Switzerland, access to autonomy is paid for by precarious living conditions and a loss of economic independence.

Mediating Mental Distress in Young People: The Role of Popular UK Media in Challenging Stigma

Most mental-health needs in young people are unmet, even in high income countries and ‘stigma associated with mental disorder is a key challenge’ (Patel et al, 2007). Media representations are considered to play a key role in fuelling stigma though this is not a new problem. Mental illness and prejudice has a trajectory which predate modern media and is deeply ingrained culturally (Signorilli, 1993). This paper draws on semi structured interviews with programme makers and source organisations as well as thematic content analysis to explore messages concerning young people in mental distress. What role might popular media play in helping to challenge or perpetuate stigma? Are there unique opportunities created by popular television that challenge prevailing representations of young people in distress? How do source organisations work with programme makers to create positive collaborations? What are the associated opportunities and pitfalls? Is there evidence that such representations can change attitudes and beliefs?

This paper builds on studies that have identified connections between media coverage and public beliefs about mental health (Philo 1993). The negative coverage of mental health is considered to bear significant responsibility for fuelling public prejudice and misconceptions (Wahl, 2003). Acute conditions such as schizophrenia are associated with particular stigma and the media stereotyping of those affected by such diagnoses is considered to have significant repercussions for their social network. Charities and other organisations have explicitly targeted popular prime time drama in a range of successful health campaigns and there is evidence that young people are receptive to ‘public’ issue messages within popular media formats (see Henderson, 2007). This paper examines the role of young people in UK entertainment in shaping public understanding of risk and suggests that populist depictions of young people in mental distress can challenge prevailing perceptions of those affected and represent their experience in unique ways.

‘What’s in a Gauge?’ an Assessment of Self-Reported Measures of Informal Activities

The relationship between different measures of informal activities is at best unstable. In theory, if one estimated the same reality, the outcome of different measures should point in the same direction. That remains unclear in the case of informal activities. This paper assesses self-reported survey measures of informal activities. If surveys measure informal activities in a reliable way, the possible applications are extensive. In comparison to national level macro-economic estimates, their potential is much bigger.

One source of bias in surveys is the respondents’ propensity to answer sensitive questions in a socially desirable way. This problem would be limited to the impact of the error terms on the condition that the bias were randomly and evenly distributed throughout the population. One possible consequential issue in questionnaire based measures of informal activities, however, is that the social desirability bias may be associated with certain group characteristics. In this contribution we will investigate the indication that the prevalence of the social desirability bias in a given population is positively associated with experiences of respondent's government interventions. The lack of rule of law or of basic individual rights should influence the willingness to honestly disclose past illegitimate actions such as tax evasion off-the-books work by respondents.
Indeed, the disturbing fact is that the gap between macro-economic and survey
based estimates of informal activities seems to be bigger in former communist
countries. This gap may be a result of different reporting biases. The paper tests
the prediction that the social desirability bias in self-reported survey measures of
informal economic activities depends on this institutional history. Based on the
second round of the ESS, this thesis is tested with the help of comparison with
other forms of (economic) deviance, the impact of generations to the social desir-
ability bias and direct measures of negative attitudes toward informal activities.

Creativity As Anti-Alienation: Towards a Sociology of Artistic Labor

Based on qualitative research in the fields of the visual arts and design we aim
to show that the actors in those realms experience the non-alienating qualities
of their work even under current conditions of an intensified economisation of the
“aesthetic” sphere. The idea and the activity of “creative labour” thus may still
serve as an idea for a Critical Theory of alienation. We propose that this view is
legitimated by the self-reflexive stance of this type of activity on the one hand and
the self-proclaimed distance to economic logics in the mode of production on the
other hand. For example, some artists we interviewed who were quite aware of the
commercial dimension of their own activities proclaimed anti-economic zones and
un-commercial times in their creative process. The autonomy attributed to the
idea of creativity and the practice of creative work thus seems to allow for a
relative and at least temporal distance to economic calculations and its potentially
alienating effects.

This is a surprising result because it runs against two major trends in contem-
porary European sociology. First, against the impetus to interpret the discourse
on creativity mainly in its complicity with neoliberalism (for example following the
sociology of critique of Boltanski/Chiappello or proponents of Governmentality
Studies such as Thomas Osborne or Ulrich Broeckling), and secondly, against the
perceived need to focus on issues of marketization resp. financialization and econ-
omic speculations in the analysis of all areas of social life (according to Michael
Sandel and others). While both trends can hardly be ignored, the ‘liberating’ effect
and the ‘particular’ nature of creative work for the actors themselves however seems
to be relatively stable. This is an argument in favour of the classical “artis-
tic” critique of capitalism that is sometimes under a meta-critical attack in recent
sociological research.

Reification, Money, and Wage Labour: A Defense of the Classical Theory

Reification is not a new topic, neither in Sociology nor in Social Philosophy: Au-
thors such as Gabriel/Luckmann, Hannah Arendt and Helmut Plessner and German
Hegel have described it already. Astonishingly, however, when Axel Honneth ‘re-
constructed’ this concept from the angle of his normative theory of recognition in 2005,
he did not include the ‘classical’ factors of reification: money and wage labour,
in his new version of the theory. This lead, or so I will argue, to a re-idealisation of
the concept which had more in common with Hegel than it had with the classical
Critical theory that used this term in a Marxist understanding.

Against this moralization and de-economisation of the term, this paper argues
for a re-economised theory of reification. The starting point for an alternative
reconstruction, however, is not History and Class Consciousness, but the political
economy of Karl Marx himself, who already used the term in an interesting way
(e.g. in VI. of Capital). The paper will first develop and defend a sociological
interpretation of Marx’s Pariser Manuskripten (1844) and Capital (1867), where Marx
identifies the mechanisms of a monetarized economy and a production based on
wage labour as the main drivers of a capitalistic ‘reification’ of social relations. In
a second step I will apply this reformulated classical theory of reification to today’s
globalized and flexibilized economy. I would like to suggest that conceptually the
'classic’ tradition of Critical theory still has a lot to offer for an analysis of contem-
porary capitalism.

No Taxation without Discrimination: The Racial Interconnectedness of the Third-Fifths Clause, Taxation, and Alienation

“No taxation without representation!” These ironic words of tax rebels like the
“Sons of Liberty” marked the birth of a new nation. Yet when they became formal-
ly codified under law, neither can be fully understood without reference to race.
In terms of congressional representation, Northern representatives wanted to
regard slaves as much less than three-fifths a person to ensure their own political
control, but when it came to taxation, these same delegates argued that slaves
should be counted as more than 60 percent for a tax system based on popula-
tion size. Of course Southern delegates objected to higher tax burdens and lower
representation, and they assumed positions in direct opposition to their North-
ern brethren. On both sides of the debate, racial oppression was rationalized by
elite white men to promote their own interests through discourses of alienation
and estrangement—discourses ranging on a continuum from entitlement and en-
franchisement on one end to victimhood and disenfranchisement on the other.
The debates spanned nearly 10 years, until finally, a compromise was achieved.
Yet this compromise is not merely an artifact of the American past. It culminated
into the prohibition of direct taxes by federal government, a legal clause that still
stands as a major Constitutional roadblock to federal taxation on most forms of
wealth in the United States. For these reasons, among others, I argue for a re-ar-
ticulation of those revolutionary words as not “no taxation without representa-
tion” but “no taxation without discrimination.”

Youth Protests in Baghdad: Acting in intertwined realities

“Table of Contents”

Analysis of urban protest cultures that arose during the so-called
Arab Spring have mostly overlooked recent developments in Iraq. Yet - inspired
through other countries in the region - Youth in Baghdad do engage and position
themselves in urban spaces as well as in digital social networks and challenge
sectarian, political developments and frictions within Iraqi society. The paper
argues that these symbolic and physical spaces are not to be regarded as dichoto-
mous but rather as two aspects of relational space. The evolving digital platforms
(e.g. Facebook, Twitter, Blogs) have created new spaces and ways of acting and
networking that would have hardly been possible otherwise due to the on-going
violence and worsening security situation. Drawing on interviews and chats with
involved actors the paper explores which new possibilities arise from technolog-
ical opportunities of networking and organizing and how the self-representation
and performances of actors are digital and urban spaces are linked from a theo-
retical view as well as from the actors’ own perspective. Furthermore it aims to
discuss how these processes of positioning shape public spaces and can be seen
as new instruments of power.

Women in the Era of Globalization. An Approach Based on the Study of Female Seasonal Agricultural Workers in Chile

After years of numerous worldwide strategies and policies, implemented by
different public, private, national, and transnational actors, who want to install
a gender and equal opportunities approach for women, what is the final assess-
ment of these practices? What true empowerment and what real capabilities have
been achieved by these different actions? Are there any significant transforma-
tions that we can identify in these attempts?

Some interesting answers to these questions can be found in the case of fe-
male seasonal agricultural workers. After going through a process of proletarian-
ization and insertion into, by definition, precarious and unstable work, numerous
changes have affected their social, economic, cultural and domestic environment.
These include access to a consumer society, participation in new networking and
the sharing of responsibilities in the family area. But in a context of great inequal-
ity and precariousness, how can we talk about empowerment and capability?

Purposes and Rationalities in a Globalized and Multicultural World. A Study of the Agricultural Sector in Chile

In the summer of 2011, a massive protest wave emerged in Tahrir Square and the emergence of the American Occupy Wall Street movement, Israel experienced a massive protest wave. However, unlike Egypt and the US, at that time Israel did not have any political, social or economic difficulties. In fact, by most objective parameters, this was a relatively calm period. Yet the protest gained unprecedented attention and participation. Based on social movements, political process theories and public opinion data collected in the framework of the monthly Peace Index and the annual Israeli Democracy Index run by the author, the paper will examine the reasons for the unexpected momentum of this protest campaign; and analyze the public assessment of the 2011 protest ex post facto. The main argument here is that the 2011 protest popularity on the one hand and its negligible results on the other are two sides of the same coin. Dissatisfied with the government performance and motivated by their perceived political inefficacy and simultaneously fascinated by the political and social transformative ideas, rhetoric and activities of the Arab and Western protest campaigns of the time, the Israeli masses filled the streets of Tel Aviv from July to September 2011. However, the data suggests that the protestors were not “hungry” for substantial social, economic and political changes. In fact, they had national (Jewish) and (middle) class vested interests in the maintenance of the socio-political status-quo, as was manifested later in the 2013 parliamentary elections. Because of this duality, significant social dissatisfaction together with strong motivation to change the socio-political superstructure, despite certain similarities, unlike the Tahrir and Occupy struggles, the Israeli 2011 protest did not and could not have produced a clear transformative agenda or action plan.

Dissatisfied But Not Enough – Israeli Protest Of Summer 2011

Internationalization of Knowledge Work in Argentina: The Case of ‘Global Professors’

Globalization has changed the world in many aspects relevant for professors and ‘knowledge workers’, such as professors and teachers. One of these aspects is linked with higher education and its internationalization process. The configuration of the educational sector and the increasing necessity of ‘symbolic analysts’ and other ‘knowledge workers’, who can manipulate and manage the proper codes required for production today, are part of a development that calls for permanent and higher education to foster production and social reproduction. These global processes significantly increase the need for ‘knowledge workers’ and for cross-border higher education, and subsequently this may cause conflicting interests between local education institutions and transnational providers. In addition, lifelong training is increasingly required, such as postgraduate and professional courses in a wide range of areas. Taken together, these are major reasons for a new emergent type of a ‘global professors’ in 21st century. A growing number of professors are working in different countries but without moving; moreover, as virtual tutors or professors they are teleworkers in the information society. This paper will discuss this new reality in Latin America, specifically focusing Argentina.
International Learning

Globalizing the Classroom: Innovative Approach to National and International Learning

This essay examines an innovative approach to teaching globalization and assesses a course on Globalization, Social Justice and Human Rights co-taught collaboratively by faculty from different campuses and countries since 2009. This course was created to address unmet needs in the traditional higher educational systems; the lack of cross-cultural and interdisciplinary collaboration among students, faculty, and institutions to examine recent forms of globalization. Whereas economies, policies, environments, and human societies are experiencing great connections across the globe, the educational system continues to be modeled on Nineteenth century assumptions and structures. Faculty teach at their respective universities but use an on-line platform to allow for cross-campus communication. In addition to the classroom rooted in a physical place, a major component of students, faculty, and institutions of this course is inter-campus collaboration. The students of each teaching team were paired with students on other campuses, including undertaking collaborative group work across borders. A shared core syllabus can be modified by institution to satisfy local needs. We examine the following: the logistics of this course; the obstacles and possibilities in its implementation, including the use of technology; the role of language and communication, and; mechanisms for adapting faculty participants’ needs to local curricular guidelines. We also address the benefits of the course for students, such as exposure to a multicultural educational experience, and for faculty participants, such as exposure to different teaching methodologies and interdisciplinary communication and collaboration. We also assess the challenges for faculty in designing and managing a course on different time zones and academic disciplinary communication and collaboration. We also assess the challenges for faculty in designing and managing a course on different time zones and academic disciplinary communication and collaboration. Accordingly, we use a broad range of criteria to assess the success of this course, which are related to improving and innovating approaches to teaching globalization.

La Industria De La Migración En Los Flujo De Trabajadores Temporales Legales De México a Estados Unidos

La producción de la migración internacional, ya sea como movimiento colectivo o acto individual, no solo es resultado de las grandes desigualdades económicas entre países. La migración también requiere de intermediarios que ponen en juego saberes e infraestructuras que vinculan efectiva y eficientemente a empleadores que buscan un lado, y trabajadores, por el otro. Definimos a este conjunto de intermediarios como la industria de la migración. Aunque es comúnmente asociada con las migraciones indocumentadas, la industria de la migración también está presente en los flujos autorizados por el estado, sean éstos permanentes o temporales. En este trabajo analizamos el papel que la industria de la migración juega en la organización del flujo de trabajadores mexicanos a los Estados Unidos, bajo el programa de visas temporales H2. Si bien el programa de visas H2 es un programa del gobierno norteamericano creado para suministrar trabajadores de baja calificación a la agricultura y otras industrias intensivas de mano de obra, el manejo práctico de dicho programa está en manos privadas. La administración práctica de este programa inicia con un conjunto de agencias estadounidenses que certifican, a nombre de los empleadores, la “escasez” de mano de obra en determinada industria y región de la Unión Americana. Estas mismas agencias colaboran con contratistas mexicanos y norteamericanos para anunciar, seleccionar, y contratar a los trabajadores mexicanos que les han contratado. En este trabajo analizamos a los actores que conforman el ecosistema de la migración, los intermediarios que dan forma a este mercado, y algunos de los efectos que tiene para los trabajadores que migran.

Transnational Labor Collaboration: Mexico Union’s Perspectives and Experiences

The study of transnational collaboration in social movements has a long tradition, yet a focus on labor union solidarity across borders is rather recent and, surprisingly, there is very little cross continental fertilization among scholars. In this study, I seek to bring together scholarship from the Americas and Europe as I endeavor to understand the experience Mexican labor unions have had with transnational labor collaboration. I contribute to our understanding of transnational labor collaboration by viewing it from the perspective and experience of unions in the South. Through interviews with 27 leaders of 16 unions, both corporatist and independent unions, offer a broader picture of the factors that influence transnational labor collaboration. Unlike previous US scholarship, I do not only study independent unions, but also corporatist ones. Rather than select the enticing cases, I use a sample of various kinds of unions in Mexico, and explore what is their experience and view of transnational labor collaboration. This approach allows me to unravel more complexities in our understanding of transnational labor collaboration. Supporting earlier findings, I identify internal, external, structural, and economic factors influencing the possibility and shape of collaboration. However, I pay closer attention to ideological factors than has previously been done. This research also permitted me to explore the difference between corporatist and independent unions’ transnational relations and the way national-level disagreements among unions and intra-union tensions play out at the international level.

Aesthetic Proximity and Performance Among “Hatsune Miku” Cosplayers in Japan

“Cosplay” is an activity popular among Japanese youth where somebody dresses-up, in the most of the cases, as a fictional character. I focus on those cosplay performances on the character named “Hatsune Miku”, a voice synthesizer presented as a female fictional character developed by “Crypton Future Media”, under the concept of a “virtual idol”. This synthesizer uses the “vocaloid” technology developed by Yamaha Corporation and is used to “sing” the songs produced by her users. However, unlike many other popular characters, Hatsune Miku is characterized by her offer of a creative. Nevertheless, instead of lose “reality” because of this “lack”, is precisely thanks to this characteristic that she has the versatility of appear in many media (mainly User Generated Media) and be used freely in many different ways, becoming a perfect icon of the “Participatory Culture”, as imagined by H. Jenkins (2006). The particular kind of reality that supports her success as a “virtual idol” is described following a “character-entertainment theory” proposed by G. Ito (2005). In my study I analyze the role of this kind of reality among Miku’s fans in Japan, departing from Ito’s theory of “Kyōra”. However, while Ito’s theory is centered on iconic futures of Japanese comic books (manga), I will adapt his theory into a wider use of the “Kyōra”, and particularly its performative use in the cosplay. For this aim, I will move from the textual iconicity focused by Ito, towards the idea of “aesthetic proximity” as suggested by Sandvoss (2005a, 2005b) in the study of fan affectivity, and therefore, focusing not on the “visual” but on the “aesthetic” dimension of popular culture. As a result, my aim is to present an example of how character’s “reality” is built through social practice in the particular case of contemporary Japanese cosplay culture.
in the eastern and western corridors of the U.S.-Mexico border? Who are the migration entrepreneurs that facilitate and develop the infrastructures of migrant mobility? How do segments of the migration industry of migrant mobility go from being a bastard institution to become a legitimate institution? What differences and similarities exist between the industry and infrastructures of migrant mobility of the Monterrey-Texas and Tijuana-California migratory corridors and what accounts for them? We answer these research questions using data from a multi-year ethnographic and qualitative study of transportation networks on both sides of the U.S.-Mexico border.

By introducing a typology of actors that traces their careers (Becker, 1956) previous their entry to the Secretariat, this case study underlines the criteria employed for the appointments at the levels of Secretary, under-secretary and director. From this typology, an initial assumption can be made: the logics of bureaucratic appointments in the Secretariat depend not only on the appointees’ affiliation to Correa’s party, Alianza País, but also on their involvement in the social movement organizations mobilized for the migrants’ cause.

Relying on this tableau of actors, a detailed analysis will be presented shedding light on how the appointees dispose of a specific set of capitals (Bourdieu, 1972, 2004). practices and representations of the migration issue that allow them to shape the design of the nascent institution and the implementation of the Ecuadorian migration policy. It is finally through the lens of bureaucratic appointments that we will have a powerful entry point to further understand the interactions between the political and social movements spheres and their effects on the re-shaping of the bureaucratic field during the Correa administration.

This paper is empirically based on a six-month field research at the Secretariat carried out from June to November 2011 and a series of 30 interviews with high officials of this institution.

HERRERA-VEGA, ELIANA* (University of Ottawa, eherrera@uottawa.ca)

Consequences of Newer Media of Communication within Economy As a System

In order to understand the future of economy as a social system, my research revisits a theory of media from the general perspective of communication and retracts the first accounts of generalized symbolic media in the form of money, payments and today’s nexus of exchange, as initially described by Marx and later by Adorno. Second, the piece studies how monetary economy includes within itself its own institutional and social organization. The third part of the paper describes the epistemological transformations that are required. In effect, the current development of autonomous systems asks for different methodologies and epistemological perspectives in order to observe and decrypt the new landscape arising from the way in which society has evolved.

Increased reflexivity within system’s production (Luhmann, 1995) has important consequences in respect to the communication flow in society. What are those consequences? Wilke (2007:14) envisages the market within a variety of mechanisms to ensure coordination and cooperation. Nevertheless, disembodied media of communication may have erosive effects upon previous modalities of coordination and cooperation. In what extent the recent developments of derivatives and newer media of communication within economy renew Marxist perspectives of refication?

Concluding, a comparative analysis of the communicative power of distinct media of communication must be part of economics. This supposes an enlargement of communication as a field in order to comprehend the distinct systemic varieties of communication at stake, the diverse semantic and practical purposes that they serve, and the possibility of overlapping communications that create further risk.

() The concept of nexus of exchange is found in Marx, Karl. (1858). Second Draft of Critique of Political Economy. MECW Volume 29, pp. 430-507.

Functional Differentiation and Communication Problems

This research deals with the necessity of a transformation of the dominant paradigms for observing society. It builds from N. Luhmann theory of social systems. The problem is dealt with using cybernetic theories of social communication that are used to advance selected case analyses.

I first deal with the fragmented state of scientific production, which I explain as a side-result of functional differentiation. I describe this as a case of incomplete rationality that has consequences for the level of human agents and for the level of systems’ communications.

I then postulate that structural changes force any serious social epistemology to include the notion of functional differentiation, in order to account for newer epistemic forms of agency such as organizations that exist at a level of praxeological equality with human beings.

The situation of newer epistemic forms has profound consequences for all the concerned levels. On the one hand, in respect to the level of direct human agency, the fact of emergent modalities of agents forces a reconsideration of the differentiated perspectives of agency (Collins, 1992). Anthropic perspectives are refused by those newer epistemic forms, jeopardizing the former centrality of the human subject in the making of society. On the other hand, in respect to the side of techno-systems and their increasing reflexive features, a reconsideration of

* denotes a presenting author. Abstracts are organized by first presenting author's last name. 381
Shaping National Borders and Imagining National Belonging

The implications of my research are 1. A decentring of the anthropic perspective to understanding complex social communication. 2. A revision of determinist views to ascertain conflicts in social systems' communications. 3. My research offers a practical approach to maximize the possibilities that direct human agency has to circumvent stabilized communications in social systems. Finally, the piece offers new venues to understand the relationship between human agency and systemic stability.

HERRON, MELINDA* (The University of Melbourne, mherron@student.unimelb.edu.au)
Cosmopolitanism in a Changing Political Landscape: Making Sense of Cultural Difference and Belonging in an Australian School

With the recent change in federal government, Australia is currently experiencing a conservative nationalist turn. Xenophobic, anti-immigration debates abound about how cultural diversity and difference will lead to the demise of ‘Australian’ national identity, values, social cohesion and security. Whilst this political discourse has marginalised post-national sentiments in dominant media, does this align with how culturally diverse communities orient toward cultural difference and belonging in the everyday? The City of Greater Dandenong in the outer suburbs of Melbourne is one of the fastest growing, most culturally diverse regions in Australia. Dandenong government schools, micropolitics of the wider community, are key sites where issues of race, cultural diversity and belonging are experienced. Normative cosmopolitanism offers an alternative discourse and a competing resource for the imagination toward targeted educational and cultural interventions in school communities. Whilst cosmopolitanism has currency as a valuable ethico-political ideal for contemporary transnational and global ways of life, it has faced criticism as unrealistic, elitist, consumerist and western-centric. Based on fieldwork in a Dandenong high school, this paper considers how students and teachers interpret and interact with nationalist, cosmopolitan and other post-nationalist discourses in making sense of how they live, belong and get along in a complex, culturally diverse school community and their wider worlds. In light of debates over whether grassroots, vernacular forms of cosmopolitanism manifest in commonplace encounters with difference and diversity, this paper provides insight into whether students and teachers in this school create an everyday cosmopolitanism on their own terms – independent of the ever-shifting ‘flavour of the month’ political and institutional discourses.

Shaping National Borders and Imagining National Belonging through the Professional Practices of Asylum

This paper is part of an ongoing ethnographic study of the Dutch asylum process. I explore how competing professional practices of the ‘asylum procedure’ shape a specific kind of (national) border-performance and works to produce images of national belonging. Non-Western migrants pose a dilemma for ‘nation states’ leading to a manifold of control measurements and monitoring strategies. In part this dilemma is dealt with in and through an asylum procedure that incorporates both the compassion-ate promise to protect ‘authentic refugees’ and repress a complexity of differently classified non-Western migrants. In this spatio-temporal asylum process the asyl-um applicant resides in a liminal manifold of interaction, in which professional negotiations and visualizations of ‘deservingsness’ unfold between legal representa-tives of asylum applicants and well-trained IND officers representing the state. Such asylum practices can be understood as particular ways of performing the border (cf. Green, 2010). While, often, national borders are taken for granted as stable, fixed and as an ever-present reality, a national border is dynamically made and unmade, present or non-present. The presence and making of the border is a question of different paths along which an individual are placed and regulated. In light of new concerns (Ion, 1997) Through the analysis of a local organization aimed at promoting, however, notably in policies to advance women's rights, since legal marriage enables each partner to assert his or her rights, if necessary through the courts. But why are women opposed to this practice in different populations? Is marriage always a factor of progress for women? To what extent does it challenge the traditional leeway of women to manage their conjugal life, for instance to dissolve their union? Are the rights associated with civil marriage always more profitable to women than the flexibility of the “de facto” marriage? Are these rights consistent with local reality or do they correspond more to principles with no practical application? We will examine these questions on an empirical basis, using a small-scale and longitudinal research in rural Mali, implemented in 1987-9 and updated every 5 years (the last in 2009-10). Quantitative data come from an exhaustive life event history survey that was carried out in two villages (1,750 inhabitants in 2009). Qualitative data include a corpus of individual interviews (65) on the family interactions experienced at different periods of life, and 7 interviews on marriage legalization (6 with focus groups + 1 with the judge in charge of divorce and family affairs). In line with women's perceptions that civil marriage is a brake to marital rupture, quantitative results confirm that divorce is rare in case of legal marriage, while it is comparatively rare for the people in the city and other women (first marriage) otherwise. The paper will show that legal marriage can increase gender inequalities by making it more difficult for women to dissolve a union, while failing to provide them with rights that are suited to local realities.

Le Paternalisme Recyclé. Le Cas D’un Projet Minier Au Pérou

Le paternalisme comme système total régressant la relation entre employeur et salarié a été aminci à la sueur de l’industrialisation et du travail salarié en Europe. À travers ses différentes caractéristiques et ses différents usages, encadrement de la population marginale, outil de fidélisation et de discipline, univers clos, outil de contrôle social et politique permettant de faire écran à l’Etat et aux luttes sociales, ce système demeure au travers de relations plus complexes et d’acteurs nouveaux.

Nous observons ce système de domination au Pérou, où certaines entreprises minières ont un contrôle non seulement sur leurs salariés, mais sur l’ensemble de la population avoisinant le projet minier.

Nous voulons étudier la relation entre l’entreprise minière Suive Xstrata, et la communauté paysanne de Furabaamba au Pérou.

Les minières, au Pérou, ont adopté des techniques pour fidéliser et discipliner les travailleurs: territoire communal, l’entreprise développe des stratégies d’adhésion à son modèle, notamment à travers le système de Responsabilité Sociale.

Le paternalisme n’est pas, ici, uniquement la prise en charge des employés par l’entreprise. En système intégré les habitants de la communauté (fidélisation, dépendance, distraction, suivi « social », sponsoring, etc.) pour le bon déroulement de son projet.

Ainsi, l’entreprise remplace l’Etat, crée son propre marché du travail, emploie les habitants de Fuerabamba, offre des bourses aux jeunes, propose des formations et des ateliers, (ré)invente des traditions et des concours de danses traditionnelles, promeut le développement dans la communauté et s’impose comme un modèle, notamment à travers le système de Responsabilité Sociale.

Le theoretical and empirical claim is that refugeem as location and as identity is a liminal arena that both enables an examination of women’s experience and offers a new viewpoint for understanding Jewish and Palestinian societies as well as women’s experiences. My argument is twofold: first, women’s multi-faceted marginal location within both Jewish society and their own society enables them to challenge both societies.

Second, internal refugee status for the second and third generations of Palestinian society, in Israel, has become a category of identity alongside national, ethnic, religious and gendered categories. It is an identity category through which existential experiences are interpreted, and a collective, familial and personal his- tory is constituted. Like national, ethnic, and gendered identity, this category is also subject to constant negotiations and contestation over its boundaries and meaning, but is unique in its location. From the woman refugee’s position somewhere/nowhere, women are able to develop a strong political critique towards their own society (Palestinian within Israel, in the Occupied Territories, in the Diaspora) and toward Jewish society.

Re-Membering the Past: Biblical Archaeology Between Secularization and Religionization

Secularization and religionization are concepts that continue to arouse much debate. This paper focuses on the societal level mainly in terms of institutions and norms. Our theoretical presumption is that both “religion” and “the secular” are not universal nor essentialist entities, but rather contingent dimensions of social life that are embedded in time, place, and changing historical circumstanc- es. Moreover, they are based on continuing social processes of separation and hybridity between these social categories. This mandates examination of religious and secular institutions (such as state, science, nationality) as relative dispositions and strategies for action in historical perspective. Our case study is the changing attitudes toward the Old Testament that reveal the pendulum between secularization and religionization and, at the same time, unveil the hybrid nature of the categories of religion, secularity and nationalism.

Traditional religious appreciation of the Old Testament by the three monothe- istic religions was disrupted by the secular school of biblical criticism that flour- ished in Germany from the mid-19th century and challenged the historicity of the biblical narrative.

A counter movement of biblical archaeology rose at American Divinity Schools in the early 1920s aimed at refuting the secular biblical criticism claims by excavat- ing sites mentioned in the Old Testament and thereby testify- ing to the historicity of the biblical events. This approach was enthusiastically adopted by secular is- raeli archaeologists in the newly established State of Israel. The collective memory of the religious biblical stories strengthened national cohesion.

Since the 1990s, the pendulum has swung toward a critical view of the archaeolog- ical data. Secular scientific archaeology rejected the shackles of religion and national concerns.

Tourism in Vulnerable Coastal Areas: Towards a More Resilient Wadden Area

Coastal areas are extremely interesting regions to examine, since a large share of the world population lives in these areas, despite threats caused by climate change and sea level rise and their consequent state of vulnerability. This research aim is thus the following question: how can vulnerable coastal areas make a transition towards areas that are more resilient and better prepared to cope with unexpected ecological, social and economic changes in the future? In this paper the concepts of tourism, complex social-ecological systems, resilience and planning will be illustrated by the case of the Dutch Wadden area, which is one of the largest tidal wetlands in the world and was enlisted as UNESCO World Heritage in 2009.

This paper will be organized in three parts. First, we will examine the concept of tourism and indicate where the academic gaps and shortcomings regarding tourism in vulnerable coastal areas can be found. Second, we will look into why, and in what ways, a complex adaptive systems approach - like a social-ecological systems approach - can be useful in analyzing tourism in vulnerable coastal areas in order to overcome the traditional separation between ecological and social sciences (Liu et al., 2007), to examine tourism in a more systematic way (Ruiz-Ballesteros, 2011) and to find ways to develop and protect at the same time.

Third, the paper will describe governance perspectives that contribute to understanding and managing complex issues like tourism in vulnerable areas through different scales. Planning is important and has to be done carefully, since tourism in coastal areas is very sensitive to environmental development, but at the same time an agent of disruption or destruction (Getz, 1986). By means of this paper, we will eventually provide theoretical lenses for looking at the Dutch Wadden area and other vulnerable coastal areas in the world.

Reclaiming Democracy: Popular Participation of the Left and Right in Venezuela and Bolivia

Participatory budgeting (PB), a practice that gives urban residents control over local budget decisions, has spread to hundreds of cities in Latin America and around the world since the 1990s. PB was originally closely tied to a Left political agenda; the most radical proponents of PB envisioned it as a tool that could be used to form a new socialist revolution by the working class. In Bolivia, PB was championed by Evo Morales. While PB has most often been initiated by Left parties, there are a number of cases of PB in cities controlled by centrist and right-wing parties. For the most part, scholars have failed to grapple with the question of “right-wing participation”, and many scholars argue that participatory reforms, such as PB, can only succeed when a Left party is in power at the local level.

In this paper we explore the possibility of PB in cities run by the Left and Right in Venezuela and Bolivia. We expected to find more successful PB in my two Left cases. Surprisingly, I found robust participation in my Left and Right Venezuelan cases but limited participation in my Left and Right Bolivian cases. I was also surprised to find greater success in my Venezuelan cases given the greater strength and autonomy of social movements in Bolivia compared to Venezuela and the direct trajectory through which Hugo Chávez and Evo Morales rose to prominence (Chávez through a failed military coup and Morales through social movements). I argue that these unexpected findings can only be explained by examining the relationship between local and national politics in Venezuela and Bolivia.
social rights of citizens, the latter highlights the protective role. Even though the war ended in 2009, public discourse continues to be dominated by security issues. Persisting ethnic tensions in the county feed into the dominant discourse, relegating social policy issues to the background.

**Issues in School to Work Transition in Sri Lanka**

The transition from school to work has become more complex in recent years due to both the changes in the education system as well as the dynamics within the labor market. This paper, first provides an overview of the above changes based on secondary data drawn from various institutions and then examines how young people in Sri Lanka fit into both the education system and the labor market in the light of data drawn from the national youth survey of Sri Lanka conducted in 2009 under the direction of the authors.

As is evident from the survey data, the desire on the part of the youth in general for securing educational credentials remains strong, though the opting out of education at secondary level is also increasing, particularly among male children. This tendency appears to be related to labor market dynamics as well as poor prospects for employment among youth with higher levels of education. Domestic labor shortages and increasing overseas employment opportunities for people with low levels of educational attainment persuade young people to leave school early. The paper discusses the implications of the above for skill formation in a country that strive to achieve a higher level of economic development in the years to come.

**Statistical Methods and Network Simulation: The Role of Limited Information in Edge Formation**

Snijders et al. (2009, 2013) have contributed to an approach integrating agent based models and empirical network data in which instead of empirical data “validating” the simulation, the simulation estimates the empirical parameters. One assumption is that agents have information about the other actors in the network, i.e. that any two agents could potentially form a tie. This assumption means that the model is limited to modeling relatively small empirical networks. Another potential solution is to consider how information about potential matches might be limited. In a loosely related area, Bearmann et. al. (2004) looked at the potential generating mechanisms of a specific type of social network: sexual histories. They found that limiting potential matches (excluding those close to one’s network) generated social networks that closely matched empirical data.

We use agent based simulations to consider the effects of assuming full versus limited information in evolving social networks. First, we limit information in a network’s evolution based on the existing network, partitioning the list of potential new friends between those within one’s local network (e.g. 3-step acquaintances) and a small sample of strangers. We test whether limiting information about potential matches generates more realistic graphs in terms of the average path length, clustering, edge distribution, and connectivity, as community size increases. The question of limited information is then extended to sexual history networks, again, partitioning potential matches into those in one’s local network and a small sample of the general population. The evolution of social networks is based on an exponential graph models while the sexual histories implement a network, again, partitioning potential matches into those in one’s local network (e.g. 3-step acquaintance). The major findings are summarized below. First, although instructors find difficulty stepping into these youths’ private lives because of limited authority. Second, if young people lack basic social skills, such as taking a bus or train, they have difficulty stepping into these youths’ private lives because of limited authority.

**Global Academic Participation: Opportunities and Threats**

A recent Japan initiative, "Global 30 Project for Establishing Core Universities for Internationalization," aims to recruit 300,000 additional students from outside Japan by 2020 to study in English, and to send more Japanese students overseas, mainly to English-speaking areas. These and other developments are a response to decreasing numbers of Japanese students studying abroad, and demographic shifts domestically.

Gradol (2007), presenting a comprehensive survey of global trends involving English language education (ELE), outlines a strong economic correlation with language learning. This economic imperative has influenced some Japanese companies to follow such as Uniqlo and acquire higher English proficiency from a number of their workforce. This indicates a change in attitudes to the professional use of English in the workplace, but may not be matched by institutions of higher education in Japan. Yamagami & Tolfesson (2011) report that globalizing forces can offer opportunities and threats for global non-native speakers of English.

A higher educational approach promoting awareness and skills necessary to be global, are keys to gaining access to predominantly English academic discourse. Such access can lead to the sharing of common life goals and more specific participatory mechanisms across national boundaries and cultures. The promotion of both global awareness and skills, based on Steiner’s three-tiered model of social life development, involves discipline-specific information exchanges and knowledge-sharing, specific genres, highly specialized terminology, and a high level of expertise (Swales, 1990).

Content and language integrated communication learning or CLICL, prioritizing academic literacies and discipline-specific content, provides learners with knowledge, skills, and life values enabling them to be mobile in local and global contexts, including academia. Our paper provides an account of CLICL, which balances academic literacies and discipline-specific knowledge, skills, and values. We outline the practicalities that nurture CLICL, or lead to its rejection.

**The Changing Significance of Social Class in Later Life**

During the 1980s the concept of class constituted a fundamental touchstone of social gerontology. This was especially true within the political economy approach to class, focusing on age, however with the development of new paradigms of the class of a later age this concern was overshadowed by engagement with other stratification orders. This has had the consequence of leaving class analysis “surprisingly underdeveloped”. Although the field does at times focus on the social background of older people, the arbitrary implementation of Marxist or Weberian standpoint informs us only of the extent that older persons comport to middle-aged norms rather than shedding light either on the unique character of class relations in later life. Moreover, tracing the class position of older people back to the breadwinners’ final occupation does not really account the reality of older people’s connection to class. This ‘modernist’ strategy contains crucial analitycal and empirical lacunae. For instance, whilst it may have been valid in the past when most individuals died either before or soon after statutory retirement age, nowadays retirement generally signals the start of a ‘third age’ phase of life. Moreover, instead of an ‘add and stir’ approach to class where age is ‘added on’ to individuals’ social positions, informing us only of the extent that older persons comport to ‘older’ men and ‘older’ women when they are addressing the linkages between ageing and class. This presentation will introduce the key themes of power identity and lifestyle as they connect to class in later life and assess the extent to which social class is a useful category in studying old age.

**How Can the Public Service Improve the Uncertain Transition of Youth into Adulthood? a Case Study of Educational Support Centers in Japan**

In Japan, the uncertain transition into adulthood for some young people is recognized as the problem of futoko: a term that refers to youths who have been absent from their school for over 30 days in a single year. A person with experience of futoko tends to have difficulty in advancing to a higher education or obtaining a job, and may become isolated from society. Futoko shares similarity with hikikomori, as both refer to a youth’s withdrawal from the public sphere. In contrast to hikikomori, however, futoko youths are formally registered in school, and the educational administration agency therefore attempts to become involved with them.

This paper examines the governmental service for futoko adolescents, with the aim to clarify the factors constraining the transition of this age group to school or work. We focus on the Educational Support Centers (ESC) program, which is the most extensive and longest-running policy of Japanese Ministry of Education for futoko juveniles. Futoko has been a topic of interest for many Japanese sociologists, however ESCs have received little attention to date. Using interview data from instructors of ESCs in four cities, we examine how the staffs approach futoko youths.

The major findings are summarized below. First, although instructors find young people lack basic social skills, such as taking a bus or train, they have difficulty stepping into these youths’ private lives because of limited authority. Second, if young people lack basic social skills, such as taking a bus or train, they have difficulty stepping into these youths’ private lives because of limited authority.

Civilt-Military Gap in Japan: Comparing the 2004 and 2013 Surveys
-- CANCELLED

This paper compares two surveys conducted by the authors in 2004 and 2013 which looks at the possible “civil-military gap” in Japan. These surveys, modeled after the TISS survey, were the first academic attempt to examine the attitudes of Japan Self Defense Force (SDF) officers as well as civilian elites in Japan. In the 2004 survey, we found that (1) SDF officers were more conservative than the civilian elite, (2) on US-Japan alliance issues, there were no evident gaps between the officers and civilian elite, while there were signs of gap with the general public, (3) SDF officers long for a greater role in the policy making process. Events that took place between 2004 and 2013, including the SDF dispatch to Iraq, the end of the conservative party rule in Japan, and the 2011 earthquake and the disaster relief efforts by the SDF, suggest that there may be a change of attitudes among both the SDF officers and the civilian elite. A second survey is to be conducted in October 2013, and this paper will compare the 2004 and 2013 survey results to examine whether and why there may be changes in the “civil-military gap.”

Contested Spaces. Informality, Dwelling and Spatial Governance in Berlin

This paper examines the intersections between informality and the governance of space in Berlin, Germany. In particular, it examines practices of dwelling, in which permanent residency does not fit neatly into the logics of formal planning processes in order to discuss the possibilities and delimitations that people experience when living beyond the law. In Berlin, research on urban development has frequently been framed through debates on neoliberalism and a series of interdependent developments such as gentrification, urban entrepreneurialism or increasing socio-spatial inequality (Mayer 2009; Holm 2010; Bernt 2012). While these debates focus mainly on the enclosure of space, a series of postcolonial approaches have developed an analytical toolbox that helps to consider the ways in which cities are shaped through the everyday lives of their inhabitants. Here, the urban is seen as “a site that is not just inhabited but produced through that inhabiting” (McFarlane 2011: 651), a site that is neither ossified nor stable, but open to political transformation. Drawing particularly on Bayat’s (1997, 2000) notion of ‘quiet encroachment’, which describes the quotidian and longsomed advancement of the poor, these frameworks will be used to compare processes of regulatory enforcement in three urban typologies, in which people informally inhabit space: ‘Schrebergärten’ (best translated as allotment gardens), camp sites and ‘Wagenburgen’ (best translated as trailer encampments). Even though the retreat of their inhabitants into sheds, vans or camps could simply be interpreted as an indication of socio-spatial marginalisation, I set out to explore, if the infiltration of planning law through their informal dwelling practices could similarly be understood as a sign of enclosure. In sum, I highlight both enabling and destabilizing aspects of these processes: While residents find opportunities to claim urban spaces and sovereignly influence their experience when living beyond the law.

The Rules That Govern Peoples Lives: Informality in Tallinn, Bafatá and Berlin

Urban research has long related informality to a lack of state capacity or a failure of institutions. This assumption not only lacks attention to the heterogeneous logics and relations through which informality is produced by multiple actors in- and outside of the state, it has also created a dividing line between states. Whereas some states are understood to manage urban development through a coherently functioning state apparatus, others presumably fail to regulate. To unpack and reframe such understandings this paper offers a theoretical exploration into the ways in which informality is infused in contemporary urban development in both the north and the south. Based on a comparison of three case studies in Tallinn (Estonia), Berlin (Germany) and Bafata (Guinea-Bissau), our line of argumentation focuses on the ways in which local state agencies are entangled in the workings of informality. Drawing on these cases, we suggest that if we seek to account for the similarities and differences in the informlization of cities across the globe we need to reconsider the role of states. First, state institutions shape urban development through everyday negotiations, legal incoherencies and regulatory ambiguities. Second, people’s lives are not only governed by the state, but also by alternative forms of rule and institutions that exist beyond the state. It follows that allegedly informal processes can similarly be understood as a form of formality, while what appears as formal might work through multiple informal relations. Our comparison, then, aims to work towards an understanding of informality that is more attuned to the multiple roles adopted by different actors involved in urban processes and the power relations that are mobilized in this process.

A Tale of Three Villages: Boom and Bust Experienced at the Local Level in Rural England

The paper compares and contrasts three English, rural villages, each with different low-skilled rural populations that have influenced their social histories: one geographic proximity to Southern UK cities (for commuting purposes); another offering a heritage site (several buildings and ruins of historical note) and; finally one with geographic characteristics that brought a large-scale industry temporarily to the village, but only to depart with similar rapidity. Through a comparative analysis, the paper considers the impact of these individual circumstances for each village before and after (in the modern-day context). It draws upon a portfolio of evidence including macro contextualizing background information and also ethnographic research datasets. This seeks to capture an insider perspective, whilst recognizing villages contain different social class groups and are not immune to global influences. It then questions the sustainability of each of these periods of boom and bust. What implications does each model hold for their respective village? Who benefits from each of these three differing circumstances – local, regional or national (or even global) interest groups? What lessons can be learned from local adaptability and resilience? The paper finally seeks to comment on the theoretical model best suited to capturing the complexity of rural villages. Are you defined by where you live, as some sociologists have recently argued? Or does there remain something sociologically significant about the social situation as grounded by the local level? This analysis places economic trends and changing circumstances as experienced and also informed by local, community-level social actors.

What Facilitates Moving from Urban Cities to Rural Depopulated Villages?: “I-Turn” Phenomenon in Ayabe City, Kyoto Prefecture, Japan

The Japanese countryside is suffering from severe aging. Due to the lack of job opportunities, many young people migrate from their home villages, leaving the elders in difficult living environments. Moreover, according to government reports, 423 villages will be depopulated within the next 50 years with the decline in population. However, in some villages in Japan, some people living in urban cities are willing to move their residence to those depopulated villages. This movement is so called “I-turn” phenomenon. In this report, I use data from my fieldwork, which includes a case study and social surveys of Shigasato town, Ayabe city, and Kyoto prefecture in Japan. Shigasato (1,444 people live in here) town has warmly invited about 40 families in the last 10 years. Almost 10% of their population is “I-turn” residents from other urban cities in this town. What kind of social factor fascinates these “rural-oriented” people in Japan? Answering from my studies, 2 factors are accountable. First, Shigasato Town has plenty of “bridging” social capital (Putnam 2000). Shigasato’s local neighborhood association called "KODAKARA-Net" hold various events of cultural exchange with rural residents, which minority members can acculturate politically (e.g. integrate, assimilate, or separate). Employing at least 50 workers of whom a disproportionate share are low-skilled. It is found that there are significant differences between the industries (mainly across the manufacturing-service axis) with regard to “normal” exit age, adopting measures that promote employability of low-skilled workers and the interest in retaining workers until standard retirement age (or even beyond). Furthermore, these suggest that firms have indeed modified their behavior towards older low-skilled workers and have become more responsive to their needs, i.e. the quest to stay on in the job longer in order to prevent pension cuts. Those workers who actually made it until standard retirement age are often eager to return to their former employer to increase their public pension by working temporarily or part-time.

HINDRIKS, PAUL* (Utrecht University, p.hindriks@uu.nl)

It Takes Two to Tango: Dutch Majority Group Evaluations of Muslim Political Acculturation

Explanations of the degree to which ethnic minorities are included in a national political system typically concern either the institutional build-up of a nation (e.g. electoral systems, seats in parliament reserved for ethnic minorities), or characteristics of individual minority members (e.g. gender, education, social capital, political orientation). While these explanations are very valuable, they ignore the pivotal role played by the ethnic majority group. After all, minority groups and their individual members become politically active in the face of constraints presented by the political system – a system that is shaped by the rule of the dominant majority group. In other words: it takes two to tango. Drawing from Berry’s seminal work on cultural acculturation (Berry, 1997), we formulated different ways in which minority members can acculturate politically (e.g. integrate, assimilate, or separate). Employing representative samples of Dutch majority members (N=802 and N=928) we then conducted two vignette studies in which Muslims, the most prominent minority group in the Netherlands, were the target group. In addition, we considered the roles of perceived threat and perceived political unreliability. The results showed that majority groups’ acculturation strategy indeed affects majority group’s attitudes. Furthermore, evaluations of Muslim political participativa-hist were contingent on the level of perceived threat and political unreliability. The results are, however, not in line with expectations one would derive from cultural acculturation, indicating that the scale for minority representation in the political domain might differ in important ways from everyday ethnic relations.

HINRICH'S, KARL* (University of Bremen, hinrichs@zes.uni-bremen.de)

Labor Market Exit of Older Low-Skilled Workers: German Firms’ Practices

Recent pension reforms in EU countries display two main trends: 1) early retirement pathways are closed and standard retirement age is increased; 2) the contribution-benefit link is strengthened, mainly by calculating pensions on the basis of lifetime earnings. Both developments endanger the adequacy of old-age pensions of low-skilled workers in particular because they regularly attain low lifetime earnings, leave the labor market (much) earlier than (highly) qualified workers, and often have to claim pension benefits before reaching standard retirement age. In the paper, Germany is taken as an example of a country that, for long, practiced premature exit of older workers and had developed an “early retirement culture”. The first part describes and analyzes the pension reform trends and the present employment situation of elderly low-skilled workers. The second part explores in more detail how firms part company with these workers, at what age, and whether firms’ strategies and workers’ preferences have (already) adapted to shifting institutional frameworks. This part is based on semi-structured (qualitative) interviews with human resource managers of firms (manufacturing/service sector) employing at least 50 workers of whom a disproportionate share are low-skilled. It is found that there are significant differences between the industries (mainly across the manufacturing-service axis) with regard to “normal” exit age, adopting measures that promote employability of low-skilled workers and the interest in retaining workers until standard retirement age (or even beyond). Furthermore, these suggest that firms have indeed modified their behavior towards older low-skilled workers and have become more responsive to their needs, i.e. the quest to stay on in the job longer in order to prevent pension cuts. Those workers who actually made it until standard retirement age are often eager to return to their former employer to increase their public pension by working temporarily or part-time.

HINRICHSEN, HENDRIK* (University of Bremen, Hinrichsen.Hendrik@t-online.de)

Sovereign Debt Crisis and Pension Reforms in European Countries

The “Great Recession” and sovereign debt crises in several EU countries in the wake of the 2008 financial market crisis have triggered drastic reforms of old-age security systems. They aim at ensuring the financial viability of public pension schemes in the short and long run and/or at realizing notions of intergenerational fairness. Meanwhile, however, was restructuring fiscal manoeuvres and obtaining financial aid from supranational organizations (IMF, EU). These pension reforms differ from previous changes with regard to the magnitude and the political process. (1) They were large, causing a substantial and immediate impact on the living conditions of present and future retirees and, sometimes, changed the legislative process and are implemented with a short time lag. Hence, they can be considered as “rapid policy changes”. The paper analyses pension reforms in eight crisis-shaken EU countries: Greece, Hungary, Ireland, Italy, Latvia, Portugal, Romania, and Spain. It looks into the reform contents and the circumstances which led to the respective changes or facilitated them. It is shown that the challenges these countries were (or still are) confronted with allowed or enforced alterations which would not have been feasible otherwise or which would not have been initiated by the respective governments in view of the political consequences. Moreover, cross-national comparison reveals similarities and differences and also sheds light on the social consequences that are already visible today.

How Does Participation in Resistance Interact with the Construction of Family Relations? West Bank Palestinians Between the First Intifada and the ‘Post-Oslo’ Period

A large share of the Palestinian population in Gaza and the West Bank was involved in the First Intifada (1987-1993). As a mass movement against the Israeli occupation it was both, shaped by and shaping the construction of family relations and gender roles. In academic literature on Palestine, it has been widely discussed whether the involvement in civil and militant political activities against the Israeli occupation has reduced the patriarchal influence of senior males in favor of a growing influence of juveniles and women within the (extended) family resp. clan (Hamullah). In large parts research focused on the efforts of female integration into ‘committee work’ and the increased familial authority of young Palestinian males (Peteet 1994). The period after the so-called Oslo peace process (roughly after 1995) and the various transformations it entailed for Palestinian society, however, have caught much less attention in research on the Palestinian family.

Research in biographical case reconstructions and participant observation we want to discuss if the societal conditions in ‘post-Oslo’ Palestine have altered the interplay between participation in resistance against the Israeli occupation and the construction of manhood and family relations. Therefore we show the effects that the interplay of involvement in ‘resistance activities’ and family relations yields for the biographical trajectories (Schütze 2006) of young Palestinian males. Looking at the relations of family members from a biographical perspective allows us to reconstruct the changing relevance of family relations in the course of a lifetime as well as the intertwining of family relations with other biographical spheres of action. Our paper is based on fieldwork in the West Bank which is part of our PhD-projects as well as a larger Israeli-Palestinian-German research project funded by the German Research Foundation (DFG) and supervised by Prof. Gabrielle Rosenthal, University of Göttingen.

Women’s Experience of Maternal Morbidity - a Global Meta Ethnography

While the conditions and healthcare women experience during pregnancy and childbirth vary greatly, this meta-ethnography will explore whether there are shared ‘human’ experiences, regardless of inequalities in economies, healthcare resources and the social capital of women in different settings.

Maternal mortality rates vary greatly around the world, 99% of all maternal deaths occurring in developing countries. Improving maternal health by reducing maternal deaths is at the heart of global health policy.

Studies of near miss maternal morbidity, where a woman needs urgent life-saving treatment during childbirth to save her life, have been undertaken in various settings. They are used to understand factors that lead to maternal death and improve care and outcomes for women.

Methods:
Qualitative interview studies of near-miss maternal morbidity from around the globe (including the UK, Australia, Brazil and Burkina Faso) will be reviewed and synthesized using the meta-ethnographic method.

Findings:
There are considerable organizational differences in the delivery of care and social context in which women experience these emergencies; women in Australia and the United Kingdom are giving birth in more individualistic and isolated communities than their counterparts in Burkina Faso and Brazil. Does experiencing an acute health crisis in a first world country where mortality rates are very low vary greatly from experiencing it in a developing country where maternal death is still a common occurrence? How does the ‘social capital’ of women in different contexts impact on the long-term emotional and physical impact of these experiences?

Conclusion:
This presentation will explore what can we learn from shared experiences and whether a synthesis of qualitative research can contribute to improving maternal health outcomes in diverse settings.

ESA The Position Of The Female Gender In The Political Space. An Analytical Biography Access To The Study Of East German Female Politicians Career Chances

This abstract aimed to determine the career opportunities of East German female politicians for the processes of their social and mind-making. The biographical analytical way was selected, because this method does not exclude the “elogio-social” perspective of the female subject in politics and also distinguishes between the different levels of politics. In this regard my research confirmed that “gender” has got a crucial influence on the East Germany politicians careers, especially, when it is cooperation with other categories of difference such as "generation" for “family”. That is why influence of the collapse of the GDR and the follow-

The Collaps of the GDR in 1989- an Analysis of the Political Career Chances Of East German Women In This Time of Change

This abstract aimed to determine the career opportunities of East German female politicians in the time of the collapse of the GDR and consider the processes of their social and mind-making. The empirical basis are 24 biographical interviews with female MPs’ from East Germany. In this regard my research confirmed that the revolution in the former GDR has got a crucial influence on the East Germany politicians careers, especially, when it is cooperation with other categories of difference such as “gender”. That is why influence of the collapse of the GDR and the following transformation processes had crucial influence on career opportunities of East German female politicians be considered. To that extent, the research aiming to show, too how “gender” and “gender differences” in politics are constructed in this time of change. These consequences for their political careers will be demonstrated, too. The abilities which are essential for successful careers if women in politics are discussed. Another focus is paid the specific advantages and disadvantages female politicians have got because of their “gendered” role in the time of the collapse of the GDR, the transformation processes and the reunification in Germany. Besides, it will be shown if and in which way female politicians will be accepted by the male competitions and by the society. Last but not least the consequences of these subjects for the political culture at the present time are also discussed.

Movement for Justice in Labour and Environment - Post Fukushima Labour with Exposure to Radiation

This paper focuses on labour with exposure to radiation in post-accident Fukushima. Radiation related labour includes all the work in and outside the troubled Fukushima Dai-ichi nuclear power plant as well as vast amount of decontamination work around the region. Network calling for justice in working conditions and health with radioactive labour has been set up and is undertaking various activities such as: helping workers in radioactive labour find and join unions and fight for better working conditions, gathering and disseminating information on radioactive labour, and exchanging information with staff members of Ministry of Health, Labour and Welfare, Ministry of Economic Trade and Industry, asking for reform in various policies, and lobbying diet members and their staffs on this issue. This movement takes place at the crosspoint of labour movement and environmental movement and thus is has many implications for these two movements and their collaboration and theoretical studies of them. This paper will address the main issues regarding radioactive labour in post-accident Fukushima and try to introduce theoretical perspectives.

Restructuring Vegetable Oil Supply and Demand in Asia: The Impact of Trade Liberalization Facilitating Increase of Fat Supply Among Asian Nations While Jeopardizing Their Domestic Production

This research examines strategy shift in vegetable oil sector among global transnational corporations, focusing on Asian TNCs like Japanese sogo-shosha and food industry, together with related trade liberalization and deregulation policies of Asian countries in the Corporate Food Regime (McMichael, 2005). These shifts are expected to have serious implications for local vegetable oil, which can jeopardize theirfood security as the global oil supply increasingly depend on only two crops, oil palm and soybean, produced in the limited number of countries. The shifts also can jeopardize public health of the Asian population

Does the Great East Japan Earthquake Influence the Migration Patterns of Filipino Nurses to Japan? – Study on the Mental Health of Filipino Nurses to Japan

The disaster caused by the Great East Japan Earthquake influence foreign residents in Japan. A mass exodus of foreigners was observed especially in the first few months after the earthquake for fear of being exposed to long-lasting radiation. However, the occurrence cause of the accident of Fukushima Nuclear Power Plant. Nevertheless, there were Filipino nurses, who entered Japan to work at hospitals across the country, only two months after the earthquake.

This study aim to find the predictors of the mental health status of the 3rd batch Filipino nurses coming to Japan, under the Japan-Philippines Economic Partnership Agreements. A four-page questionnaire, including GHQ (General Health Questionnaire), socio-demographic status, motivation to go to Japan, degree of knowledge about Japanese language, education, skill, satisfaction for pre-departure training and impact of The Great East Japan Earthquake, was developed and distributed to all candidates who attended the pre-departure orientation organized by Philippine Overseas Employment Administration in May, 2011.

The multi-linear-regression model (R²=.535, p<0.001) indicated that the strongest factor to indicate GHQ score was satisfaction for pre-departure training (beta=.370, p<0.01), followed by motivation to go to Japan (beta=.351, p<0.01), and impact of the earthquake did not show a significant correlation to GHQ score.

One can assume that Filipino nurses’ migration was derived by their motivation based on their economic needs. On the other hand, the degree of impact of the disaster did not influence their migration patterns.
Comparative Emploi Domestique Et Travail Du Care Dans Une Perspective

GUIMARAES, NADYA (University of Sao Paulo)

sur la division sexuelle du travail et des professions, ainsi que sur les processus joncture socio-économique et institutionnelle de ces pays ont des implications de l’évolution de l’emploi domestique et des métiers du care dans des contextes.

En conclusion, nous présenterons des pistes de travail pour approfondir l’analyse.

First, this study analyzes citizens’ attitudes toward the pension system using national survey data. The data show that citizens tend to have high expectations of the social security system.

This study then examines the historical and institutional factors behind the problem of dissatisfaction in Japan and France. The study explores the possibilities for a comprehensive but more targeted reform of old-age security to address the concerns of the elderly.

First, this study analyzes citizens’ attitudes toward the pension system using national survey data. The data show that citizens tend to have high expectations of the social security system.

Lastly, this study analyzes the employment situations of middle-aged and older workers. It is suggested that improvements in the employment policies for these workers should be prioritized, given their high work ethic and the financial difficulties of the public pension system.

Contradiction and Resistance in the Production of Space in Urban Sao Paulo: Urban Vision on the Collectors of Recyclable Materials

In last decades, real estate production turned into a main capitalist way of reproduction of the global financial dynamics. For urban spaces this means impoverishment of a city notion. For social mobilization that seeks for the reduction of social inequalities it leads to a perception of insignificance of small victories, even more than a general contradiction of the city vision.

In this paper I discuss how to interpret and represent individual gender biographies in transcultural research settings when a researcher meets with informants who belong to different social and historical contexts. In my experiences regarding gender biographies in transcultural research almost all informants talked about ‘their’ social norms of gender before telling their life histories, although it is very important to understand the conflicts between their biographies and social contexts. Here it is also implied that the nation-state has still a powerful meaning for informants and a researcher, even if a researcher argue ‘transnationality’ or ‘transculturality’ of the filed to be examined. In this paper I explore whether a methodological effort can help make an adequate co-production for both a researcher and an informant in case that they have different cultural and national backgrounds.

Housing Policy and Gentrification: Conflicts and Contradictions in the Inner City of Sao Paulo

During the last decades, Neil Smith is developing a conceptual framework linking neoliberal urbanism and gentrification. In his works, the increasing role of the state as an agent of the market is underlined. Also, according to Smith, in a context of globalization and financial capital, the gentrification is thoroughly generalized as an urban strategy (Smith, 2002). This paper aims to discussing the concept and the elements of gentrification in cities of emerging economies, using as an empirical case the inner city of Sao Paulo, Brazil. Since the nineties, the central area of Sao Paulo is being subject of several urban interventions, varying from the promotion of new cultural facilities to the redevelopment of several blocks as a key to increase population in the historical neighborhoods. The most recent intervention presented is using the housing policy as an instrument to promote gentrification, by removing several buildings, today occupied by poor families that were once attracted by low rent prices, in order to make room to new developments to address the housing needs of the emerging medium class. The conflicts and contradictions that are arising from these projects are meaningful and give us strong elements to deepen the political terms of the Smith's concept of gentrification, coloring it with the characteristics of the Brazilian uneven urban development.
Reshaping the Housing System in the Context of Japan's Post-Growth Society

Many mature economies are now entering the 'post-growth' era characterized by low growth in GDP, ageing of the population and increasing social stratification. Japan stands at the forefront of such transformations towards 'post-growth societies', where the government is increasingly being prompted to reorganize the housing system within the context of the shrinking and super-aging population, lowering marriage rates and lowest-low fertility, extremely prolonged recession, increased social inequalities, house-price volatility and housing asset deflation, and growing pressure to cut back on social spending and public subsidies. Housing studies have been debated during the postwar 'golden age' of social and economic development accompanied by increasing population, high-speed economic growth, expanding housing construction, and increasing rates of home ownership. Such housing debates were linked to the development of wider social theories on social stratification, welfare state and urban transformations. With entering the 'global age', however, the 'post-growth' social context now requires a re-examination of housing debates and related theories. This presentation looks at Japan as a vivid exemplar in terms of exploring how housing is implicated in shaping 'post-growth societies'.

Teachers Concerns and Proposals in Educational and Ethical Practices to Face Uncertainty

In Mexico, teachers that instruct in primary and secondary levels of education are increasingly being evaluated by international and national policies and organizations and are being harshly judged by different social agents, such as mass communication media, public opinion, parents and entrepreneurs. In international tests, our country has being evaluated and compared with many other countries, and has being located with low levels of educational achievement. To attend this problem the government has proposed continual educational reforms that include diverse types of evaluation of schools, students, teachers and the institutions that are in charge for the preparation of the future teachers. Processes of actualization have not been developed simultaneously and furthermore there have been changes in the labor conditions that have created uncertainty. In our research project: Professional Ethics for Professors and especially from the open question: which are the five necessary actions to prepare teachers about professional values? we found that teachers are interested in a better cognitive knowledge and actualization, an approach to norms, rules and codes in reference to values and ethical themes, the consequences of their professional decisions, the importance of team work and personal relations and communication. Two key aspects are the reference to be a behavioral model to their students and to teach and research not only as a professional but as a life project. These last two answers are more articulated to subjective and individual concerns that search for diverse ways to face uncertainty.

Politics of Food (In)Security in East Asia: Insatiable Appetite for World Food and Agricultural Resources

This paper will be focused on backgrounds of and perspectives for the food (in)security politics in Japan and East Asia, and could therefore be an introduction to the session.
With its rapid economic growth, East Asia is widely recognised as one of the most important regions in the world economy. Despite its significance in the globalised agrifood system, very little has been discussed in international academic communities about the realities and transformations of the agricultural sector, food systems, and rural societies in the region. Because of its consumer affluence and limited agricultural resources, the extent of the region's heavy dependence on food imports has become too significant to be disregarded. According to FAO/STAT, the region accounts for 28.9% and 64.5% of the total volume of world maize and soybeans imports, and 15.6% of the total value of world agricultural trade. This situation is unsustainable not only for regional economies but also for the world food economy in the era of "the end of cheap food". A heightened sense of "food crisis", especially since the 2007/2008 world food price crisis, can be observed at every corner of political, economic and civil society in the region. Unfortunately, in the mainstream discourse, our "food security concerns" are appropriated and manipulated to justify the business-as-usual agricultural and food policy for further agricultural trade liberalisation (e.g. KORUS and TPP) and large-scale overseas farmland investment (i.e. land grabbing) in order to make food accessible in the globalised market at the expense of food sovereignty within and beyond the region.

In this paper, the development of policies and discourses on food (in)security will be critically analysed as a underlying basis for further empirical studies with a perspective for social mobilisation of food sovereignty in the region.

Policing and Autonomy of Community: Comparative Study of Japan and Indonesia

The objective of this presentation is to clarify the character of community policing in Japan and Indonesia from the viewpoint of the autonomy of community and my filed research. This presentation will be divided into three parts.
First, I will examine some discussions and theories regarding the community policing, where we will see that the autonomy of community is needed to manage the way of policing practiced in community in the case of the US. Then, I will clarify the crisis of the autonomy of community with special attention to a discrimination among communities. It has been produced by the development of suburban area and individualized auto-mobility in the US.
Secondly, we will turn to the case of Japan, and I will cover weakening roll of Japanese neighborhood organizations and activation of policing by the central government. The government tries to apply “broken window theory” and discipline and tradition of mutual help as case study.
Third, we will explore the cases the community police in Indonesia in the development era and evaluate a mixture between local security and tourism for community development in Bali. The police has tried to apply the community policing in order to reestablish new structure of the police and grasp vigilante groups since the collapse of centralized police. However, in the case of Sanur area in Bali, we will see the failure of the community policing with new image of tourism.
Finally, through the analysis, I will clarify the advantage of the community development through the mixture of policing and other creative activities.

Burmese Refugees and Ethnic Business in Japan

While Japan is said to be the country which has one of the strictest control for refugees and asylum seekers, Japanese government accept some refugees, especially from Burma. After receiving the asylum, some of Burmese run a small business in their community. How do Burmese become a refugee entrepreneur? How do they run a small business? This presentation aims to explore the factors which foster the refugee entrepreneur from the view point of the opportunity structure theory. This presentation is based on the field work data carried out in Tokyo, Japan from 2004 to present. The data consists of interviews with Burmese refugees, refugee advocacy NGOs, Government agency, and other related personnel. Based on the opportunity structure theory, we have some types of Burmese small businesses. One type is a small business serving an ethnic community's needs. With the help of their colleagues, they mobilized various ethnic resources: capital, labour and skills. Other type is small business serving an open market. They try to attract non-Burmese customers in their shops. However, their businesses are not stable because of the small size of their ethnic market and the intense competition of the service industry. Following the presentation, I will discuss the economic integration of refugees in the future.

The Communion without Boundaries and Sakae Osugi's Anarchism

The purpose of this paper is to investigate the political ideals of Sakae Osugi. Osugi argued that it was possible to establish a “society of mutual aid” based on the principle of “expansion of life”. In his view, the hierarchy meant fixing the personal relationship to the community. For him, the principle of “expansion of life” was articulated to subjective and individual concerns that search for diverse ways to incorporate the emerging masses: how could they be incorporated from different order from those faced by the Meiji leadership. Osugi aimed at a free and diversified federal community. Osugi argued that it was possible to establish a “society of mutual aid” based on the principle of “expansion of life”. In his view, the hierarchy meant fixing the personal relationship to the community. For him, the principle of “expansion of life”. Osugi's influence stemmed from his articulation of the basic concerns of his generation. That generation confronted difficulties of a different order from those faced by the Meiji leadership. Osugi was attracted to anarchism and social and economic development accompanied by increasing population, high-speed economic growth, expanding housing construction, and increasing rates of home ownership. Such housing debates were linked to the development of wider social theories on social stratification, welfare state and urban transformations. With entering the ‘global age’, however, the ‘post-growth’ social context now requires a re-examination of housing debates and related theories. This presentation looks at Japan as a vivid exemplar in terms of exploring how housing is implicated in shaping ‘post-growth societies’.

This paper addresses Chinese women's self-conceptions through developing the concept of erotic justice to focus on access to life chances and opportunities for sexual expression, erotic exploration and realisation.

The erotic is conceptualized as more ambiguous, fluid and diffused than sex-oriented sexuality in that as a process it does not focus on one part of the body or one object. It is about connection between currents inside and the world spinning outside, but not limited to the interpersonal (Ho & Tsang, 2013). Furthermore, erotic justice transcends and anticipates the "politics of economy" and "politics of life chances" which are not equal. Indeed, people in their movements, emotions, and desires are themselves made in terms of the discourses and unequal differences, of the past, present and future political economy (Foucault 1980; Bourdieu 2001). In short, erotic explorations in everyday life occur within the fields of power where they play a game with others who strategize with equal self-interest, but often with more legitimacy (Bourdieu 2001).

In-depth case studies of online narratives of Chinese women have suggested ways in which these women create new identities for themselves through a politics of iconogenesis using new social media (Ho, 2006, 2011, 2013). We examined how they articulate the kinds of injustices they face in love, marriages, family and other social variables. We also identified the strategies that they used to rectify these injustices including becoming everyday icons through their practices of self online and offline.

In creating these new identities, they envisage and locate themselves within new futures in which gender and sexual justice become possible. Their self narration includes a reflexive construction of self where the past is reshaped to fit the present and the imagined future.

Women Negotiating Work and Family Responsibilities in Hong Kong and Britain: Rethinking Modernity, Individualization and Intimacy

Drawing on comparative qualitative research conducted in Hong Kong and Britain, this paper contests western theorists' ideas on the consequences of modernity for women's orientations to work and family. Our data derive from life history interviews and focus groups with young women and their mothers in both locations and reveal both similarities and differences in the effects of social change on the two generations. The differences cannot be attributed to the pace or duration of modernization, nor are they wholly consistent with the changes that might be predicted by Gidden's (1992) 'transformation of intimacy' or Beck and Beck-Gernsheim's (2002) individualization thesis. While the Hong Kong women are more committed to family than their British counterparts (cf. Chang and Song 2010; Jackson and Ho 2013), in particular in terms of obligations to close kin, they are also far more career oriented. Conversely, the British women seem much more individualistic, sometimes hedonistic, in their personal lifestyle choices, but they are far more willing to sacrifice career to motherhood than those in Hong Kong. Hong Kong women are much more strategic in pursuing economic opportunities, evident especially in pressure on daughters to succeed, in terms of advancing the family as a whole. This is in keeping with the idea of Asian instrumental/utilitarian familialism (Lau 1978; Chang 2003; Chang and Song 2010). Young British women are encouraged by their families to succeed, but this is not the common thought of in terms of financial or material fulfillment. These differences are not only cultural, we argue, but also a result of material conditions of life in each location and the ways in which gender intersects with other inequalities in local contexts, creating differential opportunities and barriers to reconciling family and work under late modern conditions.

Nationality of Food: Food Safety As National Crisis and Nationalistic Ideology in South Korea

This paper examines food safety issues as national crisis and nationalistic ideology in South Korea. Food safety issues are one of the major issues at stake in South Korea recently. The import of US beef and potential threaten from mad cow diseases had caused one of the biggest protests in Korean modern history in 2008. The risk of agricultural products imported from China is almost the daily topic in South Korean mass media. The uncertainty of possible radiated fish from Japan after 311 Fukushima incidents arouse panic around family tables. Food safety is a topic that touches people's nerves in everyday life.

In this paper, I will analyze the discourses and regulations regarding original places of food productions. My argument is that although food safety is a reasonable issue to worry about, yet in South Korea it is rather a political/nationalistic issue. An agricultural movement called shintobul in late 1980s had successfully
built up an ideology that only domestic food is reliable and good for Korean people's body and health, no matter how those foods are produced. Regulations to enforce labeling the origins of food production enhance Korean national identity and sentiment towards their domestic products as well as nation. Fear penetrates when evolving foreign food products. Crisis of food safety thus is not only an issue about health and well beings but rather an issue in political arena. It shows the anxiety and senses of threats when South Koreans have to face other powerful countries around them such as US, China and Japan. Safety only exists inside the door. Nationality is thus not only essential for people, but also for food.

Queer Reproduction in Global Context: How Taiwan Lesbian Building an Alternative Sociotechnical Network of Assisted Reproductive Technologies

While Taiwan is the most LGBT friendly country in East Asia, it is still one of the twenty regions only "married" (heterosexual) couples can legally use assisted reproductive technologies (ARTs). Globally, East Asian countries are the second restrict region (next to Muslim countries) where assisted reproductive technologies eligibility criteria are severely based on marital status. At the same time, the first lesbian parenting social group in East Asia emerges Taiwan, the interesting contradiction between legal restriction and vigorous lesbian parenting desire and association bespeak a theoretically abundant case. In this paper, through more than six years field work, participation and observation in Taiwan LGBT parenting group, the author explores 15 lesbians in Taiwan how did they negotiate to get access to ARTs despite of the legal restriction. First, the author find self-insemination is not well diffused and used in Taiwan like the United States and some other western countries, and it’s due to different feminist movement context and the predominant feminist antinatalist discourse in Taiwan. Second, lesbians in Taiwan disguise as single (with heterosexual assumption) women to fulfill their procreative desire in existing medical system, their reproduction practices challenging the original ARTs intend. Furthermore, queer actors, knowledge, and ARTs travel beyond borders, not only weaken the state-bound health regulation, but also embody a new transnational biomedical mobilities.

Attitudes Of The Israeli Public Towards Asylum Seekers: Humanitarianism and Its Consequences For Exclusionist Attitudes

This study focuses on the role of humanitarian convictions in shaping exclusionist attitudes towards asylum seekers in Israel. It provides first empirical evidence regarding public views on asylum seekers, the most recent non-Jewish migrant group to this country. Data for this study is based on a survey conducted during the spring of 2013 among a representative sample (N=500) of the adult Jewish population in Israel.

Our interest in public views towards asylum seekers does not derive merely from the innovative empirical potential they hold, but rather from the theoretical questions such views bring to the fore. Previous studies indicate that the Israeli public consistently opposes the granting of social, civil, and economic rights to non-Jewish immigrants. These exclusionist attitudes are mostly guided by a sense of national as well as socio-economic threat associated with the need to maintain both personal and group well-being. Although asylum seekers may invoke similar threats, we expect attitudes towards them to be based in addition on other psycho-social mechanisms associated primarily with notions of universal liberal values and human rights.

The association of asylum seekers in Israel with a human rights discourse is not intuitive. In fact, policy makers have initiated a public campaign delegitimizing the refuge claims and questioning this association, presenting asylum seekers as "infiltrators", illegal laborers, etc., and some physician’s consider single women are more legitimate than lesbians to have children despite of both groups are illegal users. Besides, some lesbians have pseudo-marriage with gay people to get legal access to ARTs. Finally, reproductive exile also happen in Taiwan—some lesbians go to Canada and Thailand to pursue ARTs treatments. In this paper, the authors found how lesbians in Taiwan negotiate and navigate their way to pursue their procreative desire in existing medical system, their reproduction practices challenges the original ARTs intend. Furthermore, queer actors, knowledge, and ARTs travel beyond borders, not only weaken the state-bound health regulation, but also embody a new transnational biomedical mobilities.

Starting from Unequal Positions: Patterns of Young Households Starting on the Amsterdam Housing Market

This paper takes a broad perspective regarding the success with which young people can leave their parental home and become an independent household in Amsterdam. High demand pressures on the local housing market and the financial crisis are seen to place constraints on the accessibility for young households. Nevertheless, paradoxically, especially the influx of young households currently contributes to Amsterdam’s population growth. However – and most importantly to this paper – previous research suggests that inequalities between different groups have grown. These inequalities are often transferred from one generation to the next. Using longitudinal individual register data this paper looks at patterns of inequality between young households with different backgrounds as they make their first steps as independent households. Especially their parental background is of importance to this analysis.

Our data suggests that the number of ‘starter’ households with wealthy parents and following university education entering the Amsterdam housing market is growing, whereas disadvantaged starter groups are increasingly excluded. We will analyze how socioeconomic and parental backgrounds influence young householders’ decision to secure their own accommodation in Amsterdam. Included elements are the age of nest-leaving, tenure type they move into, the type of household they form, and the chance of moving back to their parental home after a brief period of independent living (boomerang kids).

Processes of gentrification have made most of Amsterdam’s inner-ring neighbourhoods more expensive, the study asks entry. This results in a spatial mismatch between the demands of young households for inner-city living and the supply of relatively affordable and accessible dwellings located more peripherally. This paper looks at the spatial production and reproduction of inequalities, which have been transferred between generations. Increasingly, we see that starters with wealthy parents move into the more expensive neighbour hoods, whereas disadvantaged residents increasingly concentrate within peripheral parts of the city.

interroger conjointement la nature des mutations du travail en magasin et les registres d'action et de contestation dans une multinationale des services dont la main d'œuvre est essentiellement peu rémunérée, féminine, immigrée et pas ou peu diplômée. S'appuyant sur une série d'entretiens réalisés auprès des salariés des magasins, activités et syndicalistes du secteur ainsi que sur des observations in situ de réunions et manifestations menées par ces derniers, cette communication souligne les dimensions organisationnelles et institutionnelles de la difficile émergence des formes de contestation dans une firme qui en un demi siècle est parvenue à tenir en échec les tentatives de syndicalisation de sa main d'œuvre.

This presentation is based on the analysis of "discrete" mutations of work, employment and trade unionism in and around the US Walmart stores. While the corporation is experiencing significant technical and organizational transformations, the rise of criticism invites us to question both the nature of mutations of work in stores and the protest records in a global service firm whose workforce is mainly made up of low paid immigrant women, holding jobs that do not require a particular degree. This communication is based on a series of interviews with employees and union activists as well as on in situ observations of meetings and walkouts organized by unions and associations. Through a diachronic approach, it emphasizes the organizational and institutional dimensions of the difficult but ongoing emergence of protests in a firm that, in half a century, has come to thwart all attempts at unionization of its workforce.

Managing the Difference Engine: A Cybernetic Analysis of Discrimination

This paper will propose, as a model, a cybernetic device, deeply embedded in human language and social processes, which produces both separation – of groups and meanings – and unity and convergence. Drawing on evidence from linguistics and sociology it will argue that both movements, of separation and convergence, must be managed by the same device. This has important implications for efforts to manage discrimination of all kinds (e.g. racism, sexism, class divisions), if these opposite outcomes are produced by altering the settings on a single system, rather than by the clash between opposing systems, one of which might exist without the other.

From cybernetics, Bateson's models for schizophrenia and for schizophrenia will provide a starting point. From linguistics especially relevant will be the work of Chomsky, Labov and the Comparative Philology tradition stemming from Sir William Jones and Saussure, and empirical studies of language change and multi-culturalism will provide concepts and materials. Theories and studies of evolution and development, as in the work of Edelman. From theories of chaos and complexity, the basic framework will come from Prigogine's account of catalytic and auto-catalytic loops in biological and social life. Mandelbrot's theory of fractals will be drawn on, as will theories of artificial life.

“Projeto Vidas Paralelas” – PVP aims to reveal and give visibility to daily life, culture and work from different social groups, from the perspective of the subjects involved, by means of training processes in digital culture and articulation of social networks to strengthen social participation in the construction of public policies, health promotion and culture. It is a proposal for strengthening the social movements and struggle processes through audiovisual training and use of new media as tools of expression, critical thinking and social organization. The project arises from a demand of workers for expanding the visibility of conditions and work processes experienced in the contemporary context and strengthening social movements. Thirtieth by the culmination of social movements and delegates of the Third Brazilian Conference on Occupational Health held in 2005. Thus, “Projeto Vidas Paralelas” – PVP is articulated and built with all the Brazilian Union Centers and social movements related to occupational health. Between 2008 and 2010 the project was implemented in twenty-one (21) Brazilian workplaces, in a partnership between "Rede Escola Continental em Saúde do Trabalhador", University of Brasil, Brazilian Ministry of Culture and Ministry of Health. In 2010 indigenous students demanded the formation of “Projeto Vidas Paralelas Indígenas” – PVPI, and in 2012, the process for the construction of “Proyecto Vidas Paralelas Campo”. Currently, “Projeto Vidas Paralelas” – PVP is a social network that articulates the major social movements in Brazil, related to urban and rural workers, indigenous and “quilombola” communities. This study aims to share the experience on their theoretical and methodological proposal, as well as socialize the progress and challenges regarding the implementation of the strengthening of social participation through social networks.
tutions they were confronted with and the powerful relations and social processes behind these institutions and out of the horizon of their experiences. When mapping these relations between life-world, professional interventions and the regulatory forces behind (discourses, norms, jurisdictions etc.) we often succeeded in uncovering processes that had been unnoticed by users, professionals and the people in charge.

This paper will summarize the methodologically challenges for institutional ethnography when entering the life-world and institutional structures for people in especially oppressed situations. To deal with the situation of these people challenges our tradition and changes slightly the elements in our research design. Among the regulatory principles that gain more importance and weight in this field are discourses ranging from pedagogical theories over diagnostic systems and the concept of evidence to governmentalities.

The Emergence of the European Research Council As Supranational Funding Institution

Structural transformations in the European Union's funding policy of the last decades have led to the historical emergence of a genuinely supranational funding institution: the European Research Council (ERC). Conceptually oriented towards an institutional approach of the sociology of science, and methodically led by extensive documentary analyses, we empirically analyze historical evidence for the opportunity structure, social mechanisms and effects of European research funding as part of the history of the ERC as an institution. Analytically, we draw a distinction between the following levels of investigation: Firstly, the structural relationship of national and supranational dimensions of the European research policy is located at the heart of a historical interest in Europeanization processes in science. While the ERC as supranational organization can be seen as intermediate in relation to the European Commission and the international scientific community, the transnational organization structurally builds on and reflects historical predecessors at level of national science systems as well. Secondly, we try to clarify in which way we deal with integration or rather disintegrative stratification of European research, reflected in cultural objectives of funding programs such as 'transnational cooperation' and 'scientific excellence', and researchers' socially structured opportunities, ambiguities, and potential conflicts to realize these objectives. Thirdly, seen from a dynamic perspective, we investigate how and to what extent European funding policy's goals have historically changed and been subject to self-perpetuating processes with unintended effects feeding back towards the social structure of European, and global, science as well.

Flexible Work Practices, Workplace-Related Policies and Individual Strategies for Reconciling Ercldercare and Paid Employment. Findings from the European Carers@Work Project

Faced with a historically unprecedented process of demographic ageing many European societies extended the working lives of older workers, with the side-effect that working carers have to juggle the conflicting demands of employment and care-giving even longer. This does not only impinge on working carers' wellbeing and ability to continue providing care, it also affects European enterprises' capacity to generate growth which increasingly rely on ageing workforces.

The focus of this paper will be a cross-national comparison of flexible work practices and other workplace-related company policies aimed at enabling working carers to reconcile both conflicting roles in four different European welfare states – Germany, Italy, Poland, and the UK – based on expert interviews with human resource managers and 240 semi-structured interviews with working carers in the four countries. It is analyzed to what extent these company-based measures are path-dependent according to the respective welfare state / care regimes, which resulted in diverging degrees of state intervention and support and, subsequently, varying levels of company-based policies. However, a key finding to the research was a trend towards converging individual reconciliation strategies in the four countries. Finally, varying degrees of gender inequality in the provision of care will be examined.

Experiencing It like a “Gogo”: Intergenerational Relationships in South Africa

“Gogo” is the Zulu word (from “ugogo”) for grandmother and this paper will focus on the pivotal role of older women in the context of entrenched inequality and large-scale poverty. An estimated 1.2 million so-called HIV/AIDS orphaned children, of whom around sixty percent reside in grandparent-headed households, exacerbate this and obviously place on the research and policy agenda the continuous asymmetrical dependency and needs of younger generations on older generations. Although these grandmothers’ contributions are increasingly recognised, current explanations of the dynamics within these multi-generational networks lack a nuanced understanding of their complex and ambiguous nature. Drawing on 58 narratives from different generations (a generational sequential approach) in 20 multi-generational networks, this contribution qualitatively explores grandmothers’ motherhood in Mpumalanga, South Africa towards a deeper understanding of such inter-generational relationships. The main findings relate to the intrinsic and extrinsic vulnerability of the sacrificing older carer in resource-constrained and uncertain contexts. This has implications for them at the nexus of their individual rights and their future care outcomes.

Promoting Intangible Cultural Heritage Protection Through Research: An Analysis Of The Impact Of Academic Discourse On Local Protection and Tourism Practices In China

This study traces the impact of the Chinese academic discourse on intangible cultural heritage protection at local government and tourism practices in the PRC at the subnational level. Since the concept of intangible cultural heritage (ICH) entered the Chinese academic discourse in 2003, the academic elite has actively promoted the development and protection of intangible cultural heritage nationally through the publication and circulation of research. While their influence on the drafting process of the ‘Intangible Cultural Heritage Law’ has been acknowledged, hitherto little research has been conducted on their impact on local governmental policies, protection strategies and tourist promotion activities. This paper therefore aims at filling this research gap by conducting a comparative historical text analysis of Chinese academic journals from 2003 to 2013 in order to assess how academic discourse affects local government strategies for the branding of intangible cultural heritage. Comparing various selected cases, the paper will examine how scholars support local governments by reinforcing and framing local traditions according to ICH discourse, promoting them for ICH nomination and attributing tourist values. Furthermore, it will explore how successful local government practices and management models of ICH protection are disseminated within epistemic communities of scholars, ICH experts and local administrators. The findings not only shed light on the impact of Chinese academic discourse on specific local practices of ICH protection but also point to common protection strategies ready for adoption in other localities.

HOLDGRÜN, PHOEBE* (German Institute for Japanese Studies, holdgruen@dijitokyo.or.jp)
High Aims, Low Outcome: Implementing Gender Equality in Japan

Japan has ratified the Convention for the Elimination of All Forms of Discrimination Against Women (CEDAW) in 1985. Next to other measures, the Convention led to enacting the Basic Law for a Gender-equal Society in Japan (1999). This law is the most outstanding and far-reaching policy regarding gender-related issues in Japan at date. However, when it comes to gender equality in international comparison, Japan still lags far behind other countries, ranking 101 among 135 countries in the Global Gender Gap Report 2012.

This paper asks for the reasons of the discrepancy between the far-reaching aims of policies for gender equality and the low outcome. By taking the Basic Law for a Gender-equal Society as a case study, this presentation reassesses how and to what extent the ideas of CEDAW have been implemented throughout Japan and what barriers prevent successful outcome. This question is being taken into account from different perspectives. Next to deciphering the mechanisms and strategies of implementing gender equality on the regional level of the 47 Japanese prefectures, an outlook of policy change during the DPI government (2009-2012) and the new LDP government that took over in December 2012 will be given.

The paper draws back on results of the authors Ph.D. thesis on the implementation of gender equality in Japan as well as on a paper on the impact of the DPI government on the implementation of gender equality policies (to published 2013).
Alcohol consumption in later life has emerged as a public health concern in many advanced economies in recent years associated with an observed increase in alcohol consumption among the elderly. The dominant public health message has centred on the need to moderate drinking in later life due to the direct and indirect impact that alcohol has on frailty in later life. This paper challenges the assumption that increased alcohol is associated with functional as well as social decline, but in doing so recognises how assumptions about the inter-relationship between alcohol consumption are both gendered and class-specific. Drawing on both quantitative and qualitative data on alcohol consumption in later life we explore how drinking is a cultural practice that both resists and conforms to expectations about ageing and frailty. In particular we consider how drinking patterns are both gendered and classed and how drinking is a practice through which idealized norms of femininity and masculinity are performed in old age, but also how these can be resisted. The paper is based on quantitative analysis of the English Longitudinal Study of Ageing and qualitative analysis of focus groups with older people on drinking in later life.

Youth Leisure As Job Training and the Pursuit of Distinctiveness

In 2009 a group of students at the University of California, Santa Cruz who self-styled themselves as the ‘Research and Destroy Collective’ issued a Communiqué from an absent future denouncing how demands on young to perform and be active rather than liberating, were stifling their futures, and that ‘even leisure is a form of job training.’ This paper responds to this rally cry to map out how young people are increasingly engaging in leisure pursuits in advanced economies in order to enhance their CVs. I will consider how leisure activities, which may include travel, sport, hobbies, volunteering and membership of organisations, are increasingly seen as ways of standing out from the crowd and demarcating oneself as distinctive. While these quests for uniqueness is not a particularly new quality, they are increasingly expected to be responsible for their own futures through the acquisition of youth transitions, in the paper I argue that it is taking on news forms as the assumption process is vital for the identity construction of the hate group members .

The starting point of the paper is in cultural criminologist Mike Presdee’s notion of a world in which crime is a cultural practice that both resists and conforms to expectations about ageing and frailty. In particular we consider how drinking patterns are both gendered and classed and how drinking is a practice through which idealized norms of femininity and masculinity are performed in old age, but also how these can be resisted. The paper is based on quantitative analysis of the English Longitudinal Study of Ageing and qualitative analysis of focus groups with older people on drinking in later life.

HOLLEMAN, HANNAH* (Amherst College, hannah.hollemann@gmail.com)

Supply-Side Economics and Demand-Side Planning: U.S. Southwest Water Challenges, the Case of Oklahoma

In 2013 the U.S. government categorized all 77 counties in Oklahoma a disaster area due to persistent drought conditions. While 597 counties nationally were in declared drought, Oklahoma, Kansas, and western Texas were hardest hit. Years before this, scientists' projections of anthropogenic climate change showed “widespread agreement” that in the Southwest “the levels of aridity seen in the 1950s multiyear drought, or the 1930s Dust Bowl, become the new climatology by mid-century; a perpetual drought.” However, such information is not the basis of ecological and economic planning in the Southwest. I examine the development of the Comprehensive Water Plan recently adopted by the state of Oklahoma to demonstrate how planning in the region continues to operate on an undemocratic and “demand-side” basis. With disastrous consequences, the OCWP offers no real plan for long-term change subject to science or the democratic process. Rather, politicians demonstrate their commitment to historical modes of development in the region while downplaying the costs and publicly encouraging skepticism of scientific projections. Drawing on Michael Kalecki's distinction between “monopoly-capitalist” and democratic planning and exploring the epochal turn identified by Forster Ndbishi towards “demand-side” (in ecological terms) planning, I offer a theoretical approach to understanding the limitations of the dominant mode of planning for addressing such long-term anthropogenic ecological crises. I argue that the official designation of drought-stricken counties as facing “disaster,” has short-term implications and is therefore misleading. This region must be recognized as facing an historical transition, in need of genuinely democratic, and ecological or real “supply-side,” economic planning to avoid some of the worst ecological and social outcomes. To end, I offer suggestions based on current, localized attempts at planning outside of the dominant framework, for alternative approaches that, if forced by movements to the state level, or beyond, could help reverse current trends.

HOLLINSHEAD, KEITH* (University of Bedfordshire: England, khdva@btopenworld.com)

Tourism Studies and Conceptual Unsettlement: The Decolonisation Of The Bleached Field

Each discipline / domain should regularly examine its effectiveness regarding the representation and making of the socio-historical world. In inspecting the so-called global provocations of tourism, this presentation advances the view that the increasing dominion of tourism / Tourism Studies over matters of culture, heritage, and tourism has not only been carried out according to eurocentric canons, but has been bolstered by theoretically feudal forms of knowledge. It thereby calls for a concerted decolonisation of Tourism Studies --- that is, for a conceptual cleansing of the field to clearly identify and confront the hegemonic agency and
authority of the industry over colonialised places / spaces and over histories / contemporaneities.

The presentation therefore will principally question:

-¹ = Which priority areas of concern in international tourism should be decolonised, if any?
-² = What would / should / could the decolonisation of Tourism Studies principally entail, or mainly consist of?
-³ = Who should be involved in the so-called decolonised ‘cleansing’ of Tourism Studies?
-⁴ = How would the decolonisation of tourism be substantiated educationally (in the schooling of practitioners and researchers who currently drive international tourism)?

The main supposition undergirding this paper is that the decolonisation of the so-called ‘bleached realm of tourism’ (after Pfefferl’s term “bleached” field / “bleached spaces”) would involve considerable ‘conceptual unsettlement’ for many of those who work in Tourism Studies / Tourism Management. Much of the required re-oriented understanding would indeed be corrective (as the industry’s internal and collaborative sinews of oppression are identified). Hence a more fluid acumen is demanded vis-a-vis the fields’ improved conversation with the world” (after Bauman), where the productive / compositional genius latent within it can be positively used much more strategically and frequently for distant / removed / colonialised populations in their own found interests.

In 2011, Heffernan produced Wilful Blindness, a text inspecting “why we [in our institutions] ignore the obvious, at our peril” as the examined the structures of how our brains and working practices to see Europe — within our instrumentalities / corporations / organisations — act with such sustained blindness and such deliberate indifference to what outsiders deem to be very large, important, or crucial matters. Thus, Heffernan’s “security of institutional convinience and organisational silence” will be distilled to generate discussion amongst RC50 delegates to critique what forms of groupthink blindesses / wilful ignorance / under-reognised abnegations might indeed characterise ‘Tourism Studies’ / as a disciplinising institution.

In this Heffernanian light, Tourism Studies will be dissected to reveal (from the presentation of working experiences to see Europe, Australasia, North America, and Asia) the sorts of structural blindesses that have cultivated regular forms of group derangement within the field. In offering just three of these areas of mutually reinforcing (and, sadly, restrictive) conformity, Tourism Studies will be posited as a domain that:

* is intrinsically interdisciplinary, yet offers so few bona fide interdisciplinary / multidisciplinary / transdisciplinary investigations;
* fundamentally deals with the image of places and spaces, yet rarely codifies any such mix of symbolic (or representational) impacts as it coterminously plays habitual homage to long-established economic, cultural, social, political, and environmental impacts;
* is seemingly a creative industry which selects, produces, and projects ‘differences’ about peoples / places / pasts, yet which has only the poorest of connections with other lead creative / inscriptive industries such as film / the media / the arts.

In summary, RC50 delegates will be asked to reflect (i) upon the the field’s conceivable ‘purblind addiction to received procedure’; and, (ii) upon their own individual willing subservience to such forms of unquestioned / unthought praxis.

In Finland the Roma children have not done very well in school. The national curriculum is very supportive of Roma children but the reality is different. The indigenous Sami population is also doing less well that the majority Finnish students. Students with immigrant background are a risk group with regard to bullying and discrimination.

The group most vulnerable in school is the students with disabilities or long-term illnesses. Of this group about two-thirds have found themselves treated in hostile ways or excluded from the group.

Hence, even in a system that at the policy level officially strive for equality and equity, the daily life in school can be unfair for certain groups of students. This unfairness and marginalization can have long-term consequences for welfare and achievement.

Photography As a Research Method in Exploring Bilingual Teenagers’ Language Minority Group Identifications

Using participatory photography as a research method is underutilized in sociological youth studies. Young people today are comfortable using photographs for communication. Visual research methods are increasing in overall importance, but especially the analysis and interpretation of visual data have not changed much in the last decades. Hence, the focus in this paper is on analysis and interpretation of photographs taken by 15-year-old students in the comprehensive school in Finland. The importance of the researcher’s language minority habitus in interpretation is explored in relation to the habitus of the language minority students.

The teenagers all belong to the Swedish speaking minority group in Finland. The purpose of this study is to explore how the Swedish language minority students position themselves with regard to belonging to the Finland-Swedish group but also the daily life in school can be unfair for certain groups of students. This unfairness and marginalization can have long-term consequences for welfare and achievement.

Marginalizing of students despite official preventive efforts

Marginalizing of students despite official preventive efforts

Finland has a reputation of providing a good and just education for all students independent of ability and background. However, even in this kind of educational system there are students who are marginalized. We focus here on the relationship between laws and official documents regarding issues concerning social justice issues and, on the other hand, discriminatory practices. We lean on a discourse analysis of the rhetorical policy level including the national curriculum. This analysis is compared to empirical findings about students’ experiences regarding social justice issues.

There are some remarkable socio-cultural differences in Finnish schools. For example, the gender differences in literacy are the largest in Finland of all the OECD countries. ‘Childhood poverty is increasing in Finland and the gap between the poor and the wealthy is increasing. This has serious implications for teachers and teaching, but in our study we found that teacher education students do not consider social class important for their future work.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
are eligible for early retirement and disability benefits, the diagnosis in many cases does not present financial disaster. However, receiving disability benefits led to stigmatization through the bureaucratic mechanism in place. Subsequently women discussed feelings of shame and worthlessness induced by bureaucratic mechanisms.

The present study will be one of the first studies in which international comparisons on qualitative interview materials that have been collected in different languages and by different interviewers are analyzed within the same research framework. Thus the paper presents important findings on production of inequality in high-income countries, and provides a new methodology for cross-cultural secondary analysis.

RC07-138.3  
**HOLMES, PABLO** (University of Brasilia, pabloholmes@gmail.com)  
**Social Inequalities in Latin American Social Thought: Beyond Culturalism and Class Theory**

Since its origins in the nineteenth century, Latin American social theory has been primarily concerned with the unequal position of the region in the world society. The “Latin American condition” has been largely explained with reference to its “cultural singularity” vis-a-vis “developed” societies. In the last two decades, following a broader critique of developmental theories, there has been strong criticism of cultural explanations for global, regional and national inequalities in the region. In Brazil, some theoretical attempts have attracted attention. The first one, formulated in the beginning of the nineties, argued that structural forms of extreme social exclusion from modern social systems like law, politics, economy and education would have striking consequences for the institutional reproduction of these systems in the region. Accordingly, there would emerge a small sector of a socially over-integrated population, which would be in the position of using legal and political institutions for its advantage. Simultaneously, a broader sector of under-integrated population would have only an insignificant meaning for institutional operations, remaining thus excluded and being used to reproduce unequal social structures. Another well-known approach has drawn on many elements of this formulation, insisting, however, on classical categories of class theory to explain the social reproduction of inequality.

In the present paper, I would like to look critically at these different interpretations. I will, thus, argue that, although one can consider the existence of social classes as an outcome of important social dynamics, any theoretical explanation of social inequalities in the Latin American context must take into account the role of legal and political institutions. The paper also argues for the necessity of taking not only institutions into account, but also for the importance of bringing back the role of transnational institutional dynamics in the debate, although without stepping back into old culturalist traps.

**JS-1.4  
HOLMES, PABLO** (University of Brasilia, pabloholmes@gmail.com)  
**The Social Constitutionalization of Trade? the WTO-Trips and the Chances of a Reembedment of the Global Regime of Intellectual Property**

Since the financial crisis, the consciousness has grown that increasing social inequalities can have impairing implications for the functioning of institutions and for economic efficiency. Nevertheless, the tools that were known until now to tackle inequalities still seem to be ineffective on the transnational level. Mechanisms of tax & transfer, as well as the promotion of social rights, cannot be used in the same way as they had been in national contexts. For many scholars, the only way to face these problems would be a shift towards the transnationalization of social rights. Although much talk has been seen on the necessity of “constitutionalizing” the WTO, the fact remains true that the global regime of trade remains highly fragmented. Moreover, the rules of the many regimes existing in the WTO do not seem to be interpreted under the light of the so called “global regimes of human rights”. Rather, it seems that they reproduce extremely specialized vocabularies, each of them taking for granted specific conceptions of how to balance property and social rights. As some authors argue, it is if true that the highly specialized global regimes of governance operate in close relation to economic knowledge, maybe they could develop some sort of “responsivity” to their non economic social environment on which they depend. In the present paper, by carefully analyzing 34 decisions of WTO dispute settlements regarding the Agreement on Trade-Related Aspects of Intellectual Property Rights, I try to assess the extent to which it is possible to identify in this regime internal elements of the constitutional semantics of social rights or possible functional equivalents of it. Hence, I will assert whether it makes sense to have any hope on transnational constitutionalization processes of trade carried out exclusively by the legal and functional mechanisms of economic global governance.
The Function and Uses of Society

Who needs society anyway? Since Weber, many sociologists have shunned the notion of society as a unified collective concept; and in the wake of the globalization debate, the critique of ‘container theories’ of society has further decreased the number of those who regard society as an essential sociological concept. But ‘society without society’ not only runs the danger of discarding an important element of social theory without a proper alternative but also fails to account for the position of the term outside academic discourse. This paper addresses the sociological and everyday uses of the concept of society from a functional perspective. Although the function of society, as the most encompassing social system, must be conceived quite broadly, it nonetheless remains distinctive if compared with other social systems such as organizations and face-to-face interactions. Only loosely related to this functional reconstruction of the concept, ‘society’ also continues to play a role in everyday discourse. Yet what kind of society we need to live in and how it affects our lives remains very much an open question.

HOMANEN, RIIKKA* (University of Tampere, riiikka.homanen@uta.fi)

Reflecting on Work Practices: Possibilities for Dialogue and Collaborative Knowledge Production in Institutional Ethnography

The presentation explores ontological and epistemological issues of institutional ethnography (IE) in relation to bringing together different knowledges and epistemic commitments. More specifically, the presentation addresses the possibilities for dialogue and collaborative knowledge production between research participants’ practice-oriented, experience-based ideas about their work and researchers’ academically informed concepts. The issues are explored through analysis of how participants in an IE project, namely researchers and maternity nurses, engage in reflection collaboratively on the care activities. The material analyzed are fieldnotes produced at workshops arranged for joint reflection on the nurses’ own work practices as documented on video.

The analysis shows that the possibilities for, and the difficulties of, achieving dialogue emerge from three sources. First, conflicting knowledge interests between researchers and research participants may lead to complementary projects in situations where all parties align themselves with the other’s interests. In such situations, experience-based knowledge may be co-produced through storytelling motives. Second, doing IE is about the researcher moving from one setting to another and taking up different positions accordingly. These fluid positions create constraints and possibilities for dialogue. An outsider expert/administrator may take a very different position and circumstances that reinforce it are not conducive to the articulation of multiple voices. However, it is possible to shift the overall positioning so that the participants may co-produce knowledge. In my case this was done through working with videos and researchers’ provocative commentary that bore societal relevance and there is a gap in perceived and actual perceptions on issues which are acting as roadblocks in bilateral relations. Previous research suggests that there are highly emotional responses to numerous controversial issues from both sides (Yong, 1997; Choi, 2010; Fan 2012), but little fieldwork has been done to identify the feelings involved in these emotional responses and how individuals perceive their peers’ opinions. Recent surveys conducted by Genron-NPO in 2012 have been able to capture the opinions on a number of topics and the reason for negative opinion, but failed to ask to identify respondents’ feelings as well as how they believed themselves to be perceived by the other nation.

Therefore, to improve the relations between the two countries in the future it is imperative to identify the feelings and the perceptions of the Chinese youth concerning Japan and opinions on the controversial issues. Preliminary analysis of data collected from 261 college students indicates that, on average, Chinese students rate themselves and their peers to be more knowledgeable than the average Japanese student on China-Japan relations; what is more, they perceive the Japanese to have more amiable feelings towards China than their Chinese counterparts feel toward Japan. There is evidence to suspect the false-consensus bias is present and the possibility of naive realism which has conflict resolution implications. Though numerous social scientists have focused on the past and the historic issues between Japan and China, my goal is to focus in on the current perceptions and their implications for building a better future.

HOMMADJOVA, ANYA* (University of Tsukuba, anutah@gmail.com)

Blocking the Road to the Future: Biases and Misperceptions of Chinese Youth

The future of Asia will be highly influenced by the current opinions of its youth and bilateral relations between China and Japan. The current perceptions of the Chinese youth have not been fully understood and there is a gap in perceived and actual perceptions on issues which are acting as roadblocks in bilateral relations. Previous research suggests that there are highly emotional responses to numerous controversial issues from both sides (Yong, 1997; Choi, 2010; Fan 2012), but little fieldwork has been done to identify the feelings involved in these emotional responses and how individuals perceive their peers’ opinions. Recent surveys conducted by Genron-NPO in 2012 have been able to capture the opinions on a number of topics and the reason for negative opinion, but failed to ask to identify respondents’ feelings as well as how they believed themselves to be perceived by the other nation.

Therefore, to improve the relations between the two countries in the future it is imperative to identify the feelings and the perceptions of the Chinese youth concerning Japan and opinions on the controversial issues. Preliminary analysis of data collected from 261 college students indicates that, on average, Chinese students rate themselves and their peers to be more knowledgeable than the average Japanese student on China-Japan relations; what is more, they perceive the Japanese to have more amiable feelings towards China than their Chinese counterparts feel toward Japan. There is evidence to suspect the false-consensus bias is present and the possibility of naive realism which has conflict resolution implications. Though numerous social scientists have focused on the past and the historic issues between Japan and China, my goal is to focus in on the current perceptions and their implications for building a better future.

HOMMERICH, CAROLA* (Institute for Japanese Studies, hommerich@dijitokyo.org)

The Advent of Vulnerability: Socioeconomic Insecurities and Feelings of Social Isolation in Contemporary Japan

Over the past two decades, topics related to social inequality have come to dominate public discourse in Japan. Over the same time span, the number of Japanese youth who experience socioeconomic anxiety in their everyday life has increased. Analysis of data of a nationwide survey carried out by the author for the German Institute for Japanese Studies (DiJ) in 2009 shows, that an increase of social risks is not only perceived as something affecting others, but that socioeconomic anxieties and fears of social isolation spread throughout all strata of Japanese society. The data indicate that such negative emotions have a strong negative impact on subjective well-being in the Japanese context.

An analysis of who is most likely to be affected reveals objective differences in social status to be only weakly associated with a variation in insecurities. Instead, resources of different forms of trust and individual coping competences – in particular a sense of coherence – are decisive for an experience of status anxiety or social isolation.

However, trust levels, especially in governmental welfare, prove to be low in Japan, and, thus, cannot fully develop their protective function. Japan has not yet managed the transition from a society based on assurance to a society based on trust. Most of all the younger generation is vulnerable and ill-equipped to cope with the new social risks it faces in present-day Japan.

HONDA, YUKI* (The University of Tokyo, yuki@p.u-tokyo.ac.jp)
WhoFeelsPowerless?:AnExaminationonSelf-Attitudes of JapaneseYouth

Youth labor market in Japan has changed drastically since the beginnings of 1990s. It is often pointed out that both precarity and severity of work, the risk of poverty and social isolation have increased remarkably among Japanese youth. In order to forecast the future of Japanese society and to search for clues to break its deadlock, we need to grasp the precise trajectories and attitudes of young people.

Youth Cohort Study of Japan (YCS), a five-year longitudinal quantitative survey of young people in Japan, provides us abundant information which is beneficial to the purpose mentioned above. Using the YCS data, this analysis focuses on factors which affect self-attitudes, especially the sense of powerlessness and self-esteem of Japanese youth. The reason is that these attitudes are deeply related to agency and resiliency of young people, who is expected to rebuild the stalemated social structure.

Among numbers of axes which divide young people, most influential ones are gender, family SES, trajectories of transition from school to work, educational experience, regional mobility, workplace environment and social network. Through multivariate analysis, it is found out that there are remarkable differences both of levels and of factors concerning self-attitudes between men and women. The results imply that Japanese young men, including regular workers who have been thought to be advantageous compared to non-regular workers, feels more depressed than young women. The deterioration of labor condition since the early 1990s had much graver negative impact on Japanese men than women as the change of male-breadwinner norm has been far slower than that of the actualities.

HONDAGNEU-SOTELO,PIERRETTET* (University of Southern California, sotelo@usc.edu)
ImmigrantHomelandRe-CreationandHealinginUrbanCommunityGardensofLosAngeles

This presentation will extend the definition of the domestic sphere to include urban community gardens, which I argue serve as critical spaces that allow undocumented Latino immigrants to sustain themselves and to re-create homeland in urban Los Angeles. I focus on undocumented immigrants, some of them indigenous and some mestizos, from southern Mexico and Guatemala.

Illegality and legal violence, racism, and marginalization characterize urban life in these neighborhoods. Home-making and healing practices occur in these urban community gardens, which become shared domestic space. Mexican and Central American immigrants and their families gather at these gardens to grow familiar foods that nourish them. In the process, they connect their children, some of whom are U.S.-born, with ancestral traditions, attaching them to homeland culture, and to an experience with la tierra (the earth). They are not simply feeding their families, as they are spatially re-appropriating urban Los Angeles and re-coding it with material plant life such as sugar cane, mango trees and corn stalks.

The urban community gardens are also healing spaces. The gardeners cultivate and share a range of medicinal herbs, creating informal homeland pharmacies that remedy tooth aches, nervous anxiety and indigestion. The gardens also provide palliative remedies for intimately experienced social problems, including loneliness, social isolation, and the depression and anxiety that accompanies poverty and illegality.

The domestic sphere has always been a loaded place, a site of comfort, sustenance, and belonging, but also, as feminist scholarship reminds us, a site of patriarchy, powerlessness. So it is with the urban community gardens. While they have Edenic aspects, these are not new Edens of Nirvana, and the conclusion this has for Korean sociology.

ThePowerofExpectation:ApplyWisconsinModelinChina'sEducationalStratification

Besides Blau-Doncan's Status Attainment Model, Wisconsin Model is another important model in US to explain educational and occupational stratification and mobility. However, the Wisconsin Model is relatively ignored in Chinese stratification studies. Drawing upon data from a national survey conducted by Tsing-presents the evaluation methods of social emotional stability, under educational expectations of Chinese parents: idealistic educational aspiration and realistic educational expectation, and then examines the effects of parental educational aspiration and expectation on children's educational achievements.

In this paper, first, I describe the distribution of educational expectation levels across different classes both in urban and rural China. Second, I analyze the formation mechanisms of the gap between idealistic aspiration and realistic expectation, examining feasible influencing factors. Third, I adopt a family capital framework, mainly including social and cultural capitals, to explain how educational expectations work in household level. In sum, this paper attempts to reveal the cognitive and behavioral processes of how educational stratification occurred in current Chinese society.

SocialEmotionalStabilityFacingDisasterWarning

Social emotion is a complex system, with a dissipative structure. When the carriers of social emotion percept threaten from a disaster warning, the initiative dissipative structure of social emotional system will be broken down. This study presents the evaluation methods of social emotional stability, under educational expectations of Chinese parents: idealistic educational aspiration and realistic expectation, examining feasible influencing factors. Firstly, we analyzed the dissipative structure features of social emotion and used Social Emotional Entropy (SEE) to measure the changes of social emotional stability, which was explained by the entropy of the Bird Flu H7N9 events in 2013. Secondly, we considered that social emotion is not simply the totalizing of individuals’ emotions, but results from both the combination of individual-level affective factors as well as from the group or contextual level. In that way, we used the Cellular Automaton modeling method integrated with the Social Network Theory, in order to present a dynamic dissipative process of SEE from both aspects: “bottom-up” and “top-down”. Finally, we used a case study to verify the effectiveness of the integrated method. Our results indicated that the social network properties and population characteristics are key determining variables of social emotional stability.

HONKANEN,ANTTI* (University of Eastern Finland, antti.honkanen@uef.fi)
GoldenAge-Ageing,Well-BeingandTourism

Population ageing is likely to affect the tourism movements especially in Western countries. The importance of seniors for the tourism economy is growing. Nowadays seniors are expected to be more active in domestic tourism and traveling more often abroad than previous generations. However, there are several reasons why aging people are not traveling as health problems and lack of resources.

The paper clarifies how active travelers ageing people are and it identifies reasons why in Korea discussions on individualization are exclusively concentrated in areas of gender and family.

Another important feature of the discourse is Beck's “methodological cosmopolitanism”. Beck and his Asian colleagues seem to consider the values and institutions of strong Confucian family as unique characteristics of the Asian path to modernization. This is one important reason why in Korea discussions on individualization was considered as a special way (“Sonderweg”). Beck's individualization theory, however, aims to explain Germany's modernization as a typical process of Western development. With the above introduction in mind, I propose to investigate the historical context between “Sonderweg” and the methodological cosmopolitanism of Beck as an initial step necessary for the analysis of the special ways of Asian modernization. I will proceed to make a further comparison between Germany's Sonderweg and Korea's path of modernization as a mean to evaluate Beck's methodological cosmopolitanism, and the implication this has for Korean sociology.
The older age cohort was traveling less than the younger one as expected. The socio-economic differences are wide in domestic tourism and especially traveling abroad. People traveling often were also more active in other leisure activities. Respondents’ self-estimation of their health predicted the propensity of traveling. Health problems were one main reason why ageing people are not traveling (anymore) but also other factors like lack of money.

Child Investment in Youth Care Services: Dilemma’s and Consequences

Welfare states have (re-)invented family policy as a response to the notion that children are the social, cultural and economic capital of societies. Consequently, the healthy development of children is an important aim in policies regarding child care, and the role of parents in safeguarding their children’s development is stressed.

For professionals working in the field of youth care this change in policy aims has had its effects on the way their profession is organized and carried out: more attention is directed towards preventive and early interventions—in order to ensure the best possible developmental trajectory—as opposed to curative interventions.

1. There is a stronger emphasis on effectivenes and evidence based practices and its concurrent emphasis on protocols and guidelines. At the same time however, professionals are expected to adjust their work to the demands of parents, and to serve parental expectations and wishes.

2. In line with this, professionals find themselves balancing “distance” and “control”: working with parents presupposes that professionals can’t be directive and should refrain from being too authoritative. Yet, professionals also expected to intervene when children are at risk, and policy measures emphasize risk-assessments and inter-organizational information exchange.

The international research project “Governing New Social Risks” centers on this turn to parenting. In our paper we will discuss how these changes and dilemmas have affected the way in which professionals define and organize their own profession, and their relation with parents and families. Based on interviews with (academic) parenting experts, relevant policy makers and professionals themselves, we will present our findings on how professionals give form to these policy changes. Although the turn to parenting takes place throughout welfare states, we will focus on the Netherlands as a case example. However, data from the other European countries included in this international research project, will be taken into account.

RC53-856.2

HOPMAN, MARIT* (Utrecht University, The Netherlands, m.hopman@uu.nl)

KNIJN, TRUDIE (Utrecht University, The Netherlands)

Defining Children in Youth Care Interventions

Within welfare states, attention for the development and upbringing of children is increasing. On the one hand, scientific disciplines such as developmental psychology have professionalized child development and concurrently, a pro-to-professionalization of parenting has taken place. On the other hand, the same attention for development can be found in governmental policies, resulting from the influence of child investment theories. Consequently, parenting support interventions—aiming at parents in their central role as child raisers—have gained in importance. These interventions mostly respond to the child rearing questions of parents. Also, interventions are often selected based on their effectiveness.

Although these issues are essential in organizing youth care, this approach fails to acknowledge how these interventions perceive and define children and childhood, and how this effects the ways in which children are raised and develop. This paper addresses two of the theme-related questions:

1. What are the dominant definitions of children’s problem and which ideas of social order do they respond to?

2. How do stocks of professional knowledge as well as the practices of intervention on children’s problems evolve over time?

The questions are addressed by using both quantitative and qualitative data from the international research project “Governing New Social Risks”, which centers on the turn to parenting from the 1990’s onwards. In the quantitative part, results of the analysis of parenting support interventions are presented. For example, changes in scientific theories underlying the interventions help us in understanding how children are being defined. In the qualitative part we discuss data gathered through interviews with (academic) experts and relevant decision makers about dominant views and changes in the perception of children and families and of state-family relations. We focus specifically on the Netherlands, but information from the other countries included in this research project will be addressed as well when applicable.

Gender Differences in Happiness: The Effect of Marriage, Employment, and Parenthood in 33 Countries

Happiness remains an important measure of psychological well-being. Given the current challenges of struggling global economies and political conflict and unrest, psychological well-being has never been more important. While previous studies have found that females, the young, the unmarried, and people with lower socioeconomic status are more likely to suffer from lower psychological well-being, they fail to fully capture societal-level conditions’ impact on individual happiness. Although previous studies have focused on how societal conditions affect individuals in a given society and shape perceptions of their personal conditions, in this study I focus on gender. Utilizing hierarchical linear modeling on data from the 2002 International Social Survey Programme, I examined gender differences in happiness and how country-level gender stratification affects the relationship between happiness and family-related predictors in 33 countries. The results show that there are clear and significant gender differences not only in the happiness between men and women but also in the factors affecting their happiness. While, on average, women evidenced lower happiness than men, results indicated that there were gender differences in the effects of being married, not working, and the number of children individuals had on happiness. However, despite expectations that country-level gender equality and egalitarian norms would improve women’s happiness, the measures of gender equality and gender ideology at the country-level showed mixed results in the cross-level interaction and therefore suggestion are made for future directions in this important area of research.

A ‘Ritual’ of Surgical Mask Wearing in Japan: A Short History

The practice of surgical mask wearing in Japan has been adopted by a significant proportion of the national population and has become embedded in people’s everyday lives. This paper studies the practice as a ‘ritual’ and outlines its history in Japan. The notion of ritual is employed in this paper, not analytically, but operationally, in order to highlight the structural/functional aspect of the practice, by which individuals come to terms with invisible threats. In the 1920s, the practice of mask wearing, introduced from the West and conveying the symbolism of modern science, replaced pre-modern ‘superstitious’ rituals against flu in Japan. It started to be worn by healthy individuals in order to avoid infection, and spread as a matter of social etiquette to the infected, so as not to infect others. In addition to this usage, which continues up to the present, by the 1990s masks had become widely used by cedar pollinosis sufferers to avoid inhaling pollen. Some people wear masks in order to prevent their throats from drying up or to keep their breath fresh while others wear them for aesthetic or psychosocial reasons. More recently, radioactive particles from Fukushima and air pollution spreading from China have been added to the list of health risks to be minimised by wearing masks. Wearing a mask appears to provide peace of mind amidst uncertainties. Its instrumental value in reducing health risks is scientifically

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
inconclusive. What is certain is that the practice precedes scientific discussions. The practice of mask wearing absorbs anxieties and uncertainties and restores a sense of security and self-control.

The Invention of Religion Category and the Formation of the Secular in Japan

This paper examines the social construction of the categories of ‘religion’ and ‘the secular’ in Japan. This is a preliminary analysis of how the term ‘religion’ was invented amid the power struggle of international diplomacy against the Western colonial powers in the mid-nineteenth century. It also played an integral role in the formation of non-religion (or the secular), more specifically, the modern Japanese nation-state. After the fall of the shogunate in 1868 and throughout the modernisation process thereafter, the invention of the religion category, in turn, demarcated the modern Japanese secular, the category of non-religion, where the centralised state legitimised its authority over the population. The secularisation of the state enabled the government to mobilise various groups classified as ‘religious’ for political purposes, while suppressing so-called ‘pseudo-religious’ groups, in order to achieve the ideological goal of the Japanese nation-state. After the Second World War, these categories of ‘religion’ and ‘the secular’ were reformulated under the influence of American-style liberal democratic values and sensitivities, which delimit the post-war Japanese secular. The boundary between these two realms, however, has always been ambiguous and often contentious. This paper argues that sociological studies of religion should critically analyse the social construction of the religion-secular dichotomy, by focusing on the social process in which particular meanings of the terms of religion’ and ‘the secular’ have been constructed and the ways in which the two categories are demarcated from each other.

there is a dire need to bring such studies into the larger picture of comparative, this is another stream of research still in infancy, the outcome is uncertain but pines, Thailand, Vietnam and to some extent also India have become a growing social policy developments in countries such as Indonesia, Malaysia, the Philip- pines, Thailand, Vietnam and to some extent also India have become a growing concern among social welfare researchers interested in a particular case. Again, this is another stream of research still in infancy, the outcome is uncertain but there is a dire need to bring such studies into the larger picture of comparative, cross-national welfare state research.

Changes in ICT Usage in Times of Scarcity

The information and communication technologies (ICT) market has been show- ing a remarkable expansion. Considering the severe ICT infrastructural and economic crisis some countries are currently facing, and the restrictions in several forms of con- sumption due to scarcity, what changes may be affecting ICT usage in everyday life? This presentation tries to address how are individuals adapting to new chal- lenges related to inequity of (material) access to ICT and a growing digital divide in ICT usage opportunities, which may emerge and become particularly relevant in a context of scarcity such as the one Portugal is now experiencing.

Vanishing National Reality

For two decades, comparative welfare state research on developments in Asia was largely confined to five or six cases: Japan, South Korea, Taiwan, Hong Kong, Singapore, and occasionally China. These welfare states have continued to be in the foreground of recent social research. However, with rise of PRC over the last decade this picture has entirely been changed. On the one hand the focus of global social policy research has shifted towards the monumental transforma- tions going on in China also regarding welfare policy. Chinese social researchers have come to the fore in this area to an extent never seen before. In particular western researchers have flocked to this lump of sugar and interacted with the growing stock of domestic comparative scholars in this field. So far, this stream of research is only in its infancy. The outcome is uncertain but there is a dire need to bring such studies into the larger picture of comparative, cross-national welfare state research.

Diff erenti ation Rights, Segmented Labour Markets: The Emergence of New Guestworker Regimes and the Making of Marginalised Precarity in Western Europe

This paper contrasts current labour migration with post-WWII guestworker programmes and argues that hierarchical differentiation and exacerbated precarisation for some migrant groups are the main characteristics of current labour migration regimes. My main objective is to show how both low-wage and ‘elite’ migration programmes are structured by (i) the securitisation of migration and (ii) racialised boundary making. These processes are disguised by the hegemoni- cal notion of migration management. Using the examples of the UK, Austria, and Spain, I first outline how labour market restructurings since 1975 have led to a layering of labour mobility: the concentration of labour migrants in low-paid in- dustries, migration histories, and welfare regimes. Together they illustrate how the climate change is therefore central for the country’s future, and media debates are likely to play an important role regarding the choices that have to be made. In fact, the framing of climate change in the media guides public perceptions of reality and offers hints for thinking and acting (Ettorre 2004) from the individual to the policy-making level. In line with the COMPON research protocol, newspaper articles were selected by searching for the keywords “alterações climáticas” (climate change) in all items published in three dailies (Público, Jornal de Notícias, and Diário Económico) from 2001 to 2010. A random sample of 25% of the articles published between 2007 and 2010 by each newspaper was selected, and the sample was stratified by year. Results show that the Portuguese press tends to reproduce the global political agenda on climate change, mainly focusing on international events associated with global political decision-making processes, while typically reducing the debate to climate change mitigation. Adaptation’s low visibility may be explained by a dependency of Portuguese newspapers on the international political agenda and by the news sources used. The lack of mobilization of national leaders for adaptation may also play a part. This type of coverage tends to obscure local and national realities and responsibilities, though they are key to addressing climate change.
workers throughout Europe, many of them living under conditions of radicalised precarity.

*Enforced Temporariness – the Interplay of Securitisation and Economisation and the Emergence of Temporary Migrant Worker Programmes in Western Europe*

Focusing on the level of migration politics, this paper enquires into the logics and processes underlying the formulation of temporary migrant worker programmes. Based on Foucault’s analysis of liberal governmentality and Jessop’s strategic-relational approach, I argue that the governing of temporary labour migration in liberal nation-states requires sophisticated political technologies. These technologies entail the differentiated deprivation of fundamental rights and are therefore neither unproblematic nor self-evident. Developing and elaborating the necessary legal categorisations along skill levels, nationality, employment status etc. requires a complex interplay of two political rationalities that are often conceived of as contradictory: the securitisation and the economisation of migration. Once established, differentiations and measures introduced under securitised conditions can be invested in utilitarian migration policies. The interplay of these two rationalities depends on and is mediated by wider political-economic and societal transformation processes. In order to illustrate this general argument, I, first, give an overview of temporary migration policies introduced in Western European nation-states from the early 1990s onwards. Similar policies have been implemented in nation-states representing different ‘varieties of capitalism’; party systems, migration histories, and welfare regimes. In a second step, I focus on developments in Hungary and Austria to show how the securitisation of migration changed the strategic setting and thus enabled some actors to push their agenda of enforced temporariness and radicalised precarisation. Finally, I discuss how these political developments are linked to changes in the political-economic context – and argue that the interplay of securitisation and economisation has allowed to adapt migration regimes in line with neoliberal market needs.

*Elderly Prisoners’ Life World - Comparative Study in NZ and Japan*

The Elderly Prisoners’ Life World-comparative study between NZ and Japan

In Japan and NZ the crime rate of the elderly persons (up to 65) is dramatically getting upward since 1990s. I and John Pratt(NZ) have engaged in the comparative studies to make clear the backgrounds and reasons to put the elderly persons committing crimes. Both countries did a lot of effort to prevent them from doing crime and take care for them after release from the prisons. Nevertheless, such kinds of crime policy and the welfare trials were found out ineffective for the decrease their reoffending.

Therefore we make our ideas to understand the elderly people in terms of their life world such as their life plans in childhood, dreams, hope, political needs, religious consciousness, love, alterity, family networks, crime and violence aspirations and satisfactions etc.

Based on the research findings (600 prisoners in Japan and 66 prisoners in NZ), here, we would like to construct their life worlds to get some suggestions to step forwards for them in their future without the criminal lives.

*The Determinants of Cross-National Variation in Migrant Accessibility to Rights*

Nation-states vary largely in the degree to which the economic, social, cultural, civil and political rights enjoyed by the native citizenry are conferred upon foreign nationals, and rarely do non-nationals fully enjoy the rights until they naturalize. There is considerable cross-national variation in accessibility to the legal institution of citizenship, but extant studies on the determinants of such variation are fragmented, revealing contradictory findings. Comparative studies, though informative, are largely qualitative and geographically limited to Western liberal democracies, making it difficult to make generalizable claims about other parts of the world. Furthermore, there has been limited theorization on the impact of international exogenous pressures on citizenship and nationality laws. Using the 2001 Citizenship Laws of the World dataset to obtain data on the minimum residence years and citizenship requirements for naturalization, we examine the extent to which states’ access to rights, this cross-national study utilizes 0LS regression to compare the explanatory power of world culture variables against domestic economic, political, and demographic variables commonly used in studies on the determinants of citizenship laws. Results show that international non-governmental organization (INGO) membership best predicts cross-national variance in the minimum residency length requirements for naturalization, thereby suggesting that extensive linkages with INGOs and the resulting diffusion of world cultural scripts on human rights into the domestic society and polity influence a state’s willingness to confer the ultimate means to legal membership and rights.
Many ‘Post-Modern Princes? Rival Cosmopolitanisms in the Global Field of Justice Movements

In this article, Hosseini reflects on the recent organizational and ideational shifts in the so-called global justice movements. While some recent studies conceptualize these movements as ideologically mature and coherent, other inquiries highlight growing disorganizations, fragmentations, disappointments, and disputes. The former argue that underlying global solidarities are coherent cosmopolitanist or universalist values, whereas the latter claim that the global justice movements lack the necessary ideological vision for uniting the masses behind a global project for changing the world capitalist system. Alternatively, by drawing on his research project (2002-2006) and examples from the post-GFC uprisings including the Occupy movements in 2012, Hosseini argues that there have been four major parallel trends of ideological changes, dividing the global field of transformative practices between rival camps in terms of their orientations towards cosmopolitanist values. There are however significant potentials for traversing the divisions between the cosmopolitanist camps. Among them is the rise of a new (meta-)ideological vision, coined here transversalism by him. Transversalism assumes the possibility of creating common grounds for dialogue, collective learning or actions among multiple progressive identities and ideological visions in the global field of resistance. It appears in two forms: (1) the extension of any of the above mentioned camps to accommodate some of the principles of the other camps, such as regional Bolivarian cooperation between socialist/populist states in Latin America in recent years, or the idea of Democratic global Keynesianism that attempts to improve the conditions for democracy within societies by adopting democratically developed international regulations; (2) in the form of independent integrative projects based on pragmatic adoption and combination of transformative practices from the camps, such as Economic Democracy.

Mending the Master Programmes: An Effort to Improve Progression and Completion Rates in Graduate Education

Generally, studies of dropout and completion in higher education have been concerned with undergraduate education and little attention has been paid to graduate level.

The Bologna process has led to a introduction of reforms in higher education in several European countries. In Norway a comprehensive reform in higher education – the Quality Reform – was implemented in 2003. Two of the aims with this reform was to improve the students’ progression and completion in higher education. To achieve this, a number of changes regarding the structure and pedagogy in Norwegian higher education system were introduced.

This article addresses completion and dropout in Norwegian university graduate higher education before and after the reform, using register data consisting of the students that entered one cohort before the reform was implemented (the 1999-cohort) and one after (the 2005-cohort). The aim of the article is two-fold: to investigate if there are changes over time in completion rates and dropout rates in graduate university education, and if the changes can be interpreted as an effect of the comprehensive reform in Norwegian higher education implemented in 2003. To what extent can national translations of international reforms make changes in national completion rates?

Preliminary analyses, including important independent variables such as SES and gender, indicate that there has been an improvement in completion rates after the reform, but that the dropout rate might not have changed significantly over time. This is an improvement on previous projects completing on estimated time (2 years). Moreover, the process of completing a graduate university degree in general is more rapid after the reform than before.

Social Innovation: Driving Force Of Social Change

The importance of social innovation in successfully addressing social, economic, political and environmental challenges of the 21st century as e.g. poverty and inequality is recognised not only within the Europe 2020 strategy but also on a global scale. However, despite this growing awareness of the significance of social innovation, there is still no sustained and systematic analysis of social innovation, its theories, characteristics and impacts.

Since Schumpeter, the concept of innovation has focused predominantly on economic and technical developments, whereas social sciences were particularly interested in the corresponding social processes and effects. This may explain why social sciences, to this day, have been conducting empirical work on social innovations quite comprehensively, but without labeling them as such and, with few exceptions, without a concept of social innovation informed by social theory.

In light of the increasing importance of social innovation, the paper looks at the theoretical concepts, areas of empirical research and observable trends in the field of social innovation on a global scale. It gives an overview of the current situation and the perspectives of socio-scientific innovation research that have greatly contributed to the development and spread of an enlightened socio-scientific understanding of innovation.

It will present the objectives and the concept of the global research project SI-DRIVE (7. Framework programme of the European Commission) which intends to extend knowledge about social innovation (SI). Facilitating empowerment within innovation processes driving social change can and shall be a main result of social innovations. Thus, social innovations need to mobilise citizens to take an active part in innovation processes and thereby enhance society’s generic innovative capacity. This requires new models of governance in favour of self-organisation and political participation, allowing sometimes unexpected results through the involvement of stakeholders.

Food Markets of Oaxaca (southern Mexico): Culinary Heritage, Gender and the Slow Food Movement

In 2010 traditional Mexican cuisine - ancestral, ongoing community culture - was inscribed on the Representative List of the Intangible Cultural Heritage of Humanity of UNESCO. Significant element of the indigenous culinary heritage of Mexico is the pre-Hispanic institution of a food market (tianguis).

The southern state of Oaxaca - characterized by its ethnic and cultural heterogeneity and rich biodiversity - is famous for its regional cuisine considered to be the most sophisticated in Mexico and well established network of traditional markets. Nowadays, those lively, highly gendered spaces are not merely tourist attraction but still form a crucial part of local economy and communal life.

At the same time, new styles and spaces of food consumption have emerged in the region due to advances of globalization and intensified processes of human mobility (migration, tourism, growing expatriate communities etc.). One of them
is recent, western trend of ‘slow food’ markets, shops and cafes established in
gentrified urban spaces as well as middle class suburbs of the state capital. Based
on the results of fieldwork carried out in 2011 and 2014 in the central part of the state of Oaxaca (Vollas Centrales) this paper analyzes the ambiguous relation between two seemingly similar, but heavily diversified along gender, class and ethnic/national lines patterns and ideologies of consumption that can be ob-
served in contemporary marketplaces of Oaxaca City: traditional, indigenous/ mestizo, peasant usage of food versus those promoted by the local branch of slow food movement connected with new, transnational urban lifestyle. Moreover, it points out the implications and dubious outcomes of the ongoing changes in
Oaxacan urban foodways for indigenous communities and especially those who
traditionally produce, cook and sell food at local markets – Indian women.

From Environmental History to Sustainable Future? On the Taiwan Experience and Beyond

In this presentation, I will draw from the lessons of Taiwan's local environmen-
tal history in 10 counties and cities over the past 60 years to assess the possible future for sustainable development. First, I will sketch the overall and particular historical trajectories of how local environment has been affected and become deteriorated by human actions and government policy factors such as ill planned industrialization and over urbaniza-
tion in many localities. Second, I will look into the rise, development, and effect of green local civil society forces in the forms of anti-pollution, nature conservation, and anti-nuclear power protests that have tried to stop the pro-growth path and reverse the envi-
nomental injustice in various counties and cities.

Third, I will then assess if the slow yet steady paradigm shift facilitated by the
green movements has been effective enough to change the government-business
society forces in the forms of anti-pollution, nature conservation, and anti-nuclear
movement in many localities.

IV. What can the Taiwanese experience contribute to the making of a truly
construct the order of the system (in the sense of Dirk Baecker), not reducing the
contexts currently become a huge complexity than within the modern society in the

“My Girlfriend Said She Won't Live with My Mom in the Future”: Online Discussion about Relationship in Taiwan

The contemporary self-help culture raises scholars’ interest, through it to investigate whether the discourse and imagination of intimate relationship or biographical pattern and life decisions. However, although people still rely on advices and counsels from self-help books and manuals written by experts and professionals when they are troubled by matters about relationship and life, more and more people login to online forums to ask for advices from other or-
dinary people. Not only in new media but in non-western context is the self-help culture significant and prosperous, though in different ways from western societ-
yes on which most studies concentrate. Therefore, this study aims to inquire the
advice interaction about intimate relationship on an online forum (Boy-Girls) of
Taiwan’s largest virtual community (PTT).

Through a yearlong fieldwork and discourse analysis in this community, I ex-
amine the discourses about intimacy in Taiwan and compare with what have been
suggested in the previous studies based on the Western self-help literature in print media. The online advising discussion shows different concerns and disc-
urses about intimate relationship, and has a different relationship between adv-
isers and advisees. First, family issues, gender difference, and ethics of relation-
ship are main themes in the discussion. Secondly, comparing to what have been
indicated in the past, the discussion in virtual forum concerns less self-centered
than ethics-centered, less value of self than equality between genders. These
discourses may promote a perspective of intimacy based on rather mutually de-
pendent partnership than ego-centered atomic individuals. Finally, the pattern of
the production of discourse in online forums is different from the way structured
in mass media which allows only one author/expert/advisor preaches their ideas/
strategy to the mass audience. In this sense, the different relation-
ship between advisers and advisees in new media, I argue, is the reason resulting
in different discourses about intimate relationship and self.

The Unspoken Shame – the Politics of Memory during Cold War in Taiwan

How do political victims recall and deal with their pasts after prolonged griev-
ous state violence? This is a research aims to account for the way in which the politi-
cally victimised ones in Taiwan look back on their pasts during the Cold War
from the present point. Whilst conducting interviews with the victimised individu-
als, as former state enemy, informants are prone to conceal their pasts as to their
traeson crimes, and even tend to deny the pasts in public. The attitude highlights
the impasse of transitional justice work in Taiwan, while the society has not pro-
vided the former state enemies enough rooms to voice their deeds that had once
seemed to be committed crimes. In addition, informants of the research express
an emotion of shame that they even have never voiced to the loved ones. Yet,
after the fieldwork for years, the informants disclose their unspeakable shame to
researcher such as I during interviews. It is salient to denote that the emotion of
shame that has intertwined with their memories is not remnants of the state vio-
lence or political stigma. In stark contrast, a shame was derived by the depression
of not revolting the regime successfully. As the society see these individuals as
victims, they tend to see themselves as revolutionaries instead.

The research aims to elicit the hidden context of the collective state of mind of
the former state enemy in Taiwan. With in-depth interviews and collected data,
the paper manages to analyse the subjectivities of these individuals through their
memories. By unraveling the way in which the victimised individuals remember
their life stories, the research aims to deliver another perspective of the politics
of memory in Taiwan.

Big Data: The Concept in the Next Society

In our society, each social phenomenon leans on every new concept to clarify.
Concept of “Big Data” reveals the novel route to further illustrate our society.
Combining endless possibility in the society nowadays, connection produces in-
umerable different situation since they are highly correlated. These variable
context currently become a huge complexity than within the modern society in the
sense of Niklas Luhmann. Therefore, the aim of next society is finding a way to
construct the order of the system (in the sense of Dirk Baecker), not reducing the
complexity instead.

Facebook demonstrated a solution, which has been developed by the society. By
algorithmic programming in Facebook, each loose coupling (uncertainties) click of
the user is now referring to different distinction and building up the boundary of
meaning. Every time user clicks “like” on status that it means he understands
something. Following understanding and meaning, the uncertain state will soon
transform into certainty, namely stable state or the order. Thus, using the endless
uncertainty is possible to construct the order or coexist with other systems.
The novelty of “Big Data” isn’t itself but clarify the targeted question. The paper
illustrated how Facebook reveals the solution to the problem of the next society,
computer society, as Dirk Baecker said.

Satisfaction in Japan, Mainland China and Taiwan

The unique style of coresidence in East Asia is a three-generation household. This is not only strongly endorsed by cultural values with emphasis on respect for parents, but this also forms a basis for promoting intergenerational changes between elder parents and adult children. There are three main questions to be answered in this study. First, how does living arrangement influence material and instrumental support between generations? Second, does this influence vary by countries in East Asia? Finally, what are the relations between living arrangement, intergenerational support and individual life satisfaction?

In this study, we used data from 2006 of the East Asia Social Survey. Results show that co-resident children in these three countries tended to provide more support to older parents and also receive more support from older parents. Older parents who lived with children tended to give more support to children; however, coresident parents in Taiwan received less support from children than parents who didn’t live with children.

Results from logistic regression models suggest that while living with own parents does not appear to affect adult children’s life satisfaction in these three countries, greater giving support to own parents was associated with a higher level of life satisfaction of female adults in Mainland China and male adults in Taiwan. Japanese males who didn’t live with father-in-law and who contributed more support to in-laws tended to be more satisfied with life. Taiwanese females who didn’t live in the same neighborhood with mother-in-law were likely to be more satisfied with life. Furthermore, males in Mainland China who lived in the same neighborhood with their adult children tended to be more satisfied with life. While living arrangement was not associated with life satisfaction of older parents in Taiwan, receiving more support from their adult children would facilitate life satisfaction of older parents.

Fourthly, the hypothesis of social stratification is rejected. Parents of different status groups make similar fertility decisions. Fifthly, the data didn’t support the cohort hypothesis, because the patterns of fertility decisions by different cohorts appear the same. Finally, the significant effect of sibling structure indicates that fertility decisions are made in a sequential decision-making process in Taiwan.

Colonial Legacy and Development in East Asia: South Korea and Taiwan Reconsidered

Conventional wisdom attributes the post-war ascent of Taiwan and South Korea to the role of the “developmental state”. Specifically, the formation of the developmental state in both countries has been attributed to similar causes: post-war geopolitics; land reform; or even, by some, to distinct forms of Japanese colonial rule. A focus on external factors assumes the impetus of post-war East Asian development stems from the external big bang that shook up the existing social orders and molded two different societies into being alike.

Yet, advocates of this position have been unable to explain the different patterns of industrialization and economic organization in Taiwan and Korea despite similar external challenges. On the other hand, the literature that focuses on endogenous forces in East Asia offers a more adequate explanation to how the developmental state and becomes ahistorical. This paper joins the debate through a reinterpretation of the origins of the post-war political economies of Taiwan and South Korea. While acknowledging the importance of conjunctural forces in shaping the direction of development, I argue that the existing social structure matters: Its interaction with the state shapes and constrains state choices and thus can account for the variations in strategies.

I make three claims to explain the divergence between Taiwan and South Korea: First, I illustrate how different configuration of state-society relationships (the state-business relationship) responded differently to similar historical conjunctures. Secondly, I highlight the different responses from society and the dynamics of the state-society relationship in shaping industrial structures and industrialization patterns. The existing social structure played an important role in shaping and constraining state choices at the transition to industrialization. Thirdly, I illustrate how these historical events have helped to reinforce the established patterns of state-society relationship, (Korean state and large capitalists nexus versus Taiwanese state and numerous SMEs alliance), rather than flattening them out.
Does motherhood affect the wages of an employed woman? Because women generally take the major responsibility of childcare, researchers have noted the effect of childcare on the wages of women. At least three theories have been developed in the United States of America and Europe to explain the relationships between motherhood and lower wages. These theories include mainly human capital theory, the welfare state, and the implementation of National Health Insurance, wherein population health became a new ideology of legitimation. Second, health industry in its inclusive sense has been targeted as a promising techno-economic paradigm, along with the descending information and communication industry, for a new mode of growth. Third, there is a ‘managerialistic-developmental’ creation of national system of innovation for promotion of the targeted industries. However, policy paradigm characteristic of marketization of healthcare system, privatization of health promotion on the one hand, and intensifying workplace regime on the other, contribution to a disjunction among current mode of growth, regulatory regime and accumulation strategy, which turning to a more far-reaching organic crisis. Writing from regulation approach, this paper argues that why the ‘welfare turn’ is in fact a political project and illustrate how the therapeutic worker of childcare become a symbolic function of social control. The aim of this paper is to inter- selenahsueh@gmail.com
city, it is essential to understand the role of housing affordability playing in it. This article estimates green housing opportunities of various socio-economic groups in Nanjing China according to their affordability and housing preferences. It analyses the effects of sustainable plans on housing opportunities by comparing three urban development circumstances: the current situation, after improvement of the metro network, and after relocation of heavy industry. Results indicate that in the current circumstance, the lower-middle class has slim chance to have a green home across the city. The improvement of metro network can increase the green housing chances for the lower-middle class in the central areas only if they sacrifice their housing size. The relocation of heavy industry can dramatically increase the green housing opportunities of the upper-middle class in the central urban areas, but will push the lower-middle and middle class moving to the suburbs due to the high prices. To ensure social equity in developing a sustainable city, policy makers need to consider affordability and sustainability simultaneously.

Parental Migration and Adolescents’ Transitioning to High School in Rural China

The transition from middle school to academic or vocational high school or work is a crucial period for adolescents in China. It has profound implications for both the individuals’ lifetime status and the society’s educational stratification and social inequality. Educational reforms beginning in 1980s have raised direct costs of education for individual families and widened regional disparities in education opportunities. Returns to schooling have increased in both rural and urban China. Growing opportunities of migrant work in urban China provide alternatives to economic mobility. Facing unequal opportunities and constraints of pursuing education, how do rural adolescents choose to follow different trajectories of transitioning to high school?

This paper investigates how parental labor migration influences rural adolescents’ transitioning to high school of different levels or migrant work after or even before graduation from middle school. Millions of rural children are left behind in rural China for years as their migrant parents work in the city. Parental migration may lead to increased financial resources, decreased parental supervision, more emphasis on children's time and labor on housework or farming, access to parents’ information and networks on migrant work opportunities, and changes in parents’ values and attitudes about children’s education. These mechanisms will in turn affect children’s aspirations, motivations, academic performance and educational outcomes in different ways.

The data used is collected from my fieldwork following groups of students and dropouts from 3 middle schools located in a typical migrant-sending county of Central China. I used mixed methods to obtain detailed information from student participants, caregivers, teachers and the schools. Data from multiple time points and sources allow me to contextualize life circumstances for rural adolescents, and to examine who continues to high school and why. Both qualitative and quantitative analysis will be conducted.

Passive Revolution: The Retreat of the Taiwanese Developmental State Since 1990s

Since the late 1980s, under the “double squeeze” of democratization and globalization, it is undeniable that the developmental state in Taiwan has undergone significant transformation along the course of economic development. Yet a nagging question remains unanswered: How to comprehend this transformation? It is to illuminate and conceptualize this transformation of the developmental state to which this paper is devoted. More substantively, based on the policy regime approach, the main research objective is to investigate the changing role of the state in fulfilling the dual and often contradictory function of accumulation and legitimation (especially since the 1990s). Three strategic research sites can be chosen: accumulation regime, welfare regime and fiscal regime. Whereas by examining the accumulation regime helps us understand how the state involves in promoting capital accumulation, the welfare regime characterizes the state's pursuit of legitimation. And in order to decipher the tension of accumulation/legitimation nexus, the fiscal regime is accordingly examined. The main concern of fiscal politics is to discover the principles governing the volume and allocation of state finances and expenditures and the distribution of tax burden among various economic classes. Fiscal regime is therefore the linchpin among all the three policy regimes to help us identify the action of the state.

Institutional Divergence in Petrochemical Industry of Mexico and Taiwan: Combined Effect or Failure of State Intervention and Liberal Marketization?

This paper examines the shift from interventionist state to market-led growth in petrochemical industry for both Taiwan and Mexico since 1980s, which leads to the formation of mixed-market economies (MME) in these two countries. Despite the similarity, Taiwanese petrochemical industry demonstrates a backward and forward linkage in a full scale of privatization, whereas Mexico comes to a rupture in backward linkage and importing a large quantity of immediate chemical products with huge trade deficit while implementing privatized contractors.

This paper argues that despite the transition of state policy from interventionism to neo-liberalism in the 1980s, the differences in economic performance of these two countries’ petrochemical industries are determined by the different kind of market institutions-building and state-business collaboration, a result of respective path dependence in Taiwan and Mexico.

The initial finding shows that the Mexican model of state-business coordination via “PEMEX and contractors” and strategic alliance have failed to create incentives for public-private partnership as well as attract investment due to state ownership of oil in the upper stream and oligopoly among big corporations dominated by a few business groups in the middle stream of Mexican petrochemical industry. By contrast, in Taiwan’s case the effectiveness of state intervention lies in developing a state-business co-evolutionary model, featuring not competing with business but rather complementing to business needs in the market. It seems that the continuity of state intervention in Taiwan has penetrated into the era of neo-liberalism, while lacking monopoly and oligopoly in Mexican case.

Teacher Quality Vs. Social Justice: Issue and Status Quo in Taiwan

Teacher quality is taken as the strategy to social justice in the trend of standard-based teacher education. In the accountability of the interpretation of social justice is about student learning opportunity that let every student can learn depends on teacher quality. Especially, all students in every school can receive teaching from qualified, knowledgeable, and capability teachers that means school success. The assumption of the relationship of teacher quality and student learning is worth to investigate. Why the relationship is about social justice, what kind of social justice in the assumption, and how about the context in Taiwan? Is its meaning of Taiwan the same in the concept of standard-based teacher education with globalization? Therefore, this paper would like to find the relationship of teacher quality and social justice. Second, this paper would like to investigate the meaning or perception of social justice in the case. Third, this paper would like to
analyze the relationship of teacher quality with social justice in Taiwan context. Finally, this paper provides some findings and suggestions.

The Taste of Home: Food, Identity, and Community Among Chinese Marriage Migrants in Taiwan

This study aims to explore the complexities of boundary-negotiation, identity, and the sense of belonging through examining foodways in cross-border marriages between Taiwanese men and Chinese women. Analyses are based upon data collected from ethnographic research conducted in Taiwan. Food is not only a necessity in the globalized society but also a contested site where gender, class, and ethnicity intersect. Chinese marriage migrants are often depicted as opportunistic gold diggers in the Taiwanese society. Not only do they suffer various forms of discrimination from the general public, but even more unbearably, within their own family. This research shows that living arrangement has a great influence on Chinese marriage migrants’ agency. In a “three generation cohabitation” setting, the dining table becomes a battlefield between Chinese immigrant wives and their Taiwanese in-laws. Chinese immigrant wives’ food preferences and cooking habits such as the general usage of oil, salt, MSG, and other condiments are associated with their national origin, further stigmatized as the lack of modern knowledge and inferior. In the name of a “healthier” diet, Taiwanese in-laws often despise Chinese marriage migrants cooking habits and ask them to adapt. Food consumption and cooking styles not only draws a subtle ethnic line between Chinese marriage migrants and their Taiwanese in-laws, but also serve as a marker of status and class. Facing such difficulties in the domestic sphere, Chinese marriage migrants often claim that unlike many restaurants in Taiwan, what they cook are the real “authentic” Chinese food. They develop a nationalist discourse as a means of asserting their subjectivity and the legitimacy of being a good mother. With limited agency in food consumption in their own household, Chinese marriage migrants, despite they come from different regions, have collective memories and establish a special bonding, a sense of belonging through food making and sharing.

RC31-522.4

HUANG, PAOYI* (CUNY Graduate Center, phuang@gc.cuny.edu)
“I Want to be a Breadwinner Too”: Chinese Marriage Migrants’ Narratives of Gender, Identity, and Family in Taiwan

This study aims to explore the intricate gender dynamics in cross-border marriages between Taiwanese men and Chinese women. Analyses are based upon data collected from ethnographic research conducted in Taiwan. Gender is not only a major element to immigrant identity, but also a vehicle for minority groups to claim cultural superiority over the dominant group. Taiwanese men and Chinese women have very different expectations of gender roles in marriage. Taiwanese men and their parents expect these Chinese women to behave in a traditional way – be a good stay-home wife/mother/daughter-in-law. Yet Chinese immigrant wives, who grew up in communist China, consider such expectations outdated. Many Chinese immigrant wives, despite external immigration policies and their lack of local networks, exist a strong desire to work. Being confined in the domestic sphere, these Chinese women long for part of their old identity – a financially-independent working woman. Facing stigmas in the Taiwanese society, Chinese immigrant wives criticize that their Taiwanese in-laws are under Japanese colonialism and feudal Confucianism’s influence, thus they are backwards and lack of modern concepts of gender equality. This research argues that these Chinese marriage migrants develop such discourse as a strategy of resistance – a means of asserting their progressiveness. At the same time, gender dynamics in the household (private sphere) has become a public issue – the Taiwanese government launches programs to “teach” Chinese women how to be an “appropriate” Taiwanese wife/daughters-in-law. This study elaborates how the conduct of micro private life is deeply tied to macro social structures.

RC37-639.5

HUANG, QIUYUAN* (Peking University, vincentthu09@gmail.com)
History and Text: A Study on the Changing Forms of Governmentality of the Communist Party of China

Following the traditions of New Historicism, this paper explores the historicity of text and the textuality of history through a case study on the changing forms of governmentality of the Communist Party of China (CPC) before and after the foundation of the People’s Republic of China (PRC). The paper focuses on two social movements initiated by CPC: Land Reform before the foundation of PRC and Patriotic Hygiene Campaign afterwards. The former movement intended to classify ‘class backgrounds’ of people in rural China in order to distribute private properties to create an egalitarian society. While the latter aimed to arouse awareness of public health so as to win an alleged germ warfare and raise people’s standard of living.

The first part of the paper uses two literature texts to analyze the change of governmentality. One is Ding Yan’s novel and story collection Senggang River which portrays the Land Reform. The other is Clear Skywritten by renowned playwright Cao Yu which tells the story of how an American-sponsored hospital transformed during the Patriotic Hygiene Campaign. Under CPC’s ideological influence, both texts served the purpose of political propaganda. While the former draws characters and storytelling reveal the change of CPC’s governmentality from absolute dependence on violence to reliance on mastering and discipline of knowledge and discourse.

Second part of the paper further discusses the practice of the new form of governmentality in later years of the Patriotic Hygiene Campaign. Using news reports and official archives, the paper uncovers the changing meaning of the idiom ‘class enemy’. From American imperialism to wrong methods of economic development, and later, dissidents within the Party, the change of the designatum of the same word unveils the fact that history is more of a narrative open to various interpretations than a solid causality between events.

Framing Risk and Untrustworthiness: A Study of Anti-Nuclear Activism in Guangdong, China

This study examines frames and framing processes in the opposition to a proposed nuclear material processing plant in Guangdong, Jiangmen city, which led to the suspension of the plan. Systematic analysis of microblog posts belonging to the hashtag of “Jiangmen nuclear crisis” on Sina Weibo revealed two important oppositional frames: risk of radioactive contamination and its hazardous effects on health; untrustworthiness towards the local government and the attendant low level of acceptance of the siting plan. The framing process was facilitated by the Internet and shaped by contextual factors as well as interactions between government and opponents. The sense of risk has been heightened after the Fukushima Daiichi nuclear accident, frequently referred to in the framing process. Yet, unlike the previous literature emphasizing the importance of “technological fix”, the risk was framed as a social issue associated with the lack of confidence in authorities’ supervision and regulatory capacity which was justified by past scandals regarding shady public projects, food safety as well as the widespread pollution problems in China. The untrustworthiness towards government was initially derived from the short consultation period, procedural unfairness, and inadequacy of information disclosure, and then further reinforced by officials’ inappropriate responses, ill-prepared feedback channels, and more importantly the micro-blogging censorship. As untrustworthiness levels increased, the sense of risk was also enhanced. Besides, the Internet played an important role in revealing the problematic flaws and demonstrating the potential widespread fallout through digital mapping system; it also helped activists counter officials’ discourse head-on. These findings echo previous conclusion that limited public participation in decision-making process is a significant cause of environmental activism. However, the interactive framing processes suggest that the public’s perspectives on environmental issues are inevitably intertwined with government’s responses and the public’s general perception of the government.

The Relationships Among Ethical Ideology, Work Stress, and School Life Adjustment of Elementary School Teachers

The purpose of this study was to explore the relationships among idealism, relativism (two kinds of ethical ideology), work stress, and school life adjustment of elementary school teachers. Data were collected through questionnaires from a sample of 565 elementary school teachers in Kaohsiung city. The major instruments for this study included Teachers Idealism Scale, Teachers Relativism Scale, Teachers Work Stress Scale, and Teachers School Life Adjustment Scale. Structural equation modeling (SEM) was applied to make parameter estimations. Path analysis revealed the following findings: First, idealism could negatively predict work stress, whereas relativism could positively predict work stress. Second,
in the common estimation, idealism could positively predict school life adjustment, but relativism could not significantly predict school life adjustment. Third, work stress could negatively predict school life adjustment. Fourth, work stress was not the mediator among idealism, relativism and school life adjustment. The implications of this study to elementary school teachers' human resource management in Kaohsiung and future studies were discussed.

Inclusionary Housing in China: Achievements and Challenges

Faced with a large national quota for low-income housing coupled with severe budgetary constraints, local governments in China have recently embraced inclusionary housing as a new strategy to achieve housing affordability and social and spatial inclusion. Yet, inclusionary housing in China is complicated by the strong role of the central government in housing policy, the state ownership of urban and local governments right to lease land, and a private sector that historically had little role in the provision of low income housing. This paper evaluates inclusionary housing in the Chinese context, asking: 1) Has inclusionary housing achieved social and spatial inclusion? 2) What is its social, economic and political costs and benefits? 3) What kind of mechanisms needs to be in place to make it successful and sustainable? Field work in Beijing shows while inclusionary housing in China is producing a large number of new units due to the strong government mandate, it does not result in increased social and spatial inclusion. As a result, the policy further deepens patterns of spatial marginalization of low-income residents to the urban fringe, increases transportation costs and decreases access to employment opportunities. The government is the main beneficiary of inclusionary housing, while developers and residents have few benefits but face challenges in property management and daily life. We argue that the inclusionary housing policy in China has to be reformed to be sustainable, with a better incentive system to encourage the active participation of private developers and a better policy design and implementation to facilitate social and spatial inclusion.

Torn Between Equality Norms and Risk-Based Governance Stimuli? Comparing the Role of Professions in Occupational Health and Safety Regulation in Germany and the United Kingdom

Risk-based governance provides, inter alia, the means to target regulatory interventions by individuals, the occurrence of ‘bads’ and their impact. For example, in 2005, the influential British Hampton Review suggested to target workplace inspections in occupational health and safety (OHS) policies in a novel manner: not the threat of injury should allocate resources, but high probability and/or spectacular injuries. However, the unequal treatment of workers in risk-based governance regimes for the professional ethos of occupational physicians or safety engineers. While professions define the critical values of acceptable, tolerable and unacceptable harms and consult companies on their OHS management, their role regarding the (non)spread of risk-based regulation is still underexplored.

Based on findings from the international research project HowSAFE this paper identifies key tensions between professional dedications to treating the health and safety of all workers equally and risk-based approaches which would focus on particularly frequent and/or costly health damages as defining element of OHS regulation. To do so, we compare the undermine used in the OHS domain and nuances in professional identity. We thus explain, for example, why the ranking of diseases and risks seems relatively acceptable in the UK, while the medical profession in Germany treats each case as particular and socially and politically relevant.

Where Is Home? Hukou, Non-Local Young People and New Inequalities in Relation to Housing in Contemporary Shanghai, China

In the past decade, housing prices have been skyrocketing and renting prices also have been on a rise in Shanghai. The measures taken by the governments to restrain rising housing price, together with their pursuit of gentrification of the city, when interacting with such institutional hurdle as hukou (household registration) system, ironically, have produced new inequalities between local residents with a Shanghai hukou and those without. This paper aims to unpack the complexity and examine the production of new inequalities suffered by young non-locals, who, according to the 2010 census, account for almost 60 per cent of the nine millions non-local migrants in Shanghai. It employs two cases. First, it examines a phenomenon called “group renting” (qun zu) in which existing medi-end even high-end apartments are divided into small cells and let to people. The great majority of the inhabitants are young non-local migrants who cannot afford more than a cell in the gentrified city center, with the number of “hukou” in their hands, and the local government has taken measures to stop ‘group renting’ which leaves many young non-natives nowhere to find a home. The second case is about a recent regulation issued by Shanghai government in which non-local unmarried people are denied the right to buy a home in Shanghai. The effects of this regulation are gendered, as the protests have focused on how consumers in protests. By analysing these two cases, this paper aims to show how the right to the city of the young nonlocals has been contested through the unequal citizenship regime which is institutionalized with the hukou system and further reinforced and complicated along lines of gender and class; how the state has infringed on their private life decisions particularly marriage choice (to get married or not) by regulating on their housing right, in order to refrain housing prices.

Breaking the Cycle: Inequality, Social Investment, and Human Capital in Latin America

Latin America has long lagged behind the East Asian Tigers in investment in education. In particular, Latin American countries failed to invest heavily in public secondary education. This has had costs both in terms of economic growth and inequality. After some 20 years of democracy and particularly with the turn to the left, social investment in the form of increasing expenditures on education and health care and the spread of Conditional Cash Transfer Programs has received unprecedented attention. The CCTs are based on the recognition that investment in the human capital of the next generation requires that poverty in the present generation be addressed. We argue that in Latin America social investment, human capital stock and inequality and poverty are linked in a feedback causal process and present quantitative and qualitative evidence supporting our argument.

Asthma Management in British South Asian Children: An Application of the Candidacy Framework to an Understanding of Barriers to Effective and Accessible Asthma Care

Asthma is one of the commonest chronic conditions of childhood, placing a significant burden of care on families, communities and health services. British South Asian (Indian, Pakistani, Bangladeshi origin) children diagnosed with asthma are less likely to receive reliever and preventer medication prescriptions compared to their White British counterparts; are more likely to suffer uncontrolled symptoms; and are more likely to be admitted to hospital with acute asthma exacerbations. This paper explores the socio-cultural context of asthma management in British South Asian families, drawing on major qualitative study of management and interventions for asthma management funded by the UK National Institute for Health Research, Health Services Research (NIHR-HSR) Programme.

We present findings from data exploring parents/carers’ children’s and health professionals’ understandings of asthma and their perceptions of the barriers and facilitators to good asthma management. The paper draws upon an interpretive analysis derived from the candidacy framework for explaining inequalities in access to health services for vulnerable groups, developed by Dixon-Woods and colleagues in the UK (Dixon-Woods et al. 2006). The candidacy framework emphasises the dynamic, multi-dimensional and contingent character of health-care access and provides an insightful interpretation of our findings in light of the social patterning of perceptions of asthma and health services. Our analyses using this conceptual framework demonstrate how a lack of alignment between the priorities and competencies of British South Asian families and the organization of health services conspire to create vulnerabilities and difficulties in effectively managing childhood asthma.

Funding acknowledgement and Disclaimer: This project was funded by the NIHR-HSR programme (Ref 09/0001/19). The views and opinions expressed therein are those of the authors and do not necessarily reflect those of the NIHR HSR programme or the Department of Health. The paper is presented by the authors on behalf of the wider MiA project team.

Bio-Sociality and the Negotiation of Diagnosis in Cross-Border Infertility Treatment

The expansion and globalisation of medical technologies for the ‘treatment’ of infertility has taken place at a rapid rate. Solutions to an increasing range of fertility-related concerns (chromosomally abnormal gametes and embryos, immunological disorders, reduced ovarian function) have been marketed to an affluent, engaged, mobile and technologically literate patient group. The apparent increase in what has been referred to in the popular media as ‘reproductive tourism’ is one product of the ever-expanding field of medical possibilities offered by ARTs (assisted reproductive technologies).

Recently expressed concerns about patients who travel overseas for fertility treatment have helped to embed the notion of the ‘fertility tourist’ in the public imagination. The categorization of this group has seen them variously constructed in the media as selfish, vulnerable, irresponsible, or desperate. Outside of sensationalist media reporting, little is currently known about the motivations or experiences of those who seek infertility treatment across international borders. Drawing on findings from the first UK study on this issue, which specifically addresses this absence in our understanding, this paper presents patients’ accounts of the demands and dilemmas involved in seeking a medical solution to unmet childlessness across international borders.

The paper specifically explores the use of online networks and support communities, a form of technologically mediated bio-sociality, in the development of biomedical literacy in relation to infertility. Reproductive travellers described active participation in advocacy as a response to their infertility which was achieved via virtual networking with other patients and direct negotiation with fertility experts. Shared virtual identities, connections and allegiances positioned users of overseas fertility clinics as a ‘biosocial collective’ (Rose & Novas 2003) which enabled them to navigate the global ART landscape and to seek resolution to their fertility quests.

Analysing Culture in Long-Term Perspective: Documents and Artefacts As ‘Figurations’

In this paper, I explore Norbert Elias’s sociological practice as a model of analysing culture and the media in long-term perspective. I centrally argue that embedded in Elias’s work is an approach to historical and cultural analysis in which documentary and cultural artefacts are treated as part and parcel of human ‘figurations’. I propose that Elias’s approach to social analysis raises a series of methodological questions concerning the status of documentary/cultural artefacts as sources of evidence. Principal among such issues is the question of whether medieval manners texts; literary and art works; and, by extension, television and film can be treated as reliable informants on the social universe. I suggest that, using conventional methodological standards, notably those expounded in John Scott’s seminal A Matter of Record, the value of such sources should be checked against such criteria as authenticity, credibility, representativeness and meaning. As such, serious questions are raised concerning the extent to which documentary and cultural artefacts can be used as sources of evidence for social/historical analysis. However, this approach to assessing the worth of particular sources of evidence against, what we might loosely call, ‘standards of truth’ is itself problematic in key respects. While such criteria have their place, they ultimately lead towards a set of questions which are perfectly at odds with processual/relational thinking. Again using Elias’s work as a case in point, I explore as an alternative an approach to diachronic cultural analysis in which both discursive form(s) and content(s) become simultaneously ‘objects’ and ‘subjects’ of investigation. In this way we might re-consider the value of cultural/documentary artefacts not simply as sources of ‘content’, but in terms of what such sources might be used to tell us about the unfolding relationships, human interdependencies – the broader social conditions under which such materials ‘came to be’.

Massification Meets the Knowledge Economy: Are They Compatible?

This paper begins by outlining the ‘education revolution’ policy direction of the recent Australian federal government, and the ways in which it envisaged meeting its goal of having a 40% of the population between 25 and 34 with a Bachelor’s degree by 2025, and ensuring that 20% of tertiary students came from LSES backgrounds. This is contrasted with the achievements of the UK government’s ‘Widening Participation’ strategy. It then discusses the institutional and policy challenges which both social inclusion goals generate for the tertiary sector – challenges designed to fundamentally reshape universities forcing them to become partners in a national educational mission.

It explores the discourses about ‘diversity’ and ‘social inclusion’ which have driven this policy development, and which presented as a moral imperative. It argues that they obscured a neoliberal impulse to increase the commercial orientation of the tertiary education sector where universities compete in a free market to provide clients (students) with products (qualifications) that meet a market niche - thereby meeting the needs of both the economy and the educational consumer.

The paper then examines the foundation of the arguments which employ both social and individual benefits of mass tertiary education, and discusses the impact of massification on universities themselves. What happens to elite institutions that traditionally catered for young, white, independent male students when they are required to accept ‘diverse’ students? Do the universities who welcome ‘diversity’ lose status? Are elite, conservative universities able to successfully resist equity policies? Should they?

Finally, the paper makes a judgment about the responsibility universities should have for the promotion of democratic benefits and social justice - and the likely success levels of government-led equity initiatives.

Alienation and the Crisis of White Racial Identity

The lion’s share of contemporary research on alienation remains couched in Marxist and neo-Frankfurt school foci on the separation between the subject and the object, the production of the subject’s labor, other subjects, and the subject’s ability to grow and develop. Moreover, this paradigm’s application to gender, sexuality, and race, have left us with understandings of these social categories as distractors from the “true” basis of social reality—the inherent conflict between owner and worker. In breaking step with this tradition, a modicum of recent scholarship
effectively demonstrates both (1) how dominant white racial groups alienate non-white racial and ethnic groups and (2) how dominant white racial groups employ a discourse of alienation—through claiming an unfairly victimized status—as a political strategy to lay claim to resources and reproduce their dominant status. Still, few have employed the concept of alienation to understand how white racial identity is continually reconstructed as a site of ontological crisis that facilitates simultaneous (a) claims to superiority, (b) claims to victimhood, and (c) practices of discrimination. Through an in-depth exploration of supposedly antagonistic white racial projects positioned at different class and labor positions, we can better understand how the social expectations of white racial identity are not distortions from material inequalities, but are a central mechanism in the reproduction of inequality and domination.

L’innovation participative au service d’une résilience urbaine. Pratiques et moyens (numériques) de transformation de la ville de Detroit

Détroit illustre aujourd’hui assez bien l’Amérique des laissés pour compte : une métropole ouvrière noire et difficile à situer sur une carte tant elle illustre les atermoiements, les écarts de l’American way of life et la mémoire d’une ségrégation socio-racialement structurée. Contre ces contextes urbains en faillite, il faut chercher à plonger le lien entre crise économique et apparition de pratiques socio-politiques alternatives mises en place par la société civile. Ces pratiques conscientes orientées vers une économie fonduée sur la valeur d’usage traversent le quotidien des gens par nécessité ou par persistance de formes sociales non marchandes. Elles contribuent à des projets de partage des technologies de la communication qui révèlent à la fois une diversité de moyens modestes pour faire face à la crise économique, et un ensemble de pratiques innovantes permettant de penser la possibilité d’un mode de vie alternatif, voire anti-capitaliste. Notre contrainte matrimoniale au cœur de cette ville, renvoie à des pratiques numériques visant à la réduction des inégalités d’usages et d’appropriation, à la création de nouvelles solidarités et au renforcement des communautés à l’échelle du quartier. Elle visera également à montrer comment ces initiatives mettent en lumière des questionnements relatifs aux rôles que jouent les usagers dans l’organisation et le fonctionnement matériel d’un réseau social numérique. Car, selon nous, ces moyens qui émergent dans cette ville sont effectivement à l’image d’un mouvement de contestation récent qui révèle de manière plus ou moins directe les enjeux de la démocratie Internet et ceux des publics ‘forts’ et/ou ‘faibles’ du Web. Detroit et ses pratiques de transformation basées sur les formes numériques illustrent un vivre Internet différent et le développement de l’économie de la contribution, vecteur d’emancipation des citoyens utilisateurs nécessaires à une émancipation citoyenne.

Legal Consciousness and Labour Insurgency: A Comparison Between China and the U.S

This paper seeks to examine the effects of legalization of labour relations on workers’ collective actions in response to the 1935 National Labor Relations Act of the U.S. Some U.S. scholars pointed out that the Wagner Act has deradicalised the U.S. labour movement by imbuing legal consciousness that built upon contractualism and private property rights into workers and by confining their actions within the legal institutes and practices (Klare 1978, 1982). Similarly, many scholars in the field of Chinese labour studies highlighted that the labour laws system used by the party-state to channel workers’ protests into bureaucratic procedures (Lee 2007; Gallagher 2007; Friedman and Lee 2010; Chen and Tang 2013). However, little is known about the grievance-diversion mechanism vested in the Chinese labour laws system. For example, how does the party-state make workers believe that the legal system can protect their interests so that many of them do not launch an insurgency? To what extent do workers trust the legal system? Under what circumstances will they bypass it?

This paper aims to fill up these gaps by analyzing how the Chinese party-state constructs the legal consciousness of workers, the characteristics of this consciousness, and when and how workers would act beyond the legal consciousness. I answer these questions from two approaches. First, while not many current studies examine the Chinese labour laws from the perspective of workers, I have conducted 60 in-depth interviews with workers in the Guangdong province in order to find out the agents’ viewpoints on the juridico-political structure and the characteristics of their legal consciousness. Second, by comparing to the Wagner Act in the U.S., I aim to investigate the impact of this legal consciousness on labour insurgency in China and the possibility of overcoming its effects.

How Parental Absence and Social Capital Influence the Psychosocial Development of Left Behind Children Whose Parent(s) Work Abroad? - the Case of Yanji City, China

As a major supplier of migrant labor, China has a large number of people moving from rural to urban cities and even crossing borders to search for better opportunities and wish for a better future for their families. This paper focuses on the left behind children in China whose parent(s) work abroad (LBCPWA). The reason is that these children are largely ignored in the country, and such cohort of children are encountering the crisis of the drawbacks between the context of globalization, which has threaten the quality of life for this vulnerable child population.

Previous literature shows that when compared with children of non-migrant families, the psychosocial development of LBCPWA due to parental absence is mixed. Some studies indicate a significant difference between LBCPWA and children of non-migrant families, while others show identical results. In this vein, this study employs a resilience perspective that regards social capital as protective mechanism, which can buffer or mediate the impact of parental absence on the psychosocial development of LBCPWA. It adopts a quantitative research method, uses a cross-sectional survey design to collect information from a sample of 1000 LBCPWA and children of non-migrant families in Yanji city, China-an ethnic minorities area, where international migration is a common phenomenon. The findings and policy implications are discussed.

The Mapping of Leisure Value in Chinese Cultural Tradition

In the 5000-year-long history of Chinese culture, leisure culture has played an important role in passing on Confucian, Daoist, and Buddhist culture. From ancient times to the present day, leisure has been perceived as a particularly cultural form, which has permeated people’s lifestyles and behavioral patterns widely as a force that is direct, intimate, free, sentimental, and humanizing. Not only has leisure aided human beings in a biological sense, helping them to recover their physical strength and energy, but through meaningful leisure activities people have brought forth many beautiful fruits — spiritual sublimation and the release of humanistic concern and creativity. This kind of wisdom helps us to realize that the leisure life is not a privilege limited to the rich and the successful only, but a product of a carefree mind.

But, China is entering a new historical stage: a stage of rapid changes when material wealth has been greatly increased, a stage when human beings are not...
in harmony with Nature, a stage full of competition among people, a stage when everyone is full of many kinds of desires.

Unfortunately, Today, traditional values of leisure have in this multivariate social transformation been mutilated more and more; and the essence of these values has been more and more tainted with materialism; leisure value is either distorted or understood in too narrow, too shallow, and too vulgar a way. Most people simply identify leisure with beer and skittles, with entertainment and shopping, or with what is fashionable that the rich like to boast about. This article attempts sort out Chinese traditional leisure culture and style from Confucianism, Buddhism and Taoism... as well to reflection on contemporary Chinese face to the confusion and difficulty, as well to the loss of leisure value and cultural traditions.

Point of No Return? Neoliberalism and Changing Public Opinion in New Zealand and the United Kingdom

Neoliberalism represents a significant and enduring shift in the politics shaping social policy. Although it is frequently ascribed a hegemonic, all-powerful status that focuses our attention on the coherence found in neoliberal policies, this paper is influenced by scholars highlighting variation in the neoliberal project across different policy areas, national settings and across time. Specifically, it employs Peck & Tickell's (2002) view that neoliberalism has gone through multiple phases in response to both external and internal crises as an entry point for studying neoliberalism's impact on public support for the welfare state. Drawing upon a New Zealand case study with select comparisons with the United Kingdom, the paper argues that public reactions to the early period of retrenchment ('roll-back neoliberalism') differ from those found in the following 'roll-out' or embedding phase of neoliberalism implemented by Third Way Labour governments in both countries. The paper concludes by highlighting the importance of studying public opinion in many public support in many policy areas arguably contributed to the internal crisis that provoked an adaptation of the neoliberal project. Moreover, the paper explores what has happened to public support for the welfare state following the external crisis provoked by the financial meltdown of 2008-2009: do New Zealand and British public attitudes show signs of resistance against austerity measures or do they indicate a third, 'roll-over' period of neoliberalism whereby the public accepts not only a neoliberal economic agenda but also the need for further retrenchment of the welfare state? Conclusions about the politics of social policy at the level of public opinion are drawn from a qualitative analysis of both survey data over three decades and interview/focus group conducted in New Zealand, offering both good and bad news for welfare state advocates.

Sidewalk Cafés: Formal and Informal Negotiation of Public and Private Space

The School: A Nurturing PLACE for Inefficient Work Force

The School: A Nurturing PLACE for Inefficient Work Force

The health of various social institutions is based on their value system. Some values (truth, justice, equality, humanism, tolerance, peace, etc.) are necessary for the survival of the social institutions and other are desirable (excellence, commitment, studiousness, honesty, empathy, industriousness etc.). According to Emile Durkheim, the value system is passed across generation in the school and the agent of the society for this job is the school teacher. For that he/she should be in the possession of various values. Numerous reports and studies have highlighted the prevalence of undesirable values among the school teachers. Transmission of undesirable values to the generations could lead to inefficient work force. This paper is based on a preliminary study conducted to investigate the prevalence of undesirable values among the school teachers of Roopnagar district of the state of Punjab in India. Six undesirable values investigated in the study were absenteeism, dereliction of duty, lack of responsibility, discrimination, authoritarianism and commercial venality. A comparative appraisal of undesirable values was also made between male and female teachers.

Generational Orders in Azerbaijan and Kyrgyzstan - Young Adults Between Independence and Interdependence

Our paper is based on field research, qualitative interviews and group discussions with young people of different social origin in Azerbaijan and Kyrgyzstan concerning their biographical plans for professional and private life. In both countries the ethnographic and interview material points to strong obligations of young people towards their families of origin, e.g. obligations to submit to parents’ will, to support parents financially, to support them with care or just with affection and attention. Such obligations are legitimated by what is meant to be tradition, by religion and as well by a generational and gendered order as they may be especially strong towards daughters. These strong expectations are confronted with however conflict with educational and occupational aspirations which young adults hold for themselves or which are held by their parents for them. Educational migration is of major importance in this context. Various solutions are worked out in such conflictive constellations, some being more, some being less realistic planning, and most of them maintaining the validity of an age hierarchical order. By comparing the two countries in two successive groups in these countries, the paper will present a theoretical approach identifying constellations that are supportive or obstructive in regard to favorable solutions.

Sexual Rights In The UK: The Christian Right and The Religious Equality Act

In recent years the United Kingdom, much like other western democracies, has seen the proliferation of sexual minority rights largely through equality legislation (especially Equality Acts 2006, 2010). As a consequence many faith communities are now challenged by such legislative enactments that advance the equality, citizenship and social inclusion of sexual minorities (and heterosexuality) and prohibit discrimination in various economic and social spheres. This paper will explore attitudes and views of conservative Christian churches that have come out strongly against such developments on moral grounds and advance freedom of speech to express their vehement views. Christian Right campaigning groups are however more strident in their attitudes which have tended to have become increasingly polarized. This paper considers the key issues in the context of, firstly, the result of increasing marginalization of conservative Christians in a post-Christian environment and, secondly and relatedly, the narrative of rights and the philosophical underpinnings that they adopt in the opposition to sexual rights. The paper will also consider how such narratives also engage with religious rights that are simultaneously advanced by the Equality Acts 2006, 2010 and which generate contradictions and conflict/potential conflict between sexual and religious rights.

Sidewalk Cafés: Formal and Informal Negotiation of Public and Private Space

Abstract Text Guidelines

Sidewalk Cafés: Formal and Informal Negotiation of Public and Private Space

In the creation of a Parochial Social Order

Albert Hunter

Northwestern University

Abstract

Sidewalk cafés are a venue for exploring the intersection of public and private space in the urban environment. Drawing on the work of Duncan, Goffman, Hunter, Lofland, Sennett, Whyte, Zukin and others, the research defines the way in which the transition between the public space of the sidewalk and the private space of a restaurant is symbolically negotiated and defined. The result is a new social order – a parochial realm – that selectively draws on and amalgamates elements of the public and private realms. In addition to the informal negotiation

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
of norms defining this space among patrons, proprietors and passers-by, the research also explores more formal mechanisms that define it by city regulations, and zoning ordinances that are themselves seen to be another level of negotiation among public and private interests. We also trace the mutual impact of the two levels of informal and formal negotiations among friends and followers online. The research explores variations in these negotiations of public and private space across local communities and neighborhoods with respect to differences in ethnicity, and inequalities of social class and power. The research is based on data from participant observation at the informal level as a “consumer” and at the formal level as a city plan commissioner.

HUPPATZ, KATE* (University of Western Sydney, k.huppatz@uws.edu.au)

A Reflection on Social Class Differences in Australian Mothers’ Experiences of Full-Time Employment and Family Life

In Australia, as in many other countries, a growing proportion of mothers, whether they are wealthy or poor are participating in full-time employment (AIFS, 2008). This paper will examine social class differences in mothers’ experiences of full-time employment and family life. Drawing on qualitative interviews with mothers who live in NSW, I will examine how differently classed mothers in full-time employment negotiate workplace obligations, unpaid labour in the home, parent-child relationships and romantic relationships. This paper will argue that, while mothers in white collar occupations are rich in economic and cultural capital, the increasing demands of middle-class employment create a ‘time deficit’, which may deplete women’s capacities to genuinely attain ‘the good life’, associated with their class positions. At the same time, full-time employment is rarely compatible with the ideals of ‘good motherhood’, regardless of a woman’s social class location.

Older Canadian Men’s Perceptions and Experiences of Ageism in Everyday Life

In this paper, we consider the complex and often conflicting perceptions and experiences of ageism among older Canadian men. We draw on data from in-depth interviews with 29 men, aged 65-89 (average age of 74), who were diverse in terms of their incomes and levels of education while also being largely homogenous with respect to their marital statuses and sexual orientation (the majority were married and heterosexual). Our analysis of the data revealed three key findings: a) perceptions that ageism was irrelevant; b) identification of ageism as something that affected others; and c) internalized ageism. Many of the men asserted that ageism was not a factor that constrained or explained their everyday lives. For some, the irrelevance of ageism was because they perceived that the prevalence of age-based discrimination had declined over time. Others reported that they had simply never experienced ageism in their everyday interactions including encounters with strangers, health care providers, peers, or family members. However, the majority of the men also suggested that ageism was something experienced by others, primarily older women (who were perceived to be under intense pressure to look young) and institutionalised elders (who were perceived to be the most likely target of maltreatment, including neglect and abuse). At the same time, most of the men expressed internalized ageism either through the distancing of themselves from those they considered old (both a moral and chronological age category), the expression of concern for young appearances or youthful personas, or the acceptance of negative stereotypes regarding later life (such as older adults as poor drivers, grumpy individuals in poor health, ‘dirty old men’, or persons unable to easily adapt to new technologies).

We discuss our findings in relation to the extant theorizing and research pertaining to ageism, masculinity, and age related social networking sites with Instagram and Facebook being the more popular ones. While the medium may differ, the identities presented are almost the same and more importantly these visual identities feed from their offline identities. They are engaged in constant picture taking, usually using their mobiles. Uploading pictures on their social networking sites, and by extension, sharing these pictures with friends and followers online, validates their online existence. As these social networking sites can be used publicly, inviting a wider range of followers, pictures that are uploaded are managed (through a process of selection and editing) so as not to disrupt the presentation of online selves. More personal pictures do not appear in closed sites among trusted friends where one can ‘let loose’. From these preliminary results, it can be concluded that online identity construction among this group of urban Penang youths is a reflexive activity. Furthermore, the identity that is portrayed online as well as the interactions that take place through the visuals posted need to be managed well so as to ensure that the preferred identity is not disrupted.

Keywords: Online identities; social networking sites; visuals

Advancing Gender Equality in Nordic Academia: Political Will and Persistent Paradoxes

The Nordic countries – Denmark, Finland, Iceland, Norway, and Sweden – can be characterized as global leaders when it comes to overall gender equality in society (World Economic Forum, 2012). Political will to advance gender equality in academia is evidenced by the gender equality promotion that has been actively on the national policy agendas since the late 1970s-early 1980s, through various national level interventions, especially so in Finland, Norway and Sweden. Gender equality is addressed in the university legislation in Norway and Sweden, and universities are legally obliged to engage in equality planning. These three countries show the highest proportion of women on scientific boards in the European Union, approaching gender parity, and the highest proportion of women among university Vice-Chancellors in the EU (EC, 2013). Even if many key gatekeeping positions shaping the academic and scientific landscape show greater gender equality, unequal gendered structures in academic careers prevail. If the proportion of women among full professors is used as an indicator of gender equality in academia and science, Norway and Sweden do not excel in a European comparison, having only reached the same level as the European (EU-27) countries on average, while Denmark has among the lowest, whereas Finland among the highest proportions of women among full professors within the EU. This paper interrogates the Nordic paradox of high overall gender equality in the society, political will and active policy regulation to advance gender equality in academia and sciences, on the one hand, and the persistent unequal gendered structures in academic careers and inequalities in resource allocation, especially in research funding, on the other. Accordingly, differences and similarities between the Nordic countries will be highlighted and discussed, along with historical developments, policy landscapes and continuing resistances to greater gender equality.

Artistic Valuation and Growth in the Creative Economy

Highly elaborate valuation practices enable judgments of value on unique, constantly new artistic creations. They combine collaborative and contentious processes of agreement on aesthetic qualities with market exchanges of original works, measured in monetary units. This particular hybrid structure is an institutionally grown, historical accomplishment that fosters future growth in the consumption of aesthetic experiences.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Section 1 of the paper develops the theoretical argument, based on Luc Boltanski's "sociology of critique", Luc Karpik's "economy of singularities" and my own work on "familiar surprises". Section 2 demonstrates, in four historical vignettes, the slow historical development of judgment practices in the Visual Arts. Section 3 contrasts contemporary practices in the global art scene and its high-end market with recent online aggregations of common opinion in the creative industries, particularly OCRs (Online Consumer Reviews). Section 4 argues that both developments make it possible that total value generated by products of the global aesthetic experience economy will continue to grow.

New General Unions: Trade Union Mergers and Labour Movement Renewal in Canada

The crisis of organized labour has given rise to an extensive literature and various policy ideas for trade union renewal. One proposal has been to call for union mergers to create new types of labour organizations better equipped to conduct campaigns to increase union density and influence. Are such mergers an indication of union weakness or, if undertaken strategically, do they hold promise for a renewed labour movement?

After reviewing past union mergers in selected industrial relations systems, the paper focuses on a recent new union formed out of the merger of two large private sector unions – the Canadian Auto Workers and the Communications, Energy and Paper Workers Union of Canada. The paper provides the background to the merger and offers an assessment of the possibilities for labour movement revitalization.

Objectives for the new union include the organization of non-union workers, especially in private service sectors characterized by a concentration of younger employees who make up much of the difficult to organize precariat. New organizational approaches include building union associational and community chapters. These tactics require innovative union philosophies, organization structures more appropriate to the new general unions, and political campaigns to change legislation. Having critically considered these and other ideas on reshaping unions, the paper makes more far-reaching proposals for recasting unions to address class perspectives that can provide a counter-hegemonic political culture to that of neo-liberalism.

The paper contributes to theory and policy by arguing that an increase in the size and complexity of working-class organizations need not necessarily compromise democratic worker campaigns.

The research draws from a literature review, interviews and recent conference debates on union strategy. The paper has benefited from the author's involvement in research and education programs for one of the two unions involved in the operation of LP.

HUXLEY, CHRISTOPHER* (Trent University, chuxley@trentu.ca)

Thirty Years of Lean Production: The Making of a New Managerial Ideology

Employers have been implementing lean production (LP) outside of Japan for more than 30 years. This production system has been researched, debated and contested throughout this period, while the concept has been applied well beyond the automobile industry to other work environments.

The paper critically surveys the literature with an emphasis on empirical investigations of how workers, and where they have existed, unions, have responded to LP. The author was a co-investigator for one of the first longitudinal research studies of a transplant joint-venture LP automobile factory in North America.

30 years of LP allow for a comparison with three managerial ideologies discussed by Berck and Hendrix (1956, 1974); scientific management, human relations, and the communist party and trade-union sponsored "worker-activist movement" in post-Second World War East German industry. Hendrix views each of these movements as both organizational and ideological. Those in authority advanced each technique as a way to improve efficiency, while simultaneously presenting the policies as having redeeming social value. Each ideology also identified a role and mission for managers.

Based on research in Canada, the United States and Mexico, the paper applies Hendrix's framework to consider LP as a new managerial ideology. First, managers assert the superiority of LP, as measured by efficiency and quality of output. Second, proponents point to the success in transposing LP techniques from the Japanese prototype to work organizations around the globe. Furthermore, managers of non-union and unionized enterprises alike have been able to introduce LP into their workplaces. Third, LP supporters have claimed that their system provides for skill development, increased employee participation and an enhanced quality of work life.

The paper assesses each of these three sets of claims. Finally, the paper gives consideration to how worker resistance has sometimes brought about change in the operation of LP.
ropene context, telework - an arrangement that enables employees work from home - has been suggested as a virtual mobility option with the potential to reduce the 'consumption of distance' associated with regular commuting. Given its emphasis on the application of technology to solve environmental problems, the critical promotion of telework constitutes a prime example of shallow EM thinking.

Despite the prominence of EM thinking in climate policy and practice, theoretically informed empirical explorations of its implementation and impacts remain incomplete. Drawing on a multi-method investigation of telework in the Republic of Ireland, this paper finds current EM thinking amongst decision-makers to be shallow and largely reflective of neo-liberal environmentalism, contributing little to curbing the consumerist impulses of contemporary economic models and lifestyles. The environmental benefits of telework are also questioned, as is the rationale for existing teleworking schemes. This paper further asserts that actual and potential environmental gains can conflict with potentially negative implications for fairness, equity and well-being, with teleworkers shouldering a substantial social burden arising from technology-aided changes in work practices.

HÄNZI, DENIS* (TU Darmstadt, haenzij@ifs.tu-darmstadt.de)

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The paper describes preliminary results of an interdisciplinary research (involving sociologists and architects), funded by the Autonomous Region of Sardinia. The analysis focuses on the experiences of relational public art (or community art), studying the strategies that artists activate to enable citizens’ engagement in the transformation of urban spaces. These strategies are able to “revitalize” models of urban governance in which participation often translates in a mere consultative process. We are facing emergent phenomena that are not only “countercultures”, but could also feed into processes of policy formation and decision making. Indeed, the “new genre of public art”, represents a new way in which citizenship is practiced: artists ask the audience to become co-actors in the construction of their works, taking in charge problems/conflicts related to urban spaces, intercepting needs and experiences of people who live in these spaces, and activating citizens’ awareness of their role in the transformation of urban spaces. Starting from a background analysis of significant national and international case studies, the research focuses on Sardinian experiences activated in the urban “border areas”. The aim is to investigate – through interviews to the “citizen-artists” and the other actors involved in the artistic intervention – the practices of production and consumption (active/participatory); the shared meanings of participation, politics, community, territory; the representations of the other actors; the discourses related to objectives and results; the communication strategies; the interaction with the reference contexts. The process of analysis will conclude with the production of three outputs: a “Participatory Research Laboratory” which involves artists and other actors of the urban governance (architects, sociologists, public administrators, stakeholders); an online platform containing informations (texts, video, images, georeferenced maps) about experiences we analysed and the modalities to activate similar participatory processes; a procedural tool for administrators, oriented towards a participatory territorial planning.

The end of the so-called housing bubble with the current economic crisis is having dramatic effects in the urban landscape as construction companies have declared bankruptcy and have left many unfinished buildings and empty lots in the urban space where garbage is being accumulated, while no one seems to be responsible and neighbours suffer the consequences. Thus, it is urgent to develop initiatives and alternatives that provide an answer to the deterioration not only of the urban landscape but, more importantly, to the everyday lives of the citizens who suffer the consequences of years of speculation with the urban space.

In this paper I will show the preliminary results of the research project FUTUR (Filling Up Territorial Discontinuities in the Urban Landscape) that has been carried out in the Spanish city of Burgos with the goal of promoting citizens’ participation in the elaboration of proposals and alternatives that activate sustainable forms of participatory engagement for a better living in urban areas. This research is based on ethnographic fieldwork research with neighbours, independent artists and local authorities (participant observation, interviews, life stories, discussion groups) as well as archival research (year of construction/demolition, name of the constructor, original project).

"Women in Men's Worlds. Strategies to Overcome Job Segregation By Gender in Six Occupations in Spain"

Women in Men's Worlds. Strategies to Overcome Job Segregation By Gender in Six Occupations in Spain

The sexual division of labor, the cornerstone of patriarchal society, remains in paid work. After more than 30 years of active employment policies for equality, gender segregation of work is still dominant, and is one of the significant explanatory factors in understanding the wage gap between the sexes. The research group “Women in Men's Worlds” seeks to understand the career paths of women in traditionally male occupations, because through their life stories we can analyze what factors or social actors are positive and/or negative in these processes. Specifically, we present the first results of a research project funded by the National R + D + I in Spain (MICINN-12-FEM2011-25228) which explores the career paths of women in six very male dominated professions: construction painters, vehicle repair, repair of computers (hardware), police and security guards, airline pilots and depth interviews with these women are accompanied with the vision of entrepreneurs and male workers, in order to understand the processes of change within patriarchy, and especially to identify the factors that help to foster this change.

At this point, the ongoing investigation has already developed typical career paths of women in these very masculinized jobs (Weberian ideal types). In these trajectories, patterns of training and access to employment have been central, differentiated by the business structure of each occupation. (Consider the institutional context of airline pilots, mostly working in ibérica, or of railroad engineers - all working in the state railway company). In addition to institutional context of the occupations, the human profile of the occupation, the type of colleagues, bosses and clients of each occupation have also been important factors. The research also examines how work attitudes, especially reconciliation of work and personal life, are explanatory factors.
Graduate programs in medicine assume the social commitment with their performance according to scientific and technical norms of discipline in these fields, but it will also demand to carry out this work within the framework of certain ethical, professional, and social values. It is clear that we are faced with emergent field knowledge in higher education institutions. The inclusion of these topics in the university curriculum—either as knowledge discipline or transversal axis— is recent and even more so when it refers to specific aspects of this discipline. The research analyzes the perceptions about the professional ethics the teachers and students in medical graduate programs and pretends to know about desires for training in skills and values in public and private universities to make comparisons. In this paper we present the results of the revision, adaptation and implementation in a Mexican public university to discuss how to promote these skills and values. By a joint methodology that includes application of: the instrument validated by Hirsch (2005) from National Autonomous University of Mexico (UNAM), about professional values; the questionnaire for the assessment of the competencies of teachers by the team coordinated by Pérez Pérez (2012), from Valencia University, Spain and conducting interviews. The above-mentioned instruments includes teachers and students that show the condition that prevails about the beneficence principle which, according to Alcoberry, originates in the Hippocratic oath, but goes beyond philanthropy which recognizes the patient as a subject of law: it talks about the expectations of benefits to justify any risk of damage or discomfort to the participants, who sometimes use there transgression to save live at the expense of an unequal relationship between the physician and the patient.

**Urban Conflicts As Spaces of Politicization of Collective Action Around the City: Notes to Think the Continuities and Discontinuities of Urban Social Movements in the City of Santiago (Chile)**

Over the last 40 years the city of Santiago has experienced deep transformations, which have been linked to the implementation of neoliberal policies. Also, the city has been not only the stage, but rather the protagonist of a variety of conflicts around urban issues, such as urban growth, use and appropriation of urban spaces, environmental, demand for housing. This has been the scenario in which the field of collective actions have emerged to propose new forms of appropriation and use of urban spaces, transforming the urban space into an object of political action.

In this context, this paper aims to study the processes of politicization and delimitation of collective action, on the one hand, on the other hand, the processes of collective consciousness, understanding that the politicization goes beyond the mere mobilization and involves the generation of new spaces for the production of reality, in this case realities and socio-political imaginaries around the design, management, use and appropriation of urban space and urban goods. However, preliminary data analysis on urban conflicts in the city of Santiago suggest that not all collective actions around urban issues develop the same levels and types of politicization. Therefore, in this paper I will try to address the following question: what are the factors that can explain the trajectories of the process of politicization or delimitation of collective action around urban issues? To answer this question I will study the collective actions that have developed around the problems of housing inquiring into its politicization paths from the mechanisms and strategies that develop as part of their urban struggles (configuration of their social networks, identity, organizational structure and action strategies). Finally, I will try to establish the relationship between the processes of politicization and the construction of imaginaries and collective discourses around the city and urban issues.

**Culturalism: Its Circulation In East Asia, Development and ‘Clash’ With Nationalism**

The paper examines the migration and development of culturalism, ‘a natural conviction of cultural superiority that sought no legitimation or defense outside of the culture itself’ (Duara 1996) in East Asia and its supposed ‘clash’ with nationalism as the face of modernity. Culturalism can be seen as one of models of political communities to create a political circulation in China before the advent of the modern nation-state. The idea has been developed further as a useful tool in challenging the claim that emphasises the novelty of nationalism as a form of consciousness as proof of radical discontinuity between pre-modernity and modernity suggested by leading theorists of nationalism such as Benedict Anderson (1991) and Ernest Gellner (1983). If the novelty of nationalism as a form of consciousness lies in the co-extensiveness of political and cultural communities, nationalism was not totally novel in China where culturalism providing a similar kind of totalising view of community had long existed. Culturalism, originated from China, naturally migrated to its spheres of influence including Japan, where under Tokugawa shogunate, it stimulated various intellectual responses such Kokugaku, a ‘nationalist’ school of learning focusing on the study of Japanese old text which produced a vision of community that bears close resemblance to Chinese culturalism. The conventional view is that culturalism both in China and Japan then experienced a clash with nationalism, a modern idea of political communities originated from the West, and was replaced by it. The paper first outlines the idea of culturalism as developed in China and investigates the way in which it migrated to Japan and facilitated a range of new ideas under Tokugawa rule. It then questions the assumption of the nationalism’s takeover of culturalism in nineteenth- and twentieth-century Japan and China and explores possible transformation of nationalism.

**The ‘Overcoming Modernity’ Symposium: Modernity, Japan and East Asia**

The paper aims to address the theme of the session by using the ‘Overcoming Modernity’ symposium that took place in Japan in 1942. The symposium has conventionally been dismissed as ‘infamous’ or even ‘notorious’, not deserving serious attention, and was predominantly viewed that it was an attempt by the intellectuals of the day to legitimise the war and fascism. While the symposium’s principal concern was wartime politics, it also had a range of other ideas, including a strong contribution to Japanese political and cultural thought has been sporadically re-examined starting with Takeuchi Yoshimi’s essay published in 1959. Takeuchi (1959=1979) dismissed the symposium as intellectually empty but argued that the event represented a historical moment when various contradicting forces in Japan, such as restoration vs innovation, the East vs the West and so on, came into a violent collision as an attempt ‘at overcoming modernity’. He appreciated the intellectuals’ concern with ‘overcoming modernity’ as a worthy endeavour as an exercise to look for solutions to the perceived social, economic and political ills but concluded the symposium failed to contribute to the development of political and cultural thoughts in Japan because of the intellectuals’ failure to recognise the double-sided nature of the Pacific War (as an anti-imperialism war against the hegemonic West and as an imperialist and colonialist war towards Asian countries) in their attempts to understand the world. The paper examines the visions of modernity that the symposium participants sought to overcome and explores the ideas suggested as alternatives to the Western-centric vision of modernity during the symposium. These alternatives were then placed in the background of competing visions of Asia and the world including pan-Asianism, the East Asia Cooperative Community and oriental religiosity.

**Another Way of Modernization and Sociology: A Critical Assessment of the “Japunistic Sociology” in the 1920s and the ’30s**

During the late 1920s and the early ’30s there was a movement among the Japanese sociologists to establish the “japunistic sociology” that should differ from the western sociology.

Concerning the social & international context in which this movement emerged, three points should be mentioned at least. First, in the 1920s social inequality and social conflict were more clearly recognized than before in Japan. In 1919 the Japanese Ministry of the Interior established the “social” section for social policies. There also arose a “social science” movement among the university students in the early 1920s which was strongly affected by the Marx-Leninism and therefore oppressed soon. Many Japanese sociologists tried to separate sociology from this kind of “social science”.

Secondly, the political orthodoxy in Japan shifted its orientation gradually from the westernization to the asainism. The Japanese proposal for the racial equality was rejected at the Paris Peace Conference (1919). And the new Immigration Law (1919) changed its colonial policy towards the new “Manshukuo” (“soft power”). Also, the Japanese government tried to camouflage its colonial domination in “Manshukuo” (established in 1932) with the ideology of “mutual harmony among the 5 peoples (Gezoku-Kyowa)”. It was in this social & international context that the movement for the “Japunistic sociology” emerged. What was it? What kind of sociological theory can we make today from this history? This presentation considers these questions.
Role of Children's Active Participation in Managing Conflicts

Ageism and Social Integration of Older Adults in Their Neighborhoods in Israel

Purpose: The paper aims to examine the extent to which ageism is connected with the social integration of older adults in their neighborhoods and to identify factors that explain social integration.

Design and Methods: A convenience sample that included 300 older adults aged 65 and over (for the future) has been the focus of research in three neighborhoods in Tel-Aviv, with varied socio-economic status were interviewed. Kogan’s Attitudes toward Old People scale was used to probe ageism. Social integration index included three dimensions: frequency of participation in activities in the neighborhood, familiarity with neighbors, and sense of neighborhood. Hierarchical regression analyses examined three groups of independent variables: older adults’ socio-demographic characteristics, their perceived health and outdoor mobility, and neighborhoods’ characteristics including level of ageism.

Results: Neighborhoods varied by levels of ageism and social integration. Higher level of social integration of older neighborhoods’ residents was explained by a combination of factors: younger age, better self-rated health, and fewer limitations of outdoor mobility, lower levels of ageism reported by a sample of younger respondents, and higher socio-economic status of the neighborhood.

Implications: To enable better social integration intergenerational programs should be developed to decrease ageism and in order to make communities more age-friendly there is need to facilitate accessibility to services and public spaces.

Nurses’ Attitudes Toward Migrant Care Workers In Hospitals In Israel

Aims. To examine nurses’ attitudes on tasks that paid carers of older patients should or should not be allowed to perform and to examine the factors that best explain nurses’ attitudes towards the involvement of paid carers in providing care during the older patients’ hospitalization.

Background. Many older patients who are hospitalized are functionally dependent and employ paid carers who perform a variety of tasks during hospitalization. Yet, this issue has been barely examined.

Methods. The study included a combination of qualitative and quantitative research methods.

Five key persons in two general hospitals were interviewed and 265 nurses in internal medicine and geriatric wards were surveyed.

Results. There were no formal policies and guidelines regarding the tasks that paid carers should be allowed to perform. The majority of nurses perceived that paid carers should be allowed to perform a variety of tasks except for professional nursing tasks. Type of hospital and ward and nurses’ education were significant in explaining nurses’ attitudes towards involvement of paid carers in providing care to their older care recipients.

Conclusions. Attitudes and nurses’ attitudes toward paid carers are determined mainly by local organizational characteristics and nurses’ education. There is need for explicit policies and practice guidelines and their enforcement with regard to paid carers.

Positioning and Counter-Positioning in an Institutional Setting. the Role of Children’s Active Participation in Managing Conflicts

This paper presents some videorecorded episodes of conflicts involving children and adults at school. These cases describe the multidimensionality of school community work and point to: 1) the distinctiveness of the interactional construction of the conflicts in schools; 2) the ways institutionalized organizational narratives become cultural resources for framing, scripting, and revising problems as plots; and 3) the interdependence of micro- and macro processes. The approach constructs conflicts as a dynamic part of classroom social life in which personal expressions are affected by and affect teachers’ and students’ classroom norms of conduct. Conflicts are observed in discursive practices that interactively construct social positions and diverging/shared narratives. Drawing from work on organizational narratives, positioning theory, and conflict analysis, this presentation focuses in particular on the role of children’s active participation in managing conflicts in an institutional setting.

The Promotion of Agency in a Conflict-Affected Context. the Social Participation of Children and Adolescents in the West Bank

One of the most challenging narratives in the past few years (and probably one of the most stimulating for the future) has been the importance of children’s active participation not only in terms of having the right to say, but of the right to choose among alternatives in communication systems, i.e. in terms of practicing agency rather than simply having voice. Supporting and improving children’s capabilities means promoting children’s participation beyond their right to speak and to be heard, to a wider concept of active citizenship, which means contributing to the structuring of social systems. In this approach, therefore, children’s capabilities assume the social form of children’s agency. In other words, the idea of agency emphasizes that children can condition the actions of their interlocutors in communication with them, above all in interactions and can, in this way, transform the social structures.

This presentation tries to examine how children’s agency and participation can be promoted in a conflict-affected context. With this aim the chapter conducts an evaluative analysis of a project of international cooperation developed by Oxfam Italy and the Palestinian NGO DoiPs which is aimed to promote social participation and to raise children’s rights awareness among Palestinian children and adolescents.

The analysis is conducted by drawing on theoretical and methodological concepts from recent literature on social participation, sociology of childhood and Sen’s capability approach, and looking at 1. the structures that promote agency in communication processes, 2. the ways in which agency modifies the structures of communication processes. The analysis of videorecorded data permitted some conclusions about social conversion processes and factors of agency, which allow social change. Our datas show that social change can be enhanced through children and adults’ turns, but it is determined only in the self-organization of a communication system.

Acquiring a ‘Right’ Combination of Capital: Japanese Nouveau Elites’ Capital Accumulation Trajectories for Children through International Schooling in Tokyo

As economic globalization has been proliferated by nation-states’ espousal of neo-liberal agendas, various domains of educational institutions have been internationalized and valorized globally valid forms of cultural competencies, termed ‘global capital’ (GCC). With the rapid changes occurring in the global fields of education and business, many East Asian families and students have pursued GCC through international schooling, overseas education, and/or extra-curricular activities in order to improve and/or secure their status position in the global stratification hierarchy. However, existing research pays little attention to these factors and trajectories of accumulation of not only GCC but also national cultural capital (NCC) through schooling and extra-curricular activities.

By examining school choice patterns of nouveau elite families having enrolled their children in the preschool section of international schools in Tokyo, this paper examines a neglected domain of parental strategies to acquire the ‘right’ combination of GCC and NCC for their children through a series of school choices (e.g., preschool, primary school and secondary school sectors of international or Japanese schools). My findings reveal that Japanese nouveau elites see an embodied form of NCC (e.g. Japanese language and mannerism) as a primary resource to constitute the child’s identity as cosmopolitan Japanese. Therefore, the mothers monitor their child’s language acquisition and strategize to have their children acquire both GCC and NCC, which lead the families to be flexible and spontaneous in their decision-making to enroll their child in overseas schools, local Japanese school or other international schools in Tokyo. I conclude that GCC is still recognized as an important set of competencies for globally-minded elites in the context of Japan and that makes the families’ capital accumulation strategies complex, flexible and stressful.

Is It Possible to Overcome Social Gap through Coproduction?: Kashiiwa’s Practical Experience As A Radioactive ‘Hotspot’ after 3.11

Kashiwa, a typical commuter town in the greater Tokyo Area, is a significant urban farming area where the principle of 'local production for local consumption' is here to stay. However, Kashiwa lapsed into being the most serious 'hotspot'
within the Kanto region, and its farmers suffered from a sharp decrease in sales following heated media coverage. Under these circumstances, I convened the Round-table Meeting for “Kashiwan Products for the Kashiwan People” towards Safety and Security, and called for various local stakeholders—including farmers, supermarket owners, restaurant chefs and housewives within their childrearing years—to be engaged in that meeting. We deliberately and scientifically discussed some unique radioactivity determination method on local farm products and soil, and arrived at an agreement over our own acceptable standard of radioactivity level in farm products. By measuring radioactivity and transmitting the result, we achieved the verification of the reliability of local farm products.

Our primal motivation to convene the meeting was to overcome the gap within the local community, namely, the pointless conflict between consumers and farmers after the Fukushima accident, which was mainly derived from the asymmetric nature of ‘choice’ and ‘mobility’ between them. Redefining local consumers and farmers as Kashiwan citizens sharing the same locality and issues, we strategically aimed to connect the local consumers, who have an attachment to the locality and wish to peacefully eat local products, with the local farmers, who intend to build personal relationships with the consumers. However, our community-oriented risk-communication strategy had a critical limitation: apart from the assumed local customers, it was impossible to reach a wider range of consumers via our marketing strategy. On the basis of this practical experience in Kashiwa, this presentation will discuss social ‘coordination’ and trust-building between people with opposite interests under the risk of uncertainty.

Decision Makers and Those Affected in the Japanese Expert Community—the Fukushima Nuclear Disaster

An aim of this presentation is to describe the great distance in risk evaluation regarding the Fukushima people with dementia (PWD) in Japan and to analyze its structure and background by applying the insight on a distinction between decision makers and those affected in risk sociology of Niklas Luhmann (1993). After 3.11 in 2011 the most Japanese experts appearing in mass media followed the government report which was underestimating a seriousness of the nuclear disaster and a possibility of spreading of radio activities. In contrary some experts such as Hiroaki Koide and Tetsui Imanaka from Kyoto University pointed a high possibility of core meltdown in the nuclear plants and warned citizens of the great dangers of the serious nuclear disaster through local or community media from the early on. A distance between experts and PWD has been deepened in Japan which is very common in the previous risk analysis might be useless to explain this distance, because it appears within the expert communities. Therefore the author focuses on the other distinction and takes into account the diagnosis of Luhmann that the serious conflicts over the perception and evaluation of future loss between decision makers and those affected who are excluded from decision making process cross into the every functional area in the society. It implies the splitting of the scientific experts into such two unintegratable positions. To analyze this tendency in the case of Fukushima the author will focus on the different types of positionalities for warning risks and dangers and will analyzes the different degrees of uncertainty about own or other’s controllability in the risk situations. These elements might influence their discourses at the more basic level than their differences in scientific-theoretical assumptions on a safety of nuclear plants and a nature of radio activities.

How New Is the Image of Those with Dementia in 21st Century in Japan? an Analysis of TV Documentary Programs in the Nhk Data Archives

Introduction: From the late 1990s to the early years of this century, a new image of dementia (PWD) has been promoted in Japan. The willingness of PWD to speak publically about their thinking and desires around 2004 is considered a significant event. Afterward, their statements became a central issue in dementia care. The mass media and especially the NHK (Japan Broadcasting Cooperation), which produced television documentary programs on this subject, have promoted this trend. The event of 2004 has been definitely important in changing the image of PWD. However, the views and wishes of PWD have been uncoupled and constructed in diverse way in each field of dementia care, and the NHK has reported some outstanding care practices. The empirical exploration of this image change is a problem for us. However, how has it been represented before 2000s? How are previous images related to the new image? This presentation explores the presentation patterns of those with PWD in NHK TV documentary programs produced between 1980 and 2003 with using following data.

Method: The author conducted content analysis of video data archives and for participants to challenge some themes. As a participant, I obtained access to the video data systems for a year and created the following three types of data:

1. a title and contents list of TV programs about dementia;
2. documentation of the story, the contexts and scenes of each program; and
3. pictures of symbolic scenes in these programs.

Results: Two controversial descriptive patterns of the thoughts and wishes of those with PWD emerged. The first is that descriptions of these characteristics relate to problematic behaviors for caregivers. The second is that when PWD suffers think and feel are important in and of themselves and, therefore, sometimes conflict with the needs of caregivers.

A Pragmatic-Semiotic Analysis of “Occupy Nigeria Group” Online Posts on the 2012 Fuel Subsidy Removal in Nigeria

In response to the fuel subsidy removal by the Nigerian government on 1st January 2012, Occupy Nigeria Group, a protest movement, embarked on different mass strike actions and demonstrations including online activism. The civil resistant actions geared towards reversal of petrol pump price increase deployed certain verbal and visual means in portraying the government and its actions. Previous studies on online protest discourse in Nigeria have adopted sociolinguistic and discourse analysis approaches in examining issues of identity and self-determination with little attention paid to visual-pragmastrategies in representing people and their actions. This paper, therefore, undertakes a pragmasemiotic investigation of “Occupy Nigeria Group” online posts on the 2012 fuel subsidy removal in Nigeria with a view to examining verbal and visual modes of representing people and their actions in the event. Seventy-five online protest posts purposively sampled from the groups’ page are used to identify and categorize various pragmasemiotic elements and functions in the representations using insights from Mey’s pragmatic act, Halliday’s systemic functional linguistics and the semiotic theory. It is observed that the verbal mode complements the visual in projecting the demands and resistance of the group. The findings also reveal the use of various visual-pragmastrategies such as prayer, negative labelling, humour, mockery, abuse, passionate and fierce appeal, including photo trick. This study has established some pragmasemiotic patterns in verbal-visual posts in the Nigerian online protest context. An awareness of the peculiar patterns and use is crucial for understanding and interpretation of socio-political realities of such news events by online consumers.

Comparative, Realistic, Communitarian and Public Qualities: Looking Back Michitaka Kaino’s Sociology of Law

Among Japanese socio-legal scholars, Michitaka Kaino (1908-1975) remains hidden abroad, though he is unique with comparative, realistic, communitarian and public qualities. Kaino covers the Emperor system/fascism, human rights, the courts, ownership, commons, family, sociology of law and pollution, which are hidden abroad, though he is unique with comparative, realistic, communitarian qualities. Kaino’s qualities seemed to have characterized Japanese sociol. of law to some extent. A comparative law perspective has been requisite for most Japanese socio-legal scholars. Realistic view of law in confrontation with Japanese social situation has become a matter of course. Kaino’s stance to the right of iriai has been reevaluated in light of the study on the commons. In reference to the notion of “public sociology”, Kaino’s stance and works seem to fit “public sociology of law”. The methodology is a life history analysis, which tries to reconstruct Kaino’s personal experience and life from his written records such as interviews and his biography. It is expected that a relationship between one socio-legal scholar and society would be brought into relief through this approach. Thereafter, qualities, merits and limits of Kaino’s sociology of law will be considered from the point of view of global legalization.
Since the fallout of the triple disaster in March 2011, coupled with the government’s pursuit of the reactivation of nuclear plants, Japan has once again become a seedbed for grassroots political activity. Various anti-nuclear rallies and demonstrations are held across Japan, and the largest of them all, the Friday Protest Rally in front of the Prime Minister’s Official Residence has been staged more than fifty times. Such contentious activism, especially among Japanese youth, has been quite inconceivable in the country for many years. How should we understand this development in relation to the three decades of relative silence after the end of student movements in the 1970s, which is said to have left a negative legacy by its violent disintegration? Building on the sociological studies of the protest cycles, this paper explores the concept of “abeyance” and demonstrates the working of “mediators” as key actors for social movement continuity in a post-union democracy.

Climate Change Policy-Making Process and Reasons of Its Stagnation: Activities and Preferences of Stakeholders in Japan

Institutional processes of making political decisions determine the range of their outcomes. The international comparative research project, the COMPON project (Disaster, Climate Change Policy Networks), explores characteristics of the decision making processes in each society, based on common methods. The purpose of this presentation is to show results of the Japanese face-to-face questionnaire survey to national stakeholders and to discuss its interesting findings, especially on activities of major stakeholders.

The COMPON project conducted this survey based on the Japanese translated version of the common COMPON questionnaire sheets to 125 organizations in 2012 and 2013 which can exert political leverage in the field of climate change policies. 72 organizations responded and the collection rate is 57.6%.

As results of our survey, we find that almost all stakeholders share the view that the climate change really occurs and is caused by human activities, though a few stakeholders conduct natural or social science research by themselves. They can, therefore, concentrate their political resources to bring their opinions to governmental officials by attending at committees and making press releases.

On preferences of domestic climate change policies, there is a cleavage over policy orientations, especially between industries and NGOs. Industries prefer a bottom-up voluntary goal setting, while NGOs prefer more institutionalized and legally goal-binding measures.

Our respondents replied the process of climate change policy are seriously impeded by the lack of political leadership. This result can be interpreted in two ways. For one thing, they expect the government’s coordinating of the crush of interests between stakeholders. And for another, they expect stronger political leadership and media campaigns to introduce more effective climate change policies. Climate change policy-making processes in Japan are stagnated, then we need stronger international stimuli and pressures to change the situation.

Community-Based Disaster Management in Super Aging Society: How Age and Gender Interacted to Shape Disaster Response in 2011 Tohoku Disaster

This paper seeks to examine how different attitudes toward gender across generations affected disaster response and recovery in 2011 Tohoku Earthquake and Tsunami.

Substantial population aging had occurred in the coastal areas of Tohoku that were devastated by the 2011 Earthquake and Tsunami. About two thirds of those killed in the 2011 disaster were older than 60 years of age. While elderly persons as a group are one of the most vulnerable population groups, they are key to community-based disaster management in Japan.

Community organizations for disaster management (jishubousaikai) are conventionally established under each residents’ association (ichikai) or neighbourhood association (choumaikai). Men in their 60s and 70s, retired but active, are the main members of jishubousaikai. Women of the same generation also participate in activities of jishubousaikai, but they are seldom engaged in decision-making because of social and gender division of labour that characterize this generation. Younger generations with more egalitarian gender attitudes are generally not very interested in disaster management activities.

After the disaster, jishubousaikai managed shelters and distributed relief goods in many affected areas. The national government for the first time issued requests to each affected local governments to consider diverse needs of affected women and care-giving families in shelters; however, the requests were not recognized as important in many affected areas.

This paper investigates how age and gender interacted and shaped response processes in 2011 Tohoku Disater though the analysis of data collected in two studies: 1) interviews with people engaged in disaster response and recovery during the 2011 Tohoku Disaster, most of who were also affected by the disaster themselves and 2) an action research project with three jishubousaikai, aimed at incorporating gender and diversity sensitivity in their activities in Shizuoka Prefecture, where another gigantic Tokai Earthquake is predicted to occur.

Gender-Based Violence Following the Great East Japan Disasters

Research on gender-based violence following disasters remains limited in Japan. A team of researchers and advocates, who are members of the Women’s Network for East Japan Disaster, conducted a case-finding study and compiled 82 unduplicated incidents of gender-based violence perpetrated in the aftermath of the Great East Japan Disasters. This presentation discusses the study’s results and analyzes various manifestations of gender-based violence following the disaster.

While the majority of the reported cases (n=45) pertained to intimate partner violence/domestic violence, the remaining 37 cases involved violence and harassment by individuals other than intimate partners. These incidents were diverse in their manifestations and situational contexts and included sexual assault, unwanted sexual contact, voyeurism, sexual harassment, and stalking. The majority of the perpetrators were individuals whom the victims knew, as opposed to total strangers. Some of the reported cases involved sexual assault and exploitation committed by individuals who were in the position to provide assistance and protection to the victims. The sense of fear and helplessness was a tactic frequently employed by perpetrators. For example, ex-partners perpetrated violence after approaching women and offering help, and disaster response personnel/experts exploited disaster-affected individuals.

Women of all ages and in all situations are at risk of this type of exploitative violence; however, women who are single, divorced, separated, or widowed and those who have lost a place to live, job or other sources of livelihood appear particularly vulnerable to this type of violence.

This study elucidated multiple layers of vulnerabilities of women in the wake of the disaster, which stem from the pre-existing social structures that disadvantage and discriminate women, and sociocultural norms that reinforce male domination and female subordination.

IKEDA, KEN’ICHI* (Doshisha University, keikeda@mail.doshisha.ac.jp)

Does East Asian Social Capital Bring about Beneficial Effects over Its Indigenous Cultural Constraints?

East Asian social networks, as compared with North Americans’, are often colored with their emphasis on hierarchy. In tandem with network structures, East Asian cultural context also stresses that hierarchy is essential in society, which is often modeled after traditional kinship networks. As revealed in a book by Ikeda & Richey (2011) in Japanese cultural contexts, this hierarchical nature does affect Japanese political trust, knowledge, and participation. However, we are not certain that the case is true for other East Asian cultural contexts, i.e. the generalizability of the findings. This paper will focus on this point. Using EASS 2012 dataset (East Asia Social Survey among Japan, Korea, Taiwan, and Mainland China), we will show comparative analyses of social network and its effects on social trust, social support, and political/ social participation, especially focusing on the hierarchical nature of “Asian” social networks.

IKEDA, SHINGOU* (Ins Labour Policy and Training, ikekeda@jil.go.jp)

The Factors of Japanese Female Workers’ Job Quitting for Childbirth/Childrearing

This presentation will show the factors why Japanese female workers quit their jobs for childbirth and childrearing. Despite the enforcement of Equal Employment Opportunity Act and Parental Leave Act 20 years ago, the female labor force participation rate by age in Japan still forms M-shape curve, because many women quit their jobs at the time of their pregnancy.

C. Hakim stresses on “preferences” between work and home to explain behaviors of female workers with family responsibilities; “work-centered”, “home-centered”, and “adaptive”. She presents the data that many of women are “adaptive” in Europe. She also points out the influences of relaxing labor market regulations

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
on increasing part-time work and on intermittent careers which are typical of adaptive women.

I suppose it is also important in Japan to focus on the structure of labor market as influential factors to explain the mass of women's behaviors. Japanese society has experienced long-term depressions during the past two decades, and firms have increased non-regular employees such as part-time and temporary workers instead of regular employees. This severe employment situation has negative influences on many female workers' job continuity, while some firms maintain female regular employees as long-term labor force. Moreover small organizations are not so positive on parental leave while large organizations promote the leave. As a result, the job continuity rate after the first childbirth is increasing only for the regular employees in large organizations.

The results of our data analysis imply that it is effective for employees in small organizations to gain knowledge of work-life balance support systems to negotiate with their organizations and avoid job quitting. And also, it is important to support female workers searching for regular employment with work-life balance systems so as not to choose non-regular jobs in order to balance work with family lives.

The Influence of Gabriel Tarde on the Development of Japanese Sociology in the Early Twentieth Century

The purpose of this paper is to examine Gabriel Tarde's influence on the development of Japanese sociology in the early twentieth century. In the period of Tarde's influence, Japanese sociologists and social scientists realized the importance of sociology for the Japanese society. In this context, we will examine the work of Tarde's disciples in Japan and their impact on the development of Japanese sociology.

However, there were many foreign sociologists in the audience of his course of modern philosophy at the College de France. One of Japanese sociologists who attended Tarde's course, Shotaro Yoneda (1873-1945), became the first professor of sociology at the Kyoto Imperial University. Yoneda established his sociological theory based on Tarde's "inter-psychology." In 1913, Yoneda co-founded the Japanese Institute of Social Science with his colleague at the Tokyo Imperial University, Tongo Takebe (1871-1945), who also attended Tarde's course. Yoneda's earliest disciple, Yasuma Takata (1883-1972), a preeminent sociologist and economist in Japan, not only borrowed Tarde's idea for his "Power theory of economics," but discussed Tarde's imitation theory for his system of formal sociology. Therefore, in this paper we propose to demonstrate that the impact of Tarde's sociology was more important in Japan than in his home country.

What Is Happening in the Northern Mozambique Under the Prosvavana Programme and Agricultural Growth Corridor: An Implication to the Large Scale Land Acquisition in the Southeast Asia

This paper intends to reveal what is happening in the Northern Mozambique under the Prosvavana Programme and agricultural Growth Corridor, and draw implications from a field survey for peasant society in Southeast Asia. Large scale land acquisition, so-called "land grabbing," is extending in Southeast Asia as well as in Africa. Laos and Cambodia are relatively new countries in the sphere of land grabbing. Such countries are expected to promote agricultural growth corridors. Obviously, there is close relations between land grabbing and corridor projects. What impacts will such relations give on the concerned rural communities and peasant farmers?

In Mozambique, some agricultural growth corridor projects have been conducted since the mid of the 2000s. Nacala corridor project in the Northern Mozambique, which connects Nacala Port to Malawi and Zambia, is one of them. In the same area, Prosvavana programme started in the same area in 2011 under the triangle cooperation among Mozambique, Brazil and Japan. The target area of Prosvavana covers the Nampula, Zambezia and Niassa provinces.

The UNAC (Uniao Nacional de Campones) and international NGOs are claiming to stop Prosvavana because of many problems causing from Prosvavana and its related activities of the local and the central governments, and agribusinesses. This paper highlights the process of land deals, real beneficiaries, and severe impacts on rural communities and inquires how large scale land acquisition by foreign investment infringes food sovereignty of the society.

Rural Cooperation in the Republic of Tatarstan(Russia):Ethnographic Case-Study

The results of social survey (2013) in Pestreschinsky and Kukmorsky municipal areas of the Republic of Tatarstan (Russia) of such components as self-estimate of material state of his/her own family, social activity, satisfaction with ecological situation in the area of residence, interaction with bodies of local authorities, migration moods, life ambitions, etc., draw stable psychosocial climate of a rural area. Mutual support is a phenomenon in modern society where personal values and social norms dominate. This phenomenon is characteristic of very few rural areas of Russia and it was found in rural areas of Tatarstan. The explanation of this fact lays, in the opinion of the author, in socialistic values of rural population especially typical for the area where the proportion of old people is quite big. Social networks reflecting rural population cooperation in Pestreschinsky area are concentrated basically on mezzolevel and in Kukmorsky area on microlevel. Projective trajectories of rural population towards development of all spheres of life in a rural area are connected with intergenerational continuity due to family agricultural business.

As a consequence, the specific of a demographic portrait of population in Pestreschinsky area reflected on making facilities inside the house. At the same time home improvement in Kukmorsky area is connected with household needs outside the house. 2. Rural residents working on a family farm show high level of satisfaction of fulfillment of his/her reproductive capabilities. 3. Such form of rural residents' cooperation is accompanied by condemnation of co-residents for not taking part in life of a rural community. 4. Life of rural people living in Pestreschinsky area is concentrated on the development of a social wellbeing while in Kukmorsky area - on personal wellbeing. None of these strategies cannot be viewed acknowledged as the best for the development of a rural society because personal wellbeing also constitutes social capital of the whole area.

A Visual Retrospect of Istanbul’s Galata Neighborhood: Pursuing the Path of Socio-Spatial Segregation

This paper will examine the visual effects of gentrification in the historic neigh-
borhood of Galata in downtown Istanbul, Turkey. Revisiting the research I have done in 2004 and conducting a new fieldwork in the neighborhood, I intend to
examine the evolution of visual contrasts between physical proximity and social
distance, revealing the differences and similarities concerning residential segre-
gation and neighborhood change. Galata is a historical district which was inhab-
ited by non-Muslim minorities until the first half of the twentieth century when these had to leave the country for various reasons, including the creation of the State of Israel, the events of 6-7 September 1955, the “wealth tax” in 1964 and the
cancellation of the residence permit for more than eight thousand Greeks. These years also represent a significant wave of migration from underdeveloped regions of southeastern Turkey towards Istanbul. These migrants have settled in the neglected and abandoned apartments mainly in Galata. In the 70's, small fac-
tories moved into the area, usually in the ground pavements, destroying the walls in order to install machines and thus worsening the condition of the buildings. Since the 2000's the dilapidated buildings are restored and the migrant popu-
gation is gradually displaced and replaced firstly by the middle and then upper
classes. Using the concept of territory, enrolling in both frames of time and space, this study aims to elaborate the interpenetration of these two structures and to identify the ways, developed by different social groups living in the district, of appropriating the same urban space.

**The Focus on Everyday Life As a Turn to the Human Dimension of Social Structures**

The focus on everyday life as a turn to the human dimension of social structures
If to use the metaphor of construction, we can say that the classical sociology
mainly interested in architecture, leaving on the periphery of his attention the
problem of the nature of the materials. This was reflected in the priority of macro
sociology. Theories focusing attention to the logic of behavior not the masses and
groups, but individual, emerged but they always, first of all, were in the back-
ground, secondly, do not exert any noticeable influence on the theory of mac-
ro-level.

At the end of the twentieth century, the visible turn of social science to every-
day life had acquired a paradigmatic character (P. Sztompka). If you use the
construction metaphor, we can say that the sociology came to understanding that
the “architectural forms” are unthinkables without careful study of the molecular
structure of materials from which they are implemented. This means that the
traditional division of macro and micro sociology has lost the meaning. Social
system predetermines the quality of used elements, and the characteristics of the
latter depends the fate of the system. In other words, the social structure is no
longer regarded as something external to the people. Firstly, the social structure is
understood as sustainable forms of social behavior (the theory of structuration
by T. Giddens). Secondly, the social structure is regarded as socially programmed behavior of individuals (the concept of habitus by P. Bourdieu). The inter-
action of individuals generates external emergent quality in form of social and
traditional division of macro and micro sociology has lost the meaning. Social
system predetermines the quality of used elements, and the characteristics of the
latter depends the fate of the system. In other words, the social structure is no
longer regarded as something external to the people. Firstly, the social structure is
understood as sustainable forms of social behavior (the theory of structuration
by T. Giddens). Secondly, the social structure is regarded as socially programmed behavior of individuals (the concept of habitus by P. Bourdieu). The inter-
action of individuals generates external emergent quality in form of social and
cultural fields (situational approach by K. Lewin). Fourthly, situations of daily inter-
action acquire stable and predictable forms in the context of the action of mac-
ro-level institutions (Performance Theory).

**ILYAS, MOHAMMED** (Goldsmiths College University of London, modini11@hotmail.com)

**British Muslim Response to the Post-9/11 Uncertainties**

The 9/11 and 7/7 attacks in the US and UK, as well as the subsequent War on
Terror and its effects have had a tremendous sociopolitical impact on the British
Muslim polity. On the one hand the effects have fostered Islamophobia and
the secularization of Muslims. But on the other hand, which is the focus of this paper,
the aforementioned events have fostered an atmosphere where sociopolitical
and religious reflexivity is taking place among British Muslims.

The paper is based on interviews and virtual ethnography and they identified
three main ways in which the Muslim community is changing. Firstly, some Mus-
lims are adopting a literalist reading of Islam, which is performance orientated and piety conscious. Secondly, a small number of Muslims are reading Islam in a liberal reformist way within a modern sociopolitical milieu. The group is com-
posed of born and convert Muslims and ethnically diverse. The reformists tend
to focus on human rights, women rights and the rights of the Muslim LGBT com-
munity. Finally, an increasingly large number of young Muslims are becoming
politically assertive, confident, and organized. These Muslims in the main are con-
cerned with human rights, especially of fellow Muslims. Like the literalist group,
this group is composed born and convert Muslims and is also ethnically diverse.
This group adheres to a mixture of reformist and literalist reading of Islam and
often receives criticism from the literalists.

**ILYAS, MOHAMMED** (Goldsmiths College University of London, modini11@hotmail.com)

**New Technologies, Therapeutic Zones and Islamist Groups**

**New Technologies, Therapeutic Zones and Islamist groups**

Communication and entertainment technologies over the last decade have
transformed sociopolitical activism. Ayman Al Zawahiri, in his book Knights Under
the Prophet’s Banner states: ‘We must ... get our message across to the mass-
es and break the media siege imposed on the jihadi movement ... This can be
achieved through the use of the Internet’. In most cases the new technologies
were first developed for military purposes and later modified for civilian use – in
the Internet, mobile phones, and military games. However over the last two decades
Islamist groups have started to use the technologies in ways that they were first
intended for – build secret communication networks, attract and train new re-
members, etc. The second part of the technologies, especially Internet has
been well documented in academic literature, and think tank and government
reports. However, there is little written about how the aforementioned technolo-
gies are used to create psychosocial environments that act as precursors to one
joining and acting on behalf of Islamist groups.
In this paper I will detail how social networks, videos, and video games can foster and be used by Islamists to create what I call 'therapeutic zones', which make acquiring and acting upon extreme ideas more amenable. I consider these zones as an essential part in cultivating the desire among some individuals to acquire extreme ideas and in some cases act upon them, either with or without the involvement of Islamists. These zones are important because they are spaces where what I call militarized emotions can be cultivated and secondary trauma imparted. The emotions act as displacements to circumvent ethical and legal references and make Islamist explanations and solutions acceptable.

IMADA, TAKATOSHI* (Tokyo Institute of Technology, imada@valdes.titech.ac.jp)

Significance of Agent-Based Simulation in Social System Theory

Since the last decade of the 20th century, agent-based simulation method has been developed and becoming a powerful tool for social science. This approach has attracted attention as a new trend, which clarifies the social dynamics and complex human relations. Especially, the following is an important advantage of this approach. This simulation is performed in bottom-up and process-traceable ways, therefore we can clarify how the macroscopic form and social order are generated from the interactions of individual agents. The agents only receive a small number of constraints, each interacting autonomously in the computer space. Then we can reproduce by simulation the manner of forming the ordered whole (social system) from individual behaviors.

The agent-based simulation lies in that we can explore the micro-macro link between individual and society by a bottom-up procedure. There has been a deep division between the methodological individualism and collectivism. To bridge this division has been the most difficult work so far. Because of the emergent property of a macro level, it has been regarded as almost impossible to derive the characteristics of macro (society) from the micro (individual). In fact, while efforts to the problem of micro-macro link have been made in sociology, meaningful results have not been achieved.

In the presentation, I argue the micro-macro problem from three aspects based on the viewpoint of agent-based simulation. First is to examine the mechanism of emergent behavior between Glais's "A Self-Forming Neighborhood Model." Second is unintended consequence of action by referring to Yamamoto's model regarding a trap of egalitarianism in the logic of social contract. Third is mathematically unsolvable solution with reference to Axelrod's "Tit for Tat" strategy in the iterated Prisoner's Dilemma game.

Making Places for Identity: Urban Alleyways As Places of Belonging and Displacement

This paper presents a comparative study of the roji, urban alleyways in Tokyo, and urban alleyways in Berlin-Mitte, which have been part of people's personal spatial sphere and everyday life, but which have increasingly been transformed by diverse and competing interests. Marginalized through the emergence of new forms of housing and public spaces and re-appropriated by different fields, the alleyways play a role as the way to the alleyways are being re-interpreted and restructured as subcultures and new social movements to fit hybrid and multiple concepts of living and lifestyles. Focusing on the comparative cases of central Tokyo, Japan and Berlin-Mitte, Germany, drawing on ethnographic data supported by a conceptual framework derived from theories of place making and identity formation processes, this paper investigates the kind of functions the alleyways fulfilled in these cities in the past, and the qualities of urban life that have been lost or changed.

Providing multiple narratives of change, the paper's main purpose is to critically reflect on the recent 'revival' of the urban alleyway, arguing that the interstitial nature of these places can be characterized as a boundary between belonging and displacement being on the hand places which are desired and needed to express local voices, thoughts and personal opinions but also places which face different forms of occupation, transformation or destruction.

In summary, conceptualising the alleyway as a contested place and sampling for assessing physical, corporeal, and social relations in these processes of micro-scale place making, allows us to view the alleyway as the material expression for broader social struggles, and focus for generating, proclaiming and negotiating different cultural subjects, which are aspects of contemporary urban life. The outcomes of this study should offer more insights and alternative views to understand the potential and future of the urban alleyway in a global perspective.

Almost fifteen years have passed since the rising levels of inequality and insecurity became the social issues in Japan. One of the major reasons of this is clearly rooted in the limited social inclusion of non-regular workers within the institutionalized pattern of social security of livelihood and future prospects. Although the last several years witnessed some attempts of re-regulation of labor markets under the governance of the Democratic Party of Japan such as the revisions of Temporary Dispatching Work Law and Part-time Work Law, the processes and the outcomes of re-regulation appear to legitimize or even formalize the existing structure of inequalities and exclusion. The paper argues that the situation cannot be turned around unless the specific link between employment security and welfare and the norms that support it is properly recognized. The link is shaped as a specific type of industrial citizenship, a set of rights and duties for employers and workers that is negotiated historically between state, firm and labor. In Japan, it was negotiated by enterprise-based labor unions prioritizing the employment security of workers with standard employment contract who are typically employed by large manufacturers. Social security system was designed to support these male bread-winners. Ironically, this citizenship – negotiated standard of social justice in a society – justifies triple inequalities that characterize the current labor markets in Japan: large firms over smaller firms, men over women, regular employment over non-regular employment with regard to the access to livelihood security and future prospects. The paper points out the necessity to overcome the standard employment centrism that produces the ironic consequences.

Political Participation Patterns in Lithuania: Alienated or Active Citizens?

Citizen participation in the process of political governance is an essential condition for the functioning of democracy and ensuring the stability of society. Political participation efficiently is expressed through a number of mechanisms inherent in the process of democratic government that help citizens to voice their interests, preferences and needs, and to pressure state officials to take into account their opinions. Active participation in the process of democratic government provides ordinary citizens with a possibility to have influence on the appointment and monitoring of politicians and civil servants.

The focus of this paper is to investigate the impact of structural and individual factors on political participation patterns in Lithuania. What groups of citizens in Lithuania may be distinguished in accordance with their level of interest in political participation efficiently is expressed through a number of mechanisms inherent in the process of democratic government that help citizens to voice their interests, preferences and needs, and to pressure state officials to take into account their opinions. Active participation in the process of democratic government provides ordinary citizens with a possibility to have influence on the appointment and monitoring of politicians and civil servants.

The outcomes of this study should offer more insights and alternative views to understand the potential and future of the urban alleyway in a global perspective.
Vocational and Academic Effects on Gender Segregation in VET - a Three Country Comparison, Germany, Norway and Canada

Gender segregated vocational education and training (VET) is usually attributed to gender stereotyped career choices of students at the end of junior high school. However, institutional logics may also promote gender segregation in VET. Empirical findings in German-speaking countries show that mixed-gender educational programs require higher school achievement compared to both male- and female-typed programs.

The paper investigates how institutional logics of the education system impact on the allocation of school leavers to gender-typed upper secondary (general and vocational) programs in Germany (DE), Norway (NO) and Canada (CA). We test the assumptions that (a) the more vocationalised an educational program, the more gender-typed the program (vocational effect), and that (b) mixed-gender education programs require higher academic school achievement than gendered-typed programs (academic effect).

The three countries were selected because of their different educational policies (vocational and academic principles in DE; academic and universalistic principles in CA; NO sharing the vocational principle with DE, and the universalistic principle with CA). We use youth panel data in all three countries (DE: BIBB Transition Survey 2006; NO: Young in Norway YIN; CA: Youth in Transition Survey YITS) to analyse both the vocational and the academic effect on educational gender segregation. We apply multinomial logistic regressions for men and women separately, with gender-type of the educational program (male-typed, mixed-gender, female-typed) being the dependent variable to test our hypotheses.

Preliminary results show clear evidence for the vocational effect on educational gender segregation in all three countries, including Canada. In contrast, the academic effect on educational gender segregation is strong in Germany but relatively weak in Canada and Norway. We interpret our findings with the unique constellation of different educational principles (vocational, academic, universalistic) in each country.

Shrinking the Ballooning Young Precariat Class in Nigeria: The Need for Youth Empowerment

All over the world, the debouchment of a new class has been observed with new demands for the progressive troika of equality, liberty and fraternity. Far from being the forlorn cry for the establishment of a Marxian utopia or pantoscopy, the genuine demands for egalitarianism necessitating the restructuration of economic, social and cultural capitals has become a desideratum for society’s preservation. Social upheavals, civil protests and collective movements led by the dependent variable to test our hypotheses.

Bodies-in-Design: Impairment and Embodiment in Universal Design

Bodies-in-design: impairment and embodiment in Universal Design

Designed objects and environments are often inattentive to impairment or bodies that do not conform to particular, yet normalised, conceptions of bodily form and performance. This has resulted in a heightened awareness for a socially just design that is sensitive to the complexities of bodily actions and encounters, leading to the emergence of movements such as Universal Design. Drawing on a study on the relationships between impairment, embodiment, and design, this paper considers the diverse ways in which major exponents of universally designed products and services construct the impaired body, or the bodies for which they purport to design. Discussing data from interviews with designers in companies at the forefront of making universally designed products, we consider how the impaired body is represented in design contexts and environments, and how far designing for impaired corporeality is possible, and desirable, within the confines of commercially orientated organisations. As our research suggests, while Universal Design purports to design for all, the practices of designers sometimes risk falling back on reductive conceptions of the impaired body that mask the diversity of capabilities and experiences among users of designed objects and environments. We then discuss some of the reasons for such exclusions as well as outline potential ways of sensitising organisations and practitioners to the complexities of bodies-in-design.

The Possibility of “Community” Mediation

Community is made up of the following minimum. (1) Life is dependent on the region (2) Sharing culture (3) Relationships face-to-face (4) Relationships are there grandparents, parents, children, grandchildren, and so on. However, the community, recovery community is fragile, and once lost, injured difficult. 2

We set household composition at 8th survey (conducted in 2010) as basic dependent variable. As sample attrition was serious, we dealt with this sample selection bias by propensity score analysis and Heckman’s two stage estimation probit model (Heckit). We found that those who did not have college or university degree, those who had married at early ages, and those who had low household income in 2002 tended to drop out from subsequent survey, but they also tended to divorce and form a single parent household in 2010. Marital relationships of those at low socioeconomic status were generally insecure and were likely to disrupt. These findings suggest the mediating effect of divorce between parents’ low educational attainment and those of their children’s.

The Possibility of “Community” Mediation

Community is made up of the following minimum. (1) Life is dependent on the region (2) Sharing culture (3) Relationships face-to-face (4) Relationships are there grandparents, parents, children, grandchildren, and so on. However, the community, recovery community is fragile, and once lost, injured difficult. 2

About the possibility of community mediation. Community mediation, proceed as follows. (1) Providing a forum for mediation (2) Listening to both parties (3) Promoting the voluntary interaction (4) The parties themselves generating an
agreement. I will explain in the following example of the above. (1) Examples of Indonesia: Mushawaar and Tsunami of Aceh (2) Example of Mongolia: New mediation act (3) Legal consultation activities as Tohoku disaster cite (4) Social support for evacuated municipal staff from Fukushima nuclear power plant (5) Medical dialogue promoters (6) Ethnie settlement support center

Does Trust Promote Generosity?

Both of trust and generosity have been considered as important factors to promote cooperation (Yamagishi 1998, Nesse 2001). Some researchers argue that trust plays a significant role in assessing quality and trustworthiness of unknown others. On the other hand, generosity is defined as a tendency to forgive defects or failures of partners (Exline & Baumeister 2000, McCullough 2008). However, these two cooperation promoting traits appear to be incompatible. Trust helps us to assess partner's trustworthiness, which may lead to a withdrawal from inappropriate relationships. On the other hand, generosity helps us to forgive partner's mistakes, implying that we make a commitment in spite of partner's failures. Therefore, the question is: Are these two traits really compatible? And if so, how do we have developed these two seemingly contradicting traits?

Here, we aim to clarify the puzzling relationship between trust and generosity by using an agent-based model. We adopt trust game as a basic building block and then incorporate two further elements into our model. One is related to heterogeneous agents in terms of abilities to fulfill donor's expectation. The other element is related to partner choice, commitment (repeated trust game with the same partner) and an exit. Trust is thus formulated as selective strategies in the context of partner choice, whereas generosity is defined as forgiveness of partner's failures in the context of commitment relationship. We carry out the set of computer simulation experiments to assess the viability of several strategies.

Our first result is: without reasonable trustful strategies, more generous strategies cannot be viable. Furthermore, we find that as group size increases, trust level also goes up, leading to the prevention of degenerating generosity. These two results clearly indicate that trust can promote generosity. But it differently, there exists a coevolution mechanism of trust and generosity in our social world.

Facing the Selves in the Field Research of Immigrants: From the Research Question Based on Visibility to Led through Daily Relationships

This paper aims to describe the process of constructing and transforming research questions through encounters with immigrants in the field of everyday life under the globalized environment, and to indicate two approaches to the fieldwork, based on my research around Kobe city, Japan. The first is research based on researchers' perceptions that categorized immigrants as the "aliens" visibly in the social structure, while the researchers' positions and power to make them other are not critically subjected. Here, encounter is not a research subject but rather a chance to inspect their presupposed research question. On the contrary, the alternative approach that constructs research question from daily relationships with immigrants focuses on the encounter itself as the process of facing the selves that occurs us another belonging and identity in the dimension of existential movement, such as Ghasan Hage proposed (Hage 2005). Based on my research, I experienced these approaches as transition from the former to the latter, that criticized the direct linkage between the notion of "aliens" and their visibility by walking away from the ethnic festivals to the daily relationships among return migrants from Peru, and by getting involved an trouble of a family to the latter, that criticized the direct linkage between the notion of "aliens" and their visibility by walking away from the ethnic festivals to the daily relationships among return migrants from Peru, and by getting involved an trouble of a family to the latter, that criticized the direct linkage between the notion of "aliens" and their visibility by walking away from the ethnic festivals to the daily relationships among return migrants from Peru, and by getting involved an trouble of a family

Reading “Battle Hymn of the Tiger Mom” As An Educational Biography

In this presentation, I explore Amy Chua’s “Battle Hymn of the Tiger Mom” as a biographical account of child rearing by a second generation Chinese American. I examine Chua’s account in relation to Asian immigrant experiences in the United States. The questions asked include: How does Chua tell about the ways in which she raised her children to attain high educational achievement in U.S. society? What were the limitation and (unintended) consequences of her strategy? How can we interpret Chua’s account within the history of Asian American social, cultural, political, and educational experiences? Does her account overcome stereotypes against Asian Americans, or those against other racial minorities?

I situate Chua’s account of child rearing in the context of existing quantitative and qualitative educational research on educational achievement of Asian Americans to point out the almost missing perspective of building social capital from cross cultural contexts. Second, I analyze Chua’s account. Chua comes from an intellectually elite family, and she herself is also a well-connected intellectual elite. She has very distinct idea on “success,” and her children are successful so far, but Chua also suggests that the Chinese way of raising children will have some pit falls because it does not nurture some important American values such as creativity, leadership, and independence. I argue that Chua’s account, while being somewhat extreme, shares some common characteristics of the dominant discourse of Asian Americans as a model minority. I also suggest that analyzing the accounts of second-generation mothers is advantageous, as they know the ways social capital and networks work based on their foreign-born parents’ experiences and they are very conscious not to allow their children to lose them while becoming “American.”

INOUE, HIROKO* (University of California-Riverside, hiro.inoue@email.ucr.edu)

The comparative world-systems approach analyzes systems of societies rather than a single society. Interaction networks in world-systems comprise systems of human societies which are bounded in space and engage in regularized interactions. The evolutionary growth of the connections and intensified linkages through cycles and oscillations has formed increasingly larger and integrated world-systems over time. Structural globalization is thus conceptualized as an elementary trend that prevailed in the last two centuries. While the world-systems approach explains evolutionary growth of interaction networks over time, it is conscious of historic contingencies as well as spatially and temporally specific conditions for local polities. This aspect is compatible with recently developing agent-based social science. Applying spatial agent-based simulation, the current study engages in examination of historical cases. In particular, this study focused

How Human Insecurity Arose Under International Peacebuilding: The Case of Timor-Leste

This presentation explicates how new form of human security arose in Timor-Leste during the time of international statebuilding and peacebuilding. Firstly, it draws attention to the influence of neo-liberal economic policy on people's lives. The introduction of neo-liberal economy had a detrimental impact on domestic agriculture in Timor-Leste, triggering a large-scale urbanisation as many moved to cities in search for jobs. Despite the recent economic growth, however, most of migrants from rural areas remained jobless and the poverty among the new migrants aggravated.

Secondly, I point out the impact of the failure of state-institution building on the human security condition in the country. As many have pointed out the modern state institutions had struggled to build its foundations in the country. State was therefore yet to be fully forged to redress the poverty created by the economic policy. At the same time, it is important to note that the decline of customary form of governance had a critical impact on the quality of people's lives. While the clan-based community and its customary form of governance have provided social safety net in rural areas, the population in the urban areas lacked such supports from families and extended families. It was under such a context where a new form of human insecurity emerged.

I will close this presentation by discussing the implication of the case of Timor-Leste to the theory of international statebuilding and peacebuilding. The conventional theories have assumed that political democratisation would automatically bring about peace and security in the post-conflict society. The case of Timor-Leste, however, suggests the need to reframe the theory so that it would be able to include the complexity of political and economic modernisation and to appropriately explain the complex trajectories that the post-conflict societies might experience.

Towards Adequate and Accessible Psychosocial Care: A Research Working Alliance with Professionals in Treatment and Counseling

Institutions of psychosocial care do not offer equal access to all members of society, not even to those who are entitled to such services by general health insurance. Immigrant status is associated with lower rates of use of mental health services; this likely reflects cultural and linguistic barriers to care. In the case of Germany, migrants are disproportionally highly represented among in-patients in psychiatric clinics and in compulsory treatment in forensic psychiatry; in many cases, psychosocial care therefore does not function preventively. Institutions of psychosocial care do not adequately respond to the needs of migrants and the relation between migration and mental health needs further investigation, as well as the development of cultural sensitive health care.

Psychotherapists and psychiatrists in Frankfurt am Main founded the "Intercultural Forum Migration and Psychosocial Care" in April 2010 to address these problems and work towards more adequate and accessible treatment and counseling. In some institutions there are changes in organization and leadership, more professionalism and treatment experience are employed and treatment is offered in different languages. In other institutions, such changes are absent or very slow. But professionals from most clinics and counseling centers take part in the "Forum" and agree that change is needed.

This study verifies the current validity of Douglas-Arisawa's law and the determinants of women's employment in Japan. Almost 70% of women exit the labor market during marriage or childbirth and this figure remains high, especially among higher educated women (Cabinet Office 2006).

Reports indicate that whether married women work or not is explained by "Douglas-Arisawa's law," which suggests that there is a higher non-core family members' labor force participation rate in lower core income than in higher core income households. This law's validity has been proven using panel survey data in 1997 (Kawaguchi 2002), yet some reports currently indicate that Douglas-Arisawa's law is collapsing, especially among married women with less than a high school education (Manabe 2004). Furthermore, Takeuchi's (2003) study used panel data from Japanese married women aged 30 years and below and found that life events such as childbirth and child-rearing serve as restraints to employment, and that wives have not reacted to changes in their husbands' income. This study verifies the current validity of Douglas-Arisawa's law and the determinants of women's employment in Japan.

Data obtained from the National Family Research of Japan, 2008–2011 Panel Study (NFRJ-08 Panel) were used with a dependent variable having a job dummy, when having a job = 1 and not having a job = 0. The results of logistic regression analysis show that vocational school or university graduates would probably work than high school graduates with a lower probability of wives working if their husbands' income is higher. A short-term reduction in the husband's income did not affect the wife's probable employment; however, the youngest child's age did have an effect. Results indicate little change from Takeuchi's (2003) results and appear to maintain Douglas-Arisawa's law.

The Street As Urban Borderland: Micro-Geographies of Inequality and Co-Existence in Manchester and Shanghai

The paper examines the micro-geographies of spatially divided but adjacentely located and coexisting social groups (defined by place of origin, ethnicity, socioeconomic status or various other criteria) in two very different cities. It is rooted in six years of fieldwork in Shanghai, China, and several months of research-based teaching (Architecture) in Manchester, UK. The study builds on ethnographic work (namely long-term observation, visual methods and in-depth interviews) in two divided neighbourhoods, where the street acts both as a border, separating difference, and as a space of conviviality, bringing together and merging. In this way, two study streets are established as spaces where the various barriers between the different are often patiently and persistently undone by those who live them in their everyday, just as symbolically as they are sometimes erected
by the powerful. Furthermore, the paper looks at how the formal and informal production, appropriation, transformation, use and management of street space in the case study areas of Manchester and Shanghai are linked and contribute to the formation and maintenance of multiple and hybrid social identities among members of distinct groups. The focus lies on the exploration of the street as a space which makes various types of inequality explicit, a space which is temporally, culturally, economically or, simply, physically in-between, and can thus be regarded as a type of urban borderland.

Widowhood Practices Among the Edo People in Nigeria: Continuity and Change

This is an empirical study involving both quantitative and qualitative approaches. It explores the widowhood practices among the Edo people in Nigeria which is a patriarchal society where majority of women especially those in the rural areas suffer from severe cultural constraints and inhibitions, creating an unequal relationship between men and women. The widowhood rites are often very dehumanizing to the extent that it erodes the self esteem, potentials and capabilities of women. They are made to suffer emotionally, physically and economically as they are often denied the essentials of life. In terms of their means of livelihood, a woman enjoys access to land for farm purposes when her husband is alive; but at death, she becomes vulnerable to the dictates of her late husband’s relations as she is seen as part of the property to be inherited by the family. The case is made worse by the fact that cases of form of adjudication on her behalf ever carries any significant effect especially in the rural milieu where customary law seems to be stronger than statutory law. This is the debilitating situation facing most widows in Edo State, Nigeria, hence the need to examine the prevailing situation and propose appropriate solutions that would help address the challenges of widowhood practices in the 21st century and beyond.

Keywords: Cultural constraints; customary law; patriarchal societies; rural areas; statutory law; widowhood practices

The Sex Lives Of Sex Researchers

The Sex Lives of Sex Researchers

As sexuality studies develops as a field, recent biographies feature some prominent figures. In addition to several texts on Alfred Kinsey, these biographies include those of Michel Foucault, Richard von Krafft-Ebing, Jeannette Foster Howard, and the first librarian at the Kinsey Institute, and William Masters and Virginia Johnson. Some of this work is superb scholarship. Some might be considered “pathography,” Joyce Carol Oates term for “the technique of emphasizing the sensational underside of its subject’s life.”

Pathographies of sexuality researchers spin for perversion. For example, James Miller’s biography of Michel Foucault links Foucault’s work to a range of unconventional sexual proclivities like SM. And biographer Thomas Maier begins his book with Virginia Johnson losing her virginity, portrays her as a sexually carniving secretary and delights in exposing surprising aspects of the researchers’ sex lives together. Historian James Jones biography of Kinsey perhaps most typifies the genre. Jones claims that Kinsey’s research was driven by his own “inner demons,” which allegedly included homosexuality, masochism, and a range of sexual compulsions such as masturbating with objects inserted into his urethra.

This paper examines a number of biographies of sexuality scholars, and explores the dilemma biographers face in writing about the sex lives of these researchers. I suggest that, despite increased acceptance and even excitement about the academic study of sexuality, sexual stigma is a persistent theme in the stories about researchers themselves. Biographers use sex to frame the story, locating sex research in a brew of perverse desires and practices, and contending that the researcher’s deviance colors or discredits the scholarship.

Does Inequality Matter? Intergenerational Relations in European Welfare States

Intergenerational transfers of money, time and space are important features of parent-child relationships. Previous research reveals substantial differences in intergenerational solidarity, raising the question of causes and reasons for European divergences. Apart from inequality on the micro level, meso level structures (family) as well as macro level factors are important in order to understand differences in support levels of giving and taking money, time and space within and also between countries. While single types of solidarity have been predominantly analysed separately, a joint analysis is still missing.

Based on the Survey of Health, Ageing and Retirement in Europe (SHARE), 14 European countries are analysed to measure the impact of inequality structures on functional solidarity between parents and their adult children. Multilevel analyses including micro, meso and macro levels indicate that need and opportunity structures as well as variations in family composition and cultural-contextual differences between welfare state regimes matter for intergenerational relations. Children in need get more support than better situated offspring. Simultaneously, parents with better opportunity structures help more. Furthermore, we can observe that parents in low-level service states and high poverty and income inequality countries such as Poland, Italy and Spain predominantly support their adult children by providing living space, whereas in less familialistic and more generous welfare states such as the Netherlands, Denmark or Sweden parents rather provide time and monetary support. Our results moreover reveal that the provision of living space substitutes for time and financial transfers. The latter, however, do complement each other; children who receive time support from their parents often receive monetary help as well.

SYZDILIK, MARC* (University of Zurich, szydilik@soziologie.uzh.ch)

Money Vs. Space? Intergenerational Transfers in a Comparative Perspective

The provision of living space as well as direct financial transfers are important elements of functional solidarity between parents and adult children. However, previous research reveals substantial discrepancies in monetary transfers and intergenerational coresidence not only within but also between countries. Against this background, the investigation addresses causes and reasons for intergenerational support in terms of space and money. We investigate (1) which parents do provide these kinds of support for their adult children, (2) whether money and space are substitutes or complements, and (3) how one can explain national differences.

Based on the Survey of Health, Ageing and Retirement in Europe (SHARE), influences of individual, familial and societal factors are analyzed for 14 countries. The empirical results, based on logistic multilevel models, indicate that especially needs of the adult child as well as opportunities of the parents are important determinants of intergenerational solidarity. In contrast, competing family members reduce support probabilities for each individual. Parents in familialistic and low-level service countries such as Poland, Italy and Spain predominantly support their adult children by providing living space, whereas in less familialistic and more generous welfare states such as the Netherlands, Denmark and Sweden parents rather offer monetary support. Furthermore, the provision of living space seems to substitute direct financial transfers.

Ukrainian New Left and Grassroots Social Protests: A Thorny Way to Hegemony

When and how the emerging radical new left in the post-Soviet societies is able to win hegemony within the rising social-economic protests mobilization? In the context of the post-Soviet weak civil society the new left has a unique opportunity to use the ‘primacy effect’ in order to win strong position within the grassroots social protests. The prior strong position within the movement around some problem gives the privileged position compared to other political groups when the mass mobilization around it erupts. I will analyze the case of Ukrainian radical left student union ‘Direct Action’ organized in 2008 by ideological anarchists and libertarian Marxists which appeared to lead 20,000 student mobilization in over 15 Ukrainian cities against introduction of paid services in the universities in 2010 when established student NGOs were siding with the government or discovering 15 Ukrainian cities against introduction of paid services in the universities in 2010 when established student NGOs were siding with the government or discovering
far right has ultimately won hegemony. I will show the process of ‘double institutionalization’: participation without systematic attempt to establish ideological influence and use of the grassroots protests for the publicity of particular political groups. If these two typical failure strategies are allowed to proceed, they lead to increasing distrust, the collapse of coalitions and isolation of the new left groups.

An Analysis of Imagined Boundary of the “Japanese”: Results from an Internet Survey in Japan

This paper aims to analyze tendencies and differences of imagined boundary and definitions of the “Japanese” among Japanese people. There is a legal definition of the Japanese, that is, the Japanese is the people having Japanese nationality. However, a personal definition to distinguish people between Japanese (or ‘real Japanese’) and non-Japanese may vary from person to person according to their experiences and social status. Especially, subjective terms of grey zone cases, for example naturalized immigrants or Japanese diaspora, is controversial and delicate issue in Japan.

For capturing people’s imagined boundary and definition of the “Japanese” in detail, I conducted an internet survey with 2,000 respondents in 2013. In this survey, I employed 16 types of vignette questionnaires which describes typical combination of conditions relevant to national identity, i.e., nationality, resident, blood, and language, and asked respondents to judge whether a person who has a certain combination of conditions is regarded as the “Japanese” or not.

By using this data, we can capture a person’s imagined boundary as a Boolean algebraic equation. In the paper, results from the survey will be demonstrated in detail. Besides, the relevance between types of imagined boundary and definitions and demographic and socio-economic status will be discussed in the paper.

Income Inequality and Relative Deprivation: A Formal Theoretic View

In a time of increase of inequality, does people’s frustration or feelings of deprivation rise? If it is yes, how do theories of relative deprivation explain these kinds of relevance between objective economic situation in a society and subjective feeling of individuals?

This paper aims to present a formal theoretic view of the relationship between income inequality and relative deprivation by applying and developing Shlomo Yitzhaki’s (1979) defined indices of individual and societal degree of relative deprivation emerged by income comparison among reference group, and demonstrated explicit link between indices and the notion of the Gin’s inequality coefficient.

In this paper, especially, I try to describe and explain two paradoxes relevant to relative deprivation occurring in the time of modernization from a formal theoretic view. First paradox regards the tendency that a disappearance of class barrier as reference groups in terms of income comparison rather results in increase of people’s relative deprivation. Second paradox is related to economic growth which tells that increase of amount of income in a society rather increases individual and societal relative deprivation under certain conditions.

A formal theoretic model will be introduced so as to solve these paradoxes. Furthermore, some implications from the model for understanding contemporary situations in advanced countries will be discussed.

Social Network and Job Change in Japanese Youth Labor Market: Embeddedness, Safety Net, and Social Closure

The purpose of this study is to examine whether and how social network affects job change behavior and the result of job change in Japanese young workers. They are faced with high risks of job turnover because of the expansion of fixed-term or part time employment, which is followed by service industrialization and long term recession since 1990’s. It is becoming an important process of career mobility that Japanese young workers find their job in the external labor market today. Social network approach is a convincing sociological framework to investigate the job search process.

There are several explanations based on social network approach. Embeddedness, safety net, and social closure arguments are examined empirically in this study. A panel survey data targeting at Japanese youth is utilized and it is tested whether and how social network affects job change and change in income after changing a job. Heckman’s two-stage sample selection model is applied.

Empirical analyses support the embeddedness argument. We have two main findings. First, social network is not related with job change behavior, but employment status is the definitive factor. Secondly, however, male job changers with ‘weak ties’ get higher income if they experience mobility between different industrial sectors. Social network works especially in cross-border mobility, where workers may lose their human capital and be put under uncertainty about their career. Social network can offset these disadvantages and give them advantages in job searching. And the cross-border mobility is a process of de-embeddedness.

In previous researches in East Asia, social network’s aspects of safety net and social closure are focused. From the results of this study, however, embeddedness argument is still important to be considered.

Baseball Labor Migration: Transformation of Border Crossings of Athletes in Global Diffusion of Baseball

As the result of globalization of a sport, the border crossings of athlete are increasing explosively today.

This study proves that the border crossings of athletes have accomplished the qualitative change from the example of global diffusion of baseball, which has been accepted as professional sport with capital.

The global diffusion of baseball can be positioned on the context of forming a global marketing and scouting network of professional baseball whose summit is the Major League Baseball as North American top league. This network had consumed Central America-Caribbean region by 1950s and East Asia after 1990’s, and has been expanding to the ‘Baseball Barnen’, Europe, Middle East, Africa and South American Continent, after 2000s. As a result, new competition terrains, where playing level had been dropped, have emerged in some of the ‘Baseball Barnen’, and new types of border crossings of athletes can be seen there.

In the past sport labor migration studies, it has been thought that economic reasons, like salary or bonus, are main factor for the athletes who cross borders, however, not a few athletes are going abroad for non-economic and mental reasons, such as self-actualization these days. These can be seen as a new phenomenon as a conclusion of globalization of sports. In this situation, border crossings of athletes can be regarded as not parts of ‘labor’, but parts of ‘consume’.

From this analysis, the word of ‘Sport Labor Migration’ is becoming no longer appropriate to represent the border crossings of athletes.

Reconstructing Relationships in a Transgender Family: The Story of Parents of Japanese Transgender Children

Raising and nurturing children is one of the most important functions of a modern family, and the emotional parent-child bond is typically strong. However, in the case of transgender children, to what extent do their gender issues impact their relationships with their parents? When discovering that their child is transgender, parents either accept them or change or reconstruct their relationship. This study discusses the process of creating new relationships and parents’ viewpoints by analyzing the narratives of parents of Japanese transgender children. Ten in-depth interviews of parents with transgender children were conducted. The interviewees included eight mothers and three fathers. Data were collected from November 2012 to October 2013 in Kobe, Tokyo, and Fukuoka.

First, in these families, children’s problems were mainly handled by mothers because fathers had a comparatively tenuous relationship with their children and tended to avoid the topic of sexual minorities. Two types of reactions were seen on discovering that their child was transgender. The first was an “as suspected” response, while the second was extreme shock. The interviewees then began gathering more knowledge about gender issues and LGBT by reading or visiting LGBT communities to understand and generally acknowledge their child’s unique or queer gender identity. And in their life stories, parents tried to reconfirm or reconstruct images of their children and reforest their emotional ties with them.
workers but also because in-home long-term care support providers may lack motivation; as they do not receive subsidies for placing compatible care workers with aged persons. Yet, good chemistry between aged persons and their care workers is important because aged persons have diverse needs, which may require specific characteristics in their care workers.

To design a policy that will motivate care providers to deploy their care workers more effectively, the presenter interviewed several care workers and other support provider staff members, investigating how care support providers deploy care workers and the difficulties they face. The qualitative interview data revealed that some support providers have aged persons appoint their own care workers at their own expense. This method usually results in successful postings as it enables aged persons to choose compatible care workers and to make particular demands regarding their needs. However, because these appointments are made outside of the Long-Term Care Insurance Law, a designation fee is applicable, which some aged persons cannot afford.

These findings suggest that the government should give subsidies to support providers who appoint large numbers of care workers so that these providers can keep their designation fee low, and aged persons can continue to choose their own care workers. Such an initiative may also restrict social welfare costs in the long run because increased rates of in-home care are associated with decreased medical spending.

**A Political Ecology of Aquaculture Certification: Towards a ‘modernization of Ecology’**

The article examines environmental certification regimes in the global aquaculture as an example of ecological modernization. While the fundamental tenet of ecological modernization is to shape capitalism by ecological principles, the study shows instead that through environmental certification regimes, ecology or nature itself is largely shaped, transformed and restructured to fit into, and thus serve, neoliberal governance and accumulation in a normalized manner. Certification regimes offer some avenues for a sustainable aquaculture; however, the internal dynamics of neoliberal capitalism remains largely unchanged. Since economic logic still reigns over ecological and social logics, the article argues that the example of the certification regimes should therefore be characterized not by ‘ecological modernization’ but by ‘modernization of ecology’. It is because through certification regimes, capitalism is not modernized in ecological lines, but ecology itself is modernized in the line of neoliberal capitalism.

**Volunteerism among Mexican Youth in the US: The Role of Family Capital**

This study investigates patterns of volunteerism within a rapidly growing segment of the population, Mexican immigrant and Mexican origin youth, using data from the Education Longitudinal Study of 2002 (ELS). These data show that volunteerism varies by immigrant generational status. Contradicting classical assimilation theory, first generation Mexican immigrant youth are found to be more likely than their second generation counterparts to engage in volunteerism compared to their third+ generation counterparts. This difference is most pronounced at the lower end of the family income spectrum. The study also analyzes the effects of components of family capital, family income and parental education. Contrary to previous research, this study finds that while family income and parental education both have a positive effect on volunteerism, but the former is associated with volunteerism of any frequency and the latter with regular volunteerism.
values of judo. Such policy has caused mortal accidents at public schools every year in Japan. I examine why the judo practices are so different in these two countries in regard to education and violence.

Habermas’ Discourse Theory and the Concept of Public Sphere

The aim of this paper is to clarify the concept of Jürgen Habermas’ public sphere in his book, Between Facts and Norms, especially focusing on his perspective and method.

In this book, discourse theory is formulated with “D: Just those action norms are valid to which all possibly affected persons could agree as participants in rational discourses.” However, especially in American context, there is a lot of criticism that the discourse theory is not so effective for the analysis of an actual problem because it is too formalistic. Responding to this criticism, Habermas elaborates a process model of rational political will-formation about realistic problem. Habermas has taken up the public sphere as a concept to support such political will-formation. According to Habermas, the public sphere “is a warning system with sensors that, though unspecialized, are sensitive throughout society” and “can best be described as a network for communicating information and points of view.”

Some existing discussion found that Habermas succeeds to use a theoretical technique, called conversion of perspective and shift the level of a reference in The Theory of Communicative Action. However this paper points out that Habermas already uses similar techniques in Between Facts and Norms. Habermas moves to more concrete level of discussion based on his theoretical understanding of a modern democratic constitutional state. Dealing with experimental problems, such as politics and law, one of focusing point is a public sphere. Finally, we think on the feasibility of the concept of Habermas’ public sphere as an analytical tool of actual problems.

ISTVAN, ALESHA* (Texas A&M University, dstivan@tamu.edu)

Using an illustration of the relationship between the U.S. environmental movement and the U.S. wind energy industry, I develop a theory for understanding the relationship between social movements and their economic outcomes. Synthesizing the social movement theory of political process with the economic theory of social structure of accumulation, I argue that social movements become more and less important to industry creation based on the intersection of the two sets of forces in the cycle of contention with the industry’s position within the cycle of accumulation. Furthermore, at any given point in time, these cycles are both impacted by the larger political, economic and ideological structure of the society. I develop four distinctions that I use to further clarify this theory. First, during times when the economic consolidation intersects with movement diffusion, contentious actions have little, if any, relationship with industry development and technological explanations prevail. Second, during times when economic decay intersects with movement exhaustion, technological and social movement outcome explanations become less important and the macro political-economic environment provides a more robust explanation for industry changes. Third, during times when economic exploration intersects with movement radicalization/institutionalization, movement actions have an important effect on its industry counterpart. Fourth, during times when economic consolidation intersects with movement exhaustion, the economic counterpart may develop in direct contradiction to movement goals.

Re-Thinking of Community Based Pre-Disaster Activities; The Problem of Social Divisions in the Case of Japan

As the lessons learned about local initiative of disaster preparedness, this paper will be re-thinking the role of local community mainly focusing on the case of Japan recent two decades and especially based on the original research findings about neighborhood association “chonai-kaí” and “making secure-and-safe community activity” after the Great Kobe Earthquake of 1995. The questions are 1) why and how previous disasters and terrorism have changed local communities’ disaster preparedness and risk perception nationwide, 2) how the local office promoted risk mitigation at the level of local community and 3) whether they worked out or not during the tsunami disaster efficiently.

We want to illustrate what Japanese teachers or parents suffer from and what is the problem of social divisions in the case of unequal gender/ethnic relationships in communities and reflected in the local pre-disaster preparedness.

The discussion is 1) how the disaster studies take up the problem of social division in the theme of local community at global level and 2) how the relationships of the nations and local citizens in the disaster planning should be.

The Role of Japanese Public Health Nurses’ Activities As Post-Disaster Assistance

This paper will examine about the construction of disaster resilient local community based on multiple social networks through the cases of public health nurse activity in the tsunami devastated area.

The questions of this paper are 1) why and how the professional ability of public health nurse are efficient at the post-disaster time and 2) how it is different from volunteer activities such as non-specialized NPOs or neighborhood disaster prevent associations at the community base.

This paper is based mainly on the findings of my own interview with public health nurses of Ohtsuchi-town which located in south of Iwate prefecture and a detailed survey on the public health reports about the disaster assistance. The findings are that 1) their activities are focusing on informal care and long-term support for community re-construction as well as official nursing services in the shelter right after the disaster, 2) their professional skills were especially effective in case they conducted their research about the health status for all surviving citizens in the area by using nationwide public health nurse human-resource network. And 3) they can support efficiently the destroyed local public office because they have been long working there and knowing in detail about clients and their community. It is important significantly different from other non-professionalized volunteers that 4) they have professional skills and a long year experiences of local community based caring and they have a variety of wide networks all over Japan.

I will discuss about collaboration of public health services with other local institutions, NPOs, volunteers and organizations for disaster vulnerable people such as elderly women. Japanese public health nurse activities is one of the best examples of post-disaster assistance system which has been uniquely rooted in local communities culturally and historically.

ITO, KENICHI* (Gunma University, itoken@si.gunma-u.ac.jp)

What the Ubiquitous Network Society Brings in Japan: Influences of the Mobile Internet Devices on Teenagers

Advanced technologies sometimes corrode social institutions. “Act on Development of an Environment that Provides Safe and Secure Internet Use for Young People” is a Japanese law which binds every parent to set up mobile web filtering on the mobile phone of her/his child to block “harmful” information in cyberspace. However, recent prevalence of smart phones and hotspots in Japan is spoiling this protection.

In this paper we want to describe current trends of the Internet use among Japanese schoolchildren based on several surveys we exercised in 2010 – 2013 in Gunma prefecture. The results show that many teenagers use their mobile Internet devices in a quite unguarded manner. For example, 20% of high school girls answered our questionnaire that they had met someone they had come to know through the Internet.

We are convinced that, basically, teenagers are exposed to three types of different risks. The first risk is caused by the fact that they are connected directly with the outer world, where evil adults (or non-adults) are waiting for their victims. This risk contains cyber-crimes such as enticement, deception or false billing. Another risk comes from the situation in which the teenagers are connected online with themselves. Cyber-bullying, or cyber-troubles are getting serious because they happen where neither teachers nor their parents can observe. The last risk comes from the recent convenient condition of the ubiquitous network. Schoolchildren are exposed to the risk of addiction to the Internet activities, such as online games, blogs, SNSs, live-chatting or online-shopping.

We want to illustrate what Japanese teachers or parents suffer from and what we should do in order to protect schoolchildren. We don’t think we can prevent teenagers from connecting with the web, therefore, at last we have to teach them how to adapt themselves to the coming digital age.

In conclusion, this paper forecasts the future of post rapid expansion of second-division diploma was not enough to have a stable job in the metropolises, but was graduates. People began to realize that only having a higher secondary education and caused a reduction in its speed. Firstly, a privatization of educational statistics by regions, the author found that the number of enrollments in high school now is stagnating, and is even decreasing in some poor rural areas. However, there are data which are contrary to their theories. If we focus on family relationship, since about 2000 we see tendencies that people regard family relationship as more important than before. First, people try to stop postponing formation of the family, which is not successful though. Second, they try to keep the family relationship; they support the idea that one should keep the family relationship, even if one becomes to dislike his or her partner, which are contrary to Giddens's theory. Third, more people tend to support the normal family: registered marriage and the family consisting of a husband, a wife and their children. While Western society are experiencing the disintegration of families in the public sphere, Japanese society is experiencing the re-institutionalization of family on people's consciousness.

In conclusion, although the theory of reflexive modernization is a useful tool to research Japanese society, we should re-theorize it from our differences.

This paper examines an abrupt expansion and stagnation of higher secondary education in Vietnam during the two decades since the beginning of 1990s. In 1986, Vietnam introduced the Doi Moi policy to shift from a centralized socialist economy to a market-based one. Influenced by this drastic transition of economy, people's aspirations for upward mobilization through achievement of a higher academic level increased significantly. The school enrollment rate of high school increased from 15% in 1990 to 55% in 2010. However, the trend of the upward mobility movement has not continued for such a long time as in other recently industrialization countries in East Asia. By analyzing educational statistics by regions, the author found that the number of enrollments in high school now is stagnating, and is even decreasing in some poor rural areas. This paper focuses on two causes that restricted the rapid expansion of higher secondary education and caused a reduction in its speed. Firstly, a privatization policy of secondary education introduced a number of private high schools with weak management bases. They provided temporary bases for people's aspiration to go to high schools, but could not be continued due to lack of strong management strategies. Secondly, the development of the labor market could not keep up with the rapid increase of the newly produced labor force, high school graduates. People began to realize that only having a higher secondary education diploma was not enough to have a stable job in the metropolises, but was also too much education to work as part of the manual labor force in factories. In conclusion, this paper forecasts the future of post rapid expansion of secondary education in the first two decade of the transition economy.

This paper will focus on the development of "personal services (services à la personne)" policy by the French State and its impacts on the working conditions of migrant domestic/care workers. Launched by the "Borloo Plan" in 2005, the "personal services" policy aims at creating new jobs in the household economy sector, largely dominated by informal employment practices. Given that many of the undocumented migrants domestic and care workers provide undeclared work and thereby constitute a large part of this underground economy, it would be of interest to see the consequences of this policy on their status. Discussions will be based on a study of regularization campaign for undocumented migrant domestic workers conducted in the Parisian region, with a special focus on Filipino workers.

This paper aims to describe the experiences of difficulties faced by the withdrawal of youth from society known as hikikomori people in Japan. This paper is based on fieldwork data and narratives of hikikomori people in self-support group in Kobe. This self-support group organizes peer supporters with their experiences, and provides support to hikikomori people as the person concerned (Tojisha). This paper analyzes their narratives from the approach of life-history analysis. In Japan, hikikomori phenomenon has been problematized since the 1990s. According to research conducted by the Cabinet Office in 2010, the population of hikikomori (age range 15-39), is estimated 696 thousand (comprising 1.79% of the total population of Japan). In this survey, hikikomori is defined as “people who predominantly stay at home for more than six months, other than for household work, child-care, schizophrenia or physical illness.” Therefore, hikikomori has been referred to as problems of psychology and requires psychiatric intervention. Moreover, hikikomori has been also identified as problems related to Japanese education and employment systems. However, experiences of difficulties faced by hikikomori people are more complex. In fact, on their narratives, they address the various issues which they face in their daily lives. When talking experiences of hikikomori, they talk about various categories of human relations. In particular, their narratives on difficulties are often associated with intimate relationships, gender, sexuality and the other. For example, a hikikomori person said “I am troubled about how to interact with other people familiarly.” Thus, this paper focuses on the intimacy of human relationships within their everyday-life experiences. Through this analysis, I argue that the experiences of difficulties faced by hikikomori people not only reflect instability of employment of youth but also related to the anxiety and uncertainty concerning their intimate relationships.
come and Living Conditions (EU-SILC), which contains a very good measure of income and several indicators on subjective well-being (overall life satisfaction, meaning of life, positive and negative affects). Multilevel regression is employed as a method, in order to study the impact of country level variables, especially related to income distribution, and the differences between European societies. The hypothesis is that inequality may be the missing link between GDP and subjective well-being.

Tolerance’ Frame As a Hindrance to Effective Public/Authorities Feedback in Belarus

The report is going to consider ‘tolerance’ as a misconception and an ideological frame. A critical assessment will be done of tolerance on the part of Belarusian people. It is going to be shown that a) tolerance as an invariably beneficent trait of the Belarusian people is quite mistaken, b) that the ‘tolerance’ frame interferes with democratic governance principles as accepted and practiced worldwide, c) that responses to public dissatisfaction (part and parcel of normal governance systems) in Belarus are complicated due to persistence of the ‘tolerance’ frame, and d) that for sustainable democratic outcomes in Belarus a regular public/authority feedback should be restored by getting rid of ‘tolerance’ as part of the ideological apparatus.

The idea of this paper concerns ‘tolerance’ as it enters democratic governance schemes and might be leading to their malfunction. The word ‘tolerance’ is widely used in liberal democracies and is ascribed a positive meaning. However, it appears that tolerance is not necessarily a virtue. The word tolerance has negative connotations as it acknowledges a problem. The danger with the ideological frame ‘tolerance’ is that it might enter democratic governance models where it can effectively block public responses to dissatisfaction. This way, the system is incapable of conveying public dissatisfaction, and the stimulus is removed for the authorities to improve their work. This might be evident in Belarus, where people have little opportunity to convey their dissatisfaction, given that they are considered as well as consider themselves ‘tolerant’. In this case, their tolerance, being mere holding on, is a potential volcano.

Spatial and Temporal Structures of Inequality in the Super-Urbanized World. Flow-Structures of Glam-Capitalism and New Configurations of Inequality

The economy and society in networked enclaves of globalization – super-urbanized areas like Los Angeles, New York, Tokyo, Hong Kong, Moscow, London, Buenos Aires etc., are considered as glam-capitalism. Preconditions for new form of capitalism have been generated by virtualization of social structures. By the 2000s intensive commoditization of images has leaded to overbranding and triviality of the virtualization strategy that provokes shift of competitive advantages to hyper-virtuality of glamour. Being since the 1930s specific life style or aesthetic form, glamour has become now rationality of newest version of capitalism. Glam-capitalism raises when producers at the hyper-competitive market place must glamour consumers and when goods / services must be aggressively beautiful to attract targeted groups.

The amount of funds received by the university from external sources is among the indicators that are taken into account during the competition.

A detailed analysis of the problems that arise after the reforms, shows the positive and negative effects of each reform on the research activities of universities. The positive results of the reform are: the expansion of research in the universities, the emergence of new laboratories and scientific equipment update, inviting well-known scientists to carry out joint research projects. But still the main source of funding for research in universities is the state budget. There are significant restrictions on the receipt of funds for research from other sources. Limited income of the population in Russia does not allow to raise tuition fees. The economic crisis and the reluctance of the innovative entrepreneurs restrict the flow of funds from the business sector. There is also a contradiction between the development of innovation activity and basic research.

RC23-406.2

IVANOVA, ELENA* (Sociological Institute of the Russian Academy Sciences, eaivanova@spbrc.nw.ru)

Reforms in Higher Education in Russia: The Transition to a Market Model

The pressure on universities to increase external sources of funding research became the global trend. This trend is consistent with the basic principle of a modern market economy - the demand of increasing the efficiency of all actors and to reduce government deficits. In the last 20 years Russian higher education took several reforms. After 1992 many technical institutes have expanded the number of faculties and have become state universities. They were allowed to introduce tuition fees. In 2003 the special foundations, financing the first stage of innovations, were founded, including national and regional venture capital funds. The innovation activity of the universities was stimulated. In 2009 the government introduced status “research university” and began to support research universities with special mega-grants. To receive this status universities prepared for their research development. The amount of funds received by the university from external sources is among the indicators which are taken into account during the competition.

The purpose of the study: a comparative study of the correlation between the level of social anxiety, and some of the economic characteristics of the countries.

Indicators: the level of anxiety (Q83-Q84 – EVS), the level of happiness (Q3 – EVS), the level of social activity (Q5Aa–N – EVS), human development index and human development rates.

High growth rates of human development level positively correlate with increased level of anxiety (0, 76) and negatively correlate with the level of happiness (-0, 51) and the level of social activity (-0, 57).

IVANOVA, TETYANA* (Sumy State University, social_tanya@mail.ru)

Anxiety and Social Change

The Next Transformation: From Glam-Capitalism to Alter-Capitalism

Globalization has resulted not in the world society but rather in networked enclaves of globalization: New York, Tokyo, Hong Kong, Moscow, London etc. People in such enclaves experience globalization through intensive flows of consumer goods, technologies, migrations, money, media-generated images (Appadurai). There capitalism has been transformed into glam-capitalism. Preconditions for glam-capitalism were created by virtualization of social structures. Hyper-reality of simulations producing copies without original (Baudrillard) is adequate model for networked enclaves and network as well as for politics of images and media. By the 2000s intensive commoditization of images has leaded to overbranding and triviality of the virtualization strategy that provokes shift of competitive advantages to hyper-virtuality of glamour. Being specific life style or aesthetic form, glamour becomes now newest rationality of capitalism. Glam-capitalism raises when producers at the hyper-competitive market place must glamour consumers and when goods must be aggressively beautiful to attract targeted groups.

Value creation process now is related more to trends, than to brands, not only in fashion industry and show business but also in high-tech and financial industries.

Alternative movements like ‘copy left’, ‘open source’, ‘creative commons’, and ‘pirates’ violating ‘intellectual’ property rights challenge regime of glam-capitalism and represent the authenticity revolt against hyper-virtuality of glamour not only in economy but also in politics and culture.

Alter-social movements reinforce functionality and competition against image producers at the hyper-competitive market place as well as for politics of images and media. Alter-social movements is initially oppression. But now glam-capitalism is absorbing cultural and social protest as corporate management adopts protesters’ tactics. New management approach can be seen in practices of ‘stretching’ brands down, making ‘open source’ and ‘free access’ corporate business models, commercializing torrent and ‘pirates’ violating ‘intellectual’ property rights challenge regime of glam-capitalism and alter-social movements give birth to alter-capitalism as a ‘post-Baudrillard’ regime: capitalization on flow of originals without copies.
Low growth human development index are accompanied by reduced anxiety (-0.88), high level of social activity (0.81) and feeling of happiness (0.71).

Negative emotions can be an important regulator of social activity. It is necessary to distinguish between the qualities of negative emotions. For example, the decrease in activity occurs in depression. Anxiety is accompanied by disappearing of emotions, interest loss, and energy reduction.

Anxiety stimulates social activity, makes people more susceptible towards, first, to social innovation, and secondly, to social dysfunction. High innovative activity leads to a more rapid pace of economic and social development of the country.

IVORY, TRISTAN* (Stanford University, tvory@stanford.edu)

Immigration Policy, Gender, Identity and Their Implications For Sub-Saharan Africans Living In Japan

Japan is a relatively new immigrant destination among advanced post-industrial nations. Despite increased immigration since the 1980s, Japanese immigration policy provides relatively few avenues to citizenship or permanent residence and even fewer accommodations for family reunification. Furthermore, Japan has experienced a prolonged internal debate concerning the effects of immigration on national identity and belonging. For the majority of migrants within Japan, the only way to regularize their status and legally remain in the host society is to marry a native-born Japanese citizen. Sub-Saharan Africans represent a novel migrant group to study in Japan because they are racially, ethnically, and culturally distinct from the majority-group (a “visible minority”) and their status as Africans is often denigrated within Japanese society. I use in-depth interviews and participant observations from a 12-month period in the Greater Tokyo metropolitan area to interrogate how Sub-Saharan male migrants negotiate their status within Japanese society. The issues of greatest interest arising from the research are: the gendered nature of citizenship in Japan, strategies for asserting masculinity in perceiving promotions, prioritizing in career selection, and negotiating cultural and gender differences in maintaining the family structure. I argue that marriage to a Japanese national is not only the primary mode for regularizing a migrant's legal status, but the most essential avenue for providing invaluable access to social capital and social networks.

RC06-120.2

IVORY, TRISTAN* (Stanford University, tvory@stanford.edu)

Marriage As a Social Resource: Distinctions Among Immigrants In Japan

Classic studies on immigration to traditional receiving destinations describe intermarriage with native-born populations as one of the final steps towards group assimilation (Gordon 1964; Bogardus 1968; Barth 1969). Although aspects of this argument have been complicated (Alba and Golden 1986; Song 2009) or revised (Kalmin 1993; Rosenfeld 2001), the basic premise has remained intact (Qian and Lichter 2000; Cherlin 2004; Waters and Jiménez 2005). Research on new receiving destinations, however, has been much less conclusive about the nature and sequence of native-born/immigrant intermarriage within the process of group assimilation (Kalmin 1998). Using interview and observational data gathered from the Sub-Saharan African population residing in the Greater Tokyo Metropolitan Region between July 2011 and August 2012, I show that marriage is substantially different across the two distinct classes of migrants. For migrants incorporated as low-skilled or non-credentialed laborers, marriage to native-born individuals is the first step towards assimilation because it is the fastest, most readily available avenue for obtaining legal long-term residence in Japan. For migrants incorporated as high-skilled or professional laborers, stability of legal status and comparatively broad access to human capital and social networks results in a less instrumental mate-selection process and increases the likelihood of marriage to non-native-born individuals. The segmented nature of immigrant/native-born intermarriage in Japan highlights the importance context- and country-specific factors play in understanding intermarriage and the process of group assimilation.

Who Takes the Use of Physical Punishment?

In the end of December 2012, a male senior high school student killed himself after he suffered from frequent use of physical punishment by an adviser teacher of his basketball team. Since then, a large number of serious cases caused by massive wartime controlling have been reported in Japan. Before that incident, although the Fundamental Law of School Education prohibits physical punishment, public opinion generally tended to tolerate the use of physical punishment by parents in Japan. Many people think that hitting a child as a way of parenting is unavoidable in some cases. According to JGSS-2008 data, more than 60% of respondents approve the use of physical punishment by parents. Physical punishment by teachers was also more or less permitted in JGSS-2000/2001. It is now necessary for us to understand social and cultural backgrounds of tolerating physical punishment in Japanese society. This paper explores the factors of approving the use of physical punishment among different age groups, fathers and mothers, and children between 10 and 17 years of age. The study is based on the interviews of JGSS-2008 data, which show that gender and the experience of being a subject of violence in childhood are strongly related to the attitude toward approving physical punishment. People who suffered serious violence in childhood are likely to support the use of physical punishment by parents. In addition, women whose father was perceived to ignore her in childhood are likely to support the physical punishment. The results imply that physical punishment possesses ritualistic elements among Japanese people by symbolizing intimate relationships. It is also suggested that new types of ritualistic behavior in intimate relationships should be created in order to prevent serious problems by physical punishment.

Balinese Reactions to UNWTO’s Global Code of Ethics for Tourism: A Case Study of Balinese NGO’s Initiative

This paper examines an emerging tourism-related movement in Bali, initiated by the local NGO to reform long established mass-tourism. While Bali is well-known as Indonesia’s most prestigious tourism destination today, Bali’s economic prosperity has been seen as resulting from the development of the tourism industry since the 1970s. However, especially after the 2002 terrorist attack, various socio-cultural, economic and environmental changes caused by modernization have come to be recognized as serious threats not only for the social stability but also for the tourism development among the Balinese. This is partly but significantly because Bali has been relying on international tourism. In other words, tourists’ fluid attitudes on culture and the environment seriously concern tourism practitioners. Consequently, although there is no unified idea and approach, introducing sustainable tourism has come to attract considerable attention especially among Balinese intellectuals, policy makers and NGOs.

A local NGO, Wisnu foundation, has launched a village tourism project called ‘Bali DWET’ in 2010. The project has two purposes: to promote alternative forms of tourism and to preserve the Balinese cultural heritage. In order to publicly demonstrate the necessity of reforming Balinese tourism, Wisnu foundation came up with ethical standards based on the UNWTO’s Global Code of Ethics for Tourism (GECT) supported by urban intellectuals.

This paper firstly illustrates how Wisnu foundation and its collaborators identified the issues of tourism in Bali and promoted its ethical dimension by ‘rearranging’ the concept of tourism. The outcome of the field research reveals that although there is an apparent divergence between active villagers and urban intellectuals, NGOs stand in terms of their perspectives on tourism, preserving culture and means of livelihood, the usage of GECT is playing a certain role in uniting the participants of the project.
The Apple Does NOT Fall FAR from the Tree: Offspring of Interracial Marriages in Brazil

Starting from colonial times, Brazil has a long history of racial miscenegeration. How do families structure themselves with respect to a concept of racial hierarchy? Several censuses and surveys from the Brazilian Central Statistical Office (IBGE) incorporates some ethnic enumeration with information on race/skin color of the respondent, though mostly self-reported. Alternatives are: “White”, “Black”, “Asian”, “Mixed race” and “Native Brazilian”. Though it is possible that some subjectivity in assigning “Black” to nuclear plants. It is also found that the nuclear disaster has changed not only people’s attitudes but also people’s behavior. People have come to try to save electricity in addition to turning off electrical equipments frequently. It has led to the 5.1% reduction of electrical demands over the previous year in 2011, and 1.0% more in 2012. The level of commitment to energy saving is found to be correlated with opinion on nuclear issues: 80% of the proponents of nuclear reactor decommissioning have tried to reduce electrical consumption. The reduction of electrical demands has been people’s silent movement, that is, their manifestation towards the nuclear energy policy.

Reconsidering the Traditional Postpartum Practices of Laos from Women’s Experience

The traditional postpartum practice that keeps mothers body warm for a certain period after childbirth is still practiced throughout the Southeast Asia and has been performed in Laos usually as well. As the biomedicine penetrated into Laos, such traditional practice has been often considered as a “bad custom” which injures women’s health. However, it must be said that this is partial and insufficient recognition which comes from overlooking the experiences of women who have actually practiced it. This presentation attempts to describe the postpartum practice called “yu fai” in Laos through the viewpoints of Lao women. These perspectives were suggested from interview survey which was conducted to 25 Lao women who have given birth, and it shows the following points. Yu fai is a process of caring a postpartum vulnerable body to make it recover to be able to do daily activities through performing a set of practices such as; lying by the fire, following food restriction, taking hot bathes and drinking hot drinks. Interestingly enough, while their practices are generally oriented by a customary framework as a whole, the remarkable differences appeared in each individual way and the time period of yu fai. Through the experiences of monitoring and caring their bodies cautiously during a period of yu fai, women acquire individual knowledge about their own body’s characteristics, and they can reconstitute their body perceptions and ways and period of yu fai based on their realization. Such differences are reproduced through the women’s knowledge based on experiences of practicing yu fai by themselves. From examining above findings, this presentation tries to approach the aspect of yu fai as dynamic practice to care postpartum body based on women’s individual experiences and knowledge.

Zero SUM GAME – Evolution of Violent Deaths in Brazil

Though one can perceive an important drop in mortality rates by external causes in the last years of the 20th century and other for homicide rates in recent years for several states in Brazil, this decrease is counterbalanced by sharp increases in other causes. In spite of (or because of) these contradictory trends, resulting global rates for the country as a whole remained basically stable since 1995 (external causes) or 2004 (homicides). The analysis covers mortality data from slightly over three decades, from 1979 to 2011, further disaggregating the information by sex and regions. Brazil’s 27 states are analytically divided in five homogeneous Great Regions by the Central Statistical Office, IBGE. For the sake of comparison, besides the crude death rate for the population as a whole, similar statistic is computed for the young adult population – those between 15 and 24 years of age, the group more affected by external causes in general and homicides in particular. In order to understand the dynamics of the process, crude rates are broken down by broad groups of death causes (natural, homicide and other external causes). Since the Southeast was the region which presented the sharpest drop, the analysis is replicated for all four states in the region to further enhance the comprehension of the process at a lower level. A seesaw effect is also perceived here with São Paulo and Rio de Janeiro presenting a strong downward trend from 2003 onwards, counterbalanced by Minas Gerais’ and Espírito Santo’s upward trend. Results confirm this exceptionality of the Southeast for external causes: it is the only Region that exhibit same level death rates at the extremes of the interval under study, while for Brazilian males rates increase 41% and the Northeast’s almost threefold. Discrepancies are even larger for young adult males.

In previous work I have looked at the claims of indigenous groups and responses at the local, global, and international levels (Iyall Smith 2011). These cases focused on cases in the global north, including Greenland and the Makah tribe in the US. In this paper I will look particularly at cases in the global south, which may present greater opportunities for success for indigenous peoples than discovered in the global north. Again I will examine indigenous rights within global organizations (focusing on issues emerging from the global south), regional organizations (focusing on regional organizations within the global south including the Inter-American System and the African Commission), and local contexts (cases to be identified, including the Miskito one million acres land claim in Honduras). While the global south is very much a part of the neoliberal political and economic system, some areas have managed to create progressive policies that elevate human rights. The extent to which these policies are enforced is also important to consider. Previous examinations of the UNDRIP and the implications for the global south identify strong potentials for the enforcement of rights (Hall and Fenelon 2009 and Rodríguez-Pinero 2011) and also points of conflict (Murray 2011). With this paper I hope to analyze additional cases to shine more light on indigenous peoples' potential for living human rights within the global south.

Catholic Faith-Based Filipino Organizations in Japan

This study looks into the Catholic faith-based groups of Filipino mothers in Japan. This paper argues that organizing or mobilizing such groups enabled the Filipino to cope with their situation as immigrant housewives. It explores how Filipino Catholic communities in Japan organize themselves collectively and how their activities are associated with identity affirmations both in religious and ethnic standpoints at their intercultural homes and the community in which they belong. Discussion of this paper is partly based on an author's three year stay in Japan as a doctoral student and one of the founding members of a Catholic Church-based Filipino community known as the Kaagayap Oita Filipino Associations or KOFA. A reflexive account, this paper narrates the experiences of the organization as it tries to cultivate a “space” in a Japanese Catholic Church. The views of the author cannot be ignored in this writing as he was involved in the process of founding such a group.

Who Refuses to Answer the Question about the Income and How Can We Reduce the Item Non-Response Bias By Using the Propensity Score Adjustment?

The main goal of this presentation is to find out whether the refusal to question of income are random or not as well as how can we eliminate the effect of item non-response in point estimation.

Firstly, using the Hungarian and Polish data set of ESS 2008, it will be demonstrated that the likelihood to refuse is not random, but rather proportional to the declared level of income. In this part of presentation I will introduce the basic principles of propensity score adjustment (PSA) as a weighting scheme (see Matsu et al. 2011). The procedure is not based on statistical inference, but will demonstrate the usefulness of a credit-scoring model for such purposes. In fact it is also based on logistic regression, but it helps to choose the relevant set of predictors as well as to illustrate and understand the nature of income refusals.

Secondly, based on the data from the “Polish General Social Survey”, an assessment will be provided of whether PSW or PSA leads to lower total survey error (TSE). By removing the known values of income I will consider three patterns of missingness: (a) the random one, (b) the systematic one without 10% of the lowest income values and (c) the systematic one without 10% of the highest values. Findings are four-fold: (1) PSA is much more effective when missingness mechanism is systematic, however PSW is slightly more effective when non-response is random; (2) PSA increases variance a little bit more than PSW, but (3) PSA decreases bias much more efficiently than PSW. Taking (2) and (3) together, it turns out that (4) PSA estimator seems to be better on the ground that it implies much smaller TSE.

JABLONSKA, BARBARA* (Jagiellonian University, b.jablonska@uj.edu.pl)

Classical Sociologists on Music and Society

Music is a social phenomenon and a product of social life. There is no culture in which there would be no music. Throughout history, people have created and reproduced music, at the same time making it an important aspect of artistic, aesthetic and social life. Sociological reflection on music and society is as old as sociology as a science, and has much to offer contemporary sociologists. More or less systematic assumptions about the musical life can be found in the reflection of such great classics of sociology, as Herbert Spencer, Georg Simmel, Max Weber, Alfred Schutz, Pitirim Sorokin, Norbert Elias, etc.

Despite the rich theoretical base and a long tradition of social thought on musical life, the sociology of music (as a part of the sociology of arts) is probably one of the most theoretically and methodologically neglected social science sub-discipline. The problem of its theoretical backwardness was stressed out by Alphon Silbermann (1962) many years ago. Its interdisciplinary character causes many theoretical problems, such as incoherence and lack of consistent conceptual grid. There is also poor debate on the role and significance of classical sociology on music and society in the contemporary sociology.

The main goal of the paper is to consider the theoretical tradition of social thought on music and society in the classical sociology, especially in such aspects as: musical practices of societies, rationalization of music (Weber), musical identity of groups (Simmel), musical roles (Elias) or musical interactions (Schutz). The leitmotiv of the presentation is to show how theoretical assumptions of classical sociologists on music and society can be useful for contemporary sociology of music.

New Donors of Development Assistance: Theorizing the Future of the OECD Aid Apparatus

This paper explores the new role that non-OECD nations such as Brazil, India, Russia, South Africa, South Korea and, especially, China are playing in providing international development aid. While global aid flows from traditional OECD nations remain significant to development of global politics, and what William Robinson calls the “Transnational State” (TNS) apparatus, these new aid donors are challenging the Western nations’ vision of what development means and what kind of global economy is being built. The consequences of these increasing aid flows for the global economy and for the development of aid recipient nations at this point are unclear. But it is crucial for scholars to pay close attention to the rise in official development assistance (ODA) from non-OECD nations as a key indicator of global political and economic integration. Often considered to be of secondary importance to many globalization scholars who prefer indicators such as foreign direct investment (FDI) and international trade, ODA is perhaps the most important measure of “economic politics” (to use Bourdieu’s definition of globalization) for sociologists of development to observe. Bringing together insights from world systems theory, world polity theory, Robinson’s Transnational Social Perspective, and Saskia Sassen’s work on deterritoriality and denationalization, this paper will offer some theoretical analysis of the role that new donors are likely to play within the global political economy in the coming decades. Particular attention is paid to whether the so-called “South-South” aid from these new donors is really “South-South”, whether we can expect to see a counterhegemonic shift in aid practice, what kind of future conflicts between donors are on the horizon, what this might mean for world state formation, and finally, whether any of these amounts to the beginning of the end for the nearly 60-year old Western aid apparatus.

DOERSCHLER, PETER* (Bloomsburg University, pdoersch@bloomu.edu)

Multiculturalism and Minority Well-Being in Fourteen European States

Despite pronouncements of its death by leaders of key European states in 2010, multiculturalism “carries on” (to use the Guardian’s term 9/19/12) in public policies at the national and local level in these same states. Kymlicka (2012: 6) argues that “[m]ulticulturalism is part of a larger human-rights revolution involving ethnic and racial diversity.” Using the European Social Survey (2002, 2008, 2010) for fourteen European states with scores on the Banting/Kymlicka Multiculturalism Policy Index (MPI), we operationalize well-being in terms of the Council of Europe’s (2003) specification of the eight key areas of life (cf. Jackson and Doerschler, 2012). These are employment, housing, health care, nutrition, education, information, culture, and basic public functions (which include equality, anti-discrimination and self-organization) (Jackson and Doerschler, 2012: 1). Greater well-being of minority populations is seen to result from reductions in disparities and polarizations between them and the majority population (European Parliament, 2007). Scores for the eight dimensions of multicultural policy development (Banting/Kymlicka, 2012) allow us to consider the effects that specific state policies have on targeted areas of minority well-being. We furthermore examine the possibility that the situation of minorities also improves when states turn toward multiculturalism because these policies foster economic growth and free up societal resources from security functions. Do minority group members feel safer in states that have taken a greater turn toward multiculturalism? Are minorities better educated and more likely to be employed in these states? Do minorities report greater trust in the political system where multiculturalism has taken hold? What happens to majority group members’ levels of education, employment and political trust as states implement multicultural policies? These are the questions on which this paper centers. With such information, political leaders can defend multicultural policies from criticism or amend them in directions that will better reduce disparities and divisiveness.

DOERSCHLER, PETER (Bloomsburg University)
Multiple Discrimination, Intersectionality and Vulnerability

In its 2012 report, Amnesty International underscores the consequences of discrimination against Muslims in Europe. “Multiple discrimination” is a special focus of the European Union Agency for Fundamental Rights. Discussion of the need for a “Horizontal Directive” (EU-MIDIS, 2010: 5) and the “Genderance” project of the 7th Framework Programme both highlight multiple discrimination and the “intersectionality” (Genderace, 2010: 272) of axes of discrimination. The GenderRace report (2010: 32) uses the term intersectionality “to define a situation … in which several grounds of discrimination interact concurrently.” This report follows the European Commission’s 2007 study, in which the problem of multiple discrimination and the significance of intersectionality on the impact of discrimination are investigated. Using the European Social Survey (2002, 2008, 2010) for fourteen European states along with scores on the Banting/Kymlicka (2012) Multicultural Policy Index and its eight dimensions (available for 1980, 2000, 2010), we examine over time both the reported discrimination faced by Muslims on the basis of their religion, race, nationality, ethnicity and gender and the impact of specific areas of state policy on the trajectory of discrimination. We give particular attention to consideration of the discrimination-reducing impact of state policy in eight areas: (1) affirmation of multiculturalism by the constitution, legislature or parliament; (2) school curriculum; (3) media—sensitivity and representation; (4) dress-code exemptions; (5) dual citizenship allowed; (6) funding of cultural activities of ethnic group organizations; (7) bilingual education; (8) affirmative action (Banting and Kymlicka, 2012: 11). On the basis of the results, we assess the policy changes warranted by the data to enable European Muslims to fully utilize their talents and abilities to the benefit of Europe and its member states.

Sport, Symbolic Capital and Monopoly Rents: The Cultural Politics of the New Zealand All Blacks

In their bid to globalise, transnational corporations (TNC’s) utilize a diverse range of strategies and synergies in order to insert into, and locate within, local/national cultures. Amongst their strategies TNC’s invest in a range of powerful and innovative marketing, promotional campaigns and methods to attract consumer attention and to distinguish brands has lead to a compulsive search for new images and themes where culture has become a giant mine (Goldman and Papson, 1996) resulting in a range of political, economic and ethical questions. This paper traces the promotional culture of the New Zealand All Blacks since the sport went professional in 1995. The focus is on David Harvey’s concept of monopoly rent which emerges “because social actors can realize an enhanced income stream over an extended time by virtue of their exclusive control over some directly or indirectly tradable item which is in some crucial respects unique and non-replicable.” (2002: 90). The paper focuses on several specific sponsors (Adidas and AIG), and their advertising campaigns, to illustrate the cultural, political, legal and ethical/moral issues associated with the logic of monopoly rents.

Towards a Practice Theoretic Approach to Understanding Sexuality

In our book ‘Theorising Sexuality’ (2010) we re-worked the interactionist sociological account of everyday sexual behavior drawing on the work of G H Mead (1973) and utilising the notion of sexual scripts (Gagnon and Simon 1973). We do however, accept some of the criticisms of interactionism as overly cognitive and have attempted to overcome this by developing a more embodied understanding of sexuality - using the example of orgasm (Jackson and Scott 2007 and 2010), and developing the ideas of Luhmann and de Certeau in order to enable an understanding of the ways in which sexual interactions are composed. While we have utilized the term sexual practice, and engaged to some extent with the work of Bourdieu we have not, until recently, begun to develop fully a practice theoretic approach to the sociology of sexual conduct. In this paper we will engage with the work of Wrong, Schatzki, Redclift, Warde and Shove in order to set out the ways in which sexual conduct constitutes a practice, and to indicate to what extent this approach, if brought together with interactionist ideas, can support the development of a general sociological theory of sexuality.

JACOBI, PEDRO ROBERTO* (Universidade de Sao Paulo - USP, prjacobi@usp.br)

Environmental Governance and Risks in Brazil

Environmental governance has advanced in Brazil since the Rio Conference. Different stakeholders have had a relevant role in the process that has permeated in a growing scale the process of decision making and formulation of new public policies. The process of environmental governance has brought into scene stakeholders representing the public and private sector and the social movements, mainly the environmental movement.

The incorporation of new social actors with differentiated demands on the management of natural resources has become more frequent as to issues on water, solid waste, biodiversity and climate. The engagement of these different actors has brought to the environmental arena, a logic of dispute and negotiation on aspects linked to natural resources, sustainability in cities, impact of degradations of water sources, loss of biodiversity, conflicts with indigenous population on land, impact of hydroelectricity projects and more recently on the impacts of climate variability and its multidimensional aspects.

The paper will approach how national policies are taking place adequately or insufficiently taking into consideration the complexity of the process of environmental governance, and what this implies in terms of enlargement of the role and engagement of stakeholders in the process of decision making. The analysis will focus on the strengthening of deliberative spaces, multi-stakeholder networks that promote awareness and mobilization to face uncertainties and potential risks in cities and biodiverse spaces and the pressure to reduce socio-environmental and knowledge based asymmetries.

Several civil society organizations have had in the last years important role facing environmental governance and risks in Brazil, and these initiatives promoted advancements towards democratizing access to information, besides pressuring for more transparent and participative decision making processes on environmental policies and the need to take into consideration diversities, complexities of transformations taking place in a context of global climatic uncertainties.

Developing Care-Technologies While Balancing Utopian/Dystopian Worldviews: Dimensions of Attention

Collaborating since 2005 in different interdisciplinary pre-competitive care technology research projects in Flanders (Belgium), we learned about crucial dimensions to balance the tendency of supporting utopian/dystopian views on the impact on wellbeing and quality of care due to new care technologies. The goal of these subsidized projects is to innovate in a way added value is created for its future users and valorization potential is increased. In the collaborative companies in general the team is rather utopian on the capabilities of the information and communication technology.

Involving potential users from ideation phase towards valuation of prototypes is a primary way to bring balance in looking at both positive and negative consequences of the future care technology. Due to the involvement of social scientists, over the years we moved from a pathology-centered problem definition, over an age-focused approach towards a care dependent approach. Concurrently, we emphasized the need of a multi-stakeholder approach, grounded in the insights of social Construction of Technology perspective (cf. Bijker, Rip). These premises of human-centered design are not enough to balance the tensions and paradoxes encountered when studying the potential consequences of envisioned care solutions and their impact on care-giving.

Recurrent dimensions of empowerment and disempowerment, that are potential pitfalls, are described in this paper. Two essential themes will be: self-determination of care dependent and his/her caregivers, impact of technology on the caring relationship and quality of service by care organizations, role of present and future infrastructure and learning curve of present and future users, ... We also discuss the ways in which we try to balance tensions and paradoxes in this field, such as use in all phases of innovation binder approach (scenario’s and persona’s, tech cards, ...), and supporting the development of CareLivingLabs. We illustrate these with examples from past and current projects.

Media Metacommentary and the Performance of Expertise

This paper considers the extent to which media metacommentary – or, the critical comparative reflection about media formats – constitutes a new form of expertise. We begin by tracing out the history of critical discourse that seeks to explore the possibilities and limitations of different cultural formats, arguing that this is linked to institutional development of critics and the larger aesthetic discourse about modernity. Next, we consider how mediatization has altered the conditions under which media metacommentary can be mobilized as a performance of expertise, or the display of an expert identity. Ultimately, we argue that the proliferation of new media technologies and the growth of transmedia culture have fundamentally transformed the social organization of expert discourse.

Orphans Other Deadends in the History of Sociology: Symbolic Interactionism and the Mid-20th Century American Compromise

To conceptualize deadends in the history of sociology, we examine how intellectual lineages, networks and institutional histories have been narrated in U.S. sociology. Introductory sociology textbooks are strategic research sites because they are a space where sub-disciplines, academic institutions, curriculum, individual intellectuals, and market dynamics intersect. Examining textbook narratives of the discipline, we ask: What has been narrated as central? What has been omitted and why? On this basis, we identify symbolic interactionism as an orphan – a casualty of the mid-20th century standoffs in the United States between what came to be known as the consensus, conflict, and symbolic interactionism perspectives. The three-fold model of US theory remains a central feature of introductory sociology textbooks today, a fact which explains the isolation of symbolic interactionism from the power centers of disciplinary sociology.

Conflict over Confirmation Teaching in Public School – the Impact of Neoliberal Policies on Local Political Level in Denmark

The neoliberal discourse is part of a larger shift from democratic to neoliberal policies that has been occurring over the past decades; a shift accompanied by both discursive and structural changes in society. If the neoliberal discourse is transforming the core functions of government globally, then this must also be true in the case of the close co-operation between the Danish state and the national church in Denmark. In this paper the cases of conflict over and transformation of the position of confirmation teaching in Denmark is analyzed in order to find out if the changes is a result of neoliberal policies in Denmark or simply a matter of structural changes caused by another rational basis. In Denmark confirmation teaching is part of the public schools timetable according to the Primary Education Act. Municipalities in Denmark have according to the Primary Education Act the right to place the confirmation teaching after school but until recently it was the tradition to place the confirmations teaching with the local vicar in school. Local politicians are now beginning to alter this tradition. The basic argument used is that the changes are necessary due to efficiency and to improve the quality of the teaching. However the changes are seen as a result of pressure from the Ministry of Education and not driven by local needs.

Multi-Sensory Tourist Experiences

Since the end of the twentieth century, there has been an ocular-centric affinity in tourism research, often related to studies of place images and tourists’ visual sensations. But there is more to travel than sightseeing: travel experiences are not just in the eye of the beholder but also in the ears, palate, nose, hands and feet. Tourist experiences are both corporeal and multisensory. Although vision is a dominant mode of consciousness in the modern world and some 90% of our perceptual intake is visual, this may not indicate an overall significance of eyesight. What one might call polysensualism is a manifestation of the increased emphasis on senses other than vision in travel experiences. Based on personal interviews, the paper will exemplify some under-researched non-visual tourist experiences related to novel themes on the research agenda.

L’évolution De La COMPétence En Organisation Des Collections De Documents Numériques: Le Cas De L’entrée Dans L’enseignement Supérieur

La fracture numérique de second degré (Hargittai, 2002) pose le problème des écarts de compétences médiatiques entre les utilisateurs. Dans un contexte où de plus en plus d'informations sont disponibles (Gantz & Reinsel, 2011), où l’accès à ces informations est toujours plus fragmenté entre des contextes différents (Jones & Teevan, 2007), et où la dynamique des objets médias se complexifie, la compétence à organiser ces informations devient fondamentale.

Cette compétence d'organisation correspond à la capacité à imaginer des structures pertinentes et à les implémenter à l'aide d'outils matériels ou logiciels. Dans les usages, cette compétence à organiser s'actualise aussi bien dans des activités de recherche, que de gestion des flux d'informations, ou de stockage (Jones, 2008).

Une série d'entretiens d'étudiants réalisées avant et après leur entrée à l'université fait apparaître que les plus compétents sont ceux les mieux capables de percevoir, d'adapter et de modifier les affinances (Norman, 1990) offertes par leur environnement. Trois catégories d'affinances peuvent être dégagées: sociales, techniques et informationnelles. En situation, la compétence d'organisation consiste donc pour l'utilisateur à prendre parti des affinances et contraintes des outils adoptés afin d'améliorer l'environnement technologique pour le faire correspondre à la structure de l’activité de l’usager, de sorte qu’il soutienne au mieux celle-ci (Kirsch 1995).

Trois hypothèses alternatives sont avancées quant aux facteurs de développement de cette compétence : l'intensité des usages des médias (Schradie, 2011), la variété des contextes sociaux dans lequel les usages se développent (Ito et al., 2009), et finalement, le rôle de stimuleur des relations sociales de l'utilisateur. Nos premières observations semblent indiquer que, plus encore que l'intensité ou la variété des usages, l'entourage des usagers joue un rôle primordial dans le développement de la compétence d'organisation, en ce qu'il crée des opportunités d'échange et de confrontation de pratiques médiatiques.

Marginalization As the Social Context of Risk Perception in Everyday Life

In this paper, by adopting a constructivist perspective, it is tried to address the question how experience of marginalization and a sense of exclusion could affect the ways individuals perceive risks in everyday life. In general, social constructivist approaches to epistemological status of risk emphasize that the perceptions of risk are socially constructed and cultural and political contexts impact on how risk are made sense by people. The methodology in this research is based on qualitative methods and the data has been obtained through in-depth interview with 28 students from the University of Tehran in Iran. In the interviews we asked the students to describe how they make sense risks in their everyday life. Furthermore, they were asked to describe their experience with a sense of exclusion as a consequence of being marginalized in society. According to the findings, the ways the university students perceive risks have been closely intermingled with their experience of marginalization in their everyday life. Although studying in university may potentially result in social inclusion, most of the students have had the experience of marginalization, and therefore, the dimension of social and economic inequality and also ethnic, gender and generational discriminations. This has led to exclusion and so provides a context for perception of risk and uncertainty. Particularly, when they try to build a desirable personal lifestyle, they face various social restrictions, which cause risks and uncertainty in their everyday life. In the other words, the social conditions of being marginalized lead to perceptions of some types of risk specially, those which are related to their lifestyle.

Creativity and Embeddedness

Creativity, understood as an innovative and novel way to solve problems and challenges is combined with a variety of factors influence both the sociological perspective, as well as psychological. One is the factors influencing the level of creativity might be also the quality of social interactions and the conforming influence the possibility of being misunderstood or socially rejected.

The aim of the study would be to create analyze the relationship between the characteristics of the social structure and individual degree of creativity. The study group was analyzed from the perspective of the declared behavior in different social situations, declared level optimal distinctiveness and tendency to take the social risk. The level of creativity was measured by tests of divergent thinking based on the number of different responses to a given problem. Demographic factors were controlled. A study was conducted using a commercial online tool tracking IP numbers of participants based on the answers given by 306 people. Analysis shown that people who tended to be more socially independent and less embedded in the social networks gave more divergent responses to the creativity test during the research. The level of individual creativity, commonly regarded as psychological factor, might be influenced by the social milieu of the person.

RC10-188.1 JAGODZIŃSKI, ROMUALD* (European Trade Union Institute, rjagodzinski@etui.org)

The paper aims at drawing attention to proper transposition of EU directives as a challenge for ensuring effective workers’ rights to information and consultation (I&C). To this end it looks at the example of implementation of the European Works Councils (EWC) directive 94/45/EC and recently transposed 2009/38/EC and recently transposed (European Trade Union Institute, rjagodzinski@etui.org)
societies really distinguish from other societies is the millennia-long Christian tradition. But has this tradition also brought forth unique values? And if so, are they still influential in modern societies?

In the nineties a similar debate started in Asia. Asian values were initially seen as a stronghold against Western value imperialism and against Western democratisation. This was due to an empirical research effort that related to the European findings on value pluralism. Dalton and Nhu-Ngoc (2005) could not identify specific and homogeneous value patterns in the Confucian societies. Rather, family orientations and respect of authorities largely varied in Asian countries. This will not be the end of the debate on Asian values. There are so many visible differences between Asian and Western cultures that the search for specific underlying Asian or Confucian values will continue. Education and work values, as well as economic and social inequalities might be domains in which specific Asian values have emerged. The paper focuses on values which are related to social and economic inequalities and tries to find out of which multi-level analyses of the ISSP Social Inequality Module 2009 whether and to what extent these values are affected by different cultural backgrounds and whether Asian societies in particular differ from societies with a Christian tradition.

Formal and Informal Female Migration: Challenges of Governance in Bangladesh

In the last three decades, Bangladesh has grown to be an important source of migrant labor. Female labor migration, however, has lagged far behind the male migration. Starting with a small number, in recent years the number of Bangladeshi women has grown. Official figures put the proportion of Bangladeshi female labor migrants as 1% of the total number of migrant workers in 2003. In recent years proportion of women as total migrants is estimated at around 14%. Bangladesh female migrant workers go to the Gulf countries, Lebanon, and Singapore to work as domestic workers. Many Bangladeshi women also went to work in the textile industries in Malaysia, Mauritius and Korea. In addition to formal labor migration, an undetermined number of female workers go to neighboring India to work as domestic workers as well as in entertainment industries. The issue of female labor migrants in India has created controversies in Bangladesh especially, in view of the harsh treatment they face as undocumented workers. They also take great risk, including the risk of life in crossing the Bangladesh-India border. The present paper examines how the government of Bangladesh has dealt with the issue of female labor migration and what are the public policies in place to promote safe female migration to the Gulf countries and Lebanon and how concerned authorities of Bangladesh government deal with the informal female migration to India. Using interview methods and analysis of secondary data, this paper will draw attention to the Bangladeshi female migrants in the Gulf Cooperation Council (GCC) countries and Lebanon. Policy issues, especially innovation in migration policies will be examined in this paper.

JAIME-CASTILLO, ANTONIO M.* (Universidad de Málaga, amjaime@uma.es)

Inequality of Opportunities and Preferences for Social Policies

The positive relationship between democracy and equalization of income predicted by the well-known Meltzer-Richard has been highly criticized on both theoretical and empirical grounds. In this paper, I analyze whether inequality of opportunities (rather than outcomes) is connected with preferences for social policies at the individual level. I focus specifically on the sources of current inequalities by decomposing individual outcomes into a fair share, which can be attributed to personal merit and effort, and surplus outcomes, which are the results of structural barriers in the labor markets or depend on inherited factors such as social background. To do that I rely on the methodological approach used by the growing economic literature on reference groups, in which individual income is the product of two components: the average income of the group and an idiosyncratic factor, which is the result of individual attributes. I use data from five waves of the European Social Survey in order to test these hypotheses. Empirical findings prove that occupational status and individual differences with respect to reference groups (especially those caused by inherited disadvantages) have a strong and significant impact on preferences for redistribution. In addition, educational inequality has a negative a significant effect over preferences for redistribution at the aggregate level.

New Religious Capital, Conversion, and Drug Rehabilitation: Evangelical Social Projects in Baja California, Mexico

The aim of this paper is to analyze certain changes in evangelical identities and their religious capital in the religious field at Baja California, following the impact of charismatic movements and the crisis of denominational models during the 1980s, and their relation to the expansion of the so-called “Christ-therapy” in Rehabilitation Centers for drug addicts. From a general perspective, religious capital suffered a series of rearrangements within their referents mainly anchored in doctrines, practices and preconceptions relatively unchanged until last decades of the twentieth century.

Therefore, this work raises the question of whether the expansion of a new evangelical model of openness to society in Pentecostals and Charismatic churches, especially in Northern Mexico, may explain the growth of Evangelical Christians, with new forms to mobilize symbolic capital and social participation. In this sense, many of these churches have found that an increasing demand for rehabilitation of drug users, and the withdrawal of the Mexican State from the health sector, has opened new spaces to apply their social change projects based on individual conversion. To study the above, this paper analyzes some cases of Rehabilitation Centers in Tijuana, and Ensenada, Baja California.

Making People Illegal: What Globalization Means for Law and Migration

In any given week in 2007, newspapers around the world carried reports of “illegal” migration. This did not start in 2007. It is not poised to end any time soon. While many of the accounts are about the United States or the European Union, unauthorized migration is newsworthy in all corners of the globe. Russia has a large and growing extralegal population. China stopped more than 2,500 illegal border crossers in 2009. Thailand and Malaysia have launched a cooperative approach to their shared illegal populations. The Gulf of Aden is a key human smuggling route. South Africa is attempting to grapple with its unauthorized occupants. Illegal migrants come to droves in India, and in lesser tempering this view of citizenship. Considering the limits of law in this regard, it is crucial to unearth the place of law in accounts of globalization, and to understand how and why globalization affects making people illegal.

It is worth examining as to why people and tribes of people are being termed illegal, what is it that does not give them support in the country they seek shelter and why do they leave their native land to find shelter in a foreign land. Here under the paper proposes to study and understand the concept of illegal people, how illegal migration is being aided by the process of globalization and how does it harm the native society and also the ill effects of migration on the migrants.

Technology and Family Leisure: Is It the Way Forward?

Families are one of the fundamental units of society and are the building blocks of social structures and organizations in every culture. A theoretical framework that has been used to describe and understand how families function and interact is the Family Systems Theory (Steinglass 1987; Whitlurch & Constantine 1993). According to the Family Systems Theory, the family is a complex system of individuals interacting with one another. The concepts of family cohesion, family adaptability and family communication are the key to continuation of family systems. Over the last seventy years, researchers have consistently reported positive relationships between family leisure and positive family outcomes when examining recreation and leisure patterns among families (Hawks 1991; Holman & Epperson 1984; Orthank & Mancini 1991).

Enjoying family leisure time can be a way through which cohesion, adaptability and communication is increased within families. The perils of the modern world which includes the fast paced life, both parents working, emergence of nuclear families, pressures of weekend socializing, demands of curriculum on the children have all made a serious dent in family leisure time.

The present paper proposes to examine the role of technology especially communication technology in promoting family leisure time amongst urban educated families.

Multi-Scale Analysis of the Effects of Socio-Spatial Segregation

The variable “space” is increasingly being used by scholars in the social sciences. In this sense, the methods that use spatial analysis are becoming more known.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
by social scientists. One of the most important applications of the use of spatial analysis in sociology, demography and population studies is the socio-spatial segregation. Some countries are studying the spatial concentration of the population with respect to race/color, but in others, such as Brazil, the miscegenation of the population is high, and so it makes no sense to study segregation by this variable. In this case, the income of the person can be the key variable in this process. Spatial analysis techniques, such as isolation indexes, are then used to analyze the spatial segregation according to income, translated by poverty or wealth. However, in each geographical unit (scale) used, the result of the analysis may be different. Therefore, one of the objectives of this paper is to create a multi-scale analysis of the effects of segregation in terms of isolation of poverty and wealth indicators. Our assumption is that when we increase the scale of the segregation analysis, the inequalities also increase. And this is what we attempt to show with this paper, using data from census tracts of 2010 for the city of São Paulo, the most populated in Brazil.

JAKOB, ALBERTO AUGUSTO EICHMAN* (University of Campinas, alberto@repe.unicamp.br)

The Changes in the Form of Japanese Integration in Brazil

The beginning of the 20th century is considered a starting point for more significant flows of international migration in the Brazilian Amazon, with the arrival of different people, especially from European countries as well as Japan, due, among other reasons, to the political instability of the period of war that the world had faced. The arrival of these migrants changed the Brazilian society in several aspects, with regard to the insertion of new cultures, traditions etc. Thus, the objective of this work is to analyze the socio-demographic profile of the Japanese migrants in Brazil by regions, including the Amazon, in terms of their date of arrival in the country, their occupation in rural or urban areas, and also of migrants who left the country and later returned in an attempt to understand possible changes in the aspirations of the younger Japanese generations with respect mainly to occupation, which traditionally has been widely recognized for their contributions in the Brazilian agricultural production. In order to do that, data from the Brazilian Demographic Census of 2010 will be used to create maps of spatial concentrations and to compare the Japanese migrants with more long-standing in Brazil with those who arrived more recently to find out until what extent the younger generations are preferring other occupations and other housing locations instead the traditional ones and with this leaving aside their traditions and modifying their forms of integration in society.

Bugs and Future Usage = Design As Twofold Problem

My ethnographic field is a design laboratory in which young German designers develop wearable textile-electronic interfaces. It can be observed here that the characteristics of the design-work are quite different compared to the work of scientists, as for instance Karin Knorr Cetina or Harry Collins have put it. In short, two types of practices can be found in the field of design: Designers talk about the use and the benefits of their conceptualized design objects systematically in meetings and informally on various other occasions. They ask themselves, what their design object is it good for and who will use it and when. In a less abstract level of their work, the designers are very concerned to create a functioning protoype. They have to arrange every material detail and technical problem of the prototype, as with the interfaces stitching, wiring, programming, de-bugging etc. According to Bruno Latour, objects are an indivisible compound of contextual meanings and materiality. My data shows that the designers work on both sides of this notion of object: They have to design both, an object’s meaning and material function. These two different kinds of goals require two different types of work practices. It shows that these practices interfere heavily with one another, although they are very different in character. Whereas the work on meaning and utility is anticipatory and therefore never concluded, functional and material problems pop up in the present progression of a designer’s work and have to be solved or circumvented to keep the work process going.

For analyzing the creation of new technology, it is crucial to observe the designer’s anticipation of utility over the whole process. They may vary in substance and become less obvious for the ethnographer, but basically the interplay of anticipa-
tion and construction constitutes the outcome of a design process.

BYUN, MIREE (Seoul Institute)

Urban Scenes and Place Identity: The Case of Seoul

The scene perspective can help us understand cities in terms of cultural amenities. Its abstract characteristics can join Asia with the US and Europe so that social scientists, policymakers, and average citizens can coherently interpret some features of world city systems. Scenes can be defined as the specific lifestyle of a place. Thus, a scene is more than a neighborhood or its physical structures. It includes collections of people labeled by race, class, gender, etc. It also includes specific combinations of these groups and activities that join them together. With these characteristics, scenes show the specific cultural tastes of the residents, shop owners, and visitors. They show their own internal logic and dramas that, for instance, are more glamorous rather than fade into anonymity, project warmth and intimacy rather than distance and aloofness, maintain an authentic and real life rather than a phony existence.

Place identity can be formed through interactions between the physical characteristics of specific places and the people using the physical facilities. In this sense, urban scenes are closely related with place identity. Both urban scenes and place identity are considered as contributing to the creative regeneration of a city. In this paper, we present how urban scenes can contribute to developing place identity in Seoul. To do so, we will compare a Seoul scene map with a map of the urbanization of Seoul. This will lead us to incorporate characteristics of people into the facility data of the scene map in the specific place of Seoul. With this analysis, we expect to capture the dynamics of place identity and the influence of scenes on party identity.

JANKOWSKI, BARBARA* (IRSEM France, barbarajanko@yahoo.fr)

Sharing Information at the Operative Level

The information is vital in the conduct of war and the whole field of information warfare focuses on how one can achieve superiority over the enemy. Thus we already know more about how we protect vital information, or how they are obtained than on how information is shared within a specific force. Human and interactional dimensions of war have less been studied whereas “friction” and “fog” act as much between the belligerents as within the armed forces.

My presentation will focus on information sharing, on cooperation around information. Officers are trained in staffs where they learn to plan and conduct operations. How do they train on information sharing? If the control of information is considered a factor of operational superiority, how do they learn to get it? How are they prepared to work in a multinational environment? This is even more important because in the future the national armed forces will have to cooperate in various environments: NATO, EU, ad hoc, multi and bilateral, military or not.

The paper will focus on the decision-making process: assessment of the situation, decision, order transmission, reporting. This presentation will be based on a field work that will take place in the first half of 2014, inside French joint staffs training areas.

Antonio Gramsci’s Prison Notebooks on the Role of the ‘Intellectual’ Meets Social Responsibility Theory

This paper seeks to explore social responsibility theory that emerged in the 1940s to protect freedom of speech, the media, and the public/citizens’ right-to-know from government and corporatist interventions in information and moral exchanges. However, the strategy in the paper is to marry social responsibility theory with the writings on ‘hegemony’ or ‘cultural leadership’ in the Prison Notebooks and Antonio Gramsci’s
thesis on the role of ’the intellectual’ in times of social crises and social change. The discussion in the context of the paper, is integrated into the overarching and broader contextual theme (of the conference) on “facing an unequal world (and the) challenges for global sociology”.

JANSSON, ANDRÉ* (Karlstad University, andre.jansson@kau.se)
Hospitality and Recognition in the Transmedia Age: Mediatization As Social Critique

Recent (trans)media innovations, such as the smartphone and social networking sites, have drastically altered the conditions of everyday life in affluent societies. Such developments have on the one hand contributed to potentially expanding lifeworlds and extended social affordances in terms of mobility and social connectivity. On the other hand, research from various disciplines has pointed to social disorders, or ’pathologies’, related to the everyday dependency on such technologies, as well as to the socially segregating nature of these developments. Against this backdrop, the suggested paper engages with the ongoing academic discussion in the context of the paper, is integrated into the overarching and broader thesis on the role of ’the intellectual’ in times of social crises and social change. The argument is developed in three steps. Firstly, a general approach to social critique is presented, based primarily on the works of social philosophers such as Honneth and media theorist Roger Silverstone. Here, the concepts of hospitality (Silverstone) and recognition (Honneth) are singled out as key (mutually dependent) facets of a socially sustainable and egalitarian (global) society. Secondly, the paper introduces a model of mediatization as a socio-spatial meta-process, based on Lefebvre’s triadic notion of social space. The combined social forces of connectivity and recognition are mediated through three regimes of dependency: “material dispensability and adaptation”, “premeditation of experience” and “normalization of social practice”. These regimes are to be understood as analytical tools for advancing a critical approach to the mediatization meta-process. Finally, the paper provides an empirically grounded analysis of the current status of hospitality and recognition in mediated lifeworlds. The empirical analysis integrates qualitative interview data from two different field-work sites: (a) a small-town middle class neighborhood in Sweden and (b) an expatriate community of UN employed Scan-tinterview data from two different field-work sites; (a) a small-town middle class university to bridge and overcome the gap of student access to and participation in learning. It relates the case of the University of South Africa (UNISA) in open access, distance and online e-learning (ODIE).
Experiencing multiculturalism, and combining a postcolonial feminist perspective with intergenerational communication, transnational migrant families are examined with a view to understanding the realities and negotiations between generations as well as how cultural values are transmitted across generations. In particular the communication: varied aspects such as verbal and nonverbal, that grandparents use in relation to their grandchildren will be examined. A nuanced analysis of gender intersecting with race, class, ethnicity and cultural diversity will be used in this study. The goal is to empirically uncover and shed light on the following questions: How do grandmothers transmit cultural values to their grandchildren in the Canadian context?

More specifically, what negotiations do grandmothers make to effectively communicate with their grandchildren about the cultures of their countries of origin? Interviews, at least ten to twelve, using a semi structured interview protocol as well as focus groups if needed will be conducted in Ottawa among grandmothers and a group of respondents from varied cultures as possible representing varied nationalities and cultures will be selected to participate in the study.

AHMED, RUKHSAANA (University of Ottawa)

The Cons/Truction of Gender in the Canadian Construction Industry

We examine the Canadian construction industry by looking at how gender intersects with various markers of identity within the construction industry: such as age, ethnicity, class, race, education etc. in Canada and how these interactions affect women's participation in the industry. We base our categorization of gender as a broad sense to include its intersection with other aspects such as ethnicity, race etc. (Denis, 2006; Mohanty, 2003; Spivak, 1999; Tastoglu, 2006). In the Canadian context, the espoused policies of multiculturalism and immigration provide a context for immigration related research (see http://canada.metropolis.net/index_e.html). However, there are challenges of labour force participation of immigrants and of women in almost every sector (Cohen, 1994; Watts & MacPhail, 2004).

In addition, research on the construction industry in Canada has shown that it is highly gendered in terms of the experiences of women (Watts, 2007) manifested in such behaviours as sexual harassment of women as well as a hierarchical and male dominated culture (Watts, 2007). At the same time, immigrants into Canada who are very diverse in terms of the various facets of identity outlined above have also tried in some instances to make inroads into the construction industry (Walton-Roberts & Hiebert, 1997). By performing secondary data analysis (Rubin, Rubin, & Peele, 2005) through a survey of the literature as well as through an examination of construction industry periodicals, we want to examine how gender in its broadest conception as intersecting with race, ethnicity, and age, and other dimensions plays a role in the construction industry in Canada and, if there are differences in various segments of Canadian society.

We will do this by a comparison between mainstream women's participation and the barriers faced by them, in the construction industry, and ethnic immigrant women.

JEANTET, AURÉLIE* (Université Sorbonne Nouvelle Paris 3, aurelie.jeantet@free.fr)

Emotion at Work: Between Alienation and Resistance

This presentation endeavors to utilize the concept of emotion in an heuristic and sociological manner in order to investigate the subjective link we have with work. More specifically, we will use it as a means to grasp not only the suffering and alienation that are associated with work, but also the pleasure that can intervene to ameliorate work-related pathologies. Furthermore, if we view emotions as a link to the self as well as to others and to the world, it becomes possible for an investigation of emotions associated with work to reveal how relationships to work can point to forms of resistance. It is also necessary in this regard to take into account the fact that the concept of emotion enables us to rethink the classical oppositions between rationality and affect, nature and culture, and masculinity and femininity. In addition, what Rimé (2006) has written about the social elements of emotion from a psychological point of view can be developed from a sociological and critical perspective. Finally, the concept of emotion is subversive in a manner that is analogous to the way in which care theory is subversive, which Caroll Gilligan (2013) has demonstrated. This is particularly the case at the work place, which is characterized by control and self-control. The discussion will thus seek to reveal how the concept of emotion not only is heuristic in character, but also possesses a subversive and critical force.
privatizing previously public or common goods and grounds, the shift is towards conceptualizing care as a public good and as part of the collective societal responsibility. This move implies a paradigmatic shift in the way social sciences have conceived social practices and understood social inequalities – between regions of the world, between income strata, between age groups and ethnic lines, between men and women and among women themselves. Therefore, an integrated consideration of the institutions (states, markets, families) and the belief systems that regulate gender regimes, global migratory regimes, age patterns, ethnic and racial categorizations, can provide the clues that could guide public action leading to redress some of these central global injustices.

At the intellectual and scholarly level, this paradigmatic shift calls for revising and renewing conceptions of the links between micro and macro levels, of the private/public divide, of needs and emotions.

JEMIELNIAK, DARIUSZ* (Kozminski University, darek@kozminski.edu.pl)

Celebrity Leadership in Open Collaboration Movement

As Coleman observes (2021), open collaboration communities can rely on two diametrically different leadership philosophies: with a charismatic, celebrity leader (WikiLeaks, Wikipedia, to some extent Linux) or with no clear leader at all, or leadership passed from person to person (the Anonymous, Debian).

I would like to present the results of a long-term, participative, ethnographic study of Wikipedia community, and the role of Jimmy Wales in organizational culture development. I want to show how “benevolent dictatorship” (Raymond, 1998, 1999/2004) model on one hand contradicts the a-, or anti-hierarchical ethos of Wikipedia. Through a case study of development of Jimmy Wales role in Wikimedia community, I am going to show that in principle, “F/LOS communities only tolerate an individual’s exercise of authority over her areas of expertise” (Guerrero & Steinmüller, 2008), with a possible exception to recognizing also organizing skills (Van Aalst, 2004; Boëtius, 2006; Chidambaram, & Becker, 2007). I am also going to show that leaders in open collaboration movements have to carefully and sparingly accumulate merit and charisma (Besseau, 2010), and that they can lose it overnight, after one careless blunder. I am going to seek conclusions for the pros and cons of celebrity leadership, and describe the current role of Jimmy Wales, who gained real momentum and increased his influence only after he resigned from performing most of active duties on Wikipedia.

JEN-DER LUE, PETER JEN-DER* (National Chung-Cheng University, jenderlue@gmail.com)

Incorporating the Social Investment Element into East-Asian Productivist Welfare System: Path Dependence or Path Breaking?

The critical difference between East Asian productivist welfare state and European social investment welfare state is the logic of social policy formation. East Asian productivist welfare state was designed according to the principle of “economic developmentalism” to achieve economic catch-up. However, European social investment welfare state is emerging as a new policy paradigm to adapt new knowledge-based economy and deal with new social risks.

The logic of economic developmentalism in East Asia (and probably, in Southeast Asia) led East Asian governments to push human capital formation policies, such as universal education systems. Family policy is very prominent in European social investment welfare state, but not in East Asian productivist welfare state. Third, one of the critical features of the social investment welfare state is the focus being placed more on the life course and on the future than on equality of outcomes in the present. Last but not least, the concept of citizenship in East Asian productivist welfare state and European social investment welfare state is different.

Given the differences of the East Asian productivist welfare regime with the social investment strategy in Europe, some ‘active’ components and mode of welfare delivery have changed recently in East-Asian countries, particularly Japan, Korea, and Taiwan. This article aims to highlight the continuous discourse and rationale for this change. The political position of different actors (political parties, unions and employer organizations) toward this change will be examined. Moreover, a new social/political cleavage and possible building of effective coalition for pushing this social investment in East Asian context will be examined.

Putting Care at the Center of the Global Agenda

The pervasive inequalities in the world limit the prospects of masses of people – persons as well as communities – of living full and satisfying lives. The deficit in wellbeing reflects a critical deficit in care, since the core of wellbeing is to be found in caring and receiving care.

All human beings have to be cared for; most human beings (notably women) are responsible for carrying out this fundamental long periods of their lives. Survival depends on being cared for. Social bonds depend on and express themselves through caring.

Since care has been usually provided in the domestic economy, in the “privacy” of families and households, the deficit was and still is to a large extent invisible. Contrary to current trends in the political economy of the world implying...
For parents of intersex children, from the moment of birth, if not before, the announcement of sex is replaced with an announcement of a different kind: that of a medical and social emergency. A body that is not clearly male or female as a result of its chromosomal makeup, hormonal balance or external genitalia, is given the diagnosis of ‘indeterminate sex’ (ICD-9-CM code 752.7). But this diagnosis is a gender diagnosis, i.e., a further diagnosis (such as cancer), the classification of the medical problem is necessary for deciding on management and prognosis. In the case of intersex, medical professionals assess additional data to determine the intersex individuals’ ‘true sex,’ in effect explicitly diagnosing intersex while implicitly diagnosing sex en route to treatment recommendations. In this paper, we examine the diagnosis of intersex as a site that renders visible the process of social diagnosis (Brown, Lyon, Jenkins 2011). As argued in the framework, diagnosis is social because of both the variety of social actors involved in diagnosis and because it diagnoses social structures that contribute to health and illness. In this very top-down view (we1 show how multiple social actors (e.g. parents, doctors, technolo-
gy, legal and cultural institutions) contribute to diagnosing the individual’s ‘true sex,’ which, once determined, can be ‘restored’ medically. We then (2) set out to diagnose the social structures that make intersex a medical and social problem. In line with other scholars (e.g. Fausto-Sterling), we view sex in a multi-dimensional space, with male and female representing only two points. It follows that a system that diagnoses intersex, in effect, also diagnoses sex. We argue that since most cases of intersex do not involve physical dysfunction, it is this social compulsion to categorize sex that make intersex individuals ‘sick’ – not their chromosomes or organs.

JENKINS, TANIA (Brown University, tania.jenkins@brown.edu)
The Myth of Meritocracy in the American Medical Profession

The United States currently graduates approximately 40% fewer physicians than are needed to fill postgraduate residency positions. The remaining positions are filled by American graduates of foreign universities, foreign medical graduates and osteopaths. The result is that US medical graduates (USMGs) are the most competitive candidates for residency, getting priority access to the most desirable positions. Last year, for example, over 90% of spots in plastic and orthopedic surgery were filled by USMGs. In contrast, non-USMGs fill lower-prestige residency positions in less desirable geographical locations and specialties (like internal medicine). In some cases, this has resulted in very polarized training environments, with so-called ‘friendly’ programs staffing only non-USMGs, and highly prestigious ‘traditional’ programs training only USMGs. Because of major differences in resources and medical service offerings, these programs have vastly different approaches to teaching which can affect residents’ opportunity structure post-residency, especially in subspecialty training.

This study proposes why this arrangement persists, in spite of its implications for inequality. What are the social forces and beliefs that sustain this system of stratification among internal medicine residents? Drawing on two years of ethnographic observation and interviewing at one such ‘friendly’ hospital, this paper presents evidence for a ‘myth of meritocracy’ among residents. Doctors feel they are individually responsible for their own success, and conversely, that they are to be individually blamed for not reaching certain goals, such as getting into competitive residency and fellowship programs. They also deploy examples of non-USMGs successfully achieving these goals as evidence for this belief, rather than that of wider structural barriers (e.g., institutionalized racism). This belief constrains opportunities for non-USMGs. By elaborating local understandings of social mobility and advantage among medical residents, the paper reveals the power of this myth of meritocracy in obscuring, sustaining, and perpetuating the role of significant social and institutional constraint.

Horizontal Knowledge Dynamics and the Initiation of Students in Expert Cultures: Investigations into Profession-Oriented Programs in Higher Education

The aim of this paper is to discuss relevant approaches for studying how students in profession-oriented education programs become initiated in their expert culture in a period in which such cultures undergo changes in several ways. Much is written about how modes of knowledge production and distribution are in transformation in today’s society (e.g. blurred relationships between knowledge production and application; new relationships between knowledge, education, and society; and the spatial expansion of such processes). Less is known, however, about how such developments influence educational programs and student learning.

We present a conceptual framework for investigating these relations, highlighting the concepts of epistemic machineries, epistemic practices and ‘epistemological identities’ as constitutive for expert cultures across education-work boundaries. Next, we present our empirical strategy for examining dynamics of knowledge and student learning in three educational programs. We use examples and tentative findings from our first phase of data collection in law education to discuss how students get introduced to their expert culture during an intensive, inquiry-orient-
ed introduction to the world of law.

Albert of preliminary character, our analysis indicates that the introduction to - and training in - methodological principles for defining, exploring and solving professional problems in a structured way constitute a key mechanism of induc-
tion. By examining and integrating different sources of knowledge while working systematically on a complex problem, the students get introduced to the wider machineries of knowledge construction that constitutes the field of law.

Together with other findings, the study contributes to the field of higher ed-
ucation by developing new insights in the way expert knowledge evolves across the research-education divide. By revealing the role epistemic practices and their methodological principles play in connecting different sites in the expert culture, this study may also inform current efforts to bridge education and knowl-
edge policies.

JENSEN, PER H.* (Aalborg University, perh@dps.aau.dk)
Factors Conditioning Female Labor Force Participation

Studies of female labor force participation have so far primarily focused on socio-structural factors, i.e. factors that may support or impede women’s ‘free choice’ to participate – or not. Factors supporting female labor force participation have been identified as e.g. women’s wages (relative to men), as it is expected that the higher the wages the higher the utility of paid employment. Factors impeding female labor force participation have been identified as lack of child/elder care institutions, the qualifications of women (calling for re-education and lifelong learning) etc.

What has been under researched is the impact of (1) demand side and (2) cul-tural factors on decision making of women. Demand side factors refer to the local production system; e.g. traditional male dominated manufacturing in a given locality may leave very little room for female employment opportunities. As to culture, it should be rather obvious that women are most probably not disponi-
tioned to use of public care institutions in as much as the cultural system inclines agents to support the idea that good mothers should take care of their children on their own.

The aim of this paper is to contribute to a better, more comprehensive under-
standing of the factors which explain variations in female labor force participation in different European localities. The major research question thus becomes: how has the interplay between supply side, demand side and cultural factors struct-
ured the level and character of female employment in different European local-
ities?

The paper draws on comprehensive register data as well as survey data col-
lected for the purpose of this study. Data are analyzed by means of quantitative methods.

JEOLAS, LEILA* (Universidade Estadual de Londrina, leila@uel.br)
KORDES, HAGEN (Münster Universität)
Jen傕iing Cultures: Illegal and Legal Road Racing in Londrina, Brazil

This paper deals with masculinity and risk in the urban space of Brazil. The analysis seeks to comprehend sense and structure in the life-threatening man-
oeuvres of racing, beginning with the significations that the young racing enthu-
siasts attribute to their experiences of speed and thrill. Due to the illegal nature of road racing – racha – the research process for this study began in the virtual field of the internet community where young racers present and discuss their attraction (or even addiction) to acceleration and risk. Data was later collected in the ‘real’ field of roads (illegal) and autodromes (legal). The urban space of racha as a social practice is constituted by several groups whose members differentiate themselves through contrasting preferences in music and clothing. In this pro-
cess of construction they deploy and modify their bodies, at the same time seeking prestige and social reputation. Racing exhibits the joint power of the male driver and the modulated machine. We see here a kind of humachine constituted in the risk and danger of the race. The young men are thrilled by the heavy sound and vibration. In the moment of the race, they modify their registers of perception, time is accelerated, and they are released from the normal constraints of gravity in urban space. By high-tuning the engines the rachadores make themselves ready to transgress limits and norms of security and speed. The machine becomes an extension of the male body, a muscle car, a new sensory interpretation of the corporeal and the engine.
Employment: The Case of South Korea

The main purpose of this study is to examine the relationship between the levels of Fairness-awareness and Forms of employment using data from 2009 Korea General Social Survey(KSGG) survey. In the field of Sociology, only few works has been dealing with fairness-awareness itself as a unit of analysis, despite numerous attempts to consider inequality in connection with social status, class, resource allocation and distribution process etc. even that earlier researchers have limitations that many studies could not explain which variable affect Fairness-awareness of organization or they only concentrate positive influence of fairness-awareness affect to organization. Grounded on this, I analyze the data concentrating upon the Main Hypothesis which is “there are existing Fairness-awareness difference depending on Form of Employment (Permanent/Temporary)” and demographic variables as a Moderator. And the results are as in the following: (a) Temporary position have an positive effect on Fairness-awareness level of distribution. This direction is reinforced by younger age and (c) low level of education. There is no effect between Fairness-awareness level of procedural and Form of Employment.

The Organizational Evolution and Innovation of Korean Anti-Base Movement

The organizational evolution and innovation of Korean Anti-Base Movement – focused on the dynamics of multi-layered solidarity network. It is a main feature of Korean Anti-Base Movement(KABM) that it has been affected by the historical tradition and culture of democracy movement. First, KABM started in 1988, directly after the June democracy movement in 1987. Second, democracy movement organizations paid attention to local issues in the 1990s and built the local networks of KABM as solidarity ones. Third, the activity networks of democracy movement was a major factor of the building of national solidarity network and massive nationwide mobilization. Some factors of successful Maehyang-ri struggle can be explained by these.

But in the early 2000s, the old networks of solidarity are disintegrated and emerging pacific peace movement sometimes have cooperated and sometimes competed with each other. And both were was combined through the medium of residents’ organization. KABM has developed multi-layered ABM organizations composed in scale of village, city, and nation. The anti-base committees of city and nation scale have been composed of local and national organizations which experienced democracy movement. On the other hand, residents and jejim-activists lead village scale movement. The supplementation of three scale movements is important factor of the dynamics and extensive influence of KABM. But in case of Kangju village of Jeju island, the influence of city and nation scale organizations is weak. It is mainly caused by the geographical isolation and cultural factors, that is developmentalism and local conservatism. This implies that the objects of ABM has to be more than the mere change of aimed policy or institution.

JEPSON, NICHOLAS* (University of Bristol, nicholas.jepson@bristol.ac.uk)

The Rise of China and Post-Neoliberalism Among Southern Resource Exporters

Studies of the rise of China and its interaction with the rest of the global South have quickly grown into an established research programme in recent years. Efforts have generally concentrated on investments in natural resources and agriculture, new aid relationships and questions of political non-interference and human rights. I begin from a broader world-historical perspective which analyses contemporary China-driven structural transformation in the global capitalist economy and its implications for states in the South. The scale and speed of Chinese growth in recent decades has led to a level of import demand for natural resources of sufficient global weight to have prompted the 2002-2008 commodity boom. Even today, with a stagnating global North, fuel and mineral prices remain well above pre-2000s levels. As China, and increasingly other large Southern economies, continue to develop and urbanise, high natural resource prices seem likely to be sustained for another decade or more. This provides the revenue which is freeing hard commodity exporting states from the neoliberalising discipline imposed by the IFIs and global capital markets, easing a key constraint on their policy trajectories and thus allowing for alternatives in political-economic direction of travel which would have appeared highly improbable prior to the commodity boom. I use Qualitative Comparative Analysis (QCA) with a set of 30 Southern states as cases to demonstrate that a high export concentration in hard commodities demanded by China is a necessary but not sufficient condition for a break with neoliberalisation. I find that domestic class structure and (traditional) domestic dependence are also causally significant and that particular configurations of these conditions can be related to distinct types of post-neoliberal political-economic formation. In world-historical terms, these may tentatively point towards emerging regimes of accumulation centred around a new phase of material-based growth in the global capitalist economy.
Sociological Problems and Educational Divergence

OLSON, PAUL (Ontario Institute for Studies in Education at the University of Toronto)

This discussion focuses on the relationship between education and social structure through analyzing Anthony Giddens's structuration theory to rural Tibetan society in China. In this study, we analyze the dialectical relationships among local social structures and three forms of education in Tibetan society. The talk also looks at how myth and symbol have parallel and relationship to the social and cultural linkages in the construction of this identity and are reflected in stories, views of nature, the dialectical relationships of world and social beings.

These are the questions the paper will seek to answer. Relying on national immigration regulations in the EU and its Member States, such as the UK, Germany, Belgium, or the Netherlands, the paper will try to (1) describe the ideal image of societies reflected in societies, (2) assess the excluding features of these tests and whether they build / create cultural boundaries, and (3) investigate how in these tests reflect reality.

Widowhood, Intergenerational Family Support and Living Arrangement Among Older Adults in China: Based on Gender LENS

Widowhood becomes an extended experience for old adults in China because of increased life expectancy, particularly for older women. While intergenerational family support and living arrangement of older adults has changed greatly during the past decades in China because of huge population migration and life style transformation. Drawing on the Senior Citizens Survey date of the Third Wave Survey on the Social Status of Women in China, jointly launched and organized by the Chinese Academy of Women (CAW) and the State-Owned-Enterprise in the New Era of Globalization.

Preliminary results provide striking evidence for the critical role of proximity to secondary schools (the number of schools within commuting distance), viz., the gateway to college. Gateway proximity, not college proximity, enhances college attendance. This finding contrasts starkly with the focus on college proximity by the recent U.S. literature on the geography of access to higher education. To further identify the possible mechanisms underlying the gateway proximity effect, we will also conduct a detailed examination of alternative measures of proximity.

**Temporal and Spatial Patterns of Secondary Education Expansion in China, 1980-2010**

China has experienced unprecedented educational expansion in secondary education since 1980s while there are substantial spatial disparities across provincial level divisions. This study does not only document the evolution of secondary education enrollment over the last three decades and across 31 provincial level divisions, but also examines how well the key factors of modernization theory-industrialization and economic development are associated with the temporal and spatial patterns of the expansion in lower secondary education and upper secondary education.

**Based on pooled cross-sectional and time-series data for 31 provincial level divisions over a 30-year period, results show that the overall secondary education enrollment rate increased dramatically, while the spatial disparities are substantial.** Additional analyses find that the expansion of secondary education corresponds closely to the economic development and industrialization. Within its provincial divisions, more than 60% temporal variation of lower secondary education is explained by the changes of economic development and industrialization. Across provincial divisions, around 70% variation in upper secondary education is explained by the changes of economic development and industrialization factors. This study provides greater precision in evidence for modernization theory by explicitly measuring industrialization, economic development, and educational expansion of secondary education. In addition, it differentiates spatial and temporal variations between expansion of lower secondary education and upper secondary education to determine whether and how industrialization and economic development correlate in these two patterns.

**Sustaining Global Skills Inequality? Skills Transfer and Skills Protectionism in the Nigerian Multinational Corporate Sector**

While the vital role of skills in the socio-economic transformation of nations is well espoused in the literature, little scholarly attention has been paid to the international dichotomies in skills and the dynamics that underpin them. In many countries in the global South, there is a plethora of liberal policies that seek to attract industrial investments by corporations in the global North, the hope often being that the transfer of vital skills – and eventual national socio-economic transformation - will result from such investments. Yet, studies have shown that in many developing countries, years of active multinational involvement by multinational corporations in the local economy have not had the desired effects: anticipation of over effects in the process of socio-economic transformation in the developing countries have not occurred. It is against this backdrop that this paper examines the skills development programmes and strategies in Nigeria’s multinational corporate sector vis-à-vis the dominant national discourses on skills development in Nigeria. The key focus is on the extent to which multinational corporations operating in Nigeria have facilitated the acquisition, by Nigerians, of vital skills. From interviews conducted in key Nigerian multinational power agencies and two multinational companies, each with over half a century of active industrial operations in Nigeria, the paper argues that despite the long period of involvement, multinational companies operating in Nigeria still source vital skills from their home countries. Besides, the levels of investment in skills development in the local economy suggest a possibility of skills protectionism – an active or unwitting process of hoarding vital skills rather than transfer them to local employees. The paper thus highlights the challenges and contradictions of aligning the economic calculations and objectives of corporations to national human capital development imperatives, and one of the subtle ways in which global skills inequality is sustained.

**For decades science was considered the major force for the advancement of humankind. Ironically, S&T has notoriously progressed either for the preparation on the realization of war. Likewise, the gigantic technological steps made by humanity during the race to the moon are also paramount. Science was regarded as the answer to the problems of humanity. However, many times science, rather the use that man makes of science is counterproductive to the human ideals. Based on scientific discoveries man has made, and used, weaponry for massive destruction. The potential for annihilation of the human race of chemical, biological and nuclear weapons currently stored – and recently used by a number of countries is beyond limits. However, scientists as a whole don’t pay enough attention to the development of science for the benefit of humanity. Based on this inattention to social problems, UNESCO in an effort to catch the attention of scientists organized the conference “Science for the 21st Century”, in 1999. The objective was the formulation of a new relationship between science and society, that is, a new social contract with science based on the assumption that science is to be subjected to public scrutiny. The debate on the need for a democratic discussion of scientific priorities, the size of its budget, its institutional structure, and the use that is given to the results of scientific labor, was recuperated. It was asserted that such decisions cannot be left simply in the hands of scientists and government officials. However, fifteen years later, the results of this global effort seems to be null. This paper gives some insights and examples of the ways in which the society is being influenced, and how it could be more involved on the decision making of the scientific labor.**

**Renting and Sharing: Housing Options for the Poor**

The government of Mexico encouraged the construction industry and the financial sector through massive new housing projects, particularly from 2000 to 2012. Developers built houses and acquired land reserves where the price of the land was cheap: on the far away outskirts of the cities. An important impact of this policy on the poor is that cheap land where irregular settlements would in the past have developed, has now become scarcer and more expensive. Over half of the population do not qualify for the new houses, anyway. Thus the financialization of housing on the periphery of Mexican cities is likely to have pushed the poor back into existing low-income settlements, or forced them to remain there, thus encouraging the already ongoing process of consolidation of irregular settlements. Old low-income settlements, founded more than 20 or even 50 years ago, have earned themselves a privileged location in the cities by now, as they can offer their inhabitants proximity to employment and infrastructure. In these areas, renting or sharing accommodation has become an important option for those with low incomes, either because, as is often the case, it is the only choice they have, or else because it suits their family or economic situation to rent instead of buying. Also, shared arrangements play a fundamental role in the lives of most vulnerable groups: single mothers, the sick, the handicapped, and people of an advanced age. However, we know very little about current conditions in these settlements, and the problems faced by owners, tenants and sharers. To shed light on these parts of the city, I use information obtained from questionnaires and in-depth interviews conducted in Mexico, as part of a major research project into 11 cities in 9 countries of Latin America (the Latin American Housing Network).

**Invisibility As Strategy? Understanding the Perceptions Toward Organising Amongst Foreign Farm Workers in Musina, South Africa**

In this paper I explore issues of self representation and mobilisation amongst foreign farm workers in Musina, Limpopo. Based on original empirical research on the commercial privately owned farms in Musina, this paper reveals a number of human rights violations against this group, and points to a lack of capacity and inadequate civil society organisations as well as lack of political action to effectively address these problems. Drawing on this context, I make two interconnected arguments: first that the political economy of Musina has created and sustained an informal-formal system through which these conditions can be perpetuated; and second that farm workers adopt tactics of ‘invisible’ mobilisation to remain outside this system. By this I refer to the range of sustained strategies that workers- foreign workers in particular- engage in to earn livelihoods. Drawing on a global literature of mobilisation, and community relations, I argue that the face of the poor and inhumane conditions that workers face, silence and invisibility are tactics that they use to fight back and survive.

This paper examines affiliation divestiture process of Korean business groups, chaebol, in 1989-2010. One of the characteristics of chaebol is that its head and his/her family members rule the structure, the whole group network, despite their little shares. It is possible because they are major shareholders of the group network’s holding company. Thereupon, the corporate network, composed of individual legal corporations, is the group owner family’s privately owned social structure and succession of ruling right is regarded as if a private property. Consequently, some Korean conglomerates have divided itself for succession from group owner to his family members. This affiliation divestiture process differs from a firm’s typical spin-off because it results separation and survival of the business group network. This research, hence, analyzes the process based on three points: how each structure is cohered; how major human agents locate within each structure; and what happens in the structure’s network across time. The result is as follows. First, group network’s cohesiveness is an important factor of making affiliation divestiture. Next, separation experience works as a path-dependency by becoming ‘a logic of succession.’ Third, business groups which have not concluded their way of transfer select joint succession as a temporary expedient.

Fourth, the corporate network, composed of individual legal corporations, is the group owner family’s privately owned social structure and succession of ruling right is regarded as if a private property. Consequently, some Korean conglomerates have divided itself for succession from group owner to his family members. This affiliation divestiture process differs from a firm’s typical spin-off because it results separation and survival of the business group network. This research, hence, analyzes the process based on three points: how each structure is cohered; how major human agents locate within each structure; and what happens in the structure’s network across time. The result is as follows. First, group network’s cohesiveness is an important factor of making affiliation divestiture. Next, separation experience works as a path-dependency by becoming ‘a logic of succession.’ Third, business groups which have not concluded their way of transfer select joint succession as a temporary expedient.

Last, group network forms plural cores before commencing gradual affiliate divestiture. By those processes, Korean chaebols get on different ways in succession due to how inner network of each structure is organized. In other words, cohesiveness of structure and composition of network show how a network of business group is divided, is transferred from previous owner to his descendants, and maintains its survival. This result provides a key to understand formulation and survival of derivative chaebol, which will continuously come into the world.
can be organized to different degrees, and some phenomena are only partially
organized. The least common denominator of organization is that it is a decided
order. Without a decision, no organization, not even a partial one. Here, a dis-
tinction is made between full organization and different forms of partial orga-
nization, the latter consisting of mixes of organization and other social orders; a
phenomenon may be a mix of organization and institution (if, e.g., it rests heav-
ily on rules, norms and beliefs) or a mix of organization and network (if it lacks a
clear formal hierarchy). Organization is a widespread form of social order. Many
such phenomena are temporally delimited. Here a distinction is made, regarding
the nature of temporariness, between known and unknown time-frameworks. The lat-
ter (when it is not known when a phenomenon will take place) is characterized
by a higher degree of uncertainty. Disaster management belong to this catego-
ry. Different aspects of disaster management are analysed with this theoretical
framework.

Change in Daily Eating Habits – Organization and Arrangement of
Nutrition Patterns in the Context of Family and Public Compared
Between Germany and Japan

Instead of looking at unknown social arrangements far away, comparative so-
ciological research should investigate the alien within the known following suit
the ethnographic research of modern industrial society. While comparing the devel-
opment of western industrial states, sociology can get insights in the meaning of
social problems, its circumstances and consequences. This perspective will be presented by an on-going project comparing eating habits of every-day life between Japan and Germany. The stark contrast between European and Asian nutrition habits illustrated by the German-Japanese com-
parison is examined to discuss the correlation of malnutrition, change of family
structures, gendered responsibilities, and daily eating habits in regard to cultural
differences as well as to numerous similar characteristics of the current social
change. Thereby, the focus is to be laid on specific and comparative analyses
as to how the diagnose of “malnutrition” is made, which shape it assumes and
which causes are being named. Ultimately, it has to be questioned what kind of
regional country-specific solutions of the stated problem take root and which
family-suitable compromise functions can be taken by extra-fami-
ilial agents of socialization in order to teach nutrition skills. Afterwards, different
national approaches to a solution of the respective problems of how to arrange
daily nutrition in the area of tension between private and public nutrition supply
as well as their transnational learning potentials can be discussed.

To compare developed countries with each other in regard to particular prob-
lems will not only result in new knowledge about the research objectives but will
also help to evaluate and develop the theory of World Society, whether the world is
differentiating into a multiplicity of societies or unifies in a way which takes a
segmental, regional differentiation into account.

Times of Innovation – Innovation of Times

Social relevant times are caused only by social events. However the variety of
events rapidly increases by the density of possibilities rising the problem of
synchronization of social time. Pre-modernity could refer to natural events for
this purpose. More important was the reference to the idea of fixed temporal
horizons – the past and the future though. These temporal fixations were bro-
den by modernization, presenting the problem of synchronization anew and even
exacerbate it by developments like sciences or the European expansion. Thus
synchronization means the possibility of a joined temporal orientation by a fixed
horizon rather than the alignment of times. At first modern synchronization could
be ensured by the concept of progress. But once its singularity had dissipated
horizon rather than the alignment of times. At first modern synchronization could
be ensured by the concept of progress. But once its singularity had dissipated
features by a higher degree of uncertainty. Disaster management belong to this catego-
ry. Different aspects of disaster management are analysed with this theoretical
framework.

Intersections Between Western and Indian Childhood Discourses

This paper presents one of the chapters in my Ph.D. dissertation on Conceptu-
alisering Childhood, Indian children as a social category are neither homogeneous
nor monolithic. “Childhood” in Indian discourses represent “shifting set of ideas”
developed over a period of time, and across different sub-cultures. In this paper
I review requirements that neo-liberalism places on children and Indian in the West
in order to show that childhood discourses (located in the West) documented in
this study are getting percolated into Indian discourses due to globalization of
childhood discourses, even as there are protests about childhood discourses be-
ing Eurocentric. In both the West and in India plurality of childhoods have been
acknowledged in discourses on Childhood. Indian sociological studies document
multiplicity of childhoods which in turn depends on varying factors such as re-
gion, religion, caste, social class, gender, family structure, etc. What emerges from
the study of texts on the subject, is that both India and the West children have
been marginalization in sociological discourses on children until now. There is a
perceived emergent decrease in patriarchal control of children by adults, with
adult-child relations becoming more democratic and participatory, manifested in
greater negotiation of control by children. The “Century of the Child” notable for
the United Nations Convention on the Rights of the Child (1989) and the new So-
ciology of Childhood has brought children into the arena of international politics
and academic debates in both the North and the South.

Pedagogies and Practices in the Modern and Postmodern

There is a paradigmatic shift in how pedagogy is conceived and practiced in
contemporary discourses. In this paper, I focus on the discourses that arise out
of the fragmentation of the project of modernity. I attempt to make a distinction
between modernist and postmodernist educational theory, their languages and
vocabulary and their tools of measurement. Furthermore I show that issues re-
lated to change, crisis, difference, diversity and fragmentation of identity, and
knowledge and power are important aspects of the emerging conceptualization
within pedagogy. I try to describe some pedagogies such as the notion of “border
pedagogy” etc. have emerged from critical pedagogues who locate themselves
within the postmodern. Pedagogies that give students an opportunity to engage
in multiple reference points that constitute different cultural codes. Finally I raise
the problems that the radical critique of postmodernism pose for education that
is central to post-Enlightenment, emancipatory, liberal humanist project of mod-
ernism.

JOHNSON, PAULINE* (Macquarie University,
Pauline.Johnson@mq.edu.au)
Sociology and The Critique Of Neo-Liberalism

Sociology and the Critique of Neo-liberalism

On all sides we’re hearing that social critique is in trouble. Nancy Fraser’s re-
marks about a ‘crisis of critique’ confirm Axel Honneth’s account of critique’s ‘per-
plexing predicament’. Peter Wagner too observes that contemporary capitalism is
often seen to be ‘in the grip of critique’. What is alarming everybody is the supposi-
tion that the project of immanent critique has been undermined by what Honneth
calls the ‘neo-liberal revolution’. Immanent critique, Michael Walzer tells us, judges the present with reference to ideals that are purely internal to a
particular socio-cultural context. Immanent critique is having a hard time because
the normative principles and ideals internal to our social and institutional prac-
tices appear to have been resignified in capitalist friendly terms by a triumphant
neo-liberalism. So neo-liberalism issues a peculiar challenge to social critique. The
distortions and cultural costs of its strategy of appropriations and resignifications
were referred to as ‘sociological death of critique’. I propose to excavate norma-
tive investments that are implicit in this programme which might be marshaled to
a guide a critique that weighs up the cultural costs and damages in neo-liberalism’s
re-working of our normative principles and ideals.

Organising the 'Invisible' Sector: A Case Study on Household Workers in Lima

This paper examines the organisation of household workers in Lima. Household services is one of the biggest employers of female workers in Peru, and roughly a half of all household workers live in the capital Lima. Among other informal workers, household workers are regarded as one of the most precarious and marginalised group of workers in the labour markets. The lack of recognition, and the fact that the work is done in private households, makes the household sector 'invisible' and thus the workers' rights, including working hours, wages and access to social security, are poorly controlled. Lima provides an interesting case for studying household workers’ movement. In recent years, household workers have increasingly mobilised on local, national as well as international level and formed new networks to promote their rights as citizens but most importantly, as workers. In 2011, the international labour conference accepted a convention for domestic workers, setting labour standards for persons working in house- hold services. Peru has not yet ratified the convention, but especially the local household workers’ organisations have been actively campaigning for the ratification. This paper investigates the various forms of organising household workers in Lima. Special focus is given on household workers’ organisations and their networks, and the ways these promote decent work and job quality for workers in household services. Since informality in the sector is high and less than 1% of household workers in Peru are unionised, non-governmental organisations play a significant role in advancing the position of household workers in the labour markets and in the society.

Women Human Rights Defenders: Promoting Women's (Human) Rights in Honduras

This paper explores the recent developments in women’s human rights activism in Honduras. In the past years, political and economic instability, culminating in the coup d’état in 2009, has led to extensive protests and mobilization among a variety of civil society actors, particularly among women’s groups. While promoting gender equality and organizing against militarism, neo-liberal practises and human rights violations, Honduran human rights activists have been simultaneously embedding the notion of human rights in their claims. Moreover, a wide variety of women’s groups including feminists, teachers, community leaders, labour union members and LGBT activists, among others, have met challenges collectively as ‘women human rights defenders’. I suggest that as a consequence, the discourse on women’s human rights has moved from academic spaces and a ‘feminist project’ to the everyday understandings of a large number of women’s groups and most importantly, a new framing of women’s agency. In doing so, activists have, moreover, enhanced their alliances with supportive women’s groups beyond national borders and entered new regional and international arenas of advocacy. Drawing mainly on social movement theories, this paper seeks to explore 1) the factors that have contributed to the shift in women’s rights framing among women activists in Honduras and 2) the possibilities and challenges arising from the strategic usage of human rights frames for the activists’ work and the women’s movement in Honduras generally.

Disaster Warnings on Remote Islands: From the Traditional to the Contemporary

Natural disasters such as tropical cyclones are commonplace in South Pacific island nations, including on remote islands within these remote countries. During a project working on young people in a changing climate, warning signs and responses to them in remote island communities in Fiji and Tonga were investigated. On remote islands, people are well connected with their land and environment, and local ecological warning signs have existed and been relied upon traditionally. Knowledge about such traditional warning signs is still alive today, but diminishing as technology takes hold. Traditional warning signs are being overtaken by a reliance on warnings from the meteorological service on the radio. Many of the older people who hold most of the traditional knowledge perceive a lack of interest from young people in learning about those signs, because of the radio. However the young people are using the radio in order to communicate, which may make this form of warning message distribution less effective in the future. There are moves toward the use of mobile phone technology, especially in Tonga, for distribution of disaster warnings. In remote areas where mobile phone reception is less about being in the right general area than standing under the right tree, methods of locally spreading the news of any warning will remain important. This presentation outlines knowledge of different types of warnings, their perceived reliability, how these are changing, and the responses to the warnings, on two remote island communities where sufficient warning is considered more important than the severity of an extreme weather event.

Sustainable Consumption and the Enactment of the Fairtrade-Market in Vienna

Since the current discussion about the extent and manifestation of an environmental crisis, norms and values as integral part of economic markets gain public attention. According to contemporary findings within economic and consumer research, a range of markets are currently undergoing a fundamental transformation, reflecting both moral values and commitments that are considered as constitutive of economic operations. But whether this culturalisation of the economy must be understood as based on a moralisation of markets (Stehr) or rather is the result of an economic colonialisation of morals (Habermas) is neither theoretically nor empirically verified. My contribution is based on these considerations: on the basis of a praxeological research approach I ask how and in relation to which practices the so-called „fairtrade” market enacted and, in doing so, moves in a tension between a moralisation of markets and the economic colonialisation of morals. I consider these questions with reference to empirical research; starting in a fairtrade district in Vienna, the capital of Austria, I focus primarily on the constitutive practices and settings in which the fairtrade market is enacted. In doing so I address especially the questions how citizen consumers are able to learn about social and environmental risks and to what extent consumption of fair and sustainable products are driven by practices as well as respective sociomaterial orders.

What Kind of Power Is ‘Love Power’? II - Continuing the Elaboration of a Theoretical Concept

Love, more specifically “love power,” is central in my mode of theorizing contemporary western societies. In the article, “What Kind of Power is ‘Love Power’?” (2011), I outline briefly, three ways in which I have approached this key question. I have done this, firstly, by comparing “love power” with “labor power,” concluding that the two human powers are both similar and basically different, and that both can be seen as specifically human “world creative capacities” (in the sense explicated by Marx); secondly, by distinguishing care and erotic/erotic ecstasy, as the defining elements of the internal dialectic in sexual love; and,thirdly, by asking, what kind of power love power is, looking (in vain) for answers among the so-called “power terms” as presented in dictionaries and applied in most prevailing social and political theories. I conclude that love power should assume a new dimension and enrich the whole complexity of power terms. In this paper I will continue to elaborate the concept of ‘love power’ roughly along these three lines. The aim is to explore, develop further, and reflect over the strength and delimitation of my love theory. I will expand the comparative view (labor vs love in Marx) by bringing in and assessing some other, apparently similar or overlapping theories and key concepts where creative and transformative powers are also at the center: some feminist-historical-materialist work-labor-related concepts, and also concepts, generated within other research traditions, in particular “desire” and “erotic power” as variously framed by, or through critical debate with, psychoanalytic theory.

Examining international diffusion of radical ideas and campaigns via their organisational, discursive vehicles and communication media, suggests three possible commonalities for achieving ‘transnationalised’ social movements:

- similar causative grievances;
- adoption of another society’s social movement model;
- and/or convergence of regional/national movements into transnational programmes and goals.

Analysis of these potential commonalities indicates that sixties movements achieved lateral, non-hierarchical mobilisation and organisation, rejection of conventional ‘system’ politics, direct, deliberative democracy practices, and equality of participation through personal commitment, initiative and action. Yet sixties’ protests failed to transform or even modify capitalist economic relationships, which assumed even more elemental market forms. Sixties’ campaigner’s radical alternatives to today’s transnational economic crisis. What lessons do the failure of sixties radicalism in the 1960s offer for today’s contemporary movements? Can they transform or subvert corporate and political power systems, or is this a utopian project? How will these movements effectively navigate the muddy waters of corporate social responsibility? Which company is more sustainable: Coca Cola or Pepsi? Apple or Microsoft? GE or LG? Or none of the above? While data does indicate that customers must significantly reduce our overall quantity of consumption, sustainable consumers face a wide range of obstacles when attempting to enhance the quality (responsibility) of their consumption. Reliable data is not readily available, and the practice of “greenwashing” – or deceptive marketing that makes corporations appear socially responsible – conceals legacies of unethical conduct. How can citizens consumers effectively navigate the muddy waters of corporate social responsibility? Drawing from a seven-year public sociology research project that uses independent, third party data to evaluate corporate practices, this presentation examines the art and science of creating corporate social responsibility. More specifically, it explores five tensions inherent in the development of a comprehensive and accessible system of measurement.

1. The Data Integrity Problem: Involving the data that companies do not share.
2. The Data Quantity Problem: Uncovering too much data on the other.
3. The Past/ Present Problem: Weighing companies’ legacy of positive or negative conduct against more recent indications of change.
4. The Multidimensional Problem: Determining the comparative value of different dimensions of social responsibility (e.g., human rights, the environment, political lobbying).
5. The Simplicity/Complexity Problem: Creating a system that is simple enough for consumers to use while being complex enough to accurately capture the many facets of corporate conduct.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The author offers working solutions to these tensions and explores the strengths and weaknesses of his methodology. More broadly, this inquiry underscores how, in order to be effective, more sustainable consumption requires increased corporate transparency and better public sources of data on corporate social responsibility.

JONES, ELLIS* (College of the Holy Cross, ejones@holycross.edu)

Reclaiming Corporate Social Responsibility for Activists and Academics: An Analysis of International CSR Ranking Systems

Is it possible for activists and ethical consumers to reclaim corporate social responsibility (CSR) from its current, largely greenwashed, state that seems to merely strengthen much of the same neoliberal agenda it was meant to address? While CSR research in general is expanding rapidly, there is relatively little research being done on CSR measurement, and almost all of this sub-category of study focuses on corporate self-reporting rather than 3rd party tracking of corporate behavior. The solution may be found in nonprofit and academic efforts to develop valid measures of CSR for a public audience. This research project examines four CSR measurement systems created specifically for consumers in the US, UK and Australia in order to understand the current level of consensus/diversity in: 1) definitions, 2) methodologies, and 3) outcomes. Utilizing a combination of text analysis and standard statistical tools, these questions are answered with some surprising results. The rankings of 106 global corporations are compared across all four systems to reveal where consensus can be determined despite significant differences in methodologies. CSR ranking results are reassessed in light of some of the most recent publications from Transnational Institute (“State of Power 2013”) and Asia Monitor Resource Center (The Reality of Corporate Social Responsibility) to determine where blind spots may be in each of the systems. Further recommendations include a call for increased research in the area of empirically measuring overall CSR behavior (with an emphasis on indicator validity) rather than generating additional research on CSR reporting, reputation indices, correlations with corporate profitability, or hyper-specific, non-comparable corporate efforts along particular lines of social or environmental responsibility. The argument presented includes a call for resistance movements to help transform capitalism rather than cede the economic realm to neoliberal ideologies while focusing on social change efforts in other arenas.

JONES, HELEN* (University of Huddersfield, h.m.jones@hud.ac.uk)

Youth Work in England: An Uncertain Future?

It is easy to paint a pessimistic picture of how young people are affected by the current economic situation. In Britain, almost 20% of 16-24 year olds are ‘NEET’, the acronym for young people who are not in education, training or employment. The Education Maintenance Allowance, paid to 16-18 year olds to encourage them to stay in education by paying them a small weekly grant to help with fares and other overheads, was removed in 2011. Perhaps it is not surprising that UNICEF (2007) found the UK’s children and young people to be the unhappiest out of those living in 21 developed countries. As part of the result included attitudes to education, personal well-being, home and family life and general satisfaction with their lives. The OECD (2013) has found that young people are most likely to suffer from governmental austerity packages; they suffer most from cuts.

Young workers have always tended to look back to a golden age. Currently, the period when government funding was channelled into work with young people via local authorities and third sector/voluntary organizations provides the touchstone. In April 2013, the UK’s magazine Children and Young People Now published an article entitled, ‘Youth sector on a “knife-edge” as third of organisations close’ that presented a depressing overview of reductions in expenditure and a pessimistic prediction of the future. Youth services have been subject to swinging cuts accompanied by amalgamation with targeted and acute services. This paper identifies the aspects of young people’s lives which have been affected by different cuts and other policy changes. Where possible, examples of innovative practice will be discussed. These present exciting ideas which have potential to be replicated if funds are found: although the future is uncertain, we owe the country’s young people a more optimistic future.

Class and Health Inequalities in Later Life

For over sixty years significant research activity has addressed the extent to which the social class over the life-course have determined or contributed to an individual’s economic and social fate in old age. This has led to the elaboration and discussion of a whole host of conceptual and measurement issues among a growing body of epidemiological and social researchers. To these we must add, in light of the social changes and accompanying theoretical developments over the same period, questions about the viability of class as a means of understanding social relations and social inequality in contemporary society. This paper will interrogate these issues as they relate to the role of class in later life, especially the prism of health inequalities. The paper will discuss the wider implications of the emergence of a relatively lengthy post-working life have not been fully incorporated into studies of class and health in old age. This is a major lacuna given that the generations entering retirement today in affluent countries are precisely those who have experienced the social changes that have seen both increased prosperity and the questioning of the salience of class in wider society. We therefore need to address two questions. Firstly, how best to describe and explain patterns of social class inequalities in health over the life course? Secondly, what does class mean in later life and how can it be conceptualised in relation to a population that may have been out of the workforce for many decades?

JONES, IAN REES* (Cardiff University, jonesir4@cardiff.ac.uk)

Communities, Connectivities and Later Life

The rapid diffusion of forms of Information and Communication Technologies (ICT), mobile technologies and social media have transformed many aspects of social relationships and enabled new forms of social connectivity. However, the impact of virtual connectivity on community and communication for those in later life is not yet well understood. Research suggests that for older people internet use and its impacts are multifactorial and differ according to the nature of social relations. Research in this area has produced ambiguous results. Researchers have found that, where older people were previously socially isolated, by becoming internet users they were able to keep in touch with friends and family often across large geographical distances. Others have found cyber communities to have a negative impact in terms of withdrawal from the outside world leading to a contraction in the use of social and physical space. It is certainly the case that the expansion of social networks beyond the local neighbourhood that domestic ICT allows can lead to profound changes in the nature of community in later life. Research on the internet has tended to focus on a digital divide, on the impact on community and social capital and on political and cultural participation. While the most common uses of computers by older people appear to be related to communication and social support, leisure and entertainment, health information, educational information and productivity; this is not that different to younger groups.

The presentation will address: theoretical approaches to new technologies and social relations in later life, trends in internet use among older people, research addressing the digital divide, patterns of motivation and use, the impact on social relations and social networks and the consequences of technological change for older people in temporal and spatial terms.

JANSEN-JANSEN, LEONIE (University of Amsterdam)

Socio-Spatial Justice and Housing

While the relationship between justice and geography and spatiality is acknowledged and put central in research by several scholars, there is no consensus on the type of relationship. Space is often used as a contextual way and social justice writings are in many cases focused on power and struggles within society. Edward Soja has argued for putting spatiality more central in social justice research. Space is often used as a contextual way and social justice research has addressed the digital divide, patterns of motivation and use, the impact on social relations and social networks and the consequences of technological change for older people in temporal and spatial terms.
The Vulnerable Man-Machine: Human Actors As Productive Parts in Work-Networks

As parts of heterogeneous work-networks, human actors need to manage their vulnerability by finding ways of fitting neatly into the network and become reliable man-machines. They also have to learn how to manipulate the network so that they return a position in it. From a posthuman- and ANT-based perspective, this presentation explores human vulnerability in a male dominated, internationally successful company. Vulnerability is understood as a consequence of various material-semiotic processes, where individuals are or are perceived as unable to attain certain tasks, relearn, commit and so on. Being or being seen as able can result in vulnerability as well, as this may propel the actor in unknown or even unwanted directions.

Working at “Techno”, human actors help form a work-network put together for increasing productivity and, in the end, profit. They are protected by laws, policies and helmed by a private real estate development company repurposed abandoned distillery buildings to restore the historic Cheonggyecheon Stream; in the latter, Cityscape Holdings, a Seoul Metropolitan Government removed an inner-city overpass to uncover and The contemporary global city consists of vibrant local communities and a robust material reality of the global city emerged: the anti-iconic. The anti-iconic buildings has not completely diminished, recently a new paradigm for the development, even when expensive and large-scale, advocates human scale projects underpinning Seoul's Cheonggyecheon and Toronto’s Distillery District projects, that retain heritage and encourage embodied social interaction while shying away from iconic buildings. The self-proclaimed ‘Non-Citizens’ of Europe, in reference to Agamben’s ‘Asylstafetten’, the Asylum Relay Walk in Sweden during the summer of 2013, plus research on the Refugee Protest March through Germany and the marches organized by Refugee Struggle for Freedom in Bavaria, also the responsive practices of policing are elaborated in this paper. While repression via police harassment was a central experience of the protest marches through Bavaria, the Asylum Relay Walk through Sweden barely met ‘the state’. Further including the Congress of Protesters in Europe, held in Munich in early March 2013, the historical and geographical context becomes palpable: ‘European’ refugee protest must be analyzed not only as local and national, but also as increasingly transnational. The self-proclaimed ‘Non-Citizens’ of Europe, in reference to Agamben expressing their overall aim to “overcome the duality of Citizen and Non-Citizen”, have met the responses of power in different ways in different places. The ‘Human Right’ to non-violently articulate democratic dissent has in these cases been infringed by different strategies of state repression. Meanwhile, grassroots refugee activism has to a certain extent already managed to adjust domestically and organize internationally according to these structures of inequality, discrimination and exclusion.

JOO, YU MIN* (National University of Singapore, spypjm@nus.edu.sg)
Finding New Opportunities in Shrinking Cities: Local Citizens, Artists, and the State in Urban Revitalization Projects

South Korea is one of many countries now facing the problem of inter-urban inequality. While Seoul and the capital region have nearly 50% of the national population, many other cities, which developed as the country rapidly industrialized during the latter half of the 20th century, are quickly losing their industries to newly emerging economies, such as China and Southeast Asian countries. In short, a number of Korean cities, once noted for their speedy urban transformation and growth, now face reversed difficult challenges of shrinkage. A good example is Busan, which had been the center of the southeastern industrial core, but is now struggling, with a shrinking economy and population. This paper examines two urban revitalization projects that took place in Busan's dilapidated old downtown, and their effects on the city's social and cultural development. Unlike typical urban development projects of a developmentalist city, dependent on state-driven top-down approaches with a goal of supporting private capital accumulation, these two projects set themselves apart by relying on the active participation of local residents and artists to bring bottom-up changes that are strongly connected to the local history and social life. Through the two cases, I explore how the changed circumstances necessitated scaling back the roles of the state and capital, and permitted newly emerging civic actors to take much greater roles in the development projects, leading to unexpectedly successful outcomes. Additionally, the paper points out how the visible decline provided an opportunity to change the mindsets of the society, which had been rather firmly embedded in development-oriented ideologies, and to seek alternative possibilities amid the shrinkage. Perhaps, with the arrival of more socially aware and inclusive development approaches and goals, shrinking cities may find new opportunities to build more resilient and livable cities.

JONSSON, EMMA* (Swedish National Defence College, emma.jonsson@fhs.se)
Recruitment of Women and Persons Born Abroad to the Swedish All-Volunteer Force

This presentation examines the recruitment base to the Swedish all-volunteer force; the applicants for basic military training. So far the recruitment to the all-volunteer force has been satisfactory in respect of qualitative terms; both regarding psychological and physical abilities. The capabilities of those selected for basic military training have been as good as or better in comparison to previous years with conscription. Despite good quality among the recruitment base there have been vacancies, and the future need of personnel will increase. To increase the recruitment base and to increase the proportion of women and employees with different ethnic background. Although the all-volunteer force provides a more heterogenic recruitment base in some aspects than the conscript based force, the all-volunteer force in Sweden mainly attracts young men that are born and raised in Sweden. A proportion of women has significantly increased but in conscription, However there are no well-known changes in the amount of persons born abroad. Studies have revealed that the proportion of applicants for the basic military training born in another country than Sweden decline in each step of the selection process. This presentation will focus on the recruitment of women and persons born abroad in the selection process to the Swedish Armed Forces.

Identities, Culture and Transnational Learning: Being Malaysian Women Medical Researchers

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
In spite of being half of the population of the world, having increased access to education and increased labour force participation, women continue to dominate traditional fields in education, health and welfare, social sciences, business and law, and humanities and arts (OECD 2011; UN, 2010) and are still severely underrepresented in science, engineering, technology and emergent industries, accounting for only slightly more than a quarter of all scientific researchers (Hawkins & Ronchi, 2008; OECD, 2011). There is loss of productivity and human capital, and monetary loss when women’s potential is fully harnessed. This paper is based on a pilot study looking on the intersectionality of culture, global networks and innovation, investigates the identity practices of a group of Malaysian women medical researchers. It examines the ways in which ethnicity, social relations and power dynamics within the medical research sector shapes this group of highly skilled Malaysian women’s identities working in this research sector and their access to resources and opportunities. The findings will contribute to an initial framework for understanding these cultural identities and transnational learning in knowledge-intensive industries. The discussion also considers an initial framework for understanding socio-cultural and scientific dimensions of new industries, and higher level skills vital for women’s successful participation in the global economy.

Studying Selected Youth Transition Studies Between the Global North and South: A Conceptual & Methodological Analysis

This paper examines selected youth transition statistics and studies between the Global North and South, and focuses at understanding how conceptually and methodologically these studies may be related and contextualized to researching “transition crisis” in the Philippines. It focuses at assessing unemployment and education performance indexes from selected countries, and identifies how these statistical variations reflect similarities and differences along work-education nexus across cultures. Methodologically, the paper evaluates empirical designs of selected studies to recognize what good measure of youth transition estimate may be applicable to Global South countries like the Philippines. In the end, the paper draws insights from youth statistics and content analysis of studies to inform the design and texture of conducting local youth transition research in the Philippines.

Theoretical Consistence Between Goffman and Luhmann

At first glance, it could cause doubts when one tries to put Erving Goffman and Niklas Luhmann together. Their thoughts will probably be treated as two different, even opposing approaches. This article attempts to offer another perspective by pointing out the theoretical consistence between Goffman and Luhmann. Furthermore, it hopes to make Goffman and Luhmann more understandable by cross-referencing to each other. In a short journal article “Die Form Person” (The form person), Luhmann defined person as a form with two sides which through regulating the actions offers a solution to the problem of double contingency (Luhmann 1995: 152). After some explanation, Luhmann wrote: If you want to learn more, you have to read Goffman (Luhmann ebd.: 151). For a closer investigation of the theoretical consistence between these two sociologists, this article will develop its arguments according to the following guidelines:

1. Foreword
2. George Herbert Mead as a point of reflection: Both Goffman and Luhmann are unsatisfied with Meads’ explanation as to the process of self-formation.
3. Double contingency as a chance: Unlike Parsons, both Goffman and Luhmann do not treat double contingency as an communicative obstacle needed to be overcome through common culture normality, but as a chance or a pressure to set dynamic practices in motion.
4. Person/Non-Person: Both of them pay attention to the possible qualifications and attributes of self-identity which are temporarily excluded from the side of non-person, but could potentially be ascribed as the self-identity. This may explain why one would behave so cautiously in the social interactions to maintain the civilian self.
5. Conclusion: Inspired by the above discussion about the theoretical consistence between Goffman and Luhmann, I would like to suggest, as the conclusion of this article, a practical perspective of a “self” that refuses the ontological existence of a pre-social self.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
global South as a whole. The strength and diversity of participating groups in a protest wave are apparently shaped by a country’s specific characteristics and its location in the world-economy structure. These kinds of linkages allow us to pinpoint shared political-economic attributes and structures that are conducive to the outbreak of popular contention by large numbers of people in the global South. Examining contentious protests within the world-historical perspective offers a path to understanding the continuation of struggles and how periods of contention may be just the one wave in a larger sea of long-term resistance. What is particularly crucial to determine is how diverse social movements affect each other and interact with the structures that they are decomposing and transforming. This heuristic characteristic of collective action has an elective affinity with the concept of protest wave, which points out the connectedness of each protest cross over time and space in the global South.

Information Management, Collective Intelligence Within The Context Of Crisis Resolution - Going Global

Information Management, Collective Intelligence and Knowledge Management within the context of Crisis Resolution - going global. Crisis Resolution from an international perspective is to be embedded into the problem of escalation and de-escalation of irregular war. Experts during many decades of Cold War had been focusing in research on interstate wars. But Civil war today is the most common form of armed conflict. More than 20% of the world’s population are affected by some form of violent conflict. This paper presents an analysis of how collective intelligence and knowledge processing in the broader domain of security management and crisis resolution. The international community and the international alliances are affected by their enforced austerity programs, this gave birth to the idea of “Pooling and Sharing” as a new paradigm for overcoming political calamities. It is useful to look at the cultural and psycho-sociological foundations of collective intelligence and knowledge management for to find incentives but also barriers for pooling and sharing in the military-civil security domain. Collective intelligence and knowledge Management is based on accepted values:

- sharing
- responsibility
- respect

So Pooling and sharing of logistic resources may be successful in this respect, but what about the vast field of pooling and sharing of information, scientific ideas? The processing agencies very often are competitors in this field.

Saving the Environment? Environmental Policies of Japanese Firms and Their Effectiveness

In the past decade, a new framework has gained popularity that firms, which aim to make profits, should also address broader social issues, such as environmental protection, human rights, and labor standards. It is no coincidence that this framework of corporate social responsibility (CSR) has become popular under the anti-regulation logic of neoliberalism. Instead of bringing the state back in, the CSR framework grants corporations a way to pre-empt state regulations, by claiming that market mechanisms through corporate voluntarism is more effective in resolving social issues than state mechanisms through bureaucratic supervision. Thanks in part to the promotion by international organizations (e.g., the United Nations), various CSR policies have been widely adopted across advanced industrial societies. Their effectiveness, however, has been largely unknown, raising serious concerns that adoption of such policies amounts to mere symbolism. In this paper, we examine environmental policies of major Japanese firms and their impact on these firms’ environmental performance, using a dataset from Japanese firms between 2006 and 2013. During the period, under the increased global institutional pressures for CSR, Japanese firms have adopted a broad range of environmental initiatives, such as environmental auditing and labeling. But there is little research on whether and under what conditions such initiatives lead to substantive changes. Our findings suggest that without other complementary mechanisms such as government regulations or other third party monitoring, corporate voluntarism alone is unlikely to achieve corporate environmental responsibility and may instead result in corporate carte-blanche.

Transnationalism and Religion; A Study on Biographies of Immigrant Women in Germany

This study research into the biographies of South Korean nurses who left Korea in early adulthood and have remained in Germany until now. Between 1963 and 1978, around 11,000 Korean nurses left for Germany as working migrants. Korean nurses were hired under a restricted three-year time period for migration. After the expiration of the contract, many returned to South Korea or chose to immigrate to another country such as Canada and the U.S. But other nurses did not return to Korea but instead chose to remain in Germany. They have formed Korean Communities and organized various Korean immigrant associations in Germany. After deciding to remain in Germany, they established their life over more than normal to implement those procedures of collective intelligence and knowledge processing into the broader domain of security management and crisis resolution. The international community and the international alliances are affected by their enforced austerity programs, this gave birth to the idea of “Pooling and Sharing” as a new paradigm for overcoming political calamities. It is useful to look at the cultural and psycho-sociological foundations of collective intelligence and knowledge management for to find incentives but also barriers for pooling and sharing in the military-civil security domain. Collective intelligence and knowledge Management is based on accepted values:

- sharing

Civil Awareness: A Comparison of the 2011 Occupy Wall Street Movement in the United States and the 2008 Mad Cow Disease Protests in Korea

The Occupy Wall Street protest that swept the United States in 2011 and the mad cow disease protests that emboldened Seoul in 2008 seemingly occurred in different political and cultural contexts concerning different issues. In fact, although the details of these two protests differ, the protests are similar in that the initial protest took on a larger symbolic significance that captured the imagination of other groups and encapsulated some essential truth about society. Both the Occupy Wall Street movement in the United States and mad cow disease protests in Korea demonstrated how spontaneous protests can strike a chord with the larger population and create a powerful dialectic between the protesters and the public wherein the protests articulate a theme resonant for the larger population and have immense impact on groups at a distance from the original protest. The very successful performance of protests as intense fusion between protest- ers and the public display similarities in a broader sense symbolically, and these similarities emerge in the motives of individual actors and shared inner meanings of the respective protests. It is worthwhile examining the motivations of these two different protests, the ways the discourses were made up among protesters, and interpreted in the mass media, and how the general public responded. The comparison of the two cases offers insights into the process by which a small group can create movement that transfers to other groups that do not share the same interests, discussing how the themes were articulated and how meanings are created beyond a national level.

Airports As High Reliability Networks and the Inherent Emerging of Security and Safety Threats

The theory of High Reliability Organizations tries to explain why organizations or its units can achieve error-free results in complex and error prone environments. After the application in the fields of nuclear power plants, traffic control, etc. the theory was deployed to airport security screening procedures after 9/11 (Frederickson/Laporte 2002). It is argued, that under the vital impression of 9/11 the security regime became enforced and prone to produce more false positives (error type I) rather than false negatives (error type II). Therefore, these false positives may become an argument to reduce security in favor of efficiency. To avoid backlogs in security it is – according to the authors – essential, that airport screening organizations become high-reliability organizations.
We will argue that the focus on high reliable screening organizations is too narrow – instead the whole airport needs to function as a high reliability network of organizations. Since airports do not solely consist of security producing organizations but rather need to be understood as complex systems of heterogeneous actors such as airlines, airport management, retailers, etc., security regulations often can conflict with their standard procedures and organizational logics. To maintain the processes that are vital for these actors adaptive strategies evolve constantly and are passed on. These adjustments are often not formalized but remain informal since they transgress the rules of the security system. They are therefore not easily affected in the predominant security regime as they are not intended and the regime builds on idealized assumptions of compliance. Consequently, new safety threats for the airport system can arise due to the attempt to increase the security regulations in this critical infrastructure. The presentation builds on findings of a research project on the social production of (in)security on airports in Germany.

JUNISBAI, AZAMAT* (Pitzer College, ajunisba@pitzer.edu)
JUNISBAI, BARBARA (Pitzer College)

In this paper, we examine attitudes about the desirability of democracy versus dictatorship in Kazakhstan and Kyrgyzstan, two of the most pro-market economies in post-Soviet Eurasia. Drawing on original data collected in late 2012, we raise a series of fundamental questions about the link between market economics and democratic politics. Are some societal groups more receptive to democratic ideals than others? Are the middle classes, following expansive market reforms and a shrinking of the welfare state, as hungry for political change and as hostile to dictatorship as democratic theorists posit? How do individual experiences with the transition to capitalism affect not only perceptions of current government performance, but preferences for the political future? To uncover answers, we systematically test the effects of a host of demographic and individual-level characteristics using a nationally representative dataset of 3000 respondents (1500 in each country). We look at minority versus titular status, household income, educational attainment, area of residence, and religiosity, as well as individual trajectories in the labor market, understandings of the roots of social inequality, and one’s satisfaction with current political institutions and practices. We find that, more than two decades since the onset of independence, post-communist citizens remain divided over basic questions of governance, and this division is especially pronounced in Kyrgyzstan. In addition, surprising patterns of group and individual-level preferences emerge, challenging a number of conventional theoretical expectations.

 Family Resilience in Times of Mass Migration: The Case of Lithuania

A decade ago state officials believed that short-term emigration is a rescue for Lithuania during the difficult economic period. They state that short-term emigration reduces unemployment rate, increases income of the population and people gain useful experience abroad. Following Lithuania's accession to the EU in 2004, the point on emigration radically changes - the de-bordering of Europe and the development of intra-European mobility is seen as one of the main factors of recent wave of the mass emigration from Lithuania giving rise of the family changes. The paper aims to trace the development of the outline to migrant family research through a lens of changes, resources, definitions of the situations and impact management practices. While family resilience and coping with difficulties are seen as the main goals of the on-going research project, Reuben Hill's family change model is treated as conceptual axis of migrant family research. The authors theorize family resilience and coping with hardships by means of ideas of symbolic interactionism, theoretical constructs of intergenerational solidarity, kin networks, personal networks and conceptions of family practices: doing and displaying family. Presentation of empirical data is based on two quantitative research studies, conducted in 2014 and 2015, and includes comparative perspective. The focus is made on the analysis of family resources by means of the theoretical constructs of intergenerational solidarity (V. Bengtson), kin networks (B. Nauck) and personal networks (R. Milardo and B. Wellman). Different concepts are utilized purposefully in an attempt to analyse family resources on several levels - the concept of solidarity permits to examine specific features of interaction among individuals of three generations related by kinship ties, while personal networks of family members comprise exchange and interaction networks with significant individuals that transcend the boundaries of family and kinship ties.

This paper studies dual-earner couples in their transition to their first child. We perform a qualitative analysis on longitudinal and semi-structured interviews – both individual and couple- gathered in 2011 and 2013 in Spain. This case study is part of the international TransParent study. In this piece of research we compare how the couple intends to care for the baby, before birth, and how the couple’s members describe having shared the care during the first and a half year of baby's life. How do co-parents manage work-family balance during pregnancy and how do they come up either with more symmetric or more traditional care arrangements afterwards? What distinguishes quasi-symmetric from asymmetric care-sharing couples: their relative resources and employment contexts or their gender and care attitudes? This paper analyses resources in a large sense: from relative income, job security, job sector, job organization principles and work careers to relations with peers and the family. Results show that resources in a large sense matter as a necessary condition for a symmetric share of care, but the key to understand real outcomes is the form of the bargaining process and the mix of gender and care attitudes within the couple.

JURENIENE, VIRGINIJA* (Vilnius University, virginija.jureniene@khf.vu.lt)
Transformation of Gender Roles in Lithuanian Society

In 1990 after regaining Lithuanian independence, women organizations started their active performance. The majority of these organizations summoned re-constructive congresses, for example Lithuanian Women Catholic organization which was forbidden in the 1940s when the Soviet Union occupied Lithuania. At the beginning of 1990 the first democratic election to the Supreme Council of Lithuanian Soviet Socialist Republic was held. In 1990 there were 14 women who made up 10% of the elected in the Seimas (Parliament).

A legal measure to eliminate gender discrimination is the Law of Equal Opportunities which was passed in 1999. This law was the first of its kind in Central and Eastern Europe. On September 29, 2008 the Seimas signed National agreement on realizing women and men’s equal rights and opportunities. The agreement was initiated by the National women’s consulting forum striving to enforce equal opportunities of genders in reality.

After Lithuanian society entered the 21st-century, with changes in economic and social intercourse, women have become more active while looking for well-paid jobs regarding their specialties. Though tenacious stereotypes about male and female jobs still remain.

Facts of public opinion poll and social inquiries prove that patriarchal attitude, which is based on a traditional understanding of manliness and womanhood, are still popular in Lithuania. It is often stressed that it is men who should take a more important place in labour market and social life. Women’s opportunities to seek for professional career or stay in a leading position are perceived sceptically.

Though in Lithuania changes in labour market are present, a number of unsolved problems still remain. A problem of women – mothers’ discrimination still exists.

However, an important question is open: why women electorate do not vote for women candidates?

Perspectives on Climate Resilient Food Chains - a Case Study from Finland

Climate change has several profound effects on the functionality of food supply chains. Floods, soil erosion and changes in plant species for example make agricultural activities and food production more vulnerable. It is, however, increasingly evident that local impacts of climate change on food chain may vary remarkably not only between countries but also within one country. In this regard, it is a major future task to re-organize the prevailing patterns of the food system in order to make it more resilient. It is important that all stakeholders of the supply
chain from food producers to retail and consumers have access to this transformative food chain management. In our paper, we discuss the transformative food chains in climatic conditions of Finland. Our paper is based on a case study, which was conducted in Finland in 2012. The primary data were collected through thematic interviews with 16 different food chain stakeholders, from three regions in Finland: Central Finland, Pirkkala and Southern Savo. The interviewed stakeholders comprised mainly of food entrepreneurs, with additional representatives consisting of farmers, trade unions and retail chains. Qualitative content analysis was used for data analysis. Our preliminary results indicate that there is a need for a more decentralized food system. Local food chains may act effectively as adaptive strategy. Food enterprises are simultaneously facing other increased challenges, such as increased bureaucracy and market competition which limits their efforts in climate change adaptation.

JÖNHILL, JAN INGE* (Örebro University, jan.jonhill@oru.se)
The Paradox of Managing Diversity. Observations of a Personnel Management Strategy in Mass Media Organizations from a Systems Theoretical Perspective
On the background of “anti-racism” legislation, of ideas of cultural diversity and incentives of the marked economy, the management strategy of diversity management was developed in the early 1990s. It has since then made success globally as a “new paradigm for management”. - The aim of this paper is to present some results from a research project on diversity management in mass media organizations in Sweden.
The project applies Luhmann’s systems theory as main approach for several reasons. In this case (1) as it allows analyses from different observer perspectives, (2) as the functional and structural conditions of society and its organizations and (3) as well the complexity of the issue may be taken into account, and (4) as the distinction between acting and performing becomes apparent in this communication-based theory.
Social changes in direction of (more) equal opportunity and inclusion chances as to cultural diversity have occurred in the studied media organizations. In a previous study one of my findings was that it is reasonable to assume that diversity management is more adequate than other modes of managing issues of cultural background of journalists, such as quota and also a high confidence as to legal regulations.
Among my findings are that diversity management makes a difference due to a recent professionalization of personnel managing in the media companies. Competence-based assessment as a principle generates a prerequisite for journalists with migrant background to achieve equality in opportunity, when e.g. applying for a position or by team building. The study, thus, shows that focusing on the matter of competence and not focusing on person’s cultural background (but being aware of the social matter of disfavour), paradoxically, is likely to be a functioning or even successful path of managing this issue.

JÖNSSON, INGRID* (Lund University, ingrid.jonsson@soc.lu.se)
Ingrid Jönsson and Yuegen Xiong: Changing Intergenerational Relationships in Contemporary China and Sweden: Consequences for Eldercare
Changing intergenerational relationships in contemporary China and Sweden: consequences for eldercare.
Although China and Sweden represent different stages of economic, social and demographic development, currently eldercare is an important social policy issue in both countries due to changing social and generational contracts. The paper aims at analysing recent developments of eldercare with regard to marketisation and de-refamiliarisation departing from the frame of analysis suggested by Daly & Lewis (2000:287). Empirically it means that the division of responsibilities between the state, market, family or community at the macro level will be analysed while at the micro level this will be identified by who performs the caring, who receives benefits and available services, how does the relationship between caregiver and receiver look like, under what economic, social and normative conditions care is carried out and the rate of female labour market participation. This frame of analysis enables us to identify recent changes and point to similarities and differences of how social care for ageing populations is handled in different economic, social and demographic contexts. China and Sweden are chosen for the comparison as they traditionally represent a strong generational and a strong social contract respectively. The paper starts with historical reviews of the organisation of eldercare followed by a presentation of recent changes related to economic, social, cultural and demographic circumstances (e.g. migration, changing filial piety, family structure, size etc.) with consequences for generational and social contracts. Eldercare in everyday life will be discussed in relation to Daly & Lewis’s frame of analysis as well as in relation to the concept ‘care packages’ (used by Knijn, Jönsson, Klaerner, 2005 compare income packaging used by Rainwater, Rein and Schwartz, 1986), i.e. which resources are used when caring for elder-ly and its impact on the relationship between caregivers and receivers (dependence/interdependence) and women.

RC11-207.16
JÖNSSON, INGRID* (Lund University, ingrid.jonsson@soc.lu.se)
Ingrid Jönsson: Childcare and Eldercare - Different Paths of Development
Traditionally welfare in Sweden is publicly paid, publicly organised and access is based on needs rather than means. Economic retrenchment, changes of governance and legal frameworks in the 1990s have an impact on the organisation of social welfare with implication for universalism, marketisation and refamiliarisation. The paper will discuss the different paths of developments for eldercare and childcare and whether ideas of social investment currently being advocated by international organisations have contributed to the different paths of development. Although ideas of social investment in Sweden dates back to the late 1930s (Morel et al 2012) recent emphasis on early childhood and care in the context of limited economic resources and changes of governance and legal frameworks have implications for eldercare. Discussing eldercare as social investment in a European context means counteracting future costs related to ageing populations while it for children means capacitating them for changing labour market and family structures with the aim of improving employability and increased economic competition. Historical reviews of childcare and eldercare including changes of governance, legal frameworks, etc. constitute the background for the analysis of recent diverging paths within the two sectors in relation to universalism, marketisation and refamiliarisation. The recent development is socially as well as gender differentiated.
Gender Inequality and Occupational Segregation: A Study of Women Labourers in Areca Nut Processing Units in Karnataka, India

Despite remarkable progress in many spheres, the Gender inequality still persists in India. Waged work is Segregated and Marginalized on the basis of Gender. Employed women in work place are horizontally and vertically segregated and there is a clear distinction between men's work and women's work. Women's work is characterized by lower wages, low status and lower rung on the skill ladder, involved in less interest, more repetitive, monotonous and low status activities. Such pattern of Gender Segregation is exhibited in Areca nut processing units.

Areca nut is a cash crop which has contributed more than Rs.250 crores towards the National income in India. It is largely cultivated in Malenadu region of Karnataka State. The process of cutting, de-husking and drying of nuts is entirely dependent on hand labour. Women are employed in this process. The present paper discusses the Gender Inequality, Segregation and marginalization of women labourers working in an unorganized sector. The main objectives of the paper are (1) to examine the vertical Occupational Segregation of Women labourers in Areca nut processing units. (2) To study the factors influencing Gender inequality, and (3) to overview the implications of Inequality and Marginalization of women in areca nut processing units. The study is based on the primary data collected through interview technique. The study highlights that, there is Gender inequality and Marginalization in functioning and the payment of wages. There is job insecurity and violation of labour legislations. The study helps to identify the nature and structure of Gender inequalities, Segregation and Marginalization. Further, the paper tries to justify the need for empowering women to bring Gender equality and enhancing their status.

Global Social Governance As Inter- and Inner-Organisational Relations Between Actors

This paper is concerned with the conceptualisation of global social governance as a matter of inter- and inner-organisational relations between global policy actors. Global social governance is commonly characterised as a complex and multi-actored process, driven by more or less powerful and legitimate actors. There are significant overlaps in their agencies, as well as they are bound in various (sometimes) overlapping networks and alliances that cross-cut organisational borders. While global social policy actors differ in terms of types and functions, they do not unfold their respective power in isolation from each other. They relate to each other, part of what they do is driven by what others do.

The global social policy literature has discussed a number of examples how different global social policy actors, often international organisations, are involved in fighting over ideas; a process that happens both between and within organisations. This paper engages in a rather theoretical discussion about different ways of how the inter- and inner-organisational relationships can be conceptualised and how related interactions can be understood by drawing on a number of disciplines. The paper will reflect on some insight that can be drawn from sociological, organisational and psychological theory to better understand such relationships.
For long time, Japanese people have been used to the point of view that law system and judgment of Court are constraint to citizens. It seems difficult to imagine that a lay judge can join the procedure to drafting a law or to make a judgment of the Court. Creation of lay judge system changed the relation between Court and people.

After three years of the creation, however, some problems of this system have been progressively clarified. There are some criminal cases that lay judges demanded heavier punishment than the demand of public prosecutor. There are several reasons about it: the social demand to reflect on the sentiment and the demand for a criminal and the influence of the social norm and prejudice between lay judges, and so on.

We trace here the judgment of Osaka District Court concerning to a murder caused by a man with attention deficit hyperactivity disorder (ADHD). In this case, the Court made a judgment of 20 years of imprisonment beyond the demand of the public prosecutor. The judgment is derived from the misunderstanding that the society has not any institution or facility where accepts an ex-convict with mental disabilities. The judgment based on the misunderstanding concerning to ADHD makes us to notice the necessity of the support for the lay judges when the specific knowledge is needed to examine the case.

---

**Children's Leisure Pursuits: A Test of the "Homology" Versus "Omnivore-Univore" Hypotheses Debate -- CANCELLED**

Recently in the UK academic milieu, there has been a debate as to whether the link between socio-economic status (SES) and adults' participation in cultural activities conform to a "structural homology" rule (Bourdieu, 1984), or present a pattern best characterised as an "omnivore-univore" distinction (Peterson, 1992). The dispute surrounded the issue of whether in contemporary British society, cultural participation (and consumption) still signifies social-class, and in what ways. However, research has not yet to analyse class-based patterns of cultural participation and leisure pursuits in children.

The present paper addresses this gap in knowledge by exploring the associations between SES (measured by parental education and occupation levels and by familial incomes) and children's participation in three leisure domains: social-group activities, commercial-public activities, and home-centred activities. Within each of these domains, activities from across the "highbrow-lowbrow" cultural capital spectrum are examined.

The results are used to discuss the debate on the "homology" vs. "omnivore-univore" hypotheses in the contexts of cultural socialisation and cultural capital acquisition in the middle childhood years.

The paper relies on quantitative analyses of data drawn from the British "Millennium Cohort Study" (MCS), a survey of around 19,000 babies, all born between 2000-2002. The current analyses focus on data taken from the third and fourth sweeps of the MCS when the children were aged around 5 and 7, respectively.

The findings indicate that children's leisure pursuits are stratified by SES: children in high-SES groups are more likely than peers in low-SES groups to participate in a range of leisure activities across the highbrow-lowbrow spectrum. This pattern of leisure participation is consistent with the "omnivore-univore" hypothesis. Yet, the results also show that the associations between SES and children's leisure pursuits are stronger for highbrow and midbrow activities than for lowbrow activities, a finding that lends support to the "homology" argument.

---

**The Provision and Expansion of High School Education in Post-War Japan**

This study aims to clarify the mechanisms of high school educational expansion and regional variations in postwar Japan regarding the kinds of opportunities that were provided. We focus on education providers and the programs offered by high schools. High school education expanded rapidly in the 1960s when the first baby boomers became high school students. To understand how this extraordinary expansion was made possible and how the opportunities for high school education were provided, we must consider the relationships between public and private institutions and the roles of the private ones. The proportion of students attending private high schools is now over 30%. This proportion became higher during the 1960s. This means it was impossible for high schools to expand if only public schools supplied education. Also, as Ichikawa (1991) points out, a distinctive feature of the Japanese educational system is a preference for general education under a single-track system. The same holds true for high schools. Although Japanese high schools offer both academic (general) and vocational/specialized programs, the ratio of students enrolled in academic programs continues to rise, accounting for more than 70% in 2010. These two features characterize high school education in Japan. At the same time, there have been regional variations in provision of high school education regarding above mentioned points. We describe classed educational strategies by combining our empirical studies we are especially focusing on 1) the changing emphasis on equality of learning outcomes is small; and, finally, the impact of pupils' socio-economic background to pupils reaching only the lowest proficiency levels is small; the variation between schools is low; and, finally, the impact of pupils' socio-economic background to learning outcomes is small.

---

**The Classed Parental Attitudes Towards the School Choice and Equality of Opportunity in Finnish Comprehensive School**

Recent international comparisons and rankings have highlighted the equality and quality of Finnish education system. Throughout the whole 2000s, PISA-test results have demonstrated that Finnish pupils score high; the percentage of pupils reaching only the lowest proficiency levels is small; the variation between schools is low; and, finally, the impact of pupils' socio-economic background to learning outcomes is small.

Traditionally, Finnish comprehensive school system has been built on principle of equality, and the provision of basic education has been governed through school districts. Since the 1990s, reforms, based on principles of decentralisation and deregulation, have reduced direct state control. As a result, local education authorities have developed distinctive policies concerning local models of selection and admission with diverse possibilities to exercise parental choice.

Our aim is to discuss the ways in which social class interwines with parental values towards universal and selective features of comprehensive school within the political, social and educational context of Finland. Based on our previous studies we are especially focusing on 1) the changing emphasis on equality of opportunities, and 2) the new cleavages within social classes, in relation to school choice. We describe classed educational strategies by combining our empirical
findings of school choice, attitudes towards comprehensive school system and social class (based on family survey, conducted in 5 Finnish cities, n=2617).

Our interpretation is that the lower classes are relatively excluded from the Finnish version of school choice, which grounds on aptitude tests, and urge for more open enrolment in general. Whereas middle classes on one hand, more commonly exercise parental choice in practice, and, on the other hand, are more aware of the segregative effects of free parental choice. Nevertheless, new cleavages, based on occupational status within the middle class have emerged with different emphases on freedom to choose and universal education system.

In the present paper the effects of the Greek economic crisis to the Greek society are comparatively scrutinized with concentration on both male and female access to the labor market. In particular, the issues under investigation throughout 2008-2013 are: a) the unemployment percentage both of men and women, b) men and women part-time employment and c) the correlation between studies and labor. Besides, the variable of gender is studied in combination and in relation to age and years of studies.

Through quantitative researches an evaluation is pursued whether education about gender equality, being the aim of the educational policy, was productive; in other words, whether a differentiation based on gender was statistically significant. Additionally, the years of studies are correlated with unemployment or part-time employment of men and women so that the question whether the prolonged education is conducive to the reinforcement of gender equality is investigated, resulting in the same access possibilities to labor market both by equally qualified male and female subjects.

The economic crisis is regarded by the present paper as a testing phase for the educational policy implemented towards gender equality. It is estimated that in this ordeal with a limited number of working positions and the reorganization of the labor market the evidence will be apparent. In this respect the years of studies are correlated with unemployment or part-time employment of men and women and the correlation between studies and labor is examined.

The variable of gender is studied in combination and in relation to age and years of studies.

From the Educational Policy about Gender Equality to Its Testing in the Labor Market during the Greek Economic Crisis

The Nordic countries are about to open their eyes for that employees in all sort of workplaces is an important untapped potential of resources for innovation. But many politicians, bureaucrats and top managers lacks the understanding of what it is and how to do it.

During the last decades the technological paradox has influenced industry and innovation policies. Succeeding innovation strategies seems to base the rather one sided notion that essential ideas occur in laboratories and research departments. However a paradox shift is in the process of getting approval. Major social challenges, rather than more dispersed product priorities, have become evident, also in EU and OECD policies. The value of holistic approaches to innovation is emphasized, rather than a purely scientific and technological focus. And the importance of innovation in services, production and work processes is lifted up.

This happens at the same time as the general level of education are rising, and businesses are hiring more people with skills to see and understand the wider contexts and to participate in resolving complex issues. As part of the Nordic countries adapted the concept of “employee-driven innovation” in their policies. This implies a recognition that the vast majority can and should contribute to innovation. Individuals represent a significant source of insight and problem solving, whether they work in a development device or have operating tasks. Experience shows that broad involvement of local shop stewards and staff in innovation processes has positive economic effects, but also provides benefits in terms of improved job satisfaction, further education and reduced absenteeism.

In this way this development has been promoted by the Norwegian Confederation of Trade Unions. A paper will address Norwegian EDI challenges and experiences based on the Nordic work life model.

Churches and Religious-Secular Interaction in Welfare in Croatia and Finland

The welfare state reforms have changed the position of actors and put cooperation between public and private stakeholders in Europe on the agenda. In this situation, the Churches are also taken more seriously as partners of welfare services and they have an opportunity to expand their activities on the secular sphere. At the same time, the question regarding the position of the religious in the interaction must be taken account. Growing religious-secular interaction seems to be a different position than the religious institutions had during the modernization process. Thus, the situation differs also theoretically from the classical views of secularization: both differentiation and dedifferentiation are equally relevant viewpoints for the analysis. In the context of predominantly Lutheran and Catholic countries, which are analyzed in this paper, the interaction may also support the impact of the religious on the secular domain.

The paper focuses on the role of Churches in the welfare sector in Croatia and Finland. It presents results regarding the local-level interaction between secular and religious organizations in the field of the welfare sector. The data includes the interviews of secular public sector and the social work of the Churches gathered in 2013 in three regions in Finland and Croatia. On the basis of the empirical work and background analysis the paper demonstrates the multifaceted reality of interactions between religious and secular institutions and discusses theoretical consequences of changing ways of interaction in different social and religious contexts.

Disentangling Greek Xenophobia during Recession

In the recent recession, the most severe one since the Great Depression, Greece has been considered the Achilles heel of Eurozone’s economies. Since 2008 the country has experienced an economic turmoil as well as an unprecedented social and political collapse. Due to the devastating economic conditions, the growth in xenophobia and racist rhetoric has grown more and more strongly oriented towards a policy of reinforcing gender equality along with a broader policy about equality conducive to the unification of vindication structures.

The evidence will be apparent. In this respect the years of studies are correlated with unemployment or part-time employment of men and women and the correlation between studies and labor is examined.

The variable of gender is studied in combination and in relation to age and years of studies.

Kalogeraki, Stefania* (University of Crete, s.kalogeraki@gmail.com)

Unveiling Correlates of “Don’t Know” Responses in the Left-Right Scale

Europe's current economic crisis has spread to the political sphere and escalated populist tendencies and nationalist politics. Specifically in indebted member-states the political crisis is echoed in citizens' skepticism about an uncorrupted political system and widespread perceptions that political parties are no longer ideological oriented, but rather populist, personalistic and clientelic. In a period of socio-political bewilderment, the division of traditional patterns of individual's ideological orientation towards political parties has become more ambiguous. In empirical research a classical measure to operationalize political orientations is the left-right scale. The Don't Know (DK) responses in the specific scale are usually treated similarly with “Refusal” or “No Answer” and interpreted as individuals' cognitive inability in the left-right self-placement; hence excluded from analysis. However, in the present study the DK responses in the
left-right scale become the core of investigation. During an era of economic and political crisis, DK responses may reflect individuals’ perceptions of weakening of democratic institutions, their distrust in political parties to revive the economic growth, their condemnation of the political system and their focus on alternative forms of governing to confront the socio-economic woes. Using data from the European Social Survey (ESS) in 18 European countries, the paper investigates the changes in DK responses in the left-right scale before and during the economic crisis. The analyses unearth specific patterns of DK responses whereas the greatest changes are detected in two countries severely affected by the recession, i.e. Greece and Spain. Multinomial logistic regression analyses unveil the differential impacts of political and civic participation, trust in democratic institutions and political parties in elucidating DK responses in respondents’ left-right orientation during a period of economic downturn and political turmoil.

Medical Marijuana Laws and Substance Induced Deaths: Evidence from the U.S.

This paper explores the relationship between medical marijuana laws and substance induced deaths. The relationship between marijuana and alcohol empirically remains unclear; one strand of the literature shows the substitute relationship while another reveals the complementary relationship. In a similar vein, gateway drug hypothesis (i.e., marijuana consumption results in more harmful drug use) has been subject to empirical analyses, and yet proponents and opponents of the hypothesis have been often unclear about what policy it entails. That is, it is argued that a policy aims to reduce the risk of exposure to marijuana in order to prevent the use of other illicit drugs. On the other hand, one would claim that the problem lies in the nature of the illicit drug market where marijuana and other illicit drugs are simultaneously provided and supplied. Using state level data, the paper enters for the first time, legal data in addition to other data sources (1990-2010), I estimate the effects of medical marijuana laws on alcohol-induced deaths and cocaine-induced deaths. Empirical results show that medical marijuana laws result in an increase in alcohol-induced deaths, suggesting that there is a complementary relationship between marijuana and alcohol. In contrast, medical marijuana can only be supplied in an informal/illicit market. It is therefore suggested that if such drug related policies change the way drug markets function and results in drug market separation, illicit drug induced deaths can be reduced.

Attitudes Toward Non-Normative Sexualities Among University Students in Japan: Quantitative Analysis (Part 2)

Following the presentation by Kazama, et al., we will present the results of a preliminary analysis of attitudes toward homosexuality, transgenderism and other non-normative sexualities among university students in Japan, focusing on the mechanisms through which gender, other attributes and personal experiences might shape their attitudes. A definite and sizable body of literature on attitudes toward LGBT issues has been accumulated in the Euro-American context. Such studies are limited, however, in Asian countries. This paper is informative ethnographic studies on the themes in several Asian societies, and yet, without the data based on large-scale surveys, it is difficult to comprehend the environment in which people live or to reveal how non-normative sexualities are situated. As the first step toward filling such a gap, we conducted a survey at three private universities in 2012 and 2013. The questionnaire includes knowledge and awareness of, as well as attitudes toward sexual minorities (discomfort, judgment, perception of what is “normal”) and also experiences of contact, including personal, media, educational, of such people/issues. A preliminary analysis of the data of more than 700 cases shows that in many of the attributes students show more liberal attitudes compared to their male counterparts. Personally knowing someone who is homosexual and/or transsexual also tends to make one more accepting of variant sexualities compared to students who do not have such connections. In the presentation, we will provide a comprehensive picture based on further analysis of the data, including how such attitudes relate to attitudes toward other issues, such as gender, family and nationalism. We hope to draw implications on how heteronormativity, homophobia, sexism and binary thinking of men and women constitute the experiences of young generation in the Japanese context.

Changes in Family Forms in Japan: Analyses of Subjective Definitions

In order to understand the changes in family pattern, it is crucial to look at how individuals understand and define the family subjectively. In this paper, I will examine the changes in the subjective boundary of the family among Japanese, namely, who among kin are normatively considered as members of the family. The preliminary analyses of the 1st (1993) to the 4th (2008) National Family Survey of Japan conducted among married women by the National Institute of Population and Social Security Research show that there is an expanding trend of the normative boundaries. In other words, more and more types of kin are considered to be one’s “family member”. For example, the proportion responding that a “married daughter” is generally considered as one’s family member regardless of whether or not they live together increased from 35% in 1993 to 66.2% in 2008. The analyses also show that the defined boundaries vary by age, education, employment status, household size and its composition, and geographic region.

In the paper, I will further examine how the subjective family boundaries relate to their attitudes toward various family forms and ways of living, such as attitudes toward taking care of aged parents, aged couples living with their children, marriage not having children, and marriage of young children who stay home. I will also compare these results based on individual level data with the macro-level data on family structure to explore possible mutual relationships behind the changes in family pattern.

Effects of the Great East Japan Earthquake on Subjective Well-Being

We study changes in Japanese people’s subjective well-being (happiness) and feelings of altruism before and after the Great East Japan Earthquake of March 2011. We use a panel data set compiled by a group of researchers mainly from Keio University. Although the questionnaire is large, we focus on a question about people’s altruism. We are interested in altruism because, according to a Japanese Statistics Bureau report on expenditure by Japanese households, charitable donations increased by over 850 percent in March 2011 compared to one year earlier. Using this large panel survey consisting of responses from over 4000 households all over Japan, we found that many Japanese people reported more feelings of altruism following the earthquake, even in the most affected areas; this is consistent with the rise in charitable giving. We also found that a large number of people reported an increase in happiness after the earthquake, in fact, as the number who reported a drop in happiness. An interpretation of this finding is suggested by a recent experiment by Dunn et al., who find that spending money on others promotes happiness; according to this story, many Japanese people became more altruistic after the earthquake, inducing them to make charitable donations, which in turn made them happier. We are interested in seeing how changes in altruism affect changes in happiness. However, both variables are subjective, so their measurement errors are likely to be correlated. Therefore, we use a two-stage procedure, first identifying the effect of altruism on an objective variable, charitable giving, and then measuring the effect of charitable giving on happiness. In each step of the analysis, we run a two-stage logit regression, which controls for reverse causality. This analysis, which deals effectively with the aforementioned problem of correlated measurement errors, yields results that are consistent with our story.
students to lean the everyday lives of rural Japan, and also to take a leadership role of university in revitalizing the rural communities. This paper explores the reason why Kanazawa University set up this project, and show to what extent this project goal has achieved its initial goal.

In 2004, central government enacted the low to reform the national universities to quality assurance. Thereafter, many national universities including Kanazawa University set up the charters. In Kanazawa University Charter, social contribution is declared as one of the principal missions of the university. Kanazawa University has established Center for Regional Collaboration in 2002. “Matsuri Project” started in 2010 as one of the University’s social contribution activities. Over one hundred of overseas and Japanese students joined the project every year. During the summer, almost every village in Noto region held traditional summer festival, called “Kiriko festival”. Within the last decade, due to aging and depopulation, many villages are now faced with manpower shortage to maintain the villages. Young students are pleased to join the festival and walk around with shouldering heavy Kiriko with village people. Before the festival began, gorgeous dinner are sometimes served to students.

For the students, joining Kiriko tour is a good chance to go inside the village and to talk with local people. Planned and arranged by university staff, overseas students can experience the actual lives of rural villagers. So far “Matsuri Project” has weak relationship with student education and academic research by faculty members, local people well acknowledges the leadership of the university for revitalizing the rural communities.

初始地主: System: Explanation Using Game Theory

Stabilization of the World Due to the Expansion of a Western State System: Explanation Using Game Theory

Initially, in a path-dependent manner, the world heads for an equilibrium that includes “dependencies that do not resist oppressive sovereignties.” During this period, empires vie for supremacy. Subsequently, global political discourse requires sovereignties to comply with a “commitment” to non-oppressiveness. The world then heads for a subgame perfect equilibrium in which “sovereignties do not oppress from dependencies." Thus, when the sovereign authority of many countries becomes established, “cooperation” will be selected in the repeated N-person dilemma game, resulting in a more stabilized global society. The term “institution” referred to by institutionalists can be understood as “commitment” or “equilibrium” in the game theory.

Examining the Structure of Happiness and Life Satisfaction in Japan Utilizing a Large Scale National Survey

Using data from “The Study on the Quality of Life” collected by the Cabinet Office in March 2012, we examined the structures and factors affecting the happiness and general life satisfaction among Japanese.

Both measures are calculated with single questions, and the mean score for happiness (6.64 for the scale of 0-10) is higher than life satisfaction (5.98). Of all satisfactions with various aspects of our life (e.g. housing, childcare, healthcare, etc.), the satisfaction with family is most strongly related to happiness and life satisfaction except for the satisfaction with work to life satisfaction among males.

Multiple regression analyses indicate that the respondent’s age shows a U-shaped effect on the life satisfaction (lowest at age 40 through 50). The happiness is positively affected by the respondent’s education and being married, both of which seem to indicate more psychological, internal state of our life.

We also took an exploratory approach and regressed both variables on various psychological, attitudinal variables. We found that our happiness was more strongly related to the happiness of family members than any others including own life satisfaction. Other factors related to happiness but not life satisfaction include tolerance, peace of mind, tenderness, and feeling accomplishment often, which all indicate autonomous and psychological fulfillment, somewhat similar to the concept of Eudaimonie in Greek philosophy.

On the other hand, factors related to satisfaction but not happiness include doing as well people around myself, feeling appreciated by others, feeling confident that I am as successful as others, and often thinking of myself first, which all indicate utilitarian and competitive drives.

The present study is based on one of the first and most comprehensive data sets on subjective well-being in Japan with a national sample. As such, it offers a contemporary and comprehensive overview of subjective well-being in Japan.

Domestic Division of Labour and Marital Satisfaction in China

This paper analyses data of the Chinese Women's Status Survey 2000, a national-level survey in China, to examine the association between household participation and marital satisfaction in urban and rural families. Married women's housework time is 2.8 times that of married men. Yet their level of marital satisfaction is on a par with men's. We hypothesize that this is partly due to gender difference in the preference about domestic roles versus work roles. We first test if household time formed as a resource allocation between marriage and marital satisfaction for women than for men (i.e. Do women dislike housework less than men?). We also test if work time has a stronger negative relationship with women's level of satisfaction than men's (i.e. Do women dislike paid work more than men?). Furthermore, we test whether elderly parents' help in housework merely alleviate women's domestic burden rather than men's. We find supportive findings for these hypotheses in our preliminary analyses. We will employ Structural Equation Modelling to investigate the patterns of associations among different forms of marital satisfaction (including satisfaction with the domestic division of labour, satisfaction with marital life, and satisfaction with the family). The domestic division of labour and co-residence living arrangement with elderly parents.

What Kind of Trust Do We Measure Using the Generalized Trust Question?: An Approach Based on Latent Class Model

Despite the importance in social capital research, empirical studies on generalized trust show inconsistent results. For example, trust studies have not shown clear results with respect to the relationship between group participation and respondents' level of generalized trust (Nannestad 2008). This study shows that a part of inconsistency is due to the measurement of generalized trust. Generalized trust is measured by such questions as "Generally speaking, would you say that most people can be trusted, or that you can't be too careful in dealing with people?" This kind of question is employed in major social surveys such as World Values Survey (WVS). This study hypothesizes that respondents think some different kinds of trust when they answer the generalize trust question. This study extracts heterogeneity of trust respondents think by latent class analysis (McCutcheon 1987), using Japanese dataset (Social Survey of Residents' Networks and Health). As a result, this study extracts four types of trustors; (a) active trustors (27.6%), who show higher levels of generalized trust and participate all kinds of social groups, (b) inactive trustors (31.3%), who show higher levels of generalized trust but do not participate any kinds of social groups, (c) parochial trustors (19.6%), who show higher levels of generalized trust but participate local groups only, and (d) distrustor (21.4%), who show lower levels of generalized trust and do not participate any kind of social group. This result shows that respondents think four different kinds of trust when they answer the generalize trust question. Inconsistent results in previous studies may be caused by the difference of group participation between high trustors.

Urban Cultural Strategy and Japanese Animation in Nerima

Culture is now implemented for urban economic development in many advanced countries. Urban cultural strategy, trying to attract investment and human capital, became popular in Western cities from 1980s. At that time, former industrial cities suffered from economic decline. In contrast, Japanese cities had enjoyed economic prosperity because of industrial growth, especially the R&D and hi-tech industry. But from mid 1990s most Japanese cities, including Tokyo, began to gradually lose the industrial base because new international division of labor had deepened. So new plans for economic development were needed in Japanese cities around the end of the 1990s and culture became to be recognized as a resource for urban competitiveness. In this presentation, I will show detailed case of Nerima ward, Tokyo. Because many animation companies in Nerima ward, the local government is encouraging animation industries and trying to reconstruct Nerima's image as Anime Town. It is based on a partnership with Nerima Animation Association, the trade association of anime companies in Nerima. In order to explain how and why this partnership is formed and policy measures are implemented. Therefore, it is needed to focus on the flow of event that affects the recent situation. It is shown that a civil group that aims to construct a museum for Japanese animation and chamber of commerce played major role to prepare institutional base for recent policies from the mid-1990s. Although they cooperated to lobby for public supports for animation and achieve significant results, they dissolved their partnership. I point there is a tension between culture and commerce. It affects policy formation and inter-organizational relationship in Nerima.

Policies of Correcting the Physician's Geographical Uneven Distribution in Japan

Japan has adopted the universal health care insurance system since 1961. It means that the government has to guarantee the access to health resources to
the insured living everywhere in Japan. The other hand, Japanese physicians can practice medicine at their favorite place within Japan. This system has continued traditionally from the 19th century. Therefore, the government has not been able to adopt any policy to directly regulate the practice place of physicians. This presentation examines how the geographical distribution of physicians has changed in Japan under these circumstances. Concretely, it analyzes how the policies after the 1960s, namely the increase of medical schools in the 1970s, the regulation of hospital beds since the 1990s, the new clinical training system in the 2000s, have influenced the geographical distribution of physicians, and shows that the physician's geographical uneven distribution has decreased.

The Transition to Parenthood As Experienced By New Fathers
The Transition to Parenthood As Experienced By New Fathers
Abstract
While many studies have explored the transition to motherhood, literature on the transition to fatherhood remains scarce. This qualitative study sought to broaden the knowledge on the transition to fatherhood by analyzing the experiences of fathers to first children aged one year and under. Looking at how they cope with the challenges presented by their transition to fatherhood.

Data was collected during an unstructured group interview held in a focus group of 9 married men in Israel. The study findings reveal that, contrary to common gender stereotypes, men were mostly concerned about emotional issues, and not instrumental ones, emphasizing the need for emotional support.

Four main themes were raised during the men's discussion, with which they were required to cope in their transition to fatherhood: new insights about the meaning of love in their relationships with their spouses and the changes it undergoes; feeling as men; the need to adapt to new circumstances and changes in their relationship with their spouses; a sense of delay in their emotional bonding with the child in comparison to their wives; and with the new paternal identity they must adopt; and finally their emotional need to have access to a "safe place", outside their relationship with their spouse and role of parent where they can share their experiences with other men and emerge stronger.

The study findings shed light on three areas where new fathers grapple with mixed feelings of discomfort, difficulty and vulnerability: the personal, the spousal and the parental. These findings indicate the importance of developing an intervention program for new fathers in which all three areas will be addressed.

International Organizations in a Global Social Inequality
Economic globalization caused the fast growth of market economy throughout the world. But it also caused the worsening of social differentiation and growth of social tension. The principle of free movement of capital maintained during the last three decades provoked a mass permutation of social-economic space.

National governments are in a permanent search for new models of economic growth, understanding that previous strategy of growth has lead to market's destabilization. International and regional organizations in this situation need to elaborate common rules, norms and values that can possibly lead the world or region out the the dangerous way of perpetual crisis. Many global actors, both national and international, agree that rules of the game must be changed, but this strategy faces a serious conservative opposition.

Current analysis is directed towards the reasons and consequences of the global social breakdown through the lens of three regions: European Union, Middle and Near East and Latin America. European Union, being the most powerful international organization in the world, is not only the example of wrong fiscal policies. Founder of the EU considered that the creation of the free trade zone and common currency would bring an end to monetary imbalance. But, on the contrary, it resulted in social imbalance and growing split between the states. The social and political disruption on the Middle and Near East is also caused primarily by national and supranational financial and economic imbalance between the rich Gulf countries and the rest. It, in turn, influences and strengthens the ethnic, religious and geopolitical contradictions. Latin America is rightfully considered by many today as one of the grand social laboratories. Successfully cooperating through regional organizations, national governments have managed to propose innovative social-liberal policies throughout the continent, renewing but not repeating the continental European economic policies of the 1960-70-ies.

From Theory of Social System to the Theory of Social Harbor
In the new post-industrial era, especially in the sense of ecological civilization, the concept of “society” in the end should be re-understand and re-define. The work is an urgent job. People in the past regarded “society” as a “complex system” and the intercourses, the understanding and studying work is based on the systems methodology to reveal its dynamics mechanisms. In fact, there exist an entirely demands to find a new set of concepts, categories and to establish a new theoretical framework for the sociology. In this paper, the concept of “Social harbor” or “Harbor society” is proposed to reveal the society to help people build a new comprehension or sense to security mechanism.

“Harbor” is an abstract concept from physical world; it can be used to study the problem that how humans can better cope with unpredictable or unavailable changes and bring a new sense of co-existence of social cooperation. Correspondingly, the concept such as “matrix”, “general climate” are important cornerstones. This research, using the sociological framework and methods has been developed based on the theory of social system and a new kind of insight or ideology which is beyond the concepts of systems and institutions can be established.

Understanding Science Revolution By a Trinity Model
Paradigm change is an ex post summary of Scientific Revolution. How to make out a specific Scientific Revolution is still an unsolved mystery. Philosophy, mathematics and science are trinity, logic is the real core. Logic is mined from mathe- matics using the methodology of philosophy thinking. In other words, logic is refined from philosophy based on the mathematical framework. When philosophy and mathematics integrated, logic generated. While under the guidance of logic, new sciences are formulated. In order to achieve trinity, transforming from engineering, art and design language to the philosophical language system based on practice’s completely significant. Why people all think that a solution is no doubt can be found for a problem? If the language system used when searching for the answer is the same with the language system used when formulating the problem, at no time the solution can be found. The only way to eliminate the problem is to completely and totally switch the way of practice’s thinking, which means to change the language system. Here, we stress the in-turn transfer of engineer language, philosophy language and

Do Social Networks and Sns Function As Social Capital for Social Engagement?

This paper examines what types of social networks are facilitated by online networking activities and function as social capital for social engagement in South Korea. East Asian Social Survey (EASS) Module in 2012 Korean General Social Survey (KGSS) provides measures for social networks and social engagement, whereas KGSS has a unique module for Internet/SNS activities. Analysis focuses on social eating/drinking and neighbors’ social support as social networks, local participation, voluntary activities, and political interests as social engagement, and the presence of internet and/or SNS activities as online networking. Analyses of 2012 KGSS and EASS Module observe that online networking activities facilitate social eating/drinking, but not neighbors’ social support. Correcting for possible bias by counterfactual analysis, it is SNS activities, not internet activities per se, that facilitate social eating/ drinking. It is also observed that both social eating/drinking and neighbors’ support function as social capital for both types of social engagements: local participation and voluntary activities. SNS activities do not directly affect those social engagements but promote political interests, whose effect is robust after counterfactual analysis. Concerning personality traits, more conscientious and open people engage in social matters more actively while less conscientious but more open people are more likely to use SNS. In summary, this paper finds that (1) both neighborhood-based strong ties and socially outsourcing weak ties encourage social engagements for local and public interests; (2) SNS activities mainly help social outreaches and promote political interests, but not actions yet; and (3) SNS activities have affinity with specific types of personality and exercise distinctive impacts on social networks and engagements beyond those of internet activities.

Kalpana Kannabiran: Tools of Justice: Non-Discrimination and the Indian Constitution

In the years since independence, the Indian subcontinent has witnessed an alarming rise in violence against marginalized communities, with an increasing number of groups pushed to (and outside) the margins of the democratic order. Against this background of violence, injustice and the abuse of rights, Tools of Justice: Non Discrimination and the Indian Constitution explores the critical, ‘insurgent’ possibilities of constitutionalism as a means of revitalising the concepts of non-discrimination and equality, and to develop legal mechanisms to challenge them.

What are the possibilities for a critical engagement with law in a context of perpetration of atrocities against communities and the flagrant denial of liberties to marginalized groups?

Building on previous work, the book attempts to return history and politics to constitutional hermeneutics, suggesting that interpretation is not the exclusive preserve of constitutional courts but, importantly, may be crafted by people’s movements in their exercise of a dispersed sovereignty. It attempts an intersectional approach to jurisprudence as a means of enabling the law to address the problem of discrimination along multiple intersecting axes. The argument is developed in the context of the various grounds of discrimination mentioned in the constitution -- caste, tribe, religious minorities, women, sexual minorities, and disability. The book attempts to bring together an understanding of the social history of resistance to oppression in its specific forms, and the constitutional articulation of non-discrimination.

The book plots the possibilities of popular constitutionalism and constitutional morality, inside and outside courts in an attempt to project these as the other, the mirror, in which the existing constitution must validate itself. The construction itself is not a fixed legal text, but a vision that shapes and is shaped by peoples through daily struggles and upheavals.

Measuring Community Resilience to Natural Disasters: Implications for Disaster Management and Reduction in Korea

Building a resilient community to disasters has become one of the main goals of disaster management to absorb and mitigate negative disaster impacts. More disaster resilient community often experiences less disaster impact and reduces long recovery periods after a disaster. In this paper, we present the methodology that we constructed a set of indicators to measure community’s disaster resilience (CDRI) in terms of human, social, economic, environmental, and physical factors. Moreover, this study develops a methodology to aggregate constructed disaster resilience index of local communities in Korea. 229 local municipalities are examined to measure the degree of community’s resilience to natural disasters. Geospatial Information System (GIS) is used to analyze and visualize spatial distribution of disaster resilience. Moreover, this study examined a relationship between the aggregated community disaster resilience index (CDRI) and disaster losses using a geographically weighted regression (GWR) method. Identifying the extent of community resilience to natural disasters would provide disaster management officials or decision-makers with strategic directions how to improve local communities’ resilience to natural disasters and to reduce the negative disaster impacts.

Violence, Cumulative Discrimination and Gendered Struggles for Justice

The unabated violence against women, sexual minorities, Dalits, minorities and indigenous communities in India, its resurgence even, resurfaces other debates on subjugation, repression and resistance struggles. There are layers of new meanings and forms and articulations of suffering and harm that grow over these older debates on inequality and discrimination that signal shifts in economic realities and legal (im)possibilities -- spreading the sense of imminent crisis. The (mis)appropriations of ideas of justice, by the state, by non-state actors and “the people”, drive new vectors of change at the intersection of law, governance and public debate. The emergence of a new common sense on the (co)habitations of gender based discrimination and the interrogation of the very construction of crisis itself -- “is this the worst that has happened?” -- are at the centre of the renewed imagination of justice.

This paper will use the events and debates around the Report of the Committee on Amendments in Criminal Law headed by Justice Verma that recommended wide ranging changes in the law on sexual assault to open out the possibilities that a Bill of Rights for Women holds for a different imagination of justice -- looking at the specific situation of women, but also at the ways in which larger questions of modernity, impunity, targeted assault, the existing recognition of “atrocity” in the law and state practice inform and are shaped by these debates.

What are the multiple locations and articulations of the law (or is it justice in the era of modernity?) -- within which the shifts in the debate need to be mapped? What are the aggravations in targeted assault that are consequential on rapid and escalating shifts in economic policy? And therefore how does state formation take place around the edifice of patriarchy?
This is a Man’s World: Changes in Disposable Income Predict Sex Ratio at Birth

The human sex ratio at birth (SRB) is long known to be relatively constant at around 105 boys per 100 girls. In recent studies evidence has been found that SRB might vary according to exposure to chemicals and socioeconomic conditions. SRB has also been declining after World War II in several industrial countries – a phenomenon that remains unexplained. Here we show that changes in disposable income are associated with birth sex ratios in OECD countries. Positive changes in disposable income are associated with higher proportion of male infants. We apply panel regressions to OECD data that spans the years 1971 to 2011 for 35 countries and UN fertility data in an unbalanced panel. Findings not only partly explain the rises and declines in the sex ratio in OECD countries, but also first time provides evidence of the influence of economic and social forces on SRB that can be even be seen in macro level analysis. This opens up radically new research directions in social sciences, where the emphasis on the biological factors has traditionally been on how biological determinants shape social life and in the interaction of the two, not on how social and economic determinants might affect biological facts such as the sex of an infant. This furthermore contributes to debates of gender equality. Our findings suggest that the equality of opportunity differs for genders as the sex ratio depends on the underlying economic conditions: men seem to be born into better economic conditions.

Deliberating Risk Governance: EMF Case in Taiwan

This paper contributes to ongoing discussions on democratizing expertise and building public capacities for deliberative / participatory risk governance of science and technology through an investigation of public participations in risk governance concerning the controversies of electromagnetic fields (EMF) in Taiwan. The author utilizes a qualitative approach, drawing from documentary data and data from two focus groups, as well as in-depth interviews with key actors in this controversy to critically investigate this Taiwan case. This paper reflects on the politics of expert authority permeating practices of public participation, employing insights from the sociology of scientific knowledge and STS, the author discovers that extensive tensions taking the form of contestation have arisen from discussing a common problem, such as accuracy of scientific literature translation, to what extent EMF exposure is acceptable, versus containing conflicts around how to define the problem under scientific uncertainty and complexity. In addition, the failure of expert authority reflection on their social value positions has played a key role to understand their less-than-successful defense in the citizen perspective. From this perspective, the author discusses some challenges for democratizing expertise in this Taiwan case and then provide suggestions for better public participation in EMF risk governance.
New Age, New Economy, New Middle Class: The Case of Jewish New Age in Israel

Albeit the extreme individualization of late modernity, social class still is important in all aspects of our life. Yet, class, as a social category, remains largely ignored in contemporary religious studies. Based on ethnographic data, this paper sets out to explore the central yet under-researched ways in which class sustains social, cultural, and religious distinctions. In particular, by focusing on New Religious Movements and on New Age spirituality, it aims to explicate how class is determining religious affiliations and practices.

Sociologists of religion have recently pointed to the fact that New Age has become part of the cultural repertoire of the new middle class. However, only rarely have they explored New Age as a leisure practice manifesting class-based tastes. Our paper examines the emergence of a New Ageois in the Jewish cultural-religious field in Israel, asking why has New Age Judaism become so appealing particularly to the burgeoning cosmopolitan post-materialist, secular new middle class.

Drawing on post-Bourdieuian cultural sociology, we start by describing the theological and experiential hybrid nature of Jewish New Age, and show how these elements were enthusiastically embraced by new middle class followers. We argue that by partaking in Jewish New Age communities, middle class new agers express and further accumulate high levels of omnivorous cultural capital. In line with recent work on cultural cosmopolitanization and class privilege, we conclude by claiming that in the Israeli context, high cultural capital is manifested, inter alia and rather surprisingly, in the ability to re-appropriate local religious forms, and to cosmopolitanize them via New Age culture.

Career VS Children: The Effects of Institutional Background on Females' Subjective Well-Being Across Europe

The paper deals with life satisfaction and happiness among women in European countries. The research question is to disclose in which countries (with more liberal or strict labour market legislation) females are more happy to have kids, or to combine children with employment. The author claims that women living in the countries with more liberal labour laws and open labour markets are happier to have children and combine their work with childcare than those women who have to re-enter labour market in the countries with very rigid labour legislation. The hypothesis is tested with the help of the European Value Study dataset for 2008 year, including 28 countries. The results of multilevel regression analyses proved that both assumptions and shown that females are happier in those countries with family oriented labour legislations and at the same time where it is easy to find a new job, means lebral labour markets. In the countries with high rates of employment protection legislation females are more happy with jobs than with combining motherhood and employment. Conditional effects of multilevel regression of the results in a more detailed way. The paper could have important implications for social policy in European countries.

Normalcy after Stroke: Spousal Caregiving and Management of Uncertainties

Stroke is usually characterised by sudden onset, and what follows may be a fluctuating and long-term recovery trajectory marked by uncertainties. In particular, which is commonly considered a disease of old age, may pose various risks and uncertainties in the life course and biography of working age patients and their carers, who are often spouses. While chronic illnesses such as stroke have been widely conceptualised as ‘biographical disruption’ (Bury, 1982) for both patients and carers, this notion has also been contested on the basis that not all chronic illness can be seen exclusively as ‘disruption’. In this paper, I explore experiences of spousal carers of people who have had a stroke whilst in their working age (25-55). Drawing on qualitative data collected through 17 ethnographic in-depth interviews with spousal carers in Victoria, Australia, this paper demonstrates that their responses to stroke and the caregiving role vary across different social positions and contexts. Some participants were striving to regain a sense of normalcy, others somewhat reluctantly accepted the ‘new normal’, while yet others embraced the ‘new normal’. Departing from conceptualising carers as agentively mobilising resources and navigating a biographically uncertain trajectory in an attempt to regain normalcy, I argue that their responses are better understood as a course of action enacted by a network of individual, medical and healthcare, social, and political actors. In this respect, I suggest that responsibility as necessarily distributed, and challenge the increasingly common construction in policy and healthcare settings of informal carers as choice-making service users. By doing so, this paper seeks to generate a basis on which service providers, healthcare practitioners, policy makers and members of the wider society can engage in a constructive and critical discussion towards creating a ‘caring society’.

KARATSAI, SAHAN SAVAS* (Johns Hopkins University, skarata1@jhu.edu)

Financialization, Crises and the Changes in the Global Income Inequality, 1820-2010
This paper discusses the global income inequality and stratification of the world economy from 1820 to 2012 with a focus on the transformations that take place during periods of financialization and hegemonic transitions. We argue that in periods of financial expansion and hegemonic transitions, intensification of economic crises, inter-state competition and emergence of new developmental strategies transform existing structures of world-income hierarchy. Hence, historical development of world income hierarchy and between-income inequalities cannot be explained merely by the orthodox interpretations of the modernization, dependency and world-systems theories. Through a combination of quantitative and historical-comparative analysis, we discuss the continuities and ruptures observed in patterns of global income inequality in reference to existing theoretical frameworks provided by modernization, dependency and world-systems theories. Our analysis suggests that (1) global income inequality moved from a bimodal to trimodal distribution during the British-led financial expansion period and (2) this transformation has been going through another transformation in the contemporary era of financialization. By analyzing the transformation of the global income inequality from 1820 to 2012, changes in the position of individual states/regions within global income hierarchy across time, and conducting a historical-comparative analysis of both periods of financialization, we discuss the prospects and limits of the existing theoretical-conceptual frameworks. Our analysis (1) highlights the transformative role of systemic crises, inter-state rivalries and emergence of alternative “developmental” patterns during periods of financialization and hegemonic crisis, and (2) calls for a new conceptual theoretical framework for explaining dynamics of global income inequality which pays equal attention to continuities and ruptures.

Gezi Uprising in a Macro-Comparative Perspective

This paper examines the class structure of the 2013 Gezi uprising in Turkey in comparison with the 2011 wave of global social unrest. Although the Occupy-type movements that took place primarily in North America and Europe were important segments of the movements which created the 2011 wave of social unrest, they were not the only form of protest. For instance, the cluster of movements known as the “Arab Spring”, or worker struggles in new zones of global production in South, Southeast and East Asia were also parts of the 2011 wave of unrest. Many studies which discuss the class composition of the 2011 revolutions, however, often rely on single structural approaches to the temporal flows of North American and European protests. Arguing that single analytical models will fail to address the complexity of the contemporary wave of social unrest, in this paper we discuss the class composition and social base of the 2013 Gezi uprising in Turkey in comparison with different segments of the 2011 wave of global social protest. In the first half of our paper, based on a database of newspaper reports and social protests from 1990 to 2012, we provide a global survey of the class structures of movements which constituted the 2011 wave of social unrest. In the second part of the paper, we discuss the class structure of 2013 Gezi uprising in respect to discussion of diverse class compositions of social protests across the world. Finally, the cluster of movements known as the “Arab Spring”, or worker struggles in new zones of global production in South, Southeast and East Asia were also parts of the 2011 wave of unrest. Many studies which discuss the class composition of the 2011 revolutions, however, often rely on single structural approaches to the temporal flows of North American and European protests. Conceptualising Re-Migration: The Case of Post-Soviet Nanoscience Émigrés

This paper examines patterns of the outward migration of nanoscientists from the countries of the former Soviet Union during the period 1989-1994 yrs. This period of scientific migration is characterised by its mass character, very limited return rates, and peculiar patterns of diaspora distribution. The paper will focus on the latter.

It is argued that the numbers of emigrating scientists reached as much as 10 000 people leaving in 1993. (Gokhberg and Nekipelova, 2002) And whereas the primary destinations for emigration included Germany, Israel, the USA and Greece (top-4 in 1992-93), the final destinations featured the USA, Germany, and (2) this tri-modal distribution has been going through another transformation during periods of financialization and hegemonic crisis, and (2) calls for a new conceptual theoretical framework for explaining dynamics of global income inequality which pays equal attention to continuities and ruptures.

The Discursive Competition Between Very Different Counter-Hegemonies: Neo-Nationalism Vs. “Subaltern Counterpublics”

This paper draws on a decade of research on the politics of national identity and ethnicity in contemporary Austria. Employing a critical discourse analytical approach, it argues that in our current phase of globalisation and in the context of the EU as the “quintessential network state” (Castells, 2000), the dimensions and meanings of counter-hegemony vary according to the political context and geographical scale being considered. Based on an analysis of diverse media materials, public debates and civil society organizations in Austria today, two very different forms of counter-hegemony are discerned: First, neo-nationalism as self-defining resistance against “transnational flows” and external threats; second, the “identities, interests and needs” articulated by groups of migrants and other subordinated groups in what Nancy Fraser (1993) terms “subaltern counterpublics”.

The discourse analysis of relevant data offered here revolves around the key-concepts of the topos – or “structure of argument” (Reisigl and Wodak 2001) – and deixis, or “rhetorical pointing” (Billig 1995) effecting the (re)production of social boundaries. The central argument being developed is as follows: Key to conceptualizing the defining differences between neo-nationalism and subaltern counterpublics is Michel de Certeau’s distinction (1984) between “strategies” and “tactics”. While the former define neo-nationalist discourses being articulated from an “institutional power base”, “tactics” are typically encountered among the subaltern who do not control such spaces of power and nonetheless manage to temporarily and discursively slip through the “webs of power” that surround and constrain them.

Poetics, Politics, and Possibilities: Visualizing Our Humanity

At the turn of the 21st century, sociologist Robert Putnam warned that bedrock of community–our social connections to each other were disintegrating and leaving our lives and communities impoverished. He found that we were losing touch with our humanity, our sense of belonging, and our ability to care about, and be cared for, by others. Since this alarm was sounded there has been an explosion of research into the neurological basis of social connections. In this quest, scientists have focused on the role of emotions, especially empathy, in moral and societal knowledge. This research into the workings of oxytocin, mirror neurons, and social cognition may also offer a means to understand the enduring power of photography to evoke an emotional response. Moreover, it offers interesting interpretations as to why viewers respond so strongly to some images and not to others. As visual scholars, these findings can also point to possibilities for more self-aware image making in our visual methods. Photography can be a transformative act for the image maker, the viewer and the community. As a medium of communication and connection, images rely on empathic impulses to go beyond social differences and engender understanding. Empathy may be in the eye of the beholder but it can also be at the heart of the photographic act. The camera, like Janus, looks both ways offering a glimpse of the maker as well as the subject. In this way, every image can be seen as a self portrait, reflecting the values and vanities of the photographer. If the neurological research is sound, empathic photographers will create images more likely to resonate strongly with others, thus re-engage those lost social connections – one compelling image at a time.
Facebook as the most widely used social media site in the world has lead the way in using interface technologies to shape user behavior by turning online interaction into algorithms that engineer specific kinds of performances and render others invisible. Like Foucault’s Panoptican, the Facebook Gaze is deployed through the architecture of the site itself. Facebook has created an online space that allows users to enter their information into generic templates which make managing and mining large amounts of data easier but constrains the users participation to those things allowed by the template. Creating a uniform normativity through the technical structuring of a way of being, users must adjust their behavior accordingly in order to participate. Edgelfank, Facebook’s algorithm for structuring the flow and visibility of information and communication, further disciplines user behavior by through the threat of invisibility (Bucher 2012). Photography plays a key role in social media identity staging and interaction as images are a prime means of increasing your Edgelfrank score. Similar to the hermeneutic circle allows users to gaze (Urry 1990) which disciplines performative travel. Photography, this same dynamic is at work on Facebook as users learn to construct images that echo those shared and positively received by others. Images that generate a large number of responses provide a model for expected and accepted contributions. Neuroscientists have also found that receiving ‘likes’ activates the reward center in the brain and these approval responses predict future Facebook use (Mehi et al. 2013). This informal, but immediate, feedback lets the individual know how well their performances are being received and assists them perfecting and refining their presentation to remain visible and included in this new form of society.

Job Is Not Everything. The Case of Return Migration from the UK to Poland in the Wake of the 2008 Economic Crisis

The human capital approach, which is dominant in the EU migration policy, suggests that migratory experience and resources are likely to improve returnees’ competitiveness and foster their successful adaptation on the home country labour market. Based on the analysis of the return migration from the UK to Poland in the context of the economic crisis in 2008, this paper critically examines this assumption.

It is estimated that within 8 years after the EU enlargement in 2004 about 0.7 million Poles went to work in the United Kingdom. At the same time it is suggested that about 250 thousand Polish immigrants in Britain decided to come back to their home country. The financial crisis did not significantly influence the number of return migrants. It rather slowed down the new emigration and those who stayed in the UK employed wait-and-see strategy (Barcevičius et al.). The quantitative data on Polish returnees (Bieńkowska et al.) suggest that return migrants are more likely than the non-migrants to be unemployed (especially women). Significant data on Polish returnees (Bieńkowska et al.) suggest that return migrants are more likely than the non-migrants to be unemployed (especially women).

Simultaneously, they are much more likely to run their own business and work as a self-employed.

Addressing this apparent contradiction, this paper makes use of qualitative research to understand the conditions and process of successful and unsuccessful reintegration on the home country labour market. Based on the analysis of biographical narratives with the Polish return migrants from the UK to the Lower Silesia region in Poland, we examine the process of labour market reintegration as a result of the interplay of subjective and structural factors mediated by earlier biographical experiences. In the paper, the tentative results of an ongoing empirical study will be presented along with a theoretical discussion on the limits of human capital approach in understanding return migration.

Cooperation Between Strangers of Unequal Status

Recent studies of trust and cooperation in social dilemma situations focus on explaining how social identity processes - triggered by differentiation based on a nominal characteristic – affect cooperative behaviors among strangers. Few studies, however, predict and explain whether and how much cooperation occurs among strangers who vary by characteristics that have status value attached – i.e., characteristics that cause actors possessing one state of a given characteristic to be perceived as more worthy than actors possessing another state of that same characteristic. Even studies that incorporate the status hierarchies’ effects into social dilemma models focus on groups’ effectiveness in producing collective goods, rather than on the simplest trust-game type interactions. This might be defensible insofar as game theory predicts that status differences will have no effect on cooperation among strangers. Our paper takes a different approach: Using status characteristics theory, we predict that in a prisoner’s dilemma (PD) where actors are differentiated by salient status characteristics, the rate of cooperation will vary by the partner’s status relative to that of the focal actor, as well as by whether it is a simultaneous or sequential game. We report experimental results from a one-shot, two-person PD, before which subject pairs worked on tasks intended to manipulate the status of subject and partner. We test the following hypotheses: (1) in a sequential PD, if actors are differentiated by salient status, the rate of cooperation is higher when the low-status actor initiates the game than when the high-status actor does so; (2) regardless of the nature of the game, the cooperation rate among high-status actors is higher than that among low-status actors; and (3) in simultaneous PDs, the level of cooperation among status differentiated actors is at the same level as it would were they both high-status partners.

Contemporary Capitalism As an Economics of Seduction: Ethics and Justice Defined By an Aesthetic Principle of Pleasure

In neoliberal society, aesthetic seduction has become an important operator in economics. Commodities are successful only if they lure consumers. From an economics oriented towards practical and functional needs, there’s a shift to multiplied fields of aesthetic productions. Aesthetic refinement has become the inner rationality and power element of neoliberal or post-neoliberal society.

Are we searching for the cultural logic of neoliberalism - we must take seduction, the aesthetic powers of attraction, seriously. In this paper I will argue that the long-term commodification process has not only written the aesthetic principle of pleasure under producers’ and consumers’ skin but it might also be seen in ethical standards or even in legal proceedings. What it means to human culture and basic question of equality if ethics and justice are understood under market-based terms and values?

Gerhard Schulze has discussed of “the experience society”, and Pine and Gilmore in their business theory of “the experience economy”. Consumers are known to find experiences and emotions through services and commodities, but this theory could be developed forwards, by activating mental concepts, like experience or emotion, with more primal bodily connections and conceptualizations. Zygmunt Bauman has moved into this direction, by speaking of “the aesthetic consumption”, and of consumers as divided into the seduced and the repressed. Are we searching for the cultural logic of neoliberalism - we must take seduction, the aesthetic powers of attraction, seriously.

PAPADOPOULOS, APOSTOLOS G. (Harokopio University)

'So Close and Yet so Far Away': Migrants and Nationals in Greek Agriculture before and after the Economic Crisis

In Greece the structure of rural society has changed profoundly since the 1960s-Rural exodus and consequent demographic ageing, restructuring towards more intensive seasonal farming and social rejection of wage labour in agriculture living in rural areas created labour deficits.

The arrival of international migrants following the collapse of the neighbouring socialist regimes in Albania, Bulgaria and Romania meant new opportunities for the struggling Greek agriculture. The mass vulnerability of flexible, cheap wage labour gave agriculture and rural areas an impetus of development and demographic regeneration.

The employment of these migrants was rather complementary than antagonistic to family labour often freeing family members to undertake other jobs outside agriculture and rural areas. The segmentation of labour markets between the informal and formal implied their smooth operation for the 'benefit' of both populations.

However, the economic crisis variously affected the situation and the convergence of the labour markets. The crisis was now expected to bring closer the informal and the formal labour markets leading to a stronger competition for the same jobs the two populations.

Drawing from research material collected in a rural area where the intensive cultivation of strawberries was concentrated, the paper analyses labour relations and living conditions developed between oldcomer and newcomer migrant workers in the region of Elia in western Peloponess.

The cultivation of strawberries is a typical example of an export driven industrial product while the employment of international migrant labour reflects the externalisation of reproduction costs and the demand led character of the labour market. It bears evidence therefore that control over labour costs and labour relations is a critical issue for the competitiveness of the product. Thus, ethnicity, exploitation, racism production relations, irregularity of residence status and arduous working and living conditions are examined in the paper as part of this production model.

Sea level rise is one of the most critical climate change impacts that could exacerbate shoreline erosion, storm surge and flooding. As it represents complex, uncertain and significant environmental, financial, social and legal risks to coastal populations, it demands a rethink of institutional arrangements for risk governance in the whole system of Australian coastline (Abel et al., 2011; Ryan et al., 2011; Leitch and Robinson, 2012). However there are challenges like conflicting expectations and normative judgements of values, contradictory perspectives of evidences and knowledge to deal with (Leitch and Robinson, 2012). Accordingly, the government will need to balance the aspiration, expectations and values of coastal coastal enthusiasts by taking into account the social into account the social expectations and values of coastal coastal enthusiasts by taking into account the social uncertainty which hold a vital role in the ability of local authorities to shift to new governance and practices (Leitch and Robinson, 2012; Taylor et. al., 2012; Susskind, 2013). Failure to realize this may jeopardize the objectives of building trust, legitimacy and cooperation in risk management and impair the ideas of deliberation and inclusion of improved risk governance. Thus transforming practical strategies of is of paramount. This study aims to explore sociologically-informed approaches to risk governance through deep investigation and understanding of how social learning underpins risk perception, communication and decision making through negotiation and compromises and that it holds potentials to improve risk governance. Theories orientations for the research derived from Luhman's System Theory and Social Amplification of Risk Framework (SARF). This study embarks on interpretive case study involving local governments in Australia with local government officers and local communities as unit of analysis. The findings that revealed the implications and explicit attention of social learning in risk decision making will be the basis of practical intervention for future risk policy making as well as extending the current sociological theories of risk.

The Meaning and the Role of Clothing for Elderly Women

The aim of this research is to explore the meaning and the role of clothing for old women by analyzing their life stories. This means to investigate not only psychological but also sociological effects.

In general a large number of elderly women have plural diseases in various levels. For example some old women need to be cared in nursing home or hospital, and the others don’t need but often go to hospitals from their own houses. We call the former type “dependent elders” such as dementia or bedridden people because of requiring professional care and cure, conversely the latter one “independent elders” because of ability of social contribution as the volunteers in many kinds of fields.

But even if which type they are categorized, it would be desirable to wear their favorite clothing. The reason is that it would be helpful for them to maintain their Quality of Life (QOL) as a result of thinking positive and continuing to engage their enjoyable activities. To investigate this issue, this research would emphasize the subjective recognition and experiences of their own clothing, and not the objective beauty of appearance and fashion trends.

Intensive data were collected as life stories of 7 elderly women including both types, “dependent elderly women” in nursing home and “independent” who had engaged the volunteer at medical agency. The interviewer asked all the interviewees to arrange some favorite pictures during their lives. These pictures helped to remember their clothing including some episodes and memories in their youth.

As a result of content analysis, it is clear that “the meanings of clothing” and “the role of clothing,” for dependent and independent elderly women, are “Self-expression” and “the switch of identity”. It appears that the satisfied and favorite clothing as social body assist their lives when they confront some hardships.

Adorno’s Style of Cliticacl Theory and Sociology as Chimera

According to T.W.Adorno, this society is full of contradictions, so the concepts of sociology cannot but be flawed and fractured. But he evaluates such a crack in character sociologically affirmatively because it enables sociology to grasp the essence of “non-identifiable” thing. If the concepts of sociology become too static and too systematic, sociology views society as the “identical” object and can't face social contradictions. So Adorno intends to make a new style of sociology for the critical “non-identity” thinking. And his narrative style is formed after art works, especially after avant-garde arts. The purpose of this presentation is to consider Adorno's unique style of critical thinking. Adorno emphasizes the hybrid character in sociology. He says that sociology has both philosophical and scientific characteristics. From Adorno's view, sociology is a jumble of various academic disciplines or methods of study. In

The village had maintained its traditional rural landscape as one of the “most beautiful villages in Japan”, and was renowned for its high quality beef and dairy products. The farming community’s spiritual wellbeing is deeply ingrained in their land, both of which are under threat of being lost in the serious contamination and the prolonged evacuation.

In Iitate, there is a shrine devoted to the local community of Satsu called Yamatsumiji. The shrine’s guardian or holy messenger is a wolf considered to protect farming villages from pests such as deer, boar, and monkeys. The wolf’s mighty power is also considered to deter disasters, illness, fire and theft, and there is a record that at the end of Edo in Asei period, wolf worship flourished as a series of disasters and unsettling events overwhelmed Japan. Yamatsumiji, known for its 237 ceiling paintings depicting the wolf as its holy messenger, kept its door open to the evacuated community in much the same way as the wolf worship supported the community in Edo. Tragically however the shrine burnt down in April this year.

This paper reports on an ongoing project that attempts to record the significance of local beliefs interwoven in the natural environment and restore the legacy of one significant belief of the village people, namely the wolf paintings. It is argued that attending to the spiritual wellbeing of the community deeply ingrained in the ‘spirit of the place’ is critical in the reconstitution even if the community may not return to the village fully in near future. Clearly the project has an anti-nuclear message though it does not take an overt ‘anti-nuclear’ action.

Between “Munesuke Mita” and “Yusuke Maki” - on the Possibilities of Fictional Construction By Sociology.

“Yusuke Maki” is the pseudonym of the Japanese sociologist Munesuke Mita. Mita uses the name “Maki” for creating a new style of sociology. Mita says that the name of “Mita” is used for works within the modern society and the name of “Maki” is used for works beyond the modern rationality. It is remarkable that one person has two names as sociologist, and he uses them for different purposes. Mita uses the fictional sociologist “Maki” for alternative images of sociology. The purpose of this presentation is to consider the possibilities of fictional construction by sociology from Mita’s project “Maki.” Maki often uses the word “clarity” affirmatively, and there are two aspects of this word in his works. The first connotation is the clarity and the thoroughness of a theoretical structure. Generally speaking, the social figure of sociological theory is different from that in real society, as in the example of Max Weber’s “ideal types.” But such a fictional character in sociological theory enables us to have a theoretical “clarity.” The second connotation of “clarity” is unmediated interaction between people in society. Maki’s definition of “Gemeinschaft” uses this aspect of “clarity.” The fictional sociologist “Maki” creates the image of a not yet existent utopia by combining these two aspects of “clarity.” Here is a fictional possibility of sociology. Maki’s social theory intends to create a sociology beyond the modern rationality. It doesn’t ignore or deny the potential of modernity. He seeks to change the direction of the modern rationality. The early works of Mita and Maki largely depend on modern Western social theories, and in the latter works Maki creates his original perspective of “comparative sociology” which relativizes the western modernity. A consideration of Maki’s social theory probably links to a consideration of social theories in a non-western world.

Intergenerational Relationships Between Adolescents and Their Grandparents in Japan

Intergenerational bonds among family members may be more important today than in earlier decades, because the individuals today live longer and share more years and experiences with members of other generations (Bengston, 2001). The effects of birth rate and family size on the intergenerational relationships have been described since 1989 as a major social problem in Japan. The main objective of this study is to examine how adolescents’ perception of the relationships with their grandparents is associated with the frequency of communication with their grandparents, and friends in Japan. Further, I describe differences between face-to-face and ICT communication.

In order to accomplish the above objectives, I collected survey data from Japanese college students in 2011-2013. These data were collected in the government-funded project entitled, “The Process model of building the intergenerational relationships in child rearing and education in the family.” The data include 198 Japanese college students aged 20 to 21. The questionnaire included questions concerning their perceptions of the relationships with their grandparents and ICT communication with their parents, grandparents, friends along with demographic information. A multiple regression analysis was used.

The adolescents are likely to have greater satisfaction of the perception of relationships with their grandparents. In addition, having overly burden of the relationships with their grandparents are associated with little conversation between the adolescents and their parents. Their higher commitment to their grandparents is related to their increasing the communication with older persons by e-mail and face-to-face communication.

Based on my findings, I suggest that Japanese society needs to consider the ways to facilitate communication between adolescents and their grandparents in order to build intergenerational relationships. It is also important to promote the positive effect of the perception of relationships between adolescents and their grandparents on influence processes within the grandparent-parent-grandchild triad in Japan.

Wolf, Extinction and Fukushima

Iitate, Fukushima is a village designated as ‘whole village evacuation’ since April, 2011 despite being located over 30km from the Fukushima Daiichi Plant. The village had maintained its traditional rural landscape as one of the “The most beautiful villages in Japan”, and was renowned for its high quality beef and dairy products. The farming community’s spiritual wellbeing is deeply ingrained in their land, both of which are under threat of being lost in the serious contamination and the prolonged evacuation.

In Iitate, there is a shrine devoted to the local community of Satsu called Yamatsumiji. The shrine’s guardian or holy messenger is a wolf considered to protect farming villages from pests such as deer, boar, and monkeys. The wolf’s mighty power is also considered to deter disasters, illness, fire and theft, and there is a record that at the end of Edo in Asei period, wolf worship flourished as a series of disasters and unsettling events overwhelmed Japan. Yamatsumiji, known for its 237 ceiling paintings depicting the wolf as its holy messenger, kept its door open to the evacuated community in much the same way as the wolf worship supported the community in Edo. Tragically however the shrine burnt down in April this year.

This paper reports on an ongoing project that attempts to record the significance of local beliefs interwoven in the natural environment and restore the legacy of one significant belief of the village people, namely the wolf paintings. It is argued that attending to the spiritual wellbeing of the community deeply ingrained in the ‘spirit of the place’ is critical in the reconstitution even if the community may not return to the village fully in near future. Clearly the project has an anti-nuclear message though it does not take an overt ‘anti-nuclear’ action.
older people face is also complex; often based on two or more factors, such as age and gender, ethnic origin, where they live, disability, poverty, sexuality, HIV status or literacy levels. Older people without any source of income are particularly vulnerable to discrimination based on both age and dependency. This article focuses on the sociological conditions responsible for elderly vulnerability in Kerala. It also seeks to identify primary abusers within families besides the elders’ perception of abuse. This paper focuses on the extent to which the elders depend on family members for care, as well as the type and level of care they need. An empirical study comprising 300 elderly people were made in the state of Kerala.

Effectiveness of Social Welfare Schemes for the Elderly in RURAL Kerala, India

By 2050, India will be home to one out of every six elderly persons in the world. While life expectancy has improved, the changed socio-economic conditions have drastically altered the living conditions of the elderly in India. In this changed social set-up, old people face increasing incidence of age-related discrimination, ageism, elder abuse, and mistreatment, which militates against the norms of a civilized society. The least noticed of the destitute in India are the elderly. Most elderly struggle with low incomes and poor health. As income inequalities increase, it is noticed that senior citizens are getting poorer and poorer. Social security thus becomes necessary. Further, inadequate public healthcare facilities and expensive private healthcare heighten the relevance of social security. In recent years, the social and economic policies of developed and developing countries are attempting to address social security needs. Thence, need for social security during old age quite early. The Indian Constitution guarantees social security in old age under its Article 41. But ideals have rarely translated into reality at the grassroots level.

Kerala has the most comprehensive safety net among Indian states for vulnerable sections in society. The Kerala Government’s social security schemes primarily target poor families. The elderly in Kerala suffer either by not receiving sufficient economic and/or physical support. The rising cost of living, minimal or no reliable employment opportunities and nuclear families are the culprits. Age-based priorities of aid and assistance are now firmly entrenched. There are more than 35 social security and assistance schemes that have been implemented in India. Therefore impact and effectiveness of social welfare programmes on senior citizens is assessed to sensitise the government and the policy planners for their mid-term corrections. This data was collected from 320 elderly persons in Trivandrum district in Kerala.

Informal Caregivers’ Expectations and Experiences of Hospital Admission of a Relative with Dementia

This paper describes findings from a two-phase study undertaken in the UK by a multi-disciplinary research team. 111 pairs of people with dementia (PWD) and their family caregivers were recruited from patients referred to a specialist psychiatric liaison service in two English general hospitals. Data was obtained about their quality of life (Qol-AD and EQ5-D0), severity of dementia (MMSE), carer stress (GHQ), activities of daily living (I-ADL) physical illness and depressive symptoms (GDS), and economic data on care services and resources (Sheetan et al 2012). These measures were repeated at six months and at twelve months where feasible. In the second phase caregivers whose relative was planned to be discharged to a long term facility were interviewed several times, the final interview took place about four months after the admission of the PWD to the facility (Katz et al 2013). This paper focuses on a) caregivers’ observations whilst the PWD was in hospital and b) the process of choosing a facility.

Concurrently and retrospectively family caregivers gave detailed accounts of their relative’s care in hospital. They varied considerably in their assessment of the quality of care received, but many focused on the patient’s physical and mental deterioration during the hospital admission. Caregivers noted how their roles vis à vis their relative changed, and described their emotional and practical reactions to what they observed. Most recounted a difficult process of being an ‘outsider’ to the care of their relative and feeling guilty and remorseful.

Caregivers described their experiences of having to choose a long term facility (often at short notice) with relatively little guidance from hospital or social services. This paper focuses on their perceptions of the conflicts caregivers face in endeavouring to provide protection for their relative whilst simultaneously carrying out their (filial) responsibilities.

‘If I Had Cancer I Would Get Loads of Sympathy, ‘Cos It’s HIV, I Can’t Even Tell Anyone’: Young People’s Understanding of the Stigma of HIV

There is little research which has documented how the stigma of HIV is understood by young people who have grown up with the virus. This paper presents the experiences of twenty-eight participants living with perinatally acquired HIV in the UK. At the same time as being formally told their diagnosis participants recalled being alerted to the stigma of HIV. They are advised to keep their status secret to avoid discrimination or rejection.

The fear and experience of stigma was reported as central to their experiences of growing up with HIV. Participants observed that HIV is viewed differently to other illnesses, and believed that, unlike other health conditions, HIV did not evoke a sympathetic or supportive response. The young people identified the negative and derogatory talk around HIV in wider society as affecting their self image. Through their observations of the negative media representation of HIV coupled with the lack of positive role models, they learn that it could be counterproductive to be open about their status.

This paper presents the strategies participants devised to avoid stigmatisation. This included finding an alternative biography to explain hospitalisations and illnesses, conceal medication in the home, hide the taking of medication at school and with peers, deny knowledge and awareness of HIV and learn ‘the code of silence’ and to ‘keep their heads down’. The external negative representation of HIV metaphorically reinforces the stigmatised nature of their condition and young people in turn feel the negative reflections of their stigma. While young people’s explanations of the stigma of HIV identify the link with sex, promiscuity, racial stigmatisation, fear of infection and association with homosexuality and intra-venous drug use. Participants themselves construct a hierarchy of blame: those perinatally infected are ‘innocent’ whilst those infected through sexual contact or intra-venous drug use are seen as responsible for their own infection.

This Ain’t Mere Eco-Nationalism: Undervalued Cultural Roots of the Lithuanian Green Movement

A nation state embodies the political order of the modernity in contrast to the contemporary Green movements foreshadowing its end (Hurrel, 1994; Lash et al, 1996). Consequently, nationalism and environmentalism are considered to be hardly compatible companions (Hamilton, 2002). Therefore a puzzle of the Greens, found at the vanguard of independence movements of Central and Eastern Europe in late 1980s, is often resolved with a simplistic disavowal of their “green” identity. In words of American scholar Jane I. Dawson, here Green movements were no more than a manifestation of eco-nationalism, a mere surrogate for a hidden nationalist strife (Dawson, 1996, 2000). The paper aims to challenge this nationalist thesis, a reductive and homogenising reading of eco-mobilization of 1980s in the region, bringing to the fore a deeper empirical look into complex and diverse cultural origins of pioneer organisations of the Green Movement (Lietuvos Zalieji) in Lithuania. Archival analysis and in-depth interviews with surviving fathers and active members of the Movement reveal tangible distinctions in the collective identities (Melucci, 1995) of three earliest voluntary environmental associations, Zemyna, Aukuras and Atgaja, in Lithuania. The identity work and differences among the early Greens are poorly explained by eco-nationalist argument, however, their mutual tensions are well represented by the classical distinction between anthropocentric and eocentric worldviews (Naess, 1973; Eckersley, 1992), embedded in peculiar local cultural meanings of ‘nature’ and conflicting logics of soviet environmental modernization, (neo)traditionalist apotheosis of indigenous ‘ethnoscape’ (Smith, 1999) and lively postmodernist celebration of the ecology of countercultural lifeworlds. These findings urge for a more rigorous and subtle approach to the play of cultural fields and cultural notions of ‘nature’ in environmental/ ecology movements not only in Europe but also worldwide, including Asia (Thomas, 2002).

How to Conceptualize Social Inequality after Risk Concept?

How to conceptualize social inequality after risk concept?

Risk concept has been in sociology with the publication of Ulrich Beck’s Risk Society (Beck 1986). One of the most important thesis of Risk Society is the “paradigm” shift of social inequality. Beck claimed the “change from the
logic of wealth distribution in a society of scarcity to the logic of risk distribution
in late modernity”. Thus he pointed out the appearance of risk society “in contrast
to class society”.

However, Beck’s thesis has been criticized in several researches by showing the
continuity of class relevance. Such as Hans-Peter Müller (Müller 1992) or Rainer
Geißler (Geißler 1996) , J.H. Goldthorpe , (Goldthorpe 2002) etc. Then how can
we understand social inequality covering the relevance of risk and class. The is-
sue is to integrate the relevance of risk and class to understand contemporary
social inequality. And we need a concept which integrates class elements and risk
elements.

This presentation attempts to figure out the issue to integrate class and risk
concept focusing on 1980’s individualization dispute in Germany.

Acceptance of Foreign Nurses Based on the EPA in Japan and
Future Challenges

Objectives: The acceptance of foreign nurses started in Japan from 2008 un-
der the Economic Partnership Agreements. Over 400 nurses have come to Japan
from Indonesia and the Philippines thus far. If they do not pass the exam within
3 years, they basically have to return to their countries. They can work in Japan as
nurses if they pass the Japanese national board exam for nurses within 3 years
after coming to Japan and they will be paid the same or more as Japanese nurs-
es. Passing the national board exam for nurses is the main issue for the foreign
nurse candidates. So far, the rates of foreign nurse candidates passing the nation-
al board exam were 0% in 2009, 1.2% in 2010, 4.0% in 2011, 11.3% in 2012 and
9.6% in 2013. Though the pass rate is gradually increasing, realistically, passing
the exam is very challenging for them considering the fact that the overall pass
rate for Japanese applicants is approximately 90%.

Methods: We conducted a study on the practice national board exam targeting
Filipino nurse candidates in Japan and Indonesian nursing students in Indonesia.
We requested them to take the Japanese national board exam translated into
English and Indonesian and analyzed the exam results.

Results: The percentage of correct answers was low even though the practice
national board exam for nurses was written in English or Indonesian.

Conclusions: Because the percentage of correct answers was low in the study
on the practice national board exam for nurses, we believe that there is a differ-
ence in the nursing training curriculums and nursing itself in each country. It is
necessary to compare and study the differences in nursing training curriculums
in each country as soon as possible.

Environmental and Ethical Implications of Food Consumption
Affecting Distant Countries: How Aware Canberra and Tokyo
Community Gardeners of These Issues

Global food system has developed with the increased power of agri-food cor-
porations. Under the current structure, wealthy people tend to over-consume
food, while poorer people are experiencing social inequality and degradation of
their environment. Recent studies around ‘alternative’ food systems have high-
lighted grass roots movements, especially in industrialized countries, for demo-
cratic and environmentally sustainable food systems, which often focus on local
food production. However, it is still necessary to discuss environmental and eth-
cratic soundness of global food production and consumption, because it is unre-
alistic to expect that local food systems can immediately become the dominant
structure. To begin to transform the current dominant system, it is important to
explore whether people who are engaged in ‘alternative’ food sys-
tems understand and care about the ethical and environmental issues around
global food systems, from consumer point of view. Consumption attitude of im-
ported food is a key, as citizens in wealthy countries are the major actors of global
food consumption, who have power to choose what to buy, and what to
create demand, even though this power is restricted. This study may then point
to the possibility of these people engaging in ‘alternative’ food system becoming
agents for global change.

This study examined whether community gardeners in industrialized countries
have an understanding of, and interest in, the ethical and environmental impli-
cations of the current global food supply chain. This study compares Canberra
(Australia) and Tokyo (Japan) as case studies. Initial analysis of interview data sug-
gests that participants from Australia expressed a stronger understanding and
awareness of ethical and environmental issues occurring outside the country
than Japanese participants. The cultural, political and economic differences, in-
cluding different position in the global food system (Australia as a net-exporter
and Japan as a net-importer), underlying these results will be considered.

On Hannah Arendt's Understanding of the Society or the Social:
Resisting Unprecedented Crises

Hannah Arendt stated in The Human Condition her intention to understand so-
ciety or the social as well as provide criticism on society and salvage the political
to promote appreciation of and resistance against unprecedented crises. In her
pursuing an understanding of society, she has adapted a unique method tracing
back to the distinction between the public and the private in ancient Greece as
the origin of society, and then referring to the history of theories on society pre-
sented by John Locke, Adam Smith, Karl Marx, and sociologists Auguste Comte
and Herbert Spencer.

In this paper, I will interpret her understanding of society based on the above
method and argue that society is fundamentally ruled by the biological life
process. Therefore, human life and activities in society are regulated based on wheth-
er each person contributes to the sustenance of the life process and multiplica-
tion of lives. This interpretation can link Arendt’s understanding of society in The
Human Condition with her descriptions on unprecedented crises in her other writ-
ings, especially The Origins of Totalitarianism. Arendt has stated that when people
are extremely forced to contribute to a function of the life process, an ideology
forms out of ideas of race, body, and other biological things contributable to such
a function. By rise of such an ideology, People not contributable to the function
have been removed to a condition of complete rightlessness in imperialism and
concentration camps in totalitarianism. Moreover, to accelerate the function of
the life process, humans approach nuclear fusion to harness nuclear power at the risk
of irreversible danger, “to act into nature”.

In addition, this paper outlines my attempt to search for a normative theory in
her arguments on resisting unprecedented crises by focusing on her concepts of
forgiveness and promise.

“I Don’t Want to be a Burden”: Japanese Immigrant Acculturation
and Their Attitudes Toward Non-Family-Based Elder Care

Elder care remains in the family sphere in Japan while elderly Japanese immi-
grants in the U.S. are actively planning to utilize formal care services. Although
social structural conditions may explain these differences, they do not fully ex-
plain “how” Japanese immigrants have developed norms of independent living
and utilization of formal care services. This paper will focus on how Japanese
immigrant women’s value acculturation leads to their cultural preference for
non-family-based care. They seem to accept the U.S. norms of the independent
parent-child relationship and see their children as “other” individuals rather than
“inseparable” family members who are obligated to fulfill their filial duty. This val-
ue acculturation may manifest in their preference for independent living, friend-
based support, and utilization of formal care services. This ensures their middle
aged children’s freedom from filial care duty by showing no expectation of it at all.
The sangha historically maintained a close relationship with the Buddhist kingdom and a symbiotic relationship between them underpinned the stability of the country until the last king was dethroned in 1885. The desacralization of Buddhism by Europeans and the violation of its symbols remain deep in the collective memories of the people. I discuss the political activism of Buddhist monks that started during the British colonial rule and highlight the patterns in which monks respond to different crisis points in modern history, deriving from a deep sense of anxiety that their Buddhist tradition is threatened.

Myanmar (Burma) witnessed intense communal violence during the democratization period after independence in 1948. Prime Minister U Nu was hampered by monks making incessant demands to give preferential treatment to Buddhism and eventually succumbed to make Buddhism the state religion. Buddhist monks today comprise almost half a million of the population and profess themselves to be the custodians of the saṅgha (the Buddha's dispensation). They are increasingly assertive and use their authority to protect the saṅgha in the age of moral decline, the way they see as coming from Islam. This paper attempts to unravel the collective trauma that prompts monks to manifest a similar pattern of both self-defense and aggression, and understand the cultural and religious undercurrent that continues to influence people's aspirations and worldview.

Family Support and Mental Health Care for the Japan Self-Defense Force Personnel

Since 1992, Japan Self-Defense Forces (JSDF) has engaged in various types of new missions overseas, stretching globally from Haiti to Golan Heights, Iraq, Sudan and Gulf of Aden. The 3.11 East Japan Great Earthquake in 2011, subsequent tsunami, and nuclear power plant disaster in Fukushima, resulted in the largest-ever domestic disaster relief operation in the JSDF history, mobilizing more than 100,000 personnel. Given the increased operational tempo, JSDF have tried to improve institutional family support and mental health care programs. This paper describes how the social-psychological support programs have developed, focusing on the Japan Ground Self-Defense Force (JGSDF). In particular, I examine the institutional programs of the Family Support Center, Mental Support Center, and a “Mobile Counseling”, or outreach program, to provide mental health care to JGSDF personnel and their families in the Hokkaido area. Also, the effectiveness of the institutional programs from the soldiers and their families perspective will be examined, based on both quantitative and qualitative data, including interviews of military families. In conclusion, relevance of “community capacity model” will be discussed in terms of enhancement of social support networks for the JSDF families.

New Middle Class in Singapore As a Global Creative City

I would like to present a new middle class and cultural development in Singapore as a global creative city, particularly focused in the following two points. One is taken in Singapore case and I would deal with the detail content developed during these 20 years. It is very interesting case, because Singapore government has successfully accomplished the cultural institutions. As a result, there have occurred some intensions or class discrepancy among Singaporean people themselves, additionally a famous conflict between foreign workers and Singaporean workers. I introduce the concrete cases and analyze them. During 20 years Singapore government considerably planned and systematically managed some artistic areas including artistic participation, art education, and artistic outreach activities. And it will be included a famous ethnic public policy in Singapore. I would trace the historical transformation and analyze the sociological meanings. Specifically I would compare with the other similar Asian cases. Particularly I would take both Shanghai and Tokyo. Both cities are also global creative cities just the same as Singapore. Of course each city has had its original history and has making its unique type by itself. But there exists Asian Share-ness among the three cases. Mainly I would point out the relationship between national/city government and particularity I would discuss the future of the new class conflict in Singapore and the sociological meanings compared with the two cities.(227 words)
municipality in Japan. One of the issues in the aftermath of disaster in Iwaki-City is the frustration of its residents to host evacuees and the social friction between evacuees and residents.

The aim of this research is to examine the structural problem of the social friction, based on the data taken by the interviews to the evacuees and the hosting residents and support groups in Iwaki City. The cause of friction can be categorized as (1) the drastic social change and inconvenience of daily life due to the rapid population growth, (2) the relative deprivation constructed by the compensation for mental damage and the sense of risk to radiation and (3) the structural issues of disaster relief assistance for evacuees and to create an environment for the evacuees and residents to interact.

Especially regarding the third issue, as evacuees are widely dispersed, the formal assistance for disaster relief, which differ according to municipalities, have not necessarily fulfilled the needs of their current daily life, and informal self-help groups of evacuees have emerged to reconstruct their existed social network in order to obtain an access to social resources. However, in this situation, the sense and need of belonging to each municipality is emphasized and these differences eventually seem to function as ethnic differences and deepen the gap between them. This issue illustrates the social and economic gap constructed in the process of disaster, the difficulties to organize a disaster relief assistance for evacuees in this nuclear disaster and the need of coordination assistance between evacuees and residents.

**Negotiating the Risk of Being Murdered in Turkey: Femicide in Everyday Life**

Existing literature on femicide frequently focuses on certain patterns of femicide, characteristics of perpetrators and/or victims as well as some other institutional aspects such as policy orientations to reduce incidence and its social changes (like globalization, migration and transformation of family structures and gender order) that would possibly have an influence. However, very little study sheds light on how femicide is perceived in the everyday life. This study brings forward women’s perceptions, and their negotiations with rising phenomenon of femicide in contemporary Turkey. For this purpose, this study reveals different aspects of femicide in Turkey at two levels. At a macro level, we aim to figure out violence against women, and femicide as an extreme practice of violence through interrelatedness with social and economic changes in Turkey. On the other hand, at a micro level, based on interviews with women of risk groups defined through some demographic factors like marital status, belonging to migrant communities and class positioning, this study analyses women’s emotional attachments to femicide and their strategies to challenge risk of being murdered. Accordingly, we aim to reveal how public visibility of femicide shape women’s practices in everyday life and re-constitute social and cultural demarcations between appropriate and inappropriate gender performativities. Moreover, this study would give us an opportunity to understand potentials and/or limitations of women’s agency across increasing phenomenon of femicide and how it is differentiated in terms of class, cultural and regional differences.

**Attitudes Toward Non-Normative Sexualities Among University Students in Japan: Quantitative Analysis (Part 1)**

Purpose: Although there is a sizeable body of social research on gender inequality in Japan, biases against sexual minority groups have remained largely uninvestigated. Through surveying university students, we examined the feelings of heterosexual people towards sexual minorities.

Method: We conducted questionnaires at three universities (n=724). Members of sexual minority groups in the sample were excluded from the analysis. We used t-test to compare the negative emotions towards different sexual minorities.

Results: We compared feelings towards female homosexuality, male homosexuality, bisexuality, having ambiguous (neither male nor female) gender identity, and undergoing sex reassignment surgery (SRS). Firstly, among five items, feeling towards ambiguous gender identity is the most negative and SRS is the most positive. Among three sexual orientations, male homosexuality is the most negative, and female homosexuality is the most positive. Then we compared the averages among feelings towards sexual activity between women, becoming friends with lesbians, having romantic feelings between women, and holding hands between women. The feeling towards sexual activity is the most negative. Finally, we compared the averages among feelings towards sexual activity between men, becoming friends with gay men, having romantic feeling between men, and holding hands between men. The analysis shows that the feelings towards sexual activity and holding hands are the most negative, and romantic feeling the most positive.

Discussion: The findings that feeling towards ambiguous gender identity is the most negative and SRS is the most positive suggest that transgender people that had SRS are accepted due to their fitting into the gender binary, whereas people who have ambiguous gender identity aren’t accepted due to their failing to fit into the binary. Although the feeling of rejection towards male homosexuality is stronger than that towards female homosexuality, it also suggests that gay men tend to be associated more with sexual matters than lesbians.

**Social Security and Orphans in Foster Care: The Experiences of Social Workers and Home Based Care Workers in the South African State’s Provision of the Foster Care Grant**

South Africa’s HIV epidemic remains the largest in the world. It is estimated that there were 5.6 million people living with HIV in 2009 (WHO, 2011: 24). South Africa had an estimated 1.9 million children who had been orphaned by AIDS by 2009 (SAHR, 2011: 57) and this figure is expected to increase to an estimated 4 million children (approximately 10% of the entire population) by 2015 (Whiteside and Sunter in Madhavan, 2004: 1443). The South African state has a well-developed system of social security. The state introduced a foster care grant, which is unique to it, in response to the HIV and AIDS pandemic (Hearle and Ruwanpura, 2009: 427). For the state to get the foster care grant to the orphans there are also certain conditions to be met. The aim of the grant is to provide financial support to the orphan in foster care. This paper pays particular attention at the experiences of social workers and home based care workers in the South African state’s provision of the foster care grant in Ha-Makuya, a rural district in Northern Venda (Limpopo Province). During the apartheid era, Ha-Makuya suffered systematic underdevelopment and is now considered to be a national poverty node (Berman and Allen, 2012: 81). Data were collected from seven purposively sampled social workers and home based care workers who were interviewed in May 2013. It was found that the application of the foster care grant was dependent on the role played by the home based care worker as they were the “eyes in the community” and also they, according to the social workers, “liaised” with them. This paper also illuminates the functionality of other social institutions. These social institutions include the family, the legal system and the social services.

Detecting ‘Ripple Effects’ Of The Canterbury Earthquakes in a National Longitudinal Study Of Aging

The timing of the 2010 and 2012 surveys conducted by the New Zealand Longitudinal Study of Aging provides a clear “before and after” dimension to the exploration of the impacts of the Canterbury earthquakes, on the study population of older people. Our data shows some effects (after controlling for baseline differences) on physical and mental health, according to location, and degrees of recorded direct and indirect exposure to the Canterbury earthquakes. In particular, the aspects of control and self-realisation within the quality of life measure show different trends based on location and exposure to earthquake effects. Other psychosocial measures of loneliness and depression also show regional differences. These differences are not unidirectional or consistently negative, to the extent that some exposure suggests positive outcomes on some measures. The relevance and value of these findings in terms of policy will be further enhanced by our future ability to continue to track such effects over the longer term, in light of the scale and duration of the Canterbury recovery process, and of other emerging phases of this country’s exposure to a potentially hazardous seismic environment.

Health, Work, Caregiving and Retirement in the New Zealand Context

Several features of the New Zealand policy context provide an interesting comparative perspective on the relationships between caregiving, paid work and health status in the fifth wave survey of a national sample of participants aged over 55 years, drawn initially in 2006 from both the general and the Maori electoral roll. Relatively high workforce participation rates for those aged over 65 years, followed the final removal of mandatory retirement in 1999, and a universal national superannuation system has been retained alongside the development of a voluntary contributory fund, known as KiwiSaver (introduced in 2007). Legislation which opened up the right for caregivers to request flexible working arrangements was reviewed five years later in 2013, with a recommendation that the right to flexible working for caregivers should be extended to all workers. This recommendation was reviewed five years later in 2013, with a recommendation that the right be available to any employee, irrespective of needs relating to family caregiving.

In this context of arguably mixed policy messages, survey data provided by the participants in the 2013 Independence, Contributions and Connections study will be presented. As well as considering trends over the five waves from 2006, the 2013 survey offered a supplementary opportunity for caregivers to describe their caregiving roles, their sources of additional support, their views on workplace and caregiving interactions, and plans for the future.

KEEN, CAROLINE* (University of Auckland, ckeen01@aucklanduni.ac.nz)

The Question of Internet Filtering: Negotiating Discourses of ‘moral Panic’ and ‘risk’ in the Australian and British Policy Debates

The implementation of internet filtering systems is becoming an increasingly established means of regulating the internet in many countries. The availability of pornography involving child sexual abuse is understandably an emotive concern, which makes public opinion in liberal democratic countries more accepting of internet filtering of such content. However, the exposure of children to inappropriate online content and their increasingly autonomous activities online produce further societal anxieties. In the cases of Australia and the United Kingdom, the objectives of child protection and crime prevention inspired proposals for online filtering, but these schemes proved controversial because of concerns about their potential to (intentionally or unintentionally) prohibit a wider range of materials if they were ever to be implemented. The Australian proposal, which was set aside in 2012 after a complex five year long debate, would have applied filtering to block a range of materials deemed ‘harmful’, ‘offensive’ or ‘objectionable’ (both illegal and legal). More recently, the UK government has made calls for Internet Service Providers (ISPs) to provide a ‘default on’ filter to address anxieties about internet content. Drawing on comparisons from both the Australian and British examples, this paper explores how the rhetoric of ‘moral panic’ and ‘risk’ are variously used as discursive strategies in recurring policy debates about filtering pornography on the internet.

Centre-periphery relations and academic autonomy in Latin American social sciences: critical comments

The volume edited by Fernanda Beigel is positioned at the intersection of various strands of literature such as sociology of science, sociology of intellectuals and internationalization or globalization of the social sciences. It integrates various debates and enriches them with in-depth, historical studies provided by experts in the domain. It provides a conceptual differentiation of the ubiquitous term “academic autonomy” by contrasting it with its various opposites (heteronomy, dependency), by differentiating between its intranational and its international as well as between its disciplinary dimensions. Apart from highlighting the intra-regional variety of cases and thus differentiating the concept of “the periphery”, the book thus also manages to restore the agency of the peripheral actors that purely structural analyses tend to overlook. This could only be done convincingly through a set of empirical studies. They clearly show that academic exchange, however unequal, is not unilateral.

Ibn Khaldun – Assessing His Influence in the Foundation of Modern European Sociologies

In the course of recent debates around decolonizing, decolonializing and pluralizing the history of our discipline, Ibn Khaldun has been (re)-claimed not as a precursor, but as one of the “founding fathers” of sociology. Suspicion has been voiced that low key is indeed rather tuning into a Mobius. As an important reference in the foundational phase of modern European sociology, has been sidelined with the construction of the sociological canon and thus remains today an unacknowledged source. This paper systematically assesses the presence of Ibn Khaldun as a reference in early sociology texts. Starting from a representative corpus of German-language sociological monographs published between 1900 and 1934 (bibliography provided in Käsler, 1984), this study reconstructs the circulation of Ibn Khaldun’s works within the German-language and wider European community of scholars. While the overall presence of Ibn Khaldun is quantitatively low, this paper presents hints to three potential “entry points” into modern sociology: Spanish history of ideas that refers to Ibn Khaldun’s heritage; debates between organicists and historical sociologists at the Institut International de Sociologie; as well as Vienna as a place of debate around Ibn Khaldun, possibly through the influence of Ottoman social thinkers. The paper then provides more detailed textual analysis of the reception of the Muqaddima by two important early sociologists, L. Gumplovicz and F. Oppenheimer, with regard to their “sociological theory of the state”. The way in which they mobilise Ibn Khaldun as a reference is particularly interesting with regard to the question in how far sociological theory is context-bound as opposed to generally true.

Stressors and Resiliency Resources: Explaining the Significance of Subjective Social Status and Objective Social Status for Depressive Symptoms Among African American and Afro-Caribbean Women Residing in the U.S.

Studies in the U.S. often find that black women report more subclinical depression and psychological distress than whites or black males. Scholars argue that these disparities arise from the intersection of race, gender, and social class that converge in unique ways to place Black women at higher risk of poverty and its associated stressors that challenge their emotional well-being. Stress research indicates that the strong inverse relationship observed between objective measures of social standing (e.g., education and income) and mental health arises from greater exposure to stressors and/or the lack of coping resources among the economically disadvantaged. Recent research suggests that subjective rankings relative to others may be even more influential. This study used data from the National Survey of American Life to investigate the association between objective and subjective social status and depressive symptoms among black women residing in the U.S. Using regression analyses, we investigated the extent to which two chronic stressors—perceived discrimination and financial strain—and four resiliency resources—religion, education, romantic and emotional support from family, and racial/ethnic group evaluation—mediated or moderated the association between status and symptoms. Findings revealed a strong negative relationship between subjective status and symptoms for both groups of women and a less robust relationship between education and symptoms for
African American women. Family support and economic strain mediated this relationship for Afro-Caribbean women, while discrimination, economic strain, friends, family, and group evaluation did so for African American women. Our findings speak to the paradox of inclusion. Although the experience of subjective social status is similar for both African American and Afro-Caribbean women, the different effects of education, perceived discrimination and group evaluation suggest the need to avoid homogenization of the life experiences of women of color when examining disparities in mental health.

Father-Child Relationship Quality in Living Arrangements after Divorce

Based on multiactor data from the Divorce In Flanders survey conducted in 2010, this study examines to what extent the quality of father-child relationships is higher for children in families with joint physical custody arrangements compared to children who live solely or mainly with their mother. We focus on two mechanisms that may explain the association between living arrangements and the quality of the father-child relationship: (1) the level of father involvement and (2) the quality of the co-parental relationship. In addition, we examine whether gender of the child and conflicts between the ex-spouses moderate the association between living arrangements and the quality of the father-child relationship. Our results reveal that children who live in families with joint physical custody have indeed higher quality relationships with their fathers, compared to children who live solely with their mothers, but not compared to children who live mainly with their mother. In addition, our findings reveal that children in joint physical custody report higher quality relationships with their father compared to children who live solely with their mother because in the former families fathers are more actively involved with their children and the ex-spouses have better co-parental relationships. No significant moderating effects from child's gender or conflicts between the ex-spouses were found. Contrary to what is often thought, our results suggest that it is the fact whether or not children live with their father, and not so much the amount of time they live with them that is important for the quality of the father-child relationship.

The Impact of Gender Role Ideology on Direct and Indirect Paternal Involvement: A Focus on Men Who Make the Transition to Parenthood

Using data from the first two waves of the Netherlands Kinship Panel Study, I examine to what extent men's gender role attitudes explain men's paternal involvement after the transition into parenthood. I extend previous work in two ways. First, I incorporate multiple dimensions of paternal involvement. Although father's role of providing is highly important, there is scant research that directly examines the fathers' experiences with paternal involvement rather than the other way around. My results show that men with more modern gender role attitudes indeed spend more time on childcare tasks, also when controlled for relevant background characteristics such as educational attainment, work hours, religiosity, age, partner status, age and gender of the child. In contrast, gender role attitudes have no impact on changes in men's work hours across the transition to parenthood nor on their level of income. This latter finding shows that men's work schedule and impact on changes in men's work hours across the transition to parenthood nor

Re-Invention of the Kurdishness through the Transnational Kurdish Media

The rapid development of transport and communications technologies have contributed to the exchange of information and resources along with multiple participation in socio-cultural and political activities across the borders of national states. Transnational ethnic media has played a key part in this by enabling a re-connection of diasporic/transnational populations with a mediated homeland. In this sense, this paper will explore the linkages between nationalism, media and Kurdish politics and the role of the Kurdish transnational media in articulating and mobilizing different political and identity positions for Kurdish migrants. It will focus on the development of Kurdish media in Turkey/Kurdistan and in Europe and the way in which they have connected, constructed a deterriorized imagined Kurdish political community. This paper will be based on 30 in-depth interviews with Kurdish journalists and migrants of diverse age, gender, political affiliation, occupation and length of migration in London, Berlin and Stockholm.
Finally, the proportion of the sample that experienced poor childhood conditions, financial hardship, or had received social benefits at baseline was successively reduced during follow-up. The impact of selection processes throughout the life course is commonly discussed in ageing research. However, few studies have explored how these processes change the social composition of longitudinal samples over time.

Eat the Rich, Ignore the Poor: The Welfare State and Income Inequality in 46 Societies

The emergence of the welfare state provided a countervailing force against the social ills of industrial production and capital markets, namely economic inequality. However, issues of legitimate pay and income inequality regularly spark bitter polarizations, debates and protests. In this paper, we investigate the possibility that these attitudinal phenomena are shaped by the welfare state. We test hypotheses that push beyond material self-interest or country-level development in explaining individual attitudes. Namely we use the breadth of welfare state institutions (welfarism) as a way to cross-nationally identify what leads individuals to endorse redistribution and legitimate earnings for low and high status occupations. Despite the theoretical and institutional theoretical perspectives, we find that individual attitudes are attracted to the material returns of the welfare state and envy of those who have high incomes. Using ISSP data, this finding is true in the broadest range of countries investigated to date in either of the legitimate pay and welfare state research traditions (46 countries; 112 country-time points; 120k individuals). We conclude that resource acquisition as opposed to equality or social cohesion drives the impact of welfare state institutions on individual attitudes.

Between State Bio-Power and Social Bio-Politics: Documented and Undocumented Migrant Care-Workers in Israel

The paper deals with tensions emerging between high demand for migrant care-workers in affluent economies and their simultaneous construction as a demographic threat to the nation’s political body. Drawing on the empirical analysis of the Israeli case, an ethnically defined nation state and a major ‘insoucier’ of labor migration, the article examines how these tensions are put in display in the topical realm of migrants’ family formation and unity within host countries. It argues that while contradictions between the reproductive labor of migrant care-workers and their reproducing bodies are closely connected to gendered state policies and labor migration, they manifest differently along the legal/illegal continuum of migration status. Thus whereas documented care-workers are subjected to the regulation of their employment conditions and protected by labor laws, they are also directly exposed to state and employers’ control on family formation. Periodically, undocumented domestic migrants who are forced to uneftered dynamics of informality and risk of deportation, gain space for greater maneuver over the creation and maintenance of family life in host countries. Moreover, difference in the management of the reproductive-reproducing dyad around care workers according to their legal status, shape the repertoires of contention available to civil society organizations and networks as they try to assert migrants’ rights to family life in the context of global feminization of migration and stringent control policies.

Socioeconomic Influences on Inequalities of Wellbeing in Later Life: A Study of Australian Baby Boomers

Promoting health and wellbeing in individuals across the life course has become a priority for many governments and policy makers around the world. There is increasing recognition of the value of subjective measures of wellbeing as a complement to the more traditional, objective measures of health and wealth. In Australia there is a widespread view that the early post WWII birth cohort has been advantaged relative to later cohorts but there has been little attention to the origins of inequalities arising from earlier life experiences within the cohort.

This paper begins this gap by examining the influence of earlier life course exposures on subjective wellbeing among a sample of Australian baby boomers aged 60 to 64 years from the 2011-12 Life Histories and Health (LHH) survey (a sub-study of the NSW 45 and Up Study). Inequalities in childhood social position – notably parental social class and education – were found to have small but significant effects on later life wellbeing. The childhood influences operated mainly through their relationships to adult attainment of socioeconomic position such as highest education, occupational class and household income. Differences in child and adult health were also impacted on later life wellbeing through associations with adult health and physical capacities. Overall, there was evidence that advantages or disadvantages experienced in both childhood and adulthood had a cumulative effect on wellbeing on entry to later life. These findings underscore the value of examining not only proximal, but also earlier, distal life course determinants of wellbeing and the importance of reducing inequalities in health and wellbeing across all stages of life. Comparisons to English Longitudinal Survey on Ageing will indicate the influence of societal differences in socioeconomic development and public policies on wellbeing outcome.

Insights from the Past: Disaster Research and the Second Environmental Crisis

We are living in a time of accumulating hazards that form a universal risk milieu: a concentration of potential dangers across natural, technical, and social systems. Intensifying urbanization, climate change, aging infrastructure, and global economic difficulties combine to create a complex of perplexing hazards for which scientific discovery and policy guidance are both needed and elusive. Yet among the many environmental crises occurring in the United States in the 1960s: a realization of threats to the natural environment that were publicized in iconic works such as Silent Spring and that inaugurated a movement of activists, musicians, actors, public officials, and legislators to enact widening laws and regulations to lessen environmental pollution. In less than a decade, the Clean Air Act, the Clean Water Act, and the Endangered Species Act were created to tackle toxic challenges to health and wellbeing. This was a time of both rapid policy innovation and moral transformation regarding human interaction with the environment. In this paper, we consider how the experiences of that earlier era can inform needed change now.

Consumption Behavior and Disaster Recovery: Insights From Eight Years In a Living Laboratory

On August 29, 2005, Hurricane Katrina came ashore along the United States Gulf Coast resulting in unprecedented damage and presenting long-term struggles for residents. Since that date, the region has been impacted by other natural disasters, most notably Hurricanes Rita and Isaac, resulting in a rich laboratory for investigating the impact of these large-scale, shared life events on various behaviors. Utilizing data collected over 8 years by several research teams[4] and drawing from extant research in marketing, sociology and psychology, this body of work investigates the short- and long-term effects of these natural disasters on consumers’ consumption behaviors and how these behaviors aid in the individual and community recovery process. Several themes are explored in this research. In addition to discussing methodological challenges and best practices when collecting timely information pre- and post-natural disaster, the role of consumer behavior as it relates to the various stages in the disaster recovery model is examined. Using data collected from 318 individuals, the role of consumption as a tool to regulate emotions is explored as a means to cope with an impending threat. Further, depth interviews and online surveying (n=448) conducted in the weeks and months after impact shed light on the collective stress and resulting positive and negative consumption behaviors and attitudes (i.e., impulsive and compulsive buying and evolving views of possession). Follow-up surveying (n=176) four years after a natural disaster illuminates the role of consumption behaviors in restoration, reconstruction and recovery. The ethical and social responsibility implications for public policy makers are discussed along with future opportunities for social science researchers.

This paper presents findings from research in six branches of a Wal-Mart owned food chain in Johannesburg, South Africa. Wal-Mart entered South Africa in a newsmaking majority share owner buy-out of South African listed Massmart, Holdings in 2012. This paper explores the results of research with shop floor workers. It details labour conditions and worker frustration with company and unions, alike. It examines worker politics in these stores as they struggle to combat the erosion of existing conditions, and as they struggle to be heard by their union. It discusses union efforts to support this workforce and to build an All-Africa Alliance of Wal-Mart workers. It grapples with the gap between worker experiences of precariousness in their jobs and union battles to confront this multinational on its home turf.

Precarity and the Law: Regulating Casual and Contract Labour in the South Africa Retail Sector

This paper explores the history of legislation around forms of casual, part-time and contract labour in South Africa since the 1930s. Building on my previous work on casual and part-time labour regulation in the retail sector (Kenny 2009), this paper expands the discussion to explore the legal lineages which helped to define these forms of labour within this retail and distributive sector. It seeks to examine the relationship between the law as disciplinary apparatus, transnational importation of law and norm, and socio-political contexts and worker and union politics in explaining changing legal provisions over time. In so doing, I hope also to examine the boundary between these forms of employment law and the influences of Masters and Servants legislation as limit for black workers in South Africa in relation to the sector.

Shifting Power Relationships in the World Economy: A Long Term Perspective

It is argued by many that position in the world economy is, for the most part, highly stable and resistant to change, at least across the macro-level “zones” that form a key element of world-systems theory. I suggest that this apparent stability actually masks a considerable amount of change and discontinuity within the global economy. This paper takes a different perspective, focusing on power rather than position, to explore the extent to which shifting relationships between military and economic power, both within and across countries, reflects a changing dynamic with significant implications for the global economy. Following Kentor (2013), the balance of economic and military power within countries is charted at 10 year intervals from 1850 to the present. I then explore the impact of this changing balance of power on movement in the world economy.

The Structure of the Global Economy 1850-2000

This research develops a new typology of the structure of the world economy, based upon Charles Tilly’s (1994) theorization of the emergence of the modern nation-state system. Following Tilly, this research conceptualizes the world economy as a four dimensional space of economic and military power. These dimensions include 1) size of the economy 2) capital intensiveness of the economy 3) size of the military and 4) capital intensiveness of the military. A typology is constructed that locates countries within this multidimensional space from 1850 to the present, utilizing fuzzy set methodology. This typology allows us to better understand the shifting relationships among countries at any given point in time as well as changes over time, and provides new insights into the dynamics of the world economy such as economic development, inequality, and hegemony.

Insert Coin for the Next Level! Digital Games and the Idea of Regional Development for Less Developed Regions: The Case of Ankara Gaming Cluster

Digital Gaming sector is one of the fastest growing sectors in the world. It is estimated that the growth of the gaming market will reach to 85 billion USD which doubles the cinema and music. In Turkey, Gaming sector has boosted in Turkey with the beginning of new millennium. It looks very new and baby born sector. But, its development pace has been incredible.

The idea of regional development is now crucial concept for the developing countries in highly globalized world in which the competition has increased day by day. Obviously, the developing countries cannot catch the big ones in every field of development. Somehow, they have to develop their production capacities, productivity and knowledge level in specific fields. Even if economic development processes are highly localised not all ‘locations’ are equally able to succeed in the global competitive environment. In fact, regardless the sector, the success of innovative activities requires a convenient environment which comprise of local social, political and institutional actors.

In the case of digital gaming sector, the only cluster is founded in ODTÜ Teknokent which is the biggest science park of Turkey. More than 15 enterprises are located in the same region. Besides almost all the stakeholders are located in the same region such as two big universities having M:S: Programme on Gaming and also public institutions funding gaming projects.

In this paper, the digital games sector will be discussed specifically. One of the main questions is that: Can digital games be a proper factor which contributes to both regional and national development in developing countries like Turkey? Or in what sense such a growing sector can increase the socio-economic level of the country? The gaming cluster of Ankara is used as a case.

Globalization, Uneven Economic Development, Inequality, and Poverty: The Interactive Affects between Position in the Modern World System and Domestic Stratification Systems

Various data sources indicate that in the last decade(s) world poverty has decreased and global inequality between nations has diminished. However, within most less developed countries and even among some of the most developed countries, primarily in the USA, inequality has increased dramatically while poverty has not gone down, or at times increased. From the 1970s, research focused on less developed nations, following the modern world system perspective, has shown that globalization has mostly led to increasing inequality and less long term economic development in most nations, and in some cases even higher poverty. There is increasing evidence that a large part of the increasing inequality in the USA, in contrast to many EU countries, is related to economic globalization.

Recent evidence has suggested that the impact of economic globalization has come through impacts that are less related to very uneven economic development, rapidly increasing inequality, and no poverty reduction. This paper suggests how differences in domestic stratification systems are the key to understanding the varied impacts of economic globalization in both rich and less developed nations around the world.

Literacy Leadership and Accountability Practices: Holding Onto Ethics in Ways That Count

Despite the rhetoric of schools serving the needs of specific communities, it is evident that the work of teachers and principals is shaped by government imperatives to demonstrate success according to a set of standard ‘benchmarks’. In this paper, we draw from our current study of new forms of educational leadership that are emerging in some South Australian public primary schools to explore the ways in which mandated accountability requirements are being mediated by principals in schools that serve high poverty communities.

Taking an institutional ethnography approach, we focus on the intersection of trans-local policy and the everyday work of one principal to show the nature of the impact that standards-based reforms are having on practices of literacy leadership, and how principals’ work is increasingly constrained by attempts to classify and measure their professional responsibilities. Institutional ethnography explores the complexity of such coordination in its emphasis on actions of people as they engage with the ordinary, usually textually organised, routines of their local work organisation. School reviews in the form of ‘validation days’, and ‘liter-
we elaborate on these inescapable textual framings and the ways in which they modify in order to ‘hold on to ethics’.

We argue that while leaders’ and teachers’ everyday work is regulated by ‘ruling relations’ (Smith, 1999: 2006) of a globalized education system reach into and regulate the activities of people in a specific place and time and at the same time appear in documented studies in other parts of China and in other parts of the world. We examine in detail a sequence of the markings that were appearing in 2013. Analysis indicates that themes are emerging from a single location in Northwest China taken in 2012 and 2013. This paper will explore the rise of the change management agenda in the NHS, and the organisational and psychosocial theories and values which underpin it, before moving on to consider how and why we might trace its articulation in the practices of NHS managers, drawing on preliminary data from exploratory discussions and observations with NHS managers working in a large soon to be Foundation Trust Hospital in the North of England. We consider how and why we might go about understanding the social life of change management in organisations by focusing upon manager’s practices and accounts of their experiences of and rationale for change, especially the productive character of change mantras and devices. We end with some critical reflections on the importance and the difficulties of tracking, understanding and articulating the activities and the actants of change in organisations-in-flux and in managing the ways in which we ourselves as researchers are enrolled in the processes of change we seek to study.

This paper engages in a descriptive summation of dominant themes found in the markings and changes in these themes between the collection of original marking in 2012, and the markings that were appearing in 2013. Analysis indicates that themes are consistent with emotional issues experienced by youth embedded in transitional and temporary social networks. Beyond a pure descriptive summation, the paper further explores differences in themes appearing in its data compared to that appearing in documented studies in other parts of China and in other parts of the world.

We also explore what was the reaction of their family in Albania and their children with regard to their decision to return. What role did their family, their friends, and in general the Albanian government, play during the process of their return? Did the role of the Albanian government because it has been advertising itself as a facilitator and accommodator for their smooth adaption.

We also explore what was the reaction of their family in Albania and their children with regard to their decision to return. What role did their family, their friends, and in general the Albanian government, play during the process of their return? Did the role of the Albanian government because it has been advertising itself as a facilitator and accommodator for their smooth adaption.

In Australia, as in many western education systems over the last two decades, discourses of accountability, transparency and performative have reshaped education policy that in turn has reorganized the work of school leaders and teachers. Increasing attention to the production, analysis and display of student achievement data has been one of the effects of this reorganization.

This paper presents some of the work undertaken by school leaders and teachers in a small rural religious school whose NAPLAN results suggest that it is succeeding ‘against the odds’. In the spirit of institutional ethnography we are interested in the ways in which the educators’ everyday practices in this school are textually mediated and shaped by a number of different texts and discourses, including the discourses of accountability and transparency associated with the national school reform agenda, and the discourses of professional learning, Veritas and care that are promoted locally.

The paper examines how intersecting layers of national, state and sector policies connect with and coordinate school leaders’ and teachers’ everyday practices. We trace the ways in which local and translocal ‘ruling relations’ (Smith, 1999: 2006) of a globalized education system reach into and regulate the activities of people in local everyday settings. Our analysis uses the concept of the ‘active text’, the text as activating and occurring in a specific place and time and at the same time coordinating and ruling from a distance. We examine in detail a sequence of the production and reading of assessment data by educators in one school and consider how this codifies students and their learning experiences and articulates them. We mainly explore the difficulties of their re-integration in Albania, and how they perceive themselves in the Albanian society. We call it a ‘re-integration’ because Albania is not the country that they left behind when they first migrated. It is changed, pretty much the same way as other closed societies have done after they opened their borders.

In the second part, I will draw on network analysis. Burt (2000, 2005) demonstrated in several studies how processes of opening and closure was further developed and refined in the field of social network analysis. In the context of the discussion about the production of social capital, the distinction between opening and closure affect the innovative capacities of social networks. Beyond a pure descriptive summation, the paper further explores differences in themes appearing in its data compared to that appearing in documented studies in other parts of China and in other parts of the world.

The UK NHS is going through what is typically referred to as an unprecedented period of change, marked by key priorities of patient choice, innovation, quality, innovation and the minimisation of bureaucracy. These processes are associated with a plethora of paradigms, initiatives and tools designed to support the management of change, including strategies for developing the learning organisation and the role of change agents, predictive change tools, models and processes of personal change, and the rejection of ‘old-style paternalistic’ theories of organisation and culture.

In this paper we explore the Albanian return migration from Greece and the organisational and psychosocial theories and values which underpin it, before moving on to consider how and why we might trace its articulation in the practices of NHS managers, drawing on preliminary data from exploratory discussions and observations with NHS managers working in a large soon to be Foundation Trust Hospital in the North of England. We consider how and why we might go about understanding the social life of change management in organisations by focusing upon manager’s practices and accounts of their experiences of and rationale for change, especially the productive character of change mantras and devices. We end with some critical reflections on the importance and the difficulties of tracking, understanding and articulating the activities and the actants of change in organisations-in-flux and in managing the ways in which we ourselves as researchers are enrolled in the processes of change we seek to study.

In the beginning of the 90s, after the fall of communism in Albania and elsewhere, where capital was the biggest exporter of migrants in the Eastern Block, judging by its proportion to the general population. Over one fourth of the country has lived or is living in a foreign country. Their main destination was Italy and Greece, because of their geographic proximity.

Recently, there is a growing number of migrants that have returned home. Our research is focused on the reasons of their return, the Greek debt crisis being one of them. We mainly explore the difficulties of their re-integration in Albania, and how they perceive themselves in the Albanian society. We call it a ‘re-integration’ because Albania is not the country that they left behind when they first migrated. It is changed, pretty much the same way as other closed societies have done after they opened their borders.

We also explore what was the reaction of their family in Albania and their children with regard to their decision to return. What role did their family, their friends, and in general the Albanian government, play during the process of their return? Did the role of the Albanian government because it has been advertising itself as a facilitator and accommodator for their smooth adaption.

In this paper, utilizing an original data source of approximately 400 graffiti markings from a small location in Northwest China taken in 2012 and 2013, is a longitudinal content analysis study. The markings were collected from a co high school/university campus in a predominantly Muslim region of China. The paper engages in a descriptive summation of dominant themes found in the markings and changes in these themes between the collection of original marking in 2012, and the markings that were appearing in 2013. Analysis indicates that themes are consistent with emotional issues experienced by youth embedded in transitional and temporary social networks. KERSTEN, JOACHIM* (German Police University, joachim.kersten@dhpol.de)

Policing of Minorities and Police Accountability

In the European Union organizational structures, traditions and citizens’ trust in police differ substantially among the member states. While numbers of police per 100,000 population fluctuate between less than 150 to nearly 500, trust in police indicates an opposed relationship: the lower the numbers and the less money spend on police/ security the higher is trust in police (Kääriäinen 2013).

Despite of all the variety there is a common challenge to police in Europe which is the relationship between police and minorities. Whether working migrants and their descendants (e.g. Turks in Germany), traditional resident minorities (e.g. Roma in Hungary) or asylum seekers/ refugees from civil war regions (e.g. Sub-Saharan Africans in Austria), survey results indicate that minority men and women are more frequently subjected to police controls than majority citizens. More often than majority citizens, persons from a minority background feel treated unfairly by officers during encounters with police. At the same time, the victimization rates of minorities are significantly higher while their levels of reporting to police is lower, and this includes instances when they become victims of hate crimes (Goodey 2013).

The European Union has commissioned research aimed at an assessment and an improvement of police-minority relations in the EU member states. The presentation will report findings of such a project (www.corepol.eu). This research project investigates police minority problems and best practice conflict resolution in a wider perspective of restorative justice approaches in Germany, Austria and Hungary.

KETOVUORI, HELI* (University of Turku, heli.ketovuori@utu.fi)

Learning Communities – a New Paradigm for Education

Education is by its nature a normative enterprise and therefore guided by certain aspirational, cultural and ethical beliefs. It is no wonder that the educational systems of different countries reflect the local ideas of nation, the established ways of perceiving knowledge, ways of production, as well as religious and other normative ideas. In western countries educational thinking has generally been connected to the scientific worldview that is based on Cartesian and Newtonian inquiriness in this approach by taking first things first – after that is done, the whole is constructed again. This kind of thinking has its emphasis on things like analytical thinking, determinism, and reductionism, but it cannot cope with phenomena such as complexity, purpose, intention, uncertainty and ambiguity, to name a few. The arts are, however, often mentioned to possess capacities and methodologies to deal with these latter issues. Is this really true is a question well worth to be investigated. The theory of learning communities (Wenger, 2004) offers us plausible framework, from which the premises for the role of arts in education can be outlined. However, at the same time the theory reveals also the limitations of the current structures and predominant ideas within the field. Combining the theory of situated cognition with analyzes of the on-going change in modern society, the new paradigm can be both grounded and justified that means also changes in educational designs.

From Topic to Problem. Organizational Mechanisms of Constructing Demographic Change

By referring to organizational theorists like Karl E. Weick and Niklas Luhmann, the proposed contribution starts from the assumption that for organizations demographic change is not a clear and unambiguous given problem, but rather a topic which might be regarded (i.e. constructed) as a problem or not. Consequently, demographic change is understood as a non-instructive problem, which can be framed in different ways (e.g. risk, catastrophe, or standard problem). Based on the analysis of qualitative expert interviews that has been conducted in organizations of various types (e.g. business firms, health insurer, local government, social welfare organizations), I want to present preliminary results on the question: Which structural elements and which mechanisms are crucial for the organizational construction of demographic change as a problem?

More specifically, the proposed contribution wants to shed light on two aspects: first, it is asked as what kind of problem the demographic change is constructed by organizations. This refers to the organizational construct of demographic change itself and aims at identifying different types of constructs. Second, it is asked how the demographic change is constructed as a relevant problem. This refers to the process of constructing demographic change as a certain type of problem and aims at identifying crucial structural elements certain types of constructs depend on.

Obviously, this approach does not refer to a shifted objective and real social structural reality and its related challenges for organizations. Instead, it asks for the construction of demographic change as a certain type of problem and aims at identifying crucial structural elements certain types of constructs depend on.

Obviously, this approach does not refer to a shifted objective and real social structural reality and its related challenges for organizations. Instead, it asks for the construction of demographic change as a certain type of problem and aims at identifying crucial structural elements certain types of constructs depend on.
The present paper would like to focus on 1) to assess life satisfaction within low, middle and high socio-economic status. 2) to compare life satisfaction of elderly people living in old age home and in family 3) to assess adjustment of elderly people within low, middle and high socio-economic status. 4) to compare the adjustment of elderly people living in old age home and in family. 5) to compare leisure and life satisfaction of elderly people living in old age home and in family. 6) to compare leisure and adjustment of elderly people living in old age home and family.

Key words: Leisure, life satisfaction, adjustment, support system

Use of Facebook As a Source of Political Participation Among University Students of Pakistan

Use of Facebook as a Source of Political Participation among University Students of Pakistan. The Internet has brought about remarkable changes in contemporary societies by increasing access to the information and allowing users to freely express their views to others. Various scholars consider the Internet as a new source of political socialization and a way to bring young people closer to the political process. The Internet facilitates this process in various forms. The use of Social Networking Sites (SNSs) is viewed significant in this regard. SNSs have stimulated the political debate among less democratized societies particularly after the event of Arab Spring. However, there is dearth of scientific evidence that how SNSs are linked with democratic and political participation among the users of developing countries. The study follows the俩y intends to see that how Facebook, most accessed social networking site in the world, is being utilized by its users in Pakistan for political purposes and influenced its young users to participate in political process. For this purpose, an online survey has been conducted with students of various universities in Pakistan to find out the relationship, if any, between Facebook use and their civic and political participation. The preliminary analysis shows that there is association between Facebook use and online and offline political participation. However, further inquiry is in process to see the effect of intervening variables to validate this relationship. The study will provide deep insights regarding the political use of Facebook and its influence on civic and political participation.

Islam and the Arab Muslim Refugees in United States

The studies of Arab Muslim refugees in the United States are just in the beginning; research is needed on wellbeing of families. Refugees have more challenges than many other immigrants because of what they have experienced before and after they arrive to United States, Politics, religion, and culture overlap to shape these refugees’ lives. Islam is one of the main factors that influence refugees’ resettlement and adaptation in their new home. New opportunities challenge traditional ways of living. The paper will draw on some of the findings of an on-going research study exploring refugees’ religion continuity and change: fate, rituals, and practices, the role of religion in refugees’ resettlement, adaptation, and emotional support, types of challenges faced for being Muslim, and the role of Muslim communities in refugees’ resettlement. A qualitative approach was used to investigate the perceptions and experiences of female Arab refugees. Semi-structured interviews were conducted with refugees in the middle Atlantic area. Grounded theory was used to build useful theory about Arab Muslim refugees’ religion continuity. Findings emphasize the importance of taking a holistic approach in understanding Arab Muslim refugees’ needs which can lead to successful integration into the American society. Islam is more than religion; it represents a strong emotional support that ties the family together and helps them to assimilate to the new culture, and passing their religious values to their children is one of their priorities. In addition, it appears important for the wellbeing of refugees that they maintain their religious rituals while encouraged to integrate to the new culture. Social ties play an important role on family’s well-being and emotional support represented on other refugee friends, relatives, and American friends.

The Peace processes could do no better. There has been a continuous ‘fawed’ peace process in the region providing no solution but encouraging more cycles of violence. The focus of the paper is to explore the dynamics of ethnic conflicts in the region, to examine the engagement of peace process by the Indian state with different communities and to conceptualize ‘Peace as a trouble more than a solution’.

**Key words:** External powers, India's Northeast, Ethnicity, Ethnicism, Peace

Dynamics of Social Indicators of Ukraine

Nationally representative surveys started in Ukraine (along with other countries, that arose after the collapse of the Soviet Union) only in the early 1990s. Several surveys in the framework of the ESS and IPP have been conducted during the last 5-7 years, but these surveys are irregular. Therefore, long series of social indicators are a rarity for Ukraine. The report addresses social indicators available for the analysis, obtained mainly in the polls of the Kyiv international Institute of sociology from 1991-1994 until 2013. These include indicators of well-being, health, happiness, morality (in particular, the level of xenophobia and modernization (in particular, the use of the Internet). We discuss the possibility of combining the individual social indicators in integrated indicators describing the state of the country.

The Increase in Support of Right-Wing Party in Ukraine: Assessing the Social and Economical Context

The survey data show that right-wing ideology becomes more popular in Ukraine. Far-right party Svoboda, promoting racist, xenophobic views, on the parliamentary elections in Ukraine received 10.44%, and was held in the Parliament for the first time (in the previous elections of 2007, it received only 0.76% of the votes). One of the most unexpected findings of the Ukrainian national exit-poll 2012 is that individuals with higher education have greater propensity to vote for right-wing party. Has far-right ideology such strong support in Ukraine or are there other reasons for this success? The analysis is based on the electoral statistics and nationally representative data about the well-being, educational status, ethnolinguistic affiliation, electoral history, basic social and political attitudes, and protest intentions of supporters of the right party Svoboda in Ukraine.

A Challenging View on Religion-State Relationship: Iranian Case

It’s obviously documented and historically recorded that religion has always been a strong factor in Iranian society, and is embedded in social/everyday life of Iranian Muslims. Most of researches also explore that Iranian Muslims strongly believe in spirituality as well as rituals although the states might have followed secular policies in public spheres in past decades. Since the victory of Islamic Revolution in 1979, the state was formally charged to diffuse religious believes over the society and to control people to follow religious rituals and Islamic duties in public sphere as well as the private space. These new policies made the state to intervene in legislating process regarding the Islamic believes to make people to follow Islamic rules in public sphere and do rituals like prayers, fasting, Hijab etc.

But what’s the true reality? A survey on the basis of data collected in 2010-2012 in a few of important vital cities in Iran tries to find answers to this question. Due to the findings of this research it’s suggested that although the state is to make people do rituals in public sphere and all possible efforts are done by the state, media, police etc to convince people to follow the state Islamic rules (i.e. not eating/drinking in fasting days in public spheres) -otherwise they will be punished-but it has not lead to increase in doing religious rituals in their private everyday lives.

This research explores that state's/pressures on people to do rituals have been less successful although it suggest that Iranians are strongly religious and strongly believe in spirituality yet but in a personalized way.

Keywords: sociology of religion, religious legislation, religious status, public sphere, Iranian Studies.

Artistic Communities: Strategies and Tactics of Creative Products Promotion in Petersburg Market of Contemporary Art

This paper considers the strategies and tactics that young Petersburg artists use to promote their artworks and provide communicative resonance among them. It presents the results of a research project conducted in accordance with the strategy of multiple case-studies: four artistic communities of different scale, structure, integration grounds, ideological orientation, professional background, forms of spatial embeddedness and artistic style were selected for analysis. In the course of data collection, a wide range of field research techniques such as...
in-depth interviews, participant observation and qualitative analysis of texts was applied.

The empirical data show that under the conditions of deficient sponsorship and information support, artistic success in Petersburg largely depends on the artists' constant self-promotion efforts (participation in competitions and collective project applications submission, dissemination in Internet). By accumulating material, informational and reputational resources of their members, art-communities make convenient platforms for artistic self-presentation and development both in and beyond the local market. Responding to the specific noneconomic logic of the market, where symbolic recognition precedes commercial success, communities produce unique strategies of defining target audiences, embedding creative process in urban contexts, choosing legitimate exhibition sites, opposing themselves to other artists and art-groups. Community membership helps artists cope with the risks of disintegration, isolation and insufficient information exchange impossible for the small and highly competitive market of contemporary art in St. Petersburg and balance between the margins of creative products unoriginality and unrecognizedness. Thus, artistic communities can increase symbolic capitals of individual artists serving as a peculiar kind of social lift and constituting one of the major forces of the social construction of artistic reputations.

Social Effects of Neoliberal Policy in a Post-Soviet City: Urban Space Contestation Revisited

With the transition from Soviet state-planned economy to post-Soviet market economy, neoliberal city policy has become central for urban planning and (re)development in Russia. Subject to this policy, contemporary St. Petersburg experiences impetuous commodification and aestheticization of urban space and, consequently, its rapid gentrification. Alternative views on how urban space should be organized make citizens consolidate and buck against the decisions of elites. This paper considers the processes of urban space contestation by strong and weak advocacy groups in a neoliberal post-Soviet city. It focuses on six research cases embracing struggles of local communities against aggressive urban (re)development in St. Petersburg (spot construction, demolition, renovation of historical areas). To analyze the decisions on urban futures taken by city administrations and developers, we use the theories of urban political regimes (Stone, Molotch, Logan). To describe the resistance of citizens to imposed urban transformations, we apply theoretical frameworks developed by Levebvre, Scott and Crang.

However, our empirical data show that the abovementioned theoretical backgrounds have to be adapted to the local context of St. Petersburg where struggles over urban space unfold under the conditions of total uncertainty: coexistence of multiple property regimes, constant adjustment of legislative frameworks, insufficiencies in the decisions and actions performed by authorities and investors. For instance, pursuant to growth machines theory, coalitions of authorities and developer companies are fashioned in Petersburg, but it is only true for big businesses whereas smaller enterprises often suffer damage from inconsistent authoritative decisions. Meanwhile, local communities always suspect developers' exchange in a despicable urban agenda strategies and actions performed by authorities and investors. For instance, pursuant to growth machines theory, coalitions of authorities and developer companies are fashioned in Petersburg, but it is only true for big businesses whereas smaller enterprises often suffer damage from inconsistent authoritative decisions. Protecting The Health Consumer – Health Capabilities and Collective Voice Versus Patient Choice

'Patients' are increasingly seen through the lens of the 'health consumer'. Non-communicable diseases and injuries are increasingly predominant, while a rejuvenated interest in the 'social determinants of health' and health inequalities re-locates individual biology and agency within a larger context of physical exposure and social conditions, highlighting longer chains of biomedical and social causal factors (Venkatapuram, 2011, 33, CDSH 2008). This contrasts against discussions which view patients as individual health consumers, leveraging self-efficacy to achieve societal health outcomes. The health capability paradigm offers an alternative perspective by individualizing health agency, scientific and professional judgement, and collectivist health norms (eg Reger 2010, 141–142). This paper advances a health capability perspective on systemic public health protection and argues for capability-oriented health system reforms (eg Thai Health 2013) which support and vindicate the principle of health protection. The discussion is illustrated with respect to well-known occupational and environmental health hazards such as asbestos that are beyond the health agency of individual 'patients' (Kho and Kulsoomboon, in progress). The goals are twofold – to prevent and decrease risk of exposure and to increase provision for those who have, or may in the future, become ill or disabled through exposure. The discussion points to the importance of protection as a systemic attribute in health governance. It focuses particularly on collectivist and solidaristic consumer action and its role in participatory deliberation through organized civil society channels.

The theoretical discussion integrates reflexive health governance and the capabilities approach, linking normative, substantive and procedural claims for health justice and rights with theories of health governance. A ‘joint scientific and deliberative approach’ can provide a means to guide decisions and bring together normative substance, scientific evidence and procedural decision-making to achieve broader health system development and reform towards more legitimate and just forms of shared health governance (Ruger 2010, 183).

Challenges of Poverty and Inequality in the Arab World

Challenges of Poverty and Inequality in the Arab World

Despite spectacular economic rise of some of the Arab Gulf countries, poverty remains a persistent challenge in the Arab World. Social inequalities persist as new inequalities overlay old structured ones in a number of Arab countries. Depending on the country and the region of the Arab world, the definition of the social safety net, social inequality is often deepened by the rapid social transformations. Historically formed structured inequality often combines with new poverty to produce social turmoil. Social inequality and poverty played a critical role in the waves of social uprisings popularly known as the 'Arab Springs'. There are intra and inter-regional variations in poverty in the region which help shape not only internal political outcomes, it also impacts external relationships. Some of the poor countries in the region depend on their rich neighbors to meet ends meet, while others look beyond the region for facing the challenges of entitlements. Such external relations play an important role in shaping the geo-political alignments in the region. Intra-Arab regional migration too plays an important role. Remittance earnings play a critical role in meeting the challenges of poverty in some of the countries. However, social upheavals tend to disrupt patterned migration with far reaching consequences in the intra-Arab world relationships. The paper will provide a critical survey of the state of the play of poverty and inequality in the Arab world and try to chart various social and political implications of structured inequality and poverty in the region.

Gender Research in Japanese Sociology: Complicit or Critical?

Gender Research in Japanese Sociology: Complicit or Critical?

The impact of feminism in sociology has been examined quite thoroughly in the US and Britain but comparable analysis has not been undertaken in Japanese sociology. The present paper endeavors to fill this gap, but less to assess the impact of Japanese feminist research to which Japanese sociology has so far contributed. The paper will examine the type of gender research published in a mainstream sociology journal, to obtain a picture of the nature of gender knowledge that is produced in sociology, and specifically, whether gender research in sociology raises questions about the way sociology is practiced. I analyzed all four issues per year from Volume 40 (1989-1990) to Volume 61 (2010) of the official general sociological journal published by the Japan Sociological Society, Japanese Sociological Review (Shakai-ku Kyorin), with a total of 558 theoretical and empirical articles. All articles were coded for topic/area, geographic focus, if relevant, methodology, and also gender, affiliation, and professional status of the author(s). In addition, the text of the gender-related articles were read and coded for major claims or findings and reference sources. Preliminary, the analysis shows that most gender-related articles are on the topic of family and marriage, body and norms, intimacy and sexuality, and social stratification. The next popular topics are labor, employment and organization, and social network. Only two such topics are central to sociolgy represented by this journal and indicated by the number of publications. While 59 articles out of 558 articles may represent a fair number from any subfield in sociology represented by this journal and indicated by the number of publications. While 59 articles out of 558 articles may represent a fair number from any subfield in sociology and indicated by the number of publications.
Effects of Women Employment on Family Integrity (Case study: Comparative Teachers with Housewife in North of Iran)

Identifying the effects of women’s employment has contributed to the strength and health of the family, and the research in the effects of women’s employment has high scientific and social importance and necessity. The purpose of this study is to identify the effect of women’s employment in Integrity of the families. The research method in this study is survey. Population includes of 400 people of employees (teachers) from 25 to 49 years as a test group, as compared with the same number of housewives as control group. Sample size which were determined by using Cochran formula is 200 that includes 100 of the employed women and 100 of similar housewives women. Samples selection is done, using random sampling and stratification method in employed group and stratified method appropriate to unemployed groups. The tools of data collection was questionnaire and its validity was using a content validity of face validity, using and reliability using Cronbach’s alpha coefficient (0/84) has been approved. For data processing spss software and for data analyzing statistical analysis appropriate in level of variables measurement such as Pearson, Spearman, the mean comparison (t.test) and analysis of variance (ANOVA) was used. The results of the research showed that the Integrity of family among housewives women is higher than the employment groups. More results show that whereas the income has positive relations with the Integrity of Family; the education have negative effect on Family Integrity. Discuss show that the result of this study have been protect with the result of Alaeddini (1993), and André Michael (2003).

Sociocultural Interaction in the North Caucasus: Globalization and Identification

The North Caucasus is experiencing globalization challenges. New information technologies generate frequently the cultural shock, threatening ethnic cultures in the region. Interaction of the global and local in modern conditions strengthens intensity of traditional cultures. Therefore globality becomes time imperative. Globalization influences greatly the identity, opening a way to set of identities in the global world. Of principal value is conscious familiarization with cultural wealth of other people. We should take such values which do not break internal development of our own culture and do not tear it off from the historical roots, the best achievements and traditions. The ethnic culture can develop and rise to the universal importance only in dialogue with cultures of other ethnoses. One of the findings of modern public consciousness is that it is impossible to imagine any civilized country out of communication with other world, with other cultures. The need for cultural exchange for cultural understanding and aspiration to learn an inner world of each other lead to expansion of spiritual bonds and contacts. Ideas of preservation and further development of a human civilization are connected with the need of cultural mutual communication.

Efficiency of cultural inheritance depends, first, on ability of a community to claim master and use values of other people in own ethnic environment; secondly, on aspiration of a community to take unavailable valuable elements; and thirdly, on readiness of a community to see in loan an opportunity to open the best qualitative lines and properties.

In conclusion, the new acquired does not lose ethnic coloring and originality, but on the contrary, it becomes more profound ethnically and at the same time integrated. This statement is especially topical for a modern sociocultural situation in the North Caucasus and in Russia as a whole.
in the capitalist world-system. No wonder, many people distrust authorities and rarely participate in civil actions. Thus, there is a huge gap between awareness of unbearable situation and passive approach. Yet, people should know that there is an alternative: an emancipatory social science, which calls on active participation for implementation of desired change. In the real utopia approach of E.O. Wright that active and real alternatives should be desirable, viable, and achievable. And civil activists who plan changes actually need and lack knowledge about possible models of empowered democracy and techniques of implementation, which proved to be efficient in real utopia cases around the world. And this study is aimed to provide such knowledge. As far as democratic initiatives implemented by authorities have a profound influence on society as a whole, it is reasonable to give priority to civil activism in political realm through symbiotic transformations using the state. Therefore, the research question is the following: what would be a comprehensive real utopia model of desirable, viable, and achievable participatory democracy? The existing studies, and qualitative expert interviews provide grounds for an integral real utopia model of efficient participatory democracy, relevant for communities and even larger societies. So far, the perspective change in democratic governance should include local community initiatives, participatory budgeting, referenda, free and fair elections, citizen assemblies, electronic democracy, and efficient control of work of authorities. For implementation civil activists should be guided by their emancipatory values and objectives, take into account theoretical implications, consider experience of the existing real utopias, mechanisms of implementation, effects of contexts, collateral institutions, unintended consequences, power and negative feedback studies, especially medi- ate reforms. The findings are applicable to semiperipheral, peripheral, and even core societies.

World-Systems Approach to Global Inequality in Effects of Proactive Individualism on Subjective Well-Being

The world is experiencing global crisis, yet proactive individuals can promote social change. Still, opportunities for activism and its impact are unequal in the modern stratified world-system. Therefore the following research question arises: what are the differences in degrees of causal influences among proactive orien-
tation, individual activism, personal achievement, and subjective well-being be-
tween countries of core, semiperiphery, and periphery? The preceding theoretical implications and empirical findings by M. Kohn, S.K. Parker and C.G. Collins, M. Se-
ligman, M. Argyle, C. Welzel and R. Inglehart, L. Beer and T. Boswell, I. Wallerstein were considered. The posed hypothesis is the following: degrees of causal influences among proactive orientation, individual activism, personal achievement and subjective well-being are higher in core societies than in semi-peripheral societies, and in semi-peripheral societies are higher than in peripheral societies. The data sets of 49 Societies (2005-2008) with the sample of 49 countries with up to 69,381 respondents were used. Structural equation modeling and multiple group analysis in MPlus has been performed. In fact, the hypothesis was confirmed partially. It was proven that positive influence of person’s individual activism on subjective well-being is the strongest in the core, is weaker in the semi-periphery, and is even negative in the periphery. However, it was found that there are relatively small differences between degrees of influence of individual activism on personal achievement. This finding signifies that overall human ac-
tions do lead to accomplishments, regardless of structural conditions. Moreover, it was revealed that the degrees of influence of all other constructs are surprising;

While poverty, as previously established, correlates negatively with schooling, risk management strategy for families at risk. At the policy level this supports ex-ante strategy.

The Role Of Risk In Child Mobility Decisions -- Empirical Evidence From Benin

RC19-328.1

KIELLAND, ANNE* (Inst Applied International Studies, oki@fajomal.nl)

Child mobility is still common throughout the West African region. This has been academically approached under the headings of child fostering, child migration, child labor and trafficking. Poverty is considered a main driver, alongside social networking and skills matching. Recent empirical work looks at the role of shocks to child mobility. Yet, it has been hypothesized that vulnerable families do not necessarily wait for a shock to occur, but might relocate children as an ex-ante strategy.

The proposed paper looks at the role of risk in the child mobility decision with data from a fertility based survey of 3000 rural households in Benin, a country known for high child mobility rates. The survey allows for registering children living away from parents, their schooling status and purpose of leaving. The 2012-survey covers three important areas: poverty, exposure to the massive floods of 2010 (shock), and the household head’s level of worry about not being able to provide for his family the next 12 months (risk).

The regressions show (controlling for social and demographic factors), that perceived risk correlates substantially and systematically with child mobility. Poverty and shock, on the other hand, do not correlate at a statistically significant level. This interestingly contrasts with the correlates of the schooling decision. While poverty, as previously established, correlates negatively with schooling, risk and shock do not. Focusing only on children who have left and are not in school, both risk and poverty correlate with the mobility outcome.

The results support the notion that child mobility forms part of an ex-ante risk management strategy for families at risk. At the policy level this supports cash-transfer type social policy interventions, supporting findings from South-Af-
rica where even small - but predictable incomes - like pensions and child benefits - have produced positive effects on child outcomes.

The Variant Actuality of Young People in Precarious Transitions in Late Modern Japan—Based on the Interviews with 51 Young People

In recent Japan, young people have experienced prolonged and complex tran-
sitions from school to work, have been forced to work in precarious jobs, or faced the risk of unemployment, poverty, and social exclusion. The Youth Cohort Study Japan (YCSJ) conducted by The Japanese Educational Research Association is a five-year panel survey that contains 1687 samples aged 20 (first wave in 2007) and 891 aged 24 (fifth wave in 2011). Our analyses of YCSJ data have indicated the characteristics of the transition from school to work in recent years, especially its precarious processes and the factors (familial and educational background, social capitals, gender bias, etc.) which have influence on the differentiation of transitional trajectories. Then we have tried to describe the actuality of youth in precarity based on qualitative analyses of interviews with those young people who have participated in our five all waves and assent to be our interviewees (we interviewed with fifty one cases). Through these analyses, we aim to show some variant types of precarious transitions. And we also suggest how young people overcome or negotiate their difficulties.
Normalizing Precarity? Youth Unemployment and Employment Instability in Poland

In the last decades, there has been a heated debate concerning the consequences of employment flexibility in many European countries. Concerns have been raised that even if young people are provided with a protected job, they are not protected from unemployment and employment instability.

Instability in Poland

In Poland, the unemployment rate has been high for many years, but recently there has been a decrease in the unemployment rate. However, employment instability is still a problem. The analysis is based on the results of surveys conducted in 2008 and 2013. POLPAN data include detailed information on the respondents’ employment history, enabling a dynamic analysis of young people’s early labour market trajectories. The qualitative results are supplemented by a qualitative analysis of in-depth interviews, reconstructing the ways in which the young define their own experiences of unemployment and precarity. Paradoxically, it appears that even if young people in Poland are protected by law, they do not necessarily perceive their situation as satisfactory.

KIKUCHI, NATSUNO* (Nagoya City University, kikuchi@hum.nagoya-cu.ac.jp)

What Does the Word “Joshi-Ryoku” Mean in Terms of Gender in Japan?

Recently the word “joshi-ryoku” has become very popular on the mass media and daily life in Japan. It seems a counterpart of the word “girl’s power” in the English speaking world, which means girls’ empowerment, ambition, or strength. But joshi-ryoku implies a more restrictive sense. The meaning of this word “joshi-ryoku” is so complicated, and therefore, examining the usage of the word helps us to find the complexity of the modern Japanese culture and society, especially from the viewpoint of gender.

In the 1970s and 1980s, the Japanese society has experienced the changes in many points: The economy went into recession and improved: a regime change occurred: social unrest never ceased. The movements by the sexual minority people are rising, while women’s movements are stagnant and cannot achieve a change of generations.

The word “joshi-ryoku” came into use in this social situation. It means the ability that women must learn in any age. The specific meaning changes in context, it varies, for example, from the ability as a housewife to do the housework efficiently to the ability as a working woman to manage business tasks with alacrity. So it depends on the context where and by whom it is used, conservative or liberal.

This presentation examines the variable meaning of this word depending on different contexts and, by doing so, determines the gender regime that the word implies in the present Japanese society.

KIKUZAWA, SAEO* (Hosei University, skikuzawa@hosei.ac.jp)

Family Caregiving and Stress Processes: Son and Daughter Caregivers in Japan

In Japan, caregiving of elderly parents has been traditionally the responsibility of the family; the wives of eldest sons, or daughters-in-law of the elderly, typically provided care for elderly parents. However, the profile of family caregivers has been changing in the past few decades. One of the major changes is the increase of male caregivers. Presently, about 30% of primary caregivers are sons or husbands of the impaired elderly. A growing concern is that these male caregivers may have different types of difficulties or stress from caregiving, compared with their female counterparts. For instance, a recent national survey on elderly abuse reported that more than a half of the abusers are male caregivers. Evidence suggests the possibility of gender differences in stress processes. However, most previous studies are on female caregivers, and research on gender differences in stress processes is very limited in Japan. Are there gender differences in the stress processes of family caregivers? This study seeks to address this question by drawing on stress process theory (Pearlin et al. 1990). I analyzed data from a survey conducted in 2011 on son and daughter caregivers aged 40 to 64 years old, who take care of their elderly parents at home as primary caregivers. The analysis results show that the stress proliferation processes of son and daughter caregivers share many similarities in terms of pattern, whereas certain differences appear to reflect the gendered nature of Japanese society.

Dimensions of Safety in the Process of Mental Health and Illness. Empirical Results and Theoretical Framework

Feeling safe in the world is regarded as a basic human need which Maslow placed at the second level of his human need hierarchy directly after bare physical survival. Consequently, lack or loss of safety in the most general sense is considered as a major risk factor for the impairment of human well being and the development of mental disorders. Dimensions of safety which have been identified as relevant for mental health are personal relationships, economic living conditions and environmental circumstances. Despite the fact that the relevance of these dimensions of safety for mental health has been confirmed in an increasing number of studies, there is still lacking a common theoretical framework that allows a comprehensive understanding of the interrelationships between individual and environmental aspects of safety in the etiology of mental disorders.

In this presentation the recent results of empirical studies on the impact of the lack or loss of safety on mental health will be discussed with regard to their contribution for the understanding of the interaction between personal characteristics and environmental hazards in the development of mental health and illness.

KILIAS, JAROSLAW* (Warsaw University, kilias@chello.pl)

The Sociology of Work and Factory Sociologists in Communist Poland

In Communist Poland the sociology of work was one of the most prosperous social science branches. It was perceived as particularly important due to the Marxist emphasis on the category of work, as well as its supposed significance for national economy. It might have been even perceived as a dream come true by those who imagined social science as a scientific guidance for the practice. Besides academic field, in which the branch was hindered by imprecise definition of the very subject of its study, normative bias, censorship and, mostly, self-censorship, the sociology of work spread to big socialist enterprises which employed professional sociologists in 1960s and 1970s. Their role was significant also due to the role of the workplace as the backbone of Socialist civil society. As a result, new occupation and potentially interesting field of intellectual activity opened for young sociologists.

The paper will base on period literature dealing with factory sociologists - limited yet existing - as well as on archive resources and interviews with ex-factory sociologists. Due to fragmentary data it will not probably be possible to describe typical social profile or career paths of factory sociologists, so the paper will concentrate on those cases in which some more detailed biographical data is available. The study will aim at describing their professional role which was by no means clearly defined, position in the factory structure/hierarchy - somewhere in between the management, Party secretary and labor unions - as well as their expectations and career paths. A special concern of the paper will be intellectual ambitions of factory sociologists and their relations with the academic field from which they were rather isolated, what in turn caused their constant dissatisfaction.

Medicalization in Turkey in the Context of the “Health Transformation Programme”

There has recently been a growing interest on the effects of health care systems on medicalization in particular national contexts. This paper contributes to this literature by focusing on the case of Turkey, where medicalization in the form of increasing consumption of medications, use of health care services and diagnosis of a number of diseases goes in parallel with the health reform process that started a decade ago aiming to radically transform the provision and financing of healthcare services. Special emphasis is given on how policy measures such as separating purchasers from providers, encouraging competition among public providers, implementing performance-based payments, and combining public and private health care services affect medicalization by creating financial and pricing incentives for physicians to alter their diagnostic and treatment behaviors. Additionally, the arguably positive and negative impacts of medicalization are discussed with reference to recent statistical data including population health indicators, patient satisfaction, outpatient/inpatient ratio, consumption of pharmaceuticals, the number of screening tests performed and the number of doctor visits with a particular focus on indications of overdiagnosis/ overtreatment.
This paper explores the changes that have occurred for women in the legal professions in Korea since women first became lawyers to the present day. This paper seeks to delineate these changes and to offer a socio-historical analysis of how this took place as well as where it might lead.

Social Capital, Social Integration, and Suicidal Thoughts Among Korean Youths

Abstract

The focus of this research is to examine some of the key factors that influence suicidal tendencies among youths in Korea. The teenage suicide rate in Korea has been one of the highest among all OECD nations, attracting the attention of scholars and policy makers alike. In this study, we examine in particular the gender and to what extent measures of social capital are associated with having suicidal thoughts, ceteris paribus. In a Durkheimian tradition, medical sociologists and social epidemiologists have increasingly relied on the concept of social capital in explaining individual and cross-national health inequality. Much of the extant scholarship focuses on adult populations in the context of Western developed economies. Based on the analysis of the Korean Youth Panel Study, a government-funded multi-year research project, we shift the analytical angle toward a vulnerable population that has not received much academic attention. A number of social capital indicators are conceptualized and measured in analyzing the roots of suicidal tendencies among Korean youths, specifically participation in voluntary organizations, friendships, and quality of interaction with close friends, neighborhood trust/fear. Hierarchical linear modeling is used to examine the psychological health effects of social capital simultaneously at individual and contextual (neighborhood) levels. While controlling for a host of socioeconomic and demographic variables, we find that voluntary organizational membership, intimacy with parents, and neighborhood trust/fear are significantly related to having suicidal thoughts. We offer broad theoretical discussions and implications for the social capital literature based on our findings.

Understanding Civic Engagement in Asia: The Role of Social Capital

The question of “who participates” has received a great deal of scholarly attention among political sociologists. Increasingly, students of political participation, both formal and informal, have relied on the concept of social capital—defined in terms of trust, networks, norms of reciprocity, and organizational membership (Putnam 1993). By analyzing the conditions under which people choose to engage in political activities instead of opting to ride free on the efforts of others, as Jacobs and Skocpol (2005) point out in Inequality and American Democracy, equal political voice and democratically responsive governments are under increasing threat due to the declining level of political interest and participation on the part of individual citizens. Understanding why some people decide to engage in politics formally and informally, therefore, is of paramount importance not only for the US but for any democratic nation. This study proposes to investigate this topic in the context of Asian countries. Based on the multilevel analysis of the Asian Barometer Survey of Democracy, Governance and Development (2006), which consists of data on 13 countries in Asia, it examines how and to what extent various social capital indicators (i.e., generalized and institutional trust, participation in voluntary associations, and network size) influence the likelihood of engaging in political activities, while controlling for key socio-demographic factors (i.e., income, gender, education, age, and religion). Four outcome variables are examined: two formal (voting and contacting an elected official) and two informal (attending a lawful demonstration and discussing politics in social settings). Findings from hierarchical linear modeling reveal that social capital is associated with different political outcomes in complex ways, at both individual and contextual (country) levels. Theoretical implications of the quantitative results are discussed in relation to earlier findings in the extant literature.

Biopolitics of Depression in Korea

Abstract

Biopolitics of Depression in Korea

As Korea has experienced rapid modernization, patients of depression have dramatically increased for the last 50 years. This has led, tragically, to a rapid increase in the rate of suicides. This study attempts to understand the reasons...
why Korea as one of the most successful countries in modernization has shown such high rates of depression and suicide. It also attempts to analyze the process of medicalization of depression in Korea and how the doctors and patients accept anti-depressants as a cure for depression.

Neoliberal Individualization and the Modified Familism of Korea: The Case of Unmarrieds in Their 30s

As one of countries with the record low fertility rate Korea has the sharp concern in the unmarriedness among youth. The explanations on the issue has been given to the causes such as economic condition or individualism among them, which seem to be insufficient. This article aims to analyze the marriage attitude among the unmarried people in their late thirties focusing on the complexity of their family value. That purpose is to explain the characteristics of the individualization in intimacy in the times of the late modernity relating with the strong familism and the kinship system of the patrilineality privileging the first son. The analysis on the life course is also the main theme in this research. The economic crisis of Korea under the IMF-led bailout programs started to be intensified from the year of 1998 when the cohort group of birth in 1975 started to graduate from the universities. So this article selected 19 unmarried men and women from the target group, who were thirty eight years old.

The result shows the great gender differences in the narratives of family value. Men interviewees tend to tell the sons’ responsibility of the care for the parents and the role of the male provider, while the women as well as to consumers by ing the self and making the lives of their own. But the sexual lives of both seemed very limited, and their emotional ties were commonly connected with their parents, especially with mothers. Their living arrangements were never separated and the role of the male provider, while the women counterparts focus on seeking the self and making the lives of their own. But the sexual lives of both seemed very limited, and their emotional ties were commonly connected with their parents, especially with mothers. Their living arrangements were never separated from their parents’. So we can call the recent changes among them as ‘the family-oriented individualization’

Korean Wave As a Hybrid Subculture

The Korean wave (Hallyu) refers to the significantly increased popularity of Korean drama and music around the world. Hallyu swept through Japan, China, Taiwan, Vietnam, Philippines, Thailand and other Southeast Asian countries, and then to all over the world. Now, Hallyu has expanded to include the popularity of any ‘Korean subculture’ including cuisine, clothes, cosmetics and language, etc. ‘Gangnam style’ by Korean singer PSY has recently acquired more than 1.7 billion views on Y-Tube in the world within a year.

This paper is dealing with the rise of the Korean wave (Hallyu), reasons of success and the current situation of the Korean wave both in the positive and negative perspectives, and then it concludes with some sociological implications for a hybridization of East Asian culture. This study claims that Hallyu is the fruit of hybridization through digesting the influx of culture from Western and Asian sources in Korea. Hallyu in turn builds a hybrid subculture that appeals in Asia based on a long tradition of cultural interactions among other countries.

Organizing Independent Contractors in South Korea: A Case of Insurance Agents Unionizing

The purpose of this study is to understand limitations and possibilities of organizing independent contractors by focusing on insurance agents in South Korea. Among various types of precarious employment, insurance agents are an exemplar case of independent contractor jobs. Since the 1997 crisis, the private insurance industry has shifted market risk on to workers by employment externalization in the form of independent contracting as a result of deregulation. The labor standard law does not treat insurance agents as workers and most of insurance agents are not affiliated with labor unions. As a result, insurance agents are outside labor protections. Under this context, insurance agents attempted to organize their own union, Korean Insurance Agents Union (KIAU), in early 2000s, and form a branch of Korean Finance and Service Workers’ Union (KFSWU) in 2004. However, the KIAU lost rapidly its membership since the mid-2000s and have failed to revitalize itself until now. This failure might be attributed to some external and internal factors. External factors include the denial of worker status by the courts, the absence of labor market regulation by the government, and crack down on union activities by major insurance companies like Samsung. Internal factors include the absence of strategic approach on the side of the industrial union (KFSWU), individualized job characteristics of insurance agents, heterogeneity of the working conditions between regular workers of insurance companies and insurance agents. In recent attempts to re-organize insurance agents, the role of industrial union is crucial factor. Some programs turning non-regular workers into regular jobs are implemented by the KFSWU through collective agreements; however, the union focused on directly employed non-regular workers, like fixed-term workers. Moreover, the KFSWU’s strategic and long-term support was not given to insurance agents, because of its internal constraints and the lack of preparation.

Selecting Between Chosenjin and Zainichi: Analysis on the Zainichization Processes of Koreans in Japan

The Zainichi Koreans were brought to Japan during the colonial period and so this foreign group has the longest history of foreign residence in Japan. But success of ethnic identity formation is not easy in a country that determines nationality by jus sanguinis and so many third- or fourth-generation of ZainichiKoreans have some trouble living as a Korean. Even though there are lots of studies that address their ethnic identity troubles, many of these focus on the discourse of intergenerational diversification.

Based on Constructivism of Cornell & Hartmann(2007), this paper focuses on the media environment as a field of constructing ethnic identity. Analyzing the influences of exposure to the ‘Korean Wave’ and ‘abductions by North Korea’, and conducting three semi-structured interviews with Zainichi Koreans, this paper look into the interpretations and responses of Zainichi Koreans through their selection processes of group appellation in everyday life.

In this paper, looking into the survey and in-depth interview data, which I have conducted after 2008, I will also attempt to analyze the relation between the using and selecting group appellation of Zainichi Koreans and the changing of ethnic identity of them.

These approaches would bring light to new aspects not only on the current Zainichi Koreans’ identity but also on how factors, like as Zainichization, affect changing ethnic identity in host society.

South Korea’s Developmentalist Worldview and Debates about Its Modernity

South Koreans make a Eurocentric hierarchy between countries according to the criteria of their developmental discourse, the discourse of seonjingu (advanced country). In this discursive framework, the identity of South Korea tends to be constructed as a country near seonjingu or “on the threshold of seonjingu” (“seonjingu munteok”), which provides both senses of superiority over hujingu (backward country) and of inferiority over seonjingu. With this intermediate identity, Korea is still under the project of modernization, actively pursuing the status of seonjingu as its historical national mission. This paper aims to provide a critical review of the debates about Korea’s modernity in the light of its dominant developmentalist worldview, the discourse of seonjingu.

International Policy-Translation Among Precarious Women Workers Organizations: Japan and Korea in Comparison

It was Japan that established the women-only labor union, which was influenced on learning and adopting the main idea of organizing precarious, non-standard women workers from the model of SEWA (Self-Employed Women’s Association) in India, on the one hand, and from the cases of community labor movement in Japan, on the other hand. Korean Women Workers Association (KWWA) learned the experiences of Women’s Union Tokyo (WUT) in Japan, and established a women-only labor union, which is Korean Women’s Trade Union (KWTU) later. On the contrary, Women’s Union Tokyo learned the way of organizing and its role of KWWA, and applied to establishing the Action Center for Working Women (ACW2). Yet, the organizational performance and political impact of the KWTU and KWWA overwhelm those of the Japanese, WUT and ACW2, in a decade.

By introducing the concept of policy translation, this study searches for understanding the different strategies and results in organizing and reflecting interests of precarious women workers in Japan and Korea. The term of policy translation will be used for describing the process of moving policies, programme, ideas or institutions from one time and space to another. Policy ideas may travel via individuals and organizations. It helps to capture the travel of ideas and their modification at the organizational level and helps to analyze the history of women’s organization, the labor movement discourse, and the drivers in the process of policy influence.

The effective performance of KWTU and KWWA attributes to the organizational strategy of the movement leaders, the solidarity condition within the civil society, and the rise of the new cultural context emphasizing the women rights in the society. These experiences of the two countries show that policy-translation can occur...
and matter within labor movement, and that its effectiveness can vary according to the strategy, environment and context.

**Implications of Work-Family Policies and Anti-Discrimination Policies on Gender Occupational Inequality: A Cross-National Study**

Whereas the impact of the welfare state on the quantity and quality of women’s employment is widely studied, little research has further investigated the ways other (non-welfare) types of policies affect women’s occupational opportunities. In this paper, I attempt to explain the level of gender occupational inequality in 2004 in 38 countries through cross-national variations in particular state policies in 1984. I create an original indicator of two types of policies: laws designed to help women combine employment and childrearing responsibilities (measured by a paid maternity leave policy) and laws that promote non-discrimination (measured by a policy that guarantees equal access to all occupations and a policy that guarantees equal remuneration). My data thus include three policies altogether: maternity-leave policies and two distinct forms of anti-discrimination policies. I find that state policies are the strongest determinants, compared to global and female human capital factors, of the gender occupational inequality but different types of policies have different impacts. Specifically, maternity leave is associated with a greater level of occupational gender equality while anti-discrimination legislation is associated with less occupational inequality within countries. Although a panel analysis for a relatively small number of countries should not be overgeneralized, the results do introduce new information about policy-specific consequences for gender occupational inequality and provide a solid foundation for future research.

**New Media and The Social Reconstruction Of Reality**

Social constitutive power of media has been increasing continuously as we enter the era of new media driven by digital technology. As a result, media is no longer a simple means of living but a life itself. Building on Peter Berger and Thomas Luckmann’s phenomenological proposition: ‘Reality is socially constructed’, this study first applies said proposition to our current social reality and discusses the changing life-world of the digital age under the theme of “social reconstruction of reality.” Next, referring to the results from 2011’s survey of 10277 netizens on happiness, the constituting mechanisms of online and offline life-worlds are compared. Finally, based on aforementioned theoretical and empirical discussions, qualitative differences in online and offline life-worlds are further explored.

Upon analyzing survey results, the rise of online life-world, as opposed to offline life-world, is witnessed. Online life-world can now be considered a very effective functional alternative to offline life-world. While citizens, the members of offline life-world tend to follow reality principle, netizens of online life-world appear to favor fantasy principle. If causal logic is inherently emphasized in explaining the behaviors of citizens, narrative logic seems more salient for understanding netizen’s behaviors.

Compared to our conventional offline everyday-life which has been existing from the outset of agricultural age, online everyday-life, used to be generally looked down as ‘mock reality’ devoid of substance. However, empowered online virtual reality is now elevated to an alternative life-world capable of competing against offline actual reality. Moreover, owing to its hyper-real characteristics, online virtual reality appears to reinforce itself up to a point where the possibility of colonizing offline everyday-life cannot be ignored.

**South Korean Values: Understanding Who Koreans Are**

Attempts at understanding what people think and feel has been one of the major themes in the realm of academia. From motivations to strategies, various studies seek to venture into the unknown. Because human mind belongs to the inner workings of human psyche, it transforms itself depending on the situation, and can be concealed at the face of social taboos. Koreans, by the look from outside seems to be multifaceted, and it is not easy for us to get a grasp on the overall mind map. However, behaviors are governed by motivations and motivations are the reflection of what people value. Identity, when applied to inner-workings of people is general, as the starting point, identity, motivation, and core values are expected to guide us in comprehending who Koreans are.

This study seeks to develop an understanding of who South Koreans are. Following the logic of “magic of numbers” and fully utilizing the power of empirical generalization, overall mind map of South Koreans is drawn. Data gathered from 47 separate assessments by psychoanalysts is used. It could be argued that South Korean mind map consists of following three main branches: 1) Relationalism, 2) Inner-Worldliness, and 3) Returnism. These tendencies are all intertwined and form secular trinity in the sense of supreme bliss.” As aforementioned tendencies went through significant alterations, the sense of supreme bliss’ sought after differs from that of traditional Korean society. The kind of bliss so many Koreans yearn for nowadays is more of a fortune than happiness. Disenchanted Koreans today seek the sense of supreme bliss by means of meaningful and beneficial personal connections. What we are witnessing is the reflection of distrust toward ruling ideology and social leadership, resistance to the opportunity structure where fairness is ignored, and remorse over competitive life where winner takes all.

**Developmental Multiculturalism In The East and Liberal Multiculturalism In The West?**

While multiculturalism is losing its popularity among Western European countries, multiculturalism has gained popularity and continued to play an important role in East Asian countries. This paper examines the extent to which multiculturalism in the East (mainly South Korea and Taiwan) conforms to and deviates from Western liberal multiculturalism. In this paper, I define and limit the discussion of multiculturalism as immigrant multiculturalism or a mode of immigrant incorporation. I argue that at the level of practices and policy instruments, Western multiculturalism and Eastern multiculturalism are similar; both segment and stratify immigrants on the basis of their willingness and ability to assimilate to a host country. But, at the level of discourse, Western and Eastern multiculturalism diverge. While Western “liberal” multiculturalism treats tolerance a property of liberal West and construes the immigrant others “illiberal, object of tolerance”. On the contrary, Eastern multiculturalism presents multicultural tolerance as a necessity for their countries to become advanced liberal democracy. For this reason, I call multiculturalism in the East “developmental multiculturalism”. The key difference in the Western liberal multiculturalism and Eastern developmental multiculturalism centers on who has the responsibility to learn the value of tolerance. In the West, it is the immigrant minorities; while in the East, it is the non-immigrant majorities.

The difference in Western liberal multiculturalism and Eastern developmental multiculturalism may suggest one possible reason why the popularity of multiculturalism has declined in the West while it is still in vogue in the East. In the West, multiculturalism is constructed in a way that its failure is blamed on immigrant minorities. In Eastern developmental multiculturalism, multicultural tolerance is constructed as a virtue of advanced, more developed [Western] countries and achieving multicultural tolerance is the role of non-immigrant majorities for their country to become more like the developed countries.

The notion of race and ethnicity is central to contemporary immigration scholarship. Researchers routinely compare groups of different origins to assess their immigration trajectories and respective degrees of socio-economic integration. Less attention, however, has been paid to the historical origins of the classification and categorization in immigration. This paper argues that Dillingham Commission Report (1911) marks the pivotal moment, at least in the United States. Responding to the surge of nativism and increase in the number of immigrants and from southern and eastern Europe at the end of 19th century, the leading politicians and intellectuals of the time engaged in the task of classifying and categorizing immigrants: vast amount of statistical data on social and economic characteristics of immigrants within the U.S. were collected to promote a scientifically informed measure of immigration control.

Focusing on the data from the report concerning crime, welfare, and education of immigrants, this paper will display how racial and ethnic categories emerge out of raw data. The initial statistics conveys an extremely complex portrayal of immigrants, this paper will display how racial and ethnic categories emerge out of statistical data, both through scientific reasoning and political struggle.

Attitudinal Correlates of Cohabitation in Japan

What are the attitudinal correlates of cohabitation in Japan? Cohabitation has been growing more prevalent among young cohorts in Japan, and yet little is known about its relationship with liberal attitudes on family and gender. Exploring this issue is important for testing the Second Demographic Transition theory that predicts ideational secularization as driving force for non-traditional unions like cohabitation. In this article I examine attitudes on family and gender norms that are correlated with current or past cohabitation experience. For this analysis I use the 2009 National Survey on Family and Economic Conditions (NS-FEC), a national, two-stage stratified probability sample of 3,112 Japanese men and women ages 20-49. Individuals with more liberal attitudes toward pre-marital sex and out-of-wedlock birth were more likely to have cohabited relative to those with conservative attitudes. Also, those who disagreed with forgoing divorce for the sake of children were also more likely to have cohabited. On the other hand, differences in attitudes on other gender issues did not significantly change the likelihoods of cohabitation. The results show that liberalism in only narrow range of family issues are associated with cohabitation in Japan, showing only partial support for the Second Demographic Transition. Also, the results suggest that cohabitors in Japan would be expected to have higher rates of divorce once they enter marriage compared to non-cohabiters.

Culture-Driven Gentrification from below: A Case Study of Tokyo, Japan

This paper analyses the ongoing process of Tokyo's gentrification from the case study of former working class neighborhood in east Tokyo. Since gentrification has generalized as a global urban phenomenon, it has become an avowed policy goal of the cities competing for economic supremacy and globalized services. In Tokyo, recent redevelopment of the central Tokyo which actively promoted by state authorities had been considered.

This study aims to introduce a new generational politics model, and to apply it in explaining the welfare politics in South Korea where social investment strategy has recently been pursued. So far, social investment perspective underscoring policies for the early stage of life rather than policies for older age has overlooked welfare politics, whereas existing theories on welfare politics have failed to organize generational interests theoretically. To fill this theoretical gap, this study suggests ‘three generations model' which establishes older generation, working generation, and future generation as key stakeholders having welfare status in the welfare state. Applying this model, this study explains how public policy for older generation has reformed, and how social investment policies for future generation have expanded in South Korea since the late 2000s. The main results are as follows: First, the findings in analyzing pension reform show that generational cleavages were stronger than the class cleavages of labor-capital or insider-outsider. Furthermore, future generation has been considered as a main stakeholder even without visible representation in decision making. Second, development of childcare policy has been pursued in the context of social investment in South Korea. The complete expansion of childcare support has been made possible as the interests of current working generation and of future generation were considered almost conformance. In addition, investment on future generation has been confused as the compensation for generational equality in the era of ageing society. Theoretically, this study confirms that three generations model has an effective explanatory power in understanding welfare politics of social investment.
The notion of race and ethnicity is central to contemporary immigration scholarship. Researchers routinely compare groups of different origins to assess their immigration trajectories and respective degrees of socio-economic integration. Less attention, however, has been paid to the historical origins of the classification and categorization in immigration. This paper argues that Dillingham Commission (1911) marked the pivotal moment, at least in the United States. Responding to the surge of nativism and increase in the number of immigrants and from southern and eastern Europe at the end of 19th century, the leading politicians and intellectuals of the time engaged in the task of classifying and categorizing immigrants: vast amount of statistical data on social and economic characteristics of immigrants within the U.S. were collected to promote a scientifically informed measure of immigration control.

Focusing on the data from the report concerning crime, welfare, and education of immigrants, this paper will display how racial and ethnic categories emerge out of the initial statistics. The initial statistics contain an extremely complex portrayal of immigrants, often divided by esoteric categories (such as “black Russians”) that are remote from our contemporary understanding of race and ethnicity. As report progresses to the synthesis and recommendation, however, the notions of “desirable” and “undesirable” immigrants emerge as an overarching principle of categorization, and edge towards the conclusion, promoting positive immigration leads to reaffirmation of the pervasive understandings of racial hierarchy. Endless stream of numbers and crosstables align behind this hierarchy to provide substances to racial categorization, and immigration policy follows this blueprint to shape national identity of the U.S. by implementing the national quota restrictions of 1924.

Drawing from original archival evidences, I show how race, ethnicity, and national identity emerge out of statistical data, both through scientific reasoning and political struggle.

**KIM, YOONJIN** (Sogang University, u-jin118@hanmail.net)

*A New Style of Labor Movement Among Korean Youth*

South Korea has shown high levels of collective interest in various forms of social movements in the modern history. So far, Korean scholars adopted social movement theories emphasizing the roles of resource mobilization, rational choices, political opportunity structures, or social networks; however, they could rarely include the role of emotions in social movements.

This study focuses on factors influencing the mobilization of social movements: Although the youth generation feels anger and dissatisfaction with the perceived social injustice under the economic crisis, why do they fail to take collective actions? With the ever increasing economic polarization in the present neo-liberal regime, the relationship between emotion and social activities among young people in Korean society has been drawing scholarly attentions. As high rates of unemployment and unstable employment conditions (non-salaried and part-time work) become normalized in the society, youth anxiety and depression are emerging as societal problems. The emotions of the young generation (particularly anxiety and depression) were not approved as cultural constitutive elements of the dominant regime. The approach to add options rather than just change the dominant regime, and improve the benefits that are gained in this regard. The presentation first examines the type of capital an individual possesses to attract others using quantitative data from the 2012 survey conducted by the Japan Youth Study Group. Z. Bauman (2000, *Liquid Modernity*) has pointed out that with professions and families becoming more and more fluid, one's own body has become one of the means of confirming one's identity (Details of the book is omitted in this abstract). Then, what does this 'body' refer to? Attractive looks can be one of them. But this is not enough. C. Hakim (2011, *Honey money: the Power of Erotic Capital*) has offered an interesting insight on this point. That is, in addition to economic capital, cultural capital and social capital identified by P. Bourdieu (1986, "Forms of Capital"), she has proposed the fourth capital, 'erotic capital'. She also suggests that the benefits yielded from erotic capital, which is made up of looks and interpersonal charm, are huge and increasingly important. Nonetheless, conventional sociological studies have not paid enough attention to people's attractiveness. In particular, in the study of feminism, femininity, which is one of the attractive characteristics of a female, has been denied. Therefore, the presentation aims to examine the different attractiveness and those without, and benefits that are gained in this regard. The presentation first examines constitutive elements of erotic capital in Japanese youth culture. Secondly, it examines the ways in which erotic capital differs from 'social capital', a concept which is increasingly receiving attention.

**KIMURA, GORO CHRISTOPH** (Sophia University, g-kimura@sophia.ac.jp)

*Language Rights and Disability Studies*

Language rights discourses have rapidly evolved in Japan during the last decade. From an almost unknown term, it has advanced to a frequently used concept to address linguistic inequality. By foregrounding fairness in language matters, this discourse has expanded the scope of moral arguments on language diversity in Japan.

With the newly being heavily influenced by international academic and political discourses, the Japanese discussion on language rights has gradually undergone some specific evolutions. For example, it is probably unique to Japan that the struggle for the recognition of the sign language has been one of the leading forces advancing language rights. Related to this is the most striking characteristic: the entwinement of language rights with the discourse of disability studies. The so-called social model in disability studies, which sees the cause of disability not in the body of the individual but in the society, has ostensible affinity to the idea of language rights which also focuses on injustices rooted in sociolinguistic conditions. Two linguistic-related research approaches to add options: one that is just to change the dominant regime, or the emphasis on improving the legal framework are also features common to both discourses.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The concept of communication rights which came out of this synthesis seems to have the potential to overcome the limits of the internationally contested concept of language rights which typically seeks to provide a certain status to a certain defined language.

After a short overview of the language rights discourse in Japan, the paper compares this discourse with recent international discussions on the matter in order to assess whether and how the Japanese way of conceptualizing language rights can contribute to put forward the international discussion on inequality related to language.

KIMURA, KUNIHIRO* (Tohoku University, kkimura@sal.tohoku.ac.jp)
Education, Employment, and Gender Role Attitudes Of Japanese Married Women In The 21st Century: Declining Significance Of Rational Choice and Cognitive Dissonance Reduction?

Several students of attitude change have utilized models that combine rational choice with cognitive dissonance. Kimura (2007) proposed a hypothesis of "rational choice and cognitive dissonance under the constraint of the segmented labor market" in order to explain the apparently paradoxical associations among education, employment, and gender role attitudes found in the data of Japanese married women in 1980s and 1990s. There was a negative relationship between educational attainment and attitudes towards the gender division of labor, a negative association between these attitudes and employment, and also a negative association between educational attainment and employment. If we analyze the data in the early 21st century, however, we can find that all of these associations are weaker than before. Although this seems to reduce the explanatory power of the hypothesis that postulates rational choice and cognitive dissonance reduction, I will examine the factors that may have contributed to these changes form a rational choice perspective. On the one hand, surveys on gender role attitudes, as well as media reports on these surveys, have pervaded Japan so that respondents might have come to regard a negative attitude towards the gender division of labor as a socially desirable response. On the other hand, proracted recession have reduced the size of the fulltime labor market as well as the husband's income so that even highly educated wives might have become unable to resist working as part-time or dispatched workers. The former implies that another kind of rationality plays a part, while the latter implies that structural constraints on rationality are significant.

Who Support the Death Penalty in Japan?

One of the most powerful reason for retaining the death penalty in Japan is the wide public supports for it (86% as of 2009). However, it is often criticised that the governmental survey contains a wording misleading the public into retentionists, governmental survey contains a wording misleading the public into retentionists, and it remains uncertain who support the death penalty. Based on the online quota sampling survey conducted in 2013, the presentation clarifies what distinguishing attitudes are found in the retentionists. Although recent criminologist studies show that people's misperception of unsafer society despite the counter evidences, no significant difference in this point is found between retentionists and abolishment. Rather the gaps are found in their knowledge and perceptions of social factors of crimes, deterrence of criminal punishments, rehabilitation of criminals, international trends, and the principle of the presumption of innocence.

Branding of an Industrial Heritage and Practice of Local People: The Case Study of Gunkan-Jima

This study examines how the branding and the commodification of an ex-industrial area proceed and how they affect everyday practices and historical identities of local people. Nagasaki is a global harbor city located in southwest Japan. Less than fifteen kilometers away from the port of Nagasaki, there is Gunkan-jima island. The island was used as a coal-mining station between 1887 and 1974, contributing to the industrial modernization of Japan. In 1890, the Mitsubishi Company bought the island and set about gaining coal from the bottom of the sea. Subsequently, the company built up the island's infrastructure as well as living quarters (such as large concrete buildings, apartments) to accommodate its workers. However, in 1974, the mines were forced to close due to an abrupt shift in energy use, which made the whole population move out of the island. Since then, Gunkan-jima has been totally uninhabited.

However recently, the island started to arouse attention as a symbolic site of industrial modernization of Japan. Nagasaki City is now attempting to re-evaluate this abandoned island as an "industrial heritage" and utilizing it as a tourism resource for regenerating the declining industrial areas. There has even been a movement to make the island a world heritage site, while tours around Gunkan-jima are also becoming more and more popular.

Using data based on fieldwork conducted in Nagasaki City and semi-structured interviews with several actors related to Gunkan-jima, I found that the branding and the commodification of the ex-industrial island have been drastically promoted by the municipal merger and the "locality" as the basis of the legitimacy to represent the island has been totally changed. These findings can be utilized in the future studies that examine the mechanism of urban regeneration projects.

KIMURA, TADAFUMI* (Yes, t.kimura@m.tohoku.ac.jp)
Situational Approach to "individuality"——from the Perspective of Frame Analysis——

The purpose of this study is to examine the concept of "individuality" from the perspective of the definition of the situation and Goffman's discussion in his Frame Analysis. Symbolic interactionism focus individual interpretation process about social reality. They postulate the great influences of the individuality upon constructing social reality. However, can we construct social reality freely? How can we explain the steady coincidence of our definition of the situation?

In Frame Analysis, he investigates the acquisition process of social reality based on his "interaction order theory." He indicates people's impressions for others depends on the definition of the situation. When he engages in this problem, he focuses on the correlation between impressions for the role behaviors and these for the individualities.

Imagine an interaction in an operation room. Some surgeons say jokes or give some nicknames to surgical instruments during an operation. If a patient watches their ridiculous attitude, s/he guesses they might be queer or incompetent. However, according to Goffman, they try to reduce stresses or tensions of other operation staffs and lead the operation to succeed by doing so. From the standpoint of the operation staffs, such behaviors by surgeons do not convey any odd impression about their personalities. In the American hospital culture, these behaviors are accepted as conventional role behaviors of surgeons. As shown in the above example, how people interpret the behaviors of surgeons and their individualities is dependent on their definition of the situation. According to Goffman, it depends on what kind of frame they apply to social reality. The frame in this context is a cultural cognitive pattern of social reality. Whether a behavior is interpreted as a typical role behavior or a unique behavior indicating her/his character depends on the frame of the interpreter.

It's a Girl Thing: Tween Queens and the Commodification of Girlhood

This submission is a 58 minute documentary film to be shown either in a roundtable session followed by a Q&A or as part of a social event.

Description:
Since the birth of Mary-Kate and Ashley Olsen in 1986, the girls' tween market has evolved from almost non-existent into a multi-billion-dollar money-making machine.

Framed by the structure of a faux interactive website for tween girls, It's a Girl Thing speaks with consumer critics, tween brand marketers, girls, moms, and educators to explore the seemingly benign cultural universe of candy-coated, pastel-colored, hyper-commercialized girl culture (and the tween queen phenomenon) to reveal the complex and contradictory messages directed at today's young girls.

Historical research, playful reenactments and found footage allow the film to look closely and critically at the global tween market's evolution and the role of Disney and Nickelodeon's tween queens (Mary-Kate and Ashley Olsen, Britney Spears, Hilary Duff, Miley Cyrus, Miranda Cosgrove, Kiki Palmer, Selena Gomez, and more) in the market's evolution.

Genre As Social Force: Hollywood Cop Action from the Perspective of Filmmakers

Recent analysis of genre as social construction shows that critics and scholars tend to categorize works of art differently than producers do. The biggest practitioners in Hollywood cannot copyright genres and so avoid treating their own product as genre. They sell their films instead as unique combinations of diverse elements, in order to appeal to many audiences and differentiate product. Interviews with contributors to the Hollywood cop action movies discuss the conditions under which they come to write on the projects, the extent to which they see themselves as genre-makers, and how they try to differentiate their own work. This research shows that filmmakers answer to their own demands and priorities, distinct from those of critics, audiences, scholars, and distributors. By showing how such diverse categorizations of film converge and diverge, it demonstrates how genre of human expression is contingent on social affairs, porous in boundaries, prone to change, often subject to reasonable disagreement, and yet still a compelling force within an industry that remains ambivalent about producing generic work.

Sensing the Right Person. Finnish Recruitment Consultants and Outline of the Ideal Working Body in the Recruitment Interviews

The body's aesthetic and emotional capital in the post-industrial working life has eagerly been examined in recent years (e.g. Hassard et al. 2000; Mckie & Watson 2000). However, we still know too little about how the ideal working body, i.e. representing the wanted personality, is concretely performed in recruitment processes. The paper is based on the interviews of Finnish recruitment consultants. It illuminates their role in assessing and defining the ideal employee when their client companies have mandated them to choose and interview the proper candidates. The paper shows how the candidates should first convince the recruitment consultants in the interviews by stylized bodily performances and communication skills in order to get the job. Recruitment consultants use their own embodied knowledge in determining which candidates would "fit in" with different working teams and environments. In order to fill in their clients' expectations, the consultants not only attempt to read the bodily performances of the employee candidates. In addition, due to the employment discrimination law, the consultants not only attempt to read the bodily performances of the employee candidates, but they also try to understand the personal background and social life of the employees they are evaluating. The project addresses the question how such diverse categorizations of film converge and diverge, it demonstrates how genre of human expression is contingent on social affairs, porous in boundaries, prone to change, often subject to reasonable disagreement, and yet still a compelling force within an industry that remains ambivalent about producing generic work.

The Conditions for Sustaining Efficient and Inefficient Norms

Although most rational choice theorists have assumed that social norms are created to prevent negative externalities, some norms spoil the welfare of people. These inefficient norms have been discussed as "unpopular norms," which typically include "the emperor's new clothes," self-destructive adolescent behaviors, infatuation, and honor killing. However, it is also true that efficient norms, which prevent uncooperative behavior, are observed in social dilemma situations. In this paper, we hypothesize that long-term relations stabilize both efficient and inefficient norms, but communications destabilize inefficient norms. We analyze a Sub-game Perfect Nash Equilibrium (SPNE) and a Strong Perfect Equilibrium (SPE) in an N-person repeated prisoners' dilemma with the costly punishment option. A social norm is defined as an equilibrium in which every player is expected to do something (or refrain from doing something) and is punished by some or all other members if she deviates from this expectation. If one equilibrium concept reflects the stability of the other, the concept that is the equilibrium in the prisoners' dilemma with the costly punishment option. A social norm is defined as an equilibrium in which every player is expected to do something (or refrain from doing something) and is punished by some or all other members if she deviates from this expectation. If one equilibrium concept reflects the stability of the other, the concept that is the equilibrium in the prisoners' dilemma with the costly punishment option.

Future Visions and Social Theory

Social science in general and sociology in particular are facing a challenge of conceptualizing the relation between environment and society in ways that assist the dialogue and multiple attempts for creating visions of a sustainable society. Thinking about the future always involves thinking about the future of society. However, in future studies little attention has been paid to how underlying social theories affect our future visions. Since backcasting is a special approach in future studies which starts with a normative vision of the future and elaborates a strategy to reach this normative vision, this issue is even more pressing. Our paper
aims to reveal and reflect upon the role of these underlying social theories in the construction of future visions in backcasting practices. In the first part of the paper we will present four different ways to think about society and social change. These are structural functionalism, conflict theory, symbolic interactionism and actor-network-theory. We argue that these are not only present in academic papers but also can be thought about as general ways of thinking about society. Furthermore, these underlying models of society also affect the various ways future is presented in public discourses. The second part of the paper especially focuses on the various methodological approaches to involve social theories in the elaboration of future visions in backcasting practices. Methodologies such as functional analysis of institutions, stakeholder mapping, living labs, narrative approaches and system mapping will be discussed both in relation to the above-mentioned social theories and the future vision which can be created by utilising such methodological approaches. We argue that backcasting upon both theoretical and methodological issues in thinking about the future can enhance the quality of the normative future visions created in backcasting practices.

KIRCHBERG, VOLKER* (Leuphana University of Lueneburg, kirchberg@uni.leuphana.de)

Emotions As Reason, Rationale and Result of Urban Artist Areas

For the last two decades urban arts and cultural districts, arts neighborhoods, and artist housing and studios have become the focus of social scientists studying the interrelations of urban and arts sociology. I will analyze the emotional forms and functions of this type of urban cohabitation. Certain smaller areas have been, from the bottom up, transformed by artists NOT for external political or economic purposes BUT for self-utilitarian – and often emotional – purposes internal to the participating artists and their community. The latter purposes are objectives directly and emotionally pursued by the participating artists. These artist areas are “reserves” that serve as catalyst for the internal socio-spatial emotional enjoyment of artists, performing and propagating a “liberty of deleterenability” not offered outside these specific areas. As a theoretical starting point I interpret texts such as Zukin’s “Loft Living” (1982), Bourdieu’s “Rules of Art” (1992) and Ehrenreich’s “Doing it in the Streets” (2006), plus the literature on the notion of ‘cultural sustainability’ that alludes to emotional values (e.g., Kirchberg & Kagan, Brochi, Duxbury, Throsby). There is a variety of emotional benefits that can be paraphrased and typologized as “artistic community identity”, “alternative com- patriotism”, “lifestyle experimentation” and “bohemian sociality” – to name just a few. Furthermore, these emotional benefits will be analyzed applying the extensive literature on the “affectual turn” (Clough 2007, Gregg & Seighworth 2010). Empirical illustrations will be provided by my own research in urban artist areas in Baltimore, Maryland, and Hamburg, Germany, plus further collated evidence from Phoenix, Arizona, Minneapolis, Minnesota, and other cities.

Agism and Language in Old-Age Inequality

Nikolas Coupland (2007) has focused on “style” as a productive dimension of linguistic material. He highlights that sociolinguists have not adequately appreciated variation in style as a tool for conveying meaning in social interaction. Coupland shows that the common sociolinguistic reduction of style to social structural affiliations entails a cost to understanding how users agentically create meaning through choices of style. Separately, Coupland bemoans that linguists have insufficiently studied discursive communication by and involving old people, disregarding a long tradition of largely psycho-cognitive studies of language praxes by and toward old people (But see linguists Pennebaker et al, 1995, Sankoff & Blondeau, 2007). Excepting gerontologists, social scientists also tend to omit old people from research. General discourse rarely associates old age with matters of style, as if style-based variation is of no interest or awareness after a certain age.

Aging of the global population has been widely publicized, generally expressing fears about negative effects on society-at-large – i.e., on younger generations - underlying pervasive public attitudes of agism and disciplinary research inequality.

That agism is embedded in language, and detrimentally affects aging identity-formation often through linguistic practices, has been recognized (Minicicli et al, 2011) minimally examined, with no serious attempt at proposing feasible correction. This theoretically Social Constructivist paper is motivated by the under-appreciated success of a similar, salient situation regarding “ableist” language and the stigmatized identity of disability. The Disability Rights Movement offers a model, led by disabled activists, eventually involving rehabilitation and other “helping professionals” and governmental policymakers. Long-term resistance by Aging and Disability field leaders to making that connection is now weakening. For data, I analyze style in online recruitment language from key disability activist versus aging service organizations showing agentic linguistic style changes that can undermine negative effects of agism.

KIRDINA, SVETLANA* (Russian Academy of Sciences, kirdina@bk.ru)

Methodological Individualism Vs. Methodological Individualism As a Core Principle in Alternative Social Theories of Second Modernity

Modern dominant Western social theories are based largely upon methodological individualism. Attempts to overcome its confines are undertak- ing constantly in different analytical programs and approaches (A. Giddens, M. Archer, P. Sztompka, P. Bourdieu, J. Alexander, J. Ritzer, V. Yadov etc). But in fact all these approaches assume an explanation of the social and economic phenomena in terms of individual behavior and follow methodological individualism principle (S. Lu, J. Holmgren). In the paper the capabilities and limitations of methodological individualism as a core principle of mainstream sociology and economics are explored. The recent debate dealing with methodological individualism in Russian and foreign sociology and economics is considered. Institutional individualism principle (A. Agassi, F. Toboso) is tested. As a challenging view, premises for methodological institutionalism (P. Keizer, S. Kirdina) are offered and consid- ered as an alternative and complimentary precondition of the different vision for alternative social theory of second modernity. It is shown that methodological individualism and methodological institutionalism express two epistemological positions and two philosophical precondition such as holism (“the whole is more than sum of its parts”) and a reductionism (“the whole is understood as a set of primary elements forming it”) respectively. Institutional matrix theory (S. Kirdina) based on method- ological institutionalism principle will be presented to explain the success and failures of historical trajectories of modernization for non-Western countries as well for Western ones.

Fitness Culture As the Factor in Globalization of Recreational Sports

In the context of globalization, integration in the sphere of competitive and professional sports that receives maximum support from political and economic institutions, International Olympic Committee, and international sports federations expands to a great extent. Increasing need of the modern society for health-rec- reational technologies unprecedentedly reinforces the role of health culture and health industry known as “wellness”. Fitness is an element of wellness culture, and it presents a universal basis for popularization of health forms of physical and sport activity along with optimization of nutrition and body weight control. It makes health fitness as the direction of recreational sports an effective tool for strengthening health culture. Problems of Access to Modern Wellness Culture

Society's growing interest to the quality of life has predetermined the develop- ment of modern culture and industry of health called “wellness.” During last decades, wellness has acquired features of new institutional complex, which in- tergrates functions of numerous spheres related to health preservation and im- provement, e.g. medicine, pharmacology, sports, leisure, tourism, manufacturing of goods and cosmetics. The process of popularization of wellness culture is supported by scientific and educational institutions, mass media and advertising. From a sociological point of view the inclusion of individual into wellness cul- ture is determined not only by the conditions of upbringing and quality of edu- cation, but also by the motivation that forms healthy lifestyle and consumption. The key role in this process is determined by individual's socio-economic status, which includes income level, nature of person's professional activity, availability of mon-
ey, free time and vitality strength for active-health leisure. In this aspect, the maximum access to the values and practices of wellness culture have the elite groups, middle classes primarily in the developed countries (“the golden billion”). Not only modern medicine and wellness culture but also basic medical care stay inaccessible for the majority, namely the poor population of the world.

In the increasing societal need for health improvement, the effective strategies of increasing access to wellness culture is determined by the limits of economic growth, amplification of ecological barriers, the need to shift to wise consumption. Such strategies include raising people’s personal responsibility for their health, lifestyle, active-recreational leisure; strengthening financial, institutional and informational support; development of preventive medicine; using potential of leisure and local green tourism for expanding the access to health-recreational practices for people. In general, the study of health-stratification and unequal access to the wellness culture is based on integrative sociological approaches.

**The Process Of Urban Change In Osaka City After The Collapse Of The Economic Bubble: The Case Of Horie, Nishi Ward**

For the last 30 years, cities everywhere have followed the neoliberal path, including a shift to a service economy, consumerism as a way of life, homogenization of urban spaces, socio-spatial polarization, and urban entrepreneurialism. Japan, with a liberal political economic history but also its own regulatory mechanisms (based on the background of the neoliberal urbanism) after the asset price bubble collapse in the early 1990s. Since then, the emphasis on Tokyo as Japan’s sole global city to the neglect of other large cities in Japan has accelerated the further adoption of the neoliberal urban policies. Having lost its previous status due to uneven development, Osaka has nevertheless recently been forced to engage itself by its mayor, Tomy Hashimono, who sees it as the way out of post-bubble economic and demographic stagnation. The contrast of mushrooming fancy mansions and many homeless in the city renders this policy turn questionable.

In this urban sociological research, I aim to comprehend the process of neoliberalization in Osaka City, observing this change process over the last 30 years in detail at the level of a downtown neighborhood called Horie, located in the Nishi Ward. With reference to the concepts of post-industrial city, gentrification and neoliberal urbanism, the study comprises of an analysis of visual materials and narratives of the long-time residents in the area. Despite being very close to the central business district of Osaka City, Horie has a more residential character and is interesting in terms of the regeneration of its old shopping street of furniture stores during the 1990s. Its current atmosphere is visually similar to the western examples of neoliberalized gentrified neighborhoods, with its up-market mansions, western style cafes, specialty stores claiming to do fair trade, trendy people strolling around, and some small crime like purse-snatching.

**How Can Trade Unions Improve Quality of Work in Low-Wage Services in Europe?**

In 2010 the European Union adopted the Europe 2020 strategy, emphasising the need for increasing labour market participation with more and better jobs as essential elements of Europe’s socioeconomic model. But there is evidence that quality of work in many of the low-waged sectors in Europe is still problematic (Holman 2012) and problematic configurations produce various forms of precariousness, low-wage work, problems of social inclusion and violence at work (Kalleberg 2009). Increasingly, employment at the lower end of the spectrum of skills and wages in Europe is dominated by services that are spatially distributed and often employ vulnerable groups of employees (e.g. contract catering, office cleaning, waste collection, etc.). In these sectors, work is often outsourced from the public sector or other private sector companies and taken over by private sector service providers (large service multinationals or SMEs). The outcomes for employees often are insecure and problematic working conditions and little representation. This results from companies’ cost-cutting strategies, enhanced by changing regulations, the practices of contract awarding and public procurement, the role of the client, conditions that are likely to be exacerbated by austerity measures in the framework of the current crisis, etc. The continuous debate about the specifics of service work has brought significant evidence about the importance of the triangle between employment, employees and customers (Korczynski 2009). The paper investigates how trade unions address these challenges at EU level and in selected European countries. It is based on the recent research done in the framework of a European comparative project WALQING (www.walqinge.eu). The findings presented in the paper are mainly results of the analysis of interviews with social partner representatives in those sectors as well as from company case studies carried out in the examined countries.
version of the 13-item SOC scale, the Japanese criminogenic thinking inventory (JCTI), and self-reported demographic items. The SOC scale consists of the three subscales of comprehensibility, manageability, and meaningfulness. The JCTI contains four subscales including discontinuity, “cut off” thinking, self-deception, and problem avoidance. Spearman’s rank correlation coefficients were calculated to assess the relationship between the frequency of incarceration and each personality factor. In addition, the Man-Whitney U test and Kruskal-Wallis test were performed to analyze the relationship between the frequency of incarceration and demographic variables including age, dwelling environment, education, marital status, job history, and the latest charged offense.

The results revealed negative correlations between the frequency of incarceration and the total SOC score and the scores on the comprehensibility and manageability subscales. A positive correlation was observed between the frequency of incarceration and the JCTI subscale of ‘cut off’ thinking. The frequency of imprisonment (at prison only) and the demographic variables of marital status and the latest charged offense were found to be significantly correlated.

Improving offenders’ SOC and criminal thinking might mitigate the risk of recidivism and facilitate their reentry into society. Our findings will be discussed further in our presentation.

Young People’s Practical Agency: Transitions From FE College To Work In London

This paper presents findings from the Changing Youth Labour Markets and School to Work Transitions in Modern Britain project. The project examined young people’s experiences and perceptions about study, work and the future while going through transitions. Our findings demonstrate a complex picture of potentialities, vulnerabilities and resilience of young people in transition. The target group was young people aged between 18 and 24, who were on vocational courses at Further Education (FE) colleges in London. Group is under-researched ‘missing middle’ (Roberts 2011) group, who are neither NEET nor following ‘tidy’ pathways. Drawing on the individualisation theory and agency theories, we explore how diverse and complex transition experiences of the missing middle can be categorised. We apply the conceptual framework of temporal orientations of agency, originally proposed by Emirbayer and Mische (1998). The missing middle group shows a number of potentialities, but they are vulnerable under current circumstances of youth labour markets. The young people do exercise agency in making decisions based on practical and realistic options available to them at the present, and thus they develop resilience. We suggest that agency is situated and discussed the interplay between young people’s agency and the contexts in which they live, particularly in relation to youth labour market conditions.

Deterrioralising Teaching and Research through Information Technology and Capitalism

Allegedly there is a gap measured in astronomical units between the ways in which the contemporary youths and universities work with knowledge. And thus the universities at least in Finland should gird their organisational loins and adapt accordingly. In this paper I investigate one such attempt to deterrioralise teaching, learning and research to better suit the future the involved parties have envisioned or wish to create. I do this by concentrating on the use of the concept of Knowledge Practices in expressing and explaining this vision. Deterrioralisation is used here in two senses: firstly as travelling to new places and secondly as the parameter defining the state of the boundaries and relative internal heterogeneity of an assemblage. With these concepts I try to map out the envisioned future relationship between universities and society by tracing the relationships of different components of a particular assemblage called Minerva Plaza expressed in material form or through language.

This is a work in progress but Knowledge Practices seems to be effective in making various boundaries less fixed and solid by being somewhat amorphous and scalable. It spans recurring everyday activities (practices) from individual to societal level lines (practises). This paper expresses the extent and consequences of the previous sentence in terms of translating two scientific models into material form. It was uttered as a summary of using Minerva Plaza, a set of facilities built within the University of Helsinki in order to utilise the supposed digital nativity of the students. The stated goal of Minerva Plaza is to weave together collective knowledge construction emerging communication technologies and inclusion into the scientific community in order to prepare especially future teachers for the challenges they are predicted to meet during their careers. These goals have been somewhat incongruent with The University’s ICT policies and the capacities of the selected soft- and hardware.

The collection of assembled and interconnected components of Minerva Plaza can be aptly described as volatile. They can facilitate very fast transitions from one state or point of interest to another but also being difficult to hold permanently. Some of this explicitly intended in the design. On the other hand the Wireless Local Area Network has managed to hold its position as an unintended obligatory passage point for the sets of translations of using the Plaza as planned. This paper presents an analysis on how dependency on ICT and project funding has displaced the power to decide who participates and how away from the users. This seems to resonate with David R. Johnson’s depiction of technological change as a cause of diminishing professional control within the professoriate. Unlike Johnson I argue this is caused by the volatile nature of the whole assemblage also in cases where the technology use is initiated and endorsed by the teaching professionals.

Old and New Inequalities of Educational Opportunity by Gender and Family Background in Finland

What comes to equality of educational opportunity, in the sociology of education enduring themes have been, for instance, the Bourdieuian thesis of strong reproduction and the persistency of inequality à la Shavit and Blossfeld as comes to relations between parents’ socioeconomic position and their offspring’s educational achievements. Empirical studies from various countries have started to report decline in educational inequality. Our own previous studies based on Finnish longitudinal data have shown that the equality of educational opportunities, as measured by differences in participation in university studies by gender and family background (parents’ education academic vs. non-academic) has clearly improved and differences narrowed up till the end of 20th century. Gender relations belong to the core interests of sociology of education, too. For long there has been discussion on the persistent gender segregation in higher education, which according to Carlo Barone (2011) is a key in understanding inequality in the labour market.

In this paper we explore equality of educational opportunity and labour market effects related to educational expansion in Finland. Our updated longitudinal register data covers five age groups of higher education students and graduates from baby boomers to recent small age groups, including for the first time also students of the universities of applied sciences. We ask to what extent expanding education improves the odds of participation in university studies when analyzed by gender and family background. We also study how the female/male relation, situation emerging differences in participation in university studies by gender and family background (parents’ education academic vs. non-academic) has clearly improved and differences narrowed up till the end of 20th century. Gender relations belong to the core interests of sociology of education, too. For long there has been discussion on the persistent gender segregation in higher education, which according to Carlo Barone (2011) is a key in understanding inequality in the labour market.

Toward a Sociological Understanding of Evolutionary Time in Human Development

There is no doubt that social sciences would benefit from opening up even more toward Darwinian ideas; most crucially, it would enable a more accurate grasp of the vast time periods involved in the development of our humanity and social life. As known, sociologists have had a complicated relationship with Darwinism – perhaps haunted by the specters of ‘Social Darwinism’, the threat of ‘socio-biological reductionism’, or other traumatic past experiences. This presentation seeks steps toward evolutionary sociology by examining, (1) the lessons taught
by the currently popular “evolutionary psychology” (Toolby and Cosmides, Pinker) regarding the human nature; (2) the “Homo economicus criticisms” of evolutionary economists in the spirit of A Cooperative Species: Human Reciprocity and its Evolution (Bowles and Gintis); (3) Geoffrey Hodgson’s version of “Generalized Darwinism”; and (4) “nich-construction” approach to human “gene–culture coevolution” (Deacon, Dennett, Laland, Odling-Smee), with its evolution-historical studies on social learning and language evolution. While evolutionary psychology offers insights into humanity in a long enough timeframe, it unfortunately involves a leap from the face-to-face groups of Pleistocene era straight to modern societies, over all sociologically interesting institutional developments. Bowles and Gintis discuss the evolution of altruism against the idea of selfish individual, providing solutions to “the problem of social order” – timely in economics but familiar to sociologists already since Talcott Parsons. Hodgson’s model in turn utilizes pragmatist conceptual tools well, but its level-onontology and generalization of principles of evolution rendered less convincing. This paper seeks to pick out the best lessons of these three approaches and synthesize them with the fourth, niche-construction approach. The resulting organism-environment transaction model opens the brain–consciousness–language–society continuum “outside-in” rather than “inside-out” and allows understanding in terms of localized organism–environment transactions by means of which evolution can in fact only be understood.

We Are The People! Street Demonstrations As A Means Of Communication

We are the people! Street demonstrations as means of communication. Over the last decades we have witnessed a dramatic rise in the occurrence of street demonstrations. Increasingly, citizens chose street demonstrations as a means of communication. “We are the people!“ or more recently “We are the 99%“ are appeals to politicians to listen to the people and to take their claims seriously. Movement politics have become the natural counterpart of party politics. Employing a unique dataset of over 80 demonstrations that occurred between 2009 and 2013 in 9 different European countries, we give voice to the citizens who populated these protest events. Some of these demonstrations were people protesting the austerity measures they were suffering from. For instance, students protesting a raise of tuition fees or public health workers fighting budget cuts. Other were people demonstrating against the way democracy was practiced in their country. Democracy, as we know it for decades, no longer satisfies many a citizen. Not only in post-communist and authoritarian regimes but also in mature democracies people challenges democracy as it is done. Occupy-London or Amsterdam, or the 19“ of May in Spain are examples. We will compare the participants in these two types of demonstrations. What were their grievances? How did they evaluate democracy in their country? Did they trust state institutions? What did they expect from their participation? Did they participate in party politics next to movement politics? Had they given up party politics? How were they embedded in the multi-organizational field?

We maintain that movement politics is a necessary complement of party politics. The democracticity of a country is defined by the quality of both movement and party politics.

We maintain that movement politics is a necessary complement of party politics. The democracticity of a country is defined by the quality of both movement and party politics.
But inequality defined merely by access to and use of the resources within a certain protected area (PA) is a very limited, and in fact ideological, notion of social inequality. The yardstick should rather be the distribution of the general social resources of the country and beyond. Otherwise, there is the risk of naturalizing “stakeholders” as stewards and custodians of biological diversity. Such essentialism, present in the everyday practice of sustainable development, largely misses locally lived realities and aspirations, and with these the systemic and productive relation between nature conservation and exploitation, in Laos at least. Instead, a view where nature reserves are not passive reservoirs but rather “factories” that produce nature values as a result of a process of socially structured practice, is more appropriate. This practice transcends, undermines, ignores or complies with the laws of a PA according to social differentiation. In this tangled and ambiguous way a PA and its productivity is realized.

These issues are discussed with regard mainly to NNT in Lao PDR. The presentation is based on the extensive research carried out by a variety of experts and scholars due to the involvement of the World Bank in the Nam Theun 2 dam project, as well as on my first-hand research in villages of the PA.

Sociology of the Frontier, Frontiers of Sociology? Ecotourism in Laos and the Social Practice of Resource Production

This presentation departs from the overall concern with the nature of power and the power of nature in current global capitalist society. It focuses on one part of this society, ecotourism in countries like Laos: frontier economies that, by definition, challenge the well-arranged epistemologies of institutionalized disciplines. I argue that attempts at understanding frontier dynamics must be decidedly sociological, i.e. aware of the dimensions and peculiarities of social practice as the very place where transformations and continuities take form. On the one hand – since theory itself is bound by and thus must reflect the complexities and limitations of time and place – sociology of frontiers must also transcend itself; first, by transcending the inherent bias that “everything is social”, albeit acknowledging that every “thing” is social. Second, just like socio-economic processes “run wild” at the frontier, frontier sociology has to transcend academic boundaries, within and outside the disciplines.

Nature reserves are “thick” social facts constituted and maintained by socially organized and differentiated practices, and ecotourism is central in this regard. I analyze ecotourism in Lao nature reserves as a socially organized practice that crosses scales (local-global), dimensions (ecology-religion), and nature relations (subsistence-capitalism) as well as binaries such as “tradition vs. modernity” and “conservation vs. development”, which continue to pre-occupy large parts of environmental thinking and practice. Seeing nature conservation as effective resource production, I suggest a theory of frontiers as social spaces of productive conversion. I will show how a careful, reflexive materialist and an elaborated notion of social practice as the place of symbolic-material crisis regulation provide fruitful methodological grounds for a critical social theory of eco-capitalism. The presentation highlights the challenges and chances for a theory of social nature relations in late capitalism fit to deal with the diverse pitfalls of its frontiers.

Truth and (self) Censorship in Military Memoirs

Sometimes it can be fairly difficult for outsiders to gain access to the military field. However, there is a rich source on the military that is readily available for every researcher: military memoirs. This source does provide some methodological challenges, nevertheless. One might wonder about the reliability (truth) of these autobiographies and whether their content is affected by the fact that these books are prone to official censorship by the military in order to preserve operational security.

This study shows that truth and (self) censorship are not only a concern for researchers, but also for military writers themselves and it gives insight into the way soldier-authors deal with these issues. This study provides concrete quantitative data based on all military memoirs published between 2001-2010 dealing with Afghanistan experiences from five different countries (UK, US, Canada, Germany and the Netherlands).

The majority of soldier-authors make some kind of truth claim (either in the form of a subjective or objective truth) in their books that they also substantiate. Books published by traditional publishers do so significantly more often than self-published books. At the same time, military authors also frequently admit to some form of self-censoring, especially anonymising names is an often mentioned method. So truth claims and self censorship do go hand in hand.

At least one form of truth claims, at least one form of censorship, that is being actively censored by the military, but most don't even mention it, making censorship a common military feature, that is almost normal for military writers.
Making truth claims, mentioning being censored, or self-censoring do not influence the kind of plots these authors write either in a negative, or positive way.

Developing Home? Transnational and Translocal Return Migration To Ghana

Since the late 1990s a number of Ghanaian migrants living in Western countries have returned to Ghana for shorter or longer periods of time. Return migrants are widely regarded as having potential – and responsibility – for contributing to development in Ghana and are courted as development agents by the Ghanaian government and other policy makers. This perception is shared by some returnees who see themselves as having obtained knowledge and resources through their experiences abroad. However there are different types of returnees and they perceive themselves and are received in different ways.

This paper presents a case study of return migrants from Europe to Ghana, examining three different types of returnees: recent returnees who have returned because of economic turmoil in Europe since 2008; voluntary returnees who have been in Ghana for more than ten years; and involuntary returnees such as deportees. Its aim is to analyze what the modes of return mean for how returnees articulate their return; how they are received locally; how they engage themselves socially, politically and economically; and finally, the responsibilities and challenges they face when returned.

It shows that in many ways the position and engagement of ‘successful’ transnational return migrants resemble that of the local elites who have made it in the capital or other big towns: migrants who are (are perceived to be) successful are expected to contribute to their families and hometown communities no matter whether they have migrated to Europe, other places in Africa, or inside Ghana. The reception of migrants who have received because of deportation or economic problems, however, is more ambivalent and depend on a large degree on what return migrants have managed to remit back either during their migration or when returning.

Polyamory and Political Economy: A Note on Socio-Economic Inequalities

Academic research and popular writing on nonmonogamy and polyamory have so far paid insufficient attention to class divisions and questions of political economy. This is striking since research indicates the concentration of significant amounts of and on class-based polyamorous communities. This paper highlights the economic conditionality of polyamorous relationships and families. Theorising polyamory from a materialist point of view allows for a more adequate understanding of the contradictions riddle poly communities in advanced industrial societies and shape their reach of this particular identity to predominate in small middle class circles. The insertion of poly cultures into an economic and cultural nexus shaped by neoliberal capitalism helps to circumscribe the material and discursive spaces from within which poly relationships and kinship formations are enacted. In this paper, the author is particularly interested in how the construction of polyamorous family ties is embedded in the context and style of enhanced commodification. The paper highlights the economic conditionality of polyamorous families. Theorising polyamory from a materialist point of view allows for a more adequate understanding of the contradictions of polyamorous relationships and families. Employment Preferences or Family Values - Where Are the Pitfalls for Women’s Labour Participation?

A better reconciliation of work and the family life is one important issue on the political agenda in many areas of the world. In West-Germany, the male-breadwinner family model is still well established. Only recently, the development of child-care for children less than three years of age offers mothers the possibility to re-enter the labour market early. Apart from such important structural restrictions, family values and gender attitudes play an important part for explaining labour force participation of mothers. With regard to family values, the family-home plays a decisive role. In West-Germany there is a widespread believe that children should grow up in sub-urban or rural as a pasturebed, so that moving to a child-friendly home can be seen as a proxy for a strong value orientation towards family life. Such moves normally add space between the family home and the work-place, which results in the necessity of long-distance commuting. Hence, an early re-entrance in the labour market might become un-attractive for women, although they had a strong labour market orientation before the move. The goal of this contribution is to estimate the influence of family-oriented relocations on the re-entry in the labour market of mothers, controlling for employment preferences and gender attitudes.

The data comes from the German Socio-Economic-Panels (GSOEP). The sample consists of 900 women who had a partner and a first birth between 2001 and 2010, and event-history models are applied. Preliminary results show that a child-oriented move indeed impacts mostly negatively on the re-entry of mothers in the labour market, whereas employment preferences have positive influences. Other important influences like marital status, that are partly interacted with the family values and employment preferences, support the view that both concepts are useful for enhancing our understanding of the underlying processes.

Attitudes About Success: Is It Rational To Be Dishonest During Economic Transition?

Success or becoming successful is quite often identified as a goal by many cultures in the world. As former Soviet states gained their independence and opened to the rest of the world the notion of success, especially economic success, became very popular even for children. It is important to note that as economic achievement becomes imperative it is unclear whether the transitional economies are able to provide their citizens with the legitimate means of achieving this coveted success.

Here we propose to compare attitudes of Ukrainian students to success and the means of its achievement to those of American students by conducting a pilot survey in American colleges and Ukrainian schools. The survey questions include the definitions of one’s success, necessary elements of success and the possibility of breaking the law, being dishonest and corrupt to achieve the success. One can hypothesize that the established economy with well-developed democratic institutions (like those of the US) will produce citizens who are less inclined to choose the illegal or dishonest path to achievement. Ukraine, on the other hand, with its relatively high level of corruption (according to TI index) and unstable economy might be more likely to influence the population to acquire quite different values and attitudes, more suitable to ‘cut-throat’ conditions of the market. Is the Ukrainian population’s willingness to ignore the law and basic notions of honesty an indicator of a rational adaptation?

Good without God: Atheists Facing Moral Questions and the Question of Morality

Religious books and stories are a compendium of rules and parables that cause people to consider ethics and behavior, even when many of the rules are questioned in a modern and diverse society. These guidelines remain the major source of morality for many believers; while some consider only their own religion legitimate, others accept all varieties of religion. But to reject a higher power altogether is perceived to be without an ethical basis, and thus immoral.

Based on a research project incorporating over 70 qualitative interviews with both believers and atheists in the U.S, this lecture will examine the concepts behind this accusation, how atheists react to it, what kind of morality they bring into play, and what they in fact think about religious morality.

In what ways do questions of ethics and equality matter to atheists, and what kind of topics do atheists choose for their social and political charity and activism? How is this related to both their status as a social minority and to non-religion itself?

Social inequality is a key focus of many of these moral debates. While many believers associate atheism, directly or implicitly, with communism, there are in fact a variety of approaches atheists take in facing the issue of inequality. What these approaches share is a common pattern for nonreligious ways of dealing with social change.

These different points will be laid out and illustrated with interview material in order to create a theoretical framework regarding atheist and nonreligious morality and ethics.

Intelligentsia in Modern Russia: Social Status Change

Humanitarian intelligentsia is a specific social group. Throughout its history it is not only developed non-material culture of society, but also played the leading role as civil asset of the nation, its “conscience”. During two past decades transformation in social life put the group in necessity of social adaptation, and so far the social position of the group and its role in the new social relations became unclear.

The paper is aimed to determine the current status of humanitarian intelligentsia in socio-economic, socio-political and professional fields and seek ways to improve its civil and professional positions. The analysis is based on the theoretical and methodological approaches that take into consideration the stratification of Russian society, differences in territorial conditions and professional fields. The study was divided in two phases. Initially, a wave of semi-structured interviews (n = 100) were conducted. After that, quantitative data were collected from questionnaires (n = 1150).

Results identify the strategies of socio-professional behavior, the current socio-political position of the group and its social adaptation level. The factors of status change present different levels: macro - level (socio-economic, political), meso - level (the development of the region and current professional sphere), micro - level (individual knowledge, attitude and behavioral strategies).

The Reality of Nineteen Eighty-Four. How Fiction Becomes Social

A literary text, according to the literary theorist Wolfgang Iser, operates by oscillating between the limits of the fictional and social worlds and thereby expresses the plasticity of the human being and its continued evolution of self. Notwithstanding, the question of how these fictional ideas spread into the social domain is rarely tackled. At the heart of this presentation is the task to forward develop an understanding of how the fiction found in literature participates in the shaping of social reality.

The reception of George Orwell’s popular novel Nineteen Eighty-Four (1949) in the German public sphere in the years 1983/1984 will be taken to exemplify the irruption of the fictional into the social. Symbolizing the concept of totalitarianism in its purest and most extreme form, the element of imagery provided by the fictitious text moves beyond signification and pretends an ontology. This socio-fictional aggregate referred to either by the novel’s title or the term Big Brother has come to shape the idea of totalitarianism for a whole era. I will introduce the social philosophy of Cornelius Castoriadis to the debate, as I believe it can help us understand the functioning of the fictional within the social as displayed in this phenomenon. Castoriadis attributes primary importance to the imagination for the creation of social knowledge as well as the interaction between the social imaginary significations and the (individual) radical imagination. His framework of the interconnectedness between the individual and the social may well be perceived as a gateway for the irruption of the fictional as found in the arts into the social.

For the sociological understanding of literature, I therefore propose to take the element of ontological pretension provided by fiction into consideration. Fiction can thus lay the foundation for abstract social terms and hence becomes part of social reality.
JAPANESE APPROACH TO CLIMATE POLICY: THE ROLE OF BOTH PRIVATE AND PUBLIC SECTOR IN JAPAN

JOSEPHINE HURST

Abstract: This paper introduces the potential for Japan to become a leader in climate change mitigation in the Asia-Pacific region. With its high reliance on fossil fuels, Japan is facing significant challenges in transitioning to a low-carbon economy. However, the country’s approach to climate policy is unique, involving both the private and public sectors, and aligning with the principles of sustainable development. The paper explores how Japan’s national energy strategy and international commitments contribute to its climate action and assesses the effectiveness of its strategies in reducing greenhouse gas emissions. The paper concludes with recommendations for future actions to enhance Japan’s leadership role in climate change mitigation within the Asia-Pacific region.
The first part of the paper focuses on the period when influential German historians tried to emancipate themselves from Hegel's philosophy of history in order to create a truly empirical science – and failed! The problem was that they couldn't solve the problem of relativism which comes up in any historical account that distances itself from Hegel's teleological perspective. Thus, historians such as Ranke and Droysen from multi-nominal logic regression models support the entrapment hypothesis. We argue that special educational and social attention for newcomer children is needed to improve their academic achievement. Teachers also face challenges in instructing diverse students whose native languages are Chinese, Tagalog, Portuguese, Spanish, and others.

In Kanagawa prefecture neighboring Tokyo, the number of newcomer children is relatively large. Four public high schools began providing special services for foreign students in 2007, and the number of such schools increased to 16 in 2013. Those schools provide a variety of services including native language classes, Japanese-as-a-second-language classes, and special instruction classes for academic subjects.

The authors identified the challenges and needs of newcomer students. The data derived from interviews with 85 children at a high school in Kanagawa prefecture from 2007 to 2013. The findings and interpretations indicate that (1) some newcomer children have poor academic achievement and face difficulty going on to college because of scarce resources and support even though they desire more education; (2) many families experience separation due to migration for jobs or women marrying Japanese men and leaving their children in their own country. These are the "multinuclear households" often seen in countries with long accepted immigrants; (3) those families that live apart for many years have difficulty reestablishing their ties. We argue that special educational and social attention should be given to these families and their children.

KO, JHY-JER ROGER* (National Taiwan University, jikko@ntu.edu.tw)
Differences in Job and Work Mobility of Labor Market Insiders and Outsiders in Taiwan

One emerging issue of research on work and labor market is to study the segmentation trend in job and work mobility in labor markets, and mechanisms behind segmentation processes. Recently, some researchers argued further that the division between standard and nonstandard workers has acted as an additional segmentation of labor market. This approach also paves the way to understanding of the link between precarious work and social inequalities. Considering the significant impacts and labor market policy implication of this possible segmentation, detailed research on patterns of job and work mobility between standard and nonstandard workers, and also study if these differences have caused segmentation in labor markets of Taiwan.

Existing literatures provide two strands of arguments regarding consequences of nonstandard work arrangement: the stepping-stone hypothesis and the entrapment hypothesis. The stepping-stone hypothesis claims that nonstandard work provides a stepping stone to a standard job and is regarded as a means to flexibilize the rigid labor market. On the other hand, the entrapment hypothesis, which is derived from labor market segmentation theory, assumes that nonstandard work has long-lasting negative consequences on job mobility because it makes nonstandard workers "trapped" in the secondary labor market segment, or leads to unemployment. To investigate which hypothesis is correct in Taiwanese labor markets, I use "Manpower Utilization Quasi-Longitudinal Survey" (2008-2011) to examine job and work mobility between standard and nonstandard workers. As a result, the data suggest that multi-nominal logistic regression models support the entrapment hypothesis. Segmentation of labor market is reflected in difference of mobility pattern between standard and nonstandard workers.

KO, PEI-CHUN* (University of Cologne, ko@wiso.uni-koeln.de)
Determinants of Social Activities Among Older People in China: An Analysis of Family Factors and Community Factors

Objectives: The study investigates the extent of family factors and community factors affecting engagement in social activities (non-market productive activities and leisure activities) by older people in China.

Conceptual framework: Given filial piety and Chinese “quanxixi” value the importance of family in Chinese culture, family factors, including older people’s household size, composition and number of financial supporters are tested. In line with opportunity structure arguments, the impacts of community factors (public facilities, community offices and urban/rural communities) on the likelihood of social activities are examined. Research hypotheses are summarized here:

H1: Older people living with more family members are less likely to engage in social activities than are older people living with few or no family members.

H2: Older people living alone are less likely to engage in social activities than are older people living with partners.

H3: Older people with more financial supporters from within their family are less likely to engage in social activities than are older people with few or no financial supporters from within their family.

H4: A community with more public facilities increases individuals’ propensity to participate in social activities.

H5: A community with a longer office increases individuals’ propensity to participate in social activities.

H6: Individuals living in an urban community have a higher propensity to participate in social activities than do individuals living in a rural community.

Methods and data: The first wave of the China Health and Retirement Longitudinal Study (CHARLS) is used. The analytic sample is composed of respondents above 50 years old (n= 7,813). Multilevel models for dichotomous data are employed (first level: individual characteristics and family factors; second level: community factors).

KOYAYASHI, HIROMI* (Bunkyo Gakuin University, h.kobaya@bgu.ac.jp)
Transnational Families and Newcomer Children in Japan

In the 1980s, because of the economic boom in Japan, many workers came to Japan from other Asian countries. In the 1990s, the Japanese government revised the Immigration Law, resulting in workers coming from Latin America. Since then, the number of foreign laborers has continued to increase. The number of foreign workers’ children has also grown. They face difficulties keeping up with academics in school because of insufficient Japanese language and poor school support. Teachers also face challenges in instructing diverse students whose native languages are Chinese, Tagalog, Portuguese, Spanish, and others.

In Kanagawa prefecture neighboring Tokyo, the number of newcomer children is relatively large. Four public high schools began providing special services for foreign students in 2007, and the number of such schools increased to 16 in 2013. Those schools provide a variety of services including native language classes, Japanese-as-a-second-language classes, and special instruction classes for academic subjects.

Mobile Social Dilemmas in an Experiment: Mobility Accelerates the Cycle, but Does Not Change Cooperation

Problem
This paper sheds light on the role of mobility on cyclic processes in mobile social dilemmas. Olson argues that rational actors will free-ride in large groups. Ehrhart and Keser’s experiment revealed that people formed cyclical cycles of group size and cooperation when they can change groups. But they did not compare various levels of mobility. Thus, our research question is how mobility affects the cycle and the cooperative behaviors.

Methods
We conducted a laboratory experiment (with 168 participants in 40 groups in 10 sessions). Three conditions (treatments) were introduced (immobile, high mobility costs, and low mobility costs conditions).

Results
We show the following findings. (i) Mobility did not change effects of size on cooperation (N=339 group-rounds). (ii) Still, mobility accelerated effects of cooperation on size (N=360 group-rounds). As people moved more easily, cooperative groups were more likely to expand. (iii) As a result, intergroup mobility accelerated individual cooperation (N=40 groups). Groups rotated faster when people moved more easily. (iv) However, mobility did not raise nor decline cooperation levels (N=40 groups).

Conclusion
We observed negative effects of size on cooperation. This was consistent with the literature, both on mobile and immobile social dilemmas. We observed cyclic dynamics. This reconfirmed Ehrhart and Keser. We observed identical cooperation at various mobility levels. This was inconsistent with Tiebout’s prospects. The literature overlooked that free-riders can invade cooperative groups. To foster cooperation among rational actors, first increase mobility to free-riders. Then, restrict mobility to exclude free-riders.
This paper examines how zainichi (residing-in-Japan) Korean athletes have been represented in the media and mobilised in relation to the cultural politics of Japan. Zainichi Koreans have been the largest ethnic minority in Japan largely due to forced migration during the era of Japanese colonialism. Second and later generations of zainichi Koreans have often strategically hid their Korean citizenship and identity by speaking Japanese and adopting Japanese names in order to avoid daily conflicts with, and discrimination from, Japanese society. Sport is one of the sites where the political-historical issues of zainichi Koreans are brought to the fore in public consciousness and popular discourse. From the legendary professional wrestler—Rikidozan—to the naturalised Japanese football player—Tadanari Lee, zainichi Korean athletes have been represented in an ambivalent manner—both as ‘Japanese’ and ‘the Other’. This ambivalence of representation is linked to how they self-identify, the role of the media and the context of cultural politics at the time. By examining how representation and perception of zainichi Korean athletes have been maintained or changed over time, the paper highlights the key events and sport stars that have contributed to the re-positioning of zainichi Koreans in Japanese society. Research on zainichi Koreans has been rarely conducted yet deserves attention because it challenges the homogeneous construction of ethnic essentialism and sport nationalism in Japan and reveals the postcolonial politics within a wider context of East Asia. Overall, this paper serves as a preliminary analysis of zainichi Korean athletes with respect to how they might be studied both theoretically and methodologically.

Taking Japan Seriously Again: The Cultural Economy of Glocalisation and Self-Orientalisation

Although Japan’s economic presence has declined over the past two decades, the legacy of Japanese cultural-economic contributions to the global process has not been adequately addressed. This paper identifies the pioneering role of Japan in developing, and globally disseminating, two key commercial processes of ‘glocalisation’ (Robertson, 1995) and ‘self-Orientalisation’ (Dirlik, 1996; Iwabuchi, 1994). By delineating the links between the two interrelated processes, it is argued that Japan’s contributions to the making of the global cultural economy have dramatically altered the mode of domination by transnational corporations—from economic rationalisation to cultural differentiation. This was triggered, as I contend, by the formation of strategic alliances of Japanese corporations with Western marketers and advertising agencies when they globalised their products and business operations in the 1970’s and 1980’s. Drawing on case studies of global sport brands, this paper demonstrates the ways in which Japanese workers and consumers have contributed to the re-territorialisation of the global/West through their practices of glocalisation and self-Orientalisation. Overall, this re-thinking of Japan’s cultural-economic contributions counters the view of seemingly unilinear development of neoliberal capitalism that has been prevalent in theorising of global consciousness and connectivity.

Self-Rated Ability of Reading the Atmosphere and Correlated Factors Among College Students

Inarticate understanding of someone’s needs and feelings accurately, and communicating with people smoothly is represented as “reading the atmosphere”, and it has been treasured in Japanese tradition. Recent young Japanese adults prefer being accommodating, and setting themselves apart from their peers can lead to worsening of their mental health. The present study was a questionnaire study that affects the self-rated ability to read the atmosphere for 703 students at two universities in 2011. Among them, 3.2% were self-rated as “cannot read the atmosphere at all (Group 1)”, 19.4% “cannot read the atmosphere very much (Group 2)”, 46.8% “can read the atmosphere a little (Group 3)”, 25.4% “can read the atmosphere very much (Group 4)”, and 5.3% “read the atmosphere too much (Group 5)”. Also, logistic regression analysis showed that the self-rated abilities of reading the atmosphere were not related to age, sex, and the presence or absence of siblings, and collectivism scale. However, they were significantly related to the self-monitoring scale. The results indicated that self-monitoring is a crucial factor for the proper functioning of abilities to read the atmosphere. Also, people read the atmosphere not because they put the priority of group goals over individual goals.

KOC, MUSTAFA* (Ryerson University, mkoc@ryerson.ca)

Dark Side Of The Miracle: Hunger and Food Insecurity In Turkey

Turkey has been praised as a remarkable success story among the developing economies as many countries in the Southern Mediterranean, the Middle East and North Africa suffered the impacts of global financial crisis during the first decade of the 21st Century. The economy grew by 5% per year on average from 2002 to 2012 and per capita income increased up to 10,500 USD in 2011, from the modest 3,500 thousand dollars in 2002. As of 2012, Turkey was listed as the 17th largest economy in the world with a GDP of about 800 billion dollars.

This paper explores the nature of progress towards poverty and hunger alleviation in the country during the same period. It shows that behind the neoliberal miracle of growth, there is escalation tendency for depeasantisation, increase in urban poverty, decline in collective bargaining rights of labour unions, widening income gap between the rich and the poor, worsening of working conditions, increase in the percentage of workers working for the minimum wage and high levels of youth unemployment. Despite these socially unattractive social factors, official figures celebrate success in terms of food security and fight against hunger.

This paper will provide insights as to the causes and consequences of such “success” in food security while critically assessing the analytical and methodological utility of the concept.

Arranged Urbanism: Modes of Informality and Governance Structures in Barranquilla, Colombia

During the last several years a dynamic transformation has been taking place at the northern city fringe of Barranquilla, Colombia: Shopping Malls, Gated Communities and Gated Tower Buildings have been built – a process very similar to other Latin American cities. The aim of my presentation is to reveal the underlying planning approaches and explain the role and influence of the private and public actors involved. The presentation contributes to the discussion on formal and informal practices of urban development in the Global South and shows the blurring borders between the ‘formal’ and the ‘informal’. The re-framing of the analysis is the analogy between the interests of private actors, official documents and the spatial transformation which is taking place. This analogy was made through the massive influence of private interests in public planning and a multitude of informal arrangements between the land owner and the public authorities. This form of urban development is described as ‘arranged urbanism’ and stands in a tradition of similar processes of spatial, economic and political development in Latin America, nevertheless, the pace and shape has changed. In addition, forms of ‘arranged urbanism’ can also be found outside of the Latin American context and thus present a new mode of planning governance in Cities in the Global South and the Global North.

Governance of Climate Adaptation through Urban Regimes: The Cases Bogotá and Frankfurt

Climate adaptation strategies have gained importance both in Cities in the Global South and the Global North (Birkmann et al 2010). A crucial aspect of these strategies are so-called climate adaptation plans. These plans show the actions and activities necessary to deal with climatic changes. During the last several years a dynamic transformation has been taking place at the northern city fringe of Barranquilla, Colombia: Shopping Malls, Gated Communities and Gated Tower Buildings have been built – a process very similar to other Latin American cities. The aim of my presentation is to reveal the underlying planning approaches and explain the role and influence of the private and public actors involved. The presentation contributes to the discussion on formal and informal practices of urban development in the Global South and shows the blurring borders between the ‘formal’ and the ‘informal’. The re-framing of the analysis is the analogy between the interests of private actors, official documents and the spatial transformation which is taking place. This analogy was made through the massive influence of private interests in public planning and a multitude of informal arrangements between the land owner and the public authorities. This form of urban development is described as ‘arranged urbanism’ and stands in a tradition of similar processes of spatial, economic and political development in Latin America, nevertheless, the pace and shape has changed. In addition, forms of ‘arranged urbanism’ can also be found outside of the Latin American context and thus present a new mode of planning governance in Cities in the Global South and the Global North.
view my presentation tries to provide insights on the construction of capacity to act regarding climate change on an urban level: How are climate adaptation plans elaborated, who participates in their elaboration and who not?

Women's Health and Gender Discrimination In India

Abstract

The greatest revolution in any country is the one that affects positively the lives of women, and there is no doubt that, if women are encouraged to realize their potential, that it's not only their life which would be affected but the life and situation of the whole household which is the basic unit of our national economy.

Women's health in India can be examined in terms of multiple indicators, which vary by geography, socio-economic standing and culture.

Women's adversity is the outcome of many factors, which include economic status, political status, cultural tradition, and gender inequality. In order to avoid the need for sleep altogether.

Finding Shelter in Denver: Multiple Regimes of Spatial Order and Multiple Coping Strategies

From a homeless person's perspective, the neoliberal city seems like a virtual minimum-security prison. In order to work, eat and rest, they must negotiate multiple and layered ordinances regulating their activity and movement. For the homeless, simply occupying public space is already problematic. Certain municipalities allow begging, others do not. Scraping metal often violates land use codes. In seeking services, the homeless must conform to the requirements of state and charitable service providers. Obviously, neoliberal spatial control of homelessness does not germinate from a single control center. Peck (2010) argues that the mongrel phenomenon of the neoliberal state is relationally constituted. His notion aligns with Staeheli and Mitchel (2008) claim that public space regulation does not emanate from a single ideological or practical nexus, but courses many separate interpenetrating property regimes.

In attempting to understand how homeless individuals negotiate a growing phalanx of codes and ordinances variously intended to move them toward service providers and into shelters we utilized ethnographic methods. Talking to homeless injection drug users in Denver, CO, a city wherein sleeping with any protection against the elements in public has recently been outlawed, we found that shelters, due to mandated durations of stay and strictly enforced conditions of confinement were often considered undesirable places to be. Understanding this, it is unsurprising that homeless people resists this degree of control by continuing to use alternative and often illegal places for shelter and attending to personal hygiene. Other findings prove both ironic and tragic. We learned that as part of an overall strategy for negotiating Denver's regimes of spatial confinement often leads to increased drug use. A heavy nod numbs heroin users from the cold part of an overall strategy for negotiating Denver's regimes of spatial confinement into shelters we utilized ethnographic methods. Talking to a phalanx of codes and ordinances variously intended to move them toward ser-}

Cleavages and Conflicts in Aging Societies: Generation, Age, Class?

Fifty years ago, inequality in developed societies disadvantaged the elderly. Becoming old could mean falling into poverty, and some sociologists interpreted retirement as a form of social exclusion and alienation. Today, the tide has turned: the elderly have benefited from the expansion of the welfare state, and some sociologists paint the bleak picture of a coming gerontocracy. The discourse on gender and "new" cleavages such as those of gender and ethnicity (or "race"). Emphasizing the generational conflict tends to downplay other inequalities, and by this, risks being ideological.

I will briefly retrace the stages of this discourse, and then examine the current extent of cleavages among generations in the elderly, and the impact of economic well-being and social inclusion. How these cleavages turn into conflicts depends on their potential for mobilization, which I will assess by examining political attitudes, participation and voting. The result is that the salience of generational conflicts is (so far) low, which I attribute to the mediating function of political institutions and of generational relations and transfers in families.

Class inequities cumulate in old age, and class cleavages may thus deepen in future aging societies, but the potential for class mobilization seems to fade away. Generational cleavages may also deepen, not least through the current trends towards welfare state retrenchment. Whether they will lead to generational mobilization depends on the continued viability of the mediating institutions in politics and the family.

Parents' Home Ownership and Support for Adult Children Across Europe

The degree to which economic well-being depends on the support provided by the family of origin varies considerably across welfare regimes. Thus, while Scandinavian countries are characterised by an high level of defamilialization, Continental Europe follows a model of supported familialism. The Mediterranean countries are best described as adopting a model of familialism by default. In our previous research, we have shown that what changes from one model to the other is not only the relevance and strength of the family ties, but also the strategies adopted by parents to support their adult children's own family projects. The present paper, based on data from SHARE and SHARELIFE, examines how parents' housing careers are related to the transmission of economic resources from parents to children, and how this varies across different welfare contexts.

First, we will analyse the extent to which parent's home ownership status affects the likelihood that children co-reside with their family of origin. Our preliminary results suggest that, ceteris paribus, parents who rent their home are less likely to support their adult children through co-residence. Secondly, we want to analyse how parents' own housing experience affects the strategy that they adopt to support their adult children. For instance, does the fact that parents received support in their present home lead them to help their children in turn? Also, a number of other experiences – such as ownership status of one's first home after the exit from the parental home, age when establishing one's own household, or special events in one's housing history – are likely to affect the strategy that parents adopt in supporting their adult children. Most importantly, the role played by parents' housing experience is likely to vary across different welfare contexts.

Friends, Comrades and The Aesthetic Melting Pot: Instagram As a Tool Of Propaganda

This paper examines the ways through which the aesthetic mechanism of Instagram, a social network application designed for media sharing, is used as an intended that each person in it's unique way of being should be acknowledged and accepted as an active participant? How can such processes of change be carried out and supported? My presentation will focus on the inclusion of children with handicaps in public schools; I will reflect on the questions above and conse-quent topics.

KOETTI, MICHAELA* (University of Applied Sciences, michaela.koettig@gmx.de)

Does Inclusion Mean Everyone Every Time?! – Critical Reflection on a Popular Concept

It seems that inclusion is being discussed everywhere you turn; organisations, institutions, government services all claim to be places of inclusion. What does this really mean? Does it mean that every location will be designed so that anyone can access and act in it? Is it enough to declare your intention to work together to be inclusive? Will this concept be able to remove the subtle (and not so subtle) forms of exclusion that have developed over the years in our society? Is it really
emotive tool in institutional propaganda. My case study is Instagram photographs which were uploaded to the official Instagram site of Israeli Defense Force between 2012-2013. I also examined random Instagram photographs which were tagged IDF and Zahal (IDF in Hebrew).

I will suggest that the site administrators attempt to form a conceptual frame embedded in ideological, functional, and sensory emotional norms shared by the users (Chandler & Livingston, 2012). This frame of values is understood as a common ground for the Israeli users, who were raised on myths about the army and the value of deep friendship among warriors. The same frame of values serves them simultaneously as members of a social network which is based on fixed aesthetic norms such as chosen filters and the "artistic" square shape, which its similarity to Kodak Instamatic and Polaroid images makes the photographs "sentimentally beautiful" (Enquist, Magnus & Arak, 1994).

Also common are values of sharing, the meaningful dual concept of "friends", and the value act of positive motivating, may it be the army's hierarchic system or the social network's "likes".

I will look into the ways through which the use of Instagram helps the sites' administrators and private users to activate a unified code of symbols, which blends individuality and nationality, the beauty of nature, the aesthetic standards of the application and the admiration of armed forces (Friedländer, 1984).

And last, seeing Instagram as a platform for individuals to perform and share their artistic creativity (Gye, 2007), goes along with another Israeli myth, which praises soldiers as sensitive individuals who fulfil their national duty, while being young "fighters and dreamers", who express their feelings in various forms of art.

Free Movement and Serial Migration: Exploring the Lives and Motivations of Highly Skilled Finns Living Abroad

The European Union (EU) is a globally unique area, where it is possible for the majority of Europeans to study, work or retire in any of the 28 EU member states, as well Switzerland, Iceland, Norway, and Liechtenstein (KOIKKALAINEN, 2011). European citizens have more legal, transnational mobility rights than any other migrant group in the world and the ease of mobility across intra-European borders has created a common labour market for those willing to be mobile. The presentation discusses the intra-European mobility regime from the perspective of highly skilled migrants: how young, educated Europeans experiment with living abroad, move between European capitals and take up job offers in various countries without the need to worry about visas, work permits, or integration requirements. For these privileged migrants, Eurostars (Favell, 2008), onward migration may be as easy as buying a low-fare airline ticket or hopping on a fast train. The paper draws on the Working in Europe Study (2008-2011) which collected the experiences of 364 Finns working in 12 European countries. Special attention is paid to the experience, qualities, and motivations of the serial migrants, those who have lived abroad in at least two different countries. Why did they move abroad in the first place, and why did they move again? Do they display a particularly European identity, continue to identify with their original home country, or see themselves as global citizens (KOIKKALAINEN, 2013)? And does the ease of mobility increase the likelihood of remigration?

Mobile Workers, Mobile Lives: Tourism Workers in London and Lapland

This conference paper focuses on two European tourism destinations that thrive on seasonal leisure, often performed by circular migrants: London, UK and Lapland, Finland. London is an important urban tourism destination in Europe attracting more than 30 million tourists each year. Lapland is a major tourism destination at a smaller scale: the land of ice and snow, the arctic borealis and reindeer safaris attracts just below one million tourists each year. While the profiles of these two places are very different, they do share important similarities in terms of labour demand. In London the pubs, hotels, shops, and amusement parks rely on seasonal labour, often performed by young people originating from other European Countries. In Lapland the hotels, skiing resorts, wilderness safaris and other tourism-related services also require flexible, seasonal workers who return to their countries of origin or to Southern Finland for the off-season. A look at this unlikely pair of case studies can increase our understanding of the mobility – tourism nexus, and provide an insight into the differences between the tourist experience and the mobile worker experience. Drawing from the tourism research and migration research literatures the presentation explores how the experiences of tourists and migrant workers differ from each other. Is working at a tourism destination in fact a form of lifestyle migration? And how do seasonal tourism workers form workplace communities, develop place attachment, and bond with the local community, if they know that their own stay at the tourism destination is only temporary?

KOJIMA, HIROSHI* (Waseda University, kojima@waseda.jp)
Correlates of Work Behaviors Among Muslim Migrants in Japan, Seoul and Taiwan

This study analyzes correlates of work behaviors among male Muslim migrants in Tokyo, Seoul and Taipei Metropolitan Areas, applying logit models to the micro-data from the Survey of Foreign Muslims in Japan (2005-2006), the Survey of Muslims in South Korea (2011) and Explorative Study on the Taiwanese Muslims (2012-2013). The results of logit analysis for the correlates of employment status show that ages 35+, entry before 1990, South Asian origin, intermarriage with a local woman and high school education have positive effects on self-employment but South Asian origin has a negative effect. In Taiwan ages 15-24 and 30-34, entry before 2007, marriage with a local woman or a consensual, high school, junior college and polytechnic education, and speaking proficiency in Chinese have positive effects. Therefore, the positive effects of high school education is shared by the three societies, while the effects age, year of entry, national origin and the nationality of spouse do not have consistent effects.

As for being an employee, ages 35+ and entry before 1990 have positive effects, in Japan while ages 35+ entry before 2007, Indonesian origin and high school education have positive effects in South Korea and ages 35+, entry before 2007, high school, junior college and polytechnic education, and speaking proficiency in Chinese have positive effects in Taiwan. Therefore, the positive effects of high school education are shared by the three societies. The results for employment type and job hunting method will be also presented.

In sum, there are some variables which have opposing effects in different societies. They seem to reflect the differences in the population composition of Muslim migrants as well as the composition of economically active population in each society.

KOJIMA, HIROSHI* (Waseda University, kojima@waseda.jp)
Halal Food Consumption Among Muslim Immigrants in Tokyo, Seoul and Taipei: A Comparative Analysis of Correlates

This study aims at clarifying the similarities and differences in immigrant integration from the perspective of religiously regulated food consumption in new immigration countries in East Asia. It analyzes correlates of halal food (which Muslims are allowed to eat) consumption behaviors among male Muslim migrants in Tokyo, Seoul and Taipei Metropolitan Areas, applying logit models to the micro-data from the Survey of Foreign Muslims in Japan (2005-2006), the Survey of Muslims in South Korea (2011) and Explorative Study on the Taiwanese Muslims (2012-2013). It broadly draws on the analytical framework proposed by Bonne et al. (2007). The dependent variables include the frequency of visits to halal shops and that of visits to halal restaurants.

The frequency of visits to halal shops and restaurants tends to be low in Japan and high in South Korea. The logit analysis for Tokyo shows that white-collar employment, strengthened religiosity and concerns for local customs have positive effects, as does the visit to halal shops, while age and levels of education and living in owned or company housing have negative effects. The logit analysis for Seoul shows that the entry in 2005-2006 or 2009-2011, South Asian origin, very strict observance of Islamic rules have positive effects on the visit to halal shops and that other origins and high-school or less education have negative effects. The logit analysis for Taipei shows that living in owned housing and very strict observance of Islamic rules have positive effects on the visit to halal shops and that other origins, white-collar employment, non-strict observance of Islamic rules and adaptation have negative effects. The results show more differences than commonalities among the three societies, possibly because of the differences in the composition of Muslim immigrants and in the availability of these facilities.

"Alternative Unions" and Their Involvement in the Post-3.11 Disaster Politics

Labor unions call alternative unions are increasingly becoming a noteworthy presence in the contemporary Japanese social movements scene. These are individual membership-based unions, such as general unions and community unions. I call them alternative because they are not representative of nonstandard workers, they serve as an alternative to enterprise unions from which non-standard workers are usually excluded. This paper examines the ways in which these alternative unions, who have made themselves into prominent figures engaged in nonstandard employment issues, became involved in the post-3.11 disaster politics. This study uses ethnographic and archival data gathered during fieldwork in Japan from April 2008 to September 2009 in addition to follow up research conducted in 2010 through 2013. I demonstrate that alternative unions live enmeshed in a complex web of individual and organizational ties, and they thrive by building new ties and resolving existing crises. From the standpoint of individuals who are involved in labor disputes through these unions, they come to be enmeshed in a dense network through union affiliation. They develop new bonds and ties with individuals they meet anew. As a consequence of this organizational social capital being transferred to the individual, some come to participate in social movement activities on their own, separate from union affiliation. The network transfer sometimes leads in the long run to nurturing new activists who respond and engage in emerging crises. I argue that alternative unions serve a double role in the field of social movements in Japan. First, they actively engage in emerging crisis work with other union members and community activists. Secondly, these unions serve to connect individuals through these activities, which sometimes lead individuals to participate in movements on the newly emerging crisis.

Depression, Work and Identity in a Neoliberal World: Perspectives from Australia and the UK

Since the 1980s, job markets in economies such as the United Kingdom (UK) and Australia have been shaped by neoliberal policies directed at increasing competitiveness and productivity. While different national policies and institutions are at play, workers in these countries have been affected by some common trends, including decreased union membership, restructuring, outsourcing, off-shoring, increased workload pressures, short-term contracts, and redundancies, contributing to greater job insecurity and workplace stress. During the same period, the prevalence of depression diagnoses has increased worldwide, with the World Health Organisation estimating that over 100 million people are currently living with depression. Recently, sociologists have theorised about the possible connections between these two trends, suggesting that the increasing demand for workers to be flexible and enterprising has contributed to them feeling stressed, with implications for depression (Rose 2007; Ehrenreich 2010). Yet relatively few qualitative studies have empirically explored the relationship between work, depression and identity. This paper elucidates the connections between work and personal narratives of depression using 77 in-depth interviews with people living with depression in Australia and the UK. Interviews were conducted between 2003 and 2010. In this paper, we provide a secondary analysis of interview transcripts (with original researchers involved), using thematic analysis to explore how people talk about their experiences of work in the context of their illness narratives. We will uncover how people living with depression experience work, including how work and workplace policies (e.g., antidiscrimination, sick leave) can both contribute to emotional distress and protect against it. We locate our empirical findings in the context of theoretical debates about the impacts of neoliberalism on contemporary individuals, and draw explicit comparisons between people’s experiences in Australia and the UK to illustrate our points.

Preschool Teachers in a Changing Institutional Context: Reforms andProspect of Professional Group

Results of this research are the initial stage of the "Processes of the Actual Russian Market of Preschool Education" project and allow to allocate the following main points of a situation of preschool teachers in the period of institute reforming. Difficult situation of preschool teachers is caused by increase of demand for this service, on the one hand, and an obvious suspense of an array of problems of the sector, defining status of positions of group, on the other hand. The cultural resource of occupation is very poorly popularized that making uncertain the symbolical capital of group in the opinion of clients (parents and educational government officials). In this situation private sector is essentially interested in advance of the cultural capital of occupation as the power of authority and expertise of a profession as a basis to increase the status indicators of the group.

At institutional level monopolization by the state of administrative functions administrates. The professional organizations in estimate of experts received different treatment. Informants of the "pro-state" sector associated them only with labor unions, taking into account absence at them serious opportunities of change of professional group position. Experts of "pro-market" organizations showed interest in professional associations and the organizations of public control. The preference of a type of expert associations focused on advance of the cultural capital of group and classical "not bureaucratic" ideas of professional independence, testifies higher interest in development of power resource and group ascending mobility.

The specific changes in an institutional context can potentially modify structure of professional group, promote legalization and expansion of its private sector and increase of its status indicators.

The Causal Effect of Another Sibling on Own Fertility – an Estimation of Intergenerational Fertility Correlations By Looking at Siblings of Twins

Researches have documented persistent differences in fertility between different socioeconomic groups. These differences could occur over several generations have important population level implications on the social transmission of socioeconomic status as the size of socioeconomic groups naturally are dependent on differential fertility. The reasons for intergenerational fertility correlations are however poorly understood. The current study attempts to differentiate between the causal role of another unexpected child in the parent generation, from the effect of other characteristics that are shared between parent and children, for explaining intergenerational fertility correlations. Thus it is possible to examine if intergenerational transmission of fertility is due to transmission of socioeconomic status, which on average is shared between individual. This is examined through an instrumental variable approach, using a twin birth as a source of exogenous variation in the size of the parent generation. Data is drawn from the complete Swedish population using administrative register data on more than 2,000,000 parent-child links. Findings show that little or none of observed fertility correlations can be attributed to the causal affect of growing up with another sibling as such, instead shared characteristics between parents and children such as fertility preferences, ethnicity, religion or socioeconomic background appears to explain observed fertility correlations.

Development and the Transformation of Women's Capabilities. – Sociological Study of Household Footwear Cluster in India

Indian leather industry has grown in household sector and part of it is in the process of mechanization today. Footwear is major product produced both in household and factory sectors to meet the export and domestic demand. The Indian leather industry is supporting livelihood to millions of artisans who follows the unique system of labour. A few units particularly in clusters are surviving with limited market support of traditional buyers. Men and women have specialization in each operation in the footwear production activity. The household sector contributes almost 70 percent of the total footwear needs of the country. The post liberalization era brought huge quantity of cheap and non leather footwear to Indian market that affected mostly the household sector. Outdated technology and low scale of production system and primitive designs of the footwear are the major reasons for the household footwear sector that unable to hold their market share. Faced with the emerging competition and challenges, many of the household units closed down their production system. A few units particularly in clusters are surviving with limited market support of traditional buyers. Women play major role in sustaining the footwear activity in these clusters. The institutional intervention focusing on women workers has empowered them with new production skills and technical training. Central Leather Research Institute (CLRI) has taken up the task of footwear cluster development programme with women specific empowering goal has made significant impact on women artisans in household footwear sector. The study has brought out interesting facts and findings on the women empowerment with decision making through institutional support.
Science, Technology and (New) Forms of Social Inequalities – Sociological Study of Household Footwear Cluster in India

Dr. Giriyappa Kollannavar, N S Vasagam, Jagathnath Krishna and A B Mondal
Central Leather Research Institute, Adyar, Chennai – 600 020.

Key words: Leather industry, household footwear sector, women workers, institutional support, division of labour

Indian leather industry has grown in household sector and part of it is in the process of mechanization today. Footwear is major product produced both in household and factory sectors to meet the export and domestic demand. The Indian leather industry is supporting livelihood to millions of artisans who follows household and factory sectors to meet the export and domestic demand. The household sector contributes almost 70 percent of the total footwear needs of the country. The post liberalization era brought huge quantity of cheap and non leather footwear to Indian market that affected mostly the household sector. Outdated technology and low scale of production system and primitive designs of the footwear are the major reasons for the household footwear market that unable to hold their market share. The government has decided to create a ‘state-led’ financial system (similar to France, etc.) of French post-structuralist Jean Baudrillard (2006) I’m representing the concept of ‘trans-alienation’ which is a hybrid of “new” Western and “old” Soviet forms of alienation which are products of the different types of social spectacle (Guy Debord, 2004). The “democratic” Western countries are more inclined to the methods of state regulation of the economy, whereas in developing countries there is still a tendency to anomie and imposing values of the market and the consumer society. Thus, the modern individual is represented as totally alienated, in other words, as a “dead subject”: a vicious circle: alienated labor ↔ commodity ↔ alienated labor ↔ commodity. Is there still hope today to reanimate the subject that is not more crushed by the discourses of power, labor, consumption and capital? If the early works of postmodernists abounded statements and attitudes regarding the death of the subject, some of their more recent works show revision of the terms “subject” and “subjectivity” and indicate the possibility of resuscitation active social agent as a full-fledged subject of power, of his will, intentions and desires. This is possible by the development of new ideas about the properties of the social environment (concepts): a flexible, non-linear, post-bureaucratic, rhizomatic (Deleuze, Guattari).

In the field of environmental education, several previous studies mentioned experiences in nature as the factor to prompt pro-environmental behaviors and in the field of environmental sociology, they say environmental awareness and knowledge about environmental issues are the factors to do environmentally appropriate behaviors. The purpose of this study is to examine the effects of those factors as the determinants of prompting pro-environmental behaviors. In November 2010, we conducted a survey in Minamata, Japan. Respondents are all the 3rd grade junior high school students and their parents in that city.

Results are as follows: 1) Both students and parents who try to share knowledge about environmental issues with their family members tend to do pro-environmental behaviors, 2) Experiences in nature are in correlation with only students’ pro-environmental behaviors, not with parents’ behaviors, 3) as for students and fathers, awareness of personal responsibilities for and effectiveness of doing environmentally appropriate behaviors have correlation with their pro-environmental behaviors.

In general, the studies of alienation can be divided into two strata: 1) processes of alienation in the “developed countries” due to formation of mass consumer society, 2) dynamics of alienation in “developing countries” that takes place in classic type of social spectacle. Based on the above considerations in the globalizing world we can sharply distinguished types of alienation? Probably today we should talk about rhizome (Deleuze, 1980) of different dimensions of alienation. Using the concepts of diverse trans-phenomenon (trans-politics, trans-economics etc.) of French post-structuralist Jean Baudrillard (2006) I’m representing the concept of “trans-alienation” which is a hybrid of “new” Western and “old” Soviet forms of alienation which are products of the different types of social spectacle (Guy Debord, 2004). The “democratic” Western countries are more inclined to the methods of state regulation of the economy, whereas in developing countries there is still a tendency to anomie and imposing values of the market and the consumer society. Thus, the modern individual is represented as totally alienated, in other words, as a “dead subject”: a vicious circle: alienated labor ↔ commodity ↔ alienated labor ↔ commodity. Is there still hope today to reanimate the subject that is not more crushed by the discourses of power, labor, consumption and capital? If the early works of postmodernists abounded statements and attitudes regarding the death of the subject, some of their more recent works show revision of the terms “subject” and “subjectivity” and indicate the possibility of resuscitation active social agent as a full-fledged subject of power, of his will, intentions and desires. This is possible by the development of new ideas about the properties of the social environment (concepts): a flexible, non-linear, post-bureaucratic, rhizomatic (Deleuze, Guattari).

The “Classical” Concept of Alienation in the Light of Post-Structural Social Theory: Trans-Alienation and Hypo-Subjectivity of Working Man

In 1948, when Israel was established, there were more than twenty banks and a hundred of credit cooperatives. This was the legacy of the pre-state period in which this fragmented Jewish banking system was formed by the British liberal government framework, social and business networks among German origin Jewish bankers, power struggles between mainstream and pro-world-Jewish Zionists ideology unites them all.

Thirty years later, in the end of the 1970s, the landscape of the Israeli banking was completely different: it was dominated by only three powerful banking groups which have become almost exclusive actors in the financial and real markets. The government has decided to create a 'state-led' financial system (similar to France) and brought about an extreme consolidation in the banking sector, in order to control the monetary system and optimize the channeling of capital for achieving industrialization. Through ordinances and informal means, embedded in institutional arrangements, politicians and state bureaucrats adopted and simultaneously applied a triangular policy: giving institutional preference to three specific banks; imposing discrimination against the rest; and prompting mergers in the field. The regulatory authorities also allowed the three largest banks to become ‘universal’ (similar to Germany), what made the implementation of the
Emergent Platform Stage of Japanese Civil Society after the Fukushima Accident: The End of “Winter of Social Movements” in Japan?

After the severe accident in Fukushima Daiichi nuclear power plant, major campaign issues in anti-nuclear power have become variable. Before the accident, these issues were related to the anti-nuclear power plant construction in particular regions and anti-atomic weapon for the risk of causing radioactive contamination. However, this crisis broadened the range of these issues and changed the risk. Not only living environments in Fukushima were destroyed by the tsunami, but also the environments in other regions were influenced by the risk of the unseen health problem which may be caused by radioactive contamination. How did Japanese civil society organizations respond to the arising issues? What are the differences and commonalities of the organizations working through each issue?

To investigate the questions mentioned above, we conducted interviews with leaders of civil organizations on related issues in Tokyo, Osaka, and Fukushima, and a questionnaire survey hundreds of the organizations which appeared in newspaper after March 11.

From these researches we find out that the wide range of issues in nuclear power which was caused by the crisis gave way to the emergence of, not only the anti-nuclear power organizations which passed through the “winter of the social movements” before the Fukushima accident, but also new comer organizations which keep sometimes ambiguous or neutral stance on nuclear power. But, for example, a new comer movement proposed a law request for the victims, which was finally got through, to the local government. In other words, a newcomer organizations can have the means of accessing Japanese society. So, these organizations can provide the alternative means to fight against the government for Japanese civil society organizations of the issues in nuclear power. These research findings must make important resources to predict the future of the civil society after the great earthquake.

The Influence of World War II-Experiences on Today's Older Workers

Older workers are at the center of many current policies. These workers' activity is essential for maintaining a sufficiently large and qualified workforce, and for ensuring a sound financial basis of pension schemes. Therefore, policymakers encourage older people to work. However, policies to this aim meet some challenges because older people are not only influences by current development. Instead, they are also subject to life-course influences, meaning the on-going effects of past experiences. This presentation explores the life-course effects of World War II (WWII)-experiences on older workers. These experiences are, e.g., a soldier or a prisoner of war during WWII. The life-course effects of WWII-experiences can function through three main mechanisms. First, the career interruption created by WWII may have a scarring effect similar to the one of unemployment spells, and thus influence the further career progression. Second, generational membership influenced how individuals experienced WWII, and it also influenced which historical developments of the labor market people participated in. Third, WWII-experiences can influence health status, personality and world view, which in turn, influence the decision on when to retire. This presentation answers two questions: Do WWII-experiences affect workforce participation in old age? Does the effect depend on the timing of these experiences within the life-course?

I conduct a sequence analysis with data from the “Survey of Health, Ageing, and Retirement in Europe” and the “English Longitudinal Study of Ageing”. The analysis determines life-course differences according to, e.g., gender, and generational membership. Moreover, the analysis explores how labor market structures and retirement policies modify life-course effects by comparing countries: Germany, Finland, Poland, Sweden, and the United Kingdom. Findings help to refine theories on old age, life-courses, and the labour market. Moreover, they help policymakers in countries that recently participated in a war to design more effective policies for older workers.

Local Food Movement and Sustainable Community Building in Seattle

A growing number of consumers are demanding alternatives to the globalized, industrialized food system that fosters and relies upon social relations embed- ded in a particular place. The food localization movement is an unmistakable feature of the urban corridors of the U.S., where direct farmer-to-consumer relations are becoming increasingly common. For instance, there has been a 4.6-fold increase in the number of farmers markets across the U.S. between 1994 and 2013. In 2007, more than 12,500 U.S. farms reported marketing products using the Community Support Agriculture (CSA) model.

This article examines the development and current state of the local food movement in the Seattle metropolitan area of Washington State. We are particularly interested in the roles that different actors play, and how these actors formed connections with one another as the localization movement developed across this region. We also examine the positive effects that emerged from food system efforts, the challenges that were overcome and those which were not, and the emerging challenges and needs. We pay close attention to how low-income residents and ethnic minorities participated in and benefited from local food system development efforts. Data are derived from interviews with local farmers, retailers, non-governmental organizations (NGOs), and government officials conducted between 2011 and 2012. Government statistics and documents, and other archival materials were also collected and analyzed.

Overall, our preliminary findings suggest that a local food policy initiative in Seattle helped not only promote local food consumption and support local farmers, but also provided opportunities to connect various actors in the food system. What is particularly noteworthy is that local food networks connected actors belonging to traditionally different sectors, and with a regulatory schema for the sale of local foods, the localization movement became in many ways institutionalized allowing for accelerated movement toward urban sustainability.

Movements and Counter-Movements in Korean Environmental Politics of Post-Fukushima

This paper intends to explain how the Korean social movements engage in the environmental politics after Fukushima disaster by focusing on the competition between two master frames, eco-justice versus green growth. We believe that Korean social movements have more actively developed zeal of nuke-free society through engaging in various nuclear issues after the disaster. Simultaneously, counter-movements based on green growth frame have more actively supported nuclear plants as an alternative to peak oil or climate change. Each movement tries to seize the so-called master frame, ‘eco-justice’ or ‘green growth’ respectively. As the former is strengthening its relationship with global and local NGOs, so the latter is focusing on the national and local governments, business and media groups. Divergent movements in Korea are converging again after the Fukushima incident with the flag of global justice frame with expanding their activism into transnational arena. Simultaneously counter-movements are also developing a strong solidarity with the master frame of growth. The Korean environmental movements engaging in such contentious politics pay more attention to regional collaboration in East Asia to cope with unexpected high risks at various levels.

Titanic and Mcsex: Accomplishing Masculinities Among Chinese Men Who Buy Sex

It is argued that a profound transformation of personal lives has taken place in late modern Western societies. In particular traditional ‘procreative’ and modern ‘companionate’ models of sexuality have been increasingly supplemented by ‘recreational’ sexual ethics. Hong Kong follows a similar but somewhat different path due to its Confucian Chinese culture, British colonial history (1842-1997) and the rapid advance of globalization. Departing from traditional masculine roles, Hong Kong men are struggling among different discourses of heterosexual male sexuality and are increasingly preoccupied with the construction of a new self.

It is under this background that I would like to explore the newly emerged scripts for Chinese masculinities. Based on 24 in-depth interviews and 2 focus group discussions conducted since 2012 of Hong Kong heterosexual men who buy sex, this paper examines these men’s involvement with commercial sex in relation to their male identity. Following Roefi (2007), I will argue that these men...
are a desiring subject with 'sexual, material, and affective self-interest'. They have a wide range of aspirations, needs and longings for love, sex and relationship. Some are proud of paying for rather impersonal sex with as many women as they wish (McDonaldization of sex, or MSex) while others passionately seek intense emotional intimacy with female sex workers and refer themselves as a member of a ‘sunkern boat’ or Titanic, the local parlance for male clients who fall in love with sex workers. It is through these different engagements with female sex workers that we can understand the emerging Chinese masculinities in Hong Kong.

Through a sociological analysis of men’s commercial sexual experiences in Hong Kong, this research joins the current international debate to rethink masculinity in relation to the changing gender order between the sexes under the new urban sexual culture of post-industrial capitalism.

KONIECZNY, PIOTR* (Hanyang University, piokon@post.pl)

This paper contributes to the discussion on Internet mobilization and on international social movements’ ability to influence national policy, by analyzing the motivations and the participation levels of Wikipedia volunteer editors (Wikipedians). The case of the “first Internet strike” on 18th January 2012 against the SOPA legislation proposed in the USA. Wikipedians from all around the world took part in the vote concerning whether Wikipedia should undertake a protest action aimed at influencing American policymakers. Wikipedians are shown to share values of the international free culture movement, through experienced Wikipedians were also likely to be conflicted about whether taking part in a protest action is violating the site’s principle of encyclopedic neutrality. Wikipedia’s participation in this protest action allowed internationally-based netizens to have a visible impact on the US national legislation. As such, Wikipedia can be seen as an international social movement organization, whose participation (24 hour site’s blackout) was a major factor that led to a creation of an international political opportunity structure (worldwide awareness of and protests against a proposed American legislation) enabling a national political opportunity structure (American citizens who otherwise would not be aware of the issue became so and became politically active)

Social Stratification of Changing Family Life Courses – Results from Sequence Analyses for Seven European Countries

A major shift of life course patterns occurred in Europe throughout the second half of the 20th century. The post-war period of economic growth and mass prosperity fostered highly standardized life courses, characterized by continuous employment patterns (among men), nuclear family patterns with early and stable marriages, accompanied by medium levels of fertility. Research has proven, that living arrangements have pluralized and become more heterogeneous since the 1970s, while life courses destandardized. Value change, individualization and increasing economic insecurity are assumed to have stimulated these changes. We add to the discussion of the causes of destandardization by investigating which social strata are driving the process. We examine differences in destandardization of family formation between higher and lower educated strata in seven European countries with distinct socio-political systems and economic development. We use representative data from the Generations and Gender Surveys (GGS) for Norway, France, Italy, Russia, Estonia, Hungary and from the National Educational Panel Survey (NEPS) for Germany (n = 70228 respondents). We compare cohort-specific patterns of family formation between the respondents’ 15th and 35th birthday using sequence analysis, which allows examining complex life course patterns.

The empirical results show for all countries that a) traditional’ sequences of family formation are diminishing and b) life courses of the lower educated have become more destandardized than those of the higher educated strata. This is due to the fact that a new standard of family formation emerges among the higher educated, while the lower educated follow a variety of different paths. Specific life course pattern contribute to the social stratification of changing family life courses. Overall, our results suggest that destandardization is a less extended fostered by value changes, but much more by social deprivation and failure to establish stable and socially accepted family trajectories among lower social strata.

KONNO, MINAKO* (Tokyo Woman's Christian University, konno@lab.twcu.ac.jp)

The Collective As an Ideational Entity

As actors in a social world, we are well aware of the existence of collectives. Families, communities, organizations, social and political movements, business- es, states and so on can be considered collectives. We know that various social entities in our social world are not mere aggregates of individuals; they are more than the sum of their parts and transcend the individuals who form them. These entities act like other individual actors, welcome or reject us, ask us to act for them, and give meaning and a sense of direction to our lives. In this regard, the existence of a collective moment when we take a step outside the everyday world. Viewed from the outside, collectives seem to be mere aggregations, or relationships among individuals, the simple sum of their parts. Unlike its individual members, a collective itself cannot have a material body, a thinking brain, or a will or color. If collectives exist, they cannot exist in the same sense that an individual body does.

How can we reconcile these two perspectives? This paper argues that such a reconciliation is possible by revisiting the foundational ideas of our social world, which is essentially a field of meanings. In this field, collectives exist as “ideational entities” in the words of Japanese sociologist Seijama Kazuo. They do not exist in the same way as a material entity exists; instead, they exist as elements in a particular field of meanings. To the extent that this field is intersubjective, the collective acquires a unique ontological status for those sharing it. Thus, collectives are ideational but, nonetheless, real.

KONNO, MINAKO* (Tokyo Woman's Christian University, konno@lab.twcu.ac.jp)

Toward a Sociology of “Sexuate” Beings

Although biological factors underlie human sexual behavior and interaction, sexuality is a distinctly sociological phenomenon, as it is part of the social world that is endowed with and constituted through meaning. In this regard, sexuality does not differ from other aspects of social experience. However, its close connection to the biological body presents an especially interesting challenge for sociological theorizing.

The meaning of sexuality has been explored widely in the social sciences and humanities. One notable theoretical strand in these inquiries is gender theory. Gender theorists share a sociological perspective in that they view sexuality as part of the making of meaning that we constantly create. Another important aspect of the sociology of sexuality is the theory of socialization. Socialization is defined as the process in which individuals learn the patterns of behavior expected of them. Despite these different approaches, the theories of sexuality and socialization are supposed to be rationalized, these theorists have identified multiple ways in which everyday interactions occurring within them are sexualized.

Yet, the body itself is curiously absent from these and other theoretical approaches. Although the only way to know our bodies is through some meaning structure, this does not mean that the body cannot exist unless meanings are attached to it. The body exerts a powerful influence on social interaction, and sociological theory must account for it.

As social theorist Ducrile Cornell has argued, we are “sexuate” beings with multi-level and multilayered status. Our sexuality status creates the meanings and the materials with which we construct our social world, which is shaped through this process. A more adequate theory of sexuality must be based on an understanding of how the real and fictitious possibilities of attraction and repulsion among human organisms are acknowledged, used, and acted upon, on the one hand, or拒绝, on the other, in various social contexts. Building on Cornell’s concept, this study aimed to develop a conceptual framework for a more complete sociological understanding of human sexuality.

Diversity in Leisure and Leisure Research for Social Justice in Japan: Seeking International Conversations

Although Japanese leisure research literature has grown over the past four decades, it has not been well recognized at the global level largely because of the language barrier. Given the recent consideration that our sexuality status creates the meanings and the materials with which we construct our social world, which is shaped through this process, the language barrier may be closely intertwined with each other particularly in non-Western contexts (Fox & Klaber, 2006; Iwaski, Nishino, Onda, & Bowling, 2007), the acknowledgement of the existing Japanese leisure literature appears necessary to initiate constructive conversations on leisure and leisure research in Japan among international researchers. Therefore, a critical review of literature on leisure research in Japan written by Japanese researchers in Japanese language was conducted. Four major challenges were subsequently identified: leisure research as historical description, the weak linkage between empirical and theoretical research, the persistent influence of a work-leisure binary perspective, and the ambition of the relationship of leisure research to contemporary social issues. To tackle these challenges, I propose that diversity and social justice perspectives (Parry, Johnson, & Stewart, 2013) can facilitate researchers’ conceptualizing leisure as active and multi-faced phenomena reflecting social diversity, enhancing the linkage between empirical and theoretical aspects of research, increasing self-reflexivity, and proactively addressing social inequalities and social discourses. Rather than simply

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
importing Western perspectives, this paper argues for scholarly analysis cognizant of Japanese history, culture, and contemporary social issues, particularly family issues. I argue that a culturally-adapted communitarian model of diversity perspective on contemporary Japanese family settings will open space for a just research of diverse family issues, including the rapid rise of one-/two-person households and the so-called “invisible family” that do not necessarily fit the conventional idea of Japanese nuclear family. This study examines specifically gender and age issues in the contexts of such postmodern family configurations. Given the effects of globalizations on all nations, further international conversations are necessary to advance our knowledge on the subject.

Conservative Movements and Political Threat Structure: Focusing on History Issues Related Groups in Post-Cold War Japan

Since the 1990s, a growing set of conservative movements has become conspicuous in Japan. Major movements that have brought media’s attention and political and diplomatic struggles have emerged starting from history-revising movements led by the Atarashii Rekishi Kyokasho o Tsukurukai (New History Issue Creation Association) at the same time been called the era of the emergence of Japanese civil society. My study has brought primarily by the service sector and trade, which began to develop explosively now. Mentioned qualities became seen as a result of staying in higher educational institution. Speciality, for which there was teaching not important for the employer, a possession of a higher education diploma is essential as a certificate of appropriate training. Seller of clothes, for example, should not have a diploma of trade manager, he may have engineer or teacher degree, but availability of a diploma is mandatory.

A second kind demand has led to growth of correspondence departments. There are lower requirements to students at those departments; learning there requires less time and efforts. Thus, it is easier to get a diploma. So enrolment in those departments became set equal to enrolment in full-time departments and surpassed it. Expansion of higher education turned out mainly expansion of the correspondence education.

KONSTINTINOVSKY, DAVID* (Russian Academy of Sciences, dav.konstant@gmail.com)

Expansion Of Higher Education: Demand, Supply and Differentiation Of Universities

Russian experience of expansion of higher education offers to understand the specific lessons. Demand and supply were drivers of changes.

Part of the national economy has formed a demand for knowledge, qualifications. On the other hand, the mass demand has been formed by employers on a more or less socialized young people whose core competency is the relative ability to learn new subjects and skills of communication. This demand has brought primarily by the service sector and trade, which began to develop explosively now. Mentioned qualities became seen as a result of staying in higher educational institution. Speciality, for which there was teaching not important for the employer, a possession of a higher education diploma is essential as a certificate of appropriate training. Seller of clothes, for example, should not have a diploma of trade manager, he may have engineer or teacher degree, but availability of a diploma is mandatory.

Demand (both kinds) of the labor market was transmitted into families. The educational system has responded by supply adequate to the families’ demand. Now the increment of human capital is developed in some universities; implementation of the signal function, the production of certificates about staying in educational institution take place in other universities.

A second kind demand has led to growth of correspondence departments. There are lower requirements to students at those departments; learning there requires less time and efforts. Thus, it is easier to get a diploma. So enrolment in those departments became set equal to enrolment in full-time departments and surpassed it. Expansion of higher education turned out mainly expansion of the correspondence education.

Governance Matters?: Social Concertation and Macro-Economic Outcomes

The contemporary labor market and welfare state has undergone dramatic changes since the 1980s. In most countries, governments have been facing the declining economic growth, higher level of unemployment, rising inequality, and tighter fiscal constraints. Just as the context of labor market and welfare state has changed, the patterns of governance coping with the problems have also changed significantly.

Previous literature shows that the macro-economic outcomes such as unemployment and inequality have something to do with the different patterns of governance. This study seeks to examine the relationship between governance patterns and macro-economic outcomes by analyzing the 30 year trajectories of labor market and welfare reforms and policy-making systems in 20 advanced countries. We do so by proceeding as follows:

First, using the optimal matching technique, we identify different trajectories of labor market and welfare reforms and policy-making systems in the three decades from 1980 to 2009. Second, we group the countries based on the similarities in reform trajectories and policy-making systems changes. Third, we compare the levels of unemployment rate and inequality across the groups. The results show that the countries with more market economy have developed new social welfare and active labor market programs relatively early and have relied on more consensus-based policy-making systems, which require the cooperation between government and organized interests for coordinating macro-economic objectives. The results also note that the countries following higher expenditure on new social risks andconcertative policy-making trajectory perform better in terms of reducing unemployment and inequality. We discuss the implications of these findings for the development of new governance model in Korea.
Immigrant Occupational Attainment in Japan and Its Determinants; Is it a “Structured Settlement”?

Japan as a “post-transitional society” has recently shifted into a “new” country of immigration as southern European countries. However, there are few studies on the integration of immigrants in the Japanese labor market. The present study aims to reveal immigrant occupational attainment in Japan and its determinants by comparing their occupational distributions to those of the Japanese counterparts with the Japanese census micro-data conducted in 2010. As a result, the following findings are revealed; to the first question, we answered that socioeconomic compositional differences cannot explain the differences in the occupational distribution between immigrants and the Japanese, meaning that a migrant might have a different probability of occupational attainment from the Japanese who has an equivalent feature. On the second question, it is revealed that a return to immigrant educational attainments is higher than that of the Japanese, when a migrant is a highly-skilled or a long-term resident such as Vietnamese Refugees or Japan residents. In addition, there is a gender gap in a return of educational attainment, which tends to be smaller for females than for males. To the third question, we can argue that the extension of residency in Japan mostly has a positive effect for migrants except highly-skilled ones. To the fourth question, the outcome of occupational attainments shows mosaic situation, implying that the same characteristic plays a different role in their occupational attainment depending on their mode of incorporation. Taken together, it is clarified that selection on human capital, duration of residency and gender difference are important for immigrant occupational attainment. Actually, the relations between those determinants are similar to findings in previous studies in western developed countries. However, it is also revealed that Japan has experienced multiple modes of incorporations of immigrants simultaneously, or a “structured settlement” as a feature of “new” country of immigration.

Refugee Returns - Experiences of Inclusion Here and There

My doctoral dissertation focuses on the personal experiences of research participants, legally defined as refugees, in relation to their reentries to the region of their origin, from Finland. Reentry, a fluid concept, adopted from intercultural communication research, illuminates several types of return that appear along a spectrum from normative notions of ‘permanence’ to relatively transnational outcomes. Specific examples in my interview data include forced return, voluntary return, onward migration, patterned visits, following return in Chile, Iraq, or Vietnam. Applying Rosenthal’s biographic-narrative interview as the interview method of study, the participants narrate their life story, which is then analyzed, in terms of phenomena linked to return, especially concerning the biographers’ social networks. My aim in this presentation is to illuminate how the participants narrate their inclusion and exclusion in different settings in Finland and as a returnee, in the region of their origin. In addition, the interviews illuminate other key settings, events, relationships and issues that play a critical role in their lives. Experiences of being different are frequent in the participants’ narratives – both here and there – and they frequently reflect on this, often showing remarkable social acuity and awareness of social and cultural dynamics, in terms of aspiration, achievement, abandonment – or being contextually-abandoned, with the result of either achieving the aspired position or experiences of abandonment. In addition, normative framing and unquestioned assumptions are frequently encountered, presenting an ongoing and central challenge, for both myself and those I have invited to participate in this research.

Return of Refugees’ Life Stories

My doctoral study looks at refugee returns applying Rosenthal’s biographic-narrative interview as the interview method of study. Reentry, a fluid concept, adopted from intercultural communication research denoting the immediate experiences of people returning, the applicability of the method is being elaborated on in reference to different types of interview participants, returning from Finland to the region of origin, e.g. the case of three voluntary returns to Iraqi Kurdistan (2013). The three interview participants held a legal status of a refugee in Finland, stayed there for at least 2 years, and returned under the auspices of an IOM programme of assisted voluntary returns in the beginning of 2013. In order to examine the return processes as a whole, with special emphasis on social relations and networks, and the impact of the time spent in Finland in the participants’ lives, the biographic-narrative interview was chosen as the most applicable method to elucidate the genesis of return, key turning points characterizing the participants’ lives, the various salient social and cultural dynamics concerning the return decision, and what the future looks like from the participants’ present perspective. A matter of looking at “the experiences preceding, following and in connection to the phenomenon in question” (Rosenthal, 2004: 53). For the analysis, the procedure of biographical case reconstructions is followed step-by-step: biographical data, text and thematic field analysis, reconstruction of the life history, microanalysis of certain segments, comparison of life history and life story, and the development of the narrative and comparison of cases. Challenges are apparent regarding other types of biographical data. That said, both the levels of narrated and experienced life history fall within the scope of my study.

The Turkish Dilemma: How Should Islam Relate To Republican Era Collective Memory?

This paper scrutinizes the ways in which the secular Republican collective memory clashes with Islamist collective memory in Turkey drawing upon insights from political sociology and political history. Among others, the ascendance of political Islam in Turkey for the past decade also illustrated clearances in society regarding the basic tenets of collective memory. Relentless, the supporters of secular Republicanism retained the ethos that made “Turkish people a singular nation with ancient roots in Central Asia as well as Mesopotamia and racially not different from the West Europeans” (Inan 1968). In a denigration-coupled ethos he rejects any connection between Turks and Arabs and recently went as far as appropriating to the Prophet Mohammad Turkic origins thanks to his families “mythical” connection to the “ancient Turkic” population of Sumerians. While not fully ridiculing
this ethos, the supporters of political Islam in response vied to emphasize Islam and its Turkish martyrs as a predominant character of collective memory. In other words, Turk’s gallantry, statecraft superior to its neighbors, and finally tolerance to the weak became the underlying theme of such collective memory. It is puzzling to see that while both ideologies underline superiority, history, and continuation in Turkish historiography, but they diverge on how to fit in Islam in this composition. In the end, we face a very pious and conservative nation who call themselves defensively as the “real” Muslims vis-à-vis each other, but not certain about how to fit in the heritage of Islam in the making of their collective memory as a nation. This paper investigates the roots and effects of this dilemma on the relation between politics and religion in Turkey.

Patterns of Substance Use in Entertainment Venues in Latvia:

A number of surveys in Europe, including Latvia, show that the level of drug use among young people in entertainment venues is significantly higher than among youth in general (according to EMCDDA). Monitoring surveys carried out in Latvia in 2000, 2008 and 2012 support this conclusion. Over the last 12 years, changes in the modern illicit drug use were identified: young people try these substances at very young age, the drugs distribution market is very saturated and offers wide variety of substances, including legal highs. At the moment the poly-use model is dominating, i.e., using several substances simultaneously (alcohol, legal and illegal drugs). Our analysis of the spread of drug use and affecting factors is based on quantitative data (n=400 in 2000, n=600 in 2008 and n=800 in 2012) and semi-structured interviews with field experts and owners of entertainment venues.

The results show that young people admit the fact that drugs became an integral part of modern youth entertainment and club subculture. Drug use is made to suit particular entertainment purposes and driven by desires of achieving known effect. In order to minimise risks young people avoid injecting drugs and prefer not to use substances with distinct and strong smell (for instance, marihuana); at the same time drugs in pills or plasters are in favour. We can speak as about the prevalence of substances with stimulant effect that offer effect appreciated by some users: catching unexperienced energy, feelings of parallel realities etc. Another alarming trend is poly-use that increases the risk of overdose and intoxication. Poly-use combinations can include alcohol, legal medications, and various illegal drugs.

A Challenge for an Expert: The Management of Acute Psychosocial Support

According to Finland’s Health Care Act, municipalities are responsible for organizing the acute psychosocial support in crisis and special situations. Typical of these situations is the need for immediate and simultaneous help, where obtaining the necessary resources is challenging. Acute psychosocial support includes psychological, social and mental help to the victims, their families and communities. All these parties should be considered in managing the acute psychosocial support. Strategic management is required when psychosocial support is organized for different groups, so that the general view is not forgotten and no one is left without the offered help.

The purpose of this study was to find out what helps the expert to quickly become a crisis and special situation manager and what helps the employee to change back to the expert role. In addition, the study sought answers to crisis and special situation manager’s decision making and what kind of abilities crisis management requires? Both quantitative and qualitative methods were used including for data analysis. The data consisted of initial mapping and a theme interview made at Vantaa City social and crisis emergency department.

This study showed that the feel of being in control of a situation as well as being in control of oneself are factors supporting the management of acute psychosocial support. Both the employee and the team should have special skills to control the situation, as well as the feel of being in control personally. Crisis and special situation management consists of management support, structures, capacities and the support of various parties. These factors can be influenced by education and training. Education and training should be planned carefully, for example, by skill mapping to find weaknesses in skills so that training would be targeted correctly.

The question of political lobbyism by religious (collective) actors is not an issue for interest group research only. Their public and political presence also raises questions concerning the relationship between religion and the state within modern, secularized societies. All modern democratic states know (traditional) regimes of religious governance that influence the scope of action of religious organizations and may open up or limit their opportunities to increase their political participation. In recent years the (scientific) concern regarding national regimes of religious governance has even increased since there have been processes of secularization, privatization of religious practices and religious diversification that have challenged historically rooted arrangements regarding the relations between religion and state.

This research project focuses on the political presence and participation of religious organizations in two countries with different traditions regarding both the role of organized interests in general and of religious interest groups in particular: Germany and the USA. The question is how religious organizations try to influence political processes in the two countries, thus to frame the political agenda, to be present in public and to establish relations to and networks with relevant (political) actors.

The strategies and means religious communities apply are analyzed via a qualitative analysis of documents published by religious organizations like press releases, position papers and their websites. Via a media analysis not only positions of religious organizations concerning certain political issues are investigated but also the results of their efforts to be present in the media and place their concerns publicly. The political participation of religious organizations is investigated via parliamentary lobby lists, the numbers of their members being elected to parliaments and their presence in parliamentary committees and governmental advisory boards which they are invited to as experts on specific issues and as relevant societal groups, respectively.

A World-Systems Methodology for the Study of Inequality

Drawing on historical data on inequality within and between regions of the world-economy, we identify that inequality within regions in both the core and the periphery of the world-economy tended to rise over a long period extending from the sixteenth to sometime in the nineteenth century. During this same period, inequality between regions of the world-economy remained considerably less pronounced and stable. Beginning during the nineteenth century, however, the trends shifted in significant ways: inequality within many core areas began to decline (as opposed to many peripheral and semiperipheral areas where inequality remained very high), and inequality between these areas underwent a rapid increase. We link these transformations to social forces that acted to expand various rights (e.g., those of citizens and of workers as wage laborers) under the aegis of the modern nation-state, with uneven and linked effects in core, semiperipheral and peripheral areas of the world-economy.

Our data allow us to provide a stylized depiction of within- and between-country income distributions to show a multiple and overlapping matrix of distributions--a global income distribution that is both systemic and historical—that has shaped the geography of winners and losers both over the long term and in more recent decades. This depiction suggests that (i) Schumpeterian cycles of innovation and creative destruction in the global production and goods and services have been key to shifting patterns of within- and between-country inequality, as these innovations have included (ii) the deployment of shifting and unevenly successful institutional strategies aiming to facilitate mobility and change for specific regions and/or nations within the world-economy. This exercise allows us to raise new questions for further research, but also to propose some empirical and methodological innovations to better advance future social science inquiry on inequality.

KORZENIEWICZ, PATRICIO* (University of Maryland, College Park, korzen@umd.edu)

Global Migration and the Contentious Politics of Citizenship

Our understanding of migration changes fundamentally once the relevant unit of analysis is shifted from the nation-state to the world as a whole. Elsewhere, we have argued that ascriptive criteria centered on national identity and citizenship, and the relevant state policies emerging thereof, have served as a fundamental basis of stratification and inequality in the world since the nineteenth century. Moreover, we have indicated that the growth of between-country inequality through most of the last two centuries became a driving force for the migration of labor and capital: growing income disparities between nations over time generated strong incentives (e.g., drastically lower wages in poor countries) for both the migration of workers to higher-wage markets and the "outsourcing" of skilled and unskilled jobs to peripheral countries. Both trends exercised a "market-by-pass" that over the last two decades have been overcoming the twentieth century institutional constraints on labor flows that characterized the development of the world-economy. In the proposed paper, we further specify and expand our arguments by developing a new model that identifies the main forces driving migration across the world-economy. We test this model by drawing on an original cross-national dataset on population flows: this exercise allows us to more precisely identify country- and region-specific patterns of outgoing and incoming migration, and to assess the relative weight of specific variables (e.g., wage differentials, income inequality, civil war, famine, geopolitical location and migration policy regimes) in explaining these patterns. Finally, we consider the social and political tensions that have accompanied recent changes in these migration patterns, discuss how these tensions are shaping the politics of citizenship across the world, and draw some theoretical implications for rethinking how Karl Polanyi’s concept of the “double movement” might be used to understand contemporary patterns of migration and its regulation.

The Genesis of Educational Inequality in Post-Soviet Russia: The State, School, Interest Groups

In this paper we focus on growing social inequality in contemporary Russia which is being fostered and reproduced by the current setting of its educational system. Particularly, we look at the impact and effects of the education policy both on the federal and the local level.

The results of the study are based on the expert survey conducted in 2013 in three regions (Moscow, the Moscow Region, the Republic of Karelia.) The sample includes officials of the federal and regional level directly engaged in the education system reforms of 1990- early 2000s, as well as school principals. We also conducted a content analysis of federal and region programs and legislation in the field of education in the period under review.

We discuss the restructuring of the education system on the basis of neo-liberal approach, which has become a common trend in globalization era, but we argue that its impact in Russia has had its own particularities with respect to stratification of schools (i.e. quality, resources and context) due to its institutional preconditions. To do this we reconstruct the meanings inserted by various interest groups in the process of restructuring of the education system (i.e. households, school principals, education policy makers, etc.) and set it against the formal institutional design of the reform. We show that these reforms (extension types of schools, the provision of school choice, the legalization of paid services, and rejection of affirmative action) have provided exclusive opportunities for elite groups and extremely limited opportunities for the more deprived population.

Parallel to that we also discuss how the results of pioneering sociological studies in Russia and particularly their dissemination among the expert public have pushed the issue of inequality in access to quality education to become a major point in the national policy agenda in Russia.

KOSIARA-PEDERSEN, KARINA* (University of Copenhagen, kp@ifs.ku.dk)

Multifaceted Party Membership

Party membership is in general in decline; however, both the trends and the membership figures vary among parties, and the meaning of party membership varies among members. Both the degree, type and quality of party member participation vary among party members. Hence, in order to understand how the concept of party membership is filled out by party members, it is necessary to take into account what formal members are actually (not) doing within or for their parties. On the basis of a party member survey in nine Danish parties across the political spectrum, first, party members are grouped into types of party members. Second, the characteristics of these party member types are shown. Third, the distribution of party member types across parties is explained on the basis of party level variables, such as level of intra-party democracy, party culture and campaigning strategy. Finally, the party member types are discussed and compared to other, newer forms of party ‘supportership’, and the democratic implications of party membership figures are put into perspective.

KOSKELA, KAISU* (University of Helsinki, kaisu.koskela@helsinki.fi)

Experiences from within the ‘Migrant Hierarchy’: Imposed Categorizations As Definers of Social Identity for Highly-Skilled Migrants in Finland

Studies of ethnic hierarchies in Finland show varying levels of prejudice toward migrants based on their nationality and ethnicity. Levels of acceptance are also tied to the role of the immigrants in the economy and labor market (i.e. class standards). In the intersection of these value judgements an overall ‘migrant hierarchy’ is formed. At the bottom of this hierarchy are ‘unwanted’ humanitarian migrants from less familiar cultures, while at the top end are the ‘migrant elite’: ‘wanted’, highly-skilled, and preferably Western, migrants.

I study this hierarchy as a form of categorization that creates a social structure. This structure has an effect on the construction of migrants’ self-defined social group identities; although these categorisations stem from the Finnish society and its views on immigrants, I believe that they are recognised and to certain extent internalised also by the migrants. Drawing from ethnographic and interview data emphasising lived experience and everyday life of skilled migrants in Finland, I will discuss how the imposed categories become strategies that can be used also by the migrants themselves in identity negotiations and to represent value judgments. As such they also point to possible problems with integration: in (re) drawing their group boundaries within this new social structure, skilled migrants in Finland are defining their identities not only as who they are, but also as who they are not: not ‘unwanted’ humanitarian migrants, but also not Finns.

Can Actor Relational Approach be Combined with Institutional Ethnography – What Could be the Benefits When Studying Information and Communication Technology Use in Child Welfare?

The need to make use of an interdisciplinary approach is vital when studying the development and use of new technologies in welfare services. There is research that indicates that information and communication technology (ICT) affect

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
work practices in welfare services in many ways. So far the effects have only in a limited way been in the focus for critical and constructive interdisciplinary research. In welfare services there is a need to communicate the essence of work especially among professionals planning, purchasing and using ICT.

This presentation is based on an empirical research plan. The research concentrates in studying the development and use of ICT in child welfare units in Finland. The aim of the research is to find out how functional the client data systems are that are used in Finnish municipalities. The question of functionality focuses on how appropriate these systems are in relation to the basic task in child welfare. The research plan has its origin in a small case study in the city of Helsinki. The results of this action research indicate that the use of client data systems may have negative effects on the basic task in child welfare in case there are not enough human resources using the systems.

The theoretical frame of the research comes from the actor-network-theory (ANT) and its critic. In order to communicate the findings within disciplines, the researcher plans to make use of Actor Relational Approach (ARA). In this sense the presentation investigates further whether Actor Relational Approach can be combined with Institutional Ethnography in a fruitful way in this research.

KOSMINSKY, ETHEL* (Queens College/CUNY, ethelkos@hotmail.com)

Mayume’s Life History: Between Japan and Brazil

Although Mayume is from mixing ancestry, her mother is non-Japanese Brazilian and her father is Japanese Brazilian, her Japanese side is similar to a girl from a small town in Japan. At the time of the interview she was eighteen years old. When she was at four years of age, and her brother one year, her mother decided to join her father who was already working in Japan. She attended kindergarten, although she didn’t understand what they were talking. However, she adjusted very well to the Japanese school and life style. But, six years ago her mother decided to return to Bastos, Brazil, to see her parents. That’s when Mayume faced a difficult adjustment: “I wanted to come here to see the town. I didn’t want to remain. I wanted to go back, I wanted until today... because there is enjoyable at least for myself.” She compares the Japanese town where she lived to Bastos: “Ja-pan is a divined society, it looks like Sao Paulo, and I thought that here it would be the same. When I arrived here, I said: that’s too much land!” Mayume faced a lot of problems at the Brazilian school. She compares the organization and the cleanliness of the Japanese public school, the respect from her classmates toward their teacher, and among themselves to the Brazilian public school and its poor building, lack of respect toward the teacher, lack of discipline. Mayume’s dream is to return to Japan and attend college there.

Mayume and other children face ruptures in their socialization process due to their parents’ labor migration. However, children as social agents can struggle to change their lives and make the decisions that sound better to them.

KOSNY, MAREK* (Wroclaw University of Economics, marek.kosny@ue.wroc.pl)

Pension System Based on Sharecropping and Economic Security of Families

Decisions about giving birth and upbringing of children imply consent to finance the public good. These decisions are generally individually adverse from the point of view of both short- and long-term economic security of families. The way to change this appraisal is to modify the structure of the pension system. The idea of the new solution is based on the sharecropping – one of schemes of incentive systems under uncertainty and information asymmetry. The concept underlying this approach assumes that parents and the state, involved in upbringing the children, share both costs and benefits, what results in sharing the risk. The main advantage of the proposed solution is a convergence of interest of the parents and the state.

The practical implementation of such a system would be based on division of pension insurance contributions, paid by a working individual, between the two pillars of the new system, in proportion to the expenditure incurred on his (her) upbringing by the state and the parents in the past. The first part would be spent on financial support and social benefits granted to all present pensioners on the basis of their contributions made in the past, during the professional activity. The second part of the contribution, the so-called second pillar, would be transferred directly to the parents of this person – increasing their pension capital (if they are still working) or in the form of direct payments (if they are already retired). Additional, capital pillar could be established to improve long-term economic security for those without children or provide an extra protection for individuals involved in the first and second pillar.

The empirical part of the analysis will be done for the pension system in Poland, in the context of its planned restructuration.

Risking It? Upper Social Class and School Choice in Finland

The uncertainties and risks families are facing concerning educational choice have both, local and global influences. The neo-liberal market mechanisms promoting educational choice in educational systems move the responsibility of successful choice increasingly on individuals. The individualized responsibility is partly replacing the ‘collective assurance against risk’, and as it increases individual risk, it might lead to social closure and enabling the strengthening of the ‘lines of social divisiveness’. In the context of educational choice this touches upon the discourse around choice and distinction between social classes. Despite the privileged educational trajectories can still be obtained by context-relevant use of economic, social and cultural capital, the changes in the educational provision and vision of access to prestigious institutions produce new arenas for competition. This challenges the privileged position of upper-class children in the competition of the best education available, and makes examining their educational choices relevant.

The aim was to examine the educational discourse of the upper-class parents of children aged 5-12 who were to enter primary school, and investigate how parents and children perceive risks and fears regarding their children’s education intertwine both with the considered risks and their trust in the Finnish education system. The data consist of semi-structured interviews conducted in Finland and France (Vantaa, Espoo, Paris) with parents (n=19) who have experience on educational policies and practices in Finland and abroad, and as contrasting data, interviews with parents with no such international experience (n=78). The interviews were analysed by using qualitative content analyses. Preliminary results show that parents trust and value Finnish education and especially the value-base behind it. Still, their perceptions regarding competition, uncertainties, risk and the definitive nature of educational choices seem to have absorbed some ‘international fears’. This contributes to the construction of the social reality and subtle social distinctions in the Finnish school choice space.

Expressing the Inexpressible. Japanese Artists about the March 2011 Tragedy

The number of “Shichō” a monthly Japanese literary magazine, issued in March 2012, published short diaries written by 52 Japanese artists to commemorate the twenty-first March Earthquake and the Tsunami, which happened the year before. Artists representing various genres of art such as literature, music, photography or visual arts were requested to describe these 52 weeks of their life and the process of artistic creativity after the disaster. In the society, where speaking about one’s inner thoughts and emotions is not culturally approved, to express artistic work seems to be one of the most important, if not the sole, vehicles bringing up the vox populi to a broader attention. It can be said that it is thorough art that the social phenomena are reflected in the public discourse. It is an art that collects individual experiences of the disaster in a diary of collective memory. In this sense becomes also a political tool, as Jacques Ranciere would say, which has the power to express the inexpressible, to render visible what from various reasons could not be revealed.

In my presentation I will analyze the content of the diaries to see what aspects of the events, which took place in the aftermath of the Earthquake and Tsunami disaster, were described by the artists and what was the purpose of casting light on these particular problems. Another issue I would like to raise is the question about whether the image of the tragedy as recreated from the artistic diaries is approved, artistic work seems to be one of the most important, if not the sole, of a ‘collective assurance against risk’, and as it increases individual risk, it might lead to social closure and enabling the strengthening of the ‘lines of social divisiveness’. In the context of educational choice this touches upon the discourse around choice and distinction between social classes. Despite the privileged educational trajectories can still be obtained by context-relevant use of economic, social and cultural capital, the changes in the educational provision and vision of access to prestigious institutions produce new arenas for competition. Living Between Tongues. Elements of Evocative Autoethnography in Tawada Yoko’s Writings

Autoethnography can be described as an approach to research and writing that seeks to describe and systematically analyze (graphy) personal experience (auto) in order to understand cultural experience (ethno) (Ellis, Adams, Bochner 2011). The value of autoethnographic method lies in the possibility, it offers, of having an access to an inner (emotional reactions, feelings and thoughts of a respondent not revealed otherwise) insight into an analyzed problem. Consequently, this methodology recognizes forms of writing research – amongst which also literary works such as biographies etc. – which are consciously value-centered, where the searching subject is visibly present and her/his voice is of equal importance in forming statements about the social reality. If a literature is to be considered an object of sociological interest, an autoethnography, especially its evocative genre, entrusts it with playing a significant part in describing the social world.

Given the above, in my presentation I would like to discuss elements of evocative autoethnography in literary works of the Japanese writer Tawada Yoko to see how the knowledge, which is acquired from literature, can be applied to an analysis of social phenomenon, here: a professional career of a migrant writer, who works and lives between two languages: Japanese and German. Tawada Yoko left Japan at the age of 22 and at that time her knowledge of German was limited to grammatical rules. Ever since, she successfully writes and publishes in both languages, experimenting with the borders of language and public discourse. She is associated with the term “exophony”, which may be defined as a voice from the outside resounding in the world of literary culture in a given country. In my presentation I will focus on the social condition of the writer in exile, while questioning the universality of the notion of artistic genius (Elias 1994).

In my presentation I will focus on the social condition of the writer in exile, while questioning the universality of the notion of artistic genius (Elias 1994).
It has often been argued that a certain loss of experience, even of the ability to have experiences is apparent under the modern condition (Adorno, Benjamin). Yet, at the same time it seems to be true that modernity is quite obsessed with experience (see: Jay 2005). Certainly, there are different understandings of what experience actually means, and it is probably true what Michael Oakshott has to say about this topic: “Experience, of all the words in the philosophic vocabulary, is the most difficult to manage, and it must be the ambition of any writer reckless enough to use the word to escape the ambiguities it contains” (quoted in: Jay 2005: 9).

In this paper this ambiguity of experience, and the acknowledgement of it, that contributes to an often claimed characteristic of modernity: its contingency (Rorty) or its ambivalence (Bauman). In this paper I will argue that the ambiguity of modern experiences has to do with a new kind of world-consciousness that emerges in modernity. I will draw on authors like the recently deceased Marshall Berman, the already mentioned Walter Benjamin, and Theodor W. Adorno, but also more recent authors like Boaventura de Sousa Santos and Peter Wagner. And I will include in my discussion voices from Latin America like Octavio Paz and the philosopher Bolivlar Echeverria. They all shall help to outline a theory of modernity for which the experiences that real human beings are making when confronted with the challenges of modernity.

Civilizational Distinction: Figurative Changes of Contemporary Societies

A common civilizational core binds all contemporary societies. It provides inter-action, trust and solidarity. It is a civilizational unity is a basis for the emergence and existence of multiple modernities with their endless social and cultural divers-ity (S. Eisenstadt, J. Arnason, P. Wagner). The development of the western and eastern societies in the civilization relation should be comparative study based on the figurative Sociology of Norbert Elias. Figuration is an entwinement of rela-tionships people, intended and unintended social and cultural processes. In the center of the figurative process is fluctuating voltage equilibrium, a balance of power, which belong to the structural characteristics of configurational currents. Civilizational distinction show a full range of colorful entwinement intentional and unintentional links, networks , activities, structures, states. Sociogenesis symbols of culture and civilization shows how they precede unplanned actions and relationships between individual and group. However, they require an understanding and designing models or strategies of economy, government and culture, both at the individual and collectiveness levels. In every contemporary society develops a flexible balance of power between individuals and groups, a specific configuration of social inequality, resources, and efforts. Civilizational order as well as at global and local levels is a set of flexible forms of social mobilization, effective institu-tions, technology management, cultural controls and patterns. Figurative modifi-cations, meaning moving modernities of contemporary societies, speak about degree of their civilizational variability while maintaining a fundamental proper-ties in common. Figuration as interdependence of people is primarily mediated by factors like social communication. The main mechanism of interaction within and between national societies (states, communities) are historically formed socio-cul-tural practices and a variety of social communication (transit, exchange, and use of experience, knowledge and information). Civilizational configuration is a variety of modernities, coexisting and interacting actively in the changing political and socio-cultural space.

Socio-Cultural Resources Development of Russian Province (“backs”) in Context of Globalization

The situation of contemporary rural province (“backs”) in most Russian regions shows a doldrum of social, economic and cultural life. The demograph-ic situation has stabilized, yet the population in general and of an economically...
active labor force and in particular is reduced. Employment in the industry falls especially in the small cities and provincial locality. The main issue for the farmers is an access of its products to local market and a large labor costs. Therefore it is developing the traditional type of economy, which is dominated by monocultural agriculture and small-scale construction, transport services, temporary employment and commercial businesses. Modernization potential of the rural “backs” in particular in South region of Russia is inverse. The rural population is aging and decreasing. However, there is a surplus of labor force against the backdrop of falling employment. This dissonance is typical for the Black Earth region. Lack of investment, jobs, degradation of industrial and agricultural spheres pushes people to the development of the service industry and trade, to labor migration to the big cities, and social mobility. It is sufficient to note the high level of social and economic infrastructure: electricity, gas, roads, fiber optic lines, public transport, landscaping. There is a stable mobile communication, satellite TV, Internet access. However, rural inhabitants are experiencing social fatigue. They complain constantly about the lack of funds, the futility of life in rural areas. Many inhabitants are focused on internal migration, employment, education, and career in the middle and big cities. Key resources are upgrading a new economic policy of the local authorities, effective budget and private investments, solidarity of local communities, and of course, the willingness of local people to the medium-and long-term investment in yourself and in the development of their area.

Creating an Image of «Victim» As a Way of Creating Controlled Conflict Situation

For creating controlled conflict situation and for finding (appointing) an “enemy” often an image of “victim” is being created, meeting goals and tasks of its creators.

An image of “victim” may be classified on the follow types: “victim-hero”, “victim-fiction”, “victim-villain”, “victim as powerful”, “victim-tragedy”, “victim-country”, “victim-nation”, “multifunctioning victim” and other.

Constructed “victim” has to meet such characteristics of real victim as innocence and defenselessness. Therefore innocent children, old people, and women are appointed to the role of “victim”. Violence towards them provokes the tension of passions and promotes desired public opinion.

Process of construction an image of “victim” includes the following steps: actualization, privatization, heroization, humanization, institutionalization, historicization (mythologisation), objectivisation, legitimization, sacralization, realization of “victim”s image in the social and political practices.

Generated image of “victim” presuppose execution following functions in the real and potential conflicts:
- identification of people on the base of their attitude to the “victim”;
- creation of enemy image who is guilty attacking “victim”;
- consolidation of people to fight identified “enemy”;
- upbringing of “new heroes”;
- determination of people behavior in critical situation;
- image of “victim” is becoming the elements of culture.

Deliberately thrusting of “victim” problem generates disadvantageous situation for alleged “enemy”. Direct of potential oppressor’s image constructed, with necessity to oppose or annihilate it. The most important “enemy” characteristic is its mortal threat for person, group and society. Next distinguisher of “enemy” is dehumanization.

Special role in the process of both “victim” and “enemy” image construction belongs to mass media and first of all a television.

Generated image of “victim” may be used as motive for intervention of “third party”, for deliver a “retribution blow” on a real or an appointed enemy.

Towards Emancipatory Ecological Cosmopolitan Commonism Via Positive Ecology in Tasmania, Australia

Adopting earth stewardship appears to be the fate of the human species; it is how we adapt to this challenge that will determine our survival and level of thriving. This paper will outline four areas of an approach to the challenge of earth stewardship. The first is to identify the emergence of a capacity for intentional cultural evolution, for which there exists a variety of indicators across the globe. The second is to sketch a theory of negative ecology, based on the process of dominance that has evolved over history, resulting in the failure of successive systems to equitably meet basic human and environmental needs. This has led to ever increasing social and environmental costs, and indicates the need for radical degrowth. The third is to outline a theory of positive ecology to guide progress towards what is tentatively called “emanicipatory ecological cosmopolitan commonism” (EECC), aimed at ending repressive domination. The equitable meeting of needs is given priority, based on “synergistic satisfiers”, with global cooperation the ultimate goal. The fourth area discusses community-based exchange initiatives (CBEs) as bottom-up initiatives towards advancing positive ecology in the here and now. Analysis of the potential of some CBEs currently underway in Tasmania, Australia to progress towards positive ecology and EECC will comprise the final part of this paper.

Women’s Overqualification: Why It Is Necessary to Account for Additional Individual Characteristics

Women’s labor market participation has been rising in the last years, the proportion of female university graduates increases constantly and ever more women are in executive positions. However, there is also evidence that women are more likely to be overqualified then men.

If a person is overqualified, in the sense that an employee’s level of training exceeds the job requirements, parts of the human capital lie idle. This could not only have negative consequences on the individual level, but also be costly on the social level. Current research on overeducation focuses mainly on its magnitude and structure; often the discussions on explanatory factors are limited to only one dimension, such as gender or migration status. But in light of economical, political and cultural globalization that increases societal heterogeneity, it is obvious that the emergence and reproduction of social inequalities cannot be reduced to only one dimension. In the study of social inequalities it is important to consider that people are always part of several social groups at the same time. Therefore, it can be supposed that for instance female immigrants face different risks of being overqualified than male immigrants.

In the presentation I will focus on this research gap. Based on the concept of intersectionality I will discuss the mechanisms of interaction of gender, migration status and 社会背景 in the context of overqualification theoretically. Using data from the German Socio Economic Panel, a nationally representative household panel study, I show the effect of gender on the risk of being overqualified as itself and in interaction with the other individual characteristics. I will respond to the question how gender inequality on overqualification varies with other social categories.

Construction of Knowledge Around Risk and Regulatory Practices Among Pipeline Industries in Australia

This research assesses the gas pipeline industry in Australia in relation to risk, regulatory practices and its comparatively strong safety record. It may be held as an exemplar to examine: how is knowledge of industrial risk in the Australian pipeline industry constructed and performed by regulators? In tackling the question, this research takes discourse analysis combined with a semiotics of materiality Actor-Network Theory approach; giving new emphasis to non-human entities interacting with actors (e.g. regulators, company safety officers, workers and communities) in generating knowledge-power and actions around the regulatory process of governing industrial risks from hazardous industries. The entry point is technical-informed regulators, assumed to have good risk-management knowledge. The research explores three relationships among these entities. First, relationships between regulators and non-human entities: e.g. how regulators develop their knowledge-power and take their actions influenced by a legal concept (as low as reasonably practicable – ALARP); and how regulators interpret their responsibility in the process of hazard identification and assessment? Second, relationships among regulators, companies, workers and non-human entities are assessed: e.g. how do regulators assess the roles and participatory actions of workers and the public in breaking regulatory capture, balancing power, and managing industrial risks? The findings may reveal inconsistencies hidden in processes, leading to a better understanding of how to manage, govern and mitigate risks and improve regulatory practices and effectiveness.

Organization, Identity, and Transnational Citizenship: Mexican Indigenous Migrants in the United States

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Transnational migration challenges the congruency of identity, citizenship, and state territory, because transmigrants identify with their communities in countries of destination as well as origin, and practice citizenship across national borders. The question of transnational identity and citizenship is all the more important when migration involves members of indigenous groups who are ethnically discriminated against politically and economically marginalized in countries of origin and in their adopted countries. How do indigenous migrants negotiate transnational citizenship? Based on the data collected from my ethnographic research in Los Angeles and in Mexico City, I argue that indigenous migrants from Mexico's Southern state of Oaxaca negotiate citizenship through a diverse network of migrant organizations which open wide transnational social spaces to reconstruct the boundaries of ethnic and local membership and belonging. In contrast to Mexican mestizo migrants, they established issue-based migrant organizations in Los Angeles – such as business, religious, or educational organizations – above the level of hometown associations and state-based federations to claim precise rights for indigenous people as workers, believers, or students. In doing so, they collaborate with various political institutions, businesses, churches, and other organizations on different levels – local, state as well as national – in the United States and in Mexico. In other words, pan-indigenous identity and transnational citizenship emerge not only in public response to ethnic discrimination and social hostility, but also cooperation and support in transnational spaces.

Challenges for Teachers and Pupils on a Vocational Program

This paper aims to analyze teachers’ views on how a good mechanic should be, and how the teachers are mobilizing students to become mechanics through instruction and practice.

In another social landscape – before marketization, post-industrial transformation and neo-liberal forms of governance has become a part of the public educational system – a common practice were that students established a kind of counter-culture in schools. Why should I study while I am going to be an auto mechanic? Today teachers in the vehicle and transport program partly face a new school logic where they have to deal with pupils that have another approach to education. Why should I study, I’ll still not do want to be an auto mechanic? Previously the students were to a high extent culturally self-motivated, but nowadays the students have to become a car mechanic seem to have changed. My PhD project is linked to a larger research project that deals with issues of multicultural incorporation and school achievement. My contribution to the project concerns an ethnographic study in a vocational high school on a vehicle program, where there are mainly boys with immigrant backgrounds from heavily segregated areas, present in the classroom.

The paper contains an analysis of the symbolic boundaries that structure the auto mechanic profession and how these boundaries are expressed by teachers and industry representatives. It also describes how teachers in the vehicle and transport program mobilize students to the mechanic profession both by their teaching/pedagogy and use of social networks within the car industry.

Social Transformation and the Memory in a Postwar Society: the Case of Kosovo

This paper is based on two qualitative research projects conducted ten years after Kosovo exodus, and the dramatic changes related to the war, social organization, environment, daily life, and value system. The first one is “Memory vs. Forgetting” (2009), and the second one is “Socio-cultural Changes in Postwar Kosovo” (2010). Both conducted by the Department of Sociology in the University of Pristina. The data show very interesting aspects of collective memory and human experiences during the dramatic events and the general social transformations. The way how people remember the past, how do they perceive the present, and what they are expecting from the future is important not only for Kosovo society, but for the entire humanity.

The focus of our research is the period after 1999. This period is important in two senses. First, in terms of social change, this period is important because three international missions were deployed in Kosovo and the country has declared its independence since. Second, from the aspect of social organization, it is the period of transition of the self-administered institutions, and the development of the overall transition. The structural changes affected the culture, and the system of values in Kosovo society to a great extent. This period is of a particular importance, because it signifies great changes in lifestyle, the transformation of values and mental or patterns and practices. Research in the field of collective memory and social transformations requires very precise methodological approach. Each of the research projects has included 50 in-depth-interviews, and visual elements collected in the field, such as pictures and video materials. The data show that people's relationship are very strong not only to the family and the homeland, but also to physical objects, tools, pictures, books, souvenirs, symbolic values, plants, animals and the environment.

This paper aims to examine aspirations and expectations of adolescents in Spain with regard to family formation patterns, using survey data collected in secondary schools in Madrid. We are interested in the variability of these preferences across generations and between children of immigrants and their native peers. We look at fertility and marriage expectations to account for varying cultural backgrounds and for acculturation and/or integration processes. Furthermore, differentiated expectations of fertility and marriage tempo and quantum among children of immigrants and natives might be an indicator for segmented assimilation with regard to their or their parents’ socio-economic status.

For the empirical analysis of this paper we use survey data of some 2,600 adolescent pupils and 1,150 parents. About half of the students and parents are of immigrant origin. Besides aspirations and expectations linked to family formation processes, the survey provides information about parents’ labor situation and their educational levels, variables that are used as a proxy for their socio-economic status. To complement the survey, contextual data will be included, adding information on origin countries’ actual fertility and marriage behaviors and the ethnic composition of the neighborhoods in Madrid where the youths live.

Most theoretical approaches and empirical studies in this field concentrate on the U.S. Focusing on Spain as a relatively new immigration country can give important new insights into another migratory setting, which may be valid also for other (European) immigrant-receiving countries.

Producing the Collective Subject: Anarchist Practices at the People’s High School in Buenos Aires

This paper analyzes the experience of a “people’s high school” in Buenos Aires, Argentina, and the ways that it engages with anarchist-inspired practices and ideas. In 2001, Argentina experienced a political and economic crisis that gave rise to hundreds of social movements opposing the neoliberal status quo, including “movements of unemployed workers” (MTDs) and factory takeovers. These 2001 movements encompassed much experimentation with the idea of social movement itself, as they abandoned the old political party structures and incorporated social relationships into their political agendas. While many such movements have since dropped their autonomist orientations in favor of aligning themselves with kirchnerism and the presidential administrations since 2003, other movements remain staunchly independent and committed to alternative models of social change (referring to themselves as part of the “independent left”). One such organization, the people’s high school (bachillerato popular) of the MTD Barracas, uses a non-hierarchical structure and consensus-based decision-making as one of the primary vehicles for organizing grassroots social change within the movement and the neighborhood. Based on a year of participant observation, I examine how the movement enacts these anarchist organizational forms. I argue that the successful outcome of such organizational practices is the creation of a collective subject, which is only produced at the school when these structures are combined with meaningful emotional interactions among activists. Thus this paper sheds light on how and why some uses of consensus seem to fail flat or collapse into frustrating bureaucratic formulae, while other movements succeed in using such anarchist principles to meaningfully integrate participants into decision-making processes. Within a context of marginalization and oppression in Argentina’s shantytown, the people’s high school is using anarchist practices to create alternatives to neoliberal capitalism.

KRAUSE, MONIKA* (University of London, m.krause@gold.ac.uk)
Human Rights and Humanitarian Relief: The Organizational Mediation Of Ideas In The Global Arena

In talk of the “international community”, many commentators assume that human rights work and humanitarian relief are pulling in the same direction. Others see human rights and humanitarian relief as two fundamentally different modes of engagement. What both of these approaches share is a focus on the content of ideas. This paper examines the relationship between human rights and humanitarian relief in the international arena from the perspective of the sociology of practice and the sociology of organizational fields. Since the 1970s two separate traditions of practice have emerged— one centred around human rights and one centred around human rights. Based on interview research and document analysis, I examine how professionals in humanitarian relief organizations use the concept of human rights. In the past 15 years, they have used the language of human rights more and more, but the impact this language has had on humanitarian work has been mediated by the practical constraints and incentives of the humanitarian field.

KRAVCHENKO, SERGEY* (Moscow State University of International Relations, social7@yandex.ru)

Rethinking the Theory of Social Becoming: For a Humanistic Turn

According to P. Sztompka (Society in Action: A Theory of Social Becoming, Cambridge, 1991), the modern world is in a state of becoming that occurs in the context of unfinished structural and functional development. As a result social and cultural patterns are in different forms of transformation within a culture. He worked out a new type of sociological imagination the essence of which is reflexive thinking about social becoming.

Since that time the socium has become even hyperccomplex: there appeared “normal accidents” (Ch. Perrow), climate change as well as new risks, vulnerabilities and social turbulences produced by human agency (J. Ulry, U. Beck). Taking into consideration these realities of new catastrophism I agree for a “humanistic turn” in sociology, whereby societies should be examined through the patterns and character of their complexity-dependency and human agency-sequences. This implies still a newer type of sociological imagination based on the synthesis of social, hard and humane sciences. The methodological instruments of this type of sociological imagination include both non-linear and humanistic aspects. Thus, I propose a non-linear and humanistic sociological imagination that deals with the acceleration of socio-cultural dynamics and globalization (R. Robertson), syntergetically takes into consideration paradoxes, risks, and dispersions of socium, searching for new forms of humanism, based on men’s existential needs.

KRELL, KRISTINA* (Leibniz Institute for Social Sciences, kristina.krell@gesis.org)

Reference Income and Pay Satisfaction: How Do People Choose Their Reference Group?

When exploring individual well-being, not only satisfaction with life as a whole is suitable basis for analyses – also information on satisfaction with certain domains can provide valuable insight into how people are affected by the circumstances of their lives. Satisfaction with the personal income reflects not only whether people assess their pay as high enough to deal with every day’s expenses but also people’s perception of how their effort and performance is valued by others (the employer), which can be a considerable aspect of mental well-being. In this context, the comparison with other working people is always an important benchmark when evaluating the own income situation.

As is known, reference groups for income comparisons can be people of same profession, with same education or colleagues, etc. This paper provides further insight into the field of study of whether different groups of people apply different reference groups when evaluating their income and – if applicable – which aspects motivate the choice of reference group (e.g. information disparities).

Data base is the German Socio-Economic Panel Study (SOEP) of 2010. Several typical reference groups are defined and the impact of their income on the personal income satisfaction of different population groups is analyzed, applying an ordered logit model.

Towards the Construction of a Composite Indicator of Objective Individual Living Conditions for Europe

This paper provides an approach for constructing an index of objective individual living conditions which is based on micro data and comparable between countries and over time. It summarizes on the individual level how people’s lives are from diverse perspectives, which together form their “objective living conditions”. As the name already indicates, the index particularly focuses on objective indicators, not taking into account subjective (cognitive or affective) perceptions of one’s own life, such as life satisfaction or happiness. The life domains that are included in the index are:

- income / standard of living

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Bargaining the „Human Rights“ of „Human Resources“ – Unions and NGO-Networks Advocating Precarious Migrant Workers’ Interests in Japan

Taking the debate concerning recent immigration policy changes, focusing on the so-called Technical Intern Training Program (TITP), as a case study, this paper challenges debates about the labor market and the labor movement in Japan. While civil society in Japan has often been portrayed as apolitical and service oriented, being strong in producing local “social capital” but weak in generating “advocacy” on the national level, the labor movement has been described as politically domesticated and oriented towards balancing interests of big companies and their core staff, organized in enterprise unions. As these generalizations are grounded for a great part of the scene, they still ask for qualification, because they obscure a relatively small but growing and significant portion of organization of and bargaining for workers interests in Japan. Irregular employment and migrant labor is especially prominent in Japan’s many small and medium sized enterprises (SME). The unionization of employees in SME through individual membership unions, that has been fostered in the 1970 by the former national union center Sôhyô, has since the 1990s formed the basis for migrant and irregular workers organization in unions in Japan, and as further become the core of new constellations and alliances in civil society, which played an active role in discussions leading to immigration policy reforms. Thus it was not the Japanese civil code or the so-called NGO-law, but the Labor Standards Act (LSA) and the Labor Union Act (LUA), which formed the legal framework for a vibrant civil society in Japan, by providing rights of organization and collective bargaining for precarious migrant workers, and thus enabled political advocacy.

Not No Place: Fragments of Johannesburg

Not No Place is a collage of visual and written fragments on Johannesburg’s historical, archivial, found and self-generated. The book is the result of documenting and collecting material on the city of Johannesburg over the course of five years. It interweaves selected quotations with personal memories and reflective accounts, weaves fiction in an attempt to explore the city as both lived place and an imagined no-place (the direct translation of Utopia). A montage combining photographs, drawings, archival material and texts, it alternates between the mode of collector, witness, observer and author, taking into account the numerous representations of the city in historical writing, urban theory, film, media and fiction. Not No Place presents a collection of moments in the city’s complex history, its contemporary spatial realities as well as its future projections.

Bettina Malcomess and Dorothee Kreutzfeldt speak to their visual processes as thoroughly as possible.

Constructing an index based on micro data has the advantage that the computation of the index for subgroups (e.g. by gender, age groups, etc.) is possible. In the lack of a micro data base for Europe that covers information on all the domains mentioned, the index combines three data sources: the EU-SILC, the ESS and the EU-LFS. At present it can be computed for a limited number of European countries for the years 2006, 2008 and 2010 (severely limited also for 2004). First results of the index indicate that there is a high correlation between macro indicators of the economic strength of a country (e.g. GDP/capita) and the index as a whole, whereas certain domains of the index seem to be unrelated to those macro indicators. Particularly, this concerns the domains housing area and health. Hence, the indicator can give differentiated insight into the “performance” of countries concerning their population’s objective living conditions.
The findings indicate that although multilingualism appears on various levels in the different social contexts investigated, all of these contexts are heavily dom-
inanted by English. It also appears that in their professional practice, our respondents are highly aware of the relationship of language(s) to power and they prefer the usage of more power-neutral language policies even if this comes with the cost of mutual intelligibility. It also seems that the current availability of some of the alternative languages used in the Brussels context might be some-
what more important when dealing with political status/historical reasons than with practical consider-
ations. Yet, the findings imply that multilingualism plays a less significant role in the social and working lives of Brussels based civil servants and lobbyists than previously assumed. Furthermore, the respondents’ social identities are rather influ-
enced by new signifiers related to economic globalization and competition and their institutional positions than their linguistic backgrounds or the multilingual practices they take part in.

KANJUO - MRČELA, ALEKSANDRA (University of Ljubljana)

“I Hope to Muddle through until the Retirement” - the Aging Workforce in Demanding and Dangerous Jobs

The paper discusses the increase of physical and mental challenges for older workers in various exceedingly demanding and dangerous occupations, typically in police and military force, fire brigades and prisons (wardress) but also in aviation (pilots and traffic controllers, railway operators) as well as in heavy industry (mining) and - though it may seem strange - in performing arts (ballerinas). Slovenia, an ex-socialist country that has joined European Union in 2004 is taken as the case.

Firstly, the challenges are identified through combination of interviews, group discussions and unstructured questionnaires and relevant workforce representa-
tives. Secondly, the obtained testimonies are compared among professions and between generations who underwent socialist and transitional (mainly market driven) period respectively, to identify similarities and differences in challenges. Thirdly, the problem is approached from social policy point of view to demon-
strate the inefficiency of the latest changes in the Slovenian pension system regar-
ding demanding and dangerous jobs. Finally, the state of affairs is addressed in the framework of changes the society underwent in the last twenty-five years, including liberalization of economic and political system, privatisation, Europe-
anization and globalization. The influence of global economic crisis and austerity measures, that altogether lead to redefinition of workforce position in general, to chaotic and eclectic transfer of responsibilities regarding retirement security from society, state and companies to individuals. The individualisation of risks has serious consequences for quality of work and working conditions of workers whose possible disabilities for decent retirement and satisfactory pensions are severely reduced.

*Testimonies and evidence were collected as a part of a research project, com-
missioned by consortium of Slovenian Unions Associations (Alternativa and Free Trade Uniono), Ministry of Labour, Family, Social Affaires and Equal Opportunities, Chamber of Commerce and Norway Grants found.

KROPP, KRISTOFFER* (University of Copenhagen, kkr@soc.ku.dk)

Europeanizing Social Science - the Case of the European Social Survey

This paper sketch out and analyze the historical development of the European Social Survey (ESS). In the 1996 a group of European social scientist under the ausp-
ices of the European Science Foundation initiated what became one of them larg-
est social scientific projects, a project that now is seen as the golden standard in transnation
alization and globalization. The first wave was launched in 2001 and has since been conducted biannual in an increasing number of European countries. From the first wave and onwards the ESS has been heavily funded through the European
Union Frame Work Programs and National Research Councils. Simultaneously the ESS has been leading in developing and disseminating transnational surveys research techniques from items design through field works to data management and dissemination. Using documents and interviews, the paper analyses the case of the ESS shedding light two interrelate processes both very central to the analy-
sis of social sciences in society. First, it can tell us about the current changes and developments of surveys research. Surveys research has been one of the most influ-
ential social scientific techniques, but the classical techniques of surveys re-
search has in different ways been attached to the nation state. Thus, the paper asks which kinds of changes does transnationalization of surveys research bring? Secondly, the paper analyses the relations between the social sciences and the EU. The social sciences has since their first institutionalization been closely entan
gled to the nation state, but how is this entanglement changes in the European-
ization process and with what consequences for the social scientific knowledge?

Korean Environmental Sociology: History and Characteristics

This article aims to analyze the history and characteristics of Korean environ-
mental sociology since the 1990s. Korean environmental sociology has been de-
veloped since the 1990s when environmental movements and environmental awareness started to proliferate nationwide. The Korean Association for Envi-
ronment Sociology was established in 1998. The field of Korean Environmental Sociology is currently characterized by its variety of theoretical and empirical research and has published Academic Journal of ECO since 2001. Seejae Lee summarized that Korean environmental sociology is participation, problem solving, and field research oriented. Sun-jin Yun analyzed that sustainable develop-
ment, ecological democracy, oil-spill disaster, nuclear waste dump site, envi-
ronmental justice, and so on are key issues in Korean environmental Sociology.

Korean environmental sociology has the following theoretical and empirical achieve-
ments. Firstly, it introduced ecological paradigm and tackled the limita-
tions of anthropocentric sociology. Secondly, environmental sociologists raised environmental justice and inequality issues and accumulated research of environ-
mental and ecological movements. Thirdly, they tried to develop theory and poli-
cies of ecological democracy beyond anthropocentric democracy. Fourthly, they tackled the limitation of nation state and economic growth model and tried to develop alternative state, local community, global governance and development. Korean environmental sociologists have focused on not only analyzing envi-
ronmental problems, awareness, movements, and policies status quo but also suggesting new theoretical framework and alternative society model.

An Inter-Cohort Comparison of Intra-Cohort Social Stratification: How Do Cumulative Dis/Advantages Evolve Across Cohorts?

The aim of our paper is to analyze trajectories in hourly wages between the ages of 30 and 50 for five different birth cohorts, using the PSID data. More pre-
cisely, we focus on processes of intra-cohort stratification by tracing patterns of income as individuals age. Our analysis is informed by the cumulative dis/advan-
tage hypothesis as a process of intra-cohort stratification. Using growth curve models, we seek to describe and explain the patterns of income stratification within and between cohorts. We hypothesize two key patterns: Simple interindi-
vidual and path-dependent post individual divergences. Simple inter-
individual divergence is indicated when the relation between initial hourly wage and its slope over time is positive (in contrast to convergence, where this relation is negative, and stability, where there is no relation between initial hourly wage and its slope over time). Path-dependent interindividual divergence is indicated when hourly wage differences between men and women, or between whites and non-whites, increase as individuals age. Our analyses will reveal if the patterns of
wage divergence over the life course are constant across cohorts, or whether the extent and form of wage divergence is shifting over time.

*The Joint Impact of Paternal and Maternal Parenting Styles on Children's High-School Academic Achievement in Taiwan*

The present research used data gathered by Taiwan Education Panel Survey (TEPS) in 2001 and 2003 to explore how fathers’ and mothers’ parenting styles jointly influenced their children’s academic achievement in junior high. Using latent class analysis (LCA), the research uncovered the same four parenting styles for both Taiwanese fathers and mothers. These four parenting styles are consistent with parenting typology often discussed in the literature and can be labeled as authoritarian, authoritative, permissive, and neglectful. Since the majority of Taiwanese children lived with both biological parents and not much research has been done to understand how both father’s and mother’s parenting styles jointly influenced their children’s development, the research further used LCA to construct 16 joint parenting styles to investigate how these styles were related to children’s academic achievement. The research found that children with both parents adopting the permissive style would have the best academic performance in junior high. Past studies have indicated that authoritative parenting would be conducive to good academic achievement. The present research showed that when one of the parents was authoritative, for their children to perform well in junior high, the other parent should be more permissive. In other words, in the traditional Chinese view of parenting, there should be a combination of being “yin” (strict) and being “tuer” (kind). The research further found that if paternal parenting was authoritative and maternal parenting was neglectful, this type of joint parenting style would have the most negative impact on their children’s academic achievement. In short, the findings of present research clearly demonstrate the importance of understanding the joint impact of paternal and maternal parenting on their adolescent children’s development in Taiwan.

*Renaisence of Ethnicity? Self-Identifications of the Second and Third Generation of Algerian Immigrants in France*

The paper presents the results of an empirical research on the self-identifications of people belonging to the second and third generation of Algerian immigrants in France. The aim of the research was to investigate in which situations the Frenchmen of Algerian origin (FAO) feel included and in which excluded from the various social (not only ethnic or national) categories. The choice of FAO stemmed from the fact of their strong, connected with numerous contradictions, attachment both to the country they live in and its culture (France) and to the country and culture of their origin (Algeria), also from their ambiguous attitude towards the suburbs of the French cities in which they are very often identified with in the context of riots erupting there every few years. The project answers to the questions concerning the variables that differentiate the identifications of FAO with various social categories and give the classification of situations which occurrence is conducive to the appearance of self-identification of a particular kind. The results are based on a content analysis of 25 autobiographical novels written by FAO authors and published in France between 2000 and 2012 and the biographical method by F. Znaniecki and his principle of “humanistic coefficient” was used in the project. Indicating the situations in which FAO still feel different than other citizens of their own country can show the areas of social life that require reconsideration in the terms of the state’s integrating policy.

**KUBO, HIDEO** (Kyoto Sangyo University, kubo1978@cc.kyoto-su.ac.jp)

*Takao Tanase and Talcott Parsons: The Possibility Of Functional Analysis*

Takao Tanase makes a unique contribution to sociology of law because he uniquely applied the sociological framework of Talcott Parsons who elaborated a general theory.

When Tanase studied abroad in 1970’s, he majored in sociology and was mentored by Parsons. So Tanase was clearly influenced by Parsons in his early works and tried to develop or modify Parson’s theory. But after that he rarely mentioned Parsons and repeatedly referred to normative theories such as critical legal studies. So lately Tanase has been considered a postmodern theorist in Japan.

But if we read intensively his works, we can notice that he was influenced by Parsons all the time although he never clearly mentioned Parsons.

Tanase frequently used Parsons’ functional analysis uniquely to study law and society in Japan. He decomposed research objects (surt in Japan, for example) into ideal elements (logic of liberalism, for example) and observed the functions of those modern ideal elements in real social conditions. Then based on the observations and new normative theories such as postmodernism transcending the limits of modern ideas, he proposed what is necessary for modern law imported from the West to function more properly in society. In this way Tanase applied Parsons’ general theory standing on the convergence between idealism (normative theories) and positivist (observations), and his application gives a hint when someone applies Parsons’ general theory to researching the functions of law in other countries.

Though Parsons was attacked severely and his influence declined once, he has been reevaluated since 1980s. But this is not true for sociology of law. So Tanase’s application becomes a nice model of using Parsons’ general theory in sociology of law and it suggests the possibility of researching and comparing the functions of law globally.
These findings demonstrate historical and linguistic relations of power that intersect with practical considerations. Specifically, the language choice seems to be implicated in a colonial legacy reflected in the linguistic hierarchy (e.g., Japanese vs. Korean or Chinese) and the commodity value attached to Japanese as well as pragmatic factors related to linguistic and orthographical proximity. Moreover, the fact that the interviewees were selected by each company reveals a particular entrepreneurial habitus or lingua-cultural dispositions expected for transnational workers. The study problematizes the neoliberal ideology of the promise of English and provides educational implications.

Conflict Management in Prostitution (性活=“Seikatsu”) — the Structure and Meaning of Pluralistic Justice

"Conflict management in prostitution" have some meanings especially from the perspective of law. They are also concerned with their own viewing. In Korea, there are also different ideas depending on the situations. The meaning for female who are working as a prostitute (I call them normally as "性活者"="Seikatsu-su-ya", sex-practical use person) is protection or any system which will help them. This presentation will try to make clear the "real" situation of conflict management in prostitution (I call it normally as "性活者"="Seikatsu", sex-practical use person). For it, I had researched for 101 prostitutes by interview directly in 2010 to 2013 in Nairobi, Mombasa, Malindi, Nakuru, Kisumu and Meru. The average time of interviews is 1 hour 30 min. And I did the research more than 500 for non-regular women and men as customer by questionnaire. The research for prostitute have more than 100 questions divided into 5 sections, Experiences, Ideas, Ways, STI, and Personal Matters. I will describe here how prostitutes think about and get on with "law" even "living law" in prostitution. And more, I will try to find what is the way and meaning of conflict management for them through my research in Kenya. We can find the idea of original conflict management in prostitution through confrontation against "law" finally. Actually, justice, even law is pluralistic in the field of prostitution. When we think the structure of prostitution from the perspective of conflict management, we feel something poor or strange to the normal-idea in prostitution field like that is legal or illegal. Because the "law" must be different for each in multiter prostitution structure. We need to understand the situation without any bias in first and discuss to pure structure of prostitution later. The idea of strategy of conflict management in prostitution will help it.

Sexuality and Refugee Status: Narrative Construction of Sexual Minority Asylum Seekers in the United States

Since the 1990's, sexual minority status has been recognized as a basis for refugee/asylum claims in certain countries. In the United States, as seen from the recent governmental guidelines for those specific cases, the so-called LGBT asylum is now drawing attention. This study attempts to analyze the issues of gays, lesbians, and transgenders who are seeking asylum in the U.S. from the perspective of narrative construction regarding to the dominant notion of sexuality in the host society appearing in legal procedures. Previous studies have shown that since the credibility and objectivity of those claims are legitimized within a US-centered notion of homosexuality, it marginalizes those individuals who fall outside of this paradigm. However, studies based mainly on legal documents have yet to develop an understanding of sexual minority asylum seekers' experiences and of the degree to which they follow the dominant picture of sexuality.

To further understand this phenomenon, interview research was conducted in New York City and the San Francisco Bay Area. In order to define asylum seeking process as a system which connects the concept of sexuality to past events in the narrative construction, this study explores the experience and perspectives of the asylum seekers themselves. Although, in most cases applying for asylum is taken as an option they find as a choice to legalize their status, a comparison of two different areas tells us that the strategies and discourse of their advocates and case-workers, desperate migrants and ethnic communities, and practices of border crossing have impacts on how they form the narratives. For example, the asylum seekers in New York City tend to use human rights discourse while those in the San Francisco Bay Area do not. Instead, a common practice of multiple border crossing characterizes the latter as an actor within the asylum-migration nexus.

Servants of Two Masters: Work and Family in the German Armed Forces

Since the end of the Cold War the German Armed Forces have undergone a significant shift from a defense-oriented military to a mission-oriented military. This profoundly impacts on military families and on military family policies. The paper traces this shift and outlines the consequences it has on the work-life balance of German soldiers. It also tries to contextualize the work-life balance in the military with the work-life balance in the civilian sphere.

Gendered Innovations In Hospital Workforce Management: A Scoping Study

An increasing scarcity of health human resources in Europe calls for innovations in hospital management and workforce governance, yet policy interventions and measurements are mainly concerned with costs. In this paper we introduce an approach of ‘gendered innovations’ that brings both the gendered nature of the professional groups and their importance as the backbone of healthcare systems into perspective. The aim is to explore gender-sensitive forms of managing the clinical workforce, especially medicine, and how this may contribute to both gender equality and sustainable health human resources. In terms of method, we draw on a scoping review of the literature and findings from a pilot study in a large German hospital. Here, the focus is on hospital doctors with particular interest in the situation during specialisation. The case study applies comprises data analysis of hospital statistics, expert interviews and four focus groups with (male and female) doctors working in different specialties and departments. We develop a conceptual approach that systematically links three strands, namely privatisation and organisational restructuring of hospitals, health human resources management, and gendered professional careers. There is increasing evidence that improving gender-sensitive work and career conditions and linking organisational and professional governance issues may help improving competition of hospitals for qualified doctors. At the same time, the opportunities of gendered innovations are not effectively in hospital management, doctors in increasingly competitive hospital sector. Drawing on these findings and organisational settings, we suggest ways of translating gendered innovations into the day-to-day practice of hospital workforce management, thus furthering more efficient and sustainable workforce management and sustainability.

Mapping The Governance Of Care and Professional Development: A European Comparative Study

This article investigates the care sector through the lens of the sociology of professions. We introduce a dynamic approach that systematically links changes in the nursing professions and society at large with new modes of governance in healthcare. The aim is to explore institutional conditions that contribute to the development of an integrated professionalism and efficient health human resource management in the care sector. A novel contribution is the cross-sector and profession-neutral approach that connects professional developments in nursing in hospital, primary and long-term care with governance arrangements. A comparative case study design is applied that focuses on western European countries using England, Finland, and Germany for an in-depth analysis. In terms of methods, we draw on public statistics, document analysis and other secondary sources. Three emergent patterns can be identified: (1) ‘constrained professional development’ was observed in the German corporatist and federalist/fragmented system

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
with overall high density and quality of healthcare services and concentration in the middle-range professions with a lack of upward institutional pathways; (2) ‘elitist professional development’ was found in the more centralised governance in England and characterised by a growing expansion in the high-status segments, but overall weak development in the middle-level and lower segments; and (3) ‘integrated professional development’ emerges in the context of decentralist and universal governance arrangements in Finland, that foster expansions in both high-status segments and low and unqualified segments of nursing. In summary, the findings highlight connections between professional development and governance. This study (that focuses on visual (African) level of professions, in order to achieve transformative potential, must be connected and backed up by (macro-level) health and social policy interventions.

Before we can even discuss democratic consolidation, at least three minimal conditions must be fulfilled, according to Linz and Stepan (1996). Beside those consolidated democracies should also fulfill several other conditions that have in scientific analyses not attracted such high attention than three minimal conditions. Among those conditions Linz and Stepan specifically stress the importance of economic consolidation. The proposed paper is going to analyse the challenges of democratic consolidation in the Central and Eastern Europe from the beginning of 1990s, when democratic transition began to take place, to most recent period, when consequences of global economic crisis hit the region. It is clearly evident from various democratic consolidation measurements that most former socialist countries have reached level of consolidated democracies; authors are testing the thesis that one of the reasons for that was also successful economic consolidation, which is in recent period suffering under heavy pressure of global economic crisis. The consequences of that can already be seen in various democratic consolidation measurements, like Nations in Transit or Human Development Index (HDI), where most CEE countries are regressing in last few years.

Is The Middle Class a Harbinger Of Democracy? Evidence From Southeast Asia

A vast body of literature claims that the middle class is a critical force for democratic transitions, democratic consolidation, and political stability. Yet, recent events in Thailand and in other Southeast Asian newly-industrializing countries (NICs), indicate that the middle class often challenges democratic regimes or supports authoritarian juntas. How should we reconcile these divergent views of the middle class? This article argues that an explanation for the behavior of the middle class in relation to regime-type must begin by looking at the state’s role in addressing the interests of the middle class. Where a state addresses the key concerns of the middle class – rule of law, economic development, and political stability – this class is unlikely to rebel against the state. Institutionalized states are most likely to satisfy middle-class interests, while patronal or clientelistic states are particularly vulnerable to middle-class rebellion precisely because they are unable to satisfy those interests and values. A comparison of four Southeast Asian NICs will thus show that middle-class support for democracy is highly contingent on the structural conditions in which they find themselves embedded.

Judging Bodies in Europe: Examining the Variety of Repertoires for Evaluating the Beauty of Male and Female Bodies in Six European Countries Using Visual Q-Methodology

Being perceived as beautiful is associated with many social and economic benefits, including advantages in dating and labour markets. In post-industrial European societies, “physical capital” is increasingly becoming a valuable asset, for men as well as women. Yet little systematic and inductive cross-national comparative research has been done on what is perceived as physical capital by people of different social backgrounds, genders and age groups. As a result, most existing studies on beauty ideals emphasize universal criteria of beauty evaluation inherent in human evolutionary psychology, or the homogenizing effects of beauty standards propagated by transnational media imagery and a transnational beauty industry.

In our study, using a structured sampling method, a total of 180 respondents in six European countries are asked to sort picture sets of a wide variety of both male and female bodies according to their own tastes. This is done in the context of semi-structured interviews in which respondents are asked about their ideas on beauty and the role it plays in their lives and social interactions. Through factor analysis, separate “taste groups” are identified on the basis of their sorting patterns, and their particular criteria for evaluating beauty interpreted with the help of their own comments.

The effects of gender, education, age and nationality on ideals of bodily beauty, are ascertained through regression analyses with factor scores, and systematic coding of the interview material. Furthermore, we investigate to what extent bodily beauty ideals are informed by moral or symbolic, rather than purely aesthetic, considerations. We predict, on the basis of the theories of Elias and Bourdieu about class (in absolute and relative terms) level of professions, in order to achieve transformative potential, must be connected and backed up by (macro-level) health and social policy interventions.

Abortion Policies and Health Outcomes in Latin America: What Are the Relevant Lessons for Africa?

Both Latin America and sub-Saharan Africa have high abortion rates (generally above 30/1,000 women aged 15-44) despite overwhelmingly restrictive moral, legal, and social sanctions. Although data are limited, enough is known to examine how Latin American countries are making progress in negotiating the challenges posed by abortion and compare it with the situation in sub-Saharan Africa. This allows identification of relevant lessons for improving health and social outcomes in much of Africa.

Several decades ago, many Latin American countries had economic levels seen in many African nations today. They have since achieved better contraceptive practice and social outcomes, and are now witnessing declining rates of abortion, unsafe procedures, and related deaths. In contrast, Africa accounts for over half the world’s unsafe abortion-related deaths and abortion rates will increase unless unmet needs are more strongly addressed. We explore several promising steps for alleviating present and future dilemmas.

We review how abortion policies have been changed recently in Colombia, Mexico City and Uruguay, their implementation and effects. Also, we investigate the effects of improved contraceptive practice and the social diffusion of simple interventions (including emergency contraception and misoprostol) across much of Latin America to reduce abortion.

These interventions are being sustained in the absence of legal change and strong social movements, and could potentially be implemented to strengthen the performance of African health systems. This could help overcome scarce resources and confusion about how to deal with abortion, as well as reduce inequalities in health and health care. We stress the importance of strengthening the evidence base, research-policy connections, health systems, and issue networks to articulate reproductive and human rights, health rationales, and to exploit policy windows. Such a coordinated strategic incremental approach may secure social change, support a broader policy reform, and better outcomes in this deeply controversial policy arena.

State Family Planning Policies in the Islamic and Arab Demographic Giants: Does Indonesia Offer a Path for Egypt to Achieve below-Replacement-Level Fertility to the Benefit or Detriment of Women?

Indonesia is the world’s most populous Muslim-majority nation and Egypt has its largest Arab population. Both countries have similar overall and any modern-method contraceptive prevalence rates (61% and 58%) and levels of unmet need (12-13%). Fertility declines recently stalled in both countries, but at a lower level in Indonesia than in Egypt (2.6 and 3.0 births/woman, respectively). In the mid-1960s, both countries established clinic-oriented national family planning programs with strong bureaucratic and financial support. However, state policies led to skewed method choice with each country relying heavily on a single reversibly-acting intervention (that accounts for 95% of the total contraceptive use, reducing choices for women. Also, each program each has recently hit trouble. Indonesian politicians have shifted their attention and resources away from family planning. Injections are increasingly offered by local midwives with strong incentives and by more private providers. Indonesia now has the world’s highest injectable use rate (32%), but reliance on long-acting contraception is weak. The Egyptian program has poorer informed choice, higher discontinuation rates, and heavier reliance on public sector sources now undermined by ongoing political turmoil. The IUD remains the most widely used method (36%), but 7% of women now use injectables, more than in other Arab states and possibly soon usurping pills as the second
Gender and Medical Specialization: Segregation By Culture or Choice?

Women taking to gainful employment and professional practice are on the rise in India and medicine is one such profession which by its nature, prestige and rewards comes to be sought after most by women. It is precisely owing to these traits, the medical profession has been strongly aspired by their male counterparts as well, which might bring into play the forces of gender bias and gender discrimination as has been the case with the phenomenon of gainful employment in general. The paper seeks to ascertain empirically the considerations, motivations, and biases influencing women’s inclusion in the practice of medicine by women in medical profession. The findings are based on in-depth interviews with 237 women physicians in the City of Bangalore in India. The findings reveal that women doctors are inclined and constrained to avoid such branches that tend to be male dominated. It is further noticed that women doctors tend to opt for the soft specializations and less sought after the surgical male counterparts and hence are less expensive in terms of course fees and capitation, and also are relatively less paid on the one hand and provide less intrinsic satisfaction and recognition in medical circles and society on the other. The experiences and dispositions of women doctors appear to indicate that their decisions on specialization tend to be culturally conditioned and are outcome of their tendency to avoid areas of medicine over which their male counterparts are assumed exercise a cultural and professional prerogative and unjustified monopoly.

Marginalized or Empowered? Conflict Induced Internally Displaced Kurdish Women's Experiences in Turkey

This study is focusing on the conflict-induced internally displaced Kurdish women's experiences. There has been an ongoing internal armed conflict in Turkey since 1984 and one of the consequences of this conflict is the internal displacement that occurred in 1990s. In the displacement process, women and other family members were victimized. They did not only loose their homelands, but they also had to struggle in the city centers with poverty and discrimination. After they started to live in the city centers, women may become both marginalized and empowered. The aim of the study is to understand the situations that lead Kurdish women to be marginalized and/or empowered in the cities to which they have been forced to migrate. After the displacement process, which is one of the major victimization processes for these women, some of them may be trapped in ethnic and gender-based discrimination and may become more marginalized in the city centers. But marginalization and empowerment are not fixed categories and there is always a possibility for these women to transform their marginalized position into empowerment. By political engagement, working outside home and/or being head of the household these women may break the cycle of their marginalization and becomes empowered in the city centers.

**Nations and Expectations of Democracy Among the Participants of the OccupyGezi Movement in Turkey**

The aim of this paper is to explore the notions of democracy and the expectations about the democratization of Turkey expressed by the participants of OccupyGezi movement started in Turkey in May 2013. The protests, which began on 28 May over the plans to demolish one of Istanbul's rare central parks, developed into nationwide rallies against the government. Although the protests have been acknowledged to be a civil unrest participated by people from different political backgrounds, the demographic features of the protestors and their demands remained under-researched and this caused speculations from both the government and the opposition sides about the reasons and impacts of the protests.

A group of voluntary independent researchers have conducted a survey with 1060 protestors, during the actual demonstrations on the streets in Ankara. Data were collected in three days (8th, 9th, 10th June) in two different centers of the protests in Ankara. Participants were people attending the protests at the time of the interviews, in varying forms and degrees (example: just standing to actually fighting with the police). Participatory observation and results of other surveys conducted in the same period served as secondary data. The questionnaire consisted of questions concerning the demands, political backgrounds, reasons and types of participation to demonstrations and expectations of the protestors, along with their demographic characteristics.

This paper is based on the analysis of the participants' notions, expectations and demands around democratization in Turkey. Results suggested that the demands of democratization have varied according to a series of factors, including the political background of the participant, gender, the place of demonstration attended and the different understandings about the government's policies restricting individual freedoms. The results have also documented the intense police violence experienced by the protestors, which is expressed as one of the major reasons for the growing unrest.

**Population Change, Demographic Dividend and Health Care in Aging Population of ASEAN**

The purpose of this study was to investigate the change of population from 1967 – 2060 and to study the demographic dividend among ASEAN countries and to study the demographic dividend among ASEAN countries. It was determined that the population of ASEAN is approximately 600.8 million people or 8.6% of the world population and this amount has tended to continuously increase for 40 years. Nowadays, the population structure consists of 48.3% of laborers, 39.8% with child dependency, and 8.5% of aging dependency while the death rate is very low and birth rate is declining. The total fertility rate of the ASEAN population is 2.4. The demographic dividend could be categorized into three groups including 1) countries that already have passed opportunity, i.e., Singapore, Thailand and Vietnam, 2) countries that have had the chance to handle this prime event, i.e., Indonesia, Malaysia, Brunei Darussalam and Myanmar, and 3) countries that will meet this situation in the future, i.e., the Philippines, Cambodia and Lao PDR.

The ASEAN community consists of ten countries as its members which all have different population structures, hence dividend occurs more than once and each country could give a hand to others to help solve problems and clear effects. It may be necessary for countries which have not faced the prime period to learn experiences from those who have passed the period. For labor issues, population segments could be reallocated to countries that lack human development resources resulting in the new trends in health care systems for aging people in the future.

KUMAGAI, FUMIE* (Kyorin University, fkumagai@com.home.ne.jp)

**History of Courtship and Dating in Japan**

The marriage pattern in Japan developed from the group/horde marriage in the Primitive Times to the tsunamado-ken (the groom commuted to the bride residence), to the muko-in (the groom lived with the bride family) during the aristocracy, and to the yome-in (women marrying into men’s families) under the Bushi ruling. It was only after the Meiji era that Japanese marriage changed to the Yorai pattern based on the mutual consent of the marriage partners.

Then, two types of mate selection pattern emerged: the arranged (miao), and the romantic marriage (ren-ai). In the arranged marriage the go-between (nakoudo) arranges formal interviews providing the young with opportunities for meeting possible marriage partners. During the early stage of Japanese modernization miao was the predominant pattern, however the complete reversal has emerged today, and ren-ai has become the dominant pattern instead.

Recently, young Japanese have difficulties in finding ideal marriage partners. Consequently, great many Japanese men and women remain single lifetime (1920: about 2% for both men and women; 2010: 20% for men and 11% for women). Extremely high rates for life-time singleness of Japanese men and women today are one of the major reasons for the fertility decline.

Attempting to provide young people with mate selection opportunities various “kon-Katsu” services (marriage mate seeking activities) have been established by local municipal offices, commercial matchmaking agencies, and Mochi-Kon (Township Companion where both young men couples and women couples meet in group). Furthermore, the current government will extend monetary support to marriage services organized by municipal offices effective 2014 fiscal year.

Marriage, however, is an individual and private matter. And, therefore, if one decides to lead a lifetime singleness, it matters only to him/herself. Nevertheless, it is hoped that these new styles of courtship and dating will encourage Japanese youth to go forward for marriage.

**Car Festivals (Religious Yatras) in India: A Dimension of Leisure Tourism (A Case Of ‘Nanda Devi Raj-Jat Yatra’ In Uttarakhand, India)**

This paper is about the car festivals (Religious Yatras) organized in different parts of India and their impact on the quality of life of its participants. This paper is analyzing how these car festivals provide leisure to its participants which further improve quality of their life through mental well-being, being, jagannath puri rath yatra (Orissa, India), mysaur rath mahotsav yatra, mysaur (karnataka, India), and Nanda Devi Raj-Jat Yatra (Uttarakhand, India) etc. are some of the famous religious car festivals in India. Thousands of people participate in these religious festivals to get relaxed from day to day stress. Nanda Devi Raj-Jat Yatra is one of the most celebrated car festivals of Uttarakhand in India, taking place once in every 12 years during August-September for 19 days. A trek of 280 km remains jam-packed with the experience of nature, flora and fauna, fabulous culture and let one have a glimpse of the Uttarakhand Himalayas. Last car festival was taken place in the year 2000 and more than 50,000 people had been found taking this car festival.

Well established indicators of quality of life are used to explain the results in this study. Simple statistical and participatory tools are used to analyze the information and data gathered from different primary and secondary sources. Case studies are also used to explain the experiences of the participants of the car festivals.
The protests against the politics of crisis in both the US and Germany are structured along similar patterns: The Tea Party Movement in the US and the right-wing Euro-criticism in Germany stand in opposition to the Occupy Movement on both sides of the Atlantic. These polarized spectra not only deploy parallels in their political messaging, but also in their socio-demographic composition. Beyond this opposition, all four poles seem to be united by a deep mistrust towards their national governments with a focus on domestic socio-economic issues.

The paper uses the concept of the socio-spatially determined Habitus, bridging the gap between agency and structure: resonating with the messaging of the respective protest-mobilizations, but in turn also structuring and shaping the development of these very movements. Participant observations in meetings and protests, group discussions and interviews conducted with participants in all four movements are analyzed relying mainly on the hermeneutics of the sociology of knowledge to reconstruct the Habitus as a sedimented body of practical knowledge shared by the participants.

The paper seeks to contribute to the understanding of the development of the movements and the different inner and outer limits they encountered. Why did the Occupy Movement in different parts of the US and other countries follow such different trajectories after 2011? Why did the German counterpart to the Tea Party never gain comparable traction - despite numerous attempts and significant resonance in the media?

The analysis shows that the polarization of the national protests can be understood as resulting from the different ways in which social classes interpret the social contradictions sharpening in the recent years. While this dispositional schism is mirrored on both sides of the Atlantic, the diverging paths the movements took express the different ways in which the crisis affected the national economies.

Sowing the Seeds of Change: Shifting from Traditional Cropping to Cash Cropping-Some Illustrations from Western Himalayas

Around 10,000 years ago human beings had started domestication of plants and animals, even before this period, people had been altering plants and animal for their own benefit by using other means such as fire-kill farming. With the changes in almost every sphere of life, agriculture has also undergone change particularly in developed and developing world, and has been characterized by enhanced productivity, the replacement of human labour to mechanization and the introduction of synthetic fertilizers and pesticides, selective breeding has changed the fate of agriculture round the globe and Himalayan states are not exception.

Present paper is based on primary study conducted in Chamba and Kangra districts of Himachal Pradesh. In the state agriculture contributes nearly 45% to the net state domestic product and about 93% of the state population depends directly or indirectly upon agriculture, moreover it is main source of income as well as employment.

The paper is an attempt to analyse the shift from traditional crops to cash crops which is based on primary data based research collected from two study districts from the state of Himachal Pradesh in India dividing two districts in four sub-districts and further in 30 panchayats (lowest administrative unit) and 73 villages and at least selecting three respondents from each village. 200 respondents have been interviewed to arrive at desirable results. People have shifted from traditional crops to vegetables, semi-culture and horticulture and earning very good income and experienced change in the amenities available in the household as well as the provide better living conditions. Study concluded with observation that at present, the seeds of change has sown and now the change is visible and people of the hilly region are changing traditional crops and shifting to cash crops.

KUMAZAWA, TAKUYA* (Japan Society of Sport Sociology, sd131012@g.hit-u.ac.jp)
The Diffusion of American Football in Japan from 1930's to 1950's

This research examines the diffusion of American football in Japan from 1930's to 1950's from the sociological perspective. The research question is why and how it diffused in Japan during the time. In general, Japanese-American relations during the time was tense because of Immigration Act of 1924, Manchurian Incident in 1931, Second Sino-Japanese War in 1937-1945, Pacific War in 1941-1945 and the occupation of Japan by GHQ in 1945-1952. American football diffused in Japan in these situations although it is one of the most conspicuous American cultures. Why and how did this happen? In my opinion, there are four main reasons. Firstly, at the beginning of 1930's, Nisei students from Hawaii and the west coast of America began to come and study in Japanese universities, and they started to play American football. Secondly, some Japanese politicians, diplomats, business people and the American Embassy staff in Japan supported Nisei students to play American football because they thought that it was useful for promoting friendly relations between Japan and America, or at least, for preventing Japanese-American relations from getting worse any more. Thirdly, the media like newspapers and publishing companies also supported Nisei students to play American football because they thought that it had a potential to become popular content like baseball and help to sell their newspapers or magazines more. Lastly, because many Japanese people saw American football through American movies from the beginning of 1930's, American football had a grounding to be diffused. For example, about 20,000 people came and watch the first official game in Japan on November 29, 1934. In conclusion, American football diffused in Japan from 1930's to 1950's because four different actors shared their different interests through American football.

Conflict In Ethiopia

Colonialism is a practice of domination, which involves the subjugation of one people to another. The etymology of the term from Latin word colonus, meaning farmer. This root reminds us that the practice of colonialism usually involves the transfer of population to new territory, where the arrivals lived as permanent settlers while maintaining political allegiance to the country of origin. Colonialism is a characteristic of all known civilizations. Books on African history teach us that Ethiopia and Liberia are the only countries, which were not colonized by West European states, but the paper argues that Ethiopia was created by Abyssinian state colonizing its neighboring nations during the scramble for Africa. Using comparative colonial history of Africa, the paper tries to show that Abyssinian colonialism is the worst of conquest and colonial rule of all territories in Africa, according to the number of people killed during the conquest war, brutal colonial rule, political oppression, poverty, lack of education, diseases, and contemporary land grabbing only in the colonial territories. In its arguments, the paper discusses why the Oromo were defeated at the end of 19th century whereas we do have full historical documents starting from 13th century in which the Oromo defended their own territory against Abyssinian expansion. Finally the paper will elucidate the development of Oromo national struggle for regaining their lost independence.

The Roots of Horn of African Conflicts

The Roots of Horn of African Conflicts

Majority of societies passed through various conflicts in their history. Horn of African societies entered new types of violent conflicts starting at the end of 19th century, which is continuing until today under different forms. Exceptionality of Horn of African states is that Abyssinia (Ethiopia) was the only African Empire state, which participated in the colonization of Africa with Western European states at the end of 19th century. Compared to all participants of colonial powers of this part of Africa, Abyssinian conquest war was the longest and the bloodiest violent conflict according to historical empirical data. The territories of many nations were divided and became part of different colonial territories and different nations were forced to be part of the same colonial territory. The paper will discuss conflicts at different levels in the Horn of Africa: the conflict between state and ethno-national identity in the Sudan and Ethiopia. The Ethiopian empire colonial character from the view of non-Abyssinia peoples, the problem of interference of the state in religion affairs of some groups in Ethiopia (e.g., Islam and Waqfana (Oromo indigenous religion), geopolitical interests of foreign powers in the region will be the main points of the discussion. The role of Ethiopian state interest in Somali conflict will be one of the points of discussion of the paper.

Sociocultural Shocks In Cross-Border Marriages: A Comparison Between Chinese and Southeast Asian Wives In Taiwan

Along with the expansion of international trade between Taiwan and Southeast Asia, inter-ethnic marriages between Taiwanese men and Southeast Asian women have started from the late 1970s. Cross-border marriages between Taiwanese men and Chinese women have dramatically increased starting from the late 1980s after the Taiwanese government has changed the national policy. These new developments make cross-border marriages a significant phenomenon in Taiwan.

Based on the in-depth interviews with marriage immigrants from China and Southeast Asia, the author delineates their daily lives in Taiwanese families after they married. It is clearly that all these marriage immigrants experience sociocultural shocks when they have started their lives in Taiwan. The author notices that both Chinese and Southeast Asian wives wish to work on the job market and be economically independent but are restrained by the government policy. Both of them feel strange about the common arrangement in Taiwan to live in in-laws. They also experience the unreasonable underestimation of their natal family's SES by their in-laws.

Only Chinese wives complain that their husbands never helped with household chores, and their mothers-in-law seldom helped either, and so they have to work like a household servant. Moreover, they are often in conflict with their mothers-in-law or husbands on the issue of child rearing. They are also fussy about Taiwan's limited living space.

Most Southeast Asian wives, on the other hand, emphasize personal privacy and sanitation of living environment, but the real situations often contradict with what they expect. They also frown at the special diet their mothers-in-law prepared for them after they have delivered babies. They are especially angry about their natal mothers being looked down upon by their in-laws.

All the above mentioned sociocultural shocks in turn affect whether or not these foreign wives identify with their families in Taiwan.

The Movement of People's Politics in Democratisation Process in Thailand

This paper aims to explore the concept of people’s politics and its application to the Thai democratic movement. Although Thailand became a democratic country more than 80 years ago (1932), the problems of inactive participation, political conflicts and political unconsciousness are still clearly seen today. The attempts to bring top down to bottom up democracy became a new approach in the new Thai Constitution (2007). Both the political development council and local organization council Acts have been established to support people’s active involvement. People’s participation has also been launched throughout the country. Both the best practices and the drawbacks of people’s politics in the political movement towards democracy will be examined in the paper. The grassroots’ movement for human security, equity and opportunity will be studied as an example of the strengthening of people’s politics in terms of deliberative democracy, civic education and democracy. The roles of people’s politics in the development of democracy through the works of Center for People’s Political Development Center supported by King Prajadhipok’s Institute in 48 centers/provinces during the last decade will be reviewed and investigated for the success of people’s politics development.

KUO, SHIH-YUN* (Science Technology Disaster Reduction, sykuo@ncdr.nat.gov.tw)
LEE, HSING-CHIEH (National Science and Technology Center for Disaster Reduction)

Constructing the Assessment Framework for Local Disaster Management Capability

Due to the increased magnitude and frequency of extreme climate events, increased population density and land-use intensity, disaster impact that humans need to face in the future can be foreseen as more severe and complicated. Disaster risk is typically conceptualized as a composite function influenced by numerous natural and socio-economic factors. Coping capability is a key factor that influences not only the society's acceptance to disaster risk but also its potential to take related measures. It is important for a society (especially those vulnerable communities at local levels) to prepare itself so it is capable of responding to these natural, technological, and emergent threats more effectively. While there have been numerous studies and practices on assessing social vulnerability, few studies are emphasized on assessing a system’s ability to manage disastrous incidents. Hence, one worthwhile inquiry is to explore the characterization and measurement of disaster management capability at local levels.

Structure and Specificity TRUST of E-Zines

Nowadays the Internet has globally changed mass communication. As a result ‘civil journalism’ has emerged. The urgent problem of trust in networking has become more actual. Media-trust defines relations in mass media communication with the using of material objects including electronic media and devices. Media-trust is a multilateral phenomenon. Its components: trust of the audience to mass media, trust of the mass media (team of journalists or one journalist) to his audient, or to a concrete reader (a viewer, a listener, a user). The user's status (regular, random, prospective and etc.) is an important factor of Media-trust. Media-trust is a function of the characteristics of mass media audience, characteristics of the audience and the characteristics of the communication process. The peculiarities social media is the social context (“the ideology of the time”), the form and type of information. In particular, the Media-trust importance as a whole and its components depends of the usefulness or uselessness of the information, of connection information to one or another area of subject’s life and etc. Users' trust in e-zines is one of particular cases of media-trust, which is a result of three basic components integration: trust to information, trust to journalist. The integration of the referred components is constant and absolute, as trust in social information is impossible without trust in its source. The triad of these types of the interrelated trust has three aspects: information, perceptive and interactive. The validity of the conceptual model and the relationship of many media-trust characteristics have been confirmed in empirical study of Russian youth. The relationship trust to e-zines and intellectual, emotional and communicative respondent's characteristics has identified.

Trust, Loyalty, and Culture in Organizations

The trend in business is based on the idea that an employee is the primary resource of any organization, that sincerity, benevolence, trust and loyalty of employees is a major competitive advantage. The purpose of the study was to examine relationship between different psychological organizational phenomena, such as trust, loyalty, and organizational culture in organizations with different spheres of activity. Hypotheses were tested using survey data different organizations: publishing, nanotechnology, banking, PR, marketing. The results of comparative and cross-cultural studies of trust, loyalty, and types of organizational culture have given evidence of all hypotheses. The results suggested that separate components of trust, loyalty and culture are related between each other. Organizational culture is related to organizational trust and employees' loyalty, i.e. different types of culture require particular combination of trust and loyalty indicators. Organizational trust is related to employees' loyalty, i.e. each component of organizational trust will be determined by the specific rate of each type of loyalty (organizational, professional, labor). Moreover differences of preferred and actual culture index are inversely related to overall level of trust and loyalty. The study carried out in a unique context of poor explored Russian market could provide further practical and theoretical insights and contributed to the understanding of the nature, development, and maintenance of trust, loyalty and culture in organizations. Yet, this understanding has not been fully translated to the business community in a way that encouraged the actions necessary to reduce the growing trust deficit. A-dimension of the efforts to build better practices for communication and employee involvement, along with strategies for reducing employee vulnerability and dependence. These efforts should be integrated into the cultural norms of the organization, where trust is a part of every interaction between employees.

The Sportification of Tai Chi and the Hegemony of Vision

The purpose of this paper is to enable a deeper understanding of modern sport through an examination of the sportification of tai chi (taijiquan) – its transformation from a folk tradition specific to local communities into a modern sport with global competition. While there is considerable literature on the sportification of tai chi (Li, 2008; Ryan, 2008; Zhang, 2010), this paper proposes to understand sportification as hegemony of vision (Levin, 1993) – the prioritization of the visible as the most important source of socially relevant meaning over what is perceived by other bodily senses. This was first made possible by the creation of the Simplified 24 Form in 1956 under the initiative of the New Chinese Government. Whereas traditional tai chi was, and still is, a martial art combined with internal “chi” cultivation techniques impregnated with Daoist philosophy, the Simplified 24 Form is sterilized of the martial, internal and philosophical aspects; it was rendered a standardized, easy-to-learn health exercise for the masses, demanding only the correctness of visible movements. This prioritization of vision enabled objective rules for competition, which systematically allocated social meaning to the visible body. While competition has contributed to the global popularity of tai chi, it has invariably neglected the aesthetic aspects that were not subject to visual appreciation, such as the internal cultivation of “chi” and its philosophical implications. By drawing on data gathered by fieldwork in a tai chi class in Xinxiang City, China, light will be shed on the rich sensory experience that traditional tai chi affords. This relativizes not only sportified tai chi, but also modern sport itself, as an activity obsessed with the externally visible out of the whole of human sensory experience.
rate and rate of deaths in medical institutions broken down by gender and age, and (c) life expectancy at birth, 20 years of age, and 65 years of age broken down by gender, in post-war Japan will be examined, and by comparing between the patterns of chronological change of (a) and (b), and between those of (b) and (c), it will be analyzed how the change in (a) has influenced (b), and how the change in (b) has influenced (c).

**JAPA-15.1**

**KURODA, YOSHIHIKO** (Nagoya University, krd@nagoya-u.jp)

**Globalization in East Asia and Contemporary Situation in Northeast Asian Societies**

The East Asia and Pacific region continues to be an engine of global growth, contributing around 40 percent of global growth in 2012. Driven by strong domestic demand, the region grew at 7.5 percent in 2012 – higher than any other region in the world. Economic interdependence in the countries of Northeast Asia is getting stronger. Needless to say, the center of economic development is China. For Japan, economic importance of China has increased every year. China is the largest trading partner for Japan now. Japanese population who live in Shanghai is estimated to 100,000, which is greater than New York. Chinese has become the biggest bloc of foreign residents in Japan in 2007, overtaking Koreans, which has been the biggest bloc in Japan in the postwar period. In rural and remote areas, Chinese workers called Foreign Trainees and Technical Intern are an essential labor force to support the local economy since the 1990s.

Although North Western countries share common economic interests, political tensions between Japan and China, and between Japan and Korea frequently occur in the 2000s. Japan and China are strongly opposed to each other over the territorial problem. Japan and Korea are opposed to each other over the territorial problem and the understanding of history. In the near-to-mid term, it seems that there is no hope for building the East Asian Community.

Japan and China’s relationship is often described as comprising “Cold politics and hot economics”. It can be said the same for Japan – Korea relationship. The problem is that violation of human rights may be prone to happen upon foreign residents from North Eastern countries under the situation of “Cold politics and hot economics”, as is recently observed in hate speech against foreigners from Korean.

**White Trash, Working Class or Just Your Average Guy? the Changing Face of a British Far Right Supporter**

In the wake of a lively academic debate of the past decade and against the background of yet another decline in fortunes of the British Far Right, the paper investigates the sources of its political power. It was long considered to lie in the working class neighborhoods, to the point of current BNP leader comparing his party to the early 20th century Labour. However to what extent is the support base of the Far Right proletarian, or rather post-proletarian, given the overall postindustrial trend, remains debatable. And there's more to that – how does the experience of living in an area with actual minority population influence the support for the Far Right and what are their preferences in cross-party perspective. Based on aggregative electoral and socio-economic data, I would argue that there is need to differentiate between the ideological hardcore, persistent and transient supporters of the Far Right, which are defined by distinct set of characteristics. Furthermore, as the face of the Far Right shifts to grassroots movements (such as the English Defence League), the transiency trend is set to increase.

**The Disparity in Rate of Deductible of Social Health Insurance with Respect to Age and Gender and Its Resolution in Post-War Japan: Whether It Has Influenced Healthcare Utilization and Longevity?**

In post-war Japan, healthcare system has been constructed so that every Japanese could utilize health service of modern medicine free of charge or at low cost. When this system started in 1961, the employed and their dependents were obligated to enroll in so-called “social health insurance” plans. The medical expenses, the amount of which was covered by the National Health Insurance, those charged on their dependents were covered only by 50%. The other people such as the self-employed including farmers, retirees, and their dependents were compelled to enroll in so-called “national health insurance” plans, which covered 70% of their medical expenses. The disparity in rate of deductible was based on occupational status, which was closely related to age and gender. This disparity has been reduced bit by bit until the year of 2003 when irrespective of occupational status, the deductible rate for those 70 years and over of age was 10%, whereas that for those under 70 years of age was 30%; in either case, monthly total out-of-pocket expense was capped. In this paper, change in (a) disparity in out-of-pocket expense of healthcare service utilization, (b) health care utilization.
ing the gender employment gap in the group of parents of young children. Also the institutional context (work-family policy) plays an important role. However, there are also financial incentives that lie in the rules of family benefits and child tax credits systems, often neglected in comparative research, but influencing material decisions whether to work. In my research I compare these rules in the CEE countries looking for incentives that support or hinder maternal employment. I focus particularly on such pairs of countries that share similar socio-economic and cultural contexts for maternal employment, but differ in financial incentives that lie in the tax-benefit systems and in employment outcomes for mothers of young children. One of such examples is a pair of two, small Baltic States: Estonia and Lithuania. I show that while socio-cultural and structural contexts are more favorable for maternal employment in Estonia than in Lithuania, more generous maternity/parental leave-benefit provisions in Estonia form a strong negative economic disincentive for mothers to work when their youngest child is still in its nursery age. The income of mothers of very young children (nursery age) is much lower in Estonia than in Lithuania, whereas employment of mothers of older children follows the opposite pattern.

Role of Local Governments in Immigrant Integration: Cases from Thailand and Japan

There are much discussion on immigration at the national state level, focusing on their immigration and citizenship status. However, it is at the same time recognized that there are many migrants who do not go through the official procedure of immigration and come to live in the countries illegally. Local governments need to face these migrants on a day-to-day basis, since these migrants live there as residents. We focus on this vacuum of migration policy at the local level. How are the local governments coping with migrants and how are they balancing their accountability to local residents and their accountability to national state regarding migration policies? We will take cases from Thailand (Tak and Samut Prakan) and Japan (Yokohama city) to explore the struggles of local governments and communities.

Vulnerabilities to Cyclonic Disasters in Bangladesh

This paper aims at exploring the vulnerability factors affecting cyclone impacts in the southern coastal regions of Bangladesh based on empirical investigations. The primary data for the present analysis has been collected from over hundred respondents, who sustained repeated cyclonic disasters, based on semi-structured interviews conducted during last several years in the study areas. The findings suggest that the prevailing socio-cultural conditions significantly underpin the cyclones’ evacuation behavior and rapid response during crises and emergencies. Moreover, a comparative analysis of 1991, 2001 and 2007 cyclones, marked as the most severe in recent history, reveals a significant decline in life casualties of 0.5 million, 0.14 million and 4 thousand respectively. The paper identifies three major reasons behind this damage reduction. First, disaster preparedness measures have gradually become effective and the information dissemination technology and early warning systems got improved over the years. The widespread of cell phone technologies in rural areas of Bangladesh played key role in effective early warning dissemination and reducing life casualties between 1991 and 2007 cyclones. The second reason is the unequal population density of the landfall areas of these three cyclones. The 1991 cyclone made landfall near Chittagong city, the second largest city in Bangladesh, causing maximum damage to lives and livelihoods. The third reason suggests that the 1991 cyclone had attacked during high tide, causing high storm surge accompanied with severe inundation resulting enormous destructions. The paper, however, makes substantial analysis for informed decision-making and policy considerations for cyclonic disaster reduction in southern Bangladesh.

Does School Context Reinforce the Educational Inequality of Children of Immigrants in Europe? A Multilevel Analysis of Individual and School Effects

Various national and international studies on school achievements confirmed that immigrant descendants suffer educational disadvantage over native students (cf. 05-00-2006). Social background of students has proved to be crucial factor explaining unequal opportunities in education. However, in some national contexts disadvantaged students seem to overcome the socioeconomic barriers and perform better at school, a fact that raised the question about the role of context in school achievements. This article focuses on the institutional factors of school in explaining the discrepancies in educational outcomes between native-born and second generation in six European countries. The aim is to examine the effect of school policy, climate, and sociocultural composition of students on reading and mathematics performance of 15 years old students. I use hierarchical linear modelling as a multilevel analysis technique with the international data of PIAAC. Among countries such as Belgium, Germany, the Netherlands, and Switzerland in order to estimate both, school-level and cross-level effects on the individual students’ test performance. The expected finding is that in all six countries compared the school context does affect the performance of students. The more selective the education system either regarding age, performance and/ or sociocultural background of students, the more disadvantaged is the second generation compared to their native-born peers. On the other hand, the schools that responded to the increasing multiculturalism of society and adapted their programmes to students’ specific needs are expected to have a positive impact on students’ performance.

Mobility As Strategy to Cope with Resettlement: History of Mobility and Social Reproduction of Ethnic Groups in Northern Laos

Moving villages has been part of their life for many of the indigenous groups in Northern Laos. However, in the last few decades, such mobility patterns have changed since villages in the Northern Laos were targeted for resettlement to places near the road. Increasing economic concessions from cross-border investment has lead to rapid expansion of rubber plantation, restricting land and forest access of the ethnic people. With resettlement and changing livelihoods, which also lead to scattered social networks, indigenous women and men have to devise new ways of organizing their social reproduction. Women in these communities are burdened with the responsibilities to weather the changes associated with resettlement and keep family going for day-to-day survival, but their support networks for childcare and other reproductive work might not be available as before with more women becoming busier and more mobile in order to gain cash income. Unlike childcare among urban workers and in industrialized countries, analysis on childcare in rural remote areas has been neglected. However, we noted that the types of mobility patterns pose new challenges for childcare arrangement in these remote villages. Based on Cresswell's (2010) notion of political dimension of mobility and following Kronsid (2008) in taking mobility as capability, this paper analyzes the link between gendered livelihoods and mobility patterns and how these affect social reproduction especially childcare.

KUSAKABE, KYOKO* (Asian Institute of Technology, kyokok@ait.ac.th)

"Individuality" As a Moral Expression in Japan

Sociology has long been interested in individualization or individuality as social phenomena. Classical sociologists found individualization among social changes in modernization. It is said that there has been this process in Japanese society, too.

This paper examines how “individualization” and “individualism” has been talked about, not among sociologists, but among lay people in Japan and explores how people conceive of “individualization” and “individualism” and how they make use of those concepts to understand their everyday life. Those words are not only theoretical terms but also everyday words. This way of approach is based on the idea Ibarra & Kitsuse (1993) proposed as an ethnography of moral discourse; a constructionist approach to social problems that focuses on social processes in which a social problem is defined and discussed.

The words “individualization” and “individualism” in Japan are also used often to problematize social phenomena, people, or events. For example, a movement to change the civil law to allow women to keep their name after their marriage used to be criticized as excessive “individualism.” Eating a meal alone, especially in the case of children or young members of a family, drew attention in early 2000’s as “ko-shoku (individual or solitary meal or eating)” and is thought to be a problem of individualization that has weakened family bonds. These vocabularies convey moral meaning and they are “vernacular constituents of moral discourse” (Ibarra & Kitsuse 1993).

By examining how those words are used in moral discourse, I would like to argue how they work for people to approve or disapprove of social conditions, behaviors, and social changes. Talking about “individualization” or “individualism” is a speech act that participates in constructing social realities.

Identity Problems in Global-Local Relations

The categories of identity, identification, state, civil, national, and ethnic identity are being widely used in sociology and other disciplines. These concepts are rather new to Kyrgyzstan’s public domain and scientific rhetoric where the interpretation of a nation as citizens of the state started entering political and academic discourse. According to Habermas, post-traditional, post-national identity is “a more sober political identity” that separates itself from the background of the past centred around ethnic history. Modern civil nation is not made spontaneously and at one step. It evolves as a result of efforts aimed at consolidation of civil society and its institutes in their interaction with the state.

Modernization of post-Soviet Kyrgyzstan in the context of local-global relations of post-traditional world will be successful only when traditionalism is overcome based on the choice of civil or social Demokrasi. Dominant national and cultural identities are a feature of traditional societies in which ideology, ethnicity, and religious traditions are main social values. In post-traditional world the values of civil nations are asserted that integrate multi-ethnic communities and ascertain cultural pluralism as a main vector of collective identifications. A civil nation is not developed by chance, but emerges as a result of the efforts to strengthen civil society and its institutes and their interaction with the state. The overall problem of the Kyrgyzstan’s identity is a mismatch between its basic elements such as national, ethnic, religious, cultural and political ones. There is a trend for new interpretation of these elements’ composition. While the Soviet identity was mobile home lifestyle” in the US southern regions which promises a pleasing climate, mobile home is generally more affordable than living in a site-built home, many people in the Sunbelt states of the US: the mobile home park. While living in a mobile home park, they play in what has been labelled as an inhumane, insensitive, detached system of research provides a platform for the labour brokers to be able to defend the role and subjecting it to an assessment alongside the notion of decent work as advocated by the International Labour Organisation (ILO). The research solicits the opinions of the labour broker so they can directly address, justify and/or clarify the accusations against them as being against the four pillars of decent work. This research has been conducted regarding the business case for labour broking and subjecting it to an assessment alongside the notion of decent work as advocated by the International Labour Organisation (ILO). The research solicits the opinions of the labour broker so they can directly address, justify and/or clarify the accusations against them as being against the four pillars of decent work. This research provides a platform for the labour brokers to be able to defend the role they play in what has been labelled as an inhumane, insensitive, detached system and strategy.

Between Lifestyle and Necessity: Senior Mobile Home Living in Florida

This paper focuses on a community-type that has long been attractive to older people in the South states of the US: the mobile home park. While living in a mobile home is generally more affordable than living in a site-built home, many seniors actively seek, and even move across the country, to participate in the “mobile home lifestyle” in the US southern regions which promises a pleasant climate, homeownership, leisure activities, community, and friendship to White middle and working class seniors. My paper examines to which extent these expectations by seniors are fulfilled in which kinds of communities, and how social differences, economic struggles, as well as health and personal issues can compromise them over time.

The paper is based on an analysis of 150 qualitative interviews conducted with residents of the Gulf Coast of Florida between 2005 and 2009, where more mobile home parks are more numerous than anywhere else in the US. Just over half of the interview participants were 55 years or older; roughly one fourth resided in so-called senior parks which restrict residency to persons over the age of 55, while the other half lived in communities that also accommodate middle aged residents and children.

Even though it is not an entirely urban phenomenon, the senior mobile home lifestyle is influenced by urban experiences and cultural imagery, such as fear of crime or racial/ethnic conflict, often creating a longing for simpler, more neighborly and homogenous communities which can, however, turn out to be less affordable, and personally fulfilling for older people than originally anticipated.

“Look at My House!” – Home-Making and Identity in an Urban Mobile Home Park

This paper focuses on meanings and practices of home among residents of a predominantly Latino mobile home park in Florida. It is based on an analysis of 30 qualitative interviews conducted with sixteen Latino/as, twelve White, and two African American community residents, follow up walks with fifteen interview participants, and ethnographic fieldnotes written by a Latino student researcher and community resident during 2008-2009. This research was part of a larger study investigating the communities and disaster vulnerabilities of working class families who lived in mobile home communities in Florida, during the unfolding of the last U.S. economic crisis.

The paper specifically discusses the meanings and emotions of home for the Latino/as, who were predominantly immigrants, and emphasizes differences with how white residents think and feel about their places. Latino/as generally displayed great pride in their neatly decorated and customized mobile homes. They emphasized their (various) achievement of homeownership, the neighboring community, and the park’s safety and tranquility (especially when compared with surrounding areas) in their descriptions, which functioned as markers of decency, upward mobility, and personal identity. Whites, on the other hand, had less positive feelings regarding their homes and community overall, and at times struggled with negative public perceptions of “trailer” residents, as well as a sense of economic decline or failure.

In sum, the paper shows how residents of the same neighborhood in similar housing can, figuratively, live in very different places, based on culturally framed social locations and contextualized within the larger stories immigrants and natives tell about our lives.

The Business Case For Labour Broking In South Africa

Globalisation has brought about changes in the world in particular the restructuring of the workplace in order to promote labour market flexibility. Labour broking has been labelled as a new form of slavery that further fuels worker exploitation. Certain abuses have been associated with the practice of labour broking in relation to ensuring decent jobs in South Africa’s globalizing capitalism. This research has been conducted regarding the business case for labour broking and subjecting it to an assessment alongside the notion of decent work as advocated by the International Labour Organisation (ILO). The research solicits the opinions of the labour broker so they can directly address, justify and/or clarify the accusations against them as being against the four pillars of decent work. This research provides a platform for the labour brokers to be able to defend the role they play in what has been labelled as an inhumane, insensitive, detached system and strategy.

From ‘L’intervention Sociologique’ To ‘Pendampingan Sosiologis’: A Reconstruction Of Social Movements Theory & Methodology Based On Indonesian Experience

The idea of ‘intervention sociologique’ (sociological intervention), introduced by respectful French sociologist, Alain Touraine, has been considered as one of the most innovative approaches to social movements. However, in the different social context out of European society, sociological intervention faced various challenges. My experience in doing sociological intervention to a group of young actors of ‘multicultural movement’ in Indonesia has allowed me to identify the limitation of sociological intervention and furthermore, to build alternative adaptation and innovation of the theory that is more suitable with Indonesian society. As a consequence of theoretical and methodological reconstruction that I have made, I therefore introduce a concept of ‘Pendampingan Sosiologis’ or could be translated in France as ‘l’accompagnement sociologique’ and in English as ‘Sociological Accompaniment’. Although pendampingan sosiologis found its origin and inspired principally from Tlaxcoaque of Chiapas and this concept has been applicable in Indonesia. Pendampingan sosiologis is a new kind of sociology that needs to be introduced. It is a new kind of sociology that is not theory and research, experiment and action, there are several fundamental differences between these two approaches that certainly will open a further global dialogue for the development of social movements theory and methodology in many different contexts.

Multicultural Movements In Indonesia: A New Youth Initiative For Social Transformation

The massive process of reislamization of society that started to develop after the time of ‘Reformasi’ in 1998 has brought many social changes in everyday practice of social life in Indonesia. Today, Indonesia has to face almost everyday the problems related with the disruption of harmony of living-together. Besides religious-fundamentalism and terrorism, the intolerance among religious groups, violence against minorities and the demise of cultural diversity respect value have become a serious problem in society. Concerned with that situation, many young people in Yogyakarta in Central Java have built movements for bringing back social tolerance in Indonesian public sphere. As counter-actions and count-er-discourses, the movement has successfully gained the public support and built larger networks in local and national levels. The movements also have become the source of ideas and inspiration for wider discourses on diversity in a global...
multicultural world. Of course, there are challenges that they have to deal with in order to achieve the social transformation.

KUZMINA, ELENA* (MGIMO University, helen.i.kuzmina@gmail.com)
Russian Youth: Mobilities, Inequalities and Life Chances

Due to the influence of the global social transformations of XXI century there have appeared new forms of inequality (access to mobilities, networks, education, spare time and information, guarantees of security) as well as the "old" inequalities concerning income, wealth, prestige are being changed in the direction of increasing. Russian youth has been particularly affected by the rapid social, political, economic and cultural changes and discrepancies. Furthermore, the breakdown of the USSR has led to the drastic social conversion. These multiple structural factors not only determine but shape the life of youth in Russia. Faced with these uncertainties and turbulences the young people have to make their own decisions and to pattern their behavior on the current "liquid modernity" (Z. Bauman) which possess a lot of seeming life chances and choices.

Our paper addresses the growing phenomenon of social mobility which has become a core motif of the modern society and numerous "new" and "old" inequalities forming the social structure of the Russian society. The theoretical grounds of the research are the classical and the modern social theories concerning social inequality and mobility. We elaborate the "integral" approach to the social inequality which appeals simultaneously the objective characteristics and to the person's perception of his social position and the inequality phenomenon. The paper is based on the desk study of the Russian youth, its problems, choices, social identification, ways of life and on the data of the author's sociological on-line survey of 400 young people at the age of 18-35 years old. I'll present the results of the research showing the influence of the becoming of non-linear inequality on the social mobility and life chances of youth in Russia.

KÜNEMUND, HARALD* (University of Vechta, harald.kuenemund@uni-vechta.de)
Life Expectancy and Retirement Age: Policy Options and Pratise

The trend to early retirement that has been observed in many industrialized countries (e.g., Kohli et al. 1991) seems to have come to an end. The steady increase in life expectancy has led to changes in retirement age regulations, what in turn accelerates the ageing of the workforces. For example, the Czech Republic and Poland increase their retirement age by the amount of the projected increase in life expectancy, what statistically keeps the mean duration of the retirement phase in the life course constant, while the mean working phase in the life course extends. Others countries like Germany rise the retirement age in a way that both the retirement and the working phase increase. Regardless of the amount, these changes affect inequality and redistribution by the social security systems as life expectancy is distributed unequally in these societies: For example, better education and higher income result in higher life expectancy. The paper discusses opportunities to change the current three-parted (and dominantly male-oriented) life course regime in a way that both increased mean productivity of the aging workforces and reduced inequalities can be reached at the same time by reorganizing the life course, namely by redistributing education, work, and retirement phases in the life course. By improving productivity, the problems of ageing societies can be tackled at the societal level (e.g., increasing contributions for social security) as well as both the level of employers (e.g., improved health). Discussing such opportunities, other than simply rising retirement age, widens the scope for designing growth-friendly social security that help to reduce existing social inequalities.

KÜNZLER, DANIEL* (University of Fribourg, daniel.kuenzler@unifr.ch)
The Politics of Social Policy in Kenya

Since the introduction of the multi-party system in 1992, Kenyan political parties generally had a low programmatic profile and were clearly personalized. Voting was rather based on tribal and ethnic affiliation than on policies. The inglorious climax was the violence after the presidential elections in 2007 when more than 1000 people were killed and over 300,000 displaced. It was thus remarkable when the newly aligned major political parties released manifesto for the 2013 elections. They included some claims in the field of education, health and housing converging into a common vision of Kenya. The financial feasibility of these grand pledges was strongly doubted by Kenyans, as was the winning coalition’s interest and capacity in implementing them.

However, barely three months after the election, President Kenyatta declared free public maternity services, a first step towards free primary healthcare as designated by the Jubilee coalition manifesto. Considering the human and financial resources, there is still ample ground for scepticism concerning the long-term viability of this policy. Nevertheless, this is a significant development in a rather sclerotic social welfare system.

What are the determinants of this social policy change? Functionalist, institutionalist, economic determinist, modernisation or power theories have limitations and explanatory power. Preliminary evidence from interviews with stakeholders in Kenya and other sources point towards the importance of politics. The recent post-election violence questioned both domestic and international legitimacy. Including free maternity care in the manifesto and implementing it quickly is on one side an attempt to restore international legitimacy, as maternal health is an important issue on the international agenda (MDGS). Given the neck-and-neck electoral race of the two big coalitions, it on the other hand also attempted winning the support of smaller electoral groups and thus domestic legitimacy. Hence, catalysed by a serious electoral crisis, politics finally resulted in policies.

Faces of Uncertain Transitions to Adulthood – in Different Fields of Education

The faces of uncertain transitions to adulthood vary between different countries. But they also differ within countries. Germany and its’ manifold fields of education are ideal cases for studying the phenomena in question. Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will carve out different patterns of uncertain transitions to adulthood.

In our presentation we will (a) show how the transition to adulthood is structured in different fields of education (e.g., in a paternalistic apprenticeship based on an old master-pupil model; in an art academy which offers independence but uncertain job chances); (b) differentiate between forms of uncertainty (e.g., to secure the livelihoods in the long term, to find the scope for self-realisation, to live alone); (c) discuss how the adolescents cope with uncertainty, how they design their future and their self.

The sample of our study contains trainees in vocational training (hairdressers, painting) and university students (art, teaching/engineering). The sample composition allows a comparison of adolescents in different fields of education in Germany.

There are different theoretical options and viewpoints to get a perspective on transitions to adulthood. In frame of our research project, we link theories of interactionism (e.g., Meads processual concept of “self”, Strauss’ concept of “status passage”) with Bourdieu’s theory of social inequality (and his concept of “field”) to understand the strategies and orientations of adolescents at the threshold to adulthood.

KÖNIG, ALEXANDRA* (University of Wuppertal, akoenig@uni-wuppertal.de)
Orrientations and Strategies of Less Privileged Students

In Germany, like in many other countries, the proportion of adolescents with university entrance exam increases and the absolute number of students is higher than ever before. Using data from a quantitative and qualitative longitudinal study on orientations, strategies and decisions of adolescents upon leaving school, we will shed light into the way less privileged adolescents make their choices and shape their self-project. We use the term “self-project” (in reference to Mead and Strauss) to indicate that the decision for a university program is (a) part of a more encompassing “self-project”, that allows identification and this means ascription to a unique self; (b) it is a decision-process (with evaluations, modifications, revisions), and it is (c) embedded in an interactive process with generalized and significant others. The sample of our study contains three subsamples: students of art, of teaching, and of engineering. We want to discuss the following points: a) The structuredness of choices: Choices are structured because requirements and expectations differ depending on the social position. For instance, the less privileged adolescents choose more often university programs offering good job chances (like teaching or engineering). b) The access to different fields of education: While the criteria for access to university are universal and transparent for all students (e.g., improved health). Discussing such opportunities, other than simply rising retirement age, widens the scope for designing growth-friendly social security that help to reduce existing social inequalities.

KÖNIG, RONNY* (University of Zurich, koenig@soziologie.uzh.ch)
Educational Inequality and Welfare State Patterns

Previous research on social stratification reveals that social inequalities in educational and thus occupational opportunities are still very relevant features of modern societies. Against this background the study focuses on the intergenerational reproduction of educational inequalities and how this reproduction is affected by specific welfare state patterns in 13 European countries (Austria, Belgium, Denmark, France, Germany, Greece, Ireland, Italy, the Netherlands, Portugal, Spain, Sweden and Switzerland). For the analyses micro-data from the Survey of Health, Ageing and Retirement in Europe (SHARE) and macro-data from several sources (e.g. Eurostat, OECD and UNESCO) are used. With this approach it is possible to combine a multi-level perspective in a two-level model. A broad comparative perspective allows the identification of different institutional influences, namely direct or indirect governmental investments in education, national specific shifts in the labour market as well as demographic changes. In general, multi-level estimates on 33,346 individuals – born between 1950 and 1984 – show the perpetual importance of the family of origin and the reproduction of educational inequalities over generations. Furthermore, the overall hypothesis that both welfare state arrangements and labour market indicators have an influence on the educational attainment is confirmed. In addition, contextual characteristics can partly counter the influence of social origin and therefore reduce the intergenerational transmission of educational opportunities.

The influence of generational support on housing pathways: Evidence from the British Household Panel Study (BHPS)

The family home is the single most valuable asset for most individuals and households. In addition, people have strong emotional attachments to their family home, when it is passed on by one generation to the next (capitalization). In recent years the idealised concept of a generational housing pathway has become more and more complex. Young people are increasingly depending on their parents, both financially (deposit and in-kind (guarantor, living rent free at parental home), to acquire their first home. Qualitative evidence shows that middle aged children support their less well-off parents to purchase their own flats via the right-to-buy scheme. This paper contributes to this debate by investigating the influence of bequests and in-kind generational transfers on homeownership. Based on the British Household Panel Study (BHPS) we investigate how housing pathways are influenced by receiving an inheritance and in-kind support by offering rent-free accommodation. Estimates suggest that inheritance seems irrelevant compared to other socio-demographic control variables. Based on the results the timing of such windfalls seems to be crucial. Most individuals receive an inheritance at the end of their work-life and often share the amount of the windfall with their siblings. Hence, at this stage in life few people move into their parental home, to acquire their first home. Qualitative evidence shows that middle aged children support their less well-off parents to purchase their own flats via the right-to-buy scheme. This paper contributes to this debate by investigating the influence of bequests and in-kind generational transfers on homeownership.

Gender, Work and Family: The Situation in the Philippines

Using three waves of data from the International Social Survey Programme (ISSP) survey modules on Work Orientations, and on Family, Work and Gender Roles, the paper will explore the current situation and the changing trends on how the work-family nexus is structured by gender in the Philippines. At the macro-level, Filipino women have gained greater equality with Filipinos men than its Southeast Asian neighbors. The Philippines was one of the first countries in Asia to have recognized the important role of women as an essential component in nation-building. There are laws enacted laws and policies instituted to ensure the empowerment of women. The Philippines has had two women Presidents, a woman Chief Justice of the Supreme Court, and women in high-level elected positions. Women have much access as men to establish their own businesses. But what happens when men and women go home from work? Despite the increasing the role of women in the public sphere, the Philippines remains a conservative, largely Catholic society that puts importance on the family. The paper will first examine the gender differences in the domestic division of labor, traditionally the women's domain as "homemakers". Then the paper will examine the possible impacts of gendered division of labor on the work sphere, as measured by potential work-family conflict, and attitudes/behavior on female employment over the life-cycle. Finally, the paper will examine the possible linkages of domestic division of labor and well-being of couples, including satisfaction with family life, happiness and satisfaction with life. Using the data from ISSP surveys conducted in 1994, 2002 and 2012 will allow the paper to examine the trends in gender, work and family in the Philippines within the context of the changes in the Philippine economic conditions across three decades and the accompanying socio-cultural changes it brought.

Ambivalent Transnationalism. Understanding the Long Distance Engagements of Hometown Organisations

Collective remittances undertaken by hometown organisations for the benefit of their origin area is a well-known illustration of migrant transnationalism. This paper unravels the rationale for these hometowns to engage (or dis-engage) into long distance development practices. The latest evolutions of transnational theory focuses on the spatial extensions of transnationalism embedded into neo-liberal globalization but fails to address the micro level drivers of transnational engagement. It is contended that a revised conception of structure and
agency approach to transnational phenomena is likely to shed a new light on actors’ transnational engagements and on the role of transnational social institutions such as hometown organisations. This S/A approach presented in this paper draws on ambivalence theory as well as Habermas communicative action theory. The paper also argues that such an approach would open the possibility to open a cross fertilizing dialogue between transnational theory, migration theory and general social theory.

The different steps of the demonstration will be illustrated by personal research on hometown organisations in France and the UK. Arguably, integration adds layers of migrants’ identity. Their identification with the place of settlement and their new associated obligations undermine their “raison d’être” as a villager. The life experience and socialisation of migrants in alternative social fields enriches their lifeworld with new references and fosters ambivalent perceptions of the world. But, in term, this multi-polarisation questions people sense of belonging, in this way voters need to be constantly reassessed. A transnational practice shows that it is far from being the case. This reorientation parallels the emergence of a Moroccan middle class in France. This data survey analysis is complemented by a field study that informs the dual embedding “here and there” of immigrant transnational organizations.

What are the relationships between this reorientation of Moroccan volunteerism and integration? Is the growing importance of the transnational referent synonymous with a weakening of the integration dynamics in the host society? The analysis of the INED survey “Trajectoires et Origines” including a sample of 10,000 people and focusing on both immigrant integration and transnational practice shows that it is far from being the case. This reorientation parallels the emergence of a Moroccan middle class in France. This data survey analysis is complemented by a field study that informs the dual embedding “here and there” of immigrant transnational organizations.

Transnational Volunteering and Immigrant Incorporation: The Case of Moroccans in France

This paper analyses the recent evolution of Moroccan organisations in France. The analysis of the Journal official, a registry of all associations created in France, shows a marked decline of hostland oriented organizations such as civic or socio-cultural associations and whose aim is traditionally dedicated to insertion of immigrant communities in France. In parallel, the number of creation of homeland oriented organisations is on the rise and surpassed hostland oriented organizations in 2002. These transnational associations are mostly NGO’s engaged into development and humanitarian activities.

The paper also argues that such an approach would open the possibility to open a cross fertilizing dialogue between transnational theory, migration theory and general social theory.

What are the relationships between this reorientation of Moroccan volunteerism and integration? Is the growing importance of the transnational referent synonymous with a weakening of the integration dynamics in the host society? The analysis of the INED survey “Trajectoires et Origines” including a sample of 10,000 people and focusing on both immigrant integration and transnational practice shows that it is far from being the case. L’action Et Les Politiques Syndicales à L’épreuve De L’aide Et Des Services à Domicile En Europe. Le Cas De La France

En France, comme pour d’autres pays européens, l’aide et les services à domicile sont le lieu, depuis plusieurs décennies d’expérimentations discrètes en matière d’émergence de nouvelles formes d’emploi et de précarisation du travail. Dans le même temps, des avancées certaines mais fragiles ont aussi eu lieu et ce, depuis plusieurs décennies.

Depuis le milieu des années 2000, on assiste toutefois à des mutations importantes. Les nouvelles régulations engagées par les Pouvoirs publics impactent très fortement les conditions de travail et d’emploi ainsi que les politiques et pratiques des employeurs en matière de management et d’encadrement du personnel.

Cette communication propose de s’intéresser aux formes des politiques et de l’action syndicales dans l’aide et les services à domicile en France, en articulant les différentes échelles de l’action syndicale et en revenant sur les contradictions à l’œuvre. L’analyse documentaire, d’entretiens réalisés auprès d’acteurs syndicaux et institutionnels ainsi que des observations de permanences syndicales permettront de discuter des stratégies à l’œuvre et de la façon dont elles peuvent peser pour changer le travail, qu’il s’agisse d’actions au quotidien ou de formes d’intervention dans des instances internationales. Les données sont extraites d’une recherche européenne (Belgique, Italie, Espagne, France) coordonnée par le projet IT-COM (IT-Comité européen) menée au moment de l’application de la Convention internationale 189. Une mise en perspective avec les autres pays étudiés sera proposée.

The Egypt Sufism Movements in the Aftermath of 2011 Revolution. Critical Study

Abstract: Experts on Sufi movements often assume a potentially significant position for Sufi in framing the political map for change in Arab countries following the Arab Spring. This is particularly true for one of the most vibrant Sufi capitals of the Muslim world; Egypt, holding a record of more than ten million Sufi members. In this paper, the author presents the problematic issues of Sufism with respect to politics in Egypt, with particular focus on the political experience of the Sufis in
Egypt. It seeks to examine the Sufi experience in the process of political struggle, in addition to their contributions in the election held in November 2011 in an attempt to understand the factors which culminated in their gaining remarkably insignificant political support in spite of their massive membership base; and officially favored state support, both internally and externally. This study concludes that the nature of the Sufi project itself has played a key role in restraining their political presence, in addition to their lack of political awareness as well as poor organization and populism; all of which have had a significant impact on the failure of the political experience of Sufi orders in Egypt.

Moreover, the two decades spanned by the data, results show that terrorist attacks were a more liberal and more left-wing oriented voting behavior encounter less problems, especially if they are short of financial resources, we believe that municipalities with the countries the immigrants come from render integration more difficult. We expect problems to integrate foreigners to be higher in larger municipalities especially if they are short of financial resources, we believe that municipalities with a more liberal and more left wing oriented voting behavior encounter less problems, and finally it is the percentage of immigrants and their cultural distance which also play an important role.

Switzerland is a country with a relatively high rate of immigration. This puts the municipalities under considerable pressure when it comes to measures to integrate the non-Swiss residents. In about 40 per cent of the municipalities top level officials claim that their municipality encounters difficulties to cope with integration problems. On the grounds of our regular surveys among all Swiss municipalities we are not only able to show, which types of municipalities are more successful in integrating residents from other countries, whether this depends, for example, on the size and on the financial situation of the municipality (system capacity, Dahl and Tufore 1973), and to what extent this depends on cultural and political differences between the municipalities. We can also show how the perceived difficulties to integrate foreigners developed and to what extent the countries the immigrants come from render integration more difficult. We expect problems to integrate foreigners to be higher in larger municipalities especially if they are short of financial resources, we believe that municipalities with a more liberal and more left wing oriented voting behavior encounter less problems, and finally it is the percentage of immigrants and their cultural distance which also play an important role.

How Well Do Municipalities Cope with Immigration – System Capacity Versus Cultural Reclusiveness

This paper will review the work on listening as a democratic skill in participation, particularly online participation. Crawford, writing in the context of the applying listening in the context of online activity, draws on the work of Jonathan Cray who observes there is in our times ‘an ongoing crisis of attentiveness.’ Crawford proposes that emphasizing listening as an approach offers a counterpoint to this. So too listening theorist Beard has written that there may well be “an ethical listening subject.” He argues this subject will make “an ethical listening subject.” He argues this subject will make “the choice to listen selectively.” This does not mean Beard explains to only those points at which we feel “safe” but rather to think about why and how we listen and to seek out listening points rather than being passive receivers of endless information. Having explored elements of listening theory drawing on Kennedy and Beard this is then applied in the context of environmental issues. The recent work of Holfield will also be reviewed; this work argues that listening and ecology have a relationship. Drawing on quite different theoretical foundations nevertheless Beard and Holfield argue this listening then in turn creates the ‘self’. The listening approach to online participation therefore has value in contributing to cosmopolitan ideas. While it does not create a theory of cosmopolitanism it does deal with common themes from cosmopolitan thinkers who grapple with the universal, the voices of all, and the self. Listening writers therefore offer an important perspective to the project of enhancing democracy.

Exploring the Role of Listening in Participation. -- CANCELLED

China has undergone an expansion of higher education in the 1990s. The crude university enrollment rate jumped from 1.6% in 1978 to 24.2% in 2009. The university enrollment rate among high school graduates increased from 27.3% in 1990 to 83.6% in 2010. At the same time, Chinese universities are stratified into key universities and non-key universities, which differ significantly in resource input and prestige. Researchers argue that in the era of mass education, the focus on educational inequality should move from quantitative to qualitative differences. Class inequality in the US is found to be maintained through family practices in competition for prestigious universities rather than mere educational attainment. Moreover, when it comes to labor market stratification, both university prestige and extracurricular activities are screening devices adopted by employers.

Educational inequality in China has attracted much research attention in the past decade. However, little is understood about educational inequality in China in the qualitative terms. The present study thus explores the relationship between family origin and inequality in university education in terms of institutional prestige and participation in extracurricular activities. Data come from a panel survey of 759 recent high school graduates in urban Nanjing. A vast majority of these students (98.4%) were enrolled in post-secondary education in 2012, among whom 96.6% attended universities or colleges in China. The analyses are restricted to the in-school sub-sample.

Preliminary findings reveal that 21.5% of the respondents go to key universities. Students with university-educated fathers, students coming from prestigious family origin and inequality in university education in terms of institutional prestige and participation in extracurricular activities. Data come from a panel survey of 759 recent high school graduates in urban Nanjing. A vast majority of these students (98.4%) were enrolled in post-secondary education in 2012, among whom 96.6% attended universities or colleges in China. The analyses are restricted to the in-school sub-sample.

Social Disorganization and Terrorist Attacks in the United States before and after 9/11

Despite much rhetoric regarding terrorism in recent years, little empirical research has examined patterns and predictors of terrorist attacks in the United States. We use newly available data on terrorist attacks in U.S. countries from 1990 to 2010 to test a set of hypotheses informed by a social disorganization framework. Given the historic impact of the coordinated attacks of September 11, 2001, we also examine whether the determinants of terrorism changed after this iconic event. In particular, we hypothesize that the unprecedented increase in anti-terrorism policing following 9/11 not only reduced terrorist attacks but also produced the greatest reductions in terrorism in communities where policing is traditionally most successful—those with low population heterogeneity. Across the two decades spanned by the data, results show that terrorist attacks were more common in counties characterized by greater language diversity, a higher proportion of foreign born residents and greater residential instability. Moreover, while total attacks declined significantly after the 9/11 attacks, results show that the decline was less dramatic in areas characterized by high levels of population heterogeneity. We discuss the implications of the results for theory, future research and policy.

Back to the Future? How 3D Printing Technology Reassembles Museums’ Materiality with Scenarios Analysis

3D printing or ‘personal fabrication’, as a newly emergent technology, has now been widely considered as the most significant technological breakthrough of the twenty-first century. Drawing upon complexity theory, actor-network theory and field theory, this paper considers 3D printing as a newly emergent technology and examine its translation into one specific culture field—museum field. Museum field, the guardian of authentic material cultures, instead of worrying the widespread of hyper-real reproduction culture caused by 3D printing, showing enthusiastic embracement of this new technology that brings back materiality to the society. This paper thus discusses how 3D printing associates into the museum assembly and creates the new heterogeneity and novel competition transforming the museum field. It not only emphasizes on the museum’s aftermath of digitalization and its new hybrid material turns by 3D printing whirls, but also examines new dynamics engaging into the competition in the global museum field.

Based on 3D printing’s current engagements and appropriation in the museum field shown in news and exhibitions as well as scenario analysis of future studies, this paper examines their performances in terms of ‘forms of museum materiality: Firstly, it analyzes current museums’ acquisition of 3D printing collection and their creative projects with artists and designers as well as its application in collection’s restoration; secondly, it analyzes the future presentation techniques in exhibitions with newly emergent materiality and spatial design; thirdly, it deals with how 3D printing’s engaged in museums’ interactive education programs and their future development; thirdly, it discusses bringing 3D printing back home for on-line visitors and souvenirs-making in the age of (im)mobility. Some scenarios analysis of the 3D printing’s general future impacts and the consequence of unequal development of global museum field will also be laid out as the conclusion.

Educational Transition and Social Networks – Preliminary Findings from Recent High School Graduates in Urban Nanjing

The formation of social networks is not a random process. It is a result of the combined forces of macrostructural conditions, which provide differential opportunities to meet members of different social groups, and the tendency of people forming social relations with similar others. The macrostructural conditions are superimposed in the form of social organizations. School is a major social organization in contemporary societies; there many individuals spend an extended period of time on acquiring knowledge and skills. During the course of schooling, individuals often move from one educational institution to another. A change of educational institutions would then lead to a change of macrostructural settings for social network formation. Existing studies have mainly focused the correlates of social network formation at one time point or social network changes across different time points. Little is understood about the network impact of macrostructural changes associated with life course transitions. The present paper investigates the relationship between educational transition and social networks in China. Data come from a two-wave panel study of 759 recent high school graduates in urban Nanjing, a vast majority of whom (98.4%) were enrolled in post-secondary education in 2012. Two research issues are addressed. First, what is the network impact of transition to higher education? Chinese high school students are a diverse group of students from universities and colleges, and the key ones, which differ significantly in resource input and prestige. Differences in network changes between these two types of universities are compared. Second, how may participation in extracurricular activities and part-time employment, two major aspects of university life, affect the social network structure? Changes in network size and diversity are measured. Preliminary findings show that transition to key university, extracurricular activities, and part-time employment are related to an expanded social network and increase in network diversity. Implications of the findings will be discussed.

Producing Knowledge about Post-Separation Stalking from Children's Point of View - Children As Social Actors?

In this presentation, the post-separation stalking is understood as gendered violence from the children’s point of view. The post-separation stalking - as a sensitive, morally laden issue - creates a psychosocial and physical threat for children’s autonomy and ability to safely make a social contribution. Stalking is defined as severe, continuous, multidimensional, and a systematic process of violence. Even though the mother is the main target of the stalking, the children are often used as a means to carry out stalking, as targets of revenge and as abused informants. The sensitive nature of the phenomenon emphasizes the ethical demands in the knowledge production. The presentation is based on the ongoing research project “The Invisible Children – Supporting the Survival of Children and Adolescents in the Everyday Life Shadowed by Post-Separation Stalking” funded by Alli Paasikivi Foundation. The aim of the project is to analyze the stalking in the everyday life of Finnish children. The principle has been to enable safety spaces for children’s voices. The children’s knowledge is approached from different angles in order to reach their everyday experiences. The knowledge is produced together with the mothers and professionals (the Federation of Mother and Child Homes and Shelters) who work with the victims.

The basis of the data collection has been to encourage and strengthen the possibilities for children's narration. The data is collected by children’s groups based on action and interviews conducted with children as individuals and together with their siblings. The knowledge produced in different forms and relations has supported children as social actors and knowledge producers. The tentative analysis shows that children are able to break the beliefs and taboos concerning the understanding about the family, parenthood, violence, and the best interest of the child. Therefore the question is do we take into account children as agencies who can redefine these issues?

The Realpolitik of Sexual Assault: Cartographies of Gender, Consent, Standpoint and University “Hookup Cultures”

There is significant media attention, especially in North America and the UK, to a so-called “hookup culture” among adolescents, particularly those enrolled in university. Characterization of young people as indiscriminately promiscuous may be reductionist hyperbole and/or cliché, but in any case the value-laden, gendered, classed and raced realities within which such discourse obscure a regime of institutional reification requiring interrogations and occupations. The current technological phenomena of social media, texting, and camera phones bring with them a culture of immediacy, self-disclosure, and voyeurism that add complexity to these issues and their lived experiences. In this era of rapidly developing technologies, the quality of sexual and platonic relationships is also changing and accelerated changes. Research is challenged to keep pace with new realities associated with experiences and definitions of abstinence, sex, and dating. Moreover, consent and coercion are under-theorized in the literature, interfering with deployment of effective strategies to prevent or respond to instances of gendered sexual violence and non-consensual or coerced sexual encounters. Political, ethical, and moral sensibilities mitigate efforts to nuance, trouble, and frame discourse on this subject, rigidifying a project of patriarchal social reproduction.

This paper offers a theoretical framework for engaging issues of sexual coercion and consent, reconciling laws, policies and practices with RealPolitics of
socio-sexual landscapes, belief systems, behaviors and interactions, employing the case of universities and their students as sites of institutional sociological convergences. We will report on a grounded theoretical qualitative study incorporating Feminist ethnographic, narrative, phenomenological and phenomenographic methods with a diverse cohort of university students interviewed throughout their first year for navigating transitions and complexities in their developmental lives and social environments. The participants provided courageously candid, detailed and complicated accounts of their experiences. Findings elucidate and deluge previously conflated and/or obscured details of the phenomena, pointing to hopeful opportunities for fostering social and sexual agential capacities.

Identification of Training Needs in Informal Sector for Street Vendors and Their Facilitators in Mumbai

Informal sectors are thought as a source of development. But these sources of development can be mislead by poor working conditions and poor management in these sectors. Where poor working conditions can include different problems in their day to day functioning which is also affected by poor management of the human capital engaged in the process. Therefore with increasing importance of development through these informal sectors needs to be more focused and organised, for which identification of training needs of its human capital is one major approach that needs to be addressed by different Corporate Social Responsibility (CSR) activities of organised sectors and other government and non-government organisations. Exploring the importance of Training Needs Assessment (TNA) this paper is an attempt to highlight the difficulties they face in their work life and the way they deal with. This paper also tries to identify their skill development techniques and strategies that links to their growth and descent survival of their family in the society. This paper is based on primary data sources where, structured questionnaires were administered among the Mumbai street vendors, Government and Non-Governmental Organisations and CSR activities of organised sectors including a few case studies. The data was analysed through chi-square test and cross case analysis. The findings supported that the group undergone any kind of training were able to speak about their future learning skills they require for better development of their families than those who were deprived of any kind of training for their business growth were keen to learn the skills required.

Issues of Atrocity and Discrimination Against the Dalits: A Study of Students Protest at the Premier Indian Educational Institutions

Even today Dalits are the victims of violation, isolation, atrocities, discrimination, untouchability, discrimination, ill-treatment, deprivation, social stigma, and the trap of the poverty in the society. Recent years that makes the state answerable before each and every individual and Dalit women in particular. Needless to mention the two unfortunate incidents: Recently 30 Dalit houses were torched by the upper caste people in Lathore, Odisha. Earlier the most unfortunate incidence of Pipil gang rape to a Dalit girl in Odisha, Kharilarji massacre in Maharashtra and many more. Conceptualise the problems this paper tries to explore the combined protest efforts of students’ organisations and civil society in India. The second objective of this paper is to find out, how the students’ organisations take up the issues and strategies in the process of revolution or protest against the state for the justice. It also aims at to explore the deftness of the students’ revolution and its impact on the disaster prone area. It this paper is also theorising the atrocities, discrimination and it’s consequences towards the Dalits in India. This study is based on both exploratory and content analysis research; data triangulation is the method for the data collection. Thematic analysis and descriptive statistics are the data analysis procedures for this study. The students sensitisation, organisation and the way of the protest are the footprints of students’ movement in the sand of justice and struggle. The politicisation of the issues in the campus and the outside campus pulling the leg of success of this movement. Personal vested interest played prominent role to de-spread and de-lined the student protest from their founding motto. This study reflects how it impact the civil society, upper caste lobby and to the state silence in the atrocity and discrimination issues.

Can Sri Lankan Teachers Afford to Spare the Rod?: Teacher Attitudes Towards Corporal Punishment in School

The main objective of the study is to understand the attitudes held by teachers in the Government schools in Sri Lanka regarding the administration of Corporal Punishment (CP) in school and to examine the justifications they have for resorting to CP. The study is a response to a concern raised by the authors in 2012 about the need for more in-depth exploration on the topic.

The purposive sample of teachers who participated in the study was from four Government schools in Colombo. One school was a boys’ school while the remaining three were coeducational schools. 28 teachers were chosen for study based on their gender and years of experience in the teaching profession. Data was gathered through in-depth interviews with the teachers.

It was found that a majority of teachers in the sample have resorted to some form of CP at some point in their career as teachers. Given the teaching-learning culture teachers have been exposed to as children and the authority traditionally attributed to teachers in Sri Lanka, they were of the opinion that CP can have positive impacts on children and their future success. Teachers did not seem hostile to the idea of CP per se but the “form” and “severity” of CP administered on students. Many were of the opinion that CP was “a fine means of disciplining students” as long as it is administered with the ‘correct’ intent of guiding students. They also thought that CP becomes an “issue” only when teachers use it in brutal/inhuman manner with vindictive intents and as a means of stress release.

High levels of work related stress and weaknesses in the mechanism of appointing individuals to the teaching profession were highlighted as resulting in situations of “brutal/inhuman beating” in schools. These views expressed by teachers raise important policy implications.

The Conflict over Mining in the Heart of the Universe

Mining is progressing over indigenous people’s land in Mexico. One of the holiest sites of Wixárrika people, Wirikuta, has been concessioned to mining companies seeking to revive mining in the region. This has caused a conflict. Various indigenous groups of actants in the region including different groups of actants by construction, ownership and control of that territory.

This paper presents an ethnographic study of the conflict based on actor-network perspective. Information was obtained during fieldwork conducted during August to December 2012. The main purpose of this work is to analyze the conflict from a relational perspective, I also seek to highlight the importance of nonhuman actants which participate in conflict. Nonhuman actors have been invisible or objectified in sociological analysis of conflicts over the spread of extractive mining, however at least in the case we are studying, nonhuman actants are central to explaining and understanding the dynamic of the conflict by the construction, ownership and control of the territory in the Natural Protected Area Wirikuta.

Conditional Cash Transfers, Job Markets and Capabilities in Latin-America: A Missing Link

The paper is part of an on-going joint project between the National University of Colombia and the University of Buenos Aires that is re-examining the achievements of conditional cash transfer programmes (CCTs) in the region. Within the acknowledgment of their diversity in terms of targeting, modalities and composition, CCTs have been mostly praised by international co-operation agencies, Latin-American governments and the academia. Nonetheless, there seems to be a missing link. Social policy presents a strong relationship with how societies deal with dilemmas concerning social inclusion and justice within an increasingly complex and articulate local and global dynamics. Beyond technical debates related to CCTs financing and implementation there lays a key interrogative: do CCTs increase people’s capabilities and reduce key individual and household-related vulnerabilities? Do they provide access to a key asset such as greater job and income security? In 2012 the research project started to analyse six national CCT programmes in the region (Argentina, Brazil, Chile, Colombia, Honduras, Mexico and Nicaragua) and two regional job markets (Argentina and Colombia). The paper present two interesting insights: a) so far the great majority of CCTs evaluations have been unable to present any solid result about medium or long-term improvements in the security of people’s livelihoods and capabilities, b) in the face of substantially unaltered rates of unemployment and informality, CCTs do not seem to have improved the participation of beneficiaries in the job market. These results are based both on the analysis of national and capital cities-based household’s surveys, and on programmes assessments and internally available data through the presentation of quantitative and qualitative the paper aims to contribute to the challenging of mainstream wisdoms on CCTs and to an already renewing debate in the region.

Response Latencies and IRT Estimates Using CASI

Computer assisted self-interviewing (CASI) has been used around the world for a long time in order to achieve survey data collection with a reduced cost. CASI can also be useful when the intention is to reach groups of the population who are geographically dispersed, or who cannot be available to be interviewed during normal work hours. However, it has often been argued that CASI may potentially yield low-quality data if the respondents are not motivated to respond honestly and reliably, using their full potential and concentration.

This study proposes a new Item Response Theory (IRT) algorithm for the estimation of the person estimates when an attitude scale or an ability test is administered through a CASI. The algorithm weights less the responses that are given too soon after the stimuli are presented, so they may not be considered as legitimate and honest efforts for a truthful response. The new method is based on the work of Wise and Kong (2005) and Mislevy and Bock (1982) and used a modified biweight IRT estimation method.

The application of the algorithm on empirical data (N=920) in the context of the mathematics National Curriculum in England gave indications of increased validity and usefulness of test results.

Decolonizing Struggles in Latin America Today

In spite of its dogmatic universalistic pretensions, hegemonic social science and liberal democracy should be understood as one of many possible historical options. These constitute distinct cultural alternatives that do not exhaust the possibilities of forms of knowledge or of the construction of plural and democratic coexistence between the human beings. They are the product of a specific historical experience and a particular mode of production, and specific ways or relating to so-called “trends.”

As has been argued by Aníbal Quijano, Enrique Dussel, Walter Mignolo and others who have been working within the modernity/coloniality perspective, the experience of modernity has meant something radically different for the North and the South. What has been characterized as the luminous nature of modernity by the philosophers of the enlightenment is only the bright side of a worldwide historical process that has its dark underside in the existence of the colonies without which the bright side would not have been possible. In the North, modernity eventually lead to material abundance, citizenship, democracy, science and religion: for the majority of the planet’s population and in the colonized, subjugated South, modernity has been an experience of imperial and colonial domination, genocide and slavery. This dark underside is as modern, as essential a component of the modern experience as the experience of the North.

Colonialism, genocide and slavery were not in any way pre-modern. They are constitutive of the global modern experience. Eurocentric social sciences have overall erased this history and attempted to interpret a self-centered European history as Universal History and to characterized its particular political system (liberal democracy) as the “normal,” “modern” universal template that the rest of the world has to replicate.
the global economic downturn has affected well-being of all employees, the ramifications for individual employees' remain unclear.

The data used to study these issues were collected in the European Social Survey (ESS), Family, Work and Well-Being (FWW), modules for 2004 and 2010. The study is limited to a sub-sample of Swedish employees. To capture gender differences in perceptions of work-life conflict the research problem is approached from both dimensions; work-to-family and family-to-work conflict as previous research has shown that men and women experience these facets differently. In order to capture class position the study adopts Wright's class schema based on ownership, hierarchy and autonomy as developed and elaborated by Leifursrud, Benson and Jemseg. The study is expected to show that some intersections of class and gender will exacerbate work-life conflict and have a more detrimental effect on work/life balance than others.

What It Needs for a Social Ego: A Survey-Based Comparison of Social Network Measures

In this paper we compare different methods of measuring social capital in conjunction with alters' resources. Our analysis is based on a survey of two succeeding, complete cohorts of sociology students from one university. This survey includes detailed information on network ties between students. In addition, we use a resource generator and a position generator to assess ego's social network beyond his/her fellow students. For all social network instruments, we differentiate between relationship strength, the basis for social capital, and the level of resources that are accessible via these social ties. We implement the same distinction with respect to measures of family background.

This unique design allows us to construct methodologically interesting counterfactuals. We can assess how the measured distribution of resources affects the accessibility of resources is not taken into account; how well we approximate ego's resource distribution when based exclusively on indicators of relationship strength; and under which conditions – regarding ego's network structure – we can measure social capital and related resources by using solely name generator based instruments. Furthermore, we compare these counterfactuals between different sampling designs. We analyze which path length is necessary to approximate the full cluster solution using a respondent-driven cluster sampling design.

Our study is constructed as a generic methodological study. Based on our results, we can specify which conditions regarding sampling designs and measurement instruments are necessary to adequately represent the social embeddedness of egos. These results are of general importance to researchers conducting larger-scale surveys, e.g. international survey projects which rely on cluster sampling designs and/or name generator based instruments when assessing the social networks of respondents.

The New Middle Classes - Drivers of Both Unsustainable and Sustainable Consumption in Developing Countries

During the last decade, in public debates and particularly in the media, unsustainable patterns of consumption spreading also in the Global South developed into a major concern. The focus is mainly on the 'new middle classes'. They are imputed to lack any sense of responsibility both in civic and environmental respect and, by their sheer number, to undermine any progress made so far in protecting the climate.

Nevertheless, albeit a pilot group in promoting western lifestyles, above-average levels of education and qualification, according levels of professional responsibility, and above-average levels of political influence (locally, regionally...) make parts of the new middle classes important players in fostering more sustainable consumer patterns.

Negotiating a Space to Rest: Denver’s Camping Ban and Camping in Denver

On May 14, 2012, camping became illegal in Denver, Colorado. Over the past 25 years, the development of downtown Denver followed identifiable patterns of neoliberal governance. Single room occupancy hotels were upgraded into "loft-living" condos, rundown streetscapes were intensely policed then redefined, a major downtown street was pedestrianized. Urban policies focusing on commercialization and real estate development contributed to Denver's revitalization while exacerbating the city's problem with homelessness. As experienced in other cities, concurrently rising property values and increasing numbers of homeless people have led to various municipal ordinances intended to render homeless people invisible to the consuming public. In Denver, a sit-lie ordinance was enacted and park curfews were more strictly enforced to keep homelessness from the public's field of view. Consequently, for residents without a permanent address, finding a place to rest became increasingly difficult. Then in 2011, playing off of popular distaste toward the Occupy Denver Movement, conservative politicians and the Downtown Denver Partnership, a business improvement district, sought and succeeded in introducing legislation outlawing camping—sleeping in public with any sort of "protection against the elements".

The creation of the camping ban did not eliminate homelessness and interested how Denver's homeless residents were coping with the ban, we focused on a particularly vulnerable homeless community, injection drug users (IDU). Conducting participant and unobtrusive observation as well as in-depth interviews with 24 IDU, we learned that their continuing survival depends on a mixture of three interrelated processes: a complex moral economy of mutual aid and mutual predation within and between homeless communities, acts of often unexpected kindness by agents of the state officially charged with enforcing the camping ban, and the articulation of public and hidden transcripts playing off various tropes of homelessness, helplessness, and self-help.

"Because You’re a Migrant, They Treat You Really Tough." Findings of a Qualitative Study on Young Migrant’s Perception of the Armed Forces in Germany

In 2011 compulsory military service was suspended in Germany. In view of profound demographic changes and ethnic pluralisation of the German society, migrants now pose an important target group for recruitment. The question whether recruitment of personnel with migration background is successful not least depends upon migrants’ perceptions of the armed forces, which have a long institutional history of ethnic homogeneity and exclusion of “others”. In order to identify psychosocial factors and dynamics that influence these perceptions we conducted an exploratory qualitative study, using four semi-structured group discussions with young people with different migrations backgrounds in three different German cities. The composition of the group of interviewees allowed for evaluating effects of gender, migration background and military status in addressing recruitment issues to migrants. Our analysis calls attention to three findings: 1. The participants resisted fixed national and ethnic identity ascriptions. Multiple accounts of situational identifications demonstrated their ability to strategically play with identity constructions in different social contexts. 2. The perception of the German armed forces was essentially framed by personal or family experiences with the military or police in the country of origin. Problematic experiences with armed forces in authoritarian countries e.g. negatively influenced the image of the German armed forces as well. 3. The interviewers played a subtle role in producing an environment of interest/disinterest for the armed forces in the group discussions. In unintentionally activating his role as a migrant military member, one of the interviewers was repeatedly addressed as a peer expert for a military career. Hence, with regard to recruitment strategies the study hints at the importance of 1. developing an institutional sensitivity for post-national identities of a younger generation of migrants, 2. considering different migration contexts in addressing military issues, and 3. integrating migrant servicemen as positive role models for their respective communities.

Intimacy in the Research Process – Methodological and Ethical Implications of Examining the Psychosocial Dynamics of Sexual Risk Behavior in Biographical Peer Research

Sexuality is regarded as a highly sensitive topic for empirical research, especially if tabooed and stigmatized issues are at stake and sexuality is conceptualized as a part of one’s biography. In general, peer research that is aimed at exploring life worlds as an “insider” is seen as a privileged way for researching sensitive issues because it can facilitate field access, enhance trust and openness, and play an empowering and de-stigmatizing role in the field. However, peer research on sexuality poses considerable methodological and ethical challenges that must be taken into account if the potential of peer research is to be utilised.

The paper draws on a peer research project on sexual risk behaviour of gay and bisexual men in Germany. Based on a biographically oriented approach 58
narrative in-depth interviews were conducted by an HIV-positive gay researcher. In the peer interviews subtle dynamics of a sexualisation of the researcher occurred that focussed on the researcher's sexuality and his sexual biography.

The paper addresses methodological ways of dealing with phenomena of sexualisation and effects of intimacy in the research encounter, the interpretation of such data and its implications for writing-up and publishing the respective findings. Referring to psychoanalytic concepts of inter-subjectivity and counter-transference it argues for reflexively bringing in into the research process one's own sexuality as a researcher for a deeper understanding of the production of sexual lifelies in the interview situation. The double-bindi of being researcher and perceived peer that may lead to exploitations of the interviewee's fantasies of sameness call for the integration of ethical considerations about reflexivity, power relations and responsibility as an integral element of the methodology of biographical peer research.

Mobilizing for Dignity: Recognition and Social Movements

How do we understand the world wide spread of social movement of our age, from various fundamentalisms to the progressive thrusts of Arab Spring to Occupy. How have such movements fared? We will argue that the roots of these movements can be found in the consequences of neoliberalism that has not only fostered greater inequality and hardship for most, but its crises have migrated to the realms of subjectivity, emotion and motivation. Our analysis is rooted in Marxist critique of alienation, Lukacs critique of reification, Habermas on legitimation crisis, New Social Movement Theory and recent development in sociology of emotion. We will argue that these movements not simply for better economic conditions, but to overcome the adversities of a lack of recognition of a meaningful identity that in turn has fostered anger, indignation and even hope. But these assaults to one's identity also foster hope that leads people to social mobilizations.

Tokyo: Rebuilding the Global City in a Context of Urban Maturity

Since the turn of the 2000s, Tokyo has been facing issues which deal with urban maturity, a notion characterized by two elements: stagnation of the economic growth, and population peak, associated with an ageing population. Those issues, which threaten the sustainability of Tokyo as a major and attractive global city, necessitate new approaches for urban management, urban finance, and urban rebuilding projects. Nevertheless, in spite of the mature urban profile of Tokyo, the city changed sharply during the 2000s. While demographic and economic indicators of Tokyo are not very favorable compared with those of the other Asian global cities, how could the urban profile of Tokyo change as fast and as dramatically as it did? How was the city able to reorganize its structure, to verticalize its skyline, to vegetalize its public and private spaces? After the «Japanese miracle» which occurred from the 1960s to the 1980s during a time of prosperity, the 2000s also knew another miracle: an urban miracle in time of crisis, as a result of urban maturity.

Two new phenomena are necessary to understand this urban miracle in Tokyo. The first one is real estate securitization, which allows the financing of the city based on its mature state. The second one is a new approach to urban management, with the edition of the Urban Renaissance Special Law in 2002. Both of these elements help to rebuild a world class city in a context of urban maturity. This new urban model is a cutting-edge one which can inspire the management of European and American cities facing the same issues than Tokyo.

This paper will present the urban transformations induced by urban maturity, and will allow to discuss the notion of urban maturity, taken as a notion in opposition with the model of shrinking city.
The contexts marked by the reception of migrants, with a high degree of multilingualism, represent a scenario that clearly reveals the symbolic capital associated with the languages. In this light, the organization's aim is to analyze the predictive power of parental and non-parental variables related to the construction of self-identifications in which the symbolic capital of the languages spoken in the residence territories are unequal and highly relevant (Bourdieu, 1985, 1991; Heller, 2000, 2008). The adoption of ‘flexible modes of production’ across much of the developed world has been theoretically postulated to be a substantial driver of declining macro-levels of social capital and generalized trust. A key facet of ‘flexible modes of production’ believed to be particularly harmful for social capital are increasing rates of job displacement (e.g., involuntary job loss from redundancy, downsizing, restructuring) and job insecurity. However, in spite of the widespread belief, very little has research investigated if, how and why job displacement affects societal trust, with depressed trust observable at least nine years after the event placement, between the ages of 33 and 50, appears to significantly scar generations. This paper explores how experiences of job displacement can negatively affect individuals’ tendencies to (dis)trust over the adult lifecycle, using two waves of the Great Britain National Child Development Study cohort data. Applying lagged dependent variable and change-score models, we find that experiencing job displacement, a growing trend between the ages of 33 and 50, appears to significantly scar generalized trust, with depressed trust observable at least nine years after the event occurred. In fact, even after individuals return to employment, distrust remains higher amongst those having experienced displacement. However, the severity of the effect appears dependent on the value an individual places on work: the more central employment is to individuals’ lives the stronger the negative effect of displacement. A range of mediators, such as physical health, mental well-being, and personal efficacy fail to account for the effect. This paper keenly demonstrates the importance of understanding how experiences within the economic sphere can spill over into the wider social sphere, both at micro- and macro-levels.

Due to processes of globalization, digitalization and cultural democratization, publicly funded organizations in the culture sector are in need of legitimating their own existence towards three publics. The publics provide different forms of legitimacy, and the general public provides legitimacy. In satisfying the three publics the organization's aim is to analyze the predictive power of parental and non-parental variables related to the construction of self-identifications in which the symbolic capital of the languages spoken in the residence territories are unequal and highly relevant (Bourdieu, 1985, 1991; Heller, 2000, 2008). The adoption of ‘flexible modes of production’ across much of the developed world has been theoretically postulated to be a substantial driver of declining macro-levels of social capital and generalized trust. A key facet of ‘flexible modes of production’ believed to be particularly harmful for social capital are increasing rates of job displacement (e.g., involuntary job loss from redundancy, downsizing, restructuring) and job insecurity. The paper presents a theory of legitimation work. The theory is developed from several empirical studies of various publicly funded organizations in Norway and Sweden. I have studied the legitimation work done in the Norwegian public service broadcaster NRK and the Swedish public service broadcaster SVT, the Norwegian National Opera and Ballet and the Oslo Philharmonic Orchestra. These are all organizations that are in need of legitimizing themselves towards the three before-mentioned publics when conducting legitimation work. In the paper I discuss how characteristics of a publicly funded organization's communication with the various publics and what role they play in the legitimation work.

This work is a part of a research project funded by the Spanish Ministry of Science and Innovation (EDU2009-08659EDUC). Janés, Poalelungi and Popa have a Pre-Doc Grant funded by Catalan Government (2011 FIB 00490 / 2012 FIB 00379 / 2013 FIB 00347 respectively).
Economic Growth and Institutions: Gender Equality, Beyond Markets in Brazil, China, and Russia
