Drawing from recent NGO studies and reports, this paper offers an overview of the carework transformed to globalized care, which includes the state regulations of specific receiving countries that increasingly restrict the movement and labor choices available to migrant workers; the complexities and inequalities in housing and health as traditional notions of women’s work, which recognized the “significant contribution of domestic workers to the global economy” that is “unremunerated and invisible, and is mainly carried out by women and girls, many of whom are migrants or members of disadvantaged communities”. The convention serves as an important initiative to develop a broad understanding of the work related to the care economy and the different forms of care and caregiving that are developed. Drawing from recent NGO studies and reports, this paper offers an overview of the carework transformed to globalized care, which includes the state regulations of specific receiving countries that increasingly restrict the movement and labor choices available to migrant workers; the complexities and inequalities in housing and health as traditional notions of women’s work, which recognized the “significant contribution of domestic workers to the global economy” that is “unremunerated and invisible, and is mainly carried out by women and girls, many of whom are migrants or members of disadvantaged communities”. The convention serves as an important initiative to develop a broad understanding of the work related to the care economy and the different forms of care and caregiving that are developed.

The gendered nature of the struggle to integrate caring, family and paid work has been repeatedly demonstrated. Most research, however, has focused on dual parent families. This paper discusses work-family conflict in the everyday lives of lone mothers in Sweden. We use an agency-centered framework inspired by the capabilities approach, which emphasizes that the options of an individual depend greatly on institutions and relations with others. Drawing on 38 in-depth interviews with lone mothers from different social backgrounds we explore i) how the proper role of the lone motherhood and paid work is perceived of, ii) the institutional and relational factors that influence lone mothers’ opportunities to attain work-life balance, and iii) the strategies employed in negotiating paid work and family. Results show that paid work is integral to good motherhood to all mothers regardless of social class. They also show that lone mothers typically experience work-life conflict. Opportunities to reconcile paid work and family depend on employment conditions, accessibility to social support networks, the role of the absent father, household composition, and access to public childcare on irregular hours. In the case of middle class mothers, blurred boundaries between work and family life and late meetings restrict opportunities to attain work-family balance. For working class mothers temporal employment, irregular working hours and low earnings are significant constraining factors. Reducing working hours, negotiating working schedules, and asking relatives and friends for help are examples of strategies used to reduce work-life conflicts. Reducing travel time between the job and the home by moving from one place to another, and moving closer to relatives to increase the chances to get practical support are other examples. While middle-class women typically used flexi-time at work to alleviate conflicts between different responsibilities, several low-in- come mothers changed jobs in order to improve their situation.

Military Careers, Family and Private Dilemmas

Work and family are the two most important areas of life for most people. Although they are traditional areas of sociological study, and have occupied different fields of research. Today, the characteristics of these social institutions in contemporary society reinforce the need to discuss the relationship between work and family in the context of the social sciences, and very particularly in sociology. Interest of study that is even more evident in the field of the military profession, given the specificities associated with her, and also by the changes in society and the military.

A significant number of studies have enlighten the impact of military life on families, considering that the circumstances of risk, frequent mobility, long absences, uncertainty etc. products remarkable effects not only in military service personnel, but also in those who are close to them. Family and the military organization have in common the fact of being extraordinarily demanding in ties, energy and total dedication. Using the terms of Segal (1988), the “greediness” of both institutions may lead to conflicts between the family and the military realm, that migrant domestic workers do under restricted conditions or as a means of coping and dealing with the constraints. The aim of this paper is to compare the trajectories of man and women military personnel coming from the same promotion of officers formed at the Portuguese Military Academy. Specially, we will be seeking to map their expectations regarding couplehood and parenthesis before military career. To this end, we explore the impact of the military and the professional projects. In methodological terms, the main data will be supported on depth interviews in the form of life stories applied to the first promotions of officers that included women.

Patterns of Migration, Working Conditions and Organizing in Globalized Care Work

The 100th Session of the International Labour Conference in 2011 concluded work-force shortage of care workers, with an acknowledgement that “There is a significant contribution of domestic workers to the global economy” that is “unremunerated and invisible, and is mainly carried out by women and girls, many of whom are migrants or members of disadvantaged communities”. The convention serves as an important initiative to develop a broad understanding of the work related to the care economy and the different forms of care and caregiving that are developed.

Age, Gender and Migration Status on the Labour Market – A Case for Accumulation of Advantages and Disadvantages

The analysis addressed in the presentation will show the situation of the older workers from the perspective of their minority status, namely belonging to the group of migrants, as well as from the perspective of gender. We will present the problem of the accumulation of certain advantages and disadvantages during the life-course of individuals with regard also to their socio-demographic characteristics. The questions this presentation will answer are the following: Are there significant differences in labour market outcomes between the workers with migration background and the workers without migration background? Do these differences increase with age? What is the impact of those two dimensions – age and migration status on one of the labour market outcomes, namely the wages? and finally, what is the role of gender in determining the changes in employment status?

The analyses in this paper draw on data from the SOEP (German Socio-Economic Panel) which is a representative, interdisciplinary, and longitudinal survey of the German population. For our analyses we apply the SOEP data from 1991 to 2011, distinguishing between population with and without migration background. To investigate wage differences between individuals we use the methodology developed by Oaxaca and Blinder (1973).

In the empirical analysis we have found that initial disadvantages in education of men with migration background cumulate across the life span resulting in large differences in employment probabilities irrespective of age and from the perspective of gender men with migration background. In the case of women we do not observe these increasing differences but mainly because both women with and without migration background have a pronounced negative development. Furthermore, the wage analysis reflects that wage differences between individuals with and without migration background are due to their different endowments and not an effect of direct discrimination.

System Trust and Cooperation: The Case of Recycling Behavior

In this paper, I develop and test the hypothesis that system trust – trust in the reliability, effectiveness, and legitimacy of social institutions – promotes cooperation in social dilemmas and the provision of public goods, focusing here on the example of recycling. I discuss three models that can explain recycling behavior (rational choice, low-cost hypothesis, dual-process theory) and show how they link incentives and attitudes. All three models claim that incentives are an important factor mediating the attitude-behavior link, but they develop contrasting hypotheses about the direction of this effect. I use survey data collected by Sanders and Daugbjerg (2011) to advance an empirical test. I find a positive and significant interaction between the attitude of system trust and recycling costs, as well as a negative and significant interaction between system trust and recycling benefits. The data rule out the rational choice and low-cost hypothesis explanation of recycling behavior. Instead, they indicate that attitudes moderate the impact of the incentive structure, increasing cooperation in collective action dilemmas irrespective of the costs associated with compliance.

Trust and Adaptive Rationality: Towards a Causal Explanation of Conditional and Unconditional Trust

This paper provides a theoretical framework to reductively explain conditional and unconditional trust; it also presents an experimental test of the corresponding integrative model and its predictions. Trust research has neglected the importance of (1) an actor’s context-dependent definition of the situation and (2) individual-level adaptive rationality. The diversity and fragmentation of trust research is a direct consequence of this neglect. This antagonism has permeated trust research across disciplines, both with respect to phenomenological description and causal explanation. But human cognition is guided by a flexible and dynamic degree of information processing; trust is as “multi-faceted” as there are cognitive routes that take us to the choice of a trusting act. The degree of rationality involved in interpretation and choice is a fundamental aspect of trust. However, adaptive rationality has not been treated as an independent and orthogonal dimension of the typological space of trust. By allowing for both automatic and rational modes of information processing, the model demonstrates the impact of a flexible and dynamic degree of rationality in interpretation and choice on trust. It describes a finite set of parameters that guide the selection of the processing mode and provides a causal link between an actor’s definition of the situation, individual-level adaptive rationality, and the behavioral outcome of trust. I predict a closed set of admissible interaction patterns in an experimental context using a measure of chronic norm accessibility (interpersonal trust scale) and two situational parameters. In a 2x2 factorial design, I vary the context and initial endowments in a standard investment game. The data show that negative incentive effects on trust in high-cost situations (SE vs. 50€ real initial endowments) can be mediated by high norm accessibility or a positive social context. Decision-times analyses reveal a consistent pattern of interactions.
specific form of the phenomenon: right-wing populism. Other forms of populism, such as left-wing populism or liberal populism, have received far less attention in comparative research. This paper conceives of populism as a set of ideas that can be combined with legal and political ideology. Moreover, it is assumed that political parties can employ the populist set of ideas to a larger or lesser extent. As such, populism becomes a matter of degree: parties – both on the left and the right – can be more or less populist. This raises the question as to how the success of the populist message can be explained. Why and under which circumstances do citizens vote for parties that employ a populist discourse? In order to answer that question, I focus on both micro-level explanations (socio-demographic characteristics and political attitudes on the individual level), and macro-level variables (corruption, social inequality, party system polarization and the electoral system). The paper combines the results of a computer-based content analysis of election manifestos with the European Social Survey (2002-2010). By means of multi-level analyses, I investigate how Eurosceptic parties in 15 Western European countries, it is assessed how the success of parties that employ a populist discourse can be explained.

**Skills Exchange: The Politics of Collaboration and Co-Production**

This paper identifies the ethical and methodological significance of this project and discusses the productive blurring of the overlap between arts and visual research practice.

**Skills Exchange: Urban Transformation and the Politics of Care**

This was a collaborative art and social research project that took place over 6 years. It investigated the elderly in the city, relations of care and the civil spaces available for older people to participate in. The project from a notion that artists, researchers, older people, care-workers and others might exchange their skills, and, in this process, alter roles and relationships through processes of creative exchange. This Exchange challenged stereotypical images of older people, and their capacity for critical thinking and interaction, the kinds of art they like, and the audiences for this kind of work. The resultant powerful evocations and artistic responses often exceeded the expectations of the institutions involved.

A Participatory Action Research (PAR) methodology, was combined with visual ethnography which employed methods of mapping, photography, interviews, and research diaries. These methods were orientated towards exploring questions about the distribution of power and voice, both within the research process and the wider society. This research methodology had questions of ethics, visibility and representation as central concerns. Well – rehearsed relations that risk being ossified in the framing of older people as the objects of research were challenged.

The openness, conflictual responsiveness and reflexivity of all were integral to the development of the projects from artistic, research, and social perspectives. The distinction between art and social research was challenged as aspects of the research overlapped directly and contributed to the artistic processes. The research archive includes art works and social initiatives, opening events and manifests in addition to interview transcripts and social mappings, each oriented towards the cultural and socio-political changes groups hoped to enact.

This is Not a Toolkit: Reclaiming Critical Evaluation of Participatory Arts

This paper argues that ‘evaluation’ is a term which has been abused in the recent scramble to systematically measure the economic value of the arts. Considering the relationship between arts policy, cultural theory and arts and evaluation practice this paper offers a critical perspective on the ‘norms’ and ‘forms’ of evaluation. The histories of and motivations for evaluation include a governmental impulse to culture as a resource that can be put to work as part of a wider global project of managing social change (Yudice 2003, Bennett 1995) and a genuine desire to learn from and improve the effectiveness and possibilities of arts-based social interventions. This paper argues that in the current policy context evaluation has become a technocratic ‘hoop’ for arts organisations to jump through and the various ways in which this has been tested is the elimination or raise in the upper age limit for retirement. In Finland people may retire already at 63 or 65, but they have to retire at 67 or 68. This upper limit could be raised to 70 without much protest, or eliminated completely.

Another new development is the combination of retirement and (paid) work. This is very involved in very quick in the developed countries. One explanation is low pensions and/or need for good health coverage. But in countries where the level of pensions is decent, the reasons for working are mainly on the pull side. The retirees are healthy and wish to stay in the work life. This means that they do not wish to work full time, but on the other hand are not primarily interested in remuneration. In fact, there seems to be also an increase in the unpaid work, which is difficult to follow statistically.

In our Finnish Generational Transfers study we follow the Finnish baby boomers (born 1945-1950) and their activities. From our data we can see that working when retired is quite common and has interesting correlations with education, income, health and other factors. The paper will present these results and compare them to data from other European countries. On the basis of these results some recommendations about retirement policies are made.

immense political challenges from its opponents, many of whom currently constitute ruling governments. Leaders and or opposition parties in Switzerland, Germany, The United Kingdom, France and the Netherlands have made strong public statements against multiculturalism and linked this rejection to the presence of Muslim populations. Banting and Kymlicka note that even though multicultural policies remain in place in many of these nations, the de-legitimation of the word multiculturalism is not just a change in discourse, but jeopardises the very conditions under which multicultural policies can actually work. It would be easy to consider that in this context, multiculturalism has a dim future.

This paper, based upon extensive research conducted for an Australian Research Council funded study examines the ‘retreat from multiculturalism’ in Australia through the debate about sharia, legal pluralism and Islamic finance. It offers important insights into the dimensions of a new neoliberal multiculturalism in Australia.

Biography
Joshua M. Roose (Joshua.Roose@uws.edu.au) is a senior research officer of the Religion and Society Research Centre at the University of Western Sydney, Australia working on an Australian Research Council-funded study examining sharia and legal pluralism in Australia and the United States. In 2013, he served as a visiting scholar and researcher on the same project (with Professor Bryan Turner) at the Committee for the Study of Religion at City University of New York. He is also a co-convenor of The Australian Sociological Association (TASA) “Ethnicity, Migration and Multiculturalism” thematic group with a focus on religion and multiculturalism.

Muslim Elites in the Neo-Liberal Sphere: Implications for Citizenship and the Future of Islam in the West

In recent years there has been a vast array of studies examining Muslims in Western contexts at the level of rationalisation, impacts of negative representations and civic engagement. However, little research has examined the emergence of Western born Muslims into the elite professions that are central to the operation of the neo-liberal free market and that serve as a central location of economic and political power. Less research has examined how this ‘new Muslim elite’ is shaping citizenship amongst Muslims and the future of Islam in the West (and the tensions this produces with traditional Muslim community leadership). This study aims to reveal important empirical and theoretical insights into these developments. Significantly, this study shifts the focus from the ‘Muslim question’ to how Muslims are actively contributing to a ‘Muslim Solution’.

This paper is based on findings from a three year project (2012-2014) funded by the Australian Research Council and conducted by a multidisciplinary team (Law, Sociology, Criminology and Political Science) from the University of Western Sydney (UWS) and City University of New York (CUNY). Empirical research was conducted in the global cities of Sydney and New York with Muslim attorneys, Islamic finance specialists, Imams and community leaders. The study aims to explore the intersection of sharia and the secular legal system, as well as gaining a broader insight into how sharia shapes the daily lives of observant Muslims.

ROSA, HARTMUT* (University of Jena, hartmut.rosa@uni-jena.de)

The Temporality of the Good Life: Resonance As a Key-Concept in Critical Theory

The modern reality of ethical pluralism implies that we cannot define the substance or content of a good life. However, perhaps it is possible to identify the temporality, or at least some of the crucial temporal aspects of a good life? The paper seeks to explore this. In the first part, it identifies three time-levels that have to be brought in ‘resonance’ or coherence within a life: The temporality of economic life, the temporality of a life-time (or biographical time), and the temporality of one’s age or epoch (historical time). In its second part, the paper seeks to establish the argument that the good life is achieved through a mediation between singular ‘moments of resonance’ (as opposed to situations of alienation) and stable ‘axes of resonance’ that allow for such moments. The crucial point here is that in order to keep these axes of resonance in place there has to be a certain level of security and stability that is potentially threatened or undermined in an era of incessant social acceleration.

While moments of resonance are rare and shortlived, what subjects need are stable and reliable ‘Axes of Resonance’ which give access to such experiences. In modern society, such axes can be love and the family, work, but also nature, art and religion. I will explore these ‘Spheres of Resonance’ by contrasting them to ‘Spheres of Alienation’ which mirror the former and might be on the rise in a late-modern world governed by the imperatives of speed and competition.

ROSA, CESAR* (IIT-Chicago-Kent College of Law, crosado@kentlaw.iit.edu)

Can International Framework Agreements Facilitate Transnational Labor Cooperation?

Marx & Engels predicted that globalization would lead workers of the world to unite. Indeed, the world economy is today ‘global.’ However, globalization seems to have hurt workers’ organization as labor unions have lost membership and influence almost across the board. But in the past decade global unions have even been able to persuade more than 100 multinational corporations employing over 8 million workers to sign so-called international framework agreements (‘IFAs’). As a minimum, all IFAs must commit to the “core labor rights” of the International Labor Organization (‘ILO’), to wit, the right of freedom of association and effective collective bargaining, the right to be free from discrimination at work, the right against compulsory labor and the right against the worst forms of child labor. Could Marx & Engels have been correct, after all, about an international formation of workers acting in a class-conscious way for fundamental social change around the world? After doing empirical field research for about 6 months in Europe and the U.S.A., I do not think that IFAs yet signal a significant and new labor upsurge. First, I found out that the mostly German, Nordic, and French labor organizations seem to determine the specific meanings of the IFAs. These specific national labor organizations broker the IFAs and the relations that give IFAs meaning and life. In this sense IFAs are not truly ‘global.’ They have important national roots. Second, unions across economic sectors seem to have conflicting interests. No brokerage seems to mend those ruptures, leading some global unions and their IFAs to clash with others. The paper concludes by arguing that the ILO may help to broker these conflicts to propel IFAs forward.

Communicating the Challenges of Climate Change Adaptation in the International Red Cross and Red Crescent Movement

The paradigm of climate change adaptation (CCA) plays an increasingly important role in various types of civil society organizations (CSOs). (Widick 2012; Hall 2013). The International Red Cross and Red Crescent Movement discussed the topic of climate change as a humanitarian challenge for the first time in 1999. The foundation of the Red Cross/Red Crescent Climate Centre (RCCC) in Den Haag in 2002 institutionalized this new organizational commitment to address climate change induced challenges in disaster preparedness and the securing of livelihoods. Today, CCA is being discussed as a cross-cutting issue in humanitarian
Innovative Strategies to Cope with Climate Change Across Time and Space - Local Preparedness As a Humanitarian Challenge

This paper addresses an innovative climate change adaptation strategy in the area of disaster preparedness developed by the German Red Cross in cooperation with local partners in Africa such as the Ugandan and the Togolese Red Cross. Discussing the concept of "early warning/early action" and its practical implementation, this paper addresses organizational learning processes in transnational organizations from an actor centered perspective. By looking at a new project approach in the area of indicator based disaster preparedness systems, the importance of knowledge creation and transformation across time and space is highlighted. Time is important to respond adequately before a disaster strikes which requires new forms of institutionalized cooperation (for example, with meteorological departments and other stakeholders), while the spatial dimension refers to processes of organizational learning across borders and hierarchies from the local to the regional and transnational level. The role of both local communities and organizational change agents, meaning key persons within and outside the organizations, is addressed systematically to analyze the possibilities to foster climate change adaptation projects and their successful implementation in the long run.

Imperialism In a Wool Blanket: Aboriginal Iconography, Denomination and Canadian Paper Monies

Imperialism in a Wool Blanket: Aboriginal Iconography, Denomination and Canadian Paper Monies

National currencies, especially paper notes, are emblems of the nation-state and its power. This paper builds on these literatures to explore iconic representations of Canada's Aboriginal Peoples in its monies, using examples of colonial and ostensibly post-colonial notes. Research on images of imperialism and nationalism in African colonial and African and East Asian post-colonial monies and stamps is a well-established field. However, Canada's imperialist, colonialist legacy is a neglected, sometimes denied, history, and its monies are barely studied from critical, social science perspectives. Beginning with an 1870 Dominion of Canada $2 bill, and culminating in the 2004 Canadian Journey series $20 bill, this paper asks whether Canada's claim of multi-culturalism vis-a-vis First Nations Peoples is indeed supported by nation-building imagery on its own currency. Hudson's Bay Point Blankets were traded between colonisers and First Nations in 19th century Canada. These wool blankets were re-purposed by Aboriginal peoples as garments, ceremonial exchange and prestige goods. On the 1870 $2 bill, the blanket draped across an Aboriginal man's body is an imperialist icon of le doux commerce that 'tames' the 'noble savage'. In the 2004 $20 bill, First Nations are represented by a modern sculpture by a Haida artist B. Bill Reid, depicting the creation of mankind, 'Raven and the First Mer'. But on this bill is contemporary Aboriginal art and 'traditional culture' – the sculpture depicts a key event in Haida cosmology – presented as truly valuable?

When 150 Becomes 100: Conversions and Denominations In Grocery Shopping

When 150 becomes 100: Conversions and Denominations in Grocery Shopping

This paper explores two aspects of expatriate money practices with Russian rubles, focussing on everyday shopping: conversion rules of thumb and denominations. The Russian ruble is a currency whose base denomination is one hundred (100) rather than one (1). Many expatriates living in Moscow are accustomed to currenies like the United States dollar, the Euro or British pounds sterling, whose base denominations are one not one hundred. Conversion becomes a way of managing ‘sticker shock’, a means of making sense of how a can of coffee can cost 800 currency units (rubles in this case), and coming to understand new regimes of value and price for everyday goods. Yet even expatriates from countries with a currency whose base unit is 100 – Japanese yen, South Korean won, Swedish krona – talk of curious conversion negotiations under a rule of thumb that 150 of one unit equals 100 of another eventually becomes a 1:1 ratio. Learning to use rubles, especially in buying daily necessities, means not only developing a handy conversion to assess prices, but also adjusting to new arithmetic based on
different monetary denominations, even when the base unit may be the same. I will argue that conversions are slowly adjusted to better match not official rates of currency conversion, but notions of worth and value that are linked to available denominations of money at ‘home’ and abroad.

ROSSAL, MARCELO* (Universidad de la República, mrossal@yahoo.com)

Ethnographic Studies Approaching Violence and the Transaction of Illegal Drugs in Montevideo, Uruguay

The present work is a result of a process of ethnographic investigation that took place in three different social locations: the downtown area (with a population conformed by homeless teenagers and young adults); a peripheral suburb location in Montevideo (focusing on consumers of cocaine paste base); and, prison (within a system created for people with no criminal records). The focus of this study discusses the social interrelations and the transactions of illegal drugs. Given the general assumption that the foundation of social interrelations is exchange itself, the case of an exchange that occurs within an outlawed background will be debated - an illegal market which is necessarily (re)producing violence - a market that is illegal due to the fact that those merchandises are considered non-legal by national and international normatives. The present investigation was held during the debate that arose in Uruguay on the topic of the legalization of one illicit drug, which is illegal due to the fact that those merchandises are considered non-legal by national and international normatives. The present investigation was held during the debate that arose in Uruguay on the topic of the legalization of one illicit drug (cannabis), a critical debate to which attention is paid along this work: while the Uruguayan government formulates the regulation of the market of marihuana, it also proposes to implement stricter measures against the traffic and transaction of cocaine paste base. This rationale implies contradictory policies and thus, drug-related social violence is strictly connected to an illegal framework of its transaction than to drug abuse psychological and phisical effects.

In and out of the Mass Media System: Crisis Microblogging in a Social System Theory Perspective

The large diffusion of social media platforms, togheter with the diffusion of mobile connectivity, has generated, during the last few years, a growing amount of real time production of user generated content. This broad phenomenon is even more intense when it comes to crisis related communications. During crisis events traditional mass media communications might be slower less efficient and less accurate than user-generated information. This is why, over the last few years, we are seeing a growing number of research projects aiming at using these data for rescue operations or other civil protection activities. We are facing this kind of data from a different perspective. Within this paper we will claim that - within specific circumstances - user generated communication will act surrogating the traditional Mass Media System in its function of self observation of the Social System (Luhmann 2000) by applying the same operational selection between information and non-information. In addition we will claim that, as soon as the initial conditions disappear, user generated communication will evolve into a new - and still largely unexplored social function.

To support our thesis we will use Twitter data collected during the first five hours after the earthquake that struck Emilia Romagna region in Italy on May 20th 2012 monitoring the #terremoto hashtag. By focusing on the first 5 hours of the Twitter stream we have been able to detect the early user-led phase of the phenomenon, showing which type of users has been the first to fill the information gap and, by then, what happened until the early morning when traditional media came on stage. We will show how in this time span it is possible to observe how specific social network analysis metrics (Bruns, Stieglitz 2012) evolve from a specific mass media like structure toward a more conversational structure.

Ageing and the Development of Community Care in East Asia – What Way Forward?

With the ageing of societies, there is growing interest among also East Asian countries to implement new policies of long term care. Home care arrangements now predominate in OECD countries, reflecting older people’s preferences for home based help and care but also as an attempt to reduce reliance on expensive institutional care, particularly for recipients with lower levels of disability (OECD, 2005). Countries without extensive formal community-based care systems such as the East Asian countries are in a demographic situation which requires them to consider how to organize and provide adequate, affordable and quality community-based care, in both urban and rural settings, and in a financially sustainable and culturally diverse way. They can draw on the lessons learned from other countries in the development of national community-based care models, but new models of community care must develop according to their respective cultural, political and social background and taking into account financial and systemic capabilities. This paper investigates what models of community care have been implemented or is under way in 9 East Asian countries, outlining their characteristics and the challenges forward.

The Gendering of Internet-Based ICTs in Everyday Life

Dealing with the implications of ICTs for social inequality requires taking the everyday processes and actual situations into account in which ICTs are used and where participation is negotiated and constituted.

Relating to Cultural Studies the domestication approach argues that everyday life especially in the domestic sphere can be seen as a microcosm of society, where institutional and discursive inequalities are reflected as well as being re-produced. Within the domestication process ICTs are actively integrated into daily routines, social interactions and spatiotemporal structures of the households revealing processes of inclusion and exclusion.

The present paper presents findings from the ethnographic-orientated, interview-based long-term study “The Mediatized Home” analyzing the integration of the different internet-based ICTs into the everyday lives of 25 (heterosexual) couples over a period of over 5 years. The findings show that due to a technological framing, inequalities in internet use and skills are especially tied to gender roles and practices. Although the technological framing and thereby these inequalities diminish during the process of integrating the internet into everyday life, they do not dissolve entirely, but prove to be resilient to its changing surroundings. Causes for the persistence of these inequalities can be identified on an institutional and discursive level as well as within the interaction of the couples. Various aspects on these different levels lead to a gendered division of labor within the relationships of the couples, which is evidently affecting the use of internet-based ICTs.

In order to understand the ways in which internet-based ICTs interact with questions of social inequality, it is crucial to ask for its latent implications. Our study shows that looking at everyday life from a domestication perspective allows us to not only identify latent implications of internet-based ICTs, but also to understand how they unfold their effects on social inequality.

Where Participation is Negotiated: New Media in Everyday Life

Addressing the intersection between New Media and social inequality requires taking the everyday processes and actual situations into account in which New Media is used and where participation in New Media is negotiated and constituted.

Relating to Cultural Studies the domestication approach argues that everyday life especially in the domestic sphere can be seen as a microcosm of society, where institutional and discursive inequalities are reflected as well as being re-produced. Within the domestication process New Media Technologies are actively integrated into daily routines, social interactions and spatiotemporal structures of the households revealing processes of inclusion and exclusion.

The present paper presents findings from the ethnographic-oriented, interview-based long-term study “The Mediatized Home” analyzing the integration of the different New Media Technologies into the everyday lives of 25 (heterosexual) couples over a period of over 5 years. The findings show that inequalities in internet use and skills are especially tied to gender roles and practices. Although these inequalities diminish during the process of integrating the internet into everyday life, they do not dissolve entirely, but prove to be resilient to its changing surroundings. Causes for the persistence of these inequalities can be identified on an institutional and discursive level as well as within the interaction of the couples. Various aspects on these different levels lead to a gendered division of labor within the relationships of the couples involving a gendered construction of New Media expertise, which is evidently affecting the use of New Media.

In order to understand the ways in which New Media can open up possibilities to participation, it is crucial to ask whether people are equally taking part in New Media or not. Our study helps explaining processes of inclusion as well as exclusion showing how participation in New Media is negotiated in everyday life.

Unions and Childbearing: Converging Gender Roles in Finland
One distinguishing trait of Finnish fertility during the last decades is the increase in the proportion of families having three or four children. We study how socio-economic status (SES) and numbers of unions relate to above-average (3+) parities among Finnish men and women across age cohorts. In previous studies of wealthy low-fertility countries, both male SES and number of unions has often been shown to increase fertility, while their effect on women is mixed or negative. We use the FINNUNION data, a 11% sample of all Finnish-born persons resident in Finland during 1970–2010 and covering the fertility of age cohorts 1930–1960. It includes data on coresidential unions and marriages, childbirth and central sociodemographic indicators of the individuals on an annual basis. It also includes sociodemographic indicators and childbearing history of all partners in marriage or cohabitation of the index person.

Results show that across all male cohorts, higher social status increases the proportions of 3+ children. There is no comparable clear trend among women, although the negative effect of female education on higher parities diminishes over time. Interestingly, the gender differences appear to diminish among younger cohorts. We discuss reasons for the shift towards gender equality in mating patterns in families with many children.

**Plural Modernities and Post-Western Sociologies: Individuation in Europe and in China**

In a context of plural modernities we have entered in a period of Post-Westernization of the way we understand and construct the construction of situated knowledge. We are in the midst of a global change which is distinct from previous changes in society and their ephemeral nature and which appears to be a turning point in the history of the social sciences. In this communication we will consider the diversity of the scientific and reticular epistemologies, the emergence of Post-Western sociology through the dialogue between European and Chinese sociologies; finally we will be focused on theoretical continuities and discontinuities between Chinese and European sociologies through the analysis of the process of individuation in Europe and in China.

The concept of the individual is not very highly developed in Chinese sociology, whereas it has assumed a central position in European sociologies. On the one hand, various theories of the guanxi have been developed; some Chinese sociologists advance the ‘we’ is produced, on the one hand, by guanxi, which delineate the particular boundaries of the ‘self’ in the construction of the individual, and, on the other hand, by social affiliations. Over the past 20 years or more, it has been interesting to observe that in European sociology, and particularly French sociology, the contemporary individual, whether he appears uncertain, reflexive or autonomous, lies at the heart of sociological thinking, whereas he is scarcely visible on the Chinese sociological scene. This phenomenon highlights the affirmation of the process of individuation as a process of civilisation – in Norbert Elias’s sense of the term – and shows that, whereas in the past it was social structures that sustained the individual and the level of reflexivity was consistent with the social structure. We would consider discontinuous continuities and continuous discontinuities between Chinese and European sociologies.

**WG01-896.3**

**ROULLEAU-BERGER, LAURENCE** *(CNRS, Laurence.Rouleau-Berger@ens-lyon.fr)*

**Sociologies and Methodological Cosmopolitanism**

Methodological reflection in sociology is linked to the development of the Western society which saw its birth. If the process of pluralisation of contemporary societies questions even the idea of sociology as a narrative attached to that of modernity, and in particular that of European modernity, European thinking has continued through methodological nationalism to see itself as universal mediator of the other narratives (Chinese, Indian, Arab, African, Brazilian and so on). Certain forms of scientific hegemony have marked the development of sociological thought. The most pressing task, however, is to produce methodological cosmopolitanism in which continuities and discontinuities, connections and disjunctions are constructed between different places in the world and potentially capable of bringing to light the multiplication of regimes of alterity, the different ways of being with Others. The Others became a major methodological and epistemological scientific issue. Here, a methodological cosmopolitanism is based on a multisited ethnography of recognition, in which all Others are regarded and recognised with their experience, their competence, and his fluctuating, reversible and varied identities anchored in a diversity of locations and temporalities. Methodological cosmopolitanism is a way to access to the multivocality and the polyphonies of the plurality of narratives. Here methodological cosmopolitanism allows for a universal sociology, which means integrating different points of view, which European, Asian, American and Latin American sociologies, together. We propose to create a transnational intermediate space of knowledge in sociology by favouring an harmonisation between different theoretical, epistemological and methodological traditions from Asia, Europe, Africa, North and South America and Arabic countries. Methodological cosmopolitanism is related to a conceptual space based on the articulation between a critical sociology and a pragmatic sociology where structural processes, collective and individual action, interaction orders, and thinking come together in different places in the world and different temporalities.

**The Comprised Mobility of Moscow’s Labour Migrants: States of Exception in a Super-Diverse City**

While Moscow is a super diverse city with between 4.5 million of its population international labour migrants, the majority from Central Asia, and despite the state recognising their economic importance, levels of integration and tolerance are extremely low. This paper argues that increasing xenophobia and unclear legislation forces many migrants to live and operate within shifting states of exception, ensuring a precarious everyday which impacts greatly on their mobility. While often used to describe migrant camps this paper argues that the state of exception concept applies to Moscow as a whole as even documented migrants are prey to state officials and, increasingly, its citizens due to the uncertain everyday life that imprecise legislation creates. Thus migrants share informal knowledge about the safest places in the city and the routes around it which reduce their chances of interactions with the police. Furthermore, migrants’ normality is forced into informality by their employers and landlords refusing to register their documents correctly, increasing their vulnerability and denying welfare access. Compounding this, while it is extremely unclear who can demand a migrant’s documentation they are routinely stopped by the police and increasing numbers of the public, with groups such as ‘Moscow Shield’ proclaiming themselves as the city’s protectors. This ensures that migrants wish to spend as little time as possible in ‘public’ spaces to reduce the risk of confrontation, punishment and violence. For many their spatialities of Moscow are reduced to their workplace and accommodation and there are very few places where integration occurs. Through the work of Lefebvre and de Certeau the paper then addresses how migrants develop informal tactics to ‘cope’ with these everyday realities and carve out spaces of the city for themselves.

**JS-80.6**

**ROUND, JOHN** *(Higher School of Economics, j.round@me.com)*

**The Precarious Everyday of Moscow's Labour Migrants: Rising Xenophobia and the Migrant As a Political Subject of Disgust**

Since the collapse of the Soviet Union Moscow has positioned itself as a global city (re)built on the profits of its energy boom and the efforts of, currently, over four million labour migrants, the majority from Central Asia. Far too many migrants endure an extremely precarious everyday as they are forced to live in what the paper describes as a city wide state of exception, within which legal frameworks protecting migrants are ignored or misinterpreted to the benefit of the market. Many migrants who desire ‘legality’ are forced into ‘illegality’ by their employers and landlords refusing to register their documents correctly, increasing their vulnerability. Based on in-depth qualitative research this paper explores the human rights abuses that labour migrants experience, ranging from arbitrary fines by the police, a total disregard for their workplace safety to xenophobic attacks. The research demonstrates that migrants are simultaneously visible and invisible to the state, as for the latter the legal uncertainty denies them access to welfare and a voice within the city but they are visible for exploitation both in terms of their labour and the political capital gained from their presence. Migrants, the paper demonstrates, are constructed as ‘illegal’ regardless of their documentation status and politicians, pandering to growing nationalist sentiments, castigate the migrant body (in all meanings of the word) as ‘diseased’ or ‘criminal’, to be seen as separate from the rest of the city. This is feeds into xenophobic attitudes making migrants even more vulnerable with, for example, volunteers groups emerging to check their documents as they are seen as a danger to the city. Drawing upon the work of Lefebvre and de Certeau the paper concludes by exploring how migrants develop informal tactics to try and negate these problems to ensure their general well being.

“Equality and Challenge: The Case of ‘Lysiistra’ in Ancient Greek Drama”

This paper concerns with the successful revival of the ancient Greek drama through the study of “Lysiistra” by Sophocles. The educational and recreational character of the ancient Greek drama gives the audience messages for

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
equality, a notion useful in building sound personalities, ready to participate in a democratic state. In this paper I will present the analysis of "Lysistrata" through the mask/proseopoeia of the ancient Greek drama. The results were acquired after going through and studying elements from a variety of sources, such as masks form pottery, bas-reliefs, sculptures, frescoes, statuettes and texts. Aristophanes, who is considered to be the best ancient Greek comedy writer, was well aware of the social problems faced by the Athenian republic during and after the Peloponnesian War and thus felt challenged to present these problems through his writings. One famous persona he made up was "Lysistrata", an audacious, viv- id, powerfully beautiful. "Lysistrata" is taught in philosophy schools and played in theatres around the world. The messages conveyed involve idea of the equality, peace, reconciliation, dialogue, human rights. The educational activities deriving from the ancient masks presented masks could take the form of articles, lectures, e-lectures, workshops, interactive programs, videos etc.

Epistemological Standpoints and Steps in Social Sciences. Intersectionality in Gender Studies

Human and social sciences are the subject of a long lasting confrontation between the ideal-type standpoint of the researcher's neutrality and the inevitable subjectivity in everyday life situations, between positivism and subjectivism. As a result of these paradigmatic oppositions, we encounter a cleavage between statistical and qualitative methods, the role of experience, memory and the individualization and not the generalization, the correction of the subjectivity must be assumed, explored, transferred.

Since 1980's, in information and communications sciences but also in management and gender studies, we are talking about the reliability of qualitative methods, the role of experience, memory and standpoint. The objectivity is actually non-achievable, so the subjectivity must be assumed, explored, transferred. Feminist studies (sociological first, then communicational, discursive, histori- cal) are designed to reveal the women's perspectives, as the feminist approaches had been ignored over the centuries. The main operator for the methodological change was the women's testimony through methods like life story, narrative analysis, and ethnography. It will be improper to talk about the exclusion of the quantitative methods from the feminist research, but of the intersectionality of problemat- ics and methods. What makes a quantitative or qualitative approach feminist is the focus on the topic of women and their issues. The feminist research prefers the individualization and not the generalization, the correction of the view from nowhere postulated by positivist research.

With this new orientation towards a "situated knowledge" (see D. Haraway), with the triangulation of methods and the intersectionality of sociological parameters, the traditional separation between the subject connoisseur and the object to be known is abolished and the group or community perspective can replace the neutral, individualizing perspective.

"State-Formation From Below": Social Movement Of The Dam-Evictees' and 'Legal Transformation' Of The State In Maharashtra (India), 1960-1976

Dam-evictees' movements in Maharashtra have a long history. Peasants in Ma-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
the Mulshi dam built by the Tatas. Significantly, this is the first known move
tment organized by the dam-affected persons in India and throughout the world.
However, for various reasons, this movement failed. From 1960 onwards, the
dam-evictees' movements in Maharashtra are being led by a federally structured
organization named, Maharashtra Rayo Dharrangara va Prakalpragrastha Shettaki
Parishad (MRDPS); Maharashtra State Dam-affected and Project-affected Farm-
er's Organization.
Many of the demands of MRDPS, such as—equity in water distribution and
civic amenities for the rehabilitated villages, have been largely fulfilled by the state.
Moreover, these movements of the peasants have considerably trans-
formed the structure of the state in Maharashtra. As a result of their mounting
resistance, Maharashtra government mooted the first rehabilitation law in India,
in the year 1976, which was further amended and replaced in the year 1986 and
1999. Though the movements of the dam displaced still continue to operate, in
this paper I analyze and analyze the initial period of the movement from 1960 to
1976, when the first rehabilitation law was formed in Maharashtra that
legally empowered the dam evictees.
In this paper I argue that, dam-evictees' movements in Maharashtra, were
largely successful in getting their 'material' demands fulfilled because of having a
long 'historical legacy' of movements against hydro-power projects and main-
ly by their strategy of — a) raising purely local 'ecological concerns', in strategic
disjuncture from global environmental issues, b) increasingly rationalizing their
demands through legal 'rights based approach' and c) orienting their movement
towards claim-making on the Maharashtra state resources, through recurring cy-
cles of conflicts and negotiations that ultimately caused the legal transformation.

Many Shades of Grey: Past, Present, and Future of Age Relations in America

Population aging is considered one of the top three challenges of global devel-
oment by the United Nations. By 2025 one in every seven Americans, one in five
Japanese, and one in four Europeans will be over the age of 65. This presentation
reflects on the key sociological question: in the context of this historically unique
transition towards aging society, how does age matter to deviance and to social
status? It describes how the 21st century cult of the youth is linked to the revolu-
tion of “successful aging” tell the story of the Old and the New ageism, or age-
ismic imaginaries, animalistic imagery, moral and humanitarian
tive tradition of grounded theory summarizes a thick description of the different
cultural contexts in which age relations are constructed and interpreted. The
second factor is status homophily. Most of the main-
land students are from upper-middle class or upper class families; whereas the
majority of local students come from middle class or lower middle class fam-
ilies. The two groups differ not only in terms of consumption patterns but also in
terms of future career aspirations, making cross-group relationships more diffi-
cult. The third factor is about contact opportunities. Our findings show that it is
not just the presence of opportunities that makes a difference. The timing, that is,
when these opportunities become available, is also very important.

ROZHDSTVENSKAYA, ELENA* (National Research University,
erozhdstvenskaya@hse.ru)

"To be Controversial" - a Social View on the Russian Art Piece at the
Venice Biennale in 2013 ("Russia: Never overturn")

The author analyzes the art piece, which was established on the basis of na-
tional competition concept art with the focus of Russian national idea. The
roly-poly, a 5-meter-high dynamic sculpture, featuring a wooden log crowned with
a double-headed eagle, which rises back up when pushed over, is showcased at the
biennial contemporary art fair in Venice.

Visual analysis of the subject contains a political representation: the conjunc-
tion of the images of majestic orb and traditional doll, the roly-poly, creates the
effect of dynamics, together with the provocative slogan "Try overturn" as an
invitation to confront the aggressive counter-play with the audience.

The subject of textual analysis represents 458 art concepts involved in the
digital competition, they demonstrate significant meaningful references for the
understanding of the national idea in Russia. Several steps of coding in the qualitative
tradition of grounded theory summarizes a thick description of the different
themes. As a result, the top ten most important components of the national
idea in order of importance are: state symbols, family and children, Christian
symbols, animalistic imagery, anthropocentric imagery, moral and humanitarian
values, liberal values (2.4 % of the total number of ideas), environmental values,
the idea of revival and patriotism. Interpretation of the narrative (N130) core fo-
cuses on the change, transformation, physical effort, glorious death, salvation and
hope.

In general, the analysis of this art piece reflects an important condition for
the modern media presentations - the idea of conflict, the collision of different
ideological spaces. But the authors of the culture-consuming understanding of national idea as “a thought
that gives us the strength to improve life” is visually aggressive, and substantively
— rather archaic.

Birds of a Feather—a Study of Social Networks of Mainland
Chinese Students in Hong Kong

Our study addresses the issue of network building processes of mainland Chi-
inese undergraduate students in Hong Kong, especially in terms of the homopho-
tic preference and homophyly in their social networks. Mainland Chinese students account for 10% of
the university undergraduate students in Hong Kong today. Like all newcomers,
they need to adjust to the new environment, and their social network members play a very important role in this
process.
We shall study choice homophily, the type of homophily produced by individ-
ual preferences. Although people in mainland China and Hong Kong share the
same culture, they are under very different political and economic systems. We
shall also study induced homophily: the type of homophily produced by the op-
portunity structure. We want to find out why mainland students associate with,
mostly, mainlanders, given the fact that there are plenty of opportunities for them
to come into contacts with local students.

The data comes from a 2011 survey of Mainland undergraduate students in a
Hong Kong university, and from in-depth interviews with them. Preliminary find-
ings reveal three sets of factors that promote establishment of in-group contacts
(discouraging out-group relationships) for mainland students in Hong Kong. First,
differences in values, beliefs and behavior are major obstacles in establishing
cross-group relations. The second factor is status homophily. Most of the main-
land students are from upper-middle class or upper class families; whereas the
majority of local students come from middle class or lower middle class fam-
ilies. The two groups differ not only in terms of consumption patterns but also in
terms of future career aspirations, making cross-group relationships more diffi-
cult. The third factor is about contact opportunities. Our findings show that it is
not just the presence of opportunities that makes a difference. The timing, that is,
when these opportunities become available, is also very important.

RUBBERS, BENJAMIN* (Université de Liège,
brubbers@ulg.ac.be)

The Moral Economy Of Paternalism. Reflections From The
Congolese Copperbelt

Once the most important mining enterprise of Congo-Zaïre, famed for its out-
ward paternalism, the Gécamines – the former Union minière du Haut-Katanga,
nationalized in 1967 – went into a steep decline in the 1990s. To address the sit-
uation, the World Bank advocated, in the early 2000s, the sale of company assets
to private investors, and the privatisation of Gécamines. In 2011, Gécamines
employed about 10,000 workers. Yet, despite the company’s paternalistic poli-
cy (the company as a benevolent father, the workforce as a unified community,
the individual worker as a responsible, Christian, pater familias, and so on) it
came to be more and more put into question. Nevertheless, as several examples will
take clear, these models, or norms, continue to influence workers’ expectations –
and to be used as a reference – in their relationships with public authorities,
with their wife and children, with (former) colleagues, and with non-Gécamines
workers. At a more general level, the paper suggests that, far from being limited
to ex-Gécamines workers, this paternalistic “moral economy” underlies the rela-
tionship that most inhabitants of the Congolese copperbelt have with wage work
and institutional employers. To avoid conflicts with workers, local communities
and public authorities, the mining companies that came in Katanga during the last
decade have but no choice to take such expectations into account. By doing so,
they contribute to the emergence of a new form of paternalism, distinct from the
one developed by Gécamines in the 20th century.

This paper contributes to the growing literature on intimate industries (Parrenas, 2000; 1923; Levi-Strauss, 1969; Rubin, 1975; Bourdieu, 1977; Appadurai, 1986; Strath and Mitchell, 2006). Reaching back to a much larger treatise on the gift (Mauss, 1954), we argue that the commodification of pregnancy is a result of the market relationship for which they receive wages? Is pregnancy a part of a gift relationship, or is it a market relationship for which they receive wages?

1. What do surrogate mothers make of the commodification of their pregnancies? Is pregnancy a part of a gift relationship, or is it a market relationship for which they receive wages?

2. If the newborn baby is a gift to the commissioning family residing in India or elsewhere, then what is the ongoing relationship between surrogacy as a market relationship for which they receive wages? Is pregnancy a part of a gift relationship, or is it a market relationship for which they receive wages?

3. Conversely, if pregnancy is wage labor, then how does one make sense of the baby as a commodity, a product of market pregnancy? Beginning with Timituss's seminal The Gift Relationship, where he endorses the virtues of blood donation in the U.K. versus the demerits of blood distribution as a commodity in the U.S., the social circulation of bodily fluids, tissues and organs is well examined (Rabinov, 1999; Schepers-Hughes and Wacquant, 2003; Waldby and Mitchell, 2006). Reaching back to a much larger treatise on the gift (Mauss, 1923; Levi-Strauss, 1969; Rubin, 1975; Bourdieu, 1977; Appadurai, 1986; Strathern, 1988), and as gift-giver and commissioning parents as gift-receivers?

V. Conclusion

This paper presents considerations on the understanding of social innovation in terms of its effects of social innovations one has to consider the dynamic of change processes to make up criteria. An essential result of the analysis is the identification of five types of social innovations (do-it-together, strategic consumption, community based consumption, do-it-yourself, new offers for consumption), which are the basis for political intended promotion strategies and strategies for further development of the change agents.

RUI, SANDRINE* (Université de Bordeaux, sandrine.rui@u-bordeaux2.fr)

Coping with Discrimination, from Subjective Experience to Social Consequences of Discriminations

To what extent studying discrimination from the subjective experience of discriminated persons throws new light on the sociology of discrimination? Whereas most of the studies aim to measuring discriminations (usually with quantitative methods) or aim to evaluating policies implemented to reduce them, the point of view of those who are discriminated or susceptible to be discriminated is less often analyzed. This last perspective is at the core of the research this communication is based on. Our research has been led in France using 4 sociological interventions and 220 interviews with persons concerned by discriminations due to their origin, their culture, their sex, or their age. (Dubet F., Cousin O., Macé E. et Rui S. (2012), Pourquoi Moi ? L’expérience des discriminations, Paris, Seuil.)

Our study emphasizes the gap between the subjective experience and the objective situations people go through. The experience of discrimination is therefore determined by structural and individual factors, by institutional, economic and social circumstances and the way people cope with the discriminations, the way they avoid, resist, adapt or adapt, the way their strategies are successful or entail perverse side effects, in order to understand the effects on individuals as well as the collective consequences of discriminations. Ambivalent and uncertain, the experience of discrimination is all the less adjusted to its definition as a public problem since the links between discrimination and domination, discrimination and stigmatization, discrimination and inequalities are not obvious.

Regarding theoretical and methodological issue, we will insist on the relevance of sociological intervention (Touraine, 1978; Cousin & Rui, 2010) for the study of the discrimination’s effects at the same time on individuals and on society.

RUILING, ZHAO* (The Chinese University of Hong Kong, lthinks08@163.com)

Exploring the Less-Educated and Lower-Income Migrant Young People’s Experience of Transition to Adulthood – a Qualitative Research in Shenzhen, China

In recent decades, many researchers have found that young people's transition to adulthood is greatly prolonged in terms of finishing education, entering job market, getting married and having children. Accordingly, they suggest that contemporary young people's transition trajectories have become radically different from those of their previous generations. Among researchers on youth transition, Jefferey Arnett even contends to regard this prolonged transition to adulthood as a separate and normative life stage – emerging adulthood – between adolescence and young adulthood. However, other researchers criticize that the prolonged transition is not a universal phenomenon for all the young people. They believe that those who are socially disadvantaged and excluded incline to enter adulthood at an earlier age. On the contrary, local researchers in China find that it is just the increasing life pressure that forces the young, especially those who lack of social resources, delaying their transition to adulthood. The contradictions among existing studies indicate that transition to adulthood does not obey a normative route. The research therefore even contends to regard this prolonged transition to adulthood as a separate and normative life stage – emerging adulthood – between adolescence and young adulthood.

In this project, we will conduct 10 semi-structured interviews with 10 young people to collect information as rich as possible from their life stories and experiences. The experiences of these young people will be used to make up criteria. An essential result of the analysis is the identification of five types of social innovations (do-it-together, strategic consumption, community based consumption, do-it-yourself, new offers for consumption), which are the basis for political intended promotion strategies and strategies for further development of the change agents.

The Influence of Political Inequality in Vulnerability to Natural Hazards: An Analysis of Selected Mexican Municipalities
The susceptibility of different territorial units to be affected by natural hazards has been usually associated with the nature of the hazard itself, together with the socio-economic conditions of the local population. However, the political conditions that underlie planning and emergency response are usually overlooked. We argue that vulnerability varies in relation to the political inequalities regarding law enforcement, effective planning, land use control, environmental knowledge and resources availability among different territories in response to hazards; and these inequalities would significantly influence vulnerability outcomes of municipalities subject to similar hazards. This paper reviews the debates of political inequalities and their spatial effects. It also discusses the differences in vulnerability outcomes in different territorial units in Mexico, associated with such inequalities, from a qualitative comparative approach.

Participación Social Ciudadana. Reflexiones Desde El Pensamiento Comunitarista De Amitai Etzioni

La participación ciudadana, desde la aparición de las Tecnologías de la Información y la Comunicación (TIC), ha experimentado una radical transformación. Las teorías clásicas sobre participación social y creación y desarrollo de comunidades, se encuentran con el reto de adaptarse y contrastarse con los nuevos fenómenos de desarrollo tecnológico. Internet y las herramientas 2.0 tienen en común la participación colectiva mediante procesos de colaboración e intercambio con otros usuarios. El cambio de mentalidad que supone esta nueva forma de comprender y utilizar Internet desarrolla interacciones peculiares. Los individuos establecen relaciones con los roles y las redes personales se convierten en lo más importante, creando comunidades antes inosuscipientes.

Esta comunicación se centra en el estudio del pensamiento de Amitai Etzioni, uno de los principales investigadores sociales sobre la creación y desarrollo de comunidades y pone en relación su pensamiento clásico sobre participación con sus aportaciones recientes a la luz de las nuevas posibilidades de participación ciudadana.

Cycles of Contention Post-Apartheid: A Challenge to Current Theory

Since 2004 South Africa has been undergoing a wave of protests predominately led by the unemployed within South Africa's impoverished townships and informal settlements. This protest wave reached a peak in 2012 where it has been estimated that there was an average of three protests a day (RIS, 2012). Furthermore, there has been a discernible rise in industrial unrest with an increasing number of wildcat strikes occurring as workers choose to take their demands outside organised trade unions and collective bargaining processes. The intensity of this movement and the hostility of the State to it was tragically highlighted by the events at Marikana in 2012. This upsurge in contentious politics falls within a context of increasing economic and social inequalities and the hostility of the State to it was tragically highlighted by the events at Marikana in 2012. This upsurge in contentious politics falls within a context of increasing economic and social inequalities and the State's increased use of violence.

Independent Cultural Centres As Amenities in Urban Regeneration

This paper reports results of a research project on 15 independent cultural centres around Europe. These specific sites, promoting culture and arts and related industries, have often acted as ‘urban pioneers’ in their neighbourhoods, converting spaces considered “difficult” in size or because they are listed properties. The centres involve combination of different creative actors and action. They are professionally managed, and agree that visionary leadership is essential to succeed. They are usually organised as independent associations, but require acceptance and partnering of cities, often as owners of the properties. However, not all of them are dependent on subsidies, even in the form of land rent, but illustrate other examples how to organise such activity.

The paper discusses the role of independent cultural centres in urban regeneration. The current literature acknowledges both the supportive role of such activities in place-making and providing spaces that the market otherwise does not, but also highlights the paradox that if a development becomes commercially successful, rising rents may lead to their displacement, which eventually also lessens the character of the whole area. This study argues that instead of transitional activity in a particular property, planners should consider independent cultural centres as new kind of civic activity supporting heterogeneity and mix in changing urban areas. This use of vacant spaces should be conceptualised as amenity—non-profitable venue that has broader significance for area's atmosphere and liveability.

It’s Climate Change, Stupid! The Role of Think Tanks in Maintaining a Knowledge Divide in Climate Politics. Evidence from Germany, the United States, Japan, and South Korea

‘Global environmental inequalities’ are often used synonymously for the asymmetric tragedy of the commons problem posed by anthropogenic climate change: polluters (mostly countries in the developed world) are less affected and more capable to deal with the consequences of global climate change than the less polluting countries in the global south. An important aspect of this problem is the rejection of national responsibilities or the outright denial of climate change by important emitting countries.

The consequences of environmental degradation and climate change can be felt directly at the local level. In contrast, public awareness as well as an understanding of the complex interplay of local and global aspects by national electorates is highly dependent on the production and distribution of scientific knowledge. While the production of relevant knowledge is institutionalised at the international level (e.g. IPCC), national level knowledge production and modes for distributing it to political elites and the wider public differ considerably. To estimate the impact of diverse patterns of knowledge production and distribution on ‘climate scepticism’, I will focus on the influence of environmental Think Tanks. Think Tanks are said to provide applied research and impartial advice as well as political advocacy in ‘scientific disguise’. It’s therefore important to analyse their network ties to government authorities and among each other in order to estimate whether they are part of an epistemic community or forming advocacy coalitions instead. Linking the findings for selected countries (Germany, the United States, Japan, and South Korea) with the theoretical framework of differing ‘knowledge regimes’ helps estimating the consequences of an unequal access to and the distinction between a biased and a more ‘neutral’ presentation of scientific findings for national climate politics and international burden sharing alike.

Fathers, Welfare and Gender

This paper examines macro-level social policy influences on national variations in men's roles as fathers across different 'worlds of welfare'. It begins by identifying a paradox. On the one hand, the paper illustrates that the mid-1970s represented a historical turning point in social policy responses to the changing nature of fatherhood. On the other hand, national variations in the social politics of fatherhood have been largely overlooked by comparative welfare state studies and 'welfare regime analysis'. It does so through historical analysis of the social policy treatment of fathers and non-resident fathers in selected Nordic, Anglo-Saxon and East-Asian regimes and at the meta-level of European Union patriarchal welfare states, using gender equality directives. The analysis serves to illustrate other examples how to organise such activity.

The paper concludes by discussing whether and the targeted regime in the USA, which impacts most forcefully on a residuum of non-maintenance paying fathers. **Consuming Cuteness: The Visual Code Of Youth In Kawaii (cute) Fashion Subcultures**

The *kawaii* (cute) fashion subcultural scene of Harajuku, Tokyo, presents a complex visual sphere in which youth produce and circulate images through the consumption and design of clothing products. This paper examines the power that the image can have in bringing together young designers and consumers. Using visual data from Harajuku and qualitative interviews with key cultural producers, it unpacks the idea that aesthetics in fashion subcultures can be used to signify wider thematics of the subculture. This paper aims to revive the use of semiotics in the study of fashion subcultures, working under the Birmingham Centre for Contemporary Cultural Studies' premise that there is resistance within fashion subcultures which is symbolic and counter hegemonic. It also integrates a discussion of cultural industries to map out how these images and their related mythologies are produced and circulated in the subculture. It combines the literature from these three fields to examine the ways in which *kawaii* fashion subcultures engage with residual and emergent social cultural forms, particularly pop culture. Youth in *kawaii* fashion subcultures claim images of childhood, and arrange them into a system of signs mediated through fashion styles as a form of symbolic resistance to hegemonic norms of Japanese adulthood. The clothing of *kawaii* fashion subcultures allows for self-transformation, as prints, motifs and textiles are used to signify individual identities and collective dreams centered around cuteness and passive doll-like archetypes. The streets of Harajuku become a public theatre in which participants act out these identities, utilizing a complex code of cuteness to communicate 'authenticity' to other subculturalists. This paper also raises women's strategic organizing and enhancing their economic roles at local level.

**Key words:**

- Women's economic participation, local economic empowerment, institutional or structural transformation, women's collective action.

**Population and Forest Land Use Cover Transition: The Case of Brgy.Puting Lupa, Mt. Makiling Forest Reserve, Laguna, Philippines**

Theoretical propositions about the adverse impacts of population growth to the natural systems have found grounding in many empirical-based literature since the environmental discourse became global. Neo-Malthusians predict ecological destruction when there is unrestrained population growth coupled with advancement in technology and increase in per capita affluence in a society. When industrialization in Calamba legitimized by local and national policies materialized, the Makiling Forest Reserve (MFR) became vulnerable to on-site and off-site environmental pressures. In 1990, the University of the Philippines Los Baños (UPLB) was vested exclusive jurisdiction, control, and administration over MFR and in the following years, adopted a participatory approach to management. Chronologically following the implementation of these policies is the abandonment of agricultural clumps of state-owned forest and near the MFR buffer zone in Barangay Puting Lupa. Results of this study show that forest land use transition occurred in MFR-Calamba characterized by first, deforestation and forest land conversion to agriculture, then to gradual forest recovery. Spatial analysis of the 1993-2002 Calamba land cover shows that forest conversion increased by 18%, agricultural land use decreased by 3%, while built-up areas expanded by as much as 79%. Albeit forest land regenerated through time, land cover changed from forest species to agroforestry specifically in Barangay Puting Lupa. While industrialization is associated with increase in population and eventual environmental degradation, this study suggests that there are other socioeconomic elements that interact compatibly with each other to arrive at a different scenario of forest regeneration. Seemingly contradicting but synchronous commitments of policies of the university and of Calamba among other socioeconomic factors have a synergistic effect that amounts to the improved forest land use cover transition in Barangay Puting Lupa despite increase in population and pressures of industrialization.

**Labor and Populist Politics in Ukraine**

This paper looks at the labor movement in Ukraine by considering two types of workers’ power (as defined by Wright): structural, resulting from their position within the economic system; and associational, contingent on the ability to form collective organizations – unions, parties, workers’ councils or community organizations. Silver’s observation that the role of workers’ associational power is growing in the XXIst century and that therefore perspectives of the labor movement are conditioned on the broader political context, requires us to extend the definition of associational power also the alliances between labor and political movements. This paper discusses consequences of alliances between Ukrainian workers and various political projects since the break-up of the USSR, focusing or programs do not focus on stimulating women’s critical consciousness and their capacities to articulate their interests invidually as well as collectively. It’s indicated that women’s roles as economic actors are being positioned as instrumental roles, not substantive/transformative ones. The main root of this issue refers to the weakness of local government commitment and capacity which can not be separated with the national agendas on economic development. And the agendas might be based on economic assumptions (blinders) that tends to disadvantage women’s conditions as well as positions. It’s been reflected from several regions in Indonesia.

Referring to Chafetz (1988), empowerment as structural transformation efforts – which only possible if local (also national) economy policy responsive to women’s economic right. In term of relation between state and women, the other crucial issue is to enhance or to empower women’s commitment as well as their capacities as a collective/interest group. This paper also raises women’s strategic organizing and enhancing their economic roles at local level.

The Doctor-Patient Relationship and Type 2 Diabetes: What Can We Learn from a Cross-National Comparison of Three Qualitative Datasets?

Background: Evidence suggests that higher levels of patient involvement results in more beneficial care. Patient involvement can be higher in long-term conditions, such as type 2 diabetes, where self-management is important. But we need to better understand what happens in the shared decision process and which factors contribute to the inherent inequalities. In this paper, we explore models of doctor-patient relationship in three qualitative datasets from Germany, Spain and the UK. The data were originally collected to explore the experiences of patients with type 2 diabetes. Lay summaries are published at www.krankheitserfahrungen.de, http://www.dipex.es, www.healthtalkonline.org.

Methods: A secondary analysis of the datasets using a two-strand approach. First, a thematic analysis of the individual datasets to identify models of doctor-patient relationships, and examine what factors may contribute to these models. Second, a comparison of these findings to identify similarities or differences across the datasets in order to enhance our understanding of shared decision making.

Results: Early analysis suggests the importance of a trust within the doctor-patient relationship and an enduring paternalistic model in the management of diabetes. While UK patients may suggest some partnership working in the way they articulate their self-management, in practice, they do what the doctor tells them. In contrast, German participants emphasize a desire to preserve a certain level of autonomy. This was most obvious with eating and weight management, where respect for elders is defined and disrespect versus respect, ageism, personhood and the quality of life of elderly people are all discussed. Societal categories older people into socially constructed age groups. It is important to recognize that while age has a biological meaning, income, work and retirement construct groups and meanings about age that may reflect negatively on older people, and, therefore, lead to experiences of disrespect amongst our older population.

Postskeptualism of Modern Society: Russian Option

We observe a social request for religion and religious values comeback in the public space today. This can be observed by the example of protests actions in defense of traditional family in France, protests actions in defense of keeping crucifixes in Italian schools, the Christmas tree as a Christian symbol of Christmas in the Benelux countries, etc. etc.

The Russian society lost faith in the communist ideas at the turn of the 80's and 90's, and later liberal ideas which were approved during the epoch of liberal democratic reform of 90s - had become nothing for the vast majority of people. This happened due to the fact that neither one nor the other idea contained the core of cultural and spiritual traditions of Russian society.

At what point and why the 'Orthodox believer' in Russia becomes the dominant force of modernism of social change? At the time of the Soviet Union collapse, the destruction of Soviet type societies institutional structure, during the state of anomie. At this point, the fabric of social relations becomes loose, able to sense even a small impact as triggers for deep and large-scale social change. At this point, the 'Orthodox believer' is gradually becoming a carrier of dominant Orthodox identity and ceases to be a 'stranger'.

During the 90's and early 2000's the number of carriers Orthodox identity and Orthodox believers, including church Orthodox believers increased several times. 'Generation in the way' are those who have experienced religion and found a new identity for themselves after 1991.

'Generation in the way' is a notion which more or less accurately captures a new social set, which is characterized by varying degrees of perception by this Orthodox identity: from the identity of the Orthodox by self-identification to deeply church orthodox believer.
es in the number of Vietnamese in comparison with official statistic data. So in Russia according to 2002 census number of Vietnamese made 26 thousand people, however, study results suggested 100-150 thousand people. Part of Vietnamese is “veiled” by integration process. 

Based on the methodology developed by the authors, assessment of extent of integration of the Vietnamese migrants in host countries was given. The technique is based on allocation of integration components of Vietnamese in host countries, namely, civil, economic, ecological, social and psychological, religious, cultural integration. Research was conducted in Russia, Ukraine, the Czech Republic, Hungary and Poland by 400 private institutions of higher education, business, they were offered to put points from 1 to 10 to each component. 

Results showed that integration proceed differently. Vietnamese are most integrated in the Czech Republic and Hungary. According to experts, total score made 50 points out of 60 possible. State policy in the Czech Republic and Hungary was directed to the need for integration of Vietnamese in society through development of integration programs. In Hungary and the Czech Republic much of the Vietnamese citizens received citizenship in host countries, they became citizens. The success of economic integration is associated with high entrepreneurial activity, professional qualifications and access to the labor market of Vietnamese. Much less successful is integration of Vietnamese in Russia and Ukraine, civic, environmental, and socio-psychological component integration is low there. Evaluation of Russia is 40 points, Ukraine is 34 points. 

Over the past few years, neither Russia nor Ukraine has developed mechanisms for integration of Vietnamese. Bureaucracy, absence of standard and legal base strongly complicated integration process.

Higher Education and the Labour Market: A Polish Perspective

The structural conditionality of normal sciences, including state ideologies and financial support, is essential for the structure of higher education. The system’s transformation in Poland, based on the neo-liberal ideology, involved the dependent development model not only to the economy but also to science, with its dramatic decrease of expenditures. This reinforced a negative selection of the scientific cadres, who, by the inter-generation transmission of values and norms, were unable to adopt the traditional scientific ethos. The official ideology tends to transform the structure of academia in the market-oriented corporate manage- ment model. As a result, private institutions of higher education were established, based on the ideology of “practical” knowledge, which changed edu- cation in a commodity and the education process in a vocational training. The overproduction of formally well educated young people, hardly able to abstract thinking, resulted in a high unemployment of the youth. The government’s reme- dy is to apply this model of education/training to public universities, which are ex- pected to teach for the needs of the current market, notwithstanding the fact that the needs change faster than the education cycle. Instead of teaching students the ability of life-long learning in a flexible labour market, much governmental effort is made to produce formal education by bureaucratisation of universities.

Global Citizenship – New Pedagogical Aim or Market Strategy?

The development of education in the globalization context poses a lot of ques- tions, being quite a challenge for scholars. The analysis of such new trends as integration processes in education, the growth of educational migration, the involvement of international organizations and NGOs, and the education policy of national states leads to referring to the seemingly established concepts of particular features of education.

The urgency to implement educational reforms is stressed by various international organizations. One of the promulgated aims of these new educational projects is bringing up global citizens. 

In recent years the concept of “global citizenship” came into a broad use in European and American educational and public discourses. However, its meaning remains blurred, and its content is interpreted very broadly.

Analysis of the global education concept takes into account current sociological and political science discourses on the concepts of citizenship, nation and state. Previous understanding of citizenship as membership in nation-state gives way to a new variety of interpretations, which are based on the concept of universal deterritorised human rights.

The concept of education for global citizenship captures in what way this new understanding of citizenship and identity is interpreted in pedagogical discourse. Global citizenship is treated as a social engagement with the voluntary obligations undertaken, and priority is given to civil rights of the individual. It still stays unclear in what way state educational system as the key element in nation-state building process should foster global identity formation.

Besides for many educational institutions and so called international students the engagement in “global citizen” educational programs is only a pragmatic tool to improve economic chances in the global educational and job markets.

RYUO, TAKAYOSHI* (Yokosuka Nursing School, tak.ryuo@gmail.com)

Against the State-Centered Model of Social Policy: The Moment of Schäffle in the Sociology of Durkheim

Émile Durkheim, one of the founders of sociology, started his academic career in an interdisciplinary struggle. He refuted Spencer’s self-interest based conception of society in the Division of Labour in Society, and rejected psychological approach for social studies in the Rules of the Sociological Method. But in order to acquire the institutional independence of sociology from neighbouring intellectual fields, he had to fight in another battlefront other than against economics and psychology, that is against the state-centred model of social policy.

In order to reinterpret the sociology of Durkheim in a broader interdisciplinary context, focusing on the moment of Schäffle is a helpful clue. Albert Schäffle was a German Staatswissenschaftler, economist, forerunner of sociology, and staunch opponent of authoritarian socialism. Durkheim reviewed the main work of Schäffle, the Construction and Life of the Social Body in his earliest academic article, and endorsed Schäffle’s attack against state-directed socialism thereafter as in the Suicide and the preface to the second edition of the Division. The protest against the hypertrophic tendency of state bureaucracy is not a mere manifestation of political adherence of Durkheim, but a careful strategy to define sociology as a distinctive science in the light of historical and intellectual circumstances of the epoch.

That was the time Durkheim was contending for sociology when French government embarked on implementing modern social policies. By contrast to free market policy favoured in the 1880s, the turn of the century France welcomed state-led intervention measures originated from Imperial Germany under Bismarck. The concern of Durkheim over the state-centered model of social policy and his alarm for the peril of individual liberty under the authoritarian regime is a theoretical response to the ongoing transformation of the state and society and to the state-oriented social thought at the time in France.

Changing Patterns of Spending on Leisure? Case of Finland, 1998-2012

...
In the 2000s, the landscapes of leisure consumption have changed dramatically in the Western societies. Many traditional industries such as tourism, sports, and cultural activities continue to flourish. In addition, the new information and communication technologies (ICTs) have become widely adopted in everyday life. Access to ICTs is often considered as essential while at work, home, and even when spending free-time outdoors. As the alternatives for productive leisure activities have increased, we have also witnessed a trend of narrowing population disparities in the consumption patterns. Against this development, it is possible to argue that engagement in various leisure activities has become more versatile and less connected with individuals' socio-demographic background. But does this assumption also apply to older consumers, people living outside urban and densely-populated areas, economically less well-off people, single parents, and the less educated population segments? Or, is it possible to argue that the expenditure patterns of the many disadvantaged population segments have changed differently from those of the better-off segments during the past decade? The paper examines temporal changes in leisure consumption by examining Finnish household expenditure patterns between 1998 and 2012. The data are derived from nationally representative set of household budget surveys (N= 17,412). Empirical analyses will concentrate on money allocation on cultural services, books and magazines, and use of music and technology. In particular, structural disparities by educational level, economic background, age and life-stage, gender, and place of residence will be compared.

How Can Decision-Makers Cope with the Heterogeneity of Values in Public Innovations

In the last two decades the concept of innovation has been taken from Schumpeter's logic of competition at the market to the public sector. In the private sphere the making of profits is essential, and added profit can be seen as added value. For the public sector this is much more complicated, and it has been a large debate about the concept of "public value" since the publication of Moore's book "Creating Public Value" (1995). Values in the public sector can both be inputs (public ethos) or some sort of outcome (efficiency, improved quality etc.). But both for input and outcome there will be a heterogeneity of values. Beck Jørgensen & Bozeman (2007) are mentioning a "universe of public values". In the invitation heterogeneity is understood as the "coexistence of different rationales". We will argue that different set of values can be seen as different rationales. Creating new and innovative solutions in the public sector is part of the struggle for power society. Different actors will use different parts of the "universe of values" to support their arguments. To get a decision the parts will have to bargain with others about the blend of values they try to realise. The context will influence the weight of different values.

The paper will discuss how the heterogeneity of values is treated in decision-processes in public sector. We will draw on relevant literature about "public values", but especially on the case-studies in our edited volume "Frameing innovations in Public Sector Services" (Fuglsang, Rønning, Enquist (eds.) (Routeledge Oct.2013)

RØNNING, ROLF* (Lillehammer university college, rolf.ronning@hil.no)

Innovation in Nordic Elderly Care

Innovations has for some decades now been seen as the engine for success in the competition at the market. Now the concept of innovation has made its way into public sector and even into elderly care. This paper is about the efforts to innovate elderly care in the Nordic countries. In many European countries there is a worry about the demographic changes in the population. The declining fertility rate and numerous cohorts from the after Second World War baby boom fading out of the labor market, are a challenges both for the pension system and the economy, as well as for the caring system. The challenges of the caring system are the focus for this chapter, especially the need for labour, or caring hands. The diagnosis is that too few people have to care for too many frail and elderly. Even if the Nordic countries do not have the most challenging rates between the generations, a caring deficit is seen as a growing and upcoming problem. In 2050 20% of the population is expected to be above 70 years, rising from 10% which is the situation today.

Most attention will be paid to the Norwegian situation. Because of the fortunate economic situation in Norway, the country has probably been able to maintain a (Nordic) model with a strong public responsibility to a larger extent than their neighbors. Attention will be given to three of the main path to innovations of the elderly care in the Nordic countries, we have labeled them privatization, use of caring technology and extended use of voluntary work.

The paper is meant to be a "state of the art" paper, summing up the experiences so far, and reflecting on possible paths into the future.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
neoliberal principles of global justice. This suggests that individuals are guided by a complex justice belief-system that encompasses both neo-liberal global principles and the social-justice tenets of the domestic arena, creating co-existing and at times contradictory social justice judgment profiles.

The Changing UAE Family

Emirati families have been changing since the advent of oil and wealth. However, the recent socio-economic shifts in the society have affected the family on many levels. What the UAE family has endured recently in term of outside and inside pressure due to globalization is probably not comparable in many parts of the world. In no other country has the proportion of foreign nationals in a society been boosted so high in such a short time as in the UAE. As a consequence, Emiratis are no longer the largest national group in their own country, and have had a hard time trying to sustain a culture among a continuously growing pool of foreigners. As communities from around the world have mushroomed around national families in both the public and private spheres, UAE households have turned global within. Although one could make comparisons with families in other Gulf States, the UAE’s pioneering economic model and speed of change have had an unprecedented impact on the globalization of families.

This paper focuses particularly on women in the family (mothers and daughters) who are considered the gatekeepers of culture and social wellbeing. It looks Emirati women face new challenges and changes that they are facing from different parts of the society and the state to perform to a role becoming increasingly difficult. The paper looks into such difficulties using a combination of quantitative and qualitative data gathered from National families of Zayed University students.

Mapping Filipinos’ Knowledge, Understanding, and Actions on Climate Change

A recent Climate Change Vulnerability Index identified 16 out of 170 countries as extremely vulnerable to climate change; of this set, the Philippines was ranked sixth (Maplecroft 2010). Despite advancements in technical strategies to adapt to the impact of a changing global climate, understanding the complex socio-behavioral dimensions of climate change remains a challenge.

Using the data from a survey module on climate change commissioned by the World Bank and implemented by the Social Weather Stations (First Quarter 2013 National Survey), the study aims to know: (1) What factors shape Filipinos’ awareness and knowledge on climate change? (2) In a more qualitative sense, how do they conceptualize or understand the effects of this phenomenon? (3) What factors affect citizens’ participation in efforts to address climate change? Do awareness and knowledge actually translate into tangible efforts?

Correlation analyses reveal significant relationships (moderate to strong) between awareness and knowledge on climate change and these variables: locale (higher among urban dwellers), socio-economic class (higher among upper class), and educational attainment (higher among those with greater education). Climate change resonates among Filipinos as a public health issue. When asked to identify the effects of climate change, half of them cited “increased incidence of illnesses”—significantly greater compared to other responses such as degradation of natural resources, ozone layer depletion, and rise in sea level. Participation in efforts to mitigate climate change is higher among those in rural areas and the youth (with moderate to strong correlations). There exists very weak relationship between awareness on climate change and participation. However, there is moderate evidence to support that those with more extensive knowledge on the impact of climate change also have greater tendency to participate in actions on climate change.

Social Inequality, Power Legitimacy, and the Future of Democracy in the MENA Countries

In spite of their relatively similar religious, cultural and linguistic foundations, the MENA (Middle East and North Africa) countries consist of a diverse set of particularities in terms of their geography, socio-economic structures, human capital, and political institutions. As far as their governments and governance are concerned, they are often categorized by authoritarian and autocratic regimes. Such governments have ruled autocratically and suppressed pluralism, limiting or totally denying fundamental societal, economic, and political
rights. This state of affairs has created widespread social disparities and injustice, a freedom deficit, and stagnation in the area of democratic change. In other words, a policy of social inequality that has come to be taken for granted. The ruling elites have been able to hold on to power ruthlessly by means of various manoeuvres. These have ranged from violent repression and the superficial practice of democratic simulacra to corruption and "enlightened authoritarianism". Global democratic change, and the visibility it has gained through the new media, has given people, especially the rising middle classes, the impetus to give voice to their grievances. In consequence, they have started expressing their discontentment with the political status quo, in its place, demanding democracy and social equality. This can be seen in the emergence in 2011 of social movements in numerous MENA countries, otherwise known as the "Arab Spring". This paper aims at analysing some of the main patterns of inequality that prevail in the MENA region and also their socio-cultural and economic origins. In addition, the paper will aim at assessing and how demanding the process of democratization may be in the context of the social and cultural complexity of the existing structures and their present legitimacy in such societies.

From Matsuri to Anime Convention: The Experience of Festivals and Contents Tourism in Japan

For foreign tourists, festivals are mostly associated to cultural events that present a colorful and picturesque image of a different and exotic culture. This work is then an attempt to question new forms of tourism, in order to draw a parallel between festivals and other types of gathering that attract foreign visitors. This study is lying on the idea that tourism is made significant by a specific imaginary of the visited place. The travelers choose and comprehend their destination and its culture through the picture they have before and during the trip, a picture elaborated references. When enjoying festivals in a foreign country, tourists can see a concretization of their imaginary about the culture they discover, and sometimes, participating to the event, they feel immersed in that exotic universe.

The aim of this presentation is to show that this process is also at work in the case of contents tourism, when the travelers experience media pilgrimage (i.e visiting places with significance in media narratives, Couldry 2005), guided by a fantasy built on pop culture and media references. Taking the case of Japan, this comparative study intends to show the similarity between the experiences of traditional festivals and pop culture events. In addition to data collected among French tourists in Tokyo, fieldwork will be conduct during specific events in 2014. Then, some traditional matsuri will be compared to events like the Comic market in Tokyo or the Toyako Festa in Toyako (Hokkaido). The Sapporo snow festival, that mixes playful aspects of traditional festivals and pop culture influences, will also be investigated. So, the analysis will question the structural similarity between these tourist experiences, in order to examine to what extent contents tourism renews cultural tourism.

Nature and (pop) Culture Tourism in Hokkaido

For more than a decade now, the worldwide diffusion of Japanese pop culture has been analyzed as a soft power phenomenon, questioning the consequences of this success on the international image of Japan. Many studies have examine whether or not Japan is really gaining positive influence thanks to contents exports, while the Japanese officials acknowledged the idea of coolness associated to the country, consequently launching the "cool Japan" campaign. In the field of tourism, many initiatives have been taken to enhance contents tourism. Foreign travelers can now find information and activities about manga, animation, video games and so on, and some areas have been renewed and rebuilt to attract these tourists, Akihabara (Tokyo) being the main example. The idea of pilgrimage has been used to characterize the trip to these "sacred places", as the Japanese national Tourism Office delivers information about what is called "seichi jinrei" or "pilgrimage to sacred places" (http://www.tourismjapan.go.jp/english/index/cultural/pilgrimage/index.html; http://otokumode.com/visitjapan/). In that context, Hokkaido is a specific case, considering the traditional tourist activities in the island. The place is famous for its landscape and its countryside, with tourism linked to nature and outdoor sports (hike, ski). Nevertheless, some locations are considered by foreign tourists for other reasons, linked to pop culture. For example, the success of two movies, Love letter and If you are the one, attracted Korean and Chinese tourists in Hokkaido, with many visitors who want to discover the places where the movies were shot. Then, the aim of this presentation is to question the possible shift from nature tourism to pop culture tourism in Hokkaido, through the comparative example of Japanese, Asian and Western tourists. The notion of soft power is also going to be examined as a means to influence image and meaning of sites.

From Facebook to Parliament: Civic Participation through Social Network Organizations Between Success and Failure

Computer Mediated Communication has given access to political participation to a larger number of citizens around the world mostly regardless of their ideological, social, ethnic, economic background. People living in different Countries or even who have voted for opposite parties for years may unite for a single issue purpose, for a protest, a petition, for organizing a revolt or a deeper change in government. The No-Global Movement years ago and, more recently, the Arab Spring have proved the possibilities of the Net in terms of political organization and impact. In Egypt and in Italy things have gone even further: Social Networks have become the means and the place for civic organization that later were transformed into political parties running for government. The paper will analyze possibilities and limits offered by the Web-Democracy in relation to these two recent examples.

RC26-457.2
SACCA, FLAMINIA* (Tuscia University, sacca@unitus.it)

Web Democracy and Digital Rhetoric

The relationship between communication and politics has always been a tight one, but information technologies have taken this relationship a step further: in many cases they are no longer just a mean through which political parties or movements disseminate policies, slogans and values processed off line. This process now seems to have been reversed: they have become the means and the place where policies, decisions slogans and positions are discussed, elaborated and voted. They have turned into a milieu of political organization as the Tahhir Square movement in Egypt and the 5Star Movement in Italy have shown us, contributing to a wide spread rhetoric over the democratization power of the Internet. But while it is indisputably true that Computer Mediated Communication allows an easy access to political discussion and participation virtually to anybody, we cannot disregard that it also carries the seeds of disengagement, self-consolation and amusement which could have the counter-effect of enhancing citizens de-democratization levels. The paper will analyze both aspects of information technologies' impact on political processes.

SACCO, NICOLÁS* (Universidad de Buenos Aires, nsacco@sociales.uba.ar)

"Veinte años No Es Nada": Social Change and Aging in Buenos Aires (1980-2011)

Argentina's population it's experiencing irreversible changes in the age composition. This changes must involve the implementation of public policies related to the labor retirement that provide fair living to the retired population. Health systems and social security should be able to absorb a growing number of beneficiaries.

The socioeconomic conditions of life of the elderly depend not only on the mechanisms that provide social security systems, but the role that family and relationships between them. In the past, large families accounted for the greatest protection, however, demographic change will result in a huge change in family composition. Reducing the size of the family will have significant impacts in terms of living arrangements of older people and the relationships among its members.

How did change the older population over time? How are they alike and how they differ over yesterday and today? What are the socio-demographic profile of the cohort members in the coming years who will transit to older ages?

The goal of this communication is to investigate the changes observed in the last thirty years in the demographic profile of the population of 65 old years and over, based on cross-sectional analysis in four points in time, according to census data (1980 2010) and to describe the socioeconomic characteristics of the population over age 65 living in the city of Buenos Aires.

This should take into account current theoretical developments in sociology of population that formulate a new paradigm with significant analytical potential for understanding the phenomenon of aging (MacInnes & Diaz, 2008).

Keeping Elderly Care Nurses through Organizational Commitment: An Inner-Organizational View

The demographic trend influences the geriatric care sector twofold: While the demand for geriatric care increases constantly, the number of work force declines at the same time. For 2025 a shortage of about 125.000 full time nurses in Germa-
ny is estimated (Afentakis, Maier 2010). Additionally, the problem of fluctuation in the geriatric care sector causes a competition about qualified personnel among care-providing organizations. Other sectors already use the idea of organizational commitment to keep their employees. The basic concept of commitment (Allen, Meyer 1990) distinguishes three components: affective, continuance and normative commitment. These components are not mutually exclusive but rather coexist. So far no specific study has researched the concept of commitment considering the specifics of geriatric care.

This paper is based on preliminary results from a qualitative research project looking at this topic from an inner-organizational perspective. As geriatric care in Germany is provided by non-profit organizations as well as for-profit organizations both types will be looked at.

Results from interviews with elderly-home managers give an overview of problems about keeping qualified employees. The range of instruments, which are already used by organizations to strengthen organizational commitment and problems in everyday work, will be illustrated. In addition determining factors, which restrict human resource management in the geriatric sector, are identified. Besides general factors also organization-linked factors are included.

Furthermore, results from problem-centered interviews with elderly care nurses provide reasons and conditions for why they work for their current organization. These results will be set into context with the Allen/Meyers organizational commitment model to specify the three commitment components in the context of geriatric care.

Finally a guideline based on the research results is presented. It will help organizations in the geriatric care sector to strengthen the organizational commitment.

Dioxin Risk Controversy in Japan

In this risk society, we are confronted to many kinds of environmental risk and involved risk controversy. Whether the risk is small or large, we have right to choose that risk or not. But we sociologist should try to grasp the quantitative size of the risk to analysis the discussions of scientists or experts in the public sphere. So I try to propose the sociological analytical method of symmetrical scientific controversy through the case study. The case I focused in this paper is Dioxin risk controversy in Japan. Dioxin had caused a great deal of public concern in the 1990s. It was exhausted from industrial waste incinerators and municipal waste incinerators all around Japan. People around the incinerators started anti-pollution movements. And some of dioxin researches in Japan helped them and measured the exhaust of dioxins in environment. At last those movements resulted in the enactment of anti-dioxins law. However, risk studies in Japan consisted that dioxin’s risk is not so large, according to their own risk comparative studies.

On the context of environmental movement, this kind of risk studies may be often criticized; “they are political.” But in many cases it is not clear how it is political and on what point it is political. In this study, I analyzed the scientific paper of risk studies and compared those of dioxin researchers. As a result, several assumptions were found in the “scientific” paper of risk studies. Especially, average values they used are different from that of dioxin researchers. We can say this is political. And we have to pay attention to the point that this is not derive from the risk study, but it is from the attitudes of risk studies. This distinction is important in the debate in public sphere. Symmetrical analysis can make this distinction possible.

SAEIDNIA, SAHAR* (École Hautes Études Sciences Sociales, s.saeidnia@gmail.com)
SAIDI SHAROUZ, MINA* (Université Paris Ouest-Nanterre La défense/ Mosaïques-LAVUE, France, minasaidi@yahoo.com)

Since 2006 Tehran municipality has started a pilot environmental and urban development project in Beryanak, an old southern and popular neighbourhood particularly exposed to seismic dangers. This new urban experiment, part of a wider environmental-seismic prevention project, aimed at implementing a participatory urban renewal based on a dialogue with inhabitants, the neighbourhood council, local associations and with a scientific mediation of a research unit of anthropologists and town planners.

This project involving professional and social dialogue was innovative in Tehran, where a centralized and technical approach was traditionally favoured. More broadly, it reflects the participatory shift in urban policies illustrated by the decentralization law of 1997 and the creation of elected neighbourhood councils in Tehran in the 2000’s.

This paper will examine this complex dialogue and the way neighbourhood council have progressively positioned themselves as key actors of urban development in Tehran. Indeed these collaborative and participatory organizations designed to integrate ordinary citizens to the definition of their city’s public policies, have encountered many difficulties to fit in the local political space. Thus, this paper will focus on the different conditions and modalities of mediation and cooperation in the Beryanak project and how they evolved through time. We will both study the structure of the dialogue, mainly the habitus, backgrounds and representations of the actors (town planners, neighbourhood councils, municipality, etc.), and the tensions, conflicts or the asymmetry between them in terms of positions, knowledge, power and resources.

This paper is mainly based on a long-term field study conducted in Beryanak (Teheran) since 2006 (participant observations of deliberative experiences, project’s meetings observations and semi-structured interviews with City advisors, neighbourhood councillors, citizens, researchers, state representatives, religious field actors, etc.).

SAEKI, MASAHIKO* (Chiba University, m-saeki@chiba-u.jp)

Totalitarianism and Dead Ends in Sociology

The 20th century did not only see the rise of academic sociology, but highlighted also strife within societies that resulted in specific forms of totalitarianism. Literature on the relationship of sociology and these totalitarianisms is controversial. Some authors state that sociology is not a natural antipode to dictatorships: Some sociologists like Sombart and Michels were active proponents of totalitarian ideology, and most totalitarian regimes quite liked the technical expertise of social research.

Other authors propose that a flourishing sociology needs a certain form of society characterized by openness and tolerance to find a constructive climate for theoretical reflection, empirical research and practical relevance. From this position one can argue that there is a “Wahlverwandtschaft”, a structural affinity, between sociology and democracy.

The presentation will use empirical material from a case study on the development of sociology at the University of Halle between 1900 and 1990. The University of Halle is an interesting case in so far as in this East German university the societal context varies between monarchy, democracy, fascism and communism. The empirical material focuses on published and unpublished work of Friedrich Hertz and Rudhard Stolleberg, as well as archival material to their activities and conflicts. Specific dead ends of forms of historical sociology and empirical sociology are analysed with regard to the guiding question, whether there is a structural tension between forms of totalitarianism and sociology.
The Impact of Sentencing Decisions about Similar Cases and Others' Opinion on Sentencing Decision

In 2009, Lay judge system started in Japan. Under this system, lay judges and professional judges determine guilty of crimes and sentences to the convicted criminals. After the determination of introduction of this system, some scholar have explored how that decision making is done by psychological experiments -mock trial study. However, the research which employed this method focussed on private lay judges' decision, not outcomes after deliberation. It is due to the difficulty of conducting mock trial study with deliberation.

Of course, the results of this research are useful when thinking about modification of trial procedure. However, the determination of sentences to the convicted defendant is done privately, but is done through deliberation by lay judges and professional judges. In this paper, the impact of information which is given to lay judges is examined. In trials and sentencing deliberation, lay judges look graphs about past similar cases. This is basically shown in the form of graph of distribution, and it has powerful effect on lay judges' sentencing decision. In a psychological experiment, the impact of that graph and participants' opinion about how useful that graph is and how respectfully we should treat that graph are explored. In addition, there might be conflicting opinion with regard to sentencing outcomes by other lay judges. In the same experiment, reactions to those different opinions are also examined. This psychological experiment did not include sentencing deliberation itself, but due to that experiment, some important aspects about sentencing deliberation can be explored.

In this paper, the results of the psychological experiment are shown. Then, some practical implication about trial procedure is discussed based on the results. Especially, to incorporate general public opinion into judicial system is one of the goals of Lay Judge System in Japan. Therefore, the results are examined from this perspective.

The Demographic Transition and Subsequent Transitions: The Case of the United States

The United States has experienced major demographic shifts throughout its history. Like many other developed countries around the world, the traditional demography of a country associated with declining mortality and declining fertility has spawned subsequent demographic transitions. These transformations have included the urban transition, the marriage transition, the household transition, the aging transition, and the race/ethnic transition. Of these transitions, the two most prominent at the beginning of the 21st century are the latter two—the aging transition and the race/ethnic transition. In particular, the country is in the process of aging rapidly as the large cohort of baby-boomers start reaching age 65 between 2011 and 2029. In addition, as the white population begins to decline due to low fertility and major aging, the Latino population due to its youthfulness will dominate the nation's population growth. Indeed, population projections suggest that the Latino population will more than double from 50.5 million in 2010 to 111.7 million in 2050 compared to a 5 percent decline in the white population from 196.8 million to 186.3 million during this period. These major demographic transitions will have major impacts on demographic, social, and economic trends in the coming decades and in many ways is likely to lead to varying experiences between the United States and those of other developed countries. The implications of these trends in the future of the United States will be discussed.

The End(s) of Diversity: the Struggle Between Nationalism and the Hyperdiverse City

In the framework of the FP7-project Divercities, we investigate how urban policymakers deal with the increasing hyperdiversity in European cities (Tasan-Kok, van Kempen, Raco & Bolt, 2013). In reaction to immigration and the intense diversification of the population, nationalist parties have gained electoral success in several Western-European cities. As a political ideology that focuses on constructing and maintaining a homogeneous nation-state, nationalism seems to be at odds with the hyperdiversity in contemporary Western-European cities. Characterized by the coexistence of people with very diverse socio-economic and ethnocultural backgrounds, the hyperdiverse city is an anomaly to most theories of nationalism. While authors like Anderson (1983), Gellner (1983) and Smith (1986) explained nationalism on a countrywide or regional scale, little has been written about the relationship between nationalism and the city. In this paper, we want to address this problem by internationalizing nationalist policies and their impact on hyperdiversity in the city.

In order to answer this question, we take the example of Antwerp in Belgium. As the largest city of the Flemish region, Antwerp is an interesting case because of the electoral success of Flemish nationalist parties on the one hand and the diversity of its population on the other hand. While extreme right-wing Flemish nationalism has long be relegated to the opposition, a moderate Flemish nationalist party recently came to power in Antwerp. Based on a critical discourse analysis of policy documents and interviews with policymakers, we compare past and present integration policies regarding immigrants in Antwerp. This comparison illustrates how urban integration policies have shifted away from multicultural to assimilationist policies. Serving nation-building ideals rather than the pragmatic inclusion of immigrants in the city, the national assimilation policies seem to be ill-equipped to deal with the increasing hyperdiversity in the contemporary Western-European city.

Context specificity of stratifying factors is often alleged, but attempts to systematically test applicability of theories outside the context of their emergence are still relatively rare. Bourdieu's ideas on cultural consumption and leisure practices were lucky in this respect. Due to their centrality for the late XX century sociology of culture and stratification, and general feeling that they have special French flavor, their applicability has been tested for a variety of national contexts (the US, Hungary, China, Australia). Thus, studies carried out in the US demonstrated that the opposition of high- and low leisure activities find only partial equivalent there (DiMaggio, Kingston, Lamont, Mohr). This study evaluates applicability of Bourdieu's concept to the Russian context. We Bourdieu's predilection aspect of this notion which, to our knowledge, has not been addressed before: direct connection between intensity of leisure practices, high culture awareness, and taste.

Using a sample of 450 high school students we find out that widely accepted measures of these variables demonstrate impressive lack of correlation even when various controls for cheating are implemented. Besides, two of the three measures are not related significantly to parental investments. The data seem even more surprising taking into account that Soviet time studies, carried out without knowledge of Bourdieu's work, but in largely the same vein, produce results better fitting with Western context. As Bourdieu predicted, high level of cultural capital tend to form a homogeneous status group and cultural consumption remains structured. Counter to Bourdieu, instead of one dominant taste we find a plurality of segmented tastes, covering different forms and species of art. Investment in developing taste for and familiarity with one of them does not imply familiarity with homological others. We will conclude with discussion of possible solutions of this puzzle.

The Academic Empires: The World-Society Argument and Colonial Legacies in the International Student Migration System

In the recent years, sociological thinking about globalization in the education sphere has been heavily dominated by the world-society theorizing, originating in works of John Meyer and his various colleagues. The major expectation, arising from it, is emergence of a unified global academic culture, and, generally, convergence in organization and practices of the education sector. This paper tests the world-society theory by applying it to data on higher education students' migrations between countries. The expectation derived from WS theory is that (a) the migration flows will demonstrate rapid diminishing or already minimal levels of clustering to one of the academic centers. As Bourdieu predicted, high level of cultural capital tend to form a homogeneous status group and cultural consumption remains structured. Counter to Bourdieu, instead of one dominant taste we find a plurality of segmented tastes, covering different forms and species of art. Investment in developing taste for and familiarity with one of them does not imply familiarity with homological others. We will conclude with discussion of possible solutions of this puzzle.
Empirical Measurement of Integration & Cohesion

Youth (LSAY) which involved over 10,000 students. Following this cohort of youth and use the 2003 Cohort data of the national Longitudinal Study of Australian

due to the significance of youth’s uncertainty about what they want to do later in life. The Daasanach are a pastoral group in Ethiopia, and the South Sudan have fought with neighboring pastoral groups, viewed as "enemies", for more than a half-century. The Daasanach claim that their primary motive for going to war is the demarcation of masculinity, allowing men to be recognized as "brave" by community members. Various cultural mechanisms praise the "brave man" who kills a member of enemy group and who raids their livestock. Since the 1980s, the proliferation of automatic rifles in East Africa has increased the seriousness of conflicts. It has been reported that the young are drawn to the destructive power of the automatic rifle, and their behaviour is carelessly destructive of the social order. However, many Daasanach youth told me that recent war experiences with automatic rifles had led them to "renounce war". Two main types of experiences contributed to such decisions. First was the bodily (including "physical" and "mental") pain of war, such as being grazed by a bullet or surrounded by dead bodies. Second was the shameful conflict that could occur among the Daasanach during the course of a war. In wartime, the unity of "we Daasanetch" could break down under the violence. Many persons who "renounce wars" said, "I became cowardly" as a result of such experiences. In this presentation, I will discuss how the change of weapon influence on the forms of war and bodily experiences in the battlefield, and how people reflect their pain and suffering in the battlefield to their life.

The empirical measurement of the integration and cohesion impacts of migration throw up key conceptual, practical and sociological challenges. The paper features the findings of a study of such impacts in the UK commissioned to develop evidence-based public policy. Integration and social cohesion are elusive concepts that are defined in different ways. There are impacts on national identity. Measures here refer to perceptions of feeling or belonging to a national society. In the British case, the trend over time is of a move from an ancestral understanding of identity, couched in ethno-cultural fixtures, to one based more on civic values and responsibilities. Secondly, migration impacts on integration, defined as group outcomes set against the societal average. Here migration’s impact assumes a great deal of importance—as migration and policies that modulate migration have impacts on trajectories. Notwithstanding that the choice of measure is critical, it is clear that different immigrant groups perform very differently. Finally, migration impacts on cohesion, namely how migration affects neighborhoods, and is defined by people’s perceptions of how people get along with each other in their local area. The paper reports UK empirical measures of this in two ways, first by perceived positive or negative changes in neighborhoods and in respect and interaction between social groups; and second by levels of trust in local institutions (such as the police). The findings suggest that new migration does not notably affect cohesion but pre-existing diversity and high levels of poverty are predictors of lower social cohesion. There are important insights for social researchers examining issues around the size of migrant communities and for policymakers in respect of managing the pace of change in neighbourhoods.

This paper will present preliminary research results from an ongoing research project that considers the dynamics of food consumption among the middle classes in Bangalore and Metro Manila, including consumption patterns, practices and policies. Asia is often seen as the center of gravity for the “new consumer” phenomenon, whose rise in affluence can translate to consumers who enjoy better diets, private transport, throwaway products, and fashionable versus functional clothing (Myers and Kent 2004). The focus of this paper is on Metro Manila and the emerging middle classes, who may not necessarily be experiencing ‘better’ diets, but where there does seem to be a trend towards ‘organic’ and ‘local’ food consumption among some people. This paper wishes to highlight the emergence of organic and/or local food and composting as entry topics for environmental concern, as well as the influence of globalization on environmental initiatives.

One main finding is that changes in food consumption practices are not only related to a rise in affluence, but to changes in other practices, such as changing the location of your home, joining a new workplace, or the employment of a domestic worker. Specifically, a change towards organic food consumption seems to be motivated by a different set of reasons, not directly related to environmental concerns. It is important to investigate how the consumption patterns of these new practices had all been ‘elsewhere’ and brought new ways of doing back to certain markets, as well as the influence of travels abroad. Looking upstream at organic farming and further downstream at composting, people engaged in these new practices had all been ‘elsewhere’ and brought new ways of doing back with them, upon returning to the Philippines. The significance of demonstration projects towards more ‘sustainable’ practices will be discussed.

The aspirations of young people have been extensively studied, and were key variables in early status attainment research in the late 1960s. The link between youth ambitions and eventual educational and occupational outcomes has never been doubted, although the ways in which the variables are related has been debated. Throughout this 50-plus years of research, it has always been thought that all young people had ambitions, but that how much, and for what attainments, needed to be explained. Only recently have researchers begun to pay more attention to the significance of youth’s uncertainty about what they want to do later in life. Some researchers have referred to this as aimlessness or role exploration. Yet this uncertainty can be also viewed as flexibility which is typical or even beneficial in a world in which life-long careers are a thing of the past. In this study, we investigate the consequences of uncertainty shown in youth educational and occupational ambitions. We conduct our study from a longitudinal perspective, and use the 2003 Cohort data of the national Longitudinal Study of Australian Youth (LSAY) which involved over 10,000 students. Following this cohort of youth between ages 15 and 24 we will examine the consequences of uncertainty in educational and occupational ambitions focusing specifically on differences between those with and without aspirations and the possible various reasons behind them. We also discuss the implications of our findings for theories of youth social/psychological development, career development, and occupational attainment.

The empirical measurement of integration and cohesion impacts of migration throw up key conceptual, practical and sociological challenges. The paper features the findings of a study of such impacts in the UK commissioned to develop evidence-based public policy. Integration and social cohesion are elusive concepts that are defined in different ways. There are impacts on national identity. Integration and social cohesion are elusive concepts that are defined in different ways. There are impacts on national identity. Measures here refer to perceptions of feeling or belonging to a national society. In the British case, the trend over time is of a move from an ancestral understanding of identity, couched in ethno-cultural fixtures, to one based more on civic values and responsibilities. Secondly, migration impacts on integration, defined as group outcomes set against the societal average. Here migration’s impact assumes a great deal of importance—as migration and policies that modulate migration have impacts on trajectories. Notwithstanding that the choice of measure is critical, it is clear that different immigrant groups perform very differently. Finally, migration impacts on cohesion, namely how migration affects neighborhoods, and is defined by people’s perceptions of how people get along with each other in their local area. The paper reports UK empirical measures of this in two ways, first by perceived positive or negative changes in neighborhoods and in respect and interaction between social groups; and second by levels of trust in local institutions (such as the police). The findings suggest that new migration does not notably affect cohesion but pre-existing diversity and high levels of poverty are predictors of lower social cohesion. There are important insights for social researchers examining issues around the size of migrant communities and for policymakers in respect of managing the pace of change in neighbourhoods.
Voluntary Risk Taking and Individual Emancipation

Background: In France, the important proportion of teenagers who develop a repeated consumption of cannabis, tobacco or alcohol consumption worries the security and public health authorities. The consumption practices among young people are recognized by social and scientific researches to have a risk behavior. Many scientific researches try to explain why they develop a health, social and penal risks behaviors. However, very little one has analyzed the way that experience of consumption is lived by youth. How do teenagers perceive their consumption behavior, what meanings that they attach to their behavior?

Methods: In order to apprehend the subjective experience of drugs consumption, we have led a qualitative investigation. We carried out 42 biographic interviews to twenty-one girls and twenty-one boys between seventeen and twenty years old. They live in Ile-de-France. These interviews have permitted us to apprehend subgroups about their consumption experience and analyze the dynamic by which the have developed the substances use.

Results: The public health categorization on consumption by youth does not tally with what happen in reality. The perception of the teenagers on their consumption moves away from the epidemiologic categorization. The drugs use means to the participants festivities or conviviality. Moreover, teenagers, who are currently looking for an autonomous identity, develop consumption, not to oppose to their parents or social and penal norms, limits. We observe that if the youth people develop the consumption of cannabis, alcohol and tabaco it is especially to build a personal and individual identity: it is in a context of individual emancipation (Kaufmann, 2004) that we consider voluntary risk taking is part of individualization process.

Conclusion: There is a contrast between the collective and scientific perception and perception of teenagers on drugs consumption. Voluntary risk taking is a subjective and positive experience which responds to his quest for identity.

Development Induced Protests in Contemporary India: Response from the State and Civil Society

The issue of forced human mobility has been receiving much attention from the government, policy makers, civil society organizations, activists and academia in contemporary India. Social scientists interpret forced human mobility as involuntary migration and internal displacement. The desire to take control over a certain territory and its resources becomes a cause of conflict which forces its residents to leave their current homes. The most visible are displacements associated with conflict over resources or antagonisms based on ethnic background. In the case of development-induced displacement or conservation-induced displacement, territory becomes an arena of specific conflicts between the interests of the public or private sector and the needs of people displaced or affected by particular development decisions. Development-caused displacement is often associated with conflict over resources which have led to landlessness and consequent problems.

The paper attempts to analyze the contemporary Indian society and development-induced displacement from a class-gender perspective. The lower one is on that ladder, the greater the negative impact of changes introduced in their lives without their consent. The marginalised communities especially Dalits and tribals feel it more than the others do and women among them are the worst affected. They are deprived of the resources that were basic to their survival and are denied access to education, health services and nutrition. It forces them to deny their children right to childhood and to a decent adulthood. Women are deprived of the little autonomy they had. Development cannot be real till such failures are remedied and its benefits reach those who pay its price.

Democratization of Art Production and Voicing Subversive Vision of the World

Tunisian youths are experiencing new form and styles of art production. This is especially true for rap music ans graffiti. Facebook and you tube networks are the predelected means of diffusing the products. Onr can see in this a wave of democratization of the production of art which sappers the old rules of ranking popular and mass arts. In the other hand, the content of these products are more and more crucial and complex in rural areas, but it is also true that most of the violence have been hidden from public eye. Due to rigid traditional norms and values of rural society; victimized women never try to disclose it. The rural societies have been strictly controlled and regulated by traditional norms. This is the reason behind the failure of rural women to accept spousal violence as a serious criminal offence; which presents a grave challenge to society.

Spousal Violence Among Rural Women: A Sociological Study in North-East India

Spousal violence is a grave challenge to a happy marital life. When proclivity of violence takes place in dyad relationship, it crushes the bond of family. Therefore, spousal violence has been considered as one of the most serious social problems throughout the world. Hence, this issue has a sociological significance. The theoretical arguments regarding spousal violence can be classified into different categories. But in this study specific focus has been laid upon wife-battering only. This paper seeks to know the nature of violence and to find out the causes and consequences of spousal violence in rural areas of North-East India. Apart from these two objectives, awareness and knowledge of the victims towards legislative measures to save them from spousal violence have also been investigated with proper method. The field of the study concentrates around a village namely Goskutta in North-East India. Keeping in view the subjects of the study, basic information about spousal violence was gathered from 100 married women out of 208 households of Goskutta village. The data were collected purposely and in this context accidental sampling procedure was followed. The findings of this study have revealed that rural women of North-East India have been suffering considerably of spousal violence. The relationship in between the husband and wife became more crucial and complex in rural areas, but it is also true that most of the violence have been hidden from public eye. Due to rigid traditional norms and values of rural society; victimized women never try to disclose it. The rural societies have been strictly controlled and regulated by traditional norms. This is the reason behind the failure of rural women to accept spousal violence as a serious criminal offence; which presents a grave challenge to society.
cases relating to spiritualism, and enjoy this authoritative position as it gives them the opportunity to spend their leisure in a healthy manner. A considerable demarcation thus separates the Marwari men and women in connection to their notion of leisure in spiritualism and this is what this paper intends to throw light upon. A detailed survey-work has been undertaken with some in-depth interviews to represent this field as accurately as possible.

*Two Visions of Cosmopolitics*

This paper explores how Ulrich Beck's world risk society theory (WRST) and Bruno Latour's actor-network theory (ANT) can be combined to advance theory of cosmopolitics. On the one hand, WRST is good at illuminating how relevant political actors interact with each other to deal with global risks while negotiating the two logics of politics, cosmopolitanism and nationalism. On the other hand, ANT is good at showing how scientists participate in the construction of global risks and helps to elaborate how science and politics are intertwined in cosmopolitics. By combining the strengths of WRST and ANT, it becomes possible to examine simultaneously the tension between the two logics of politics and the co-constitution of science and politics, both of which, I argue, are crucial for theorization of cosmopolitics. The proposed synthesis of WRST and ANT also force sociologists to critically reflect on their role in cosmopolitics and envision a new form of critical theory.

*Nation Consciousness and “Multiracialism” of the Singaporeans: Focusing on the Concept of “Racial Difference” and Their Interactions*

Singapore is well-known as a ‘multi-racial’ society, but then, how they form their identity as ‘Singaporean'? Considering this problem, ‘multiracialism’ becomes an important concept in making ‘Singaporeans'. However, its purpose is to make ‘racial differences' obvious and emphasized. Therefore, how do people create Singaporean consciousness in these kind of society?

The aim of this research is to study this problem by using free talking interview and observation data carried out by the speaker. We can say that the government of Singapore reinforces the ‘races’ in order to make differences among ‘races’ highly visible by emphasizing the differences among the ‘races’. In Singapore, differences among ‘races’ are visible even though people from different ‘races’ interact with each other daily. Moreover, a sense of community or even of being a ‘Singaporean’ begins to grow and maintains; at the same time, differences among ‘races’ are maintained.

*Rainfall Variability, Coping Strategies and Livelihoods: Case Study from Godavari Basin, India*

Natural resource-dependent rural households are likely to ensure a dispro-portionate burden of the adverse impacts of climate change -- droughts, famines, floods, variability in rainfall, storms, coastal inundation, ecosystem degradation, heatwaves, fires, epidemics, and even conflicts. In some parts of the world, these effects may already be in play with potentially disastrous consequences for the poor. Reliance on subsistence agriculture means the impact of stresses, floods, variability in rainfall had been plaguing the farmers of Andhra Pradesh during the recent past resulting in crop failure and indebtedness. It would be important to find out the coping mechanisms that are being developed by the farmers to deal with variability in rainfall and the support being provided by the government. In some parts of the state, farmers are opting for cultivation of commercial crops instead of food crops as they are finding better returns from these new types of crops which could lead to issues like food security and loss of livelihood for certain communities.

This paper focuses on identifying livelihood adaptation strategies of cultivators in Nizamsgar project, where farmers developed new water sharing mechanisms and brought about changes in farm practices to deal with rainfall variability.

equity in universities. Examples of them and discuss effective ways to support both sex and foster gender equality in universities. With other occupations. This paper outlined a possible short time response and inappropriate answers was 483. The average age of these women is 40.5, 59.8% are employed and 40.2 are non-employed. Multiple regression analyses the effects of employment and marriage cohort, family resources, and academic status of them, coev and the support in the workplace, upon the recognition of birth experience. Our results indicate high housework frequency of the husband decreased their first birth hesitation. On the other hand, positive recognition toward birth experience is influenced by the support in the workplace. Smooth communication with both family and workplace members was a possible effective factor. These findings advance our understanding of how Japanese companies can take specific measures to improve low fertility.

The Effects of Using ICT on Work-Family Life: an Empirical Study Based on the Work-Family Border Theory

One of the features of ICT use is greater alleviation of time and location restraints in communications. Although positive effects of ICT for improving work-family life have been reported, much of the ICT literature stresses negative effects on work-family life through increased extra work. Sakamoto and Spink’s (2011) found that a higher degree of using ICT tools directly related to higher work-family conflict of Japanese workers. This study explores the effective mediating factors that can reduce the negative impact of ICT use, applying work-family border theory to measure the concepts and propose hypotheses.

Data used for this study was derived from a web questionnaire survey conducted in September 2013. The sample is consisted of women having husband and children (under 15 years old), who resides in the Tokyo metropolitan area. In order to correct the potential bias of the registered monitors, we adopted stratified random sampling based on job status and the age of the smallest child. The valid sample size excluding quite short time response and inappropriate answers was 483. The average age of these women is 40.5, 59.8% are employed and 40.2 are non-employed.

Multi-group analysis of covariance structure modeling test the effects of using ICT on work-family life focusing on the housework frequency, time use of their daily life and their perception of them. We analyze the mediating effect of domain identification, influence and across-the-border communication. Our findings advance our understanding of how we manage the permeability between work and family life.

SAKANASHI, JUN* (Rikkyo University, sakujan88@gmail.com)
Work and Private Life of University Professors in Japan and Positive Action Taken By Japanese Universities

This presentation will examine the work and private life situations of female and male university professors in Japan, and offers some examples of positive or affirmative action taken by Japanese universities and discuss its effectiveness. In Japan, the ratio of female researchers is low, as is the case of other countries. In 2011, just 13.6% of university professors (full professor, associate professor, lecturer, assistant professor) were female. From around 2006, the Japanese government started a positive action policy to increase the ratio of women. The government grants subsidies to offer about 10 universities each year for three years. The universities offer support centers for women, gender equal office, childcare centers and so on.

The presenter has worked in one of the gender equal offices as a staff member. My observation there and a questionnaire research for university professors are the main data source of the presentation. First, the presenter will discuss their work and private life situations. Many researchers have shown that male productivity tends to be higher than that of females. However, the results show gender does not appear, scientific productivity when they control other variables. Next, they have specific marriage patterns. For example, many female professors tend to be single or have partners who are professors. Many couples live separately. However, women tend to shoulder domestic work and child rearing, as is the case with other occupations.

In Japan, many universities have set the goals of numbers or ratio of women and introduced many types of positive action. The presenter will show examples of them and discuss effective ways to support both sex and foster gender equality in universities.

SAKATE, MACHHINDRA* (MRJM College, Umbraj, machhindralogy@gmail.com)

Renewable Energy: A Study of Oyunkuswade Wind Park, India

Man has been using the wind for sailing ships, for pumping water and for supplying electricity for a very long time. The increasing concern for environment, and the high price of oil have made generation of electricity from the wind a realistic alternative. The question today is whether the costs and other disadvantages of oil and nuclear power have reached the point where wind generators developed by modern technology can be considered to be competitive.

The wind power in India began in 1990 and has significantly increased in last few years. India has installed high capacity wind jammers to exploit wind and converts it as wind energy for its socio-economic inclusive development programme. As on 31 January 2013 the installed capacity of wind power in India was 19564.95 mw.

Maharashtra state has the second position in wind energy in India. The first wind power project in the state was installed at Jamsande in Sindhudurg district in 1986. Vankuswade Wind Park is located on a high mountain plateau at 1,150 m. above the Koyana reservoir near Satara which is Asia’s biggest wind power project. There are some issues like land acquiring and local perceptions. The attempt has been made to explore the situation which will help to solve the issues of conflict in future. The paper presents the overall situation of Vankuswade Wind Park, its need as well as ground level perceptions in Satara district of Maharashtra, India

SAKATE, PUSHPALATA* (Samatawadi Mahila Manch, Maharashtra, pushpalata.sakate@gmail.com)
Role of Dalit Mahila Vikas Mandal Against Femalefeticides in Maharashtra, India

Strong preference for sons over daughters exists in the Asian countries and Indian subcontinent. The female feticides over the last four-five decades have distorted sex ratios at birth in several Asian countries in general and in India particularly. Foetal sex determination clinics have been established all over India in the last two decades. There are studies on the outcome of an intensive abuse of prenatal diagnostic techniques for sex selection in India. Parents tend to be calculative in choosing the sex of the next child and the decision is based on the birth order, sex sequence of previous children and number of sons. The misuse of medical technology in India is resulting in reinforcement of patriarchal values as professional medical organizations seem to be indifferent to ethical misconduct.

The medical researchers pointed out the need for reducing the medical practice of selecting the sex of the child. Once the contribution of sex determination tests (SDT) to the rising sex ratio has been vigorously debated. While urban feminists demanded legislation against SDT, some social scientists felt that SDT had little impact on sex ratio.

The paper presents the assertive action by ‘Dalit Mahila Vikas Mandal’, a social organization which was established in 1990 in Maharashtra. Female feticides done by medical fraternity have been exposed by this organization through sting operations carried out in Maharashtra and Gujarat state. The shocking facts found during the field work carried out by the author are also presented in the paper.

SAKS, MIKE* (University Campus Suffolk, m.saks@ucls.ac.uk)
Professional Turf Battles Vs. Inter-Professional Collaboration: Their Impact on Inequalities in Health and Social Care in the UK

From a neo-Weberian perspective, it is argued that professions have long competed with each other in turf battles to enhance their respective positions in terms of income, status and power from the viewpoint of their professional self-interests. Using illustrations drawn from health and social care in the UK, it is argued that this has come at a substantial cost to both the user and the wider public - and has in particular exacerbated existing social inequalities. This paper outlines the growing trend for inter-professional collaboration in health and social care in the UK. Although there can be downsides to greater inter-professional working in relation to such issues as the complexity of communications and supervision arrangements, there are many positive generic reasons for such engagement – from creating a more satisfying work role for the professionals involved to enhancing the service given to the user. This paper specifically asks questions about the benefits or otherwise of inter-professional working in terms of social inequalities. In so doing, it acknowledges that inter-professional collaboration can take a number of forms. It also again draws on examples from health and social care in the UK to support its general argument that inter-professional collaboration can make a significant impact on social inequalities, not just in the UK but more globally.
Broken Promises. Temporary Labour Migrants’ Experiences of Working Conditions and Social Security in Finland

West European countries, including Finland have started to recruit more labour migrants to low-income sectors in hope of a partial solution to the consequence of rapidly aging working population. This paper demonstrates how highly skilled labour migrants from non-EU member countries face social disqualification in their efforts to become part of the Finnish labour market. Particularly, African and South-Asian male workers find mainly cleaning or dish-washer jobs despite their academic background. Our study explored the temporary labour migrants’ experiences of acquiring opportunities to working rights and social security. The results show that the majority of the interviewees had been reluctant to look for information either due to the fact that they were working only temporarily in Finland or due to their week bargaining positions. The information of recruitment, working rights, the Finnish taxation system, and of the Finnish social security rarely reaches the labour migrants. These features can partly be explained by labour and migration policies, and by the natives’ strong creation of ‘otherness’ between the native Finns and the non-white foreigners. In the analysis an intersection of gender, ethnicity and class has been applied to describe the unequal and sometimes precarious position of the labour migrants. The research material consists of documents, memos based on ethnographic observations and of seventy-eight semi-structured interviews, of which forty-nine were conducted among cleaners, bus drivers, and seasonal agricultural workers.

Re-Creating Mutual Belonging: Filipino Labour Migrants’ Local and Transnational Practices Between Finland and the Philippines

This paper demonstrates the unequal embeddedness of transnational Filipino labour migrants in the Finnish and Filipino society. My study of Filipino labour migrants’ working and living conditions in Finland explored the migrants’ adaptation strategies in their efforts to become integrated in the Finnish society and in staying in touch with the ones left behind. The analysis showed how the integration of Filipino labour migrants to their new host society is influenced by their adaptation strategies, such as of the migrants’ local and transnational practices and contacts. The active participation in sociocultural and religious practices helps the Filipinos to find their way of being in Finland without losing their contacts to the Philippines. The migrants’ adaptive strategies strengthens the Filipinos ethnic identity and in its turn their ethnic belonging to an ethnic minority community in Finland as well as to a transnational community. These two communities should not be perceived as two opposites but as dual sites of mutual belonging consisting of a hybridity of transnational and ethnic collective identities. At the same time, the migrants’ opportunities to become familiar with the Finnish society and to learn the Finnish language have been vague. There is a risk of segregation from the Finnish society if the Filipinos do not become familiar with the Finnish society and language. The research material consisted of open-ended interviews conducted among twenty Filipino cooks, nurses and cleaners and of memos based on ethnographic observations.

Occupy Gezi: From an Uprising to a Social Movement?

Occupy Gezi started as a small protest to oppose the demolition of a park in Istanbul and quickly transformed into a national grassroots initiative against the government’s authoritarianism and a hybrid democracy, which locks political action into the ballot box. After a month of intense street protests leaving 5 dead, dozens wounded and under arrest, it has shifted to “park forums” as thousands of protesters joined in public squares nation-wide. In this paper I explore the social processes that emerged during the Gezi protests to understand how they opened new social and political possibilities, spaces of political action (online and off) and a new kind of political language; which shook the so-called “apolitical” generation out of their comfort zones to the streets; and brought people from all walks of life and political spectrums together. It will also look into the chances of Occupy Gezi becoming a full-fledged social movement and the limitations it faces in the process.

Mysteries of the Discourses That Encourage Cooperation. Ver.2

Mysteries of the discourses that encourage cooperation. Ver.2

- Another important constant number on the human societies added to “Dunbar’s Number”: Yoshio Sakurai
  (Kagoshima University)
yoshiosakurai@gmail.com

[Methods] I used a multi agent simulator. The structure of the pay-off of the game is composed by a kind of ‘social dilemma’ in her neighborhood, and other orientations with their costs. Each agent has a strategy which has two kinds of output values; (act cooperatively / not act cooperatively) and (speak to advocate cooperation / not speak). There is also another parameter, threshold for speaking to advocate cooperation parameter. Each agent will speak to advocate cooperation with ‘a cost’, and only when the ‘cooperative act rate’ of her neighborhood is UNDER her ‘threshold for speaking to advocate cooperation’ parameter.

[Results/Conclusion] I tried to check whether “speaking to advocate cooperation” or “not speaking to advocate cooperation” has effects on the cooperators rates in the whole universe. The results are in Fig.1. Next, I tried a parameter survey on how values of the ‘neighborhood radius’ have effects on the cooperators rates. I did 100 trials where the ‘neighborhood radius’ were randomized with equal probability from 0 to 130. The results in Fig.2 are in the figure shows, in the cases that the ‘neighborhood radius’ ranges from 10 to 25, the ‘cooperators rate’s seem to be distinctly high. It seems that there is a ‘threshold value’ around 25 by which the ‘cooperators rate’s are discriminated between being high and being nearly zero. I think that these models are interesting in several points. We will discuss some at our conference.
Materials and methods: the variables in the model proposed by the pilot study have been reviewed on the basis of the individual data available in the information systems of the local actors. They have been used for defining evaluation models based on the characteristics of the individuals, with the same techniques used in the pilot study. As a case study the municipality of Genoa, whose population is among the oldest in Europe, has been taken into account.

Results and discussion: The passage from regions to individuals in a large municipality confirms the validity of the model for people 65+ years old. ADL disabilities are the main disability dimension with highest association with the worsening of the SE condition, also due to the effect on the social relations dimension. The public strategies seem to better protect individuals and families, with the help of the informal network of support for the family care. The indicators in the models could be very useful for the Social Services, in order to develop tools for better addressing policies and intervention at local and national level. Moreover, this work could extended wherever these kind of data are routinely collected.

As everyday resistance that Nahd el-Bared inhabitants take back the control of the camp and rebuild their own space. My research examines these three elements in the way they are expressed in space.

SALAS-PORRAS, ALEJANDRA* (Universidad Nacional Autónoma de México, asalasporras@hotmail.com)

Think-Tank Networks in Mexico and How They Shape Economic and Political Reforms

Think tanks, broadly defined as public policy research organizations, have proliferated in North America. In the case of Mexico they are a relatively new phenomenon associated to the retreat of the state from the economy. However, they have rapidly taken networks which play a key role in coordinating elites in the country in order to influence the public policies and strategies promoted throughout the past two decades, in particular those associated to NAFTA and the reforms this agreement has entailed. This paper analyzes the most important characteristics of Mexican TT, who controls them, the networks they have constructed in the past decade, the strategies they pursue to influence policy-making, the most influential ideological orientations and the extent to which the Mexican TT network is linked to a regional or international network. I argue that the landscape of TT has undergone a profound transformation in the past years leading towards: (1) an increasingly greater presence of independent TT and private consultancy firms that undertake not only research on public policies, but executive and legislative lobbying too; (2) a more challenging advocacy role of academic and business TT that actively participate in the media and multiple forums to build consensus around, and (3) the dissipation or fading away of former state research centers, particularly those promoting developmentalist goals (4) the concentration of state research in autonomous public agencies requiring very specialized information; and (5) new and more complex forms of collaboration and cooperation between business affiliated, academic and other TT, national and regional. Formal network analysis will be carried out in order to examine the patterns of connections between TT, their centrality and the tensions or divisions emerging from the ideologies they espouse or from the technocratic knowledge produced.
In the Philippines, there has been some amount of talk and, fortunately, some amount of action too, about climate change. We ask: What is being said and done about climate change in the country? How is climate change being framed and acted upon? Why are these developments unfolding the way they do? How do these discourses and practices reflect and influence sociocultural dynamics? The paper presents voices, views, and vignettes from the country. It attempts an understanding of these realities by drawing from social constructionism, critical discourse analysis, and social movement theory.

Managing NGOs for Older Persons in East and Southeast Asia: Lessons and Good Practices from the Field

The paper reviews the roles and experiences of non-governmental organizations for older persons (NGOs-OPs) in East and Southeast Asia. It is based on case studies of selected NGOs from Hong Kong, Japan, Korea, Indonesia, the Philippines, Singapore, Thailand and Vietnam. The study finds an increasing number of NGOs-OPs present in the region, working in diverse areas of service delivery, education, research, training, and advocacy. Community-based older persons' organizations or senior citizens associations are also becoming more active, with some organizations engaging in social and recreational activities, and venturing into policy advocacy and other areas traditionally served by non-community-based NGOs. Most NGOs are taking on multiple roles simultaneously, e.g., adding advocacy to their other programs, while a few are beginning to focus on a specific target group, activity, or service. On the organizational and management side, NGOs-OPs are also becoming more accountable and are taking creative and innovative steps in meeting the challenges of management. To be sure, NGOs-OPs need to address important gaps, notably the lack of capability-building at the community level, the lack of follow-through in policy implementation, and the need to solicit critical, hopefully constructive feedback from the older persons they are serving. Nevertheless, like the older persons they are working for and with, NGOs-OPs themselves are getting more active and growing wiser with age.

Genealogía Del Pensamiento Crítico

In América Latina y en castellano se usa mucho la expresión Pensamiento Crítico, sin que siempre se tenga claro a qué se refiere con ella. Este trabajo pretende aclararlo desde su origen, para ello se piensa revisar los aparatos críticos más originales y reconocidos durante la modernidad, se piensa acudir a la Ilustración y al romanticismo, toda vez que, tanto Kant por vía de Weber, como Hegel por vía del marxismo, han estado presentes y son imprescindibles para la sociología actual. De tal forma se espera alimentar la vocación crítica del discurso sociológico.

Les politiques d’immigration en France depuis une dizaine d’années visent très particulièrement les couples binationaux dont le ressortissant étranger est sans papiers. Depuis 2003, sont inscrits dans la loi les délits de mariage « blanc » et mariage « gris » : le premier se réfère au délit de mariage de complaisance, et le deuxième concerne l’étranger extra-communautaire qui se pacse (pacte civil de solidarité) ou se marie seulement pour avoir des papiers de séjour, c’est-à-dire, et selon les personnalisations de recherches françaises un escroc sentimental à but migratoire ». Or, ce discours et les politiques d’immigration ne visent pas tous les couples de la même manière. La sexualité, la nationalité, la « race », le genre, la classe ou l’âge de la personne étrangère sont des critères importants de la suspicion de l’authenticité d’un couple. À partir de mon travail de terrain effectué pendant trois ans auprès des couples binationaux de même sexe et de même sexe différents, il s’agira, dans cette communication, d’analyser la manière dont cette politique régulé et contrôle la vie intime de ces couples par le discours politique mais aussi par l’appréciation de la loi. Celle-ci varie lorsqu’il s’agit de couples où l’homme est ressortissant d’origine africaine ou d’origine musulmane, ou lorsqu’il s’agit de couples binationaux gays ou de couples binationaux lesbiens.

An Experimental Study Of The Relationship Between Knowledge, Attitudes and Recycling Behavior In Iran

It is often assumed that knowledge and attitude about the recycling will engage in recycling behavior. We used data from a survey on Mazandaran province, Iran in 2013 to investigate this premise. A survey method was utilized to help the neighborhood change Database spanning the years 1990-2010 are used to investigate census-based measures of gentrification. Systematic social observation of select neighborhoods using photography will also be used to document change visually, with an emphasis on commercial storefronts. This research seeks to integrate cultural and spatial analyses into demographic methods to ask how their combination can better assess the contours of neighborhood change. The three central research questions are: 1) Do traditional demographic measures (i.e. race and class) adequately capture the phenomena of change? 2) Why do neighborhoods experiencing gentrification seem to look similar to each other and utilize the same semiotic tropes? 3) What are the physical indicators of neighborhood change and how are they involved in symbolic boundary construction between old and new residents?

Between Market, Art and Politics: The Different Ways of Ressignification of the Old Industrial Spaces in the City of São Paulo

Since the beginning of this century, the old industrial buildings and spaces of the neighborhood of Monca, in the city of São Paulo, have been the subject of economic, political and social practices guided by a cultural sense with an increasing aesthetic relevance. Photography, painting, advertising, heritage practices, graffiti, have contributed to bring a new sense to these spaces, which goes from their private appropriation to real state market to the appreciation of public space by heritage state agencies. This implies in a redefinition of the relations between aesthetics and politics in a “postmodern” logic (Jameson, 2000; Harvey, 2000).

One of the consequences of this process is the construction of “postmodern urban landscapes” characterized by gentrification and disfigurement (Zukin, 2000, Smith, 2000). On the other hand, according to Huysseens (2000), there is no pure space outside the market culture, which leads us to question the limits of these phenomena.
Can Outsourced Workers Organize? a Case Study from the Philippines

This presentation will detail an attempt by outsourced workers in the Philippines to form a labor union. These workers are in the “knowledge process outsourcing” sector, meaning that they possess significant human capital and do skilled tasks for firms of the Global North. The case immediately presents two puzzles. First, given the many structural barriers known to impede unionization by outsourced workers in the Global South, how did a union campaign emerge? Second, why did this unionization attempt ultimately fail? My ethnographic research inside the outsourcing facility provides answers to these questions. Representation struggles were initiated by highly-skilled workers and in response to new, driving tactics on the part of local management. The latter were reacting to pressures put upon them by their Western clients. The unionization campaign appeared to have caught local managers by surprise, and throughout it they were very concerned to keep news of it from reaching the government, the press, and Western clients. In short, employees possessed significant structural and work-place power in their attempt to gain recognition. Ultimately, however, it was local management’s ability to harness greater associational power that led to the defeat of the union. One general implication is that studies of labor in global supply chains should theorize and examine empirically the vendor-client relationship. In these supply chains, vendor firms and client firms have different interests and resources.

Foxconnning Science: The Globalization of Academic Publishing

This paper presents ethnographic work done inside an outsourcing firm in the Philippines. This firm is part of the emergent knowledge process outsourcing, or KPO, field. It contracts with publishers wishing to outsource such work as copy-editing, typesetting, authorial communications, and more. Most major scientific publishers now contract with such firms. I present evidence that the nature of these firms and work requirements compels respondents to deploy tactics of globalization. Suppliers lack basic knowledge of the overall field of production (in this case, academic publishing), and so judge themselves against unknown competitors. They compete on price, rather than quality, and so continually engage in various “low road” techniques of management. Most notably: wage suppression, the “driving” of workers, and forced overtime. I conclude the paper by discussing at length one incident that produces a prism into the entire labor regime: a unionization dispute that took place at this facility. Global pressures induced worker resistance which was then channelled into a unionization campaign. But ultimately managed were able to deflect this campaign by mobilizing local networks and traditions. In this case, global and local forces collided to control the hidden workers in the new global production of science.

The Relationship Between First Principle Production in Brazil and the International Demand

The following research approaches the criticism of the production system of knowledge in Brazil, focusing on a laboratory of Theoretical Physics which works with First Principle Model (FPM), order to analyze the institutional dilemma and the relationship between the laboratory and the central spaces of knowledge production. The production of knowledge, how the current in Social Studies of Science and Technology, demand an articulated network of elements which sustain and make circulate the knowledge production produced inside the area. In the FPM case, the space of production and circulation is very peculiar, since the production involves upgrades in the computers’ servers when a new resource arrives. The lab does not spend much time in the other hand, the circulation occurs within the specific circle in physics, because the production not necessarily will become a product since the experimental relevance does not always happen. And yet we have the relationship with central spaces of central places of knowledge production, understood basically by The US and European which influence the content and the decisions of productions inside the laboratory. The methodology of this research consists of an interview which researchers and analysis of published material for one label of FPM which is related to a Brazilian University. With the following research, we aim to contribute for the debate about the production process of knowledge, bringing reflexive elements about the role of Brazil in the production of FPM knowledge.
The Notions of Otherness and Critical Construction Sites: Theorizing Professional Boundaries within

This paper is about social and symbolic boundaries (Lamont & Molnar 2002). The aim of this paper is to suggest a theoretical way to understand constructions of ‘Otherness’ within professional boundaries. I draw on the empirical case of the doctors with immigrant backgrounds in the Swedish medical profession and use the notion of critical construction site by Cornell & Hartmann 2007. In order to bridge the gap between structure and agency the study started with a reading of the Swedish research literature in order to see how ethnicity, ‘race’ and ‘Otherness’ had been received in research. In this review I found that ‘Otherness’ is often something that is ascribed to patients and not doctors. I then went on reviewing the professional debate around the issue of doctors with immigrant backgrounds in Sweden I found something what I theorized as underlying assumptions of ‘the Other’. This ‘ethnic Otherness’ was not about doctors’ ‘ethnicity’ nor about ‘race’ instead it had to do with that the doctors had immigrated and was perceived as something tangible and predetermined. This notion of ‘Otherness’ was later also found in interviews with doctors with immigrant backgrounds. In the interviews I expectantly found stories of discrimination, prejudice and even racism but I also found stories of agency, and coping strategies where the ‘Otherness’ they were ascribed with was used a way to construct their role in the Swedish health care system; to take care of patients with immigrant backgrounds.

The paper theorises how as doctors with immigrant backgrounds seem to be using a primordial definition of the ‘Other’ in circumstantial ways in order to find their place within the Swedish medical profession which I argue, is a critical construction site.

SALMONSSON, LISA* (Uppsala University, lisa.salmomsson@soc.uu.se)
The Other Doctor: When Professional Boundaries Conflate with Notions of Ethnic ‘otherness’

The paper suggests that field of Sociology of professional groups need to consider social position theory in order to theorize boundaries of ‘Otherness’ within them. The paper is based on some of my concluding remark from my dissertation where I interviewed medical doctor with immigrant backgrounds in Sweden about their feeling of belonging to the Swedish medical profession, among other things. The thesis is that the medical profession in general and the Swedish medical profession in particular have been successful in controlling the numbers of new doctors that are accepted to Swedish medical schools. Sweden has also experienced and increased in doctors with immigrant backgrounds working in the Swedish health organization. In my interviews with these doctors they often told me about something that could be understood as hierarchies within the profession on the basis of gender and ‘ethnicity’. I have chosen to theorize this as ‘ethnic Otherness’ as it seems to have to do with that they are ascribed with ‘non-Swedishness’ than about what ‘ethnicity’ they have. These divisions I argue are linked to ideas that can be found in EU legislation, in the Swedish research on ethnicity and health as well as in The Swedish Medical Association and can therefore be a case of another successful boundary making.

Set in the City: Condominiums As Settings of Technological Innovations Toward Sustainable Consumption

One of the tangible signs of growth in Metro Manila, a Philippine mega-city of about 11.7 million people, is the proliferation of condominiums. A condominium is a form of housing tenure whose cost of land is prorated due to multi-story building and which makes it possible for many people to live closer to the work-place and shopping centers. This paper lays out the proposition that the condominium is both medium and outcome of technological innovations that either stimulate or stymie sustainable consumption. Technological innovations embodied in the design of spaces and rules of condominium living provide the material setting that defines interactions and images relating to inhabitants’ consumption of technologies in the home and consequent social constructions of sustainable consumption. The paper focuses on social practices relating to the use of information, communication and entertainment technologies as well as domestic technologies by condominium-household members. The take off point is a body of data and insights from key informant interviews, direct observations, and secondary data analysis.

The international labour Organization unanimously adopted the ILO Declaration of social justice for a fair Globalization on 10th June 2008. The declaration expresses the universally of the Decent work Agenda. All members of the organization must pursue policies based on the strategic objectives, employment, social protection, social dialogue, and rights at work.

This paper examines the present position of the informal sector workers in South Asia. The study is based on information collected through secondary data. At present, Multinational Corporations have entered in the global market; therefore, the nature of capitalist production has been changing. It is effect of weakening formal and informal institutions in developed and developing countries.

In the era of globalization, right to life and livelihood has become the central issue not only for organized sector workers but unorganized workers also. South Asian Association for Regional Cooperation (SAARC) is an economic and political organization of South Asian countries, which includes India, Sri Lanka, Bangladesh, Pakistan, Afghanistan, Nepal, Maldives, Bhutan.

Informal workers include all workers in the informal sector as well as in the formal sector performing informal jobs. Labour laws in the countries of the region are not universally applied and excluded several groups of workers or groups of establishments from their scope. It is generally the formal or organized sector that is covered by labour laws. As a result many labour laws apply only to a small proportion of the workforce.

There is a need to implement the ILO Declaration of social justice for a fair globalization.

Does the Transition to (grand-)Parenthood Change Intergenerational Relationships?

Existing studies suggest a close relationship between the presence of grandchild and intergenerational relationships. For example, studies on grandparental involvement in parenting show that the birth of a child increases opportunities for associative solidarity between generations as well as it increases the demand and supply of functional solidarity, both with regard to material help or childcare as well as information and advice. This, in turn, may also result in increased affective solidarity. But it might also operate in opposing directions: If the demand for intergenerational solidarity meets supply from the grandparental side, this may enhance the existing intergenerational relationship; in case of incongruency, the event may result in increased intergenerational conflict or detachment. Yet, more research is needed on how intergenerational relations adapt to the new family structure and needs of family members after the generational transition.

Past research mostly concentrate on the presence of grandchildren regardless of their age, consider only one direction (parents or grandparents perspective), or are analyze cross sectional data. The present study examines the transition to first parenthood and the associated development in intergenerational relations over a two year period concerning various dimensions of the Bengtson-Silverstein-solidarity-model. The German Family Panel (pairfam) is chosen as the appropriate data-set to addressing the research question, including reports from both perspectives, gathered in 2010 and 2012. Using difference score regression, N=7,163 dyads were analyzed. The analyses suggest an increase in the frequency of contact and practical support only from the elder to the younger generation. No changes were found for financial transfers. Regarding the frequency of conflicts, the generational transition has a decreasing impact.

Invisibility of Sexual Minority "Women" in Japan

There are no existing laws that either discriminate against or guarantee the rights of sexual minorities in Japan. It is partly because in Japan LGTBQs are quite invisible in every day life in Japan, except on TV shows. It is not strange to see a gay man or a woman who appears to be so on TV. They often talk like women, crossdress, and are expected to be teased or to play the fool. However, we hardly see a lesbian or a woman who can be seen as an FM (Female to Male) transgender even on TV.

In a LGBT community, some says the number of lesbians is less than that of gay men, because they don’t see them so often, and others mention most women are bisexual, so there not so many lesbians in Japan. Why do they appear to be fewer ‘lesbians’ than gay men? Do most of them recognize themselves as bisexual? In their presentation, I will compare interviews of sexual minority men and women focusing not on ‘the number’ but the invisibility of the sexuality of women in terms of three points; the first is their different experiences when coming out, the second is a sexual double bind, and the third is ambiguity of sexuality which is beyond description in binary categories (ex. homosexual and heterosexual). By introducing narrative, I will discuss how these elements make it difficult for “women” to talk about their sexual orientation and sexual identity.

Wasted Opportunities - the Production of Power and the Challenges to Organizing Informal Reclamers

Movements and organizations attempting to organize informal workers are confronted with the challenge of overcoming social divisions and power relations between informal workers. And yet, the burgeoning literature on organizing informal workers pays curiously scant attention to the ways in which power relations between informal workers shape the ways in which they organize and circumscribe their terrain for political action. This paper explores how the informal workers' stories that reclaimers (waste pickers) develop in order to govern their labour process produce power laden social identities and relations that hinder their ability to organize collectively to transform their place within the value chain. Although grounded in an ethnographic study of reclaimers on a garbage dump in Soweto, South Africa, it draws on comparative experiences in Asia and Latin America in order to draw out the broader implications for the theorization and practice of organizing informal workers.

Franchised Central America: Migration and Labor Dynamics

Malgré d’incontestables progrès économiques et politiques au cours des deux dernières décennies, l’Amérique Centrale continue d’être une terre de forte émigration. Certes la recrudescence de la violence et de la criminalité dans la zone n’est pas une cause de la déviation et des flux migratoires, mais c’est bien à l’articulation de ces dimensions, à la fois géographique, économique et sociale que cette communication entend défendre la thèse d’une mise sous franchise de l’estime centraméricain, bande de terre devenu réceptacle d’activités productives, légales ou illégales, le plus souvent déléguées et sous-traitées. Ce regard historique indique quelques pistes pour comprendre les formes productives adoptées à l’heure actuelle mais celles-ci seront principalement analysées à partir d’une cartographie de ses principaux flux migratoires. Cette cartographie tiendra compte de la diversité culturelle et de la diversité éthnique et géographique des espaces productifs locaux, ruraux et urbains, les premiers étant porteur de nombreuses mutations sociales, dans la famille ou le travail par exemple; les seconds donnant l’occasion d’évoquer la place qu’occupent certains secteurs productifs dans la mise en mouvement des centraméricains, ceux de la maquilas, de la construction ou encore du tourisme. Mais c’est bien à l’articulation de ces dimensions, à la fois géographique, économique et sociale que cette communication entend défendre la thèse d’une mise sous franchise de l’estime centraméricain, bande de terre devenu réceptacle d’activités productives, légales ou illégales, le plus souvent déléguées et sous-traitées, et où la transnationalisation des espaces n’est pas tant synonyme d’ouverture que d’enclavement.

Exploring Age and Aging Via the Life Course Perspective: A Filipino Perspective

Aging is a natural and universal human phenomenon. It is natural as it is part of the human biological process and universal as it exempts no one, across time and space. The naturalness and universality of the aging process indicate a spectrum of how human beings experience it. It is both a collective and an individual experience, at the same time. As individuals add on years to their lives, the population also ages. This brings to mind the famous sociologist C. W. Mills’ (1959) position that a person’s biography is linked with world history. The sociological imagination, the frame of mind that Mills believes could enable one to understand the said linkage, reminds us to look into how social structures bear on one’s personal life, how personal troubles can become public issues.

The institutionalized life course as conceptualized by Kohli (2007) lends a distinct tool in understanding how external forces such as social institutions, social structures and cultural elements interact with each other and with society’s individual members thereby predicting actions and promoting relative stability. How the individual and an increasing process along its four given dimensions (chronological, biological, psychological and social) are understood by the older persons themselves give their current situation as a senior citizen, is the problem focused on in this study.

The normative system of how to plan and live one’s life as defined by the institutionalized life course is implicated in how the elderly Filipino older persons (60 years old and above, men and women) understand the phenomenon of ag-
ing. Selected older Filipino participants in a qualitative study that utilizes narrative
and the way they compartmentalize life accordingly.

Building Global Worker Communities: The Case of Filipino Migrant Workers

Building global worker communities: The Case of Filipino Migrant Workers. Filipinos overseas are not wanting of associations or organizations to belong to wherever they may be. Commonplace are social organizations around common professions or historical communities, also based on geographic regions or ethnolinguistic origins in the Philippines to name a few. These formations are meant to provide support to the members, enhance their profession, religion/faith, ethnolinguistic identities and the like. Rarely do they get in conflict with the laws and policies of the host countries; neither were they inclined to have sustained campaigns critical of policies in the Philippines.

Fastforward, 4 decades later, we see an expanded and varied landscape of migrant communities. In Hong Kong, migrant domestic workers are joining and forming their unions and merging into coalitions of different migrant nationalities. In the Gulf States, the Gulf Co-operation Council (GCC) countries where organizing of workers -local or migrants- in whatever form and orientation is almost a taboo, there is no stopping the migrant Filipinos from organizing cyber communities. Their “membership” knows neither boundaries nor time limits.

In other regions such as Taiwan, what is feasible are support groups such as Church/faith-based migrant formations that are spread out around the country. Every Sunday, these formations touch base with more than a thousand Filipino migrants who congregate in the churches for the worship service. Off and on these formations, migrant issues are raised, activities and campaigns are undertaken.

Interestingly, these new forms and ways of organizing migrants pave the way for more direct involvement of migrants on issues that impact them; for more concrete and solid labor actions and responses and for support and solidarity between migrants of one country and with migrants of other nationalities. Indeed, migrant worker organizing is the future, once that challenges the boundaries of nation-states in more ways than one.

New Configurations of Informal Work in Brazil: Besides the Informal, Short of Rights

This work aims to examine the non-wage based labour relations and understand its implications for the State and Society. These kinds of labour relations have been referred to as “informal” or “non typical”. In this sense, they have been viewed academically and politically as lacking or unvalued. However, if it is true from the perspective of the traditional labour institutions (Unions, State, and the juridical forms of labour regulation) these labour relations are aliens and cannot be characterized but for absence of the key attributes that traditionally have defined labour, in the context of political and economical changes that took place in the past decades, these labour relations are an important part of the accumulating history and have generated new fields of conflict and have been trying to get politically organized, building identity and pushing forward with their agenda.

The first part of the work focus on understanding the theoretical and political implications of the non-wage based relations for labour relations in general. On the second part, we try to understand the emergence of this new reality and the development of new political subjects with their own agendas and identities. However, although these labour relations and its workers are not informal, they still not recognized in their relation with the State as having rights.

The Solidarity Economy and the Social Struggles in Brazil: The Right to Associated Labor

One of the most important examples of a collective subject rising in the public arena in Brazil is the solidarity economy, which for several years has been sharing itself as an autonomous social movement. In this process, it has been trying to build new social rights for Associated Labor. It is a description and analysis of this process that this work intends to develop.

With this objective, it starts by rebuilding the history of the Solidarity Economy in Brazil, showing that despite its long history and connection with the Brazilian social struggles for more than a century, it is only in the last thirty years that it has assumed a new configuration and new meanings as a result of the social and political changes that took place in Brazil after the eighties. The second part of this work focuses on showing how the Solidarity economy today has become a new social, economical and political reality in the Brazilian society however; the subjects of the Solidarity Economy still lack the institutional recognition of its rights.

Lastly, we analyze how the subjects involved with the Solidarity Economy have been for years mobilizing and requesting the rights to Associated Labor and have achieved some successes in this process such as the creation of the National Secretary of Solidarity Economy and the approval of laws for the Solidarity Economy.

As a result, the analysis of this movement in Brazil demonstrates that there are no natural rights but rights are political constructions consolidated from processes of social struggles that aim to expand democracy and transform society. It is some of these political agendas that we try to explore in this work focusing on showing the arenas where the struggles and debate around the development the right to Associated Labor take place.
In the last fifteen years, certification schemes (and the standards they enact) for producing sustainable products have become one of the most important strategies for enhancing sustainability into commodities (such as coffee) market. Similarly, certification schemes are introducing important changes in the governance of agriculture systems. Such transformations have been the focus on a wide set of works that critically highlight how certification schemes are embedded into a neoliberal project as well as the multifaceted interactions in the context of a moral economy. Although many of these approaches isolate technical and social dimensions as separated realms relative less attention have been put on how certification schemes are enacting sustainability in terms of trust, a key element in the material shaping of any differentiated market.

Following Busch (2011) contributions on standards, enacted in the Certification schemes (Van Der Kamp, 2012), and trust I explore how certification schemes can produce two version of it in two different locations. First, trust as consistency in the International Coffee Organisation (ICO). Here I describe how certification schemes are designed to produce trust in the market related to the transparency and the consistency of coffee production according to international environmental standardised criteria. This trust, then, is limited to the boundaries of a certificate. Second, I describe the experience of a small coffee roaster and retailer with certification schemes in the UK, J. Atkinson & Co. What emerges there is a concept of trust as trustworthiness. Certification schemes are framed in terms of coffee relationships, these involve a more emotional and sensuous experience of the market. I present how some standards can be harmonically integrated in these arrangements and how sometimes such integration cannot be possible. As a result, an alternative version of sustainability is produced.

Oil-Drilling in Arctic and Ecosystem-Management Plan of the Barents Sea

In the High North, The Barents Sea has large resources of petroleum and sustainable populations of fish. The international challenge lies in implementing the conservation of marine biodiversity, at the same time managing sustainable exploitation of natural resources in the Arctic region. The Norwegian government has tried to solve conflicts of interest by the making of a large scale ecosystem-based national management plan for The Barents Sea and Lofoten Islands. The national goals are sustainable use of petroleum, fishery resources and conservation of the structure of the maritime ecosystem. In this paper, I present an empirical case study of Norwegian national decision-making in ecosystem-based management of The Barents Sea. This new system of planning is implemented as the second sea area in the world. Australia has implemented a large ecosystem management plan at the east-coast with the Great Barrier Reef. In the paper, I discuss in a critical perspective of sociology of knowledge the social effects of the new environmental policy and environmental institutions of problem-solving of management of large sea area in the Arctic region. In the paper I want to investigate the social effects of the development of national planning of the sea ecosystems in the Arctic area. The question is: Does the government eco-system management planning of the Barents Sea provide a suitable institutional framework for solving the social conflicting interests between oil-drilling and conservation of nature in the Norwegian societies?

SANDERSON, MATTHEW* (Kansas State University, mattrss@ksu.edu)

MALDONADO, MARTA (Iowa State University)

Integration and Belonging in Two U.S. New Destinations

The extension of border politics, and specifically, a politico-legal context characterized by increased surveillance of immigrant populations and the hardening of immigration controls, is concomitant with the emergence of new destinations (Massey 2008). In this sense, the border has been "pushed inward" (Coleman, 2007). Additionally, a growing number of state and local governments have proposed and/or enacted a wide range of policies with consequences for the lives of immigrants and their families. Such policies are aimed at local policing and enforcing of immigration controls while others regulate access to jobs and housing, and more generally, the provision of services. This "variegated landscape" of local policies (Walker and Leitner, 2011) results in contexts of reception that vary significantly across U.S. spaces. From a research standpoint, questions about the interaction between socio-spatial scales (the global, the national, the regional, and the local) in shaping of the conditions facing Latin@ immigrants gain centrality. How does the broader context interact with local contexts to shape the conditions facing immigrants? How do policies, social relations (shaped by power, as they are), and institutional arrangements at these various scales interact to produce particular outcomes for immigrants? We investigate these questions by exploring the experiences of Latin@ immigrants in two rural new destination communities in the U.S. Midwest region. We draw upon a theoretical framework that understands immigration and integration as racialized and gendered, political-economic processes. We utilize quantitative and qualitative data gathered through original research in rural new destinations in Southwest Kansas and Central Iowa.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
further, foundations have to change their institutional practices and routines, aiming for justice and a socialised and democratic production system, rather than regulating economic and social inequalities. The paper draws upon an ESRC-funded investigation into philanthropy that involved 34 semi-structured interviews with executive directors or senior project managers of charitable and community foundations and grant-makers. Each interview lasted on average 1.5 hours, divided into two parts: the first part asked the interviewees to describe the history of their organisations, and to outline their current strategic themes and priorities; and in the second part, they explained the use or the lack of the concept ‘social justice’ in their organisation. In addition, further interviews were conducted with sixteen participants from the first round either via Skype or emails to collect extra information.

**SANE, NEETA** ([UNIVERSITY OF MUMBAI, neetasanjeev@gmail.com](mailto:neetasanjeev@gmail.com))

**Youth in Social Transformation Through Education**

India, known as a country of youth, with the potential to build a stronger democracy through social entrepreneurship. There is a need of enthusiastic and pro-active youth for any transformation. They need a balance while addressing country’s growth and social issues.

Education is a progressive approach for transforming society. Existing education policies has many shortcomings. There are many discriminatory practices applied at ground level. However, despite this adverse situation the young generation is engaged in creating an atmosphere for change in rural Maharashtra, India.

Idea of bringing students in the mainstream of education has been established. But, due to distress & seasonal migration of deprived sections of the societies with family, education of students gets affected badly. Some experimental learning centers such as SAKHARSHALA for sugarcane workers and PASHANSHA-LA for stone crusher workers have been started for the education of deprived community students.

In tribal area, language is a big issue which cuts masses from education. In Gadchiroli (Indian Village), youth started translating the formal text books in Gondi, a colloquial tribal language, which was successful, and tribal students continued in schools.

The formal set of the government is fixed, & the decision makers are not in a frame of mind to change the structure. It is observed that when changes done in the realm of style, time, language, location leads to education reaching to the masses and particularly the deprived sections of the society.

The mission for the marginalized & oppressed through facilitating concrete processes. Which is based on collective, reflective & sustainable actions initiated by youth; who explore & criticize the oppressive foundations of the society and possess desire to transform it through education.

**Everyday Morality and Moral Concerns and Their Implications for Charitable Giving in the UK**

This paper examines how individuals are morally evaluative beings, who interpret the social world in relation to things that matter to them, and how charitable acts are embedded in their lives with different degrees of meaning and importance. The paper offers some criticisms of the Bourdieusian theory on giving, which depict individuals lacking reflexivity, emotions and disinterestedness. Drawing upon various literature that view individuals as evaluative beings, I will suggest that there are three modes of moral reflexivity that have various implications for charitable giving, moral obligations and civil society. First, moral conventionalists, who value familial and social networks, use charity events as an opportunity to socialise and to have fun. Second, moral individualists, who are strongly committed to work and career, view charitable practices as performative acts that demonstrate their knowledge and skills. Third, moral critics are deeply committed to charitable causes, motivated by strongly held values and beliefs, which offer alternative visions for society.

The paper draws upon an ESRC-funded investigation into charitable giving that involved 41 semi-structured interviews with men and women of working and middle class social backgrounds, mostly white interviewees. Each interview lasted on average 2.25 hours, divided into two parts: the first part asked the interviewees to recount their life history, describing the twists and turns in their lives, their personal goals and their everyday practices, and in the second part, they recalled significant acts of giving and volunteering, describing their feelings and motivations.

**Social Justice, Liberalism and Philanthropy in the UK**

This paper examines how charitable and community foundations as normative institutions relate to issues of social justice, legitimacy and accountability. We will argue that grant-making foundations use their resources to support basic liberties and to assist the most disadvantaged groups in society, pursuing a liberal conception of social justice and equality. But there are some tensions and limitations, partly arising from their historical legacy, internal features and structural positions within the polity. Foundations tend to have UK-focused mission statements, operate with minimal accountability, have parasitic endowment and sources of philanthropic donations, have privileged and conservative trustees, and face pressure from the right-wing media. To achieve a Rawlsian liberal form of social justice, foundations have to change their institutional practices and routines, aiming for justice and a socialised and democratic production system, rather than regulating economic and social inequalities.

**Becoming Kathoey Prostitute: Voices of the Excluded**

Labeling as deviant has long been imposed difficulties on those who take up Queer gender identity in some ways depending upon to what extent they have technology of self. Even though rainbow movement strives and wins some social space for certain acceptance especially in terms of human rights, still discrimination is reproduced in both private and public spheres. The main argument in this paper is that vicious cycle of inequality prevails. This makes the issue of Queer identity complicated and chains it with an extended long winded problem arisen in the society’s life and affects the life of the individuals. The Kathoey or Male transsexual to Female transgender, a sexual minority group, is to be emphasized in paper as they are at risk to be excluded and as a result are pushed to become prostitutes.

In fact, many of Kathoey are as competent as others. However, not many of them are successful in the job market and have comparatively narrow alternative in the society to maintain their life. Many of them, then, take this path. By listening to their voices and stories using narrative approach, themes from narrative analysis can be concretely emerged to reveal the social conditions framing Thai Kathoey towards it. All in all this paper has a strong desire to propose policy recommendations to attain a total equality goal and to cherish a non-discriminatory process of sexual diversity inclusion in the society.

**The Meaning of Leaving National Language to the “Mobility People”?**

I will introduce some of the biography interviews of famine migrations at “integration course”, which are “by the national government” organized and, quoting a Malaysian methodology, examine their biographies to try to reveal, how they built identities and confront the concept of “national states” in the globalization. “Integration Course” is a some form of social problems. Kathoey or Thai Male government since the year of 2005 for the migrants, who are not good at German.

Its object is to enable migrants to be integrated easily and participate in Germany. But the idea is based on too archaic figure of immigration moving only between origin and host country? Is it unusual today that man has Networks among plural countries? Or those people, whom I define “mobility people”, who have Networks among plural countries?

According to Shansul, a Malaysian Anthropologist, identity formation takes place within what he would call a “two social reality” context: first, the “authority-defined” social reality, and second the “everyday-defined” social reality. The former is one which is authoritatively defined by people who are part of the dominant power structure and generally with text recorded. Quoting his hypothesis, “Integration Course” is not only a German course but also a means of transmitting German “authority-defined” social reality and could be of creating German identity.

However does it work well as the government intended, especially to the “mobility people”? Based on my research, the biography interviews to the participants of “Integration Course”, I will consider the meaning of “national language” and “national identity” in the globalization era.

**Increased Precarity and Widening Disparity of Youth Transitions, and Inclusion in the Labour Markets**

The Youth Cohort Study of Japan (YCSJ) was a major programme of longitudinal research undertaken to monitor transitions from school to work in Japan from 2007–2011. The first survey was undertaken when respondents were aged 20. The respondents, who were selected nationally through random sampling, were
followed up annually for five years. The achieved sample size and response rates of the YCS is as follows: 1678, 40.2% (2007); 1361, 82.0% (2008); 1141, 86.2% (2009); 1009, 90.7% (2010); 891, 88.3% (2011). Based on the datasets of the YCS, we explore four main topics in this paper.

First, we analyse youth transitions to work, documenting the increasing precariousness of youth labor markets. Here we have used indices such as low income, irregular jobs, and unemployment, to examine the extent to which vulnerable situations in youth labor markets have expanded. Second, we investigate which cohorts are more likely to become precarious. Against precarity indices, we found key variables of disadvantage in relation to individual attributes, family socio-economic backgrounds, residential area, and current jobs were relevant to risk factors with statistical significance. Third, we consider forms of disparity in working conditions including work content and developmental opportunities. Here we find that there remains a significant structural disparity between genders and amongst transition types in working conditions.

Forth and finally, we investigate the mechanism of inclusion in the labor market. We find amongst most of the transition types, irrespective of gender, that demands for high commitment to work – such as acceptance of long working hours and heavy responsibility – has increased every year despite an apparent disparity in many aspects. We propose two key factors to enable inclusion in labour with high commitment: discretion and participative involvement; and positive human relationships in the workplace.

Economic, Social Change and Son-Preference in Nepal

The purpose of this study is to clarify the promotion factors of son-preference, such as the neglect of female child, trafficking of girls and the interruption of the female fetus, in Nepal. According to UNDP (2010), the number of the ‘missing women’ in Nepal is estimated to be about 0.1 million, Republica, local newspaper, on 29 Nov 2012 reported that the female population is 2.3 percent less than male in the 0-10 year age group in the latest census.

In this study, the findings of the ongoing research implemented in seven districts in Nepal, during March 2014, will be shown. The questionnaire survey of 1500 men and women both married and unmarried 18-80 year-old were selected based on a multi-staged random sampling technique. The data will be analyzed by modified framework of sustainable livelihood approach. This framework consists of three components such as livelihood assets, policy institutions and livelihood opportunity (Chambers and Conway1992). This leads to analyze consequences among these three components. Livelihood assets, furthermore, consist of financial capital, natural capital, physical capital, human capital and social capital.

Former studies reveals the correlation between the property (financial capital, natural capital), relatively high educational level (human capital) and son preference (Clark2008; Banerjee2012; Republica 2012). In this study, the correlation among social institution such as family structure, 5 capitals and son preference, will be analyzed, in addition to the former studies.

As the result, following three findings have been verified; (1) Even though luck of some of capitals, those who has variety of network does not tend to be son preference, (2) Even though abundant in capitals, those who live in extended family tend to be son preference, (3) Those who have female family member who support family economically does not tend to be son preference.

Unequal Identities: The Attainment of National Identity and Ethnic Identity Among Children of Immigrants in Canada

Despite growing interest in “the new second generation,” quantitative analyses on the psychosocial adaptation among non-white offspring are limited, especially in Canada. This study addresses this gap by assessing the impact of ethno-racial characteristics among children of immigrants on the establishment of self-labeled national and ethnic identities using a nationally representative survey, the 2002 Ethnic Diversity Survey. Results from binary logistic regression suggest that while white children of immigrants are more likely to form national identity, ethnic identity is more likely to be established among their non-white counterparts.

While this is consistent with the segmented assimilation theory, the study also reveals that the level of parental education does not explain the results, countering the hypothesis included by highlighting the impact of ethnic concentration, home language, and experience of discrimination on the identity formation and discussing implications for immigrant integration policies and future immigration research.

SANTORO, MONICA* (Università degli Studi di Milano, monica.santoro@unimi.it)
Married and Cohabiting Adults with II and Old Parents: Does Intergenerational Solidarity Change According to Family Conditions?

The objective of this paper is to compare the patterns of intergenerational solidarity among children who cohabit or are married, with their own parents and those of their partners. To this aim, I report the results of qualitative research I performed in Italy, based on 50 in-depth interviews of cohabiting and married couples, with an age range between 26 and 56 years. The dimensions of family solidarity investigated, included the financial support provided by parents to their offspring, help in child-minding the grandchildren, the frequency of phone calls and visits and finally, the willingness (also in the past) of the offspring to look after one of their own parents or their partner’s parents when ill and old.

The analysis of the interviews has highlighted the varied types of interpersonal relationships established with parents by the cohabiting partners. While those who were married kept closer relationships and appeared to be more willing to help their parents and in-laws when ill and old, among those in cohabitation, only those who had a background of formation of a traditional family model, similar to marriage, adopted the same manner of solidarity. Those who had begun cohabitation, following separation or co-habited with a partner who was separated, felt less responsible towards their partner’s family members, to the extent that they did not perceive any kinship ties nor obligations. Consequently, they felt that caregiving activities were not their responsibility. Finally, the length of the marriage or cohabitation was seen to have no effect.

Between Subordination and Protagonism: Violence Experience of Young Women through Biographic Narratives

The involvement of women in violent actions and criminal activities is growing in many countries. Even though, sociologists usually have not directed their analysis to this issue. This paper discusses the relation between young women and violence in Brazil, stressing the main interpretations available in Brazilian sociology, which mostly emphasizes, on the one side, the secondary position of women, dominated by their male partners and peers, and, on the other side, the structural conditions of the Brazilian society – for instance, inequalities, uncertainty in work market, drug uses and school evasion – as the main reasons for this phenomenon. Besides this, the literature stresses the position of women as victim in violent actions, almost monopolizing the analysis when violence and women are connected. An overview of the research on the social characteristics of those who have experienced and been perpetrators of violence in Brazil is carried out. The approach that stresses the disruption of norms and legal rules, neglecting this way another component of the practice of violence, that means, a subjective interpretation of reality. Biographic narrative approach permits to offer other possible interpretations to the engagement of young female in violent and in criminal activities. Based on preliminary findings of a research that are investigating direct and indirect experience of violence of young females, the paper presents the main antagonist positions founded, that means, between the subordination to dominant males and a more relevant and protagonist role played by women. The results show that using this kind of “insider” approach is possible to obtain new elements for the interpretation of the experience of violence, in which the women role as victims and perpetrators are not always well defined.

SANTOS-HERNANDEZ, JENNIFER* (University of Puerto Rico, jennifer.santos@gmail.com)

Social Vulnerability to Disasters Has Generally Focused on Understanding How Social Stratification Relates to Disasters and How Social Forces Can Create the Possibility of a Hazard to Become a Disaster. Ben Wisner and his colleagues assembled a working definition of social vulnerability as they were studying the famine that unfolded in the Sahel from 1967 to 1973. In the book At Risk: Natural Hazards, People’s Vulnerability and Disasters (2004), Wisner and his colleagues defined social vulnerability as “the characteristics of a person or group and their situation that influence their capacity to anticipate, cope with, resist, and recover from the impact of a natural hazard”. Their definition includes the difficulties and chances that people may encounter as they mitigate, prepare for, deal with, respond to, and recover from the impact of a natural hazard. However, there is no firm definition of social vulnerability. Rather, it can be considered as an evolving concept. Despite its focus on process, applications of the concept of social vulnerability in research often fall short in capturing the elements and dynamics of social vulnerability. This research uses “hazard as a case study in which social vulnerability is conceptualized as steaming from evolving structural and behavioral forces. This research presents a dynamic situational approach to social vulnerability and explores how the practice of emergency management may impact, address, or fail to address the needs of impoverished marginal communities and their contrasting perceptions. The findings provide insights that could assist emergency management practitioners and disaster researchers and practitioners working in the areas of marginality, development, emergency management, bureaucratic change, rationalization, decision-making, and policy making.

Personal Networks and Changing Openness Toward Immigrants: Social Network Analysis Measurement Versus Traditional Survey

Instrument of Personal Networks

Recent literature underlines the surprising integrative role of the family (DiPrete et al., 2011). The growing heterogeneity of families produce family based social networks that are less segregated on a number of dimensions than other social circles. Heterogeneous family networks might favor changing norms and more open attitudes. The aim of this paper consists in comparing two instruments measuring family networks and in testing their predictive power on norms and attitudes such as the openness towards immigrants. In MOSAIC 2013 survey, including both ISSP modules 2012 and 2013 in Switzerland, respondents were asked to answer to two distinct personal network instruments. The first one has a classical survey format and consist to interview respondents on the proportion of immigrants in their family network, on the frequency of contact with the immigrants in their family network, and on the quality of their relationships with them. The second instrument follows a social network analyses perspective, letting respondents define themselves the boundaries of their family network, asking about several characteristics of the networks members, such as their nationalities, and finally measuring the complex web of relationships between networks members. Results are discuss from the perspective of the strengths and weaknesses of both approaches.

Green Capitalism and the Global Environmental Policy-Planning Network

The Rio+20 conference that took place in June 2012 confirmed the hegemony of green capitalism to address the global environmental crisis. Supporters of the “green economy” believe that putting a price on ecosystem services will allow to internalize environmental costs into the capitalist process of production. In the case of climate change, this involves the creation of greenhouse gases trading markets. For their part, critics of green capitalism describe this process, including carbon trading, as the commodification of nature and as a new system of accumulation by dispossession that mostly benefits large corporations with little effect on actual greenhouse gas emissions. Corporate-led policy-planning groups such as the World Business Council for Sustainable Development or the Global Climate Foundation have long been active to promote carbon markets and green capitalism. In this paper, I use a purposive sample of eleven such policy groups as an entry point to explore corporate involvement in the field of climate and environmental politics. At the level of organizations, the analysis of board interlocks reveals the structure of the environmental and climate policy network that links the corporate sector, the NGO sector and the transnational state, and emphasizes the mediating role played by policy-planning groups. At the level of individuals, the linkages between members of the global corporate, political, and scientific elite involved in producing and maintaining environmental knowledge suggest the existence of a potentially powerful capitalist class faction, whose ascendency nevertheless remains highly uncertain.

School Divide and Social Fragmentation in Mexico

Inequality seems to be endemic in Mexico. After a decade of moderate economic growth and improvements in some social indicators, the country continues to show very high levels of social inequality. In a context of contradictory trends, a new model of “unequal inclusion,” is emerging. Privilege and deprivation exist side by side, ignoring each other and even tacitly accepting each other. Inequality has taken a qualitative leap towards fragmenting the social structure through spaces of inclusion that are not only unequal, but also socially and culturally distant. This paper will explore the contribution of educational segmentation to this broad pattern of social fragmentation. Access to education in Mexico has increased substantially in the past few decades. Between 1990 and 2010, basic education coverage became almost universal, and the average years of schooling of youth age 25 to 29 increased from 7.9 to 10.2. In addition, there were several constitutional reforms that extended compulsory education, most recently, in 2011, making it compulsory until the age of 12. But, parallel to this process, the educational system has experienced a deep fragmentation. Thus, privileged children and youth attend the same private schools, have more and better resources for learning at school and at home, and receive an education of higher quality and greater variety. Among poorer groups, children and youth also attend socially homogeneous schools, but with a more precarious infrastructure and fewer pedagogical resources to support students that come from homes with little social or cultural capital. The consequences of this segmentation are not limited to educational achievement; they extend to school experiences and the meaning of education. Drawing on qualitative fieldwork, interviews and focus groups with privileged and disadvantaged youth in Mexico City, this paper explore the consequences of this process in terms of social fragmentation.

Transcending Frontiers: A Contribution to Overcoming Instrumental Rationality in Our Relationships with Nature and with One Another

Environmental sociology is uniquely positioned to analyze the relationships between humans and nature and examine the societal factors that lock our civilization into carbon dependence; it can also analyze why the issue of climate change is becoming increasingly politicized and divisive. Moreover, it can examine how social inequalities—ubiquitous in this era of unemployment and economic decline—compound environmental crises and aggravate the suffering of the most vulnerable. This paper argues that the social and environmental hierarchies prevalent in the world today can be meaningfully analyzed using the theoretical framework of instrumental rationality. In a nutshell, using instrumental rationality means applying the means of reason short-sightedly to solve a problem without considering the larger context—burning fossil fuels to fulfill most of our energy needs is a prime example.

Instrumental rationality has been linked to the drive for self-preservation and using this link as a conceptual tool can offer new insights: The first insight is that paradoxically—we often hurt nature because we are (partially) from nature; the second insight is that our drive for self-preservation can be easily fused with an apparent and a shallow (instrumental) rationality, leading to a substantially irrational state of mind which is very dangerous for nature as well as for other human beings.

The challenge then becomes to find ways to overcome instrumental rationality and this is the main purpose of this paper. It is an arduous task and one that needs to be assumed urgently to help us decouple from the unsustainable path we currently follow.

Between the Corporate and the Government Responsibility: The Livelihood Issues Experienced by the Local Community in the Surrounding Conservation Forest in West Java, Indonesia

Until about ten years ago forest had ever been the primary source of income for the community living in the surrounding area of the Halimun-Salak mountain, West Java. This situation has been changing since the government launched the new regulation that prohibited people to get anything from the forest because the area was designated as forest conservation. Since that time the community has been experiencing a decline in their standard of living, especially who were only had the forest as their source of income. Besides, for many years, the community has only been provided by inadequate basic infrastructure (i.e. health, education, transportation) that supposed to be the government’s responsibility. The situation becomes increasingly critical when the people knew that there was a multinational company that has been exploring geothermal energy within the conservation area which has further caused anxiety and uncertainty in local people livelihood. The latest development seemingly has been overlooked by the local government since it has not been taken any significant action to help the people. Moreover, the conflict between local people and the MNC sometime has been raised as critical issues for the economic or political interests of certain actors in the community. Pressures to the company have been increasing since the government regulation stated that the company should perform the social and environmental responsibilities. Based on the ongoing research in the area of Halimun-Salak mountain, this paper analyzes the relation between state, market and government regulation stated that the company should perform the social and environmental protection and community development (Vogel, 2006).

: Comparison of Leisure Activities of Children of Tea Garden Community and Other Groups in Anganwadi Schools: A Case Study of Dibrugarh District, Assam, India

Dibrugarh is an easternmost city situated in the Banks of the river Brahmaputra. The place has the highest number of tea gardens giving it the status of Tea Capital of Assam. Though tea is a big industry, the children of the tea garden community do not get adequate facility of good education, health and leisure facilities. There are Anganwadi schools in the tea garden areas which look after the mental, physical, and emotional development of children between the age of 0-6 years. They also provide nutrition and value based education to children in the age group of 3 to 6 year. The conditions of these schools are not satisfactory to provide the pre-schoolers the pleasure of enjoying their childhood as compared to the Anganwadi centers for children in other parts of the city.

The dropout rate from the schools in tea gardens is very high, as a large number of the children are engaged in child labour and some help their parents to look after the younger siblings or help in the household work. Some children, who go to school, go there for the food provided as the mid-day meal. The leisure time activities of these children include playing with other children or helping their parents. They play in groups but very few have access to playing equipments.

The facilities provided at school are not adequate as compared to other Anganwadi schools and in some cases, the teacher do not come to school regularly. These children are thus deprived of quality education, satisfactory leisure activities etc. as compared to the schools and Anganwadi centers in the city.

The paper attempts to do a comparative study of education and leisure activities provided by Anganwadi schools to tea garden community and other children in Dibrugarh.

Leisure, Tourism and Environmental Degradation—a Study Based on Assam, India

Tourism in Assam holds large prospects as the land is bestowed with natural beauty and resources. Tourism in Assam is essentially nature based. Assam has a rich cultural and ethnic heritage that has also made it a favourite tourist-spot. It is counted as one of the prime Eco-Tourism destinations in India. The rich bio-diversity of the region encourages eco-tourism. But compared to some other states in India, eco-tourism is not yet developed in the real sense in Assam.

A lot of tourists come to Assam for different leisure activities as the region is still less explored and provides for peaceful existence with nature. The eco-camps set up in areas like Nameri in Sonitpur, Tipam Phake village in Eastern Assam, camping in and around Kaziranga National park, famous for the one horned Rhino, attracts lot of foreign as well as domestic tourists. They are provided with facilities like boating, fishing, trekking in the wild etc. and misuse of these can lead to severe environmental degradation. Illegal destruction of forests to set up hotels near Kaziranga, excessive boating and fishing etc. has also been increased.

The land has the opportunity to develop several leisure activities based on eco-tourism where the rich bio-diversity of the region can be explored without environmental degradation. But activities like using the areas as picnic spots and then leaving behind plastic waste has already destroyed some of the natural spots. A systematic development of tourism involving local population, who can look after the protection of environment, is needed to increase the inflow of tourists.

This paper attempts to analyse the tourism scenario, development of eco-tourism inspired leisure activities and how tourism can be used positively to lessen social inequality, and lead the way towards a more socially and environmentally responsible tourism practices.

Meanings Of Friendships in Substance Abuse Clients’ Talk In The Probation Service

Although several studies have examined the influence of friendships on clients’ substance abuse and treatment outcome, there is a paucity of research examining clients’ talk about their experience of the meaning of friendships. This paper explores the meanings substance-abusing clients attach to friendships during motivational treatment sessions in probation service. By using semiotic framework, this paper examines client’s change-related talk utterance about friendships as a symbolic sign. The analyses are based on videotaped data consisting of 98 motivational counseling sessions. This database involves the first two sessions of 49 client-counselor pairs. Sessions were videotaped in 12 Probation Service offices in Finland in 2007–2009. In general, the findings of this qualitative study indicate that the friendships play an important role in the substance-abusing clients’ motivation to change. The results of the study display that the meanings of friendship were divided into four categories: a support to change, a reason to change, an obstacle or a threat to change, and a surmounted obstacle to change. The study also suggests that the personal meanings of clients’ utterances in motivational counseling sessions could be seen as potential predictors of their future behavior.

What Was All That Growth for? Explaining Chinese Decreasing Well-Being in Times of Economic Growth

China is one of the countries that experienced the most impressive and sustained rate of economic growth. Since 1990s its economy has been increasing on average by 9.7% each year. Arguably, economic growth allowed a general improvement of several social, economic and sanitary dimensions of people's life. However, in the same period people's satisfaction with their life decreased.

What does explain this outcome? And who are the winners and the losers from economic growth? Finally, if economic growth did not improve the human lot, did it at least reduce well-being inequalities?

Using data from the World Values Survey, this paper identifies the determinants that shaped people's life satisfaction in China between 1990 and 2007. Results suggest that the erosion of social capital and social comparisons are the two main factors explaining why economic growth did not turn into higher people's well-being. Moreover, economic growth resulted in higher well-being disparities among people: those in the lowest three deciles and the middle-class experienced a significant reduction in well-being, whereas richer people substantially improved their conditions.

“The Influence of Institutional Framework on Local Community Schemes in the Period of Economic Crisis 2011-2013: The Example of the Municipality of Athens”
The aim of the paper is first to present the institutional framework concerning the role of participative action in Greece. The institutional foundation for cooperatives and unions is primarily set by Article 12 of the Greek Constitution, while specific laws provides the role of Social Cooperatives in Greece. After a short analysis of the legal framework the paper will examine the main sectors of activities of NGO’s and other bodies (organizations) that belong to the social society, especially those acting in Athens.

More specifically this paper examines the schemes of the municipality of Athens to promote specific policies and volunteerism in order to contribute to the solution of problems that vulnerable social groups, who live in the city of Athens, face in the period of economic crisis 2011-2013. An emphasis is given both to the role of participative action in Greece and the role of the volunteers in the social sector of the city. The paper will attempt to answer the main critical questions of how the top-down and bottom-up models can co-exist in the implementation of public policies at a local level, and of how ways of cooperation concerning everyday problems can emerge from the economic crisis.

Micro-Motives and Collective Action: Measuring Individuals’ Reasons for Participation in the #YoSoy132 Movement in Mexico

Individual’s political mobilization has been explained by rational choice theory according to the general tenets of its approach to human behavior (Becker, 1968; Olson 1971). Following the well-known distinction between the narrow theory of the broad theory of rationality (Elster, 1988), this paper presents a more extensive view of political mobilization, considering the individuals’ strategic calculus for their participation in a contentious collective action (Tarrow, 1997). Following the broad theory of rational choice, the work incorporates cognitive, normative and emotive factors to the explanation. So, first we propose that the movement can be treated as a production’s function with two phases, where in each of them there are different mechanisms and games that help to explain the process of collective action. The first phase, which we call accelerative, is triggered by a political opportunity that incorporates elements such as coordination between groups, high expectations, and a focal point equilibrium. The second phase, called not-accelerative, arises once the election finishes and it is characterized by a lack of coordination, internal conflicts between groups, and lack of participation. From a normative perspective, we argue that the #YoSoy132 movement are main independent variables. Six indicators in terms of financial/non-financial performance. By contrast, non-clinical CEOs negatively (positively) influence the financial/non-financial performance. Paper argues a differentiation in the provision of skills to the strategic process, as well as in the relationships with the clinical/non-clinical staffs. Findings also report good effects of CEO’s previous governance experiences and public health specialization.

Paper contributes to research in different ways. First, we corroborate the relevance of human capital in governance for the organizational performance. Second, we discuss the dissimilar effects of clinical/non-clinical expertise by arguing their reasons in setting peculiarities. Finally we investigate never explored effects of clinical/non-clinical specializations and experiential background.

For what concerns the practice, we suggest policy makers to pay more attention to the expertise legal requirements for CEO candidates.

Cultures, Strategies, and Organizations for Mobilizing Social Movements: Divergence and Convergence Between Social Movements and Labor Movements

There have been few comparative studies of social movements and labor movements. Social movement studies have examined the conditions, development, and outcomes of social movements using various theoretical frameworks. In contrast, largely driven by Marxist and post-Marxist theories, labor movement studies have often focused on whether and how workers have organized themselves as a coherent force—i.e., as a class. In brief, in labor movement studies, workers’ movements have often constituted a sub-topic of the study of class, and the ways workers have organized as workers. But how exactly do these two movements differ? Or what do these movements share? By examining a Japanese social movement, the protest against the revision of the U.S.-Japan Security Treaty (commonly referred to as the 1960s Anpo protests, named after the acronym of the treaty in Japanese), this paper explores divergence and convergence of movements, ideologies, and strategies, and the organization of social movement and labor movement groups. I compare two groups that participated in the 1960 Anpo protests—the Bund, a new left student movement group that became prominent during the 1960 Anpo protests, and a new left faction of the Osaka Central Telegraph union that became prominent among new left labor unions in the 1960s. This paper argues that despite similarities in ideology between the two groups, external constraints on their organizations shaped different strategies for mobilization. Furthermore, the two groups never merged nor worked together, although they explored possibility, despite their common political goals and similar ideologies. This was due to intergroup culture differences, as well as problems with mutual trust acting as a wedge between them. The empirical data collected from interviews, for instance, show that while knowledge was a key issue for mobilizing student movements, trust was a key issue for organizing the workers’ movements.

Alternative Art-Production Networks in Lower Manhattan in the 1960s-1970s: An Organizational Account of the SoHo’s Gentrification

This paper deals with an early period of an artists-led gentrification in SoHo in New York City in the 1960s and 1970s, from the standpoint of alternative arts-production-networks in Lower Manhattan then. A couple of studies have already dealt with the gentrification in SoHo (Simpson 1981; Zukin 1982). Given roles of the artists in the SoHo's gentrification, previous studies have shown that there are two issues: a creation of living spaces and a construction of symbolical and institutional boundaries of art districts. These former studies contributed to examined that the artists' spaces and their aesthetic images, fortunately or unfortunately, contributed to the subsequent creation of a commercial and consumption district there. Although these findings are valid and quite important, this paper argues that there was another fundamental issue in the SoHo's gentrification: alternative arts-production-networks in downtown also critically contributed to construct physical and symbolical bases there.

In order to explore this issue, I will focus on artists' activities and their networks from the standpoint of organizational sociology and production-of-arts theories (Becker 1982, DiMaggio and Hirsch 1976; Peterson and Anand 2004; White and White 1965). Some artists pursued alternative production and distribution systems against the backdrop of a flourished of art museums and commercial galleries in urban areas. These anti-establishment and organizational fields of art productions in downtown. Analyzing the arts-productions-networks in downtown in the 1960s and 1970s, this paper focuses on especially cooperative galleries and alternative spaces. These alternative arts venues were critical aesthetical bases in SoHo.

Historical Overview of Migratory Flows Between Brazil and Japan

This paper will present an historical overview of the migratory flows between Brazil and Japan. The first part discusses the immigration of Japanese to Brazil at the beginning of the 20th century. During this time, their presence in the country sparked a heated debate among the politicians of the Brazilian elite as to whether or not they should be accepted. The Japanese were labeled as “not white”, an undesirable state according to the eugenistic policies of the time. At the same time, Japanese government closely accompanied the entire migratory process, helping to establish the Brazilian immigrants in Brazil. In the second part, I will focus on the inverse route, upon the ending of the 20th century and beginning of the 21st century, when Brazilians of Japanese descent began to migrate to Japan. They were favorably contemplated in Japan’s 1990 immigration reform law, a factor which contributed to the increase of the population, especially during the first half of the 1990’s. From that time on, the Brazilian presence began to consolidate itself and socializing networks within the host country, losing sight of its original temporary expectations and intensifying the flow of people moving between Brazil and Japan. However, after more than two decades, the Brazilian population in Japan began decreasing in 2008. At this time, the world financial crisis resulted in a rising unemployment and one third of the Brazilians in Japan returned to Brazil. They are facing great difficulties as they try to reinsert themselves into a new or different social and cultural reality in their own homeland, encountering problems in linguistic and educational fields as well as the local labor market.

Hope or Fear? How My Voice Could be Represented – Public Understanding of Nationwide Electronic patients’ Records in the UK

This presentation is a response to the issues of citizen’s right arising from the emergence of IT technology vis-à-vis the former British national policies, Information for Health and Connecting for Health. The main purpose of these British policies was to develop computer databases of patient records ‘from cradle to grave’ whereby clinicians and medical researchers could access patients’ clinical records and medical history. The anticipated benefits of accumulated data included enhancing both public health and the quality of medical services and research. Whilst it could be said that these policies have been aborted, the core theme has still survived vis-à-vis the Social Care Act 2012 and other policies.

The downsizing of these policies could mainly be attributed to the shortage of financial and human resources, but certain issues arising from them contributed to the scrapping process of the policies, too. Specifically it evoked questions regarding, for example, citizens’ rights over their own medical data and the security of the e-database. The first issue deeply involves the matter of ‘informed consent’ in medicine, specifically on what terms and in what ways a personal and anonymised medical record can be used for medical treatment and research. The second question is that current research has revealed this the first issue to be deeply entangled with public concerns over data security. Hence further consultation is needed over the development of such electronic medical records. If we can develop computer databases of patient records from cradle to grave on the basis of public health and the quality of medical services and research, whilst it could be said that these policies have been abandoned, the core theme has still survived vis-à-vis the Social Care Act 2012 and other policies.

Wandering Career Paths Among Japanese Youths: An Analysis of Jgss Life Course Study

In Japan, there had been a standard life model that many youths follow. Once students entered the labor force, their full-time employment was virtually guaranteed until retirement. Since the mid-1990s, however, many young Japanese did not (or were unable to) follow this standard life model. Increasingly, Japanese youths have started their careers as contingent employees. For many younger adults with unstable careers, incomes did not grow, and thus the gap between regular employees and contingent employees expanded. In addition, for many Japanese, marriage and childbirth became no longer an ordinary path of life. The goal of this study is to illustrate diversified career paths of Japanese youths and investigate the causes and effects of the career paths. Jgss Life Course Study contains detailed life history, including educational background, work experience, marital record, with a national sample of men and women aged 28 to 42. Mix- ture modeling with longitudinal data was employed to classify Japanese career paths. In this model, retrospective data were treated as if we collected types of respondents’ employment each year.

The results show that there are clear gender differences in the career paths among Japanese youths. Younger men’s career is more likely to be unstable, whereas younger women’s career is more likely to be stable. Educational attainment does not predict career paths among men, whereas highly educated women’s career is more likely to be stable. Men whose career path was unstable are less likely to make money and get married, and more likely to be unhealthy and unhappy. Women whose career path was stable are more likely to make money but be unhealthy, and less likely to get married. Recent economic recession and the popularity of higher education are presumed causes of diversified career paths among Japanese youths.

The Meaning of the International Marriage in Korea

Nowadays in Korea, international marriage has increased since 2000 rapidly. Increase in this international marriage is not the change of the marriage from the influences of globalization. Because Korean people have protected their blood principle rigidly for a long time. It is a big change increasing to international marriage in Korea, and it is shaking now family value from the bottom. In this report I ask why has international marriages increased in Korea rapidly these days? Also, who and why do people choose an international marriage? I pay attention to the change of the marriage and the family in Korea today and intend to consider the meaning of international marriage.

This study developed the result of the data analysis of the census (1995, 2010) that I analyzed before. In the former analysis, I compared the change that was in the marriage form with the census of 1995 and 2010 according to sex, age, and educational background. The result implies from the rapid increase of international marriage in Korea that it is due to the increase in high educational background of the woman from the 1990s and the economic power drop of the man from the late 1990s. Based on these findings, I will include variables such as economic activities state, occupation, occupational position and compare and contrast according to the man, woman and combination of couples who chose international marriage using census data. Furthermore, I will use the “dynamics statistics data” and cast the education level between the couples who married a person from a different nationality, the variable such as the nationality of the partner and consider the meaning of the international marriage in Korea these days by clarifying the sociodemographic characteristic of the couple who choose to international marriage.

Expulsions: When Complexity Produces Elementary Brutalities

The past two decades have seen a sharp growth in the number of people, enterprises, and places expelled from the core social and economic orders of our time. This tipping into radical expulsion was enabled by elementary decisions in some cases, but in others by some of our most advanced economic and technical achievements. I use the notion of expulsions to go beyond the more familiar notion of growing inequality, and get at some of the more complex pathologies of today’s global capitalism. It brings to the fore the fact that forms of knowledge and intelligence we respect and admire are often at the origin of long transaction chains that can end in simple expulsions.

The talk is based on Saskia Sassen’s forthcoming book Expulsions: Brutality and Complexity in the Global Economy (Harvard University Press 2014)

Food Sovereignty and the Solidarity Economy Alternative

This paper explores the relationship between food sovereignty and the solidarity economy. It brings out the extent to which food sovereignty as an attempt to address corporate control of food systems, engender adaptation to and mitigation of climate change and ensure popular control of food systems embraces and articulates with the solidarity economy. The solidarity economy in this paper is not understood as a codified definition but rather a transformative practice emerging from below with an emancipatory utopian dimension, a new conception of ownership over power and a commitment to deepening democracy. This exploration is carried out through the prism of two case studies. The CECO-SESOFA worker cooperative movement in Venezuela and its attempts at popular control of a food economy and the emergent food sovereignty movement in South Africa.

Structure of the Issues Surrounding the Nuclear Accident Evacuees: What Has Been Seen While Supporting Town Meetings

Since August 2011, “Tomioka sub group” of the Sociology Study Group of Large-scale evacuation (representative YAMASHITA, Yusuke) has been conducting interviews with Tomioka town residents in Fukushima Prefecture that were forced to evacuate from their home town due to the Fukushima Daiichi nuclear accident. While supporting town meetings organized by stakeholders, we recognized the following issues clearly:

1) Problems that evacuees have faced are complex and very extensive.
2) However, those issues are not correctly recognized by policy makers.
3) Therefore, the present policy does not effectively relieve the affected people.
4) As regional restoration plans were decided hastily, the problems of the affected people deteriorated.
5) The problem of Japanese legal system which surrounds local autonomy is behind such issues.
6) In addition to these issues, it is not possible to deny the existence of public opinion to boost the seriousness of these problems.

What Has Been Seen While Supporting Town Meetings

In addition to these issues, it is not possible to deny the existence of public opinion to boost the seriousness of these problems. In order to improve the situation, the following initiatives are required: survival and continuation of the affected communities, feedbacks from communities to decision makers by way of the town government, and long-term policies that take account of the lifestyles that vary as time goes on.

Women’s Empowerment Beyond ‘Smart Economics’: A Transnational Feminist Perspective

Since the economic crisis of the last decade, integrating women into development has become the major ‘smart economic’ strategy. UN Women states that “equality means business” and the year 2012’s World Bank report set gender equality as their top priority. Today, in the global South, Northern private corporations, like Coca Cola, aim to empower women in their value chains or at “the bottom of the pyramid” by turning them into petty traders and vendors. Simultaneously, in the global North, corporations use cause-related marketing to empower privileged mothers to care for distant others by consuming ‘ethically’. Large corporations, like Coca Cola, aim to empower women in their value chains or at “the bottom of the pyramid” by turning them into petty traders and vendors. Simultaneously, in the global North, corporations use cause-related marketing to empower privileged mothers to care for distant others by consuming ‘ethically’. In order to strengthen existing analyses, ‘ethical’ consumption and southern livelihoods, presented thus far separately by critical feminist scholars, should be studied together. Such a study will, necessarily, be transnational and will draw on the theory and methods of both those who study the Northern consumer society (e.g. lifestyles and marketing) and those who focus on low-income societies (e.g. sustainable livelihoods).

This paper uses a transnational feminist perspective to examine existing feminist literature in a comparative study of the practices through which women generate livelihoods and the lifestyles women produce through their participation in Northern corporation led market-oriented development activities. This paper links inter-related constructions of mothers in the North and South in order to generate and test the foundations necessary to later study empirically if and how market-led corporate sponsored ‘smart economic’ development approaches obscure and/or transform structural inequalities in the name of women’s empowerment.

Atypical Employment in Japan

The aim of this panel session is to outline the changing practice of the Japanese employment system. The Japanese system has been classified as an organization-oriented, the key feature being the security of long-term employment within the same firm. The main feature of the Japanese industrial relations system is the enterprise union, which appears to have reinforced the employment security. The Japanese practice of offering new recruits work after graduation makes it difficult to maintain the high level of job security for various types of work in Japan. The focus of this presentation is the recent increase of atypical employment in Japan.

Shifting Risk Perception after Shocking Events: Counter-Terrorism in the United States and Energy Policy Change in Germany

Risks are not objective “facts” that are directly experienced. Our risk perception not only changes in social and political contexts but is also mediated through pre-existing cultural patterns. By investigating an American and a German case, we would like to show how shocking events bring about decisive shifts in our risk perception and governance and how specific cultural patterns frame those shifts. In both cases, a minimal risk ceased to be a mere theoretical possibility and turned into a real “threat” which imposed a political “necessity” to act. After 9/11, the hypothetical “ticking bomb scenario” became a matter of national security that justified US-led wars, US detention and interrogation policies as well as extensive global surveillance. The anticipated threat of terrorists in possession of biological or nuclear weapons had to be averted – whatever it took. Similarly, the shocking accident at the Fukushima nuclear plant following the big earthquake and tsunamis, had a profound impact on the risk perception of nuclear energy in Germany and changed the government policies. A “residual risk” (Restrisiko) of nuclear energy, which had thus far been regarded as controllable by means of science and technology, became an allegedly life-threatening danger to be eliminated at all costs. But these discursive and political shifts cannot be thought of as a direct consequence of these events. It is rather the specific framing of events in particular national contexts that leads to shifts in risk perception and governance. This is particularly clear in the German case: the recent energy policy change was mediated through a discursive pattern of nuclear resistance, which is deeply rooted in the German political culture. Similarly, the American response to 9/11 was shaped by national memory and popular culture, for example “Pearl Harbor”, the “phantasm of bioterror” and the “law-defying hero”.

Health Discourse, Ruling Relations and Work Knowledge

Research in Institutional Ethnography (IE) has increasingly shown how institutional discourse frames the way individuals think and act within their everyday practices. For example, Luken and Vaughan provide compelling evidence that state-affiliated organizations created a discourse about family housing that structured parents talk and actions concerning their living arrangements (2006, 300). This further highlights those ruling relations that served to organize parent’s daily family life.

This presentation will argue that an analogous case can be made in relation to modern discourses involving the use of health and physical activity. It focuses on the case of rural female workers who live outside the mainstream conceptions of health and physical activity. Very little is known about these rural communities and the kind of contributions that women make in these environments. My aim

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
is to explicate some of the ruling relations that organize work activities in relation to women's health in these different cultural settings.

A key resource for this research is the concept 'work knowledge'. 'Work' in IE points to anything that requires time and effort, that is conducted under specific conditions with specific resources and which may need to be thought about. This view helps the institutional ethnographer stay focused on what people are actually doing and what it is that they need to carry out their work. I show how it is especially suited to examining how women in rural communities think, plan and feel about the kind of work and physical activity that they engage in. In particular, it points to anything that requires time and effort, is conducted under specific conditions with specific resources and which may need to be thought about.

This view of work helps researchers to stay focused on what people are actually doing and what it is that they need to carry out their work. I show how it is especially suited to examining how women in rural communities think, plan and feel about the physical activity and work that they engage in. I further demonstrate how in these rural communities and the kind of contributions that women make in these environments. My aim will be to show how sport is largely absent from these females lives but that physical activity is central for how they conceive of their work and health.

A key resource for this research is the conception of work found in institutional ethnography (IE). IE points to anything that requires time and effort, is conducted under specific conditions with specific resources and which may need to be thought about. This view of work helps researchers to stay focused on what people are actually doing and what it is that they need to carry out their work. I show how it is especially suited to examining how women in rural communities think, plan and feel about the physical activity and work that they engage in. I further demonstrate how in such rural settings work, health and physical activity are interconnected and not isolated as in their urban counterparts.

The importance of a healthy lifestyle is then a product of the physical activity that is part of their overall work life and is not derived from sporting activities or government policies and recommendations.

Meta Rational Choice Analysis of Social Action

Various behavioral models have been proposed to explain human behavior. However, it seems to be under way to create a general theoretical framework that deals with the models in a coherent way. This paper proposes a theoretical first step toward such a framework. More concretely, I propose a mechanism that shifts the two mode of rational action: Forward-looking rational action and back-ward-looking rational action. In conventional rational choice theory and game theory in particular the former model has been used. The model assumes that an actor chooses his/her action based on his/her calculation of expected utility. The backward-looking rational action model, in contrast, has been used in evolution- ary game theory and assumes that an actor chooses his/her action based on his/ her experience in the past. Although both of them are plausible models of human behavior, an actor uses both of them in reality. Suppose that a person catches a cold and needs to go to a doctor. Then he/she would visit his/her family doctor without serious consideration. Suppose, in contrast, that the person is diagnosed with lung cancer during an annual checkup. He/she would collect as much med- ical information on the cancer as possible and try to find the best doctor who would properly deal with the cancer. The same person uses the backward-look- ing rational action model in the first case and the forward-looking rational action model in the second case. In other words he/she swings between the two models. How does one explain this behavior? My argument is that an actor chooses one of the two models depending on the cost of searching for the information and the ben- efit of the result of the search. I will try to generalize this idea and present a more comprehensive theoretical framework.

Contesting the Uncertain Promises of Rehabilitation: Struggles and Coping Strategies Among Slum Dwellers in Ahmedabad, India

The 'slum-free India' slogan that came to the fore in urban policy discourses in the mid-2000s has marked the draconian shift from in-situ slum improvement to slum relocation. Accordingly, the burgeoning literature on urban governance in India has portrayed slum dwellers as victims of such new, neoliberal forms of development. Despite its unique focus on the socio-spatial configuration of poor people’s exclusion, it has not paid due attention to their resilience to such processes. Drawing on qualitative data obtained from two slums in Ahmedabad, an India's globalising mega city, this paper examines the manner in which some residents collectively negotiated with the local state either in defence of their housing rights and livelihood or in pursuit of personal gains through manipulating the compensation for relocation. This paper has three objectives. Firstly, it gives an overview of the Slum Networking Project (SNP), which was launched in 1996 through a partnership between aid agencies, local government bodies, NGOs and community-based organisations, as an example of in-situ slum improvement. Secondly, it portrays the process by which the SNP was replaced with some re- habilitation schemes as evident in the provision of dwelling units in multi-storied housing blocks, which are typically located in urban fringes. Thirdly, it presents the diverse strategies that slum dwellers took to claim their right to housing and livelihood.

This paper concludes by stressing that the powerful in a slum can mobilise an ‘illegiti- mate’ means of survival when they are at risk of eviction and deprived of access to ‘legitimate’ channels of claim-making such as NGOs.

SATOH, KEICHI* (Hitotsubashi University, ksatoh2006de@mercury.ne.jp)
Japanese Climate Change Discourse Coalitions

The presentation shows the Japanese discourse and discourse coalition on climate change based on the content analysis of main newspapers. For the analysis, our Japanese Compon team engaged in the following: (1) To follow historical changes to the discourse, we sampled articles from 1985 to 2006 from one of the largest progressive national newspapers, Asahi Newspaper. (2) To analyze in more detail the structure of the current discourse, we used two other main newspapers in addition to Asahi newspaper for articles published between 2007 and 2009, the Nikkei economic and Yomiuri conservative newspapers. The results of our analysis indicate the characteristic features of the Japanese discourse on climate change. The majority of articles do not cover the views of skeptics with regard to the existence of the climate change problem itself. In addition, there appears to be an overall agreement within Japanese society on the need to save energy. The main flow of the discourse is along the lines of how climate change is framed within the broader context and measures to be taken. One side of the discourse coalition, which is primarily lead by the Ministry of Economy, Trade and Industry, and industrial sectors frames the problem in the context of energy itself. Accordingly, this coalition essentially pursues the improvement of energy use efficiency through voluntary action and the shift to nuclear energy sources. The other coalition, led by the Ministry of Environment, a progressive newspaper, and NGOs—though their coverage in the media is limited—recognizes the need for a more structural change toward a more sustainable market and industry. Historically, this coalition gradually imported policy ideas from other countries, such as green tax, emission trade, and Feed-in tariffs, some of which were introduced by the DPJ government between 2009 and 2012.

Infrastructure for a Post-Nuclear Society: From the Survey on Japanese Civil Society Organizations in Nuclear Energy Policy Domain

Despite the unclearness of the Japanese government's attitude toward the future of Japanese energy policy, I will argue in this presentation based on the empirical research results that the condition for the post nuclear society is emerging in the Japanese civil society.

Keiji Takeuchi, a journalist at Asahi newspaper, states in his book that in order to cope with the post nuclear society supports from both institution and public opinion are needed, and he continues, that of importance is the existence of the civil organizations which continually appeal to the publics and connect citizens with
political parties. I will call those civil organizations here as *infrastructures* for a post-nuclear society. They were, however, rather isolated before the Fukushima Daiichi accident. Whether was the situation changed or not?

To analyze it, *Study Group on Infrastructure and Society* conducted a survey during February and March in the year 2013 on 904 civil organizations, and got 326 answers from them (the collection rate was 32.6%).

We find that firstly organizations which worked in the nuclear energy policy domain increased more than two and half times than before the Fukushima accident. Secondly, those new comer organizations handle new issues such as recovery from the disaster and measuring radiation level. Consequently, they widened the context of the nuclear related issue and broadened the connection between civic life and policy. Thirdly, those organizations discuss the policy based on data and information and sometimes collaborate with public sectors, which are crucial criteria for the post nuclear society. Fourthly, however, a coalition between the organization of the safety and the society they succeeded to set a clear enemy such as the government and TEPCO, but they do not share the concrete image of post new clear society.

Handmade Housewives : Between Production Labor and Reproduction Labor

The aim of this presentation is to clarify and better understand the relation between production labor and reproduction labor. I focus on Japanese housewives who make handmade goods and sell these. Since enforcing Basic Law for a Gender-Equal Society at 1999, the Japanese Government switched a “kind treatment” policy to the housewife and has aimed at making women work force. But it is difficult to continue working due to not only the heavy burden of parenting but also the unsupport system of raising children. Therefore women cannot help being a housewife through a birth. In other words women hold dilemma between the difficulty to participate in production labor by child care and the pressure which they should do production labor. In such a dilemma, what kind of compromise do housewives have?

To clarify the question, I paid attention to “Sakka-san” and their group who are not only housewives but also making and selling handmade goods which are fabric accessories, leather crafts, woodworks, knits, etc. I investigated the reason of the act why they produce and sell goods through the field work to them. As it turned out, it might be the act from the gender division of labor at first, but they transcended that unawares and present the new way of labor to us.

The Influence of Drug Characteristics, Social Environment, and Personal Characteristics on Cognitive Enhancement Drug Use

Cognitive enhancement (CE) via pharmaceutical agents has been intensively and controversially discussed by scientists and the media. We investigate several drivers of and obstacles to the non-medical use of prescription drugs to augment brain capacity (benefits) and a high probability of side effects (costs) and a high price decreased this willingness. A rising strong augmentations of brain capacity (benefits) and a high probability of side effects (costs) and a high price decreased this willingness. A high probability of side effects (costs) and a high price decreased this willingness. 

We found that 65.3% of the respondents strongly refused to use CE drugs. The results of a multivariate negative binomial regression indicated that drugs promising strong augmentations of brain capacity (benefits) and a high probability of achieving this amplification increased respondents' willingness to use CE drugs. A high probability of side effects (costs) and a high price decreased this willingness. 

Prevalent CE drug use among peers increased willingness, whereas a social environment that strongly disapproves of these drugs decreased it. Regarding the respondents' characteristics, strong academic procrastination, high cognitive test anxiety, low intrinsic motivation, low internalization of social norms against CE drug use, and experiences with CE drugs increased willingness. No effects were found for the severity of side effects, social recommendations about using CE drugs, risk preferences, and competencies.

The application of the rational choice theory and our findings contribute to the understanding of factors influencing CE drug use. They support the assumption of instrumental drug use and may contribute to the development of prevention, policy, and educational strategies.

Loud Rebels: Politics Of ' Revolutionary Women' In Kyrgyzstan

Drawing upon Bourdieusian class analysis and Andrew Sayer's ideas on social class and lay normativity, this paper explores how class, emotions and moral worth shape everyday politics in southern Kyrgyzstan. The research paper focuses on so-called ‘revolutionary women’ (also derogatively referred to as OBON - Otirad Bab Osobogo Naznachenia (Women Units for Special Purposes)), who have emerged as a visible and vocal political group, often engaging in protests and sit-ins. The study shows how this group of stigmatized women capitalizes on their limited symbolic capital as ‘elderly mothers’, class emotions (such as shame, anger and resentment) and moral worth and egalitarianism to counter the neoliberal policies and domination in all spheres of life. The paper argues that class and moral sentiments are an important part of human subjectivities that cannot be reduced to power or social conventions. The paper draws upon fieldwork data collected in southern Kyrgyzstan that includes 65 interviews with ethnic Kyrgyz rural migrants and urban middle class ethnic Uzbek and Kyrgyz residents during summer 2011 and spring 2013.

Why Class Matters In Kyrgyzstan: Everyday Experiences, Class and Moral Sentiments

Contemporary Central Asian literature on society and politics face two significant problems: first, an absence of class analysis of everyday practices; and second, reductionist accounts of human agency that are devoid of moral emotions and deliberations. Drawing upon Bourdieuian class analysis and Andrew Sayer's ideas on social class and lay normativity, this paper examines class and moral sentiments among poor rural migrants and working and middle classes in southern Kyrgyzstan. The paper will focus on how different groups (such as rural Kyrgyz migrants and the so-called 'revolutionary' women) view each other and negotiate claims for economic resources and recognition. I will also discuss the ethnized violence between ethnic Kyrgyz and Uzbeks in June 2010 in Osh in terms of class and recognition. I will argue that subjectivities and identities in Central Asia are class-based and cannot be reduced to ethnicity, clans, and localities. Furthermore, moral sentiments and evaluations are examined as an important part of human subjectivities that cannot be reduced to power or social conventions. The paper draws upon fieldwork data that includes 65 interviews with ethnic Kyrgyz rural migrants and urban middle class ethnic Uzbek and Kyrgyz residents during summer 2011 and spring 2013.

Comparing Climate Policy Networks in the Germany and the UK

This paper compares, contrasts and accounts for the different outcomes of the climate policy networks of two western industrialised nations: Germany and the UK. Both are generally considered to have undergone changes in their environmental policy discourse from end-of-pipe solutions to more integrated forms of environmental management associated with ecological modernisation. Yet the two countries differ in terms of their climate policy networks. In Germany, the most influential policy actors are drawn mostly from policy arenas, industry and science. This is typical of what we might expect under conditions of ecological modernisation. In the UK, in contrast, the most influential actors represent either government or quasi-governmental institutions or the NGO sector. The UK has probably the most ambitious climate change legislation across the world, instituted in the Climate Change Act (2008), which calls for cuts in carbon dioxide of 80% on 1990 levels by 2050. However, little serious effort is underway to make headway towards achieving the targets. Thus, climate policy in the UK represents what one might anticipate given the nature of the policy network: the presence of strong advocacy coalition calling for large-scale cuts in GHG emissions, but the UK has probably the most ambitious climate change legislation across the world, instituted in the Climate Change Act (2008), which calls for cuts in carbon dioxide of 80% on 1990 levels by 2050. However, little serious effort is underway to make headway towards achieving the targets. Thus, climate policy in the UK represents what one might anticipate given the nature of the policy network: the presence of strong advocacy coalition calling for large-scale cuts in GHG emissions, but one that has relatively little influence compared to climate policy network actors advocating business as usual. What is surprising, though, is the relative lack of influence of the energy giants. In Germany, less ambitious targets for reducing emissions and a set of more discrete concrete actions to address climate change could be considered the result of a policy network of ecological modernists, where pragmatic realism pervades.

Despite evidence that income inequality has increased and is of community concern, Australian policy makers have emphasized their commitment to the ‘fair go’ but reconfigured features in political discourse, raising the fears of a voter backlash in the face of reforms that involve losers as well as winners. Both major parties favoured ‘growing the pie’ over ‘dividing up the slices’ yet fail to recognize that even a larger pie must be distributed fairly. Establishing how inequality has changed is complicated by definitional changes that have undermined the comparability of income distribution data, and the confusing picture portrayed by public opinion data on attitudes to inequality provides little guidance about how much actual redistribution (as opposed to how little inequality) the community is prepared to support. The emergence of social inclusion as a policy priority has given a new focus to understanding inequality and social exclusion, although this relationship is poorly understood conceptually and inadequately documented empirically. This paper draws on a range of survey data to examine recent trends in different dimensions of economic inequality and social exclusion in Australia. Attention focuses on how the profile of social exclusion varies across the income distribution, on the extent and nature of exclusion-inequality itself, and on the association between these measures (in isolation and in combination) and the subjective well-being of those affected. The paper will conclude with some reflections on the implications of the emergence of social exclusion as a policy issue on egalitarianism and the redistribution agenda.

**Contesting Time and Space in Istanbul: Differential Civic Activism in Urban Development**

The paper explores the re-appropriation of urban space as a practice of collective contestation against established frames of time and space in urban policy making. Crisis and uncertainty in the governing of urban form have showed the spillovers of a rational model of spatial organization, based on long term future prediction of city growth and supply-oriented urban policy making. Civic society and urban users have been generally regarded as customers or users of urban space, which explains sometimes they sometimes become choreographed practices of cooptation. We argue that contemporary urban policy making are too much framing urban agency as a ‘governmentally designed object’, through preconstituted notions of space and time despite few attempts to enable self-organization. These linear models of space and time are evident in constrained policies of urban development, that compartimentalize collective action into rigid boundaries of intervention and programming timelines. The paper explores the features civic political activism as a practice of opposition against these space-time frames in urban policy making. It defines urban activism as the creation of ‘differential space’ by working against the objective to manipulate ‘time-space frames’ of urban intervention. These borders constitute the major coordinates of contested urban agendas. The paper discusses how practices of creative resistance are targeted at governmentally defined time-space borders and underline that emerging conflicts lead to specific problems, which we call of spatial disaggregation. Even today, in Istanbul, we can see the potential in manipulating the urban space and the contemporary urban activism is an attempt to do so. The recent wave of protest in Turkey have been linked to a restructing of urban activism against authoritative governmental policies. Despite its broad social and economic implications, we will particularly focus on the practices of framing urban interventions in the city and on the conflict between the modern logics of governmental intervention and the emerging relational spaces of urban activism.

**Family Structure, Socioeconomic Well-Being and Elderly Chronic Illness in Thailand**

Thai culture which is related to caring of the elderly has been named as one of a very strong one in the world. The family, in general, has to look at the elderly in every perspectives. This study focuses on Thai elderly ages between 65 and 84 years old quality of life, under the rapid changing of Thai society that moving from a traditional to a more capitalist one. The research examines effect of family structure, household socioeconomic well-being on elderly quality of life that measured from chronic illness. The research employs a national survey of Thai elderly sport, exercise, and physical activity, and elderly quality of life in Thailand 2012 by the Institute for Population and Social Research Mahidol University. Findings shows that the elderly who live in a nuclear family which is among them or a lone are more likely to have some chronic illness, and lonesome when compare to those who live in extended family. Family support is more likely depending on household well-being, and living arrangement of them and their children. Those who have some chronic illness and participating with elderly club are more likely to do some exercise, and some physical activities when compare to those who do not involving in the club. They are a person who is mostly living in a nuclear family where do not have household registration. Thai elderly who would to receive support from government need to have some household registration. This result suggests that, to reduce some inequality of elderly quality of life when having some chronic illness, there should be some policies and some social welfare to support the illness elderly, even if they do not have any household registration. This people are not a homeless person. They are Thai. But they may lose their household registration form.

**ICT As a Communication Tool for Older People (aged 80) in an Urban Area**

While ICT (Information and Communication Technology) has been spreading dramatically in Japan, little is known about how seniors use it as a tool to communicate with non-relatives. The authors conducted interviews with residents (aged 80) of Suginami City, Metropolitan Tokyo, in October and November 2013, regarding communication with non-relatives. A total of 513 people responded.

About 60% of the respondents met and spoke with “friends” and “people they have known from childhood”; men were more likely to do so than women. In all types of relationships, a conventional phone was the most popular choice as a usual communication tool, followed by “letter” for “people they have known from childhood”, as well as “face-to-face meeting” and “cell phone” for “friends” and “people in the group they are members of.” In all types of relationships, 10% of the respondents chose “e-mail.” Men were more likely to send e-mails from a computer.

In North American urban sociology, there is great interest in how the faster communication, resulting from the increasing availability of affordable and efficient transportation and ICT, affects interaction among individuals. As the usage of ICT becomes more common among seniors, the ways the very old persons communicate with others are also expected to change.

**Social Policies and Political Identity: Analysis of Bolsa Familia Program in Brazil**

There are few studies analyzing how policies impact on political identity construction. Following the cognitive approach in policies, recent studies show that State actions creates new social actors: individuals that become beneficiaries but who didn’t constitute their identities in relation to the State before. Therefore the State is a space of cultural and symbolic production, where new identities are constructed and new political lessons are learned.

The social construction of target groups framework (SCTG), from Helen Ingram and Anne Schneider, brings a new element to the relation between policy and political identity analysis. It makes explicit the contentions that occur in the definition of what are the social problems which will receive attention from the government, their possible solutions and who will be the beneficiaries. This framework allows us to understand the political and social consequences and motivations inside policies design. The social construction of target groups becomes an important attribute, because it affects the relation between beneficiaries, govern and public approval.

There are two main dimensions for SCTG: political power and image. Political power measures the organization and mobilization capacity of groups affected by policies. It can be high or low, depending on the group influence to bring their decisions into account. Image can be positive or negative, affecting the way beneficiaries understand themselves and their space in the political sphere.

This paper analyses the social construction of image between beneficiaries from the national conditional cash-transfer Bolsa Familia Program in Brazil as a dimension of the political identity. It analyses the role of the State, the media and social identity relations. These three elements are tightly connected and the beneficiaries are aware of the constant contention around the program’s legitimacy. They react actively to the negative image constructed by the media and that is reproduced inside their social identity relations.

**SCALON, CELI** (Federal University of Rio de Janeiro, celscalon@gmail.com)
A New Middle Class? Challenges for Inequality in an Emerging Country

The changes in the contemporary world have been quick and frequent, particularly in countries considered as emerging nations. They have an impact on the living standards and consumption, creating new social groups, resulting from those dynamics. Recently in Brazil, the debate on the emergence of a new class “average” gained relevance and academic crossed the borders, having an enormous impact in the public arena. Some economists define this “new middle class”, from their income. While recognizing the importance of this element in the study of inequality, the concept of class demand more complex analyses that include socio-occupational factors, as well as perceptions, values, expectations and worldviews regarding personal projects and processes of distinction.

As the task of studying multiple and varied dimensions of social life can not be restricted to a specific focus, either theoretical or methodological, we have been working with quantitative and qualitative methodologies. The unique approach we present is based on the fieldwork we carried out in Rio de Janeiro with individuals who fall into the two groups that we are defining “traditional middle class” and “new middle class”. Our goal is to understand their trajectories, as well as, their projects for maintaining or improving their live conditions in the future.

Multilevel Climate Governance In Europe: Are Cities Undermining Nation-States Role In Climate Policy?

Global environmental problems are increasingly showing the nation-states lack of will, as well as their inability, to take the path of sustainability. Climate change is probably the best example of the downsizing role of the nation-state in the pursu- ing and diffusion of environmental policies and actions. That’s the case in Europe, where the European Commission is becoming a global leader in this field, and, at the same time, an increasing number of cities and regions are getting involved in climate governance. Furthermore, climate initiatives like Covenant of Mayors are showing how sub-nationals and supranational institutions interact with each other by circumventing national governments. Starting from these considerations, this paper presents an empirical study on the involvement of Italian cities in the Covenant of Mayors, a multi-level governance perspective, its aim is to understand the role of the nation-state with respect to that of a supranational institution like the European Commission. Our results show that the inaction of the Italian government in the last years related to environmental and climate issues, as well the proactive role of the European Commission, explain the massive participation of Italian cities in the Covenant of Mayors. The Italian case is paradigmatic, to the extent that of 5000 signatories of the Covenant, half of them are Italian. However, even if the role of Italian cities in climate and energy sectors is shifting from that of policy-takers to that of policy-makers, and that what it means to be the “state” is being reconfigured and contested, the nation-state remains a key actor, notably with respect to national policies that can foster and strengthen local and global climate actions. Nation-states scope and powers remain crucial in climate policy, and the day when local institutions take their place in the environmental domain still seems distant.

The Standardized Transition to Parenthood: How Standardized Practices Produce Gendered Subjects at the Transition to Parenthood

The transition to parenthood in Austria is constituted through a set of standardized practices that includes medical care, legal processes, public discourses on women’s health and decisions around public aid affect every pregnant women and most of their partners. In Austria the transition to parenthood leads to more traditional role configurations and to an increase in unequal distribution of labor. However, medical care in Austria are in general highly educated, have full access to the labor market and value and demand gender-equality, it seems crucial that throughout all levels of education women experience a retraditionalization of gender roles during the transition to parenthood. A focus on standardized practices is a sufficient way to show how even highly educated, career oriented and breadwinning women bear non-work-related burdens of undereducation are less disadvanta- geous. If education counts less, so does its lack.

We Have Never Been Individuals – New Materialist Ethnography

In 2011 I finished an ethnographic project on the transition to parenthood from the perspective of new materialism (Schadler 2013a, 2013b) and started another empirical project on definitions of family from this perspective. My talk will summarize the theoretical principles and onto-epistemological foundations of these theories and how they are transformed into an apparatus (Barad) that act as a tool for actual empirical research. I will also discuss how the researcher, research and a research field are established within this process. Theoretically we cannot perceive the researcher as a subject acting on a filed, but the researcher is becoming with and figured with it during research. However, this process is also producing research outcomes, which are therefore not a product created by the actions of the researcher, but a part of the practice of researching. The researcher is formed as the part of the practice that assembles outcomes and provides them in writing and talking to research communities.

In particular I rely on the work of Karen Barad, Rosi Braidotti, Donna Haraway and Stefan Hirschauer. In my talk I also want to provide information how I derived a concrete method of analysis from the principles of new materialism. To collect data I used interviews, observations, documents and self enactments. For analysis a developed a coding process, that reconstructs practices and the establishment of the boundaries, which separate components/participants in order to make them perceivable. The consequence is an ethnographic transcription of the figurations of interest (e.g. becoming parents) and the worlds they are becoming with. The researchers’ tools become an apparatus (Barad), which is becoming with a research environment. As a consequence research has its part in the formation of those boundaries, which are researched and in the figurations of the “object”, while we study how the object is figured.

Ethnic Inequalities in Educational Returns: Overeducation, Language Skills and Social Capital

According to existing studies, the persistence of ethnic inequalities on Western labour markets is largely due to ethnic differences in educational attainment. Empirically less important, but socially more relevant are differences in educational returns: why is education less beneficial for immigrant minorities in meritocratic societies? Apart of taste based and statistical discrimination, we argue that missing language skills and a lack of social capital could explain why immigrants and their children cannot make full use of their education. For income, we additionally analyse the “lagged” consequences of lower employment returns to education: Because education is less useful in terms of finding a job for persons of immigrant origin, they are probably overeducated more often and in consequence their overall education has lower income returns.

Using data from the German Socio-Economic Panel 2006-2009, we show lower educational employment and income returns for first and second generation Spatzaus- siedler as well as persons of Italian, Greek and Turkish origin as compared to native Germans. Results of simultaneous conditional quantile regressions show similarly stark percentile and median differences for first and to a lesser degree also second generation immigrants. Missing language skills and social capital seem unlikely candidates, given the equal pattern of differences for different percentiles. Yet, these differences in educational returns are largely accounted for by the larger degree of overeducation among persons of immigrant origin. The results also show that lower returns to education have two sides of a coin: The returns are lower, but the effects of overeducation are less disadvantageous. If education counts less, so does its lack.
Racism is a societal imbalance relationship which structures social order, with social practices of difference, the construction of social groups and social meanings and inclusions and exclusions.

When looking at the mechanisms, attributions and manifestations of racism in Germany, global, European and national “lines of tradition” and histories of racism have a powerful effect, if one speaks about racism in Germany, its specific expressions and effects, the history of racism in Germany needs to be taken into consideration.

Studies show that racism today is institutionalised. For example in state employment agencies with regard to social security allotment or in institutions of education and social work and in the actions of professionals (Melter 2006, Flam 2007, Gomolla/Radtke 2007).

The focus of this paper will be on a reconstruction of a racist normality in Germany, constantly present as a societal relationship in the every day life of people to whom a migration history is attributed, as everyday occurrence and manifest-ed in normative practices of differentiation, isolation and exclusion. The analytic perspective of this paper will be on the subjective experience and interpretation and consequent strategies of action and negotiation of young people, whose everyday life is negatively impacted by racism.

In the international context of the conference it will be interesting to discuss with other researchers different theoretical visions to normative orders of racism and their influence on todays understanding of and acting on racism in the world.

The research presented in this paper is based on group discussions, and problem-centred interviews with eight young adults (age 14-20). Part of the data was collected during a 4-day workshop with young adults with a migration background, where reflections and discussion about experiences and strategies among participants took place.

Nonreligious Actors and Their “Others” – How Questions of Justice Become Matters of Identity

Whether in a highly secular context, as in Sweden, or in countries where religion plays a more influential role in the public sphere: Nonreligious groups, like humanist or atheist organizations, often construe “religion” and/or religious actors as obstacles to social progress. In social conflicts and public debates, e.g. on education, gender equality, religious freedom etc., such processes of “othering” and the various imaginations of state, secularism, social justice and modernity intersect and manifest themselves in concrete ways. Thus they provide an ideal framework for analysing the complex dynamics and multiple entanglements of social practices of difference, the construction of social groups and social meanings and inclusions and exclusions.

The paper will briefly introduce the role of the sickness funds in Belgian health care. Then, the attention will be focused on the professionalization processes of doctors in medicine, surgery and gynecology. (Original title in 1849). Specialisation processes started already in the 19th century but the coming into prominence of medical specialists started after the second World War, together with the introduction of obligatory health insurance (1944). The already existing rivalry between ‘general practitioners’ and medical specialists became very prominent. A sort of solution was reached at the end of the 20th century. In the meantime the position of general practitioners has improved.

Life-Course Influences on Paid Work Beyond Retirement Age: Quantitative and Qualitative Evidence

Work post retirement age is on the rise in many Western countries. Our contribution aims at shedding light on the factors driving post-retirement work in Germany and the UK. Our perspective is cross-sectional, but will nonetheless focus on individual life-course influences on post-retirement work. Regarding these influences, two intertwined areas can be distinguished: influences connected to the employment history, and influences connected to the family and the personal network.

As to employment histories, they shape the ability, the opportunities and the decisions to work beyond retirement age in different ways. However, the underlying patterns are not unidirectional: On the one hand, interruptions and non-standard employment are related to lower old-age incomes and a potential higher desire for additional income in old age – a relationship that is at the same time differentiated by the specific institutional setting. On the other hand, a continuous employment career, especially in higher occupational classes, seems to be connected with better employment opportunities in old age and a stronger work identity. The latter relationships are also mediated by family histories. Additionally, family histories and personal networks also constitute important independent influences.

The contribution will first present quantitative evidence on these relationships, based on the English Longitudinal Study of Ageing and the German Ageing Survey. In a second step, evidence from qualitative interviews with working pensioners from the UK and Germany will be presented. This evidence helps to elucidate the (complex) subjective mechanisms behind some of the quantitative relationships. The interviews suggest that the experience of work beyond retirement age is overall positive, with paid work being seen as a way to do something meaningful, to stay in touch with other people, or to structures one’s day. In the final discussion these results will be connected to the country-specific debates around work in old age.
Many defense organizations are comprised of both military and civilian personnel working towards the realization of defense goals. Civilian personnel in defense organizations often work closely with their military counterparts. The issue of civilian-military personnel collaboration is an important issue that affects both operational and organizational effectiveness. Civilian and military institutional separations have been the hallmark of the civil-military relations field since the post-World War II era. Focusing on the need for greater collaboration among civilian and military personnel in defense organizations challenges the traditional focus on separation. Objective civilian control does not exist at all levels of the civil-military relationship spectrum. The reality is that civil-military relations may call for broad institutional separations as well as more fluid and collaborative roles within defense establishments. Personnel relationships in defense organizations, often warrant more integrative dynamics and directly affect the development and execution of military strategy as well as operational and organizational effectiveness. Enhancing collaboration between military and civilian personnel points to a theoretical model, such as concordance theory, which embraces broader institutional separations as well as cultural conditions requiring more flexible civilian and military relationships. This presentation is created within the context of a NATO Human Factors and Medicine Research Task Group (HFM RTG-226) and a cross-national survey initiative.

The Alienation of Public Spaces by the Homeless

Since the 1970s, German researchers have turned their back on the topic of homelessness. As a result, Germany has neither a universal definition, nor an official statistic on the amount of homeless people living in the country. Today, most German cities are facing a significant lack of affordable housing. Additionally, the borders of the EU have been opened towards Eastern Europe (2004 and 2007). In the hope of jobs and wealth, Eastern Europeans flock to Germany. However, a lot of them fail to fulfill their dreams and end up homeless as they are not eligible for German welfare. Hence, the number of homeless people being visible on the public spaces of German cities increased constantly in recent years.

As the cities are afraid that the ascending presence of homeless people constrains the consumer climate (especially in pedestrian and representative areas), they are seeing themselves forced to act. In contrast to the USA, where the cities usually follow a containment strategy, the method of choice in Germany is the displacement and decentralization of the homeless. During my presentation, I would like to focus on one of the most subtle ways to achieve these goals: structural modifications and installations which aim to prevent the “alienation” of public spaces by the homeless and other undesirable groups. I would like to complement my remarks with a discussion on how these actions are being implemented and justified by the cities and why people who do not belong to the “target group” are not able to decode their function.

People say that public spaces are a reflection of the society. The stepwise exclusion of unwanted persons from public spaces not only creates a distorted picture of the reality; it also calls a fundamental characteristic of modern democracy into question. We are talking about participation.

Governing CO₂ Emissions in Delhi, India: The Clean Development Mechanism and the Informal Recycling Sector

There is a consensus among policy makers that climate change must be addressed through global governance frameworks based on the measurement and reduction of CO₂ emissions. This ‘carbon control regime’ at the global scale requires cooperation from municipal governments whose task it is to implement and enforce its implementation locally. Scholarly research on metropolitan areas in both the South and South Asia in particular has been largely centered on exploring the impacts of municipal governments in the global South to mitigate CO₂ emissions. I examine the impact of the UNFCCC’s Clean Development Mechanism (CDM) on solid waste management in Delhi, India. The main argument of this paper is that the CDM has contributed to the emergence of an environmental urban governance regime based on calculating and reducing CO₂ emissions. This data fetishism obscures the relatively high recycling rates achieved by Delhi’s large informal sector, which is ubiquitous but difficult-to-measure. This has justified a dramatic shift in Delhi’s waste management strategy, as plans to build sanitary landfills have been abandoned in favor of waste-to-energy incinerators, three of which have been approved by the CDM. This policy shift has precipitated conflicts over the ownership and control of waste between small-scale informal enterprises and large formal-sector enterprises, and it relocates value from the labor of informal-sector waste collectors to waste matter itself which is required for the operation of waste-to-energy plants. I conclude that the underlying logic of this emergent governance regime is capital accumulation rather than the mitigation of CO₂ emissions, and its inability to incorporate extensive informal environmental management systems calls into question its overall effectiveness.
plausibility for modernist conceptions of art. It universalized the category of art by giving it a global meaning both in spatial and in temporal terms. At the same time, this universalization meant that cultural hierarchies formed by western hegemony were threatened. This paper looks at the ways influence of the Japanese art between 1860 and 1940 dealt with this by contributing to the simultaneous universalization of the category of art and the particularization of the concept of ‘Japanese art’. This ‘paradox of universality’ involved a differentiation between the one hand particular, local, traditional and most often historical realizations of what was nonetheless a universal category of art, and on the other hand its truly modern and advanced contemporary realizations of universality. At the height of the modernizing movements in the west, Japan proved to be the site of an ‘exemplary expansion’ of the concept of art. Sociologically, this expansion served to a significant degree to communicate an understanding of western art as an autonomous and potentially universal. WOC is a practical bounded category, the emergence of which has been analyzed by, for instance, Bourdieu, Heinich and Luhmann.

RC25-445.3 SCHLEICHER, NORA* (University of Applied Sciences, nschleicher@bkf.hu) Impression Management for Diverse Audiences: Identity Practices on Facebook

In my presentation, I pose the question: how can we apply the concept of impression management as outlined in Goffman’s (1959) seminal work to the context of social media? Particularly, how do users of Facebook share with others. How do they influence audiences on Facebook? What strategies they use to deal with this situation and how these strategies are reflect in their stance taking practices? Does the lack of physical contact with their audiences offer more freedom and agency in constructing their ‘fronts’ resulting in more diverse and potentially subversive identities or, on the contrary, self-censorship constrain identity performances? In this research, I look at data from Facebook use of users of the social media site and try to answer these questions. The data I use to attempt to answer these questions come from a representative survey on Hungarian high school students (age 14-18), from focus group interviews as well as from discourse analysis of Facebook profiles of members of the same nationality and age group. Preliminary analysis of the data suggests the existence of a variety of strategies used including the creation of double profiles, a control over the publicity and content of the posts, ‘defriending’ certain people including parents, deleting earlier profiles and leaving Facebook completely. The analysis focusing specifically on gender identity performances on Facebook suggests, on the one hand, strong peer group pressure, but, on the other hand, affordances of Facebook are also used to break away from traditional constraints of femininity.

RC44-727.12 SCHMALZ, STEFAN* (Friedrich Schiller-University of Jena, s.schmalz@uni-jena.de) WEINMANN, NICO (University of Kassel) Two Cries, Two Cycles of Contention. Workers’ Protests in Western Europe in Comparison

The paper compares two cycles of labor unrest and its relationship to capitalist crises in Western Europe. In the first cycle, starting around 1968, workers were able to mobilize high power resources and to push for wage increases and new institutional rights on the plant level. However, the offensive phase of the Western European workers’ movement was eventually stopped by the crisis of 1974/75, thus raising unemployment and weakening labor’s workplace bargaining power. As a consequence, since the 1980s, Western European trade unions lost members and faced increasingly complicated economic and institutional conditions. With the global financial crisis 2008, a new cycle of labor unrest has started, and the nature of social conflict has changed. First, the uneven and combined development of European integration has led to a spatially uneven distribution of workers’ protests. While countries such as Germany and Austria are characterized by low protest activities, social unrest in Southern European countries has increased significantly. Also, workers’ repertoire of contention seems to have changed throughout the crisis period: In the current wave of conflict, forms of “non-normed conflicts” such as plant occupations (“bossnapping” in France) and riots (London, Stockholm) have soared, indicating not only the severe consequences of the crisis but also trade unions’ growing representation gap. The paper draws theoretically on the “Jena power resource approach” and empirically on a database on social conflict (JenaConDa).

TG03-935.7 SCHMEECKLE, MARIA* (Illinois State University, mhschme@ilstu.edu) The Worldwide Outlook for Children: A Model for Monitoring and Studying Children's Rights?

The Worldwide Outlook for Children (WOC) is a web resource of information and indicators of young people’s wellbeing, rights, and interests. It may serve as a tool for conducting research, particularly for investigating experiences and statuses of indigenous youth. WOC is designed for use by scholars to policy makers to young people, and will be available in multiple languages. WOC is a useful tool for identifying, understanding, and explaining young people’s experiences across the world. WOC presents vast evidence about children, including indicators of their health and survival, educational attainment and resources devoted to educational success, violence committed against young people, and children’s work experiences. WOC will raise awareness as well about indicators of children’s wellbeing that are not yet available for many countries. As such, WOC may be instrument for identifying what we do not know about boys and young people’s wellbeing, rights, and interests. Over time, WOC will work from a global perspective to share information regarding young people’s wellbeing, rights, and interests.

RC53-852.4 SCHMEECKLE, MARIA* (Illinois State University, mhschme@ilstu.edu) The Worldwide Outlook for Children: A Web Resource of Young People’s Wellbeing, Rights, and Interests

The Worldwide Outlook for Children (WOC) is a web resource of information and indicators of young people’s wellbeing, rights, and interests. WOC is available to social scientists who seek to identify, understand consequences of, and explain disadvantage and inequalities among young people across the world. WOC presents evidence designed for use by everyone, from scholars to policy makers to young people, and is available in multiple languages. Recent innovations in the Sociology of Childhood have focused attention on children as active agents with interests and perspectives worth knowing about. WOC provides a resource for us to further understand the rights of the child has led to a greater focus on children’s rights and on many aspects of their wellbeing. WOC demonstrates how social scientific evidence can sharpen our awareness about the variety of structural disadvantages children experience worldwide and the countries and regions in which multiple disadvantages and inequalities exist. WOC provides evidence of children’s physical health and survival, educational attainment and resources devoted to educational success, violence committed against young people, and children’s work experiences. As sociologists learn more about children’s legal and informal rights, interests and aspirations, psychological wellbeing, social interactions, choices, levels of resilience, and spiritual beliefs, we become aware of much more that we want to know about young people and the range of inequalities they experience from a global perspective. During this presentation, we will discuss methodological challenges and substantive gaps in global knowledge of children’s wellbeing, rights, and interests, and how we might move forward to develop more comprehensive and holistic understandings. We will consider how measurement, theoretical, and cross-cultural questions challenge sociology’s ability to grasp outlooks for young people worldwide.

RC06-122.6 SCHMIDT, EVA-MARIA* (University of Vienna, eva-maria.schmidt@univie.ac.at) RIEDER, IRENE (University of Vienna) RICHTER, RUDOLF (University of Vienna) The Influence of Real Life and Online Peer Groups onCaring Fathers at the Transition to Parenthood

While the transition to parenthood is still linked to a retraditionalisation of gender roles, a small but growing number of fathers aims at taking up an equal or major share of care-work, and reduce their work hours or take parental leave to do so. Our analysis of in-depth 20 interviews with fathers-to-be, bulletin boards and website shows how those fathers reflect, observe and perform this work within structural constraints that (in Austria) still favor breadwinning fathers. Our data derive from two different pieces of work: a study on fathers on parental leave and a study on the “gendered transition to parenthood” (within the consortium FamiliesAndSocieties, funded by the European Commission FP-7).

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Contacts to other fathers that are or have been in the same position play an important role for those "new fathers". Some fathers already have access to other caring fathers within their peer group. Some try to find contact to other fathers through the use of new and social media. They attend "new fathers" groups on Facebook, are members of bulletin boards that are crowded mainly by fathers, or use blogs and photo-diaries focusing on the fathering process. On these sites, they often share their opinions, the everyday obstacles they encounter being stay-at-home fathers, or happy times and events with their children. In our talk we explore how these communities help fathers to maintain their role as caring fathers, with sometimes hostile or non-encouraging environments. The ability to share their experiences interplays with their wellbeing, their persistence against structural disadvantages and adverse comments, and the quality of the father's relationship to the mother and the child.

Sociotechnics of Economy

Joachim K.H.W. Schmidt
Sociotechnics of Economy
Revisiting my sociotechnically informed economic theory on autonomous humans (Göteborg 2010), Onati and Athens (2B11), not any longer based on Capital, Market, etc., as done by mainstream economists who failed for several hundred years. Mainstream theories have been spatially based, time only occurred as space-time as well as properties as measurments within space, and humans only as objects like game pieces. - My present paper will enlarge the common Factors of Productivity, traditionally Land, Labor, and Capital, by Time. Autonomous humans are characterized by Time as duration of their life which they have again and again to invest in portions as resource for their reproductive survival. An economic theory ignoring real time must fall, cutting out some human's being sold for inauthentic slavery work. Excesses of present financial markets condemn the inefficiency of traditional economic theories responsible for such perversity. - Sociotechnics as empirical science designs and implements institutions, and these going concerns are dramatically changing; we move out of an age predetermined by analogous Greek ideology focusing on the organs of reproduction closed spaces, cf. Plato's Parable of the Cage, without time and movement, becoming manifest in positions, prohibiting time and movement. Greek world: A GIVEN one circling around positions. In opposition to this autonomous humans succeeding to leave Plato's Cage of perverted self-conceptions confronted with a digital reality, and experience themselves as homeless, being asked to construct their >homes< themselves by way of computation. Greek-Western institutions must necessarily be replaced, since nearly all passed down institutions of analogous Greek-Western world prove inadequate in present digital age, including presently still prevailing economic theories. In digital age social life will not any longer turn around positions, but will happen in networks in which being will be replaced by relation.

SCHMIDT, JOACHIM K.H.W.* (SoReGa EV, jkhws@aol.com)
The Cultural Influence on Social Intuitions

The Cultural Influence on Social Institutions
Joachim K.H.W. Schmidt, Berlin/FRG
Social institutions are culturally predetermined, the going concerns of people express beliefs in way of reality-perception. Cultures are different round the globe. Diversity of cultures contains a gigantic richness of human resources. Cultures actualize in human relations via common actions, and/or communication. Every culture has developed an own language for its communication. Western languages, especially Anglo-American languages, have presently become globally dominant, including Western civilizing culture which they embody. - The powerfulness of Western languages is subject to Greek ideology, its assumed fictional identity of thought and being, first expressed by Parmenides 2500 years ago. Greek ideology circles around an absolutely perfect and analogously conceived spatial Being, a fictive replication of an ideal world excluding change by Time and Movement. Greek ideology gets manifest in fictive positions: its operational base. All Western languages share the COPULA as constitutive element, expressing that everything will be defined either as this or that, e.g. either Greek or barbarian, or e.g. Nazis defined Jews as non-human and sent them into the gas chamber, or e.g. formerly Christians victimized heretics on auto-da-fé, and presently victimization of humans labeled terrorists by obama, with areal drones as killing machines. And we should not forget the multiple bio-, culture-, and genocide committed by Western people under the influence of Greek ideology. - As can be not overlooked by everyone, Western analogous civilization and culture is decaying with dramatic speed, getting its deathblow by digitalization of Western societies, and consequently all central institutions have to be redesigned, adapted to starting digital life of Western populations in the Third Millennium. My paper will create awareness of the problems to be faced in near future: A job for sociotechnicians.
The analysis showed that the accident in Fukushima in March 2010 did not have significant impact on media framing of nuclear fusion in the major part of print media under investigation. In fact, fusion is clearly dissociated from traditional nuclear fission) energy and from nuclear accidents. It tends to be portrayed as a safe, clean and unlimited source of energy, although less credited when confronted with research costs, technologic feasibility and the possibility to be achieved in a reasonable period of time. On the contrary, fission is portrayed as a hazardous source of energy, expensive when compared to research costs of renewables, hardly a long-term energy option, susceptible to contribute to the proliferation of nuclear weapons or rogue military use. Fukushima accident was consistently discussed in the context of safety problems of nuclear power plants and in many cases appeared not as an isolated event but rather as a reminder of previous nuclear disasters such as Three Mile Island and Chernobyl.

The analysis suggests that the public discourse on fusion is constructed mainly around research challenges, amorous events and scientific and technological achievements, rather than energy policy debate, climate protection or future economic compensations of fusion research.

SCHMIDT, ROBERT J.* (Technical University of Berlin, robert.schmidt@tu-berlin.de)

Collective Action, Trust and Robust Innovation: The Case of a Regional Network of Research-Groups

Cooperation between working groups with heterogeneous disciplinary backgrounds is an important phenomenon for modern sciences. It stems on the one hand from the necessity of expertise and technology needed to answer feasible research questions, to succeed in scientific competition and on the other hand it is required by many forms of research-funding. The contribution focuses on a special form to deal with both: an enduring network between research-groups, which realizes different lines of research and funded projects in a remarkably successful way. Success hereby not only means that they get funded, they also managed to create highly relevant findings in a robust way (Ferrary/Granovetter 2009).

The case study concentrates on the phenomenon of emerging project-networks to enable flexible and also enduring, reliable collaboration between heterogeneous actors (e.g. Windeler/Sydow 2001) but conceptualizes it as one of the actualization of collective action. Within a practice-theoretical perspective (Giddens 1984), we can describe the latter as collective agency, as differences in praxis done collaboratively in a highly bounded way towards an end collectively framed. The first part of the presentation explores different roles collective action between heterogeneous actors play in the episode of robust innovation in the network during 2005-2013.

The second part focuses on trust as a specific quality of network-relations that makes it possible to actualize these lines of collective action between research-groups. It shows the importance of trust-relations in different sub-populations of the network for the network as a whole and its robust ability to produce relevant findings. In the end, the study can provide a more detailed picture of the emergence of a specific bundle of trust-relations through a cycle of efforts in managing the complexity of the scientific field. Such a view emphasizes the inherent recursive nature and historicity of social capital in organizations and populations of organizational units.

SCHNEIDERHAN, ERIK* (University of Toronto, e.schneiderhan@utoronto.ca)

Dilemmas and Politics in Chicago: The Theory and Practice of Addams, Alinsky, and Obama

This paper uses the city of Chicago as a site to explore the work of three celebrated community organizers and intellectuals: Jane Addams, Saul Alinsky, and Barack Obama. All three faced similar challenges across one hundred years of helping people in Chicago, particularly the struggle to help others in a city controlled by powerful elites who reinforced racial, gender, and class inequality. And all three individuals, each in their own unique way, got “stuck” and became political as a way to continue to move forward and continue to make change. How are we to make sense of each individual’s efforts to negotiate the tensions between community and politics? This paper draws on the work of Robert Merton and John Dewey (among others) to develop a theoretical framework for making sense of dilemmas and political action in community organizing. It uses this framework to analyze the work of Addams, Alinsky, and Obama as they tried to help others in Chicago. The paper also provides an element of historical sociology, showing the previously overlooked legacy of practice and ideas running from Addams, through Alinsky, to Obama.

Do Tertiary Dropout Students Really Not Succeed in European Labour Markets?

Tertiary education has been expanding hugely over the last decades, so that tertiary dropout students will constitute a growing distinctive group in future labour markets. University dropout is regularly discussed as a ‘negative’ indicator in terms of reinforcing socio-economic inequalities and being a sign of university inefficiency. However, research on actual career trajectory of dropout students is virtually non-existent. Using data from the 2011 Programme for the International Assessment of Adult Competencies (PIAAC) this study first validates the uncommon self-reported measure of dropout used and compares the percentage of adults with tertiary dropout experience between OECD countries. Second, we examine whether tertiary dropout is a permanent decision as a considerable part of the dropouts re-engage in education. In a third step we investigate characteristics of adults with dropout experience. Finally, we estimate the effect of dropout in terms of their employment status and success of entering managerial professions comparing results of logistic regressions and propensity score matching taking individuals’ socio-economic and demographic background, work experience and cognitive skills into account. Results indicate that consistently across countries dropout is repeatedly a ‘positive’ indicator in the labour market. This is first due to the fact that the dropout decision is often not a permanent one as well as that for those adults who do not reenrol into tertiary education labour market chances are better than for equally educated adults in about half of the countries examined.

How the Prison System Affects the Health Care System

United States incarceration rates have increased fivefold in the past four decades, placing untold pressures on other social institutions. Using state- and individual-level data, this article tests whether the number of former inmates affects the functioning and quality of the health care system. The aggregate-level results show that a within-state increase in the number of former inmates is associated with growth in the uninsured population, more frequent use of emergency rooms per capita, and a decline in the supply of hospital beds. Similarly, states that incarcerate more people also report fewer ambulatory visits per capita, fewer mammograms, and lower levels of essential diagnostic tests among diabetic Medicare enrollees, all indicators of a lower overall quality of care. Similar processes are evident even when examining behavioral outcomes in individual-level data. Results from a nationally representative survey, show that individuals residing in states with a large number of former inmates report more unmet need, lower utilization, and lower quality care. These patterns are found even among those far removed from the prison system, including women, the insured, and the well-educated. The implications of broad spillovers from the prison system to the health care system are discussed.

Comparison of legal aid in Belgium, France and the Netherlands: do remuneration systems influence the evolution of contentious mass?
Frédéric Schoenaers, Kathleen Adelaire, Christophe Mincke, Laurent Nisen, Jean-François Reynaert
In Belgium, the current system of remuneration for legal aid causes dissatisfaction both among government authorities and lawyers. In addition, the adoption of the “Salduz law”, which allows any person heard for the first time by the police or a judge to be assisted by a lawyer, is going to weigh on the use of the legal aid. Legal aid has experienced strong growth in recent years in Belgium (+ 229.26% of closed cases between 1998 and 2011). It is useful to observe whether this growth is present in other European countries. We selected France and the Netherlands. This contribution presents a comparison of the modes of organization of legal aid in the three countries as well as of the modalities for financing it. Secondly this contribution aims to compare the evolution of the mass of disputes benefiting from legal aid. We see that beyond the differences between the three countries, the use of legal aid is constantly growing. We will attempt to provide an interpretation of this fact by mobilizing the following explanatory factors: higher income limits allowing more people to access to legal aid with a strengthening effect due to the current economic crisis in northern Europe, a better information of the citizens (by media or advertising by lawyers), a new “grammar of responsibility,” a phenomenon of juridification, the development of new public policies and the development of new “rights.”

Patient Participation in Rehabilitation Centres: How Professionals Integrate Patients’ Expectations about Discharge Plans
Today, patient participation is considered “best practice”. Yet, there are different perspectives on what patient participation means. While there is a line of argument that patient participation “is justified on humane grounds alone” and in line with patients’ right to self-determination (Gudagnoli & Ward), there is evidence that not all patients desire to be involved (Thompson et al, 2007). Policies on discharge planning from rehabilitation centres stipulate moreover that patients participate actively. It is less clear, however, how patient participation occurs and how this process is achieved interactionally. The goal of this paper is to analyse how patients participate in planning their discharge from rehabilitation centres in multidisciplinary meetings and within the health providers-patient interaction.

Three rehabilitation centres in Switzerland with a total of 37 patients and their teams of health professionals (physicians, nurses, occupational therapists, physiotherapists, etc.) participated in the study. Over 150 meetings were video recorded and analysed using Conversation Analysis, an inductive, observational method. Patient participation is shaped by organisational structure, by health professionals’ communicative practices and by opportunities for patients to engage actively. 1) Patients participate in weekly interdisciplinary meetings, and have the opportunity to intervene directly and thereby shape decisions. 2) Primary nurses coordinate care for patients throughout their stay, and relay the patient’s point of view to other health professionals. Professionals’ way to integrate patients’ opinion into final decisions might differ significantly. 3) When interdisciplinary meetings are held without patients, the patients’ point of view is thus indirectly integrated into decision-making: different professionals work as mediators. The analysis of three sites allows a reflection on professional competencies and best practices with regard to patient participation and proposes recommendations for education and practice.

SCHOENAER, FRÉDÉRIC* (University of Liège, F.Schoenaers@ulg.ac.be)
Comparison of Legal Aid in Belgium, France and the Netherlands: Do Remuneration Systems Influence the Evolution of Contentious Mass?
In recent years, around one fourth of all first year students leave university without a degree. While reasons for drop out are well examined, the consequences are rather unknown, especially in terms of labour market outcomes. This paper aims at identifying differences in school-to-work transitions between tertiary education graduates and dropouts as well as students who did not participate in tertiary education but completed vocational training after upper secondary education. Referring to Human Capital Theory and Signalling Theory we examine if additional years of tertiary education or rather credentials deliver higher returns to tertiary education non-completers. We also examine in which way the lack of formal qualifications can be compensated by alternative resources like social capital. In a first step we study the probability of entering the labour market. The further step comprises the close scrutiny of job quality (occupational status of the first job) and adds information about social capital to the analyses. Our results show that higher education drop outs in Germany do have difficulties entering the labour market but obtain a higher occupational status job than students with
vocational training. Furthermore for dropout students, years spend in education are important, especially in terms of occupational status. The acquired human capital however, can be better translated into labour market returns by those with better social capital. We therefore conclude that social networks are an important compensation strategy for a lack of credentials.

SCHOLTEN, MIRTE* (MZES/Mannheim University, mirte.scholten@mzes.uni-mannheim.de)

School-to-Work Transitions of Higher Education Drop-Outs: Human Capital or Signalling?

Graduates from tertiary education have good labour market perspectives but it is not well examined yet how the career perspectives of tertiary drop out differ from those of graduates. This paper aims at identifying differences in school-to-work transitions between tertiary education graduates and dropouts as well as students who did not participate in tertiary education but completed vocational training after upper secondary education. The focus will be on the different returns of different educational levels. Referring to Human Capital Theory and Signalling Theory we examine if additional years of tertiary education or rather credentials deliver higher returns to tertiary education non-completers. Especially in economic crises we expect that tertiary education drop outs will have huge difficulties in entering the labour market as jobs are scarce and the competition is hard. In a first step we study the probability of entering the labour market and job search durations of the different educational levels. The further step comprises the close scrutiny of job quality (occupational status of the first job) and adds information about economic crises to the analyses. Our results show that higher education drop outs in Germany do have difficulties entering the labour market but obtain a higher occupational status job than students with vocational training. Furthermore for dropout students, years spend in education are important, especially in terms of occupational status. In times of economic prosperity job search duration of tertiary graduates and non-completers are the same, while tertiary education completors fare better in economic crises.

SCHOLTZ, HANNO* (University of Konstanz, hanno.scholtz@unikfr.ch)

Debating Alternative Conventions and Defying False Friends: The Concept of Crisis in the Rational Choice Theory of Institutions and Historical Social Change

Although the term „crisis“ seems to be ubiquitous, there are historical phases when it more abounds than in others. For the years since 1989, or the 1930s, the term has (in most parts of the worlds) a higher importance than for the 1950s and 1960s. This can be understood from the fact that these times are phases in which institutional change is both going on and being prepared.

In rational choice perspective, institutions are added game elements in the game structure of human interaction, and they have both conventional and normative aspects. This perspective allows to study institutional change as characteristically depending on the complexity of organizational interaction: Independent organizations allow for early and smooth institutional change, as in the case of changing family concepts. However, there are cases as economic regulation, where organizations act in strong interdependencies and finding a new institutional setting becomes a question of social debate while the performance of old institutional structures: These are crises. In crises, many solutions are discussed, including those with biased consequences and „false friends“ for which lower adaptation costs go together with a lower long-run adequacy. Hence sociological imagination and the deconstruction of old norms and perspectives can be rather helpful in avoiding false friends and desastrous consequences for solving crises.

For the concept of the economic regulation of industrial society it can be said that unexpected consequences of the disaster (i.e. experiences of modern warfare) did probably the larger part of preparing the Post-War solutions. For the case study of introducing non-smoking policies, that was not the case. The currently greater degree of population access to information may explain the difference, giving rise to the hope that sociological imagination in the general public may add to solving the current transition problems.

RC16-279.12

SCHOLTZ, HANNO* (University of Fribourg, hanno.scholtz@unifr.ch)

The Two-Step Nature of Modernity

Over the last decades, the discourse over the end of industrial society and the coming of a second modernity has found evidence in recent phenomena that resemble parallels between 1860 and 1945, as globalizations, economic crises, democratizations, violence, social inequality, and global shifts in resource distribution. An understanding of the mechanisms behind these phases of crisis would be socially helpful since it is rather probable that the current one has not yet ended. The rational choice theory of institutions offers the tools to do so, but has not yet been applied to this question. The proposed paper (part of a larger book project) intends to fill the gap.

The paper develops a model of the two step nature of modernity by concentrating on the following arguments: 1. Modernity increases the availability of resources. 2. This results in changes in information relations, i.e. between positional and situation-specific information. 3. Multi-actor decision making has two focal points of either relying on positional (domination / authority) or on situation-spe cific deliberation and argument (discussion / argument). 4. A rational-choice understanding of tradition and modernity hence equates the two with applying the two focal points. 5. Not all games of human interaction are created equal, since organizations offer social structure and the transformation of situation-specific in positional information. 6. Hence an intermediate phase arises, with authority within and argument between organizations. This modelled intermediate phase is equated with the historical phase “industrial society”.

Additional arguments analyze the nature of institutional innovations in the transitions between the phases, allowing for the confrontation with empirical evidence and for the prediction of upcoming institutional changes.

SCHORCH, MARÉN* (University of Siegen, maren.schorch@uni-siegen.de)

The Hidden Patients - a Qualitative Study on Informal Caregivers in Germany

Regarding the aged population, we also detect a parallel growth of age related illnesses like dementia, Alzheimer’s disease or the like. In many countries worldwide, the majority of care for people suffering from these illnesses is realised at home by informal caregivers – their spouses, family members or close friends – due to cost or personal reasons. Often, the caregivers themselves are also at advanced age. Both, elderly and still working age family carers bear the heavy physical, psychological and emotional burden of taking care of their beloved ones at home. They are then at increased risk for psychical and physical morbidity like depression or burnout and can be described as our society’s “hidden patients” (Schulz & Beach, 1999). The contribution will present first findings from a sociological, qualitative study (observation and open interviewing) with this special group of elderly, informal caregivers in a rural area of Germany (Siegen and surroundings). The study is part of a larger, international and interdisciplinary research project called TOPIC (The Online Platform for Informal Caregivers), funded by European Commission and the Federal Ministry of Education and Research with partners in Vienna (Austria) and Troyes (France). First observations focussed on the every-day activities and routines within the households and underline the above-mentioned challenges for the informal caregivers in respect to time, energy and attention. Beyond that, the caring persons expressed the need for help in our talks, and not only in terms of financial assistance as often proposed by social institutions, but also for information and emotional support. This point is especially interesting from our point of view as we observed some people’s difficulties to express their feelings respectively their own needs.

Looking for a Balanced Treatment of Successive Generations: What Can Social Policy Learn from Perspectives on Sustainable Development?

This paper argues that social policy scholars have good reasons to engage with the literature on sustainable development when analysing the challenges of how to handle demographic changes and welfare states alike. While many analysts have discussed the need to ensure the sustainability of welfare states and concerns for future generations, they rarely spell out the conditions for achieving welfare sustainability or provide an adequate theory of what such sustainability involves. Attempting to address these shortcomings, the paper asks what the scholarship on social policy can learn from perspectives on sustainable development.

In a European context, current debates on the need to create sustainable welfare states and how to promote sustainable development both raise difficult issues of intergenerational fairness and governance problems including tensions between generations making and democratic legitimacy. The mantra is: ‘for a better future, citizens must make sacrifices today!’ Thus, the proposed paper is premised on the view that these areas intersect in important ways. However, they also differ, since generally questions about the welfare state are treated as problems of social/economic policy while debates about sustainable development put both social and environmental issues on the centre. Hence, linking the rich literature on sustainable development and the notion of sustainable welfare states, promises to bring new conceptual and empirical insights into the debate about welfare state futures.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
The paper first introduces the notion of sustainable development. Next, we discuss how we can enrich the conceptualisation of welfare sustainability by taking on-board a broader sustainable development perspective. In addition, we ask how we might transform this improved definition into operational indicators which enable cross-national comparisons. Third, in view of the framework developed we tentatively compare a set of European countries. In conclusion we address the implications our framework has for the question of intergenerational fairness, and we highlight avenues for future research.

Young migrants unsuccessfully claiming refugee status may be ‘tolerated’ in Germany. This specific legal status positions them in the host society nearly at the end of a vertical model of civic stratification, implying restrictions in accessing central institutions of the society such as the education system or the labour market. Besides, they are constantly facing a high risk of being deported to the country of origin.

However, the impending shortage of the skilled workforce in Germany enforced a new political discourse. As a consequence young tolerated refugees hesitantly have been re-defined as educational subjects and labour market resource. Despite the still prevailing inequalities in the access to vocational training of tolerated youths as compared to young citizens or migrants being granted a residence permit, legal changes at the federal level have been introduced since 2009. They are to reduce vocational training boundaries for these residents with the highly precarious tolerance status across Germany. But empirical evidence from our ongoing research project reveals heterogeneous approaches and new regulations. Especially migration authorities may act as institutional gatekeepers either supporting or constraining their access to vocational training. This results in regionally unequal vocational training chances for tolerated youths that cause new inequalities within this group.

What does the twofold inequality regarding the access to vocational training mean for other spheres of the social life and future prospects of tolerated youths? This is the question we would like to focus on in our presentation. To answer it we outline the current legal framework and present central findings of our comparative regional case studies that are based on document analyses, semi-structured individual interviews and group discussions with experts. The findings argue for an enhanced consideration of institutionalised inequalities that are bound to a person’s legal status in the sociology of education.

(How) Does “Home Hospitalization” Transform The Relationship Between Patients and Healthcare Professionals?

“Home hospitalization” was officially instituted in France by an act of parliament in 1970. It has been largely developed over the last ten years.

Two major arguments are advanced in its favor of this mode of healthcare. The first, is that this form of hospitalization is chosen by patients who prefer to undergo long-term treatment (often with a fatal outcome, as many of those concerned are undergoing palliative care) surrounded by their families. The second is that of its cost-effectiveness. This factor is important in a traditionally public-dominated health sector where a great deal of pressure to comply with managerial objectives more often found in private enterprise.

Our ongoing empirical study, carried out between 2012 and 2014, in a service of home hospitalization situated in a French province, has revealed the complexity of the situation, among other things, transforming the domestic environment, expert pressure on the carers (usually other members of the family) and transfers running costs to the home. As far as professionals are concerned, it is sometimes difficult to conciliate professional practice and the domestic environment. Various pressures on practitioners seem to reinforce prescription of this mode of care.

If home hospitalization does transform the relationship between healthcare staff and patients, this does not necessarily “empower” the latter or otherwise reverse hierarchical relations. As is usual in public relationships, inequality is not a two dimensional phenomenon. On some counts home hospitalization may reinforce structures of inequality, whilst modifying them on others. With reference to interviews with professionals and patients and observations carried out in the home and the work place, I will show the complexity of the adjustments made by all participants whose actions respond to diverse and conflicting pressures; economic, moral and relational, among others.

In The Shadow Of Alfred Schutz: Two “Ordinary” Sociologists In Extraordinary Circumstances

Peter Berger (interviewed at Boston 22nd October 2010) has qualified the three lecturers at the Graduate Faculty who most influenced both him and Thomas Luckmann as the “Holy Trinity”. The triumvirate was composed of Carl Mayer, Albert Salomon and Alfred Schutz. Though the latter has acquired a considerable reputation posthumously, Mayer and Salomon, apart from a short mention in the introduction to The Social Construction of Reality have been very little published and have remained almost entirely unnoticed. It is in this sense that they can be qualified as “ordinary” (that is to say not renowned) sociologists.

Their originalness contrasts with the extraordinary circumstances which affected their lives. Both Mayer and Salomon studied and eventually obtained positions in German universities during the first decades of the 20th century and both emigrated to the United-States at the beginning of the 1930s to become members of the Graduate Faculty of the New School for Social Research (Salomon was Jewish and Mayer married a Jewish woman). Archival material, the few published documents available and my interviews with Berger and Luckmann lead me to suggest that the reasons for the lack of impact differ. Though Mayer headed a research project on religion in Germany he never succeeded in publishing the results of his study. Salomon’s work was largely theoretical and did give rise to some publications; others were rejected as inappropriate for American audiences.

By contextualizing the production of these two men I will try to explain some of the reasons for their academic in-success. Where they really so “ordinary”? This will of course lead me to examine the criteria by which success is established in academia.

Organized Movement or Moving Organization – the Case of the World Social Forum

Since the 1990s there has been a significant growth in the number of Non-Governmental-Organizations (NGO) operating on a transnational level. This was called ‘NGO-Boom’ and was largely considered as a positive sign towards an emerging global civil society (Keck und Sikkink 1998). Some of these ‘new’ transnational civil society actors organized themselves to influence the politics of international institutions and to challenge multinationals. Doing ‘lobbying’ requires an effective and efficient way of organization to compete with transnational companies. The organizational forms of these actors are often comparable to those of private business companies (Mintzberg and Westley 2000). Other civil society actors deny any form of hierarchical organization and experiment with horizontal ways of organizing themselves. One example is the World Social Forum (WSF) with its ‘open space’ (Whitaker 2007). In 2001 a transnational space of non-structured individual interviews and group discussions with experts. The findings argue for an enhanced consideration of institutionalised inequalities that are bound to a person’s legal status in the sociology of education.

Breaking the Silence at Spanish Universities

This paper focuses on the impurity of aggressors in most Spanish universities and on the aspects that maintain these specific gender, power and knowledge dynamics and finally lead to the expulsion of the victims instead of the aggressors. Whereas VAW at universities all around the world is a recognized problem and most prestigious universities have implemented measures to combat this phenomenon, in Spain it is still silenced although first steps have demonstrated the need for researching this phenomenon. The project “Gender-based violence in Spanish universities” funded under the Spanish National RTD Program (Valls, 2006-2008) was pioneer. For the first time in Spain, a questionnaire with 1083 students, 13 in-depth interviews with professors and university staff, and 16 communicative daily life stories with students on this issue were conducted. The results, since of international numbers, show that a high percentage of the participants knew someone or have suffered some kind of situation of VAW at the university. Besides, it evidenced that people supporting the victims of VAW become “second order victims”. This research was crucial in breaking the silence on VAW in Span-
ish universities and has also suggested evidence-based actions to fight against it. Once the results had been presented on a national level, universities increasingly started implementing actions to address VAW, asking CREA research for support. As a result of this process some faculties have introduced protocols for cases of harassment. This is also due to the political impact of the results since the Law for effective equality between women and men (Spanish Government, 2007) obliges all public offices to establish procedures on cases of harassment. Even if there is still resistance to changing these dynamics, the article in the Spanish law for equality is an important step to challenging the dynamics of gender, power and knowledge at Spanish universities.

Preventive Socialization from Zero Years

In this paper, we present the violence prevention programs implemented in Schools as Learning Communities. These schools have been analyzed under the INCLUD-ED project (FP6 of the European Commission) and are outstanding for the great results in very diverse social areas going beyond positive academic results. Research on violence against women (VAW) highlights that patterns linked to it are included in the socialization processes. The results presented here stem from research on preventive socialization that emphasizes the social character of love and the attraction towards violence (Gómez, 2004; CREA, 2010-2012). According to this research line, the existence of a mainstream socialization that promotes the model of attraction linked to violence implies the need to socialize from early childhood in attraction to relationships that reject any kind of violence. Socialization in accepting violence that can lead to future VAW is prevented. According to a common analysis of violent actions in early childhood such as a bite is considered as an emotional expression and as a consequence the victim is forced to receive a kiss from the perpetrator as a sign of excuse and forgiveness. These actions socialize in the acceptance of the violence and set the bases for future gender violence. Zero tolerance of violence from zero years is the premise to socialize into relationships without violence and to ensure the development of childhood free of violence. In this line, in Schools as Learning Communities any kind of violence is rejected and children are socialized in this general rejection of violence and learn to avoid violent behaviors. They also learn the values of respect towards others and to insist themselves in being treated with respect. Consequently Schools as Learning Communities contribute to preventing the mainstream socialization in attraction towards violence.

Globalized Management Practices and Local Cultures

The paper will give an overview of management practices in different world regions based on the existing literature in the social and economic sciences and case studies. One of the main questions will be: What is the future of “management”? The global discourse on management focuses on the principles of the market that have been introduced in all spheres of social life through university programs, policies, organizational strategies, government policies, and personal counseling literature. This knowledge is produced, distributed, and consumed by social actors in the South, North, and East. These forms of disciplinary knowledge have contributed to the creation of a world controlled by managers and management technologies.

One of the most important societal influences in the last quarter of the 20th century was this growing importance of the management discourse. There was a spread of the idea of management from large firms to the professions, NGOs, the public sector, and the daily lives of social actors. This management discourse consists of a language and practices that global players produce in the socioeconomic world. This discourse is so widespread today that it seems difficult to escape its grip. This paper gives an overview of its increasing propagation in non-western societies. One aspect of this research is: How do groups cope with the global discourse on management in a globalized world? For the last twenty years, management practices were propagated throughout the globalized world but only few studies on its local acceptance exist even if there are studies on the problematics of market fundamentalism (Albers et al. 2006). Because of the challenges related to globalization and the global financial crisis, it is important to understand this discourse of management and its functioning in global companies in order to better plan future developments of the socioeconomic world.

SCHUERKENS, ULRIKE M.M.* (École Hautes Études Sciences Sociales, uschuerkens@gmail.com)

Social and Civic Dialogue: Confronting The Challenges Of The Post-Neoliberal Economy

This paper will show that social dialogue establishes a balance of bargaining power in the employment relationship. Globalization has changed the labor markets and contributed to a decline in union membership in a number of countries. It seems that the expansion of global production and the increasing mobility of capital has caused a shift of bargaining power in favor of employers. Growing inequality globally and within a number of companies and the growth of insecurity among those excluded from social dialogue are the empirical expression. In this situation, social dialogue remains a mechanism to protect workers and ensure stable labor relations for employers. Several countries have been able to use it to find ways out of the recent financial crisis; they were able to preserve jobs and to facilitate adjustment of companies.

The analysis of social dialogue in the world realized in this paper will reveal not all aspects of social dialogue closer to civic dialogue. If we concede that the current democracy cannot be limited to the distribution of resources, but should also include a discussion of the means of production, the dominant idea is that the business world can not be separated from society and that it must therefore participate in the discussion on the objectives of the economic world. The increasing flexibility of the labor market requires what A. Sen and Hirschman called the capability to express oneself so that workers and capital owners together may introduce new thinking about the business world. If social Europe becomes a reality, a new model of prosperity must be built with ideas and actors from civil society. To do this, the organizations of employers and workers and the states should create new initiatives and adapt new strategies to meet the challenges of the 21st century.

SCHUH, CORA* (Emmy Noether Project, schuh@em.uni-frankfurt.de)

Christian Enclaves, Freedom of Education and the Quality of Time: Contested Secularity in the Netherlands

The Netherlands are highly secular – only one third of the population being a church member; euthanasia and same sex marriage are broadly supported – against recurrent religious opposition. In some areas though, one finds an almost secular-socius religious division: In the Dutch ‘Bible Belt’ orthodoxed reformed groups strongly influence the organization of public life. Here it is not about accommodating religious minorities – rather, given the majority religions, Christian legal traditions and the structural pluralism of Dutch secular order, these places practice religious counter publics.

At the same time - due to e.g. population mobility – these places are changing, thereby becoming contact zones (Pratt, 1991) of religious and secular lifestyles. Central sources of conflict are Sunday rest and religious schools. The secular-religious divide becomes more complex with regards to non-western migrant populations and their (socio-)economic integration.

These secular-religious conflicts help discussing two central questions regarding the public sphere in religiously diverse countries: 1) what are (competing) notions of the public and how are they related to religious-secular history and 2) in what way can the state allow for multiple publics without failing to maintain social cohesion.

I discuss the conflict around Sunday openings and religious schools with regards to a changing Dutch secular model. Further I sketch how local contexts become arenas for conflict over secularity, and how these conflicts differ according to context. Based on my empirical findings I discuss the relation of secular models with religious/secular majority relations as well as the functioning of contact zones in stipulating secular identity formation.

SCHULZ, MARKUS S.* (UIUC, markus.s.schulz@gmail.com)

Transforming Struggles: Organizational Modes, Mobilization Outcomes, and Occupy Wall Street

Encampments at Zuccotti Park and elsewhere have been violently dismantled, the mass media spotlight moved on, the spectacle stopped. Fissures between different tactical and organization approaches widened. Yet, the mobilization continued through manifold spin-offs, ranging from Occupy Sandy, which provided rapid relief in response to a devastating hurricane, to groups such as the Alternative Banking Working Group, which worked on new policy proposals, and Strike Debt, which developed new kinds of direct action. Although Occupy Wall Street inspired public debate and imagination, there are hardly any tangible policy achievements while recent data point to even further increasing socio-economic inequality. Assessments of the leaderless, General Assembly-based organizational form were divided over whether these were the essence of a prefigurative politics for real change and attracting participants or whether the lengthy, consensus-requiring deliberations prevented tactical efficiency, liaisons with large unions and NGOs,
and negotiations with the political establishment to win concrete legislations. What lessons can be drawn from the Occupy experience so far? How can social movement theory help to explain the rise, fall, or metamorphosis of the mobilizations? How do existing theories need to be revised in light of the new empirical experiences and the challenges ahead? Multi-method focus on the experience in select cities shows not only enormous local variation but also varied modes of connecting sites of struggle. The paper concludes with a discussion of options for future action.

Bothering Pays for Sociologists

Bothering pays.

Segmentary societies bear inequality. All of them. Urbanized even more. Cities have proven to be inequality carved in concrete and stone. The more abundance of material culture, the more inequality. Chiefs in tribes have to bother. They remain chiefs only if they impress bothering and solving conflicts. Bothering glues even the smallest tribe.

Today large scale social units call themselves ‘modern’ to claim their qualitative difference to chieftoms and the like. Here, nobody even considers an end of inequality, it is purely unthinkable as necessarily linked with the total dismissal of the material abundance (which could and should be achieved, plans have been made).

More, bothering has become a specialized task, a branch, a profession. Clerics (clergy men and women), pedagogics, social workers, journalists – and sociologists compete here. People who have worked in the five groups can tell. So does the author.

Empirical long-term analysis of inequality studies provide evidence that the inequality index in the researched areas and regions remain more or less the same. Meanwhile, research about the economical situation of the inequality-authors shows that more than a decent living has been possible due to the inequality studies.

Bothering thus provides access to the elites and enables a stable and good living for those who bother. This is why we bother about inequality – sometimes. Have a happy conference!

SCHUSTER, FERDINANDO (Universidad de Buenos Aires, fschuster@gmail.com)

Social Movements and the Political Invention of Future. Considering Recent Argentinia

During the 1990’s, neoliberal policies drove Argentina to huge transformations of the state, economy and labour. The process left a large number of poor and unemployed people and concluded with a monster crisis in 2001. During that time, there was a very important change in the field of social movements. As a consequence of the neoliberal policies, labour movement (which has been the most important movement in whole country contemporary history) diminished roughly its statistical presence in social mobilization. This happened in 1993 and in 1996 a new kind of movements grew up. That was the case of territorial movements, established in the poor neighbourhoods and small towns in a few provinces. They were composed mostly by unemployed, who asked for elementary rights in very harsh conditions; they were composed mostly by unemployed, who asked for elementary rights in very harsh conditions.

In this paper we analyse this process and consider why and how these new movements emerged as political agents and what influence they had to mobilize and defy political system, at the local, province or federal level. We focus on the close relation between morality and culture in military deployments. The main issue in this paper is twofold, namely theoretical and practical. The first one considers the relation between morality and culture according to leading theories on these concepts. The second one is about the extent to which military personnel experience the relationship between morality and culture either (whether or not conflicting) during their deployments as described in literature. We study these issues on the basis of research data collected during and after military deployments.

SCHUTTE, GERHARD** (University of Wisconsin-Parkside, agschutte@rcn.com)

'Bastards' in a Globalizing World: Subverting Ethnic-Racial Hierarchies

Whether phenotypical or cultural, perceived human difference spawned boundaries of belonging and exclusion along hierarchical lines. The binary or rigid racial categorization created through essentialist conceptions of ‘purity’ was and still is intolerant of intermediate forms. These are generally seen as sub-variations of the prevailing classificatory scheme. The ensuing defense of a rigid classificatory scheme, especially by authoritarian societies, range from nihilation to the enforcement and assignment of place to these ‘deviants in the existing hierarchy’. In a globalizing world of dense patterns of human communication, interaction and movements across geographical, social and cultural boundaries these schemes are manifestations of entrenched power relations that have lost their meaning. Hybrid humanity and immigrants who do not fit pre-existing categories are socially and legally forced into denigratory niches symbolic of their low status and diminished life-chances. The paper examines the resulting alienation of ‘misfits’ and the ways they resist and change authoritarian hierarchies in a globalizing world.

SCHWARTZMAN, KATHLEEN* (University of Arizona, kcs@u.arizona.edu)

Global Garlic and Its Labor Consequences

This paper investigates the dynamics of China’s integration into global commodity chains and a simultaneous race to the bottom. I explore this globalization-labor topic with a case study of garlic. Even in the garlic kingdom, the race to the bottom is visible.

1) China took off as the global exporter of garlic around 1982 and has been the dominant exporter since then. In 2009, 84 percent of the globally traded garlic came from China.

2) China’s 2002 adherence to WTO allowed it to export to previously closed or high-tariff markets such as the United States. In 2002, China surpassed Mexico in capturing the U.S. market.

The race to the bottom began with North-South competition. As the U.S. economy continued to contract firms sought even cheaper labor, moving significant parts of the production process to Asia. Such moves threatened to undermine Mexico’s payoff from NAFTA. This capital mobility unleashed a race to the bottom in labor standards and working conditions. It is not possible for every nation to be a net exporter: one country’s gain is another’s loss. Although they do not initiate the race, governments become complicit because they, as much as foreign investors, want to hold onto their “competitive advantage” of cheap labor, lax working conditions, and lenient environmental regulations.

The South-South competition is reflected in the shifts in trade and investment flows. China’s export and foreign investment gains and Mexico’s losses are not simply those of two nations acting independently.

Labor conditions are oppressive, but firm owners, processors, exporters, and governments are not alone in their responsibility. ‘Bottoming out’ is a response to global importers who search for better prices.

In this research I investigate the conditions of garlic workers in China and Mexico as they relate to U.S. producers and the import market.

RC05-106.9

SCHWARTZMAN, LUISA* (University of Toronto, luisa.fs@utoronto.ca)
From Statistical Category to Social Category: Organized Politics and Official Categorizations of ‘People with a Migration Background’ in Germany

Social scientists disagree over whether it is acceptable for states to collect statistical data on the racial or ethnic composition of their populations and thus institutionalize these differences. Seeking to reconcile normative concerns with political desires to combat discrimination and reduce social inequality, some countries, like Germany, have chosen the ‘migration paradigm’ (i.e. using place of birth and parents’ place of birth to focus on the act of international migration) over the ‘ethnic paradigm’ (i.e. using phenotypical markers and/or cultural and linguistic links to a particular national group) as a ‘color-blind’ measure of difference. However, while much attention has been paid to categorizations deriving from survey and census variables, debates about whether and how to measure immigrant elast ed population differences often ignore other processes of categorization operating at the nation-state level, such as interactions in the arena of organized politics. In this paper, we expand the terms of the debate by examining the relationship between statistical classifications and their mobilization in political interactions, in order to examine the validity of the distinction between the ‘migration’ and ‘ethnic’ paradigms in population statistics. The category of ‘persons with a migration background’ (Personen mit Migrationshintergrund), which was introduced in the German microcensus in 2005, serves as our case study. Drawing on a qualitative content analysis of 60 parliamentary documents originating in the years 2005 to 2013, we show that the way the migration paradigm is deployed by representatives of the state differs from the statistical categorization: it is implicitly ethnic, with strong class associations. Insofar as the social categorizations created by elected representatives out of statistical categorizations facilitate the construction of a stigmatizing public image, they may be of personal and material – not just symbolic – consequence to individuals thus categorized.

The Only Constant Thing Is Change? Education, Adolescence, and the Potential of Adolescence

Educational policies in many countries increasingly aim at preparing pupils for a globalized world of permanently accelerating social change; the ideal type of subjectivity they produce is a skilled, self-employed entrepreneur, flexible enough to adapt both life plan and identity to the always changing needs of global markets. For a sociology of education which aims to analyze all aspects of these contradictory processes, a socio-psychological concept of adolescence offers an interesting perspective: here, adolescence is considered the life phase most directly associated with individual change as well as social innovation. Educational institutions in the classic modern nation state aimed to contain and channel the dynamics of adolescence by offering youths a “psycho-social moratorium” (Erikson) or “potential space of adolescence” (King). In contrast to rituals of initiation

in traditional communities, modern nation states thus made use of the innovative potential of adolescence. Following debates about education in Germany and other European countries it seems that on the one hand adolescents are expected to be “innovative”, while at the same time curricula demand an always increasing workload and integrate working and learning more intimately or anticipate work environments, which makes it more and more difficult to consider high school any kind of “moratorium” – especially as it is a decisive phase for social mobility. I want to present and discuss several theses regarding the relationship between educational institutions and the dynamics of adolescence, both in Western and (de)colonized societies.

The Symbolic Economy of Authenticity As a Form of Symbolic Violence: The Case of Middle-Class Minorities

In contemporary societies, the language of authenticity has become central to the organization of work, manners, social ties, and most interestingly: social and moral evaluation. The paper explores how the ethic of authenticity informs symbolic economies of worth in Israel and the US. These new symbolic economies differ from Bourdieu’s: mastery of legitimate practices and dispositions may indeed enhance the social worth of some actors, but also devalue other actors, those whose class habitus and identity are considered ‘inauthentic’ independently of their performance. Based on analysis of wide empirical literatures on raced and classed identities in Israel and the US, the paper explores how this symbolic economy shapes and disadvantages s-Palestinian minorities. When dominant ethnic groups monopolize the symbolic recognition of authentic middle-classness, middle-class members of dominated ethnic groups are at risk of being accused of mimicry (‘acting white’, ‘Ashkenazification’). This also applies to second-generation middle-class actors: following the racialization of class culture, their deeply entrenched middle-class tastes and dispositions may be suspected as inauthentic. While dispositions are often acquired in classed contexts and their distribution is hence class-based, the recognition of authenticity often follows race/ethnicity lines. In some cases, middle-class minorities react by investing in acquiring lower-class styles and habits that lack social legitimacy but may supply them with recognized authenticity. Failure to match Kyrgyz traditions and notions of “collectivistic” culture, this strong power asymmetry is by no means taken as a matter of course by the interviewees. My study shows that young Kyrgyz adults and gender hierarchies. Such restrictive generational order shows as well in my qualitative study of young Kyrgyz adults. Respondents describe experiences of inter- and intrapersonal conflict when their freedom of choice (concerning study subject, marriage partner, lifestyle) is confined by their parents. While this can be said to match Kyrgyz traditions and notions of “collectivistic” culture, this strong power asymmetry is by no means taken as a matter of course by the interviewees. My study shows that young Kyrgyz adults cope with such conflicts in a variety of ways which I divided into three categories: “submit”, “change” and “exit”. The first category refers to strategies with which the young try to influence the rules and decisions of the elders (mainly parents or parents-in-law). “Change” subsumes all those strategies with which the young manage to follow through with at least part of their personal aims, engaging in compromises, trade-offs or negotiations. With the last category “exit” I labeled attempts of full or partial es- culation from the existing social order. Furthermore, my analyses indicate, that certain narratives are used to legitimize the respective strategies: While people who engage in “change”-strategies (paradoxically) often relate to traditionalized narratives, those who submit under others’ demands in most cases deploy an individualized and self-related explanation. In the paper I wish to present the above concepts more closely, and to discuss the seemingly paradox patterns of applying and legitimizing solutions of intergenerational personal conflicts. Beyond that, I would like to discuss which implications such patterns have for the potentials and barriers of social change in a so called “transition society”.

Identifying Sensitive Questions with Non- Reactive Methods

Sensitive questions result in misrepresented responses and identifying those questions is thus a crucial task to get straight answers to sensitive topics. Using para- data as non-reactive data should reflect the uncertainty and the perceived social desirability while answering the questionnaire. By tracking response change and page change in addition to item non-response and response latencies, the researcher has a powerful tool to reveal exceptional response patterns in web sur- veys. In pretests these methods can also help to cut costs of further surveys that are usually used to identify sensitive questions and they can also show problems with wording and too high cognitive effort in earlier stages.

Non-reactive methods such as measuring response latencies and event track- ing adds information to be analyzed without adding load to the respondents. Such events were filling the questionnaire box, for example, changing the page and selecting or changing an answer option. Tracking these events not only by time, but with multiple answers over time per item, view the process of com- pleting the questionnaire instead of leaving the black box untouched, which is between handing out the form and getting the (final) responses. In this way it is possible to reveal answers of first choice, response change and page change as event types besides response latencies and the order of completion.

The para data from a web survey is compared to data from a questionnaire about the perceived social desirability and threat of disclosure of the questions used in the former one. The response patterns uncovered by the event tracking should correlate with these sensitivity measurements. Sensitive questions should have, in addition to the occurrence of non-response, a) higher response latencies, b) multiple page views, c) more response changes and d) lower intra-item correla- tion between the first and final answer.

The Impact of Work, Family and Gender Equality Policies on Vertical Occupational Sex Segregation: Comparative Analysis Across 21 European Countries

Labour markets in Western welfare states are highly gender segregated with women concentrating in less prestigious occupations and industries and being underrepresented in top positions. During the last two decades a whole set of EU and national policies in Western European countries have been aiming at gender equality on the one hand and promoting an adult worker model on the other. While these policies have been seen as separate, the first addressing discrimina- tion, the latter better reconciliation of work and family, they both have an effect on gender inequality in the labor market. However, little is known so far about the outcome of these policies in comparative perspective.

We will address this lacunae by looking at the impact of work, family and gender equality policies on vertical occupational sex segregation. The study starts with a comparative assessment of different welfare state regimes in terms of overall division of labour to identify the type of breadwinner model and then map the relevant recent policy reforms in 21 European countries. Special emphasis is given to policies reconciling work and family and gender equality policies. While it can be assumed that these policies have an effect on female representation on the top and middle ranges of the job hierarchy, female concentration at the lower end might be less affected. Since low representation of women at the top often is found to be related to the organizational structure of the firm, where the gender gap is even already present at the entry level, it can be expected that changes at the organizational level might face. True gender scholarship requires a more critical appraisal of gender relations that is inclusive of the male voice in family tourism. There has been whole-family research highlighting the role of fathers in taking on primary respon- sibilities as entertainer of the children and facilitator of mothers’ own interests (Schanzel and Smith, 2011) which requires further inquiry. However, research into fatherhood also needs to be more inclusive of diverse family forms and a range of fathering experiences, such as, solo-fathers, non-resident fathers and gay fa- thers. This study extends previous research into nuclear families and focuses on the family holiday experiences of fathers travelling with their children without the mother. The research takes a semi-structured interview and a range of solo and non-resident fathers in Auckland, New Zealand and conducted after the sum- mer holidays in January/February 2014. Because of the explorative nature of this research an interpretative paradigm and in-depth interviewing is chosen. The aim of this study is to understand the experiences and meanings gained by single fa- thers travelling with their children. The findings of this research and comparisons to earlier research on nuclear families will be presented.

European (Social) Science Policy-Making: Setting the Agenda of the Social Sciences and Humanities in the EU Framework Programmes

The social sciences and humanities (SSH) funding schemes of the European Union (EU) framework programmes are the largest of their kind in Europe (Kastri- nos 2010). The larger EU policy context has had direct impact on EU SSH research policy and indirect impact on national research funding strategies. Setting the agenda of research policy takes place on two levels in the European Union: first, the definition of large thematic priorities. Funding instruments, rules of participa- tion and the overall budget available to the different domains are defined in the multi-annual EU Framework Programmes. Second, the precise topics, research questions and favoured approaches are defined in the regularly updated work programmes.

This paper will discuss how the agenda is set in EU SSH research policy and in particular focus on the role of the Treaties (Rome, Amsterdam, Maastricht, Lis- bon) in framing SSH research policy since FP4 (1994-1998), when a SSH priority was first introduced. It will be shown that the (geo)political landscape of Europe and the degree of European integration has first limited and later facilitated SSH subjects. It will also consider how changes, first in discourse and later in govern- ance, affected practices of stakeholders (researchers, research associations, funding bodies) and public participation in setting the agenda for the SSH. The process of setting the agenda is understood on the one hand as a social practice and the degree of European integration has first limited and later facilitated SSH subjects. It will also consider how changes, first in discourse and later in govern- ance, affected practices of stakeholders (researchers, research associations, funding bodies) and public participation in setting the agenda for the SSH. The process of setting the agenda is understood on the one hand as a social practice and

Leaning Towards The Middle? Collective Manifestations Of Normative Beliefs In Developed Countries and Their Implications For Developing Countries

There is a vast and ongoing debate on the middle class in the field of political sociology. Undoubtedly, studies on its role and functions should not be restrict- ed to developed societies as the global importance of developing countries (with emerging middle classes) will definitely be growing.

This would like to take up this understanding by contributing a piece of ground- work research that focuses on the middle class in comparatively developed coun- tries because it may serve as some sort of ‘reference frame’ for an improved un- derstanding of socio-structural driving forces perceivable in developing countries. With these preliminary reflections in mind, we use data of the International Social Survey Programme (2009; module "social inequality") in order to compare perceptions and evaluations of stratification realities and aspirations. On the ba- sis of five distinct types of stratification, respondents of 26 primarily European countries were asked for their assessments regarding the current and the desired perceptions and evaluations of stratification realities and aspirations. By performing multinominal logistic multi- level regressions we identify individual- and country-level determinants.

SCHÄNZEL, HEIKE* (Auckland University of Technology, heike.schanzel@aut.ac.nz)

The Tourist Experiences of Fathers

The lack of research into fathers on holiday is a reminder that understandings of masculinities and gender relations in tourism are absent compared to other disciplinary areas such as family studies. Research on family holiday experiences is largely informed by feminist gender representations rather than examinations of femininities and masculinities. Previous studies highlight the never-ending physical and emotional work of motherhood both at home and when travel- ing with little acknowledgment of any gender-related constraints that fathers might face. True gender scholarship requires a more critical appraisal of gender relations that is inclusive of the male voice in family tourism. There has been whole-family research highlighting the role of fathers in taking on primary respon- sibilities as entertainer of the children and facilitator of mothers’ own interests (Schanzel and Smith, 2011) which requires further inquiry. However, research into fatherhood also needs to be more inclusive of diverse family forms and a range of fathering experiences, such as, solo-fathers, non-resident fathers and gay fa- thers. This study extends previous research into nuclear families and focuses on the family holiday experiences of fathers travelling with their children without the mother. The research takes a semi-structured interview and a range of solo and non-resident fathers in Auckland, New Zealand and conducted after the sum- mer holidays in January/February 2014. Because of the explorative nature of this research an interpretative paradigm and in-depth interviewing is chosen. The aim of this study is to understand the experiences and meanings gained by single fa- thers travelling with their children. The findings of this research and comparisons to earlier research on nuclear families will be presented.

Concerning stratification realities gender, age, education and (subjective) socio-economic status prove to be significant predictors. On the country-level, the objective socio-structural shape (income-based percentage of lower, middle and upper class), the GDP per capita and social expenditure (as a percentage of GDP) turn out to be relevant. With regard to stratification aspirations results indicate that respondents in the majority of countries under study opt for a society with a broad middle segment – in fact, irrespective of any stratification realities. Thus, context effects impact solely on perceptions of stratification realities, whereas we observe a universalistic preference for the ‘middle class society’.

In our study, the chosen theoretical leaning towards the middle class in developed countries may improve the comprehension of mental mechanisms and orientations in developing countries.

Le “Libre Choix Des Patients Dans Une Relation Plurielle Et Diachronique

Le droit des usagers au “ libre choix ”, tel qu’il est formulé dans la loi du 2 janvier 2002 en France, semble sous-tendre que les patients s’inscrivent dans une relation duale avec les médecins au sein de laquelle ils seraient des sujets singuliers, rattachés aux droits et autonomes dans leurs décisions. Les travaux sociologiques ont cependant montré d’une part que la réalisation de ce modèle bise contre des obstacles notamment liés à aux positions de classe, genre et âge des patients et aux situations de crise qu’ils rencontrent ; d’autre part que les maladies sont rarement pris en compte par les parcours de soins mais souvent aidés par des membres de l’entourage. Quant aux décisions des médecins, elles sont de plus en plus fréquemment prises en équipe pluridisciplinaire. Nous faisons donc l’hypothèse que les décisions de soins doivent être analysées dans le cadre d’une relation plurielle autour du patient, qui questionne la voix au chapitre de chaque acteur. Par ailleurs, les enjeux révocables à tout moment, ce qui invite à les analyser de manière diachronique.

Notre recherche porte, dans ce cadre, sur les décisions de primo-entrée en hospitalisation à domicile (HAD) et de sortie du dispositif. En fort développement en France sous l’impulsion des pouvoirs publics, l’HAD est censée constituer une solution économique dans les situations de crise et des décisions de soins. Le contexte socio-démographique et les ressources financières des patients interviennent également dans les modes de prise de décision concernant la place de l’hospitalisation à domicile. Le but de cette étude est de réexaminer ces hypothèses en utilisant un questionnaire administré par Internet et une étude longitudinale portant sur les modalités de décision des patients et des médecins lors de l’admission et de la sortie dans le cadre de l’HAD.

SCOTT, BERNARD* (Centre for Sociocybernetics Studies, bern ces1@gmail.com)

Reflections on the Sociocybernetics of “Cybernation” and the Emerging “Cyber-Nation”

The term “cybernation” refers to the existing and imminent cybernetic technologies of control and communication, data storage and retrieval, social media, user modelling and intelligent support for man-machine conversational interaction. The term “cyber-nation” refers to emerging internet-based communities that promote social change and, explicitly or implicitly, practice forms of non-hierarchical (heterarchical) democracy. Well-known examples are Wikipedia (http://en.wikipedia.org/wiki/Main_Page) and Avaaz (http://www.avaaz.org/en/). A less well-known example is the Zeitgeist movement (http://en.wikipedia.org/wiki/The_Zeitgeist_Movement), that developed from the Venus Project (http://en.wikipedia.org/wiki/The_Venus_Project), initiated by the late Jaques Fresco and Roxanne Meadows. Fresco coined the term “sociocybernetics” and there is a Facebook page dedicated to his work (https://www.facebook.com/pages/Sociocybernetics/16954924432, the Zeitgeist movement, [313]). A well-known example of an hierarchical organisation that works towards social change through cyberspace is Google (http://www.google.org/). There are many other organisations that use the internet to promote their particular vision of global harmony and utopian futures. A useful list can be found here: http://www. peacefromharmony.org/?cat=1.

In current research and debates, questions addressed in the paper include:

- What is the current state of play?
- What does the future hold?
- What influences are at work in terms of checks and balances on privacy and social control?
- How is cybertechnology shaping the internet in the context of existing dominant belief systems and institutionalised practices?
- What does the future hold?
- What influences are at work in terms of checks and balances on privacy and social control?
- How is the use of cybertechnology shaping the internet in the context of existing dominant belief systems and institutionalised practices?

As neoliberalism has undermined formal wage work across the global South, labor scholars have increasingly turned their attention away from organized and formalized workers and towards the growing sections of the “precariat”. A large literature has blossomed examining the politics of precarious, informal, and informal worker movements. Behind this precarious turn in labor studies is an assumption that these workers will be the primary source of a new labor politics that looks beyond issues of wages and working conditions and towards broader questions of livelihood and social reproduction. However, in South Africa, while precarious workers’ movements have remained disparate and unorganized, formal workers unions have taken up a range of issues—such as a universal national health insurance, a basic income grant, and land reform—that constitute a new politics of the precarious. This is surprising given that many of the policies that unions advocate would involve the subsidization of precarious workers’ livelihoods by the minority of formally employed organized workers. In order to explain this paradox the paper draws on nationally representative household survey data as well as one year of field work in three rural areas and one major urban center. The data show that the decline of formal wage labor has led to an increasing social and economic interdependence between large sections of South Africa’s precarious and formally employed workers. The case shows the importance of understanding the ways in which the rise of precariousness has reshaped not only work, but also workers’ house-
holds and broader social lives. It also shows the role that "old" organizations can play in the "new" politics of labor.

The Triangular Relations of Society, State, and Market in the Context of the Processes of Contestations Between Globalization and Decentralization: A Sociological Perspective

This paper gives a general description of the triangular relations between Society, State, and Market from a Sociological Perspective. Within the context of this triangular relations, a major challenge facing contemporary Indonesian Society will be explained, which is the social problem of Poverty and Social Exclusion. Before understanding the triangular relations between Society, State, and Market as a conceptual analytical tool for explaining poverty and social exclusion, there are several important caveats to be addressed. These important caveats are related to the relations between Nation-State, and Nationalism within the context of the processes of contestations between globalization and decentralization (democratization on the local level). The discourse on nation-state and nationalism within the contestations of globalization and decentralization in Indonesia is a highly significant social and political context if the major social problem of poverty and social exclusion can be explained and solved from a sociological perspective. The paper is based on primary data using qualitative methodological approach and a specific case study from Indonesia.

SEDAS NUNES, FRANCISCA S. S. E.* (University of Indonesia, saverio09@yahoo.com)

When There Is No State

The Decentralization processes in the context of this case study have not yet resulted in a more flexible and decentralized structural relations between the Central Government and the Local Governments (both at the Provincial and at the Regency Levels) generally and also specifically in the Industrialization Strategy in The Oil and Gas Sector (1999-2000). The triangular relations between State, Market, and Society are fluid and internally fragmented within each pillar and externally contested between the three pillars. Inclusive policies by the local governments have not yet been effective and efficient in targeting the most marginalized and socially excluded members of the local communities. The local governments need to have a clear and more affirmative policies focusing on the local communities welfare, including in-migration policies. The MNC (BP) Programs need to take into reconsideration the categorization of DAV and IAV local communities and the internal fragmentation within these communities.

The relations between the local communities and the local government are not as strong nor as dependent on compared to the relations between the local communities (especially DAV) with the MNC (BP). Collective actions are sporadic, so far only the IAV local communities have done so against the MNC (BP). At present, there is no implication yet of any process of social movement in the making on the local level.

The condition of no real role carried out by the State in the context of decentralization and industrialization strategy in West Papua can be traced back to several factors. These factors are the relations between natural resources and development, the process of decentralization, and the specific nature of the BP Tanggoh Project in The Bay of Bintuni regency.

Getting (in the) Sack(ed). Gender Domination and Male Honor

Three years ago an American college girl presented a sort of replica of an academic essay evaluating like a professor would do to his/her students her male sexual partners means and performance (some were commended, others rather not). It got out of hand in no time. With considerable discomfort building up (in the networks she was implicated in), soon she was forced to apologise to everyone involved, namely her sexual partners, and remove her outrageous paper from public sphere. What was so ignominious about her conduct, one might ask. In other words, what contemporary Lebenswelt aspects particularly of manliness where unsettled by miss Owen's daring? Was it simply a matter of a diffuse moral economy that censors women whom tell/brag too much about their sexual activities and deeds or the rejection of the "experienced woman"? We, of course, think not. Based on interviews with men and women of different ages, in this paper we'll be presenting the core idea that unbearable intimidation (or what made miss Owen an unusual troublesome/frightening figure) comes from the special kind of power her classifying assertions conveyed. Parry reversing/disputing the rigorous self-evidence that goes along with the categorisation of experienced woman as "sluts" and the like, we shall argue that any woman with a history of multiple sexual partners constitutes a threat to men's ontological security, unintelligible unless one spotlights the social production of man's honour as "proven virility", that is, someone capable of taking possession both physically and symbolically of his partners. That woman might even overturn male's domination agency. The "mature" woman, who knows the ways of the world through bygone practice, carries a comparative index enabling her to "grade" her lovers manhood. "She can and does tell", a (discursive) condition to halt man's possession and, therefore, a possible tenure-taker of gender relations.

What's in a Dreamed Profession? Training to Become a Football Professional Player

The last few years have witnessed a widespread (with greater impact in side-line countries like Portugal) dissolution of the virtuous relationship between the type and level of education, profession, remuneration and social status. This standstill has favoured young people to look for alternative life pathways. In Portugal, schools of football are playing a relevant part in this shift. Mainly concentrated in the big cities (Lisbon, Oporto), they respond to the training solicitation of an increasing number of young males. At the base of this solicitation is the fact that football has recently been subjected to social reconfiguration and symbolic (re)valorisation, concerning diverse dimensions besides professionalism:.creation, idealization and mediatisation are also drawn in.

In this paper, we shall be looking into the subjectivities of male youngsters training to be professional football players. By which meanings do they qualify football? What role those meanings play in the construction of their identities? How is the process of transition to work they face? How is transition to adulthood affected by their football stake? Answering these questions lead us to examine three analytical dimensions: 1) dream production pathways: how is the idealization order of the profession socially produced and experienced; 2) dream accomplishment pathways, namely the social circumstances that involve the transformation of the dream into a project; finally 3) dream professionalization pathways: specially focusing on possibilities of matching between the dream, the project and the realities of professional performance.

The main hypothesis we'll be discussing is that the choice of football is, at the same time, a strategy to extend and to accomplish a fulltime identity that often is not allowed to be expressed within the more conventional professional spheres; and a decision that shows new ways for young people to cope with uncertainty in transition to the labour market and to adulthood.

Understanding How We Learn

Students in South Africa face a series of challenges when making attempts to process information from the teacher and write tests in the classroom. One of the key challenges that has been identified for students is the mismatch between learning styles and testing methods. Large numbers of learners of all races and socio economic backgrounds find themselves receiving poor results on exams. This paper seeks to ask the reasons why students perform poorly, and how this poor performance can be corrected through a clinical approach. As such I have developed a programme that is currently being trialed in South Africa. This programme seeks to understand; the learners style; the attention span; the memory bank as well as the way in which learners process information. Individual programmes are then designed and the results have been very successful. This paper will present the detailed findings of 10 students that have completed this programme.

Mobilising Migrant Workers in the South African Post-Migrant Labour Regime: Precariousness, Invisibility and Xenophobia

The critical role played by the migrant labour system in allowing formidable levels of accumulation in core sectors of the South African economy (mining, agriculture) has been documented extensively over the past 30 years (First et al. 1972, Burawoy 1976, Legassick & Wolpe 1976, Arrighi et al. 2010, Crash, 2007). The mobilisation of this migrant workforce from within and beyond South African borders and its critical role in the emergence of independent Black unions in the
1980s are also well documented (Webster 1985, Sitas 1983). However, what most analysts have failed to capture is the shift from this highly formalised and disciplin ary migrant labour regime, historically framed through government-to-gov ernment agreements, to the current reality of deregulated labour migration to South Africa. Following restructuring in the mining sector and political pressure to recruit locally, the share of contract workers plummeted in the early 2000s while at the same time, emerging sectors such as outsourced construction, hospitality, and domestic work started relying increasingly on foreign labour. This structural shift largely caught South African unions unprepared and very limited organisation has taken place. Drawing on research undertaken within MiWORC (www.miworc.org.za) over the past two years, this paper explores more specifically the mobilisation challenges posed by this regime shift and strategies developed by both unions and migrant workers. While some micro-local experiences of mobilisation point to unions’ ability to conceptualise new forms of transnational solidarity, the study shows overall that current fragmentation in the South African union movement is a major obstacle to migrant workers’ organisation, particularly in those critically precarious sub-sectors of the economy. In this context workers develop multiple solidarity networks (ethnic, religious, and at times political) and strategies to circumvent exploitative and discriminatory practices, albeit in a fragmented and mostly underground manner, including through deliberate avoidance of the historical unions.

Maintaining Identities of Distinction in Taiwan through the Foregrounding of Linguistic Abilities

In his seminal work Distinction: A Social Critique of the Judgment of Taste, Pierre Bourdieu demonstrates how the cultivation of taste serves to reproduce class differences. In the talk, I argue that class divisions are similarly being reproduced today based on proficiency in languages of wider communication - particularly English. After discussing the mechanisms by which identities of distinction (or any identities, for that matter) are produced in interaction, I will present interview data from a longitudinal multi-case study illustrating how this process of practices and performance indexing dominant ideologies plays out in Taiwanese society. The study’s multilingual Taiwanese participants repeatedly point out instances in which they have distinguished themselves from those around them through their use of and (relative) proficiency in English (and to a lesser degree, French). For these participants, images of themselves as more worldly and sophisticated than their peers started to be nurtured quite early in life through tuition classes and private tutoring, and from that point on, they continuously struggled to maintain these identities of distinction, often resorting to performativity to foreground their linguistic practices. These participants, however, viewed their differentiated status as something precarious, for accompanying their repeated reports of attempting to stand out through English use was a frequently expressed anxiety about the fact that their English abilities alone might not continue to adequately differentiate them from others, particularly in the employment arena, as more and more Taiwanese gain English proficiency.

A Paradox of Coercive Power: Institutionally Founded Power Relationship and Rationality of Action

Reviewing the literatures on social power, it is found that so many different kinds of power concept as well as measures of magnitude of power have been proposed. Hence, without an appropriate specification of power concept, no meaningful analysis is possible. This research focuses on the coercive power which is defined as follows; an individual A is wielded a coercive power by B when A is forced to choose an action x which she/he would not choose if B’s action following A’s action were somehow different. In other words, B forces A to choose x by preparing a punishment to A’s non-x choice. (Strictly speaking this is “negative” coercive power. There is also “positive” one in which B prepares a positive sanction to A’s choice of x.) This concept of coercive power involves individuals’ rational choices, i.e. A is forced to choose x because it is her/his rational choice under a given situation.

It is frequently supposed that a power relationship is asymmetrical in which the power holder and the power subordinate are fixed. If A is the power subordi nate in relation to B in one situation, this asymmetrical relationship applies to other situations. Especially, if the relationship is institutional, that is, if it is institutionally stipulated that B is entitled to control A’s action by preparing a punishment to A’s normatively deviant action, B is identified as the power holder in relation to A. However, there are paradoxical cases in which the presumed subordinate A can control B’s sanction schedule in such a way that B is forced to choose a sanc tion which does not punish A’s deviant action. This happens because B also has to choose the sanction rationally. This study shows the mechanism of this paradox and analyzes mathematically the conditions that this paradox emerges.

Income Disparity Among Elderly People in Japan: Life Course Factors on Retired Life

With societies being increasingly aged, the inequality among the retired population should be more focused in stratification study. My previous study (Seiyama 2009) had analyzed, using 1995 SSM data, the reason for the larger income disparity among the elderly in Japan to some extent, but there were two serious defects in the data: that is, people aged more than 70 were excluded and the information on income sources including pension were not available. This is a new analysis on the income disparity among the elderly, based on a new nation-wide survey conducted in 2010, headed by Shirahase, with effective 6,442 respondents from unions have learned to incorporate environmental concerns in their campaigns. This presentation describes some successful red-green alliances in Latin America, exploring the implications for labor strategies more broadly.

The Partner’s Role in Immigrants’ Labor Market Outcomes: Explaining the Mechanism

This paper explores why and how partnership impacts labor market outcomes of immigrants over the life course. Drawing on household specialization and social capital theory I first state hypotheses about whether and to what extent a higher educated spouse has a direct positive effect on occupational outcomes due to their higher ability to provide those resources. Secondly, I assume that instrumental support has a stronger positive effect on occupational outcomes than emotional support. Lastly, I argue that partnership also has an indirect effect on occupational outcomes by facilitating important immigrant-specific processes such as recognition of foreign credentials and post-migration investment into education. These forms of social capital have been linked to occupational outcomes only theoretically and, mainly due to lack of data, not empirically. I first hypothesize that partnership with a native and/or higher educated spouse has a direct positive effect on occupational outcomes due to their higher ability to provide those resources. Second, I assume that instrumental support has a stronger positive effect on occupational outcomes than emotional support. Lastly, I argue that partnership also has an indirect effect on occupational outcomes by facilitating important immigrant-specific processes such as recognition of foreign credentials and post-migration investment into education. To test my hypotheses I use novel data from the German National Educational Panel Study (NEPS) which provides detailed biographical information about migration, education, occupation and family formation, thereby allowing for causal inference. First results show that partnership increases the likelihood of post-migration investment in education, however, only if the partner holds at least higher secondary education. Also, having a native spouse who is highly educated provides the most labor market related resources in terms of information, reference and help with application writing compared to lower educated and co-ethnic spouses. Education and social resources then both positively affect occupational status.

Trust and the Problem of Boundaries

The main factors are: (a) in Japan the income of the male elderly is mainly composed of working income and pension, while capital income is quite negligible. (b) Gini coefficient within age group is larger for the groups aged 60 or more than for two groups of 50's, mainly because of the fact that the elderly proportion of those with only meager income is large. (c) After 65, the main source of income becomes pension (more than 2/3 of total income), though exceptional cases are blessed with significant amount of working income (mainly administrative or self-employed.) (d) The overall income inequality among the retired reflects the inequality in pension. (e) The main factors on the pension inequality are education and occupational career characteristics at working age, but controlling for the latter the effect of education is largely reduced. (f) The important occupational career characteristics are the size of company and the experience of executive post. (g) Because the single earner family model had been prominent for the cohorts of our survey respondents, a basically similar conclusion is derived for household income.

Labo Relations, Neoliberal Agri-Food Policies and Disasters in Japan

This paper probes the issue of changes in the agri-food labor structure under neoliberal globalization. Employing two cases from Japan, the paper documents the coexistence of independent farmers and their replacement by hired labor. This process, it is argued, was accelerated by the implementation of neoliberal policies and by the effects of natural and human made disasters that affected Japan in recent years. More specifically, this work illustrates:1) the manner in which neoliberal agri-food policies engendered changes in agri-food labor relations 2) the characteristics of new forms of social labor relations under neoliberalism and 3) the specific alterations of labor relations that occurred in the aftermath of recent disasters in Japan. In the first of the two cases presented, labor relations in farms controlled by the transnational corporation, Dole Food Company, are illustrated. The second case analyzes the neoliberal agricultural reforms the single earner family model had been prominent for the cohorts of our survey respondents, a basically similar conclusion is derived for household income.

CEDAW As an Instrument to Foster Women's Political Equality in Central and Eastern Europe?

All countries of the Central and Eastern European region adopted the Convention for the Elimination of All Forms of Discrimination Against Women. Its implementation in these countries can be seen not only as a fulfillment of international human rights but also as one of the mechanisms of democratization. Based on the comparative analysis of the official country reports and information delivered by non-governmental organizations the impact of CEDAW on the implementation of gender equality in new European democracies will be assessed. The special attention will be devoted to the problem of the enhancement of women's political rights in Central and Eastern European democracies. What it means to implement the provisions of the CEDAW concerning political and public life in these countries? Can there be seen progress in their implementation? Is the Convention (and if yes, in what ways) used by women's organizations in order to demand institutional measures to strengthen women's representation in political institutions? Is CEDAW a point of reference for those who argue for legal changes – including gender quotas and zipper system – to help increase women's political representation? Is the Convention a tool used by these actors who engage in supporting women deciding to be politically active both on local and national levels? What are the similarities and differences between the countries of the region in implementing the Convention and its promotion as a tool of effective social change leading to women's political empowerment?

Trust and the Problem of Boundaries

This paper analyse the boundaries of trust which divide communities of belonging, moral credit and risk, from communities of knowledge, strangeness and security. It will discuss the ambiguous and hence threatening nature of boundary and the consequences of this on constructing trust and solidarity across communities of difference. It will further query the sufficiency of liberal individualist models of personhood and community to overcome what is one of the most serious social challenges of our time.
However, the complete recording of one's life brings up new questions about personal information management and emerging inequalities. Cases studies of methodological, epistemological and social aspects of lifelogging already show fundamental concerns about the relationship between one's own life and the data set created by liflogs. Critics warn that people using lifelogging and producing large amounts of information will become unwitting subjects of surveillance.

The critical discussion of lifelogging refers to the theory of “shifting baselines”. Three main shifts have to be considered: 1. From subject to object (loss of individualism), 2. From action to function (loss of autonomy or agency). 3. From privacy to post-privacy.

“Technoapartheid”, “over-diagnosis”, the standardisation of human behaviour, the emergence of new social norms and the shame punishment of deviant people are examples of new inequalities caused by extensive lifelogging. Against a background of research projects on media of the future and empirical data, this paper discusses lifelogging as a controversial issue, focusing on the role of recently developed digital devices. Even if related developments in the area of lifelogging are not yet in the public domain, important questions about shifting boundaries are emerging and need to be discussed.

Aged Population and Social Disability in Rural South India: The Social Exclusion and Inclusion Perspective

Ageing is a natural process that begins at birth, or to be more precise, at conception. The process that produces throughout one's life and ends at death. With prolonged human life, reduced mortality and fertility rates due to recent developments in science and technology, ageing has become a global phenomenon in the 21st century. World Health Organisation (WHO) views ageing as a privilege and a societal achievement. This process started in developed countries and slowly shifting to developing countries like India with increase in number of graying population. Elderly life is considered or assumed as a burdened life, full of struggle, illness, depression, exploitation, abuse etc. Traditionally, the joint family took care of the aged but rapid urbanization and the migration of persons from rural to urban areas have created a vicious situation. In the absence of the ability to earn, and with the absence of community support, in the form of kinship or the extended family, the aged are rendered destitute. It is also evident from Indian data that 40% of the elderly live below the poverty line and 90% are neither covered by any state pension nor have any family to take care of them. Increased rate of survival beyond 60 years have implications for financial burden from both family as well as state. Social disability is the unproductiveness, redundancy and social maladjustment to the environments. This paper aims to underpin the socio-economic inequality that exists among the elderly population and causes social disability. Also it exposes the determinants of poverty and discrimination among elder people in the study area. And analyze about the social, economic and psychological problems experienced by old persons and advocate an action plan for effective implementation of welfare, care and support of the aged populations in the study area as part of social intervention.

International Tourists at a Japanese Festival

The paper concerns the experiences of international tourists visiting a traditional festival in Japan. The festival, Tsukuda Ômatsuri, is a shrine festival held every third year in August in an old neighborhood in Tokyo, and attracts thousands of spectators and tourists. I have had the privilege to observe this festival for very third year in August in an old neighborhood in Tokyo, and attracts thousands of tourists for a century. Of course, tourists who come feel that they get a better understanding of the festival and the subsequent culture as well as an appreciation of the lessened crowds and heightened authenticity of getting closer to local performers and events. Also the few international tourists who come feel that they get a better understanding of the festival and the subsequent culture as well as an appreciation of the lessened crowds and heightened authenticity of getting closer to local performers and events.

Tourism, Colonial Framing and Post-Colonial Resistance in the Global South

The first half of this keynote considers how tourism in the global south is framed as a goal or neo-colonial ideas, values, and capital. The second half looks at, and listens to, the 'silent voices' examined in the EC's MED VOICES project and the subsequent Contested Spaces volume (edited by Kousis, Selwyn, and Clark) as examples of post-colonial resistance to the above. A conclusion relates the two halves together.

The Universities Collaboration with the Potential Employers As An Instrument for Successful Graduates Employment

This article examines the role of the universities collaboration with the potential employers in the process of professional skills acquisition as an instrument of the professional socialization and successful graduates employment. This article is based on study and comparative analyzed of such indexes as:

- An employers notions of what kind of professional skills they would like graduates to have;
- A graduates' expectations from the potential employers;
- Role of the different forms of the universities collaboration with the potential employers for successful graduates employment;
- Level of satisfaction or dissatisfaction with the level of educational attainment both a graduates and a employers;
- Role of the practical work of students as an instrument of their professional socialization and adaptation for successful employment;
- Role of career-guidance as an instrument for increasing motivation of students for acquisition professional skills.

Construction of Solidarity through Language Mode: Sociocultural Approach to Internet Discussion Forum

The situation of social inclusion could be considered as situation of 'entering' into community that brings the sense of individual/collective solidarity. The virtual community and internet forums could serve as example to follow and investigate that mechanism as the Internet provides a social space in which people can construct participation in different types of social groups (Mann and Steward, 2000). These groups could construct sub-cultures (Williams, 2006) or small cultures (Holiday, 2004). The culture of each community is based on members' lived experiences in various communities. Digital community has some specifics: in forms of participation, social status of participants, modes of identity and behavior, etc. (Mann and Steward, 2000). Researcher do not have any cultural markers beyond language reveals. Nevertheless these disembodied forum participants pass their subjective meanings and solidarity moods by digital texts as cultural markers and construct different forms of social (virtual) solidarity. So the mechanism of forum solidarity could serve as a source for analyzing the nature of solidarity through linguistic approach.

This empirical research was based on the discourse features of messages posted to several Internet discussion forums (mainly 'knowledge of practice' forums – medical, tourism forums and political solidarity forums in Russian-language blogs). The message texts were classified into three types (Morrow, 2006): problem (messages with advice messages and thanks messages), and salient discourse features of each message type were described and analyzed in terms of discourse function. "Thanks messages" in this case were interpreted as the first linguistic sign of virtual solidarity. That result turned author to the discussion of the notion of 'emotional climate' in new social media, as the 'intermediary between social structure and agency' and as 'a deeper structural reaction on political and social inequality' (Alice Baker, 2013).

Facing Inequalities: Internal-External Labour Market Interplay

Facing Inequalities: Internal-External Labour Market Interplay

From the theoretical perspective the paper aims to revisit the traditional theory of labour market segmentation and its key model based on insiders-outsiders divide. The development of a new paradigm supported by original empirical evidence of

* denotes a presenting author. Abstracts are organized by first presenting author's last name.

879
an increased interdependency and competition between external and internal la-
bour markets is proposed. More than forty years later we reconsider the rele-
vance of *Internal labour market* theory (Doeringer, Piore 1971) from a contempo-
rary perspective. The strategic use of core-periphery has shifted towards market-mediated employment relationships and affects indifferently high and low-skilled sectors. This issue is part of the wider socio-economic debate on *inequality associated to labour and ranking and sorting process in labour markets* (Granovetter, Tilly 1988).

Many European countries have undertaken reforms in order to increase flexi-
bility. From this perspective the framing refined by Varieties of Capitalism (VoC) literature has been evolving, as companies situated in different countries -facing a global competition - seem to be adopting similar employment practices.

Recent studies (Herrmann 2008) showed the ways by which firms can compete circumvent pragmatically their own rigidities though *functional equivalent practices*, by using strategies such as outsourcing or segmenting the required skills from international labour markets. Firms seem to be doing what their institutional contexts do not encourage.

We consider new forms of division and distribution of labour between firm-
based and market-based labour force and their social implications, from the key point that skills and competences are crucial factors of productivity and compet-
tiveness.

Following Streeck’s contemporary Durkheimian interpretation that “economic efficiency is to an extent conditional on the effective enforcement of social con-
strains” (Streeck 1997) we aim to better understand if there is a sort of collective

*Do We Stay or Do We Leave?: The Views of UJ Students with Regard to Living in South Africa*

This paper focuses on UJ students’ views on remaining or leaving South Africa. This is based on the degree of trust students perceive the government of being worthy of and the degree of engagement in the affairs of the country students are prepared to expend in the context of perceived threats to SA citizens. A survey was conducted in 2011 on the basis of a stratified random sample of 1214 un-
dergraduate students on all four UJ campuses. The data is analyzed in terms of a typology that considers the extent to which people either respond to real or per-
ceived threats on the basis of trust in the government’s ability and willingness to protect their interests as citizens and the derived trust in the future of the country or from a position of distrust in this regard. On this basis they could furthermore either engage the threatening reality or disengage from it altogether.

The paper analyses the extent to which patterns can be identified among different groups of UJ undergraduate students with regard to the four possible responses that emerge: Trusting engagement, trusting disengagement, distrusting engagement and distrusting disengagement. The paper concludes by briefly considering the possible implications of the four responses for the long term stability and pros-
perity of South Africa.

**Future Urbanisms: Technology, Science Fiction and Extrapolated Cities**

An unavoidable dilemma of looking into the future is demonstrated by our pondering whether to filter reality through Google glasses (smart phones, tablets etc.) - providing data about location, proximity and resources - or to resist this new temptation to stream information and explore the reality of our environ-
ment. Technology has two sides, providing new social possibilities such as digital art and communications, while taking away the need to go shopping in person. The importance of science fiction in our consideration and construction of futures is illustrated through E.M. Forester’s short story titled ‘The Machine Stops’, written in 1909, which describes a future for humanity based upon a complete reliance on technology, and predicts the internet. The story serves as a warning of a future so completely reliant on technology that humanity is disabled. Science fiction utilises several methods to extrapolate possible futures and identifies both the obvious relationship between urbanity and imagined futures, and the distinction between approaches based on extrapolation and fantasy. The process of extrapolation based on existing socio-material realities provides an avenue to work with the city as an open-ended system. This paper will demonstrate how *systemic diagram-
mapping* (Sengupta and Lissioifa, 2012) can be used to extrapolate ‘potential’ futures providing a frame of reference for current actions and future speculations. Just

---

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
as in science fiction the methodology is based on empirical socio-spatial findings (knowability), technological projection, epistemological growth and speculation regarding potential tangents and tipping points. The ability to act positively towards desirable futures is deeply embedded in possibilities of change, identifiable trajectories and an acknowledgement of the fact that cities and society continually transform. For positioning urban change in context of resilience (Walker et al., 2004)(Holling, 1996), adaptation and assemblage (DeLanda, 2006), potential urban futures become the space of socio-spatial speculation and resultant action.

“What I Want to Do” As a Form of Strategy to Survive on the Job-Hunting Process: The Case of Japanese University Students

In Japan, university students are facing challenges to get a job today. For example, only 60 percent of university graduates can find a full-time job now. Many quantitative researchers conducted researches on job-hunting for university students to understand how social structure impacts the job-hunting process. These studies pointed out that the labor market requires university students not only to have a better educational background but also to have higher motivation, like “yaritaikoto (what I want to do)”, because the labor market requires them to work for other reasons besides money. However, no one has analyzed how the word “yaritaikoto” has been used by students. 

My research aims to describe the job-hunting process for Japanese new graduates by analyzing the use of word, “yaritaikoto.” I conducted interviews with 11 students who were in the middle of job-hunting activities. Each person was interviewed two to four times during February to July in 2012. Using Goffman’s “warm-up” and “cool-down” theory (Goffman1952) as an analytical framework, I shall raise the following points. First, they used the word “yaritaikoto” to warm themselves up to get into job-hunting mode; however, many of them failed in job competitions. Second, they let themselves cool down their “yaritaikoto.” Third, they changed the meaning of “yaritaikoto”, reinterpreted it and warmed their “yaritaikoto” up again for the next competitions. Therefore, students have to continue to change their “yaritaikoto” during the process until they get a job. It is hard for them, however, to deny their “yaritaikoto” and adapt to the job market. Students need the competition not only to survive in job competition but not in their real lives, which means, interestingly, that they are not able to meet the expectation that the labor market has for them as long as they use the word.

Consolidating Patients’ Rights in South Korea: The Case of the Breast Cancer Patients’ Movement

The promotion of patients’ rights and quality care have been rapidly spreading in South Korean hospitals since the 1990s. The most conspicuous method of spreading these two concepts has been the breast cancer patients’ movement. This paper will treat the evolution of the breast cancer patients’ movement since 2011, focusing on an organization that claims to represent female breast cancer patients, the Korean Breast Cancer Patients’ Union (UKBPC). Established by Korean women with breast cancer, the distinctive characteristic of the UKBPC is that it is an informal organization having no stable members but being supported by a number of volunteers and its annual budget has been less than $100,000. However, the breast cancer patients’ movement has been a small organization with a limited budget and voluntary labor force. Nevertheless, the breast cancer patients’ movement has been an important organization for breast cancer patients because it has been providing a social support network for breast cancer patients and their families and has been contributing to the improvement of quality care for breast cancer patients.

My theoretical approach is indebted to the present scholarship on the sociology of individuals, particularly Danilo Martuccelli’s work on subjectivity(2002) and the theoretical framework of Health Social Movements (Brown, Zavestoski et al., 2005). In my analysis, I refer to materials collected from different sources: web information provided by the UKBPC, participant observation and in-depth interviews.

The study will lead to a better understanding of objectives and strategies of the UKBPC. My hypothesis is that the heteronormative femininity has developed with the current regime of breast cancer. In this perspective, I will further examine the impact the regime has had on the biomedical world and the life of patients. I will also explore actions specifically concerning the rights claimed by patients and activism context already revealed. This paper will discuss the regime of breast cancer, which resonates with the cultural and political characteristics of reframing a South Korean welfare state and particular elements constituting the subjectivity of breast cancer patients.

Youth Work in the Context of a Global Sociology of Youth

This paper explores how modern youth work has arisen through the social construction of “youth” as a delineated category of adults through a range of key processes. The youth category is created through the exclusion of this group of (biological) adults from the workforce and their incarceration in age-streamed cohorts in educational institutions. This is systemically supported by a scientific discourse of adolescence that resides clearly within a deficit paradigm with a wide range of associated cultural artifacts to disempower young people. The elimination of relationships with older adults and the exclusion of young people from economic life feeds and maintains youth cultures while simultaneously marking young people out for prejudicial and discriminatory treatment. The resulting economic dependency in young people, their incoherent social role, the emergence of distinct youth cultures and the generation gap provides the grounds for disproportionate public fear rooted in young peoples “otherness”, and the “social problem” of youth is created and maintained.

This leads to simultaneous and contradictory pressures for the control and containment of young people and for their social and economic participation and agency. This occurs in a social context by class and other contradictions, the technological and industrial transitions involved in the collapse of ‘heavy’ modernity and the emergence of more ‘liquid’ forms, and by globalization, including global modernisation and the globalisation of capital. Youth work emerges in the flux of those contradictions. The paper explores the responsibility for young workers to partner with young people to manage and challenge the conditions of their disenfranchisement and to find compensatory processes which facilitate young people’s renewed agency.

The Post on Social Network Sites: The (Dis)Embodiment in the Digital Era

Private archives (the letters and photos of ordinary people) have been an invaluable resource for historians, biographers and researchers of society. Since few researchers consider the social networking sites will be valuable for future historians, future researchers will have fewer writing documents as source materials than in the past. Digital writing and images have no physical substance. To some degree, then, we may be returning to the pattern of oral cultures: much digitally expressed cultural activity will leave no record.

As the popularity of online social networking like Facebook sites grows, so do concerns about the impact of such sites on the process of cultural memory construction. Our research has concentrated on the presentation of the past of Russian elderly (60+) through social networking profiles (our subjects are two modern Russian social networks “Vkontakte” and “My Former Classmates”). This study has looked at social networking profile pages as a single text including iconic, audio and textual elements.

We analyze two strategies of networking which are characterized of senior users. The first important characteristic of old people sites is the way personal identity is transmitted within the sense of being historical generation. The second strategy shows contradictory intentions of elderly who “play” with time changing the personal contemporary image. Deep interviews with senior users help to re-construct some practices in situation if the profile owner died.

We discuss inequality problem in terms of “digital divide” and “power over time” between elderly who use new technologies and non-users.

New and Old Path to Economic Power: Social Origins and Recruitment of Managing Elites

The transition to the new century in Latin America display several changes and challenges. Democratization processes had to overcome multiple economic and political crises, left turn over and new economic grow cycle. Despite of Uruguay is a small country has high human development and outstanding democratic legacy in Latin America. As well as many countries during the last decades had many political and economic changes.

Economic globalization in the last two decades modifies the structure of economic power and impact into business elite integration. On the one hand, the increasing influence of the transnational companies rose to new managing elites. Corporate elites are based on cultural capital background, business abilities and specialized knowledge, university management professions, social global networks. On the other hand, the traditional entrepreneurs recruited through family prestige and inherited capital, exclusive business membership and local networks linked to political power.

Moreover, the left turn over in Uruguay had several consequences on recruitment of management elites based on trade union and political capital background.

The study investigates about recruitment processes and careers of senior managers (CEO, MD). The paper identifies business elites’ relationships (social origins, family, education, work, leisure time) and political networks. The study researches
Crisis and Challenges for Families Facing Global Diversity and Inequality - Can Families Still Function As Educators in Multicultural Societies?

The paper presents a research study on the sociological and educational impact of global cultural diversity on the role of families as educators. Specifically, it presents the field work and findings of qualitative research, involving educational settings in which innovative methods have been developed to include families from diverse cultures as educators in their children's educational processes.

The study's outcomes include methods of facilitating an authentic dialogue between families and educators, a creative model for the incorporation of family traditions and narratives as enrichment resources for the school curriculum, developing curricula, and conducting educators training sessions. The study's findings indicate that an effective partnership forming between the family and the educational framework, which relates to the child's cultural world, improves the learning process. It is enhancing the children's scholastic achievements, building families' resilience by promoting equality among families, helping the family to regain its leadership role and culturally assigning responsibility for strengthening their cultural identity and their self-esteem. The study's conclusions show the contribution of families' multiple intelligences to the child's development and to the school's success in achieving its goals and the educational agenda. Therefore, such school-family collaboration has the potential to minimize the risk of crises in the family's structure which commonly include social changes such as the loss of parental authority, the man/father changing status in a democratic society, children acting as the parents' translators, different social norms, conflicting values with society, adaptation of migrating families to new realities etc.

It also encourages acquiring formal education as a vehicle for minimizing inequality and enabling social mobility. The paper will present studies conducted in a widely diverse type of families and schools in Israel along with innovative educational programs developed, tested and implemented during and after the study.

Managerial Doctors: Medical Technocracies Revisited

Cross-European countries, the relationship between professionalism and managerialism indicate new emergent configurations of hybrid professionals and mixed for governance in health care. Studies concerning Portuguese case (Serra, 2010; Carvalho, 2012; Correia, 2012; Kuhlmann, et al. 2012) show a specific situation due to the power the medical profession stills to exert over health regulation. Definitely, doctor's influence on state regulation seems to counter the specific situation due to the power the medical profession stills to exert over health regulation. For their degree of skill and qualification.

The aims of this paper is to look to key question of technological dependence and the financial sustainability. From the notion of medical technocracies (Serra, 2010) the aim of this paper is to look to key question of technological dependence and the control of management instruments by medical profession, which allows medical procedures to meet the demands of the 3Es – economy, effectiveness and efficiency (Rhodes, 1994) and, simultaneously, boost the self-regulated professional power, defined as medical technocracy. To a certain extent, it is the increasing introduction of NGO criteria that strengthens medical technocracy.
the reading of the migrant body as site of knowledge production in the African context. Situating my sociological practice in the context of postcolonial theory, I draw on the work of Donna Harraway (body in performance and resistance), Bryan Turner (corporealization) and Frantz Fanon (lived experience of the black body) to analyse the various ways in which bodies are regulated, managed and disciplined. As the consequence, marginalized women, particularly the poor, have been excluded from the access to political and economic resources. Gender reform policy has not yet contributed to the transformation of marginalized women to have a critical deviation from it.

Moreover, the elite women have used their access to political power for continued practice of oligarchy and control over resources in various domains. As the consequences, marginalized women, particularly the poor, have been excluded from the access to political and economic resources. Gender reform policy has not yet contributed to the transformation of marginalized women to have a better living. This study contends that women are not a homogenous entity. Their gender identity intersects with class, ethnicity and gender identity. Accordingly, women have various interests and regard gender reform as opportunities in different ways. Hence, the practice of oligarchy done by women elites has confirmed the heterogeneity of women based on their intersectional identities. Therefore, gender reform policy promoted by the Indonesian government, does not necessarily benefiting all women citizens in equal basis.

SEVÂNEN, ERKKI* (University of Eastern Finland, erikki. sevanen@uef.fi)

Knowing Society through Literature

It was in the 19th century that novelists such as Honoré de Balzac and Émile Zola, two leading figures in French and European realistic-naturalistic literature, saw their own literary creation as an imaginative or “experimental” way of studying society. At this stage, sociology - literature’s competitor in the field of social knowledge - was a dawning discipline whose position in the academic world was insecure. At the beginning of the 20th century it became a legitimate discipline, still it would not gain a monopoly in relation to questions regarding societal knowledge.

In addition, literature offers insights into society. In his Temps et Récit (1983), Paul Ricoeur speaks about triple mimesis. In their social interaction people create institutions, rules, common meanings, myths, and representations of the world (mimesis 1). At the next level (mimesis 2), popular stories, literature and other arts describe the first level and take material from it when creating fictional or allegorical representations of the world (mimesis 2). Thus, these cultural products give us representations of society and a more or less critical sense of alternative worlds, whose order differs from the normal societal order. Finally, readers or receivers (mimesis 3) recognize that these products function simultaneously as representations of the real world and as critical deviations from it.
LITERATURE'S COGNITIVE FUNCTION DOES NOT, HOWEVER, LIMIT ITSELF TO REPRESENTATIONAL KNOWLEDGE AND ALTERNATIVE OR UTOPIAN WORLD MODELS. LITERATURE IS NOT A MERE DESCRIPTION OF SOCIETY; IT ALSO SHOWS HOW PEOPLE EXPERIENCE THEIR LIVES IN SOCIETY—HOW THEY EXPERIENCE SOCIETY'S ECONOMIC AND POLITICAL STRUCTURES THAT CAN'T BE MENTIONED, ENTIRELY BE AN OBJECT OF LITERARY DESCRIPTION.

CONSEQUENTLY, LITERATURE IS A FRUITFUL RESEARCH OBJECT FOR THE SOCIOLOGY OF KNOWLEDGE AND THE STUDY OF IDEOLOGIES. LIKEWISE, IT CAN BE UTILIZED AS A DOCUMENTARY MATERIAL IN SOCIAL-HISTORICAL RESEARCH.

Changing Nature of Conflict in Post 2014 Situation and Its Implication in South Asia

Pakistan emerged as the frontline state during the Cold War era and especially Afghan conflict (1979 – 1988). Pakistan remained the focus of attention during this time. After the 9/11 and later in war against terror, Pakistan again became part of this new war. But the nature of country’s involvement in both wars was totally different. In the mean time during 1989 to 2001, Pakistan developed its own parallel agenda to play at different fronts simultaneously. But that policy miserably proved faulty, resulting killing of more than 45,000 civilian and 3000 soldiers and police officials in the same decade.

This paper analysis Pakistan’s future policy in the post 2014 scenario and how it plans to move forward. Will this policy be helpful in resolving conflict or it would further sharpen the existing conflicts. Paper also focuses how regional and international forces may play their constructive role to help Pakistan to get out of the crisis and how much Pakistan itself tries to pursue the agenda of good and especially regional peace.

War, Conflict and Human Rights Violation: New Debates and Discourses in Pakistan

Eventual aim of human beings is to have a peaceful society where human dignity and human rights are well respected. But during the war and conflict times situation totally rejects the concept of the such values and norms and especially in situation where conflicts persists for decades on asymmetric pattern. Situation becomes more complex in those cases where states provide covert support to the non-state actors to further toe their agenda. Pakistan’s military developed nexus with the jihadist with the financial backing of other countries, but eventually the jihadists are now haunting the patron itself.

Now conflict between militants and state has turned to situation that where the level of violence has reached to new zenith. In this situation, abuse of human rights from both sides becomes a very common issue. But due to protest of civil society bodies and judicial activism at least debate on human rights violation is being taken place in Pakistan. Human rights organizations and judiciary are pursuing the agenda of missing persons and other sensitive situation vigorously.

Paper discusses how with the strengthening of democratic traditions and emergence of free media debate on human rights violation is getting strong voice in Pakistan.

Who Participates in Encompassing Protests and Why Does It Matter? Israel and Spain in 2011

In Spain and Israel in the spring and summer of 2011, multiple demonstrations each mobilized hundreds of thousands of participants in the framework of Occupy-type protests. The Spanish Indignados (15M) and Israel’s social justice movement were instances of an unusual variety of protest, labelled “encompassing” because it combines massive mobilizations with high levels of public support. Such encompassingness does not necessarily imply society-wide solidarity, but may instead be based on what are in effect multiple parallel protests in which some social sectors are under-represented or even altogether absent. This paper reports analyses of national sample surveys carried out in both countries, showing the effects of political cleavages and other social divisions on the passive and active engagement of individuals in these instances of encompassing protest. For Israel only, these conventional sources are supplemented by data collected via mobile phone signals, which make it possible to paint a reliable portrait of the social, cultural and political characteristics of demonstrators.

Hopeing for More: Renewing and Redeveloping Public Housing without Marginalizing Low-Income Residents

Since the 1980s, politicians, government officials, and real estate developers have popularized the strategy of building mixed-income housing to replace troubled public housing projects in the United States. Although the term is used to describe a growing number of developments, “mixed-income” has never been officially or consistently defined. Drawing upon a newly-constructed database of income-mixing in projects completed under the HOPE VI program since 1993, as well as on other initiatives, this paper investigates selected public housing sites that have been redeveloped into so-called mixed-income housing in order to understand what qualifies as mixed-income and to develop a more analytically precise way of describing these projects. We reveal that the mixed-income label is applied to a wide range of income mixes, from projects that try to minimize the presence of low-income housing (less than 1/3 of total units), to projects that attempt to preserve a substantial majority of units for low-income households. The eventual aim of human beings is to have a peaceful society where human dignity and human rights are well respected. But during the war and conflict times situation totally rejects the concept of such values and norms and especially in situation where conflicts persists for decades on asymmetric pattern. Situation becomes more complex in those cases where states provide covert support to the non-state actors to further toe their agenda. Pakistan’s military developed nexus with the jihadist with the financial backing of other countries, but eventually the jihadists are now haunting the patron itself.

Now conflict between militants and state has turned to situation that where the level of violence has reached to new zenith. In this situation, abuse of human rights from both sides becomes a very common issue. But due to protest of civil society bodies and judicial activism at least debate on human rights violation is being taken place in Pakistan. Human rights organizations and judiciary are pursuing the agenda of missing persons and other sensitive situation vigorously. Paper discusses how with the strengthening of democratic traditions and emergence of free media debate on human rights violation is getting strong voice in Pakistan.
ception, and home country life. Although Jews are a longstanding religious U.S.
minority, there is a paucity of research on recent Jewish immigrants and their health
needs.
Objectives: 1) What are the health needs of recent Jewish immigrants in the
U.S. and in Israel? 2) How do these needs vary by home country and how do they
compare to non-Jewish immigrants? 3) What are the findings' policy implications
for faith-based interventions and how do they vary between the U.S and Israel?
Methods: Adult Jewish immigrants were surveyed as part of the randomized
U.S. New Immigrant Survey data set and the Israel National Health Survey. The
surveys included health, religiosity, immigration, and other demographic variables.
Outcome measures included health status, health behaviors, chronic
diseases, and mental health. Univariate and bivariate analyses were performed.
Variations by ethnicity were analyzed and outcomes comparisons made between
the U.S and Israel and with non-Jewish immigrant groups. Over 25 key informant
interviews with faith-based and Jewish community leaders in the U.S and in Israel
were then conducted.
Results: Health needs were identified and variations were found in health
outcome measures by key religious, immigrant and demographic factors, with
implications for faith-based interventions such as synagogue programs. Opportu-
nities for widespread faith-based interventions suggested by these findings and
the informant interviews will be discussed, spotlighting contextual variations by
denomination, home country and host country.
Conclusion: Opportunities may exist for faith-based health interventions
among immigrant Jews by leveraging the social and religious capital in this un-
derstudied community. Efforts to target Jewish immigrant needs by faith com-
munities and take their varying characteristics into account, including country,
are important.

Religious Capital and Addressing Latino Immigrant Health
Inequalities in the U.S

Background: There is much evidence linking participation in an organization
with health outcomes, more than the relationship of faith outside of a religious
organization with health. For example, church attendance is the mea-
sure of religiosity most often linked with better health outcomes. While some
attribute the religion-health connection to social capital, there is insufficient at-
tention to how aspects of religion itself can also be a resource contributing to the
health of members of a religious community through religious capital. While it
has primarily been used in other contexts, religious capital can be an important
resource for health. There is a paucity of both theory and evidence, however, in
understanding how religious capital may be related to positive health outcomes
and, in particular, how it can affect inequalities for vulnerable populations such
as immigrants.

Objectives/results: To fill this gap in the literature, this study draws from theo-
retical concepts in the field of sociology to examine whether religious involvement
is associated with better health status and health behaviors among Latino immi-
grants, with potential to reduce health inequalities through increased religious
capital. The study will describe in detail the theoretical framework for religious
capital, with relevant constructs explained. Quantitative evidence supportive of
the theory will be brought from multivariate analyses the author performed of
over 1000 Latino immigrants from the randomized New Immigrant Survey (NIS),
controlling for demographics, as well as from a review of the literature to support
the study's thesis.

Conclusion: Religious involvement can be related to better Latino immigrant
health because of religious capital found among churchgoers. As a result, op-
portunities may exist to leverage widespread church-going already taking place
by Latino immigrants to reduce inequalities by creating faith-based interventions
which draw upon this religious capital.

Teaching Across Borders: Making Local-Global Connections in
Sociology Teaching

In recent years, there is a growing awareness that teaching sociology should
include topics related to globalization. While a limited number of authors provide
important suggestions for sociological curricula, we feel that there should be a
more systematic approach to introducing theories and concepts of globalization
in sociology classes. In this paper, we present our strategies of teaching about
globalization in sociology classes. In this paper, we present our strategies of teaching about

flows of globalization, we want our students to see how different institutions and
actors initiate, cooperate, and negotiate transnational connections within each
sphere.

SHARABI, MOSHE* (Yezreel Valley College, moshes@yvc.ac.il)
One Country Two Realities: Work Values of Jews and Muslims in
Israel

This study examines work values of 909 Jews and 219 Arab Muslims, (or Pal-
estinians that have Israeli citizenship). It is a unique study since there are
very few studies on cultural values and no studies on work values, which compare
between different ethno religious groups who have been living in the same coun-
try/land for more than century and shares a long ethnic conflict. The findings
reveal a significant difference between the two ethno religious groups regards the
importance of all life domains and in most of the preferred work goals and the
regression analysis of the main demographic variables cannot explain these dif-
fences. The MDS of Jews and Muslims also demonstrate different perceptions
and internalization of work values among the two ethno religious groups. The val-
ue gaps can be explained by the cultural differences (individualistic Jewish culture
vs. collectivistic Arab culture), by high degree of segregation, by the employment
discrimination and primarily by the Israeli-Arab/Palestinian conflict.

SHARAPOV, KIRIL* (Central European University, sharapovk@ceu.hu)
Global Dis-Connectedness of Labour: ‘Living Well for Less’, Class,
Race and Trafficking in Human Beings in the UK

By reflecting upon the impact of the current recession on the continuing com-
modification of migrant labour in Europe, this paper will contribute towards the
sociological exploration of the re-emerged tensions and ‘dis-connects’, along the
lines of race, class and gender, between people who produce and people
who consume, between those who profit and those whose reward for their back-
breaking labour is just enough to get going. It will question how the neoliberal
ordering of production, circulation and consumption operate within the con-
text of infl ated racist, sexist, islamophobic and anti-immigration rhetoric, and
how they serve to legitimise and normalise the continuing dismantling of the welfare
state and labour market de-regulation to accommodate the governing ideology of
our times: ‘living well for less’. This paper is based on the current research exploring the links between anti-
trafficking policies in Europe and public knowledge and understanding of hu-
man trafficking. It will focus on the role of current anti-trafficking policies in the UK
in reducing the complexity of human trafficking to the issues of illegal immigration
and criminality. In describing human trafficking as ‘modern slave trade’ with the
blame firmly placed on ‘ruthless criminal gang’, the current UK government ap-
proach reduces the problem to the individual behaviour of devious criminals and
of naive and passive victims. Within this context, any suggestion that human traf-
icking remains episphemonial to class, race and gender, and directly responds to
the growing demand for exploitable and disposable, usually immigrant, labour
to satisfy the appetite of Western consumers to ‘live well for less’ seems so hard to
fathom, so ‘not-Wilberforce’ and ‘not-democracy’, yet so close to neoliberal reality.

SHARMA, NANDITA* (University of Hawaii at Manoa,
nsharma@hawaii.edu)

Categorical Divisions: The Hostilities Between ‘Indigenous’ and
‘Immigrants’ As a ‘State Effect’

Nationalist politics has increasingly become one of the main ways that people
constituted as “natives” have attempted to overthrow colonial domination. To-
gether, the state language of “sovereignty” and the national language of “self-de-
determination” have shaped notions of identity and have tended to anchor such
identities to particular places. All this has figured into how contemporary “indig-
ous” nationalisms have staked their claim to a place within a global system of
national states. Over time, a stark delineation between “Natives” and “non-Na-
tives” has been asserted. Today, a growing number of scholars who identify as
indigenous, as well as those who position themselves as their allies, portray all
“non-Natives” as colonizers. In this paper, I examine how a nationalized politics
of decolonization has come to mark “Natives” and “migrants” as mutually antagonis-
tic positions. Focusing on such politics of place in the national states of Canada
and the United States, I question the conflation of processes of colonization with
those of migration. I historicize such politics within their social, political, economic
context by looking at the continuation between colonial state practices and con-
temporary indigenous nationalisms. I also contrast contemporary indigenous
nationalisms with other political strategies of decolonization, particularly politics

Making Housing Affordable for Urban Poor- Approaches Adopted in India

Housing is one of the basic necessities of an individual. However, the dream of having a house remains distinct for than one-third urban population. They remain marginalised in terms of civic services, housing and other socio-economic parameters. The cost of this marginalisation is often very high and many studies have shown that it may be upto 2-5 times of the formal system.

By 2030, an estimated 5 billion of the world’s 8.1 billion people will live in cities. About 2 billion of them will live in slums, primarily in Africa and Asia, lacking basic services, unsecured tenure, congestion and surrounded by desperation and crime. In India, the urban housing shortage has been estimated as 18.78 million, of which almost 96 per cent pertains to urban poor. Affordable housing has been considered as the only option to meet this challenge. A Task Force on "Affordable Housing for All", constitute by the Government of India, Ministry of Housing and Urban Poverty Alleviation, defined affordable housing in terms of (a) multiples of household income; (b) size of the tenement; and (c) percentage of household income, in case of rented accommodation.

3.0 Approach of this Paper

This paper will address the following issues, in the perspective of earlier discussions:

1. The need for a multi-pronged strategy for housing delivery to all sections of the society. This includes housing delivery system, target group and housing typology.
2. Incentives and subsidies to make housing within the reach of target group and mechanisms to retain the ownership. Right policy instruments for subsidy transfer are needed to make people shop for their dream house, without any restraint on size or location.
3. The access of urban poor to sources of institutional lending.

SHARMA, VEENA* (Indian Institute of Advanced Atudy, vsharma136@gmail.com)

Equal Leisure in an Unequal World

Equal Leisure in an Unequal World Though the globe today is characterized by deep and different layers in in terms of capital accumulation and resource appropriation, the leisure experience may display a different type of demarcation – one that maybe the possibility of enriching different social groups if they drew from each other. Societies in which leisure has come to be characterized by the consumption of the fruits of production individuals may appear to be bound by a stimulus-response mode of leisure behaviour. What should be ‘done’ during ‘leisure time’ is fed into the psyche through media pressure and socialisation resulting in activities that may or may not be self-enhancing even thought they feed into the leisure industry. In conventional understanding of leisure, there continues to be a simplistic dichotomy between work and leisure and ‘free’ and ‘occupied’ time as though these were easily separable categories.

In this same layered global society there are groups of people who still live with values that recognize the organic unity of all things, are aware of a sense of continuum, as a movement from matter to spirit and vice versa, and see an interconnectedness of all things. As a result there arises a tendency to respect the environment and other beings. The ‘leisure’ of such societies need not be time abstracted from other day to day activities but a mindset that characterizes the whole. The presentation will look into the possibility of interaction of these segments on each other so as to enable a more holistic attitude to the environment and to other existents on earth.

SHARONOVA, SVETLANA* (St.Tikhon's Orthodox University, s_sharonova@mail.ru)

The National Russian Model of University in the Era of Academic Capitalism

The transformation of the national model of Russian university is under the influence of academic capitalism. The very same academic capitalism borne in the depths of the neo-liberal capitalism. The basic principles of the neoliberalization fully implemented within the transformation of national educational systems:

- the creation of conditions of accumulation of capital and power of the economic elite;
- the denial of a nation, and therefore the promotion of the idea of the dangers of government intervention in the economy (in this case is to minimize the interference of the state in education);

- promoting free and stable functioning of the education system is not in general, and of its individual elements (schools, institutes, universities, etc.).

In Russia, and in other countries, this leads to the destruction of national educational systems. Yet Durkheim said that in society there are many cultures of each of them has its own education system. Simmel argued that cultural diversity enriches the world community. However, the implementation of neoliberal policies in the field of education under the slogan of “globalization” ignores the law and seeks to simplify the interaction between the educational systems in order to achieve clarity and transparency of market exchange. Author analyzes the existing trends in Russia and the trends that are happening as a result of the modernization of the education system that implements neoliberal principles and creating academic capitalism. Virtually all non-liberal utopian promises of the project, in practice, lead to quite the opposite of the expected results.

SHARONOVA, SVETLANA* (St.Tikhon's Orthodox University, s_sharonova@mail.ru)

The Spiritual Capital As a Fundamental Element Of Cultural Capital

Cultural capital is usually regarded as a mechanism of influence on personality. Largely contributed to this study Coleman, although Bourdieu introduced the concept of a theoretical understanding of capital varieties. He was interested in the convergence of social, cultural and economic capital. We propose to focus on the cultural capital of both the qualitative characteristics of the state of society. The problem is that in the presence of cultural capital as a funded system of values relates to the face of social organisation of works of art and science, society degenerates morally. Any cultural capital based on traditional religious values. This does not mean the broadcasting of religious themes in works of art, although it excludes, but rather a philosophical position of artists and researchers, through which the public receives the interpretation of events, their assessment of a certain value-regulatory system of coordination. This element is the possibility of enriching different social groups if they are a fundamental element of cultural capital. Qualitative state of society, its morality depends on the amount of spiritual capital, which he occupies in the field of cultural capital. A striking example of how the degradation and spiritual revival of capital in society can serve as the processes that took place during the last century.

SHAW, VIVIAN* (University of Texas at Austin, Vivianshaw@utexas.edu)

Energy and Identity: Women, History, and Anti-Nuclear Social Movements in Japan

Since March 11, 2011 (3/11), some Japanese citizens have responded to the ongoing Fukushima nuclear crisis by staging large protests against the use of nuclear energy in major metropolitan areas. Within this revival of anti-nuclear collective action, scholars and global news media have argued that the prominent role of women, who have been observed leading “tent city” occupations in Tokyo and organizing rallies in other cities, signals an important evanescent with potential implications for the changing status of gender in Japanese public politics.

Applying a historical frame to the contemporary case of women’s leadership in post-3/11 activism, this paper challenges a simplified narrative of feminist emergence, instead arguing that contemporary anti-nuclear politics must be read as part of a larger context of women’s organizing in Japan throughout the twentieth century. Moreover, this history of social movements also reveals important divisions within Japanese women’s movements across lines of race, coloniality, and citizenship. In this paper, I deconstruct the concept of “anti-nuclear” and examine how this politics converges with other histories of post-war women’s collective organizing, particularly examining the roles of Japanese women in the related histories of peace and anti-militarization social movements.

In arguing how gender has politically and rhetorically functioned as a method of organizing Japanese public politics, I challenge notions that Japanese women, in the post-3/11 activism, should be viewed simply as a formation of collective identity. Rather, the different meanings of women’s identities within these cases suggests the importance of reading Japanese women’s social movements in relation to various political contestations at the “local” and transnational levels and moreover, in terms of what they are able to signify about race, coloniality, and citizenship.

SCHERBAK, ANDREY* (Higher School of Economics, gscherbak@hse.ru)

Nationalism in the USSR: Historical and Comparative Perspective

The late 1980s and early 1990s were characterized by the sudden rise of nationalist movements in almost all Soviet ethnic regions. It is argued that the rise of political nationalism since the late 1980s can be explained by development of cul-
tural nationalism in the previous decades, as an unintended outcome of commu-
nist nationalities policy. The Soviet political and cultural nationalism is studied in
historical and comparative perspective. All ethnic regions are examined through-
out their entire history of the Soviet Union (49 regions, 1917-91), using a structural
equation modeling approach. This paper aims to make at least three contribu-
tions to the field. Firstly, it is a methodological contribution for studying national-
ism: a ‘quantification of history’ approach. Quantitative values are assigned to
historical trends and events. Having constructed variables from historical data, I
use conventional statistical methods like SEM. Secondly, this paper contributes to
the theoretical debate about the role of cultural autonomy in multiethnic states.
The results challenge the concept of ‘cultural autonomy’ as solution to interneth-
omic conflict. Cultural nationalism matters, it indirectly reinforces political national-
ism. Concessions in the cultural domain failed to stop the growth of political
nationalism in the late 1980-s. Finally, the paper statistically proves that the break
between early-soviet and Stalinist nationalities policy explains the entire Soviet
nationalities policy. In fact, the late Soviet nationalities policy was inherited from
the Stalin’s rule period. This finding revealed in other studies now gets statistical
evidence.

**SHEN, JIE** (Chinese University, jie.shen@hotmail.com)

**Chinese Youth’s Post-Materialist Values in an Era of Multi-
Modernity**

Today’s China’s society is in a compound of multiple dimensions of time and space.
China’s modernization are late and long-drawn out. When the mainstream direction of China’s social development is manifested as the transformation from traditional society to modern one, the developed Western
eatern societies that have completed the modernization goal constitute the envi-
ronmental conditions affecting the development of China’s society. As a conse-
quence, China’s society more clearly than ever in the history is at the same time,
being affected by three dimensions of time, or, put another way, in the present
there are three dimensions of time – traditional, modern, postmodern – coexist
in the same space.

If so, although the total direction of social psychological changes in the course
of China’s modernization is the transformation from the tradition to modernity,
this is not intended to preclude the possibility that the present Chinese social
psychological changes will present a more complex pattern than in any previous
eras and societies.

Just as using Inglehart's two important theoretical tools – scarcity hypothesis,
socialization hypothesis can attest that when China entered the take-off stage of
its modernization, changing from a society of scarcity to one of prosperity,
the spiritual world of the social members is undergoing rapid and profound changes,
along with gradual improvement of their hierarchy of needs. It is Chinese youth
who first shows these changes. In China, the post-materialist values have begun
to emerge in these people born in the 1980s, and have further manifested by
groups born in the 1990s.

Occurrence and development of the post-materialist values among Chinese
young people will definitely lead to changes in their activities of daily life and ways
of social participation, and to affect the appearance of China's society especially
when they enter in an all-round way.

**The Value Of Mixed Methods: How Does Certifiability Of Job
Requirements Determine The Channels Of Job-Person Matching?**

Using qualitative collected in three representative Chinese cities and quantita-
tive data drawn from the 2003 China General Social Survey, in this study I have
built up a theoretical framework to understand the interdependence of formal and
informal employment channels. I argue that a job-person matching process
should be understood from a dual perspective of the employer and the job ap-
plicant. From the employer's perspective, requirements for certain job positions
are composed of two parts, namely, certifiable and uncertifiable qualifications.
The variation in the relative importance of these two types of qualifications deter-
mines that employers’ recruitment strategies vary from formal channels only, to
formal-informal-joint channels, and then to informal channels only. From the job
applicant's perspective, quantitative analysis shows that an applicant's pre-hiring
status, such as education, is a determinant factor for choosing different
employment channels. I argue that studies on employment need to take a form-
al-informal-joint approach, instead of focusing on formal or informal employment
channels alone.

**The Triangular Market: Reworking, Reproducing, and Repairing an Online Marketplace**

The Internet has revolutionized how consumer goods are bought and sold in the United States. Yet the market for local services – semi-skilled or skilled professionals hired by consumers to perform a service – still operates largely as it did before the emergence of the Internet. I will present preliminary findings gleaned from 19 months of ethnographic research at a firm aiming to do for the local service sector what Amazon has done to retail. The firm planned to create a venue in which buyers and sellers of local services would be connected more efficiently than ever before; in so doing, the company hoped that each party, in pursuing its own self-interest, could create a better world for all involved by making it easier for consumers to hire local service professionals than ever before.

My research reveals that tensions continually arose in the market because, rather than creating a horizontal relationship between buyers and sellers, the firm had created a triangular market in which its own interests frequently differed from those of buyers or sellers. In a triangular market, supporting the interests of one party necessarily damages those of another. If sociologists accept that markets are not generated and maintained spontaneously, we must investigate the work that contributes to the creation and reworking of markets; to the reproduction of markets and their participants; and to repairing the damage to relationships between market participants that can be caused by the market’s inherent tensions and ruptures. In this firm, the work of reworking, reproducing, and repairing the market was distributed across a global division of labor spanning a headquarters in San Francisco and two online, work-from-home teams with a combined workforce.

Ten times the size of the home office – one located throughout the Philippines, San Francisco and two online, work-from-home teams with a combined workforce.

**Abstract**

Maternal health is a critical topic in global development. Maternal ill health and deaths impacts families, communities and societies and has far reaching effect across socio-economic strata. Despite recent data showing a positive turning point in the battle to keep mothers alive through pregnancy and child birth, the maternal mortality rate are still high in India and significant gender-based health disparities remain in India. With limited access to education and employment, high illiterates and increasing poverty level in India making health improvements for women exceedingly difficult. Female disability is especially in attributable to maternal causes and maternal deaths. The present paper is an effort in understanding maternal health and care in rural parts of Karnataka.

The objectives of the paper are to know the status of maternal health and consequent problems and also to analyze the socio-economic factors that act as barriers to access good health facilities. The data for this paper are based on the complete birth histories collected from the 200 ever married women age 20-49 years, selected from 4 villages of Dharwad district in Karnataka.

The findings suggest that inspite of the Government’s efforts in improving maternal health in rural India, women have been suffering from health problems resulted from complications during pregnancy and child birth and also anemia and malnutrition. Hence the existing health facilities need to be strengthened to improve such health problems of pregnant women.

Title of Abstract: Gender Inequality in Indian society: A Study of Women Police in Hubli-Dharwad.

Name and Address of author(s) : Prof. Shaktuntala. C. Shettar, Professor of Sociology, Dept. of Sociology, Karnataka University, Hubli.

Abstract
A middle class woman working outside in different jobs is post-independence phenomenon in India. It is only in recent past, women have been working in police departments across the country. This has made a demanded profession that requires lot of physical stamina, power, wisdom, rational thinking, capability to control the situation and confidence. At present, India has got the distinction of having not only first women police station but also having large number of women police.

The nature of police system is altogether different from work in the other departments. It is more demanding. Here, the personnel have to work in dangerous and unmethodical places. Such a situation poses many problems for women police. The present study is an effort in understanding the problems of police women at their work place and at their family. The study is confined to 50 women police of Hubli-Dharwad Municipal Corporation, Hubli, India. The findings of the study suggest that women police have been emerging as a significant development especially among the lower middle class group. It has not only changed their economic status but also overall status. At the same time, women police have been facing problems at workplace in respect of working hours, wages, gender discrimination, promotion, career etc. Still majority of women have a sense of satisfaction of serving a society by joining this service.

Power Asymmetry and Resource Use Conflict Between Farmers and Pastoralists in Northern Nigeria

Northern Nigeria can be described as a “zone of instability” in Nigeria. Since the country’s independence in 1960, Nigeria has witnessed a myriad of conflicts ranging from religious, ethnic to political including a brutal three year civil war. Though in many of the conflicts are widespread, the northern region appears to have been the epicentre of several interlocking conflicts. The north of Nigeria is characterised by three major types of conflict, which are different but interrelated in nature, namely: inter-ethnic, religious and resource conflicts. This paper focuses on resource use conflict between farmers and pastoralists which can be explained by a variety of factors including scarcity of resources, growth in the population of herds and humans, the political economy of land use and asymmetry in power relations between the two resource users. The paper argues that historically the control of political power has vacillated between the two resource users. In the past, pastoralists were politically powerful in many states in the African savannah and Sahel including northern Nigeria; and hence, had access to land and land based resources for their livestock. In the contemporary dispensation, sedentary crop farmers are the politically dominant and “landed” group, and have often made it difficult for the pastoralists, the “landless” group, to access land and land based resources for their livestock. There is thus a fierce contest for environmental resources between the two resource users, mediated by power relations, and often resulting in violent conflict. The paper concludes that though scarcity of resources is often considered as a key explanatory variable in resource use conflict between farmers and pastoralists, the effects of scarcity are unevenly distributed in the “unequal world” of farmers and pastoralists in Northern Nigeria.

RC19-337.3

SHI, SHIH-JIUNN* (National Taiwan University, sjshi@ntu.edu.tw)

Blame avoidance and credit claiming are two popular concepts for explaining the politics of welfare retrenchment in the mature welfare state. They indicate the crucial impact of electorates in competitive democracies on the policymaking relations, and often resulting in violent conflict. The paper concludes that though scarcity of resources is often considered as a key explanatory variable in resource use conflict between farmers and pastoralists, the effects of scarcity are unevenly distributed in the “unequal world” of farmers and pastoralists in Northern Nigeria.

Forced Migrants and Their Connection to Their Homeland: A Case Study of Inter-Country Adoptions and Cultural-Discursiveness in Second Modern Transformation in East Asia

The forced migrants, as Castle (2008) noted, have dramatically grown in number in proportion to the changing global order. One of the key features of forced migration we should take note of is the trafficking of people across international boundaries for the purposes of exploitation, which includes the children expected to fill the “vacancy in a family” through inter-country adoptions. Meanwhile, human security counts on culture as having an initiative role in establishing the stability of permanent peace. The Hague Convention insists that it is the “best interest of the child” to keep the inter-country adoptees in touch with the culture of their origin. However, some Korean adoptees have found themselves in another situation. Their culture transformation has been such that they perceive themselves as having been “forced to be separated from their biological mothers and relinquished their Korean nationality.” This had led them into forming a global movement that demands legislation of the Dual Citizenship Act and rights for unwed mothers in Korea.

The objective of this research is to show the process how the forced-migration groups that here will be referred to as inter-country adoptees from East Asia, came to be the subject in a cultural-discursiveness of “second modern transformation” (Han and Shim 2010), which incorporates global risks, individualizations and cosmopolitanizations. In particular, I will examine the reasons why the adoptees can be counted as forced migrants while referring to the Korean adoptees’ statements in the movements. I will also draw attention to their values and social capitals acquired in the Western countries and their influence on Asian traditional cultural beliefs through the movements, which could be a potential to reform the social structure. Based on this discussion, I will make an implication on their leading roles in the second modern transformation in East Asia.

SHIBATA, YASUKO* (Polish Academy of Sciences, edrus23@hotmail.com)

Japanese “Solidarity” Experience: A Suggestion for Polish Disaster Preparedness

The paper suggests effective use of the socio-political culture of “Solidarity” as a potential basis for disaster preparedness in Poland from the perspective of Japanese experiences.

Poland holds a cultural tradition known as the Solidarity Movement, whose potential for mobilizing society continues to this day. Through a unique mechanism of self-organization, it unifies individuals with diverse interests and beliefs to concentrate the impact of different regions and local communities; the “subjectivized” activities of Polish citizens attained its primary aim of a change in the country’s political system at the end of the 1980s, while presenting its operative revitalization in the face of prolonged European economic crisis in the 21st century.

Crucially, Japan’s disaster experiences, especially those of the Great Hanshin-Awaji Earthquake (1995) and the Great East-Japan Earthquake (2011), show the rise of its own solidarity. In the two contrasting disaster-hit communities, i.e. Kobe City and the rural Tohoku Area, activists call for the mobilization of the cultural tradition of “bonds (kuni)” which is a unique phenomenon in the first phase of collective euphoria, but also in the long-term process of building social subjectivity and community rehabilitation to see the rise of sustainable civil society after disaster situations.

Through the lens of Japanese experiences, the paper suggests a conscious approach to the socio-political culture of Solidarity in the approaches of disaster policy in Poland, due to its lack of preparedness despite frequent damage from different natural and human-caused catastrophes including flooding. By analyzing cases of cooperation among Japanese citizens, social organizations, and local as well as national governmental institutions, the paper presents the option of transferring Polish Solidarity experiences from the field of polarized politics to that of potential disaster policies to fortify Poland’s future resilience.
Trafficking in China, Thailand and the U.S

Freedom Markets: The Moral and Political Economies of Human Trafficking in China, Thailand and the U.S

Intimate Economies of Rehabilitative Work: Policing Sexuality through Wage Labor and Re-Education through Labor in China

An Exploring Study on Networked Market Disruption and Resilience

Book of Abstracts XVIII ISA World Congress of Sociology

"Table of Contents"

My dissertation argues that despite global justice goals, faith-based and secular factions of the human trafficking movement reproduce women's global subordination at the discursive and labor process levels. American evangelical Christian missionary organizations recruit sex workers in Beijing and Bangkok to work as jewelry-makers and sell this jewelry through the bustling anti-trafficking movement in the U.S. Arguing that jewelry represents a proxy commodity for freedom from enslavement and a virtuous wage, these programs create a transnational moral economy of low wage women's work, where traditional exchanges of wage for labor are replaced with affective commitments between First World rescuers and their purported victims in the Global South. On the other hand, secular governance efforts, like the United Nations Inter-Agency Project on Human Trafficking focuses their attention on holding nation states accountable to transnational norms and treaties. They graft existing state institutions of labor, migration, gender rights onto the framework of human trafficking, thereby inadvertently strengthen nation states ability to control and punish marginalized populations, including migrant workers, marriage migrants and sex workers.

Intimate Economies of Rehabilitative Work: Policing Sexuality through Wage Labor and Re-Education through Labor in China

This paper begins to theorize the intimate labor regimes of the “rehabilitation industry” in China. It examines the collusion between transnational interests, the state and the market through two types of vocational training programs for sex workers in China. In state-sanctioned rehabilitation through labor (RTL) programs serve as mandatory sanctions for prostitution offenses; at the same time, American evangelical Christian missionaries recruit sex workers to work as jewelry makers, and label them as victims of human trafficking to transnational consumers and activists. These programs aim to generate economic alternatives to labor migration and sex work. However, the focus on labor training and re-education as the animating force of social mobility ignores the complex labor, gender and ethnic hierarchies that exist within the intimate labor industries. Opening the black box of this new industry, my work will investigate the connections between the local and global and question the optimism around the transformative potential of “good work.”

This paper is based off 28 months of ethnographic participant observation at an evangelical Christian vocational training center in Beijing, China, and pairs this with preliminary analysis into the historical and contemporary practices of rehabilitation through labor in China.

Current Crimes and Major Issues of Policing in Japan

The number of reported crimes has been decreasing since 2002 in Japan. However, the Japanese society faces to some new crimes, including cybercrime, domestic violence, and stalking. The Japanese Police are now struggling with these new crimes and constructing new rules and practices to deal with them. Current policing and countermeasures against these new crimes in Japan will be illustrated.

«Cellular Globalization» and Communicative Inequality

In view of high speed of development and incultation of the new informational technologies, growth of consumerism, space globalization in the contemporary societies the high level of social dynamics remains. At present the world community experiences increasing influence of the informational and communicational technologies. At the beginning this changes weren't very visible, but now we already don't imagine our life without social networks and connection which is available constantly. Our friends are increasingly not real people, but simulacrum. New trends of world development, their orientation on an innovation and modernization create the conditions for a new social phenomena formation, one of which is communicative inequality. Communicative space is constantly changing, and with the emergence of advanced communicative technologies new vectors of its formation are forming. Between those who have the technical capacity and the necessary educational level for using the Internet and those who have no such possibility the border lies. The new mobile communication potential influence the individuals' behavior. Communicative inequality develop in the new telephony using and in obtaining information from a variety of sources including the media which price isn't available for wide range of customers. Recently they gap between rich and poor in the sphere of information has become more and more conditioned by the technological characteristics, when the rapid expansion of communication tools covered only some of the users layers while other should be satisfied with a rapidly aging equipment. New digital communication medium created by mobile operators, Internet companies, state programs on providing the Internet connection and telephones, prepared a real geographical revolution. At this moment we can speak about the overcoming of the regions informational lag. But communicative inequality between the regions and between them and the Federal center are still remains.

A Sociological Approach to Varying Treatment Outcomes of Complementary and Alternative Medicine

Social sciences of medicine have not given much attention to the variations in the real-world treatment outcomes of CAM situated in different social contexts yet. This neglect is surprising, because the wisdom has long existed in social sciences of medicine that the effects of medical interventions are significantly influenced by social and cultural circumstances. Along with this neglect, a problematic view seems to be revived and reproduced among the medical science community that any deficiency or efficacy in the treatment outcomes of acupuncture and herbal medicine is attributable to the characteristics of the treatment in itself detached from its medical and social environments. However, the limitation of this view becomes clear when acupuncture or herbal medicine of the identical quality is attributable to the characteristics of the treatment in itself when the rapid expansion of communication tools covered only some of the users layers while other should be satisfied with a rapidly aging equipment. New digital communication medium created by mobile operators, Internet companies, state programs on providing the Internet connection and telephones, prepared a real geographical revolution. At this moment we can speak about the overcoming of the regions informational lag. But communicative inequality between the regions and between them and the Federal center are still remains.

Family-Related Risk Perception and Individualization in East Asia

Based on a survey research conducted to citizens of three capital cities of East Asia, Seoul, Beijing, and Tokyo, this paper is aimed at comparing the family-related risk perception in the three cities with a perspective of individualization theory and a typology of risks developed for East Asia. More specifically, it is aimed at revealing how the citizens of the three cities feel about the recent changes in the family such as divorce, low fertility, decrease in the parent's role in home education, isolation and suicide of the elderly, individualist tendency, decrease in mutual help in the family, and conflict in the property distribution. The research questions are as follows: first, how do the citizens of three cities perceive about these various family-related risks? Second, what influences the family-related risk perception? As to the first question, it turned out that perception of the first modernity-related risks are higher in Beijing, while that of the second modernity-related ones are higher in Seoul and Tokyo. As to the second question, it turned out that not only the family-related macro changes as revealed in law and policy changes and statistical indices in the area of fertility, divorce and marriage, but also individualization turned out to be significant. This suggests that the three cities seem to be in different stages of development and that the three cities have both the first modern and second modern risks.
Estimation of Hedonic Single-Family House Price Function Considering “Scenes”

In this study, hedonic house price functions are formulated using the single-family house market in the 23 wards of Tokyo as the subject. In the formulation of hedonic models, the estimation of omitted variable bias is thought to occur in cases when, in addition to locational factors (i.e., factors involved in decision making when buying a property) and building structures which affect the house prices, local environmental variables or “scenes” and the individual characteristics of house buyers, such as their income, are not taken into consideration. However, since it is difficult to obtain such a simple variable, it is natural to consider the neighborhood effect variables or “scenes” and to observe individual characteristics of house buyers in the property market, these variables have not been sufficiently considered in previous studies. In the current study, I aim to improve the hedonic model by incorporating local environmental factors or “scenes” and data on family income in a small neighborhood unit using a geographic information system (GIS). I demonstrate that, without considering these variables, non-negligible levels of omitted variable bias are generated in the variables that are major factors in determining house prices, such as ground area, front road width, distance to the nearest station, and the travel time to the central business district. Results showed that, in the model considering neighborhood effect variables or “scenes”, the explanatory power was improved compared with the simple linear model. At the same time, each of the neighborhood effect variables or “scenes”, which served as subjects of urban policies, was adopted with statistical significance.

Medication and Demedicalization of Mild Depression in Japanese Occupational Health

From 1999 to 2008 the number of patients with depression in Japan is thought to have increased by 2.4 times. Overdiagnosis of depression has attracted much attention both from the health professionals and the public. Previously, the concept of mild depression did not even exist until the 1990s in Japanese psychiatry. Some experts argue that the introduction of the DSM and ICD as a diagnostic tool is a possible factor in increasing depression in Japan. In this study I analyze the conflict between the medicalized and demedicalized views of mild depression in Japanese occupational health from the viewpoint of conflicting diagnostic contexts in Japanese psychiatry.

I conducted several interviews with physicians and psychiatrists active in the field of occupational health and attended various conferences and meetings of experts dealing with mild depression in occupational settings. Two findings are especially of significance to understand the current trend of depression epidemic. 1) There are double contexts in which depression diagnosis is made. Whereas the DSM or ICD is used as a tool to diagnose depression, they do not explain any etiology of the disease but just provide the criteria of the symptoms. Thus in those cases for which the explanation of the disease causes is needed, conventional Japanese psychiatry is referred, in which depression is modeled by major depression rather than by mild depression. 2) Major depression model in Japanese psychiatry includes the judgment about the “industrious” personality of the patient. As this aspect does not coincide with the mild depression patients, there is a strong tendency to demedicalize the mild depression on the side of psychiatry. The same tendency is also found in the media coverage of the disease. Thus the status of mild depression patients especially in occupational settings is unstable and vulnerable to the moral criticism on them.

Daniel Bell As Post-Cold War Intellectual: The Idea of Triunity Beyond the Cognitive Frameworks of the Cold War

Interpretations of Daniel Bell's works are typical cases of cognitive bias in Cold War social sciences. Bell has been regarded as an anti-communist ideologue, a conservative sociologist, and a neoconservative intellectual. Today, therefore, his works are not discussed in earnest. This study reevaluates Daniel Bell by clarifying that he held post-Cold War perspectives. As Bell himself noted, The End of Ideology is better known for its title than for its content. During the Cold War era, attention was paid not to what he said but to the sensational title. Because readers took “the end of ideology” to mean that all ideologies would vanish despite severe ideological conflicts, Bell was considered an anti-communist ideologue. Similarly, as The Cultural Contradictions of Capitalism showed, he took an anti-modernist position and placed value on tradition. Many scholars have regarded him as neoconservative.

Certainly, he criticized Stalinism and the Communist Party of the United States. He recalled that members of the Communist Party did not know about Kronshtadt. He took an anti-modernist position and placed value on religion, many others have experienced and internalized feelings of anomie. This study reevaluates Bell as a post-Cold War intellectual who fought against neoliberalism and neoconservatism.

At the end of the Cold War, he indicated that his position was different from that of anti-communism. He insisted that the end of communism should not be admired, and he also suggested that capitalism would extend indefinitely. Although Bell was close friends with Irving Kristol, who was nicknamed “the godfather of neoconservatism,” and funded The Public Interest with him, he conflicted with Kristol ideologically after the presidential election of 1972. In 1977, Bell articulated his three positions: “socialism in economics, liberal in politics and conservative in culture.” He tried to transcend the binary oppositions peculiar to the Cold War through his idea of triunity. This study reevaluates Bell as a post-Cold War intellectual who fought against neoliberalism and neoconservatism.

About World Championships in Athletics and TV Broadcast

This study examines changes in the nature of Japanese TV broadcasts of the World Athletics Championships from 1997-2013 using a qualitative methodology. Specifically, the study examines the changes in the Tokyo Broadcasting System coverage between the 1997 Athens event and the 2013 Moscow event. The results indicate that TV broadcasts became more professional from the point of the Berlin event in 2009. Up until the 2009 Berlin event, broadcasts featured much screaming-like behaviour from television commentators such as Yui Oda. However, the screaming-like broadcasts decreased after the Berlin event and the screaming of Yui Oda was not seen in Moscow in 2013. In addition, the nicknames of the players were not used in the Moscow TV broadcasts. This may be due, in part, to the request of the Japan Association of Athletic Federations to the Tokyo Broadcasting System to eliminate the use of nicknames. The nature of live coverage of sports events varies according to different events. In addition, they are dependent on whether or not there are Japanese players involved, and depending on whether or not there are star “foreign” players. Based on the results the paper highlights implications for future track-and-field and other sport broadcasts.

Why Does Inequality Keep Rising In South Korea?

This paper explores the rise of economic inequality in South Korea, focusing on changing income distribution of individuals and families after financial crisis in 1997. In South Korea, the great U-turn of inequality was observed since the early 1990s. Both Gini coefficient of household income inequality of household and Gini coefficient of individual's wage inequality had decreased commonly until the early 1990s. They have kept rapidly rising earlier than financial crisis in 1997. The financial crisis in 1997 has exacerbated the tendency of the rising income inequality as neoliberal economic reforms, policy measures to resolve the financial-cum-economic crisis, were implemented by the Korean government. Another financial crisis in 2008, triggered by the crisis of the subprime mortgage in the USA, made it harder to roll back the rising inequality. In addition to impacts of financial crisis, South Korea under the poor social welfare system and rapid economic growth, such as fast aging of population and family dissolution, partly associated with neoliberal economic reforms, have contributed to the drastic rise of family income inequality in the 2000s.

Labor Movement, Environmental Movement in Regime Change in South Korea

This paper explores the relationship between labor movement and environmental movement in South Korea, showing that the movement dynamics in South Korea under the new democratic regime are different from those in the advanced industrial democracy. Both labor movement and environmental movement are new social movements in the sense that new labor movement organizations were emerged during the transition from authoritarianism to democracy and environmental movement also began to appear in the post-transition era. Thus the political dynamics has significantly affected the trajectory of both movements, contributing the formation social movement unification in the 1990s. However, the financial crisis in 1997 made directions of two movement organizations divert from each other. Political democratization and globalization made the relationship between the two more independent and autonomous from each other. Democratization also gave negative impact on the development of alliance between the two because each movement had different relationship with the new democratic regime. While labor has been hostile to the democratic regime pursuing neoliberal economic reforms, environmental
The Economic Partnership Agreement (EPA) has initiated healthcare worker migration from Indonesia to Japan since 2008. Issues and challenges concerning regulations and cross-cultural understandings of healthcare have emerged around such EPA healthcare work and workers in both societies. What issues have arisen and been reported in Indonesia and Japan? How do the media, policy makers, healthcare institutions and workers themselves, and international stakeholders react and respond to such new issues and challenges? In what way do Indonesian and Japanese social and workers’ understandings of healthcare work and worker migration differ? Our paper shows how national contexts affected by globalization shape and re-shape social understandings of healthcare migration and their policies in Indonesia and Japan over time. Analyses of the national media reporting, information from the governments, and interviews in Indonesia and Japan reveal a contrast of social responses to healthcare worker migration. In Indonesia where healthcare workers have been sent to Japan and other countries, this tends to be understood positively, overall, as economic benefits and Indonesian professionals’ contributions to the care worker shortage in Japan. In contrast, Japanese are more likely to respond negatively to these issues; yet, they intend to face cross-cultural challenges, although slowly, making revisions in the language and license examination policies. We pay particular attention to social issue construction and policy institutionalization processes around EPA healthcare workers in Indonesia and Japan. Our study contributes to our sociological understanding of healthcare worker migration, cross-cultural understandings of healthcare and related concepts, and how national contexts and globalization construct and re-construct social issues and policies toward a new social change.

SHINOHARA, TAKAKO* (KIRYU University, yukki.takak.302@gmail.com)
Discourses in the Magazine “Keisetsu Jidai”: The Popularization Process of Higher Education in Postwar Japan

At a time when it was called the “examination hell” in postwar Japan, the magazine KEISETSU JIDAI was popular among students that take the entrance examination in higher education.

It has a history of more than eighty years, but this time, how the magazine has changed? The purpose of this study is the analysis of magazines in the 1950s-1960s. I would like to declare that KEISETSU JIDAI has a function of career guidance through the late 1950s. The tendency changed subjects, contributors, quantities of the magazine, and their consciousness. It’s mean to liberate students from some superstitions. A practical learning and a scientific method was directed to solve problems. In particular, the issue was a difference between urban and rural areas, which have dates and skills of an entrance exam. Some difficulties confronted them, conflicts and barriers surrounding the higher education, such as gender difference and economic issue.

This study may suggest a new history about the severe competition in school entrance exams.

The Effect of Environmental Education at School and Home on How Students Behave Towards the Natural Environment in Japan

Several studies on the factors that promote pro-environmental behavior have found the importance of environmental education. A number of environmental educational programs that aim to nurture ethical behavior towards the environment have been developed worldwide. For example, in Japan, some students in a junior high school take part in diving programs to study marine environments. The aim of this study is to examine the effect of environmental education at school and home on students’ pro-environmental behavior. In November 2010, we conducted a quantitative survey of all third-year students and their parents at all the junior high schools located in the city of Minamata, Japan. Pollution had a severely detrimental effect on the health of the residents of Minamata since the 1950s, and the disease caused by pollution has come to be known as Minamata disease. The negative experiences with pollution have led to the implementation of various interesting environmental education programs in all the junior high schools in the city.

The analysis of the results indicates the important factor that affects on the pro-environmental behaviors of students: It was their perception of the contributions their parents made to address environmental challenges, instead of the actual contributions or behavior of the parents. The pro-environmental behavior that parents took had a mediating effect on the way students’ perception on their parental contributions to the environment. The results also indicate that experience-based environmental education, such as related volunteering activities at school, promoted students’ pro-environmental behavior significantly more than classroom-based environmental education that focused on knowledge creation. However, classroom-based environmental knowledge creation remains critical.
because it provides an opportunity to influence pro-environmental behavior through the discoveries and the surprises by learning.

Career Strategies and Spatial (im-)Mobility Among Skilled Migrants Between Asia and Europe: The Role of Gender Power Dynamics in the Work-Family Interaction

This paper aims to unravel the gendered career strategies of skilled migrants in Germany's financial and academic sectors, which are being developed not only in tandem, but also often in negotiation, with gender relations in the family. Much of the current scholarly effort in the field of skilled migration and mobility has concentrated on the principal migrant and work-related context, treating the family as a rather secondary, separate and essentially 'female' terrain. Drawing on participant observation and interviews with highly skilled mobile workers from Asia, this paper shows that these two terrains, work and family, are closely interrelated in building skilled migrant workers, Germany has lately joined the "global war for talent" to seek out highly skilled migrant workers, but although the number of skilled women entering through Germany's skilled migrant pattern may in fact be small, the experiences of migrant, dual career couples show that their transnational career strategies have a strong bearing on the fine balancing act and negotiation of gender relations in the family. The overall aim of this paper is to show the contrasting -- and often gendered -- strategies devised by highly skilled couples, which can widen our understanding of the role that the family plays in international skilled mobility.

SHINOZAKI, KYOKO* (Ruhr University Bochum, kyoko.shinozaki@rub.de)

Conceptualizing Spatial Ambivalence Among Migrant Academics: The Dimension of Temporalities in Understanding Career Strategies

Highly skilled migrants are often deemed to have 'mobility capital': extensive studies have shown that for career advancement they mobilize the capacity to be spatially mobile across borders, giving up their cultural, social and economic capital. In policy, too, the debate around "gain and retain" has popularized the construction of mobile skilled migrants. In fact, Germany, the country which this paper focuses on, has been widening its channel for skilled and highly skilled migration streams and opened a route for long-term and permanent settlement for migrants entering through its skilled migration regime. This new, skill-b-based migration governance radically rewrites the traditional understanding of German citizenship, based on "Selecting by Origin".

Recent scholarship has brought about a nuanced understanding about spatial mobility capital and its negotiated nature, by considering the work-family interaction. While these studies put forth ambivalence and gendered power dynamics in realizing career aspirations among highly skilled migrants, I argue that less attention has been paid to the temporal dimension in capturing spatial ambivalence and career strategies. By focusing on migrant academics' decision/orientation to stay, move on, or return, Germany has lately joined the "global war for talent" to seek out highly skilled migrant workers, but although the number of skilled women entering through Germany's skilled migrant pattern may in fact be small, the experiences of migrant, dual career couples show that their transnational career strategies have a strong bearing on the fine balancing act and negotiation of gender relations in the family. The overall aim of this paper is to show the contrasting -- and often gendered -- strategies devised by highly skilled couples, which can widen our understanding of the role that the family plays in international skilled mobility.

Dynamism Among Japanese Railway Fans: Transition of Taste in the Dimension of Hobby

In this paper, I intend to examine "shumi" (Japanese word for "hobby") in contemporary Japan, revealing its mechanism and dynamism. "Shumi" is composed of three aspects: "onomuki", taste, and hobby. "Onomuki" is a Japanese word for a concept of aesthetics in the nature. Taste is a concept of value judgment. Hobby is a concept of enjoyable activities. In sociology, taste and hobby have been researched, but far depicting how the concept of taste has been regarded, and the concept of hobby in a class society. However, it is necessary to study this matter from the perspective of hobby. Railway fans have been chosen to conduct the survey for the purpose of this study. This is because they participate in activities that are rich in variety, as well as complexity. According to some surveys, there are around 20,000 serious railway fans and roughly from 1 to 2 million casual fans. A distinguished characteristic is that although the age distribution is widely covered from under 10 to over 90, at least 80% of them are males. Also, based on my field research related to railways, conducted from July 2009 to October 2012, railway fans have been found to enjoy various kinds of activities, which are not limited to competitions, such as "Anson" that Gaillous refers to. Focusing on Bourdieu's theory of "champ", or "distinction", I examine the new framework to analyze the conceptual interaction between taste and hobby. Specifically, I introduce "games" as the sub-concept of hobby, revealing that each fan transitions between values to different realms within the dimension of hobby. Thus, I aim to show the possibility that interaction taste and hobby takes place in a non-class society.

SHIPUNOVA, TATIANA* (Saint Petersburg State University, shhtspb@yandex.ru)

Fundamental Paradoxes of the Theory and Practice of the Criminal Law

The "crisis of punishment" as well as negative phenomena of the modern system of justice determines to the ideological handicap. Let's focus only on two mainframe ideas. Understanding of the social justice Social justice is a measure of public benefits from laws and other regulators based on an agreement which establish and maintain the life order of individuals and institutions. This order promotes the survival and development of the society, as well as provides integration and decent life of its members. The "decent life" is a compilation of all the benefits proclaiming in modern society: freedom, equality, social security, etc. Therefore the justice system should be aimed primarily at preventing crime, restoration of the rights and rehabilitation of the victims, and only then -- on the prosecution, punishment and / or rehabilitation of criminals. Economic pragmatism of the "social protection" concept The concept of punishment stakes on the state control based on a quality management underlining efficiency and effectiveness. In this regard, in Western societies are widely discussing concepts of "safety" and "protection". However, they are discussing without an analysis of what, in fact, should be protected. So "relatability" becomes symbolic notion and goes back to the "retribution". In other words, they still expect the justice system to be a main problem, it is necessary to decide from which perspective we should evaluate its quality. From producer's perspective? But what exactly it produces: improvement of criminals, retribution, or citizens' safety? From consumer's perspective? But who is consumer? prisoner, society, State? From market's perspective? But what are the objectives of the government regarding to prisoners, actual and potential victims, or crime policy? These estimates could differ, as well as the answers to the questions. The elimination of these paradoxes could fundamentally change the concept and practice of the law in modern society.
Intergenerational Transfer within Families from the Perspective of Social Inequality in Japan

As in Europe and the US, Japan’s ageing population, and the accompanying generational imbalance, has become one of today’s most pressing social policy issues. My paper primarily examines the relationship between social and private intergenerational transfers in Japan. I will discuss how intergenerational transfer within families takes place, and whether this process contributes to expanding inequality between families.

I focus on three kinds of private intergenerational transfer: co-residency, remittance, and asset inheritance. In particular, I intensively discuss different directions of transfer, both from parents to children, and from children to parents. The aim of my research is to identify similarities in determinants of all three types of intergenerational transfer, and in both directions. In conclusion, I explore whether the relationship with macro-level intergenerational imbalance is consistent with the one at the micro-level.

I will analyze data from two sources: the Comprehensive Survey of People’s Living Conditions (CSLCC), conducted by the Ministry of Health, Labour and Welfare, and the 2010 Panel Survey of Living Conditions among Middle-Age and Elderly People (PSMEP). The former presents cross-sectional, detailed household income data, with a sample size of 26,115. The latter is first wave of nationally representative panel survey of people aged 50 to 84. The survey, with a sample size of 6,442, includes detailed information on financial and care support between parents and children, and on household assets and savings.

According to my preliminary results, the meaning of co-residency has changed. The elderly are no longer always the beneficiaries of co-residency; rather, they retain the role of household head that provides basic economic support to younger family members. Private transfers divide society rather than redistribute resources, since the older generation provides more than the younger, and intergenerational imbalances in private transfers become more obvious as the population ages.

RC19-338.3

Intergenerational Transfer, Social and Private, in Japan

Largely because of generational imbalance, the ageing population of Japan is one of the most urgent topics in social policy. My paper primarily examines the relationship of social and private intergenerational transfers in Japan. I analyze two kinds of data. The first is that of the “Comprehensive Survey of People’s Living Conditions (CSLCC), which was conducted by the Ministry of Health, Labour and Welfare, and the second is that of “National Survey of Living Conditions among Middle-Age and Old-Age People in 2010.”

The public pension system, which produces social transfers from the younger to the older generation, can be regarded as a form of intergenerational re-distribution. I first examine the extent that public pensions limit poverty among the elderly in Japan as a way to gauge the impact of public transfers in improving social equality. The main research question here is the extent to which public pensions reduce the risk of poverty as the generational imbalance worsens.

I study two-fold private transfers, co-residency and remittance. In Japan’s welfare society, the family has played a critical role in providing basic economic security to its members. The elderly have secured their economic well-being through co-residency with their offspring. I examine how private transfers across generations, as in co-residency and remittance, have taken place. My second research question is whether such transfers have been enhanced by population aging. According to my preliminary result, the meaning of co-residency has now changed: the elderly are no longer always the beneficiaries of co-residency; rather, they retain the role of household head that provides basic economic well-being to the resident younger generation. Private transfers divide society rather than re-distribute resources, since the older generation provides more than the younger, and intergenerational imbalances in private transfers become more obvious as the population ages.

RC19-343.5

Family Supports and Insecure Work: The Politics of Household Service Employment in Conservative Gender Regimes

In the late 2000s Austria and Germany introduced policies aimed at expanding the employment of household services in order to support families in their ability to reconcile work and family. Both sets of policies targeted the use of a particular form of marginal part-time work, to make formal employment relations more attractive to households. The effect however, has been to constitute household service work as insecure low wage work, and to introduce new lines of inequalities between working women. While neither the Austrian or German reforms have resulted in annexing informal work in private households into registered employment, they have strengthened the traditional path of women’s labor force entry into part-time work, while creating large differences in the forms of part-time employment taken up by educated and less skilled women.

Two worlds of women’s employment meet directly in private households, largely as the result of family support policies, and are one of the ways in which the modernization of household welfare contexts with strong male breadwinner models are creating new class-based inequalities between women. The findings suggest the need to pay more attention to the employment conditions and new risks in drives to formalize and expand personal and household service work, now an explicit aim of European employment policy.

RC02-55.6

Gender Dynamics in the Dualisation of Coordinated Market Economies

Recent research about growing inequalities in some of the most protected employment economies has pointed to the dualisation of employment conditions originating in the expansion of non-standard employment and the deregulation of social protection coverage for significant segments of the workforce. This paper will focus on bringing the gendered dynamics of dualisation in Germany and Japan, and show that dualisation is not novel, but rather deeply rooted (1) in the failure in both countries to pursue social and family policy changes in strong male bread-
winning models of employment and (2) well-established occupational segregation of work by gender. As a result, class-based inequalities have become more salient, though these were considered less relevant in the coordinated market economies. In Japan, the expansion of temporary and part-time labor over four decades has exposed women and less educated youth to market-based employment systems at the expense of better educated engagements with older cohorts of the male core workforce. German policies and practices designed to protect skilled male workers in manufacturing have failed to transfer to occupa-
tory work have deepened the divisions between men and women in non-standard employment.

The Japanese General Social Surveys project conducts a nationwide social survey every two years since 2000 to study the attitudes and behavior of Japanese people. As the U.S. GSS, the JGSS questionnaire covers a wide range of topics including family issues.

Working with Korean General Social Survey, Taiwan Social Change Survey, and Chinese General Social Survey, JGSS shares some modules of questions with East Asian Social Surveys (EASS). The theme for the first EASS (EASS 2006) is Family, for the second (EASS 2008) is Culture and Globalization, for the third (EASS 2010) is Health and Society, and for the fourth is Network Social Capital, and for the fifth (planned in 2015) is Work and Life. EASS aims to continue valid and reliable cross-national surveys by using repeated research that has already generated robust results.

In this presentation, we will illustrate the change in Japanese family and capture the current picture based on the results of cumulative JGSS data. The overall trends between 2000 and 2012 will be described. While swayed by unstable job climate, both individuals and families suppress dissatisfaction and come to grips with reality. The number of unemployment and contingent employment among youths has been enlarged, the percentage of unmarried people has increased, and unmarried children have increasingly been living in non-marriage lineages with their parents. A growing number of women in all ages entered into labor force and the bottom of the M-shaped employment rates among women have become shallow.

Governments around the world are endeavouring to work out how to meet patients' expectations regarding universal health coverage. Even wealthy nations such as Australia that formally enjoy universal health coverage experience gaps and inequities in access to health care. Not all patients enjoy an equal capacity to choose. Inequities in access to care, long waiting times for surgery and increasing out-of-pocket expenses are creating a divide in healthcare between those who can afford to pay either out-of-pocket or via private health insurance, and those who cannot. The aim of this project is to advance policy-relevant sociological knowledge about the factors that shape and constrain patient choice as a basis for transformative healthcare professional education and evidence-informed policies.

The study is informed by a critical discourse analysis of selected Labor and Coalition Federal policy texts to examine how patient choice is spoken about, shaped and enacted at the federal level in Australia. The content of speeches and statements by key politicians was accessed through the database services of the Commonwealth Parliamentary Library. The sample comprises speeches and statements pertaining to health policies made by Prime Ministers, Ministers of Health, and Opposition Leaders and Health Spokespersons.

Critical discourse analysis reveals the core policy messages that emerged during the Howard Coalition (1996-2007) and Rudd/Gillard/Rudd Labor (2007-2013) governments. Our study compares and contrasts Labor and Coalition policies in relation to access to health care in order to explicate the underlying assumptions regarding patient participation and choice within the context of universal health coverage.

Education Reform in Lebanon: Nationalism Versus Social Justice As Means for Building Social Cohesion

The paper will examine education policies in Lebanon post the civil war period (1989) up to 2010. This period witnessed two education reforms: 1995 and 2010. The main priority for these two reforms was building a sustainable peace and cohesion amongst the various sectarian groups. A nationalistic citizenship education was proposed as a means for building social cohesion in 1995 reform. The importance of social justice as a means for conflict resolution was overlooked. Twenty years later, this approach proved to be of limited effect as sectarian fractions in Lebanon continued to grow while school dropout rates soared particularly amongst disadvantaged groups. In 2010, a new education strategy was developed. Promoting Lebanese nationalism again occupied the priority. However, access to education featured too in this strategy. My analysis will focus on the current understanding of equity and equality of education in this new reform plan and its consequences on the disadvantaged and marginalised groups in Lebanon and consequently on the social cohesion of Lebanon. In the paper, I criticise the neo-liberal and distributive notion of social justice which characterises the new education strategy in Lebanon and argues for a recognitive concept of social justice.

SHUCKSMITH, MARK* (Newcastle University, mark.shucksmith@ncl.ac.uk)

Crofting Is the Future: Small Farms after Agricultural Modernisation

This paper discusses crofting reform as an instance of the emergence of locally-rooted alternatives to agricultural modernisation and neoliberalisation. Crofting is a distinctive and highly regulated form of land tenure specific to the northern half of Scotland; it is also a cultural heritage of major international significance, even if it is frequently viewed as less important than basic human needs of food and shelter. Its purpose is to suggest how women's participation and perspectives of inequality and exclusion can be used to advance policy-relevant sociological knowledge about the factors that shape and constrain patient choice as a basis for transformative healthcare professional education and evidence-informed policies.

Is There an Emerging Transnational Advocacy Network in Opposition to Weaponized Drones?

The use of unmanned aerial vehicles (UAVs) or drones by the United States for carrying out targeted killings in territories throughout the Middle East, South Asia and Africa has by now become routine, but controversial, American counter-terrorism practice. In recent years, these drone strikes have been regularly denounced by human rights organizations and have also drawn the critical attention of United Nations special rapporteurs on account of the civilian casualties such attacks frequently cause in apparent violation of international norms governing the use of armed force. Perhaps just as significant, however, in continuing to resist the normalization of drone warfare, has been the increasing activism of a variety of like-minded norm entrepreneurs involved in the production and dissemination of knowledge about its legal aspects and realities created on the ground. Volunteer lawyers representing victims/survivors of drone attacks have been pursuing litigation in different national jurisdictions, most notably in the United Kingdom and in Pakistan, to identify liable parties and publicize their alleged complicity. Concurrently, the epistemic community of international law scholars and practitioners has been engaged in public intellectual debates concerning the legality and morality of drone warfare, while investigative journalists have (often at their own peril) continued to document attack incidents and play a significant role in bringing these facts to public attention. This paper explores whether, and to what extent, these separate, yet complementary, initiatives may be indicative of an emerging transnational advocacy network opposed to the use and proliferation of weaponized drones.

The Democratic Peace Debate: Theory and Fact

The concept of a Democratic Peace (DP) is a major theoretical strand within International Relations (IR). Depending on precisely how democracy is defined, the number of wars between such states over the last two centuries varies from zero to a handful. Moreover, democratic states have never fought on opposing sides in a general war involving all, or nearly all, the great powers. Such a record cannot be claimed by any other form of government – monarchies, Communist and authoritarian states have all fought against one another. The only zone of peace that is grounded in a shared political system is that of liberal democracies. In a field in which there are relatively few empirical regularities of even modest strength, scholars were energized to validate or invalidate the findings. Thus, DP provides an almost perfect focal point to grapple with contentious issues involving theory in IR. First, DP will be differentiated from the liberal (or Kantian) peace, a concept with which it is often conflated. Second, the main debates about theory within IR that DP helps to illuminate will be discussed. These debates can be categorized as follows: 1) Rationalist vs. Reflexivist (paradigm debate); 2) Quantitative vs. Qualitative (methodology debate); and, 3) Methodological Unity vs. Methodological Pluralism (philosophy of science debate). Hence, concerns about theory-building in IR (as reflected through DP) are delineated: defining variables, confounding of variable effects, and fleshing out causal mechanisms that connect the variables to each other. The position taken here is that methodological pluralism is a pre-requisite and, furthermore, such a flexible and wide-ranging approach should also prove highly beneficial for delineating real-world connections.

Gender Inequalities and Socio-Cultural Themes of Leisure in Contemporary Societies: Illustrations from Pakistan

This paper takes into account the cultural and social themes of leisure that explicate how women's leisure has been marginalized in a contemporary society. It attempts to understand and use the perspectives of inequality and exclusion at leisure experiences of women and weigh women's own perceptions and experiences with respect to leisure and social transformations. Reflecting the intersection of social and cultural themes of leisure, and progress towards the Millennium Development Goals, this paper views gender disparity paradox and contradictions within gender segregation and disparity is found in hetero-social dimension in Pakistani society. Equal rights to leisure are given in a range of UN declarations even if it is frequently viewed as less important than basic human needs of food and shelter. Its purpose is to suggest how women’s participation and perceptions are gleaned from central and contemporary gender dynamics that alter and enrich analysis and characterization of contemporary global society. The studies on gender inequalities have given theories and methods; therefore, this paper argues that women have developed different educational and organizational talents and have the capacity to make a distinct and positive contribution to contemporary global societies. The paper will try to narrow down to types of theories, methodological and ethical challenges and present a model for more equitable
leisure policies and new resolutions for more leisure opportunities for women that enable leisure to serve as a force for human growth. Finally, in drawing together some themes of leisure and gender equality, the paper will indicate how these realities have the capacity to add to our understanding of the complexity of contemporary global society. Leisure and gender inequality will be seen in a socio-cultural framework.

Inequalities of Gender, Violence and Dehumanization in Multiple Forms in a Conflicting Cultural Values Outlook in Pakistan

This paper provides a theoretical framework of understanding, experience and struggle of gender and pursuit of women rights concerning inequality, violence and dehumanization, and how multiple forms of such disparities overlap and interrelate with social categories and cultural values. The paper's main theme will be a theoretical inquiry into the way violence is conceptualized in relation to the conflicting cultural values in traditional and modern theories. Theoretically and methodologically the paper will be designed so as to allow the interpretation of maltreatment of women with reference to sexual and gender options concerning violence, class, and discrimination in the background of conflicting cultural values. It will focus on Pakistan society since it got its independence in 1947 and build its argument on previous research conducted among indigenous groups in Pakistan. It will be discussed here that an examination of multiple forms of inequalities of gender, violence and dehumanization in the lives of women in Pakistan, the interpretation would be that of a society surrounded with violence. Central to this theory of violence is accounts of the ways Pakistani women find themselves between being modern women and traditional women to illustrate the limits of the dichotomy of the theories of traditionalism and modernism. This paper will focus on the rights of the women who suffer from violence and dehumanization. These rights will include socioeconomic rights of getting jobs, social security, health facilities and shelter. In the end the paper will give a model of gendered approach for rehabilitation of the women who have faced such inequalities considering into view the legal Act against women victimization in Pakistan.

Crisis of Labour: Macro- and Micro-Level of Social Analysis

The report focuses on the phenomenon of labor crisis and its macro- and micro-level analysis. At the macro-level labor crisis is a transition to a postindustrial society; one of its features is a weakening of the need for hard work for industrial production. Labor in its classic sense is a thing of the past. Due to globalization, the processes of labour mobility across countries and the emergence of the international labor market play an important role in the contemporary world. And at this level the study focuses on the problems of the prospects of labor as an activity, changing the nature of work, etc. Therefore a researcher faces new challenges such as: identification of new labour types that replace labour in its classic sense; changes in the nature of work, etc. The evolution of labour, etc. Therefore a researcher faces new challenges such as: identification of new labour types that replace labour in its classic sense; changes in the organization of the living space of people; career opportunities; a change of priority in the lifestyle and day-to-day activities. At the micro-level, labor crisis can be described as a particular person and/or a family living in terms of increasing tensions of life and the growth of its pace. With changing strategies in the field of labour and employment on a global scale and due to the prospect of joining the conditions of flexible/part-time/freelance job the real work schedule of large numbers of people is becoming more and more intense. An Individual still, if not more, values their work, willing to work overtime. Labourism is becoming a common disease. In the center of our attention is the dichotomy of liberation from rigid labour and labour dependence, which more people around the world suffer from.

Students' Educational Achievements or Practicing of Citizenship: Disjunction or Alternative

Countries that are striving to upgrade their education most of the time take part in international educational projects such as PISA (OECD) and TIMSS, PIRLS, or CIVED/ICCS (IEA). Moreover, the participation in educational comparisons of students’ achievements is a country’s response to the onslaught of new requirements to account for school performance. Usually they have taken up some form of external evaluation and permanent monitoring of students’ achievements. The mandatory and regular use of testing tools exerts the pressure on students who are imposed now to much more intense effort than in past decades. Consequently, many activities praised at this stage of individual development, i.e. contacts with peers, community endorsement activities have to be abandoned or reduced. This side effect of new accountability practices of educational institutions can be shown on the aggregate level of countries and on the individual level (students). Frequently scholars meet either students of good grades but socially passive or socially active students who have poor educational achievements. IEA Internation Civic and Citizenship Educational Study 2009 provide the empirical foundation for this conclusion and these data will be first of all discussed.

Sociologists look for social consequences of new educational accountability practices. The most visible effect is the widespread and paid by parents supplementary training in post-school hours. The school neuroses and school violence accompanying the educational process despite reforms can be related to the new accountability practices. To compile the full list of these consequences is the task for sociologists. Authors have some additional hypotheses about these consequences. The main question, however, is whether the formal education can be in the same time effective and non-oppressive for students.

L'accompagnement Des Mobilités Résidentielles Des Salariés à L'épreuve De La Crise : La Perte D'efficacité D'un Dispositif De Conciliation Des Trajectoires Professionnelles Et Personnelles

Les mobilités résidentielles liées à l’emploi posent directement la question de l’articulation de la vie professionnelle et de la vie privée des salariés. Sous l’impulsion de l’organisation paritaire du 1 % Logement, des dispositifs ont été mis en place en France au début des années 2000 pour faciliter cette articulation, notamment en favorisant l’accès des salariés à des prestations professionnelles d’accompagnement des mobilités résidentielles. Cette initiative a su séduire les employeurs comme les salariés. Elle aide à mieux concilier les dimensions professionnelle et privée des trajectoires de ces derniers par la prise en compte des enjeux territoriaux liés aux mobilités géographiques et par un réel soutien aux salariés les moins bien dotés pour y faire face.

On verra comment le contexte économique de la fin des années 2000 en France a remis en cause ce dispositif. La fragilisation financière du 1 % Logement a joué un rôle, mais aussi le changement de comportement des employeurs eux-mêmes qui exercent une forte pression à la baisse sur les prix des prestations. Dans un contexte de ralentissement économique général, et donc de recul des mobilités géographiques liées à l’emploi, les prestataires adoptent eux-mêmes des pratiques commerciales de plus en plus agressives qui mettent progressivement au second plan l’accompagnement des salariés à proprement parler.

L’évolution de l’accompagnement des mobilités géographiques des salariés en période d’austérité se fait donc au détriment des salariés les moins bien dotés, encourageant entre les travailleurs élites et les travailleurs populaires, et en même temps le sacrifice de la vie privée de ces derniers. On verra cependant que le contexte d’austérité est aussi propice aux tentatives d’innovation de la part des salariés mobiles, notamment par le recours à la multi-localité résidentielle.
- How diverse military groups in a multinational military operation are united under one umbrella to achieve a better information sharing?
- What are the similarities and differences in definitions of "negotiation and collaboration" across different cultures?
- How to create a "third-hybrid culture" in multinational military operations?

The methodology of the study is based on qualitative research methodology. An interview to explore these research questions -designed by the writer while he was the Chief of Capacity Building Department at EUFOR in 2012- was applied face-to-face to 55 peacekeepers of 13 different countries within EUFOR Peace Operation in Bosnia and Herzegovina between April-October 2012. The gathered data will be analyzed by "content analysis" method to find out the answers to research questions and to propose strategies on a better information sharing within the light of the findings.

From ‘Absent-from-Home Father’ to ‘Committed Father’: Changes in the Model of Fatherhood in Poland and Role of Mothers- ‘gatekeepers’

The current situation of fathers in Poland is an excellent example of the gap between on the one hand - the level of social expectations, and on the other hand - everyday practice.

Social expectations have tended to climb as a result of the promotion of a new fatherhood model, extensively discussed by the media and by experts, which has led to the creation of new social patterns and a new model of ‘the father’. The majority of press, radio, and TV programmes present the idea of the committed father, involved in childcare in a very positive way, as an opportunity for men to benefit from developing close relations with their children.

In the same time, Polish fathers rarely get involved in dealing with children, do not spend much time with them, do not decide on matters that are important for children, etc. The question is: why?

There are many reasons for that, one of them is the attitude of some Polish mothers which could be described as ‘Gatekeepers’.

Many of mothers admit that the fathers of their children are able to look after children, but they treat them as if they were children themselves. They claim that men need detailed instruction, and when faced with a task of taking care of a child, the mother has to prepare everything for him. Due to this, many women prefer to have fathers ‘under control’ even though they deprive themselves of the chance of taking a break. In consequence, sometimes women subconsciously ‘push men away’ from children, because male commitment threatens their identity as built on being the mother, and thus the sole caregiver and expert in children’s affairs.

The main purpose of my presentation is to describe the situation of fathers in the context of mothers’ attitudes and behaviors.

Community Responses to Drug Related Violence in Mexico

The violent conflict that emerged in Mexico -due to drug trafficking and the Government response- has produced a sharp rise in the incidence of violence, expressed in an escalation of homicide rates and disappearances. This violence not only has had an impact on its direct victims but also has engendered collective victimization. This paper describes changes in daily life experienced by the population in five municipalities in three states (Cuernavaca and Jiutepec in the state of Morelos, Saltillo and Torreon in the northern state of Coahuila and the city of Zacatecas in the homonymous state) that have witnessed an increase in drug related violence since 2007. In each locality, four focus groups were carried out with interviewees -men and women- from lower middle class neighborhoods.

Among this sector of the population, the presence of state institutions has always been weak and access to public services and policy benefits has been mediated by particularistic intermediation rather than a matter of citizens’ rights. The analysis shows deep changes in personal, family, community spheres as well as with respect to citizens’ linkages to public security and justice institutions. These changes are expressed in everyday experience from my own background and experiences of research in military organizations from southeastern and north of the country. The way the military reality is classified and arranged is, to some extent, revealed in contacts between anthropologists and military personnel which are initially marked by the experience of the anthropologists’ perception as “civilians”, i.e. “outsiders” of the “military world/environment”.

There are a lot of positions and relations being built and acquired in the development of research, that refer to the poles “military / civilian”, and that, far from being fixed categories, reveal themselves as relational and contextual regarding roles and positions of researcher (Castro & Leirner, 2009).

By addressing issues such as women in the Armed Forces and military families in my studies, this paper aims to contribute to the analysis of the different realities that permeates the gender issue that permeates my research trajectory.

SILVA, CARLOS* (Universidad Nacional Autónoma de México, carlos_silvaforne@yahoo.com.mx)

Police and Excessive Use of Force in Mexico City

In Mexico City, excessive use of force by police officers from different police forces is a problem acknowledged by the public and some political actors. This concern resulted in the enactment of a 2008 law governing the use of force by police forces of the Federal District. However, there is little research and systematic information about situations in which police abuse is concentrated. In developing democratic societies civilian control agencies has been one of the most important efforts to constraints police abuse and achieve a better level of compliance of basic rights. The main mechanism is the assessment of complaints against illegal police behavior. In Mexico City this responsibility lies with the Federal District Human Rights Commission. Since its founding in 1993 around a fifth of all registered complaints involve policemen (either from the Secretary of Public Security or the Attorney General of the Federal District). Based on the analysis of 600 complaints regarding police abuse between 2007-2011, this study describes the main characteristics of abuse in the use of force, and accounts for its severity by looking at social, spatial, situational, and individual factors. Police abuse is concentrated in a limited set of situations linked to the specific functions of each corporation, the motives and interests of police officers, as well as in spatial patterns.

Questions, Answers and Pleas in Portuguese Exams during Seven Decades

Keeping in mind the central part national exams have been performing in the design and implementation of learning and curricula, the analysis of the evolution of the Physics and Chemistry national exams shows the dynamic implications between the exams (different contents and learning) and the curricula, in the realm of the curricular reforms that happened from 1940 to 2010. In Portugal, exams have been neglected for a long time and resulted in a lack of quality that has led to a complete failure in the evaluation system.

The paper reports and provides examples of questions, answers and pleas in Portuguese exams from 1940 to 2010. As it is never too much to highlight, it is not possible to reflect on the exams focusing exclusively around the students and the technical concern of measuring their performance without keeping in mind the factors in play regarding learning, such as curriculum, Portuguese cultural characteristics, the organization of the School Community, and the educational legislation driven by several national and international historical factors.

This approach does not aim at showing a compilation of the negative moments of the reforms throughout those decades, but to show that nowadays our school system has a higher demanding level, both at the teaching level and at the curricular level, highlighting a higher level of competence in abstract thinking.

How Is Time Organised By and for Babies?

By and large, time studies have been carried out in the sociological area, con- verging in theoretical as much as methodological aspects when analyzing time use by adults in contemporary western societies. However, research on time use by children is still incipient and until now the main topics addressed refer to daily socialisation experiences (Larson and Verma, 1999), the differences in time use considering social class and gender differences (Carvalho and Machado, 2006), childhood life in urban and rural areas (Christensen and James, 2008) and the comparison between activities developed over different decades (Cruz and Teixeira, 2008). It is important to emphasise that such research only considered children over 6. For this reason, the present undertaking seeks to understand time use by and for babies under 12 months old, and hence complete the gap found in studies based on this age range. Firstly an instrument to record daily time use was elaborated, for completion over 24 hours in observation of both baby and parent. This instrument was used twice - once on a weekday and the other on a weekend. Interviews were later carried out with the parents in order to further ex- plore the information recorded. The sample comprised two babies - one girl and one boy and their respective parents. If on the one hand, babies receive recurrent external determinations leading us to understand time as an instrument of social regulation (Elias, 1998), despite such impositions they also determine their own time use on the other.

Sweeping Floor and Building Identities: Centrality and Contradictions of Paid Work for Women in Brazil

The XXI Century Brazilian Society has undergone to several transformations, whether in the political, economic, technological or social aspects. This new situ- ation has led to changes in gender roles and labor relations, including women's work. Inserted in this context, this research presents a retrospective of Brazilian women's struggle for the conquest of their labor rights and interprets these changes empirically. We conducted a comparative case study on two organizations - one public another private - of Higher Education in the South Region of Bra- zil, with women that work in a cleaning sector for at least five years. We sought to understand how these women construct their identities at their social space of work and at home, as housewives. The data were collected through semi-struc- tured interviews and focus group. It was found that for these women, the paid work has a centrality that builds contradictory feelings and actions. At first glance, the work promoted financial independence and increased self-esteem of these women. On the other hand they have experienced an invisibility as citizens and a lack of recognition of their activities in the organizations and at home. The conse- quence of this process has been a conflict in the construction of their identities as workers and as housewives.

The Unequal Distribution of Employer-Provided Training. Empirical Findings and Sociological Conceptualisations

The aim of this paper is to analyse learning and training opportunities, and par- ticipation in employer-provided training (in-company training, in-service training, personnel training). Which employee groups are trained the most? And who are those who do not participate in workplace training at all and who lack the learning opportunities? Employer-provided training has been theorised mainly by economi- cians (e.g. Bourdieu, 1984) and human capital (Jacob Minzer, 1962) and - on the job training: Cost, returns, and implications.) In economical literature employ- er-provided training has been conceptualized as human capital. Today when skills are the most important single asset an employee has in the labour market, so- ciological theorizing on employer-provided is needed. How should employer-pro- vided training be conceptualized and theorized in relation work place hierarchies and class structure? What kind of capital workplace training is (e.g. Bourdieu?) The question is about class based skill strategies.

In international comparison the participation rate in employer-provided train- ing is very high in Finland. What is typical for Finnish workplace training is its uneven distribution among employees. In the long run the participation in em- ployer-provided training has grown. However, the differences in participation be- tween levels of hierarchy (social classes) have been remarkably persistent. The differences have not diminished in 30 years.

The empirical data used in the study are The Adult Education Surveys by Statistics Finland. Adult education surveys study not only participation in education and learning and skills among the adult population; in addition, they produce data about people’s opinions and experiences of adult education, their motivations and willingness and need to participate in it, and obstacles to and preconditions for it. The data from the survey are based on face-to-face interviewing of a sample of more than 5 000 people. The survey 2012 was a part of a European co-opera- tive project co-ordinated by the Statistical Office of the European Communities.

SILVER, BEVERLY* (Johns Hopkins University, silver@jhu.edu)

Geopolitical Turmoil and the Fate of the Labor Movement in the 21st Century: 10 Years after Forces of Labor

My paper revisits the conceptual framework elaborated in Forces of Labor as a tool for understanding the roots of (and prospects for) the recent global upsurge of labor unrest. This upsurge took various forms and contexts, from factory workers in China and fast food workers in the United States to protests against austerity in the European Union and by unemployed and precariously employed
workers in various parts of the world. I deploy a theoretical perspective that sees historical capitalism as a system characterized by ceaseless change—all that is solid melts into air—and therefore as a system that is recurrently making, unmaking and remaking working classes on a world scale. The paper traces how various capitalist “fixes”—spatial, technological, product and financial—reshaped working classes locally and globally in recent decades: strengthening/strengthening labor; creating challenges and opportunities. The paper develops several arguments that can be found in embryonic form in Forces of Labor. One, the combination of technological and financial fixes has been destroying livelihoods faster than it has been creating new livelihoods, leading to a generalized crisis of subsistence for workers, and a crisis of legitimacy for capitalism. Two, the profitability of the financial fix results almost entirely from the redistribution of income from labor to capital. Redistribution was key to resolving the 1970s crisis of capitalist profitability, but at the cost of an intensifying crisis of legitimacy. Three, financialization, crisis of legitimacy and hegemonic decline go hand-in-hand. We are at the end of the neoliberal era and of the era of US world hegemony. Thus, the geopolitical terrain is critical for understanding ‘what is to be done’, including the prospects for labor solidarity across borders and status divides in the very unequal world bequeathed to us by centuries of world capitalist development.

A Reshuffling of the World Proletariat

The transformation of historical capitalism over the past several decades has resulted in a “reshuffling” of the proletariat and proletarian movements on a world-scale. In my previous writings, I focused, among other things, on how the rapid industrialization of parts of the global South has led to the emergence of large new working classes and working classes. The existing working classes in China are the latest manifestation of this dynamic process of capital mobility and new working class formation. These writings focused on the “active industrial army”. Another important dynamic underlying the contemporary reshuffling of the proletariat is the secular trend toward increasing capital intensity, and thus the growing mismatch between global labor supply and demand. As such, a deep re-theorization of the concept of the reserve army is imperative—a concept which is both critical to but distressingly unelaborated in volume 1 of Capital. This paper seeks to contribute to this task by theorizing (1) the distinction between, and the relative historical weight of, these processes, and (2) the ways in which capitalist accumulation has depended historically on the externalization of the costs of reproduction of labor and nature, and therefore some of the ambiguities of ‘exclusion’; (3) the unevenness of these processes in time and space, and the resulting deep divisions within the world proletariat along lines of gender, race and citizenship; (4) the ways in which this unevenness is reflected in the patterning of world labor unrest in recent years; and (5) the implications of all this for moving toward a post-capitalist world system which guarantees a decent and secure livelihood for all.

Placing Panethnicity: Performing Arab Space on Sonnenallee

The multicultural Berlin district of Neukölln is home to a large number of very diverse foreign-born and migrant-background residents. Some 140 nationalities make up 40% of the population in 2010. Among the migrants least welcome by the dwindling, sometimes xenophobic, native German majority are the asylum-seekers from the Middle East. Unlike their Turkish neighbors, the Arabic-speaking refugees from Lebanon, Egypt, Syria, Afghanistan, Iran, and other countries in the region have a precarious foothold in Berlin. Establishing a small business, even if it is unprofitable, demonstrates self-sufficiency to the authorities. Ironically, immigration laws partly account for the “parallel societies” so deplored by the likes of Thilo Sarrazin, who characterized Turkish and Arab immigrants as lacking “a productive function, except for running fruit and vegetable businesses.” This research looked into the ethnic enclave of distinctively Arab businesses and institutions clustered around a segment of the five kilometer long artery, Sonnenallee. These businesses do not sell fruits and vegetables, but rather goods and services that demarcate a specifically Arab space. The Arab businesses are frequently engaged in illicit or off-the-books activities to make ends meet in an economy from which they are formally excluded. Based upon field work and interviews with shopkeepers and customers, religious and ethnic association leaders and members, government officials, and Turkish competitors who cluster along a different Neukölln street, I report on the place-making activities of Arab Berliners. I find this street offers a public space for Arab political and cultural expression, a forging of “pan-ethnic” community. Beyond common Arabic language, this street and nearby square is the location of pan-ethnic demonstrations and the center of ethnic associations, mosques, and predominantly Arab parks, schools, and other institutions in which solidarity crosses national lines. The symbolic boundaries of pan-ethnic space separate Arabs from both Turks and Germans.

New Experiences of Inclusion: Affirmative Action for Blacks and Natives in Brazil

After several decades of black social movement struggles for rights in Brazilian “racial democracy”, it was recognized by the nation-state the practice of racial discrimination in the country, as well as affirmative action as a policy to correct inequality. In this scenario, the passage of Law 12.711 on Affirmative Action, in 2012, presupposes a set of substantive changes that alters the access to public high education in Brazil. To understand the social context that has led to the new law which calls for equal opportunity on racial and ethnic relations as well as African and African-Brazilian history and culture for school system requires analysis of the democratization process of the Brazilian State. This paper focuses on three aspects: 1) the change in state policy related to inclusion of blacks, native population, and poor people; 2) the impact of these actions in the academic debate; 3) the role of black social movement in this process. The research fieldwork gathers the legislation that has changed the normative field in relation to the ethnic and racial issues after the Constitution of 1988; collects official data on the expansion of blacks, natives and poor people to public high education; and review the literature on racial affirmative action and black social movements producing a typology of the arguments.
This paper examines the background and strategies behind the slow start but fast expansion of a world-class post-secondary education in Singapore and presents an overview of its current trends and future directions.

When Singapore gained its sudden independence with its separation from the Malaysian Federation in 1965, one of the legacies of the British colonial heritage was its low investment in its infrastructural schools and teacher training. This is reflected by the low literacy rate of 73% in 1970, and a high 83% of population aged 25 years and above having qualifications below secondary level even in the year 1980, based on data released by the Department of Statistics.

However, Singapore later transforms itself from an entrepot to an industrialized economy, rapid school construction and large scale teacher development were initiated to meet new socio-economic needs and to provide education to all. These efforts bore fruitful results within a short quarter century, as evident in the following figures: by 2000, the proportions of 25-34, 35-44 and 45-54 years-old with at least a degree were about 56%, 32% and 21% respectively and the figures rose to 82%, 64% and 36%, in the same order, in 2010.

Apart from expanding enrollment at the post-secondary level, Singapore also had to shift its efficiency-driven education to an ability-driven one in the past decade, to respond to growing educational aspirations among the young and the deep impact of the digital knowledge-based era. This paper will conclude with a discussion on the new challenges, opportunities and measures to adapt to the ever-changing landscape of post-secondary education.

SIMBURGER, ELISABETH* (Universidad Diego Portales, e.a.simburger@gmail.com)

The Forbidden Discipline: The Impact of the Pinochet Dictatorship on Chilean Sociology and Sociologists

In 1972, during the height of Allende's presidency, Santiago de Chile hosted the Conference of the Latin American Sociological Association (ALAS). The conference would not return to Chile for 41 years, until September 2013.

At the time, Chile was the Latin American center of social scientific exchange and collaboration (Franco, 2007). Besides, Chile's path towards socialism and its changing society attracted many sociologists from Latin America and overseas. This golden era of Chilean sociology immediately came to a halt with Pinochet's coup d'état in 1973 and the seventeen years of dictatorship. As in other authoritarian regimes the dictatorship not only deeply altered and affected Chilean society (Fleck, 2007), but had major impacts on sociology and the humanities, resulting in the closure of sociology departments and the persecution of sociologists and sociology as a discipline, and thus altering the understanding of accepted knowledge in the social sciences.

This paper studies the fundamental transformations of Chilean sociology and sociologists' lives during the Pinochet dictatorship (1973-1990). Based on qualitative interviews with Chilean sociologists who either experienced the dictatorship as students, academics or professionals, this paper explores three dimensions in which the dictatorship altered sociology and sociologists' lives: 1) biographical ruptures and transformations, 2) institutional changes such as department closures and the subsequent impact on employment opportunities for sociologists, and 3) epistemological changes within sociology as a discipline, and changing epistemological orientations of sociologists.

Referring Actors in Change Processes

From the very beginning the role of the actor was an important concept in cy-
bernetics. Whereas classical approaches, first-order cybernetics, kept up to exter-
nalize the actor, second-order cybernetics tries to include the actor into the (ma-
terial or epistemic) feedback loops. In first-order cybernetics the definition and
adjustment of goals in control behavior is not part of the control structure. Only
the activities of an actor in changing the actuating variable (stellgröße) are includ-
ed. Second-order cybernetics a much broader picture of the interactions between
problem, feedback loop, and goal-seeking processes is drawn. In social system
theory the concept of the observer plays a similar role. Complexity is increased by
introducing 2nd and 3rd order observers when trying to explain social situations.

The role of actors is an important issue in sustainability research and politics.
Suggestions for agency alternate between appeal to individual, concerned people,
and attempts to design new technical and social frameworks. Change agents, for
example, are addressed as those to have the crucial influences on future strands
of development to now, these are conceptualized in a first-order model, reflect-
ing neither the origin of their ideas nor the function they have for adjusting
social systems to changing framework conditions. A second-order perspective
could contribute to approaching these questions in a wider perspective.

There is an important, yet widely ignored, report by Y Dror on the Capacity
to Govern. Cybernetic theory and epistemology does not play an important role
in his conceptions. However, it seems helpful to re-interprete some of his sug-
gestions applying cybernetic concepts. Especially the differentiation of actors and
their role in change processes will contribute to a better understanding of sus-
tainability strategies.

Informal Community at the Workplace As a Defense Strategy in
the Situation of Emotional Dissonance or Emotional Alienation:
Sociological Study of Emotional Labor of Cardio-Surgical Nurses in
Today's Russia

The paper based on the results of the pilot study into the peculiarities of emo-
tional labor of hospital nurses at the cardiac surgery departments in Moscow and
Rostov-on-Don in the framework of the sociology of emotions of Arlie Hochschild.
The analysis of 15 semi-structured interviews with female professional nurses aged
between 25 and 40 showed that emotional work was the essential part of
their job, they were conscious of the need of expressing special emotions for pa-
tients and their relatives. It was discovered that due to rigid professional hier-
archy and hard working conditions the nurses perform autonomous emotional labor
(term used by Martin Toliich). Such labor is not regulated by the hospital
management, but it is consistent with the norms of general emotional culture
requiring nurses to express care, sympathy, empathy, etc. The nurses of the card-
iac surgery are not specially trained for emotional labor, so they have to develop
these skills on the job. It's possible to say that the nurses present phänomenal
emotion management (according to classification of S. C. Bolton). They are per-
sueded of underestimation of their labor by doctors in particular and by patients
and society in general (via the social crisis in Russia). Hence the nurses are faced
with the syndrome of emotional burnout and emotional self-alienation. They try
to control negative emotions (annoyance, anger, despair) and to “humanize” the
relationships with patients, but it is very difficult for them. In these circumstan-
ces the nurses form a close-knit community, whose members support each other.
Such informal community incorporates the following features: openness, humor,
talking about colleagues and patients, solidarity. This community helps neutralize
the emotional tensions, dissonances and supports the emotional balance. So the
nurses rather try to adjust to requirements and problems of their profession and
maybe therefore they don't experience bitter emotional self-alienation.

SIMPSON, ALEX* (University of York, as1520@york.ac.uk)

Understanding the Market: An Ethnographic Exploration of the
City of London

Reflecting on the role markets play in shaping the interests and actions of
social life, this paper presents the argument for how institutional ethnography
furthers our understanding of the discursive creation and enactment of markets as
part of daily life. Drawing on data emerging from an ethnographic study of
financial institutions within the City of London, this paper asks how markets are
created, maintained and ideologically positioned though the everyday actions of
economic actors located within key financial institutions.

Informed by Goffman's (1961; 1963) work on the body as a site of cultural
inscription, it is argued that markets are essentially constructed and managed
through the production of dominant cultural sensibilities. This blended approach
of cultural economics identifies the market as an enacted phenomenon, bounded
socially and spatially within institutions of finance. By focusing on the embedded
cultures, enacted through the daily practices within the City's financial institu-
tions, we can explore how the market operates in terms of its agenda, practices
and conflicts with the outside world.

Through exploring the lived experiences of those working within the City of
London, light is shed on the unfolding effects of a deregulated economic land-
scape that exalts the principles of the market which legitimises the production
of social harm through its own unique set of experiences and ideologies. As a result,
this paper explores the way in which managers and traders, in their daily capacity
as market actors, seek to utilise existing technologies, architecture and habits to
create a more efficient market - one where individuals are better placed to draw
profit from their own financial acumen whilst insulated from the broader, social
costs of economic action. Re-examining the study of the risk management, institu-
tional ethnography serves to ameliorate our understanding of how embed-
ded cultures of finance actively create and manage markets.
“Other within”, Seen from an orientalist perspective, the sociological description of the Arab-Jews had engendered a negative reflection of these communities. At the same time it paved the way for a contrasting and a more “legitimate” model upon which the ideal Israeli archetype could be defined. The main endeavor of this paper is to show how an Israeli “legitimate” identity has been constructed in the context of the sociological analysis in a way that strengthened the political legitimacy and bolster its national inner logic.

Music As Leisure in the 21st Century: The ‘sportisation’ of Music Fandom

The term ‘sportisation’ (Elias and Dunning, 2008) is used by figurationalists in a general sense to document the development of rules and regulations for previously chaotic games (e.g. boxing and football) into the commercialised, controlled ‘sports’ that occupy such an important position in modern society. King (1997) focuses on the role that commercial forces, in particular the introduction of modern all-seater football stadiums, have had on the emotional management and masculine identities of sports fans. This paper readdresses the focus on leisure (in this case music fandom) in the figurational sociology of sport and leisure, charting the impact that ‘sportisation’ processes and marketplace influences have had on the live music experience of heavy metal fans.

Drawing from a three year study of heavy metal subculture which incorporated data from participant-observation and interviews, this paper examines how transformations in modern music ‘arenas’ has significantly diminished the quality of the live music experience. This is encapsulated by the problematic issues raised in terms of emotional management and identity projection that that fans have experienced in the context of such transformations. In particular, focus is attributed to the importance of the heavy metal rituals (moshing, crowd-surfing) which have previously been facilitated in ‘controlled’ environments that allowed for the ‘de-controlling’ of emotions and exaggerated displays of masculinity. Following the changes in such subcultural spaces, particularly the increased seating in large music venues, the strategies used by fans to re-conceptualise ‘established’ notions of masculinity within the scene and to demonstrate their heavy metal identity are explored.

SINGH, JAGSIR* (CSSS/SSS, JNU, jagjsirbrar1@yahoo.co.in)

Urban Inequality and Health

This paper is a modest attempt to underline the urban inequality and its impact on health. It describes the health implications of social inequalities within city. It also describes the health problems from which low-income groups in urban areas suffer more than richer groups including those that are not linked to poor sanitary conditions and those that are more linked to relative poverty (and thus the level of inequality) than to absolute poverty. Study on the health of rich and poor households within cities show the much larger burden of disease, injury, and premature death that low-income groups face. Most of this burden is easily prevented because it is a result of their unequal access to homes which have provision for piped water, sanitation, drainage and garbage collection, and adequate health care. Thus with this we can say that health inequality never has been an independent phenomenon. By using health and social impacts of urban inequality as a focal point of the discussion, the paper also intends to provoke thought on some of the fundamental issues of human development trajectories.

Role of New Communication Technology Initiatives (NCTI) in Bridging the Digital Divide: The Case of a North Indian State

Communication technology includes the hardware equipment, organizational structure and social values by which individual collect process and exchange information. The new communication technology (NCT), such as satellites, cable, television, wireless telephony, the internet, computers, laptop, iPod, have certain characteristics that are similar in some respect of those of both interpersonal communication as well as of mass communication. This NCT, also called as new media, produces the characteristics of both interpersonal and mass communications. Information exchange via the new media is interactive, meaning that the participants in a communication process have control over, and can exchange roles in their mutual discourse. The present paper is aimed to explore the role of NCT in bridging the gap created by the forces of globalisation in developing countries like India by focusing on a NCTI launched recently by the state government of Uttar Pradesh i.e. Scheme of distributing laptop to every undergraduate student who took admission in the year 2012 or later in any college/university of the state irrespective of their social background. A cluster sample (N=399) drawn from a PG College of Western UP includes both the males and females. The study results indicates that the representation of females was relatively high in all social categories. About half of the respondents were having their own mobile phones. The tendency of keeping mobile phone was low among the students of upper castes. Thus, this NCTI may be helpful not only in bridging the digital divide but also be a powerful instrument of women empowerment in rural and urban areas.

SINGH, PARLO* (Griffith University, parlo.singh@griffith.edu.au)

Developmental Logics Beyond the Divide

Developmental projects have been the common denominator of the post-1945 global order irrespective of political divides and divergent economic systems. Whether we look at the emerging postcolonial states of the South, state socialist Europe of the 1970s or the US-Allied developmental policies directed at industrializing ‘homogenous’ national spaces were adopted across the globe. However, the 1970s this model showed signs of exhaustion. At the time when ‘Limits to Growth’ came out in 1972, the Romanian state was implementing a new strategy for economic progress: it had negotiated with IMF and EBRD the ‘developing country’ status in order to facilitate foreign-debt financed investments and embark on export-led growth. This paper aims to shed new light on a particular kind of developmental continuum in an effort to question the wide-spread assumptions about the relationship between local variations and global structural constraints, namely the tendency in terms of explanatory frameworks to emphasize only particular local specificities, and to ignore external factors for certain socio-spatial formations. Drawing on extensive fieldwork in a Romanian Danube-riparian port city, I argue that it was the contingency of the 1977 earthquake that turned the city and the surrounding region into a laboratory for a new kind of developmental logic. After the downfall of the socialistic regime in 1989, the very same region became yet again part of a new understanding of development. In accordance with pre-accession criteria for EU membership, Less Favored Zones have been established in 1998 in order to attract foreign direct investment through long term tax exemptions.

Instead of seeking to establish path-dependencies linking state socialism with its aftermath, I conceptualize ‘contingent development’ as a way to look into improvement schemes that result from the arbitrariness of a natural disaster in relation to local changes that result from the dynamic of global capital since the 1970s.
SADOVNIK, ALAN (Rutgers, The State University of New Jersey)

Critical Policy Studies: The Contribution of Basil Bernstein’s Knowledge Code Theory

Critical policy studies adopts a discourse analytic approach to policy research, drawing specifically on the Foucauldian concepts of discourse, regimes of disciplinary power (bio-politics and panoptic surveillance principles), and subject positions; and the Bourdieuan concepts of field, capital and habitus. A core aim of critical policy studies is to analyse the ways in which supranational organisations, such as the OECD, increasingly regulate official national curriculums given their role in the development, administration and reportage of tests which are ‘closely linked with the debate about national standards’ expressed as comparative performance on basic mathematics, scientific and literacy skills (Tyler, 2010: 145). However, drawing from this theoretical work is a modelling of the production, recontextualisation, and acquisition of knowledge codes from the macro level of supranational organisations to the local level of school practices. This was the focus of Basil Bernstein’s sociological theory of education. This approach, Bernstein (1975–76) maintained, distinguished his ‘particular corpus of work from that of Foucault or Bourdieu.’

This paper undertakes three tasks. Firstly, it critically reviews the literature that has compared and contrasted the sociological approach of Bernstein to Bourdieu (Maton, 2008; Harker and May, 1993, Hasan, 1999) and Foucault (Diaz, 1984; Tyler, 1990). The paper specifically the knowledge codes underpinning supranational, national and local school curriculum models, and the potential consequences of such knowledge codes on different groups of students. Secondly, it explores Bernstein’s claim about his distinctive contribution to modelling knowledge codes (the structuring of curricula) in terms of his sociological analysis of the knowledge codes to analysing policy enactment around standardised national testing forces. Thirdly, it tests the usefulness of Bernstein’s theory of knowledge codes to assessing policy enactment of pre-existing standardised national testing on examples from two contexts, namely Queensland, Australia and Newkirk, New Jersey, USA.

RC04-88.1

SINGH, PARLO* (Griffith University, parlo.singh@griffith.edu.au) SADOVNIK, ALAN (Rutgers, The State University of New Jersey)

Totally Pedagogised Societies. Sociologies of the Pedagogic Communication of Knowledge

Basil Bernstein (2000: 365) asks: ‘How real is the contemporary pedagogic panic?’ And then suggests that a new sociological project might focus on the diverse sites, generating both claims for changes in knowledge forms and displacement of and replacement by new forms, creating a new field of knowledge positions, sponsors, designers, and transmitters’ (2000: 368). Bernstein’s ideas have been the springboard for an analysis of: (1) the intellectual field of the new sociology of education (McLure, 2013); (2) the epistemological analysis of a social realist project on knowledge (Moore, 2013) and geographies of knowledge (Pasias & Roussakis, 2012); (3) the transformation of teachers’ work (Robertson, 2013) and teacher professionalism (Beck, 2012); (4) the bio-politics of education and health policies (Evans, 2012); and (5) lifelong learning and new apprenticeship discourses (Genzitz, 2008; Poulet, 2010).

Our paper aims to build on this work in two ways. First, we undertake a meta-analysis of the research literature drawing on Bernstein’s concept of the totally pedagogised society, as well as literature forging a new direction for the sociology of education on the basis of Bernstein’s work. Second, we distinguish between (1) knowledge codes – the structuring of curricula and (2) pedagogic codes – the structuring of specialised communication for teaching. In so doing, we propose an alternative intellectual trajectory for the sociology of education. Specifically, we are interested in analysing new modes of global governance through pedagogic communication devices taken up in a range of formal and informal agencies to construct 24/7 spaces of learning, particular modes of learning engagement, and pedagogic identities. Our objective here is to simply lay out the possibilities for developing a sociology to examine new modes of pedagogic governance and the new spatial and temporal configurations of new pedagogic modes (see Tyler, 2001).

Globalization, ICT and Professional Education in India

The process of globalization has posed new challenges in every sphere of social, economic and cultural life of both the developed and developing societies. The transnational mobility of professionals has been increased in last two decades throughout the world. The professional education in India is also under process of transformation as a result of the pressing demands of globalization of professions. Apart from the existing professions, new categories of professions with new work ethos and work atmosphere have been emerged. The professional education in India also needs to transform in order to compete at the global level. It also demands the homogenization of certain basic elements of the professional education on the one hand and a thrust to include the context of the socio-cultural milieu of the given society on the other. As the professional education requires huge financial resources, the quality of professional education and institutions varies between and within the developed and developed societies. The poor countries have invested more on the expansion of basic professional manpower rather than on the post-secondary professionals particularly in the field of education and health looking into their pressing development needs. The rich developed countries, however, have focused more on the expansion of post-secondary professional manpower in order to stop outsourcing from their countries. In India, however, there have been expansions of both the basic professional training as well as of the post-secondary professional education. E-learning has become an essential component of professional education in the globalized unequal world. The present paper analyses the various dimensions of intricate relationship between globalization, ICT and professional education in post-globalization era.

Religion and Colonial Encounters in the Straits Settlements: From Self-Governance to Institutional Regulation

The interface between non-Christian religions in the colonies and the British Empire has attracted considerable scholarly interest and produced by now exciting social science and historical literature from all corners of the globe. In comparison to the rich and nuanced African and Indian material, one struggles to find similar works on the former British colonies in Southeast Asia. This paper attempts to redress this imbalance by turning the gaze to the religious landscape of the Straits Settlements, an administrative unit of British colonial initiative under which these rather diverse and scattered geographical entities were united between 1826 and 1945. I demonstrate that the adopted method of dealing with the religious pluralism of colonized populations was an adherence to the broad articulated principles of religious tolerance and non-intervention, but which often could not be followed through in practice. Through the 19th century, the colonial context in the Straits Settlements was not, by and large, detrimental for expressions of non-Christian religiosity. The absence of restraints and control in this arena, undoubtedly, enabled expressions of non-Christian religions and facilitated their early institutionalization in this region.

I thus argue that from the mid-19th Century onwards, the colonial context in the Straits Settlements was ‘enabling’ for religious communities in the Straits Settlements. We see in these times a vigorous sense of religious solidarity and community, witnessed in intense institution building and founding places of worship, cultural and religious organizations across Hindu, Muslim, Christian, Buddhist and other communities. However, by the early decades of the 20th century, this ‘liberal’ attitude was supplanted by a new vocabulary of regulation, supervision and administration of non-Christian religions. With this shift, new institutional structures, laws and mechanisms were established for managing non-Christian religions in the Straits Settlements signaling a move away from self-governance towards greater institutional regulation and supervision.

Institutional Conflict Settlement Field in Brazil: Four Levels of Justice System

The paper proposes an interpretation of the operation of the State conflict settlement field in Brazil. It takes the perspective of disputes among corporations, knowledge and practices that take part of this field. A reflection on the Brazilian case proposes the coexistence of at least four conflict settlement logics (or four interaction levels) to which correspond hierarchies of rituals, proceedings, persons, types of conflict and places. The study is based on eight years of ethnographic approach in courts and State informal services of justice. The observation on ordinary courts proceedings, informal courts, extra-judicial techniques, formal and informal police proceedings (including illegal ones) leads to an analysis of the coexistence and disputes in a field that produces unequal treatment of the citizens.

Intergenerational and Life-Course Determinants of Upward Mobility

Offspring originating from families with fewer socioeconomic resources are in a generally disadvantaged position in later life and in lower socioeconomic positions and attaining lower educational qualifications. Also life events in early adulthood may have an effect on socioeconomic attainment. These effects, however, may be weaker among those with higher compared to lower parental background. This study examines the intergenerational and life-course mechanisms of upward mobility. We observe which life-course characteristics in early adulthood (such as educational attainments, unemployment, living arrangements, marital status and health) decrease the risk of entering upper non-manual social class among those who originate from other social classes. Second, the contribution of factors indicating parental resources is analyzed in order to find out whether higher parental background protects from the effect of risky life-course characteristics.

The longitudinal register-based data-set used in this study are a representaive 11 % sample of the whole Finnish population. We follow a birth cohort born between 1955 and 1961. A first wave interview was conducted in 1977 as a full-time sample. The survey was conducted every 20 years from adolescence till the age of 30+ offers a chance to estimate the processes of accumulating disadvantages among individuals and households. Analyses will be conducted in event history model framework. Our objective is to broaden the perspective on intergenerational transmission of inequalities by describing the life-course mechanisms of occupational attainment in more detail.

Childhood Inequalities in French Speaking and Anglo-Saxon Sociologies

Childhood inequalities in French speaking and Anglo-Saxon sociologies According to academic traditions or sociopolitical context, the issue of inequalities in childhood has been addressed in different ways. The French speaking sociological discussion has been quite specific compared to the Anglo-Saxon. Those differences will be presented and discussed. Paradoxically, it is in putting aside the question of democratization and inequalities of opportunities that the child emerged as an actor in French speaking sociology, on a first step. As in the French context, the “Republican Universalism” has been the main reference, childhood inequalities have been mainly studied in terms of social stratification. The other side, in the Anglo-Saxon context, diversity has been the main reference, priority being given to problematics as gender or ethnicity. We intend to examine how those differences influence the way childhood inequalities are studied and how these categorizations are transformed, and their intersectionality addressed.

La question des inégalités de l’enfance s’est posée de manière différente suivant les traditions académiques et les contextes socio-politiques. On s’interrogera sur la spécificité du contexte francophone, par rapport aux contextes anglophones. Paradoxalement, c’est dans un premier temps en se dégageant des problématiques de démocratisation et d’égalité des chances qu’est apparu l’enfant comme acteur sur la scène sociologique francophone. Le poids de l’universalisme républicain a amené à reposer la question des inégalités dans un régime d’interprétation différent du contexte anglo-saxon où les questions de la diversité s’imposent pour penser ces inégalités, qu’elles soient posées en termes de classes sociales, de genre ou ethniques. Dans quelle mesure la prise en compte de l’enfant remet - elle en jeu ces problématiques ? En quoi penser les inégalités à cet âge de la vie oblige à affronter certaines catégorisations et inversement en quoi penser les inégalités donne une vision différente de l’enfance et des enfants ?

Projection of Family in Representation of Intellectual Youth in Russia

Russian demographic health should be based on development of positive trends in fertility, marriage and family relations of young generation of the country. Considering that the generation born in «new" Russia, characterized by new ideas about life strategies, value orientations, enters in reproductive age, it is important to assess similarities and differences between role of families and children in this generation representations regarding previous historical period. This study aims to determine specifics of modern marriage and reproductive behavior of young people receiving professional education in Russia. This group of young people is more demanding to high standards of living, thereby extending these requirements to sphere of marriage and family. This specificity necessitates more detailed study of their attitudes and motivations in marriage and reproductive behavior. Identification of possible limits of marriage and family and reproductive student's attitudes is scientific problem of this study.

In 2012-2013 Center of Social Demography and Economic Sociology, Institute of Socio-Political Research conducted a survey of students in higher and secondary education full-time in 2013. The study was conducted in form of distribution questionnaire prepared by the Center. The survey was conducted in the cities of Central, North Caucasus, Urals and Volga federal districts.

The study had a multidimensional nature, and it is focused on identification of general and specific issues of reproductive behavior of most educated part of Russian society to clarify the state family policy for more effective implementation and stabilization of demographic situation in the country. On this basis, were selected areas (subjects) to conduct the survey, which allowed us to identify the specifics of students ideas and their reproductive and matrimonial intentions between metropolis and provinces, between different regions of the country, between subjects of different types of administrative-territorial formations.
ernization are often conceptualized as “learning” i.e., as formation of pro-legal cultures based on an unquestioned value of the rule of law. Empirical research on the Polish investors abroad put in question such simplistic views. Firstly, in light of this research, the processes of learning are much more complicated, multidimensional and multidirectional. Secondly, the state and its agencies play here an important role - both in form of protection of rights and interests of domestic actors (national markets), and in form of protection of rights an interests of investors abroad (rights and interests of its citizens and companies). Therefore, the rule of law in a globalizing world presents a complicated negotiation game not only of values, but also of interests, between strong and weak agents, private and public.

Risk, Rumour, Radiation: Japan’s Nuclear Catastrophe and the Politics of the Apocalyptic

This paper analyzes the particularities of the Japanese approach to risk communication around radiation after 3/11. Radioactive contamination in Japan was first measured and its results published by the Japanese Ministry of Education, Culture, Sports, Science and Technology (MEXT) and the Japan Atomic Energy Agency on March 14, 2011, three days after the Great East Japan Earthquake ravaged the country. The monitoring effort was to last for a year and a half, and would have involved thousands of devices deployed. Official radiation monitoring in the following weeks continued in an haphazard manner, yielding vague and at times misleading data that failed to provide actionable information on the necessities of evacuation to the local population.

Within a week of the disaster, various groups hacked Geiger counters to enable collective radiation monitoring, resulting in a higher degree of granularity of data available to the affected population. Still, while the provided data was more transparent and comprehensive than that which had previously been made available to the affected population, the groups insisted that their actions were complementary to, rather than antagonistic to, those of the government and TEPCO and that they should not be seen as political.

The paper explores the role of digital media and technology in altering the production of and access to vital information after disasters.

PLEN-8.2

SKEGGS, BEVERLY* (University of London, B.Skeggs@gold.ac.uk)

A Global Sociology of Value and Values: How to Move beyond the Analytic of Capital?

Many theories adopt the metaphor of capital to explore power (e.g. Bourdieu), and to analyse personal (and via human capital), or action (via rational action theories), leading some sociologists to suggest that not just capital but the analytic capital has subsumed all areas of life. The relationship between quantification and qualification has been complicated further by the incursion of calculation (via algorithms) into many aspects of our daily life.

Whilst, no doubt, capital behaves according to its own logic, finding new lines of flight, converting affects such as sentiment and suffering into value, making multi-culturalism marketable, generating new forms of bio-capital, and making many of our actions subject to the logic of calculation (academic writing for instance), why should sociologists do likewise?

If we only understand the world from the perspective of capital relations what do we miss seeing? Are there any values remaining or remained? How do we understand the relationship between value and values?

The Motivations of the Opponents of a Social Memory Implant. the Re/Building of the Royal Castle in Poznań (2010-2014)

In 2010 began the re/building of the Royal Castle in the city of Poznań, which was demolished in 1796. The process, which was initiated by the Committee for the Rebuilding of the Royal Castle arouses strong controversy. The builders of the castle are accused of falsifying history (it is not sure how the building looked like before being taken to pieces) and destroying the original remains of the old castle. However, the committee was able to reach both political and social support for the re/building and collect money for this aim.

Due to a very long absence of the castle in the urban space and lack of any confidence when it comes to its outlook, the object which is being built can be called an implant of social memory. An implant of memory is an object, which function is to construct a particular knowledge of the past, becoming the carrier of this knowledge through its own form – imitating forms of ancient objects, buildings etc.

The speech will be devoted to the motivations of the people who publicly criticize the re/construction process and take part in different protests against it - the opponents of the Committee for the Rebuilding of the Royal Castle. There will be presented strategies with the help of which those people explain their engagement in the protests and their resistance to the re/building process. Conclusions will be presented based on the basis of a series of individual in-depth interviews carried out at the turn of 2012 and 2013.

Architects and Urban Planning

This presentation discusses to what degree the architect profession is able to define what counts as relevant knowledge in urban development and urban planning processes, based on material from Norway. Urban planning is a field constituted by numerous actors/stakeholders representing different knowledge traditions implying that they do not always speak the same language. However, in order to handle environmental problems, transport and other infrastructure and land use, multidisciplinary knowledge and cooperation between different sectors are required. In Norway, the architectural profession has long had a key role in urban planning and positions as heads of urban planning administrations have been a power base for architects. However, architects’ judgments and forms of knowledge are no longer hegemonic and their power base is thus weakening. This is partly caused by an increasing proportion of planning propositions (like zoning plans) prepared by private actors. Moreover, local authorities increasingly seem to depend on private funding to accomplish housing and infrastructure projects.

SKOGHEIM, RAGNHILD* (Inst Urban & Regional Research, ragnhild.skogheim@nibir.no)

Architecture As a Hybrid Profession

Hybrid organizations and professions are characterized by conflicting goals, which may cause tensions. For architects, such tensions are typically between art and market, and between ideal ideas and conceptions of design, and preferences and claims from clients/principals and others. Although market dependence is intrinsic in the role and history of the profession, this still allows an autonomy for architects. When dealing with this tension, some architects are quite pragmatic and accept and adjust to prevailing conditions. Other architects are more uncompromising and insist that creativity requires freedom from external constraints. Particular architect “heroes” espouse autonomy and distance from the service part of the profession. This may seem like a paradox as architects more than most other professionals depend on, and have to adjust to, the power, wealth, favor and money of their clients.

Rockefeller Foundation’s Role in Promoting Social Sciences in Interwar Czechoslovakia

This paper discusses the place of geopolitical concerns in the policy of the Rockefeller Foundation towards social sciences in Czechoslovakia between the two world wars. The RF provided scholarships for Czechoslovak social scientists (around 35) and sponsored social science work at various Czechoslovak institutions. The scholars supported by the RF were sociologists, lawyers, and economists, both German and Czech-speaking. Their individual fates display wide variation: several perished during WWII, others escaped and became recipients of displaced scholars grants, still others were exiled after 1948, a handful joined the Nazi and later the Communist structures. Only those who chose emigration produced academic work of some importance. The dominant geopolitical concerns were reflected in the effort of the RF to maintain a balance between German and Czech scholars and institutions supported or in promoting research in areas that were expected to contribute to maintaining the stability of the Czechoslovak state or Central Europe such as unemployment and social welfare, interethnic relations or the so-called Danubian studies. Key among Czechoslovak institutions in social sciences that received support from the RF was the Social Institute, affiliated with the Ministry of Social Welfare, the incubator of innovative ideas that directly influenced Czechoslovak social welfare legislation and policies. RF also funded a large research project on the urbanization of Prague that became the first major empirical study in Czech sociology while another study on German-Czech relations could not materialize due to the dismemberment of Czechoslovakia. The RF made significant contributions to the development of empirical social research and social policy in Czechoslovakia, but the overall impact of its funding was virtually erased by adverse geopolitical conditions and turbulent political developments in the period 1938-1948.

The Elusive Code: Anomalous Cultures of Civil Society

This paper attempts to add new evidence and theoretical insight to the literature on the boundaries of civil society inaugurated within cultural sociology by Jeffrey Alexander and Philip Smith. It argues, first, that unlike the US case, the codes of civil society in ethnically heterogeneous places are the product of multiple external oppositions which can, in certain cases, result in alternative or contrary codings. For instance, some currents in the Czech, Polish and other Slavic nationalism in the 19th century construed the Germans, their principal “other”, as rational and efficient, taking pride in the contrary in being emotional and unpractical. Second, the paper shows that civil societies are fragmented and the general code of civil society is appropriated differentially by different social groups whose interpretation of the basic binaries is dependent on their particular social experience as well as their relative position to other groups. For example, as pointed out by Marada, Buchowski and other authors, the cultural codings characteristic of the heirs of the anti-Communist dissent in East Central Europe are in some aspects, including the role of formal procedures and professionalism, completely at odds with the codes, retained by Western-style social movement organizations. With its roots in a conspirative underground community this dissident culture doesn’t code personal ties and secrecy as counter-democratic. On a general level, the paper argues for a more historically-oriented approach to the study of cultural structures of civil society that recognizes that the generalized codes are embedded in concrete interpretative traditions and, as such, are unstable, contested and often ambiguous.

Medical and Legislative Gatekeeping in ART: Narrow Trajectories in the Realm of Miracles

The techniques of assisted reproduction have the potential to free us from the bodily limitations and open the physical reproduction to people who would not conceive without medical intervention. The access to this type of treatment is regulated by numerous ways, both formally and informally. Reproductive medicine, seemingly firmly anchored in scientific objectivity, and often presented as a revolutionary or miraculous cure for anyone, in its praxis works as a controlling mechanism over bodies and the reproductive capacities of citizens, differentiating between the categories of patients. The Czech Republic, heir of its long tradition of infertility treatment, wide network of infertility clinics, competitive success rates and liberal regulation of the ART regarding the range of procedures allowed, became one of the most popular destinations for reproductive tourism. On the other hand, there is a strict regulation of the access to the ART based on the characteristics of patients such as their age, medical status and partner’s availability. The paper will focus on the process of the legislative and medical gatekeeping as a genuine example of the foucauldian biopower, as a control over bodies, interaction and norms of population performed by the medical professionals and by the administration and regulation of treatment. The paper is based on the two sources of data: interviews with 15 medical professionals working in the field of ART and the analysis of the Czech parliament debate over the new legislative limits of ART (2011). The analysis focused on the following questions: what is the position of various actors in the process, how is nature and normality, in the context of ART, discussed, what kinds of citizens/patients are defined by the clinicians and parliament members as deserving candidates for infertility treatment, and, how these regulatory mechanisms can be reflected in the context of “biotech age” and globalized biopolitics.

Causes and Consequences of Time Investment in Friendship Networks: A Dynamic Analysis of the Polish Panel Survey PolPan 1988-2013

Time investment in one's friendship network depends on the utility function U = log(y) + (1 - log(y)) that people maximize, where y is the social tie parameter (between 0 and 1) measuring the i-th actor’s taste for bonding with friends, and O refers to other leisure-time activities. In the theoretical part of the paper, we connect this utility function with time investment in friendship network (I) assuming that the numbers of friends and the density of their contacts are crucial for the amount of time that people actually spend with friends. The Polish Panel Survey POLPAN 1988-2013 contains information on how frequently respondents meet with friends (I), our main leisure-time variable, numbers of friends (N), density of their contacts (D), and several socio-demographic characteristics of respondents for the period of measurement (t) and earlier periods (t-1, t-2, t-3, where the period-units are 5-year waves of the POLPAN study). In the empirical part of the paper we examine main determinants of time investment in one's friendship network, focusing on family formation variables. We show that time investment, as well as the change in number of friends and the change in density of contacts among friends, depend on marital status, number of children, and number of people in the household. In addition, we confirm previous findings that the number of relevant ties among friends' influence income attainment and that having friends with entrepreneurial experience increases people's chances of establishing their own businesses, independently of the number of potential bridges between friends. The paper concludes with a discussion on meeting friends as a form of leisure activity that plays a significant role in the formation of social capital, and has important implications for generating social inequality.

Hazard Vulnerability and Housing Inequity after the Tuscaloosa, Alabama Tornado: A Critical Analysis of Rebuilding Efforts

The tornadoes that struck Tuscaloosa, AL and surrounding areas on April 27, 2011 caused tremendous destruction to both residences and businesses. The highest levels of damage occurred among low-income residences, both single and multifamily. In this paper, we apply hazard vulnerability theory to the rebuilding of Tuscaloosa. Hazard vulnerability theory focuses on the effects of social factors, including race, gender, place, and socioeconomic status, affect a population’s preparedness for a natural disaster. We extend this perspective into the recovery process, particularly on the availability of low-income, multifamily housing approximately two years after the storm. Data from multiple sources, including city planning resources, apartment websites, and interviews with city personnel, indicate that multifamily residences that have been constructed to replace destroyed or damaged housing complexes generally demand higher rents and have fewer units available for rent than the complexes that existed before the storm. Additionally, even as a residential construction boom has occurred in Tuscaloosa, the following the storm, the overwhelming sales have been marketed to the college student population, even though none of the multifamily housing complexes destroyed in the storm solely housed college students. Although low-income populations were more affected than student populations, the economic advantages of building for student populations (i.e. "disaster capitalism") have outweighed the social responsibility of rebuilding residences for low-income individuals. We conclude that low-income residents of Tuscaloosa were doubly vulnerable to natural disasters; not only were they more likely to be living in structurally flawed housing before the storm, they were also left out of the rebuilding process after the tornado. We discuss some of the potential consequences of the reconstruction of Tuscaloosa, and propose suggestions that can limit social inequality in the rebuilding process for Tuscaloosa and other cities that have been harmed by natural disasters.

SMEBY, JENS-CHRISTIAN* (Oslo and Akershus University College of Applied Sciences, Jens-Christian.Smeby@hioa.no)

Professional Knowledge and Expertise

Professions are according to Abbott the most important way expertise is institutionalised in modern societies. Sociologists have studied the characteristics of professionalism as well as the role of professionals in society. Even though an abstract knowledge is considered a core if not the core characteristics of professions, sociologists have examined the characteristics of professional knowledge used in occupational practise only to a limited extent. In my paper I discuss implications within the literature on expertise and argue that some of these perspectives are highly relevant to complement sociologist’s understanding of professional knowledge.

While sociologists have emphasised that abstract knowledge acquired in higher education is an important characteristics of professionalism, practical training and profet knowledge is found to be the most important professional knowledge. Yet abstract knowledge is a somewhat mysterious term often considered as opposed to abstract explicit knowledge. Based on questioning why knowledge is tacit, Harry Collins (2010) distinguishes between three types of tacit knowledge. This distinction opens up for a more nuanced perspective on the relationship between tacit and explicit abstract knowledge. His perspective also imply that explicit knowledge play an important role in the development of expertise and transmission of knowledge.

Professional work is characterised by uncertainy. Inspired by Collins different types of tacit knowledge, I distinguish between three types of uncertainity that have significant importance for the reliability of professional expertise: 1) Explicit uncertainy related to uncertain knowledge; 2) Cognitive uncertainy related to...
characteristics of the human mind (heuristics and biases) and; 3) Interactional uncertainty related to interpretation and interaction. An explicit abstract knowledge base is an important resource in handling all these types of uncertainty, but these uncertainties can never be totally abolished.

Tap Water and the Public Policy

Water is the source of life on the earth and the driving force of human development. The diamond-water paradox presented by A. Smith shows the underestimated economic value of water. However, it has its social value that can be viewed from human dimension perspective.

The knowledge of how citizens perceive the drinking water is essential to understanding the political, economic, technological context of the public policy. According to social-technical survey, 82% of citizens in Saint-Petersburg are not satisfied with the quality of tap water. These figures demonstrate, that despite the fact the city water is cleaned by ultraviolet and has biomonitoring system to meet the high requirements of international water standards, there are some hidden issues explaining this situation.

SPb water is a nexus of generations inhabiting this place: it keeps the memory of past times, preserves the spiritual fabric of the society and gives an incentive to new generations for further development. However, the industrialization has destroyed this consciousness. The growth of scientific knowledge has enabled experts to make a strict distinction between bad natural water that had adverse effects on people health and good filtered water that had the status of paid public services.

It is believed, SPb water is rusty and dangerous to drink, because city officials take bribes and do not provide the modernization of water infrastructure system in time. Public dissatisfaction takes the form of disagreement with the public policy, it prompts citizens to buy bottled water sold by water transnationals, although it is the same tap water, in fact. As a result, SPb water market is showing 12% annual growth.

Basing on the citizens’ concerns on the water problem, one can construct the Index of tap water as an indicator of the level of public confidence in the public policy.

Daily Practises of Home Making and Belonging Among Owner-Occupiers and Tenants in a Disadvantaged Neighbourhood in the Netherlands

In this period of globalisation daily practices of local home making and feeling at home are considered important. In order to illustrate such practices the focus of this paper is on a street in a disadvantaged neighbourhood in a Southern city in the Netherlands. In this street tenants and owner-occupiers with a different ethnic background - including native born - are interviewed and observed. In this natural laboratory, the street was divided into clusters; those with only tenants, those with only owner-occupiers, and those having a mix of both. This offers insight into the role class and ethnicity play in the homogeneous and mixed micro-settings and its impact on physical and social practices of home making and belonging/ feeling at home. Therefore attention is paid to narratives and the informal organization of different living spaces, territory-making activities, and practices in the different domestic clusters. This shows that the domestic space can be experienced as a vehicle of intimacy and sociability and in other clusters as encouraging alienation. Such practices can also take place in the same cluster, resulting in mechanisms of inclusion and exclusion which in turn go together with boundaries between public, private and community spaces.

Sмирнов, Петри* (Григорий Смирнов, smirnovpi@mail.ru)

Future Of Democracy In The Modern World

Democracy is one of the ancient forms of social self-government, which possesses many advantages and democratization of a society is a progressive process. However, today mass media spread illusory ideas about democracy as the terminal value which presence will provide the peace and well-being on the Earth. Relying on this illusion, Western democracies, headed by the USA, stimulate democratization process in the world, using ideological, political, economic and military means.

However the facts of real history disprove this illusion. Democratic states are not less aggressive, than authoritarian ones. Athens, Sparta and Rome, all European democracies during epoch of colonialism and the USA (during all its history) were aggressive.

We consider democracy as an instrumental value. It appears to be effective and naturally arises when society reaches sufficient consent in regards to basic values (one God for everyone, nation, person, society, etc.). When such agreement not exists, a dictatorship provides the minimum order in a society. For example, dictatorships of Cromwell, Napoleon, Stalin, Pinochet, etc.

There is no consent regarding basic universal values in the modern world. Hardy a man and his rights will be recognized as the highest values by billions of people in the near future. The policy of Western countries aimed at their promotion, leads to anarchy and violence. Therefore it is difficult to expect peaceful expansion of democracy on a global scale. Today’s biggest task for social scientists to reveal basic values in regards to which mankind can come to the consent.

Transnational Family Life from the Perspective of Zimbabwean Male Migrants in South Africa

The early years of the new millennium saw a rise in the influx of Zimbabwean migrants to neighbouring South Africa. Due to the growing economic turmoil, political crisis and human rights violations in Zimbabwe many citizens from this country have crossed the border into South Africa to find employment and/or seek political refuge. Using qualitative data collected from in-depth interviews this paper seeks to gain a better understanding of the reality of transnational family life from the perspective of Zimbabwean men who have migrated to South Africa and live in the inner-city area of Johannesburg. Close family ties both here (the country of destination) and ‘back home’ (the country of origin) were mapped. The focus fell on how the respondents sustain families across these transnational spaces and what impact their transnational experiences have on their relationship with their wives/partners and children. Moreover, attention was paid to the role high-speed information and communications technology (ITCs) play in maintaining family relationships and acting transnationally in a digital age. In light of the challenges these Zimbabwean men face on a daily basis in South Africa, where there are xenophobic sentiments and a relative high unemployment rate, the attention also fell on how these men view their multiple family commitments and the significance of remittances in maintaining a sense of self within the ambit of the family. The respondents’ reflections on family dynamics across transnational spaces show a variety of experiences and their narratives provide a window into their different lived realities as migrants with family ties across borders.

Emotion Work in the Practice of Medicine: The Case of Physician Assistants of Color

We focus on the concepts of emotional labor or emotion work and white racial framing to describe the experiences of Physician Assistants (PAs) of color as they navigate racialized barriers in the medical field. We first present results from a national representative sample of 15,275 PAs and then examine the more detailed personal experiences of PAs of color from an online survey. Finally we use the personal narratives of ten African American PAs. We identify and analyze emotion themes resulting from work-related experiences and stressful encounters that arise from interactions with faculty, staff, nurses, physicians, and patients in the workplace. Odds ratios from the online survey show that African Americans experience more emotion work than other groups. African American PAs were 26 times more likely than white PAs to report patient refusals to treat them. When we examined only Black women PAs, they were 46 times more likely to report patient refusals. Other ethnic groups experience elevated levels of emotionally negative experience, but they were not always statistically significant when other variables were included in the analysis. Women in general experienced a variety of discriminatory behaviors. Narrative accounts exhibit large amounts of emotion as the African American PAs detailed their encounters with patients and medical providers.

SMITH, GAVIN* (The Australian National University, gavin.smith@anu.edu.au)

The Art of Governing in an Age of Revelation: On the Biopolitics of Biovisuality

This paper examines the transforming value, resolution and vitalism of the social body as it is increasingly informationalized, visualized and anatomized by multivalent systems of exposure. Multiplex biopolitical interests influence and
incite these practices: wills to discern and direct consumption habits; ambitions to inscribe structured meanings upon somatic territories; and desires to better identify, verify and assess corporeal components. An emerging confluence of bio-visueral imperatives, practices and flows are placing unique demands on embodied subjects, specifically concerning (a) the control, ownership and arrangement of personal identification derived from bodily interfaces, and (b) the types of performative exertions and authentication protocols that are now routinely requested and indeed expected at various visualization contact points (McGrath 2004; Andrejevic 2012). In an age of somatic magnification and scrutiny (Monahan and Wall 2007), where fleshly topographies are considered as stable sites for truth adjudication and as volatile sites for correctional modulation, the sociological imagination can help excavate several resonances attendant on the proliferation of biocapturing mechanisms and on concomitant conditions of biovisuality. As I will argue, repetitive bioexposure, as both involuntary dictate and volitional act, generates de-contextualized knowledge streams, the channeling of which can assist experts in sharpening their diagnostic definitions and honing their prognostic interventions. But it also produces curious subjectivizing effects at the phenomenological level. Subjects become accustomed to exteriorizing interior confidences and revealing subjective states in the form of informatic particles (Foucault 1988). In this process, personal intimacies become public property, a situation inducing social harms and igniting insurgent possibilities. A critical consideration of these issues, specifically their interconnectedness and biopolitical significance, occurs in the paper as it focuses analytical attention on the types of subjectivity being fashioned from bodily transmissions and transitions.

SMITH, JEREMY* (University of Ballarat, jeremy.smith@federation.edu.au)

Civilizational Discourse and Models Of Modernity In The Meiji Revolution

During the Meiji revolution, Japanese writings on international arena, Western empires and the Western tradition nourished a discourse on civilization. At the same time, Japan's civilizational works also reflected debate on models of modernity. Over the course of consolidation of the Meiji regime, deep engagement with different foreign traditions produced an exceptionally intense phase of inter-civilizational discourse which left a significant legacy. In this process, the episodes of interpretation of civilization and modernity are explored: the construction of an urban public sphere in which this civilizational discourse emerged, creation (through conceptual and linguistic translation) of entirely new vocabularies for philosophy and sociology, and the conflicts around political perspectives expressed by the popular democracy movement of the 1870s. In the urban public sphere and the popular movement, Japanese intellectuals actively interpreted and relativized the cultures, religions and ideologies of other civilizations against a native cultural core. The famous Meirokusha publishing house and its journal Meiroku Zasshi instituted a centre of civilizational discourse for intellectual elites and the urban public sphere that they participated in. Within that public sphere, the Meirokusha set in train historically and culturally specific processes of translation of Western thought which included translation of the concept of 'society' itself and the development of Japanese vocabularies for philosophy and sociology. Social and political conflict around modernity manifested also in the wider movement for popular rights that arose in the 1870s and then subsided. A main claim of the paper is that consolidation of Japan's imperial polity in the 1890s superseded all three sets of interpretations developed by the Meirokusha intelligentsia and the popular movement, but not the civilizational discourse that they instituted.

SMITH, JEREMY* (University of Ballarat, jeremy.smith@federation.edu.au)

Debating Civilizations: Sociology and The Inter-Disciplinary Field Of Civilizations Analysis

In the early twentieth century, civilizations analysis combined perspectives from anthropology to archaeology through to world history. Founding thinkers in sociology contributed greatly to this interdisciplinary field. In a phase that stretched from Weber, Durkheim and Mauss to Sorokin and Elias, a 'classical era' of civilizations analysis generated a program of research problems that was productive in biocapturing mechanisms and on concomitant conditions of biovisuality. As I will argue, repetitive bioexposure, as both involuntary dictate and volitional act, generates de-contextualized knowledge streams, the channeling of which can as sist experts in sharpening their diagnostic definitions and honing their prognostic interventions. But it also produces curious subjectivizing effects at the phenomenological level. Subjects become accustomed to exteriorizing interior confidences and revealing subjective states in the form of informatic particles (Foucault 1988). In this process, personal intimacies become public property, a situation inducing social harms and igniting insurgent possibilities. A critical consideration of these issues, specifically their interconnectedness and biopolitical significance, occurs in the paper as it focuses analytical attention on the types of subjectivity being fashioned from bodily transmissions and transitions.

Understanding the Impact of Major Life Events on Young People's Academic Achievement and Post-Schooling Careers

Instability and conflict are pervasive features of the transition from adolescence to adulthood, as young people learn to manage an expanding array of academic, social and familial commitments. Recently, theorists of inequality have suggested that young people's exposure to such uncertainty during this time is potentially exacerbated by broader processes of individualisation and social change, placing them at heightened risk of marginalisation. In this paper we test this proposition with respect to young people's emerging career pathways, using longitudinal data from a large cohort of 7,000 secondary school students in Queensland, Australia, participating in the Our Lives research project. We do so by assessing the impact of a range of major life events during high school, such as changes in familial, social, or relational relationships, on students' academic achievement at the end of high school. Our results indicate that such events had a negative influence on young people's secondary school exit scores which, at a time when university participation has become the norm in most Western societies, can adversely impact the quality and scope of young people's post-schooling career options. We also find that this cost is distributed unevenly across the student population, with the performance of (typically wealthier) private school students, and students living in urban areas, less affected by such events than the performance of public school students and those living in non-metropolitan and regional areas. Finally, we review the implications of these findings in light of this contemporary debates about individualisation, uncertainty, and inequality in young people's educational and occupational futures.

Sexually Explicit Material, Scripting, Simulacra, and Sexuality - Theorizing the Changing Landscape of Learning about Sex

This paper explores the relationship between the marked increase in availability of sexually explicit material in the U.S. that accompanied widespread high-speed Internet, sexuality, scripting theory, and the concept of a simulacrum. The data are from open-ended interviews with 51 young adults about their experiences as adolescents learning about sexuality in the United States. Participants reported viewing sexually explicit material online as adolescents to learn about sexual behaviors and sexual interaction, often before participating in those behaviors. The ways adolescents referenced sexually explicit material, both amateur and professionally produced, in order to learn about sexual behaviors represent a significant departure from historic means of learning about sex. This development is best understood as presenting a new level of sexual scripts, intermediate scripts, within the model developed by Gagnon and Simon (1973). Participants' descriptions of viewing video examples of sexual behaviors revealed they provided intermediate script that was more specific and personal to the participants than a cultural scenario, yet did not involve direct interaction as with inter-personal scripts. This learning by viewing sexually explicit material prior to engaging in sexual behaviors approximates the concept of a simulacrum. Adolescents referenced representations of sexuality and then modeled their own behaviors on those representations. These theoretical concepts of an intermediate script and simulacra, are useful for understanding the shifting landscape of adolescent sexuality. As all aspects of our sexual world continue to be increasingly recorded, viewed, and represented, these concepts may contribute to developing theories of sexuality applicable to other populations.

Cumulative Disadvantage and Gender Differences in Early Career Earnings: Evidence from Canada's National Graduates Survey

Over the last several decades women have entered educational programs in lucrative fields like law and medicine. England (Gender and Society, 2010) has argued that, in the UK, the effect of this has been to narrow the gender earnings gap in the upper part of the educational distribution and to reduce the aggregate gap. Women in Canada have also entered the legal and medical professions in large numbers. One might expect to see a similarly declining gender pay gap between the better educated. In fact, the evidence on this suggests a more complicated evolution of gender pay differences. Statistics Canada's National Graduates Survey has collected data on field of study of successive cohorts of university graduates (at approximately five year intervals) and, then on labour force status, earnings, and family status two and five years after graduation. This makes it possible to (i) determine the raw gender differences in pay both across cohorts (the

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
first cohort analysed graduated in 1986, the last in 2000) and, within cohorts, the changes in the differences after graduation; ii) to determine the extent to which field of study continues to cause a gender difference in pay; iii) the factors other than field of study that cause a gender difference in pay, including family responsibilities. The paper reports i) analysis of the effect of gender on labour force status, focusing on the latter. They find that the differences likely to subsequently increase pay; ii) the differences cross-sectional Oaxaca-Blinder decompositions within and across cohorts; and iii) panel analyses within cohorts. The results suggest that, even within this highly educated sample, in the short period after graduation, women tend to cumulate a number of experiences that contribute to a widening gender pay gap.

Did Rising Inequality Cause the Recent Financial Crisis?

One of the possible explanations proposed for the 2007-2008 financial crisis is rising inequality in the United States. Rajan (Fault Lines, 2010) and others proposed the following explanation: i) associated with rising inequality, incomes stagnated or declined in the lower half of the earnings distribution; ii) this provoked distributional conflict; iii) the US political system prevents a response to this that would involve taxing the better off to provide income-supporting transfers to those experiencing stagnant or declining incomes; iv) but the political system has allowed a response to distributional conflict through a liberalization of access to credit including, in particular, access to mortgages for those with relatively low incomes; v) the financial crisis was caused by a boom in house prices caused by house purchases by those ill-equipped to make mortgage payments and this, in turn, caused a wave of mortgage defaults which provoked the crisis; v) the aggregation of default-prone mortgages into securities (especially collateralized debt obligations) held by financial institutions ratcheted up risk in the financial system which, in turn, caused a wave of mortgage defaults which provoked the crisis; vi) the aggregation of default-prone mortgages into securities (especially collateralized debt obligations) held by financial institutions ratcheted up risk in the financial system which, in turn, caused a wave of mortgage defaults which provoked the crisis; vii) the aggregation of default-prone mortgages into securities (especially collateralized debt obligations) held by financial institutions ratcheted up risk in the financial system which, in turn, caused a wave of mortgage defaults which provoked the crisis; viii) the aggregation of default-prone mortgages into securities (especially collateralized debt obligations) held by financial institutions ratcheted up risk in the financial system which, in turn, caused a wave of mortgage defaults which provoked the crisis; ix) the aggregation of default-prone mortgages into securities (especially collateralized debt obligations) held by financial institutions ratcheted up risk in the financial system which, in turn, caused a wave of mortgage defaults which provoked the crisis; x) the aggregation of default-prone mortgages into securities (especially collateralized debt obligations) held by financial institutions ratcheted up risk in the financial system which, in turn, caused a wave of mortgage defaults which provoked the crisis; xi) Rajan provides little evidence in support of this interpretation.

SMITH, PHILIP* (Yale University, philip.smith@yale.edu)

On Dry Othering

Existing theories of Othering can be thought of as ‘wet Othering’. They focus in metaphorical and material ways on the slime and ambivalent. In such theories othering is associated with intense emotional reactions. Those perceiving the ‘Other’ feel intense hatred, disgust and dread. This paper introduces the new concept of ‘dry othering’. This involves a completely different logic. Those doing the Othering feel - or are believed to feel - nothing at all. The victim of Othering is a mere object to them - one that does not evoke emotional responses. The logic of action is not symbolic as in wet othering but rather overly-instrumental. Victims of this kind of Othering are traumatized not by an awareness that others think they are disgusting and enjoy their humiliation (an emotional response) but rather by realizing that they are mere objects to the Otherer (who has no emotional response). Social theory on the gaze is used to make sense of this situation. The theory is illustrated with reference to accounts of unethical medical experiments, Alien abduction narratives, animal attacks, torture and serial killing.

The Urban Fabric, Repair and the ‘Good Enough’ City

This paper considers the work that repair might do in mending and smoothing over matters of experience in the physical city. The small acts of urban repair, emergency call-out – and invites us to take these unremarkable, everyday activities as a template or spur for thinking about the social and political life cities. Similarly down-to-earth or at least anti-utopian, he suggests that thinking about repair might be a way in which to think about the good city, or a good enough city. Our paper contends that arguments about urban repair do not extend so very easily from the physical - palpable, material, mute - fabric of the city to the social and political. Broken windows are a poor model, in some ways, for what it is to have broken down and need repair as a person. Sociology has been here before, yet Thrift’s thesis neglects this history.

Methodological Complexities when Using Visual Methods in Dementia Research

Methodological complexities involved when using visual methods in dementia research

Sarah Kate Smith & Gail Ann Mountain, School of Health & Related Research (ScHARR), University of Sheffield

In our study of the subjective experiences of older people with dementia when interacting with others and with technology, we have used video recording as a key method. Dementia impairs verbal communication, and this can have significant impact on how researchers may explore individual’s subjective experiences. Non-verbal communication such as gestures, body language, facial expression and posture therefore has greater significance when creating this understanding. The benefits of using video based methods in dementia research are two-fold. Firstly, these methods are key to the faithful representation of non-verbal behaviour. Second, these methods can overcome some of the communication issues that can be encountered when interacting with people with a dementia diagnosis.

We report how our use of video recordings has provided us with important data to make sense of people with dementia’s interactions with technology, the challenges of visual data analysis, and how the project has led to new understandings of how such data can be analysed and represented. Data will be presented and discussed, providing an arena for methodological discussion and debate.

Something similar – thinking small, in a big way – can be found in the writings of human geographer Thrift, though differently inflected. Thrift directs attention to ‘piecemeal and everyday activities which aim to put right, one step at a time, things over material and social transgressions in the city. Small acts of maintenance and repair, emergency call-out – and invites us to take these unremarkable, everyday activities as a template or spur for thinking about the social and political life cities. Similarly down-to-earth or at least anti-utopian, he suggests that thinking about repair might be a way in which to think about the good city, or a good enough city. Our paper contends that arguments about urban repair do not extend so very easily from the physical - palpable, material, mute - fabric of the city to the social and political. Broken windows are a poor model, in some ways, for what it is to have broken down and need repair as a person. Sociology has been here before, yet Thrift’s thesis neglects this history.

SMITH, TOM W.* (NORC at the University of Chicago, smitht@norc.uchicago.edu)

The Origin and Diffusion of Comparative Survey Research

Cross-national, survey research emerged out of and developed along with many seminal megatrends of the 20th century including globalization and democratization. It was also shaped by such major historical events as World War II, post-bellum collective multilateralism, and the spread and collapse of Communist. The development of cross-national, survey research is an example of what Rogers calls the diffusion of innovation. Public opinion polls were created in the United States in the mid-1930s and spread to other countries. Like all diffusions, its development was innovation specific and was both aided and hindered by particular characteristics of survey research. Its expansion was part of the general process of globalization. For survey research, globalization involved considerable interaction between the global product (survey research) and the local markets and cultures. Additionally, as Oberschall has noted “the expansion of surveys in general and public opinion polling in particular was part of the general growth of democracy within and across societies.” Surveys in general and public opinion polls in particular typically develop and only thrive in open, democratic societies. Democratization in general and decolonialization in particular opened up more countries to surveys.

Besides being shaped by these megatrends, the development of cross-national, survey research was influenced by historical events such as World War II, post-war collective multilateralism and the founding of the UN, and the Cold War. This paper examines 1) the emergence of cross-national, survey research including the role of early adopters (e.g. survey-research organizations), 2) the initial diffusion of survey research, 3) foundational survey-research meetings and associations, 4) the impact of World War II, 5) the role of the UN and other international organizations including the International Sociological Association, 6) initial comparative surveys, 7) the contributions of international exchanges, 8) later developments, and 9) impediments to development and diffusion.

Gap Years, Cosmopolitan Cultural Capital and Transnational Justice

This paper considers if gap years are a cosmopolitan endeavour. It draws on a qualitative study of the online travel narratives of young people from the UK who blog about their year out between school and university. The analysis focuses on the bloggers’ representations of people and places as ‘different’ in their travel stories. Volunteering overseas as part of a gap year is often promoted as a way for young people to become ‘global citizens’, and independent travel as a way to have ‘authentic’ inter-cultural experiences.

Can such gap years build a transnational sense of justice, or are they simply a way for already privileged youth to claim they are doing something ‘worthwhile’? Gap year students gain personal benefits, which I conceptualise as ‘cosmopolitan cultural capital’. This suggests they may be primarily concerned with self-interest rather than a commitment to the other.

While young people may have good intentions, I argue that the way the bloggers frame their gap year stories tends to reproduce dominant meanings and values, and are shaped by historical legacies and structural forces. Their narratives also contain instances of more reflexive engagements with difference and diversity, however. Drawing on these findings, I consider the future prospects for gap years as an agent of positive social change. I suggest how young people might be encouraged to critically engage with wider issues of global justice before, during and after taking time out overseas.

The Role of Assistive Technology for Personal Care Activities of Daily Living to Enable Families to Care for Relatives with Dementia in Their Location of Choice

The UK’s National Dementia Strategy objectives include: i) ensuring that people with dementia live well (whether in their own home or in a care home) and ii) a call for more research on the role of Assistive Technology (AT) to address the social care needs of people with dementia (PWD) and their carers. This research focussed specifically on AT for personal care Activities of Daily Living (ADLs); bathing and washing, dressing and grooming, toileting and continence and feeding tasks. Existing documentation concentrated on toilet seats, easy-use tap heads, and easy-grip cutlery. Such AT is now provided by some Local Authority Social Services in the UK. This research aimed to determine the extent to which PWD and their familial carers were provided with AT for personal care ADLs by formal social care services, or sourced by themselves, and utilised whilst they lived at home in the community. The same individuals were also assessed whilst living in a care home for their AT use for personal care ADLs. Furthermore, the study examined the role AT can play in enabling those caring for a relative with dementia to make choices about their location of care (particularly, whether the use of AT could delay an institutionalisation decision).

An in-depth multiple contrasting case study design explored perceptions and experiences of formal (care home keyworkers) and familial carers of care home residents with a clinical diagnosis of dementia on AT use for personal care ADLs. The results lend support to assertions about the difficulties and preferences carers of PWD have when attaining, using and maintaining AT and its contribution to the quality-of-life of such individuals. This method also enabled comparisons and similarities between individuals residing in different geographical locations to be compared and establish whether inequality in AT provision exists in the UK.

Rising Class Conflict, Resilient Communist Party-State: Explaining the Chinese Puzzle

Rising Class Conflict, Resilient Communist Party-State: Explaining the Chinese Puzzle
Alvin Y. SO and Yin-Wah CHU**

After the collapse of Maoist socialist regime in 1978, China has experienced rising social equality and class conflict. Within a short span of 40 years, China has transformed itself from one of the most egalitarian to one of the most unequal societies in the world. While the rising social inequality, it is only natural that rising social inequality is accompanied by rising class conflict. The number of “mass incidents” has skyrocketed from 8,700 in 1993 to more than 200,000 in 2011.

What is surprising is the fact that despite the explosion of class conflict and civil unrest, the Chinese communist party-state is highly resilient and is not under any threat of regime change. There is no large-scale national labor protest, no violent peasant rebellion, and no robust democracy movement to challenge the legitimacy of the communist party-state. The aim of this paper is to interpreting this Chinese puzzle of resilient party-state in the midst of rising social conflict from the workers, peasants, and the middle-class. The ongoing rising social conflict and civil unrest did not lead to any political instability and regime change, like it did in other post-socialist societies?

This paper argues that the Chinese communist party-state has done an excellent job in managing the class conflict among the workers, the peasants, and the middle-class in the Chinese society. Indeed, the Chinese-party state not only was able to stay in power, but it was also able to formulate and implement all sorts of developmental policies propelling the rise of China at the turn of the 21st century.

‘Housing-Based Welfare? Empirical Perspectives from the UK

Economic crisis, fiscal austerity, conservative policies and the new demography of ageing societies have given rise to the idea of ‘asset-based welfare’ as a key complement of the UK’s shrinking welfare state. For instance, concerning elderly care, retirement and education, housing wealth has become central to family welfare. Throughout the course of generations. However, variations in housing wealth across regional and local markets, between ‘boom-and-bust’ cycles, and across socioeconomic groups and age cohorts, positioning housing at the core of an ‘asset-based welfare’ regime should be questioned. In this paper, we scrutinise people’s views and strategies towards what might be paraphrased as ‘housing-based welfare’. What are the opportunities and limitations for positioning housing wealth as a base for family welfare for different cohorts and socioeconomic groups? By analysing 100 in-depth interviews with homeowners (with or without mortgages) and social and private tenants, we conclude that socioeconomic groups and age cohorts, positioning housing wealth as an asset-based welfare system. The affluent have various assets to engage in the provision for their own and their children’s welfare with no need to resort to the wealth embodied in their home. For marginal homeowners, relying on housing wealth might result in spirals of debt and drop them out of homeownership whereas long-term tenants are least able to afford alternative welfare provisions. Yet, numerous participants pursue (re)-active strategies of ‘housing-based welfare’ by traditional routes – building up housing careers in order to live rent-free and eventually downsize or increasingly by letting out buy-to-let or inherited property. However, many of these participants are unsure of the potential of ‘housing-based welfare’ in the long-term since they have no crystal ball to look into the future in order to manage complex personal, familial and societal risks; this, in turn, reinforces social and familial solidarity.

SOAITA, ADRIANA MIHAELA* (University of St Andrews, ams24@st-andrews.ac.uk)

‘Why Should I Trust You?’ Empirical Investigation of Determinants of Trust and Distrust in Romanian Post-Socialist Urban Society

Trust is a key factor in the development of collective action, and thus in the performance of communities, institutions and society. Seminal scholarship has given emphasis to the social virtues of trust and to a lesser degree those of caution. Consequently, scholars have expressed concerns regarding the ‘socialist legacy of distrust’, which have negatively influenced processes of democracy and development in the post-socialist states. While quantitative measurements of trust have become standard in cross-national surveys, in depth qualitative research has highlighted exceptional but helpful. By employing a mixed-methods design of cross-national analysis of secondary data and qualitative examination of 69 in-depth interviews in a post-‘socialist’ city, this paper investigates the determinants of (dis)-trust in post-socialist Romania. The analysis draws attention to the intertwined social and rational origin of trust and distrust. Findings show that institutional trust has risen from post-socialist as the consequence of market development and freedom to express opinions. However, institutional trust has remained low due to perceptions of widespread bribery and favouritism – not necessarily experienced but reinforced through social learning and the media – and to a general discontent with some institutions, particularly the police, the political elite and the judiciary. Conversely, interpersonal trust has been rapidly declining though

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
it had not entirely vanished and has remained generally confined to families and bounded groups. By growing social distrust, people have reacted to the increasing social inequality during the post-socialist transition and its associated figures of the insular individualist and predatory capitalist. This does not invalidate the thesis of socialist "legacy of distrust," but significantly adds to it. Data quantification suggests that the effect of increasing social inequality during transition is six times stronger than the effect of persistent communist legacies on current levels of social distrust. This has important policy implications, which are outlined in this paper.

SOARES, PAULO HENRIQUE* (Pontificia Universidade Catolica de Minas Gerais, paulohenriquealeidosoares@gmail.com) DELGAUDIO, ROZALIA* (CBA, rozalia.delgaudio@uol.com.br) Relations Between Individuals at Work in a Contemporary Context: Necessary Changes in Communication in Organizational Context

Companies organize themselves around objectives that seek the maximum return to its shareholders or founders. However, when forming the individuals in a group to which these goals are achieved, dreams as well as desires and ambitions emerge. Typically, subjects align with organizational interests in the expectation that their own goals are also achieved, existing three important issues in these working relationships. The first question relates to the symbolism of the "notion of work." The second issue reinforces the role of work in social relations. Despite all the discussions involving the centrality of work (OFFE, 1989; BAUMAN, 2008), it still remains one of the central points of life. The third issue concerns the lack of work, the possibility of unemployment and frustration as reality (BALDISSERA, 2010). The subjects experience these conflicts and tensions of force paradoxically (BALDISSERA, 2010; KUNSCH, 2012).

Some factors explain this movement transformation in communication directed to employees: a new technological context (social networks); new relations between people and organizations, caused, for example, a new employee profile and fewer permanent links with companies, besides the existence of an internal environment of conflict and tension. Employees need time to develop relationships and coherent narratives in their experiences within the organizations, but in a world where the future is already the day after tomorrow, in a fragmented environment, focused on project execution and flexibility, employees are not allowed to develop strong relationships (SENNETT, 2009). Communications directed to employees will be impacted. The safety at workplace, employment and career in one organization is replaced by employability. The needs of the organizations are more important than the needs of its workers. The imperative of aligning organizational strategies can find counterpart in the desires of the individuals in the organization. As professionals working in this field, communicators must understand those changes and challenges.

RC10-187.4

SOARES MENEZES, MARIA ZEFISA* (University of Barcelona, mzefisa@hotmail.com) Decentralization: From the Constitution’s Dream to Reality

This paper aims to analyze the decentralization of public policies in the state of Ceará, Brazil, as supported in the Federal Constitution of 1988. The decentralization agenda, mobilizing social and institutional players, proposed the partaking of decision-making during the elaboration and management of public policies in order to strengthen and expand citizenship bonds. The establishment of structures for the arbitration and recognition of organized sectors within civil society bolstered the public sphere for the discussion and negotiation amongst various social and institutional segments. This allowed in specific circumstances for a communal arbitration and recognition of organized sectors within civil society bolstered.

The safety at workplace, employment and career in one organization is replaced by employability. The needs of the organizations are more important than the needs of its workers. The imperative of aligning organizational strategies can find counterpart in the desires of the individuals in the organization. As professionals working in this field, communicators must understand those changes and challenges.

SOBOLEVA, NATALIA* (Higher School of Economics, natsobol@gmail.com) Gender Attitudes in the World of Work: Cross-Cultural Comparison

The paper deals with factors determining work-related gender attitudes. With the spread of emancipative values the difference between gender roles becomes vaguer but is still strongly dependent upon country characteristics. While values are usually regarded as factors impacting socio-economic behavior, my research underlines a less explored aspect: they are themselves formed and changed in the process of economic interactions. The objective is to assess the role of education and job characteristics among factors determining gender attitudes in different types of countries. More specifically, I focus on the interaction effect between education and employment characteristics on micro- and macro-level. Female labor force participation rate and ratio of female to male tertiary enrollment are used as the indicators of female involvement in labor market activities. The 5th wave of World Values Survey (2005-2008) serves as empirical base. The targeted group of population is the employed. Multilevel regression modeling is used. According to the results, work-related gender attitudes vary considerably by country. Education is a stronger predictor of gender attitudes than occupation and job characteristics. At the same time the higher occupational status and intellectual jobs and jobs with higher independence lead to more egalitarian gender attitudes. On the other hand the higher the labor force participation rate and ratio of female to male tertiary enrollment, the more egalitarian are work-related gender attitudes in the country. In the countries with the higher women's involvement in education and labor market activities education and job characteristics impact gender attitudes to a lesser extent. Furthermore, there is less difference in female and male gender attitudes in such countries.

RC07-138.2

SOBOTTKA, EMIL ALBERT* (National Council for Scientific and Technological Development, sobottka@pucri.br) Rethinking Citizenship in a Post-National Constellation

Classical citizenship was understood as a status attributed to all those who are full members of a national state. Around the inclusion in this status and its expansion with new rights many social movements have fought their struggles. However, internal inequalities that have survived in many countries led some authors to suggest the existence of a hierarchy of citizenship. In other contexts, the mobility of people has reinforced fears and xenophobia, and consequently the citizenship is becoming there increasingly the legal basis for demarcating boundaries of inclusion and exclusion. New discursive semantics, such as communitarianism and postcolonial studies, react claiming for singularities on community bases to define belongingness previously expressed by citizenship and nation. The text deals with the question how the notion of citizenship could be extended to maintain its relevance today.

SOBRAL SANTOS, RAQUEL* (USP - Universidade de São Paulo, rdsobral@yahoo.com.br) LEVY, DAN (University of Coimbra) Ribeirinho Communities: Identity and Social Cohesion in the Brazilian Amazon

This article aims to observe the general processes of identity construction and social cohesion of the ribeirinho communities of Combu Island, an Environmental Protection Area, located on the left bank of the Guamá River, near the city of Belém, in the Brazilian Amazon Forest. These populations are concentrated along the rivers due to the lack of means of rail and road transport, using as a primary means of travel inland waterway vessels. In this sense, they are considered part of the so called ribeirinho communities, descendants of indigenous people and also the region of northeastern migrants coming from the great drought in the Northeast in the late eighteenth century and large integration projects in the Amazon from the twentieth century. This indicates that the interaction between ethnicity and multiculturalism is that this migratory movement qualify as social construct, in other words, individuals are not the region's natural, but are adapted to the conditions and integrate historical, social and cultural inheritances with indigenous, colonial and migratory people. Thus, we propose to present some reflections on identity and social cohesion present in this part of the population of the Brazilian Amazon. Ribeirinho Communities are a blend of simplicity and complexity and based on social characteristics and demographic dynamics, we present the way of life of these different communities, through the relationship between territory and identity. The intention of this paper is to open a range of new interpretive possibilities on these communities, with no claim rule out pret-ent analysis or establish universal truths.
will be explored, looking at both sending and receiving sides of the organization. A typology will be developed using the following concepts from sociology and administrative science: absorptive capacity, resistance, diffusion (including weak and strong ties) and secrecy. The paper will be mainly theoretical, but illustrations from recent operations and experiences will be included.

Professionalizing Armed Forces in Africa: No Easy Game. Why Not?

In this paper we focus on recent attempts of the international community to help African nations to professionalize their armed forces towards proper and effective capacities in dealing with new security threats all over the continent. One of these programs is the US-led African Partnership Station. In the framework of this program, the Netherlands Navy has launched a project called African Winds 2013, in which seven West-African countries were visited to train themselves and host-national militaries, particularly marine and navy forces, in: diving, hydrographic research, amphibious landing operations, illegal fishery policies, boarding procedures aimed at anti-piracy measures, economic development, etc. In this paper an assessment will be given of those activities, based on field work at sea and evaluations by the participants themselves. There will be a connection with previous research on training and educating young African cadet-officers in Western military academies. Both endeavours will be analyzed on the basis of mixed-methods military sociological research.

Röyama Masamichi’s East Asian Cooperative Community Theory

Röyama Masamichi’s East Asian Cooperative Community Theory. While I was conducting the long-term project “Northeast Asia’s Transnational Space”, I became interested in the problem of when and how East Asia became identified as a unit. Soon, I became interested in the way that ‘East Asia’ is called and requested.

To approach the task, I have been interested in East Asian Cooperative Community (EACC) theorists such as the philosopher Miki Kyōshi, economist Kada Tetsu, and international politics scholar Röyama Masamichi, and I will mainly talk about Röyama Masamichi in the presentation.

The core of Röyama’s EACC Theory is a region or regionalism. I would like to talk about the issues related to regionalism in the relationship between East Asia and the world, which is the relationship between particularity and universality speaking in the abstract. I will divide Röyama’s regionalism into three aspects based on universalism.

First, it is the attempt to escape from the international universal order caused by the Manchuria issue.

Second, it is the attempt to make ‘East Asia’ into a meaningful region, emphasizing the special identity of East Asia.

Third, it is not that the regionalism of the EACC is a particularization of the world order but that the EACC itself constructs a universal world order.

Lastly I will wrap up my paper by discussing following 3 topics. 1)Japan’s leadership position 2)Horizontal regional order vs. Vertical intra-region order 3)The fact that the vertical intra-region order, which was attempted by Japan through the war, was realized by the U.S. after Japan’s defeat.

Women, Disaster and Challenges: A Case Study from Iran

During the past decades, Iran’s natural disasters such as earthquakes, droughts and floods have caused a considerable loss of human lives and livelihoods, environmental damages and the destruction of economic and social infrastructure. Although 49.6% of Iranian population are female but gender analysis has been ignored in the most national reports and surveys related to different aspects of disaster management. This study aimed to highlight the challenges of women before, during and after natural disasters and to investigate the capacity of Iranian women to reduce the consequences of natural hazards. Data collection was done by the interview with affected women of Varzaghan and Bushehr earthquake (2013, 2012), field observation, and review of related documents as well. The findings indicated that although the investigated women were affected more than men but their needs and problems were not identified sufficiently. On the other hand, women vulnerabilities were highlighted more than their capacities and capabilities in handling the disasters. In conclusion, it is important to consider women participation in all phases of disaster management (mitigation, preparedness, response and recovery). Gender analysts with localized/standardized analytical tools can be suggested for future studies.

A Comparative Approach on Migration in Post-Communist Societies; The Case of Albania in East-European Context

The post-communist transformations in Central and Eastern Europe represent an interesting example for comparative studies: a number of countries began this transformation from the same starting point (1989), following more or less the same common goal of moving towards democracy and liberal market economy, and EU. Based on the comparative method Brezinski predicted twenty years ago (as it was later confirmed with surprising accuracy), the historical calendar of those countries (the article “The Great Transformation” 1993), given an example of ‘thinking comparatively’ and foreseeing the future.

This paper is regarded with the hypothesis: Albania is an excellent laboratory for studying comparatively the new migratory process. The collapse of the socialist system was viewed with concern by many policy-makers in Western Europe who expected their affluent countries to be flooded by immigrants. Yet, this fear did not materialize and post-communist East-West migration was rather moderate. The only exception is Albania, whose emigration displayed features of an exodus. No other country has been so affected by migration, in such a short period of time like Albania has. It is confirmed that 34.2 percent of the Albanians have immigrated in more than 30 other countries, while the world migrant average is about 2.7 percent. And including the migrants that have spent a considerable lengths of time abroad, and have made their return back to the country, than we have a country in which more than half the population has experienced migration in the last two decades. This paper is an attempt to give a comparative answer to the question: “Why so many Albanians have migrated in such a short time, quite different from the other ex-communist countries, i.e. the countries with the same historical fortune?” In Albania, quite different from other countries, migration is shaping the society...

Mexico has the most transited migratory corridor in the world. The complex migratory flows transiting the country—mainly Mexican, Central and South American—have historically been perceived as economic and male. Scholars have noted as problematic the categorisation of the ‘labour migrant’ as being exclusively voluntary. It has been demonstrated that framing agency through simplified understandings of ‘voluntary’ and ‘involuntary’ movement cannot easily capture the realities of movements along the Mexican corridor. Identification using legal categories such as “illegal” migrant end up demarcating and ‘invisibilising’ individuals eligible for protection. The securitisation of borders and criminalisation of migration throughout the 20th century, led by the global north, has intensified and has added further fuel to the fire. Protection has still not been clearly delineated for the undocumented and seems to be eclipsed through the criminalisation of migration. Incidents such as death, rape, kidnappings and other types of abuse faced by transit migrants have opened up the debate among key human rights stakeholders on solidarity and protection. Human rights defenders have established shelters, humanitarian aid, led manifestations, caravans and campaigns in solidarity with the migrant among other activities and services. These forms of solidarity have been predominately presented by human rights actors to the Mexican government through human rights and humanitarian visa appeals for migrants to transit the country. These appeals and other forms of emerging humanitarian aid dynamics are occurring outside the refugee protection regime. Also the majority of human rights defenders are non-state actors—albeit there is reliance on states for the implementation of human rights. The purpose of this paper—based on extensive qualitative research in transit-assistance based places—is to explore what kind of contribution the politics of solidarity has in (re)shaping the migrant subject; focusing on key human rights defenders discourse, humanitarian aid dynamics and transmigrant experiences.

Complexity Art: A Pattern of Transdisciplinary Emergent Properties

Transdisciplinary intersection has been defining new fields of research and practice in humanities and arts, in particular in contemporary art; to incorporate nature as the object of its aesthetics, scientific and technological search. We should know that the emergence of an object far from equilibrium confronts us with a domain that needs to be explained in terms of the complexity of its nature in a transcendent, other domains with which it interacts. This is the origin of this proposal to consider the art of complexity as a pattern of emergent properties with the potential to offer a space for sharing research corpus with other fields. This allows to systematize its object and find a common space for collaboration with science and technology. Faced with this challenge, and the call from SEAD, the Author describes her experimental and empirical creative practice in the art of complexity. This kind of art is characterized by the use of scientific research method, observation and experimentation through trial and error and the formulation and analysis of findings that lead to a body of systematized hypothesis. Dynamic experiments based on direct interactions link the art of complexity to natural sciences and to emerging fields of image and data records. Based on this new way of thinking about disciplines the research opens new opportunities in various scenarios that lead to recontextualize art, creating a theoretical body that binds science and technology. These findings can rebuild art, giving it a new aesthetic epistemological conception with emerging applications in areas around water sciences, mathematics, chemistry, physics, artificial intelligence and new fields to be defined. Finally, the paper identifies problems, supporting mechanisms and actions for a global strategy that encourages transdisciplinary collaboration work between arts and sciences. This work was supported by the National Science Foundation under Grant No.1142510.

Beyond Bourdieu: Dialogic Modernity and Social Change

Beyond Bourdieu: Dialogic modernity and social change

When Wright met working class people who read Joyce, Dostoyevsky and Wolf Solow, he said “this confirms that Bourdieu was wrong with his concept of habitus”: ten years before Habermas had engaged with one of these persons in a debate on human rights, while most of the audience had laughed at a non-academic, linguistics report. The radicalization of modernity recovers the foundations of the first modernity and transforms the frames of reference on the basis of dialogue. Dialogic modernity includes the social actors in the development of critique by redefining, in dialogue with sociologists, the moral grounds of a plural society in which we can today live together. Habermas stresses the potential of communicative action through the intersubjective recognition of criticizable validity claims; Wright envisions social change through the analysis of real utopias. The structured and structuring structure that defines “habitus” cannot explain the cultural practices and taste developed by the working class people who attend the dialogic literary gatherings. They transform and create new cultural capital that challenges the excluded determinism and demonstrate possibility in the transformative dialogues of dialogic modernity.

Relevance Involvement in Physical Leisure Activities in Low Income Households

In Norway as in most other Western countries, the research body on involvement in physical leisure activities like sports and fitness activities indicates a strong connection between high involvement, good health and social inclusion and well-being. However, this connection detects an involvement pattern shaped by social class and social exclusion. Families with low economic, cultural and social capital have the lowest involvement in physical leisure activities as well as the biggest health problems.

The paper will focus on: (1) how parents in low income households conceive, experience and handle their possibilities to participate in physical leisure activities and sports in their local communities, and further 2) what impacts these conditions may have on children’s participation in physical leisure activities.

The data material consists of qualitative interview from a strategic sample of households belonging to low income households. Both Norwegian and west immigrant households are represented in the sample.

The overall findings showed that the involvement in physical leisure activities was strongly restricted by lack of economic capital both for the parents and the children. Most of the informants were single mothers and they had no resources to give priority to their own wishes for participation in fitness- and leisure activities. The children were also deprived of the opportunities to participate and thus less included in the peer groups in their neighbourhood. Even though the studied households possessed low economic capital, they differed in cultural and social capital. Those with the highest amount of cultural and social capital were also those who were able to articulate and claim their needs for finance support for leisure activities from the municipal social service.

Women’s Work and Reasons for Absence from Work

Women’s Work and Reasons for Absence from Work

The equal opportunities for women in the Scandinavian labour market have been improved the last decades. But in terms of caring tasks in domestic life there is still a way to go, and therefore it is a challenge especially for women to combine the two spheres. During the period 1980 to 2009 the sickness absence among men in Norway has been relatively stable while the sickness absence among women has increased 70%. Women’s higher sickness absence rate is not exceptional. Comparative studies show that women had a higher rate of sickness absence than men in most countries. But they also have the highest amount of institutional resources to support them if they are ill. But there is lack of knowledge about the reasons for women’s higher sickness absence.

This paper will focus on a) women’s self-reported reasons for their sickness absence, and b) the importance of social capital at the work place and in their domestic life. The data material is responses from a postal questionnaire sent to Norwegian long term sick listed women with mental illness or musculoskeletal diagnoses, and in-depth interviews with a sample of long term sick listed women with the same diagnosis.

The overall findings showed that women’s sickness absence has to be understood as a combination of demand, control and social capital both at their work place and in their private lives. Persons with high social capital both at the work place and in their domestic lives have the best prospects to return to work. Single mothers often have low social capital in both spheres, and they are the most vulnerable group. The political consequences for reducing women’s sickness absence will be that it is urgent to focus not only on measures at the work places, but also at women’s burdens in the private sphere.

SOLIS, PATRICIO* (El Colegio de México, psolis@colmex.mx)
Socioeconomic Background, Education, and Youth Work Transitions in Mexico City

The paper analyzes the housing transitions of young Mexicans from a social inequality perspective. Mexico is the most unequal society among OECD countries. The calendars of marriage and childbearing are significantly different across socioeconomic strata, with surprisingly low ages at marriage and first child among those coming from disadvantaged families. Migration (both internal and to the United States) has become a frequent event in the lives of young Mexicans seeking job opportunities. In this context, far from replacing or blurring traditional inequalities by socioeconomic background and educational attainment, the rising labor market vulnerability of the youth in Mexico mounts onto these inequalities, reinforcing their negative effects.

Youth Parental Emancipation in an Unequal Society: The Case of Mexico

In the paper, the authors explore this question by characterizing the process of emancipation in association with marriage and childbearing. Although these transitions are obviously related to emancipation, the association is not universal. Many newlywed sons and daughters remain living with their parents. Others move out before entering into marriage. Thus, a proper characterization of emancipation must take into consideration the different life course pathways that emerge from taking into consideration the occurrence, timing, and sequence of this transition in combination with other family events.

Gender Bias in Higher Education- Study on Indian Universities

The paper will look at these differences by characterizing emancipation in association with marriage and childbearing. Although these transitions are obviously related to emancipation, the association is not universal. Many newlywed sons and daughters remain living with their parents. Others move out before entering into marriage. Thus, a proper characterization of emancipation must take into consideration the different life course pathways that emerge from taking into consideration the occurrence, timing, and sequence of this transition in combination with other family events.

Once these patterns of emancipation are identified, I will analyze their incidence and determinants among socioeconomic strata, taking into consideration the association with trajectories in other domains, and specifically with occupational events/trajectories. The aim is to explore whether early occupational uncertainty relates to different emancipation pathways.

The analysis will be based on data from the EDER 2011, a recently released retrospective biographical survey that covers the educational, occupational, residential, and migration histories of 2,900 Mexicans of three birth cohorts. The survey reports the ages of occurrence of all the events considered in the analysis. It also includes a variety of measures of family background, thus allowing a thorough exploration of the association between socioeconomic origins and emancipation.

De carácter diacrónico intentará captar, a través del análisis de la memoria, la forma en que se ha modelado la experiencia de la modernidad en Guadalajara.

Objetivo general del proyecto: llevar a cabo un análisis, entre distintos grupos y sectores sociales, de la forma en que los tapatíos asumen las transformaciones de la vida moderna, se adaptan a ella, o las asimilan, entablando procesos de negociación del orden social. La perspectiva de trabajo parte de la premisa de que no existe una ruta única, ni una forma única, de entender la modernidad, sino múltiples posibilidades para definirla y dotarla de sentido. Cada grupo social tiene distintas opciones a mano y las aprovecha o construye dependiendo de una serie de condiciones de orden material, cultural y político. Aspectos como la religión, la educación, los valores heredados, la clase social, el grupo de edad, la situación de genero, etcétera, son clave para determinar el tipo de adaptación/negociación con respecto al proceso de modernización que se vive.

Método, el proyecto pretende utilizar diferentes técnicas analíticas, entre las que se encuentran la encuesta mitológica para profundizar en la historia personal, la evaluación de documentos, el análisis comunitario y la exploración fotográfica.

Normalmente, los estudios de valores no logran captar aspectos más profundos de la vida social, como los comportamientos reales y los sentimientos, los cuales son elementos cruciales para una adecuada interpretación de los valores y su significado. Un abordaje como el nuestro es más útil para lograr una comprensión más cabal de este tipo de fenómenos sociales.
PROFESSIONS come to be arranged in a hierarchy based on their functional importance in the Society, which in turn determines their prestige, authority, rewards and sometimes even their autonomy. Traditionally, professions represented homogeneous groups of people sharing common traits in terms of knowledge, skills, values, status and rewards. But of late, owing to growing complexity of professional knowledge systems, increasing specialization, adoption of advanced technology in their practice and ever increasing variety of services expected to be delivered by these professions, intra-professional heterogeneities and as such distinctions appear to be on rise with professionals coming to be graded within professions on professional and non-professional considerations. The paper explores these developments in medical profession in India, wherein medicine as a profession has made significant advances. A survey of 550 medical professionals in South India reveals that medical profession is a highly stratified entity with practitioners being segregated and graded on the lines of specialization, level of specialization, branch of medical practice, sector of employment, size and technical sophistication of hospital, institution from where professional credentials are obtained, length of practice and the like with rewards and recognition in commensuration, giving rise to inequities and exclusions within medical profession. Further, non-professional variables such as class, caste, religion and gender, by themselves, are not as much responsible as the professional variables stated above for the differences observed in the Indian medical profession although they appear to be associated with opportunities for entering into high prestige sections within medical profession.

Technology Driven Inequities at Work Place in India

Indian work organizations, both in service and manufacturing sectors, have brought about significant restructuring and refinement of operations through adoption of new technologies that has become imperative and indispensable for survival in the highly competitive globalizing world. These developments are assumed to be having significant long term implications for the work organisations reaching in terms of skill up gradation, composition of workforce, restructuring of organisations and work process involving huge capital expenditure. This rationalisation process has also implications for workforce in terms of increased wage differentials owing to emphasis on skill, absorption or replacement of workers with skills no longer required as well as adjustment with changed work culture. The findings based on a study of 41 service and 36 manufacturing establishments across three States in India indicate that higher skill requirements have rendered significant proportions of workers obsolete and their tools redundant. The adoption of the so called "skill biased" technology is found to be having significant implications for variations in wage inequality both within and between industries. While workers with higher skills obtained through formal courses are being inducted, the older obsolete workers are on the verge of being expelled through diverse schemes of compensation or are being absorbed in the barely required unskilled cadres at considerably lower wages. This phenomenon is more marked in private sector service industries compared to public sector manufacturing establishments. As a result of disappearance of moderately skilled workforce, these organizations are found with skill polarisation and heightened wage inequalities.

Social Context As Mediator Between Values and Well-Being

Ed Diner (2009, p. 66) claims that individuals attain subjective well-being (at least partially) when moving toward an ideal state or accomplish a valued aim. Shalom Schwartz (1994, p. 20) defines values as "desirable transsituational goals, least partly) while moving toward an ideal state or accomplish a valued aim. The purpose of this paper is to evaluate relations between basic human values (or desirable subjective goals), socially differentiable environments undermining or supporting the value priorities in question and subjective well-being. Multi-level and multivariate structural equation models are used to accomplish this task. Data from the fifth round (year 2010) of European Social Survey is used.
media can cause responses in segmented public spheres of the World Wide Web. Vice versa, content that is produced in blogs, wikis or social networks can become part of news coverage in the mass media. In addition to the public of mass media, some authors argue for the existence of a 'personal public' constituted by the World Wide Web. In the personal public sphere, actors use different rules of production and distribution compared to the public sphere of analog offline media. Both forms of public sphere, however, are connected with one another. It is therefore reasonable to describe today's public discourses as transmedial discourses. The concept of transmedia requires a change of perspective from single media and their social functions to social processes, to communicative networks consisting of different media in convergent, networked arrangements. It would be unreasonable to assume that discourses are only constituted through the web; this would not correspond to media practices in everyday life and would give the impression that there is a gap between online and offline media practices. I narrow my focus to online discourses as a way to investigate more thoroughly a highly important part of media practices. In my paper I place my focus on digital network media, first and foremost on the Internet, which can be characterized as a central point of reference for media convergence. I would discuss if and how public spheres are changing through the Internet.

Decline, Crisis or Change? Professional Status and Knowledge Authority Among Danish Doctors and Teachers

A common way to address the poor outcomes of public policy, for instance in areas like health care and education, is to blame policy failures on the loss of respect for professional authorities. No one today respects a primary school teacher as they used to do fifty or sixty years ago, and patients now focus on their own rights and google searches rather than the doctor's orders. If not more, these are at least common narratives in public debates about professionals and why the decline—or even crisis—of professional authority is at the root of present problems. This paper aims to go beyond the narratives and investigate decline, change and restructurings of professional status and knowledge authority since 1950. Taking the Danish primary school teachers and medical doctors as cases, we explore how the relationships between professionals and their institutional context are changing (or not) over a sixty year time span. More precisely, we explore both the development of professional status in a general sense of a societal status hierarchy, and in a more narrow sense, understood as the professional authority vis-à-vis other professional groups, clients and the state. While notoriously difficult to measure, not least going back in time, we hope to be able to assess possible changes through a combination of various data sources. Besides socioeconomic data about salaries and education, we mainly analyze status and authority through a comparison of professional selfperceptions and narratives as presented in magazines distributed within the professions.

Explaining the World of ‘Big Data’: Global IT Consultancy and Reshaping of Policy Knowledge in South Korea

This analysis of the process through which South Korean government produced policy knowledge for ‘Big Data’ policy demonstrates a certain actor’s - global IT consultancy - intervention upon it. The gap between an actor’s cognitive capacity and the complex, thus unobservable world gives birth to a number of institutions producing knowledge, especially which not only describes the world, but performs as the inter-subjectivity among actors for their reflexive adjustments, thus have ‘performativity.’ Given this, the article explores how the knowledge offered by global IT consultancy converted the Korean government’s attempt to describing the sociotechnical world of ‘Big Data,’ and examines how the intervention persisted. The paper builds on STS scholars’ arguments on performativity starting from Callon’s argument that it is economic action, especially that of economic actors, which is a certain way of explaining the world forms the frame among actors while overflowing from the outside of the frame is pervasive. The performativity scholars emphasized continuous maintenance and re-arrangement of the explanatory devices, and successively showed how performativity can suppress overviews. Nevertheless, this article suggests that the knowledge from global IT consultancy can still be performative even when the devices and their arrangement are increasingly deemed questionable and replaced by other ways of explanation; overflowing does not necessarily mean the weakened frame. At first, as Korean government intended to implement the so-called ‘Electronic Government’ in South Korea, the state has transformed the concept of market transactions gradually substituted in the policy knowledge the past concept of cooperative relationship for contriving creative usage in which citizen take the lead. Even though such explanatory devices were questioned for their naïve worldviews and once having excluded concept of ‘citizen’ overflowed, market model still persisted and ‘citizen’ was only taken as potential sources of lucrative data. The finding suggests our understanding of performativity of knowledge can be extended.

Social Conditions for Japanese Immigrant Attitudes Toward Institutional Elder Care

Although elderly care remains within the family sphere in Japan, Japanese immigrants in the U.S. are bound to have distinctive pathways to determining whether to utilize formal care services from the native-born. Japanese immigrant women who are inter-racially married to American husbands experience complex adaptation processes throughout their lives as they encounter social conditions that differ from Japan. This research investigates of their attitudes concerning institutional elderly care utilization as they relate to social conditions.

We conducted and analyzed in-depth interviews with 31 immigrant Japanese women between the ages of 40 and 84. We found that these women had acquired the norms of independent living through cultural acculturation, ultimately leading to their preference for non-family-based care. This paper focuses on the social structural conditions that facilitated this choice. We found four factors influenced the women’s attitudes toward the utilization of institutional elder care: 1) family living arrangement discouraging family care for elderly, 2) potential family conflicts between the caretaker and the elderly relative, 3) economic class, and 4) supportive cultural attitudes towards formal elder care and institutional availability. These factors tend to influence immigrant Japanese women’s preference for institutional elder care over familial care.

“Rubber Rice Bowls”: Work and Family for Women Entrepreneurs in Post-Socialist Rural China

The three decades of China’s market-oriented reform since 1978 have brought about an increasingly deregulated and privatized rural economy, which posed new opportunities and challenges for women to balance work and family. This study focuses on a unique group—women entrepreneurs—who were neither the Maoist ‘iron girsl’ nor the cheap laborers in capitalistic workshops. Drawing on interviews from two coastal villages in Jiangsu and Zhejiang provinces collected during 2004-2010, where rural industries and petty entrepreneurship had become an important economic engine, this study finds that women, although underrepresented compared with men, had gained a strong active role as entrepreneurs. Based on life histories of 8 women entrepreneurs, this study analyzes how women entrepreneurs found their “rubber rice bowls”—a contrast with “iron rice bowls” of urban workers and “mud rice bowls” of peasants. Contextualized in the reshuffling of job hierarchies and the restructurings of welfare institutions, women entrepreneurs found their “rubber rice bowls” satisfying due to its flexibility and potential rewards, but also challenging because of the increasing risks and competition. Such entrepreneurial dynamics led to various patterns of work-family balance among women entrepreneurs, which could not be summarized under the traditional gender norms or the socialist egalitarian ideology.

The Korean Webtoon As a Reflection of Society

Since 1990, the technology of digital media has been constantly developed in Korea, and the digital media became popular among the general public. With the emergence of the social network service(SNS), people increasingly expressed themselves with visual images, such as photos, icons, animated characters, etc. The new digital media expanded the scope of communication between people and visual images. Webtoon is the new genre of cartoon as the result of digitalization. Webtoon enables readers to easily access and to even participate in the process of webtoon making. The stories of webtoons show social experience in ordinary people’s daily lives. Webtoon readers become participants who share their own thoughts with webtoon artists and also create amateur works. Thus, the familiarity of webtoon increases. It is a remarkable big change in the history of Korean cartoon; thus, this research will discuss how webtoon influences people experience of seeing and interpretation. To do so, this research will study webtoon, as a new creative process of webtoons by the artist, Pui Kang who is the leading webtoon artist in Korea, and analyze how the artist communicates with readers. Also, this research will show the different responses caused by media switching
from webtoon to film. Today, webtoon makes changes on the ways of storytelling and positioning visual images and of interacting with readers. Also, the Korean webtoons are more broadly spreading overseas, such as France. With its increasing popularity and easiness to reach the public, webtoon is regarded as a driving force to boost the field of Korean cartoon industry.

SILVERSTEIN, MERRILL (Syracuse University)
The Impact of Adult Children's out-Migration on the Elders’ Psychological Well-Being in Rural China: Does Gender Matter?

This study examined the impact of adult children's out-migration on the psychological well-being of older Chinese parents left behind in their rural villages. Using data from two waves of the Longitudinal Study of Older Adults in Anhui Province, China, analyses showed that, controlling for personal characteristics and resources, the out-migration of children reduced the psychological well-being of their parents, particularly among older fathers. However, the transition to coresidence with an adult child buffered the negative impact of daughters’ out-migration on the psychological well-being of older mothers. These results suggest ambivalent feelings on the part of older parents when their adult children migrate out of their home villages for work or marriage. However, there is an important gender division in the adaptation to the out-migration of children. Mothers benefited from entering into a traditional multi-generational living arrangement when their daughters migrated; comparable fathers suffered from worse psychological well-being following entry into such an arrangement, presumably because living with children increased their dependence. It is concluded that a complex gender interaction needs to be considered when examining the consequences of dynamic intergenerational family processes in China.

Use It or Lose It? the Impact of Grandchild-Caring on Grandparents’ Cognitive Functioning in Rural China

Using the data from the waves of the survey “Well-being of Elderly in Anhui Province, China” conducted in 2001, 2003, 2006, 2009 and 2012 respectively, this study examines the impact of grandchild-caring on Chinese rural grandparents’ cognitive functioning through constructing multi-level growth curve models. The results show that, comparing to the low intensity care for grandchildren, high intensity care has protective effect for the grandparents’ cognitive aging, however, the effects of high intensity care depend on the age and gender of grandparents. The grandfather’s cognitive aging are protected by the high intensity care for grandchild, while the cognitive functioning of grandmothers are suffered from intensive care; and this gender difference tends to be widened as aging. These results support the hypothesis of “use-it-or-lose-it”, and imply the significance of gender roles and norms in the Chinese rural families.

Multiracial Parents and the Intergenerational Transmission of ‘Race’ and Belonging

In both popular culture and academic discourses, being ‘mixed’ is becoming increasingly ordinary in Britain. While there has been growing research on mixed race children and young people, very little is known about how mixed race people racially identify and socialize their own children. Many adult mixed individuals have now become parents - prompting the fascinating question of how they, as parents, think about the racial identification of their own children. Parenthood engenders a search for one’s ancestry and the ‘right’ social identities of children: What may such socialization bode for the future and significance of racial categories and boundaries in Britain? Are mixed race parents adopting post-racial attitudes and practices, or is there evidence of intergenerational transmission of racial thinking and identification in these households? How do parents think about the relationships between ‘race’ and racial difference, national and regional forms of belonging, and family lineage/ancestry? These questions are pressing, especially in light of recent research which does not necessarily privilege ‘race’, or which examines the meanings and experiences of ‘race’ in connection with other axes of identification and experience.

Based on a Leverhulme research grant, this exploratory study investigates the ways in which mixed race parents think about and communicate ideas and practices concerning racial identities and racial difference, and is suggestive of how they foster their children’s (and their own) sense of belonging in the wider society. This research draws on interviews with 60 multiracial individuals (parents) in both urban and suburban regions in England. A qualitative approach is crucial in critically examining not only racial categories/terms, but also trends reported about multiracial people in large scale data sets, especially those in the US.

Educational Mobility in Three Generations: Single-Parent and Grandparent Effect

This study examines the educational reproduction of American families in multiple generations. The key question is how grandparents’ education contributes to the educational success of grandchildren, and how the grandparent’s effect differs for single- and two-parent families. The grandparent effect works through both the direct and mobility and mobility processes, because grandparents’ education first affects whether parents have any children and how many children they have, before grandparents proceed to influence the educational mobility of their grandchild. Analyses build upon the mobility and demography model used in Mare and Song (2012), and draw on empirical evidence from the Panel Study of Income Dynamics. Recent researchers and policymakers alike have expressed a growing concern that single-parent family is responsible for the growth of an “undereducated class” in America. This study investigates whether or not grandparent effect contributes to the growth of the undereducated class from single-parent families in the grandchild generation.

Through Thick and Thin: Ecological Modernization in Thailand’s Electronics Industry

Electronics manufacturing in Thailand has undergone substantial transformations over the last two decades, including with respect to technological environmental innovation. Business conditions in Thailand have been highly challenging during this period, as the country has weathered multiple changes of government, mass mobilizations, torrential floods, and uncertain institutions. Some have argued that the lower end of global supply chains, electronics manufacturing in Thailand has persisted through this period, even if not entirely thriving. Driven by growing international regulation of hazardous materials and waste electronics and the greening of global supply chains early in the new millennium, technological environmental innovation in the industry has proceeded. Drawing on field research conducted over two decades in Thailand, as well as on available data, this paper addresses the causes and consequences of these transformations, including such questions as: How have these changes come about? What roles have domestic and international exogenous (market, regulatory, environmental) and endogenous (industry, firm, labor) forces and dynamics played in technological environmental innovation during these two decades? What has changed and not changed in electronics manufacturing in Thailand as a result? In what ways has electronics manufacturing in Thailand become more environmentally friendly since the beginning of the new millennium? The paper concludes with a discussion of the implications of the experience of Thailand’s electronics industry for social theories of technological and environmental change, including Ecological Modernization Theory.

Is Improvisational Theatre Really Improvised?: The Inherent Structure in Improvised Performances

The purpose of this presentation is to clarify the meaning of “improvisation” in modern society and the function of “formats” in improvised performances, and also to discuss the significance of improvisational theatre in modern society.

Improvisational theatre, often called impro, is a form of theatre that has no scripts or pre-planning. It was systematized in Britain and the United States in the 1950s and used to train actors, and also developed as a performance genre in its own right. Gradually, it spread to various countries and is now used in various other fields such as school education, business, and community development. Today, the concept of “improvisation” in itself attracts considerable attention, and there is a tendency for people to regard it as a panacea for various problems. For example, it is viewed as a way of heightening our ability to live through unpredictable articles and of changing relationships.

In our research, we first investigated discourses about “improvisation” in books and websites to clarify the meaning of “improvisation” in modern society. This revealed that “improvisation” is explained using highly positive concepts such as...
as “freedom”, “flexibility”, and “resilience”, which are contrasted with the concept of the “structure” of society.

Secondly, we did fieldwork in The Laboratory School of Improvisation, which is an improv group that carries out improv performances and workshops in Japan, and interviewed its members. We found that when improvising on stage, the performers don’t express ideas freely in their own separate ways. They embody and share “formats” which constitute the explicit/implicit manners and rules of improv.

In short, “Improvisation” has paradoxical properties. Though “Improvisation” is represented as a concept that frees us from social “structures” and enables us to create stories with others flexibly, performers in fact acquire freedom by means of “formats” when practicing improv.

Is Rise of China a Threat or a Chance? a Comparative Analysis of Determinant of Perception on China in Korea, Japan, and Taiwan

The rise of China has been discussed in different area of social sciences, but it is still rare for sociologists in East Asia to address this issue. International dimension of social development in East Asia is, however, necessary and indispensable part in sociological argument and the recent rise of China is one of the core parts of such international dimension.

Comparison of Korea, Japan, and Taiwan in terms of their attitudes toward China provides us with a lot of sociological insights. Comparative analysis of expatriates’ guanxi-building in China tells us that Korean expatriates are more aggressively extending guanxi mechanism than Japanese and Taiwanese counterparts. Our recent international collaborative research suggests that perception of “political risk of China” is different from Korean businessmen and Japanese/ Taiwanese businessmen.

This paper tries to conduct exploratory analysis of Korean, Japanese, and Taiwanese perception of the rise of China in comparative perspectives. More concretely, two research questions will be approached in this paper; namely (1) How people in three societies evaluate influence of China, and (2) Who are most concerned about the influence of China on their society, by using AsiaBarometer 2006, which is the only one dataset that enables us to compare Korean, Japanese, and Taiwanese views on China in connection with other important socio-economical variables.

Our data analysis reveals the fact that it is only in Taiwan that household income of the respondents has negative correlation with evaluation of the influence of China. Why is there such a difference? This paper, by answering this question, tries to argue that “perceived” relation is important in discussing the issue of the rise of China.

Cultural Capital In Movement: On The Dissolution Of Traditional Educational Codes By Educational Policy and Social Movements Among First Generation Academics In Germany

Barriers to educational advancement are often described in the literature. In this connection, authors mainly refer to Bourdieu’s concept in which a lack of suitable cultural capital is often a barrier to the educational advancement of children from non-academic families. Acquiring such capital, in accordance with this theory, is an essential prerequisite for success in an advanced educational career. Bourdieu paints a rather pessimistic picture of the chances of acquiring such capital. Codes of the milieu of origin survive, mediated through habits, and continue to hinder educational advancement.

Our project comparing educational advancement in three generations in Eastern and Western Germany — that is, first-generation academics in the 1950s, the 1960s and the 1970s — a total of 89 biographical narrative interviews were conducted. Many cases were found to corroborate the Bourdieusian concept. At the same time, however, it was also apparent that there are also many knowledges and cultural practices that contribute to the dissolution of culturally transmitted codes, and thus modify the “value” of the hereditary cultural capital in a given social stratum. To illustrate this, we will present a hermeneutic case reconstruction after Rosenthal that can be attributed to the type “social movements”. This case study will serve to illustrate the extent to which reforms in society and educational policy have led to a shift in cultural codes, and how such reforms can favor educational advancement.

The Growing Women’s Labor Market Participation and the Persistence of Inequality Between and Among Gender in Brazil

The last decades of development in Brazil have fostered a significant increase in women’s participation in paid work in both the formal and informal sectors. Looking into the significance of women’s growing labor force presence, this paper raises a number of questions to investigate to what extent women’s paid labor impacts inequality between gender (men and women) and among gender (women on the basis of class). We address that main issue by looking into the connections between women’s paid labor and unpaid labor and two main factors — the sexual division of labor in the family, and the labor legislation and social policies concerning maternity leave and child care. Analyses of the 2012 national survey data (PNAD) from the Brazilian Census Bureau, we show that women’s transition to paid labor in Brazil has been taking place without a significant changes in unpaid labor related to the persistence of the traditional sexual division of work in the family, and b) adequate policies geared to socializing responsibility for child care. We argue that a more equitable division of domestic work and children rearing in the family, as well as more inclusive social policies on parental leave and child care provisions are crucial to improve the balance between work and family (benefitting not women only, but men and children as well), and to foster equality between and among gender in the labor market and in the public sphere.

SOSA, ANA PATRICIA* (Universidad Nacional Autónoma de México, midris@unam.mx)
The Income Inequality In Mexico: Dynamics At The End Of XX Century

The purpose of this study is to analyze the evolution of the income inequality in Mexico considering two elements: the dynamic of labor income and wage and the general productivity in the economy. I consider that is important to contrast the level of income inequality and the structural conditions which produce macroeconomic instability, the slumps of economics and the inflation. The income inequality in Mexico is part of the socioeconomic historic unequal.

After the reduction in inequality during the 1960s and 1970’s, the exhaustion of the regime of accumulation by substitution of imports, and the crisis of the bureaucratic-corporative regulation, were reflected in a greater concentration of income, accompanied by structural heterogeneity, technological inequality and
difference in the degree of economic and social development in the diverse territories of the country. The market reforms of the 1980’s and early 1990’s worsened inequality. Start to change the unequal in recent years but the poverty has not decreased.

Recovering the Past to Face the Future: Experiences in Latin America

Recent evaluations of the results of educational reforms imposed after the eighties on education all over the world, and particularly in Latin America, indicate that these reforms have tended to reorient the politics publics in matter of immigration and of employment. At the global scale, the phenomenon migratory has to progressive place to that of the mobility professional temporary, not yet to the favor of the financialisation of the economy and of the externalisation croissant des activités de l’emploi. Au Canada, cette transition, traduit par la mise en place le développement de programmes de travailleurs étrangers temporaires qui drainent une main-d’œuvre présente dans plusieurs secteurs, de la transformation industrielle aux services comme l’hôtellerie/restauration et les télécommunications.

Le Travail Migrant Temporaire: Une Nouvelle Figure Du Paternalisme Gestionnaire Dans La Division Internationale Du Travail? Le Cas Du Canada

Les flux migratoires ont historiquement accompagné les mutations du travail. Depuis quelques années, la transformation qualitative et l’expansion de ces flux tendent à réorienter les politiques publiques en matière d’immigration et d’emploi. À l’échelle internationale, le phénomène migratoire a laissé progressivement place à celui de la mobilité professionnelle temporaire, notamment à la faveur de la financiarisation de l’économie et de l’externalisation croissante des activités de l’emploi. Au Canada, cette transition, traduit par la mise en place le développement de programmes de travailleurs étrangers temporaires qui drainent une main-d’œuvre présente dans plusieurs secteurs, de la transformation industrielle aux services comme l’hôtellerie/restauration et les télécommunications. Elle provient de divers pays du Sud, dans le cadre d’accords commerciaux ad hoc associés à l’État. Ce phénomène soulève plusieurs interrogations. Qu’est-ce que l’impact de ces programmes sur la structure de l’emploi, le rapport salarial et la régulation du travail? Dans quelle mesure ces programmes, conçus pour gérer localement les flux du travail migrant temporaire, mais qui s’inscrivent dans une dynamique transnationale, réorientent-ils certaines figures de la division internationale du travail? Dans cette étude, l’examen des discours et des pratiques des entreprises engagées dans ces programmes montre à quel point leurs stratégies de gestion sont imprégnées par un paternalisme managérial omniprésent dans l’ensemble des chaînes de valeur des secteurs affectés par ces flux (hôtellerie, télécom, agro-industrie notamment). Ce paternalisme se distingue de celui qui a caractérisé l’histoire de la relation salariale en ce qu’il semble relever d’une figure nouvelle de la division internationale du travail. Cette communication dresse un bilan critique de ces programmes en s’interrogeant sur la logique de leur gestion « publique » réalisée en étroite collaboration avec ces entreprises et en examinant leurs retombées en termes de structure de l’emploi, de rapport salarial et de droits sociaux du travail.

The Right of Women to a Free Violence City. a Case Study about Public Transportation in Mexico City

According to Women Human Rights, the government of the Federal District has made significant efforts, particularly recognizing that gender violence hurts the principle of respect to human dignity, makes difficult the participation of women in similar conditions and slows down the whole development of countries in political, social, economical and cultural life, on January 29th 2008 the Law Access of Women to a Violence Free Life is approved for the Federal District, through which it is agreed that women have the right to live a life free from any kind of violence. In the framework of this law, the Institute for Women designed a program to prevent, support and punish sexual violence against women traveling on public transportation in the city through actions aimed at promoting the rights of women, law enforcement and citizen oversight. This program includes various activities such as: Modules Care and Reporting Sexual Abuse cases in the Subway Public Transport System, Program “Athena” which is an exclusive service for women and separation of men and women in the Metrobus, Light Rail and Subway Public Transport System.

In this way The purpose of this paper is to analyze the effects of actions to prevent sexual violence that have been in public means of transportation: in the practice of daily mobility, in the perception of transport security, and feminine representation. They are built from this policy of gender equality.

The main hypothesis suggests that government actions in public transportation contribute to the generation of spatial justice, and with it in the exercise of the right to the city as a human right for women. Nevertheless, on the other side we hypothesize that the program intervention has generated paradoxical effects because they help to reproduce traditional representations of feminine and masculine in the city.

Digital Citizenship and Equal Access to Democracy

Democracy, as says the German philosopher Stephan Kirste, is a fundamental human right. Every person needs to have space to public manifestation, to get respect even this person belongs a minority group, to participate in political decisions that regulate and define its own life. Without these guarantees it will be unviable develop citizenship in front of majority groups and also State. Albeit this concern there isn’t new, it became urgent when digital technologies expanded theirselves in the world. Safety, recognition, privacy, information, all this subjects, and rights too, turn into the center of debates about social inclusion in a digital world. And to promote people inclusion one must to guarantee individuals equality, what it will be facilitated by legitimate democratic regimes. Two issues have to stay in the spotlight nowadays: how to organize popular participation in Digital Societies and, also, how to empower citizens to ensure their regular and equal participation in the political decisions. Without inclusion policies by governments it will be very difficult do get it. Citizens must have to “access passwords”, as Brazilian social scientist Eugênio Trivinho, to use digital systems, like specific hardwares, updated softwares, domain specific language of digital media, adapted theirselves to speed web interaction that he calls “dromocracy”, and others abilities needed in digital times and not ever available to everyone. This type of exclusion, and also discrimination, concentrate power in some hands, what caus democracy imbalance. Solve these issues presented is the only way to people inclusion and it’s a democracy essential condition too.

Clean Energy and Political Stability: Challenges for International Cooperation within the Union for the Mediterranean

The challenges represented by “global warming” and “energy demand” have contributed to insert the environmental debate among the main topics of international cooperation agreements. The Union for the Mediterranean (UfM) – an institution which comprises forty-three countries in Europe, North Africa and Middle East – has developed ecological projects which were also designed as a strategy for strengthening the political and economical ties between its members. Within the UfM framework, the targets defined in the Casablanca Declaration (2008) aimed to enhance the visibility of the UfM, two were clearly based on ecological criteria: the de-pollution of the Mediterranean Sea and the installation of solar power plants in desert regions. Precisely the discussion on the political conditions for

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
the implementation of the Concentrated Solar Power (CSP) in the Sahara Desert is intended to support our reflection about the potentialities and contradictions of such initiative. Once these solar plant projects are destined to provide not only Middle East and North Africa (MENA) with “clean energy”, but also approximately 16% of the European energy demand by 2050, it seems urging to consider the geopolitical transformations that the “desertec” project could unleash. We are inclined to think that such enterprise would indeed change the geopolitical meaning of the Sahara Desert and thus contribute to balance the political relationship between European and MENA countries. Although it is not likely that the marginalization of countries of the UMF are going to become “equal partners” of its European counterparts, it is probable that the export of solar energy can diminish the political asymmetries between North and South. It is also crucial to reflect whether the “political instability” of the MENA countries can impose barriers to the accomplishment of the idea, especially because “Desertec” was conceived before the so-called “Arab Spring”.

Labour Market Experts and Their Professional Practices: Technologies of Self-Control of Job Placement Professionals
The Articulation of Japanese Culture in the Global Era: The Case of Japanese Small-Type Coastal Whaling
After the whaling moratorium had come into force in 1986, the Japanese government as well as anthropologists and social scientists tried to establish "small-type coastal whaling" (STCW) as a new category within the International Whaling Commission (IWC). Japanese coastal whaling has a long tradition dating back to the 16th century. Even today whaling is socially, culturally and economically important in the whaling towns as Taiji. However, the articulation of whaling as Japanese culture was not successful. A comparison of the Japanese and the Greenlandic articulation strategies show: Despite of many similarities of the coastal whaling, the articulation of whaling as Japanese culture failed. Thus, it is considered a legitimate cultural activity within a subsistence economy of the Greenlandic Inuit. However, all attempts to get Japanese whaling recognized as a cultural activity failed. In this way Japanese coastal whaling is continued as “scientific whaling,” while internationally criticized as being an illegitimate practice with suspected background of commercial interests. The consideration of the regulation of the international whaling as a form of global environmental regimes shows that the decisions within the International Whaling Commission will be determined by global models and categories of the world polity. Japan as an industrial country left the stage of indigenity behind which is reserved for indigenous peoples as the Greenlandic Inuit and is perceived by the world community as being too modern, too enlightened and too developed.

Policing and Crime Control in Contemporary Nigeria: An Agenda for Reform
Crime and insecurity are major challenges of contemporary Nigerian society, with the barrage of various forms of criminal behaviours, including: terrorism, political violence, ethnic-religious and communal violence, unbridled corruption, politically-motivated assassinations, murder, violent crimes, kidnapping for money, and robbery. Efforts by security agents to solve the problems have not yielded the desired results. The inability of the Nigeria Police to effectively tackle the...
problem has made people question the capacity/competence of the police, and also casting aspersions on the quality of governance. Recently, the military was drafted to support the fight against terrorism. In response to the problem, some ethnic militia have sprung up, with some serving as "local police" in communities. Nigeria currently operates a unitary/centralized policing system, but there have been demands for the establishment of state police – separate from the federal police. Increasingly, communities and individuals do not wholly entrust their security to the police, and there have been local community actions against crime, including street barricades and the restriction of vehicular and pedestrian access at certain times. While the informal policing outfits have been playing positive roles with security control, the relationships between them and the police have not been entirely cordial.

Drawing from recent challenges, issues and experiences with the war against crime and insecurity (including terrorism), this paper discusses the policing and security systems as entity, as well as the relationship/interactions between the various security units. Suggestions are made for more effective policing in Nigeria, including greater collaboration/partnership between the formal policing system and the informal policing structures. The paper also advocates greater collaboration between the police and the public for a more successful campaign against crime in Nigeria.

Transnational Trajectories? Studying Nation and Citizenship in East Asia

Despite sociology's increasing engagement with global processes, the relationship between global/transnational studies and cross-national, comparative studies remains a question, both conceptually and methodologically. This paper inquires into this relationship through an empirical focus on the transnationalization of nation and citizenship in East Asia. Unlike the common practice, by transnationalization, I do not simply refer to the advance of explicit transborder regimes (e.g. the World Trade Organization and the European Convention on Human Rights), or social formations "spanning borders" (e.g., migrant networks). Rather, I offer transnationalization as an analytical node to capture the diffusion of non-nation-specific, universalistic frameworks, models, and standards, and the engagement of nationally located actors' (states, social movements, professional organizations, and individuals) with such frameworks to orient their actions and strategies. This view locates the nation-state and a variety of national actors within their broader transnational environment—in an analytical sense these two levels are inseparable.

Densely organized at the national level and beyond, education policy is highly susceptible to transnational isomorphism. The analysis of the post–World War II school curricular reforms and content (particular focus on Japan and China, in comparison with European developments) shows that national educational systems in East Asia increasingly assume a globalized society, and the role of active and able citizens and nations in making this society. In so doing, they systematically insist upon the "distinct" contributions of the nation and its citizens to the good of the wider world. Yet, as the nation (and its uniqueness) is expressed fiercely, the policy reforms in East Asia affirm transnationally difficult, common models of social order. Nations as "imagined communities" and individuals as citizens acquire commonalities across societies. The assertiveness of the nation (divergence), as well as its progressively common imaginary (convergence), is linked to its transnationalization.

Environmental Agency and Power in the Global Network Society

Over the past two decades, practice theories as developed by Anthony Giddens, Theodore Schatzki and Elizabeth Shore amongst others, moved center stage in the sociology of sustainable consumption and everyday life. Practice theories offer an attractive third way in between individualist (value driven) and institutionalist understandings of human agency and its context. We show that the environmental dimension of (consumption) practices as performances or as strategic action, we explore how specific lifestyle groups with particular ‘green’ portfolios or competences participate in the practice in order to make the practice and their lifestyles more sustainable. We investigate how and as part of an institutionalized set or nexus of practices, we focus on the process of strengthening or weakening the connections between different practices. We argue that the concepts of power as put forward by Manuel Castells (2009) can be used to illustrate the interrelationships between practices and thereby of the key dynamics of environmental changes in the global network society.

Sorting Snorers: Straight Path to Treatment?

The medical model can perpetuate and itself be perpetuated—or be challenged. In the case of insomnia, the boundaries of the medical model can be challenged by stereotypical conceptions encountered on the internet. In this rich case study of snoring and obstructive sleep apnoea (OSA), we examine internet searching as a complex actor-network comprised of actors and actants such as the searchers themselves, search engines, web-pages, and the organisations behind the pages, all contributing to lay pre-diagnosis of OSA. Clinical preconceptions regarding typical OSA sufferers include age, gender, and weight. Overweight middle-aged men are expected to have sleep apnoea, whereas skinny young women are often not. Through situational analysis of the conceptual interactions between participants recruited on the basis of either being snorers, or being the partner of a snorer and website pages, websites, and website providers, the study closely examines the generative forces arising from engagement or ill-fit with the disease-based model as encountered during an internet search. Situational Analysis is used to model the actor-network on both individual and aggregated levels to gain insight into the complexity of the medicalisation of snoring and OSA. This paper examines the internet search as an emergent yet increasingly powerful and pervasive source of influence, shaping conceptions regarding who can snore, who can have OSA, and who and how therapies for snoring can be accessed. Using Situational Analysis as a starting point, we have developed a novel data visualisation technique particularly suited to representation of both human and non-human actors and actants involved in the internet search and pre-diagnostic endeavour, and to visually represent conceptual tensions (medicalisation and non-medicalisation; snoring and obstructive sleep apnoea; male and female; old and young and so forth) within the overall actor-network.

Scums Of The EARTH: A Critical Analysis Of ‘Humanness’ In Host Society from10 Life Stories Of Poor Immigrants In Johannesburg, South Africa

This paper critically examines the question “at what cost do we establish national borders as the criterion for valuing others? What are the consequences to ourselves; the selves that ultimately places humans above their animal counterparts? It thematically but critically examines the ‘we’ that have ascribed an identity to ‘migrants’, labelling them as not fit for support and care. Adorn T, argued that identification limits the scope and facets of the subject to the desired level only. However, the reverse is also the case, whereas identification limits the scope and facets of the identifier within a box, from which he cannot break free to explore his unlimited ability to create the world he desires. In this sense, by identifying migrants and in particular poor and unskilled migrants as ‘undesired’ and ‘disfunctional and non-medicalisation; snoring and obstructive sleep apnoea; male and female; old and young and so forth) within the overall actor-network.

Between Institutional Oppression and Spiritual Liberation: The Female Ordination Movement in the Catholic Church and Its Utilisation of Social Media

The female ordination movement within the Catholic Church is a dynamic and forceful example of the paradoxical binary of institutional oppression and individual liberation operating within the contemporary religious sphere. Proponents of this movement are seeking justice and gender equality in the face of the system-

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
atic patriarchal oppression of women within the Catholic Church. This radical and pioneering international movement is struggling for recognition as a legitimate religious formation as it campaigns for a more inclusive and accountable Catholic Church. The female ordination movement thereby provides a fertile conduit for examining how religion can both oppress individual freedoms and also be used to mobilise political, social and spiritual liberation from institutional dispensation.

This paper will utilise critical discourse analysis of various social media outlets and webpages to elaborate on the institutional oppression and spiritual liberation which lies at the heart of this religious group. Drawing on feminist theology and a feminist epistemology, this paper will explore the effectiveness of social media in connecting women across the world who are facing institutional religious repression and who are seeking support from likeminded faith believers. Through critical discourse analysis, this paper will find that social media is used by groups involved in the female ordination movement such as The Catholic Network for Women's Equality, Women's Ordination Worldwide and The Women's Alliance for Theology, Ethics and Ritual, to subvert the dominant attitudes towards women within the Catholic Church and to provide an alternative form of religious expression for disaffected Catholic women. These groups are thereby able to mobilise women into a solidary international religious formation which empowers women who have experienced suppression or subjugation from the Roman Catholic Church.

UK Maternity Services ‘Risk Culture’: Is the Professional Status of Midwives ‘At Risk’?

UK maternity services, accounting for a significant proportion of National Health Service litigation claims, are increasingly regulated by ‘risk management’ standards. Such standards, aimed at improving the safety of maternity care and reducing litigation, inevitably associate childbirth with risk, and the control of professional behaviour in managing such risk. The growth of this ‘risk culture’ within maternity services poses significant threat to professional status claims.

This paper presents findings of a Doctoral ethnographic study observing the real-time impact of the ‘risk culture’ within an English National Health Service maternity department. Litigation and subsequent increasing regulation has fuelled the social construction of a ‘risk discourse’ surrounding maternity care. Aligned with the assertion that modern society has become increasingly risk averse (Beck, 1992), professional anxiety regarding risk has provoked socialisation amongst doctors and midwives that control over the childbirth process promotes risk minimisation. The stereotypical medical interpretation of risk, based upon fear of uncertainty and pathophysiology, has consequently permeated all aspects of pregnancy and childbirth. This in turn has led to the subscription of the ‘biomedical model’ as the prominent paradigm in managing maternity care, fuelling control, intervention and the ‘medicalisation’ of childbirth. Such ‘medicalisation’ has cemented doctor-led, intervention-laden management firmly within modern childbirth, with midwifery-led, naturalistic childbirth becoming an ever-decreasing occurrence. A professional identity crisis has ensued amongst midwives in that the role of the midwife in the 21st century is in a state of flux, raising concerns for the professional status of midwives within future childbirth provision. The ‘risk culture’ in the UK has provoked significant inequalities between the professional status of doctors and midwives within modern maternity care. The role of midwives as autonomous practitioners in normal childbirth is eroding, therefore the ‘risk culture’ in the UK placing the midwifery profession at risk of deprofessionalisation?

Doctors’ Narratives

Doctors’ Narratives

My answer to the question outlined in the title of this session would be: “Doctors’ Narratives”. As illness narration is a means to gain direct access to the subjective aspects of illness, so utilization of doctors narratives in which they portray themselves is important in order to understand who physicians really are. Making a distinction between the motivations behind their choice and the manner in which physicians perform their profession, the author tries to deciper the “black box” of medical identity. He does so using 40 qualitative, in depth interviews with doctors working in various branches of different ages and professional placements. The narratives so collected appear strikingly similar to those of doctors in flesh and blood from other parts of the world or to “imaginary” doctors created by the fantasy of great writer - doctors (Bulgakov, Chekhov, Celine, Conan Doyle, Crichton, M. Scott, etc.). Perhaps even the ideological choice of trying to understand the profession through biographical tales reveals more than a point of intersection with the “narrative” approach in medicine: to make a proper anamnesis, both clinically and sociologically, it is necessary to collect a good story, as only this can tell us not only the what, where and when, but also the how and why.

Tensions at the Frontline: Remediation-Work in the UK Travel Sector

In response to recent terror attacks, Western governments now involve private sector organizations in national security regimes in key strategic areas such as travel, communication and financial services. The UK’s eBorders programme is one such regime. Its goal is to collect and analyse passport and passenger data from all travelers entering and leaving the United Kingdom in advance of travel. Airlines and their supply chains are required to collect data from their customers and transfer it to the UK Border agency for processing. Using documentary and interview data, this article develops the concept of ‘remediation-work’ to characterise the impact of the regime on travel firms and their employees.

SPILLMAN, LYN* (University of Notre Dame, spillman.1@nd.edu)

Symbolic Violence and the Limits of Domination

Theories of power highlighting the complicity of subordinates in relations of domination typically assume their prior engagement in agonistic fields structured by that domination. Building on recent arguments for a cultural theory of interests (Spillman and Strand 2013) this paper examines the limits of the complicity assumption, and the implications of those limits for the concept of symbolic violence. I argue that cultural processes inherent in field formation as “autocatalysis” (Padgett and Powell 2012), as well as in dynamics of center/ periphery relations within fields (Shils 1975), and in Hirschman’s (1990) theorisation of actors’ exit options, all set limiting conditions on subordinates’ meaningful participation in agonistic fields, and thus help specify the conditions for symbolic violence.

Portraits of Juvenile Prostitutes: Reconsidering the Mainstream Trafficking Victim Narrative

The dominant narrative of prostitution in public media and even much scholarship equates sex work with trafficking – giving rise to the ubiquitous expression “sex trafficking” – and portrays sex workers as women and girls who are kidnapped, sold, and violently coerced into a life of slavery from which they need to be rescued. This narrative has been much sensationalized and set as the basis for rigorous criminal legislation against alleged traffickers (i.e., pimps) and clients, as well as reflecting the hegemonic media attention and policy influence of “new abolitionist” feminist scholars and activists who oppose pornography and prostitution as exploitative degradations of women. A bitter divide exists between these abolitionists and “sex worker advocate” feminists, who maintain that sexual commerce is not simply a story of victimization, that sex work can and often is, consensual and empowering, and that sweeping anti-trafficking policies are misinformed by exaggerated, sensationalized statistics. The ensuing “Sex Wars” have suffered from a lack of empirical evidence about the nature of sex work among those who engage in it, and the paucity of data is especially prevalent among juveniles, presumably the most vulnerable (and likely victimized) population. This study examines the experiences of 19 juvenile street prostitutes – twelve girls and seven boys – working in Las Vegas, Nevada, using in-depth interviews conducted between February and March 2012. We investigate the circumstances of these adolescents’ sex work, including age, gender, race, pathways to prostitution, involvement with pimps, and abuse. In addition to using entry narratives to explore the pathways to sex work, we go beyond simply describing why juveniles become prostitutes and examine the ways that their lives contrast with other traditional narratives about gender and sexuality, race, social arrangements, and economic consumption, all of which speak to harm reduction needs for all street prostitutes.
The Challenges for Alternatives in the Brazilian Energy Matrix: The Sustainability of Family Farming in Biodiesel Production

The paper presents results from an experience of castor beans production to obtain biodiesel with small farmers in southern Brazil. This research provides some reflection about the family farm crisis, which has been accentuated in recent decades, because the rural aging population, as well as the lack of successors. The social responsibility to settlement people on lands is the government’s role, in this way; the agrarian policies would propose strategies to modify the productive logic inherited from monoculture production, in the southern of Rio Grande do Sul. It is essential to rethink the viability of family farming beyond funding programs of the federal government. As a result, experiences articulated with different areas of knowledge could bring innovations in the ways of generating household income to the sustainability of rural activity.

Ethnic Differences in Premature Mortality over Three Decades – the Intersection Between Indigeneity, Social Class and Preventability

This study uses national-level mortality data to investigate the changing social class and ethnic patterns in premature mortality in New Zealand men from 1975 to 2006. During this period there was a political struggle for recognition of indigenous rights, a social policy focus on inequality, and major macro-economic reform. We used information from national death registrations and national census data from the five yearly national population censuses from 1976 to 2006 to examine changing patterns in social class differences in all cause, preventable, and non-preventable mortality for Maori and non-Maori men under the age of 65. Our results show that social class differences in male mortality have increased since 1975. Maori male mortality was significantly higher than non-Maori mortality in each social class for preventable, non-preventable, and all causes of mortality. The social class mortality differences within Maori were markedly greater than those within non-Maori.

Despite focused efforts to improve Maori health, the inequality between Maori and non-Maori in premature mortality appears to be increasing, even when social class differences are taken into account. The persistently higher Maori rate of potentially preventable deaths indicates that the health sector is still not meeting the serious health needs of many Maori. It also appears that there is increasing social stratification developing within the Maori population such that the social class differences in mortality within Maori are now larger than the inter-ethnic differences between Maori and non-Maori. We present several reasons why decades of indigenous development have not overcome ethnic differences in a fundamental marker of population health such as premature mortality but have resulted in increased inequality within the indigenous population.

The Internet Is Not The Answer To The Problem Of Leisure Identities, But The Internet Is Interesting For Leisure Studies: Against Poststructuralist Theory and For Empirical Leisure Research

As people’s leisure lives have become mediated through the global networks of the internet, leisure scholars such as Tony Blackshaw (2010) see a digital world of liquid leisure. Drawing on the work of Castells, Beck and Bauman, Blackshaw and others such as Rojek (2010) who have advocated the ‘post-structural’ turn in leisure studies welcome the dissolution of boundaries, the reduction of inequalities of power, and the individualization of leisure choices and leisure identities that the internet supposedly brings. In this paper, I provide a strong critique of the post-structural turn in leisure studies by showing that the theoretical foundations of such claims are weak, and the evidence base for such claims demonstrates only that some people in some countries have some freedoms to play at leisure identities. I will show that the internet in the work of post-structuralist leisure scholars has become a chimera that has little resemblance to the internet that actually exists. I will end by using some of my own research to demonstrate the limits of leisure on the internet and the structures that still shape human interactions, human leisure and human culture.

References

the problem or argue for a unidirectional cause and effect relation. The conceptual
inflation in the field of stigma research also confined the strategies to counter
the stigma within the vicious circle of exclusion limiting the scope for out of the box
social engineering. This paper argues for a multidimensional understanding of the
stigmatisation process that addresses the functionality without functionalism and
without resorting to excessive individualization. It is vital to distinguish between
what we can call HIV/AIDS stigma, and what we should call HIV/AIDS related social
exclusion. How the linkages operate; uni/multi- dimensional? It is also important
to unravel the social process operating at different levels of reality and how the
old inequalities play a significant role in producing and reproducing the new
forms of social exclusion where the Right to Live is under threat. The paper calls
for an integrated paradigm for understanding the social process of stigma and
exclusion and try to explain the dynamics of stigma within and outside the matrix
of micro-macro versus subjective-objective axes of social reality. The empirical
exploration with this framework requires a re-examination of the existing meth-
odological practices in stigma research.

Inequality and Inclusion in Primary Health Care System in India:
An Interstate Analysis

The trajectory of primary health care system in India is at crossroad with the
gradual withdrawal of state from health sector. However, there are efforts to re-
vamp the organisation and delivery of health care in rural areas with the intro-
duction of National Rural Health Mission (NRHM) in 2005. Within this context the
present study tries to analyse the internal differences in health care outcome in
India and its relation to the social determinants of health. Secondary data anal-
ysis showed that there are wide inequalities existing between different states in
terms of various indicators of health development. The state of Kerala stands
out in terms of its achievements on major indicators and often hailed as ker-
ama model of health development, whereas the state of Assam performs lowest
in most of these indicators. However the state of Assam is the only state in India,
which included health as one of the basic right to its citizen. A secondary analysis
combined with an ethnographic field work in these two states revealed that the
inequalities between these states and within the states are complex and a unitary
model of inequity determinants fails to answer the complexity. Thus the social
health determinants models needs to be re-looked from the vantage points of
the local context. The study also highlights the pitfalls of government policy of in-
clusive health and how it still stuck with the centralization of primary health care.
Thus the policy of including the excluded in the delivery of health care in India needs to be informed by the local complexity of inequity structures and processes.

PALLOTTI, Francesca (University of Lugano)
A Multilevel Model of Organization and Network Change

According to one vision organizations are more likely to establish network ties with
partners having similar operational experiences (homophily). A second vision
suggests that interdependent organizations connected by network ties are more likely to assimilate each other’s knowledge and develop progressively more similar portfolios of internal activities (assimilation). The internal structures of or-
ganizations can be represented as networks of interdependent portfolio items.
These intra-organizational networks are nested in networks of organizations and
influence the homophily and assimilation processes described.

In this paper we try to establish which of these two visions best describes the
dynamics of collaboration (measured as patient transfers) and organizational
change (measured as change in specializations) in a community of hospitals. We
estimate new developed stochastic actor-oriented models (SAOMs) for multilevel
networks which specify how inter-organizational relations affect organizational
decisions to change the portfolio network of internal organizational activities by
adding or abandoning activities. At the same time, the model allows joint exam-
ination of how the common affiliation to internal activities affects decisions to
change networks in terms of patient sharing relations between partner
hospitals. We innovate over existing studies of network dynamics in that we
represent processes of change in internal organizational structure, and change in
the structure of inter-organizational networks as coupled sub-components of
a more general process of co-evolutionary development. The objective of this
paper is to examine this multilevel process that is empirically using data observed between 2003 and 2007 among all the hospitals in a regional
community. In the discussion of the results we emphasize the connection be-
 tween recent advances in the specification and estimation of SAOMs for multilevel
networks, the current theoretical debates acknowledge the emergence of organizations
and markets and the interpretation of our findings in the light of rational choice
assumptions of the statistical framework.

Ideology of Courtroom

After 90s, when Francis Fukuyama announced the end of history and the
neo-liberal democracy was the only solution for eastern-european countries lib-
erated from the domination of the Soviet Union, it appear that the problem of
ideology was gone forever. It soon turned out, thanks to the growing consumer-
ism, postmodern terrorism and unpredictable economy, that we can't interpret
the modern world without reference to some concept of ideology. At the same
time the theory of the law is still running away from this concept. Perhaps legal
discourse is afraid that any critical theory ultimately reduces law to the economic
base (inspired by Marx) or the flow of libido (inspired by Freud). But according to
Slavoj Zizek ideology is the specter that lurks everywhere. Even in the toilet. Even
in the courtroom.

This paper is a attempt to show the structural elements of this courtroom-spec-
ter. Using lacanian-zizkenian tools I will try to examine the Imaginary, Symbolic
and Real levels of courtroom, that escapes everyday consciousness and at the
same time are the conditions of possibility of that consciousness. This approach
raises some important questions. If trial is a theater, who is the spectator – the

Social Dining As a New Urban Food Community

A new form of communal meal where total strangers eat together, often in
intimate or homely settings, has become increasingly popular in urban environ-
ments. This phenomenon has been dubbed ‘social dining’ and encompasses
meal-events where the social aspect of dining is paramount. In a time where the
communal meal par excellence – the family meal – is under threat social dining
might be a new way of creating commensality. This paper seeks to develop an
understanding of social dining and examine its cultural and economic implica-
tions and discusses reasons for its apparent popularity. Examples of social dining
include weekly communal meals at regular restaurants; arrangements where un-
familiar people cook and eat together; or the now global Restaurant Day (inspired by Marx) or the flow of libido (inspired by Freud). But according to
Slavoj Zizek ideology is the specter that lurks everywhere. Even in the toilet. Even
in the courtroom.

This paper is a attempt to show the structural elements of this courtroom-spec-
ter. Using lacanian-zizkenian tools I will try to examine the Imaginary, Symbolic
and Real levels of courtroom, that escapes everyday consciousness and at the
same time are the conditions of possibility of that consciousness. This approach
raises some important questions. If trial is a theater, who is the spectator – the
Great Other? What is its object of desire – the object small a? Finally, psycho-
analysis in the courtroom is only a therapy or it immediately becomes a policy?
The Precariat: From New Dangerous Class to Class-for-Itself

Neoliberalism, stemming from the musings of the Mont Pelerin Society after the Second World War, meant a model of liberalization, commodification, individualism, the privatization of social policy as well as production, and – least appreciated – the systematic dismantling of institutions and mechanisms of social solidarity. From the late 1970s onwards, it meant the painful construction of a global market system, in which the globalization era was the disembodied phase of the Global Transformation, analogous to a similar phase in Karl Polanyi’s Great Transformation. In both cases, the disembodied phase was dominated by financial capital, generating chronic insecurities and inequalities. But whereas Polanyi was analysing the construction of national markets, the Global Transformation is about the painful construction of a global market system.

One consequence has been the emergence of a global class structure superimposed on national structures. In order to move towards a re-embodied phase, it is essential to understand the character of the class fragmentation, and to conceptualize the emerging mass-class-in-the-making, the precariat. This is a controversial concept, largely because traditional Marxists dispute its class character. However, it is analytically valuable to differentiate it, since it has distinctive relations of production, relations of distribution and relations to the state. It is still a class-in-the-making rather than a class-for-itself. But it is the new dangerous class because it is a force for transformation, rejecting both labourist social democracy and neoliberalism. It has a distinctive consciousness, although it is this that holds it back from being sufficiently a class-for-itself. It is still divided, being at war with itself. However, it has moved out of its primitive rebel phase, and in the city squares around the world is setting a new progressive agenda based on its insecurities and aspirations.

A Precariat Charter: From Denizens to Citizens

This paper discusses my new book, A Precariat Charter: From Denizens to Citizens (2014), which builds on key arguments from my 2011 book which introduced the Precariat as an emerging mass class, characterized by inequality and insecurity. A Precariat Charter discusses how rights – political, civil, social and economic – have been denied to the Precariat, and the importance of redefining our social contract around notions of associational freedom, agency and the commons. The ecological impact is also discussed - something that was only hinted at in my 2011 book but has been widely discussed in relation to the Precariat by theorists and activists alike. By taking debates about the Precariat a step further, I further examine the kind of progressive politics that might form the vision of a Good Society in which such inequality, and the instability it produces is reduced.

Public Access to the Unorthodox Sacred Via Portuguese Urban Spaces

Drawing on numerous interviews carried out in 2010, this paper focuses on the popular cult surrounding a medical doctor famous for helping the poor, Dr. Sousa Martins, who died over a century ago in Lisbon. Because of contested rumors of Sousa Martins’ having been Freemason and having committed suicide, he is unlikely to ever be canonized within the Catholic Church, and the cult of devotion surrounding him exists completely outside of the church’s authority. The popular devotion toward Sousa Martins involves thousands of Portuguese of all ages whose numbers appear to be growing. Devotees believe that Dr. Sousa Martins can cure their illnesses, find jobs and homes for them, and even conduct ‘spiritual surgery’ on them to remove cancer. Despite the fact that the Church does not condone this devotion, the cult is enabled – and its ritual activities organized – by three public spaces within and near Lisbon (his statue, his tomb, and his home-turned-museum) in which devotees can openly ‘communicate’ with Sousa Martins to ask for his help (especially medical cures), bring him offerings, and leave gifts of thanks for miracles performed. The fact that this devotion has no organizing institution also means there is room for active individuals to guide it in particular directions. Such individuals include a charismatic female medium, a seer-turned-writer who has written numerous popular books on Dr. Sousa Martins, and the owner of a kiosk selling cult objects, who has invented rituals for communicating with the doctor which she tells to her customers. This paper will explore the importance of the public spaces through which devotees ‘communicate’ with Dr. Sousa Martins, how this complicated takes place, and how these public spaces connect to charismatic Christianity and other, more private spaces such as sessions with spiritual mediums who claim to be able to communicate with Dr. Sousa Martins.

Inequalities in Social Capital and Socio-Economic Status in the Post-Industrial Cities of Central and Eastern Europe

Comparative Results from Georgia, Russia and Poland

In accordance with the sociological literature, two components of social capital will be considered: trust and social networks. Socio-economic status will be analyzed by level of education, monthly income, and job situation. The main thesis of the paper is the assumption that in the post-industrial cities of Central and Eastern Europe access to social capital is not highly associated with the socio-economic status of inhabitants. The empirical basis for the paper is a database from surveys carried out in selected post-industrial cities of Poland, Russia, Hungary and Lithuania. In each of the above countries one city was selected in order to conduct a survey of representative samples of inhabitants between the ages of eighteen and seventy.

The empirical investigation was carried out in the year 2012 with the financial support of National Centre of Science in Poland.
Trust and Democracy in Different Post-Communist Societies: Poland, Russia and Georgia Comparison

The subject matter of the paper is a comparison of political trust (that consist the fundament of political stability) and democratic attitudes in three very different post-Communist countries: Poland, Russia and Georgia. Poland is exceptionally different from the two others because of a very strong democratic tradition while neither Russia nor Georgia have such a tradition and experience but they differ in terms of their political culture and present political aspirations. Differences of political trust are analyzed in their relations to attitudes towards democracy. We are particularly interested in analyzing social differentiation of trust in political system and in particular political institutions in the three countries. We would like to answer the question what are the segments of their societies that might be considered fundamentals of social stability and development towards legitimized democratic system. We would like to find out what are the determinants of democratic attitudes, especially their relation to political trust in the system as a whole and theirs’ institutions in countries with different traditions and different pace as well as direction of transformation. The main question is, what are the differences between those three countries in terms of the level of political trust and democratic attitudes, what are the differences in relations between the two, and what are the differences in social composition of those who trust the political system and support the democracy and those who do not. That is especially important because of the differences in existing systems. The attempt to answer these questions is made by analyzing the results of survey research conducted on nationwide random representative samples in Poland in September 2010, in Russia in March 2012, in Georgia in August 2013.

Intergenerational Dependences and the Financialisation of Retirement: Lessons from Australia

Across the developed world, population ageing has coincided with rising living standards and expectations in retirement. Since the 1980s this has led to growing concern about the sustainability of public pension systems. Australia has been held up as an example of prudent financial management, as it looked to fund retirement incomes through compulsory private savings. This supplemented Australia’s flat-rate and means-tested public pension system, also supported by widespread home ownership. The shift to private pensions has made individual workers more reliant on lifetime savings and on benefits accrued through the tax system rather than direct benefits. We examine the intergenerational implications of this trend towards greater financialisation of retirement incomes by analysing cross sectional data from the Australian Bureau of Statistics. Given the significance of the Australian model to international debates, we discuss the potential long run international implications for inequality in retirement of this experience.

Leisure in the Middle East: Tradition, Taste, and Equal Access

Much of leisure in the Arab/Iranian Middle East may be accounted for by the forces of tradition and taste in free-time activity as these two have evolved across the centuries since the birth of Islam (c. AD610). Tradition and taste have become the cultural foundation of scores of leisure activities, which are preferred by one sex or the other, are coordinated with the Islamic calendar, appeal to particular age groups, among other differentiating principles. This paper, using a variety of library resources, examines the traditional and contemporary leisure activities in the Middle East, pointing out where equal access to them is an issue. Most Arabs and Iranians with deep family roots in this culture seem satisfied with their traditional leisure tastes. Differentiation according to the aforementioned principles is not gender neutral; rather, it is not considered “unequal” in the social scientific sense of the word. What are considered unequal by some participants in the region, however, are certain “new” leisure activities, this new leisure being adopted (and often adapted) from outside the region, usually the West. These new activities range from imported European fine arts (e.g., classical music, ballet) to imported popular culture (e.g., rock music, stand-up comedy). Here, inequality is evident, for example, in differential monetary and geographic access to the fine arts. Adherence to Islamic values and traditional gender roles number among the factors generating inequality in popular culture.

The (In)Stability of Disorder Across Time and Space? A Spatio-Temporal Analysis of Physical and Social Disorder and Fear of Crime in the Netherlands

Whereas the occurrence of physical and social disorder across the urban landscape and the explanation of the observed spatial patterns have long preoccupied criminologists and urban sociologists, relatively few studies have looked at the dynamic of disorder patterns, in an attempt to observe from a spatio-temporal perspective. Elucidating the (in)stability of spatial patterns of disorder and fear of crime is especially important for the model of urban development known as the Broken Windows Thesis, which posits that physical and social disorder, if unabated, lead to heightened fear of crime, reduced informal social control, and eventually a rise in more serious crime.

The present contribution is a spatio-temporal cluster analysis of physical disorder, social disorder, and fear of crime in the Netherlands based on the Dutch ‘Police Population Monitor’ survey between 1993 and 2005, a large-scale biannual household victimization survey covering every municipality in the Netherlands. By aggregating the individual survey respondents of each commune, we constructed a municipality-level longitudinal dataset spanning twelve years. We perform geovisualisation and spatio-temporal clustering analyses of Dutch municipalities in order to determine whether there are significant local differences in physical disorder, social disorder, and fear of crime and whether these spatial patterns persist over time. In addition, self-organizing maps serve to classify individual municipalities into clusters of similar spatio-temporal type across the Netherlands. Finally, we test to what extent this ‘data-driven’ typology of municipalities accounts for the observed shifts in the spatio-temporal patterns of disorder and fear of crime over the twelve-year study period. The study thus produces evidence whether the front end of the hypothesized ‘developmental sequence’ linking disorder with heightened fear of crime and reduced informal social control can be observed across time and different types of municipalities or is a rather transient and exclusively urban phenomenon.

It's Hard out There for a Girl: Online Surveillance of the Female Body on Social Media

In 2013, we interviewed 50 Canadian girls and young women between the ages of 15 and 22 about their experiences as girls on social media. They described a complicated, often playful but often difficult relationship, with online surveillance that magnified the need for them to comply with mainstream expectations of beauty and the bodily performance of girhood. Although they relied on social media to keep in touch with friends and family, many of them experienced a high level of discipline from these groups when they stepped outside the narrow bounds of stereotypical performances of femininity, reducing their opportunities to experience a lived equality in online spaces. Most of them also internalized and then acted out a narrow, stereotypical performance of the female body online in order to protect themselves from criticism. Girls who were unsuccessful in doing so suffered from harassment and self-criticism; girls who were successful articulated ongoing concerns about the precariousness of this success. Rather than enjoying their social relationships with peers through increased online interaction, many of them relied on a series of mutual agreements to mobilize online when the reputation of a member of the group was attacked. Perhaps most disturbingly, the online surveillance gaze encouraged many of them to rely on external validation of their physical appearance to manifest a performance of confidence, both deepening the effect on mainstream stereotypes and discouraging them from developing an internal sense of validation and worth. Our findings underline the need for policy and educational initiatives to support girls online and open up spaces for them to confront online stereotypes, push back against the gendered constraints they encounter online and participate equally in online society.

STEFANEL, ADRIANA* (University of Bucharest, adriana.stefanel@ffisc.ro)

Shaping the Romanian Identity. the Nationalist Discourse of the Orthodox Romanian Church

In a Europe increasingly secularized, Romanians trust the church is high and growing. According to the World Values Survey 1999-2000, 47.9% of the Romanian has high trust in this institution while only 2.7% is the opposite. Also, except Malta, the highest percentage of Europeans who believe that religion is very important in the stability of democracy is recorded in Romania (51.3%). We can say that we are witnessing, in the XXI century’s Romania, a true renaissance of God (La revenire de Duh, Q. Kepel, op. cit. Samuel Huntington).

Where There Is No Utopia? When Real Viral Social Spacing(s) Performs to Theory

Viral proxemic social spacings of the Occupation (from Occupy Wall Street to Occupy GeziPark and Occupy Brazil) and of Gangam Style lend evidence to the next first cut proposition. It is that sensory experiences of practiced iconic irony (of wealth vs. unhealthy living) in voicing concrete spaces able to capture attention to be listened to and joined in at distance for outperforming obstructive acts, actions and acts in human spatial behavior. Configurational comparative analysis of viral proxemic processes from transitions to or initiation of interactions at near and away, and in swaying with initiating real-time emergence of related joint actions of affiliated iconic ironists, not only in vicinity but far afield, and both in geo and vireal (digital) spaces begs explaining. It is possible by collected data to infer whether they are consequential following of reactive politics of hope or stem of proactive trust of belonging to humanity resilient to depair through crowd-sourcing ligatures as being change-maker of global society legitimately enacting locally its constitution and performances.

STEIGEMANN, ANNA* (Center for Metropolitan Studies Berlin, anna.steigemann@metropolitanstudies.de)

Shopping For Community - Local Businesses As Features Of Social Inclusion?!

Increased ethnic diversity, a high degree of differentiation in income and education levels as well as lifestyles and related the socio-spatial changes have changed not only residential and commercial neighborhood structures, but also the range and level of local interactions and leisure time activities - with wide implications for neighborhood coexistence and trust among residents and their networks.

As one result the social cohesion of inner-city neighborhoods and their residents is often seen as vulnerable. Whereas some of these problems are addressed by numerous neighborhood management programs, sociology still needs to pay more attention to how spaces local interactions, i.e., everyday social contacts and connections between - and among various groups of residents how these affect local social capital. So far, the great majority of research on this topic has focused on narrow and well-integrated primary relationships among neighbors in residential settings and atrophies of local social networks.

But these studies have mainly neglected the comparatively loose and unpretentious everyday interactions, particularly during leisure time activities as well as interactions in (semi-) public spaces and how both contribute to community bonding and social inclusion.

Likewise, researchers have not given sufficient attention to the wide range of functions local small businesses and their employees play, including those which yield aspects of supply, sociability, local service and employment.

Claiming that shopping streets are significant places for forming proximity relations, the impact and meaning of shopping as both, leisure time and supply activities, for fostering local networks, mutual assistance, trust and local participation will be empirically assessed with the case of an exemplary shopping street in Berlin.

On the basis of on-spot observations and interviews with store owners, employees and customers, the paper presents empirical findings on the ways in which local shopping represents an important socially in- or excluding social practice that affect wider urban structures of inequality.

Performing Transgender Authenticity Through Video Diaries

Growing numbers of young transmen (female-to-male transgender persons) in North America are choosing to publicly narrate their body modifications and life stories online. For many, the platform of YouTube is the vehicle that enables them to be heard. As a result, my study examines the narratives of young transmenassy-constructed online voices, exploring the affordances and constraints of digital platforms in transforming the body and health. Through interviews and online participation, I explore the transformative processes that individuals engage in when they perform their gender identity and narratives online. This study highlights the role of online spaces in shaping the identity and experiences of young transmen. It also provides insights into the ways in which digital platforms facilitate the construction and expression of gender identity and narratives online.
teenage girls narrate their consumer practices. I argue that transgender videos play a double role as personal and collective identity work, affording individuals the possibility of enacting a transgender self, and also participating in the act of community-building via new media, in the context of post-feminism, the medicalization of gender, blurred public/private boundaries, and late capitalism. Turner (1996) suggests that economic transformations characteristic of postindustrial capitalism have changed the meanings of the body for individual social actors. Once the site of ascetic control and discipline, the body is now the locus of pleasure, leisure, and consumption. Not a fixed biological given, “the body can indeed be restructured and refashioned to bring about profound changes of identity, including changes of gender” (21). While these transgender video autobiographies do in fact exemplify the malleability of the body, I suggest that they also display the enduring importance of ascetic control and discipline.

RC08-160.3
STEINER, PHILIPPE* (Institut universitaire de France, philippe.steiner@paris-sorbonne.fr)

Auguste Comte, Altruism and the Critique to Political Economy

Altruism is now a current concept among economists and sociologists. When Comte coined that word in 1847 he wished to oppose a new spring of action to the selfish one that was, according to him and many other social observers, flourishing in the industrial society. While focusing his attention on the opposition between egoism and altruism, an opposition deemed to be the “great human issue”, Comte was not merely pursuing the elaboration of his own system of thought with the so-called “positive method” and the development of the religion of humanity. At the heart of his Catechisme positiviste (1852) and his Système de politique positive (1851-54), he was also pushing further the critique to political economy that he had exposed in the 47th lecture of his Cours de philosophie positive (1830-42).

Comte’s theory of altruism is a central point of his religious credo but it is also a critique to the political economy and to the consequences of the spreading of political economy altruism that gave birth to a large debate. The topic is thus perfectly fitted to a history of the relations between sociology and economics.

The first considers how selfish behavior or egoism came to be considered as a major threat endangering the functioning of the industrial society, by Comte and those who were worried by the diffusion of egoism. Then, the second part summarizes the methodological critiques set forth in the Cours before connecting this critique to the economic content of the Système and the concept of altruism.

The last part contrasts Spencer's view of altruism to the one held by Comte and, how French political economists reacted, defending the moral value of their science.

STEINER, PHILIPPE* (Institut universitaire de France, philippe.steiner@paris-sorbonne.fr)

The Great Performance: Economic Design Versus Social Design

There are now a significant number of studies done on the performativity of economics — to use Michel Callon’s words — according to which economics is a science is actually not describing the state of economic affairs, but performing its own principles about the functioning of the economy.

The topic of this communication is to suggest a larger view of the performative design in economics, combining Callon’s and Polanyi’s approaches. In his Great Transformation (1944), Polanyi exposed how much political economy contributed to the creation of the market system; however, he added that there existed as well counterforces protecting the society from such market system. Accordingly, the communication claims that there is a “Great Performance” at work. With the development of design economics, matching markets, economists are able to create market institutions that perform economics; but, on the other, alternative principles of exchange are as well designed in order to perform gift-giving behaviors. This side of the performance of social sciences through the creation of institutions of economic thought should be taken into account.

The communication will first explain how Callon’s and Polanyi’s views can be combined to understand the role of played by social sciences, whether economics or sociology, in the functioning of this “Great performance”. Then, the communication will explain how the two different forces are actually at work, first in the domain of financial markets, and second in the domain of the constitution of human body parts. This part of the communication will be based on the current studies done on financial markets (notably by Donald McKenzie) and on my own work on organ transplantation.

Whatever Happened to Japan’s Radical Left?

In the early postwar period Japan developed two major parliamentary left political parties, the Japan Communist Party (JCP) and the Japan Socialist Party (JSP). Each was supported by labor union federations and other affiliated organizations, which mobilized for social movement activities on many issues. By the late 1950s, an extra-parliamentary New Left emerged among university students. The first group broke from the JCP-dominated national student federation to form an independent Communist League, and a second independent student group developed out of Trotsky study groups on various campuses. For over a decade, the student-based New Left played a major role in social protests alongside Old Left parties, labor unions, and other civil society organizations.

During the late 1960s and early 1970s, Japan experienced a New Left protest cycle that paralleled those in Europe and the United States. It concerned very similar issues and had a similar trajectory of escalation of violence followed by strong state repression, which ended the protest cycle and drove the most radical elements underground or into exile. However, unlike the radical left in many European countries and the United States, the radical left in Japan has been largely invisible since the 1970s and is only now becoming somewhat more visible. Based on long-term fieldwork, this paper will trace the Japanese radical left’s evolution into an “invisible civil society” that continues to engage in social movement activity, but has had little impact on mainstream Japanese political agendas and action repertoires. The analysis will examine internal conditions within the movement and its interaction with the larger Japanese social and political context, including public fear engendered by the escalation of violence, the rigid employment structure that permanently marginalized radical activists, continuing state counter-measures against the radical left, and the gradual dismantling of the support base for left political parties.

STENBERG, HENRIK* (Halmstad University, henrik.stenberg@hh.se)

Relational Art and Managing Emotions

One of many intentions in art is to examine and portray emotional processes according to the artist and other peoples’ emotions in different situations. The “traditional” artist carried a need to explore personal relationships or to portray emotions in social interaction at a distance. The relational aesthetics that has been of great significance since mid 1990 is oriented towards peoples’ social and emotional experiences in different contexts (Bourriaud). The relational artists’ ambition is to intervene in social situations and to find ways to visualize, communicate and reflect on the social exchanges that occur in these situations. The artist wants to problematize the existing emotional rules that occurs (Hochschild) and explore and process emotions such as hidden shame in Thomas Sheffs sense and the emotions that contribute to the resilience of social relations.

The purpose of this paper is to examine how the relational artist uses his/her artistic skills to intervene in and influence social communities and to understand what happens to the emotions expressed in these coherences. The aim is also to investigate what happens to the artists’ creativity and artistry in an outward relational artistic work. How can the artist establish a constructive relation between his/her artistic identity and the social and emotional involvement in others doing emotional work? The paper also aims to explore how theories of emotion can contribute to an understanding of creativity as a dialectical relationship between individual and collective motivations for art based on symbolic interactionism and micro sociology. The empirical material for the study is interviews with artists involved in artistic projects in workplaces in Sweden but also the study of non-institutionalized forms of relational aesthetics.

STENGEL, NATALIA* (MAYAUMA/Universidad Anahuc Querétaro, natalia_stengel@hotmail.com)

Dignity and Capabilities: An Approach to Human Development CANCELLED

To promote the full exercise of Human Rights it is necessary to have a comprehensive understanding of dignity with its intrinsic role as the core value of human development without losing sight of the notion of respect to personal identity, local context and cultural identity, all of these contemplating the importance of allowing social actors to become, by themselves, the ones who develop a capacity to construct quality of life, sustainable development and the overcoming of the other social problems. By explaining the situation in this way, it seems that the Theory of Capabilities gives the best solution, specifically the contribution made by philosopher Martha Nussbaum in which a capabilities list proposes that individuals with a full flourishment of capabilities would be able to become key factors in guaranteeing the fulfillment of Human Rights focusing on human development.

Recalling what has not been described above, it is not surprising described above, it is not surprising that the UN (United Nations) has given such attention to the Theory of Capabilities as a promising strategy to achieve the Millennium Development Goals (eradicating extreme poverty, achieving universal primary education, promoting gender equality and empowerment of women, reducing child and maternal mortality, ensuring environmental sustainability, etc.) However, and this is the main goal of this paper’s analysis, it seems like the implementation of Nussbaum’s Theory of Capabilities would make the UN’s action for social assistance, promoting Human Rights and
propulsive human development shortighted in time and duration; meaning that once the conditions are set for full development and enjoyment of capabilities, the interventional work of the UN would be over, although, apparently, the way they are working with the Theory of Capabilities suggests the contrary.

STERETT, SUSAN* (University of Denver, ssterrett@nsf.gov)
Care, Surveillance and Legal Mobilization

Legal institutions must be mobilized by people and institutions in response to disaster. This is achieved through projects to people in two different ways: as victim and as people who have been rescuers. In studying assistance after disaster, we often treat programs as though they are distinct and experienced separately. Yet people encounter the law in disaster after having encountered other law in their lives, and interpret how to make legal claims through what they know about other programs. Similarly, state responses to disaster or efforts to mitigate or respond often work in ways that are characteristic across social programs. Although care might well be the goal of disaster assistance, for example, in the United States it is one program in a welfare state with goal of getting people off assistance and ensuring that poor people take responsibility for themselves. The people who need assistance most can experience it as hard, confusing and frightening when it ends before anyone can find a job or get resettled, whatever the goal. This project draws on assistance for people who fled the Gulf Coast after Hurricane Katrina.

A Spitting Image of Reality? Analyzing Stories of Meaningful in-out Group Incidents As a Tool for Understanding Students’ in-out Group Relationships in a Divided Community

This article explores the usefulness of analyzing narratives of particular incidents that are meaningful to and involve members of different ethnic groups in a situation of conflict. Narrative analysis of the content and structure of stories told by 15 Greek and 15 Turkish Cypriot students about a particular ‘spitting incident’ and the micro- and macro context in which these students, selected from two secondary schools in the Republic of Cyprus develop their narratives, shows that the analysis of such stories can enhance our understanding of: a) the different ways in which all actors represent this incident and the factors and processes that inform these representations and b) the more general representations actors make of their own in-group and perceived out-group. More specifically, TCs portrayal of the TC protagonist as a vulnerable but likable and brave hero who is the victim of deliberate and hostile actions of a powerful and untrustworthy villain (the GC protagonist and particularly the GC community), who uses his control over power when he hero unfairly and excessively corresponds to their views of how GCs treat TCs in the Republic of Cyprus more generally and TCs passive, more defensive response to such treatment. Similarly, GCs portrayal of the GC protagonist as a pious hero and the TC protagonist as the disrespectful anti-Orthodox villain corresponds with their views of TCs as dominant, aggressive religious (Muslim) extremists who cannot be trusted. In addition, while TCs narrate this story primarily as an isolated incident, and seek to excuse, deny and/or downplay the accusations directed to the TC student, GCs often tell this story in relationship to a more general, critical discussion of existing policies which they define as biased against them.

The conclusions discuss the implications of this study for future research and social policy on in-out group relationships.

STEWART, FRED* (University of Westminster, f.steward@psi.org.uk)
Transition Cities – a Sociotechnical Approach for Transformative Innovation

The paper draws on the sociotechnical transitions and system innovation framework of Geels and others to develop a new approach at city level to govern transition happens. It reports on the European Institute of Innovation & Technology (EIT) Climate-KIC Transition Cities project. This involves a partnership of 6 cities – Birmingham, Frankfurt, Castellon/Valencia, Bologna/Modena, Wrocław & Budapest. The aim was to develop a transition policy capability to facilitate transformative low carbon innovation in three major end use sectors – buildings, transport, and energy networks.

An inventory was made of all low carbon innovation projects underway in the partner cities. This used a broad sociotechnical definition of innovation and included a diversity in terms of scale, knowledge, and types of innovation. 107 projects were identified with a value of €2 billion in the 3 areas identified. The distribution was similar to earlier studies on city climate innovation but was at a significantly higher scale, suggesting that the national focus of innovation policy is underestimating the extent of activity at the city level. However despite the extent of activity they tended to be treated as separate, disconnected projects and there was little evidence of strategies to link and enable wider system innovation.

An analytical and practical framework was developed in order to facilitate the clustering of projects around clearer arenas of system innovation. Social network analysis involving stakeholder participation was carried out to assess the prospects for system innovation and plausible transition pathways up to 2020 in each partner city. The results showed major differences in the prospects for transition in different arenas. It also showed the emergence of key integrating non-technological innovations in different cities with the capacity to play a key role in making transition happen.

Beyond Piracy: The Materiality of Digital Objects and the Consumption of Copyright

With the growing use of digital technologies in media consumption, companies around the world have experienced a new frontier in providing goods and services to a wider range of consumers. Despite the elevated success of digital distribution of cultural objects like music, film, video games, and books, the issue of illegal access and distribution of copyrighted materials has become a widely identified social problem. Economical, legal and criminological approaches have largely dominated research on the topic of digital piracy, identifying and analyzing it in legal terms. Issues with these approaches arise as assumptions are carried forward in explaining and exploring these practices, resulting in their failure to identify this activity as the development of online consumption practices. In identifying this limitation in the literature, this paper sets out to create a conceptual model in approaching the study of digital piracy. Bridging the perspectives of cultural sociology with science and technology studies, my approach identifies the root of consumption practices in the properties of digital objects. Integrating the theoretical approach of cultural materiality, I explore how the conceptualization of digital objects as “dematerialized” disimply sociocultural dynamics of both the attributes of digital objects and the architecture of online services. In identifying the importance for a ‘digital materiality’ perspective in research on digital piracy, I explain how the form and structure of services and goods results in the development of expectations and desires leading to the consumption of copyrighted material. The resulting conceptual approach speaks to a number of possible consequences regarding how we define and understand Internet technologies. The inclusion of cultural materiality to digital content also provides a new perspective on how previous sociological definitions of materiality have been limited to a particular conceptualization of physicality.

Sociologists and the Labour Movement: Between East and West

Sociologists and the labour movement: Between east and west

While a tradition of creative engagement between worker intellectuals and academic researchers in Western Europe has been documented recently (cf Stewart and Martinez Lucio, 2011) a similar trajectory in Central and Eastern Europe remains largely unexplored. The contrasts and continuities between both regions forms the core of this paper. We examine and compare the different historical experiences of worker intellectuals and the academy in Poland the UK, indentifying the re-emergence of a pattern of engagement not only within traditional sectors of the working class but also among the new, precarious workforce, including migrant workers (UK) and agency workers (Poland). We argue that this engagement can be characterised on the basis of different and historically dependent patterns of institutionalisation of the sociology of labour in these countries. Moreover, this in turn can be derived from the fate of the historical relationship between labour (in its different forms) and organic intellectuals. We draw examples from the experience of union organising in workers in the UK and Poland amongst new and emerging workforces where the tradition of labour movement activity has been historically weak (or nonexistent).

The authors are either directly or indirectly participating in FP7 Marie Curie Initial Training Network Programme “Changing Employment”. This is providing a novel opportunity to link international funding opportunities in such a way as to foster cooperation between labour and academia.
Breaking the Ignorance Contract: White South Africans' Recollections of Complicity and Collusion with Apartheid

It has become a commonplace joke in South Africa that one cannot find any white South African who admits to have voted for the Apartheid government. White South Africans tend to produce accounts of their past that present innocence, or at the least, ignorance of how their privilege was premised upon the disadvantaging and oppression of black South Africans. Focus groups were conducted with white South Africans who lived in South Africa during the apartheid years, and who stated their willingness to engage in conversations about their racialisation into whiteness. They were invited to reflect on (a) what they in fact did know, (b) what they chose/preferred not to know, and (c) what they now feel they legitimately can claim they did not know about the system and how it impacted the lives of black South Africans while holding their racial privilege in place. Drawing on the emergent field of epistemologies of ignorance, the paper investigates the costs and rewards of breaking faith with the ‘ignorance contract’ that holds white collusion with racial privilege in place. I explore some of the complexities of dealing with the shame and continued self-interest that inhibits the admission of complicity.

Breaking Family Demography in: Class Variation in Family Behaviors and the Implications for Inequality Patterns

Stratification research focuses, traditionally, on the role of families as providing the life conditions for future achievements and opportunities. Studies have highlighted the importance of family structure and family behaviors (e.g., assortative mating) in producing and reproducing inequalities, class position and life chances. Recent changes in family patterns point attention to the interplay between social class and family demography, which is not yet fully incorporated in stratification research. Changes in family behaviors, including family formation and dissolution, fertility patterns and parenting practices, and the economic behavior of women are not uniform across social classes. Studies emphasize the importance of family structure (e.g., the vulnerable position of single-headed families); the economic consequences of divorce or the effect of homogamy on inequality among families. Recently, more attention is given to the contribution of family behaviors (e.g., assortative mating; differential fertility) to the general level of inequality.

In this paper I highlight the importance of class disparities in family behaviors and their consequences to the life chances of individuals. I emphasize in particular the important role of women's educational attainment plays in determining family behaviors, and the various consequences of class and family interaction to the economic disparities between families and gender inequality within families in particular the gendered division of paid and unpaid work. Recent studies, for example, document a higher risk of divorce for the lower classes. Similarly, women's education is related to their work activity and the formation of dual-earner families. These differences further deepen disparities between families and individuals that grew up in different types of families located in different class positions. Taking class variation in family behaviors into account is necessary in order to understand the direction of inequalities and how different policies and institutional arrangements may alleviate them.

Cheating Among American University Students: A 30-Year Follow-up Study and a Comparative Study with Chinese University Students

Cheating is an increasing problem on college campuses, made even easier by the advancement in technology which has increased access to information. Furthermore, we are seeing a shift in attitudes toward cheating as well as a change in the definition. Faculty are reporting changes in cheating behavior. This current study reports the results of a 30-year follow-up study on cheating at an American university (Vandehey, Diekhoff, and LaBeff, 2007), as well as comparisons with a comparable sample of Chinese university students. Our findings indicate both cross-cultural differences but also similarities in cheating behavior and attitudes. Chinese students reported a higher incidence rate of cheating on exams, and a greater tendency to neutralize (i.e. justify) cheating. A factor positively correlated with American students cheating is a characteristic related to a cohort effect currently labeled the Millennial Generation or Generation Y students. Our results also point to factors that may be effective in preventing cheating.

Debating Canadian Climate Change Policy: Policy Networks and Discourse Coalitions in National Media News

The news media serve as an important forum for public debate among key actors and organizations involved in climate change policy networks. We examine national news coverage of climate change policy debate in Canada during 2007-2008, which is a peak period in national climate change news coverage. We use a discourse analysis approach to answer four questions: Who are the central organizational actors who appear in national news coverage? What are the central discourses about climate change in national news coverage? How do these central organizations cluster around shared agreement over key climate change discourses? How do these central organizations cluster around shared opposition to key climate change discourses? By answering these research questions, we see how the national media and key news sources attribute responsibility for addressing climate change, and define the political responses that should be implemented to mitigate or adapt to climate change. We also gain insight into the ways that organizations align around particular policies and ways of understanding climate change, resulting in discourse coalitions, as well as rifts in climate change policy debate.

Old Harry and New Media: Environmental Movements and the Oil-Tourism Interface in the Gulf of St. Lawrence

Over the past two decades, offshore oil development and tourism have gained importance within the political economy of Atlantic Canada. In the province of Newfoundland, these sectors represent alternative models for living with and making use of coastal environments. While environmental movements routinely mobilize against oil projects like the Alberta oil sands, Enbridge pipeline, or Keystone XL pipeline, there has been an absence of critical engagement by environmental movements in relation to offshore oil development in Newfoundland. However, recent proposals to open up oil exploration in the Gulf of St. Lawrence, where the Old Harry off-shore Park, has sparked resistance from environmental movements and has brought the tourism-oil interface into sharper focus. We draw on internet ethnography of key websites and web 2.0 content, as well as interviews with core members of environmental organizations, in order to better understand how environmental movements are for intervening in environmental governance and shaping the oil-tourism interface in the region. Our analysis shows that environmental organizations use websites and web 2.0 applications to make productive use of the tensions between different political and ecological scales. These new media tools enable new ways of communicating, and open up spaces for the vernacularization of corporate environmental discourse.

Nationalism and Antisemitism in Postnational Europe: A Comparative Analysis of Austrian and English Print Media Debates on the Economic Crisis

Karín Stoegner (Vienna/Lancaster)

Nationalism and antisemitism in postnational Europe: a comparative analysis of Austrian and English print media debates on the economic crisis The post-official period’s global economic crisis and the old multicultural social and legal landscape have revealed the problematically high relevance of nationalism and antisemitism in the contemporary social world. We look at how the internal and external dynamics of the economic crisis have been interpreted in Austria and England, the choice of these countries being based on the social, political and cultural diversity of both countries. The chosen one must fit the situation and help to make sense (Weick, 1995) of it. As they appear, “normally disturbed situations” (Journé, 1999) seem to be quite unique. Due to systems’ complexity, the process may be in different phases, workers teams may be available or not…Thus coping with technological complexity and uncertainty implies operators to make “difficult tradeoffs and decisions about how much risk is acceptable and even how to measure the risk” (Leveson et al., 2009, 240). Rather than focusing on major failures, the communication zooms on day-to-day activities, on how operators make technical decisions that try to encompass all the demanding issues of high-risk systems (safety, system availability, workers’ safety, environmental protection, etc.).

How to Avoid “Normal” Accidents? Risk Management As a Dynamic and Inter-Occupational Negotiated Decision Process

This communication aims to describe how two high-risk organizations are operated, i.e. nuclear power plants and railway operation system. These technologies are so complex that ambiguous situations often arise. Organizations’ response to uncertainty usually relies on procedures. Despite a huge amount of technical documents, applying a procedure is not such an easy task to perform. This paper suggests the robustness of operators’ knowledge and how they develop argumentation and explicitation practices to make their own decisions.

JOURNE, BENOIT (Nantes University)

How to Avoid “Normal” Accidents? Risk Management As a Dynamic and Inter-Occupational Negotiated Decision Process

This presentation sheds light on the intermediation of nationalism and antisemitism in postnational Europe: a comparative analysis of Austrian and English print media debates on the economic crisis and exclusion. By focusing on discourses around the Self and the Other in the context of the global economic crisis, everyday social communicative practices are problematized in order to trace the role of nationalism and antisemitism within them. This approach draws on the working hypothesis that in contemporary Western societies, extreme right-wing open nationalism and antisemitism are not the only force that stands in the way of a society of world citizens, but also unnoticed but well-practiced routines of exclusionary identification in everyday life. These routines subtly refer to a horizon of understanding, an archive of ideological habits, which by tradition includes nationalism and antisemitism.

Future Visions in Social Milieus Among the Middle-Class of Nairobi and Mombasa – Empirical Results and Theorization of Future Concepts

In this paper I will focus on own research on future visions in the middle classes of Nairobi and Mombasa. These results will be the basis for a theoretical interpretation of these views on future. The various future visions among the different social groups (=milieus) in the middle classes of these two Kenyan cities point at certain social developments and can thus be interpreted as paradigmatic tendencies in the present society. While the social context of the milieus and their future visions might reflect global tendencies like forms of urbanisation they are at the same time highly local as they are adaptations to specific conditions - as the term ‘glocalization’ (Robertson) suggests.

Different social milieus in the middle classes of Nairobi and Mombasa have certain lifestyles and related future visions which reflect different tendencies of the contemporary social world. Kenya is a very interesting case study as the country has undergone considerable change and an increased integration into global structures in the last 20 years while it is still a developing country. Especially the differences in future orientations of East Africa’s dynamic economic center Nairobi and the old multicultural coastal town Mombasa can reveal a variety of future references. Thus I will demonstrate by paradigmatic examples how future orientations of milieus in urban Kenya reflect specific social developments and how they can contribute to the theoretical interpretation of sociological future concepts. This way the paper even tries to (re)construct social theory from a specific perspective of the Global South.
Stoll, Florian* (University of Bayreuth, Germany, stollflorian@gmail.com)

Social Milieus in the Middle-Class of Nairobi – Lifestyles, Attitudes and Future Visions Beyond Homogeneity

One of the key questions in the debate on (political) orientations of middle-class households is how these groups develop their attitudes. To answer this it helps to consider political positions in their heterogeneous sociocultural contexts among the different groups of the middle classes. As an example I will take a look at some social milieus, their lifestyles and their future visions in the middle-class of Nairobi – with a look at milieus in Mombasa as a contrast.

The reconstruction of milieus in the specific context of Kenya’s capital aims to demonstrate how a variety of factors influences the lifestyles of Nairobians and that there are heterogenous groups with different lifestyles in the middle income strata.

Future visions are an excellent indicator for lifestyles and corresponding orientations of milieus to see how they integrate these visions into their daily practices. E. g. in Nairobi developed over the last decade a milieu of Young Urban Professionals between 20 and 35 years who have a consume oriented lifestyle and who are bound to the city. They are usually not driven by religious or traditional values.

So this paper will provide a sketch of exemplary milieus, their life styles, their living conditions and their future visions. Another relevant question might be how different milieus look for solutions or demand different actions concerning the threat of the radical terror group Al Shabaab whose last attack shook Nairobi in September 2013. All aspects mentioned will contribute to draw a complex picture of the different social milieus in the Nairobi middle class and their divergent life-styles.

Morality in Context: A Multilevel Analysis of the Relationship Between Religion, Governance and Values in Europe

The exact relationship between religiosity and moral values is understudied, and it is so far unclear what the process of secularisation means for the morality of Europeans. Attitudes to religiosity and the visibility of religion, must be seen in light of whether religion’s presence in the public sphere strengthens moral communities and identities, or merely highlight moral differences.

From Haidt’s (2012) moral foundations theory and Norris and Inglehart’s (2004) existential orientations theory, we know that religion is associated with traditional and conservative values as well as low levels of political and economic development. One question is whether religion can act as a substitute for well-functioning secular authorities where these are absent, or if it simply has an additional effect on morality that is independent of the quality of governance. Another question is whether the relationship between religiosity and morality changes as the average citizen becomes less religious, and as religious diversity increases.

Using data from four waves of the European Values Study (EVS) 1981-2008, we analyze attitudes to personal autonomy and self interest in a multilevel model of 48 European countries. Results show that religiosity is most associated with moral values that concern personal and sexual autonomy, that individual religiosity is more associated with morality in countries with high levels of religiosity and that religious context is only negatively associated with self-interest in countries with low quality of governance.

Included But Still Not Equal? Board Interaction and Gender Segregation

Abstract
Included but still not equal? Board interaction and gender segregation

Norway was the first country in the world to pass legislation specifying gender representation on company boards of directors. The Norwegian Parliament passed a new regulation in December 2003 that required at least 40 per cent of each gender on company boards. Before the reform, law opponents claimed that the new women directors would not be able to or, allowed to, participate fully in board decision-making; instead their role would only be window dressing. Based on a questionnaire sent to all directors in public limited companies in 2009, the article studies this allegation.

Results show that women directors report less ability to influence board decision-making than men directors. Moreover, women to a lesser extent feel they are part of the inner circle on boards, where such phenomena are perceived to exist. These tendencies also hold when we control for a lot of other independent variables such as board role, ownership interest, number of directorships and occupation. Hence, the he quoTA regulated boards show tendencies of hierarchical gender re-segregation.

Wearing the Veil: Hijab, Islam and Job Qualifications As Determinants of Social Attitudes Toward Immigrant Women in Norway

Immigrant women are a particularly vulnerable part of immigrant population. In this paper we analyse negative attitudes toward immigrant women in Norway. We focus on immigrant women’s formal job qualifications, their religious background and wearing of Hijab—the headscarf that is sometimes used by Muslim women. Using survey-embedded experiments (N=1250) we are able to analyse the net-effects on attitudes of job qualifications, Islamic religious background and Hijab. The results show that natives have more negative views of Muslim women that wear a Hijab, but that the negative effects of Hijab are reduced when a woman wearing it has higher education. With a single exception, the results also show that Muslim background in itself (i.e., without Hijab) does not have any strong effects on attitudes of natives toward immigrant women. The results are discussed with a point of departure in cultural threat theories and current socio-economic situation in Norway.

Provincializing Postsecularism: Critical Reflections On New Western Civil Religion

This paper aims to denounce the provincialism of the European postsecularism, considering that an insufficient pluralism was often invoked by European Union in order to justify the cultural failure of her integration’s process. The Postsecularist orientation risks, if applied without an adequate sociological and intercultural reflection, to become a new civil religion. In the first part I will bring up the consequences of this critical reflection on the actually relation between State and religion in the specific context of Italian society, lacerated between a public secularism and a private Christianity. In the second part, I will try to apply to the European postsecularism, as discursive regime of the European identity, two critical hypothesis emerged from the Post-colonial Studies: the suggestion to “Provincialize Europe” and the critic to her “Cultural Hegemony”. Provincializing Postsecularism does not mean, of course, repudiate or abandon secularism, but thinking about how to renew it. In Italy the transition to post-secularism can not be seen as a simple historical transition, but also as a case of translation: translation of plural memories, religious tradition, desires of believers. In the third part, I appeal to the hermeneutic tradition of Paul Ricoeur, trying to connect a new translation of postsecularism to a new phenomenology of the Italian believer, hoping that the recognition of the religious pluralism can contribute to the constitution of a lay European political community.

Recognition and Gender Violence: Making Social Unjustice Visible

The paper tries to develop a non-conventional narration of gender violence through the description of the career that category of recognition has had both in social sciences and transnational feminist debate. In the first recognition made visible and therefore politically prosecuted asymmetries inherent models of socio-cultural representation of gender relations, in the second it redefined the relationship between equality and difference in the broad debate of human rights. The combination of these results shows that violence against women can be otherwise told provided reading misrecognition as severe form of social injustice.

Streckr, David* (University of Jena, david.streckr@uni-jena.de)

How Market Economy Did Away with Violence: A Liberal Story and The Ugly Truth of Contemporary Slavery

The history of power and violence in modernity has traditionally been conceptualized within a nation state-framework and along notions of centralization; while socially dispersed in pre-modern times, power and violence had later be-
come increasingly concentrated in the political realm. In the course of functional differentiation, the core feature of modern societies, a state apparatus developed which organized positions of power and ultimately monopolized the legitimate use of violence. Violence, thereby, more or less disappeared from all other social spheres which turned into arenas of predominantly peaceful cooperation. With regard to working class of activist position was facilitated by the alleged iric functions of market transactions: Contractual relations and trade are premised on trust and, thus, do not allow for manifest violence in the economic realm. Accordingly, it has been claimed that capitalism was the driving force behind the abolition of slavery. However, violent labour relations have not ceded to exist. in fact, contemporary slavery is a pervasive phenomenon subjecting millions of people to privatized violence. These papers aims at making sense of this situation by discussing the relative merits of the claim about capitalism’s civilizing effects on labour and relating it to contemporary slavery from the perspective of a world societ shaped by economic globalization and the transformation of state authority.

The Transition from School to University: Pressure and Coping in Catalonia (Spain)

In this paper I present results from a study about university transitions in Spain. Young people face uncertainty, precariousness and discourses that individualize structural problems currently in most Western societies. Spain suffers, moreover, from the severe effects of economic crisis and high unemployment, accompanied by severe cuts in the education system and an increase of university fees. Hence, the pressure on young people is growing further, and the contradiction between high skills and little or no power is especially pronounced. In the paper at hand I aim to identify main pressures, affecting young people in their transition from school to university, and their shown coping strategies.

In spring 2011 I conducted twelve focus groups with pupils in their last year of post-obligatory education in public, semi-public and private schools in an urban and a rural context in Catalonia and from September 2011 to May 2012 I accomplished 21 interviews with some of the participants, amplifying the sample with first-year students from underrepresented groups. I selected and analyzed several of the focus groups and interviews with the documentary method including elements of intersectional analysis.

The end of school is characterized by uncertainties and pressures, especially related to being admitted to the chosen studies, the study choice itself and fears not to be successful in university – both, academically and socially. Students experience these pressures differently and show varying strategies to handle them, whereas their personal characteristics, structural dimensions and representations interact.

I identify types along the dimensions worried/non-worried and idealistic/pragmatic, relating those to gender and social class. The comparison with the follow-up interviews does not only reveal additional problems in the further transition to university and throughout the first year of studies, but enables considering the encountered difficulties from a different perspective, adding insights due to the methodological triangulation.

Creating a Gift-Based Sphere of Exchange in Greece

Background:
A large number of groups all over the world are creating alternative, utopian visions of a world governed by non-monetary economies based on bartering and gift-exchange. Both the perceived lack of solidarity in market economies as well as the daunting existential situations people are facing in terms of poverty provide the ground on which such visions of solidarity economies are exploding today.

The TEM scheme in Volos:
The case study that will be presented is located in the Greek city of Volos, facing the double crisis of the almost closure of its port (following the Syrian civil war); cutting the trade relations between Greece and the Middle East; and the effects of the austerity policies (creating a lack of disposable income in the official currency). In Volos an alternative distributive system came into being in 2010 with the installation of the TEM scheme. Connecting time-banking, a complementary currency model and free bazaars, citizens of Volos are trying to realize an alternative economial system.

Contradictions and Challenges:
However, the contradictions of this real world application of a solidarity economy are not to be neglected. Ethnographic accounts of gift-based economies suggest a high degree of social control and mutual distrust in gift-economies. National states as well as the mainstream market economy are fearing the potential bypassing of commercial law and tax obligations. Social groups that are able to produce economic value (think children, disabled, non-skilled) are at risk of being even more marginalised. Furthermore, it is likely that the TEM scheme only provides an alternative sphere of exchange rather than replacing the mainstream economical and societal model.

The case study that will be presented shows how citizens enact a social utopia and the contradictions and pitfalls they are facing while doing so.

Feminist Theorizing of Intersectionality

This paper arises from collective work within the 5-year Swedish Research Council project, “Feminist Theorizations of Intersectionality”, organised within the GExCel Collegium for Advanced Transdisciplinary Gender Studies (Örebro-Karlsstad-Linköping Universities), with a specific focus on the equality architecture, and in part from the EU FP6 project QUING.

The whole larger project examines intersectionality as a central concept in contemporary gender studies, in relation and dialogue with the diverse, and sometimes conflictual, theoretical and political stances in feminist debates. The project is designed against the background of the rich and diverse feminist traditions for theorizing of intersectionality, but it is also informed by the tensions between these traditions.

This paper analyses and compares how equality architectures (Walby, Armstrong, Strid, 2012, Social Politics) in Europe are restructured and challenged by the developments related to intersectionality and diversity, and the implications of the restructuring for theories of intersectionality. It links concepts of equality as intersectionality to policy frames and frameworks. It examines how the challenges of intersectionality are reflected and dealt with “on the ground”, in practical equality architectures on national and institutional level, e.g. in governments and universities, and the implications for gender equality and for the quality of the gender equality architecture. It takes the merger of equality institutions in European countries as case studies and analyses the implications of the mergers for theory and practice.

Preliminary conclusions based on previous research (Walby, Armstrong, Strid, 2012, Social Politics, QUING) suggest that even though the quality of the architecture may have improved by the inclusion of multiple inequalities, there may be a revaluation of quality in terms of questions of representation. It is suggested that intersectionality as mutual shaping (Walby, Armstrong, Strid, 2012, Sociology) may be a more successful approach to theory and practice than the often prioritisised mutual constitution.

Uses Of Social Theory In Comparative Religious Studies: Assessing Chidester’s Social Redescription Of Religion In South Africa

In analysing “sociality” (the formation of inclusive or exclusionary collective identities), “materiality” (gendered bodily performances of rituals, gender experiences and the desire for material objects) and “exchange” (communist or capitalist economic exchanges in rituals of gift-giving and expenditure) as three aspects of religion within local and global contexts, David Chidester has used the social theories of Durkheim, Bataille, WEB Du Bois, Weber, Marx-Adorno-Horkheimer, and others. The purpose of this paper will be to assess what we have gained from Chidester’s use of such social categories to redescribe religion in South Africa within a global context, by relating Wild Religion: Tracking the Sacred in South Africa (2012) to his preceding oeuvre of twenty years, particularly Authentic Fakes: Religion and American Popular Culture (2005), Savage Systems: Colonialism and Comparative Religion in Southern Africa (1996) and Religions of South Africa (1992). It concerns itself with the end of the apartheid era, and the exploitation of post-apartheid South Africa’s youthful generation to express the possibilities and limitations of redemption and resistance.

Competing Narratives of Modernity and Muslim Middle Class in India

Competing Narratives of Modernity and Muslim Middle Class in India

The last decade has seen an increased interest in the “phenomenal rise of the Indian middle class”. With economic liberalization since the 1990s, the entering of multinationals into the Indian market and the simultaneous process of a rapidly growing transnational media and consumption culture “new economies of desire” have developed. Boundaries between ‘traditional India’ and the ‘modern West’ have been broken down and a new national self-image as a modern global player has emerged. Public Indian discourses typically make a correlation between the growing middle class and the national pride of modern India. While increasing consumer choices, and western connote values are important symbolic markers of middle class membership, the latter is linked to an expressive and confident af...
firmation of “Indianess” which is primarily oriented around a Hindu India. Taking the hype over the growing Indian middle class as a point of departure, the paper will questions this tacit equation of the middle class and Hindu Indian modernity and draws attention to the Muslim middle class. It delineates how narrative and performative aspects of middleclassness are tied to a new economic nationalism and discovery of indigenous modernity. A focus on the multilingual transnational references in knowledge production offers the possibility of acknowledging the entangledness of competing narratives of modernity and middleclassness in India and within Muslim middle class in Lucknow (the capital of the Northindian State Uttar Pradesh). Apart from discussing the phenomenon of the Muslim middle class as agent of change, the paper thus addresses the fragmented character of the Indian middle class and questions the equation of Modern India = Hindu India, i.e. questions the homogeneous character of the Indian middle class.

The Commodification of Education and Labor in China

This article reveals the mechanism involved in the mutually complementary commodification of education and labor, and the results of this commodification. Emphasizing institutional factors, this article argues that the state plays a dominant role in the combination of the two types of commodification. It also scrutinizes the impact of this dual commodification on student workers—deskilling, alienation, fragmented social lives, and industrial injury—as well as their response.

SUBRT, JIRI* (Charles University, jiri.subrt@fhs.cuni.cz)
Norbert Elias: Figuration As a Solution of Problem of Society of Individuals

One of the questions that Norbert Elias tries to resolve in his work - either explicitly or implicitly - is the issue of the relationship between the individual and society. Elias critically assesses two resolutions to this issue that sociology offered in his time, namely the Weberian conception of individualism that postulates the human individual as the starting point of sociological thought, and the Durkheimian concept of holism, which considered society as a whole as the starting point, giving regard to holistic, supra-individual social facts. Elias considers both of these solutions one-sided and unsatisfactory, and in his conception tries to supercede them. His strategy is close to that of Georg Simmel before him. It consists in highlighting the “third” that lies between the individual and society, which connects them. Simmel calls this “third” “Wechselwirkung”. Elias speaks about "figuration". In this paper, we consider how successful Elias’ strategy is, its positives and its shortcomings.

Social Time, Fact or Fiction? Several Considerations on the Topic

In 1937 P. A. Sorokin, together with R. K. Merton, published an essay entitled Social Time: A Methodological and Functional Analysis, in the American Journal of Sociology. They noted that most social scientists share in a silent assumption about the use of the astronomical concept of everly flowing, quantitative time, and maintained that the astronomical concept of time has a number of shortcomings when applied in the social sphere, so they tried to promote the concept of “social time” as a methodological tool, to lead to a deeper understanding of social periodicity. Since then, the concept of social time has become settled in sociology and social sciences and been the subject of various reflections. This paper examines the problems associated with its use.

SUBUDDHI, KARUNAMAY* (Indian Institute of Technology, subuddhi@iitb.ac.in)
Politics and Policy Making Approaches to Development Practices: Towards a Sustainable Citizenship

Thinking around the politics of development we are able to identify a growing body of research into the actual politics of development that threatens to turn mainstream governance thinking ‘upside down’. Politics stands at a crossroads caught between discrediting the ‘good governance’, and repoliticizing tools and discourses that attempt to reposition politics, creating space for alternative thinking.

Social theorists situate ‘Rights Talks’ as politics [as social movements] and institutional arrangement that links specific rights to developmental practices, lends support to marginalized sections, making it possible for them, as well as political planners to re-politicize the practice of development.

Ever since participation entered mainstream development discourse, critics have attacked it as form of political control. If development is indeed an ‘anti-politi-
In Japan, the number of people who moving to rural areas (or the countryside) from urban areas (or metropolitan area) is currently increasing. In this presentation, I will examine this phenomenon by using the idea of “lifestyle migration”, and then discuss the relationship between the decision to migrate and enhanced quality of life.

In foreign countries, “lifestyle migration” means moving to elsewhere in search for a better way of life (Benson & O'Reilly 2009). This idea is associated with a new form of international migration, unlike the case of internal migration in Japan. However, “lifestyle migration” occurs as result of self-reflection among these migrants, and consequently, this idea can be adopted to describe Japanese who move to rural areas from urban areas in Japan.

Searching for a better way of life by moving to the countryside relates to quality of life. For example, in my research at Chichibu area in Saitama Prefecture, I found that some migrants engaged in farming, but they often visited the nearby urban area where they engaged in consumption activities. Meanwhile, some people chose to keep working in Tokyo. That is, a sense of “the better way of life” differs according to each migrant. However, moving to rural areas had a positive impact on the health and mindset of migrants; in the countryside, they could achieve balance between work and leisure. Notably, they do not move for the sake of work or leisure alone, but aim to control both. In my presentation, I will attempt to consider the relationship between “lifestyle migration” and quality of life through a case study of migrants who moved to the countryside in Japan.

Consequences of Delayed Evacuation in Iitate-Mura Village

Residents of Iitate-mura in Fukushima prefecture, located within 30 to 50 km radius of TEPCO’s Fukushima Daiichi nuclear power plant, got their first instruction to evacuate 42 days after the earthquake, and they began to evacuate in mid May. In the evening of March 15, just 4 days after the accident, the radiation level measured in front of the town hall of the village showed 44.7 mSv/h. So the majority of villagers stayed in the village where the radiation was level was high, for over 2 months. Why was their evacuation delayed ? There are two reasons behind this delay. First, although the Japanese government enlarged the evacuation zone from 10 km radius to 30 km radius shortly after the accident, most of itate village is outside the 30km radius. Second, village authorities set priority on protecting and sustaining the major industries and jobs in the village. Whether this decision was appropriate should be put to review. Now the villagers are in an even more difficult situation, being unable to draw a plan to rebuild their lives while the government is lacking decision on relocation project and trying to go to the village. Focusing on itate-mura, this paper addresses the issues regarding the political measures to cope with the nuclear disaster, with comparison with municipalities in the neighboring region. (220words)
The Role of Family Caregivers and Their Working Lives: Convergences and Divergences Between France and Japan

This paper presents the method and results of a comparative research on family caregivers and their professional trajectories in France (Île de France) and Japan (Osaka).

The aim of the research is to chart two kinds of trajectories in a person's life: professional and of caregiving, and to examine their interdependence. In the current context of the prolongation of life expectancy, a person can provide care several times in different periods of life, or care for more than one person in parallel at the same time. The care provided may be for different causes of frailty. We should therefore look into the temporality and the global view of the caregiver's life without limiting the study to a certain type of frailty.

We rely upon a sequential analysis of data on caregiver's trajectories. We also collected on care networks developed around the caregiver by individuals participating in the care, including care for the caregiver. The typologies of professional trajectories are analyzed in relation with variables such as socio-demographic characteristics of the caregiver and care-receiver, types of care networks, etc.

We try to study the different configurations that come out for Île de France and for Osaka, while situating them in the context of the public welfare and labor markets of each country and region. We will be interested to know, for instance, what traits of caregivers come out, and on what type of conception of care and work related logic they are based.

The Islamization of Leisure in Indonesia (A Comparative Analysis of Aceh and West Java)

In this culturally unequal world, Islam is perceived as a minority civilization which is acted upon by the dominant "western" civilization. The influence is allegedly reflected in various spheres such as leisure in which a "division of labor" between leisure and work come forth. The recent revitalization of Islam portrays a more assertive Islam in society with the development of Islamic leisure in addition to Islamic economy. The case of Indonesia indicates that there is a process of Islamization of leisure with the application of Islamic values such as the prohibition of "haram" or non-"halal" food and liquor, "khilwat" (close proximity between men and women), gambling as well as the obligation to comply with Islamic dress code. The implementation of this process can be seen as a colonization of life-world along with economy and state in which society emerges as a new arena and theater. A comparative analysis between Aceh (a Shariah province) and West Java (a non-Shariah province) will shed light on various social movements that support or reject the Islamization of leisure. The roles of CSOs, political parties, state and intellectuals in their efforts to achieve compromise will broaden our understanding on the multiple meanings of leisure—and social life.

Housing Estates As Experimental Fields of Social Research

In this presentation, I discuss researchers' relationships with the research object and its transformation in empirical sociology by examining “danchi” (housing estates) studies conducted by Japanese sociologists.

The Japanese housing policy system was quickly established in the early 1950s, and the reinforced concrete housing complexes stimulated journalistic interest. Most influential researchers in postwar Japanese sociology began studying these housing estates during the mid-1950s and 1960s. One reason was that social surveys involving random distribution of standardized questionnaires to individual respondents were compatible with the new housing form. Housing estates became experimental fields of social policy and social research.

Urban sociologists attempted to comprehensively grasp the lifestyles and social consciousness of housing estate residents. Social psychologists introduced sociometry to describe social relations evident in these housing estates. Researchers often referred to the seminal text “Organization Man” by William Whyte (1956), with a Japanese translation published in 1959. According to Whyte, white-collar residents in the newly developed suburban residential areas formed active neighbor relationships. Kokichi Masuda, a family sociologist, emphasized the contrast of the rarity of neighbor relationships in Japanese housing estates with what was the norm in the United States.

The image of housing estates as pictured by social researchers transformed around 1960. Studies of residents' associations showed that housing estate communities were being formed through cooperative solutions found for residents' common problems. Whether or not a housing estate was formed as a "community" depended on how the residents related to the space. This change was also reflected in the relationships between the researchers and the respondents in that the distance between them when using the standardized attitude and opinion survey was lost. The change in the image of housing estates in the 1960s can be said to overlap with a turning point in social research.

Housing's Contribution to Poor Health Among Aging Residents in Informal Peri-Urban Communities in Texas: A Mixed-Method Geospatial and Case Study Approach

The data analyzed in this paper were collected through a two-part mail and in-person survey of 630 households in two peri-urban, low-income, informal settlements in central Texas. The survey documents housing conditions and needs in these communities where a significant portion of the population is Hispanic, elderly, and low-income. Analysis of the survey data interrogates the links between chronic illness and poor dwelling conditions in an aging population. To better understand the intersections between aging, health and low-income, self-built housing we analyze detailed data on reported problems with the dwellings and incidences of illness and disability. We present descriptive findings in the following three topic areas: 1) specifics of dwelling structure; 2) perceived problems with the house design and structure; and 3) resident morbidity problems, physical disabilities, and how these intersect with the fabric and design of the dwelling unit. In addition, we use Geographic Information Systems (GIS) analysis of the location and geospatial characteristics of the communities to map how residents' access to health and social services varies relative to those residents not living in the urban periphery. This analysis allows us to identify appropriate rehabilitation initiatives that will lead to home and health improvements in informal, peri-urban communities.
the last two decades, the academic interests about the relation of local politics
and gender have been on rise and policy-makers who are aware of this fact have
been paying serious efforts to bring local actors to the front to increase women's
political involvement. Since the 2000s, Turkish government has charged the vari-
ous branches of politics, including the municipalities and mayors in the scope of
this research, in enhancing women's participation particularly in local politics.
However, recent studies and statistics reveal that neither the number of women
at local level politics have been increased either these responsibilities have been
fully acknowledged by the local actors in Turkey.

It is assumed that, as women representatives, female mayors would contribute
to increase women's political participation in local politics and be more assertive
to fulfill the related responsibilities to support women's involvement into local po-
itical relations. Thus, in the case of 2009 local elections in Turkey, this study aims
to find out to what extent female mayors can contribute in enhancing women's
political involvement at local level. In this regard, this research will try to analyze
the related discourse and activities of female mayors who were selected in 2009
local elections in Turkey by in-depth interviews.

The Controversy: Family Separation and the Immigration Law in the U.S.a

This study examines whether the Courts in the United States are recognizing
the provisions of the UN Convention on the Rights of the Child as an internation-
customary law even though it is not ratified by the U.S.a. Drawing on multi-
plinary sources, including the work of scholars and legal professionals this article
explains the deportation of parents and discusses the family separation through
immigration procedures and human rights approaches. The article then presents
the results of recent court opinions, and compares court decisions. It concludes that
some courts have made significant progress toward family integrity and for
the best interest of the child, however some court decisions rejected to recognize
the Convention and gave priority to the State interest and deported numerous
parents even though their children are citizen of the U.S.a. On the other hand, this
article also identifies a need for further improvement, which can be accomplished
through the contributions of national and international organizations.

Care Migration in Asia: A Comparative Study

As some countries in Asia develop economically and experience major demo-
ographic challenges such as persistent below-replacement fertility, the issue
of immigration and care provisions emerges. It is particularly important in the
Asian context where people have to rely on the market in the absence of effective
welfare state. This Asian situation is called “liberal familialism.” In this paper, we
try to answer the following questions relating to care migration by drawing on
data from China, Japan, South Korea, Taiwan, Singapore, Thailand, and Vietnam:
Whether and how care provision is mediated by international migration or inter-
national migration? What are the working conditions – are the migrant care workers
documented or undocumented? Are they protected or covered under the local
employment laws? To what extent are they allowed to immigrate to the host coun-
tries? What are their ethnicities and nationalities? What is the history of employing
and women workers in different countries – for childcare and/or for elderly
are provided (for example, in the households via marriage migration or in institutional
care settings such as child care centers or old people’s homes)? What are the challenges faced by sending countries and receiving
countries? Finally, what are the ways in which care migration relates to various
forms of social stratifications in Asia – in particular, gender, class, ethnicity, and
urban-rural inequalities?

Lateral Networks of Homeowner Associations and Civil Society
Building in Urban China

Civil society organizations are crucial for the development of civil society, be-
cause these organizations teach citizens democratic practices on the one hand,
and constrain the power of the state on the other. Recently, lateral networks of
homeowner associations are being formed in many Chinese cities. While not be-

ing recognized by the authoritarian state or even faced with potential political
risks, these networks are playing an ever more important role in facilitating home-
owners’ collective actions to defend their private property rights. Existing litera-
ture tends to understand homeowners’ collective action as a reactive response to
counteract the powerful real estate developers and their management agencies
in a very mature housing market. But based on interviews, participant observa-
tions, and online discussions of the lateral networks of homeowner associations
in Beijing, Shanghai, and Guangzhou, this study argues that these networks are
proactively adopted as important infrastructures for the development of civil soci-
es in urban China. Driven by the ambitions of promoting the develop-
ment of civic organizations in China, the activists use homeowner associations
as the most practical way to make such attempts. They not only deal with imme-
diate material interests concerning housing and neighborhood management, but
also strive for the participation of member associations on a regular basis and for
ensuring that the associations have the necessary resources and autonomy to
promote homeowner activists’ motivations as well as their strategies and tactics to estab-
lish and run such lateral networks. It has profound implications for state-society
interactions and civil society building in contemporary urban China.

SUN, XIAOYI* (City University of Hong Kong, xiaoyi.shirley@gmail.com)
Pro-Growth Coalitions and Homeowner Activism – a Comparative Study in Shanghai and Taipei

Middle-class homeowners, whom one would expect to be the gainer of China’s
urbanization, have formed one of the discontented groups as other social groups
such as relocated households or migrant workers. The advocacy of collective ac-
ctions – petition, litigation, sit-in demonstration – to uphold their private
property rights. Existing literature tends to understand homeowners’ discontent
as a result of the immature housing market, the deceitful real estate developers
and their management agencies, and the non-independent legal system. While
focusing on immediate causes, existing studies neglect more important structural
factors that contribute to homeowner activism. By adopting a comparative study
based on documents and interviews – in Shanghai and Taipei, the author argues
that different levels of state intervention in housing-related disputes lead to dif-
gerent dynamics of homeowner making processes. This study attempts to explore
homeowner activists’ motivations as well as their strategies and tactics to estab-
lish and run such lateral networks. It has profound implications for state-society
interactions and urban governance in contemporary China.

International Migration of Nurses from India: A Case Study of Delhi Nursing Colleges

This paper examines the extent of potential nurse migration from India and
their causes, types and nature. Methods: Apart from empirical study, the re-
sults also rely on secondary sources. The study is based on the response of 48
potential migrant nurses from Delhi.

Discussion: India has been and will continue to be an important source coun-
try of nurses for the developed countries in the light of emerging shortfall of nurs-
es in the major destination countries in the future. Under the current scenario, it
may be presumed an annual out-flow of 8-10 thousand nurses from India. How-
ever, in spite of the fact that the country has a stock of 1.6 million registered nurs-
es, there is an additional requirement of 10 lakh nurses to fulfill nurse-population
ratio of 1.500. The current nurse-population ratio stand at 1:1100 compared to
the desirable ratio of 1:750. Therefore, India has a doubled effort to produce nurses for
meeting both domestic and international demand by creating a vast and sustainable
infrastructure for the production and training of nurses.

Policy suggestions: First, improving the availability of data on migratory flows
of nurses from the country. Second, a detailed analysis of alternatives available for
procuring and filling up the vacant posts in the shortage areas on the one hand,
and identifying and targeting the surplus areas for international recruitment of
nurses on the other. Three, twinning programmes between organizations of both
sides, and training courses and study undertakings of research, staff exchange,
staff training and support, and flow of resources to source countries. Four,
preferential treatment for migrant nurses for immigration in the destination

* denotes a presenting author.
Abstracts are organized by first presenting author’s last name.
country and facilitate return as per the willingness of migrant nurses, and finally, signing of nurse-mobility partnership agreements with the important destination countries, such as, UK, USA, Middle Eastern countries, Ireland and Australia.

Public-Private Partnerships and Micro Health Insurance Schemes in India: A Sociological Perspective

This paper is an attempt to look at the socio-economic features, and health seeking behaviours of the lower income group and their involvement in the functioning of the micro health insurance schemes. The model micro health insurance as a mechanism of social capital is examined its strength to create a good “health for all”. In other words, it focuses on the importance of public (government) intervention to create a feasible health care systems with the partnership of private both for-profit and non-for-profit sector, so that, the micro health insurance schemes profitable for the vulnerable sections of society. More precisely, practiceable schemes for better health can be created by the intensive involvement of public and private, by which willingness-to-pay for health can be possible by the lower income groups.

Despite increasing acknowledgement that social capital is an important determinant of health and overall well-being, empirical evidence regarding the direction and strength of public-private linkages in the developing world is limited and inconclusive. An increased contribution from the community has been identified as an important financing option. To date, however, there has been little systematic documentation or analysis of differences with different health financing methods.

Currently, the health sector is unable to meet the growing needs of the population and is severely financially constrained. The study estimates the impact of the program on trust and cooperation in rural communities. Rashtriya Swasthya Bima Yojana (National Health Insurance Programme) is the government initiative to provide quality health facility to the lower income groups. It is important to emphasize that the study does not separate the direction of causality between trust and cooperation. The analysis treats both aspects of social capital equally in the impact study public and private inter-linkages for better health facilities of the Indian society.

SUNARO, KAMANTO* (University of Indonesia, kamantos@yahoo.com)

Ordinary Sociologists

Until the 1990s the sociology department of a public university in Indonesia strengthened their college teaching staff by recruiting college seniors with good academic achievements as part-time teaching assistants. After obtaining their bachelor's degree in sociology some of these sociologists would continue to teach on a part-time basis while waiting for an opportunity to be recruited as a full-time faculty member. For most of them, however, the wait was in vain, among other things because there were very few vacancies available, and also because the eligibility standards for becoming a full-time faculty members were gradually raised. After teaching part-time for a number of years - while, in some cases, working towards a masters' degree -- most of them finally sought and obtained full-time employment at other public or private higher education institutions, where they continue to teach sociology.

The practice of recruiting college students as teaching assistants was eventually discontinued, Factors such as centralization and bureaucratization within the university, the tightening of recruitment criteria for teaching staff at colleges in compliance with national standards, and the application of efficiency criteria forced the department to abandon its policy.

This paper, a case study of sociology teaching, describes the biographies of a selected sample of former teaching assistants in sociology - their social backgrounds, present social statuses, academic performances and careers. The life history data are based on depth interviews with informants who were part-time teaching assistants recruited in the 1990s, are still working as academics at institutions of higher education outside their alma mater, and are still teaching sociology. Data for this study are also based on interviews with on-campus resource persons, and on the examination of relevant documents.

The Indonesian System of Higher Education, Global Challenges and Domestic Contestation

The Indonesian System of Higher Education, Globalization Challenges, and Domestic Contestation

Author: Kamanto Sunarto (University of Indonesia)

In the wake of the 1998 reform movement in Indonesia which put an end to 32 years of authoritarian rule, the subsequent governments introduced a number of higher education reforms in response to globalization challenges. As part of these reforms the new governments ratified international and regional agreements, and introduced new acts, regulations and policies.

A significant break with the past was the policy of allowing public higher education institutions to become legal entities with more autonomy. Another development was the increased emphasis on quality assurance: the accreditation of study programs and higher education institutions became mandatory, unaccredited study programs were no longer allowed to issue higher education diplomas and certificates, the authority to accredit study programs will gradually be handed over by the government to independent accreditation agencies established by related civil society organizations while the government will only accredit higher education institutions to become legal entities with more autonomy. An increased contribution from the community has been identified as an important financing option. To date, however, there has been little systematic documentation or analysis of differences with different health financing methods.

As part of its concern with quality the government issued national higher education standards to which all higher education institutions and study program will eventually be required to comply. A national qualification framework has been decreed, which will become the basis for the formulation of learning outcomes of all study programs.

These developments take place in the context of dynamic social and political reforms. While in the past government policies tended to proceed unopposed, government policies in the reform era became more prone to challenges from society. This presentation will discuss the various contestations between the State and Society concerning the adoption of global trends in higher education, and the outcome of these processes.

In Times of Civil War: On Being a Schizophrenic (public) Sociologist

This contribution will address some of the dilemmas that sociologists in the Global South face - how does one choose between the demands of the public moment, the university as a space of work and struggle, and our duty to our “disciplines”? How do we engage in practically extending the democracy and equality that we routinely learn and teach about, and yet seize the time and space required for reflection and produce research that is valued to the extent that it seems to be disinterested? And how do those of us who live and work in the global academic periphery validate our sociology in a world where the standards are often set by scholars abroad?

Undue Process and the Paradox of Increasing Juridification

Since the publication of Malcolm Feeley's 1979 classic, The Process is the Punishment, the idea that improved adjudicative processes necessarily lead to an increase in substantive justice has been questioned. In more recent work, Nasser Hussain, The Jurisprudence of Emergency (2003) has argued that colonial legality in particular, relied on rules and laws as a form of rule. Post colonial legal systems, like that of India, are notorious for the costs they impose on those participating in the system, primarily but not only litigants, in terms of fees, delays, the alien nature of legal norms, or the unwillingness of the executive to implement court orders which go against them. This burden falls disproportionally on the poor.

Paradoxically, however, there is an increasing juridification of social and political issues, with a range of disadvantaged groups resorting to the courts, asking for some right or protesting against some violation. This paper explores this paradox of increasing juridification considering the ongoing and perhaps increasing procedural injustice in the name of due process. Scholars of Indian law have argued that litigation is often conducted to aggravate rather than resolve issues, a transfer of a dispute to another sphere. But in the case of indigenous groups and others attempting to access the courts, knowing they will be harassed themselves, what are the incentives at play? What does justice mean in this context, and is that even the objective?
less couples, indicating that the meaning of parenthood and the norm of child-
birth have changed in the post-Confucian agrarian era. The burden of child care
and education has exacerbated couples’ motivations to become parents, partic-
ularly among dual-income families. However, childless Koreans may not be a ho-
mogenous group. Some couples remain involuntarily childless due to infertility, and
others simply delay having children. In this study, we categorized childless
married Koreans into three groups, voluntary, involuntary, and delayed, and ex-
aminated the factors associated with each group.

Data came from 553 childless married Koreans who had been married at least
for three years using quota sampling in metropolitan Seoul. We conducted
multinomial logistic regression to identify the individual, attitudinal, and marital
factors associated with participants’ membership in each of the three childless
groups using involuntary childlessness as a reference group. Both the voluntary
and delayed groups were more likely to perceive advantages of childlessness, to
put less importance on religion, and to have less intention to adopt a child. How-
ever, other factors were differently related to the voluntary and the delayed groups.
Specifically, attitudinal characteristics were significant among the voluntary group
while marital characteristics were significant among the delayed group. The vol-
utary group was more likely to have negative attitudes toward parenthood and to
report a lower ideal number of children compared to the involuntary group.
The delayed group was more likely to be dual-incomers and to report a shorter
length of marriage compared to the involuntary group. Our findings suggest that
childless couples may not be a homogenous group in Korea. It is worth noting that
there are differences in attitudes towards parenthood and marital characteristics
depending upon the childless group.

US Retirement Migration to the Philippines: Reasons and
Explanations for Later-Life Migration

Studies of retirement migration in the United States often focus at the national
level, and there is comparatively little information about the retirees who cross
international borders in their search for new homes. Retirement migration flows
are unusual in that the late-life migrants select destinations in less-developed
countries, in contrast to the general pattern of migration from poor to rich coun-
tres in search of jobs, higher incomes and a better standard of life. This study
has examined the reasons for retirement migration from the United States (US) to
The Philippines using data collected from different locations in The Philippines.
A non-random sample of 141 US retirees was surveyed. The findings identified
four major reasons for migrating to Mexico: financial circumstances, the natu-enal environment, a sense of community and friendship, and finding life/sexual
partners. While these relocations contradict much taken-for-granted and popu-
lar knowledge about migration patterns around the world, they have important
implications for the ways of life, social relationships and welfare of the migrants.
More in-depth multidisciplinary studies are needed to increase understanding of
this evolving phenomenon.

SURTEES, NICOLA* (University of Canterbury, nicola.surtees@canterbury.ac.nz)
 Becoming Father, Doing Fathering: How Gay Men's Practising of Relatedness, Intimacy and Care Disrupts Normative Constructions of Families

Fatherhood is frequently conflated with parenthood for any man who begets
children. Fathers are typically assumed to be involved parents as 'natural' out-
comes of biogenetic relationships with children. Drawing from the findings of a qualitative
ethnography in this paper examines in the ways in which the gay men conceived
and distinguished between biogenetic relationships and the doing of fathering and
parenting through reflexive negotiation of expected or actual roles and involve-
ment with the lesbian mothers of their planned or current donor-conceived chil-
dren. The paper highlights three ways in which multiple parenting models based on
cooperative nonsexual reproductive relationships between men and women, and
intimate same-gender relationships, disrupt normative constructions of fam-
ily. Firstly, such disruption occurred through the men's deliberate separation of
biogenetic fatherhood, motherhood and parenthood from the doing of parenting in
ways that mixed-gender relationships with children can be flexible, negotiable
and centred on practices of involvement rather than biogenetic relatedness.
Secondly, disruption occurred through the men's separation of the doing of father
and mother from gendered assumptions about parenting roles; they performed both
fathering and mothering. Thirdly, the men disrupted the assumption connecting
fathering and mothering, and to parenting with joint residence through the de-centring
of ‘home’; neither fixed nor static, ‘home’ was attached to relationships, not plac-
tes. Troubling the taken-for-granted primacy of heterosexual two-parent family
forms, legal relationships between parents, legal and biogenetic relationships
between parents and children and co-residence as benchmarks operating to reg-
ulate families, the men's stories open (discursive) spaces for recontextualising
possibilities for queer fathering, mothering and parenting beyond heteronor-
mative understandings of ‘proper’ families. Within a context of escalating family
transformations in an increasingly complex society, thinking and talking about
new forms of practising relatedness, intimacy and care in ways that are expansive
and generative will open up rather than shut down possibilities for all families.

A Longitudinal Perspective on Quality of Life in Times of Crisis: Switzerland from the 1990s to Nowadays

During the past twenty years Switzerland experienced three major recessions
and periods of economic slowdown: the prolonged and deep economic stagna-
tion of 1992-95 – the country's most pronounced recession of the post-war pe-
riod – and the comparatively mild two recessions of 2002-03 and in the wake of
the global financial economic crisis of 2008-09. During these periods of economic
crisis, unemployment and poverty increased, particularly during the crisis of
the 1990s, when unemployment soared from its previously extremely low level.
The proposed paper aims to explore the consequences of recessions and economic
downturns on various dimensions of quality of life by comparing the three histor-
ical periods of economic stagnation.

In order to analyse how quality of life has evolved since the early 1990s, we
tion and inequality, as well as of subjective well-being will be calculated in order
to measure and compare quality of life during different recession periods. Our
empirical analysis will explore the impact of economic crises for different popula-
tions and groups as well as for various quality of life domains (objective and subjective
indicators). First results suggest negative crisis impacts on quality of life and sub-
jective well-being particularly for specific vulnerable population groups.

Being Dad or Mum? about Traditional Parental Roles from the
Perspective of Polish and Swedish Fathers

Parenthood must be concerned as one of areas within which reproduction of
gendered practices occurs. In my paper I will try to show how Polish and Swedish
fathers understand traditional parental roles, how they perceive biological and
cultural differences between motherhood and fatherhood and what they think
about gender equality within the household. My paper is based on 52 in-depth
interviews conducted with Polish and Swedish fathers in 2012 and at the begin-
ing of 2013. It is a part of broader research project on fatherhood in Poland and
Sweden. Interviews concerned men's experience of parenting and are analysed in
the institutional and social contexts of both societies. In my opinion these con-
texts are extremely important here. Stereotypical roles of fathers and mothers
are strongly connected to cultural patterns of masculinity and femininity. Beside
that Polish and Swedish societies provide, through family policies, completely
different conditions for having children and differently approach the problem of
work-home balance. Unsurprisingly, these have an impact on how men define
father's and mother's roles. Among Polish fathers there is a tendency to look at
it with more conservative and traditional approach. They are convinced that it is
impossible to cross biological differences between motherhood and fatherhood
and that father is rather regarded as mother's helper or additional carer. Whereas
Swedish fathers are more eager to question imposed by society patterns of
behaviour. Sometimes they really struggle with stereotypical gender roles to
prosper or deteriorate: Modern Millennium's Path To Happiness

Prosper Or Deteriorate : Modern Millennium's Path To Happiness

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The objective of this academic paper is to present students' perspective on methods of attaining happiness. After realizing that this age group is leaders and possesses the potential to lead, it is helpful to bring their perspective and expand it into a philosophical study to analyze and adapt to the livelihood of the general society as a whole.

The results revealed 4 methods of attaining happiness in the perspective of students. They include 1) Living under moral and ethical conduct and live with the intent of eradicating defilements 2) Setting a constructive intelligence and mindset; human beings have the ability to comprehend logic and causes of phenomena as well as resolve issues 3) Human beings should place importance on spiritual and interpersonal relation aspects over materialistic aspects 4) Body of knowledge passed on or accumulated by ancestors or knowledgeable people

If ultimate happiness and collective social happiness are the goals of human beings, it is reasonable to follow the path that leads to a good management of life and society by understanding the principles or the valuable rules and apply them in all levels and forms of society.

The Rise of Community in Asian Care Provision

Theories of civil society sometimes assume or praise a civil society as being independent from the state, in which citizens, by communicating their opinions freely, cultivate their power to claim oppositions and/or propose alternatives to government. However, in Asian countries, governments themselves have intervened in cultivating civil societies in the modernization processes. For example, in Japan, the Meiji, Taisho and Showa governments tried to bring up a civil society in order to catch up with western modern nation-states (Garon 1998). The neighborhood association, chōnaikai, originates in such a government’s effort to organize a cooperative civil society.

Recently, even in many countries including advanced welfare states in the west, the governments have become more relied on the voluntary/community sector to deliver care to the elderly and/or children. Partly because of the financial constraints combined with changes of demographic structures, the role of volunteer/community has become more important to sustain lives of vulnerable people. The introduction of the social model of care (as opposed to the medical model) seems to have legitimized this trend.

This paper tries to grasp the weight of voluntary/community sector in care among Asian societies. It outlines common features as well as differences among Asian societies in the structures of community care provision, and it also investigates how governments promote community care through regulations and incentives. Through these inquiries, it tries to explore whether and to what extent the community sectors contribute to de-familiarization of care in Asian societies.

Why Did the “Blue-Green Coalition” Develop in the Case of Minamata? an Analysis of the Struggles of the Union and Social Movements Against Chisso

From the late 1960s to the mid-1970s, there was an upsurge of social movements against industrial pollution. Victims of pollution diseases as well as local residents organized anti-pollution movements and opposed the construction of pollution-prone plants in their neighborhoods. Reactions of labor unions to these social movements were indifferent or even hostile. Some enterprise unions supported activities of residents against pollution in principle but withdrew their support when the latter’s actions, such as filing lawsuits against polluters, came in direct conflict with the interests of unions and their firms. Other unions at firms that caused industrial pollution stood on the management side and took confrontational attitudes toward local resident social movements.

The earlier case of the blue-green coalitions (the absence of “blue-green coalitions”), by focusing on the relationship between the enterprise union of Chisso (the SNU) and social movements of pollution victims and their supporters. When it became clear in 1968 that organic mercury discharges from Chisso’s Minamata plant caused Minamata disease, the SNU became actively supportive. When it became clear in 1968 that organic mercury discharges from Chisso’s Minamata plant caused Minamata disease, the SNU became actively supportive. When it became clear in 1968 that organic mercury discharges from Chisso’s Minamata plant caused Minamata disease, the SNU became actively supportive. Re-Reading “The Loss Of Meaning In Death” By Shun Inoue

In this presentation, we will reconsider the English translation possibility of death. “The Loss Of Meaning In Death” of Mr. Inoue Shun.What is the “post-war(Sen-go) japanese society” for Mr. Inoue? We would like to discuss the description “can be understood in the cognitive level” or “feeling”. Because, the question to the “Meaning in Death”, was written while clearly reflected the feeling and experience of Mr.Inoue himself to the “post-war(Sen-go) japanese society”. In another word, “post-war japanese society” could show us many possibilities.

In addition, as for the “normative level”, developing interdiscipliary sociology between literature, Mr. Inoue is the only one scholar who manage the subject of analysis sociological knowledge itself “feels”, because can contribute to the “accumulation of results beyond the generation of sociological research”.

Sociology of knowledge, Inoue advocates, social consciousness theory, or cultural sociology we do not have to limit the domain of Mr. Inoue’s theory. We believe in the wake of this presentation, we would like to appeal widely, the contribution of Inoue for the world aging society.

Do Older Women without Work Experience Participate Less? Life Course Analysis Using the Jages Data

**Background** Social participation, such as being a part of community groups, is key. Although social participation in older age may be defined by cumulative experience throughout one’s life course, many older Japanese women today have never worked outside the home. As work experience can help expand social interaction and social networks, it is possible that women who have never worked do not participate in social groups as actively as those who have.

**Methods** The Japan Gerontological Evaluation Study (JAGES) is a social epidemiological survey of a community-representative sample of functionally-independent individuals aged 65 and older. In 2010-11, responses were received by telephone from 1,123 people in 31 municipalities across Japan (66.3% response rate). Social participation was measured by monthly or frequent participation in any one of six types of social groups (business, volunteer, senior, sport, community, and hobby). Using logistic regression, four models were tested on 41,966 to 44,272 women with a valid response for each outcome variable: whether lack of work experience in older Japanese women is associated with (1) less social participation, (2) less social interaction, (3) less frequent interaction with friends, and (4) fewer friends.

**Results** Controlling for age, equivalent income, family structure, years of education, and health conditions, lack of work experience throughout life was associated with a 21 percent lower likelihood of participating in groups, 25 percent higher likelihood of having less social interaction, and 12 percent higher likelihood of having fewer friends. The association between lack of work experience and lack of group participation held for all income levels and age groups.

**Conclusions** Lacking work experience appeared to lead to less social participation later in life. Work experience can develop better social skills and more extensive social networks, contributing to more active social participation in older age.

Beyond Duality and Heteronormativity: Gender Display and Manipulation in Japanese Yaoi/BL Narratives

Boys Love (BL) in Japan refers to commercial fiction and fictional media by and for heterosexual women that focuses on male–male erotic/romantic relationships. These works are more prominently found in other countries as Yaoi, a Japanese term often used as an umbrella category that can encompass various Japanese subgenres of male–male erotic/romantic fiction by and for women. The past decade has seen the emergence of studies of Yaoi/BL that have focused on gender and sex as analytical categories. Such scholarship is important in understanding fan-based cultures, production and consumption. However, a confusion of gender, sex, and sexuality at the analytical level in Yaoi/BL impedes further theoretical development. By making a clear conceptual distinction between these intertwined notions as distinctive analytical categories, this paper attempts to clarify Yaoi’s achievement in the (un)conscious feminist agenda among Japanese women.

The study examines nearly 800 commercial Yaoi/BL novels written in Japanese, which were chosen based on a certain sampling method. Through descriptive statistics based on and textual analysis of the samples, as well as interviews

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
with professional Japanese female writers, the paper first identifies some important features in the contemporary "Yoi/I/GL" texts such as transgression of sexual norms, subversion of gender fixity, renewed definitions of masculinity and femininity, and highly context-dependent sexual orientation of protagonists. By doing so, I argue that "Yoi/I/GL has made it possible for Japanese heterosexual women 1) to transgress normative gender dualism, sexual acts and sexuality at least at the level of discourse; 2) to use men's images not only for their empowerment but also for their own gratification as agent of desire. This is a significant step forward from early "Yoi" which focused upon getting affirmation from others and fleeing from patriarchy.

To be or Not to be, That Is the Question: The Bifurcation Approach of the Japanese State and Identity Formation of Koreans in Japan

Koreans in Japan present an important case for understanding the nature of the interconnections between race, nationalism, and ethnic relations. All too often, studies of these phenomena center on Western cases or on cases where non-Western racial minorities move to Western states. In this paper, however, I examine these inter-relations within Northeast Asia. The Zainichi Koreans are an old-time immigrant group in Japan (who are already in the fourth generation) must face what I call a "bifurcation approach," which makes a strict distinction between the Japanese and the non-Japanese based on nationality in the management of ethnic/racial diversity instituted by the Japanese state and society. In Japanese, the concepts 'race,' 'ethnicity,' and 'nation' are virtually indistinguishable. The formulation race = ethnicity = nationality = culture is essential to the Japanese conceptualization of what makes one Japanese. Moreover, under the Japanese sense of nationhood defined along exclusively ethno-genealogical lines and nationalistic multiculturalism, minority cultures have become fossilized owing to state sponsorship of the dominant Japanese culture. As a result, Zaidichi Koreans—who have significantly become acculturated to and share a similar phenotype to the mainstream Japanese—have been racialized and constrained in their formation of hyphenated identities such as "Korean-Japanese." Based on interviews with Zainichi Koreans, this paper demonstrates how they negotiate the shoals of race, nationality, and ethnicity in order to survive in a deeply racialized state and examine their collective identity-formation under circumstances in which they have to live by hiding their ethnic origin with a constant pressure to 'impose' being Japanese.

Challenging Law and Justice from below: The Public Interest Litigation (PIL) Movement in the Dalit Community

In this paper, I examine protest movements of the marginalized Dalit community (formerly known as Untouchables) in contemporary India from a case study of Balmiki (a sweeper caste). In particular, I explore the political aspects of caste by focusing on the caste-based quota system, known as "reservation," which is a part of India's affirmative actions. This paper is organized around two significant issues. The first is the formation of a "new" identity among the Dalits through saint worship, which poses the following question: Why has the community embraced saint worship? The answer to the question lies in their religious choice to worship a saint, which gives them a sense of dignity and empowerment, and helps in the construction of a collective identity among members.

The second issue is the implications of caste-based identity politics. Since the late 1980s, an important factor Indian politics is the shift to a multiparty system and the rise of identity politics. An increase in equality and social justice, marginalized castes have risen to challenge existing policies and demand an equal share in state resources. I found that the success rate for the implementation of the reservation policy for the benefit of the lowest castes was significantly low. The distribution has been uneven among the targeted groups. Moreover, the results of my fieldwork revealed that most people tried to hide their caste. However, a number of them also affirmed that in order to obtain the benefits of welfare schemes and protect their rights by challenging the judicial system through Public Interest Litigations (PIL). This paradoxical response explains why caste identity has become more positive and assertive, which has led to the politics of difference in contemporay India.

The State of Neoliberalism Criticisms in Japan: Why the Discussion on Cosmopolitanism Does Not Gain Steam in Japan

As economic globalisation progresses, a wave of neoliberalism is sweeping across the world, demanding states and societies to render a variety of modifications. Such a phenomenon has been analysed, described, and criticised extensively worldwide. Japan is no exception; criticisms toward neoliberalism are said to be forming a major trend in Japan. However, such critiques are slightly different from those toward neoliberalism in other parts of the world. Worldwide criticisms toward neoliberalism often lead to discussions on global transformation and cosmopolitanism, whereas such a connection is almost never made in Japan. For example, David Harvey, the author who disputes neoliberalism in his worldwide bestseller A Brief History of Neoliberalism, expresses in Cosmopolitanism and the Geographies of Freedom published in 2005 his empathy with De Sousa Santos' (2005) idea of 'subaltern cosmopolitanism'—Harvey finds hope in the movement to form a cosmopolitan solidarity by amplifying the voices of the victims of neoliberalist globalisation that exists worldwide. Ulrich Beck (2006) also criticises the trend, stating that state politics are reduced when the state neoliberalistically prioritises adaptation to global market competitions; he argues that becoming cosmopolitan is the realistic future for states.

As seen from the above, a global trend is seen in the inclination to progress from criticizing neoliberalism to promoting a cosmopolitan transformation. However, neoliberalism criticisms in Japan rarely lead to the discussion of cosmopolitan transformation. One of the reasons for such a difference is that neoliberalism criticisms in Japan are rarely discussed solely in a global context because they have been preoccupied with issues of inequality which often focus on changes in the socioeconomic structure in Japan. Therefore, this report will provide an overview of neoliberalism criticisms in Japan, describe their characteristics, and explain why the criticisms have strong national characteristics without having been placed in the context of cosmopolitanism.

The Formation Process for Civil Society in Northeast Thailand: From the Social Research of Two Villages

This paper is concerned with civil society (prachakhom) as the basis for the emergence of civil society and development in Thailand's northeastern region is the result of the social research supported by Grant-in-Aid for Scientific Research by the Ministry of Education, Culture, Sports, Science and Technology(MEXT) of Japan from 2005 - 2007 and 2008 - 2010.

In the twenty-first century, the discussion of the idea of civil society (prachasangkhom) and people's participation began to develop in Thailand. In many forums, Thai scholars proposed a range of ideas and opinions that directly link development with civil society. Furthermore, there has been various research on the development and possibilities for shaping the civil society movement.

The purpose of this study is to make clear the significance of a boy friend or girlfriend for junior high school students in Japan. For this purpose, I firstly investigated the determining factors of having a boy friend/girlfriend, and then clarified the fact that one has a boy friend/girlfriend on their self-consciousness. As a result of these analyses, I got the following two findings. First, there are various factors which determine whether junior high school students have a boy friend/girlfriend or not, and the factors differ according to each student's gender. Furthermore, the levels of academic accomplishment of the school also make a difference. Second, when I analyze the effects of that fact on their self-consciousness, it is necessary to consider not only the very thing that one has a boy friend/girlfriend or not, but also if she or he is likely to have a boy friend/girlfriend. This analysis suggests that a success in love for girls in junior high has a more complex meaning compared with that for boys.

Divorce Studies in America and Japan

This paper aims to suggest ‘Good Divorce’ comparing divorce studies in America with divorce studies in Japan. The divorce rate in the United States has continued rising since World War II and one out of four couples married at the same time, as remarriages have also increased, the step family is very rare in America. A new sociological concept, ‘binaural family’ advocated in “The Good Divorce” (1999) by Constance Ahrons has become generalized. On the other hand, the divorce rate in Japan has continued rising as well as the number of remarriages and almost caught up with other countries.

In this paper, two devices will be introduced, divorce studies and works developed in America since 1980s and Japan since 1990s. First, we will discuss the history of divorce studies in America and Japan. ‘Nuclear family’ advocated by Talcott Parsons is certainly universal but not absolute at all. Second, introducing the discussions in “The Good Divorce”, “We’re Still Family” by Constance Ahrons, we will describe divorces in America. On behalf of ‘nuclear family’, it is found how the concept called ‘binaural family’ became to come up. Third, introducing Atsuko Okano’s various discussions on divorces, we will describe divorces in Japan.

About divorce circumstances of America and Japan, some common points and differences will become clear. Finally, through both divorce studies, we will suggest what should be done to be ‘good divorce’. ‘Good divorce’ means “to keep your family together when your marriage comes apart.” We will also introduce International Academy of Collaborative Professionals (IACP) for collaborative practice, including Collaborative law and interdisciplinary Collaborative Divorce.

Sociological Theory after September 11, 2001 and March 11, 2011

This paper aims to rethink theoretical foundations in sociology comparing American sociology after September 11, 2001 with Japanese sociology after March 11, 2011. Although some ‘empirical’ sociologists in America described and analyzed attacks by terrorists on September 11, 2001 and American society after 911, almost ‘theoretical’ sociologists kept silence. However, Jeffrey Alexander, a leading American theoretical and cultural sociologist, has interpreted sociological theory and American society of and after ‘911’ from a post-Parsonian point of view. On the other hand, although some ‘empirical’ sociologists in Japan have described Japan now after the August earthquake and Tsunami on March 11, 2011, almost ‘theoretical’ sociologists within the Parsonian and Post-Parsonian tradition in Japan have kept silence.

In this paper, I will suggest that theoretical foundations for the sociology after 911 and 311 should be established on Jeffrey Alexander’s theoretical logic, cultural sociology, and civil society. First, I will discuss that new sociological theorizing including the sociology of 911 and 311 should be multidimensionally reconstructed on the meta-terorization by Talcott Parsons, Jeffrey Alexander, Jonathan Turner, and Richard Munch. Second, I will argue that new solidarities could be founded on the metatheorizing by Talcott Parsons, Jeffrey Alexander, Jonathan Turner, and Richard Munch.

Visualization of SNS Communications Concerning Radiation Risk from the Fukushima Daiichi Power Plant

In this presentation, I visualize people’s communications on a Social Networking Service (SNS) concerning the risks of radioactive pollution stemming from the Fukushima Daiichi power plant accident. The data consists of the communications from a regional SNS that was launched by the residents of Iwaki City, Fukushima Prefecture, after the accident. It contains text from diaries and comments written by the SNS members and information about who made comments to whom. The co-occurrence network of words derived from the text data reveals the members’ concerns about radiation risks. Comment relations are expressed as a form of social network that shows the structure of human relationships on SNS. The co-occurrence network of words on that social network can be integrated and analyzed concurrently to show the development and interaction of the members’ concerns and the social networks in the SNS.

The SNS members expressed various concerns, including radiation measurement, influence on health, food safety, and so on. Based on their concerns, they created diaries on the comments site as “conversational organisms” to “technical artifacts”, or even to “organisms being merely alive” as their experiment progresses.

Constructing Identities Across Borders: Case of the Istrian-Italian Diaspora in Trieste

In the last two decades, the accelerating speed of globalization has challenged the modern notion of state borders. Rather than the fixed line of a sovereign state, state borders are viewed as a dynamic interplay between territorial organizations and local social and cultural identity. This is evident in the border regions of Europe wherein extensive cross-border cooperation and interaction transform a border from a geopolitical territorial line to an international “contact area” of neighboring societies. On this basis, people living in borderlands have new resources and opportunities to construct or safeguard their identities.

This study examines the construction of a “We” consciousness by the Istrian-Italian diaspora, who suffered from national conflicts and mass exile after World War II, and emigrated from their native homeland Istria (formally Yugoslavia) to settle in Trieste, a border city in Italy close to the Slovene and Croatian borders. This study analyzes the identity construction of this diaspora by specifically using the case of national celebrations when cross-border interaction collides with national representation. Our data is based on fieldwork conducted in Trieste on the procedure of how commemorative events are organized by local authorities and how Italian national manifestation. Our data is based on fieldwork conducted in Trieste on the procedure of how commemorative events are organized by local authorities and how Italian national manifestation. Japanese way of honoring the animals killed for scientific research has been known for “offering a ceremony” for dead animals (Kuyoo). This paper pays attention to not only to the ceremony but also everyday caring practice in the laboratory.

Thus, I discuss how scientists and technicians affectively commit to experimental animals. Inspired by Science Studies scholar Casper Bruun Jensen and the sociologist Anders Blok (Jensen and Blok 2013), who developed Actor Network Theory through Japanese techno-animism, I explore new dimensions of contemporary Japanese techno-science.

Does Men’s Involvement in Family Planning Threaten Women’s Reproductive Rights?: A Case of Kurdish Rural-Urban Migrant Women in Turkey

This study discusses the issue of men’s involvement in birth control in Turkey. An argument is based on our research of Kurdish women’s experiences of contraceptive practices. Data were collected by in-depth interviews with forty women in a low-income rural-urban migrant neighbourhood in an East Anatolian city Van between February and July in 2008. In Turkey, fertility rate has been managed to near-replacement levels in recent years yet the use of traditional method, that is, withdrawal continues to be among the highest in the world. Recent studies suggest men’s direct (practicing withdrawal or using condoms) and indirect (influencing women’s use and choice of contraceptive method) involvement in birth control. Hopefully, we do not know what men’s involvement has positive or negative impacts on women’s empowerment. In the neighbourhood we studied, contraception was generally women’s responsibility yet they experienced difficulties in accessing and effectively using contraceptives because of their gender disadvantages. Nonetheless, there are a few men who were successful in birth control. They were not very different from the other women in terms of economic, educational and familial statuses yet their husbands were actively involved in birth control directly or indirectly. One of them, however, wanted more children but were using an intrauterine device because of the husband’s request. Meanwhile, back in Van, it is considered that their husbands should take more responsibility in family planning because of their experiences of failing contraception and seeing those women who successfully limit their births with the help of their husbands. Based on our case study, this presentation discusses a paradox of men’s involvement in birth control and asks explorative questions that whether men’s involvement risks women’s reproductive rights or whether feminist politics should support men’s involvement for the sake of women’s health if women can practice birth control more effectively by men’s involvement.

Globalisation and Rural Women’s Paid Work in Turkey: A Case Study of the Production Chain of Rapana Venosa

This study examines the production chain of Rapana Venosa (veined rapa whelk) and the socioeconomic statuses of women factory workers in this process. In rural areas of the Black Sea region in Turkey, women often participate in non-agricultural production. The production of veined rapa whelks is one of the sectors which rural women are especially employed. Veined rapa whelks are “marine invaders” which migrated from Far East Asian seas to the Black Sea by ballast water in the 1940s. Today, they are considered to be threatening the Black Sea’s ecological balance by consuming large numbers of bivalves. In the context of globalising marine ecosystem and multinationalising agriculture production, rapa whelks began to be exported from Turkey to Japan in the 1990s. While the prevalent catch method, algorna dredging, is known to be harmful for the reproduction of many native species, the extraction of rapa whelks is hoped to reduce their ecological pressure in the Black Sea and create employment opportunities for rural women. This study explores the use of rural women’s labour in the global production chain of rapa whelks between Japan and Turkey. The research was conducted in two phases. In the first phase, women workers’ socio-economic statuses were investigated in-depth interviews with women workers of whelk-processing factories in two Middle Black Sea villages. A research in the second phase was conducted in summer 2012 in Tokyo and data regarding the production chain were collected mainly by interviews with an importer, a manufacturer and a retailer. Research findings suggest that the global Rapana Venosa production bears many characteristics of informal and flexible production chain depends on rural women’s flexible, invisible and hence cheap labour while women develop new strategies to create a space of autonomy through paid work.

The Importance of Class for Understanding Racist Discourses: A Comparative Study of People with Different Positions in the Swedish Class Structure

In research, and especially quantitative research, the working class is often singled out as more xenophobic than other classes. However, it appears that the working class has actual relationships with “immigrants” to a larger extent. Rather than determining which class is the most xenophobic, the aim of this paper is to discuss the relevance of dominant theories about class and racism in relation to empirical findings, and more specifically to interrogate why and how class may be important for understanding people’s use of racist discourses in different social contexts. This paper is based on an ongoing research project that focuses on the relationship between people’s class positions and their practices towards people that they construct as “the other”, as “immigrant” or “ethnically different”. The empirical findings consist of qualitative interviews with (1) people working class positions (based on their work, employment relations and income) living in a working class area, and (2) people with higher class positions living in an more socioeconomically favorable area. Both areas are located in one of Sweden’s largest cities.

In the paper, I discuss both social psychological theories that focus on people’s desire for a positive social identity and other theories, mainly Marxist, that are based on people’s position in the relations of production. The paper argues that which discourses, that are available or are seen as reasonable, are conditioned by people’s different class positions. This also means that the reasons behind people’s use of racist discourses and the meanings these are filled with need to be understood in relation to the diverse class conditioned social contexts in which people live.

Interconnected 21st Century and the Decline of Traditional National Security System

Traditional national security system has been definitely one of the crucial pillars for Western statecraft paradigm since Westphalia Peace agreement in 1648. Especially in last two centuries the main task of sovereign state was how to protect own citizens and territory from foreign (military) threats with strategic concepts like deterrence and retaliation are. It was very clear the national power was based on physical and natural resources, industrial production as well military capabilities. The national state was practically the only reputable actor in international relations. Notably, nearly all loneliness effects in cities are mediated by individualism, collectivism, in stark contrast to loneliness in non-urban areas. In particular, I find that individualists in Moscow are more lonely if they have children, likely because family isolates them from the types of ties they would prefer (with friends, associations, and wider networks). For collectivists, this effect is reversed. Like-wise, collectivists in a smaller city (Tambov) are more lonely if they are involved in more civic organizations, likely because this involvement is compensating for a lack of the ties they idealize (family).

Locating the Media Discourse of Climate Change Policy Network in India 2007-2010

This paper explains the framing of climate change in Indian newspapers. With its economic growth, India has become a major contributor of greenhouse gas emissions and has a major role to play in any global cooperation to reduce emissions. Yet India's rhetoric and concerns about climate change differ from other developing and developed countries. India is the world's largest democracy, but it has a weak state that lacks levers of control over its society and economy. Consequently, the distinct framing that India's newspapers give to climate change contrasts, not the need for new government policies, but the need to convince and mobilize civil society.

Trust Me If You Can: Trust As Strategic Tool for Decision Making to Deal with Ignorance and Uncertainty in Contaminated Sites of Germany and India

In this paper we will investigate the role of trust in decision making process under ignorance and uncertainty. Classical approaches to risk analysis are based on statistical calculations dependent on hitherto known variables. This research studies the amount of knowledge for risk calculation is limited then the decision making of experts as well as 'lay' persons are dependent on their individual and intuition-al trust. Based on newly emerging sociological theories of ignorance, this paper involves two field studies: redevelopment of contaminated sites in Germany and mitigation of groundwater arsenic contamination in India. Interestingly, in both the cases knowledge on underground processes is limited. Processes of clean-up in Germany usually are confronted with contaminations that had not been identified in investigation activities. Unexpected surprises by the actors are often taken as normalcy. In the Eastern Indian region, concentration of arsenic in groundwater increases due to geological processes in succession of a decreasing groundwater level, caused by human activities. So, today's clean water may be poisonous by arsenic tomorrow. This creates a situation of ambiguity and confusion. Stakeholders (from policy makers to local inhabitants) have to take various pertinent decisions based on trust in individual, group or system. From the existing sociological literature the paper explores various dimensions of trust involved in decision making for both experts and non-experts.

prove the side effects of cancer treatment, quality of life among cancer patients, and breast cancer mortality. Although research on exercise has grown in quantity and quality (i.e., moreRCTs) during last decade, most available studies recruited primarily Caucasian samples and were based on smaller sample sizes (Pekmez & Demark-Wahnefried, 2011). Thus, these findings are not able to be generalized to non-Caucasian subgroups, such as AAs. Furthermore, exercise patterns vary with different cultural traditions. Intervention strategies such as aerobic exercises, resistance training, and Yoga which have demonstrated positive impacts might not be applicable to AA cancer survivors because most Asians will be more inclined to use Tai Chi over Yoga for their exercise routine. Thus, more research is needed to study the unique cancer experience of various racial/ethnic groups.

This paper examines the linkage between physical activity and quality of life among Chinese American cancer patients and survivors. It is hypothesized that more physically active cancer patients and survivors are reported to have higher quality of life (QOL). Data were collected from two self-report surveys of 55 Chinese cancer patients and survivors. In addition to basic demographic characteristics, weight status, medical history, two standardized scales are used to measure quality of life (SF-36) and physical activity (CHAMPS). Currently, we are conducting the data analysis and a manuscript based on the results of the data analysis that will be completed in the spring of 2014.

Navigational Capacities For Youth Success In Adversity: A Sociology Of Southern Youth

The global South has for too long relied on global North contexts and theories in the sociological study of youth and youth development. These Northern approaches have centred on US-driven positive youth development focused on dynamic systems, risks and protective factors, and the UK-lead socio-cultural approach addressing youth agency, resistance and cultural reproduction. This paper asks two key questions towards a comparative consideration of the sociology of youth: Who are Southern Youth, and in what ways are their lives the same as, or different to their Global North counterparts? And what new tools and language are required in order to make visible these similarities and differences and so bring Southern youth out of the invisibility of current hegemonic youth studies? Substantially, it offers an alternative nascent framework, that of ‘navigational capacities’ to research and frame a sociology of Southern Youth. Navigational capacities are suggested as specific socio-emotional and material capabilities required for young people to manage contexts of adversity to succeed. These, rather than skills, are learnable and are available to young people in the pursuit of success, where success is postulated as the capacity to (1) exert individual agency; (2) obtain, create and invest capitals in their primary proximal contexts of engagement; (3) recognize and analyse the ways in which interconnecting distal contexts, practices and policies exert influence to oppose and enable agency; (4) see the way in which power operates through identity markers to restrict participation, and perpetuate domination and poverty; and (5) practice collective agency for civic participation and life cycle transitions. In this regard, the notion of navigational capacities draws together the best emancipatory elements of both the dynamics systems and socio-cultural approaches to youth studies, and has the potential to make visible (de)invisibilise) the lives of Southern Youth.

Gender Marital Roles in an Ecumenical, Covenant, and Charismatic Christian Community

Marital gender roles and religion continue to capture the landscape of much sociological research in families. A significant amount of research has emerged in investigating how Promise Keepers marriage program which primary locus is in Evangelical-American Christianity. Much of the critique of the movement focuses on language such as: “the last gap of patriarchy,” the “first backlash of patriarchy,” “soft-boiled masculinity, sphere of anti-feminist backlash,” “hegemonic masculinity,” “an essentialist retreat from progressive gender relationships,” and the Promise Keepers excerpting the centrality of the political within the faith.

Against this backdrop, this paper presents empirical evidence from a 350 member Ecumenical[1], Covenant[2], Charismatic[3] community named “Allulia” in Augusta, Georgia, USA. Husbands are expected to lead, protect and provide for their wives and children. They are called to be leaders in their marriages and could be seen to reflect the images portrayed above in regard to the Promise Keepers. However, with data based on interviews from randomly selected cases (36) and 300 members of 350 who provided quantitative information, a very different story of leadership is presented. The husbands model their leadership on a kenotic style of headship. This consists of leadership which is humble, empty of self-interest, sacrificial love (agape), a detachment from status privilege, gentle, meek, kind and self-effacing. They are to love their wives as “Jesus loves the Church,” and wives are to respect their husbands.

From the interviews, both of men and women, this was the common story. Regression analysis of measures of gender roles shows significant correlations with a wide variety of measures of religion.

Constructing Asia: An Emerging Model of Migrant Labor Exportation

This article explores how global forces are reshaping the form of labor migration in the region. China has become an important influence reshaping the Asian region through increased foreign direct investment (FDI) in public construction projects such as roads, railways, and ports. As Chinese companies expand operations overseas they often bring their own workforce, exporting hundreds of thousands of Chinese migrant workers. These workers migrate under the umbrella of Chinese multinational companies and represent a fast-growing form of labor export migration called, "project contract migration." This expansion of project contract migration represents an important form of temporary migrant worker programs which are generally governed by either labor brokers and/or bi-lateral agreements among states, and are characterized by receiving countries only accepting immigrants under "strict functional and temporal limits" (Castles, 2004: 23). In contrast, China's emerging labor export model is an example of multinational corporation-led migration with a new twist. Historically, multinational corporation-led migration has taken the form of high-skilled professionals being relocated from developed nations into developing countries (Findlay, 1990; Stahl, 1991) while China's multinational companies are exporting both high and low skilled workers.

According to China's Ministry of Commerce the number of Chinese workers sent abroad has risen from about 2,000 in 1979 to around 6.5 million in 2013. Roughly 812,000 of these overseas Chinese workers are now employed by Chinese companies in the form of project contract workers, and if we include illegal or undocumented migrants, these numbers would double. This article focuses understanding why Chinese multinationals are importing their own laborers instead of using local labor. I argue that this emerging model of labor exportation creates a kind of extraterritoriality that allows Chinese multinationals to evade national and international regulations designed to protect worker and migrant rights and increasing worker control.

Engaging the State: Informal Worker Protests in China

In China, the rise of precarious and informal work is closely linked to the processes of migration and urbanization. There are roughly 150-200 million migrant workers, representing between 15-17 percent of the total Chinese population (Chen 2010). By 2009, sixty percent of all urban employment in China was informal (Huang 2009); most of this is precarious work and a majority of these jobs are filled by migrants. Informal work is performed outside the purview of the state, and it is labeled precarious because these jobs do not provide employment stability, are low-waged and lack social protection.

This paper explores informal worker protests in China. I look at two different groups of informal workers; construction workers and street vendors and find that the salient issues for each group are different. The most salient issue for informal construction workers is non-payment of wages and among street vendors it is the unfair treatment by local urban para-police called chengguan. I explore these two issues and the resulting protests by analyzing the ways that their relationships with the state, the organization of their work, and different integration into urban spaces shape their organizing and protests efforts. I detail the major characteristics of these protests and argue that that these informal workers (and their protests) represent more of a threat to the government and the Communist Party than traditional political and economic issues by formal workers. Huang, Philip C. C. . 2009. “China’s Neglected Informal Economy: Reality and Theory.” Modern China 35(4):34.

The Developmental Hierarchy Cultural Schema

In everyday conversation, popular media, and scholarly work, terms like the “Third World” or “developing countries” are often contrasted with the “First World” and “developed countries.” This dichotomy sets point that marks the space, a cultural schema of a developmental hierarchy of societies. How prevalent has this schema been throughout history? Drawing from cognitive anthropology, I argue that in general the terms people use are indicative of specific cultural schemas. This is especially the case with terms that refer to societies’ position on a developmental hierarchy (e.g., “developed” versus “developing countries,” or “advanced” versus “primitive societies,” etc.). Using the Google Books N-gram Database, I analyze the usage of over 80 such terms by year, measuring their relative frequencies in all books written in English from 1700-2008. I then combine this quantitative data with textual and other work, constructing a historical narrative of the developmental hierarchy cultural schema over the last three hundred years. The terminology of the developmental hierarchy has been prominent throughout the time period examined, though it has experienced significant changes. During the eighteenth century, developmental hierarchy terms gained popularity as the ideas of social evolutionism expanded. Notions of sovereignty and capability eventually challenged social evolutionary ideas in the beginning of the twentieth century, leading to their demise. In their wake, modernization theory quickly became prominent, bringing a new set of developmental hierarchy terms, institutionalized by the founding of various international organizations in the mid-twentieth century. Modernization theory renovated the developmental hierarchy cultural schema by shifting the object of development from societies and peoples to that of the nation-state. The developmental hierarchy cultural schema has exercised considerable power in organizing the way people classify societies.

From Chicago to Los Angeles: Western Concepts and the Study of Post-Socialist Cities

Post-socialist cities have been omitted from disputes on global urbanization. However, the insights gained from the study of their dramatic transformations can provide important suggestions for the international urban studies. The paper first introduces the key features of post-socialist urban transformations placing them within the context of contemporary global urbanism. The paper specifically discusses the development of cities, which developed during periods with different political regimes and socio-economic conditions. Their urban landscapes reflect multiplicity of socioeconomic logics and are characterized with a high level of socio-spatial hybridity. The western models that assume relatively stable relations between the principles of urban development and resulting socio-spatial patterns are not capable to capture the nature of cities in radical transformations. The paper then discusses the relevance of “western” concepts for the study of post-socialist cities. It is framed within the paradigmatic evolution from Chicago to Los Angeles schools of urban studies. The paper argues for the recognition of a multiple layers of urban logics and urban structures interrelated within urban landscapes of transforming cities. Relating long term development paths and contemporary path-shaping practices, paper documents that concepts from both schools are relevant for the understanding of post-socialist cities. Finally, despite the present urban landscapes of post-socialist cities can be seen as different from cities in other world regions, there are striking similarities. The paper argues that despite historic and cultural specificities in local contexts, contemporary urban development is conditioned by the universalistic driving forces of urbanization embedded in a globally spreading capitalism. The hybrid coexistence of different socio-spatial landscapes can thus be only temporary as the most dynamically developing urban areas related to global capitalism gradually displace the original urban patterns. The theories and concepts developed in the social context of capitalism thus have high relevance for contemporary global urbanism.

Gambatte ikô : Negotiating Identity and Belonging at a Japanese University Women’s Kendo Club

This paper draws on an 18-month ethnography at a Japanese university women’s kendo club and examines the concept of seishin (spirit), and how it is embodied through the process of doing one’s best for the group. Gambatte ikô (Let’s do our best together) expresses the personal commitment to endure hardship in order to achieve a group goal. The strengthening of seishin can be attained through enduring physical, mental and emotional hardship alongside others, where the hardships are embedded in the club’s demanding training, work obligations, hierarchical relationships. As such, seishin training takes place on all levels, in a variety of situations, encouraging the holistic development of club members. Seishin development can be goal of membership and its embodiment can be advantageous as it promises to equip members with the resilience necessary to fulfill their gendered roles as capable, exemplary members of society. Arguably, for female club members developing significant relationships takes precedence over the development of seishin. In time significant relationships with other members became my reason for being and the primary source of motivation to engage in seishin training.

SYMKOVYCH, ANTON* (National University of Kyiv-Mohyla, a.symphokyvch@gmail.com)
Safety in the ‘House of Certainty’: The Question of Violence in a Ukrainian Prison

Prisons are potentially volatile places. This paper draws on ethnographic research in a medium-security men’s training prison to discuss the nature of a relatively low level of physical violence in a Ukrainian prison despite the low staff-to-prisoner ratio. It attributes this phenomenon primarily to the informal structure of prisoner society, and the central role of its illicit normative code of prison life. I explore how the legitimacy deficit of the Ukrainian State and its legal system, together with often anachronistic and unreal official prison rules and limited staff presence render the unofficial prisoners’ behavioural code the guarantor of the peaceful co-habitation. I demonstrate that despite discriminating against certain prisoners and instigating mutual and self-surveillance, these informal arrangements were deemed by most prisoners more just and legitimate than the official ones. Whilst this informal structure was inescapable and entailed harsh punishments for violations, it, to some degree, controlled and limited arbitrary violence and established a ‘house of certainty’ (Foucault, 1975). Furthermore, I argue that despite the official antagonistic stance towards the ‘inmate code’, prison authorities heavily depended on the prisoner-controlled informal structure to both keep the prison orderly and safe and maintain uninterrupted industrial production. I then discuss the implications of the recent and current changes in Ukrainian society and prisoner profile to the maintenance of safety and order in national prisons. I posit that the intricate power-balance present in the prison has relevance beyond Ukraine because it represents a microcosm of the interaction between powerful legitimate and illegitimate interests, where the vested interest of both is profit (industry) and order (status quo).

HIV Stigma in U.S. Faith Communities

Stigma remains a significant barrier to HIV prevention/treatment in African American communities. Religious congregations, especially black churches, have been called to address HIV stigma. Social forces such as religion may create reinforcing stigmatized conditions that predispose individuals to HIV infection and limit their ability to access HIV testing and treatment. However, scientific evidence examining the concept of HIV stigma and its effects in religious communities is limited. Our work is guided by the concept of stigma as “a social and cultural phenomenon linked to actions of whole groups of people.” This approach emphasizes the need to examine social structures and processes and enable communities to move from individual-level perceptions to collectively identify and act upon negative stereotypes and discrimination against the stigmatized. Our multi-method study examines HIV stigma in faith communities from the perspectives of congregations, community members, and people living with HIV. We collected and analyzed data from interviews with faith leaders representing a theologically diverse sample of congregations; interviews with HIV-infected individuals; and, town-hall meeting-generated ideas about faith-based strategies to address HIV. We used predictive modeling of factors linked to welcoming/aliating attitudes on the part of congregations, as well as content analysis and concept mapping to qualitatively assess the concept and extent of HIV stigma present in faith communities. In congregations, stigma was often attached to the perception of individuals related to HIV infection. Homosexual orientations as most stigmatized, followed by injection drug use, heterosexual relations, and mother-to-child/healthcare-related situation. Some HIV-infected individuals reported feeling alienated in congregations because of stigma/discrimination. Finally, community stakeholders identified reducing stigma as the most important strategy to address HIV in their faith community; however, the feasibility of this strategy was questioned. In the analysis, we triangulate/discuss the findings to explore the concept of stigma, its consequences, and potential stigma-reduction strategies in faith-based settings.

Nativity, Religiosity, and Mental Health in the United States

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Religiosity has been linked to better mental health including lower rates of depression and other psychiatric problems. However, little is known about the association between religiosity and mental health in immigrant populations. This study examined the role of religiosity in the association between foreign-born status and occurrence of dysthymia (long-term depressed mood) in the U.S. population using a representative sample of U.S. residents. Dysthymia was defined per DSM-IV criteria. Religious activity was a scale based on how often respondents attended religious services, how important were religious or spiritual beliefs to respondents, and how many members of their religious group they saw socially at least every two weeks. Acculturative stress, socialdemographic and other factors were also assessed. Prevalence and 3-year incidence of dysthymia were modeled using nested logistic regression (weighted analyses). Immigrants were more likely than US-natives to have dysthymia, controlling for sociodemographic factors. This difference was explained after accounting for religious activity, acculturative stress, and other factors. Religious activity remained a significant predictor of dysthymia after all adjustments; higher levels of religiosity were associated with a lower likelihood of dysthymia among the respondents over and beyond other factors. There was no difference between foreign-born and US-natives in developing dysthymia over time, but religiosity remained a significant predictor (lower likelihood) of developing dysthymia over time in the total sample. Further analyses will address the differences in the effect of religiosity between the foreign-born and the US-native populations and discuss the findings in the light of acculturative stress and religious coping perspectives. Public health implications will also be addressed.

**Art Against Racism. Works By Santiago Sierra As a Voice Against Racism**

In my paper I would like to present an artist who is socially engaged and whose works refers to very important social issue – exploitation of workers and cheap work force. Santiago Sierra, born in 1966 in Madrid, is the best known contemporary Spanish artist, who lives and works in Mexico City. Main topics of his works are: critic of capitalism, underpaid labourer completing menial tasks and immigration. It is said that he get involved in social engaged art when he realised how little money get Mexican workers for performing gruelling work. His social background also has a big influence on his work, because he comes from a working-class family.

In my presentation I will discuss some of Santiago Sierra works, which can be understood as statement about (or rather against) racism. As we consider racism as invention of modernism we can also see some direct link between racism and capitalism, cheap labour force and illegal immigrants. We can also easily match those factors: being subjected by racism is often connected with being illegal immigrant who delivers low paid menial work. Furthermore, as we can learn from Loic Wacquant that racism has always been a convenient excuse to justify exploitation of some groups of people. Almost every economic system needs some resources to exploit to exist. Especially capitalism. In capitalism racism has its economic function: it lowers cost of production and stabilizes hierarchy. Similar functions also have illegal immigrants, who are necessary in the system, because capitalism still needs people to complete menial tasks for small salaries. Employing illegal immigrant for lower wages may be justified by racism – they are no us, they are foreigners, they not equal to us.

**Concept of Artistic Brand As a Tool for Analysing Art World**

Social construction of artistic reputation and artistic success have been an important issues in sociological research from many years now. In my paper I am going to present the idea of artistic brand as a tool for analysing art world and construction of artistic career – mainly the careers of contemporary visual artists.

Artistic brand can be a person (artist, gallery owner, collector, curator, critic) or an institution (gallery, museum, art fair). The most important criterion for distinguishing the artistic brand from non-branded artist or institution is its recognition by the representatives of the various spheres of social life. I separate three spheres of social life in which artistic brands can be present: art world, media and ordinary social life. In every of those three spheres could exists different artistic brands, which are also constructed and sustained in different ways.

Phenomena that have recently occurred in the art world (development of conceptual art, separating the artist from the art work, the lack of clear criteria for evaluation works of art, professionalization of the art market) made that artistic brand have gain an importance in the art world. Artistic brand simplify the complexity of the art world, improve the decision making process, add value to the art world product. Artistic brand is a guarantee of quality, a mean of communication with customers and agents. Brand is also a tool of negotiating rules in the artistic field, a tool for building hierarchy in the art world and a tool for building artistic field autonomy towards other fields.

As the exemplification of my conception of artistic brand I am going to present the outline of my research project concerning the in-depth analysis of the presence of artistic brand (contemporary visual artists and institutions dealing with contemporary art) in Poland.
We will show that the field of political controversy around these tenets has clear resting on the idea that any unemployment at all in this age group is a problem. Moral age group is the most affected by unemployment; the other is of a understandable what the use of the NEET category is founded upon; we shall show within its various pathways and instantiations. In particular, my approach uses an ecological sociology perspective based on a further operationalisation of the SEIC conceptual model (Tábara & Pahl-Wostl, 2008) and focuses on the case of the integrated governance of climate change. From a non-dualistic standpoint, I look at the agents’ interactions and social-ecological systems dynamics in complexity production and their implications for social learning and transformation. Such analysis is carried out in a relational mode within and between the following social-ecological components and systems: 1. Structures, rules and institutions (S) 2. Energy and resources (E) 3. Information and knowledge (I) and 4. Cumulated socio-ecological change (C). It is argued that such a framework can provide a more robust theoretical understanding of the required conditions for a global sustainability transformation and support Integrated Climate Governance (ICG) policies and options.

In this paper I present a new methodology that I call “ethnographic biography”. I have used this methodology to examine changes and developments in ethnico-class identity among young adults from different social classes who are graduates of an integrated school and who are now finding their way in adult society in Israel. Ethnographic biography involves repeated in-depth interviews with all of the subjects over time, and from different perspectives, alongside the ongoing ethnographic study of events in their lives through various communications media, such as telephone conversations, email correspondence, and the subjects’ activities in social network sites (e.g. Facebook). It also entails attending life events in the subjects’ lives (going to a football match together, visiting a subject in mourning, joining a family meal, visiting subjects at their place of work, attending weddings, and so on).

The method of ethnographic biography has a number of important advantages. First, it offers a framework that is tightly linked to the subjects’ everyday lives while at the same time reinforcing both their interpretive and reflexive capabilities and the ethnographic dimension. Second, it enables us to follow various biographical events in the subjects’ lives in real time, and not retrospectively. Finally, ethnographic biography allows us to study the development and dynamics of ethnico-class identity at varying, complex and nuanced resolutions, and thus to draw out its various pathways and instantiations.

In OECD countries, the problem of young people not being in education, employment or training (the so-called “NEET”) has been frequently raised in the political and social fields since the beginning of the last crisis. On the basis of empirical data collected in Switzerland within the framework of the NCCR Lives project (http://www.lives-nccr.ch/en), we shall first attempt to understand what the use of the NEET category is founded upon: we shall show that it is based on two tenets. One is of a social nature, founded upon the fact this age group is the most affected by unemployment; the other is of a moral nature, resting on the idea that any unemployment at all in this age group is a problem. We will show that the field of political controversy around these tenets has clear borders (Bourdieu, 2012) and that it mostly centres on whether various measures should be imposed or not, whilst there is complete agreement on the category itself.

We will then show that street-level bureaucrats dealing with youth unemployment endorse the official normativity about NEET. 44 of them have been asked to identify and precisely describe three situations that they consider as emblematic of their interventions toward unemployed youth people; hence, more than 150 such situations have been collected and allow investigating how the past, present and future stages of the beneficiaries’ life course interact within them. The data show that the normative figure is the employed adult and that they see NEET as people in need of socialization.

In conclusion, we will show that the NEET category is founded upon a linear and androcentric representation of the life course (education-training-employment-retirement) (Levy, Gauthier, & Widmer, 2006) which not only subsumes very different social universes into chronological categories (Bourdieu, 1984, Yates & Payne, 2006), but tends to deny the importance of power relationships founded upon age.

Hijab blogs as explorative media-based spaces of social recognition

As studies have shown, women with headscarves are faced with discrimination and prejudice in their everyday lives. This becomes clear in professional settings and when job hunting in particular, as the Senate Administration for Integration and the Anti-Discrimination Office in Berlin have demonstrated. (Senatsverwaltung für Integration, Arbeit und Soziales (Hrsg.), Mit Kopftuch außen vor? Berlin, 2008). Some explanatory approaches in the literature trace this back to a strong stereotyping in the media. Veiled women are thus perceived as less attractive, less intelligent and less educated, as suggested in the study by Yusra Mahmud and Viren Swami. (Mahmud Yusra/Swami, Viren (2010), The influence of the hijab (Islamic head-cover) on perceptions of women’s attractiveness and intelligence, in: Body Image, p. 30-39).

In Western culture in particular, the hijab is seen as a symbol of traditionalism, a lack of individuality (uniformity) and religious fundamentalism. On this basis, my study deals with “hijab-style” blogs as areas of recognition/areas of exploration. In these platforms, recognition is realised strongly via technical-media and aesthetic exploration. Using selected examples of “Islamic blogs”, which young Muslim women use as a platform to present and document “Islam stylings”, the meaning of such media platforms for aesthetic and social recognition is examined. As part of this, the presentation focuses in particular on the role of body/dress/image for the constituting of “the self” as aesthetic configurations of social visibility.

We are witnessing development of various new breeding techniques which cannot be regarded simply as genetically modified. For example, genome editing techniques, such as ZFN and TALEN, are techniques which delete some sequences of DNA without leaving any trace of the gene modification. In this case it is very difficult to identify whether this modification is made in an artificial way or just naturally occurred. As of the techniques called as reverse breeding, novel genes are inserted to induce certain genomic transformation at an initial stage, but the novel genes are removed from the final product (null segregant). Here it is open question whether the final product should be regarded as GM or non-GM.

These techniques are actively being developed by venture business companies and universities. If the products created using these techniques are regarded as non-GM by regulatory agencies, seed companies, such as in the area of vegetable and flower, would willingly adopt these techniques to develop new varieties. In contrast, once their products is categorized as transgenic, regulatory cost and administration will give a large disincentive for small and medium scale seed companies. Many countries now start to think over this question and re-negotiation has started regarding what should be regarded as GM, and therefore should be under regulatory oversight.

In this paper I would like to analyze how various actors, such as government, industry, producer organization, are proposing the way in which these NBTs need to be managed based on their own reasoning. Semi-structured interviews to various stakeholders are analyzed to find what is determining factors behind their views on these NBTs. In short, I would like to show how boundary work on the definition of GMOs is being done again through negotiation among various stakeholders.
TAG, MIRIAM* (Bielefeld University, miriam.tag@gmail.com)

Complexity and Simplification. a Framework for the Analysis of the Visual Representation and Constitution of Suffering

Since the evolving global interest in them, children are constituted as a especially vulnerable group. Based on an analysis of visual representations of children in flagship reports of International Organisations, I propose a framework for theorising and analysing the visual constitution and representation of suffering in two forms.

The first form of images of suffering is based on visual media such as photography and paintings, which represent specific individual and collective cases in aesthetic and documentary logics. A second form of representing suffering is based on numerical data and indicators and takes the form of lists (e.g. statistical tables with country-specific data in alphabetical order), rank-ordered lists (e.g. the Under-5-Mortality-Ranking), and graphical forms (e.g. world maps). Especially this second form deserves closer attention and theorisation, as it not only integrates numerical and graphical elements but moreover two distinct logics: simplification and complexity in transforming social phenomena into data and data into images representing social phenomena. I will discuss firstly the line of complexity running from simple listings to positioning to visually transforming data; and secondly, the line of simplification by which all three forms transform the complexity of social phenomena into visual clarity; a process in which diverging interpretations are hidden behind the visual representation, and ambiguity and interpretative openness is transformed into graphical decidedException.

I will conclude by linking the visual analysis back to semantic representations, as images of suffering are embedded in discursive frames through which their meaning is shaped, enacted, and specified. I will present the change of discursive frames with regard to the constitution of children from objects of humanitarian action to bearers of human rights, to human capital, and human potential; and the consequences of these shifts in meaning for the representation of suffering in visual forms.

Westernization or Hybridization?: Restructuring Japanese Hegemonic Masculinity in Globalization

During the economic growth period, a form of masculinity attained a hegemonic position in Japanese society, that is, salaryman. The Japanese can easily build up a mental image of a typical salaryman as, a man who works for the same company for life, being protected by career-long employment and a seniority system, and throws himself into the role of the breadwinner leaving domestic duties to his wife. Until the 1990s, majority of Japanese people approved the idea of gender division of household labor and Japan’s economic conditions at the time could afford to provide a large part of people with such lifestyles. Hence, male-dom-
Perhaps the most undetermined influence on the latest generation of Canadi-
dans is the impact of technology on Millennials' intellect and interaction. While
some scholars advocate for increased integration of technology into personnel
training and communication, others warn against the potential for the dissemi-
nation of privileged CF information. This tension is not easily allayed by statistical
evidence on Millennials' use of technology either; studies reveal that Millennials are
nearly as likely to abuse technology as they are to use it effectively. Like other
epochal transformations, the advance of technology is ineluctable. The Canadian
Forces must prepare for the integration of a generation who has fully integrated
modem technology into their day-to-day operations. Not only has technology re-
shaped the methods that Millennials use to execute tasks and communicate, but
it has profoundly reshaped their cognitive abilities, their expectations of experi-
ence and their access to information. The trouble arises when the ambitions of
licensed bookmakers from non-partners such as players in danger.

international sports organisations try to protect their business partners including
dangers of the betting industry, this presentation raises a question whether today
football association in England struggled to protect their sport and players from
along with the limitations of these measures. While in the early 19th century the
Blatter said, "we can't ban betting" because "we needed Toto and football to raise
appears to have been driven by monetary motivations. As FIFA President Sepp

The Meaning of Urban River Pollution and Sense of Place: An
Ethnographic Study of the Klang River, Malaysia

This paper is based on a PhD research, which investigates values, beliefs and
practices associated with two polluted rivers in urban settings – the Klang River
in Kuala Lumpur, Malaysia, and the Torrens River, South Australia. However, this
paper focuses on the findings from the Klang River ethnographic data. Theoret-
ically, the concept of place is central to this paper. Findings suggest that in the
urban setting where rivers have increasingly been polluted and modified, and as
a consequence whose water is not suitable for direct contact, the visual faculty
plays a prominent role in determining the state of the river. From the perspective
of everyday users, what constitutes pollution depends significantly on what can
and what cannot be seen with naked eyes. In particular, objects (such as rubb-
bish) intermingling with river water, the colour and texture of water, the density
or abundance of aquatic species in the river are some of the common visual ex-
periences described by the locals as indicative of pollution. What emerges is that
local people have a broad conceptualization of river pollution. The values of a
healthy river from local is also the physical environment surrounding it.
Specifically, the concrete grey walls and straightening of the Klang River for flood
mitigation schemes and transportation routes were viewed by the local people
as a form of pollution. They expressed a deep concern regarding the physical
transformation and modifications of the surrounding riverscape from 'natural' to
"unnatural", which consequently affect their visual experiences and overall sense
of place. In conclusion, the concept of place is central to this paper. It is a useful
means to understand and analyse the manner in which people comprehend envi-
ronmental degradation and more specifically river pollution.

Betting with the Enemy: Changes in Sports’ Attitude Towards
Sports Betting

Match-fixing in sport has emerged as a serious and widespread global prob-
lem. However, international sports organisations have tended to adopt an am-
bivalent approach towards the issue. One the one hand, they deal sternly with
match-fixing itself as seen in their common ‘zero-tolerance’ policy. On the other
hand, the sports betting industry that brings about match-fixing has now been ac-
cepted as a reliable business partner. These conflicting approaches to match-fix-
ing in sports betting industry frame match-fixing as a matter of individuals'
morality and ethics, instead of structural aspects that drive individual players to
becoming involved in match-fixing. Interestingly, this dramatic shift in sports or-
ganisations’ attitude from vigilance to trust towards the sports betting industry
appears to have been driven by monetary motivations. As FIFA President Sepp
Blatter said, "we can't ban betting" because "we needed Toto and football to raise
money for the sport". This presentation briefly discusses various measures that
international sports organisations are currently adopting to tackle sports betting
along with the limitations of these measures. While in the early 19th century the
football association in England struggled to protect their sport and players from
dangers of the betting industry, this presentation raises a question whether today
international sports organisations try to protect their business partners including
licensed bookmakers from non-partners such as players in danger.

On the Function of “Symbolic Media” in the Process of Functional
Differentiation

It is one of the most important contributions which Niklas Luhmann has made
toward the thesis of functionally differentiated society to indicate the roles of
"symbolic media” in concrete temporal events of commonground. Medium/Form-
Form-distinction is the theoretical device introduced by Luhmann for the pur-
pose of analysis of Form-functioning in autopoietic and information processing
systems (including meaning-processing communicative ones). In short, it is nec-
essary for meaning-processing systems in general, communication systems in
particular; they constitute any appropriate distinction between Medium and
Form and symbolize objects in the environment as Forms through Medium to
operate and observe them.

We focus on this distinction of Medium/Form. This presentation shows how Forms in Luhmann’s terms, which mean distinctions with asymmetry between
the two forms, and as the outside, are connected as symbols in the self-pro-
duction of the communication in which they are adopted. And we deal with
“health as symbolic media” for an instance so as to elucidate the significance of
this theoretical device for empirical researches. In concrete terms, we will take
up a case study about care work for people with physical disabilities in Japan in
order to scrutinize the validity and the applicability of the thesis of functional
differentiation in Luhmann’s theory. It shall be confirmed that various kinds of
Forms employed as symbols are so connected with “health as symbolic media” as
to allow the emergence and the self-reproduction of the functionally specific
care communication of work.

Integration and Segregation - Teachers’ Attitudes Toward Ethnic
Culture and Identity of Immigrant Children in Japan –

This paper investigates how the Japanese schoolteachers think about immi-
grant children’s ethnic culture and identity by conducting interviews with the
twenty-five schoolteachers for immigrant children in Tokyo.

For the immigrant children, school is the first-entrance to Japanese society. It
plays a significantly important role to determine how they participate in Japanese
society. Especially, the cultural aspect of both immigrants and the Japanese social
rules are not culturally neutral, and (ii) they separate the immigrant chil-
dren into Japanese or "non-Japanese" based on their ethnic and cultural national identity, while they also
integrate the immigrant children by treating the immigrant children equally under
the name of “the students in my class” or “residents in the area”.

This case study provides a valuable insight into the discussion of immigrant
integration and multiculturalism. I discuss how the theory of multiculturalism is
interpreted by the ethnic majority in a society where they recognize the different
dimensions of culture and national identity is strongly ethnic and cultural, but
not civic.

A Shortage of Medical Doctors Due to Uneven-Distribution in
Location and Specialty Needs Interprofessional Collaborative
Practice in Health and Social Care in Japan

A shortage of medical doctors has been pointed out in last 20 years in Japan,
but it has been more apparent after 2009, when two more years of a new compul-
sory clinical training added, after six years of medical education and successfully
passed the medical licensure examination in Japan. A number of practising doc-
tors per 1,000 population in 2009 was as follows: Norway 4.0, Germany 3.6, OECD
3.1, UK 2.7, USA 2.4, Japan 2.2, Turkey 1.6 and Chile 1.0. The highest number per
100,000 was 286.2 in Kyoto and the lowest 142.6 in Saitama , in 2009.

Causes of the shortage in Japan were as follows: advancement of medical
science, specialization of health and social care professionals, increase to par-
ticipate in private practice, increase of woman doctors, longer time to talk with
patients, change of patients’ consciousness to right, concentration of doctors to
cities, decrease of practicing doctors in pediatrics, and obstetrics.

Meanwhile, average life expectancy has extended as follows: 1921-1925: m
42.06, f 43.20; 1947: m 50.06, f 53.96; 1960: m 65.32, f 70.16 and 2012: m 79.94,
f 86.41 (years).

"Table of Contents"
Various needs of elderly people in health and social care could not be solved by a single profession, such as medical doctors. Many symptoms in health care occurred in the elderly, such as senile dementia, metabolic syndrome, hemiplegia, dysphagia, fragility fracture and dysuria, could be better treated by a team of multiprofessionals. Health care outcome such as average and/or healthy life expectancies may not be always correlated with a number of doctors.

In order to improve QOL of service users, a paradigm shift is needed in strengthening competencies of health and social care professionals for interprofessional collaborative practice, to develop a comprehensive health care network a community, consisting of three community-based powers on health care, welfare and education.

Women's Reversion-to-Japan Movement in Okinawa

This paper considers women's reversion-to-Japan Movement in Okinawa in the era of U.S. military occupation from 1945 to 1972.

The fact that women supported "all Okinawa movement" with the number of mobilization is seldom known.

In Okinawa, the subject of the movement is the women themselves who faced the war and after the battlefield, how tackled the movement, and how lived after the reversion.

Are there experiences, the feature, and a meaning unique to women? I think the viewpoint of gender is indispensable to consider overall structures of the movement and the community in Okinawa, although it has not been paid enough attention.

For that purpose, I have conducted document analyses and interviews about female teachers, I paid attention to relations between the United States, Japan, and Okinawa, and also to those between men and women.

Rise of Renewed Mobilization Strategies Beyond Imperialism in the NGO World

Conventional paradigm in the arena of international development has been challenged along with the growth of civil society in the third world. In the pre-dominant model, the balance of power among non-governmental organizations (NGOs) is typically prescribed by traditional North-South relations. Northern entities, which possess an abundant supply of resources, hold hegemony over their southern counterparts in the decision-making processes. Even in the NGO world where people strive to ensure social equity and political equality across borders, the formation of hierarchy has been justified under the name of aid assistance.

In other words, the legacy of colonial imperialism still persists due to continuing influences of international NGOs in the Global North. However, a recent phenomenon has substantially proved that southern NGOs attempt to overcome such a subordinate socio-political positioning, becoming an alternative node of mobilizing financial as well as human resources. In addition, those emerging organizations are getting further eager to develop their global operations, which contribute to opening up a renewed horizon of south-south cooperation at the grass-roots level. This tendency indicates that what is called as international NGOs is no longer defined simply by geopolitical conditions in the history. In order to strengthen fiscal foundations toward global expansion, NGOs in developing countries are required to seek methods different from traditional ones: raising the amounts of donations/grants. To name, innovative schemes pursued by these NGOs are fostering and utilizing social entrepreneurs to increase operation profits. To name, innovative schemes pursued by these NGOs are fostering and utilizing social entrepreneurs to increase operation profits.

Countries?

Despite that work family balance (WFB) has been addressed as an important policy issue in Japan for over a decade, Japanese employees, especially those with children, appear to have more difficulty in reconciling work and family life compared to their counterparts in advanced European welfare states. In fact, there seems to be in Japan a wide agency and capabilities gap between policies and practices, and between entitlements and a sense of entitlement to make claims for WFB. From our empirical study of working parents in Japan, we have witnessed that barriers in workplace organization and the socially endorsed working time regimes have made it difficult for the vast majority of workers, especially men with small children, to exercise their rights for WFB. Based upon the above finding, we turn to Japanese employees working in EU countries where WFB is considered to have been better achieved. The main aim of this study is to explore whether these men’s perceptions and attitudes towards WFB have been transformed by living and working in a different country, viz. a context constituted by a different social system, work environment, organizational culture, and the like.

Face-to-face interviews with Japanese men with children under 13 years old, mainly working for Japanese enterprises in Netherlands (13 persons), Germany (13 persons) and Sweden (10 persons) were held in August-September 2013. The preliminary analysis shows that the different social institutional settings seem to have enhanced their WFB; the majority of the interviewees report that they have more time to spend with their family and with themselves than they did in Japan.

Re-Discovering Children As Social Actor in Conflicting Close Relationships in Contemporary Japan

This research aims to explore possibilities of children to be re-discovered as social actor particularly in advert circumstances caused by conflicting family relationships. The Japanese family law as part of Civil Code has recently been modified, and since April 2012 post-divorce life of children has also been influenced by this family law reform. Even though contact to child by non-resident parent is regarded as one of the children's rights, children's wishes and will are not always sufficiently considered when the question is a high conflict case so that family court is asked to make a decision either by judge's decision or court mediation. Bearing in mind such court practice in Japan, it will be studied how children have been recognized in Japanese legal debate by analyzing relevant research literature. This legal aspect on child will further be analyzed through contrast to discourse on childhood among Japanese sociologists of childhood. The second part of this paper will address the discrepancy between normative views and realities of gender equality concerning parental responsibilities for child rearing in contemporary Japan. In a sense, family policy in Japan holds strong tension between promotion of gender equality and recognition of children as social actor - rather than passive object under parental authority. It would be argued that children as social actor need urgently be re-discovered in order to improve safety of children’s life and development regardless of their relationship with parents.

Social Quality in Cross-Cultural Media and Public Debates: Implications for Public Policy for Social Empowerment

This research begins a discussion by examining distinctive features with Japanese discourse on quality of life addressed by decision-makers of public policy. It will be questioned how the media and public debates have addressed the safety and quality of life in post-3.11 Japan. The main focus of this research is on various ways of manifesting citizens’ well-being, including freedom from violence in private life, as a point of start of social empowerment. In the post 3.11 world it seems more important to take into consideration the intersectionality of various factors concerning social quality, whenever we attempt to seek proper public policy response for nurturing social empowerment. It will be studied which social indicators have been referred to and/or ignored by Japanese media, and in which manners non-Japanese media has been approaching the issues on well-being. In domestic debates Japanese media and governments tend to be selective with data sources and indicators, excluding substantial among of information on those risks and issues such as radiation risks, well-being of vulnerable citizens as well as transparency in decision-making, i.e. governance risk. In brief, this research will ultimately attempt to enhance our understanding on scientific relevance of comparative studies of social quality and empowerment.

Peter Singer and the “Why be Moral” Problem

The aim of this presentation is to point out the fatal flaw in Peter Singer’s thinking by analyzing his discussion about the “Why be moral” problem. Peter Singer is one of the most influential ethicists today. He studies theoretical ethics and also engages in social practices in order to address moral issues like animal rights, bioethics, environment problems, etc. The “Why be moral” problem has been one of the topics he is passionate about since his master’s thesis. “Why be moral?” has two meanings: Why should we be moral? and Why should I be moral? The former means, “Why do societies need moralities?” The latter means, “If societies need moralities, why should I accept them?” This problem is connected with the discussions about civil societies because it also asks us whether civil societies are necessary. Ethicists submit some valid answers to the former question but no ethicists have submitted answers to the latter. Peter Singer tries to answer the latter. In his opinion, the ethical life is better than the unethical life because ethical people can realize the consistent meaning of their life while unethical people can’t. In other words, ethical people are happier than unethical people. So we, individuals, should be moral. This answer is invalid. For example, there are people who are satisfied with being egoistic. Therefore he fails to solve the problem. This is the fatal flaw in his argument.

Some say trying to solve the “Why be moral” problem is nonsense, worthless or useless. In fact, even though we don’t solve the problem, we can do many social practices. Nevertheless, solving it is important for Singer because his opinion is too radical to accept for ordinary people. That Singer doesn’t solve the problem becomes an excuse for people not to act morally.

Increased Involvement of the Disabled in Welfare Policymaking

There is increasing emphasis on participation by disabled people themselves in the process of formulating policies for the disabled, both in Japan and abroad. One of the most recent examples of this trend took place in Japan; in 2010 the government set up the “Committee for Disability Policy Reform”, forming it in such a way that more than half of the members were directly concerned with the issue (people with disabilities and/or their family members), to discuss reformation of policies for the disabled, and to develop dialogue and cooperation with them.

The aim of this report is to identify the conditions for successful advocacy that promotes the participation of disabled people in the field of welfare policymaking. I will review and compare the advocacy of organizations consisting of disabled people in reference to Esping-Andersen’s welfare regime typology. The discussion covers the organizations’ history, fundraising strategies, ways of participating in the policymaking process, relationship to the government, as well as their role and influence.

My research results are as follows; disability organizations are actively participating in policymaking both in the Scandinavian countries, classified into the social-democratic regime, and in the United States, the liberal regime. However, there is a difference between the two cooperative relationships with the government: in Scandinavia, welfare policymaking is carried out with strong support from the government, and thus always runs smoothly. In the United States, on the other hand, it is often carried out amid a tense relationship with the federal or state government, and because of this, there are cases in which it is not smooth. I will add analyses of Japanese cases classified into the conservative regime, and examine the universal conditions and problems requiring distinctive solutions that can be found through the participation of the disabled in every country.
Policy makers such as European Commission, UK, and Japan are now interested in happiness as a policy tool. Happiness is normally measured by a Likert scale. The comparison of happiness scale needs common understanding of happiness. However, happiness distribution can be classified into three types: normal, skewed and twin-peak. For example, the distributions in Japan and Hungary are twin-peak. This implies that individuals have different reference points culturally. The reference points were tested to apply questions about ideal happiness. Some twin-peak. This implies that individuals have different reference points culturally. The reference points were tested to apply questions about ideal happiness. Some

Quantitative surveys were conducted in Japan, Thailand and Philippines. It included questions about their current happiness on a 0-10 scale and ideal happiness. Adjusted by ideal happiness, the distribution was skewed distribution similar to Nordic countries. The survey's result confirmed that distribution of happiness embodied the difference of ideal happiness.

Others' Happiness: New Evidence from Four Asian Countries

If individual pursuit of happiness forced others' happiness to lower, happiness would not be a good concept to evaluate the progress of a society. We can call the society a "selfish happiness society". However, if happiness is more interpersonal, the balance between pursuit of individual happiness and other person's happiness may make society lead a good direction. In particular, we now face many issues related to sustainability. Balance between economy, society, and environment and balance between current generation and future generations are keys for our survival. We can call the society a "social happiness society". Thus, the concept of "social happiness" is much more important in our society. However, effect of a person's perception about her own happiness and others' happiness on her happiness is not clear. Therefore, it is worthwhile for us to explore if a person who takes care of or pays attention to others' happiness is happier. I analyzed the relationship by using a survey in Japan and confirmed that other person's happiness makes us happy (Takahashi, 2012). Similar to the survey in Japan, surveys conducted in Thailand and Philippines in 2013 included questions about general happiness and interpersonal happiness. Using these dataset, the author can test this interrelationship between individual happiness and other person's happiness. Even after controlling other important factors such as age, income, job and marital status, people reported that those around her were happy and she made those who were most important to her happy are happier than others. From the result, the author can conclude that other person's happiness makes us happy at least in Asian countries.

Identifying and Reducing The Anti-Japanese Prejudice By Koreans In Job Hiring Decisions

We investigated the level of prejudice that contemporary Koreans hold toward contemporary Japanese because of the Japanese military's victimization of Koreans during the Korean War and social psychological mechanisms that might alleviate the negative feelings and attitudes held by the contemporary Koreans toward the contemporary Japanese. The Korean participants were asked to evaluate a pseudocandidate for a position at an IT company upon reading his resume and watching a video clip of his job interview. The ethnicity and language ability of the candidate were manipulated to see if these manipulations would affect the participants' responses. Based on theories of intergroup conflict, social identity, and the collective guilt assignment, we hypothesized that: 1) the Korean participants would endorse the Japanese candidate more when he is portrayed as a trilingual (speak Japanese, English, and Korean) than when he is portrayed as a bilingual (speak only Japanese and English) and 2) the collective guilt assignment of the company assigns to the Japanese candidate, the more negatively the candidate would be perceived in terms of his personality, which would result in less endorsement to hire the candidate. The results confirmed the hypothesis. Possible implications and suggestions for future studies are discussed.

Loss of a Spouse As a Poverty Risk

The death of a spouse is one of the most stressful changes in one's life. Spouse's death increases the morbidity as well as mortality of widows and widowers. The explanation is the lack of social support because the family is generally regarded as a primary source of support. One important aspect is also what happens to the income after the death of a family breadwinner. All these three factors - physical, psycho-social and financial - have a substantial impact in widows and widowers wellbeing.

In Finland after the death of a family breadwinner the income of the surviving family members consists of widow's and orphan's pension. The initial pension and the basic amount of the orphan's pension paid from the national pension scheme are paid regardless of income. The survivors' pension paid from the earnings-related pension scheme comprises the surviving spouse's pension and the orphan's pension. A child of the deceased will receive an orphan's pension until the age of 18. The survivor's pension act came into force in 1967 in earnings related pension scheme in national pension in 1969. Both were reformed last in 1990.

In this study we use register data of statutory pensions. Roughly 282,000 people were paid survivors' pension at the end of 2012, of which 261,000 were widows or widowers and 21,000 were children. Men's share of the pensions is 17 percent. Most of the surviving spouse's pension recipients are women over the age of 65. Also widowers are mostly old. The poverty risk of widows and widowers is high, of those who draw old-age pension 38 percent live under poverty line whereas of all pensioners under poverty line live 22 percent. Right after spousal loss the income in family decreases about 20 percent compared to pre-loss income.

Social Networks and Conjugal Interaction in Japanese Expatriate Families

International assignment of Japanese businessmen has been expanding in corporate career management system most during the 1980s by reason of the rapidly-expanding economy in Japan. That career management system was only for men's status position until the Equal Employment Opportunity Law in 1999. Therefore from back then there are the norms of the expatriate housewife as caretaker of the family, not only she provides a comfortable home environment so that husband can concentrate on his job, but also entertains the corporate clients at Japanese style party.

The characteristic of Expatriate Family is the family who transferred abroad by assignment of the company, that is their social networks change radically every few years. Thus in the new and cross-culture land, the foreign conjugal have no choice but to rely on spouse each other.

In Japanese Expatriate Family research, much attention has paid on gender perspective and wives' career development, even though there are few studies focusing on conjugal interaction. This research investigates how expatriate conjugal forms social networks in overseas focusing their relationship, cognition of belonging to the corporation and family resource effects.

A questionnaire survey was conducted in advance to expatriate housewives, based on which semi-structured interviews were conducted. The data used to a case-code matrix through constant comparison.

This study found that Japanese Expatriate Housewives experience three phases as the process of the friendship network formation. At the first phase, wives need husband's company tie to adjust new-life, and from the second phase to third phase, wives share their partner with the association which creates themselves networks.

In this presentation, I will report the interviews data which carry out the expatriate couples every 3 to 4 months.

A Comparative Study of the Effects of English Language Proficiency on Wages in Japan and France

The purpose of this study is to compare the effects of English language proficiency on wages in Japan and France.

Many Japanese women have been learning English in the hope of finding jobs which require communicating in English. Such women have abandoned the idea of careers with Japanese firms, where women are entrusted only with jobs that carry little esteem. These women also have strong affinity for Western culture. However, to date, there have been few jobs requiring the use of English in Japanese society and their dreams have remained unfulfilled.

However, given the strong impact of globalization, the value of English proficiency in the market place is changing. English has now become an important common language for global communication. Does this mean that these women are now prized in the market place?

I examined data from Japan and contrasted it with data from France, a Western nation where women are employed in highly esteemed jobs, using a 2010 Internet survey conducted by Doshisha University, Japan, and a 2012 French survey.

The results show that English proficiency of women was not related to wages in Japan and France.

Association As a Tool or As a Principle?: The Reception and Usage of the Concept of Association in Postwar Japanese Modernization Theory

How the association could be legitimized was a key question for French Sociology, because the French Revolution prohibited not only old corporations but also new voluntary organizations in order to establish a Modern Society.

For some sociologists, "Association" was theorized as an alternative to market society, for some legal scholars, the state was defined as a contract of association, in order to submit State Power to Civil Society's control. In either case, the basic principle of association was the union of different peoples to accomplish their common purpose.

Comparing the French case, this paper focuses on the place of the association in Japanese Modernization Theory. This theory stressed the liberation of individuals from traditional ties, rather than Civil Society's independence from the State. As a result, the association was understood as one type of secondary group, which is contrasted with the local bonding community, and not as a principle for the society as a whole.

Second, the association was not considered to contribute to the Modernization Process in Japan. Modernization took the form of individualization in the free Market Society.

Today, Japanese society has been thoroughly modernized in that sense; individuals are free from tradition and customs. Paradoxically, engagement with local community activities has been revalorized and is considered to be an individual choice. Tradition became one of the resources that create the voluntary association relationship.

These situations seem similar to Giddens’ "Reflexive Modernity" in appearance. However, today the Japanese regard the association as a tool for solving problems, not as a principle of society that unifies different peoples for the good of the community.

Retracing this history, we would like to critically examine why we have understood the association as a tool, rather than a principle, and how this understanding affects today's policy.

TAKAYA, SACHI*

Citizenship of Long-Term Migrant Filipino Women in Japan: Impacts of Positions in Japanese Families

This study investigates how the citizenship of long-term migrant Filipino women in Japan is defined and negotiated in the dominant social structure. Regardless of the status of "sexual citizens," or long-term legal membership based on sexual relations with Japanese citizens as Parreñas (2011) argues, structural locations for these women have been stratifying, particularly between married women and mothers of Filipino–Japanese children. Based on census and qualitative data, stratification is primarily due to the process through which these women are or are not included into Japanese families, which embody the dominant racial and gender structure of Japanese society.

On the one hand, married women increasingly exercise their agency in not only the family and workplace in Japan but also in a transnational civil society. Despite their exclusion from formal political citizenship, some substantially exercise transnational citizenship by being involved in transnational activities across Japan and the Philippines, which lead to their positive recognition. On the other hand, solo mothers of Filipino–Japanese children tend to face difficulties accompanying marginalization and poverty. The number of Filipino single mother households has been increasing along with the rise in the number of international divorce. Many of them cannot help but depend on social welfare because of limited access to the workforce. In addition, the increase in the number of divorcees suggests that the status of married women and that of mothers are in a continuum, although they seem to be at opposite ends of the spectrum.

This study argues that the stratification among women shows how inclusion into a Japanese family provides the most available means to ensure security among these women living in a dominant racial and gender structure.

Association As a Tool or As a Principle?: The Reception and Usage of the Concept of Association in Postwar Japanese Modernization Theory

This study investigates hegemony of American banks and corporations in the making of Japan-U.S. relations in the period between 1920 and 2008, using the framework of Neo-Gramscian approach and sociological state theorists and referring to primary and secondary sources. In the period, three specific forms of hegemony have crystallized with "internationalization of capital", accompanying cooperation and conflict with Japanese counterparts. The three forms of hegemony are liberal internationalism, around high finance and corporate liberalism (embedded liberalism) undergirded by Fordism, state intervention and Bretton Woods, and neoliberal globalization. According to the form of hegemony, the period is divided into five terms. The first is the post-First World War. Wall Street bankers formed the alliance with Japanese bankers through the investment in Japan and Versailles-Washington system. The second is the term between mid-1930's and 1945. Great Depression destroyed liberal internationalism, and the conflict between Japan and the U.S. finally led to the war. In Japan, national industries like steel supported expansion of sphere of interest, which clashed against American ‘giant area’ design. In the U.S. New Deal and war mobilization formed the coalition that supported corporate liberalism. The third is the term between 1945 and 1971. American corporations and banks formed cooperation with Japanese counterparts through the investment in Japan and Japan-U.S. alliance in the cold war. Japanese leaders supported corporate liberalism, but the catch-up Breton Woods. The fourth is the term between 1970's and early 1990's with trade conflicts, during which American international banks rose, formed neoliberal globalization, and increased the investment in Japan. In Japan, multinational corporations rose through FDI in the U.S. after Plaza Accord. The fifth is the term between mid-1990's and 2008. American banks and Japanese corporations shared neoliberal globalization, increasing mutual investment in Japan and the U.S. Neoliberal globalization finally, however, faced the crisis.

Transitional Pathway from a Temporary Migrant Worker to a Permanent Resident: Narratives of Filipina Live-in Caregivers in Canada

With the rapid growth of the Tagalog (Filipino) speaking population, recent demographic studies in Canada has been directly affected by the pattern of global female migration and the subsequent arrival of these women's family members. In particular, a specific foreign temporary worker program, known as the Live-in Caregiver Program or LCP, explains the current population growth of this visible minority. More than 80 percent of the migrant workers registered under the LCP are females from the Philippines. Furthermore, the LCP grants these female migrant workers the opportunity to apply for permanent residency and to bring their families to Canada after fulfilling a 24 months live-in working requirement. The LCP is the only temporary foreign worker program that has this legal pathway toward permanent residency in Canada.

This study aims to understand the social constraints on female migrant workers through examining everyday experience of Filipina live-in caregivers in Canada. The paper particularly focuses on the transitional legal pathway from temporary to permanent residency. The study of the transitional pathway of migrant workers uncovers the social process of inclusion and exclusion of migrant workers and their family members by states. Furthermore, this social process is highly gendered and racialized experience because vast majority of the applicants under the LCP are females from the Philippines.

The Nagano Olympics: Impacts on Local Community

This study aims at demonstrating the impacts of Sport Mega-Events (SMEs). In Japan, some studies on environmental or fiscal impacts caused by SMEs have been studied. However, few studies address the concrete impacts in a specific area and local community, nor try to investigate the long-lasting effects.

In recent years, the International Olympic Committee (IOC) has attached a high value to ‘Olympic legacies’. However, there are two main concerns regarding the IOC ‘Olympic legacies’. First, these legacies are mostly based on positive effects for the host city/nation, the National Olympic Committee (NOC), other sport-related organizations, and for the IOC itself. Secondly, the ‘Olympic Games Global Impact’ project, launched by the IOC in order to improve the evaluation of the overall impacts is completed within 2 years of the event, and is much too soon to measure the legacy. This study argues that it is important to conduct research for a prolonged period of time in order to capture not only the positive aftereffects of SMEs but also to address negative aspects thereby ensuring a more complete understanding.

This study evaluates different aspects of SME impacts through a case study of Hakuba village (Japan) which hosted the Nagano Olympic Games in 1998, and the impact of the Games on tourism, business and local community. These impacts seem to be at opposite ends of the spectrum. The case of Hakuba village provides a unique example which can be compared to other cases of SMEs in Japan. This study investigated these different impacts between the Nagano Olympic Games and the Olympic legacies. The study of Hakuba village is discussed in detail. The analysis in this study is based on the questionnaires and interviews conducted with people from the community itself and on a variety of statistical data.

Great Depression destroyed liberal internationalism, and the conflict between Japan and the U.S. finally led to the war. In Japan, national industries like steel supported expansion of sphere of interest, which clashed against American ‘giant area’ design. In the U.S. New Deal and war mobilization formed the coalition that supported corporate liberalism. The third is the term between 1945 and 1971. American corporations and banks formed cooperation with Japanese counterparts through the investment in Japan and Japan-U.S. alliance in the cold war. Japanese leaders supported corporate liberalism, but the catch-up Breton Woods. The fourth is the term between 1970's and early 1990's with trade conflicts, during which American international banks rose, formed neoliberal globalization, and increased the investment in Japan. In Japan, multinational corporations rose through FDI in the U.S. after Plaza Accord. The fifth is the term between mid-1990's and 2008. American banks and Japanese corporations shared neoliberal globalization, increasing mutual investment in Japan and the U.S. Neoliberal globalization finally, however, faced the crisis.

Making Irregular Migrants Vulnerable: A Tangle of Biopolitics and Morals in Japan

This paper examines the changes in the irregular migrants’ situation in Japan and argues that the securitization of migrants has led to highlight the effects of sovereignty, which makes irregular migrants vulnerable.

Giorgio Agamben (1998) theorized that biopolitics, as a function of sovereignty, operates to define the included and the excluded, the latter of which is called “bare life.” Some studies regard irregular migrants who are legally excluded as living a contemporary “bare life.” However, other studies have criticized Agamben’s argument that emphasizes legal criteria in arguing biopolitics in the geopolitical and historical contexts. Following these studies, this study explores the case of irregular migrants in Japan.

Irregular migrants began to attract broad public attention in the late 1980s. Generally, Japanese citizens did not initially have negative attitudes toward them. Despite their lack of legal status, they were included in society according to various criteria such as the moral economy of society or international norms because the labor shortage and Japan’s self-recognition as a major power at the time.

However, since around the turn of the century, reactions to irregular migrants have dramatically changed. Their presence has been linked to security issues, and they have come to be regarded as “criminals.” Immigration authorities collaborated with the police in launching a large-scale crackdown, which endangered the daily lives of irregular migrants. At the same time, however, the legalization of irregular migrants was promoted based on moral values. At present, sovereignty, connected with moral values, mainly defines the included and the excluded among irregular migrants.

Thus, changes in the situation of irregular migrants in the last two decades in Japan show that the substantial effects of sovereignty can vary over time and according to the circumstances in which it operates.

Mobility, Diaspora & Contact Zones of Australians in Japan

Niseko, Hokkaido, a famous ski resort, has become a popular ski destination for Australians since 2001. It is located in the northern part of Japan serving both domestic as well as international ski tourists. Among foreign travellers to Niseko, Australians are one of predominant groups of visitors. With the large number of Australian visitors, the area has been transformed into “Little Australia” where Australian pubs, shops and English signs are becoming elements of the city landscapes. This paper will consider this flow of Australians to Niseko and its impacts in the local community through different theoretical concepts and shed light on nature as well as significance of such community under nexus of Australia and Japan.

A Moment of Recognition and Unity in Diaspora: Multi-Spatial Formations of Kurdish Music in Germany

Immigration from developing countries to Europe is often experienced not only as a social downward mobility but also as a cultural depetration. In the context of Turkish migrant in European countries, their musical activities have drawn attention as struggles in discrimination: effort for transmitting cultures to the next generation in informal spheres, where indigenous European people are rarely be found (Klebe 2009, Saglam 2009); 2nd Generation as a main agent who generates Hip-Hop/Rap music allowing to express their emotions as secondary citizens in the host societies (Klebe 2004).

For migrant groups with minority status in the countries of origin, however, the new host society could offer possible spaces to practice, and even develop their disadvantaged or prohibited cultures at the same time. That would lead to intensive transnational connections between people in diaspora and in homelands. This setting can be seen in the case of Kurdish migrants from Turkey. As some scholars noted, the Kurdish music production has been done mainly outside of Turkey, where Kurdish languages were forbidden until 90s, as such as is the space offered by the European based Kurdish satellite broadcasting, “RO-TV” (Christensen 2007, Van Bruinessen 2000, Hassanpour 1997).

This paper examines how Kurdish musicians have utilized the opportunities in German host societies in their cultural production in the form of music. Based on interviews with musicians and one-year participant observations in regular music activities and events, I will show that such practices not only promote musical circulations among Kurds, but also could contribute to recognition as distinguished group from „Turkish migrants” in the host society, and eventually present symbolic unity as Kurds, provided that musicians succeed in managing contact German institutions, and “proper” distance from Kurdish political parties.

The Governance of Reproduction in Japan: How Can Reproduction Be Located within the Capitalist Economic System?

As Karl Polanyi pointed out, the reproduction of human-beings and society is external to the liberal capitalist economic system. At the same time, the multi-dimensional reproductive activities (biological reproduction, economic reproduction and socio-political reproduction) are vital to the maintenance and development of the capitalist economy. The dilemma posed by the contradictory relationship between reproduction and capitalist economy had long been dealt with by mobilizing families and local communities, officially or unofficially, within each national economy. States have often played a vital role in the institutionalization of the link between reproduction and capitalist economy by locating families/community within the national economy, in other words, governing reproductive activities, as exemplified by the setting-up of the welfare state system. Economic restructuring influenced by neoliberal principles in recent years, however, has eroded the foundation on which families and local communities can function as a reproducing agent. The paucity of repertoire of reproduction is particularly acute problem to the Japanese case where a high degree of the welfare state system’s dependence on the family is observable and rapid demographic changes, typically ageing and birth-rate decline, are ongoing.

This paper examines the ways in which the Japanese state has engaged in the governance of reproduction from the mid-19th century to the present time by arranging/calibrating the governing system in order to respond to changes in national/international political economy. In so doing, the paper explores a theoretical question regarding the contradictory relationship between reproduction and capitalist economy, that is, how the governance of reproduction functions in the process of developing and maintaining capitalist economies, with reference to the works of Polanyi and the ‘governmentality’ school. The analysis of the Japanese case offers some insights that illuminate inherent problems existing in the governance of reproduction embedded in governmentality.

How to Tackle the Vacant-House Problem in Shrinking Cities: The Cases of Japanese Local Governments

Japanese society, with the progression of depopulation and rapid aging, is faced with the vacant-house problem in both urban and rural areas. It is being recognized that vacant houses are an urgent issue to be tackled by Japanese local governments. How to reduce risks associated with vacant houses (accidents caused by building collapse and risks in fire and crime) to promote residential population and local resilience. The purpose of this research is to clarify the characteristics of local governments’ actions against the vacant-house problem in urban areas into the following two types:

(1) Enforcement of “municipal regulations for controlling vacant houses” In 2010, Japan’s first municipal regulation against vacant houses was enforced in a city of suburban area of Metropolitan Tokyo. This action was a response to an increase in the number of destroyed houses. More than 40 cities have enforced similar regulations since then, and the number is further increasing. This tendency is particularly prominent in local governments facing severe economic conditions, suggesting that how to control vacant houses has been a potential and serious problem. Main actors are local governments and the house owners. More specifically, who bears the demolition costs of aging houses is the point.

(2) Management of “vacant-house banks” It is a challenge to local governments to introduce vacant houses, which have not been valued in private housing markets, to public information networks to promote their effective use. There are various types in the management of “vacant-house banks” by local authorities. Diverse actors including NPO are involved in this type. Because renovation of vacant houses costs a large amount of money, those actors are seeking to form a partnership with each other and to explore effective methods. Generally, not only reducing vacant house-associated risks but increasing values of local resources is aimed.

Re-Urbanization and the Local Food Culture: The Case Study of Central Tokyo

This research focuses on the developing process of the local food culture in central Tokyo. Regeneration of the central district promoted to develop the local food street and a local food identity. The purpose of this research is to analyze how the urban regeneration deepened the local food culture.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This research area called 'Tukishima' is located in the water-front area adjacent to the urban center. The Water-front mega-projects in the 1990's opened new large business/commercial district on the reclaimed island which attracts international and domestic tourists. The new subway lines were constructed through Tukishima, the number of tourists come to Tukishima increased.

The traditional local shop owners in Tukishima changed their business, they opened special local food restaurants. This special local food called 'Monja'-used to be a common afternoon snack for working-class children here. About 60 Monja restaurants made the distinctive street of local food. Many tourists come to eat it at lunchtime. After lunch they go sightseeing and shopping at the waterfront. Tukishima became a popular tourist spot. This is the first impact of urban regeneration on Tukishima.

The second impact of regeneration is the boom of building super high-rise condominium towers. Tukishima is very close to the business district both of urban center and the water-front, it became the area filled densely with high-rise condominium towers where professional service class live. Tukishima is gentrified, and new residents enjoy to eat Monja as a traditional local taste.

The third stage of regeneration is about to begin. Tokyo has been chosen to host the 2020 Summer Olympic Games. The venue is very close to Tukishima, high-rise tower residential can be seen from their windows. The price of condominiums goes up. Local food will be popular to visitors. The new era of Monja is about to start.

Challenges for Healthy Eating: A Cross-Cultural Study of Conceptions of Eating Among Young Adults in Urban Australia and Japan

In the early 21st century when bio-medical view on health and medicine dominates global discussion on “healthy eating”, most guidelines and recommendations are primarily concerned with fulfilling nutritional requirements and avoiding or limiting the intake of undesirable substances. They are motivated by the prevalence of chronic diseases such as cancer, cardiovascular diseases and obesity in modern society. Consequently, cultural ideologies around “healthy eating” are being constructed around these rationales. Beyond food intake, some studies and public health policies assert further that commercial eating (eating with others) encourages healthy eating behaviours such as eating slowly and consuming a variety of foods.

I argue that the bio-medical approach mentioned above is often individualistic and overlooks the social culture of eating and living in a local community such as communal eating, culinary culture, history, lifestyle, and food supply chain. I explore the construction of “healthy eating” among young adults in urban cities of Australia and Japan through 71 in-depth interviews conducted during 2012-2013. I examine holistic aspects of eating by including contextual aspects of commercial eating (eating alone) and communal eating (eating with others). In contrast to previous literature, I find that the majority of participants see communal eating as a good cultural practice and may associate it with mental health benefits, but that this practice is not necessarily associated with the healthy intake of food (portion size, pace and food content). This is due to the fact that communal eating is rather complex and sensitive to sociocultural circumstances.

In conclusion, this study identifies dynamics of eating contexts in different cultures as challenges for healthy eating promotion in the modern society.

Who Makes the Stories, Medical Professionals or Patients?

We have recently researched Japanese university students' sexual lives for a few years and published a book in Nov. 2011: talking about sex with college students: contemporary sexuality through interviews”. I was parted for gay students and sensitive to sociocultural circumstances.

I notice a paradox of the narratives as a gay or that of 'gender identity and sexual orientation'. The more they talk, the more they are suffered. I wish I could suggest a self-help group. I will supply a small material for the argument who is to draw story from medical stuff indeed in Japan. This should be the result of 'Narrative Medicine' had been done in Japan I guess. If people focus on patient's Narrative more, they might have another chance to live more successfully. I wish I could show you some case studies of strongly controlled narratives of patients though Japanese mental carers at a self-help group. I will supply a small material for the argument who is to draw story from medical stuff in Japan.

I am really interested in the arguments which should save patients more 'narrative based medicine' or ‘narratives in Medicine'? In my point of view, carers including medical professions should more focus on patients stories about their illness and life. When patients' narratives are controlled by medical professionals, even if it has been 'for medical treatments', patients are controlled by others. That might means one's life is possibly controlled by medical stuffs which are strongly connected medical governance in their country. For instance, ones narratives about "How to die" or "how to give birth" should easily connected to economical point of view in one's country through the conversation with medical stuffs that should be controlled by systematic medical standards. I may contribute to your session as a small research-based argument rather than theoretical one. I have researched both alcoholics anonymous group and self help groups for mental illness in Hokkaido, Japan. Patient's narratives are strongly controlled by medical stuff indeed in Japan. This should be the result of 'Narrative Medicine' had been done in Japan I guess. If people focus on patient's Narrative more, they might have another chance to live more successfully. I wish I could show you some case studies of strongly controlled narratives of patients though Japanese mental carers at a self-help group. I will supply a small material for the argument who is to draw story from medical stuff in Japan.

Do the Small Firms Give Advantages to Female Employees?: Firm Size Effects on Taiwanese Women's Career Choice

This study examines whether the difference of firm size influences job career of females in Taiwan using the Panel Study of Family Dynamics (PSFD) data. Previous studies show that majority of Taiwanese women continue their job without a long career break by marriage or childbirth. Well-known explanation for this is that the industrial structure composed of large number of small-and-medium sized enterprises (SMEs) and family business provide women with flexible working conditions. However, existing studies testing firm size effects on a woman's career, have failed to reach a consistent result. To eliminate possible problems providing the inconsistencies, this study limit the objects of analysis to female employees with regular salary, excluding self-employed workers and workers of family business without payment. Also, previous studies usually treat job change and job turn over separately, but in this study those two actions are simultaneously analyzed in a discrete-time multinomial logit model.

This study tests mainly two hypotheses: female workers in small sized firm are able to (1) enjoy flexible working conditions by negotiating with their employees and (2) accumulate better skills which are useful for a labor market than their counterparts in large firms are. Dependent variable is employment choice, which have 4 categories; "continue the same job", "change job in SMEs firm", "change job in large firm" and "leave from working". Main independent variable is a dummy variable indicating working experience in SMEs and interaction terms SMEs dummy and event dummies standing for marriage and childbirth. The result indicates that women who have working experiences in SMEs are more likely to have uninterrupted working careers than those who have experiences in large-sized firms.

Jeunes, inégalités, Sens Du Changement Social

De quoi parle-t-on à propos de "changement social" lorsqu'on prend en compte les problématiques des jeunes confrontés aux longs effets des inégalités sociales, dans la société brésiliennne, mais qui sont dans un processus collectif actuel de changements surtout au plan subjectif (de leur collectif et/ou collectivité)? Changement d'attitudes quotidiennes en face de leurs propres situations précaires de vie et vis-à-vis des rapports sociaux qui rétrécissent toujours leurs possibilités de participation (économique, sociale, culturelle ou politique). Les multiples transformations à l'intérieur d'une société ont des effets différenciés sur les sujets sociaux selon la place qu'ils y occupent, raison pour laquelle le sens du changement social ne peut être défini qu'à partir des perspectives sociales. Peut-on envisager une discussion sur le changement social et le processus de subjectivation (sens Foucauldien) tout en considérant certains des effets inattendus liés au développement des réseaux sociaux appuyés sur les nouvelles technologies d'informations et de communications sociales? Peut-on réfléchir sur le changement social tout en s'affranchissant des concepts «classiques» de reproduction, déivation, antagonismes de classes...afin de permettre l'émergence dans le discours sociologique, et la conceptualisation d'autres modes d'existence sociale, d'autres espaces d'expérimentations, d'autres intensités de vie, d'autres modes de penser le monde ou d'autres modes de pleier les lignes de force telle qu'une multitude en son essai d'une nouvelle économie affective où la subjectivité devient une puissance de vie (sens Deleuze et Tarde)? Des collectifs jeunes, au Brésil, en leur essai d'expérimentations culturelles, artistiques et micropolitiques qui se déploient dans les «périphériques» brésiliennes, mais aussi certains «mouvements sociaux» où les principaux protagonistes sont des jeunes, depuis 2011 (’indig-nados’, ‘occupy wall street’, ‘printemps arabes’, ‘révolte brésilienne-2013’...), sont les fondations empiriques de notre réflexion sur le sens du changement social à l'intérieur de l'imposante logique des inégalités sociales.

TAKIKAWA, HIROKI* (Tohoku University, tkikawa@sal.tohoku.ac.jp)

A Mathematical Model of Status Hierarchy

The emergence of status hierarchy, defined as a social order that ranks individuals in society from top to bottom, is one of the main topics in sociology. Although many empirical studies on this topic have been conducted, the complete theoretical understanding of it remains lacking. In recent years, Gould proposed a groundbreaking theory of status hierarchy. Using game theory and social network theory, he showed that status hierarchy can be considered as a type of equilibrium when players assign attachments to all other players on the basis of their qualities. The major difficulty in Gould's model, however, is the unwarranted assumption of limitless resources such as time and emotional costs that players must pay in executing their attachment strategies. Here we extend Gould's model to be theoretically more coherent and empirically more valid by incorporating multidimensional choices for resource constraints. Unlike Gould's model, in our model, a player choose only one allocation strategy as a multidimensional choice; that is, a player must determine the attachment levels for all the other players at the same time. Our main result is to show what is called "the relationality of social status". Specifically, we show that an individual's status is entirely determined by the individual's relative quality in the social system. This observation contrasts with that of Gould's model in which an individual's status is dyadically determined. Our model can be considered as a type of network formation model having broad applicability.

Remembering and Resilience after Traumatic Social Loss: A Multicultural Perspective

A challenging realm for Global Sociology is the cross-cultural thinking and processing of the experiences of collective remembering after mass social trauma and post-traumatic resilience across cultures and generations. In this presentation we will develop a theoretical and applied multi-cultural framework for working on the intersubjectivity of memory, with a focus on the unprocessed dimension of social experiences of traumatic loss, building on the latent, private, intimate individual and cultural aspects of experiences of collective memory and transmission. We will also work on the concept -building on Halliwell's work of “undercurrents of memory,” incorporating the more recent concept of “moral injury,” a contemporary development out of the post-traumatic stress literature.

This line of grounded theoretical research, developed by collaborative efforts by the authors over the last decade, explores the underlying conflicts of the unresolved past as they are woven into the fabric of contemporary cultures, the effects of unprocessed experience lying in the undercurrents of collective memory, often excluded or absent from the public narratives of memory, but which paradoxically retain a profound intersubjective and cultural presence, until they finally push their way into the public realm. Social studies of collective memory need to include this realm of the unprocessed (latent but present) experiences and trajectories.

The authors will develop a joint conceptual approach to look at individual/community and cultural traumatic remembering, and the resilience of certain memories, over time. Applied research cases will include Southern Cone political authoritarianism, the Japanese American incarceration experience in the US as well as the Japanese memories of the 3.11. Great Tohoku Earthquake.

TALBOT, JOHN* (University of the West Indies, john.talbot@uwimona.edu.jm)

Food Regimes and Food Import Dependency: An Analysis of Jamaica's Food Imports, 1950-2000

This paper uses food regime theory to analyze the changes in Jamaica's food imports in order to explain how it became so heavily dependent on imported food. It argues that food regime theory has a bias toward production and food exports; it tends to focus on the drivers of the food regimes: First World states and transnational corporations, along with the New Agricultural Countries, the free trade developing countries that have become major players in the global food system (e.g., Brazil, South Africa, Thailand). To correct for this bias, we need to examine how small Third World countries are connected to the global food system through consumption and food imports. As food regimes evolve, their characteristic commodities change. In turn, the types of foods imported by Third World countries also change. However, once a country becomes import dependent for a particular type of food commodity, it is very difficult to go back to self-sufficiency. Thus the evolution of food regimes creates a cumulative food import dependency feedback loop and many kinds of food. One element of food regime theory which does focus on consumption and food imports into the Third World is the analysis of how the US PL480 “food aid” program changed Third World diets, undercut Third World agriculture, and created food import dependency. This paper expands on that analysis and uncovers additional mechanisms through which food regimes tend to create food import dependency in small Third World nations.
University competition for international excellence centers faculty research productivity (measured by indexed publications, research citations, etc.), global rankings, and international recognition. This presentation analyzes internationalization and research development in Chilean universities as a spatial reorientation of faculty work, knowledge, and subjectivity. Since Pinochet’s dictatorship, Chile’s neoliberal policies have intensified everyday competition in a free market and declining welfare state. Following the regime’s political repression, universities’ knowledge alignment with popular subjects changed to creating practical, neutral knowledge through technocrats. More recently, Chilean university policy has become more aligned to World Bank and OECD logics to increase research productivity and rankings.

I theorize globalization as a “spatial rationality” that attributes causal powers to space to create efficiency, utility, and normative ideas of “the good” that catalyze particular actions and subjectivities. Rhetorics of globalization’s economic demands of “efficiency” and “flexibility” mask the rationalization for national, institutional, and individual well-being. Technologies of visualization (e.g., rankings) and cosmopolitanism incite faculty to compete as entrepreneurs, a spatial reorientation that secures theory, methods, and research networks of the Global North as norms for knowledge production for faculty from “peripheral nations.”

I present themes from interviews with twenty faculty across fields at two top Chilean universities: (1) Faculty describe becoming self-managers, securing grants, publishing in ISI journals, and participating in international networks, creating new privileges and hierarchies even as they become more productive. They describe losses: research regulation through funding agency and journal standards, abandoning local projects of social change, and diminishing space to participate in national debates; (2) These constraints produce alternative knowledge projects, such as using grant funds to create digital platforms for public exchange or indexing long-existing Chilean journals to legitimize “expressions that expand our social imaginary.”

This is not a simple narrative of research homogenization, domination, or resistance, but of how crisis ordinarness creates new spaces, subjectivities, and knowledges.

I Miss My Mum and Dad: Children’s Well-Being and Parents’ Job Migration In Estonia

Estonia is a fast-developing country, which has experienced many societal and economic changes after regaining independence in 1991. Although there has been many positive developments, the global crises has influenced the lives of many people in Estonia. One of the most recent developments is a growing job migration out from Estonia. According to Statistics Estonia since 2010 the number of people moving out of Estonia has been increasing. In 2012 it has been doubled compared with previous years. Negative net migration together with negative reproduction rate has been the main indicator influencing drop in population of such a small country. Another tendency that is poorly studied is the well-being of children whose parents have gone abroad. In some cases they are left only with their children with them, but in relatively same number of cases they are leaving children behind with one parent or if mother and father both leave, other relatives take care of the children. There have been also cases where children are left just by themselves without any proper care, in some cases just older children taking care of their younger siblings. Aim of the current study is to analyze social and psychological well-being (life satisfaction, personal well-being and relationships in school and at home) in group of children who are left behind by one or more parents and to compare the findings with control group – children who are living together with their parents in Estonia. For the analysis most recent data is used from the Jacob’s Foundation survey Children’s World (data collected in autumn 2013). Altogether 3000 children from Estonia are studied, covering the ages 8, 10 and 12, around which is the most vulnerable age in sense of psychological and social attachment and challenges of growing up.

The Gender Gap in STEM Majors: Evidence on the Gender Belief Hypothesis from Taiwan

Why are women underrepresented in science, technology, engineering, and math (STEM) fields in college and work? Drawing on an unprecedented range of survey data, Lieberman and Shauman (2003) rejected many common explanations (such as gender difference in math ability and the pipeline hypothesis) for the gender difference in college majors. Survey-based research has yet to explain much of the gender gap. Drawing on experimental studies, Ridgeway and Smith-Lovin (1999) develop a concept called cultural beliefs in gender (gender beliefs). Using survey data to corroborate the experimental results, Correll (2001) argues that gender beliefs result in biased math self-assessment (MSA) and MSA explains why females are underrepresented in quantitative majors. Yet, upon close scrutiny, her results actually show that MSA is at best a minor source of the gender gap. Interestingly, Cech (2011) shows that professional role confidence, as a form of gender beliefs, can explain the gender gap in persistence through engineering majors in college. This seems to indicate the causal importance of some gendered cultural and psychological mechanisms may well be at play.

This study re-examines whether gender beliefs can explain why more men choose the science track. In a senior high school and STEM majors in college. We draw on the core panel of the Taiwan Education Panel Survey (TEPS), a large and representative sample of first year junior high school students in 2001. In general, students’ gender beliefs early in high school explain a minor portion of the gender differences but parents’ gender beliefs when children were early in high school explain substantially more—about a half of the gender gaps. Taken together, the two beliefs explain most of the gender differences and the residual gender gaps become insignificant. For the first time, then, survey-based results can provide a simple and direct confirmation of the gender belief hypothesis.

When Are Interviews Good Enough? A Reflection on Threats to Retrospective Methods Posed By Automaticity and Performativity

Research on respondent performance in the research setting and on automaticity in human cognition directly challenge the validity of interviews. Interviews, however, efficiently produce what looks like rich, relevant data and they are particularly appealing when studying complex work in difficult to research environments. This paper looks for evidence of the practical relevance of performativity and automaticity in transcripts of interviews with civilian and military staff just returned from their rotations in a reconstruction mission in a post-conflict environment. Re-analysis of these interviews suggests that the validity of retrospective methods may degrade rapidly as complexity increases.

Symbols, Communicative Citizenship Actions and the Claiming of Human Rights from a Transnational Perspective: The Case of the Social Movement of Victims of Eastern Antioquia, Colombia

In this paper I would like to present the experience of two social movements of victims of Eastern Antioquia (Colombia – South America) that have been developing different types of communicative citizenship actions and symbols in order to do political activism in regional public spheres and claim human rights from a transnational perspective in the midst of the Colombian armed conflict. Specifically, I will focus on the experience of the Association of Victims of Granada Town (ASODIVA) and The Provincial Association of Victims to Citizens (APROVIAC), and how these two social movements have been implementing transnational practices and adapting to their communicative citizenship actions different symbols and forms of political action having as a reference other victims’ groups of the world such as Women in...
Black (Serbia), Mothers of the Plaza de Mayo (Argentina) and May our Daughters Return Home, Civil Association (Mexico).

My two principal arguments in this paper are: first, these two Colombian experiences (ASOVIDA and APROVIACI) are successful examples of how it is possible to transfer, adapt and implement different types of political actions and symbols from other parts of the world in order to improve social and political activism in particular contexts. My second principal argument is that the concept of communicative citizenship represents the instrumentalization of a new dimension of citizenship where communicative action is at the centre of the social dynamic, and one of its primary purposes is to understand the different socio-communcitative manifestations, actions, strategies, practices and tactics associated with the contemporary struggle for recognition, meaning and significance for different actors in public spheres. The analysis in this paper is based on results of a narrative analysis of 48 interviews that I conducted with different members of ASOVIDA and APROVIACI in October and November of 2012 as part of my doctoral research fieldwork.

One Health Concept and the Uninsured in Japan

Objectives. The purposes of this research are: to provide a general overview of Japan’s universal health insurance coverage system, to examine the social factors that explain the rise in the number of uninsured individuals using Geographic Information System (GIS) mapping, and to discuss the future universal health insurance agenda.

Background. Due to its universal health insurance coverage system, Japan’s health and medical services are among the world’s highest quality. Japan’s system requires that all residents belong to either the national insurance system or an employer-based insurance system. However, total population coverage is not the reality. In Japan, 18.8% of households with national insurance fail to pay their premiums, and those who fail to pay their premiums for 12 months become uninsured, including the children in these households. In fact, a Japanese government survey (2008) revealed that more than 30,000 children under the age of 16 are uninsured.

Analysis and Discussion. One key social factor that explains the rise in the number of uninsured individuals is the increase in labor mobility, which was expanded by the 1985 Worker Dispatch Law and its legal amendment. In addition, the 2008 economic crisis increased unemployment and the numbers of unstable and low-income workers. Consequently, one in three workers is a non-permanent, contractual employee, and the wage gap between regular and non-worker workers is growing.

GIS analysis indicates that the uninsured rate by prefecture is related to the unemployment and urbanization rates in those prefectures. Big cities, such as Tokyo, offer a range of job opportunities; however, the cost of living is high and upward economic mobility is difficult, so many low-wage workers forego paying their insurance premiums. The number of uninsured children is a crucial issue. Therefore, the United States’ State Children’s Health Insurance Program (SCHIP) should be evaluated for its use in Japan.
pline under the nation-state building period. In order to illustrate the kaleidoscop-ic intellectual landscape, my paper divides into three parts:

Firstly, I will depict the general history of Chinese anthropology and the logic to facilitate the sociological and anthropological knowledge as a discipline “seeing like a state” before 1949. The Chinese anthropologists and state had to face up with two challenges: promoting the expansion of nation and under the first route of na-
tion-state building in China (1911-1949): the one is to construct a stable Chinese Nation (Zhonghua Minzu) community by which the modern state can identify itself and stand up to the external Others; the other is to mentally and physically develop and reform the country. Second, I will interpret how the academic circles and intellectuals of sociology and anthropology co-relate with the nation-state building projects from 1911 to 1949. Huang Xianfan (1899-1982), Wu Wenzao (1901-1985) and Lin Chunsheng (1902-1981)’s academic lives can vividly signify how and why different intellectual trajectories jointly push forward the Chinese sociologi-
cal and anthropological knowledge. And I will close read their academic writings to show how the geopolitical facts impact their choice to produce the sociological and anthropological knowledge about understanding Chinese nation-state, and ask the questions how Huang’s learning from Tokyo Imperial University combined with the understanding of Chinese social realities made him a scholar of sociology and anthropologist different from the nationalists, how Wu and Lin went to differ-
ent discipline-formation track and settled their knowledge in China and Taiwan.
At last, I will give opening conclusion on dealing with the relationship between the geopolitical gain/production of the knowledge and the practice of the knowledge in modern China.

TANABE, SHUNSUKE* (Waseda University, tanabe.sh@waseda.jp)
An Intertemporal Comparative Analysis of Japanese Xenophobia Between 2009 and 2013
Japan is one of the most ethnic homogeneous countries in the world; however, Japan is also in the midst of rapid globalization with increasing numbers of foreign nationals living in Japan. Therefore the grassroots right-wing movements have spread and radicalized in recent years. But the causes and mechanisms of rapid growth of xenophobia in Japan remain unclarified.
The aim of this presentation is to reveal factors of xenophobic attitudes in Ja-
pain, especially the effect of social events. I analyze two survey datasets which were collected in 2009 and 2013 all over Japan. Between 2009 and 2013, Japan has experienced terrible diplomatic problems like Senkaku/Diaoyutai Islands dispute against China and also economic recovery seems to be caused by “Abenomics”. The hypotheses on relationship between social events and xenophobia are as below. The first one is the influence of “East Asian geopolitics” (Higuchi 2012) on Japanese xenophobia especially toward Chinese and Koreans. Japan has ter-
torial disputes against China and Korea. There are also political debates on the understanding of history in the period of Second World War. This hypothesis as-
sumes that those conflicts have negative effect on Japanese attitudes toward Chi-
na and Korea. The second hypothesis is the realistic conflict theory (Sherif 1966 etc.). From this perspective, in the time of economic depression, competition between immigrants and native citizens over limited resources are intensified, therefore negative feelings toward foreign residents are also escalated. If this the-
ory is correct, the relations between respondents’ socio-economic status and xe-
nophobia can be weaken from 2009 to 2013. Because in 2009 Japanese economic suffered in economic downturn precipitated by the Lehman Brothers bankruptcy, but “Abenomics” seems to show signs of economic recovery in 2013. I will confirm these hypotheses by using Multi-group Structural Equation Modeling.

Post-Colonial Immigration Memory: Social and Academic Resistance to Epistemic Violence
Since the end of the 1980s, French Immigration Memory (mémoire de l’immiga-
Dion) has gradually become visible in France. As a result of this process, the first immigration museum in France, Cité Nationale de l’Histoire de l’Immigration(CHNI), was inaugurated in late 2007. Immigration Memory, once an almost exclusive topic to the anthropological knowledge for a majority of the French, then rapidly became one of the important objects of study and of public policies through the late 2000s. However, if certain dimensions of Immigration Memory have become visible, the other dimensions, that I would call post-colonial dimen-
sions, have become invisible within the same process.
This paper, therefore, argues the exclusion of Post-colonial Immigration Mem-
ory in social and academic spheres as epistemic violence and aims to explore indi-
vidual and collective resistance against it. The resistance against epistemic vi-
cence is practiced by activists and artists with post-colonial backgrounds through Memory Work. Memory Work is a cultural and artistic practice of reconstructing certain past stories that they directly experienced or not and they find themselves, inherited from. Their positionality and proximity to the past story, depending on
their gender, life-course and/or ethno-racial identity, gives a different signification to each Memory Work. Through the analysis of several exemplary Memory Works about “memory of struggles” based on my fieldwork in Lyon, Toulouse and Paris since 2009, I aim to empirically study epistemic violence in order to resist it as a researcher. Post-colonial Immigration Memory, in this sense, is not only an object of study but also a sociological and academic project to bring normative construction of knowledge and its violence into question.

A Biographical Analysis of Women’s Political Participation: The Importance of Politicalization in Female Legislators’ Biographies
Politics as a social institution remains highly gendered in many societies both quantitatively (few politically active women such as legislators) and qualitatively (androcentric political culture). It has been a major area of concern in both the-
eric and feminist areas of academic research. I will argue that gender is not a pet-
tific variable to change this gendered world of politics. Despite their efforts women are still minorities among those who are in the decision-making positions. This paper ap-
pies a biographical approach to a study of women’s political participation and explores what promotes their participation in decision-making. Data used were collected in 2010 through qualitative interviews with female legislators in the local Tokyo assemblies. An analysis of the data revealed that women who used to be politically inactive, even uninterested, could be ‘politically’ in middle adulthood or at a later phase of life. It is argued that this process of politicization can play an important role in women’s decision to run for office. In Japanese society such politicization rarely occurs in women’s lives. Women are traditionally ascribed to the private sphere of domestic work, being excluded from – or discouraging women from being engaged in – public life. Scholars of women’s political partici-
pation have stressed the androcentricity of institutional politics and identified in-
stability as a reason for feminisms’ lack of political participation. However, I will argue that this is a short-term view. From this perspective, in the time of economic depression, competition between immigrants and native citizens over limited resources are intensified, therefore negative feelings toward foreign residents are also escalated.

First Land: Creating a Farm for the Future
According to the 2007 US Census of Agriculture, less than two percent of labor force in the nation is in agriculture; the average age of principal farm operators was 57 years in 2007, and more than a quarter of all US farmers were 65 years or older. In order to support the emergence of the next generation of farmers, we, as agricultural researchers and educators, need to provide them with pathways to economic as well as environmental and social sustainability. Based on the data collected from our multi-state, multidisciplinary research project on beginning farmers that illustrate their understanding of the dynamics of finance and capital in agriculture. Using the “economic map” as both a methodological and theoretical tool, we will then discuss the key patterns of how these beginning farmers position diverse financial/economic actors as critical resources for, or hindrances in, shaping their farming practices. We will also explore in these narratives how the concepts of “sustainable farming” and “economic viability” are articulated to guide their prac-
ties.

An International Comparative Study on the Sport Development for People with Mental Health Problems in 5 Nations
Aims: The aim of this study is to explore how sports for people with mental health problems have been promoted in 5 nations, which are Italy, England, Den-
mark, Germany and Japan. Those countries have developed sport for people with mental health problems, according to Tanaka et al. (2013). This study attempts to identify each support system in order to contribute to international sport move-
ment for people with mental health problems.
Backgrounds: People with physical and intellectual disabilities in many nations have come to enjoy sport not only for rehabilitation but also as a normal part of everyday life. On the other hand, sport of/for people with mental health prob-
I point out a type of development of social tourism that is not an alternative form consequently, many people with experiences of touring abroad support the inspection of social tourism. In China, mobility for tourism is relatively strictly restricted, and the second case involves visits for inspection or training, which is a dimension of social-cultural order effectively in accordance with appropriate practices in Japan. The industry also needs to pay attention to sustainability and establish alternative forms of tourism, such as ecotourism, which is a trend in the management of mass tourism. The role of tourism companies in creating media images and promoting unsustainable mass tourism. The industry also needs to pay attention to sustainability and establish alternative forms of tourism, such as ecotourism, which is a trend in the relationship between the two countries. Further, media outfits tend to create a negative image of Chinese tourists.

This article focuses on the social and cultural interaction of tourists from China to Japan, particularly the role of tourism companies. Previous works criticized the role of tourism companies in creating media images and promoting unsustainable mass tourism. The industry also needs to pay attention to sustainability and establish alternative forms of tourism, such as ecotourism, which is a trend in recent years. This study will examine the daily everyday practices of tourism companies from the role of tourists in forming ethical tourists, but not limited to their practices of producing alternative forms of tourism. Two case studies are examined. First is the case in which tourism companies teach their clients tourist ethics. In China, the government has recognized the importance of tourist civilization, and in relation to this, I present a practice of "moral education" in tourism companies. I point out how they teach social and cultural order effectively in accordance with appropriate practices in Japan. The second case involves visits for inspection or training, which is a dimension of social tourism. In China, mobility for tourism is relatively strictly restricted, and consequently, many people with experiences of touring abroad support the inspection or training of visits under business visas, which tends to include sightseeing. I point out a type of development of social tourism that is not an alternative form of mass tourism.

Building a Global Domestic Workers' Movement: The History, Strategies and Activities of the International Domestic Workers Federation (IDWF)

Formally launched in 2009, the International Domestic Workers Network aims to develop an effective global network of domestic workers. In the past campaign for the ILO Convention 189 for domestic workers, the IDWN coordinated and actively supported campaigns and activities of domestic workers at various levels, to enable them to speak for themselves and take leadership. Now that the ILO C189 has been achieved, we need to build a strong organization of domestic workers to ensure that countries around the world ratify the convention and national policies and laws are put in place to deliver real gains to domestic workers on the ground. In October 2013 the IDWF will hold its inaugural congress in Uruguay. In this paper we will discuss the history, strategies and activities aimed at building a strong democratic organization that can effectively protect domestic workers rights and change power relations in society to promote gender equality and human rights.

Recovery and Social Inequalities: The Use of Capabilities Approach and Intersectionality Analysis in Exploring the Social Conditions for Recovery

‘Recovery’ has become a dominant discursive feature in the UK mental health policies. Under the neo-liberal context, the mainstreamed recovery services tends to promote individualistic recovery strategies. Such policies and services fail to address the structural inequalities that give rise to distress and mental ill-health or place sufficient emphasis on the diversity of intersectional inequalities among service users that shape recovery journeys. This paper critically engages with the concepts of ‘recovery’, based on a case study of Chinese mental health service users in the UK which explores how structural factors, such as class, gender and ethnicity, contribute to their diverse recovery journeys.

To shed light on the complex interplay of structure and agency in shaping recovery journeys, a synthesis of the Capabilities Approach (Sen, 1999, Nussbaum, 2001 and Hopper, 2007) and Intersectionality Analysis (Walby, 2007 and Anthias, 2006) was developed as an alternative framework. Repeated in-depth life history interviews were carried out with twenty two Chinese people who had received a psychiatric diagnosis, recruited from three cities in the England. Findings showed that participants strove, sometimes cautiously, to retain and exercise agency to move from patienthood to personhood. Their journeys were shaped by social inequalities demonstrating that targeting social inequalities is essential for facilitating and nurturing meaningful recovery.

In the literature concerned with the globalisation of gay identities, same-sex desiring women in Asia have come under increasing attention for two reasons. Firstly, as evidence counteracting universalising Western assumptions of what it means to be a global gay or lesbian. Secondly, as a response to the tendency to lump lesbians and gay men together under the generalised rubric ‘queer’, which is dominated by research on gay men both in Western and non-Western contexts. Ethnographic monographs on female non-normative sexualities have therefore appeared in many parts of Asia, including Japan, India, Thailand and Indonesia. But the case of Singapore has been significantly missing in the literature. Why has Singapore been left out of an important queer Asian critique? This paper discusses the missing case of Singaporean women who love women. First, I explore the ways in which a queer Asian scholarship runs the risk of being constructed and produced through an Orientalist area studies approach, which inevitably leads to the omission of ‘modern’ Singaporean and Singaporean lesbians. Second, I suggest that taken-for-granted images of local middle-class lesbians can appear, in the eyes of an Orientalist, as ‘just like’ the hegemonic Western queer, a thoroughly globalised version alienated from her indigenous region. Are ‘modern’, middle-class Singaporean lesbians merely another instantiation of the homogenising global gay identity, and hence ineffective as material for an Asian queer critique? Finally, the paper gestures towards a ‘postcolonial LGQ’ approach to comprehend the complex, contradictory and contingent sexual subjectivities of lesbians in Singapore. Using empirical material on lesbians in Singapore, I demonstrate the ways in which Singaporean lesbians re-queer hegemonic concepts of homo-sexuality and argue that their sexual lives and practices are crucial moments of reconfiguration and transformation, and not mere reception, of what it means to be ‘modern’ global lesbians.

Navigating Domestic Violence Protection Law By Immigrant Wives in Taiwan

This paper seeks to explore the question: why do abused Vietnamese immigrant wives married to Taiwanese men find it difficult to escape from violence even though the Domestic Violence Prevention Law has been in place for more than 15 years and the government claims a supportive system has been established? By applying the institutional ethnography approach (Smith 2005) we contend that, even though there are laws, institutions (police, hospital, social workers, courts etc), and professional people that constitute a support system for abused immigrant wives, the structural forces of class, ethnicity and gender discrimination on intersectionally influence them as they seek to find a way out of the abuse they face.

Intercultural Training Program as a Mechanism of Raising the Individual Level of Competition

Seventy people representing five regions, and 32 countries were involved in the research. 25 expert interviews and 6 focus-groups were conducted by the researchers. Most contrast patterns of cultural clashes were observed in the interaction between the citizens of St. Petersburg and the representatives of western and eastern cultures. The strategies of acculturation of the people with diverse origin are very different. The representatives of Western Europe and the USA tend to believe that their difficulties in adaptation result from low standards of local people and Russian social environment. Newcomers from far eastern countries make enormous efforts to understand the motives guiding the local people’s behavior, and try to adjust to the context of local culture. Africans tend to conceal their problems. The main problem of their adaptation is the lack of local people’s tolerance resulting from physical and cultural differences. Weighing pros and cons of living in St. Petersburg the often try to focus on positive aspects and hush up negative sides. As for the citizens of the CIS and former Baltic republics (Estonia, Lithuania, Latvia), the process of their adaptation is the easiest one, because they speak fluent Russian, have been visiting St. Petersburg since childhood and do not feel enormous cultural differences. However, the lack of notable differences led to certain difficulties in constructing the cultural assimilators with their participation. At the same time, the migrants from the CIS, who came to raise their earnings and living standards, are often excluded from the social environment of St. Petersburg because of their limited access to economic and cultural resources.

TANGALYCHEVA, RUMIYA* (St. Petersburg State University, rumi98@yahoo.com)
Sociological Study of the Cultural Differences in Korean-Russian Mixed Marriages

According to Korean statistics in South Korea 90489 marriages between Koreans and foreigners were registered. The share of marriages with Russians was 835, among them 523 marriages between Russian women and Korean men. For the present study of the cultural differences in Korean-Russian mixed marriages the method of semi-structural interview was selected. This method gives a good opportunity to gather the necessary information and to interpret the object of research. The empirical research was conducted in Seoul, South Korea in 2010. Ten Russian women in the age from 19 to 31 years old, married the citizens of the Republic of Korea, participated in the study. Following the opinions of the respondents, the most difficult thing in family life in mixed Korean-Russian marriage is differentness in their mentality with their husbands, but communication with husband’s relatives, the obligation to visit them during the collective family holidays (Lunar new year, the harvest festival “Chusok”) when crowds of relatives gather in parent’s home. Russian women definitely emphasized the differences in celebrating holidays, family rituals and ceremonies of life cycle. Cultural differences in such marriages are quite big due to specific scenarios of children’s socialization in two societies. In the same time various actual differences in presented research were not found out because of the length of marriage of the respondents. Young Russian women and their Korean husbands who participate in cultural rituals were in their so called “honeymoon” period. It is also worth mentioning that the cultural context of ethnic relations and global trends change nowadays so rapidly that in several years Korean-Russian marriages will turn from somewhat exotic and unusual into ordinary and routine practice.

Social Cleavages Caused By Radioactive Contamination of Food and the Environment: The Case of Fukushima

The nuclear disaster in Fukushima has inflicted devastating damage to agriculture and food of Japan in many respects. I will give an overview of the social cleavages caused by the nuclear disaster in Fukushima. First, the social estimation of organic agriculture, was broadly contaminated by radioactive substances. Many consumers particularly concerned about food safety have stopped buying organic foods not only grown in Fukushima but in surrounding areas. Despite the fact that radioactive substances remaining in soil were not transferred to agricultural products, most of the consumers have not yet come back to the farmers. The fall of the reputation of organic agriculture is the more serious because it is deeply connected with the growing distrust of Japanese food in general. Radioactive contamination of food has become a serious threat to the national food security. Second, a deep cleavage occurred between the farmers who are willing to live and farm in Fukushima at the risk of exposure and many anti nuclear activists who criticize these farmers insisting that they quickly leave the contaminated hometowns. The recognition gap concerning the risk of being exposed is so wide between them that it is difficult to establish the solidarity movement between farmers and anti nuclear movement.

Third, there appeared a great gap between Fukushima and the rest of Japan, or between Tohoku District, northeast part of Japan consisting 6 prefectures including Fukushima, and the rest of Japan. The nuclear disaster has reproduced the unequal development patterns that were often observed during the modernization history of Japan: taking the goods to the center and bringing the bads to the periphery.

TANO, DAISUKE* (Konan University, dtano@center.konan-u.ac.jp)
“Strength through joy” in Japan

During the second half of the 1930s and into the 1940s, the National Socialist leisure organization “Strength through Joy” (Kraft durch Freude, shortly KdF) had a great influence on the development of Japanese leisure movement (Kôseî movement), and played a crucial role in the establishment of relations between the two countries. Since the World Recreation Congress in Hamburg 1936, the activities of the KdF, which should regenerate the “strength” of workers through “joy” in leisure, attracted public attention in Japan, where the general interest in the subject of leisure had been slight. The KdF gave the Japanese movement many suggestions and became its model. After the foundation of the Japanese Recreation Association (JRA, Nihon kôsei kyôkai) in 1938, the Japanese leisure movement made a rapid growth into the holding of the Recreation Congress for Asian Development (Kôa kôsei taikai) in Osaka 1940. At this congress, to which also representatives from Germany were invited, the slogan “Strength through joy” was adopted and the Japanese-German cooperation in the field of social policy was proclaimed. However, the actual discussions between the two countries on issues relating to leisure were not deepened by the congress, and also the mutual perceptions of Germany and Japan contained contradictions in many respects. This report therefore examines the image of the KdF in Japan and that of the Kôseî movement in Germany, and also investigates the relationship between the two countries, in order to clarify the features of the mutual perception and its significance.

Mapping out the Educational and Future Trajectories of the Children of Internationally Mobile Families

Children’s education and future career trajectories are of paramount concern for many transnational families. Educational concerns impact upon whether and when families decide to move internationally together or stay apart. This paper focuses on teenage and young adult children of Asian and African backgrounds who have spent a considerable time in Germany. Their exposure to both cultural and lingual differences make their in- and out-mobility a complex process. Most children are usually able to adapt quickly to the new culture and language and make a smooth transition to their new school environment, while others report a challenge in terms of their cultural and linguistic abilities. The results presented in this paper are based on the interviews with 20 children, their parents, and the schools. As part of the larger project on the effects of transnational family life on educational outcomes, this paper aims at mapping out the educational and future trajectory of children of internationally mobile families from Asia and Africa in Germany. The analysis of the interviews was conducted using the method of ethnographic research. The results show that the children of internationally mobile families are able to adapt quickly to the new cultural environment and take advantage of the opportunities for education and future career development provided by the schools in Germany. The results also show that the children of internationally mobile families are able to adapt quickly to the new cultural environment and take advantage of the opportunities for education and future career development provided by the schools in Germany. This confirms the hypothesis that children of internationally mobile families are able to adapt quickly to the new cultural environment and take advantage of the opportunities for education and future career development provided by the schools in Germany.

Data is drawn from a yearlong ethnographic research conducted in Jakarta, Indonesia in 2009 at an international school catering to foreign expatriate and local elite families. I conducted participant-observation of high school students (grades 9 to 12), as well as in-depth interviews with over 130 students, school staff, parents and alumni of international schools.

HIV/ Aids Among Adolescents in Brazil and France: Similarities and Differences

In order to analyze the Aids epidemic in France and Brazil, particularly among adolescents, a critical review of literature, official documents and on-site verification of services for sexual and reproductive health for adolescents was held. The concept of vulnerability and its categories were used as theoretical basics of the research. In comparison to France, Brazil has three times the number of AIDS cases and are popularly referred to as “Third Culture Kids” (Usem & Downie 1976). It explores how they experience and articulate, in varying ways, their internationally mobile upbringing and the transnationality of their family lives in relation to their new school environment. Some receive multiple international moves with their families due to their parent(s) job placement, while others are sent overseas by their parents to one or more countries on their own for educational purposes. Decisions about their schooling are tempered by their parents’ and their own economic, social and cultural capital in the context of national and international economic and cultural inequalities (Bourdieu 1986). This paper highlights the way pragmatic considerations about education and economic futures intersect with the ambivalence that young people feel about their transnational upbringing and identity, as well as the way they imagine ‘home’. Given that international mobility is the norm for the young cohort I studied, their experiences offer significant insight into the complexity of transnational family lives and its impact on children.

Data is drawn from a yearlong ethnographic research conducted in Jakarta, Indonesia in 2009 at an international school catering to foreign expatriate and local elite families. I conducted participant-observation of high school students (grades 9 to 12), as well as in-depth interviews with over 130 students, school staff, parents and alumni of international schools.

but there was a rise in cases in 2008. Both countries offer universal access to ARV treatment and the epidemic shows a trend of impoverishment, feminization and heterosexu-alization. Among Brazilian adolescents, the number of cases is proportionally 3.5 times higher; they have an earlier sexual initiation, use condoms less frequently and schooling is shorter. In France schools are obliged by law to offer regular educational activities on sexuality, the notification of Aids and HIV are mandatory; the access of adolescents to health services with confidentiality is facilitated, there is availability of tests for STDs and of voluntary interruption of pregnancy, which offer conditions for prevention and treatment of sexual disorders.

Anti-Nuclear Movement Discourse in the Countries of so Called “Nuclear Renaissance”

Since the first half of 2000s the world society has been observing the expansion of national nuclear energy programs in a number of countries, also called by nuclear power industry as ‘Nuclear Renaissance’. This development has been accompanied by the contemporary trend in public opinion showing positive attitude towards nuclear energy. The striking is, however, that this situation occurs in the countries with the history of significant anti-nuclear movements, e.g. Sweden.

The revival of nuclear energy programs, public opinion favouring the expansion of nuclear energy and the experience of anti-nuclear movements in the past are the points of departure for this study. The constellation of these circumstances in several countries encourages the following research questions to be considered in this paper. First of all, the national nuclear power strategies have affected the discourse of anti-nuclear movements, the primary task of this paper is to find out in what way. Then, the second question is to analyze how these policy changes account for a shift in contemporary understanding of nuclear energy by anti-nuclear movements. Thirdly, the connection between discursive opportunities embedded in these discourses and movement mobilization is studied. Finally, the paper aims to discuss whether there is a change in public perception of nuclear energy.

Several explanations and events are responsible for the mentioned changes, among others are the issue of climate change and the accident at Fukushima-Dai-ichi. This paper explores what extent and how these turning points become part of the anti-nuclear movement discourse.

In terms of methodology this study is based on discourse analysis.

Multiple Discrimination: Personal and Institutional Perceptions, Impacts, and Actions

This paper investigates the phenomenon of *Multiple Discrimination* in Hungary, with special attention paid to cases of intersectionality based on ethnic origin. The research unfolds those mechanisms that lead to multiple discrimination in the field of job seeking, hiring, and employment. The phenomenon of multiple discrimination is studied, on the one hand, from the perspective of decision-makers representing public and private employment agencies; on the other hand, from those who are the victims of discrimination on multiple grounds. The research project identifies the personal and institutional perceptions, impacts of and actions taken with regard to discrimination by the various stakeholders. Through a series of semi-structured interviews and a survey of private and public employment agency clients we demonstrate how a low awareness level of discrimination, on the one hand, and multiple discrimination in the constellation of these circumstances in several countries encourages the following research questions to be considered in this paper. First of all, the national nuclear power strategies have affected the discourse of anti-nuclear movements, the primary task of this paper is to find out in what way. Then, the second question is to analyze how these policy changes account for a shift in contemporary understanding of nuclear energy by anti-nuclear movements. Thirdly, the connection between discursive opportunities embedded in these discourses and movement mobilization is studied. Finally, the paper aims to discuss whether there is a change in public perception of nuclear energy.

Several explanations and events are responsible for the mentioned changes, among others are the issue of climate change and the accident at Fukushima-Dai-ichi. This paper explores what extent and how these turning points become part of the anti-nuclear movement discourse.

Does Local Level Policy Making Hinder Women to Participate in the Labour Market and Support the Gender Inequality?

Eurostat projections reveal that over the next 50 years, population aging is likely to lead to reduced working years in many of the countries, the labour force will decrease. Therefore, maintaining the national social-protection systems, it is essential that the majority of the working age population stay gainfully employed. However, political frameworks ignoring the gender mainstreaming ideas may contrarily discourage women with informal care responsibilities by hindering their possibilities to participate in the labour market. The aim of this presentation is to discuss policy frameworks and local policy makers’ mindsets supporting (or restraining?) the women with informal care load to participate in the labour market. The presentation will also make insights into women’s own interpretations and examine, what restrains their (re)entrance to the labour market. Presentation is based on theoretical approach of gender mainstreaming through the European Open Method of Coordination is affecting the national and local policy making. The methodological starting point of the presentation is multi-level governance theory focusing particularly on the local level policy-making. The findings indicate that informal care of older people is not seen as a gender specific problem. Therefore, ignoring the ideas of gender mainstreaming the policy frameworks may hinder women to participate in the labour market and promote social inequality. The presentation will base on findings from the research project FLOWS funded by the EU 7TP, by drawing data from policy documents, interviews with local level policy makers and women with informal care responsibilities.

Emergence and Handling of New Trends in Migration

In the 21st century, international migration is becoming more active and more complicated than before. The state and other political agencies struggle to handle migration further. But how can they be successful in handling? This paper will pose the question to explore, with taking a comparative stance of Asia with other regions such as Europe, America and Oceania. As is well known, Asia is an highly active area in migration, following some new characteristics in recent years. Firstly, South Korea and Taiwan have set up the guestworker system to introduce unskilled migrant workers officially that Western European countries abandoned around the middle of 1970s. This seemingly anachronistic guestworker system is based on bi-governmental agreement, which created new flows: Now South Korea accepts migrants from Uzbekistan, and Taiwan introduces workers from Mongolia. Secondly, a points system has been introduced by Japan. Statistically, Japan planned and started the points system at the same period when it introduced West Germany’s Educational Curruculum and Health Promotion (Institute) makes professionals competent in creating a “health map” for individuals – in the family, in the workplace - including physical and mental status and lifestyle elements (leisure, nutrition, time management, environment) and build personalized (individual and community level) counselling activity, health promoting actions, campaigns and projects on identified needs. With his/her knowledge in the socio-demographic determinants of unequal opportunities and the means and “language” of addressing and approaching different social groups this professional can bring the best out of life opportunities and life chances to promote healthy choices. This presentation will introduce the audience into the unique skills, knowledge and competencies the above professionals possess and the ways they can be the most effective promoters of lifestyle – with useful leisure highlighted – in an unequal world.

scientists to maintain an objective distance and conduct academic research with possible critical implications for the existing policy.

On the basis of a document analysis of historical materials and in-depth interviews with the people involved, we found a remarkable difference between scientific fields regarding research resources available for outsider scientists. In the field of dosimetry, many citizen groups measured doses of radiation using their own dosimeter, which enabled them to urge the government to adjust their policy of decontamination. However, in epidemiology, it is difficult for critical scientists to conduct large-scale surveys; therefore, they have concentrated on assessing and criticizing Fukushimas Prefectures Health Management Survey.

We also found a complex relationship between academic research diversity and political mechanisms for constructing a unified view. Occasionally, articles in international journals express different views; for example, one uncovers the possibility of health effects caused by very low-level radiation and another denies it. Even though the academic discussion has not yet been completed, the International Commission on Radiological Protection (ICRP) has taken the position of creating a systematic regulation; consequently, the diversity of academic research has diminished. To maintain diversity in the circulation of scientific knowledge, we need alternative ways to organize critical scientists and the results of their research.

Television As a Global Kaleidoscope: Multiple Socio-Cultural Realities within a Paramount Political Reality

In recent years, due to a number of factors like the severe global financial crisis, the citizens of countries like Greece search for information through foreign media. Thus, globally broadcasting corporate or state television channels, (i.e. BBC, CNN, France 24, Al Jazeera, Russia Today, CCTV News), became very popular. This paper attempts to discuss these channels' representations as alternate sources, focusing on three levels. First, the formative one: They all (a) use English for oral and written discourse; (b) follow standardized forms of Western broadcasting; (c) utilize the media cosmogony of our epoch. Second, the substantive one: (a) Operating within a 'global village' framework, they function in their 'public sphere without barriers'; (b) They manage to create 'media events', authenticating and explained by participating actors and professional experts; (c) Cultivating a sense of relevance, they connect individual 'life-worlds' with projected 'world views'. Third, the conclusive one: (a) While documenting issues from 'multiple (socio-cultural) realities' (i.e. economy and business), with a presumable undoubted factuality, they express a 'paramount (political) reality'. (b) This 'reality' is a 'noematic construction' which reflects core values from a channel's ethnocentric perspective with a long historical tradition. Any interpretive scheme they provide derives from this perspective. (c) Thus, foreign channels offer planned casting; they manage to create 'media events', authenticating and explained by participating actors and professional experts; (c) Cultivating a sense of relevance, they connect individual 'life-worlds' with projected 'world views'.

A Study of Women's Roles in Rural Livelihood Improvement: A Case Study of Yamaguchi Prefecture in Japan

This study aims to identify links between internal and external factors, where women farmers developed an important role in rural life improvement. In a sparsely populated and aging society in Yamaguchi Prefecture, western Japan.

In Japan the rural livelihood improvement program was started in 1949 in response to the agricultural and forestry problems. The program was introduced in order to create self-reliant farmers, particularly women farmers. Livelihood extension workers (all women) were hired as prefectural government officers to encourage rural development. They made up groups of women to encourage extension activities. The groups carried out intensive rural life improvement activities.

There were three phases of rural life improvement as follows. The first phase, from 1948 to 1965 aimed to alleviate poverty in rural areas. The second phase, from 1965 to 1988 focused on the bettmem of daily life in times of rapid economic growth. The third phase, from 1989 to present day, created employment opportunities through grass root activities.

As a result, the women's self-confidence improved and they became self-reliant farmers. The prefecture employees were the driving force behind this progress. The program was officially ended because of an amendment to the Agricultural Improvement Promotion Law of 1948, however rural life improvement has continued at grass roots level by the women, who still work in the farming communities.

Now women in the older generations carry on creating employment opportunities through agriculture business and tourism so that younger generations can live in rural areas in the future. What's more, they maintain close relationships with retired prefectural workers who helped them in the past.

This study focuses on this development model, as a positive strategy which could be implemented in other rural areas.

Media Coverage and Stakeholders on Climate Change in Japan

Climate change has become a serious problem facing from global society in the 1980s and the 1990s. It is a wide range subjects domain over science, economy, and politics. Although numerous attempts focused on consequences of climate change or effectiveness of policies. However, there are few reports on social acceptance of climate change. In Japan, What kind of frames is used in climate change? Which political stakeholders are mainly joined and how connected?

For this purpose, as a part of international comparative study of Comparing Climate Change Policy Network (COMPON Project), this project media analysis for articles of Japanese newspapers by using common methods among society cases of the project. In this project, we created climate change article database by searching for keywords of “Climate Change” or “Global Warming”. Then we counted articles and extracted issues and stakeholders on climate change from the database.

In conclusion, this data suggest that (1) Coverage amount is linked international agreements (like Kyoto Protocol) and political international events (GB and COP). (2) Issues have shifted to “domestic - economy” policies in 2000's from international contributions or sciences in the 1990's. (3) The corporate sector and government come up a lot, but civil society actors were found to be less. (4) After the Great East Japan Earthquake of 2011, interest in climate change has fallen sharply.

The Relationship Between “Global Meanings” and “Local Meanings”: A Case Study of Protests Against the Construction of the “Kaminosuke Nuclear Plant” in Iwai-shima, Yamaguchi Prefecture

How do global social movements relate to local social movements, and in what way does the former influence the latter? This presentation examines the relationship between “Global meanings” and “Local meanings” considering two analytical frameworks on social movements: cultural theories of social movements and the new social movement theories.

Cultural theories of social movements pursue the “construction process and the source of meanings” (Nomiya 2002). On the other hand, the new social movement theory pursues the construction process of “collective identities” (Melucci 1996). In other words, this perspective highlights the fact that movement groups and participants construct ideas through the various interactions between them.

Sociological Study of E-Dating and E-Prostitution in Iran

Abstract
Iran has provided the possibilities for virtual networks by facilitating internet access to the public. But the open nature and lack of “enough” control over the virtual community contradicted with the laws and regulations put into practice by the Islamic Republic. One of these contradictions is the dynamics of online dating and prostitution.

As a result of strict rules imposed by the government, dating, “illegal” relationships, as well as prostitution, has been looking for new opportunities in virtual environment. In particular, online social networks such as Facebook have provided a new market for sex trade. There has been a surge in Facebook subscriptions in Iran with the purpose of advertising and seeking sexual services. This study attempts to examine this phenomenon from a sociological perspectives focusing on prostitution;

Data collected from Facebook pages of Iranian users concerned have indicated that the following key points have led to the growth and popularization of this phenomenon.

- evasion of law
- freedom from the restrictions of family,
- passing the limits of time and space,
- achieving social identity in digital social stratum of prostitution,
- anonymous identities,
- ease of socializing,
- desirably setting the conditions/price for services,
- avoiding loss of earnings to pimps,
- screening and vetting the persons of interest
- sociological (e.g. economic, cultural, religious) reasons, implications, and lowering the risk of embarrassment,
- possibility of freely expressing hidden sexual fantasies and leisure,
- combating social exclusion and finding the strength to oppose popular culture.

The trend of e-prostitution is in growth and our study attempts to discuss the consequences of this phenomenon.

Keywords: Iran, cyber-space, Facebook, prostitution, leisure

Women Go Shopping: Discussing the Behaviour of Generation Y and “Green Consumption” in Rio De Janeiro

This paper aims to discuss the buying behavior of the female segment with respect to the consumption of products with ecological appeal (“green products”), in the post-modernity, through the subject area of green consumption. The sample includes 100 surveyed women of Generation Y. For this study, we conducted a qualitative, exploratory research, with field survey using structured questionnaires. The interviews were held in January 2013, at the exit door of malls in Rio de Janeiro. The theoretical basis of this study are the concepts proposed by Bauman, Cancini and Lipovetsky. The data discussion reveals a women of Generation Y with a consumer behavior paradoxical, showing that the influence of fashion, media and academic information makes young people oscillate between following fashion trends and practices resulting of a deeper understanding of environmental issues, according glances of environmental responsibilities and conscious citizen seized through education and through the Internet. The results also reveal the idea of consumption as a process of a hybrid culture (through the influence of global culture produced and widespread by the socio-technical networks) and local culture, with traces of belonging, social recognition, especially from the perspective of the consumer-citizen relationship. This ambivalent condition of this generation relies both from the perspective discussed by Bauman (dialogic relationship between the spectacle and the vacuum of consumption as a moral/social duty and the critical reflection of the consumption, through spaces as schools and universities), and by the vision of Cancini which emphasizes the logic of cultural hybridity and the idea that to be a citizen is required to carry a consumer identity. Complemented by Lipovetsky, both thoughts emphasis the consumption behavior of the social actor of female sex in the Generation Y as a reflection of a society that expresses the concept of a individualistic and consumerist ethic.

Cultural Artifacts in the Mexican Social Movement Sector: The Artifactualization of Performances and the Performativity of Artifacts in a Digital Age

Where residues of a less democratic past persist, as is the case in Mexico and several other Latin American states, challenges to the state often take more subtle and creative forms, which means that cultural insidings of mobilization processes can be especially instructive. Drawing on several mobilization sites and moments from contemporary Mexican social movement sector the paper aims at exploring whether the tools of cultural analysis—performances, ideations and especially cultural artifacts—are used in the production of oppositional meanings and whether the unfolding events and actions around them can become central to the identity and to the genesis of social movements. The social construction of these cultural artifacts, their social embeddedness, and the diverse ways that audiences respond to them, mean that artifacts themselves can play key roles in mobilization trajectories, as social actors encounter them, appropriate them, deconstruct them, modify them, and mobilize around them.

This paper will attempt, firstly, to trace the genealogy of public hearings, back to the people’s tribunals of the 1960s; it will show how the public hearing has since been reinvented and reinterpreted, and how it has met with a new populace since it was used by very different types of actors and struggles. Secondly, the paper will describe and analyze the dynamics of public hearings in order to highlight their hybrid nature, in between the community meeting and the lawsuit. Finally it will try to understand the sources and the limitations of the efficiency of public hearings as a mode of mobilization.

TAYLOR, EMMELINE* (Australian National University, emmeleine.taylor@anu.edu.au)

Punitive Pedagogy and the Political Economy of the Surveillance School

Surveillance Schools are emerging around the globe characterised by new technologies and practices that identify, verify, categorise and track pupils in ways never before thought possible. The school gates have been opened to a variety of surveillance technologies including CCTV, metal detectors, fingerprinting, online monitoring, facial recognition and palm vein scanners, to name just a few. Of course, Surveillance Schools are not just comprised of technological apparatus, many have full time uniformed police officers, armed in some countries, patrolling the corridors and classrooms, they subscribe to random drug testing and use sniffer dogs to search students and their possessions stored in transparent lockers and bags. Taking schools as microcosms of society, they can provide us with a prophetic glimpse into an emerging penal vista characterised by surveillance, containment and control. Set against this backdrop, the paper examines the new penal pedagogies and corporate priorities that have increasingly flowed into schools as successive waves of neoliberalism have come to shape the political landscape. Corporate schemas increasingly pervade schools, reclassifying citizens as consumers and aligning education with the needs of the post-industrial market. As the Surveillance School assesses pupils according to their value

as ‘human capital’ (Apple, 1998) they are sorted into two ideal types; compliant ‘worker-consumers’ and ‘market rejects’; those that are disposed to poverty, or in the most extreme cases face a direct and expedited channel from the school to prison. The paper debunks the mercenary myth to argue that the school-to-workplace pipeline has bottle-necked as neoliberalism desiccates jobs. The school production line is no longer only routed to the industrial workplace, but rather prisons have become the relief valve, filtering off the already marginalised poor into carceral warehouses.

Mental Health and Illness and Workplace Harassment

Even though every person is protected against harassment and discrimination in areas defined by Alberta’s Human Rights Citizenship and Multiculturalism Act, The Canadian Charter of Rights and Freedoms and the Canadian Human Rights Act, general types of harassment or bullying are not prohibited in Alberta, so this qualitative analysis examines the avenues to resolve harassment issues within the context of Alberta Public Service in Canada. The goal is to achieve a healthy workplace for every person. The ‘harrassed worker’ has been explored within a psychiatric framework, so the paper searches for an appropriate framework namely labour code, union grievance, legal remedy or medicalization of deviant behaviours in the workplace.

Imagining Futures in Paper Homes. Ambivalence, the ‘Politics of Becoming’ and the Everyday Life of Temporary Immigrants

This paper asks whether changes in the patterns of migrant mobility have been accompanied by, or indeed have generated, the affective register of ambivalence as a way of coping with life as temporary, nomadic and often unwanted peoples. Migration is increasingly temporary in nature, with an attendant loss of access to the channels of full incorporation to formal citizenship and belonging. As a result, immigration policies and policies in meeting the basic needs of life as well as in the long-term projects of imagining a new life in host societies. This paper proceeds with a focus on the fluid contexts of immigrants’ everyday lives, negotiating the complex pathways of globalised labour markets, national migration regulations and the localised experiences that constitute and homogenise mobility.

Ambivalence can be conceived as a rational response to the uncertainties faced by immigrants: temporary and precarious work; second-class citizenship; marginality and invisibility. At the same time, ambivalence can also be understood as a more widespread emotional response, observable under the conditions of late modernity to a combination of economic globalization; a response heightened through the immigrant experience, though perhaps not distinct only to the immigrant experience. Drawing on the concept of a ‘politics of becoming’ as a rejection of the zero sum game approach of mere inclusion or subsumption of rights claims and identity politics (Honig 2009), the paper argues for a more holistic conceptualization of line change with, rather than through migration. That is, the immigrant experience is one among many contemporary modes and experiences of change. The paper draws on original qualitative data from interviews with temporary migrants in the Asia Pacific region, focused on the fluidity everyday life and securing work, subsistence and on imagining futures. The interview material offers insights from temporary migrants to the possibilities of a ‘politics of becoming’.

‘Rooted Cosmopolitanism’ or ‘Politics of Becoming’; A Thick Convergence?

This paper proceeds from a grounded understanding of cosmopolitan values as ‘rooted’ in particular experiences and ways of life, yet assumes those same values to be generalisable – as human rights. ‘Rooted cosmopolitanism’ speaks to an aspect of human rights, namely its relationship to the nation-state form. Though human rights are conceived as universal ideals, their fulfillment in tangible entitlements and claims occur predominantly at the level of the nation-state. The possibility of human rights – and of our commitment to their primacy (as ‘natural law’) hinges on cultural understanding of rights and questions of what is it to be human. Rather than proceeding from the well understood logic of universal human rights as internationally held norms that ought to be realized and applied through the domestication of those norms in particular states, the paper proceeds with a view to the realm of affect; sympathy and love as disgust, shame and humiliation. Why do we intervene and feel sympathy and compassion for some individuals and groups, and not others? How does a politics of affect emerge in relation to vulnerable migrant groups such as asylum seekers, temporary and unauthorized migrants? Through examining the perspectives of ‘rooted cosmopolitanism’ (or cosmopolitanism from below) and the politics of becoming, the paper aims to map a theoretical convergence between hospitality and attention to proximity (nationalism).

Inequalities and Similarities Between Dutch Families: Holiday Making By the End of the 20th Century

In many studies on recreation and leisure as a social phenomenon, leisure is regarded as the opposite of work, or as compensation for work. Leisure is also seen as being complementary to an individual’s line of work. However, a number of scholars question whether this is the most fruitful way of gaining insight into recreation and leisure. Philipson (1963), Roberts (1981), Kelly (1983) and Te Kloze (1985a) believe a family or household approach to be more productive, which means that the theory should be directed at the social context of leisure on a micro- and a macro level. The social context of people refers to the primary life domains of leisure and family life – which are embedded in the wider context of society, both institutionally and socio-spatially. The question is how far the above is valid for tourist behaviour being an important part of (family) leisure life. The tourist tourism market is arguably more important now than it has ever been (Southall 2010).

An empirical study on family and leisure was conducted in the mid-nineteen nineties (Te Kloze 1996).

Part of the data of that study haven’t been analysed before. Those data were focused with a view to the realm of affect; sympathy and love as well as disgust, shame and humiliation. Why do we intervene and feel sympathy and compassion for some individuals and groups, and not others? How does a politics of affect emerge in relation to vulnerable migrant groups such as asylum seekers, temporary and unauthorized migrants? Through examining the perspectives of ‘rooted cosmopolitanism’ (or cosmopolitanism from below) and the politics of becoming, the paper aims to map a theoretical convergence between hospitality and attention to proximity (nationalism).

TE RIELE, KITTY* (Victoria University, kitty.teriele@vu.edu.au)

Conundrums for Policy and Practice Regarding Vulnerable Youth

Many youth related policies and institutions are aimed at supporting vulnerable young people to prevent problems from arising, to catch problems early, and to assist young people who are experiencing problems. Identifying some young people as vulnerable (or ‘troubled’, or ‘at risk’ – the terminology varies) rather than to assist young people who are experiencing problems. Identifying some young people as vulnerable (or ‘troubled’, or ‘at risk’ – the terminology varies) rather than providing such services for everyone enables limited resources to be targeted at those who need them most.

This poses several conundrums. First, selecting some young people for special attention creates the dual risk of stigmatising some and excluding others. However, not singling them out may lead to further disadvantage. This creates a dilemma for the provision of services for young people. Secondly, determining which young people warrant what kinds of support and when is a fraught issue.

The presentation will engage with these conundrums by not only exploring how and why certain young people are identified as vulnerable in relevant policy, but also the policy-practice nexus and the potential impacts of such challenges.
It is likely to be widely accepted that ethical reflection by professional workers, such as teachers, is of benefit for improving equity and social justice in society. More controversial, however, is whether formalized codes and principles are helpful. In this presentation I begin by analysing critiques of formal frameworks for procedural ethics: both professional codes of ethics and guidelines for research ethics, especially in anthropology and social science research. Specific concerns relate to the restrictiveness of codes, the impact of codes on undermining professional deliberation, and a lack of cultural relevance. I draw on Nancy Fraser’s framework of social justice to relate these issues to considerations of inequality.

The second part of the presentation reflects on my experience teaching a module on ‘professional ethics’ in a pre-service teacher education course in Australia. Rather than pre-determining codes or principles for students to adopt, I started with a Smörgåsbord approach, offering various ethical theories and materials. These were resources for students in order to construct their own ‘professional ethical toolkit’. I provide examples of these resources and how they were used by students.

Finally, I return to the session question of how professional ethics may contribute to diminishing inequality. I examine principles commonly used in research ethics frameworks internationally (respect for persons / autonomy, beneficence / non-maleficence and justice) as well as ethical resources through Fraser’s lenses of redistribution, recognition and representation. I conclude that in order to use ethics for equity, we need to carefully weigh up the potential impacts of formal, procedural approaches and more informal pedagogical approaches.

TECHOUYERES, ISABELLE* (ANTHROPOLOGY OF FOOD) - technology@orange.fr

When Food Aid Supports Local Farming: Towards a Sustainable Solution? Case Study in France

In Europe an increasing number of people require the assistance of food aid organization in order to cope and fund aid. While the rise of the number of people using food aid organisations is not new, the rising cost of food makes fresh quality products difficult, impacting people health. This contribution is an original on-going case study assessing the impact of an innovative food aid supplying mode supporting small local farmers. Besides developing links between urban consumers and local producers, it reveals the current conditions shaping the creation of fair and sustainable markets.

This case study is based on the pluridisciplinary intervention research ECOALES in partnership with the ANDES (national association for food aid) which has set up in 2012 an innovative short supply channel for fruit and vegetable for solidarity grocery stores in the Western region of France. Objectives are to increase fresh fruit and vegetable consumption among food aid recipients and support local farmers by buying their products at sustainable price via a pre-order system. The intervention also includes cooking workshops and visits to farms. The network of local farmers is organised by a coordinator in charge of deliveries to food aid outlets.

We will focus on the diverse constraints: creating links between shops and farmers who are spread over a large territory; the articulation between support to farmers in a difficult situation and regular supply in quality fruit and vegetable; meeting consumers’ expectations... We will also assess necessary adaptations and the sustainability of the system.

Fieldwork (including participant observation) follows the lines of global approach, including the diverse protagonists involved: farmers, solidarity food outlet staff, recipients as well as financial and political partners, representing institutions involved. The original methodology, combining interdisciplinary perspectives (anthropology, epidemiology and economy), offers finer understanding of what is at stake. The analysis should highlight the favourable conditions for the viability of such a project.

Intergenerational Coresidence, Support Transfers, and Psychological Wellbeing Among Older Persons in Myanmar, Thailand, and Vietnam

We analyze data from 2011-2012 nationally representative aging surveys from Myanmar, Thailand, and Vietnam to examine the associations between coresidence with adult child, intergenerational transfers, and psychological health among older persons in developing and rapidly aging Southeast Asia. Specifically, we ask: 1) How does coresidence with adult child and proximity of children influence the psychological wellbeing of older persons? 2) To what extent are support transfers from children associated with elderly mental health? 3) Do support transfers from children fully account for the relationships between parent-child coresidence and older persons’ psychological health? 4) How do the associations between intergenerational coresidence, support transfers, and elderly mental wellbeing vary across the three societies? The mixture of commonalities and differences in political systems, cultural underpinnings, kinship systems, levels of development and degrees of population aging that characterize Myanmar, Thailand, and Vietnam render the comparative analysis particularly interesting. While regional bodies of literature regarding coresidence and help-giving among older adults are related to their psychological outcomes, most research focuses on the effect of living alone versus living with others, which may or may not include an adult child. Less is known about the effects of coresidence with an adult child and how these factors change over the life course. The purpose of this comparison is to examine the possible similarities between methodological arrangements proposed by both authors to undertake the analysis of aesthetic expressions in order to formulate the historical specificity of the West taken in terms of culture. His study on the rational and social foundations of Western music is his only formulation of that cultural specificity within the aesthetic sphere. This unique trial presents a precious articulation between the historical transition from familiarism implicit to familiarism explicit (Leitner 2003). An entitlement to 26 weeks of parental leave was introduced as a supplement to 26 weeks of maternity leave. However, the 2011 reform confirms a strong link between the cultural images of fatherhood, the political agenda and the results of reforms. The rejection of father’s quota also revealed durability of the regulations that reproduce gender inequalities in care-giving and domestic work. Basing on evidence from other countries with similar constructions of leave entitlements it can be assumed that in Poland parental leaves will be used almost entirely by women. This assumption is further confirmed by a limited take-up level of 2-week parental leaves. Legal acts, media and parliamentary debates, existing literature and qualitative data (IDI with fathers) serve as empirical material for this paper.

TEIXEIRA, ANA LUCIA* (Federal University of Sao Paulo, plu.teixeira@gmail.com)

This paper discusses the relationships between social representations (Mosco 1986) of fatherhood, social policies and social practices in the period 1989-2013 in Poland. It investigates how shifts and continuities of social policies affect representations of fatherhood. The analysis considers cultural, institutional (laws, regulations, organizations) and societal dimensions of fatherhood. The main hypothesis states that the institutional order shapes the social representations of fatherhood and simultaneously the cultural images of fatherhood define the patterns of social policy reforms and block radical changes as well as create the realities of fatherhood.

The institutional context of the welfare regime in Poland is often characterized through the strong familiarism and paternalism. The poor access to institutional care services (2.4 % of children 0-3 y/o in institutional care) and the commodification of labor “strenthen” care function of families. This promotes male or dual breadwinner family model with a limited involvement of fathers in childcare and domestic work.

The 2013 leave entitlements’ reform in Poland can be considered as a historical transition from familiarism implicit to familiarism explicit (Leitner 2003). An entitlement to 26 weeks of parental leave was introduced as a supplement to 26 weeks of maternity leave. However, the 2011 reform confirmed a strong link between the cultural images of fatherhood, the political agenda and the results of reforms. The rejection of father’s quota also revealed durability of the regulations that reproduce gender inequalities in care-giving and domestic work. Basing on evidence from other countries with similar constructions of leave entitlements it can be assumed that in Poland parental leaves will be used almost entirely by women. This assumption is further confirmed by a limited take-up level of 2-week parental leaves.

Legal acts, media and parliamentary debates, existing literature and qualitative data (IDI with fathers) serve as empirical material for this paper.

XVIII ISA World Congress of Sociology
Religion, Migration, and Human Trafficking: Experimental Evidence From Grassroots Practitioners

This study investigates whether faith-based organizations are making an impact in preventing and caring for the victims of human trafficking and prostituted women. This study assumes that human trafficking is closely linked with migration which often causes prostituted women to be trapped into sexual slavery. This study critically suspects that because human trafficking is closely linked with organized syndicate and criminal organizations, faith based organizations remain on the side-line of solving the problem that exists in the public sphere. This study executed an in-depth interview with particular faith-based organizations working among prostituted women to probe whether these organizations are actively engaged in combating human trafficking in their own respective area of ministry. This study utilizes critical questions to test whether there are indications of participatory engagement of these organizations in partnering with government agencies or the civil society. This study finds out that faith based organizations are driven by their passion to see victims and prostituted women transformed by the power of the gospel. This observation is based from the following evidences that faith-based organizations, despite the danger and risk involved, are actively engaged in providing various interventions and aftercare services for the victims fueled by their religious convictions and values. It was evident from the study however that migration, whether it is legal or not, is a mechanism of organized syndicates to deceive and betray victims of human trafficking. Also, it resonates to the study that combating human trafficking in local and international level requires corroborative network and engagement of faith-based organizations to non-government organizations and government agencies such as legal and justice experts. This study suggests a theological framework in which faith-based organizations adopt and suggests ways on how to mobilize Christian churches to combat human trafficking in the local and international context.

Democratic Upset and the 15-M Movement. the Social Basis of the Political Crisis in Spain

Recent years have witnessed a great diversity of mobilizations in authoritarian political regimes (Arab Spring, Colours Revolution) and consolidated democratic societies (Europe, North and South America). Driven by the consequences of the economic crisis, the implementation of liberal economic programs in different social classes and the absence of significant democratic demands, citizens with a low level of previous political mobilization occupied the public space to show their discontent. The reasons are complex and, therefore, it is difficult to find a unique explanatory array that can be applied in all cases.

The Spanish case has served as an example to other subsequent mobilizations and although it displays obvious peculiarities, due to the depth of the economic crisis, it also presents similarities with other cases mentioned. The starting point of Malaysia's legal-political history is based on the premise of a plural society and the presence of race-based political parties. By plural society we mean the coexistence of various ethnic communities that interact with one another but at the same time are segregated each according to their various spaces, ideas and expressions. This phenomenon is in turn mirrored in the political structure and representation of the Malaysian National Front (BN) coalition comprising of the main political parties of UMNO, MCA and MIC which has ruled Malaysia for 56 years. This has significant implications. Because of this nation-building and nationalism is then internalised and expressed through the lenses of ethnic or separated narratives. Recent events have shown this. On July 9, 2011, despite police presence, tear gas and chemically-laced water cannons, tens of thousands of Malaysians marched through Kuala Lumpur to demand for free and fair elections. Bersih 2.0, a coalition of non-government and civil society organisations, had called for the rally. Focus group discussions with Malaysian Chinese youth participants indicate that there is an emerging new discourse of national consciousness and political unity that is acquired from participating in the rally. This paper attempts to discuss what this new discourse is. It intends to explain how it arose and has been articulated, and why this alternative discourse has emerged. Finally it attempts to raise some implications of this revived and renewed consciousness, and the possibilities it offers for the reconceptualization of a different Malaysian society.

Gender is an important lens through which we can interpret the role of education in society and the ways in which it contributed to social change in late modernity. In this presentation, I will focus on the following three points; first, to understand gendered schooling and education in Japan, empirical data of Japanese education such as gender tracking, faculty components, the ratio of female teachers and principals, and female researchers in academic fields examined from a comparative perspective. Secondly, based on the analysis of the trends of articles related to gender issues in the journal of JSES, the reality of persistent inequality in education will be discussed. Thirdly, I consider the issues of inequality of gender and other disparities in Japan, knowledge transmission, power relations and reproduction within the era of Neo-liberalism.

Undermining Poor Women's Labor and Caregiving: State Welfare Policies, Social Workers and Differentiated Deservedness in Singapore

"Work-life balance" as public problem has come to the fore in Singapore as in other developed countries. Women’s capacities to balance wage-earning and caregiving has received a great deal of attention. In Singapore, research (including my own) has focused on the norms among middle-to-high income families that heavily involve foreign domestic workers and grandmothers. Less attention has been paid to the families and women for whom these are not viable options, and for whom "work-life balance" is a problem they lack access to. In this paper, I argue that the state’s approach in public policy has produced uneven outcomes for women across class lines and thereby deepened the reproduction of inequalities across generations. I focus on how the state’s welfare approach, with its principle of what I call “differentiated deservedness,” constrains the lives of mothers who are poorly educated and in low-income households. I first outline the multiple ways in which they and their needs are negated in Singapore’s pronatalist policies of the past three decades, before turning to a discussion of how the implementation of specific policies targeted at them, and the everyday practices of social workers who work with them, cast them as unimportant and undeserving both as workers and caregivers. I end the paper with a discussion of the importance of paying attention to this group of mothers: their invisibility in scholarship has up to now a myth that “everyone has maids” and obscures the multiple ways in which public policy has failed to address the needs of care in contemporary Singapore.
European and Latin American Higher Education Between Mirrors

Higher Education systems all over the world have gone through deep transformation and extraordinary expansion. In Europe, major transformations in higher education and, in place during the first decade of the 21st century, resulted mainly from the implementation of the so-called Bologna process. The main goal was to establish a European Higher Education Area which allowed an increase in international competitiveness, attractiveness and comparability between European higher education systems. Evaluation of results and consequences of the Bologna process has largely depended upon the evaluators’ perspective. At the political level, it is easy to conclude that the Bologna process has been successful since it allowed greater integration and harmonization between the various education systems of the 46 participating countries. However, at the institutional and local level, the response is more cautious due to the great variety of contexts involved.

In Latin America, timing was different since this was the first region where neoliberal policies were put in place, after Pinochet’s military coup in Chile in 1973. Several authors described the end of the 20th century in LA as the “lost decades” The beginning of the 21st century brought with it important changes to the scene. The election of progressive governments in some LA countries gave way to policies which favored redistribution of wealth At the same time, in some countries, with robust indigenous communities, their cultures were granted political and social recognition and intercultural policies were developed. It is not meaningless that it is precisely in LA, where the first neoliberal experiment was carried out, that the search for alternative policies and the construction of other rationalities were undertaken. This paper presents the results of a research project developed by the Network RIAPE, comprehending 31 universities from 21 countries of EU and LA, funded by the ALFA Programme through 2010-2013.

Institutional and Peoples’ Response to Cope with Growing Urban Challenges: A Case of Women’s Participation and Leadership in Poverty Alleviation in Chandigarh

Chandigarh has distinctly implemented urban poverty alleviation (UPA) scheme called SJSRY unlike other towns in the region. The women as ‘changes agents’ are heading various UPA activities in the city. The self help groups have been formed by the grassroot and for the women who not only catalyzes the women members but other women in the poor clusters to join the skill formation training programs for setting up self employment ventures to earn the livelihood and also to strengthen urban community development networks etc. Three major women based activities i.e., ‘Learning on Wheels’, ‘Eco-friendly Handbags manufacturing by HIV+ poor women SHG’ and ‘Women as Change Agent in Building Leadership and bringing change in their Community’ have recently won the prestigious ‘HUDCO Best Practice Award to Improve The Living Environment’. The new pattern of community leadership is emerging among the poor women. There is a positive initial response to the UPA activities in the city which seems to empower the poor women. The Municipal Corporation has formed a dedicated Cell with adequate staff to implement SJSRY and other UPA schemes. There seems to be democratic strengthening through enhanced participation and leadership of poor women in local decision making in implementing UPA program. They are able to articulate the voice and choice of disadvantaged women in a better way. The local participatory initiatives have multiplier impact on socio-economic conditions of the poor women. There is negligible poverty and better service provisions. The emerging pattern of women participation and leadership in Chandigarh is a positive step towards UPA, inclusive urban society, women empowerment and also coping with growing urban challenges. There are many success stories of emerging trend of women participation and leadership in UPA in Chandigarh which have been documented by the author for the paper.

The Transformation of Youth Attitudes to Economic Success in Japan

The purposes of this study are to reveal the transformation of youth attitudes to economic success in 2000s in Japan, and to consider the youth under unequalizing in the society which has a legacy of equality. Though the Japanese society has been seen as an egalitarian one from Western societies, it has been transformed to an unstable society with liquidity and disparity since the end of the 20th century. Particularly the situation of youth employment was becoming worse and has not recover after the bubble economy from mid-and-long term perspective. In this situation, the social challenge is how to recover people’s motivation not just current economic gap.

In this study, we analyze the quantitative data which was collected in Suginami (Tokyo) and Kobe in 2002 and 2012 by the Japan Youth Study Group. Respondents aged from 16 to 29 were randomly sampled. Major findings of our first analysis are summarized as follows: First, the percentage of young people who think of “individual effort” as the most important factor of economic success is little different between 2002 and 2012. Second, in 2012 the percentage of young people who think of “individual talent” as the most important factor of economic success is about 10% less than that in 2002. In contrast, in 2012 the percentage of young people who think of “family environment”
as the most important factor of economic success is about 10% more than that in 2002. This difference can be contemplated that economic success for the youth are transformed from the individual matter to the social matter. This may mean the penetration both of the sense of inequality and the awareness that this matter should be treated publicly, not personally. In the presentation, we will discuss the impact of this transformation on the Japanese society and youth.

The Pragmatic Social Theory of Sign in Shunsuke Tsurumi

While most critics may agree in applauding Shunsuke Tsurumi (1922- ) as one of the most influential intellectuals of post-war Japan, no one has recognized him as an eminent sociologist. The aim of this presentation is to show some sociological implications of his thought and methodology. His works should be categorized as sociology of culture and cultural studies. Shuneike Tsurumi's interest is in the life of ordinary people and in "pragmatism in Japan". He focussed on a lot of cultural things, especially writing practices of elementary school children (TSUZURIKATA), comics and KARUTA (a Japanese alphabet card game). His notions on the so-called "research of preferred mass" aim not only to find the roots of the resistance to the government and bureaucrats, but also to criticize the conventional, scientific, or professional intellectuals and sociologists. Sociology can't read and find the potential hidden behind the written words and thoughts of ordinary people, people who express themselves through work, games, talking, rhymes, and poems, and art. He named such practices as "marginal art"(Tsurumi [1960]1991). The influence of these implications are widespread in contemporary Japan, but sociologists such as Keichi Sakuta (1922-) and Shun Inoue (1938-) are the first to share and acknowledge the methodology and importance of Tsurumi's work.

In my presentation, I'll reconstruct Tsurumi's practices and works into "the Pragmatic Social Theory of Sign" through the reconsideration of his studies regarding the development of pragmatism in the US and Japan and his analysis of Japanese popular culture.

TERRIER, JEAN* (University of Münster, jterror_01@uni-muenster.de)
The Nation As Greek Gift? Marcel Mauss on the Ambiguities of the Nation Form

In 2013, Marcel Fournier and Jean Terrier published posthumously a book by Marcel Mauss, entitled The Nation. An article bearing the same name, collected in Mauss's Œuvres at Editions de Minuit, had long been known to scholars. That article, in fact, is only the first part of a much longer book covering three topics: 1) a historical sociology of the national phenomenon, 2) a presentation of what a so-called "national relations" may look like, 3) a reflection on the relationship between socialism and nationhood. Mauss started working on this book project during the war. To it, he devoted most of his research time in the subsequent years, until approximately 1924. The book was never brought to completion, but its huge manuscript can still be consulted in Mauss's archive.

It is this manuscript that Fournier and Terrier, after many years of archival work, have entirely transcribed and made public. This book sheds a new light on Marcel Mauss. It gives us a much better sense of his political thinking. It provides a new background against which to re-read and re-interpret his celebrated Essay on the Gift. Mauss' thought on national relations can be seen as one of the most articulate exponents of a "civic" concept of nationhood and as the spiritual father of the sociology of international relations. In this paper, I will present and explain Mauss's position on the nation and provide an assessment of the historical significance of this work.

Women, More Roles, Less Personal Leisure: A Case of Kanpur City

A need exists to understand leisure in the context of everyday life along with obligations and social structures. As women occupy more roles than men (e.g., Housekeeper, mother, caregiver etc.) they may have less time available for their own autonomous or personal leisure. For anyone who is in a caregiver's role, leisure as free time may be irrelevant. Within the role of being a mother, for example, women have many expectations that must be addressed for leisure to happen either personally or women within the family (Hunter & Whiston, 1991). The underlying hypotheses of this analysis is that more roles undertaken by the women, the more likely that the individual is to have less personal leisure. The present study takes the case of fifty household women of Kanpur City, through an interview questionnaire wherein leisure time vis-à-vis their roles were examined. A contradiction seems to exist between addressing the relationships and roles that are central to women's life and needing time for one. Establishing the findings of Wearing (1991), the present case finds leisure as a place where many women are involved and where traditional feminine identities and roles are often associated with putting women's wishes and serving men's leisure before most women claim their own personal leisure. The value of this research is in the theory that is leading to the broader understandings of how gender and roles affect the leisure possibilities of women.

Lessons From Uttar Pradesh and Bihar: Sport Development Initiatives and The Potential For India's Sociologies Of Sport

Despite the potential of sport development to highlight broader social complexities, sociologists in India remain disinterested in the area (and sport generally) as avenues of legitimate study. Yet, sport development programs provide sociologists opportunities to know and engage with body politics, questions of structure & agency, and social transformation. Accordingly, in this paper I draw on Bourdieu (1992; 1993) & Giddens (1990; 2009) to understand the construction and consequences thereof, sport development projects and the broader processes to which they are a part. I discuss my research with youth in two Indian states, and consider how sport development agendas are often confined by tensions, negotiations, and resistances contours of the local context.

The factors influencing sports participation has emerged as a point of interest among many academics (Wheeler, Sharon; 2011). In order to detect determinants of sports participation, a constructive and exploratory research methodology has been adopted. The data drawn upon in this study has a sample size of 500 interviews, spread over two States of India. The inclination of parents given their socio-economic background towards putting their children in sports shows a declining trend. Involvement and attainment in a 'field' are based on a combination of one's habits and cultural capital. With rise of income level, inclination towards sports does increase. In many ways sport represents a social 'field' (Bourdieu, 1992), a structured space of positions that impose specific determinations on those who enter it and this has been tested positive.

Rather than simply enhancing individual freedom and opportunity, sport-based programs serve as social control and regulation. Basic education is important for gaining foothold in sports in order to think of social neoliberalism. Social environment, geographical conditions, educational arrangements and the regional economy determine to a large extent if personal development and ambition are able to flourish.
In the United States there are still discrepancies in the number of women and non-whites who achieve top positions in STEM fields. Despite vast infusions of money by the federal government to address this issue, little has changed in the last 50 years. Additionally, while it is assumed that Asians are the one non-white group to dominate these positions, they are in fact still outnumbered by whites in comparison. In this paper, I examine a sample of 22 Asian students who are pursuing careers in STEM to better understand intersections of race and gender for this sample, and larger implications regarding the assumptions around racial and gender "equality" in these fields.
rupt our humanity and sociality. While, simultaneously, we are being presented with a modality of equipotentiality (Heidegger, 1962; Dreyfus, 1991, 1992; Verbeek, 2005) from within the frenzy of technological activity, which paradoxically inures us in our sociality and sociability. This contention is carried through to its articulation in Castell’s (2000, 2001) theoretical substantiation of the Network Society in the Information and Internet Age with a view to opening up and tracking into specific transformational dynamics of the new modalities of the social, economic, technological and the global. The aim behind which is to consider in which ways the Internet-based transformations offer themselves up as nodal points that gather oppositionality and sociability in the ‘virtual’ world. And by contrast consider the ways in which the latter dimensions of social being as predicated upon individualism are scattered throughout the labyrinthine ‘cyber world’. Taken together the paper seeks to think through how both moments of gathering and scattering are recast in the new global informational-intellectual division of labour as mirrored in the ‘Digital Divide’. We close this line of thinking by reflecting on South Africa as engaged in this Internet-based New Global Network, with its ambivalences and consider the incorporation of Developing Countries into the new global order as a function of new social inequalities and subject positions that are emergent and made manifest in one of its forms as ‘Scatterings’ of the ‘Digital Divide’.

THELEN, LIONEL* (European Research Council, lionel.thelen@ec.europa.eu)

The European Research Council... An Open Door For The Sociology Of 21st Century?

The European Research Council is the most recent and most successful Fundig Body created by the European Union. Why successful? Because it allows the funding of single research teams in all fields of Science (up to 2.5 million EUR for a 5 years project) and it is the sole EU funding body directed by a Council of top-notch Scientists.

The author is for now more than 5 years the Scientific Coordinator of the so-called SH2 Panel, bringing together 15 panelists – from Sociology but also from Anthropology, STS, Political Science, Religious Studies, Law and Communication Studies – in charge of evaluating between 120 to 200 proposals.

The way the ERC assesses proposals - singularly in Sociology – is quite peculiar and tends to blur boundaries between disciplines.

The evaluation procedure is done in 2 steps and, at step 1, each proposal is given to 4 reviewers. The latter are, frequently, not specialists from the main proposal’s discipline. It follows, that from, debates among them not only about the excellence of the proposal but also about its relevance in confront with its subject, hypotheses or methods.

This fruitful interdisciplinary debate 1) helps panelists understanding each other point of view while bringing them, in most cases, to a consensual decision about any given proposal; 2) gives interesting hints about the various paradigms in use in disciplines apparently close from each other; 3) raises a lot of questions about the fact that some disciplines seem more “successful” than others and 4) allows to grasp at best that having reviewers from different disciplines can have paradoxical effects for interdisciplinary proposals.

Such a debate is undoubtedly helping outlining the main features of Sociology as a discipline increasingly aware of the needed ‘porosity’ of its own boundaries and, by extension, of the other social sciences’ ones.

Marketization in Long-Term Care and Growing Inequality within Care Workforce: A Comparison of Sweden and Germany

Since the 1990s, two distinct processes of marketization in long-term care provision can be found in Sweden and Germany. First, professional long-term care services were restructured inspired by ideas oriented towards New Public Management. Second, tax deduction policies were established to create a new mix of (ir)regular domestic and professional care services. Despite the international character of the development, the existing structure of professional and (ir)regular domestic services at the beginning and the approaches selected, their effects on the infrastructure and on the situation of care (and domestic) workers differ significantly. In both countries, research findings indicate – however country-specific - patterns of a worsening of working- and employment conditions of care workers embedded in distinct processes of hierarchisation among care workers. The paper aims to compare pre-existing service structures, policy approaches, their effects on service restructurings and the situation of care workers.

Conceptually, the paper combines international comparative research on care policies and marketization and intersectional approaches developed within sociology to relate the effects of marketization to the emerging patterns of inequalities within the care work force based on gender, social class (training levels and positions) and ethnicity. Empirically, it will include documents and laws, literature review and representative statistics to analyze policy changes and existing- and changing infrastructure. Findings of a German-Swedish research project on the situation of professional carers with approx. 600 care workers in each country, will be used to reveal the country-specific restructurings and processes of hierarchisation within formal care provision, which is complemented by research on the developments within domestic service provision.

THERBORN, GÖRAN* (University of Cambridge, gt274@cam.ac.uk)

Göran Therborn: The Killing Fields of Inequality

This is a theoretical as well as an empirical book. Theoretically, it sorts out the differences between difference and inequality, it sets out a moral argumentation for why inequality matters, it presents a multidimensional analysis of inequality, and it lays bare the mechanisms of equalization as well as of inequalization. Empirically, the book is global in scope, historical in depth and multidimensional in range, analyzing life expectancy, health and body measures, and existential recognition, rights, and respect, as well as income.

It also tries to answer three puzzles: Why have the Northern welfare states failed on vital inequality? Why has existential egalitarianism been so (relatively) successful in the past fifty years? What is the connection between the concurrent inter-national convergence of income and rising intra-national inequality? The book ends with a discussion of the world politics of (inequality and the possibilities reducing inequalities.

The Potlatch of the Young, the Paradox of Excessive Intergenerational Solidarity in Aging Welfare States

In this paper a new theoretical model is applied to a research field that is somewhat fragmented, namely that of intergenerational solidarity in aging societies. Inspired by utilitarian considerations many scholars tend to problematize the lack of commonality and reciprocity characterizing intergenerational exchanges. As some generations are longer old and more numerous they may receive excessive support of the younger generations, especially in a democratic setting. However, in reality there is limited empirical evidence of intergenerational conflict and theoretical explanations of this paradox are dim. An integrated approach inspired by utilitarian considerations over more questions occur about how the legal rule of “posting is challenged. We distinguish here three different ways.

1) The first challenge is the existence of differences between legal and social rules. In fact the legal component is not opposed to the social component of the rule. It would rather be two sides of the same rule. There is not a peaceful legal side of posting and another conflicting social side.

2) The second extension of the legal rule we want to deploy in our research concerns the social regulations of conflict, agreements and collective action. They combine legal initiative, jurisprudence, the actions of the Labour inspection, the tribunal but also the initiatives of the workers themselves, the unions and employer organizations.

3) The third shifting from the legal rule is related to networks. The first element concerns the Portuguese community in France. Posting that is based in large part on channels mounted on the initiative or with the help of employers who are former Portuguese employees. The second element of networks relate here to interpersonal relationships. Indeed, recruitment in Portugal is often effective because a friend or a colleague did already work for the same company.

Understanding The UK Graduate Labour Market: An Occupational Approach

The UK graduate labour market has in recent times received a lot of interest within policy, media and academic circles. With relative high levels of under- and unemployment and growing differences in labour market outcomes for graduates, there seem to be a changing relationship between degrees, skills, jobs, careers and rewards. Our current understanding of the graduate labour market is currently lacking. We need to understand the graduate labour market in a wider framework rather than solely as supply and demand forces. There is a need to investigate as well as integrate how and where skills possessed by graduates are formed, what skills graduates offer employers, what skills employers want from graduates, how graduate skills are used and what impact graduates have on the workplace. Also, the majority of existing studies on the graduate labour market link labour market outcomes with aggregate educational categories and do not explore the role of skills and credentials within occupations or professions.

This paper explores the meaning of graduate skills within three graduate occupations and draws on qualitative in-depth case studies with software engineers, financial analysts and laboratory scientist in biotechnology and pharmaceutical companies. For each occupation it will show how and where skills are developed, and how careers are developed and maintained within the occupation. By focusing on the variation in development, demand, supply and deployment of skills the paper will highlight the heterogeneous nature of the modern graduate labour market as well as outline a renewed sociological understanding of graduate labour.
el turismo como un puente de intercambio material, cultural y simbólico entre los seres humanos; revaluar los recursos locales como herramientas para el disfrute de un tiempo libre de calidad; reestructurar la actividad turística a partir de una nueva escala de valores basada en la equidad, la eficiencia y la simplicidad; relocalizar la actividad turística abriendo la posibilidad de redescubrir los espacios de proximidad y así ayudar a una redistribución de los recursos mediante una actitud de cooperación; reducir los impactos negativos a través de la conciencia de la relación entre sociedad, tiempo libre y naturaleza. Este trabajo explora las coordenadas para pensar un modelo de turismo rural basado en los intercambios sociales como vía para vincular recursos, territorios y personas, que se beneficien mutuamente sin incentivar el crecimiento y la acumulación.

THOMAS, TANJA* (University of Bremen, tthomas@uni-bremen.de)

Naked Protest, Vulnerability and Power: Gendered Scenarios of Visibility and Protest

‘Allah made me visible’. This is what some young German women shouted while they were protesting IKEA’s decision to remove all the women from the furniture catalogue for the Saudi Arabian market. Protesting topless was meant to raise media attention and to get publicity; additionally it was unequivocally inspired by the Ukrainian feminist group ‘Femen’, which some have called one of the most successful campaigns of feminism in recent times.

In this paper I’d like to invite the participants to consider diverse examples of naked protests – e.g. fighting for peace and human rights in Liberia and Nigeria – from a transcultural perspective. In enacting nakedness as a performance of vulnerability and precariousness these examples draw our attention to particular corporeal actions, activities, practices, and events and they also clearly illustrate that the body signifies more than a site of cultural inscription. At the same time one can realize that such protest performances and their depictions in the media in particular have been criticized as self-commodification, as pornography reinforcing power structures of heteronomativity, and as the idea of the (post) colonial woman being offered as a spectacle. I argue, on the other hand, that these “rules” were taken for granted, and connected to broader ideas of ‘doing’ visibility and protest.

Laboratorios Sociales De Turismo Experiencial, Exploración Colectiva De Un Paradigma Decrecentista Para El Turismo En Areas Rurales

La presente ponencia estudia el caso de los laboratorios sociales de turismo experiencial, un espacio de exploración colectiva para el desarrollo de un paradigma de turismo decrecentista en la comunidad indígena mazatleca de San Francisco Oxtotiltlan, en el Estado de México. Esta propuesta vincula a las comunidades, la academia y la sociedad civil a través de una experiencia de viaje, orientada por los principios de respeto a la naturaleza, la dignidad humana, los valores locales, la cooperación social y la simplicidad voluntaria. En este sentido, cobra un especial valor el aprendizaje colectivo en el que los anfitriones descubren oportunidades alternativas para complementar sus necesidades materiales; y los turistas construyen una experiencia de viaje creativa, auténtica y enriquecedora. Estos laboratorios funcionan desde la articulación que la academia realiza entre las comunidades y los visitantes, y orienta sus acciones desde la búsqueda de alternativas para incrementar la calidad de vida y el derecho a disfrutar el tiempo libre. En estos términos tiene un especial interés la capacidad de reconceptualizar el turismo como un puente de intercambio material, cultural y simbólico entre los seres humanos; revaluar los recursos locales como herramientas para el disfrute de un tiempo libre de calidad; reestructurar la actividad turística a partir de una nueva escala de valores basada en la equidad, la eficiencia y la simplicidad; relocalizar la actividad turística abriendo la posibilidad de redescubrir los espacios de proximidad y así ayudar a una redistribución de los recursos mediante una actitud de cooperación; reducir los impactos negativos a través de la conciencia de la relación entre sociedad, tiempo libre y naturaleza. Este trabajo explora las coordenadas para pensar un modelo de turismo rural basado en los intercambios sociales como vía para vincular recursos, territorios y personas, que se beneficien mutuamente sin incentivar el crecimiento y la acumulación.

Figurative Methods: Towards 'Bridging the Gap' Between 'Transition' and 'Cultures' Research

The study of 'youth transitions' has consistently highlighted the persistence of class influence on life chances and opportunity. The study of youth cultures has had a more troublesome and fluctuating relationship with class. The foundational subcultural studies and more recent work continuing that tradition has been critiqued for (among other things) over-romanticising working class practice; finding 'resistance' everywhere; and having an unhealthy focus on the 'spectacular' while disregarding 'day to day'. Work done in 'post-sub-cultural' studies (including 'scenes' and 'neo-tribes') has been critiqued for giving too much heed to fluid notions of identity; ignoring structural constraints; and over-romanticising 'choice' in consumer culture. In general, youth researchers have tended to focus on 'people like us' or young people for whom we have empathy. There has not been a lot of work on what I would call the more 'mundane' and residual side of youth cultural practice. By utilising Tyler's 'figurative method', this paper proposes that tracing the use of terms such as 'bohemian' or 'hipster' can enable an understanding of the ways symbolic violence is disseminated at the same time 'class' tends to be effaced from public discourse. Rather than (just) seeing class as something that is static and to be measured, a figurative method can shed light on the ways classes are relational categories produced through constant symbolic and moral struggles. This can help bridge the gap between 'transitions' and 'cultures' research and work towards ensuring that youth researchers do not unknowingly reproduce harmful stereotypes. Further, figurative methods can enhance knowledge of the ways young people are represented and the impact this has on their experiences of social (in)justice, symbolic and material inequalities and moral economies.

Global Reflexive Hipsters Vs. Local Abject Bogans: Towards Understanding Inequalities in Youth Cultures

This paper looks at terms like 'hipster' and 'bohan'. Using 'figurative methods', analysing the ways these terms are operationalised towards young people in urban and popular culture can enliven global comparative youth sociology. These floating signifiers enable distinction to be performed while eschewing the very notion of class. Both terms are mostly used as a pejorative towards various youth taste cultures. The hipster is a global figure used in many English speaking countries. It stems from 'the cultural' and 'counter-cultural' and is often seen as a critique of the superficial, a rejection of the commercial, and a celebration of the unique. However, what is often overlooked is the way in which these terms can be used to reinforce and maintain existing power dynamics. By examining how these terms are used in different contexts, we can gain a better understanding of the power dynamics at play in youth culture.

Segmented Social Capital and Ethnic Diversity in the Work Place

Work places employing many highly skilled and low skilled migrant workers and members of ethnic minorities are interesting focal points for investigations of the potential build-up of social capital along and across ethnic and national lines. Factories, retailer shops, offices etc. represent social spaces with varying degrees of social closure, interaction and formation of social relations between different employees depending on the composition of the work force, the work tasks, working conditions etc. Therefore these social spaces represent sites in which workers may build-up social capital encompassing members of other social and ethnic groups in their networks. However, so far research has paid insufficient attention to the way in which social capital formation among immigrants, ethnic minorities and locals in the work place is influenced by issues such as race and class. Nevertheless, we may expect differences in relation to social capital formation depending on the composition of the work force (highly skilled vs. low skilled workers), working conditions (permanent vs. temporary jobs), ethnic origin (western vs. non-western background) etc. This paper addresses research questions such as: Which is the impact of increasing ethnic diversity among the employees on social capital in the work space? In which ways does social capital formation differ depending on whether the employees at the work place are highly skilled or low skilled as well as on racial and ethnic origin? The analysis will be based on interviews with 49 employees from three highly ethically and nationally diverse Danish work places. One of these sites employees many highly skilled migrant workers while the two others primarily employees low skilled workers, including low skilled immigrants and ethnic minorities.

Men, Masculinity, Travel and Tourism: Emerging Themes and Future Directions

While the implicit masculine position of the tourist gaze has been identified and foregrounded, understandings of specific male tourists have often failed to engage with the gendered notions of independence, adventure, embodiment and ‘risk’ which underpin much tourism experience and practice. Drawing on the author’s own ethnographic study of British stag party tourism in a Polish city, the paper will draw out key themes emerging from recent debates about the positioning of masculinity in the complex social interactions fostered by tourist mobility and the creation of new and developing tourist spaces. Through observing how tourist enactments of masculinity interact and potentially conflict with the gender performances of others, the stag tour weekend events an insight into wider notions of how masculinities are negotiated through embodied, relational, performative and embodied tourist participation. In particular, the notion of masculinities being increasingly fragmented and pluralised must be reconciled with the apparently straightforward and taken for granted ‘hyper-masculinity’ commonly enacted during the stag tour weekend. The paper suggests that the emergence of such male bonding rituals which are frequently based around excessive inebriation, transgressive behaviour and disinhibition illustrates the convergence of numerous emergent strands in men’s lives. As such, sociological knowledge of the stagg tourism phenomenon is a pertinent catalyst to wider discussions of themes relevant to the critical study of men and masculinity. In conclusion, the paper will suggest various future directions for the study of tourism and masculinities.

Perspectives on Environmental Justice in the North; The Case of Denmark, Sweden and Japan
What is the recent development of environmental movements (EM) in the North in response to the institutionalization and globalization of environmental issues and the speeding up of climate change? How and to what extent do activists link EM issues with those of global social justice? This article will present preliminary results from a 4-year research project titled Environmental movements in a globalized world: transformation and/or institutionalization? in a pioneering study of the EM in Sweden, Denmark and the Netherlands from 1990, Jamison et. al. showed how the development of the EM linked to national political traditions and to different strategies adopted by each state in dealing with social movements. 20 years later, we analyse and compare the current development of the EM in Sweden, Denmark and Japan. In all three countries, the EM face the challenge of global politics as parts of relatively strong national political consensus cultures. In Scandinavia, the EM is increasingly focusing on climate change, while parts of the traditional movement seem to be in decline. Local mobilization has given way to international networking and interaction on the global level via internet forums, websites and social media, a development that actualizes and articulates the idea of climate justice. The Japanese EM is comparatively weaker, but since Fukushima, the issue of nuclear power is giving rise to new movements and to heated debates regarding its pros and cons in fighting climate change. While the nuclear accident has pushed the climate issue to the background, it has also stimulated interest in energy and public debate regarding democracy and the fair distribution of risks in relation to energy.

The Power of Media Communication: How Propaganda Techniques Used in Advertising Influence Japanese Women

Media, as a communication tool, has a great impact on society. From the traditional simplex communication tools such as TV, radio, newspapers, and magazines, to the most current bidirectional communication tool, the internet, media has a great amount of influence on society. Media is a powerful tool that can influence a country's policies, shape public opinion, and even set the standard for societal norms. Consequently, research has shown that media outlets use propaganda within advertising. Advertising agencies skillfully manipulate female emotions, in order to create and bolster a perpetual culture of consumption. As a result, this directly contributes to gender inequality.

The primary purpose of this paper is to analyze how media propaganda influences females in Japanese society and the impact it has on their lives. Additionally, this paper will detail how media outlets use propaganda techniques, which have proven to be the most effective in targeting female audiences. This greatly affects how females view themselves and their roles within society.

Social problems including, excessive consumption, identity, and gender inequality, are viewed as generalized social problems. These social problems are often ignored or downplayed by the mainstream media. This paper will engage in a historical analysis, to include the studies that have been conducted, concerning media propaganda on women in Japan.

Although, the news media is supposed to report objectively, studies have shown that notion to be false. The news is often skewed to serve the interest of the power elite. As a result, the news media often reinforces the dominant social ideology. In Japan, the dominant ideology is largely male-oriented. Similarly, this paper argues that the propaganda techniques used by advertising agencies, even as a byproduct, serve that same purpose: to maintain a male-dominated power structure in society.

Gender Segregation in the German Vocational Training System

Transitions from education to work are known to be particularly smooth in Germany. This is mostly attributed to the “dual system”, which combines firm-based training and vocational schooling (Müller/Gangl, 2003). In the dual system trainees spend 2-3 years in a company as apprentices and acquire firm specific skills. Both firm and apprentice thus invest in the training which leads to a mutual commitment and a high probability that the apprentice is taken over by the company after training.

However, the German vocational training system does not only consist of the dual system but also of school-based vocational training. In these schools, the contact to potential employers is limited and the curriculum is not firm-specific. We therefore expect that the transition from education to work is less smooth for trainees from school based vocational training. They should face a longer transition period and/or more job mobility.

As gender specific occupations coincide with the type of vocational training, training types are highly gendered in Germany. Women are more likely to enter school based vocational training. We therefore expect that their pathways into employment are less straightforward. The lower firm-specificity of their skills and the lower commitment of employer and employee also should lead to higher job mobility.

We use the German National Educational Panel Study (NEPS). This dataset consists of detailed retrospective lifecourse information about educational and occupational biographies of approximately 11,000 individuals. We examine transition patterns of German women and men after completion of their vocational training and assess how much of the gender differences in the duration of the job placement process and early career mobility can be attributed to the type of training.

HOLDGRUN, PHOEBE (German Institute for Japanese Studies)
Political Participation and Procedural Utility from a Gender Perspective: Activities in Neighborhood Associations in Japan
Political participation and participation in the community is often associated with higher levels of reported subjective happiness, but in the case of Japan a negative correlation between activities in neighborhood associations among female members was found by Tiefenbach and Kohlbacher (2013). The current study uses data gained from an online monitor survey (n=1600) conducted in September 2013 in Japan to get a better understanding of the relationship between happiness and participation in the community. A special emphasis is put on the sources of procedural utility (competence, autonomy and relatedness) as well as on voluntariness and loneliness as moderators and mediators of the effects of participation on happiness. Preliminary results suggest that participation in the community leads to higher or lower levels of happiness depending whether it is conducted voluntarily or not. In either case, participation leads to lower levels of loneliness, which in return has a positive effect on happiness. Finally, the sources of procedural utility can be linked to higher levels of happiness, but significant gender differences can be observed.

Historic Preservation of Significant Cultural Sites in Taipei: Comparing 2 Case Studies in the Aspect of Cultural Heritage Management

Cultural heritage management has traditionally been concerned with the identification, interpretation, maintenance, and preservation of significant cultural sites. The public face of CHM, and a significant source of income to support continued management of heritage, is the interpretation and presentation to the public, where it is an aspect of communicating with govern- ment and the public is therefore a key competence.

The thesis focuses on 2 sites in the city of Taipei, Taiwan. Both targeted case studies are defined as art spaces of cultural property organized by Taipei City Government. Spot-Taipei Film House, built in 1926 with a southern colonial architectural style during the colonial period, was originally the residency of the U.S. Ambassador. Once closed due to Pacific war and reopened for the residency of the U.S. Ambassador under the rule of Republic of China. It had faced another closed due to U.S. changed its diplomatic recognition to PRC. Tsai Jui-Yueh Dance Research Institute, built in 1920, was a Japanese style house for the residency of the Japanese Governor. The later owner, Ms. Tsai Jui-Yueh, a dancer who was educated in Japan during the Japanese colonial period, had settled her dance studio in the dwelling, held a 24-hour-long creative activism to save it from demolition by the later ruling government of KMT. This paper will look at Taipei city government's action toward the two historical buildings. How did the two dwellings process their way to become cultural heritage? The difference movements represent the interpretation and preservation of the space. Additionally, the thesis will review how the two culture heritage presents themselves to the public as well as the spatial reinterpretation of Taipei citizen.

‘standpoints’: Attitudes to Global Justice Among Young People and Youth Workers in Ireland

This paper draws on an empirical study of attitudes among young people and youth workers in Ireland towards development and global justice issues, and of initiatives taken in youth work contexts to raise awareness and promote action in relation to such issues.

Young people's views ranged from the very knowledgeable, critically aware and insightful to the uninformed and apathetic, with the majority in between these two positions, showing some limited knowledge of global issues or relationships but an appreciation of their relevance and a willingness to explore them further. Youth workers (particularly but not only those with direct development experience) for the most part showed a high level of knowledge and awareness of global issues and on-shuffling, and of the links between the global and the local. There were however considerable divergences of opinion among them as to the interpretation of certain key concepts, including 'global justice' itself.

Some young people gave examples of actions they had taken themselves in response to global issues and concerns for example decisions about where or what to live; but respondents on balance felt relatively ineflectual with regard to such issues. While the youth workers were much more likely than the young people to say that they thought they could make a personal difference to how the world works, there were very different views of how this could be done; and the researchers noted that workers commonly spoke in terms of what they could or should do in response to development and global justice issues rather than describing what they had done or were currently doing. Overall the research suggests that there is a high degree of ambivalence regarding the nature of global justice, the operation of key, related concepts such as power and agency and the relevance of these to youth work practice.

Transnational Somali Families and Resilience: Experiences of Two Generations

This paper draws on an empirical study of attitudes among young people and youth workers in Ireland towards development and global justice issues, and of initiatives taken in youth work contexts to raise awareness and promote action in relation to such issues.

Following the civil war and collapse of the Somali state, sizable Somali diaspora may be found in particular in North America and Europe. In Toronto alone an estimated number of people of Somali descent is around 100,000; in Finland the corresponding number is about 15,000. In many places of resettlement Somali migrants have faced challenges regarding education, employment, housing, discrimination and racism. Also economic recessions have contributed to low-income status of many Somali families, where not only the first generation, but also the second generation often ends up in low-paid and precarious jobs. A family unit, including transnational family connections, is important for increasing the overall resilience, wellbeing and safety of of both generations.

This presentation will address the role of (transnational) family as experienced and narrated by both Somali parents and their children who have grown up in the diaspora. What kinds of expectations do parents have towards their children as part of the family? What are parents' strategies to support and protect their children and youth? In which ways do the children – young adults – contribute to the wellbeing and resilience of their families? How do they feel about and relate to transnational family members, including those in Somalia?

The presentation is based on ongoing research on transnational Somali families in Canada, Finland and Somalia, funded by the Academy of Finland (2012-2017). The data consists of ethnographic interviews of two generations in the families of Somali descent residing in Toronto and in Helsinki. In addition, transnational family members in Somalia and some European countries will be interviewed.

“Generation IV” Nuclear Reactor Design Project As A Controversial Innovation Process: A Qualitative Study of the French Case

This communication aims to qualify the socio-material and organizational processes that affect local and institutional decisions related to the design of future nuclear reactors in France. In the post-Fukushima context, nuclear risk is less and more or less tolerated by society. Yet, France, along with thirteen other countries, is currently engaged in the design of new generation nuclear reactors, known as “Generation IV”. The “GenIV” concept and the renewal of interest for these technologies are linked to the launch in 2000 by the USA of the “GenIV International Forum” to coordinate researches’ efforts on a global scale. It led to the identification of four “GenIV” objectives: highly economical, minimal waste, proliferation resistant and safer. Six concepts are currently being researched. Even if these designs are not expected to be available for construction before 2020, they arouse oppositions and remain highly controversial.

Our proposition builds on an on-going empirical study of the ‘new reactors’ design process in France, where one concept appears dominant: the sodium-cooled fast reactor, supported by the CEA. However, this choice is disputed, especially by academic scientists who try to re-open the choice. Based on qualitative data, we analyze this innovation process as an “interactive chain” (Callon et al, 2002) that involves distinct actors (Latour, 1987), both humans and non-humans, from university labs to industrial production unit, through industrial research centers and political organizations. By observing innovation “in action”, we aim at showing how the “uncertainty/irreversibility” dilemma is collectively managed through the construction of scenarios relying on explicit and implicit hypotheses. We want to demonstrate how the positioning, the power and the level of knowledge of the different actors guide the hypotheses’ formulation and can support technological “lock-in” phenomena, finally affecting the innovation process far from being of a pure rational choice based on the four “GenIV” criteria.
multicultural, pluralist, inclusive and respectful of the missions of service public-co (los pueblos originarios, ocupan un lugar privilegiado en este nuevo sistema audiovisual).

Por primera vez el debate legislativo argentino implicó una participación ciudadana digital sin precedentes. Mas de 300 organizaciones sociales, sindicales y comunitarias y mas de 12,000 personas (inconformes con el modelo audiovisual en vigor) participaron, desde el 2004, a esta discussión a través de foros y debates con el objetivo de lograr un consenso institucional y social. Como resultado de esta iniciativa ciudadana llamada “Coalición por una radiodifusión democrática”, se elaboró en julio 2008 un texto de 21 puntos que fue tomado en consideración por los legisladores argentinos. En este contexto, el activismo de las movilizaciones sociales orientado a participar al proceso de transformación del sistema audiovisual se vehiculó a través de la utilización de las redes sociales.

Esta ley debió afrontar una fuerte resistencia del sector privado y que pa-
dece hoy en día las consecuencias de un sistema político-jurídico anómalo (frente a su eficacia como consecuencia de su judicialización) sigue siendo el centro de movilizaciones sociales generadas a través de la red. El objetivo de esta comunicación es de presentar esta experiencia argentina, de entender esta participación en la esfera pública, de analizar la fuerte expansión del uso de la TIC en diversos sectores de la sociedad (en especial: los pueblos originarios).

Identidades Políticas y Culturales. Entre La Crisis Económica, Mediatizaciones y Tecnologías

Esta ponencia tiene como objetivo presentar los avances de una investigación que estudia los procesos constitutivos de las identidades políticas y culturales en relación con las actuales formas de implicación y participación de los sujetos en el espacio público.

Al mismo tiempo, se propone presentar reflexiones sobre las prácticas culturales con el fin de analizar las características más sobresalientes de la interacción de la sociabilidad propia de las relaciones que establece la población con las instituciones del orden público y social.

Los resultados aquí presentados contribuyen al conocimiento de la constitución de identidades en relación con los procesos de mediaticización actualizados, en los sistemas derivados de las tecnologías digitales y la crisis económica y financiera de la fase actual del capitalismo.

El contexto empírico de la investigación se sitúa en dos universos institucio-

nales y urbanos: la ciudad de Toulouse (Francia) y la ciudad de Rosario (Argen-
tina), en el marco de sus respectivas regiones. Dos sociedades pertenecientes a dos países que también han sido diseñadas como ciudades potenciales comunes como hermanamiento entre sus respectivas autoridades en 2008.

Existen dos corrientes de investigación que encuadran de manera diferente el objeto de estudio: uno se ocupa por un lado, todo lo relacionado con la llamada videopolítica y sus derivados en el desarrollo actual de las tecnologías digitales. Por otro lado, la tradición de la participación social, que se centra hoy en la emergencia de nuevos actores. La cuestión que aquí se presenta es heredera de las dos tradiciones, poniendo en evidencia la existencia de un nuevo orden político sesgado por la mediaticización y la comunicación digital en un contexto de creciente crisis económica.

Workers Who Organize in the Public Square: A Comparison of Mexican and U.S. Informal Worker Organizing Models

The growth of informal employment in Mexico and the United States cries out for solutions. For informal workers, unprotected by existing laws, this requires developing new and distinct organizing strategies, and building alliances. Our study uses case studies of organizing of informal workers who contest over the use of public space in the two countries to understand this process in comparative perspective.

Our central questions are:
- What forms does this organizing take in the two countries? How and why are these forms different between the two?
- How do informal worker organizations formulate and implement their strategies, and how do they target and develop alliances, in the two countries?

“Common sense” arguments for participation in movements like the environmental movement often refer to grievances, or beliefs, as key factors that give rise to participation. However, structural analysts have demonstrated that neither discontent nor ideology are sufficient conditions to explain social movement participation. Rather, while discontent and beliefs might help to define those who might potentially be mobilized, individuals need to be connected to other movement participants in order to become active. We explore the relationship between social network ties and participation in the Canadian environmental movement. Data are from a self administered questionnaire, collected from nation-wide probability samples of environmental organization members. We find that ongoing participation is positively associated with ties to individuals in a range of environmental organizations. This effect is net of positive effects for identification with the movement, and the respondent’s NPS score, on participation. Past participation is the strongest statistical predictor of network embeddedness. Thus we argue that both “social selection” and “social influence” effects are in play. People develop ties through their participation, and are more likely to participate in new activities because of their ties. We further examine the mechanisms underlying these patterns, and discuss practical implications of these insights.

Social Media Use for Contentious Politics: Facebook-Activism Against Imposed National Education Curriculum in Hong Kong

This paper examines the use of social media for the protest against the “Moral and National Education” curriculum in Hong Kong. Employing media content analysis and archival research, it explores how social media use facilitated grassroots movement organizations and stimulated cyber-activism among atomized users in practice. On 30 August 2012, a local student organization – Scholarism – went on a hunger strike. Occupying the public area in front of the Headquarter of the Hong Kong Government, members of Scholarism protested against the controversial curriculum imposed by the Education Bureau. In the subsequent days, tens of thousands of people joined the protest. Nine days later, the government succumbed to the pressure and retracted its plans. While new information and communication technologies provide the technical infrastructures for organizing movement campaigns and protests, various uses of new media configurations offer flexible mechanisms for people to take part in contentious activities. During the occupation protest, Scholarism eagerly employed Facebook technologies to coordinate collective actions and mobilize participants. At the same time, numerous users made active use of Facebook to communicate about the movement, forge social networks, produce alternative knowledge, and create innovative protest activities. As diverse actors simultaneously undertook online activism, the patterns of their computer-mediated communication facilitated the emergence of counter-publics and the development of movement practices and culture. Borrowing insights from the growing theory on computer-mediated social movement patterns, this paper argues that new media use modified the relationship between social movement organizations and individual users, and permitted alternative forms of civic engagement for democratic participation.

Blood Sacrifice, Instant Celebrity, Organization and Mobilization

The paper deals with cases in which almost unknown persons, because of a tragedy, suddenly jump from anonymity to the civil sphere converted in celebrities with great capacity for civil intervention. These celebrities owe their instant fame to the fact that they are closely related to the victim of a bloody tragedy: the kidnap and murder of a child, a wife or a husband.

The paper will concentrate in these aspects:
1) The casual birth of a new (involuntary) celebrity, because of a bloody tragedy.
2) Scandal, annoyance, desperation, and new tragic stars in the media.
3) The re-edition and impact of the old myth of sacrifice, blood spilt and redemption.
4) The effectiveness of the myth that tragic death of an innocent victim is a sacrifice and sacrifice should be useful and deserve compensation.
5) The great impact of bloody sacrifice symbol. Bloody sacrifice and “conscience crisis” (Habermas).
6) The great possibilities of social action and intervention of some of these people.
7) The different strategies, goals and routes of social action.
8) The discovery of the possession of an unknown new great “magic” like power.
9) Amazement and improvisation of the action of the new celebrity.
10) Why some of the co-victims can develop social leadership and others don’t?
11) Resources for the mobilization of this mythical power.

Mothers’ Use of Terms Referring to Their Child in Japanese Conversations: A Conversation Analytic Perspective

This study examines ways mothers refer to her child in conversations in Japan from a conversation analytic perspective. Conversation analysis is a method- ology to examine real-time interactions from the perspective of the participants themselves (Sacks, Schegloff, and Jefferson, 1974). Person reference has been among the major topics of conversation analysis since the seminal work by Sacks and Schegloff (1979). Studies have shown that forms of reference can do a special interactive work other than referring to (a) person(s) (Schegloff, 1997; Stivers, 2007). For instance, Oh (2010) shows that Korean speakers use a quasi-pronoun based on the distal demonstrative ce (‘that over there’) in referring to a co-present third person in order to distance themselves from the referent. In this study, I focus on the kind of interactional work mothers are doing when they use different expressions to refer to their child in conversations. My data were collected at two Kosodate Hiroba in Osaka, Japan. Kosodate Hiroba is a place where mothers of a very young child spend time watching their child and enjoy conversations with other mothers and staff members, often sharing their problems in child-raising and getting advice from them. I found that the unmarked form of a mother’s reference to her child is either the child’s name or kono ko (‘this child’), neither of which does anything more than refer to the child. By contrast, the mother’s use of kono hito (‘this person’) to refer to her child can do a special interactional work. For instance, mothers recurrently make reference to their child with kono hito when their child is explaining something, thereby expressing their knowledge that makes a complaint more easily recognizable because the word hito (‘person’) conveys that the referent has independent thought and is difficult to control even for her/his mother.

Improving the Quality of Volunteer Web Panels: Evaluating Propensity Score Adjustments Methods for the Volunteer Panel

With the rise of the Internet more and more data are collected via volunteer panels. These panels are not based on probability mechanisms and hence infer- ences are difficult to make. Post-survey adjustments techniques such as propen- sity score weighting are often used to improve data quality. However, which methods work best and which variables need to be taken into account differ per survey. In an attempt to structure methods of post-survey weighting techniques for the volunteer Leisure Panel, different weighting methods are evaluated as well as different weighting variables, such as behavioral, attitudinal, lifestyle, and socio-demographic variables. Results are compared to outcomes of a probabili- ty-bases panel (LISS Panel) and figures from Statistics Netherlands.

Investigating Response Quality in Mobile and Desktop Surveys: A Comparison of Radio Buttons, Visual Analogue Scales and Slider Scales

Mobile devices have smaller displays, touch screens and different methods of navigation compared to desktop computers. This may limit the amount of infor- mation that can be placed on a mobile phone screen and it can also affect how a survey is comprehended and completed. The most traditional rating scales in Web surveys are made from radio but- tons. Radio buttons require quite a lot of space, which is scarce on mobile devices like smartphones. However, for a limited number of response options can be pre- sented simultaneously. Otherwise, respondents have to scroll to see all response options which may bias ratings. Visual Analogue Scales (VAS) are operated by point and click: respondents move the mouse arrow to any position on the line and after clicking the mouse button a marker (e.g., a cross) appears at the very position. In contrast, slider scales have a handle visible directly on load of the Web page. Ratings are done by drag and drop. Both scales can either be implemented as continuous rating scales, or as discrete rating scales where only a limited number of different responses can be given. A continuous implementation is especially valuable if respondents use mobile devices like smart phone where an efficient use of space is required. A comparison is needed of radio buttons, VAS, and slider bars to see how they affect data quality on mobile phones compared to regular desktop completion. Finger navigation on mobile phones is less precise than mouse navigation on desktops. This could result in selecting the wrong (not intended) answer option in radio buttons. Slider bars or VAS might be more efficient in selecting the intended response option. The usability of question formats is conjectured to be related to the number of scale points.

TOIKKA, ARHO* (University of Helsinki, arho.toikka@helsinki.fi)

Energy Regime Change and Institutionalism: Understanding Developments in Carbon Capture and Storage

Many analyses of energy technology development disregard the importance of institutions and the interdependence of economic, technological, political and so- cietal concerns and events. I propose a dynamic institutional systems framework to integrate the various concerns into a simultaneous analysis and demonstrate the framework with case analyses on the budding developments of Carbon Capture and Storage (CCS) technologies in Europe.

The framework integrates cognitive institutionalism, Socio-Ecological Systems (SES) and socio-technical transitions theory. Institutions are the rules of the game in shaping human interactions; both formal rules, such as laws and reg- ulations, but also informal institutions through traditions, practices and beliefs. Individual but shared beliefs about energy regimes shape how the systems de- velop, leading to issues of technology lock-ins, incremental change, institutional inertia and path dependency.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
This paper focuses on self-referentiality in the mental models of stakeholders as a factor that shapes these issues. The institutions held by the actors are seen to organize in a nested mental model: the three levels of socio-technical landscape, socio-technical regimes and the innovative niche (Geels 2002) are seen nested holons or SESs.

This paper is based on case studies in Finland. The case studies are focused along two projects: one cancelled retrofit of a coal power plant and one case of technology in development, mineral carbonation. These two projects are deeply embedded in a national and international context, and the aim of this paper is to establish how stakeholder’s institutional self-referentiality affects the developments in the projects and what these project issues tell us about CCS and energy regime change in general.

KOCHA, ARHO* (University of Helsinki, arho.toikk@helsinki.fi)

Measuring Path Dependency in Politics through Text Mining

This paper demonstrates novel methodology to measure path dependency in policy-making. The method takes large text corpuses of policy documents, plans, scenarios, roadmaps, preparatory text and the like, and analyzes the flow of concepts, phrases and blocks of text as later documents inherit bits of earlier documents. The analysis proceeds by looking at relative frequencies of words and phrases in documents through a measure called term frequency-inverse document frequency, and translates this into two networks: the document-document network characterizes similarities and dissimilarities describing how conceptual usage is inherited between documents and the concept-concept network describes courses or network areas of concepts that are used together and start to institutionalize in the political language.

The paper demonstrates the method through an analysis of energy policies in Finland, where various technologies, policy tools, and concepts co-evolve and fell over a fifteen year period from 1997-2012, from right after joining the European Union, through the rise of climate change negotiation and the Kyoto treaty, and into a period when energy policy came to be incorporated with climate policy.

TOIVANEN, MARI* (University of Turku (Finland), matrio@utu.fi)

"Belonging" in the Study of Younger Generations of Migrant Background

This study analyzes the purchase of the concept of "belonging" to study identity formation among younger generations of migrant background. It is argued that "identity" has more usage as an empirical concept, whereas "belonging" provides more analytic purchase to grasp the underlying mechanisms of inclusion and exclusion that inform young people's identity formation.

The theoretical discussion will be informed by an empirical study on young Kurds' negotiations of belonging in Finland. The qualitative study looks at how young Kurds narrate their belonging in terms of various mechanisms of inclusion and exclusion, including institutional arrangements and (racialized) discursive categorizations. The broader theoretical premises of the empirical study lie on transnationalization, identity and narrativity, and the theoretical discussion leads to question the analytical edge of "belonging" and how it addresses the questions of who gets to belong and who does not. The case study shows that young Kurds construct a sense of belonging in terms of the discursive construction of national belonging and "otherness" in the Finnish context. The racialized boundaries of "Finnishness" echo in their narrations and position them as the "other", namely the "immigrant", "refugee" or "foreigner" on the basis of their darker embodied signifiers.

Floya Anthias argues that belonging, in contrast to identity, assumes access and participation, and becomes activated in situations of denied membership and experiences of difference. In this sense, it is suggested that "belonging" better captures the political dimension of feeling at home among the younger generations of migrant background. Such theoretical choices also bear consequences on the methodological questions. This study employs the intersectional frame to analyze the intersecting attributes of gender, age and ethnicity impacting research positionality and the interaction situations with the interviewees. Hence, the theoretical and methodological challenges of employing "belonging" in juncture with the intersectional frame will be explored.

The Impact of Community Size and Characteristics on the Articulation of a Doubled Security and Social Dimension: The Case of Urban Mediators in France

In France, an increasing number of local authorities have developed programs focusing on "urban mediators", which aim to reduce insecurity within districts referred to as deprived areas. These individuals make the rounds in such districts to ensure a calming presence for inhabitants as well as to speak with them. This street intervention allows mediators to meet with various persons distant from public services, such as drug addicts, juvenile delinquents, victims of domestic violence, or immigrants facing integration problems. This demonstrates that such interventions include security and social dimensions at the same time: The mediators intervene not only with persons who "cause" insecurity but also with those who suffer as a result of it. Therefore, they differ, on one hand, from the police, whose actions consist mainly of repression (Roché, 2004) and, on the other hand, from social workers, who intervene mainly in the long term as a result of requests.

These features led us to question the way the characteristics of different districts can influence the respective importance given to both dimensions (security and social dimension). The fieldwork and the analysis conducted since the year 2010 show that this action can be classified not only according to the degree of the municipal coordination but also to the community size (larger or smaller), the networks which the municipality has with other actors, and the social status and cultural background of mediators. This communication will reveal the impact of the principal coordination on the articulation of these two dimensions, the process of construction of partner networks around the question of the insecurity, and the interaction between urban mediators and inhabitants.

By Whom Do You Want Your Wallet to be Found in Ethnically Diverse Neighbourhoods?

The claim that ethnically diverse living environments drive down social cohesion between and within ethnic groups, remains disputed, despite abundant empirical tests performed all over the globe. The Netherlands have proven to be an intriguing test site for this so-called ‘constrict proposition’, as numerous studies – using different operationalizations of ethnic diversity and social cohesion, different data, performed in different time era and defining macro-level geographical units differently – reached rather similar conclusions: in general, ethnic diversity does not erode social cohesion. Yet, various questions remain. First, does ethnic diversity only drive down trust in neighbours of ethnic outgroups or also trust in coethnic neighbours? Second, is the neighbourhood the crucial geographical unit of which one would expect (negative) diversity effects? And related to the second question how should we define the neighbourhood and consequently operationalize neighbourhood diversity? In this contribution we answer these questions through analyses of the Religion in Dutch Society 2011-2012 dataset, supplemented with unique GIS-data. Our dependent variables are so-called wallet-terms in which we systematically varied the ethnicity of the target of trust (co-ethnics versus outgroup members) and the location of the target of trust (neighbours versus non-neighbours). We introduced spatial thinking into the diversity-cohesion discussion and investigated to what extent the impact of ethnic diversity depends on the definition of the neighbourhood (administrative units versus (micro) social scale of the wallet). We applied spatial regression techniques and multi-level models to test our hypotheses.

Isolation of Children Who Leave Social Care Facilities

On the basis of the results of a qualitative study in a children's self-reliance support facility, this presentation will discuss the reason why children, who leave social care facilities, become isolated. In Japan, the social exclusion of children who are, or were, placed in these facilities has been a pressing topic. However, the relationship between the purpose of social care and the lives of the children who leave these facilities has not been sufficiently discussed.

The study was conducted in a children's self-reliance support facility (called "2") in this presentation) from May 2012 to June 2013. Beginning in September 2012, I conducted semi-structured formal interviews with twelve staff members. Each staff member was interviewed once or twice, and each interview lasted for 45-110min.

The results reveal the following: First, even children who overcome a particular issue while living in the facility may regress to their previous behaviors depending on the environment in which they live after leaving the facility. Second, children, particularly those who serve their time and leave the facility, are often compelled to choose between returning to their families and living independently. This problem is caused by a severe shortage of institutions that provide aftercare to children who leave such a self-reliance support facility. Third, although all staff members want children to depend on them when they confront difficulties after they leave the facility, in some cases, the children are sometimes reluctant to do so.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
On the basis of the above results, I will discuss the dysfunction of self-reliance as a social norm.

TOMA, KOTA* (Keio University, k_toma222@hotmail.com)
The Process of Children’s Socialization in a Group

This presentation will discuss the process of children’s socialization in a group. Although the socialization of children has been one of the most important research topics in sociology, the concrete aspect of it is still uncertain.

The study was conducted in a children’s self-reliance support facility (called “Z” in this presentation) from May 2012 to June 2013. Beginning in September 2012, I conducted semi-structured formal interviews with twelve staff members. Each staff member was interviewed once or twice, and each interview lasted for 45-110min.

The results reveal the following: (1) In Z, living with a group is optimally used to treat, care for, and socialize the children. In particular, their rank in their relationship, which is based on age or phase of treatment, plays a very significant role. (2) It is important to note that such a rank is not permanent. As the upper-class children leave the facility, or when a new child enters the facility, the rank shifts. (3) Moreover, the children do not uniformly experience the reconstruction of these ranks. Rather, it is an individual experience.

As indicated above, living in a group and experiencing the construction and reconstruction of ranks in their relationship take very important role in children’s socialization. This process can be interpreted as the process of “role-taking” in group dynamics. Moreover, such “role-taking” can be regarded as a type of anticipatory socialization that occurs after children leave the facility. I will conclude by discussing the implications of these findings for the field of sociology.

TOMALIN, EMMA* (University of Leeds, etomalin@leeds.ac.uk)
Gender, Development and the ‘De-Privatization’ of Religion

‘Poverty has a female face’ in many contexts, which has been exacerbated by the recent global economic crisis. Amongst the range of actors that have responded to declining levels of welfare support by the state are ‘faith-based organizations’, and international donors and agencies increasingly recognize these as significant ‘development’ partners. This ‘turn to religion’ within mainstream development policy and practice has taken place against the backdrop of a perceived ‘religious resurgence’ or ‘de-privatization’ of religion, which casts doubts upon earlier predictions that secularization and modernization are two sides of the same coin.

From a ‘gender and development’ (GAD) perspective, the ‘rise of religion’ coupled with declining levels of state welfare provision presents a threat to gender equality and women’s rights. The preference for ‘secularism’ amongst numerous women’s rights activists and GAD practitioners is no secret, and has been promoted as the best route for securing equality, freedom and security for women globally. Therefore, it is crucial to view the recent ‘turn to religion’ by mainstream development actors through a gender lens. This is not only because women are more vulnerable to poverty, but also because ‘religions have a male face’ (see also Tadros 2010; Tomalin 2011).

This paper examines the future of the ‘secular’ in the light of theories about the ‘de-privatization’ of religion and the implications this has for gender equality and women’s rights, which are central to GAD. Currently, understandings of religion that influence mainstream development policy and practice rely upon frameworks for analysis that are outdated and unhelpful for addressing the above concerns. Focusing upon examples from South Asia, I will demonstrate that distinctions between the religious and secular, the private and public, and the idea of a clearly defined hierarchy of religious status are unhelpful in addressing contemporary questions around ‘gender, development and the de-privatization of religion’.

Albulfuyo Ritual Healing: A Construction of Ethnicity of Filipino Immigrants in South Korea

The transnational movement of people around the globe has challenged migrants’ belief systems and their quest for well-being. The movement of people in itself is a form of ritual performance, a journey towards a dream and the aspiration to acquire a new sense of self and identity. The goal of this research is to illumine how immigrants reconstruct their ethnicity through access to the albulfuyo ritual healing of their homeland. In this paper, migrants are viewed as secular pilgrims who experience the manifold stages of liminality as they continue to seek well-being. Along the journey they suffer from pneumopsychemotic illness, which has to maintain connection with “home.” They romanticize the memories of their homeland. They access shamanic ritual healing, which brings into the real “here and now” the interplay of memory and the self’s narrative that defines their identity. The research is based on the ethnographic data collected April to June 2013 in South Korea. It focuses on the story of Filipino immigrants who experienced shamanic healing in their homeland and continue wearing the amulets given to them by shamans to prevent illness and protect them from evil while in a foreign land. The migrants’ definition of their “new selves” is shaped by the core institution of modernity.

Findings indicate that the root cause of disease from pre-industrial society to the age of globalization is emotion. Negative emotion breaks one’s social ties with the self, significant others, and the divine. Physical illness often stems from one’s spiritual sensibilities in his/her religious worldview. Also, migrants’ state of identity consciousness is “in between” – that is, “neither here nor there” – and they must undergo different stages of liminality in restoring selfhood. Thus, healing is an outcome of re-building relationships – practicing one’s spirituality and reconstructing one’s ethnic identity.

Development, Inequality, and Discrimination in Europe: A Comparison of Post-Socialist and West European Democracies

This paper uses the European Social Survey 2002-2012 to examine trends in discrimination, taking into account two different groups: those who feel discriminated against because of their ethnicity, and those who espouse xenophobic attitudes. The country-level relationship between feelings of discrimination and xenophobic attitudes calls for explanations that consider economic development and social inequality. A complimentary research question is: To what extent does social inequality influence feelings of discrimination and intolerant attitudes, beyond economic development factors, individuals’ socio-demographics and various personal outlooks? Our analysis covers post-socialist and West European countries (N>16) in the period 2002-2012. Multilevel regression analysis on the ESS data provides the statistical means to examine the effects of country-level and individual-level determinants and their interactions on feeling discriminated and on xenophobic attitudes. Economic variables at the country level include national income per capita and Gini index of income inequality. At the individual level, we focus on social stratification – education, occupational status, and income – subjective evaluations of standard of living, as well as a range of attitude measures. Results demonstrate how these variables are related to ethnic discrimination and xenophobic attitudes, controlling for political views and national orientations. We show that in post-socialist countries ethnic discrimination became more salient as society embraced party pluralism and freedom of speech. At the same time, in both post-socialist countries and Western democracies right-wing and nationalistic attitudes are strongly fuelling discrimination. At the end of the paper, we discuss theoretical implications of our findings for analyses of development, inequality, and democracy.

Peruvian Immigration to Chile: Racism and the Deskilling of Female Transnational Workers

Historically Chile has been a country of emigrants rather than a country of immigration. There are around one million Chileans living abroad. However, in the last decades immigration to Chile has accelerated. Immigrants from Peru, Ecuador, Bolivia, Colombia, China and Korea confront a hostile and racist society. The largest of these groups is formed by Peruvian migrants. About 130000 Peruvians live today in Chile. Of these, 60% are women, many of whom end up working as domestic servants. Peruvians have become a large group among domestic laborers, in particular as live-in domestics. Although the levels of education of Peruvians are higher than those of Chileans, they are consistently pressed into low paid work with little protection. By using a netnographic methodology I investigate how racism, that has historically casted mestizo Chilean women in the role of ‘namas,’ today surrounds Peruvian women into the homes of wealthier families and nationalistic, regardless of the levels of education and skills they bring with them at the time of immigration.

A Study of Policing the Protest in Japan: Effects for Social Movement Organizations and Arrested Activists
This study investigates the policing for social movements in Japan. Compared with other countries, a few studies empirically examined the policing in Japan. In 60s/70s movements, over 5,000 activists were captured by police. Though arrested activists had dramatically decreased since 1970s, policing still has an impact on social movement organizations (SMOs) and participants in Japanese political activism. In this study, interview and network data were collected to explore the role of policing for political activities from two sides: SMOs and individual participants. Three kinds of data are employed in this analysis: interview data, event data and network data. We could find some features of policing in Japan from event data. In Japan, policing is relatively not violent, but the period of detention is extremely longer than other countries. On average, protesters have been arrested from 10 to 20 days and SMOs have to do activity for helping the arrested person. On the other hand, seized participants face to the crisis collapsing their careers as a student, businessmen, housewife, and other roles in their usual life. Participants are arrested, some activists avoid taking part in and continuing the social movements. SMOs have to spend their money and time to release the arrested one from police, thus their resource are decreased and it is difficult to continue the movements as they used to be. Moreover, arrested activists sometimes break off with external relationship from the social movements: his/her offices, friends, and families.

**TOMOMATSU, IKUKO** *(Medical Chibakenai Clinic, i.tomomatsu@qmul.ac.uk)*

**Heart Transplant Recipient Identities: Between 'a Patient' and 'an Individual'*

This study explores how heart transplant recipients' (HTRs) post-surgery chronic conditions affect their identities, consisting of the roles of 'a patient' and 'an individual' in everyday lives.

HTRs need lifelong medical treatment to control their immune systems. After overcoming heart disease through transplantation operation, HTRs tend to think of themselves as individuals, while doctors see them as patients. Therefore, the experience associated with lifelong chronic conditions presents a difficult challenge for HTRs regarding their identity.

Three key theoretical concepts can inform the subjective experience of the lifelong chronic conditions: biographical disruption, narrative-based medicine and identity reconstruction. These concepts address issues of stigmatization of chronic conditions, loss of self, and reconstruction of identity following a heart transplant.

The participants for this study were recruited through 'snowball' sampling. Inclusion criteria required individuals age 20 and over who have undergone a heart transplant operation more than one year before the time of the study. Nineteen Japanese HTRs were interviewed by using semi-structured face-to-face interview techniques. All interviews were recorded and transcribed into a simple text. Interview data was thematically analysed.

The results of this study show that HTRs do not simply face an issue of 'loss of self', but reconstruct identities between 'a patient' and 'an individual' through experiences of stigma. HTRs' identity reconstruction process is primarily influenced by the location of the surgery, its duration, and the presence or lack of fund-raising support from the public. Depending on these conditions, recipients tend to experience stigma, which can be categorized as 'encoded stigma' or 'felt stigma'. Their stigma experiences are attributed to their relationships with doctors, family, friends, and the public. HTRs tend to experience 'felt stigma' than 'encoded stigma'. This indicates that HTRs' distress may be internalised; apart from the medical support, it may not receive enough support.

**Repoussées Par Le Travail Ou Attirées Par La Vie Privée ? L’inactivité De Jeunes Diplômées En Italie**

La montée des taux d’activité à intéressé les femmes de tous pays occidentaux depuis l’après guerre. C’est l’étude d’Italie plus tardive et plus rapide qu’ailleurs. Encore aujourd’hui, et encore plus le dans l’année après la crise économique, la composante de femmes qui travaillent ou qui sont prêtes à le faire demeure beaucoup plus basse que dans les autres Pays d’Europe même parmi les plus jeunes et le plus diplômées. Le recours à des explications culturelles est toujours à porté de main, mais ce est que rester à la maison représente pour autant d’Italiennes une véritable choix ou l’accomplissement d’un désir ? A partir des résultats d’une recherche de terrain qui porte sur les expériences d’un échantillon de jeunes mères au foyer titulaire d’un niveau d’études élevé on montre d’abord le rôle essentiel de l’influence de l’envie d’être au foyer. Non seulement pour tenir de l’activité, mais aussi pour leur condition tiens plutôt à la façon dont elles font face aux évolutions qui, avec l’austérité, ont caractérisé à la fois le marché du travail et l’organisation de l’état sociale y compris la disponibilité de famille d’origines à soutenir leurs enfants dans la conciliation entre vie privée et vie professionnelle. Dans un cadre de plus en plus caractérisé par la précaisation de l’emploi et l’affaiblissement de politique publique et privé d’articulation travail/famille, rester temporairement à la maison est aperçue, pour des femmes qui n’ont jamais expérimenté une insertion stabile dans le marché du travail, comme une façon de faire face à des impératifs professionnels et familiaux contradictoires. In ne s’agit pas, pour autant, d’une stratégie comme une autre. L’absence de toute sorte d’allocation et la réduction de dispositifs d’insertion et de formation continue, aussi que la persistance des inégalités soit sur le marché du travail que dans les ménages risquent d’enfermer ces femmes dans une condition plus que temporaire.

*Looking at Invisible Woman. the Experience of Housewifery in Contemporary Italy*

The contribution presents the outcomes of a research promoted by the Department of Political Science and Sociology, University of Florence. The aim of the research was to design an updated picture of nowadays housewives, as well as to investigate why so many Italian women still remain out of the labor market. In this study, we aimed to draw a so “individual” portrait of the research population, with a multiple methodology, reaching more than 500 women through online questionnaires, in deep interviews, meeting outside the malls and the schools, newspapers, blogs, etc. Outcomes show that the traditional label “housewife” is no more appropriate to describe a population more and more differentiated, with variable identities, professional histories, motivations, aspirations, ambitions.

The research investigate a high number of dimensions, nevertheless some of them (motivations, domestic life’s organization, role identification) allow to identify at least four different types: *grateful housewives*, *aged women*, who choose domestic life according to their traditional image of the family and firmly claim the value of their choice as well as a major social appreciation of the role of housewives; *tailored housewives*, aged women, who share a less traditionnal picture of the gender’s roles, has been employed and “adapted” to domestic life without represent themselves as only “housewives”; *forced housewives*, mainly women expelled by labor market, inactive because of extractions who experience domestic life as a sort of punishment and do not represent themselves as “housewives; temporary housewives”, generally younger and highly educated women who, considering the uncertainty of their professional life, invest in their family and consider their role of wives and mothers as moratorium, waiting for more favorable times in the labor market.

**The Coordination Mechanisms of Organizational Routines: A Case Study on a Free/Open Source Software Project**

How might distributed, peer-production organizations that rely on the Open Innovation paradigm sustain task specialization and achieve effective coordination in the absence of formal hierarchical control? This question is increasingly relevant because a number of production processes are being shifted from the physical to the virtual domain. Traditionally, scholars identified in organizational routines the building blocks of coordinated action in organizations. In this paper, we draw on the evolutionary perspective of organizational change (Nelson and Winter, 1982) to investigate the emergence and change of organizational routines in the context of distributed, peer-production communities. We argue that change emerges endogenously from routines - which we define as ordered sequences of actions linking problem-solvers and problems within organizations. More specifically, we investigate how routines emerge dynamically from the dual association connecting individuals (or “problem-solvers”) and tasks (or “problems”) in organizations. In particular, we ask: How do organizational routines (structured sequences of actions) emerge, evolve and persist despite demographic turnover of participants and the ever changing character of organizational problems? To answer this question we run newly developed class of Relational Event Models on the entire sequence of actions undertaken by software contributors on SourceForge during the entire lifetime of the RC51-825.2 server, a very large Free/Open Source Software (FOSS) project. By examining directly the micro-level, socio-temporal interdependencies generated by individual actions performed by problem-solvers, we find that self-reinforcing processes underpin the endogenous coordination of a decentralized production community, by fostering task specialization learning mechanisms. Different types of activities can coexist and be coordinated over time in a decentralized decision environment. Our analytical goal is to show how sequences of interdependent problem-solving actions become embedded in temporal sequences of relational events, which then trigger...
specific self-reinforcing mechanisms that provide the social infrastructure sust-
aining the production of F/OSS.

Age of Transition to Parenthood Among Married Adults: Social Determinants and Gender Difference

Using retrospective life history data from the 2008 Chinese General Social Survey (GSS) and event history analysis, this study investigated the timing of transition to
parenthood for both adult males and females for marriage cohorts spanning from 1965 to 2008. Within the neoclassical economic and second demo-
graphic transition frameworks, we expect that there will be a trend toward delayed
childbearing and a lengthening of the duration between marriage and first
child bearing across the cohorts. However, we found that a shortening trend of
marriage-first child interval across cohorts, and the more recent cohorts are
more likely to transit into parenthood net of other effects. We also found that
higher educated people are more likely to transit into parenthood earlier than
those who have primary or no education. We speculate that the trend in China
contradicts the tendency for delayed parenthood in Western countries due to the
resistance to change the traditional childbearing norm of “earlier parenthood af-
after marriage.” This is because child rearing is an issue involving extended families,
rather than couples’ own independent decision. Under the one-child policy, ex-
tended family can pool more human and financial resources that they utilize for
childbearing. We also speculate that increasing intimacy between newly married
couples in the more recent cohorts contributed to this trend.

An Institutional Approach to Autonomous and Connected Cities: Ostrom’s Distributed Metropolitan Governance

Global cities are the economic and cultural centres in the world. They compete with
each other for a number one status on various lists. International accessibil-
ity is essential for a city’s ranking and for its ‘supply of people, goods and resourc-
es, putting a city’s position in the international network of airports and harbours
and in the international economy high on the political agendas of national and
local governments.

Cities are constantly searching to improve their performance. Specialized plan-
ning models support city governments to deliver the various public goods and
public services that are expected from them. More integrated models, such as
the airport region and urban metabolism models, emphasize the tensions be-
tween international connectivity and local liveability. The extent to which current
institutions are capable of managing these tensions is questioned by stakehold-
ers. They search for institutional structures supporting the delivery of the public
goods promised, with a prominent position for questions of scale. Technological
developments have made these questions more urgent. The fast developments in
the field of renewable energy technology, smart grids and electric vehicles call for
rediffusion of roles and rules of consumers, producers, citizens, local, provincial
and national authorities and of the public goods delivered to them.

In this paper, we address the search for institutions that match today’s chal-
gen to by using the theoretical framework of distributed metropolitan governance
as developed by Vincent and Élénor Ostrom. With this institutional approach, we
explore current urban governance challenges in the Netherlands. To sustain their
competitive position in the global network, Dutch cities strive to become resilient,
self-organising and self-governing. We will explore how institutional mechanisms
as consociationalism and pillarization, as identified by Lipshart, which have proven
to be able to bridge conflicting values, are still relevant for a renewed conception of
distributed metropolitan governance.

Possibilities for New Forms of Resistance in the Neoliberal Era: Unification of All Rights Movements During Tekel Workers’ Resistance in Turkey

The working class has become overwhelmingly disorganized in the neoliberal
era partly due to the attacks on legal and institutional grounds of trade unions
and partly due to the transformation of working class itself. Dialectically enough,
the current phase of capitalism is pregnant with new crises and forms of resis-
tation as a result of increasing precarious jobs, jobless growth, insecurity and ex-
treme commodification. Under these conditions, unions are faced with altering
their strategies. A possible formula is to organize unemployed and precarious
workers as well as workers around counter-hegemonic united front on a non-ne-
gotiable defence of collective rights (right to water, rights to transportation, right
to shelter, right to decent work etc.). This study provides an historical account of
a working class protest which took place in 2009-2010 in Turkey. It argues that
this protest foretells the possibility of unifying all rights movements under an
expansive struggle for collective social rights. June 2013 mass protests in Turkey
also show that the sense of injustice is becoming stronger and felt increasingly
by those who are subordinated to all sorts of unequal power relations.

A Scientific Controversy Across the Channel : Unemployment Theories, Sociology and the Rise of Mathematical Statistics in the Early 20th Century

In the early years of the 20th century, on both sides of the Channel, social
reformers were struggling to define what « unemployment » could be. Political
economy, sociology and social statistics were mobilized in the process of shap-
ing the novel category. Defining unemployment scientifically seemed to imply
that the unemployed should be enumerated or otherwise transformed into solid
figures. Various statistical devices were imagined in both countries for trying to
solve that same puzzle, but quite different scientific languages were mobilized :
William Beveridge used the language of political economy (1909), Max Lazard that
of Durkheimian sociology (1909), and Arthur Bowley the new tools provided by
mathematical statistics (1912).

An argument developed in professional journals between Lazard and Bowley,
who doubted of the statistical techniques the other one was using : Lazard had
calculated an occupational unemployment rate, Bowley an index-number of the
variations in the volume of unemployment. In order to describe this controversy,
one can use the notion of « national scientific styles » and observe how tools circu-
lated between British statisticians and French ones, through the International
Statistical Association and an intense exchange of literature. The limited reception
of the correlation coefficient among French statisticians raises an interesting gen-
eral issue of the conditions of the circulation of knowledge.

Accounting for the difference between Lazard’s and Bowley’s formalisations
implies analyzing sociologically what they were designed for and the relations
that were being established between scientists and the users of their knowledge in
the respective labour administrations. In both countries, a close relationship between
scientists and administrators conditioned the development of abstract statistical
forms that could be applied to formalizing a new social issue and contemplated
public policies : in France unemployment insurance by industries, in Britain public
works providing jobs when an unemployment crisis would be looming.

Network Analysis and Spatial Analysis Combined : The Case of Reform and Philanthropy in 1900 Paris

Historical monographs on specific spheres of social reform are many when it
comes to the late 19th and early 20th c. In the largest industrialised countries of
the time — it was a « progressive era » for all of them. Every monograph points out
that a good deal of the characters involved were simultaneously present in many
other fields of reformist action — e.g. public health, housing reform, work
relief, « protection » of women and children, prison reform, social science, etc.
This invites scholars to cross the boundaries of specialisation and study reform
and philanthropy as a possible unified field of action, interaction and sociability.
This can be done through network analysis : voluntary associations used to pub-

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
lish reports and lists of leaders, members and supporters – by making the names of their followers public they increased the legitimacy of the cause. This circumstance made it possible to collect complete lists of members of 106 reform associations, totaling 17663 people in 1900 Paris. Two directories of Paris charities have been added to the data base, i.e. 1346 charities and 2060 people. Sources provide their initial address of the charities and most of the individuals. A GIS was set up that allows it to locate every address on the street plan of Paris (as of 1888). This material is exceptional by its quantity and systematic character. Using the data base, we can separately and simultaneously consider both social and spatial links : the affiliation of people to the same institution, the residence of people in the same building or neighbourhood, the co-presence of two institutions at the same address.

The paper presents the most interesting results and discuss the methodological solutions that had been developed for combining social and spatial analysis, and facing the problems related to the bulky character of the data.

**Negotiating Normalcy – Self-Narratives of Troubled Young People**

Young people's risk-taking is in most contemporary societies a matter of concern. Research on troubled young people who have been placed in out-of-home care shows that these young people more often than other young people are involved in risk-taking behavior such as excessive drug use. What is rarely investigated, however, is troubled young people's own ways of understanding their risk-taking behavior in the context of their everyday lives. This paper analyses the role of excessive drug use and its influence on young people's self-narratives about their everyday lives. The young people's drug use experiences continuously inform their perceptions of what they consider a 'normal' youth life and thus how they negotiate their self-narratives accordingly. This paper is based on 15 in-depth interviews with young people at age 18 who in their childhood have been placed in out-of-home care and have experiences with extensive drug use. Drawing on theories of stigmatization and normalization the paper demonstrates that what the young people conceive as a normal youth life is influenced by their drug use experiences and troubled childhoods. Their risk-taking behavior thus challenges their wish to create meaningful and coherent self-narratives and the result is often the creation of fragile self-narratives based on subtle negations of what they perceive as normal.

**Historic Environment as an Opposing Element to Inequalities**

Taketomi Island in Okinawa Prefecture is one of the outer islands near the southwest border of Japan. Its islanders have suffered two-fold inequalities for years. The area of Okinawa Prefecture was a small independent nation until 1879. This nation was defeated by Japan and subsequently annexed by the national government. Afterward, mainland Japanese, especially uneducated ones, began to regard these islanders with contempt as defeated people. Another source of inequality is the location of the island, which was peripheral even during its era as a small nation; the people of this small nation considered Taketomi islanders as non-cultured people. This tendency continued even after Taketomi's incorporation into Japan.

However, the “historic environment” that Taketomi islanders have preserved and created through an active movement in the last 30 years has changed their dismal situation dramatically. Preserving historic sites did not affect the situation; it only elicited widespread discussion of common shared values and examination of the daily lives of islanders. As such, Taketomi residents have created peculiar historic environments, which attract many visitors and tourists. In this process, they have faced the problems related to the bulky character of the data.

**Critics of Time in Modernity By Yusuhe Maki**

This presentation thematizes the series of works of Yusuhe Maki, which is the pen name of Munesuke Mita. He is one of the most prominent sociologists in Japan. In this presentation, I would like to focus on the works of Yusuhe Maki, and to define their significance and limitations.

For the above mentioned purpose, first of all, I will try to consider Yusuhe Maki’s series of works as a unified process in which his project of criticism about “time in modernity (characterized as irreversibility and linearity; Newton’s absolute time) has been gradually deepening. Maki’s critics of his initial works were based on Marxism, or strictly speaking, on theory of reification. For example, in Gendai no sonzai-ronsoku (Existential Structures of Contemporary Society) (1977), Maki carefully examined Marx, and in Ningen-Kaihou-to-Riron-no-Tameni (Toward The Theory of Human Liberation) (1971), he criticized the difficulties of an

**Navigating the Institutional Context in Late Life: The Function of Social Capital in Chilean Older People**

Some authors indicate that we should understand the macro processes affecting the social relations of older people in the context of the “accentuated modernisation”, which makes reference to the loss of influence of traditional social structures and communities in individuals’ lives and the greater responsibility that the individual has in shaping her or his life course. This description is in line with what has been defined as ‘individualization’ of modern society. In an individualized society individuals must constantly make decisions to conduct their biographies, which are no more—or at least not only— constrained by traditional and unquestionable assumptions and values. However, these biographies do not completely rest in free decisions because individuals can and must choose within the guidelines and norms imposed by the state, the market, law, education, etc. in order to manage risk. Some variants of this theory have mentioned the importance of personal ties in developing countries since they operate as key resources to be re-embedded into society and even as a central mechanism for social inclusion. Taking some elements of the New Institutional Analysis to analyze the current Chilean social policy on aging and in-depth interviews with Chilean people of 60-75 years old living in the city of Santiago, I examine how older people use their personal relationships to navigate their institutional context. I investigate whether the social policy on aging is related to the needs and resources of the older population and how individuals solve the gaps using the social capital embedded within their personal networks. This social capital can be used, for instance, to access to different types of support that are not provided by the policy instruments and to obtain help and information to negotiate with the public organizations.

**The Network Dynamics of Status Construction: An Agent-Oriented Modeling Approach**

Social Status is broadly understood as the position in a social hierarchy that results from accumulated acts of deference. In this paper we conceive the accumulation and process of individual acts of deference driven by dynamic network dependencies. We suggest that status hierarchies are produced – and reinforced – by the accumulation of acts of deference all happening at the dyadic level. We adopt Stochastic Actor-Oriented Models (SAOM) to examine the micro-foundation of status ordering by looking at dyadic relations of deference and by linking mechanisms of status emergence and reinforcement to testable dynamic network patterns. To this purpose we develop and test a model of status allocation that accounts for the unfolding of dyadic acts of deference as well as the resulting status dynamics in a group of individuals. We provide empirical evidence for our model using a longitudinal dataset that we have collected on a cohort of students enrolled in a professional management degree. We report empirical evidence that status hierarchies can be conceived as partially ordered sets structured by a tendency toward asymmetry and transitivity as well as perpetuated by status competition among the higher-ranking actors. We also confirm the results of previous work showing that both a socially endogenous inference mechanism (underlying the effect of actors’ previous deference position on their future deference rewards) and a socially endogenous investment mechanism (underlying the feedback loop between status and performance), contribute to the self-reproducing and self-reinforcing character of status hierarchies.
Social Capital in Late Life: The Case of Chilean Older People

Chile is experiencing an accelerated process of population aging. People aged 60 and older currently constitute 13% of the population. This proportion is projected to reach 28% in 2050. In this context, questions have raised about the quantity and quality of older people’s social capital due to the decrease in family size and changes at the value level related to more individualized societies. The theory of individualization proposed by Beck and Beck-Gernsheim states that in today’s society people are less bounded by traditional forms of representation and control. At the level of personal ties, this means that family members would relate to and help one another because they ‘want’ and not because they ‘must’ do so. However, the latter does not necessarily imply negative consequences on older people’s social capital, but rather it may produce a change of scenario. That personal ties can be developed based on voluntariness also means that older people can invest in relationships outside their nuclear family. From this stance, the practical and emotional help required by older people could be also sought in friendship relations and weak ties. Drawing on in-depth interviews with people between 60 and 75 years old living in the city of Santiago and secondary analysis of focus groups I aim to investigate whether the nuclear family is still the predominant source of social capital or, instead, older people are replacing or complementing family resources with other types of ties (e.g., friend, neighbors and/or state).

Gender and Education: Differences and Similarities in the Trajectories of Young Men and Women

The preliminary results of a longitudinal study, which has surveyed the same individuals at 13, 17 and 21 years old, indicate that there are convergences and divergences in the practices and attitudes of young women and men. Young women do better in school but, at the age of 13, they also report more depressive symptoms. On the other hand, at the age of 17 and 21, the trajectories of young men of both sexes are reshaped showing differentiations in some respects and similarities in others. Accordingly, young women’s initial educational advantages may not have promising effects, culminating, sometimes, in early interruptions or corresponding, afterwards, to precarious experiences in the labour market. Drawing on a theoretical framework which combines an intersectional gender approach with sociology of education, this presentation seeks to explain young people’s trajectories and the differences and similarities found. In order to do so, we will analyze the ways in which the trajectories of young people are influenced by factors, such as social background and class, parenting styles, networks of sociability, leisure-time, subjective well-being and physical and mental health, body image and risk behaviours. These relationships will be analyzed with descriptive and multivariate analysis.

Trust As Indicator of Social Consciousness in Russia
Social consciousness has always included many indicators: results of activity, needs, motives, values, interests and other indicators. Among them the significant place takes up the trust, which always reflects one of the main forms of comprehending existing social relations, and at the same time, level of knowledge, awareness and evaluation of the ongoing changes in the socioeconomics.

Role and place of trust in this sphere were studied in process of All-Russian comparative research of 1989 and 2012. The main goal was the comparison between the situation in the last period of Soviet time, when the market relations were beginning, and situation in Russia after 25-year realization of these reforms.

Data of this study showed, that there are the different tendencies in the development of trust. In connection with the division of levels of social organizations - All-Russian, regional, enterprises and personal - the researchers tried to analyze the specific features of trust on these levels.

This study showed that on the level of Russian society the trust to political, social, economic institutes to a great extent decreased. On the regional level the trust has the contradictory character in depending on situation in region: the reach or poor, agricultural or industrial, political activity and ethnic specifics.

Trust in enterprises depends from the forms of property - state or private, municipal or public company.

On the personal level the trust is increased and played the leading role among the kinds of trust existed all over the places.

Party Membership in Turkey and Members’ Participation during Local Elections in 2014
Party membership in Turkey and members’ participation during local elections in 2014
Scholars agree that since the 1980's there is a widespread disengagement from parties and party politics especially in many long-established European democracies, both at the electorate and voluntary party members’ level. They also agree that decline both in terms of numbers and members’ activities depends on different socio-economic and political factors explained by supply-side and demand led explanations.

This study is intended to present an overview of party membership levels and of participation in party activities during the local elections which will take part in March 2014 in Turkey. In this presentation we will evaluate “Party and membership decline” thesis and observe the current situation in Turkish case since 1980s. We will compare the number of party membership by using the official data which are registered in the Supreme Court of the Republican Attorney Generalship and observe the fluctuations or decline in each 5 years period between 1983-2013.

According to the scholars, there is a decline not only in numbers of the members, but also in members’ levels of activism in long established democracies. In order to see and understand the current levels of activism of the members, we will conduct a survey with different party members during local elections period in Izmir, which is the third biggest city with its population. We also plan to discuss the results of the survey and see whether there is a decrease in member's level of activism. Some issues guide our survey: Firstly socio-economic and demographic characteristics members have. Secondly why citizens enroll in parties and the third how they participate in party activities and to what extent they use new information technologies as participation methods during local elections in 2014.

Screening the 2001 G8 Summit in Genoa: An Italian Cultural Trauma
The paper is based on some results of a research project started in 2012 on the attack of the Diaz school in Genoa by the Italian police during the 2001 G8 summit. The school building was the temporary headquarters of the Genoa Social Forum. On July 21, 2001, shortly before midnight, mobile divisions of the State Police attacked the buildings. The police indiscriminately attacked the building’s occupants, resulting in the arrest of 93 protesters. During the raid the police violently attacked those who were in the school, injuring 82 people out of a total of 93 arrested. 63 arrested were taken to hospital and 19 were taken to the police station of Bolzaneto, where they were tortured. According to Amnesty Internationales these events represent: “The most serious suspension of democratic rights in a Western country since the Second World War”. The raid resulted in the trial of 125 policemen. However, none of the accused police officers were punished, due to delays in the investigation and incompleteness of Italian laws under which torture is not recognized. The design of the research includes 50 depth interviews to the victims, to the victims’ relatives, to the journalists, to Genoa citizens and to policemen of the State Police of Genoa. Moreover, it includes an analysis of all the cultural and media artifacts related to this case. In this paper the focus will be especially on the relation between cinema and the representation of this event in the national public discourse.

“Diaz. Don't clean up this blood”, a 2012 Italian-French-Romania film directed by Daniele Vicari, focuses on the attack of the Diaz school and on what happened in Bolzaneto. It is based on the testimonies and reports from judicial processes. The paper analyses how the film reconstructs the event.

Old Managerialism and New Professionalism? Social Professions Vs. Healthcare Professions
The aim of the paper is to discuss the tensions between the managerial and the professional logics, both at the theoretical and the empirical level. Original evidence comes from two qualitative studies (interviews) carried out in the Turin area, one on different occupations engaged in social work, and the other one on professionals engaged in healthcare-social team work. We move from a discussion of the nature of the managerial logic, seen as a complex puzzle stemming both from classical organizational theory (Scientific Management) and from the new institutional economics (Public Choice). Our findings suggest that in social work an “old” version of managerialism has been implemented, in which the managerial logic is reduced to hierarchical control. We then analyze professionals’ strategies adopted to cope with managerialism, as they result from ours and other studies on social workers and healthcare professionals. One strategy (cooperation) stands as a non-zero sum game in which professionals act proactively to include managerial tasks within their activities and shows that the managerial and the professional logics can be reconciled, though social workers seem to be less eager and/or less capable to adopt it than healthcare professionals. The significance of this for a new concept of professionalism is finally discussed.

Medical tourism as national economic development in Asia: comparative case study of Singapore and Thailand, versus Japan and Taiwan

Medical tourism development has been put on the national economic development agenda by a number of Asian countries in the last fifteen years. Beginning with the forerunners of Singapore, Thailand and Malaysia, subsequently other countries, notably India, the Philippines and South Korea, joined the fray. Most recently, Japan and Taiwan also declared that they would promote medical tourism. The governments of these countries seem to share a common policy goal in developing medical tourism, i.e. to increase foreign exchange earnings, expand medical and other ancillary services, and generate employment opportunities. However, each country has developed different strategies in targeting specific niches in the international healthcare markets. In this paper we compare state strategies, scholars, practitioners in the modern period of development of society and groups, with the position of the cultural and historical context, research approaches enriches the process of social cognition personality image of the world in a globalized world, the design and interpretation of environmental social reality of Tuva ethnos.

Intergenerational Dependencies: Retirement and Old Age in the Prism of Family Geography

If the family is a determining element at every age in life, it is even more at old age. At the same time retirement and old age are more and more dissociated. If the family is a determining element at every age in life, it is even more at old age. At the same time retirement and old age are more and more dissociated. What form does the family take for retired and ageing persons? How does the social constraint in family apply on its members?

The research undertaken until today has focused mainly on the one hand on the structural modifications affecting the households rather than the family and on the other hand on the residential mobility of the persons themselves rather than in the evolution of their environment. The aim of this research is to try to observe the spatial configurations and thus the places, not the individual or his household, but of his non co-resident family. When retiring, do individuals change their place of residence? Do they take advantage to move closer to their family? What about the following years when the individuals are ageing?

Based on a transversal approach we will choose three life periods (the active individuals aged over 55, the retired aged under 65 and the retired aged over 75) to observe which spatial family forms are dominating and if it is possible to establish a linkage between the life steps after 55 years of age. This work obliges us to take into account social and demographic characteristics of individuals and their families as their mobility and family geography depends on it.

This work builds on the survey « Famille et Logement 2011 », which collected data from 7500 households of both sexes aged 55 years and over. The survey gives information on the different places of residence of the children and parents of the individual questioned and thus allows for a mapping of the families of individuals at different age.

Revisiting the Boy Who Cried Wolf: Tornados and the False Alarm Effect

While the origin of the story is not clear, the 1867 publication of Aesops Fables brought "The Boy Who Cried Wolf" into the homes and hearts of many families. The story is simple and the message clear. It tells of a shepherd boy who lies to his community about a dangerous wolf to make people run to his assistance for his entertainment. The moral of the story is "if you don't tell the truth people won't believe you when you need them to." Its appeal is massive and cultures around the globe use it to extol the moral virtues of truth, honesty, and honor. It is somewhat unsurprising then that building on the very same logic, academics and practitioners have long debated the "cry wolf" or more often the false alarm effects of warnings. The question is simple: Are we somehow acting like that little boy and "crying (insert some weather phenomenon)" too often. Using a playful reference to the original fable, this analysis breaks down the key moral elements of the classic story and reinterprets their connection to current tornado prediction and patterns of risk perception as a way to help illustrate the range of complexities in need of targeted scientific research. We go on to provide scientific and quantitative analysis of the false alarm, and behavioral response to a series of tornadoes that occurred between 2007 and 2010. Contrary to most existing research, we do find a statistically significant false alarm effect among other important predictors. Conclusions discuss the importance and limits of these results and suggest further research needs.

The Impact of Social Segregation on Educational Achievement in France

Social and spatial segregation is increasingly present in debates on urban policy and in the analysis of the phenomena of violence among young people. In recent years the extent of social segregation among French secondary schools is mainly due to a greater social polarization in some urban areas. There have been little studies about social segregation mainly because of the difficulties to build a set of relevant methods and measures. The aim of this paper is to provide various measures of social and spatial segregation in order to assess the links between segregation, competitiveness and educational achievement.

Internet-Mediated Cooperative Norm Setting: In Search of Institutional and Organizational Success Factors

Norms are an essential mean of any social group, organization or society to solve the problems of social life and to accomplish common goals. In a lot of social contexts norms are the results of formal processes, in which representatives, authorities or experts develop and impose norms on their recipients (e.g. parliamentary legislation or acts of authoritative imposing of norms in organizations). Current developments show an increasing demand for direct involvement in the process of collective decision making. The demand for direct participation is mostly justified with reference to democratic ideals, but there are also empirical evidences that the “quality” of norms increase if affected individuals take part in their development (Ostrom 1990, 2007). With the term “internet-mediated cooperative norm setting” we (a research group located at the University of Düsseldorf /Germany) define a process of drafting, discussing and deciding on norms that are developed by a group and in which all members of this group can participate in.

For a successful implementation of an internet-mediated cooperative norm setting two challenges are to be met: First, the individual contributions must be aggregated to an outcome. Second, people need to be motivated to take part in a process which might eventually be longsome and cost-intensive. If these challenges can be solved, is dependent on context factors like the institutional embedding and on design factors like the forms of participation and the modes of decision making offered.

In this contribution, I will first outline the concept of an internet-mediated cooperative norm setting. Second, I will present a framework for the analysis of the institutional design. Third, I will present results of an empirical evaluation of a project of internet-mediated cooperative norm setting which was realized in the summer of 2013.

Concern Over Climate Change Among Young Australians

A large survey of young people in Queensland, Australia, indicates the majority believe that climate change is occurring, that the planet is warming because of greenhouse gas emissions and that anthropogenic global warming poses a serious risk to Australia. Parental education has an important influence upon the development of environmental attitudes among young people, with the children of tertiary educated parents much more likely than others to be concerned about planetary warming. A strong gender divide is also apparent, with young women consistently more concerned about ‘the environment than young men are. Political party identification has an important influence upon environmental concerns even among these 15-17 year olds, with young conservative party identifiers far less likely than Greens or Labor identifiers to believe that global warming will pose a serious risk in their lifetime, after controlling for beliefs in human induced climate change. The party identification findings point to an emerging support base of young Australians for parties that adopt a progressive stance on climate change among.

Loose Ties? Determinants of Father-Child Contact after Separation in Germany

Growing separation and divorce rates have shaped the image of the family in the new century. As a consequence of this development, parents are increasingly at risk of becoming single parents or of living separated from their children at some point in their life courses. Despite the fact that the share of lone fatherhood has increased in some countries, the overwhelming majority of children co-reside with their mothers after separation. Thus, non-resident fathers have become a growing group in all European countries. This raises the question of how the relationship between the child and the non-resident father develops after separation. The contact that these fathers keep with their children is a policy relevant issue which has been intensively addressed in prior studies for English-speaking countries mainly. We add to this research by investigating the determinants of father-child contact after separation in Germany, a continental European country with a slowly changing legal framework towards more paternal rights. Newly available data from the German family panel are used for our analyses. Preliminary results indicate that non-residential fatherhood is more prevalent in the eastern than in the western states of Germany.

The starting point of this study is the adoption by the European Union in 2000 of numerical indicators and benchmarks to compare and stimulate the performance of the education systems of Member States. It looks closely at the processing of this statistical information during both fabrication and diffusion. These tools for government have been developed within the international institutions created around the Second World War (UNESCO, OECD) in an attempt to combine the material well being and social harmony by shaping education to meet the challenges of the industrial world. This policy of reliance on numbers has created an increasingly voluminous structure, in permanent expansion as it generates new data. Its growth has been fuelled by new technologies that facilitate the direct collection of data on schools and classrooms. Because they increase the traceability of school careers and allow for more regular evaluation of schools and students, these tools are used by both management and social science researchers to improve education and administration. Presented as teaching aids, they are designed to improve teachers’ performance by allowing them to evaluate, classify and grade both their students and their difficulties. The phenomenon of quantification, by which we mean the activity of giving numerical expression to realities not previously expressed in this way, is considered here from three points of view - administrative, scientific and industrial - in order to provide an understanding of the origins and the effects of the avalanche of numbers on the vitality of our democracies and their inhabitants.

The Relationship Between Social Status and Health: A Conceptual Review

Although “health disparities” have been a long standing interest of public health researchers, the complex relationship between social status and health has only recently captured the attention of sociological students of social inequality. Indeed, the first appearance of a session on health at an RC 28 meeting was in 2003 in Tokyo. However, interest in this topic is expanding rapidly and it clearly is an important direction for future research by our community. The current paper reviews what is known about the relationships between indicators of inequality (primarily social origins, education, occupational status, and income) and health outcomes and also about the effect of health on subsequent socioeconomic status. The evidence regarding many of these relationships is equivocal. But, more importantly, when empirical relationships are well established, the social processes that generate them are often under-theorized. In this paper I attempt to lay out the theoretical basis for expecting particular relationships with the intent of encouraging new research. Research topics I will focus on include the following: • The effect of trauma experienced in pregnancy on education, adult socioeconomic outcomes, and adult health. • The effect of childhood illness and injury on education, adult socioeconomic outcomes, and adult health. • The role of education in affecting health behaviors and health outcomes. • The effect of social rank on health behaviors and health outcomes.
The effect of income on health behaviors and health outcomes.
The role of poverty as an added detriment to health.
The effect of health on socioeconomic achievement.
Methodological issues:
- Getting adequate retrospective data to measure childhood illness and injury in surveys of adults.
- Improving subjective health assessments through anchoring and other techniques.
- How useful are biometric measurements, including blood and saliva samples, in general population surveys?

In the first instance, race was an invention of Western imperialists who sought to justify their conquest of land and people, and racial thinking accompanied the capitalist accumulation that eventually engulfed the globe. Today, the philosophy and science of race has expanded beyond its role as justification and has become a means of accumulation itself. Indeed, the very purpose of race is to determine who gets prior rights and who is deprived of them. Maria Tetreau, in this paper, constructs an anatomy of race, or more precisely, establishes a theory of racial paradigms. This theory is empirically applied to racial thinking in distinct historical times and geographic spaces, to demonstrate paradigmatic continuities and ruptures with the global racial context. The idea is to explain how humans project racial thinking born 500 years ago into today's modern age, thereby perpetuating global racial inequalities.

In May 2012 the #YoSoy132 movement emerged as a strong political actor, asking for the democratization of Mexican media and criticizing the strategy of the PRI Party and its candidate, Enrique Peña Nieto. The available literature on the movement has repeatedly stressed the importance played by social media platforms, but few have problematized and nuanced the uses and the appropriations of these digital technologies. Drawing on an extensive review of the literature, on group and individual interviews with activists of the movement, as well as on digital and offline ethnography, in this article I explore the use of social media platforms by actors of the #YoSoy132 movement. In this paper, I argue that digital media played in the formation of collective identities, the organization of resistance and the virality of critical information. However, social media were also the origin of several conflicts and struggles within the movement, in relation to issues of surveillance, privacy and ownership. In conclusion, the article highlights that other digital communicative practices were more important for activism of the movement, and therefore urges to avoid "social media centrism" and insert their activities in a broad process of youth agency, empowerment and self-determination against the manipulation of Mexican mainstream media.

Violence in Mexico has increased exponentially, especially since the decision of former president Calderón to start the 'war on drugs' in 2006. During the six years of the Calderón government (2006-2012), victims of the narco-war were treated as simple numbers, 'collateral damages' of a necessary war to protect the 'security' of the Mexican people. The Movement for Peace with Justice and Dignity (MPJD) emerged in 2011 to expose the inconsistencies of the war against drug-trafficking, criticize the official discourse of the government and the media, and restore the dignity of thousands of victims of the narco-machine. Even if the MPJD represents one of the most important movements emerged in Latin America in the last decade, there has been a considerable lack of academic attention, in particular outside of Mexico, towards its practices and its achievements. Drawing on an extensive review of the literature and on in-depth interviews with key actors of the movement, this article aims to fill this gap by providing an analysis of its emergence, its repertoire of contention, its communication practices and the central role played by the victims.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
held in the West provoked fierce street protests, the summits held in Russia are widely and critically discussed online. Some intellectuals actively resist being complicit in the entrepreneurial discourse in their work and alternative discourses emerge. These discourses emerge by way of petitioning authorities. The lack of regulations regarding the predicament of evicted citizens; the absence of a program for the protection and innovation of cultural heritage of the city; an urgent remapping of the so-called “guarded zones” to accommodate the summits-related pressure to have enough vacant lots; and “a mess” (the metaphor of one of the interviewees) instead of systematic and logical administrative law-making—all these factors contribute to an increased “client-patron mentality” among active citizens. By “client-patron mentality” I mean the active citizens’ and political activists’ reliance on petitioning as the way for themselves to be heard and to get things done. Whether it is the only effective means to prompt the patrons to share a piece of the state budget pie or a quite efficient way to engage more public into discussions, petitioning prompts us to more closely look at the ambiguities behind genuine citizen participation.

TRUBINA, ELENA* (Ural Federal University, elena.trubina@gmail.com)

The Dialectic of Rationality and Irrationality of Urban Growth in Post-Socialist Urban Development and the “Classic” Capitalist One

It was during the 1970s that urban studies scholars began to analytically investigate the dialectic of rationality and irrationality related to urban growth. These pioneering analyses were a response to the early stage of the post-Fordist transition of Western economies and the emergence of competitive-based economic development. Having admitted “the general irrationality of the present urban system” (1978: 329), Molotch described the American urban system of the second half of the twentieth century, in which cities retained relative autonomy from the central government. For his part, David Harvey called cities “the irrational rationalizers” within the capitalist mode of production (1976: 112) and demonstrated why “the capitalist laws of accumulation” remain, for the time being, the only known laws of history. While both scholars emphasize a recurrent reconfiguration of urban alliances in order to cope with difficulties in financing the development of cities, Harvey, in his later work, described how neoliberal urban policies found a strong friend in the central state via neoliberalization of the state itself. Drawing on these path-breaking scholars, I argue that it is an irrational rationality which unites post-socialist urban development and the “classic” capitalist one. Today it is neoliberalism that figures as the global political rationality. It promotes market logic across all spheres of life. Part of this rationality is the expansion of state institutions. These act to broaden their administration into the practices of all societal spheres. Urban growth machines in Russia and elsewhere have embraced neoliberal policies and promoted global, market-led urban development. Since these processes have recently unfolded in the context of the global financial crisis, the growth machines often go awry. Yet this does not impede authorities at any level from investing, symbolically and economically, in the new iconic projects—by continually pushing forward the rhetoric of efficiency and growth.

Education and Future Well Being of Latin American Adolescents

Latin America has shown great progress in average education attainments during the past few decades. An increased participation of women in the education system occurred together with this education expansion. On average and in most countries, there are more girls attending school at all educational levels than boys. Women’s participation in post secondary education is also higher than men’s. In spite of this regional panorama favorable for women, there still are educational challenges to be confronted. This higher education level achieved by women is not being reflected later in their labor market insertion. Young women have a lower labor participation rate than men, higher unemployment levels, and a labor insertion in less protected sectors (with higher levels of informality, less productive, and with worse income trajectories).

Although this paradox is probably associated with labor markets’ historic discrimination factors, this paper seeks to identify elements from the education system that help to explain this fact. It concludes that although access barriers to the education system have been overcome by women, there is still a lot to be done in relation to the mechanisms that perpetuate the traditional socialization forms. That is, the process by which unequal and discriminatory gender stereotypes are still formed within the teaching-learning process, interfering with the prospects of equal labor opportunities. The paper also takes into account the gender differences within the reasons for aborting school early and how that impacts the design of appropriate social policies.

TRUCCO, DANIELA* (United Nations ECLAC, daniela.trucco@cepal.org)

Education and Inequality in Latin America

Latin America has shown great progress in average education attainments during the past few decades. Most countries are close to achieving universal access to primary education and some of them have the majority of the younger generations entering the secondary level. However, these same developments in education coverage and access have driven to an important stratification of learning achievements and attainments within the education systems. In spite of the numerous expectations associated with education as the principal mean for social mobility, this region of the world has not been able to transform the education system in a strong mechanism to equalize opportunities. This is partly related to the importance that household social and economic conditions have in determining educational achievements. Most of the time, this inequality is also reflected in increased segmentation of the inequality and efficiency of the education offer.

This paper examines the development of the main education indicators in the past decade among Latin American countries. Data from the countries’ household surveys is used to describe the main attainment indicators (coverage and conclusion by education levels and social groups); and data from some international standardized tests (such as PISA and ICCS) is used to discuss learning achievement inequalities. The document identifies the main challenges Latin American countries have in terms of education development and the reduction of inequality.

Cyclical Migrants: Canadian Hockey and Chilean Fútbol Players in the Twenty-First Century

This paper compares the temporary international migration of Canadian hockey players and Chilean football players under the logics of the globalization of neoliberal sports businesses and the increasing importance of temporary migration. By comparing these seemingly widely different cases we aim at showing the growing similarities in the structuring of the business of sports in both “developed” and “underdeveloped” countries. We also aim to show through the lens of sports how, in these two countries construed as magnets for immigration, temporary emigration has become part of the strategies of increasingly skilled labour forces faced with precarious employment at home, even when workers have different mobility capitals.

Disaster Capitalism and the Chilean Earthquake and Tsunami of 27 February 2010

This paper addresses the earthquake and tsunami that hit Chile in the early morning of 27 February 2010 and its regional and international resonance of the neoliberal state, the private and public press, and the large economic conglomerates to discursively, politically and economically profit from the catastrophe despite the weaknesses that appeared in the neoliberal state’s ability to prepare for the earthquake and for mitigating its consequences. It shows that a discourse of anomic and chaos fuelled by the press allowed for criminalizing the population, in particular the poor, and for occupying militarily vast regions of the country. It also discusses the deployment of charity as a means for the large monopolistic companies that dominate the Chilean economy to advertise their products and clean their images tainted by their practices during decades of neoliberalism. It finally addresses the resilience, solidarity and resistance of the population.

Inside the French Hoods: Revisiting Juvenile Delinquency in Urban Relegated Districts

This paper aims to explore the constructed reality of the ‘rising of juvenile delinquency in housing projects’ social problem in France through the narratives told by the story of 3 chosen insiders, parts of a larger population of teenagers studied in a longitudinal ethnographic fieldwork conducted for 6 years. This topic is central to the French political debates since the 2005 banlieue riots and has generated effective and consensual typifications categorizing the banlieue youth and its commitment with delinquent activities. Those typification associated to these teenagers - mainly separating the ‘good ones’ who are going to school and the ‘bad ones’ who are hanging around on street corners - does not only suffer from a very biased empirical material but also fails to explain the social, symbolic and economical significance of juvenile delinquent practices. The key separating outsiders from insiders on this particular topic is the way time is - or is not - taken into account. Outsiders do not consider delinquent activities within an historical and biographical process but as an illegal and immoral activity to be eradicated. On the opposite, listing to insiders allows us to understand that illegal activities have to be understood in relation to social trajectories and, hence, have to be considered as significant and inclusive moments rather than objective and disconnected events of the future. Unveiling behind this issue is a wider reflection about the way the French society has structured the relationships between its ethnic and social minorities and the ‘majority’. Focusing on 3 cases allow to contemplate ‘dense’ ethnographical material which appears to be a potent sociological strategy to deconstruct engraved typifications. This paper is issued from my latest book: Des capuches et des hommes. Trajectoires de ‘jeunes de banlieue’, Paris, Buchet-Chastel, 2013.

THE DISCIPLINE OF CHOICE. How students ‘choose’ further education in French priority education zones

Through an intensive, participatory and longitudinal ethnographic fieldwork conducted during 6 years, this paper raises the issue of further education’s choices of French highschool pupils in priority education zones (“Zone d’Education Prioritaire”), in the northern outskirts from Paris. Studied pupils statistically concentrated to the lowest academic categories (working class group, immigrant background and race, residency in housing projects and stigmatised banlieue, ‘muslim community’ etc.) within a society promoting access to higher education for all by offering a complex, heterogeneous and hierarchical system designed for masses. It illustrates how the possible, the probable, the desirable and the acceptable are articulated in changeable patterns which have been produced by and against the school, underlining its very own internal contradictions.

Globalization and Higher Education in India

The globalization is a process which is now transforming every sphere of our social, cultural and political life both in the developing and developed countries. Transnational flow of the capital, commodities and people is an essential feature of the globalization. This creates homogenization of higher education although

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
in a very limited sense to enable the mobility of the potential population of the countries who opened their economy for global trade in last few decades. This requires the standardization of the education system in terms of content and quality of education throughout the world. In India, the system of higher education is highly fragmented and stratified and produces students of different qualities. A large number of students having different social background and different type of schooling up to secondary level also vary in their educational attainments as well as in their career graph. They usually fall short to the national and international standards. Only few institutions of higher learning have the capacity to produce the students who have potential to compete in the global job market. Thus, globalization poses a new challenge to make necessary structural and qualitative changes in the institutions of higher learning in order to cope with the changes taking place in the globalized economy of the country. The present paper analyses various dimensions of the intricate relationship between globalization and higher education in a developing society like India.

Exchange and Life Satisfaction: Intergenerational Reciprocations in East Asia

Exchange plays a key role in affecting level of well-being. This study aims to develop a fundamental typology of exchanges across generations. By focusing on exchange of finance and household services between adult children and their parents (and parents-in-law), four types of exchanges can be identified: balanced, credit, debited, and self-reliance. We then investigate if different types of exchange affect life satisfaction and marital satisfaction. Empirical data are drawn from the East Asian Social Survey, which allows a comparative study of Japan, South Korea, Taiwan and China.

Land Grabbing in Taiwan: The Crisis of Food Security and Land Justice

Since the 1980s Taiwan had adopted liberalization economic policy and given up the principle of food self-sufficiency. The importance of agriculture had decreased and the land had been seen as valuable asset rather than the means of production. These changes together contribute an over-dependence on imported food in the local market and the loss of food sovereignty of the consumers and farmers. As a result, the food self-sufficiency rate has been extremely low in Taiwan (33%), far lower than China (95%), France (122%), the U.S. (128%), and even Japan (40%). In recent years, the implementation of neo-liberalism in agricultural policy has further worsened the practices of farming and the ways of land use in the rural areas. Since several local governments aim to promote rapid development in the high-tech industry, many farmers and rural residents have been forced to leave their farmland and assets. Over the past decade, Taiwan has consequently lost 4,000 hectares of farmland per year and totally lost 109,652 hectares in the last 30 years equated around 12% of farmland. In reality, the legalized land exploitation which in the name of scientific and industrial park and various developmental projects could be seen as a new form of land grabbing. This paper, we present two case studies and explore how the recent land exploitation has changed the agricultural practices and social context in the rural areas and the long-term effect on the food security of the whole society. The two cases cover the events and outcomes which have happened in Nantu County and Changshihliao of Changhua County, the former representing the form of anti-land-grabbing and the latter of anti-water-grabbing. Finally, we will attempt to discuss the impact of land grabbing on the food security and the possible citizenship aspires to food sovereignty.

Genetic Science in Identity Making: The Rediscovery of Taiwanese Origin and Ancestry

The global development of genetic science and technology has it's various manifestations in different local political and cultural contexts. The government of Taiwan began to support the development of biotechnology by funding projects during the 1980s, when this country underwent dramatic transition from authoritarian rule to democracy, emergence of ethnic politics, and conflict of national identity. After the rule by martial law ended, scientific research on the origin and the genetic background of Taiwanese began to emerge in the 1990s. Taking for example the research findings and scientific discourse of the team led by Professor Marie Lin, M.D., widely known as “the mother of the research of Taiwanese blood,” my article aims to explore the particular process of co-production between genetic research and identity politics in Taiwan. Since the 1990s, she has devoted herself to unveiling the mystery of the origins of the ethnic groups in Taiwan by finding scientific evidences of blood attributes and genes. Based on the research findings of her team over the recent two decades, Lin argues that 1) 85 percent of Taiwanese have aboriginal genes; 2) the Han Taiwanese people (Hoklo and Hakka ethnic groups) are mainly the descendants of the Yue people from southern China; 3) a major part of blood attributes of the Han Taiwanese people is derived from plain aboriginal people and 4) aboriginal peoples in Taiwan have multiple origins. These arguments pose a radical challenge to the dominant Chinese nationalist ideology of the period of the authoritarian rule, which is still lingering on today. My article analyzes how the genetic research on Taiwanese origin and ancestry represented by Lin and her team's has been shaped by social, political, and cultural factors in the context of democratization and ethnic identity. My analysis also shows clearly how science and politics are mutually constitutive.

Efficiency of Information Influence: Features of Measurement

Moscow is overloaded with outdoor advertisement that's why analysis of advertising campaigns efficiency becomes an extremely actual matter. We use tracking to solve a lot of research tasks, such as determination of the population percentage attracted by any advertisement, correlation between advertising images kept in mind and number of brands or company names recognized, poster attractiveness for target groups of any products or services, etc. In spite of considerable measurements, regular sociological surveys in this sphere were only conducted in England and Australia. Espar Analyst Research Agency has conducted the first monthly tracking surveys in the outdoor advising market in Russia. The objects of its research are advertising posters within the territory of Moscow and the matters are brands and companies.

The goal of the research is to determine an efficiency rate of an outdoor advertising campaign. Efficiency means here the rate of poster penetration and brand recognition. This goal may be achieved in case if the main task of measuring general parameter for evaluation of each outdoor advertising campaign's efficiency is resolved.

The following factors shall be considered in the analysis of the data obtained:
- number, type and location of advertising media;
- duration;
- other media used for advertising the brand;
- creative solution;
- advertised product category.

One of the most important results of tracking campaigns is an opportunity to form a limited indicator basis for each group of products and services, which would allow to compare the campaigns and bring their characteristics into correlation with average indicators for different product categories or formats used. Such surveys are aimed at renewal the empirical basis of social sciences, which study the influence of different format advertising images of human consciousness that is extremely important when the so called visual culture is developed.

Quality of Life As Local-Global Reflection

The changing world exacerbates so many contradictions of economic, social and environmental issues what affects the quality of life of the inhabitants of modern cities and villages. This kind of problem is especially perceptible for the most vulnerable socio-economically disadvantaged groups such as young people and the elderly.

Finding this approach, according to which a QoL refers to a comprehensive well-being, that takes into account the various aspects of human life, the Department of Sociology of Russian State University for the Humanities conducted research using questionnaires in October 2012 and September 2013. It represented the adult population and distinguished four main studying groups: youth, senior citizens, urban and rural population of all ages.

In the result, we obtained not only an idea of the self-perception of different socio-demographic groups representatives in relation to the assessment of individual aspects of life (personal economic status, social status, personal security, availability of education, social welfare and medical services, maternal and child welfare, employment, leisure etc.), but also identified mechanisms to increase self-perception of QoL.

The first one (objective) defines QoL as a result of combinations of different statistics. The second model is based on affirmation that the real sense of QoL is reflected in subjective feelings of individuals, which are formed on the basis...
of system developments level of individual, his life experience, emotional status, etc. The objective indicators (measures) include following main groups: natural, economic and social. Subjective ones are represented by life satisfaction, the feeling of happiness and depression, social support, personal competence, anxiety, stress, etc. This non-linear relation between the objective and subjective indicators allows to find a paradoxical public consciousness and offers an original mechanisms to overcome the negative trend in QoL. All these aspects will be considered as Local-Glocal reflection.

TSAY, RUEYMING* (Tunghai University, rtmsay@thu.edu.tw)
Regional Development and Social Inequality in the Age of Globalization: The Case of Taiwan

Modern societies all face a fast-developing and fast-changing global world. Recent development of tighter connection among Asian countries, especially with Chinese economy has brought significant impacts on the regional development and local life of these countries. It is expected that the emergence of the Pan Asian economy might have changed the class structure and social distributions in Taiwan. The paper proposes to study the changes of Taiwan's social class as well as occupational structures during the last twenty years. Further analysis might show the extent of the restructuring of Taiwan's occupational structure. In addition to occupational structure changes, this paper will also focus on the trend of economic development. To compete with other economies, Taiwan government has pursued a series of large-scale urban development and regional reorganization, during the years of fast globalization, which might have caused an unbalanced development among regions and skyrocketed the housing price in urban areas and thus further exacerbates the income inequality. I will analyze both macro and micro data to test the hypotheses whether the regional development either in a national scale or within the national territory has affected the degree of social stratification in terms of social classes and the inequality of distribution.

Keywords: Class Structure, Social Inequality, Regional Development, Globalization

TSE, THOMAS* (CUHK, Hong Kong, kcts@cuhk.edu.hk)
Inclusion Or Illusion: The Romance and Reality Of Integrating Students With Special Education Needs In Hong Kong

Integrating students with special education needs (SEN) into ordinary schools is a widespread movement towards “Education for All” in many developed countries. In principle, a shift from allowing students with disabilities to be educated in segregated special schools to providing them with opportunities to be educated in ordinary schools is justified on educational and normative grounds. Following the proclaimation of the Salamanca Statement as advocated by the United Nations, the Hong Kong Government initiated a pilot project in 1997, and promoted a whole set of policies to support the integrated education in full scale starting from 2004. Despite its goodwill on the part of the Government, many difficulties and problems have arisen along the moves towards greater inclusion in the Hong Kong education system. For example, the practices of integration education are under criticism as many students with SEN are not properly cared or taught, and some are even bullied by fellow students. Provision of sufficient resources and support to ordinary schools or teachers is another matter of grave concern. Teachers also face with problems in maintaining classroom discipline and ambivalence in meeting the competing demands of academic excellence on the one hand and equality and inclusion on the other. Inclusive education is one of the most controversial education policies in Hong Kong. The progress of inclusion will be examined in the dimensions of access (the extent to which students with SEN attending mainstream classes); acceptance (the extent to which all students are treated as full school members); participation (the extent to which all students contribute actively in school and achievement in terms of academic and emotional development. Values dilemmas and paradoxes resulted from the integrated education measures will be examined with a focus on accommodating diversity, quality, equity and fairness, as well as reducing or enhancing social inequality.

TSENG, FAN-TZU* (Fu-Jen Catholic University, fftseng@mail.fju.edu.tw)
Silenced Controversies: The Professionalization of Psychiatry and the Biomedicalization of ADHD in Taiwan

ADHD (Attention Deficit/Hyperactivity Disorder), the most common mental disorder among children and adolescents in Taiwan, does not seem to be as controversial in terms of its entity, diagnosis and medical safety among local professionals as it is in some Western countries such as the United States. This is not to say that Taiwanese psychiatrists uniformly embrace the biomedical model of ADHD. However, alternative paradigms and practices of psychiatry are excluded from the public sphere and discouraged by the National Health Insurance. Besides, the strategic alliance among psychiatrists, teachers and parents for dealing with various learning difficulties effectively justifies the medical framework of children's deviant behaviors. By analyzing the archives of the professionalization of Taiwanese psychiatry, and by conducting interviews with psychiatrists, relevant mental professionals, teachers, and the main parents organization, I unravel the interrelated processes of the development of the medical subspecialty, the publicization of health services and the medicalization of education, in order to elaborate that the biomedicalization of ADHD in Taiwan is not a necessary achievement of advancement in psychiatry, but a co-production with various social and political conditions. In particular, the “biomedical evidences” and “gearing to the international norms” constitute the driving rationality and emotion of the professionalization of Taiwanese psychiatry in a latecomer context; moreover, as a late-developing medical specialty, Taiwanese psychiatry lacks a sufficiently powerful legacy of the psycho-dynamic approach, which dominated Euro-American psychiatry before the 1980s and has thus far provided competition for the biomedical approach. Furthermore, Taiwanese child and adolescent psychiatrists are too few in number to encourage multi-paradigms. Therefore, although controversies and alternative practices concerning ADHD exist, they do not originate from the psychiatric in-group and thus find it difficult to shake the mainstream practices. Consequently, the biomedical discourses and treatment of ADHD have been stabilized and reproduced in Taiwanese psychiatry.

TSENG, SHU-FEN* (Yuan Ze University, gssfszeng@saturn.yzu.edu.tw)
Digital Inclusion or Digital Exclusion? The Second Order Divide in Taiwan

The study of digital divide has shifted its focuses from unequal access to ICTs to the second digital divide that addresses the inequality resulting from the different ways in which ICT technological user activities and ICT usage preferences appear to be excluded from the digital activities that could help them most. This study, by employing secondary and longitudinal data of national Individual and Household Digital Divide Survey in Taiwan, aims at examining the barriers of second order digital divide and understanding the social implications of digital inequality in the information society. The results suggest that despite of the closing gaps of ICTs access across groups and declining usage gaps in basic internet activities (e.g. information searching, communication, entertainment), persistent or widening gaps are found across groups in intermediate and advanced internet activities, such as usages of online finance, e-government and civic engagement. These results imply that social inequality might accelerate in the information society for those well privileged groups take uneven advantages and benefits from effectively use of online activities in the social, economic, and political spheres, while lack of usage in needed digital resources will make groups that are already socially disadvantaged fall further behind. Without proper interaction, the wider array of ICT usages in information society becomes the potent tools to deepen social divides.

Vavilicious Scandal: The Politics of Sexual Harassment in Post-Apartheid South African Trade Unions

Vavilicious Scandal: The politics of sexual harassment in post-apartheid South African trade unions

In July 2013 the General Secretary of the Congress of South African Trade Unions (COSATU) (the largest trade union federation in South Africa), Zwelinzima Vavi was accused of rape and sexual harassment of a junior female colleague. While the rape allegations were later withdrawn by the accused, Vavi was subsequently suspended and investigations into the allegations of sexual harassment were being conducted by the federation. Much focus from the South African media is on the many struggles within COSATU and attempts by Vavi to capitalize on the scandal to remove him from his position. However, the significance of the incident for this paper is that it highlighted the patriarchal, unequal and hierarchical gender relations dominant in the South African trade union movement (Scott, 1986). Unions are organizations of power, which is often defined in masculine terms.

The incident also reminded us of the need to publicly acknowledge the importance of sexuality in organizations (Acker 1990:139), where women and men are perceived differently and assigned roles according to how they are perceived. This paradox has brought into focus the importance of sexual harassment within the masculine organizational culture of the federation and its affiliated unions. The paper aims to discuss the politics of sexual harassment in the * denotes a presenting author. Abstracts are organized by first presenting author's last name.
post-apartheid South African unions, where women continue to be marginalized from leadership positions in spite of constituting almost half (48 per cent) of the union membership (COSATU 2011). The paper seeks to understand the significance of women’s composition in COSATU unions in terms of raising their voices and challenging dominant patriarchal practices. What is the significance of the increase in women’s membership in terms of their struggles to reconfigure the dominant masculine culture of trade unions?

**Women Academics Under Crisis: A New Field for Reflexivity**

Research data show that the present economic crisis has worsened women’s position in society. New categories of women become vulnerable to the impact of this crisis. To the traditional categories of vulnerable women (migrants, single-parent families, women victims of domestic violence, unemployed young women etc.) are now added women coming from middle and upper-middle class ladders of society (women entrepreneurs, women of high educational and employment credentials, women owners of big properties etc.). Women belonging to these new categories seem to be threatened by the risk of status degradation and the risk of impoverishment.

This paper focuses on the impact of crisis on women of high credentials. Such is the case of women academics that work in universities and research centers in Greece, a category of women of hitherto recognized social status and established high positions in social hierarchy.

Our presentation is based on qualitative data coming out of the living experiences of women academics facing the impact of crisis in their professional and personal life. Initial results indicate the gravity of the present economic crisis as it expands also to include women holding highly privileged academic positions in the social hierarchy. Adequate measures have not only diminished the income of academic women but also have enormously affected their living standards and worsened their working conditions. Moreover it is to be noted that the economic crisis seems to have brought into surface latent aspects of social crisis resulting from pre-existing social transformations which in turn also affect academic women’s lives.

Thus, our attempt is to develop a reflexive account on the living experiences of women academics as well as to discuss the impact of the present economic crisis on processes of women’s downward social mobility.

**TSIGANOU, JOANNA***(National Centre for Social Research - Greece, jtsiganou@ekke.gr)**

**Young People in Social Disadvantage: Opportunities and Threats in Local Environments**

The arguments advanced in the proposed paper are based on the analysis of data concerning the means and ways of combating social exclusion of young people in social disadvantage at local communities by means of suitable educational and training programs.

In fact, in an era of globalization of economic and social relations, the employment structures may not be understandable on the basis neither of the model of “technocratic advancement” nor of the model of “specialization”. If such is the case, there is an urgent need for the employment of other forms of “capital” in order to combat marginalization of those young people that suffer multiple social disadvantages. The question is how detached are modern societies from traditional forms of education, training and employment especially under conditions of austerity. Another issue for serious consideration is whether local environments possess new capacities for training and job opportunities for young people in social disadvantage. It is to be discussed also whether the local versus the global (i.e. in the sector of enterprises) may possess more opportunities than threats in combating unemployment and exclusion.

**The Systemic Crisis of Greek Labor**

**Abstract**

The current crisis in Greece has brought to the surface the employment security aspect of the Greek “labor system”. The employment relationship seems to be embedded upon a bifurcated system whereby labour is separated institutionally in a) a secured salaried public sector and b) a private sector defined by precarious labour conditions that are characterised by the technical separation of work from its social security (mainly pensions) relationship. The two systems have been coupled with separate health care systems developing separately (recent attempts to unify are in process). The paper explores this hidden reality by defining the organisation of the labour system in Greece, its politico-administrative controls that formulate a binary legal system (public/private) that does not allow for the emergence of the not-for-profit-law institutions.

The “social” reproduction of private labour is based upon the formally established private and “commercialised” interests that practice “trade” in basic needs (health, education). As a result, communities rely on the family, the Church, self-help and out-migration. By focusing on this anachronistic and discriminatory system of political order for the reduction of labour we may be able to unlock the reasons for the weakness of labour social economy organisations in Greece and the acute unemployment rates (the highest in the Eurozone). This approach will aid our understanding of the Greek crisis as a failure of Euro-Zone’s public policy.

**Key words**

Greece institutional crisis; labour fragmentation; Euro-Zone, social development

**Octopus Man and Tiger Woman - Why the Chinese Are Bad for Australian Nationhood**

Historically Australia has considered itself a white, Christian and British bastion in the South Pacific region. The main threat to this status was conceived of as coming from the east, particularly from the ‘hordes’ of Chinese who would sweep down and over run the nation. These discourses were prominent during the Gold Rushes when Chinese men were constructed as a threat and represented as an octopus of evil. Immigration policies were instigated to stop the ‘yellow peril’. While the so-called White Australia Policy was formally rescinded in the 1970s those from Asia are still constructed as a threat.

Most recently it is Chinese students who are ‘taking over’ the most desirable growth sectors. Because of their hard work and diligence they are excelling at entry exams and providing little incentive for mainstream Australian students to compete or be schooled in environments dominated by Asian students. Tiger mothers are represented as standing over their children, ensuring they work hard enough to achieve well. The work ethic associated with the Chinese is a form of racism. In contemporary discourses this is associated with rote learning for exams rather than independent thought.

In this paper historical depictions of Chinese men represented as an octopus ready to seduce Australian women, including through the provision of heroin, will be contrasted to depictions of Chinese women as Tiger mothers who stand behind their children ready to wield ‘tough love’ towards success. What does the promulgation of such representations in the media tell us about Australian nationhood and its reliance on gendered forms of racism for meaning?

**TSOMO, KARMA Lekshe***(University of San Diego, tsomo@sandiego.edu)**

**Sakyadhita and the International Movement for Gender Equity in Buddhism**

During the 1980s, the glaring discrepancies between opportunities for women and men in Buddhist institutions and societies caught the attention of a small group of women living in different countries and practicing in different Buddhist traditions. Communicating by post, they decided to gather to discuss what could be done to address these inequalities. In 1987, at the conclusion of this first gathering in Bodhgaya, India, an international association of Buddhist women called Sakyadhita was founded. Since then, Sakyadhita has received scant attention from the academic community, but the consequences for women in Buddhist societies have resounded around the world. For twenty-five years, Sakyadhita has organized a series of biennial conferences and issued numerous publications that have educated Buddhists in the new global ethic of gender justice. The path to gender equity in Buddhist communities and institutions has not always been smooth, however. Consciousness or unconsciously, entrenched interest groups continue their efforts to maintain the imbalance of power that disenfranchises women.

This paper explores how a small grassroots movement to improve conditions for neglected and undereducated women, especially nuns, has grown into a global movement to challenge inequalities on a structural and institutional level, recounting landmarks in the history and development of Sakyadhita and the international Buddhist women’s movement from its inception until the present. In the first section, I describe the objectives of Sakyadhita and the key personalities who have helped propel the global movement for gender equity in Buddhist societies. Second, I explore the setbacks and obstacles that Buddhist women have faced over the years and continue to face in their struggle for gender justice today. Third, I trace the major achievements of the international Buddhist women’s movement precipitated and explore potential directions and strategies that Sakyadhita has mapped out for the future.
A Study on the Costs and Demand for Foreign Nurses/Care Workers in Japan – from the Angle of Hospitals and Care Facilities –

Many consider that the international migration of nurses and care workers is driven by economic factors. Wage and cost differentials should work as a ‘push factor’ in sending countries and a ‘pull factor’ in receiving countries, though rules and regulations may partly hinder it. Japan opened the gate for foreign nurses and care givers under the Economic Partnership Agreements for the first time in 2009. It was anticipated that application and entry would rise sharply because wage gaps with other Asian countries remained high and the rapid aging of Japan’s society badly needed more nurses and care workers. However, the actual entry of such personnel has been on a declining trend in recent years, despite government efforts for reducing entry barriers. This study has attempted to analyze the pull factor, i.e. the economic costs that accrued in the hospitals and care facilities based on a survey conducted. The analysis revealed no statistically significant correlation between the economic considerations and the willingness to hire nurse candidates, implying the existence of non-economic reasons for the reduced entry of such workers. For the care givers, economic considerations seem to have had some impact on the willingness of care facilities to receive additional foreign workers. It would be imperative for the government to address institutional impediments for the nurses and pay more attention to the economic incentives for the care facilities in order to increase the number of foreign nurses and care givers in Japan.

Organizing Immigrants in Rural Areas in Japan: Case Studies of the Tsunami-Devastated Areas

This study examines the process of organizing immigrant groups in rural areas in Tohoku, Japan, especially the 311 tsunami-devastated areas. In recent decades, Japan has witnessed the entrance of many more immigrants. Along with this influx of newcomers, their relationships with Japanese society and their social mobility have drawn attention. Although previous studies tend to focus on the cases of labor migration in urban areas or highly urbanized cities, few studies have been conducted with a focus on the immigrants in rural areas that lack a concentration of immigrant populations, such as the Tohoku region.

Many of immigrants in the Tohoku region are female immigrants as spouses of Japanese nationals, who are mostly dispersed throughout small towns and villages. They tended to be marginalized from their local society and given the limited understandings and supports from the local government.

The Great East Japan earthquake that devastated many areas of the Tohoku region seriously affected these immigrants as well as Japanese nationals. The disaster and its aftermath consequently led them to form groups to help support each other and to change their social surroundings. How did they attempt to grapple with the difficulties after the disaster? To what extent did their organizational efforts contribute to changing their relationships with their local society?

With a focus on these questions, this study analyzes the process of organizing immigrants in the Tohoku region. The findings from my interviews with the actors and participatory observations suggest how they obtain resources inside and outside their community on the recovering process after the disaster, and the social issues they face to continue living in rural society. This study contributes to considering the possibilities and issues of ‘bottom-up’ approach for immigrants to change their social surroundings in rural society in Japan.

Changes in Friendship Relations of Japanese Youth

This study aims at revealing the changes in friendship relations of Japanese youth. In their everyday life, friendship relations are becoming more and more important.

According to a recent report, “In response to questioning about when they feel that their life is fulfilling, the largest percentage of Japanese youth answered ‘When I am with friends or companions’ (74.6%)”. This is also the largest percentage among the other five countries (South Korea: 58.1%, U.S.A.: 64.7%, U.K.: 45.1%, France: 68.2%), and that have basically increased from past years (1977-78: 50.1%, 1983: 59.2%, 1988: 62.0%, 1993: 70.8%, 1998: 74.0%, 2003: 72.5%, 2007: 74.6%). But in recent years, there are some interesting changes. The percentages giving ‘When I am by myself without being annoyed by anyone’ (13.8% in 2003 to 19.8% in 2007) increased over the previous survey. (Naikaku-fu, 2009, “THE JAPANESE YOUTH:In Comparison with the Youth of the World, A Summary Report of the Eighth World Youth Survey”, http://www8.cao.go.jp/youth/english/worldyouth-e/html/mokui-e.html).

This is so complex situation that is difficult to be understood, and our recent research also shows the same situation.

In this study, there are two ways of approach. Firstly, I would like to review the hypotheses about the changes in friendship relations (e.g. the dilution hypothesis, the selective hypothesis and the homogenization hypothesis). Secondly, I would like to analyze the quantitative data, and reveal the present situation and the changes. The data was collected in Tokyo and Kobe in 2002 and 2012. Respondents were randomly sampled. Their age ranges from 16 to 25.

In conclusion, it is revealed that the number of friends are increased but the diversity of that is reduced. It suggests that the friendship relations of Japanese youth have been homogenized.
Examing the Chain Relationship from Initial Contact to Classical Music to Socio-Economic Status Via Music Preference

This paper examines the effect of the initial contact to classical music on the music preference, and the effect of the music preference on the socio-economic status, in Japan. Especially, as in Bourdieu's reproduction theory, whether people's ‘orthodox’ music preference from family affects their income is examined.

A questionnaire was handed to 2,000 audiences of Saito Kinen Festival in 2012. 594 audiences answered. The questionnaire included the questions of initial contact to classical music, preferences to 20 composers, and household income.

By latent class analysis of the initial contact, four types were found: (1) vague, or no particular initiation, the effect of (2) family, (3) eye-opening experiences, and (4) various sources and experiences.

By latent class analysis of the composer preferences, five types were found: (a) shallow listeners, who do not know many composers, (b) orthodox maestro devotees, who like orthodox maestros but dislike contemporary composers, (d) itching lovers, and (e) contemporary music lovers.

Crossing the types of initial contact and the types of music preference, the following was found.

1. Those with vague initial music experience tend to be shallow listeners.
2. Those who are affected by family do not have a particular preference.
3. Those who had eye-opening experience are not shallow listeners.
4. Those who received various effects are not shallow listeners, not hard-headed, but overarchers.

OLS of the equivalent household income reveals the following. Those whose preferences were affected by family trend to have higher income than those with eye-opening experience. The orthodox maestro devotees have higher income than those with vague preference or hardheaded. However, as seen above, there is not an effect of family on orthodox preference. Therefore, we could conclude that there is no clear evidence for the chain relationship in Japan.

TSUKAYAMA CISNEROS, LUIS* (New School for Social Research, tsuk431@newschool.edu)

Food Aesthetics and the Unintended Construction of Civility in Peru

Peruvian food had always had important elements that connected it to national identity. However, in the last 10 years, food has acquired new meanings that pertained to a strong sense of national pride, and new understandings of what it means to be Peruvian, which are reflected particularly in media and politics. In Peru’s biggest city, Lima (where 35% of its population live), culture and cuisine reflect the diversity of its population through years of internal and external immigration processes since the times of the Spanish colony.

In this paper, I argue that, in great part, the “aesthetization” of food in Peru – a focus on aesthetics rather than on flavor – was pivotal to the transformation of its social meanings during the mid-2000s. In the early 2000s, chefs and tourism operators considered this process of “aesthetization” essential for the promotion of Peruvian food and, consequently, for the promotion of tourism and the increase of economic revenue to Peru. An unintended consequence of the success of this process was that the newly named “novos Andeans” cuisine became a central element of an invigorated Peruvian pride. Additionally, this pride in Peruvian cuisine, in part, allowed for the diversity of its population through years of internal and external immigration processes since the times of the Spanish colony.

The current situation and future tasks of community service actions conducted by local football clubs in Shikoku, JAPAN

In recent years, there’s been impressive growth in sport team volunteering to local community service. The purpose of this study was to examine the current situation and future tasks of community service actions conducted by local football clubs in Shikoku, JAPAN. A survey was conducted using interviews, questionnaire, and fieldwork from July in 2011 to July in 2013. Data of the questionnaire were collected from a sample of 104 clubs, while the return rate was 49.8%. The main findings were as follows: (1) About twenty-five percent of local football clubs conducted local community service actions, 2) human communication related to unity of sport competition and promoting mutual friendship was important to local football clubs. It was characteristic for local football clubs to have human networks closely related to local community. 3) Twenty-six percent of local football clubs intended to continue or start the local community service actions. There were discouraged factors of the local community service actions, while members of local football clubs didn’t know what to do. Moreover, they didn’t have enough information to conduct the local community service actions. This indicated that the share information and financial aid could seed potential local community service actions and 4) local community service actions deeply related to proper leader and frequency of practice. It was quite important to have good connections with outside the club like sponsor or football school. It is necessary to examine the assessment of people living in local community and differences of income between local football clubs.

Constructing Social Cleavage Indicators Using the Mixed-Effects Model

This study demonstrates how we can construct national indicators by analyzing comparative surveys using mixed-effects (ME) model. ME model, also known as multilevel analysis, is usually understood as a method to analyze nested data. Few studies pay attention to its unique ability to estimate individual (or random) effects.

Estimating individual effects, country-specific effects in the case of national comparison, using ME model has two distinct advantages that existing methods do not have.

One is that we can “estimate” indicators with statistical confidence, not just “compose” them by adding up or averaging relevant figures. This merit addresses the problem of composing indicators using unbalanced comparative data. A comparison of attitudes between a country with sample size of 1,000 and one with sample size of 10 would be questionable if we just calculate means of several attitudes for both countries, because the values of a country with small sample size lack reliability. Estimating individual effects using ME method can avoid this problem by introducing “shrinkage estimator”.

Another merit of ME estimation is that we can eliminate the effects derived from differential composition among countries. An indicator value of attitudes or happiness could be different because of different distributions of social groups such as gender, age, and classes. Also, simple averaging of different level of attitude among social groups can suffer from bias, because one social attribute (such as educational background) correlates with others (such as age or gender). ME method can deal with this problem because it uses linear regression technique.

This study applies ME method to compose “Attitudinal Divide Indicator” (ADI). ADI can be interpreted as indicating how an attitude toward government roles differs by social groups. A country with high ADI can be understood as a country where there is a sharp divide of opinion among people.
Rebuild a Trust Relationship Between Doctors and Patients—Informal Exchange in Chinese Health Sector

Trust lies at the heart of effective patient-doctor relationship. Chinese health sector is facing a trust crisis between patients and doctors as shown in the rising numbers of conflicts and denunciations. In seeking an accountable health care, patients widely employ informal exchange by giving gifts and red-packets to doctors, seeking connections and acquaintance relationship (guanxi) to get health care. The gift exchange and guanxi network involve the cultivation of emotion (renqing, gifting, the emotional feelings of indebtedness and obligation), through which a trustworthy relationship is emergent and negotiated. However, in the changing moral context of China today, trust is very fragile amidst the inherent uncertainties of medical care. The individual efforts of gift-exchange and guanxi networking sometimes could not secure a trustworthy relationship, and patients frequently become the targets of defrauding, extortion and abuse of power. The paper, setting the context in the post-socialist China, shows how people's rising uncertainty in daily life and to secure a trustworthy doctor-patient relationship, it is about how trust is practiced, dismantled, and rebuilt in daily medical encounter. The paper recognizes the limits of individual informal exchange in building trust, and suggests more work to be done in building a trustworthy health system and improving the trust in society as a whole amid the wide mistrust.

TUCKER, HAZEL* (University of Otago, hazel.tucker@otago.ac.nz)

Gendered ‘living Like The Other’ In Turkey

Some tourists, those who decide to stay a longer while than other tourists in a place they like, might ‘fetishise the idea of ‘living like the locals’ (Davidson 2005: 46). One of the ways Davidson suggests they might do this is through ‘integrating themselves within and among local, indigenous communities, learning from them forms of experience and knowledge rejected and repressed by the West’ (2005:51). Some might even enunciate their sense of belonging by becoming tourism entrepreneurs and playing the role of host to tourist guests. Related to this, Soares (1998) talks about globalization as increasing the opportunities for copying which may be related to a desire to perform one’s own fantasies about the ‘other’. Soares adds that, therefore, ‘mimicry can be a weapon against the political reification of identities’ because ‘the experience of circulating, shifting, and changing to the forefront of social and cultural life’ (1998: 295). Such mimicry is riddled with paradox and contradiction, however, because it is never possible to fully become the other. This paper considers the gendered dimensions of such tourist attempts at ‘living like the other’, at belonging and at becoming ‘other’. Drawing on my long-term ethnographic study of tourism relationships in Göreme, Turkey, the paper discusses the different ways in which foreign (yabanci) women and men experience the context in the post-socialist China, shows how people's rising uncertainty in daily life and to secure a trustworthy doctor-patient relationship, it is about how trust is practiced, dismantled, and rebuilt in daily medical encounter. The paper recognizes the limits of individual informal exchange in building trust, and suggests more work to be done in building a trustworthy health system and improving the trust in society as a whole amid the wide mistrust.

The Triple Role of Social Media: A Case Study

The Arab Spring’s ‘Facebook dimension’ has already received unprecedented attention. New technology was presented as an instrument used by protesters to build extensive networks, create social capital, organize political action locally and nationally, and put in place transnational links. A debate ensued between the views of ‘cyber-enthusiasts’ and those of ‘cyber-skeptics’ (or ‘digital evangelists’ and ‘techno-realists’). A common element, however, is that very little of this research investigates the possibilities and implications of its analysis. Moreover, try to counter the variety of a rather fragmented picture of this complex phenomenon, with many scholars focusing on relatively narrow social media-related sub-fields. The present paper tries to overcome this division. Its goal is twofold. First, it argues that the full understanding of the impact of social media on Arab Spring regime change processes is possible only through the analysis of the key role played by this media at three interrelated levels that, until now, seldom have been studied together: as a tactical tool of mobilization, communication, and coordination; as an instrument of domestic and international revolutionary contagion; and, critically, as a means of enhancing pan-Arab consciousness which, in turn, was fertile soil for that contagion. The paper’s second goal is to strongly anchor the analysis of social media in the political - and, more specifically, revolutionary - dimension of the Arab Spring. Social media may have been highly influential from many points of view. Still, one should not forget that the Middle Eastern process it influenced was fundamentally a revolutionary wave. As such, the role of social media needs to be addressed within the analytical framework of revolutionary contagion, which until now rarely has been done explicitly.

TUMA, RENÉ* (Technische Universität Berlin, rené.tuma@tu-berlin.de)

Comparing Different Styles of (Vernacular) Video Analysis

The paper presents the outcomes of a project that focuses on activities of interpretation of video recordings. The interpretation/analysis of visual data is not only performed within sociology but in a growing number of professional fields and everyday situations (‘Vernacular video analysis’ [1]). My presentation draws on a focused ethnographic study of interpretation practices. I have done ethnographic fieldwork in three fields and recorded practitioners at their interpretation work. The three fields each highlight different aspects of interpretation work.

In 1) Police Work the identification of actors and their (‘criminal’) actions is the police officials’ main concern, in 2) Football Training: the aspect of instruction is most important and in 3) Market Research: the interpretation of eye tracking video is distributed and organized via means of information technology. But itself reflexively applying Videography [2] onto the practices of video analysis is I am able not only to study those three fields and the spread of visual analysis as a communicative form of generation of knowledge, but am also presenting a reflexive form of videography that allows for the reflection of our situated practices and knowledge that has been criticized as missing in the use of video in interaction research.

Gender and Socialization of Knowledge

The purpose of this paper is geared towards analyzing how gender is an indicator that impacts scientific production in the administrative sciences perpetuating the differences between genders which affect the science. Particularly, significant differences that exist in the scientific visibility of men and women in Latin America are observed, as mentioned in the Latin American Quotes in Social Sciences and Humanities website (close based on its Spanish initials) and the Network of Scientific Magazines of Latin America, the Caribbean, Spain and Portugal (redes based on its Spanish initials) for year 2012. The analysis is made as evidence that in scientific research, as in any other human activity, there is a gender related division in work, which should be considered in the science and technology agenda at all levels of government.

Sociological Approach on the ART of Using Drugs By Patients Suffering of Oncological and Psychiatric Diseases

This study aims to analyze the strategies and tactics used by patients suffering of oncological and psychiatric diseases on the scale of social classes. This study would help to analyze and discuss the most comprehensive questions about the subject at hand.

Which are the factors that determine the choice of the patient when he takes a medicine?

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
Which are the motivations that characterize the behavior of the patients when they take a medicine? How the norms established by the public health instances influence the perception of the patients when they take a medicine? Basing my assumptions on how the patients take the medicine, I will investigate how the way of taking medicine is influenced by their belonging to a specific social class and which are the cultural factors that determine the way they take their medicine? Prett-Wettel and Moatti (2009) upheld that the patient is not only the subject of his illness, but also an active social role with his illness and his way of facing it and by taking part in his healing process. In that context I will investigate the factors which determine the way the patients take the medicines taking into consideration the influence of the media on them, their belonging to a social class, their dwelling environment, their gender, their profession, their educational background, their relations between them and their physician. With this study I hope to be able to assert that there is a similarity in the tactics of taking medicine by patients belonging to different socio-economic an cultural classes and that the practices of public health in Turkey play a unifying role between the various social classes in question.

TURKUN, ASUMAN* (Yildiz Technical University, osu.turkun@gmail.com)

Stigmatizing Discourses in the Legitimization of Renewal Projects in Informal Housing Areas and the Historic Urban Center in Istanbul, Turkey

This paper aims to evaluate how discourses and accompanying interventions on the housing areas of the urban poor have evolved since the 1950s in Turkey, exemplified in the case of Istanbul. After 1950s, the import-substitution industrialization necessitated low-paid labor force in industrial establishments located in a few cities, including Istanbul. The governmental policies directly supported the development of informal housing areas, which served to decrease the cost of reproduction for women and men. These housing areas, along with other strategies like helping building survival strategies for the urban poor through embedded social networks and mutual help mechanisms. Since the mid 1990s, the vision of Istanbul as a center of international finance and tourism has guided the new urban policies, based on the development of real-estate and construction sectors. Therefore, urban regeneration/ renewal practices have become the major tool of urban policies, leading to an intensified pressure on the housing areas of low-income population in central locations. In the last decades, the pressure was coupled with disinformation and stigmatizing discourses, prevalent among the members of a hegemonic urban coalition consisting of central and local governments, state institutions as well as developers, land owners, professionals, and the leading media. These discourses try to legitimize the clearance of those informal housing areas by stigmatizing the inhabitants as “invaders” or “criminals”.

In this paper, the findings of the research made in six urban regeneration/ renewal areas will be utilized together with a comprehensive study of the leading media to analyze the changing discourses of prominent actors on the housing problem of the urban poor. This analysis will also cover the accompanying laws, regulations and implementations, which have led to the displacement or eviction of disadvantaged segments of population in most cases, as well as social movements for the right to housing and the city.

TURNER, BRYAN* (Australian Catholic University, bryantturner@yahoo.com.sg)

Post-Westphalian America? Religious Conservatism and American Exceptionalism

In the sociology of globalization there has been much talk of porous borders, the effects of the international flow of labour, legal pluralism, the fragmentation of civil society by multiculturalism, and the decline of state sovereignty. America however seems as ever, to be an exception to the rule. After 9/11 and the Patriot Act, there has been considerable emphasis on the securitization of society as a whole. The focus of national security is echoed in the agenda of the Republican Party which has opposed the naturalization of illegal migrants, supported a hawkish foreign policy, warned against the dangers of creeping Sharia, and rejected cuts to the Pentagon budget. Despite its ideological opposition to 'big government', the Tea Party has driven the GOP further to the right over national security and defence expenditure. While the rightward drift of Republican Christians is consistent with traditional millenarianism and Christian Zionism in America, it is reinforced by fears of American decline. Confronted by economic weakness foreign policy now faces a dilemma: isolationism versus confrontation. The foreign policy of Chris-
industry and the civil society have intermingled giving rise to many theoretical interpretations that underline the professed radical change of universities and sciences. Of these theories, the current article focuses on the triple-helix of university-industry-government relations. The model claims that intensified interaction between university, industry and government has given rise to a new kind of research, which not only seeks to advance knowledge but also tries to attain commercially viable products. As a normative policy model, triple helix might be trans- forming into analysis certain understanding of the developmental role of scientific research. The present paper summarizes the major viewpoints of this theory and reflects on the commentary given to it. To better understand the weaknesses of the model, it also analyses the model's distinct theoretical status and claims that it is ambiguous, as it combines three types of sociological theory, i.e., diagnos- is of an era, general sociological theory and research theory. After assessing the status of triple helix, the paper contributes to the discussion about the model by probing different theoretical avenues that research associated with the concept might proceed. Of central importance here is systems theory by Niklas Luhmann, as major protagonists of triple helix have frequently used his ideas in discussing the model. The current paper draws concepts from Luhmann's theory to specify ways in which empirical research associated with triple helix could be made more responsive to the multi-functional and internally contradictory character of the contemporary research university.

Dress and the Embodiment of Age in Everyday Life

Clothes lie on the interface between the body and its social presentation. Getting dressed is an everyday body practice, one of the ways in which bodies are made social, given identity and meaning. When we get dressed, however, we do so within the bounds of a culture and its norms; and these include ones in relation to age – as they do gender also. The presentation which draws on an ESRC project published as Fashion and Age: Dress, the Body and Later Life, Bloomsbury, explores the role of dress in the day to day performance of aged - and gendered - identities.

New Approaches to Inequality Patterns in Education Science and Childhood Sociology

New approaches to inequality patterns in education science and childhood sociology

From a perspective that considers children as social agents we analyze how socialization- and learning environments are designed, processed and have an influence on children's self-orientation and autonomous learning. By using an interdisciplinary approach that combines sociological and pedagogical theories different dimensions of the 'self' are put into the center of attention. Thereby we aspire to gain new insights into causes of inequalities.

This article uses data provided by the (longitudinal) study "SEBI – Self-orientation and Self-directed Learning: An Analysis of Socialization and Learning Environ- ments of Primary School Children". First quantitative results of the ongoing study assessed the importance of parenting for children's self-confidence in primary school. A perceived parental interest in the own personality – associated with parental interest in the child's specific hobbies, activities and interests – can be seen as central for the academic self-concept. However, a perceived parental emphasis on efforts for the child's academic success does not have such a significant ef- fect. Further, these findings could not be related to social class or ethnicity, which makes a difference to common findings of the majority of socialization studies. Thus, this study contributes to an extended view on inequalities in education by focusing on different socialization practices in families and institutions and how these interrelate to the child's academic self-concept and performance. The per-
an social activists and oppositional politicians into self-questioning why they had failed to stage a rally at a comparable scale in recent years—even with the help of internet. The question calls for a comparative analysis of this incident and other internet-facilitated social movements. Drawing from literature review, interviews and some participant observations, this paper surveyed the existing practices of internet-facilitated social movement in Taiwan—a young democracy known for its strength in computing and communication technologies. Four ideal-typical categories are identified and discussed: (1) online activism of conventional advocacy/concern groups, (2) communication platform for mobilization and public debate on social-political issues, (3) issue-specific protest initiated in a decentralized, less consolidated fashion among concerned ‘netizens’ and (4) various ‘open access’ projects initiated within an IT-savvy community (e.g. the ‘gōō’ zero time government project).

A model will be theorized from the comparative analysis to account for the varying strategies of these types of movements: emotional epistemic factor, cognitive entry barrier and technological entry barrier. At last, a normative ethic on managing the scale of activism will be developed with the ‘public attention’ considered as a scarce public resource. The various modes of internet-facilitated activism will be critically evaluated with the ethics in mind.

A Comparative Study on the Inter-Professional Collaboration Among Actors Involved in Active Ageing Programmes: Lessons from Denmark and Taiwan

This research aims to investigate the inter-professional collaboration among actors involved in the collective actions of Active Ageing campaigns, from NPOs to the state, the media, political parties, and commercial companies. It asks how do actors interact with each other and to what extent can inequality be eliminated? Denmark and Taiwan, with their differences in welfare regime, population ageing process, development of democracy and union movement, can be good cases to be compared. With the theoretical framework developed by Nahapiet and Ghoshal (1998), this study examines the relational dimension of inter-organizational social capital. Strongly, three patterns of perceived relational social capital can be concluded in both the Danish and Taiwanese organizational fields, and each has its implication of obstacles to collaboration.

In Pattern 1 where actors continuously measure who needs whom and for what, an unequal power relation can be noticed. Actors at a more disadvantaged position are more vulnerable to collaboration availability and they identify their partners in exchange of their trust. Moreover, when a collaboration project is accepted, actors’ identification of being in the same community is formed. However, with numerous back-and-forth circumbulations, actors keep asking if they should trust their partners. This is the Pattern 2 in this study and its kinetics can be categorized as follows: a) toward mutual trust because of consultation, development of democracy and union movement, can be good cases to be compared. With the theoretical framework developed by Nahapiet and Ghoshal (1998), this study examines the relational dimension of inter-organizational social capital. Strongly, three patterns of perceived relational social capital can be concluded in both the Danish and Taiwanese organizational fields, and each has its implication of obstacles to collaboration.

In Pattern 1 where actors continuously measure who needs whom and for what, an unequal power relation can be noticed. Actors at a more disadvantaged position are more vulnerable to collaboration availability and they identify their partners in exchange of their trust. Moreover, when a collaboration project is accepted, actors’ identification of being in the same community is formed. However, with numerous back-and-forth circumbulations, actors keep asking if they should trust their partners. This is the Pattern 2 in this study and its kinetics can be categorized as follows: a) toward mutual trust because of consultation, development of democracy and union movement, can be good cases to be compared. Changing Consuming Behaviors By Designing Eco-Efficient Green Products

People continue to create and consume more innovative technology products in order to make life more convenience and comfortable than the past. However, huge industrial processes bring significant changes in the Earth. Natural resources are getting to dry up; ozonosphere has been destroyed; environment has been contaminated and so on. These environmental changes cause serious threats to the survival of the Earth's species.

Therefore, in recent years, environmental awareness began to be respected, and researchers explore green issues hoping to make living things can be survival sustainable. Many countries have implemented environmental protection laws to reduce the environmental impacts of industrialized society. For instance, WEEE (Waste Electrical and Electronic Equipment Directive), RoHS (Restriction of Hazardous Substances Directive) and EuP (Energy Using Product) organizations under the auspices of the European Union try to limit the environmental pollution caused by products. Laws and regulations seem to be a “pushing” force on changing consuming behaviors.

On the contrary, this research examines the possibility of a “pulling” force on changing consuming behaviors by designing eco-efficient green products. The present study attempts to integrate 39 engineering parameters of TRIZ (Theory of Inventive Problem Solving, developed by Genrich Altshuller) with 7 eco-efficient elements (Reduce material intensity; Energy intensity minimized; Dispersion of toxic substances is reduced; Undertake recycling; Capitalize on use of renewable resources; Extend product durability; Service intensity is increased. REDUCES, in short) proposed by WBCSD (World Business Council for Sustainable Development) to construct a green product design matrix, and use patents to verify the validity of this innovative green product design process. The green product design process of this research may allow designers to generate green products by improving eco-efficient elements as well as resolving conflict design issues. Hopefully, eco-efficient products may attract consumers’ attention and thus unconsciously change consuming behavior, and approach sustainable goals.

Industrial Food Pollution: A New Perspective on Food Safety Risks Beyond the Current Legal Definition

This study proposes a new perspective on food safety risks, with reference to the 1968 Kanemi rice bran oil poisoning in Japan. This poisoning was brought on by Polychlorinated Biphenyls and dioxins, which are hormone-disrupting chemicals. As a result, the victims had chronic illnesses and passed on the poisoning to their children. Despite the victims’ ongoing need for compensation and relief, no adequate policies as yet exist.

Similar to the Kanemi case, East Asian society has experienced many other food contamination, e.g., the 1955 Morinaga arsenic milk poisoning in Japan, the 1979 Taiwan rice bran oil disease, and the contamination of food with melamine in China and Korea in the 2000s. These cases show that salient issues regarding food in East Asia have changed from security to safety. Furthermore, they indicate that this study can be applied to other contamination cases.

In contrast to neglected those cases, environmental pollution incidents such as Minamata disease - caused by the methylmercury contamination of Minamata Bay in the 1950s - were officially recognized as ‘public nuisance’. The victims of them therefore received public compensation in accordance with the law. However, the government denies that serious food poisonings are ‘public nuisance’, leaving victims without compensation.

From the sociological perspective, the social damage structure of the Kanemi was not similar to typical cases of food poisoning. Rather, with regard to the victims’ possibility of recovery, the negative effects on daily life and community, and the cause of the contamination, it was similar to ‘public nuisance’.

In conclusion, I propose a new perspective of ‘Industrial Food Pollution’, beyond the Japanese legal definition of ‘Food poisoning’ and ‘Environmental pollution as public nuisance’. Based on this perspective, I recommend the establishment of ‘Relief Fund for Industrial Food Pollution’, which institutionalize compensation systems for victims.

UDAGAWA, YOSHIE* (Claremont Graduate University, yoshiedagawa@yahoo.co.jp)
Back in the 1960s, Daniel Bell predicted the coming of the new class society based on the knowledge and information capitalism. Assuming that gender would not matter in the knowledge society, women expected that this society would change in a more gender-equal direction. In reality social change has promoted neo-liberal reforms that have resulted in a widening class gap and decreased social mobility, wherein gender matters a great deal. Women are cast into the labor market in the name of the “equal opportunity,” which handicaps by virtue of their care burden. In addition, the rapidly ageing society added further burdens to the care-takers, mainly women. The result was extremely low fertility. Most OECD countries try to solve issues of care through public policy or markets, both of which depend heavily on migrant labor. In the absence of this solution, in Japan gender serves as the functional equivalent along with race and ethnicity.

This explains why the women's status in Japan as measured by the Gender Equity Index or Gender Gap Index is relatively as relating to its ranking in the Gender Development Index and the Human Development Index.

The recent disaster of the Fukushima nuclear power plant following the giant tsunami has sent out a warning that we must change our over-competitive society that places such a high value on wealth and growth. Nevertheless, the Japanese nation does not want to learn the lesson of history, despite paying an enormous price. I will argue that there is much to be learnt, both positive and negative, from the Japanese experience.

**Facebook Activism By Foreign Domestic Workers in Singapore**

Studies of foreign domestic workers are now numerous in the social science literature, with much attention paid to left behind families. Since new research is required to contemplate the latest change, this paper uses authentic accounts related to the current explosive growth of social networking by live-in domestic workers in Southeast Asia. Evidence was gathered through 54,000 posts on a Facebook group, most from Filipina domestic workers in Singapore. Interviews were held with Facebook group members, including a founder of the NGO responsible for starting the social network group. Findings confirm that internet technologies have been an integral in the lives of foreign domestic workers, enhancing their social interactions and mobilizing their self-expression. There is evidence that Facebook reduces psychological and physical costs for live-in workers, making it relatively easy for them to participate in activist social networking. Evidence suggests that, in addition to providing entertainment for foreign workers, Facebook motivates an increasing number of distantly scattered individual workers to engage in social activism.

**How Japan Imports Social Problems from the West: Child Abuse from Early 20th Century to the Present**

For more than a century, Japan's approach to the child abuse problem has been stimulated and shaped by developments in western countries, particular in the US. Early in the 20th century, a national discussion of child abuse was initiated by hundreds of Japanese who had been exposed to western philanthropy. In the 1970s, Japanese medical professionals raised awareness of battered child syndrome proposed by a leading American pediatrician. Starting in the 1990s, a massive discourse on child abuse problem emerged from various professional groups who admired prevention and treatment measures from the US. Official data show that child abuse cases in Japan are most common for people of lower economic class. However, social policy on child abuse problem downplays the importance of economic stability and attributes the problem to individual families. Thus, government policy prioritizes identifying settings where there is a risk of child abuse and counseling parents instead of focusing on bringing families out of poverty. A child abuse risk assessment tool from the US is applied to every child abuse cases in Japan. The result was extremely low fertility.

**Moral Identity in Friendships Between GLB and Straight College Students**

People make moral claims about sympathizing with and providing support for stigmatized individuals, but past studies tended to focus on this type of moral identity construction within formal organizations. The present study seeks to extend the literature by identifying the process of moral identity construction in a personal setting—friendships between gay, lesbian, and bisexual (GLB) people and straight people. Analyzing data from in-depth interviews with college stu-
Gender equality and women's empowerment are important indicators in development strategies that focus on poverty reduction and improved maternal health. Despite the overall well-being of women and the nation, research in this area is neglected. Besides the condition of women in relation to women empowerment, indicators have remained poor. The study used data from the latest national Demographic and Health Survey (NDHS, 2008) to examine the socio-economic condition of women in relation to their level of education and as a correlate of maternal health outcomes in Cross River State. The study utilized data of a representative sample of 735 women of age 15-49. A majority of respondents reported poor/low socio-economic status ranging from low educational status, unskilled occupation, low income per month, seasonal employment, etc., and this affected the level of empowerment in all the indices. These women's participation in household decision making, their attitude towards wife beating, and their attitude towards a wife's right to refuse sexual intercourse with her husband or partner. This condition is manifested in high maternal morbidity, mortality, inability to determine the number of children, spacing and antenatal care options available to them. This is in line with the prevalent scenario in the entire country. There is therefore an urgent need for improving and enhancing women socio-economic condition as it will improve their level of empowerment and will bring about better maternal health status.

Colonialism, Land Use Planning, and Indigenous Rights: Using Institutional Ethnography to Understand the Colonial Rationalities of Planning in 21st Century Chile

This paper shares some initial findings of a theoretical and methodological exploration, in which I use institutional ethnography (IE) to examine the role played by planning in the dispossession of indigenous peoples in Chile. Over the past fifteen years, the planning literature started to recognize the complicity of the discipline with colonial domination and imperial aspirations of territorial expansion, in particular how land use planning has been one of the main mechanisms used by European settlers to appropriate Indigenous lands. Starting from the premise that planning processes are embedded in complex and broader institutional structures, I further argue that planning has contributed to the reproduction and perpetuation of colonial injustices until this day, in part through the existence of institutional, legal, and decision-making frameworks that are colonial legacies. Although IE has been widely used by planning scholars, I claim that to understand how colonial rationalities are reproduced through everyday planning practice it is critical to look at how written texts—especially plans, legal documents, regulations, and policies—shape planning action and help reveal colonial ruling relations. To answer this empirical question, I draw on in-depth interviews and documentary reviews, discussing how the daily actions of government planners in Chile bring to life colonial visions and understandings, although in subtler and more invisible ways than in the past. I use as an example the planning and implementation of the first Consultation on Indigenous Institutions, led by the Chilean Government in 2011, which was developed in the context of the recent endorsement of ILO Convention 169 and the UN Declaration on the Rights of Indigenous Peoples. This exploration shows how the recognition of Indigenous rights challenges Indigenous/State relations and simultaneously reinforces colonial notions of state sovereignty, lockeans ideas of land use and property rights, and liberal understandings of human rights.

Facing An Unequal World: The 1967-70 Civil War In Nigeria, Its Causes, Consequences and Implications On The Biafran Side Of The War In Contemporary Nigeria

SHORT ABSTRACT: The paper examines the causes and effects of the 1967-70 Civil War on the Biafran side of the country, even decades after the actual war.

LONG ABSTRACT: Violent conflicts of inter and intra state wars of myriad complexities have become an integral part of African life. The Nigerian-Biafra war of 1967-70 took genocidal dimension in which the killing of people on the Biafran side of the war became a state industry. These decimations took the features of a pogrom against the “Biafrans” which resulted in millions of people of that side of the country examining the war.

This paper, therefore, analyses the causative factors of the war, the consequences of the war in terms of the massive human deaths, the refugees’ problems and the excruciating economic and social aftermath of the war on the then citizens of Biafra and Nigerians in general. The paper argues that even in the contemporary globalized world, war continues as a human tragedy that constitutes victims of the secessionist war still suffers from unequal treatment in the present Nigerian socio-political context, being a hangover of the Nigerian-Biafra civil war of post-independence Nigeria.

The Social Meaning of Racial Humour Among the Police

This paper explores a controversial side of police culture: the use of ethnic humour among the police. The empirical material consists of twenty-two interviews made in context of an assessment on the work environment for ethnic minority officers and civilians within a major Swedish police force. The qualitative analysis illustrates how officers and civilians with an ethnic minority background talk about the widespread use of racial humour within the police. On the one hand, they highlight the role that ethnic jokes play in their colleagues' jokes and strategies for handling race jokes, which reproduces ethnic stereotypes and tends to position minority officers as 'outsiders', but, on the other hand, they contribute to the reproduction of racial jokes and consider it to be an unavoidable, quite unproblematic, part of daily police jargon. Finally, the difficulties of walking the thin line between police jargon and ethnic bullying and the problems that racial humour implies for diversity work within the police are discussed.

China's Involvement in Africa: New Approaches of Solidarity in Economic and Development Policies or Just South-South Rhetoric?

The increasing Chinese activities in African countries are often stated as different or competing against Western approaches of development aid and economic relations. Not only regarding quantity but also quality, the Chinese involvement seems to develop specific patterns of a development model, for example the principle of non-interference. This paper analyses Chinese conceptions of economic and development policies towards African states. By putting these policies and their implications in the context of historical structures and social relations of forces, the asymmetrical power relations, the counter-hegemonic potentials as well as the interests and strategies of the stakeholders involved within this “third way” between (Post)Washington Consensus and South-South Cooperation can be identified.

However, there has not been much research on African perspectives on character and patterns of Chinese involvement. Therefore, in its second part, the paper focuses on the perception of Chinese activities in Ghana and the impact on local developing roles. Being the “darling” of Western donors and simultaneously experiencing a rapidly increasing Chinese involvement on different levels of its society, Ghana presents a crucial case study with conflicting constellations of interests. According to (neo)gramscian concepts of hegemony, a sustainable impact on the local development model, manifested in reciprocally combined elements of institutions, ideas, and material capabilities, must include aspects of consent (considering the specific background of the Ghanaian society by including theoretical perspectives of peripheral statehood and postcolonial approaches). Do Chinese stakeholders accomplish a broadly-based consent on their activities and therefore establish patterns of a “different” development model in Ghana? Does the Ghanaian civil society perceive them as an alternative to the dominant (Post)Washington Consensus? Following a qualitative mixed-methods design, combining expert interviews, media analysis, and secondary analysis, the findings of this core areas of the Chinese economic and social activities will be presented and compared: construction, mining and trade.

Gender Representations in Occupational Descriptions

The Swedish labour market is to a vast degree segregated by gender, likewise as in many other nations. Women and men work in different occupations, branches and even sectors and a majority (73 percent) work in occupations where 60 percent or more of the employees are of the same sex. Women are engaged in occupations such as nurse, social worker, teacher, assistant nurse and child minder, while men primarily work in manufacturing or with diverse technical occupations. The separation of men and women in the labour market can be explained by the structure of society, which results from the sex-segregated society and demonstrates gendered images of occupations. Both tasks and occupations tend to be sex-typed and we associate them with being either female or male. “Female” occupations include different aspects of caring for other persons and thereby correspond with dispositions assumed to be held by women. “Male” occupations are associated with physical strength, technical skills and logic – dispositions traditionally associated with men. Sex-typing is an ongoing process, part of the overall gender system in society, and is related to hegemonic cultural beliefs about gender.

This paper draws on empirical data consisting of occupational descriptions produced by the Swedish Public Employment Service (Arbetsförmedlingen). It presents the results from the on-going research project that studies whether descriptions of occupations are a mechanism for social reproduction of gender, social class and ethnicity. The paper focuses how gender is represented in the 30 most common occupations for women and men respectively. The aim is to find out whether these occupational descriptions reproduce stereotypes of gender, and how. The study was conducted through a qualitative content analysis. Preliminary results reveal that they both reproduce and break stereotypes: by emphasizing that nurses need to be technical and that a janitor must have social skills.

Information and Communication Technology (ICT) and “Isolated Child-Rearing” in Japan

This paper explores how ICT affects social movements for dealing with “isolated child-rearing” through analysis of political documents and qualitative interview data, especially focusing on the relation between ICT and neighborhood relationships or regional networks for families. In Japan today, these social movements for dealing with “isolated child-rearing” have been active. They problematizes “isolated child-rearing” not only from the urbanization, the increasing number of nuclear families and the dilution of neighborhood and family relationships, mainly on the assumption that the isolation relates to “child abuse” and “child-rearing anxiety.” For this reason, they try to strengthen supports for parents by neighborhood or special local agencies. On the other hand, recently some governmental ICT projects for preventing “isolated child-rearing” have been promoted, such as building a social networking service site for parents and developing e-learning environments to foster advisors on child-rearing. These projects enable parents to seek advice or to talk with other parents on their smartphone or personal computer without leaving home regardless of their regional contacts. So, how does the promotion of these ICT projects affect the need for developing a sense of community and building regional networks for preventing “isolated child-rearing”? In conclusion, the governmental ICT projects in Japan are rigidly focusing on “local community” and building regional networks for preventing “isolated child-rearing”? The paper looks at how relationships – both competitive and collaborative – between the following four entities help create economic knowledge, and how this knowledge interacts with the generation of news. The entities in question are: 1) governmental (individual institutions, arms agencies, etc.); 2) non-human institutions (instruments, models, rankings); 3) structures (classes, professions) and 4) networks (relationships among actors, instruments, structures). The paper pays special attention to how news about the economy is constructed and circulated, and how this news in turn draws upon, contests, and helps to produce economic knowledge. This research forms part of the ERC funded ECONPUBLIC project, which study how the ideas about the economy have been produced in the mass media in the UK, US, France, Argentina and Brazil in the post-war period. http://www.econpublic.bps.cam.ac.uk

Democratization of Local Leadership--- the Role and Function of Local Governance in the Disaster-Processes of the Great East-Japan Earthquake and the Tsunami

The gigantic earthquake of magnitude 9.0 which occurred on 11th March, 2011 caused tremendous damage to the huge coastal area around Northeast Japan. The tsunami was of historical record in terms of its height and area affected. As the end of March, 2012, over 20 thousand people were reported as dead or missing related to this disaster.

Moreover, serious accidents at the Fukushima Nuclear Power Plants that happened sequentially had a great impact on the huge area. The catastrophic damaged communities had been in financial difficulties with a high percentage of aged people, revealing various types of precariousness in the social structure of the communities and the vulnerability individual resident groups have.

In terms of mitigation, temporary living, restoration and reconstruction processes, the role of local political leadership that could listen to requests and meet the demand of the residents on the one hand and that could negotiate with the central and prefectural governments in order to get necessary assistance to help people in the disaster areas on the other hand, is getting more and more important. Based on the in-depth interviews to local leaders of the hard hit areas we explore the role and function of local leadership and its effectiveness, as well as the condition on which they are doing well with these jobs.

Among the democratic countries Japan has a rather centralized political and social structure with a strong central government in terms of budget-control, regulation of prefectoral and local government system etc. Furthermore after the earthquake we experienced the change of governing party from the Democratic Party of Japan to Liberal Democratic Party, which seemed to mean that it is necessary to consider deeply the way of the political leader, not only at national level but also at local level.

An Ethnomethodological Explication of the Usage of Diagnostic Categories: On the Relation Between Diagnosis of Autism Spectrum Disorder and Self-Identity (2)

Through the lens of medicalization in sociology, the relations that people have with medical categories are considered subordinate to medical professions. Therefore, how individuals with autism spectrum disorder (ASD) come to terms with the category of “ASD” is considered a manifestation of that subordination (Conrad, 2007). However, this perspective prevents us from understanding actual situations in which those individuals come to terms with the diagnosis of ASD. Many studies have investigated the various relations people actually have with their diagnostic categories (Hacking, 2009; Jutel, 2011). Based on these recent studies, this presentation examines the sessions of toijishida-kenkyu (which roughly translates as “sufferers’ first-person study”) and explains the interactions of the settings in which participants refer to their own diagnostic categories. The Japanese word toijishida-kenkyu refers to a collaborative activity in which the indi-
viduals suffering from social isolation due to their impairments talk about their troubled experiences and study the structures of these experiences in their own words. Tohjisha-kenkyu began in a mental patients' group in the town of Hokkaido, Japan and has since been utilized in many other groups of individuals with various impairments (Ayaya and Kumagaya, 2008; Ishihara, 2013). The sessions of tohjisha-kenkyu this presentation examined were for individuals with ASD and conducted by these individuals. Using ethnomethodology and analyzing audio recordings of the sessions, we focused on the following questions: (1) What is the significance and what are the roles of the participants' self-reference to diagnostic categories? (2) What relationships do these usages of diagnostic categories motivate between participants? (3) What consequences do these usages give to the meanings of these diagnostic categories?

The Transfer of Public School's Management for the "Public Non-State Sector" in São Paulo, Brazil: Challenges When Education Becomes "a Care Service to the Consumer"

An overview of the author's master's research (in progress), which discusses participation and social control specificity in "public non-state" educational services in Brazil during the last decades, after a major structural change in the country's public educational services.

It investigates how the funding architecture of state services take place after 1998, when the transition form "full public" to "public non-state" took place. It attempts to explain how the as called "financialization" and internationalization - key features in capital globalization - interfere on participation and social control in education sector. The case study analyses a legal entity created to this end - the OSCIP - specifically the branch of education that began to operate in the first schools with public non-state management in São Paulo. Marked by inclusive participation of the business community in partnership with the higher authorities of planning education (Education Departments of State and Municipality), their intention is to draw a OSCIPS school management model that copies central countries' school structure. This experience in São Paulo is crucial: it's a pilot project for all public education in Brazil. If successful, all municipalities and States should also adopt this new model and all public schools shall be run by non-state entities.

The intention is to unfold and underline the mechanisms of production of a specific kind of participation and social control over public services, which is based on the logic of "care services to the consumer". As a result, the strategies for a non-state organization, which presents itself as a nonprofit one, obtain profit arises. And, therefore, it can be said that there are private intentions supporting entrepreneurship in these supposed non-profit sectors.

Social Narratives For Noble Art Collecting (Spain, 1750-1850)

The main purpose of this paper is to study the role that collections of art works and other artifacts played in the definition and exhibition of social discourses of legitimacy and differentiation of the estates. Since noble collections embodied social theory and social legitimacy, old noble houses transformed their artistic policies in the transition between Early Modern and Modern and Contemporary Europe, as a response to the competition environment due to the new nobility and other groups climbing the social ladder. Also these old noble houses had to answer the coincidence with the institutionalization of the new artistic system represented by academies and museums. All these elements promoted the re-arrangement of old collections and the display of new social narratives for their public interpretation.

This aim is intended to be pursued through the analysis of the ideological narratives on collecting deployed by Spanish ancient nobility, 1750-1850, focusing on the houses of Osuna, Alba and Medinaceli, among other families. These old noble houses had been displaying social narratives through collected objects since 16th century. Portraits, religious and historical paintings, a few masterpieces with acknowledged aesthetic value, weapons and many other different items had been collected, organized and narrated through the ideas of lineage and differentiation of social groups and estates. The analyses of the reorganization of these collections and their new discourses at the end of the Ancient Régime could offer valuable information about the social profile of these objects and their use as means of social structuration.
For the first time in modern history and with the region's turn to multiculturalism, most Latin American censuses now ask respondents to identify by race or ethnicity. These new data allow researchers to systematically examine ethnoracial inequalities, which have long been ignored or denied. However, reliance on census ethnoracial categories could be problematic because of classification ambiguity in the region and because the categories themselves may hide racial heterogeneity. To overcome this, we modeled the relation between skin color as well as census ethnoracial categories and educational inequality, using innovative data from the 2010 America's Barometer from the Latin American Public Opinion Project (LAPOP) and 2010 surveys from the Project on Ethnicity and Race in Latin America (PERLA). We found that skin color was strongly related to educational inequality in all examined nations (Bolivia, Brazil, Colombia, Dominican Republic, Ecuador, Guatemala, Mexico and Peru), even after controlling for parental occupation and other factors. On the other hand, ethnoracial identification was a weaker and less consistent predictor.

Whistleblowing and Intervention: A Role For The Clinical Sociologist

Worldwide there is a tendency to view the act of whistleblowing as making an important contribution in the fight against corporate misconduct. However, a more ambivalent attitude is often displayed towards the whistleblowers. There are global debates about whether whistleblowers should be considered as heroes or traitors and what kind of protection they should have.

Whistleblowing takes place when a present or past member of an organization deters suspicions about organizational wrongdoing to those they believe to be in a position to take action. Whistleblowing could occur internally when the whistleblower communicates the message inside the organization (using prescribed or non-prescribed channels) or externally when the whistleblower resorts to an external agency, which could include the media. Regardless of how the disclosure is done, many organizations generally regard whistleblowing as illegitimate. The disclosure of information about organizational wrongdoing, especially if it is placed in the public domain, is regarded as a form of betrayal and often leads to retaliation by the organization. Acting as ‘loyal and caring’ employees, whistleblowers generally do not expect the severe negative responses they receive as a result of disclosing irregularities in their places of work.

This paper discusses whistleblowing in the USA and South Africa and considers the role clinical sociologists could play in designing and/or implementing interventions that would ensure better outcomes for the whistleblower as well as the organization and clinical sociologists. Clinical sociologists can play a role in designing and/or implementing interventions based on an analysis of problem situations. In the case of whistleblowing their role could include advising the organization with regard to the implementation of confidential reporting systems that would pre-empt whistleblowing; developing support systems for whistleblowers before, during and after the disclosure; and the organization and the whistleblower and advocacy to improve legal protection for whistleblowers.

Public Religious Activities of Muslim Women in Turkey

This paper aims to analyze the effects of Sunni Muslim women's increasing public religious activities on their everyday lives and social status within their close relationship circles as family and neighborhood. The analysis is an account of a two-year-long ethnographic field study in two state Quran courses and one informal Quran course in Ankara and twenty six interviews with the participant pious women. Muslim women's public visibility has been increasing in the world as well as in Turkey. This is firstly due to the increasing rates of public participation of women in Turkey (there is positive development in women's employment and education rates). Since working women spend most of their time outside their homes, pious women choose to fulfill their religious obligation of daily prayer (salat) in the mosques and mesjids which are public spaces. Secondly, more and more pious women claim their right to the public religious places such as mosques which have traditionally been male spaces and public religious activities such as Friday prayer which have been dominated by men as male religious activities. As a result, more women attend public religious activities at public religious places. This paper argues that pious women reorganize their everyday lives according to their public religious activities and that pious women's public visibility elevates their social status within their families and among their neighbors and friends. They are seen as the "people in charge" of the religious affairs by their families and by their friends.

BUILDING "ETHNIC GHETTOS" OR "INTERCULTURAL BRIDGES" THE USE OF ICTS IN MIGRANT ORGANIZATIONS IN SPAIN

The use of the Information and Communication Technologies (ICTs) by migrant organizations is a relevant factor for the enhancement of social cohesion. Migrant associations develop in-group solidarity, and this often generates distrust and trust. There is a general consensus regarding the value of ICTs in maintaining both strong and weak ties, but there is not any consensus on whether ICTs are...
useful in forming new ties and whether those are strong or weak. This study aims at examining the impact of ICTs use in the migrant associations’ social capital. Are migrant associations using ICTs to expand bridging social capital or to reinforce homogeneous networks? In-depth interviews to the representatives of 25 immigrant associations in Spain, from five different origins, namely Romania, Morocco, Equator, Colombia and Bolivia, have shown that the use of ICTs is increasingly essential for their organizations. Furthermore, ICTs are used to access to information on both the origin and the host country. However, the organizations’ communications, both online and offline are mainly addressing their local communities. On the other hand, there can be no doubt that the associations that use more diverse ICT tools are those who are more oriented to social cohesion. The study shows that, indeed, bonding social capital is essential for migrant associations and that the use of ICTs helps maintaining strong ties, while fostering the creation of new weak ties and political participation of their communities in the host society. In sum, ICTs come up as an opportunity for migrant associations to improve their public image, collaborate with other public, private and non-profit organizations and thus to enhance social cohesion, in general. Therefore, an effort should be done from public and private initiatives to facilitate this digitalization. This paper is part of a larger research financed by the Spanish Ministry of Economy.

**UZZELL, DAVID*** (University of Surrey, d.uzzelli@surrey.ac.uk)

**Workplaces in TNCs: Can Green Practices Be Transported Across The Home-Workplace Border?**

Just under 50% of the world’s GHG emissions in 2004 were attributable to energy supplies and industrial production (IPCC, 2007). The demand for manufactured goods is expected to rise by at least 100% by 2050 (from 2006 levels), with a consequence that industrial emissions, if unaltered will lead to a 90% increase in CO2 emissions by 2050 compared to 2007. Following new EU regulations, national governments have created policy instruments designed to reduce or compensate the level of emissions of specific organizations. However, these regulations have not proved to be effective, neither in terms of production nor consumption. The research project: Low Carbon at Work, attempts to understand the drivers for and barriers to environmentally sustainable practices at work and at home, and recognizes not only the crucial contribution of industrial production to GHG emissions, but also that consumption is an inseparable driver of production. Investigating two TNCs (vehicle production and oil industry) in Sweden and the UK, we have asked under what conditions workers and managers are encouraged to transfer “green practices” from work to home and vice versa. We have also investigated how relationships between managers, employees and trade unions might encourage or prevent the adoption of ‘greener’ production processes. Both case studies include informational and life-history interviews to understand changes at different times of their life course. Our findings explain why workers are often unable and unwilling to carry practices between home and work, why they draw borders between those areas and under which conditions they become permeable and “green practices” are carried from home to work and vice versa. We have found how limited communication between hierarchical levels within companies as well as inflexible management practices discourage workers to suggest and implement environmentally valuable changes.

**VAALAVUO, MARIA*** (National Institute Health & Welfare, Maria.Vaalavuo@thl.fi)

**Population Ageing and Distributional Concerns**

This presentation will look at the transformation of the welfare state from the perspective of increasing spending on various elderly and health care services. One of the main arguments of the presentation is that a new distributional paradigm put forward through demographic and structural changes is emerging. The presentation has two objectives: 1) It examines the distribution of elderly and health care spending across the Finnish population with register data on the use of services in 2011. 2) With macro-level data from the EU countries, it analyses policies and social spending targeted to different age groups in the society and discusses how their balance has changed in the past two decades. The increasing spending on elderly care services raises distributional concerns as the welfare state paradigm shifts to new forms of spending and new types of beneficiaries. Countries already display considerable imbalances in the distribution of public spending for today’s young and old generations. If we spend more money on old age in-kind benefits, who benefits the most? Do all ageing citizens benefit equally and to what extent this development in spending patterns dig a gap between generations? Are there signs of proportionally more pro-elderly spending as the median voter’s age increases? The topic is politically even more relevant in the midst of the current economic crisis when social budgets are being cut, welfare state policies recalibrated and intergenerational justice is emerging as a significant policy issue. The preliminary analyses with the Finnish register data indicate that the distribution of old age in-kind benefits has a remarkably pro-poor pattern. The final article will investigate further if this is explained by the greater morbidity of the elderly in lower income classes or if the result is connected to other socioeconomic factors, such as living alone or older age.

**VAALAVUO, MARIA*** (National Institute Health & Welfare, Maria.Vaalavuo@thl.fi)

**Welfare Dependency, Accumulation of Social Problems and Marginalization**

9.2 per cent of the population in Helsinki claimed social assistance in 2011. Media often portrays these people as a homogeneous group while the evidence tells otherwise. This presentation contributes to the development of a typology of social assistance recipients and focuses on those worst-off. Is there a new group with multiple needs that should be targeted with specific policy measures? But also, are there new claimants recruited from middle classes? 40 per cent of recipients claim social assistance for less than 3 months. These short-term recipients can hardly be called the core of destitution – especially if we consider long-term deprivation as a characteristic of destitution. An entirely different type of subgroup includes those who receive the benefit long-time or recurrently. Indeed, long-term social assistance receipt has increased and a growing share of claimants faces many problems simultaneously. Health problems, substance abuse, long-term unemployment and housing problems often accumulate and make these people more vulnerable to marginalization.

In order to develop better policies and actions by social workers, information on the heterogeneity of clients and the depth of the various problems they face is of profound importance. Should we improve the accessibility and content of health services, to whom should the rehabilitative work be targeted and who still have the potential to re-enter the labour markets? The presentation analyses social assistance clients in Helsinki with register data from 2006–2011. The data is complemented with information on the use of health and social services and pharmaceuticals. Using factor, latent class and descriptive analyses, the objective is to locate the core of destitution and classify clients on the basis of their background, benefit dependency and welfare problems. This categorization can facilitate the design of actions, setting of realistic objectives of policies for different subgroups, and analysing social assistance data in general.

**Educational Inequality and Social Mobility: A Two-City Study in India**

Patterns of intergenerational social mobility provide an indication of the equality of opportunity and “openness” of a society. This paper studies the impact of educational attainment on social mobility chances in India for both women and...
men. India presents a novel case to test theories of inequality and to examine social change given its diversity and the pace of recent growth that has excluded a significant proportion of the population, and due to persisting educational and gender inequalities. Specifically, large cities in India that have expanded both in terms of population and economic growth are ideal contexts for such a study of social mobility. This paper analyzes primary data collected through a survey of over 1800 respondents in two cities, Delhi and Patna. In-depth interviews with some of the surveyed respondents provide the much-needed context to this study of persisting inequalities.

VALAIRNO, ISABEL* (University of Lausanne, isabel.valarino@unil.ch)

Fatherhood and Doing Gender. How Challenging Can Institutional Changes be?

Transition to parenthood in Switzerland takes place in a particularly gendered welfare state. It is the only European country where men do not have access to any kind of statutory parental or paternity leaves. Following a conceptualization of gender in social structure, we consider that parenthood is shaped by social mechanisms producing difference and inequality between fathers and mothers at the institutional, interactional and individual levels. This paper investigates empirically the extent to which institutional change - such as the introduction of a paternity leave - can challenge the construction of gendered fatherhoods. It is based on a case study conducted in a public sector organization which implemented in 2010 a one-month paid paternity leave. Sequence and cluster analyses are performed on register data about the patterns of employees’ leave uptake (N=95). Interpretive analysis of interviews with fathers who took paternity leave (n=22) and with managers who experienced leave uptake in their team (n=8) is conducted. Results indicate a limited challenge of the gender structure. At the interactional level, although paternity leave enables fathers to spend more family time, a gendered division of childcare tasks is observed: fathers still have a secondary role with the newborn child. The majority of interviewees adopt a modified breadwinner model, similar to the dominant norm in Switzerland. As regards interactions in the workplace, paternity leave contributes to make fatherhood more visible, but informal norms about the legitimate leave pattern are observed. On the individual level, paternity leave uptake contributes to men’s appropriation of their fatherhood identity and to increase their sense of competence and duty as fathers. However, their conception of fatherhood is structured according to contradictory discourses which highlight change in gender relations and persisting differences between motherhood and fatherhood.

Highly Skilled Migration As a Structuration: What Is New?

This paper examines the role of interaction between social structure and human agency in the process of international migration of the highly skilled professionals. The discussion draws from Giddens’s structuration theory and Bourdieu’s forms of capital. It revisits Giddens’s analysis of duality of structure and structure and relocates it in a migration field. This presentation is devoted to explore second questions: Why do highly skilled professionals migrate even they are financially satisfied? Why others do not consider migration? What kinds of forces in migration decision process do participate? This paper is based on results from twenty in-depth open ended interviews with highly skilled professionals of Lithuania in the fields of natural and technological sciences. Migration and social status is seen as endless process constructed from set of events passed on micro, mezzo, and macro level.

In the view of structuration theory migration is seen as recursive process formed and transformed by active agents and itself shaping and restructuring subsequent social behaviour of agents. Both structural determinants in the countries of emigration and immigration and acknowledgment of migration as efficient strategy for life betterment creates new cultural element in the social structure that influences migration-decision making of other peoples. International migration is a continuous interaction between migrants and economical, political, social, and cultural contexts on macro level in the sending and receiving countries.

New insights shed light on deeper than just economic considerations layers involved in forming attitudes towards international migration. The structural ant socio-cultural context where individual is acting, migration experience in parent family, seek for higher social status, personal freedom, and need for professional recognition are just several pieces of the puzzle, the outcome of which is decision to (not) migrate.

Mexico: Democracy and Inequality in the States

In Mexico only electoral democracy has been developed. There is no growth, neither social nor political important presence from social and civic organizations that show developments on social democracy and that allow an effective control of the government by the society. The elections alternation in every aspect has been a proof of the presence of electoral democracy. Mexico’s ranked place 61st on the Human Development Index. Nevertheless, inequalities on the 32 national entities are quite evident.

This paper analyzes the evolution of the electoral democracy on the 32 Mexico’s states and relates it with inequality according to the HDI. The unit of analysis is the alternation on municipal governments during 10 years, identifying those entities with a greater percentage of municipalities with alternation in their governments and searching the relation with the evolution of the HDI and the evolution of income poverty.

Mexico: Electoral Geography from the States View

Ever since year 2000, Mexico has had very competitive presidential elections. Two of these electoral processes, have been pinpointed as fraudulent, because of several irregularities that have happened.

The electoral geography has introduced the states behavior in the three elections to be studied (2000, 2006 and 2012), showing more or less territorial agglomeration.

This paper introduces the electoral geography based on the electoral results from the capitals of the 31 states in the country, taking into consideration, that generally, the states capitals concentrate the higher amount of voters, and have the major political diversity from each state.

This paper also presents the political-governmental evolution from each entity, as a political and geographic context that supports the explanation.

Domestic Violence As Eigenvalue in Contemporary Society: A Sociocultural Approach to the Construction of a Form of Gender Based Violence in Chile

Domestic violence, including several forms of gender based violence, does not exist independently from an observer, neither is this observer limited to a domestic realm. In contemporary society, domestic violence is constructed as such in a network of operations that encompasses both private and public realms. This network involves a diversity of human and non-human agents – questionnaire, photomontage, personal items, etc. – and coordinates public policy, legal, scientific and political criteria. As a result of these operations, experiences of violence are transformed into cases of domestic violence, which overflow into courtrooms, state agencies and other sites. In this sense, domestic violence is an Eigenvalue (Reinhard von Foerster), a referential correlate of this complex network of operations.

This paper, which is based on field observations made in Santiago, Chile, describes a section of this network: the section that goes from the moment a report is made to the moment it enters a courtroom transformed into a case of domestic violence. It is stated that three problems of reference (Niklas Luhmann) give meaning to the diverse operations that are involved in this network: a) the attribution of cases of violence to the environment of the system; b) their observation as forms against a medium; c) and the constitution of chains of transformations (Bruno Latour) through which references to the lived experiences of violence are mobilized and transformed into forms against a medium. Specific mechanisms that contribute to solve these problems are presented and analyzed.

Finally, two main consequences are explored. At the same time that the constructed reality of domestic violence becomes inscribed in the lives of victims and their relatives, shaping their experiences and descriptions of the world, it is shaped as a stream of facts that feed state mechanisms of population control.

The Circulation of Two Epistemic Objects That Carry Social Science Knowledge: Domestic Violence and Bullying

This presentation follows the circulation of two epistemic objects, namely domestic violence and bullying, in Chile, from their appearance in this country in the decades of 1990 and 2000, respectively. Social science knowledge plays a major role in the configuration of both epistemic objects. Also, both objects have important normative and emotional contents, making them relevant for the orientation of actors. In this manner, domestic violence and bullying are part of performative processes through which social science knowledge shapes reality.

The definitive positioning of domestic violence and bullying as part of everyday reality in Chile resulted largely from State-led processes of measurement, diffusion and regulation. Their arrival and diffusion was induced by several social processes. In the case of domestic violence, the feminist movement, with its claims during the 1980s, was a crucial lever. Bullying, instead, has a more diffuse arrival, being mass media, particularly television, its fundamental driver. Internationally organizations such as the World Health Organizations and UNESCO played a key role in the circulation of both constructs. They have provided conceptual and methodological tools, as well as facilitated and disseminated research and provided funding. Moreover, international organizations have incorporated in these constructions a decisive normative framing that is associated with developments in Human Rights.

Some repercussions of these processes are analyzed regarding the globalization or universalization of these realities or cognitive objects and to the respective effect of perceptual and normative shaping. The empirical study is based on interviews to relevant agents (state functionaries, policemen, educators, psychologists, physicians, etc.), ethnographic work regarding measurement and classification practices, and revision of documents related to processes of constitution of these constructs.

The Atmospheres of Chilean Copper Morailties

From ancient times copper mining has been a key element for the materialisation of the civilisation processes. From the weapons and ornaments of the Western Asian settlements 1.000 BC to the chips and wirings of contemporary hybrid cars, copper has had a privileged position advancing human capacities with its versatility. However, intensive pollution derived from copper mining has also been a prevalent issue that can be traced twenty five centuries back to the smelters of Roman Empire times, as some recent sediments analysis in Greenland have recently shown (Hong et al, 1996). Additionally, copper has been relevant in international disputes over natural resources, as can be seen in Chile in the middle of the Cold War, with a process that sought to recover national sovereignty over copper and ended up with the imposition of a dictatorship. Following an actor-network perspective, this presentation is focused on the role of copper shaping the institutional settings of Chile. The analysis is mainly based on the negotiation of air quality standards and emissions caps that lasted for more than twelve years (between the late 1990’s until 2012), and explores the different copper ontologies related to health, pollution, energy, and globalisation among others, mobilised during that process.

Responding to contemporary challenges in marriage and family processes the development of people's opportunities live long, healthy and creative lives; to advance other goals that are valuable for themselves and the entire society. Human development implies that people engage actively in expanding equity and respect for human rights. Family is not only an institutional cell but also is a micro-social basis of human development and its reproduction. It is a family where the key elements of human development (health, education, well-being etc.) originate from. The potential of these elements predetermine perspectives of socio-economic, scientific and cultural development of the country and ultimately of the person himself.

A New Global Approach to Pursue Global Justice and Development

The liberalization of economy and global economy formation have fundamentally changed the model of interaction between government, employers and employees; have greatly affected the employment structure, labor markets and socio-labor relations. Uncontrolled world capital markets, and as a consequence, risen instability, uncertainty and inequality in society have led to a weakened sense of common purpose of social partners in labor sphere. At the same time, understanding that stability and considerable culture in socio-labor relations guarantee social and economic well-being, determined the need in a new base for consensus between tripartite partners in global scale. This role is performed by Decent Work (DW) concept, presented by Director General of The International labor organization (ILO) in 1999. In accordance with definition, DW involves contradiction: it is implemented through the cooperation program between ILO and Russian Federation. The timeliness and urgency of DC idea is proven also by The European Union's Post Lisbon Strategy. The European network of 53 NGOs "SOLIDAR", working to advance social justice in Europe and between ILO and Russian Federation. The timeliness and urgency of DC idea is proven also by The European Union's Post Lisbon Strategy. The European network of 53 NGOs "SOLIDAR", working to advance social justice in Europe and worldwide wrote: «We would like to see the quality jobs and decent work agenda translated into European legislation, policies and programs, with its key components and objectives reflected in the Post-Lisbon Strategy».

Contesting Stigma: Afro-Descendant Migrants in Santiago, Chile

The purpose of this exploratory study is to provide a qualitative empirical account of the experiences of Afro-descendants presently living in Santiago, Chile, and contribute to the debate on the migratory realities of people to Latin America from the perspective an understudied and often marginalized and excluded population. While this study can only provide a snapshot into the lives of some Afro-descendant immigrants presently living in Chile, preliminary findings suggest that this population is experiencing racism and xenophobia with which they must regularly contend. It seeks to understand the justification process by which marginalized groups contest stigma and how they disavow perspectives that suggest their identities have been devalued. Forty-eight semi-structured interviews were conducted with adult immigrants of visible of African-descent (27 female, 22 male), from 4 continents and 15 countries, between April and May 2013. They lasted between 10 and 25 minutes and were conducted in either Spanish or English. All but 11 were audio-recorded.

The Resistance of Bare Life: Media Narratives on Mapuche Hunger Strikes in Chile

The current Mapuche movement emerges in the context of processes of globalization and modernization affecting Latin America. Since the 1990s conflicts have arisen between Mapuche communities and private companies, due to the development of economic mega-projects in Mapuche territory. The government role has been contradictory: while they promote politics of recognition in education and culture; politics of repression are used to suffocate Mapuche protests regarding those mega-projects. The mainstream media narratives have constructed a particular framing of the conflict. Due to the lack of plurality of Chilean mainstream media, a critical discourse analysis of media discourses is fundamental to deconstruct how a particular narrative is imposed as the unique regime of truth. An alternative discourse has been developed by the ethnic media, which emphasizes an historical and contextualized reading of these confrontations and its consequences for Mapuche communities. The paper compares the discursive formations underlying ethnic and media narratives regarding the Mapuche hunger strikes of 2008 and 2010. The media coverage of those hunger strikes provided a space for contestation of notions of ethnic and national identity. The analysis of these narratives brings to the forefront the concept of bare life (Agamben, 1998). The management of the bare life of the Mapuche is at the core of the modern politics. The hunger strike becomes the only mechanism of resistance of those subjects reduced to the category of bare life. The application of the anti-terrorist legislation locates the Mapuche body outside the realm of law by creating this state of exception (Agamben, 2005) where bare life can be scrutinized and managed.

The comparison of the mainstream and ethnic media narratives shows how the Mapuche hunger strike has been constructed in contradictory terms. A critical discourse analysis problematizes notions of power, legitimacy, ethnic and national identity, involved in those media narratives.
E-Justice in the Lowlands

It seems rather odd that in today’s network society, with its increasing penetration of information technology, online administration of justice and online dispute resolution (ODR) mechanisms appear to be fairly absent in Belgium and the Netherlands. Drawing on empirical exploration, the pervasiveness and forms of existence of so called e-justice initiatives are mapped. Next, an attempt is made to explain the current situation. The contribution will be rounded off with an in-depth investigation into the opportunities and limits of e-justice in the context of contemporary rule of Law regimes. More specifically, we ask ourselves to which degree such online initiatives could improve various aspects of access to justice, while at the same time safeguarding deeply rooted procedural and democratic principles such as due process and equality of parties. From this exploration of opportunities and limits flows a set of principles that might inform policy making in the cutting edge field of the online administration of justice and ODR.

Religion That Heals or Harms? an Examination of the Association Between Religion and Gender Differences in Depression

Gender differences exist in religious involvement and depression, with women reporting significantly higher levels in both. Most research finds that women benefit more from religion than men, as they are more involved than men in many facets of religious life. Research has for example shown that prayer offsets the noxious effects of stress on well-being for women, but not men. Other research showed that women are more likely than men to make use of supportive religious networks through church attendance and other religious activities, and are therefore more likely to reap the instrumental and psychological benefits with those relationships. However, in contrast a small number of studies suggest that women may face unique challenges in the church that diminish or offset the benefits of religion to mental health. Compared to men, women are more often prescribed to traditional role patterns and a subordinate role in the worship service. In addition, in secular settings, women may be confronted with the “cost of caring” by trying to maintain both extensive church-related ties while also remaining active in more secular networks.

Unfortunately, the vast majority of current research is conducted in Anglo-Saxon and non secular settings. In the current study, we aim to examine the association between religion and depression in secular settings. Religion from a cross national comparative perspective. First results based on the European Social Survey (2006-2007) showed that religion, as measured by subjective religiosity and frequency of praying is associated with higher levels of depression, in both men and women, but more pronounced in women. These findings contradict the most frequent finding that religiosity is related to fewer depressive complaints, especially among women. We intend to further investigate our results by incorporating both individual indicators such as church attendance, as well as contextual moderators, such as religious context into our model.

Ces Rumeurs Qui Racontent Les Crises Politiques

SourceURL:file://localhost/Users/aurore/Documents/PropositionISA2014.doc

L’avenir des nouvelles technologies de l’information et de la communication a contribué à la diffusion internationale et à l’accessibilité de discours informels divers, à l’éclatement et à la déhierarchisation des pôles d’ennonciation et de productions de textes et au journalisme influencé par l’utopie de l’information en direct. Dans ce cadre, de nombreuses informations non vérifiées (rumeurs, hoaxes, ragots et légendes urbaines) circulent, font ou interprètent l’actualité et, plus particulièrement, les crises.

Depuis quelques années, le mot « crise » revient quotidiennement dans les médias pour désigner une situation économique, politique, sanitaire, socioculturelle ou organisationnelle. La crise intervient dans des situations d’incertitude et d’ambiguïté. Face à elle, les individus vont alors développer des techniques, des procédés pour la prévoir, l’aborder, la comprendre, lui donner un sens ou les aider à la traverser.

Les rumeurs et autres énoncés rumoraux font partie de ces procédés qui permettent d’éviter le déni de ces crises. Les rumeurs, hoaxes, ragots et légendes urbaines) ont permis de contester l’irréalité, de questionner les discours, de contester les vérités. Tous ces phénomènes de l’information diffusés sur le Net. Nous présenterons les résultats d’une étude sémiotique de ces énoncés et des discussions qui en découlent, récoltées sur internet.

The Social Transmission of Religiosity to Second Generation Migrants: An Interactive Model

In this paper, we examine the social transmission of religiosity to second generation migrants in cross-national perspective. We apply theories on cultural transmission and assess the influence of vertical interactions (i.e. through parents), horizontal interactions (i.e. through peers) and oblique interactions (i.e. through social institutions) and the religious context on the transmission of first generation religiosity to second generation co-ethnics. We use data from four waves (2-5; 2004-2010) of the European Social Survey (ESS) comprising 8,123 second generation migrants coming from 102 origin countries and living in 26 European destination countries. We apply cross-classified multilevel analyses to examine subjective religiosity and the frequency of praying. Results indicate that the social transmission of religiosity is successful when second generation migrants tend to be more religious the higher the religiosity among first generation co-ethnics. The transmission is more successful when interactions are favorable for this transmission process, however: when second generation migrants grew up in traditional families, are less socially integrated, have spent less time in educational institutions and in countries where religiosity is lower. Our research also shows important divergences between the transmission of subjective religiosity, which is more universal, and the frequency of praying, which is more susceptible to the influence of interactions. This could indicate a trend towards the privatization of religiosity among migrants in Europe in the long term.

Engendering Corporate Social Histories: Reflections of White, Afrikaners-Speaking Businesswomen in Gauteng, South Africa

Using a qualitative, gender-sensitive approach, this particular case study explores the narratives of a group of white, Afrikaners-speaking, women employed in the financial sector of Gauteng in South Africa. Based on semi-structured interviews this study has aimed to explore corporate women’s political and personal experiences and how this affects their career choices and ideals on how to ‘balance’ work and home life. This study shows how women quite agency-full second generation migrants tend to be more religious the higher the religiosity among first generation co-ethnics. The transmission is more successful when interactions are favorable for this transmission process, however: when second generation migrants grew up in traditional families, are less socially integrated, have spent less time in educational institutions and in countries where religiosity is lower. Our research also shows important divergences between the transmission of subjective religiosity, which is more universal, and the frequency of praying, which is more susceptible to the influence of interactions. This could indicate a trend towards the privatization of religiosity among migrants in Europe in the long term.

Dilemmas of Combating Corruption; Afghan and Dutch Perspectives

Dutch troops in Afghanistan are confronted with situations in which the local population violates values and norms, that the soldiers themselves take for granted and/or deem essential. As a consequence they regularly have to decide whether or not to intervene and try to stop and change undesirable behavior. This is not only a matter of operational feasibility, but also and especially of cultural and moral desirability. In Afghan corruption is one such ingrained practice that brings with it difficult dilemmas for soldiers.

Corruption weakens the trust in and the legitimacy of public offices and the government. Therefore, corruption has been identified as a major stumbling block to successful peace-building. As Afghanistan ranks among the most corrupt countries in the world, the abolition of its widespread corruption has grown into a main concern of the international community.

The films portray middle-class, White protagonists, while Urban Others in terms of class and ethnicity serve mainly as a foil to the “normal” Amsterdamers. Parallel to the forms of physical and social displacement that gentrification causes in Amsterdam, these cinematic representations can be understood as effecting the cultural displacement of racialized age. Material living conditions of retirees, employment rates in later life, social images as well as social expectations towards older people were quite different in the former GDR and FRG. Whereas older people in the Western part were pic-

The old-age dependency ratio - number of people over 65 for every person of working age- is expected to double over the next two decades. What kind of policies the Chinese central government initiated to prevent old-age poverty and the overburdening of the middle generation? And, is the high household saving quota an indicator that the Chinese are aware of the financial risks of longevity? Though the Chinese government launched various pension programs, these payments are not yet adequate for older Chinese to make a decent living. Therefore, we assume the high household saving quota has been an indicator of the awareness of the risk of longevity, though many other theories are proposed. We analyse the correlation between pensions and savings whereby those entitled to pensions are expected to save significantly less and hypothesize that these two are more or less communicating vessels.

First we analyze China's transforming economy and household income from the perspective of the growing dependency rate. Because we are interested in the question if the Chinese are preparing for old age, we analyze the data from the China Health and Retirement Longitudinal Study (CHARLS).

Ageism in Times of Population Aging. Rising Awareness and New Forms of Discrimination

Age and aging have become highly popular issues in industrialized countries recently – namely in a twofold manner: Next to doom scenarios on population aging and increasing costs, older people have been discovered as active, productive and successful citizens, which is particularly true for the non-fail and healthy elderly. Each of the notions, no matter if it comes to activity, productivity or success, revolves around the idea that older people are capable of living a self-reliant life, being able to contribute productively to the public good, serving for themselves and others. Though often instrumental with regard to elderly's resources in times of population aging, negative age-stereotypes are challenged in new ways: We establish a rising awareness towards discriminatory effects of age stereotypes as well as various political and academic endeavors to foster positive images of age-

**Employee Representation Regimes in Europe: Do They Exist in Practice and Have They Changed in the Crisis?**

Forms of employee representation have been legally institutionalised in most of the EU countries. These ER regimes have also been recently framed in European directives. However, there exists a great variety of institutional ER structures among the Member States: union-based or works council type; single or dual channel, complementary or exclusionary. Institutional differences exist also in the powers assigned to the ER, in particular whether the ER has not only consultation, but also co-determination rights (see for example DE). A next dimension of diversity is the role these bodies play in collective bargaining. In many systems they play only an additional role in relation to supra-company bargaining, in other countries they play a key role.

Recently theoretical classifications have been constructed to cluster these different institutional regimes. We can refer to the general typologies of Altmeyer (2005) and Bryson et al. (2012) of IR-regimes. More specific has been the typology of Altmeyer (2005), which is also applied by Van den Berg et al. (2013). Management style, type of body, assigned powers, bargaining role are used to develop different IR-regimes. We can refer to the general typologies of Visser (2009), which is also applied by Van den Berg et al. (2013). More specific has been the typology of Altmeyer (2005), which is also applied by Van den Berg et al. (2013).

**Social Dialogue on Green Mobility in Belgian Enterprises:**  
**Interpreting the Results from a Social Movement Perspective**

Belgian trade unions are known for their ‘social movement unionism’. Within this framework they have been picking up issues like environmental challenges and sustainable development. They obtained also legal information and consultation rights on these matters at enterprise level. Among others, the works council and health & safety committees obtained consultation rights on (sustainable) mobility issues. These ER regimes have also been recently framed in European directives.

The paper presents empirical results of 50 in-depth cases on ‘how’ and ‘when’ these issues of green mobility are dealt with in Belgian workplace social dialogue. The paper tackles the ‘how’-question by clustering first the cases in 5 types on form and content of social dialogue on green mobility. In a second part the paper investigates where and when these configurations can be distinguished. A conceptual model of workplace industrial relations is used for this purpose that takes into account context, actor and process characteristics. A QCA-mixed-method is adopted for this interpretation of the case data.

The results show that a specific mix of joint cultural framing and specific knowledge resources determine if a social dialogue between trade unions and management develops on green mobility and not only the creation of a political opportunity structure by assigned legal powers on the matter to the information & consultation body.

**Predicting Workplace Characteristics. an Inductive Research on the Influence of Country Characteristics on Workplace Characteristics in the European Union**

**Abstract**

Workplace innovation increases the quality of working life and the organizational performance (Oeij e.a., 2012; Kramer e.a., 2008). Moreover, the European Economic and Social Committee (2011) underlines that workplace innovation is essential for the future of Europe. The sociotechnical theory stresses that workplace innovation need to take place by an intervention in the technical system and in the social system (De Sitter e.a., 1997). In the social system, workplace characteristics (e.g. job complexity and job autonomy) influence the quality of working life and the organizational performance (Kramer e.a., 2008). Consequently, workplace innovation needs to stimulate an optimal balance between workplace characteristics. Smith e.a. (2008) show that European countries differ in workplace characteristics.

This research examines, inductively, the conditions which cause different workplace characteristics in European countries. In addition, country level conditions such as welfare regime, union density, participation rate and varieties of capitalism will be used in the analyses. The European Working and Condition Survey will outline the aggregated workplace characteristics in the different European countries.

**The New (Biological) Culture of Control: Neoliberal Communitarianism and the Singularity of the Contemporary Homo Criminalis**

At stake in this article is an understanding of the new biological culture of control (cf. Garland 2001). It discusses the emergence of the New Homo Criminalis: the new biological subject in the government of crime (Rose 2005; cf. Rose & Abi-Rached 2013). This paper investigates the power/knowledge relations between contemporary penal government and criminological theory. Three leading questions are: 1) what conditions facilitated the re-emergence of bio-criminology, 2) how to understand bio-criminology, and, 3) what are the possible effects on the government of self, others and the state? Answering these questions the paper argues, firstly, that the last thirty years witnessed the emergence of a regime of government that can be called neoliberal communitarianism. It explicates how criminological theories can be placed in the discursive space of neoliberal communitarianism. This also implied a fundamental rupture in the assumptions of government. One of the effects of this paradigm-shift is that it made possible the re-emergence of bio-criminological approaches. The latter will be under-
to natural science findings and natural system dynamics while leaving intact the social practices approach to human-nature relationships that gives due attention to natural science insights into human behaviour - particularly from the fields of neuroscience and evolutionary biology - have increasing impact on our understanding of animal and human bodies. While similarities found in evolutionary, neurological and ethological research have profound impacts on the understanding of animal and human behaviour and the ethics of animal-human relationships, they fall short in supporting the environmental morality tied to these findings by Edward O. Wilson and other conservation biologists. The paper explores its claims, assumptions and how this involves a change in the government of self, others and the state.

Who Benefits from Internet Usage? the Digital Divide of Mobilized Online Resources

Several studies have shown that the higher educated possess more or better Internet and computer related skills, such as the ability to find and process information. This implies that Internet usage should therefore also be more profitable for the higher educated, which is something that has not been studied often. We study this profitability of Internet usage in terms of the resources that people mobilize through their Internet usage, and we examine whether the higher educated mobilize online resources to a greater extent than the lower educated.

In order to learn more about these mobilized online resources we look at negative life events that are experienced by respondents and the way in which they dealt with those events. We analyze newly collected data from a questionnaire that was designed to test an inventory of online coping resources. This inventory consists of seven dimension of online coping (with 3 items each), such as emotional and instrumental support, active coping, and finding distraction.

We hypothesize that the higher educated mobilize online resources to a greater extent with regard to all seven dimensions. This challenges some of the insights of social capital research, which often finds the extent of emotional support to be unrelated to social status. Moreover, unlike what is normally found with regard to offline networks, the support comes from weak ties relatively often.

VAN KOPPEN, KRIS* (Wageningen University, kris.vankanppen@wur.nl)

Humans, Animals, and Morality in a Nature-Inclusive Sociology

Disruption of natural systems and depletion of natural resources have become major concerns in society, both in their global reach and in their local impacts. Natural science insights into human behaviour - particularly from the fields of neuroscience and evolutionary biology - have increasing impact on our understanding of the social world. Sociology has to embrace these insights in its analysis, but not by abandoning its hermeneutic method. Starting from these tenets, this paper sketches principles of a nature-inclusive sociology, building on studies of Moscovici and Foucault, and on earlier work of the author. In applying and elaborating these principles it explores the social implications of the commonalities of human and animal bodies. While similarities found in evolutionary, neurological and ethological research have profound impacts on the understanding of animal and human behaviour and the ethics of animal-human relationships, they fall short in supporting the environmental morality tied to these findings by Edward O. Wilson and other conservation biologists. The paper then sets out to describe a social-practices approach to human-nature relationships that gives due attention to natural science findings and natural system dynamics while leaving intact the role of human agency and responsibility in protecting our natural world.

VAN KRIEKEN, ROBERT* (University of Sydney, Robert.vanKrieken@sydney.edu.au)

The Celebrity Logic of the Global Financial Elite

This paper examines a particular aspect of the development of a global financial elite, its organizing around the production of particular kinds of celebrity CEO’s and financial ‘stars’ which then intersect and form alliances with those at the peak of other elite fields such as sport, entertainment, journalism, and science. The analysis looks at the workings of what Robert Merton called the ‘Matthew effect’, which concerns the ongoing accumulation and leveraging of advantage, and how it works across a variety of fields including finance, to produce a global system of over-ranking elites. In a sense the paper is an attempt to re-work C. Wright Mills’ ‘The Power Elite’ for the present day, looking at the performative aspects of the global financial elite and the competitive demands placed on the presentation of self and representation of elite status. The overall aim is to show how the process of ‘refeudalization’ outlined by Sigfried Neckel has its core the production of global celebrity across a range of field, as the contemporary version of a global aristocracy.

Child Benefit Reforms and Principles of Redistribution

Child benefits systems embody objectives of horizontal redistribution (i.e. from families without to families with children) as well as vertical redistribution (from high to low incomes). These have high stakes to the characteristics of the child benefit system: is it universal or selective, or a combination of both? In this paper, we use these principles to position the current system of child benefits in Belgium in terms of horizontal and vertical redistributive outcomes. As an indication of vertical redistribution, we use the impact on income inequality and poverty, as well as how these benefits are distributed over income groups. We also present a measure for horizontal redistribution, trying to capture the fiscal flows from families without children to families with children, as well as between families of different sizes. Using the microsimulation tax-benefit model MEFISTO/EUROMOD, we calculate vertical redistributive effects of the current system (baseline scenario) in terms of inequality and child poverty reduction. Our approach is innovative in that we take into account actual costs of childrearing based on a normative budget standard, and not only rely on the modified-OECD scale. Next, we calculate the effects of a set of alternative scenarios of three extreme positions: a fully universal system, a strongly income selective system and a strong categorically selective system. What balance between horizontal and vertical redistribution is struck by these different scenarios, compared to the benchmark of the baseline? We conclude with the outcomes of a mixed system, and some generalizable recommendations for policy makers to combat child poverty.

The Doctor-Patient Relationship: Inequality in Pain Construct

The doctor-patient relationship refers to the quality of interaction process; also to the influence and control that role players have within the relationship. This signifies the notion of inequality of experience as well as the perceived and actual outcomes thereof. The objective of the research was to explore the assumption that there is a correlation between patient consultation and anticipated and actual levels of pain and pain coping. The analysis is based on the investigation of pain reports by males and females who were operated for knee and hip replacement in Libya. The research questioned the impact the doctor-patient relationship has on the ‘pain construct’ that allowed exploration of the ‘divide’ between the role players, amongst other variables the influence of gender and culture. Face-to-face in-depth interviews were conducted with medical doctors who undertook the surgery and with patients, while observations were carried out during doctor-patient consultation sessions. With reference to gender, more male than female patients experienced a higher level of organic pain than anticipated prior to surgery, and both male and female patients experienced higher organic pain levels who had not received ‘informing consultation’ prior to surgery. These findings indicate that ‘inequality’ of doctor-patient is still prevalent in some societies highlighting cultural factors at play, while it also poses the question to what extent congruence of ‘pain construct’ can be attained through a doctor-patient relationship that is characterised by actual and perceived narrowing of the divide ‘traditionally defined’ by control and influence.

Epistemic Practices, Logics of Visualization: Migrants, Asylum-Seekers, and Deviant Subjects

In its study of ‘epistemic practices’ (Lynch 1993), the field of Science and Technology Studies has displayed a sensitivity towards the local articulation of objectivity and (scientific) truths, and the deployment of optical devices and inscriptions in these practices. In this presentation, we wish to take this sensitivity with the situated ‘fabrication’ of truths (Latour 1999) into the study of three practices other than those of natural scientists: those of immigration officials deciding over the
The Multidimensional Spatiality of Citizenship: Understanding Tensions in a Mobile World

While theoretical discussions generally assume citizenship to be anchored in a particular geographic community, little attention has been devoted to how the geography of citizenship should be conceptualized. This paper argues that spatially displaced the question of how to think citizenship spatially. The result of this is that political sociology still silently draws on the outdated idea of citizenship as anchored in a national and homogeneous territory with clearly delineated borders. In an age of increasing cross-border mobility however, territory is no longer the only, nor necessarily the most important, spatial form citizenship can take.

In this paper I will therefore firstly propose a typology for understanding the multidimensional spatiality of citizenship. The typology stems from an engagement with social geography, and distinguishes four spatial forms of citizenship: territory, scale, place and network. Secondly, I argue that the different dimensions of citizenship can be linked up with the spatial typology. 'Tone received in a statist terms as a legal status and rights entitlements, citizenship is structured in a territorial or scalar fashion. Understood as a practice of participation and belonging, citizenship is anchored in a place or a network. Thirdly, the paper ends by discussing the possible tensions derived from this multiple spatiality of citizenship. It does so by elaborating on the example of cross-border workers in the enlarged European Union. As a single space for free movement and labor, each European citizen can work wherever s/he wants on the territory. From the perspective of rights entitlements however, connections to the national level remain strong, leading to tensions between territorial mobility and scalar fixity. Simultaneously however, belonging and identification often remain grounded in a local place of origin, or become dispersed across space in networks of (ethnic) affiliation.

Varieties of Visual ‘Europe’ in Images of Illegalized Mobility

The governmental management of mobility is a crucial way in which contemporary Europe is being made. Images are part and parcel of the increasingly elaborately network of organizations, expertise, legal codes and material infrastructures set up to manage the ‘desirable’ and ‘undesirable’ mobility across EU-borders. Visualizations of registered data, routes, maps, risks, opportunities and uncertainties are implicated in governmental attempts to gain overview, anticipate the future and authorize control. However, these images of governmental surveillance and security exist and become visible in a wider field of image production and dissemination. State institutions are far from alone in their attempts to see and disclose what’s going on at the border. This paper will analyze the relations between images implicated in border management and alternate visualizations of cross-border mobility. The latter concern the work being done by NGOs’ advocacy groups, political actors and activists. Mostly specifically, illegalized migrants themselves work to make themselves visible in circumscribed ways, often to claim rights and gain political agency in highly precarious circumstances. How are images and the craft of making them copied, translated, refigured and redeployed within this field of images? How can we conceptualize affinities and contradictions between different visualizations in order to assess multiple ways in which ‘Europe’ and ‘not-Europe’ can become visually enacted? Images and their interrelations may both confirm, contest and confuse existing imaginaries of ‘Europe’ and its ‘outside’.

Notions of resilience indicate that more resilient communities will experience less severe shocks to systems and will return to stasis more rapidly than less resilient communities. Concepts of social vulnerability suggest that different populations within communities have varying capacities to anticipate, resist, absorb, and recover from shocks. Consequently, different populations may be expected to manifest different recovery trajectories, both in terms of the magnitude of the shocks and in terms of the rate of recovery. This is one of the main challenges for recovery trajectories may lead to long-term redevelopment, displacement, and demographic change in the affected communities. We analyze these variations using longitudinal household survey data, coupled with damage assessment and tax appraisal data from Galveston, Texas collected since Hurricane Ike, which struck in September 2008, causing one of the costliest disasters and most widespread power outage in U.S. history. Previous analyses indicate substantial differences in the severity of damage incurred by socially vulnerable populations immediately after the hurricane, as well as differences in the rate of recovery of housing values.

Here, we assess the relationship between the recovery of housing values and actions taken by occupants and owners. Panel models of housing recovery are enhanced with household survey data regarding occupant characteristics, financial resources, and repair behavior. These analyses build on our previous findings to better understand the obstacles to recovery for socially vulnerable populations. Understanding the vulnerability of a community to social and physical impacts from disasters helps local governments and planners, as well as the agencies that aid them, to support the development of resilient communities that are able to respond effectively to hazard events and recover quickly after impact.

Inequality in Tertiary Education: The Case of Hungry Students in South Africa

Education is seen by many people, especially in the global south, as the route out of poverty, towards development and social mobility in society. However it has become apparent that many students at South African universities do not have enough food to eat on a daily basis. Much research, mostly in North America and Europe, has focused on the role of nutrition in learning capability and learning behaviour, and it is generally acknowledged that a healthy diet contributes to successful learning and performance. On the other hand, little seems to be known about food consumption patterns and the extent of hunger among students in developing countries. Research has been conducted, within a quantitative and qualitative framework, on the phenomenon of “hungry students” at the University of Johannesburg, in an attempt to overcome the obstacles to recovery for socially vulnerable populations. Since becoming aware of the problem in 2010, the University management has launched interventions of various kinds to assist students in need, in having at least one balanced meal per day. This paper will trace certain demographic and other characteristics of “hungry” students at the University of Johannesburg campus, as well as outline the institutional interventions undertaken to alleviate the problem. At a national level, the government, while cognizant of the problems experienced by tertiary students, particularly given South Africa’s apartheid history, has appointed a committee in 2010 to review the provision and conditions of student housing at South African universities. Their report included a section on a budget meal plan for students.

Global Vocabularies, National Outcomes: Latin American Youth Activist Strategies For Bringing Transnational Social Justice Rhetorics Home

This paper explores how youth in Latin America draw from global vocabularies of social justice to imagine and advocate for social change at home. The globalized circulation of media, interpersonal communication, and commodities has, we argue, shifted the cultural repertoires youth use to imagine citizenship. This is a heterogeneous phenomenon, but many examples point to a cosmopolitan sense of justice and ethics among youth. Youth draw on social media to engage with transnational publics to demand rights and new definitions of citizenship. They
Life Course Pathways to Later Life Wellbeing: A Comparative Study of the Role of Socio-Economic Position in England and the U.S.

A max paradox in comparative social epidemiology is that subjective well-being in the U.S. tends to be higher than in England in later life, although physical health is better in England. We will present the results of a longitudinal study that examines the impact of socioeconomic position on health and wellbeing during the later years of life. The study is based on data from the English Longitudinal Study of Ageing and the Health and Retirement Study in the U.S., and includes analyses of subjective and objective health outcomes. The findings suggest that the impact of socioeconomic position on later life wellbeing is complex and dependent on a variety of factors, including education, income, and health behaviors. The implications of these findings for public policy and social inequality are discussed.

Leisure in an Unequal World: Assessing Causal Relativity Between Resources and Leisure

Leisure in the global context is an unfamiliar phenomenon in the toil-ridden lives of the marginalized and poor women in Indian villages, where moving out of homes in groups, into the open fields for privity is a leisure activity. Leisure for them is freedom from the restrictions on mobility outside the home. The multitude of toilets built with government aid, being used as storage places for fodder prove the argument of this deliberate choice of practice of leisure by women. Examining the data collected by questionnaire categorized in four leisure activities like reading a newspaper, listening radio, watching television and sitting at the computer. Study reveals with 30 married women age group of 18 to 40 in backward villages of Bundelkhand. Feasibility of study stands that nearly 78% of women do not have access to all besides most of these activities are considered leisure activities indulged by men. The resultant recurring themes were of denial and lack of resources. The data affirmed that television is most popular mode of leisure for accessible. As a gender norm women practice enormous denials: whether in food, leisure time, questions of health, desires etc. They prioritize their tasks as wives, mothers, sisters and daughters and 99% of them adhered to the retrograde practice of purdah system. All these activities were directly related to the level of education and income of the household. The study reaffirms the implication of possibility for enjoying leisure activity as defined globally is directly proportionate to one’s education and resources “instability and uncertainty that characterize the world today have their origin in the fact that an immense and vertiginous accumulation of wealth by a few has precipitated the dispossession, impoverishment and exclusion of millions of human beings in all latitudes of our planet.”

Controlling the Social Cost of Local School Markets?

Education policy is evidently in a state of change across industrialised countries. The fragmentation of the education system, decentralisation of decision-making, and increased pressure to perform have contributed to the ongoing debate about the role of state-funded, state-controlled and state-provided compulsory education. The role of local authorities and school choice is increasingly important in determining the outcomes of school choice and overall diversification in education. The aim of this paper is to assess the implications of school choice and overall diversification in education, with a focus on the role of local authorities in shaping the outcomes of school choice and overall diversification in education. The study is based on data from the English Longitudinal Study of Ageing and the Health and Retirement Study in the U.S., and includes analyses of subjective and objective education outcomes. The findings suggest that the impact of school choice and overall diversification on education outcomes is complex and dependent on a variety of factors, including socioeconomic position, individual characteristics, and the context of the local education system. The implications of these findings for public policy and education are discussed.
ent countries including: Austria, BiH, Czech Republic, Hungary, Macedonia, The Netherlands, Romania, Spain and Turkey. The collected data was analyzed by the content analysis method and it was found that there are training gaps in some areas, there is no “one-size-fits-all” model for training in PSO’s and the operational experience itself helps to fill these gaps.

VARRIALE, ANDREA* (Bauhaus-University of Weimar, andreavarrialeg@hotmail.it)
The Management of Public Spaces in Naples: An Essay in Urban Legal Geography

The main red thread crossing the debate about the disparity between Italy’s northern regions and their southern counterparts is the polarity between the categories of “modern” and “pre-modern”. This polarity has been used to portray the two regions as intrinsically different in their economies, politics and cultures. Although the use of this dichotomy has proved useful for emphasizing the gap between the two, this has been achieved, I argue, at the cost of exaggerating their differences: the South has been described with the categories of pre-modernity, community, informality. Symmetrically, the north has been associated to modernity, society and formality. The attributes of “developed” and “under-developed” have been assigned accordingly. I argue that a study of formality and informality can be helpful to understand how these territorial imbalances are reproduced, provided that the former are understood as simultaneous, not mutually exclusive systems of rules. To do so, I analyse how three significant public spaces in Naples, southern Italy’s biggest city today and its capital in the past, are regulated via formal and informal rules. With personal observation and interviews with local authorities, planners, local activists and users, I seek to understand how the interaction of formality and informality produces these spaces. Both formal and informal regulation, it is posited, exist in the city, and neither is intrinsically desirable or conducive to development. Rather, well-functioning public spaces are posited to result from a distinct mix formality and informality, whereby the two are both present and complementing each other. An explorative case study will be carried out in January 2014. There, the two sets of indicators (measuring the relative and the absolute strength of formal and informal rules) will be tested. At the RC21 conference I wish to present that case study and an assessment of the methodology adopted.

Knowledge Production, Learning and Cognition in International Relations Theory: A Case Study in Brazil

This paper investigates the learning and the sociocultural production of theoretical thinking in International Relations (IR) undergraduate courses in Brazil. One of the greatest problems faced by professors in Brazil is students’ inability to read and write academic texts, especially in understanding the relations between arguments and their importance to the development of scientific theories. This situation is further aggravated by the character of IR theoretical disciplines whose traditional theories – realism and liberalism – still permeate most of the curricula. However, it is assumed that these theories do not provide knowledge that is related to the context of developing country in which Brazilian students are inserted. As a result, they fail to stimulate a critical cognition among students, who tend to simply repeat concepts when producing academic texts about international politics. Thus, it is important to combine critical theories and pedagogies in the expansion of thinking spaces. The theoretical basis comprehends principles from critical pedagogy, sociology and cognitive sciences, mainly linguistics and psychology.

Consecration and Reputation Among the Independents: Reflections on the Case of Contemporary Independent Cinema in Brazil

The communication brings some findings of the author’s ongoing PhD research to discuss consecration and legitimation among those who play “independent” roles in fields of symbolic production. The research focuses on the social organization of contemporary independent cinema in Brazil. Mobilizing mainly elements of Bourdieusian theory but also contributions of authors such as Raymond Williams, David James and Sarah Thornton, the study analyses the main independent filmmakers’ groups in Brazil, their main instances of legitimation and the principal social arrangements that make independent production possible.

Independent film production, characterized mainly by its low budgets and by the absence of a hierarchical division of labor, acquires increasing recognition by consecration instances of traditional Brazilian cinema. It is also notable a proliferation of specific instances – such as independent film festivals or distribution companies focused on independent production –, which may indicate the beginning of an autonomization process.

Here we bring empirical data to situate the contemporary independent production in the large Brazilian cinema field and especially to show how reputation and consecration here are constructed in opposition to the values/practices of industrial cinema. And it means not only the adoption of certain aesthetic positions, but also the adoption of some practices in terms of social organization of production. We also call attention to the fact that, among the independents, consecration sometimes brings the “reverse effect” of threatening the representation of independence – which is a subject of dispute.

How to understand independent agents, for which categories as dominant or dominated, established or newcomers, are all unsuitable in some extent? How to analyse the construction of consecration in a context where the many forms of institutionalization (including some kinds of recognition) may threaten the very condition of “independent”?

VASEY, HUW* (University of Manchester, huw.vasey@manchester.ac.uk)
Diversity and Inter-Ethnic Marriage – An Agent-Based Approach

Inter-ethnic marriage, both a cause and a consequence of immigrant integration, is generally used to imply that the social distance between groups is low and, by extension, that community cohesion is high. The decision to marry out-side (or even within) one’s group is often regarded as stemming from individual preferences and opportunities for contact. However, many anthropologists and sociologists have noted that culture-specific norms of kinship and reciprocity have a profound effect on who may be considered eligible partners (Ballard 2008; Gardner 2006), echoing segmented assimilation theory’s focus on the importance of community and family influences in shaping assimilation processes.

Using a descriptive agent-based modelling approach, we seek to investigate the processes of partner selection in diverse communities, focussing on individual preferences, opportunities for contact, and group norms to uncover how these may lead to differential rates of inter-ethnic marriage. Agent-based approaches provide an ability to study ‘global’ phenomena simultaneously with their causal ‘local’ processes (and vice-versa) in a dynamic setting. They allow us to investigate the development of population-level phenomena from a simulated ‘local’ social space of norms and values populated by acculturated agents familiar to sociologists, potentially providing insights into community cohesion and inter-ethnic marriage which would not be available from other sources. Whilst agent-based models of inter-ethnic marriage have been developed previously, they have overestimated rates of inter-ethnic marriage and largely ignored the group-level processes necessary for a global understanding of inter-ethnic marriage. Utilising research and evidence from quantitative and qualitative sources from across the social sciences, we thus seek to develop a complex model of emergent processes of differentiation and change in the marriage patterns and social cohesion of migrant communities.

VASILIEVA, LESSYA* (docent, lessya-vasilieva@ya.ru)
The Quality of Political Elite and the World Crisis

The quality of political institutes of society depends from qualities of political leader as a representative of elite or ersatz-elite. The representatives of elite have such mental qualities as sophisticated cognitive intellect, diverse range of behavior and social attitudes and aims allowing them to bring maximum benefit to the society. The ersatz-elite have some common qualities with elite. But its representatives haven't diverse range of behavior and their ideas of values are mainly targeted at satisfaction of personal interests not regarding public ideas. The representatives of elite and ersatz-elite are presented on all levels of social hierarchic pyramid. The quality of political institutes of society depends from qualities of political leader as a representative of elite or ersatz-elite. Ersatz-elite introduce or develop social mechanisms depriving people of any control over political machinery. It turns out that in political and economic spheres of society deficient motivation and deficient satisfaction of basic needs and interests through political difference, social and economic frustration. The present crisis does not have only economical but mainly social roots and cultural effects. It needs to specify the term Social Rent with new scientific definition. An equivalent formulation may be given in terms of the social parasitizing which when given such a status by government. Social rent is a form of uneconomic compulsion. It is necessary that such status must be admitted by productive, market and state forces. The power and economical monopolies are the social factors which are converted into settled rent factors. Institutionalization of social rental relationships destroys economic and social competition.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
The main subject of social rentiers is the ersatz-elite. As they develop and become the ruling class, the economic and political systems either arise with seizure of new resources or destroy themselves.

Construcing Social Myths in the Modern Mass Literature (the Narrative Analysis of the Female American Novel)

The paper problematizes the literary text that becomes a subject of the sociological analysis when representing social processes and phenomena as well as social practices of certain groups. The narrative analysis reveals a deep structure of the text reflecting values, norms and social attitudes used for describing social groups and social processes. The analysis correlates with structural hermeneutics of G. Alexander implying sociocultural research of semantic structures of the modern mass literature where social myths and archetype patterns are updated, serving as interpretive models to explain and organize (construct) the social world.

The paper aims to show the results of the empirical research while proposing an original method of the narrative analysis of 18 American female novels, top-rated in the largest specialized websites. The method synthesizes various courses in narrative analysis (event-structure analysis by D. Heise and L. Griffin), structural approach (R. Barthes, V. Propp, T. van Dijk) and K.Yung’s theory. It consists in constructing a causal sequence of narrative events interpreting it in the context of the social myth. The method's steps include:
- studying the life course of the heroines;
- selecting significant events (based on structural indicators);
- narrativization of the chosen events using the grammatical approach (verbs as action highlighters);
- detecting the general narrative structure interpreted in the context of the social myth.

The resulting narrative schemes form 3 basic archetypical female role-models within the cosmogonist myth and can be considered as interpretive patterns for describing gender role transformation in modern American society. The results of this empirical research can be verified in the context of feminist and post-feminist theories.

Modernization of Values and Its Implications

This work is based on the understanding of culture following the lines laid out in the works of L. White, P. Bohannan, A. Montague et al, and defined, loosely, as a system of non-biological regulators of human behavior (such as values, norms, attitudes, etc.). Just a few generations ago the majority of Russian population was rural, lived in the countryside environment and was engaged in natural-subsistence economy. Their culture corresponded to the low-level technological environment. The process of modernization has changed the environment in just a few dozen years, leaving the some cultural adaptors far behind. Some people experience conflict with impacts and challenges of modernization such as new women status, political democracy, market economy. etc. We can see cultural differentiation on culture modernization continuation. Two poles of the continuation axes can be found. One of them is pole of modern culture acceptation, another one is pole of modern culture rejection. The both poles are Weber’s ideal types. The Likert scale was used for culture modernization measurement in our survey. The scale was validated by R.Indelhart's index and S. Schwartz's scale.

Socio-cultural types often differ according to the condition of socialization also corresponding to the generational differences. More modernized type of culture is adapted to the more modernized type of social environment. New generation has an opportunity to enjoy a more modernized culture than the old one. In this work, we attempted to evaluate the cultural changes between generations and polar socio-cultural types quantitatively. This longitudinal study was mostly based on a survey response data among university students in the city of Perm (Russian Ural) since 1991 till 2013. All samples covered more than 500 students. We can compare values of modernization between last Soviet generation and first Post-Soviet generation. The study also discovers the implications of these value changes.

VASSILOPOULOU, JOANA* (University of Sussex, j.vassilopoulou@gmail.com)

Integracism At Work. The Case Of Germany

This paper further explores the notion of integracism, which has been introduced by the author briefly in a previous paper. The notion of integracism refers to a specific interpretation of the notion of integration with implicitly racist assumptions. This racially biased and ethnocentric notion of integration frames the meanings of managing ethnic diversity in Germany. Integration polices and management measures are deployed to ‘aid the better integration’ of ethnic minorities, who are widely seen as deficient and difficult to integrate, rather than adopting diversity management measures to foster equality, fairness and inclusion at work. In that frame, ethnic diversity is depicted as a source of potential problems.

There is a surge in the use of the concept of integration in management of immigration, not only in Germany, but also in France and the UK in recent years. The notion of integration is the dominant concept in the management of ethnic diversity in Germany. The aim of this paper is to examine the corrosion of the notion of integration with racial bias, which undermines the overdue proposal of equal opportunities at work. Arrangements of integration for immigrants include requirements of extensive documentation, training, point based calculations based on qualifications, economic wealth and experience, citizenship rituals. Most of these requirements are highly variable, based often on racial profiling. It could be argued that these politics and practices of managing ethnic minorities and immigrants are not as innocent as they may seem at first sight. This paper shows how ethnocentrism and racial bias influence employment practices, leading to the exclusion of highly skilled ethnic minority workers.

The paper operationalises Bourdieu’s key concepts, field, habitus and symbolic violence and draws on a large qualitative study based on more than 40 interviews, a case-study, focus group as well as visual material and a research diary.

LUKEN, PAUL C. (University of West Georgia)

Teaching Ourselves and Reviewers Institutional Ethnography in the Process of Publishing

Methods textbooks in the United States often introduce institutional ethnography (IE) as one of a number of qualitative methodologies used by researchers, rather than as a mode of inquiry whose aim is to provide an alternative sociology. Institutional ethnography, as proposed by Smith (1987), is a much more radical departure meant to challenge the “objectified subject of knowledge” including the discursive practices of established social science discourse. This presentation focuses on how the work of institutional ethnographers differs from qualitative researchers who are often sympathetic to IE, but fail to recognize these differences in practice. Drawing on our experience of publishing our research in standard sociology journals, we explore how reviewers’ comments and questions turn subjects into objects of investigation and explanation, standpoint into a subject
position or category within society, everyday world into the object of study, and generalize forms of consciousness into generalizations about people. We discuss the ways we have responded to reviewers and how this process has taught us more about the distinctive features of institutional ethnography as an alternative sociology.

La Adopción De Un Modelo Organizacional Como Estrategia De Comunicación Para La Transferencia Del Conocimiento y Tecnología En Centros Públicos De Investigación

El presente trabajo se plantea la necesidad de contar con un modelo organizacional como estrategia de comunicación institucional para la transferencia del conocimiento y de la tecnología en centros públicos de investigación de la región del Bajo, a fin de identificar la forma de comunicación mas efectiva en materia de difusión de los procesos de transferencia de conocimiento y tecnología de cada Centro. Se parte de la premisa de que el conocimiento se presenta como el activo principal para la transformación y el progreso de toda sociedad, particularmente en organizaciones que se han creado con la intención de contribuir al progreso de la sociedad a la que se debe, fortaleciendo la economía del conocimiento, a través de la transferencia del conocimiento, y de la tecnología. Se concibe a los Centros Públicos de Investigación como sistemas vivos, en permanente movimiento, cambio, adaptación y evolución. La estrategia metodológica con la que se ha realizado la investigación, es desde un enfoque cualitativo, siendo el estudio de caso como uno de los instrumentos metodológicos. En este artículo se pretende mostrar formas para una adecuada comunicación institucional de los procesos de transferencia y tecnología en Centros Públicos de Investigación.

Alienation of Scientists in Post-Communist Europe

This paper focuses on the alienations' problems of scientists: researchers in scientific institutes, centres and universities in Post-Communist Europe. This topic hasn't yet received enough attention, especially in sociological researches of these countries. After the crash of the USSR it was seen decreasing of scientific study especially in farrms it was a riches of science but also in humanitarian knowledge. This process was accompanied by cuts of wages of researchers, their social exclusion from decision-making process and growing alienation. From the other side many researchers went abroad from the countries of their residence and some of them begun to participate in different projects and programs of foreign countries. They didn't identify results of their researches with former homeland but linked their achievements with the place of present residence. This situation provoked appearance of the new forms of alienation. The paper analyzes manifestations and consequences of such alienation in scientific practices. I'll try to give certain contribution to the discussion about alienation in Post-Communist Europe. Have did dramatic social changes that had taken place in these countries stimulated growing alienation of scientific researchers in different Post-Communist countries? From the other side scientific cooperation contains reserved possibilities to help scientific researchers overcoming self-estrangement. Haw the changes of political life in their Homeland could influence their isolation? Thus the paper focuses attention on this background of people's alienation. My analysis builds on media accounts, interviews with officials from the Organizing Committees of big sportive events and data's of sociological monitoring of different materials. The paper provides useful information for an outlook necessary for understanding national and regional identities.

VEENHOVEN, RUUT* (Erasmus University Rotterdam, veenhooven@ese.eur.nl)

Why Sociological Theory of Happiness Falls Short

Happiness in the sense of life satisfaction is a psychological phenomenon in the first place. Consequently most sociological explanations draw on psychological theory, often implicitly and with little view on its limitations. A dominant perspective in sociology is that happiness results from comparison between perceptions of life-as-it-is and standard of how-life-should-be, which view fits with the notion that happiness is a social construct and as such culturally variable. Explorations in terms of universal affective appraisals and needs are marginal in sociology, as well as biological sociology.

Though not suited for explaining happiness as such, sociological theory is apt for explaining conditions for happiness, societal conditions in particular. Empirical research shows that conditions for happiness are quite good in modern society, where its inhabitants live now longer and happier than ever in human history. Yet most sociological theorizing is about the miseries of modern society.

Some sociological explanations for this sociological short-sightedness are discussed.

Violencia, Armas De Fuego Y Mortalidad Juvenil EN Mexico

La violencia en México ha ocasionado un alto número de víctimas -sobre todo entre los jóvenes-, muchas de ellas provocadas por el uso de armas de fuego. Objetivos: Analizar el comportamiento de la mortalidad por armas de fuego en el grupo de edad de 15 a 24 años en México en los últimos 20 años e identificar factores socioeconómicos asociados a sus variaciones interestatales en el trienio 2009-2011. Material y Métodos: Con la información oficial sobre defunciones y tipo de arma se identificaron las causas de mortalidad por armas de fuego en diferentes regiones en México. Conclusiones: hubo un aumento en las causas de muerte por armas de fuego en el trienio 2009-2011. Resultados: En 2011 se produjeron más de 5,000 defunciones por armas de fuego, por lo que sería la primera causa de muerte más importante del país entre los 15 y 24 años. La tasa de mortalidad por armas de fuego se incrementó en 62% entre 2000 y 2010. Las tasas más elevadas se encuentran en hombres entre 20 y 24 años. Variables relativas al narcotráfico y el consumo de alcohol están asociadas a las variaciones de la mortalidad por armas de fuego entre estados. Conclusiones: El aumento de la mortalidad por armas de fuego, especialmente entre los jóvenes, es un obstáculo para el incremento de la esperanza de vida en México. Este es un problema social y de salud pública que debe ser abordado de forma interdisciplinaria.

VEIKHER, ANDREI* (National Research University, aveykher@hse.ru)

Social Norms of Morbidity As Specific Factors in the Demand for Health Services

Seeking professional medical help is caused not only by medical criteria health pathology. There is a complex system of social factors of the transition from the physical sensations of discomfort or psychological distress to get help from a professional medicine, i.e. make it socially relevant fact. This is the most important cause why the accounting treatment for medical help and he true morbidity can not match. The different access to health care for different social groups is the most active influence by these factors: the freedom from social factors and in countries and cities where the network of medical institutions sufficiently developed they are more important. This result was obtained in representative survey in St. Petersburg (2007-2011). The most part of them are the social attitudes norms which give rise to refuse treatment in medical institutions and relates to the culture of health behaviors. This culture is very contradictory. Improving education increases the tendency of self-medication. Massive short duration diseases (e.g. ARDS) are treated within the family without recourse to occupational medicine in 75% of cases. Social attitudes of non-professional care are supported in the survey. But the range of sociological topics allowing simple work in diseases with partial loss of ability to work. Such practice is supported by other informal social contract employees with employers: rejection of the fixing of cases of the disease in the social insurance company. This and other identified dependencies suggest that the indices of morbidity are subject to change without ambiguous connection with the actual number of patients and the duration of their illness. Methodological conclusion: for the considered social and medical conditions the survey are necessary for the correction usual morbidity data. Conclusions on the basis of registration of patients who seek health care may reflect the actual changes of many factors.

RC33-577.1

VEIKHER, ANDREI* (National Research University, aveykher@hse.ru)

The Indicator of External Validity As Aggregate Criterion Quality of Survey

The external validity criteria in sociological survey methodology and practice are used rarely. The exceptions are electoral polls. The well known Gallup and others polls obtained the trust of public and professionals due to external (predictive) validity, although the term had not yet been coined. The predictive validity is the simple and most convincing proof of the high quality of all elements and stages of research. The criteria of external validity are used for evaluation of survey quality. These methods allow to evaluate the common error for all variables of a survey under the condition that the sample is random. However the last few decades a number of difficulties with probability sampling have been cropping up in the expanding range of survey topics. The basis of application of the internal validity methodology has been shrinking too. The paper offers a few steps expand the application of criteria of external validity: - install for surveys on specific topics limit application of the criteria of internal validity - "unanswerable nonresponse rate" (nonresponse is the main factor that makes a non-random sample), - develop and apply external validity indicators for assessing the quality of a survey on selected topics - "item external validity", - include ancillary questions in the questionnaire, which will compare the survey data with data from independent external sources. In our surveys of social settings in Saint-Petersburg (2007-11) we used as a measure of external validity and simple distribution, and complex calculated indicator of latent social phenomena.

The Disadvantaged Position of Muslim Women in the UK Labour Market and the Formation of Religious Identity

The Disadvantaged Position of Muslim Women in the UK Labour market and the Formation of Religious Identity

Among ethnic minority groups in the UK, Muslims are generally in a disadvantaged position, experiencing many social and economic inequalities. Muslim women suffer from high unemployment rates and interaction levels compared to their male counterparts and other ethnic minority women. This is despite policies to reduce the diversity gap in the UK labour market based on gender and religious affiliations. The disadvantaged position of Muslim women can be seen as Muslim penalty and failure of integration and social cohesion. Many of my young educated informants, belonging to second and third generations of immigrants, resonated “ontological insecurity” leading to the formation of Islamic identity. This can often be manifested by embracing visible Islamic dress, which is a conscious decision, despite the disproportionate discrimination and negative attitudes towards veiled women as a result of displaying their faith in public.

Applying feminist theory and questioning Muslim women’s place as a marginalized group at the centre of social inquiry, this paper explores Muslim women’s experiences and opportunities in post-industrial service industry. This research single target parameter and one external parameter analogue of an unobserved variable that autonomy within the male-dominated social structures.

The Occupational Challenges of Female Architects in Iran

The Occupational Challenges of Female Architects in Iran

In the recent decades, Iranian women’s access to educational opportunities in non-traditional professional fields has expanded. Women’s access to social protection as a part of human rights is an important factor in determining the place of women in higher education and labor market. The current challenges that young professional women in Iran experience are related to their performances and experiences in terms of terms of practicing the profession. Traditionally architecture, building industry and construction management have been considered as male domain. When professional women enter these fields as engineering, engineers, surveyors, or officials and hold the positions of power, their authority is challenged not only by untrained or semiskilled male workforce, but also by educated men under their management.

Having said that in the educational institutions, particularly private institutions, they receive positive discrimination compared to their male counterparts, as they demand high financial demands.

Research on the challenges of female architects in Iran is scarce. Based on interviews, this paper aims to reflect the social, structural, and cultural challenges that young professional women in Iran experience. The paper will also shed light on women’s agency in overcoming the barriers and claiming their rights and authority within the male-dominated social structures.

Hierarchies of Middling Transnationals: Indian IT Workers in Singapore -- CANCELLED

This paper builds on emerging literature around ‘middling transnationals’ (cf Ho 2011). Drawing on empirical research among Indian IT workers in Singapore, the paper advances two propositions. It argues that there has been insufficient consideration of skill migration in terms of national and racial hierarchies of opportunity, rights and conditions; and that so far, literature on skilled transnational labour has too often been concerned with elite transnational skilled workers. Using the example of Singapore, we argue that conditioning occurs via four intersecting factors. First, Singapore has a long-standing tradition of visa hierarchies which situate White, European transnational elites at the apex of the occupational hierarchy, and dark skinned workers from the Indian sub-continent at the bottom. Although ‘offshore workers’ and migrant labourers have been among these social factors. But the more relevant exception of the recent flow of middling transnational skilled Indians builds upon this history of racial sorting. Second, we suggest consideration needs to be given to deeper social, cultural and historical analysis of how labour has been conditioned historically and in the present era in sending countries like India and how this in turn translates into conditions in receiving countries with regard to workers accepting as ‘their due’ and what they consider to be normal. Third, we suggest a more global circulation of colonial-era ideas of racial hierarchy continue to cast a long shadow even to the most modern of occupations like IT. Finally, IT as an industry has emerged as a quintessential post-industrial service industry characterised by highly precarious sub-contracting forms of transnational labour supply.

Construcción De Una Secuencia Didáctica Universitaria En Modalidad Presencial Integrando Aplicaciones Para Ipad y Smartphones

La necesidad de innovar la práctica docente en el aula se hace cada vez más evidente ante la falta de interés de los jóvenes universitarios por el modelo tradicional de clase en donde predomina la presentación unidireccional de información. Con base a la reflexión de Díaz-Barriga (2013) sobre la importancia de construir secuencias didácticas diferentes que despierten en los alumnos el interés y la motivación de su aprendizaje, se presenta el resultado de analizar y construir secuencias didácticas innovadoras mediante el uso de aplicaciones y software para Ipad, Tabletas digitales y Smartphones de los alumnos. Esta investigación se inserta en el paradigma de la investigación-acción, para lo cual se ha conformado un grupo de profesores no especialistas en tecnologías de información y provenientes de diversas disciplinas que se enfocan en analizar y probar diversas alternativas tecnológicas para adaptarlas a las necesidades de educación y formación en el contexto de la Educación Superior en México. El resultado ha sido la selección y elaboración de una guía de uso de 3 herramientas de software diseñadas para el tipo de dispositivos señalados, que han permitido construir secuencias didácticas innovadoras presenciales enfatizando la interacción profesor-alumno y del alumno-alumno, permitiendo instrumentar una primera fase del Modelo Educativo de la Universidad de Guanajuato enfocado en el aprendizaje significativo y el desarrollo de las competencias deseadas del alumno.

Professional Interests, Organizational Goals and the Mobility of Football Players in Europe

The mobility of professionals has important repercussions for organizational performance and the subjective career success of the professionals involved. Within professional football, team quality is directly affected by the movements of players to and from the club. Transfers have a big impact on player careers as well, as footballers changing clubs increase their income or revitalize their career with a renewed chance on first team football. Whereas previous research examines these movements from the perspective of individual players, this study analyzes to what extent player transfers are shaped by the interaction between institutionally embedded organizational goals and the interests of footballers.

Using event history analysis to estimate the probability that a player moves to a different team, I argue that player transfers are a function of the location of an organization in the field and the position of a footballer in his team. In general, fringe players are more likely to move. This is especially so for high status teams, where such players move to pursue their interest of first team football. Moreover, players of underachieving high status teams are bound to be transferred, as the clubs let go of the players it blames for its relatively low performance. This contrasts with the transfer probabilities of players in low status teams. The key players of these teams have a higher probability to move, as they are looking to increase their career rewards by moving to a higher placed team. Moreover, key players in overachieving low status teams are particularly likely to be transferred, as such teams sell their best players to cash in on their hard earned status.

In sum, this study highlights how professional labor mobility is shaped by the interaction between the institutionally defined interests of professionals and the goals of the organizations they work for.

Gender Asymmetry As the Barrier of Political Modernization in Russia

Considering activity of the women organization in the context of Russian political life we establish the fact of Gender Asymmetry in Russian politics. Representatives of women in Parliament (State Duma) vary from 10% to 14%.

The main features of social context determining gender asymmetry are the following: feminization of poverty, latent labor discrimination; Social and cultural inertia accompanied with gender stereotypes; Ignoring gender interests in political sphere. As the result one can see marginalization of women in the political and economic spheres.

We consider Globalization as the factor inspirig political activity of women in Russia and analyze role of more than 1500 thousands women organization and pay attention to the positive dynamic of their activity. Most of them act in social sphere (Maternity and childhood protection (39%), The help to socially deprived groups (29%), Providing of public services and amenities to city environment (29%), Healthcare (21%) and Education (22%), Protection of social interests (13%), Human rights (10%).

Main reasons of low representative of women in Politics can be described in different terms: Peculiarities of political socialization; structural factors (unequal distribution of resources owned by men and women; situational and biographical factors. For many years even the very consideration of the Law “On guarantees of equal rights and equal opportunities for men and women” was blocking.

The Law about quotas for women in the party lists also was not adopted, despite the extensive discussion in the information and the public sphere. The trend of gradual increase in the proportion of women MPs in the federal and regional legislatures is very low still.

Hidden discrimination in the political sphere restricting activity of women leads to the different problems of social sphere.

Parliamentary Debates on Ritual Slaughter. a Contextual Discourse Analysis

Parliamentary Debates on Ritual Slaughter: A Contextual Discourse Analysis

During the last three decades the visibility of religion has increased in the public sphere of many European societies. This has not only to do with the arrival and settlement of large numbers of Muslims and other non-western immigrants in these countries, government policies for managing religious and ethnic diversity, but also with political agenda setting of powerful secular forces. Illustrative for this is the political debate on ritual slaughter in the Second Chamber and the Senate of Dutch parliament in 2011, initiated by the Party for the Animals. In this presentation, the argumentation used in this debate will be analysed from the perspective of contextual discourse analysis. The arguments will be related to features of the main participants in this debate as well as to the wider context of Dutch politics in the wake of “9/11” and “the Fortuyn revolt” in 2001. These events have attributed to a reframing of Dutch identity in cultural and secular terms. Within the new created frame religious ties such as Jewish and Islamic ritual slaughter are defined in opposition to secular Dutch identity.

Modest backgrounds. (Bourdieu, 1964, Morel, 2012) It will be demonstrated that the issue of the gap between the culture of the school and the one of children from than in a school with students from the upper-class. This psychologising tends to children are mainly or exclusively of modest background, it seems that these pupils, and educational deficiencies of the parents. This would damage the mental professionals perspective, these learning difficulties are due to family dysfunc-
tions, and educational deficiencies of the parents. This would damage the mental
tempts to understand how the family, the mother figure in particular, are blamed
t他 is mainly due to the learning difficulties of children with learning difficulties. The purpose of this paper is to analyse the role
authors—predominantly low-income women in a postcolonial, low-income nation enmeshed in poverty and institutional corruption.

In the context of a sociological thesis conducted in France in primary schools, the focus has been on the issue of the diagnostics and devices used to help children with learning difficulties. The purpose of this paper is to analyse the role of psychological approach in the management of academic difficulties. In the attempt to understand how the family, the mother figure in particular, are blamed for the learning difficulties of their children. It will be seen that the lifestyle and educational habits of families are analysed by teams of professionals, and that when considered as deviant, they suggest help to the family. Indeed, from the professionals perspective, these learning difficulties are due to family dysfunc-
tions, and educational deficiencies of the parents. This would damage the mental functioning of the child and lead to difficulties in their learning. In schools where children are mainly or exclusively of modest background, it seems that these psychological methods are nearly exclusively the methods being used. Thus, children going to these schools are more likely to be diagnosed with mental illness than in a school with students from the upper-class. This psychologising tends to put the responsibility on the family or the child for his failure, while ignoring the issue of the gap between the culture of the school and the one of children from modest backgrounds. (Bourdieu, 1964, Morel, 2012) It will be demonstrated that

The psychological approach used by teachers allow them to suggest reasons for the difficulties faced by children and to put in place solutions. Indeed from a psychological perspective, the parents are seen as ‘actors’ of the success or failure of their children. The challenge for schools is then to accompany parents to transform their habits and their way of parenting.

Although some observers tend to view Mexican migrations to the United States as a common socio demographic phenomenon due to the vicinity of the two countries in the context of unequal economies, late drastic reduction in migration flows from Mexico to the United States pose several questions. In the views of some analysts this is mostly associated to the security measures practiced by the U.S. government on its southern border after September 11, however there are other indications that point out in a different direction suggesting that these changes might be associated with a set of several factors in which demographic variables along with economic, labor market and political ones are closely in-
terconnected, or if not is the case they coexist and interact in the same political arena.

Other variations of Mexican migration flows have to do with the repatriation to Mexico of huge numbers of irregular or undocumented migrants most of whom were previously residing with their families in the U.S. On another dimension there have also been some changing characteristics in the flows of Central American migrants crossing Mexican territory on their way to the United States. This new trend has been offering a challenge to Mexican authorities with new implica-
tions to the legal Mexican political framework.

One objective of this presentation is to offer data and information related to the kind of changes that have taken place lately not only in terms of Mexican migrations to the U.S., but with respect to the different political actions in the U.S. as well as in Mexico with reference to Central American migrants crossing the country and staying in the country.

A second objective is to interpret these new modifications at the light of oth-
erg general changes especially those concerning the “management” of migration flows by other governments.

The World Bank’s original mandate did not include education, but its involve-
ment in education policy and reform has grown substantially since the 1960s. Today it is widely recognized as the most powerful and hegemonic of the inter-
national organizations operating in the education for development field. The Bank is the largest single international funder of education for development in low-income countries, and its technical and knowledge-based resources tower over those of other international institutions. This paper develops a global gov-
erance approach for understanding how the World Bank’s agenda and policy outcomes in the education field have been constructed and have evolved with the passage of time. According to such an approach, research on agenda settlement in international organizations (IOs) needs to focus on three main dynamic: the political opportunities created by geo-political and ideological shifts among the most powerful member governments; the IO’s relationships with borrowing (or “client”) countries; and finally the internal dynamics and organizational culture of the IO’s own bureaucracy as it aims to reproduce itself and manage shifts in the previous two dynamics.

The paper explores how these three dynamics interact in the constitution of the Bank’s educational agenda and policies in four key periods: from the 1960s to the beginning of the 1980s, when the debt crisis exploded in many developing nations; from 1981 to mid nineties, a period marked by structural adjustment lending; from the mid nineties to 2008, when the Post-Washington consensus emerged; and from 2008 to present, characterized by significant shifts in power in the world system and an accompanying rise of strategic uncertainty at different levels within the Bank.

Learning from Informality? A Case Study to Rethink the Misfit Between Formal Policy Strategies and Informal Tactics of Citizenship

Dutch disadvantaged city neighbourhoods face a wide variety of policy strategies to regenerate housing and public spaces, integrate migrants, support families, and make these urban areas safer and more attractive to the middle class. Residents of these areas have frequently argued that such strategies overlook the particular circumstances of their environment equipped for their lives. They perform tacit and informal practices to deal with experiences of threat and develop community activities from the bottom-up. Informal practices - like everyday routines, tacit use of public spaces, and interactions at a square - tell much about the urban experience. Socio-economic disadvantages and a lack of linguistic skills make it hard for residents to engage in formal participation schemes. They experience the state through street-level interactions, but their stories do not find acknowledgement in the public sphere as governments hold on to formal repertoires. Recent needs for welfare changes for violent escallations make local governments eager to rethink citizen's involvement. How could sociologist but also policy practitioners learn from informal performances of citizenship in relation to the dominant actors and institutions? This paper analyses the misfit between informal tactics of residents and top-down strategies of government in a neighbourhood and in Utrecht. An ethnographic case study of performed interactions between citizens, welfare practitioners, and policy makers unravels how strategies to involve residents paradoxically disrupt informal mechanisms and thereby disengage residents from taking part in the political process. Latent tensions deepen in the unhandy mismatch between well-intended strategies and everyday practices. Could local governments use tacit knowledge without 'taking over' or 'disrupting' the tacit fabric of the neighbourhood?

Relative Deprivation, Affirmative Status Generalization and Social Identities

The paper is based on caste-based graded inequalities and social identities emerging from the perceived relative deprivation by the socio-economically and educationally backward castes and affirmative actions based on identification of backwardness by the State agencies in India. The emerging social identities are discussed under a new concept 'Affirmed Status', besides, Achieved and Ascribed, as explained by Ralph Lynton. The affirmed status characteristics generalization are empirically verified to reconstruct the social structure, in modern Indian context. The process of such generalization and thereby emerging identities are explained with the help of a theoretical assumption, 'Social Devolution'. Affirmed status is explained as the social identity of an individual or group(s) of individuals who has acquired a status higher than their ascribed status albeit, positively discriminated by the state in their favour but mainly because of their perceived relative deprivation. These achieved identities are not possible without such support from the state. Thus, the social identities of the affirmed status group(s) are resultant of aspirations and achievements of individuals belonging to a group(s) but due to support of the state. The status and mobility among affirmed status group(s) required to be higher could only increase with the implementation of the policy of positive discrimination, as more and more opportunities and benefits would become available and could be redirected to them. “Social Devolution” is construed as a process of elevating social power, prestige and dignity to relatively deprived, socio-economically and educationally low status groups by way of positively discriminating them to provide opportunities by a central agency (state in the case of India) without redistributing supreme and forwadness of so-perceived-higher-status groups which also now, aspire to achieve the affirmed status for perceived fairness given by that agency.

Hospital Management and the Contribution of Non-Sector Expertise

A belief in the value and superiority of private sector management expertise has been central to NPM reforms (Pollitt & Bouckaert, 2000), leading to concerted efforts to re-structure public organisations and recruit senior managers from the commercial sector, including accountants (Clewlow et al., 2000; Ferlie et al., 1995). It is assumed that such expertise will have a transformative impact on public organisations, moving them away from models of professionally dominated ‘custodial’ or consensus administration. Commercial managers will emphasise the importance of resources, the need to meet performance targets, and have the ability to implement change. However, while these assumptions and expectations are generally focused at the heart of policy making worldwide, there is little research that has tested them directly. Some work has been done on the impact of senior leaders in local government (Boyne, 2005; Boyne et al., 2011) and school districts (Meier & O'Toole Jr., 2002; Myninn & Pandey, 2005). As yet however, there continues to be a dearth of evidence supporting the assumption that diversifying the skill mix of senior managers in public organisations will lead to enhanced performance.

To address this deficiency, we focus on the impact of this non-sector specific commercial expertise on the boards of acute hospital trusts in the English NHS. Drawing on the governance literature focusing on the human (and social) capital of board members (Hayes & Holland, 2010; Far & Sunderland, 2008), we first investigate whether a more diverse board represents a difference and if so, under what conditions. Given the dominance of clinical logics in the fields of health care (Reay & Hingins, 2005), we, then, look at the nature of performance outcomes and whether other factors, such as tenure and autonomy, mediate the impact of commercial and accounting expertise.

Discours De Crise, Périodisation économique Et Quotidienneté

L’objet de l’intervention est de croiser la périodisation des discours économiques, (hauts salaires, crise bancaire, crise de la dette publique, compression salariale) avec les discours de quotidienneté en France, recueillis dans le discours sociologiques (selon les groupes sociaux et les générations).

Deux thèmes importants de la mythologie politique apparaissent dans ce corpus de crise (2007/2012): le sentiment d’inégalité se décline sur différents registres ‘salaires, impôts’ et le sentiment d'impunité économique face aux
contraintes économiques globales (finances, capitalistes, restructuration économique.
Nou nous interrogerons sur le rôle des interactions médiatiques pour véhiculer ou masquer ces deux mythologies de base. Il s’agit de conjurer les effets de trois types de médias (local, national, global).

Multilevel Approach of Professional Fields: Differentiation of Professional Status in Governance

Multilevel approach of professional groups set up a large differentiation of issues, practices and status inside the same professional groups. This approach will be developed for planners and secondary teachers in France. Local surveys frame the observation on a rich diversity of practices and capabilities. National surveys focus on the normative requirements of professional integration (certification, regulation). European survey focus on the governance models inside the convergence of professional standards (Swensson). The notion of profession can be framed inside three repertoires of issues. We recognize a differentiation of perceptions and of professional claims within the relations between qualification and autonomy for teacher, between status and recognition for knowledge workers (Larsons, Abbot).

The sociological question comes to specify the place of professional groups inside the networks of globalization. The convergence of expert knowledge standards at the global level do not mask the intense differentiation inside each professional group. (Freidson), between the level of practices and the definition of professional responsibility, between meritocracy and salarriees. The professional fields frame a tense reorganization between these different levels and different status.

VERSCHRAEGEN, GERT* (University of Antwerp, gert.verschraegen@uantwerpen.be)
Human Rights As a Social Institution

Human rights as a social institution
Contrary to legal-positivist approaches to human rights, sociologists often argue that human rights need not be restricted to legal norms. Rights have to be seen as more than legal norms discerned by judges trained in legal reasoning. For human rights to have social meaning, they must become institutionalised socially and become embedded in people’s minds as well as in the day-to-day workings of societal institutions such as the judiciary, the schooling system, healthcare and the family. The aim of this paper is to develop such a sociological-institutional approach to human rights, which provides an important contrast to standard legal-positivist approach of human rights. Based on the work of a.o. Meyer and Luhmann I will argue that fundamental rights can be seen as a social institution playing a crucial role in the protection of individual agency in a modern, horizontal and heterogeneous society.

Professionalism and Managerialism: How Do Teachers and Physicians Deal with Management Measures

The implementation of reform measures in public administration has conducted to critical changes in the functioning of services and had a great impact on several professions. Changing to a management culture, oriented by efficiency, results control and meritocracy affected this professionalism. For instance, the management measures applied in the Portuguese health sector, such as corporatization of hospitals, organizational decentralization and deregulation of the labor market conflicted with the interests of the medical profession, opposing to its characteristics (i.e. caring and altruism) and ethos code, leaving to a loss of autonomy and power in decision making related to its duties. Besides this, the attempt to implement a performance appraisal system led to resistance from physicians, saying that the model doesn’t take into account the specificities of medical profession. In the education sector, there was also specific conflicts between managers and teachers due to the application of this system.

From this perspective, it is possible to think of reality shows as a reproduction, both perspectives tend to isolate the show from the society that forged it. The purpose of this paper is to present a third perspective that takes into account the world that such format is fed and which returns as mirroring: the flexible accumulation capitalism. From this perspective, it is possible to think of reality shows as a reproduction, not of the Real, but the reality itself, understood as the fantasy that ties our daily practices. Our hypothesis is that such programs take the form of structural social organization practices such as surveillance, selection or evaluation of performance, all central devices for labor control in contemporary capitalist enterprise. The shift in the television format approach allows us to understand, at the same time, the new organization of the cultural industry - also looking for flexibility - as well as a cultural production incapable of achieving any form of transcendence.

Results support the oft considered health gradient that access is based on the perception of finances. This becomes the main barrier for women to seek sufficient antenatal care and medically-trained personnel as well. Also, seemingly counter-intuitive findings had lead to having initial interviews with mothers in selected provinces in the country. What is supported by this approach is that traditional views on healthcare shape their views but perceptions of gradients that some types of care are only suitable for those who can afford them.

Food Security, Rural Livelihoods and Agricultural Change: Evidence from a Case Study of Potato Contract Farming in Maharashtra, India

Despite decades of sustained economic growth, food insecurity remains a seemingly intractable problem for many households in rural India. In recent years, food security has been elevated to pre-eminence in the political discourse of India with the passage of the much-debated National Food Security Bill (2013). At the same time, there has been a growing recognition among researchers that achieving food security in rural areas is not simply about solving food production or distribution problems, but rather addressing broader questions about household livelihood security (Pritchard et al, 2013).

Concurrently, the majority of rural Indian households continue to rely on smallholder agriculture as their primary livelihood activity. The nature of agriculture, however, is changing in India, as liberalisation policies open up the sector to domestic and foreign capital. One such change has been the spread of contract-farming schemes. Where they operate, contract-farming schemes are changing the dynamics of smallholder agricultural production, as land tenure households are increasingly exposed to modern inputs, technology and markets. These schemes present new opportunities for some households, yet it is unclear how these changes will influence patterns of social differentiation at various scales.

This paper discusses the nexus between household livelihoods, food security and modernising agriculture in rural India, using evidence from a case study of a potato contract-farming scheme in Maharashtra. The paper argues that by understanding agricultural change through a rural livelihood lens, we can reveal the nuances of how rural households negotiate change specific to time and place, and who is in a position to benefit from such change. If we understand food security as primally a livelihood issue, then understanding how modernising agriculture is influencing patterns of social differentiation will be critical to the long-term food and livelihood security of India’s most vulnerable rural households.

VIDOVICOVA, LUCIE* (Masaryk University, lucie.vidovic@seznam.cz)

Is Poverty a Key Aspect of Ageing?

The poverty in old age is one of the most persistent stereotypical images of ageing. Due to the significant differences between income before retirement and pension benefit, there is an objective drop in the income with the retirement. However, with the individualisation of pension provision and weakening the link between market exit, the concept is not so straightforward anymore and the image gets even more colourful when social class and different forms of capital are taken into consideration.

Using the secondary analysis of different surveys carried out in last decade among the Czech population aged 40 years and above, I will show the attitudinal data on the role of poverty and financial exclusion in old age definition. I will address issues such as expected (sources) of income after the retirement, marginalisation in consumption, indebtedness, age discrimination in financial services provision and subjective poverty. I will use the paradigm of a heterogeneity of older population to show how these differ in different age, gender-, income-, and social capital- groups.

Transferability of Successful Cooperativist Actions: The Case of Albacete’s Cooperatives

The Integrated Project INCLUD-ED (FP6 of the European Commission) identified Successful Actions (SAs) in diverse social domains. In the field of employment, the successful case of the cooperatives of Mondragon in the Basque Country was analyzed. The Mondragon Corporation (MC) has proven to be a non-capitalist alternative to the traditional organizational and governance models of capitalist firms, combining democratic principles, values of solidarity and strong competitiveness that allow it to achieve both efficiency and equity. In this organization, five successful cooperativist actions (SCAs) were identified and considered crucial in explaining these accomplishments. In order to analyze the transferability of the SCAs, some of them have been recreated in the poorest and most marginalized neighborhoods of Spain: La Estrella and La Milagrosa in Albacete. In 2011, a cooperative was created on the basis of developing the SCAs to provide decent, stable and sustainable employment to people from these neighborhoods. This paper aims to explain the success of the transferability of the latter to the cooperative in La Estrella and La Milagrosa and the ways in which this successful actions approach is contributing to overcoming inequalities while contributing to generate alternatives to the capitalism. This work is developed in the framework of the international network of research on cooperativism coordinated by Erik Olin Wright and Ramon Flecha.

Sustainable Consumption Practices in Brazil’s “New Middle Class”

In recent years, Brazil and other emerging economies are showing a significant change in their socio-economic composition, which highlights the increasing income of the poorest sectors of the population. Some Brazilian authors claim that such economic improvement fosters the emergence of a “new middle class”, prompting a debate on such socioeconomic changes, and on the very concept of social class, as this concept is not consensual within the Brazilian social scientists.

Regardless of the classification which assigns to this stratum of the population, this represents a profound change in Brazilian society, with implications for the consumption patterns. This phenomenon occurs in a scenario where environmental issues gain public notoriety and the discourses that advocates the responsibility of the State, enterprises and non-governmental organizations to address them now include the role of the individual in their daily practices, including that related to consumption. So, it sets up a paradox between the possibility of increased levels of consumption and access to material goods by this economically emerging stratum (labeled as the “new middle class”), and the diffusion of the discourse and the proposals that advocate sustainable consumption and the need to reduce the consumption patterns as a way of coping with environmental problems.

Given this paradox, the paper will present results of an ethnographic study that aims to map the debate about the economic rise of the phenomenon of the less affluent in Brazil and the trajectory of environmental thinking until the moment this paradox becomes a concern about consumption patterns. This also aims to determine, from empirical cases, how these subjects are positioned in relation to the new morality established by discourses and proposals for sustainable consumption advocated by environmental groups, government agencies and businesses, and whether or not alter their daily consumption practices.

Mortalidad Juvenil En América Latina: Factores Asociados y Desafíos Pendententes

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
En las últimas dos décadas América Latina presentó importantes resultados en la reducción de la pobreza, aumento de la esperanza de vida y reducción de la mortalidad infantil. Sin embargo, el incremento de la incidencia de muertes violentas, sobredosis, entre los jóvenes en este mismo período sigue siendo un desafío pendiente. Así como ocurre con la mortalidad infantil o el embarazo adolecente, las tasas de homicidio inciden diferentemente sobre los individuos de acuerdo con su posición en la estructura social. Los estudios sociodemográficos evidencian que hay una alta selectividad en la mortalidad juvenil por sexo, color/ etnia y clase social. Irónicamente, las vidas ahorradas en los primeros años de vida en las que más pueden ser compartidas dentro del marco de una cultura que aún sostiene fuertes rasgos machistas y una visión muy arraigada de valorización de la virilidad. Este trabajo discute las relaciones existentes entre las elevadas tasas de mortalidad violenta entre los jóvenes, especialmente los homb- lidios, e indicadores de condición de vida. Nuestra línea investigativa enfatiza el rol de la educación. Los avances cuantitativos alcanzados en la educación no son acompañados por elevación de los niveles de calidad. La baja calidad de la educa- ción en América Latina que se observa por medio de los bajos rendimientos en las evaluaciones internacionales, a ejemplo del PISA, está muy correlacionada con una estructura de oportunidades restrictas que en su versión más perversa se refleja en altas tasas de mortalidad juvenil.

Trajectories of Risk and Uncertainty? Medical School Students and Their Vocational Choices

In Portugal, the imposition of a numerus clausus system at the HE entrance has contributed to the strengthening of a hierarchy of excellence in the school system. At the same time, it has introduced an increased uncertainty regarding the possibility to accomplish future projects and ambitions.

This presentation aims to analyze the processes involving Medical School en- trance in Portugal. In particular, we intend to confront students' investment on a highly competitive vocational pathway (Medicine) with their awareness of risks that may emerge along with their option.

The analysis is drawn upon data collected within the project "Failure and drop-out at the University of Lisbon: scenarios and trajectories", a recently completed research project sponsored by the Portuguese Science and Technology Founda- tion (Project ID/FCT/POCTI/65/2006). In particular, it will explore data from in-depth interviews conducted in the academic year 2009/2010 to the students that in the previous academic year had entered the 1st year of medical school at the University of Lisbon.

Did Someone Say Cosmopolitanism? A Critical Feminist View on Cosmopolitan Citizenship, Post-Nationalism and Trans-Nationalism in Europe

By Dr Ulrike M. Vieten (University of Sheffield, UK)

Since the early 1990s cosmopolitan visions evolved as an endeavour to trans- gress 20th-century boundedness of national identities, the post2001 intellec- tual climate of some kind of hegemonic 'security and surveillance totalitarianism' demands a serious 'reality check'.

Speaking from Europe, and witnessing a rise in nationalist socio-economic interests and neo-fascist political orientations in various EU Member States it is difficult to uphold any ideal of post-national political communities, not even talking of cosmopolitanism.

Nonetheless, I will argue from a feminist perspective that transnational belonging and cultural hybridity are equally on the rise providing some futuristic space to envision social justice and equality encompassing a subaltern cosmopolitanism in the plural. It seems we also live in a very rebellious civic world society; also very much connected to structural changes of the social fabric as far as ethnicity, race and religion is concerned in metropolitan cities all over the world.

While critically analysing Habermas' and Soysal's take of the 'post-national' and turning to Young's concept of the 'social connection model', the first part of the paper proposes an alternative reading of transnational and diasporic urban po- litical spaces. It is argued that complex diversity and social contradictions nurture intensification and widening of trans-cultural cosmopolitan habits alongside a backlash of parochial opinions.

In a second part of the paper these emerging trans-national identity containers of multi-layered belonging will be tested while introducing some research results of a comparative study on new European citizenship and vernacular cosmopolitamn with respect to different ethno-national minorities in Britain, Germany and the Netherlands.

Autonomy and Heterogeneity of Managerial Changes in European Judicial Systems

For a long time reluctant towards managerialism, Dutch, Belgian, French and to a lesser extent Italian judicial systems have undergone deep changes, since the Ministry of Justice implemented new management policies and tools. In terms of professionalism, accountability procedures, new norms (a more customer- and efficiency-driven approach), the valuation of other competences than legal ones, budget restrictions modified professional practices and identities of clerks and civil servants. New models of what constitutes "a good magistrate / clerk" emerged.

The paper will focus on the part of autonomy and heterogeneity of professional groups and political actors who either decided, implemented or had to cope with those managerial changes. Ambivalence prevails regarding their promoters and implementers.

Managerialism was partly promoted by other national or international institu- tions (the Ministry of Finance, the Parliament...). But even when they felt reticent about this trend, hierarchy at local levels (regional court chiefs and managers, judges and clerks at the head of diverse services) also took initiatives to gain effi- ciency, even though it might create conflicts with the law or their colleagues. Thus they contributed to the profession's definition of relevant managerial criteria and procedures.

But this autonomy varies according to the professions and hierarchical posi- tions they are receiving or having increased power (in priorities definition, budget allocation...). Yet, professional identities of ordinary magis- rates and clerks got somehow weakened by the priority given to productivity and by contradicting orders (both making quick court rulings and listening to citizens, reinforcing crime repression and reducing short prison sentences...).

Finally, we observe a hybridism between legal and managerial values rein- forced by the recent involvement of consultants and professionals other than law professions in the judiciary.

Combining sociology of professions with public policy analysis, this research relied on an empirical study based on observations and 130 interviews with bu- reaucrats, lawyers and clerks.

Lean Production in Public Services: Selective Transfer and Jurisdictional Conflicts

Lean production has spread to public services, even in countries and institutions for a long time reluctant towards a managerial approach. The French State agency in charge of the "modernization of the State" (DGME) perceived it as an efficient tool to implement State reforms. How understanding this focus at the French State level on lean system? How was it re-appropriated by the Ministry of Justice, where other tools (such as ISO standards) had just been experimented, so much so that lean management is about to be generalized in the civil judiciary system?

My hypothesis is that lean system was a means for transversal ministries such as the Ministry of Finance (to which the DGME reported) to reaffirm their power on specialized ministries and impulse reforms otherwise than by budget cuts.

Moreover lean production was implemented in the judiciary by emphasizing its "soft side" (considering a court ruling as a collective work) and by presenting the efficiency goal in a positive way (reducing the wastes of time to focus on the core business of clerks and lawyers). This selective transfer was facilitated by the fact that the DGME supported its cost and that there were no staff cutbacks in the Ministry of Justice.

The paper will show how the success of lean production relies on its adaptabi- lity to the selection of some characteristics, its capacity to be compatible with values of diverse professions (even though it may generate jurisdictional conflicts with consultants or between professions when the division of labor is modified), and on strategic uses made by professional groups and political actors.

Studying lean system in public services requires therefore to associate sociol- ogy of work and a political sociology perspective. This empirical study at national
and local levels is based on observations and interviews with bureaucrats, lawyers and clerks.

Intimate Unions: Sex Workers’ Labor Activism in Karnataka, India

Recent scholarship has de-normalized sex work and positioned it within the theoretical framework of intimate labor (Boris and Parreñas 2010). However, academic studies of sex workers’ activism as laborers remain scarce (Jeness 1990; Kempadoo and Doezema 1998; Hardy 2010). What tensions emerge when a labor framework for sex work serves not only as an analytic, but also as a basis for collective action?

This presentation, a scholar-activist collaboration, examines the trajectory of the Karnataka Sex Worker’s Union (KSWU) in India, drawing on 8 focus group discussions, 50 in-depth interviews, and our experiences. KSWU organizes sex workers using a trade union model. Rejecting state practices that either criminalize or pathologize sex workers, especially after large-scale HIV prevention programs directed at sex workers in India, KSWU has attempted to articulate an alternative claim on the state, positioning sex workers as citizens and workers.

We argue that KSWU has provided a meaningful alternative to existing relations between sex workers and the state. It has built alliances with other informal laborers and feminist and Dalit rights groups, and developed an independent trade-union-like funding approach. However, traditional trade union models have not always been adequate in the face of stigma; dispersed spatial patterns of work; no fixed ‘empowerers’; fluid identities of those who move between sex work and other informal work; systematic violence; and differences among women, men and transgender sex workers in their relationships to sex work. Many sex workers in Karnataka prefer the safety of invisibility, but KSWU’s politics pull toward greater public visibility. KSWU’s experiences highlight the inseparability of claims for recognition and redistribution, and suggest the need for strategies of organizing that respond specifically to intimate labor spheres—strategies that draw on the insights of Southern labor and feminist movements and develop creative, safe spaces for solidarity.

On the Work Itself: Task and Organizational Reality

In classic organization theory, ‘purpose’ and ‘task’ were key concepts. In order to understand the situation of a particular organization and to assess the form and necessity of managerial action it was considered crucial to address the organization’s basic purpose or core task. Without this, an organization could not realistically assess the strengths and weaknesses of its inner arrangements and the threats and opportunities posed by its ‘environment’. In contemporary organization theory, there is no longer a natural point of departure and figures only as one among many ‘aspects’ of organizational life. A widespread argument for this decreased significance holds that it is no longer relevant to speak in terms of overarching purposes as organizations manoeuvre in rapidly changing environments where tasks and purposes are multiple, ambiguous and in flux. Another is that the definition of ‘tasks’ by management is ultimately a ‘political’ or ‘instrumental’ reduction of the creativity and multiplicity of an organization. Thus it has been suggested that organizations are no longer relevant to understand as total entities, but only as ‘partial organizations’ (Ahrehn & Brunsson, 2011). In the paper, I revisit Barnard’s concept of ‘organizational purpose’, and Miller and Rice’s concept of ‘the primary task’, which share a number of family resemblances. I argue that the authors were aware of the challenges in sorting out the core tasks of an organization, but that they also explain and illustrate the problems of bewilderment and fragmentation arising from neglecting the issue. A bewilderedness and fragmentation that also characterizes contemporary organization theory as a discipline, I argue. Employing the notion of ‘reality device’ I conclude that understanding the core tasks of an organization is an indispensable means to register and evaluate the empirical reality of organizations and the work to be done in order to accomplish those tasks.

The Discussion about the Body Between University Teachers: A Case Study

The debate about the concepts of the body is justified by the fact that the noci- cate is a key element for the formation of the body conception of undergraduate students, this is the first step to consolidate how to think and act in different fields. We aim to discuss the conception of body from teachers of a philanthropic University of Goiás. The research is a cross-sectional study done in the nature.

Made sure a case study with a questionnaire developed and validated specifically for this study. Was distributed approximately 20 questionnaires and one teacher refused to answer. The study was approved by the Ethics Committee of the PUC Goiás under No. 1256/09. identifies the fact that 26.7% of teachers working with physical activities, 40% with the humanities, and 33.3% with the area of biology. About the body conceptions that prevail among teachers, nine replied the question, 66.67% consider the body as a machine, or as an organism, comprising sepa- rately from other components. Was also questioned whether teachers read au- thors and discuss the issue, 88.9% said yes. Was also asked if teachers talk about the body in their classes and again 88.9% said yes. The completion marks the fact that teachers’ conceptions of body can be con- sidered traditional, since there was no overcoming the dualism of body and soul, or the condition of a body “thing” (machine or organism). This conception among university teachers can affect the thinking about the subject among academics, fact that is shown by other researches.

Mental Health in Public Universities: A Comparison Between Brazilian and Canadian Professors

Mental health, an important object of research in Psychology as well as Social Psychology, can be determined by the relationship between psychological well-being and psychological distress. In this context, we search to understand: How do compare mental health of professors working in public universities in an emerging country like Brazil with the one of professors working in a developed country like Canada? What are the main differences in the indicators of mental health in work domain? How Mental Health affects Work-Life Balance? To an- swer these questions, this paper assesses Mental Health and Work-Life Balance for professors working in these two countries and test for their differences. The sample consists of 354 Brazilian professors and 317 Canadian professors. Data were collected through an on-line questionnaire assessing the following Mental Health indicators: anxiety, depression, loss of control, general positive effective- ness and emotion ties. We compared the components of Psychological Distress and Psychological Well-Being with the indicator of Work-Life Balance to analyse their relations. Reliability analyses demonstrated that all tested components are consistent to evaluate Mental Health and Work-Life Balance. Correlation analyses showed the components of Psychological Distress are negatively related to Work- Life Balance, whereas the components of Psychological Well-Being are positively related to Work-Life Balance. There are some small mean differences between Brazilians and Canadians professors in all five components of Mental Health, but these differences are not statistically significant. Mean differences for Work-Life Balance, gender, age, and Bias of Conformity are statistically different, although the size effects are small. Linear regression analysis, step by step, controlled for Life Events, showed that General Positive Effectiveness, Anxiety and Emotion Ties predict 31.5% of the scores of Work-Life Balance. Additionally, we observed that Brazilian professors find more balance between professional and private life than do their Canadian colleagues.

Higher Education: Inequalities and Globalization in Some Emergent Countries Using the Mexican Examples

Higher education: inequalities and globalization in some emergent countries using the Mexican examples

This paper refers to the last question suggested in the proposal of the symposium: Since data and methods to investigate inequalities mostly refer to national units, how to produce quantitative evidences of global inequalities?

I try to explain the implications of the process of globalization of the na- tional higher education system in Mexico, having as a background the Bologna process as one of the best examples of the intense globalization of national ed- ucation systems.

The paper has three parts:

1. The first one focuses on the comparison of the imbalance regarding eco- nomic and material resources among students, in order to gain access

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.

1033

Book of Abstracts XVIII ISA World Congress of Sociology
to higher education in some selected countries, based on international statistics.

2. The second one is based on an empirical research undertaken in six universities in Mexico City, that are classified by academic characteristics, and by the implications that these have in the process of globalization of knowledge, and will examine the material and symbolic inequalities of the students that obtain their professional degrees.

3. The third one, will consist on a reflection that, based on empirical national data versus international data, allows the design of some elements of comparison regarding the inequities experienced by the young students that succeed in finishing their degrees, in some selected emergent countries.

Argentina’s Dirty War: Counter-Hegemonic Collective Memories & Frame Analysis

In this paper, I analyze the contentious and long-lasting collective process to document, understand and reach justice for victims of Argentina’s Dirty War, based on fundamental texts produced after the end of the last military dictatorship. By looking in Back to the Black Mas (Never Again) report prepared by the National Commission on the Disappearance of People (CONADEP), which included hundreds of testimonies by survivors of torture and acquaintances, reading scholarly analyses on this matter, and finding testimonies published in other venues, I discuss how this report became a master narrative from which subsequent interpretations of the Dirty War emerged. I apply Goffman’s (1986) frame analysis theory to understand the complexities and nuances of processes of collective memory-making, and identify how hegemonic and counter-hegemonic frames were used to create meanings and organize experiences of the Dirty War. Then, I propose alternative frames (‘intersectional frame’ and an ‘emotions-conscious frame’) with the aim of contributing to ongoing and long-lasting collective efforts to comprehend this phase of history. While this use of frame analysis may be considered unorthodox given that scholars do not generally impose a frame on a document, I intend to demonstrate the power of framing and reframing as tools to animate what existing frames may be masking and thus reach deeper levels of understanding through furthering the production of counter-hegemonic knowledge.

VILLALON, ROBERTA* (St. John’s University, villalor@stjohns.edu)
Economic Crisis, Politics and The Menace To Battered Immigrants’ Rights

The anti-immigration measures and xenophobic sentiments that have spread since the eruption of the financial crisis in 2008 have been significantly detrimental for immigrant survivors of intimate partner violence in the United States. In common times, this group is particularly vulnerable to abuse because of the intersection of their members’ gender, sexuality, nationality, race, ethnicity, language, religion, immigration status, isolation, cross-national frames of cultural and legal reference, and socioeconomic standing. All of these factors influence the way in which aggression is inflicted and endured, and affect the availability of resources for immigrants to escape and overcome abusive relationships. The economic recession, anti-immigration policies and a rising xenophobic environment have created additional hurdles for battered immigrants given that employment opportunities have declined, exploitative work conditions have worsened, and immigration controls have increased. In this pressing context, immigrant survivors of intimate partner violence have been faced with empowered abusers whose threats of deportation became real; ambivalent law enforcement officers who instead of protecting battered immigrants may be forced to collaborate with immigration officers; and a widespread sense of fear with its paralyzing and isolating effects. At the same time, most nonprofit organizations providing services for battered immigrants have met serious budget cuts that curtailed their ability to serve the increasing number of survivors approaching them. Based on interviews with service providers across the nation, participant observation of networks of battered immigrants’ advocates, and a close reading of debates around the re-authorization of the Violence Against Women Act (VAWA), I analyze how these dire circumstances have been critical for not only immigrant survivors of gender violence, but also the battered immigrants' and battered women's movements.

Excision and Migration: Between “Legality” and “Loyalty” in the Transmission of a Traditional Practice in Migratory Context

Female genital mutilation (FGM) is forbidden in many countries of the North (Europe, Nord-America) and of the South (Africa). However, this traditional practice is still transmitted from generation to generation by women. If medical and pathological consequences of FGM are well-known, the social and symbolic implications in the intergenerational process of transmission of the practice and the gravity of the context in which the disability is accepted. The social and symbolic universe of the countries where sexual mutilations persist, implies that women who are notexcised are considered “dirty” or “obscene”. Non-excised women are stigmatized in their sexual identity and within African community. On the other side, young women living in a migratory context are confronted with other sexual models and may start to feel a sexual disability. Communication around the practice of excision is almost absent in the families where women and girls are nevertheless excised. The perpetuation of the practice is intrinsically connected to the gender system stakes and in particular to the unequal status between men and women in some of these societies (Zimmerman, on 2011). Introduction to sexuality can become one moment of distance between the parental and family standards and the social standards of the local society (Andro, Lesclingand, Poutre, on 2010).

This qualitative survey involves both social sciences and biomedicine. To seize the social representations and the sexual practices connected to sexuality and to health, a series of semi-directive detailed interviews have been conducted with ten African women living in Switzerland and have undergone FGM. On one hand, transmission of FGM on the second generation of immigrants in the migratory context, is the way for keeping memories and traditions alive. On the other hand, teenager’s sexual socialization becomes a ground of resistance against the western colonization, which takes place in the field of the sexuality.
grado construir estrategias de cooperación científica internacional como una vía de acceso al conocimiento y para reforzar sus capacidades científicas.

La cooperación científica ha sido estudiada desde el ángulo de las co-publicaciones entre investigadores. Es un método que da cuenta de la construcción de redes de colaboración, de la emergencia de campos disciplinarios y de la densidad de flujo de conocimiento en el ámbito internacional. La movilidad estudiantil es otra forma con la que se ha analizado el flujo de conocimiento y entre países. Las copublicaciones y la movilidad de estudiantes reflejan decisiones y trayectorias de individuos, pero metodológicamente no da cuenta de las estrategias institucionales que hay detrás, como tampoco del aprendizaje organizacional que llevan a cabo las universidades y centros de investigación.

La ponencia resume los resultados de una investigación sobre las prácticas y estrategias de cooperación científica y tecnológica entre universidades de México y Francia en los últimos 5 años. Mediante un cuestionario electrónico aplicado al personal de oficinas de relaciones internacionales en las instituciones académicas, hacemos una clasificación de los instrumentos, las prácticas y resultados disponibles. Analizamos en qué medida existen estrategias y políticas de cooperación internacional, cuáles son y qué alcances tienen.

**VINCENT, FANNY** (université paris dauphine, fanny.vincent73@yahoo.fr)

Dans nos sociétés prises dans ce que le philosophe allemand Hermut Rosa appelle l’« accélération sociale du temps », et face à la dégradation des conditions de travail d’autanta mériter, maîtriser son temps de travail est un en-jeu. Et ce d’autant plus dans le milieu hospitalier où temps de travail est souvent synonyme de don de soi personne.

Depuis une dizaine d’années une forme de travail atypique se développe, à la limite de la légalité, dans les équipes soignantes des hôpitaux français : le travail en 12 heures d’affilée. Présenté par les directions des hôpitaux comme une solution pour pourvoir les postes vacants, le travail en 12h permet aussi à court terme d’économiser des postes en supprimant les temps de chevauchement entre les équipes.

Mais pour les soignants eux-mêmes, ne travaillant « plus que » 12 jours sur 28, les 12h permettent d’avoir plus de temps pour sa vie privée. En effet, à la différence des plannings traditionnels en 8h, travailler en 12h permet d’obtenir un roulement fixe et de dégager mécaniquement du temps pour cumuler une deuxième activité face à au gel des salaires.

Notre exposé s’appuiera sur les premières conclusions d’une enquête ethnographique de plusieurs mois menée dans divers services d’hôpitaux parisiens, ainsi que d’entretiens avec les soignants, dans le cadre d’une thèse engagée depuis octobre 2012. Nous montrerons que ce qui apparaît comme un consensus inébranlable entre les équipes soignantes d’un service d’hôpitaux est de travailler en 12 heures d’affilée et de dégager mécaniquement du temps pour cumuler une deuxième activité face à au gel des salaires.

*Private Lands, Collective Values? Framing of Food Security in a Norwegian Land Use Conflict*

The principle of food security is in recent agricultural policy documents in Norway being used to re-legitimize increasingly neo-productivist farming policies and systems. Thus conservation of agricultural land is once again prominently positioned on the political agenda. With only very limited availability of farmland, only 3% of Norway’s land area is in productive agricultural use, the issues of agricultural land conservation and food security have become more or less inseparable. At present, the Russian government has a duty to provide orphans with housing regardless of their age, which is made at the expense of both the federal budget and the resources of local authorities. At the same time, orphans are unequally allocated in regions with various levels of economy, which collides with the variety of housing needs orphans have a right to live in.

For example, during the period of professional studies orphans are provided with a room in the university’s dormitory, thus their housing need is partly met by the funds of their educational establishment. However, after graduation orphans are required to have a permanent registration, i.e. living space of their own, in order to have a job and for other purposes.

In general, the paper combines the case study methodology with legal analysis of effective housing rights for orphans and young care leavers who are in need of housing. The study leads to the following key point: equally guaranteed rights to housing care are hampered by the lack of (i) a unified mechanism for different regions of Russia and (ii) appropriate economic resources to implement the rights.

*From Right-Wing Violence to Racist Terror – Exploring Factors of Radicalisation*

In November 2011 a racist terror group in Germany that claimed responsibility for the murder of nine migrants and one police woman was discovered by chance. For more than thirteen years security forces had no real idea of the activities of the group, assuming that the killings were caused by criminal motives. After the existence and activities of the racist group has become known several high-ranking security and secret service officers resigned and the security apparatus is still under reconstruction.

The paper addresses the attempts by researchers to locate the factors why a terrorist group developed from a much broader racist violence-prone movement and tries to weigh up the role and actions (as well as non-actions) taken by state actors towards the extreme right in Germany in general and against the regional right-wing movement in Thuringia from which the terror cell emerged in particular. In doing so, the investigation tries to find out if in the first phase restraint by the state might have encouraged right-wing violence while in a later phase adamant decisions by public prosecutors may have contributed to a radicalisation processes resulting in racist homicide.

*The Identitarian’ Movement*
In autumn 2012, the Génération Identitaire, a French group, launched a video message on Youtube declaring war on multi-culturalism. In order to gain a maximum of public attention and as an example of how the movement's performance would look like the group occupied a mosque in Poitiers; chosen for the final victory of Karl Martell against the invading Moors in 732 AD. While, in France, the group's roots date back into the early 2000s, the occupation of the mosque quickly inspired imitators in neighboring countries like Austria and Germany. Although presenting themselves as being non-racist its ethno-pluralist approach and public statements on several issues clearly indicate that the movement belongs to the spectrum of right-wing racist populism.

The paper will outline the emergence and the development of the 'Identitarian' Movement taking the variations in several countries into account. A focus will be given on the analysis of the movement's claim of not being racist on the one hand and the de facto involvement of known right-wing protagonists on the other hand. With its performance of the movement that is web-based to a large extent is investigated. In sum, the paper offers an analysis of a new political phenomenon and situates this into a broader understanding of more recent developments of right-wing populist as a whole.

Gendering Responsibility: Work Practices and Institutional Responses to Intimate Partner Violence in Finland and in Russia

This paper examines how the highly gendered phenomenon of intimate partner violence (IPV) is encountered in various institutional settings of social and health care services in Finland and in Russia. The empirical data comprise (1) 16 focus group interviews with staff members (n=73) in various social and health care units in Finland and (2) 74 interviews with staff members (n=56) and services users (n=14) in three public crisis departments and one NGO crisis center in Russia. Based on the analysis of this data corpus, it seems that one of the dominant institutional discourses is that of making the female victims responsible for dealing with the problem of IPV. According to the interviewed professionals, it is difficult or even impossible to address the topic of the responsibility of male perpetrators due to various reasons, e.g. inadequacy of existing work practices or insufficient legislation. This paper takes a closer look at the ways in which the above-mentioned discourse operates to organize work practices that result on "gendering responsibility" at the level of local activities. Following the ideas of institutional ethnography (Smith 2005), the basic assumption of this paper is that institutional discourses organize the ways of "seeing" and "knowing" the solutions to the problem of IPV in institutionally actionable ways. Of special interest here are the interconnections between the institutional processes carried out locally and those organized at state, national and even international level. In addition, this paper addresses some cultural differences between Russia and Finland in the ways in which the female victims are made responsible for dealing with the problem of IPV in the everyday work of the institutional settings under investigation.

Testing the Effectiveness of HRM Practices Among Expatriate Humanitarian Aid Workers

Abstract: Staff turnover has become a major concern for humanitarian organizations. On the one hand this can be seen as something humanitarian organizations have to live with, but on the other hand it has also been blamed for reducing effectiveness and efficiency due to discontinuity in staffing and loss of institutional memory. To generate public pressure for greater efficiency and accountability, Professionalization, and especially adopting for-profit management practices, for example regarding human resource management (HRM) was deemed to be key to achieve enhanced efficiency and accountability. In short, no sector is dependent on the employees and their loyalty and at the same time is experiencing a very high risk of turnover. Therefore, this is the perfect setting to study the effectiveness of HRM practices. Yet, while much discussed, in-depth research on the consequences of human resources practices on attitudinal outcomes of employees, like trust in management, job satisfaction and leaving intentions in this sector has so far not been conducted. So far, most studies have been conducted in the for-profit sector and to a lesser extent in the public sector. While it is assumed that HRM practices should also be effective in humanitarian organizations, empirical data was lacking in order to actually test this. To the knowledge of these authors, this is the first empirical attempt to study these issues among a sample of humanitarian aid workers, one of the largest agencies in the field: MSF. Preliminary results show that HRM practices are positively influencing individual attitudinal outcomes (job satisfaction and turnover intentions) and that trust in management is an important factor mediating this relation. HRM practices are conducive to building trust in management, which in turn is positively related to job satisfaction and intention to remain with the organization.

Les Droits Pédagogiques Chez Bernstein : La Normativité Sociologique En Questions

Cette communication vise à questionner ce qui apparaît comme le modèle normatif explicité dans la théorie de Basil Bernstein : le modèle des « droits pédagogiques » par lequel il introduit son dernier ouvrage et qui semble fonctionner comme une véritable alternative à la pédagogie des normes. Au sens strict, Bernstein affirme que ce modèle ne joue pas encore totalement le rôle qu’il est appelé à jouer, et qu’il n’a pas encore convaincu l’ensemble de la communauté des enseignants. Nous avançons l’hypothèse que ce modèle est à l’origine de la relation entre les institutions et les individus, et normatif au sens où il décrit ce que devrait être le dispositif pédagogique, et singulièrement le dispositif scolaire en rapport à son ambition d’émancipation. Ces deux dimensions associées permettent de poser l’hypothèse d’une normativité objective. En relation avec ces hypothèses simples permettant de penser les conditions de possibilité d’une démocratie minimale, l’auteur en vient ainsi à poser la nécessité pour les dispositifs pédagogiques d’instituer trois droits reçus entre eux : le Droit à l’émancipation (DA), le Droit à l’intégration (DI) et le Droit à la Participation (DP). Il est cependant possible que ce modèle ne joue pas encore totalement le rôle qu’il est appelé à jouer, et que Bernstein entend lui faire jouer dès l’introduction de son ouvrage : un modèle auquel il pourrait comparer tout ce qui se passe dans divers systèmes éducatifs. Y compris dans les analyses de Bernstein lui-même, en témoigne d’ailleurs l’intégration de plusieurs droits qui ne sont jamais par la suite mentionnés tout au long de l’ouvrage. Ils semblent peu repris explicitement aussi par la communauté actuelle des bernsteiniens.

VITOVSKY, VLADIMIR* (University of Coimbra, vladimir@vitovsky@isc.br)

How Courts Must Act To Provide Democratic Access To Justice On Civil Disputes? The Experience Of Brazilian Federal Court In Slams Of Rio De Janeiro

The aim of this communication is to discuss how could brazilian federal court act in marginal urban communities with peacekeeping police forces units (UPPs) to promote democratic access to justice in civil disputes. A federal court in Brazil has the competence to judge the conflicts involving the Brazilian federal state, as well as their federal organs, as the mail office, the social security institute, federal banks, the national regulatory agencies and others. The field of research is the implementation of programs and projects of the federal justice in underserved communities, implemented by the federal court of Rio de Janeiro. These programs began in 2010 and last until 2013. The implementation of such policies was extremely heterogeneous and plural. Initiative began with a realization of hearings, production of expert evidence and offering agreements by the social security institute approved at the same time by the Federal Judges (judgment), and presented in the final hearing of the project in Cidade de Deus, Rio de Janeiro. I conclude that pedagogical access to justice, which means, legal education for citizenship can offer a third way to rethink the relation between courts and communities for dispute resolution in civil conflicts.

Art Works and the Production of Knowledge on Cities

Artists work on the built environment mainly through the production of art works in the public realm. This implication has recently taken a new orientation where artists work in some cities, on issues related to urban projects along with the project team. They contribute to the early stages of urban projects and take part in field studies. Besides the use of urban planners’ and architects’ know-how, they collect data in various forms -sound, images, objects, words, impressions-. They transform these data into art works which are qualified as territorial. They produce through this work and their actions, knowledge on the city, the project site and the local community.
This paper presents the results of a research project based on five case studies where artists are invited by urban professionals to work and produce knowledge on cities and project sites in France. They are digital artists, sound artists, choreographers, visual artists, actors. They work mainly through intensive field work. Site immersion and (informal) interviews are singled out as the key elements that are used. We will first discuss in which way and to what extent artists produce knowledge that is different from that produced and used by city professionals. What kind of knowledge do artists produce? In which aspects is this knowledge different? Are these differences due to artists' specific skills? To their methods? To their unique gaze? To their capacity to represent the reality? Then we will discuss how can urban professionals use and work with this new kind of knowledge. How do they analyse it? What are the epistemological, methodological and analytical problems encountered in their understanding and their transposition in urban studies?

Youth Graduates Self Entrepreneur: Searching for Job or Creating a Company?

Prescariousness is a rising condition of high skilled and knowledge work. The implementation of new kind of work contracts is supporting this movement. In France, a new fiscal regime for self-entrepreneur had been created in 2009. This consists of lower tax rate and simplified administrative procedure for small companies (turnover under 33 000 euros).

This presentation presents the results of a research on graduates (master or PhD in social sciences) who enter the labour market by creating this kind of self-entrepreneur. It appears that they didn't choose this scheme of work: it had been required by employers to lower their labor cost, flexibly the working relationship and externalise administrative procedures. While graduates are administratively independents, their conditions of work are mainly those of salaried: in the firm, with fix schedule, prescription from the superior, etc.

In these situation that fuzzed and hybridised working regime and working conditions of independents and salaried, how are these graduates (as specific population of knowledge workers) adapted? Their working conditions, activities, projects and discourses reveal different feelings about that situation. This paper will explore these three idea-types of young self entrepreneur: subordinated, independent, or in inclusion. To what extent does this situation trained them to become entrepreneurial worker?

Masculinities, Violence and Multiculturalism in Latin America

Male violence has occupied a foundational place in Latin American history. Latin America's past has been marked by men's violent acts, such as the Spanish Conquest and Colonization in which not only colonized "women" were powerless within their communities, but also colonized "men" were subordinately placed within a hierarchy of masculinities. This societal structure was based on mechanisms of racial inferiority and gender subordination, which established relationships of exploitation and of complicity between the people and their colonizers. The postcolonialist period manifested the consequences of such brutality and its difficult to speak about Latin-American social history where violence hasn't been present, not as a Latin-American cultural trait but as a social fact.

While I'll reference the Latin-American context generally, I'll particularly focus on the situation in Colombia, an area on which I have extensively worked. Due to the old and painful reality of the Colombian armed conflict, exceeded only by the Israeli-Palestinian and Indian-Pakistani conflicts, the need has become apparent to promote initiatives, which introduce discussion and action into the public and academic field, revealing the following issues: first, the conflict continues to differentially affect the lives of Colombian women and men because of their social place in the gender order; and second, the difficulty of dissociating the violence of masculinity, as it has been designed and constructed socially in the Colombian context.

This paper will first reflect on the relevance of social intervention programs developed with men oriented towards violence prevention. It will then address male resistance to change and the attempt to trivialize violence against women and reaffirm masculinity based on domination, in which some geopolitical and internal social hierarchical considerations are present. Finally, this paper will discuss the forceful effects that multiculturalism in the region may or may not have on gender violence and its eradication.

still maintain high productivity and biodiversity, coupled with human activity. The satoumi is based upon traditional resource management techniques which aim at the protection of the targeted ecosystem. As the depletion of fish stocks and the degradation of marine habitats expand around the globe, the provisioning, regulating and cultural services that the marine ecosystems provide for the fishing communities are disappearing. Through extensive literature review, this paper explores the capacity of the satoumi concept for the sustainable use of the marine resources. The most important aspect of the research is the exploration of the significances of the implementation of satoumi for the survival of the communities that have adopted it. The majority of these communities depend on the local marine resources for their livelihoods and maintain a strong bond with the sea, as their ancestors have passed down to them their maritime tradition. The satoumi practitioners have shown evidence of adaptability and resilience whilst maintaining high levels of productivity and sustainability.

Perceptions of Rising Powers: Are Russia and China Still Brothers Forever?

‘Russia and China are brothers forever’ was a popular slogan in the Soviet Union time, that perfectly shows how important it is for political science to understand differences in perceptions. While in Russian culture a brotherhood can be relationships of the equal, in mind of Chinese people an hierarchy is always formed and one of the brothers has to be elder, has to be a leader. Even though China has adopted for a new federal-patriotic system and a new type of superpower, that relays more on soft power than on hard, it is struggling with the China Threat theory and problems of misinterpretations of the Harmony World concept. In order to predict the role of China in the future many specialists turn to its imperial past, the tribute system and roots of the strategic culture, so processes of a politicisation of historical observation have been done. Our research focuses on the impact of Russia’s rise on the country image and relations with other actors in the international arena are a crucial part of political discourse now, to which scientists and policymakers pay close attention.

Unequal Social Participation in Later Life

The concept of active ageing comprises the maintenance of societal participation throughout the life span into old age. ‘Good’ ageing in line with this activity paradigm develops into a starting point of social inequality rather than being its result. Based on the German Ageing Survey (DEAS) and on the German Survey on Volunteering (FWS) we investigate the access to volunteering and to educational activities depending on social and spatial aspects of inequality. The DEAS is a nationwide representative cross-sectional and longitudinal survey of the German population aged 40 and above, so far data was collected in four waves in the years 1996, 2002, 2008 and 2011. The FWS is a representative cross-sectional survey on voluntary work, honorary office and civic engagement of the population living in Germany aged 14 and older. Data is currently available for the years 1999, 2004 and 2009.

Societal participation is socially and spatially structured: Individuals from a lower social class are less often involved in educational activities or in volunteering. The results of our multi-level-analyses clearly support these inequalities in societal participation known from the literature among individuals in both, middle and later life. Furthermore, findings indicate that individuals living in economically disadvantaged regions are less likely to participate than in economically strong regions. Disadvantages cumulate in case that low individual resources overlap with poor economic conditions in the living area. Therefore, measures to facilitate regions. Disadvantages cumulate in case that low individual resources overlap with poor economic conditions in the living area. Therefore, measures to facilitate

Religious Heterogeneity and Civic Participation in Comparative Perspective

The effect of diversity on civic participation is a hot issue in social sciences during the last decade. While some authors point out that diversity erodes social cohesion, other researchers point to a need for a new fairer international participation, other researchers prove that different type of diversity (namely ethnic or linguistic diversity) have different effects on political and civic participation. The current research focuses on the effect of religious heterogeneity on civic participation, taking into account the effect interaction between the religious heterogeneity and individual belonging to a particular religious denomination. The result of multilevel hierarchical models run on EVS 2008 data shows that religious heterogeneity has a negative effect on civic participation, but the moderate effect depends on the individual religious denomination.

Researching Youth Ethnicities in East London and in Paris Banlieues: Methodological Challenges and Explorations

This contribution explores the methodological challenges I faced while carrying a qualitative study on ethnicity among young people (aged 15 to 25 and chosen for their diverse ethnic diversity across gender, age, ethnicity, social class, education and type of housing) in the London Borough of Newham in East London and in the city of Bondy in Paris northeast Banlieues. The research aimed at investigating the impact of French republicanism and British multiculturalism on everyday life and identities of these young inhabitants. But how to study ethnicity, a deeply relational phenomenon, socially and symbolically violent, and often – especially in France – considered taboo?

The paper starts with positionality and how I dealt methodologically, ethically and personally with the power relationships involved in the research. As a middle-class white female who was perceived in opposition to my fieldwork: a white rich middle class Parisian in Bondy; a strange, lost, and possibly East European young woman in Newham.

It then shows how both the willing to reduce symbolic violence and the choice for a constructionist approach defined my research design and the structure of my interviews. Two methods especially helped me investigate intersectionality while decreasing symbolic violence: self-portrait and mental maps. This fed a reflection over the use of categories.

At last, I discuss how each method involved specific power relationships and results. The method-approach – different aspects of ethnicity, individual semi-structured interviews fostered the presentation of particular yet universal selves who reject categorized and stressed a distinctiveness based on intimate experiences; focus groups (carried out every other week in secondary schools with the same participants for one or two semesters) politicized discourses and built collective actors defending group identity. Based on UtUthem dichotomies. At last, observations disclosed autonomous, playful, situational and instrumental aspects of ethnicity and discrepancies between attitudes and practices.
Since 2005, social cash transfers (SCT) have become a legitimate and widely used instrument of global development policy. This is surprising, because development organisations have long rejected direct cash transfers, citing concerns of dependency and lacking capacity for implementation in the Global South. In this paper I attempt to explain how and why development organisations changed their position on social cash transfers. Previous research indicates that a shift in global discourses may have caused development organisations to reconsider SCT as a policy option. Therefore, using an approach of sociological discourse analysis, I check in how far changes in global discourses prior to 2005 have had an impact on the legitimisation of SCT as development policy. Indeed, I find that three global discourses have played a role in the rise of social cash transfers: One on poverty, one on development and one on human rights. Since the late 1980s, each of these discourses has shifted in specific ways which have facilitated the legitimisation of SCT in development policy. Even though the shifts in the three discourses do not seem to be causally connected, they had a joint effect: I argue that the shifts in global discourses fundamentally changed the perception of the poor in development policy. While the poor were long regarded as passive beneficiaries of development, discursive shifts during the 1990s led to their perception as potential drivers of development due to untapped economic potential. This shift in the perceptions of global actors legitimised social cash transfers, because they were successfully portrayed as a direct investment into the poor which can help to fulfil their untapped potential.

Creativity & Creative Class in the Transformation of Russian Society
Russia is a country of creative minds, rich in talents. Creativity - is a fundamentally new state of Russian society, associated with the formation of the creative class, the integrated group, which unites representatives of various professions on the basis of a demand of self-realization and service to the public good. Investigation of the conditions, the vector of development and activity of the creative class shows that, despite the spontaneity of social initiatives steady trend of actualization of potential creative class occurs, which gives us hope for a successful modernization of Russia, the qualitative renewal of all aspects of public life. Today Russian society getssecond wind, gets rid of “post-reform fatigue syndromes and skepticism”. It requires the formation of the creative person, creative education, creative management of all aspects of Russian society. It is with the growth of creative trends and shaping the creative society, a society of social creativity the future of Russia is linked. What responsibility has society and what a social dialogue should be to implement a real historical breakthrough depends on the creative class.

Discourse of the Integration of Society in Latvian Sociology
If sociological theory considers social integration as a universal process which involves the whole society and all types of its diversity, the public consciousness in Latvia, as well as the scientific discourse, persistently relate this term to just one dimension – ethnic. The findings presented in the article demonstrate that the scientific research on the integration processes in Latvia has become more critical towards the methodological assumptions which appeared in the 1990s, but in the theory there is a reconsideration of the values of those ideological approaches to the understanding of society integration which first were formulated in T. Parsons’ conception. At the same time, the ideas of J. Habermas who considered it necessary to recognize a collective identity of ethnic minorities in the multicultural society, have become a significant ideological resource for the research on society integration in Latvia. The article presents some data from the sociological research carried out in the largest city of Eastern Latvia – Daugavpils, the city with an ethnically diverse population. The data obtained in the run of the research demonstrate the possibility to reconcile the liberal conception of society integration in Latvia with the recognition of the value of a collective identity of ethnic minorities.

The Formation Of Political Subjects
The Formation of Political Subjects. Tenant Protest in Berlin and New York
A crucial point in the development of urban social movements is their ability to form coalitions to overcome the deep entrenched structural and discursive fragmentation and particularization of neoliberal societies. The urban seems to be the context in which this can be achieved. In current tenant protest in Berlin and New York, though highly specific in their issues and demands, we can see such an abstraction from personal interests making affiliations of broader political positions possible. In the process of legitimizing their right to stay put some of the protest groups go as far as to make universal claims to (represent) the common good. But social movement research lacks concepts to fully grasp this process. To counter these shortcomings of social movement research I propose a re-thinking of social protest through the lenses of the formation of political subjects. Such an approach would offer the opportunity to overcome social movement research’s one-sided focus on the actors of protest as merely strategically acting, identity-based and self-interested activists by shifting the focus to the impact of the interplay between structure and discourse on peoples subjectivity, the subject positions they shape in the process of protest and the possible links they thereby offer to others.

Prostitution and The "Law-In-Action" – A Study Of Public Administration In Germany, Poland and Czech Republic

The paper presents the results of a qualitative-empirical research project on public administration of prostitution in Germany, Poland and Czech Republic. Therein administrative practices of both governmental institutions and civil society organizations (e.g. police force; public order, public health and tax authorities as well as social work) will be described and analysed. Using semi-structured expert interviews with organisational frontline-actors governance of prostitution is approached and investigated from a bottom-up perspective. Germany with the Regulation model on the one hand and Poland and Czech Republic with the Abolitionism type on the other hand follow different laws and policies regarding prostitution. However, concerning their “law-in-action” the role of social actors’ professional habits formations revealed to be highly significant. Moreover, it can be shown how executives’ patterns of perception, thoughts and actions have a crucial impact on legal changes and its implementation. Given the circumstances the study took place after an explicit legal and political paradigm shift of governing prostitution in Germany. Based on case reconstructions and contrastive comparisons a theoretical model on prostitution governance has been developed. It unfolds the conceptualization of administrative actors’ professional habits consisting of three general dimensions: their definition of subject, definition of self and definition of environment. Furthermore, empirically emerged challenges and ambivalences of governing prostitution in terms of an everyday practice attempt to explain the relevance of professional habits formations affecting “law-in-action”.

How Does Class Affiliation of Sociologists Impact Their Choice of Theoretical-Methodological Research Paradigm for Study of Social Structuration and Inequality and of Corresponding Practical-Political Strategies?

The paper proposes self-reflexive examination of the impact of the class affiliation of sociologists on their choice of theoretical-methodological and practical-political research paradigm starting from which sociologists attempt to explain and understand discontinuities in social structuration and propose corresponding strategies for conservation, mitigation or elimination of socially structured inequality.

The main hypothesis of the paper is that sociologists like other highly educated experts are affiliates of the new small bourgeoisie, incearning contradictorily class affiliation. Sociologists like other professionals, possess formal certificate of acquired specialist knowledge. Diploma makes available to them salaried employment and work place privileges of performing planning and commands’ mediating work functions, but does not relieve from permanent worries not to lose them and fall into the ranks of the manual wage laborers in times of high unemployment. This contradictory place in the class division of labor of direct producers of legitimizing ideologies, leaves sociologists greater margin for the choice of the world view and social standpoint than to the affiliates of the main antagonistic classes.

The core finding of the paper is that from the time of institutionalization of the sociology as the academic discipline, the majority of sociologists tend to retain/improve the standpoint/interest of exploiting class of commanding managers to conserve or only to reform the existing relations of reproduction of civil society’s social life and inequality, articulating simultaneously the corresponding main-stream consensus or conflict version of the positivist “old-materialist” and/or phenomenological-hermeneutical “idealist” research paradigm of eternal hierarchical social structure/stratification. The minority chooses to attempt to come over to the standpoint/interest of the class of exploited executors, to overcome class division of labor which reproduces social inequality and to establish the relations of self-managed “socialized humanity”, articulating simultaneously the corresponding critical “new-materialistically inverted dialectic” research paradigm of liberating potential of self-organized class struggle.

VOSKO, LEAH* (York University, lvosko@yorku.ca)

A mounting crisis in employment standards enforcement is prompting experimentation in common law contexts with new instruments aiming to improve workplace regulation. This experimentation across all stages of the enforcement process indicates the increasing influence of ‘new governance’. Focusing on reforms in five jurisdictions, this paper raises serious cautions around ‘new governance’ styled enforcement mechanisms, demonstrating that, put into practice, enforcement models envision the new governance lens to have failed to account for the power dynamics of the employment relationship. Furthermore, assumptions about the inevitable collapse of state enforcement capacity are premature and can impede strategies for more effective ES regulation.

What’s the Best Way Forward for Immigrant Workers? the Dynamics & Efficacy of Building Unions and Building Social Movements

In 2000, the peak association of the U.S. labor movement, the AFL-CIO, reversed its longstanding opposition to the legalization of undocumented immigrants and committed itself to organizing immigrant workers. Only a handful of its 57 affiliated unions actually heeded the call, but those that did successfully unionized immigrant workers in some key cities and states. Yet, the number of immigrant workers involved in these unionization drives pales in comparison to the millions of immigrant workers involved in a very different kind of action: the massive nation-wide rallies for immigrant rights that took place in the United States in the spring of 2006. Here, too, a couple of labor unions played a critical role, both in the immediate lead-up to the rallies and 3 years earlier, when they began to help build a national movement for immigrant rights. Two unions (SEIU and UNITE HERE) sponsored the Immigrant Worker Freedom Rides (IWFR). Bus rides of immigrant workers and activists were used to bring publicity to the plight of undocumented workers in the U.S. and also to foster relationships among local labor unions, community-based organizations, and religious, student and immigrant-rights groups in the cities and towns where the buses stopped. Recent research shows that the IWFR laid much of the institutional foundations for the 2006 rallies, especially in new destination communities (Voss and Bloemraad 2011).

In this paper, I examine these very different types of campaigns—those focused on unionization and those focused on building alliances and a social movement—comparing their dynamics and effectiveness. This assessment is far from straightforward; as one has to take into account not only immediate impacts but also longer term effects, including the backlash against them which in some of the new-destination communities that had rallies in 2006. Moreover, this backlash continues to be conditioned on state and local political climates.
Contrasting Young People's Personal and Political Uses of Social Media

Recent debates have highlighted the increasingly blurred boundaries between everyday social media use and non-social networking and its use for broader engagement with politics. Young people use social media extensively and many see that active use of social media by political actors will enhance young people's reconnection with formal politics. In this paper we analyse how young people themselves conceptualise the relationship between their everyday social media use and their use of it for political expression, and how both politicians and celebrities try to engage with them in politics. Most existing studies tend to treat young people's political engagement as homogenous; instead we analyse young people's attitudes towards political use of social media by comparing both active participants with non-participants, as well as those from an advantaged social-economic status with less advantaged young people. This data analysis is based on 12 asynchronous online group discussions participated in by 108 young people in Australia, UK and the USA. In each country the groups were divided into four segments: high/low participation by high/low SES to ensure that the discussion groups themselves had high homophily.

Social Reproduction Strategies and Participation in Higher Education during the Economic Recession

The current economic crisis in many Southern European countries has inevitably affected the number of students (male and female) progressing to higher education. The way young individuals and their families make their choices for the future is connected to the new social realities that this crisis has created. New inequalities are expected to take shape; such inequalities for example seem to arise from the unequal horizons for choice making. Middle class students and their families engage in choice-making in higher education with broader options while lower classes have restricted horizons often stemming from mechanisms of self-selection and self-exclusion. These eventually produce stratification in the educational system due to factors that are not always educationally related or connected to individual characteristics. The decision making process needs to be located in macro sociological factors that relate to the structure of available opportunities on offer.

RC04-96.3

VRYONIDES, MARIOS* (European University of Cyprus, m.vryonides@euc.ac.cy)

Experiencing Interethnic Relations in Cypriot Schools

The aim of this paper is to examine the way teenagers experience and report interethnic relations with emphasis on interethnic violence in the school environment in Cyprus. It will report findings from a qualitative investigation from an EU funded research project titled: "Children's Voices: Exploring Interehtnic Violence and Children's Rights in the School Environment". The qualitative investigation included semi-structured interviews with school teaching staff and counselors and with experts whose work was related with interethnic relations in schools. Additionally, eight focus groups with children (4 in primary and 4 in secondary schools) were conducted to explore teenagers' perspectives. Findings indicate that in Cyprus there is an environment of growing concern about the presence of migrants. People coming mostly from Asia and Eastern Europe and people of Islamic faith appear to be more vulnerable to prejudice. Overall there are mixed perceptions about interpersonal tolerance in schools ranging from negative to (politically correct) positive ones. While the prevalent discourse of multiculturalism in Cyprus uses the rhetoric of integration, what appears to be happening in the Cypriot educational system is assimilation practices focusing on language acquisition. Whenever the latter is successful potential tensions tend to minimize. These findings point to interesting directions for educational policy regarding the whole gamut of interethnic relations in Cyprus at a period in time when the current economic crisis appears to have largely negative effects on multi-ethnic coexistence and to the prospects of a resolution to the prolonged ethnic conflict between the two main communities of the country.

The Effects of School-to-Work Transition Pathways on Economic Outcomes through the Great Recession

Whereas the term “school-to-work transition” (STW) implies a clear, discrete event, this increasingly prolonged transitional period is not always unidirectional and typically includes involvements in both school and work. Destandardization in the STW transition makes it difficult to assess the extent to which young people today “flounder” during this period. Using longitudinal data from the US Youth Development Study and hierarchical latent class analysis, this paper examines the interplay of educational and career attainment and its longer-term economic consequences. Four STW pathways were observed from age 18 to age 30: two groups that attain careers through postsecondary education (via Bachelor’s or Associates/Vocational degrees) and two floundering groups that do not (those with some college and those with no postsecondary experience). Regression models demonstrate the negative effects of floundering pathways on economic outcomes and the heightened difficulties of those pursuing these pathways during a recession. While the High School Flounders were consistently the worst off, the Some College Flounders (SCF) also experienced relatively poor economic outcomes. Both pre-recession (2005) and in 2009, respondents in the SCF pathway were less likely to have a savings account and own a home, and had more financial problems and lower job satisfaction than those who moved into the labor force with Bachelors’ degrees. Even starker were their circumstances in turbulent economic times, with the SCF pathway now more likely to be unemployed, receive financial help from parents, and to have recently lost a job. In contrast, the more differentials between high and low SES groups and the Bachelors into Career group were non-significant, despite their unequal educational attainments, suggests that the pathway from an Associates or Vocational degree to a career is a viable alternative. We discuss implications of these findings both for the U.S. context, as well as for transition dynamics in other countries.

VYAS, DR. HAMENDRA NATH* (teaching, hamendra.vyas@yahoo.co.in)

Urban Upliftment and World's Largest Welfare Scheme MGNREGA : A Sociological Learning of Southern Rajasthan in India

Despite the preeminent efforts during the different Indian plan periods, the state of affairs of rural masses do not change significantly and the primary goals such as an increase in productivity, employment, eradication of poverty and social-cultural transformation of society remained an illusion for several years. Therefore in order to achieve the twin goals of rural development and employment, the government of India was promulgated the world's biggest welfare program entitled as Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA) on December 7, 2005. It aims at enhancing livelihood and security of homes in rural areas of the country by providing 100 days' guaranteed wages in each financial year. The NREGA became operational on 2ndFebruary 2006 and initially covered 200 most backward districts. In the second stage this scheme was further expanded in 330 backward districts and finally it made available for all the districts of the country.

As far as the impact of MGNREGA in Rajasthan is concerned it has helped the poor and needy in the villages of Rajasthan in several ways. Aside from offering jobs to the rural needy, it has been assisted in the creation of durable rural assets like plantations over degraded forest land, pasture land development, cleansing of ponds, improving the water harvesting system creation of gravel roads etc. It has helped in deepening the grass roots participatory democracy by making the system more transparent and accountable at every step. The scheme has also assisted in controlling the migration of poor villagers towards cities and towns in search of employment.

In this context, the present paper is an attempt to assess the effectiveness of implementations of MGNREGA in southern Rajasthan comprising of Bhilwara, Chittaurgarh, Partapgarh, Udaipur, Dungarpur and Banswara districts. These districts of Rajasthan are most backward and extensively populated by scheduled tribes.
While civil violence is almost always countered by state violence, the opposite is not true. It is unclear, according to Christian Davenport, whether state violence triggers or contains civil violence. In fact, one of the most difficult issues in the study of contentious politics is to predict civil society actors' reactions to state violence. Will those who have witnessed state repression pick up a weapon in anger or quiet down in fear and despair?

This paper tackles this repression-dissent problem. The literature on collective violence emphasizes the importance of institutional and structural contexts—e.g., political regime characteristics, state capacity, ethnic, religious, and class cleavages, levels of socioeconomic development, etc.—to understand the repression-dissent dynamics. A major stumbling block in the effort to carry out such a research agenda is methodological. On one hand, small-N case studies, while good at revealing exact processes of state and civil society interactions, cannot measure adequately the effect of multiple contextual factors. On the other, typical quantitative analyses of annual event counts, while good at estimating the contextual effects, fail to detect interactive dynamics.

By conducting a cross-national comparison of contentious event sequences, this study attempts to examine both the contextual effects and the interactive dynamics at the same time. We use a data set of 10 million events world-wide, reported by Reuters, between 1990 and 2004. This unique data set records event information at a daily—instead of yearly—basis and, thus, helps us detect interactive dynamics. Moreover, we distinguish the actors who are more likely to resort to violence after state repression from the actors who are more likely to give up any further attempts to make claims by using multilevel analysis of actor-target interactions. This paper presents an original analysis of national contexts, actor characteristics, and actor-target interactive dynamics.

**A Cross-National and Cross-Actor Comparative Analysis of Violent and Nonviolent Interactions Between State and Civil Society Actors**

In June 2013, a group of global justice activists occupied an abandoned police training academy in central London. The building became a “convergence space” from which a series of events were organised in protest against the G8 summit that was simultaneously taking place in London. The group were known as “Stop G8” and had an online presence with a blog, facebook group and a unique hashtag (#StopG8) on Twitter, which pointed to awareness by organising members of the group regarding the value of a presence on the Web.

This paper presents an ethnographic account of a week spent with these activists in the convergence space which was carried out in order to explore the position of the Web and of social media in the real-time process of protest participation. Through participant observation and interviews with activists, a picture emerged that runs in some ways counter to the mainstream understanding of the benefits of social media towards political activism.

It became clear during this study that these situated activists had a broadly apathetic, in some cases hostile view of using the Web. Two clear concerns noted during the ethnography were: the shift in recent years from public forums and well-connected networks of committed activists to a more fragmented network of individual social media profiles, a filter bubble effect which appears to have reduced the ability of activists to create coordinated alternative media for protest events and the clear adoption of social media by not only the public at large, but corporations and governments existing within clear power structures that presents little opportunity for decisive political change. It may be that the opinions of these activists are a signal of a shift within activist networks away from corporate-controlled, mainstream social media towards more ideologically suitable Web services and virtual communities.

**#StopG8 - Activist Perceptions Of Social Media Use In Contemporary Global Justice Protest**

The recent Arab youth's rebellion offers a valuable insight into new forms of online participation, alongside the role of youth culture, for political participation. For communicating their unease, for organising protest and for mobilising themselves young people utilise social media such as Facebook, Twitter, and YouTube. Furthermore, youth culture, also communicated through social media, played in influencing the Arab Spring; questioning the media label of a ‘Facebook revolution’. Our analysis (which serves as basis for a large empirical study carried out in the MENA region 2013-2014) shows that online social networks contributed to the cause of free speech; a strong social media presence; a new news source and as a public arena for building a community of like-minded activists. As organising tool social media played a powerful role in mobilising protesters onto the streets and coordinating demonstrations. When there is – as in Tunisia – a suppression of free speech in the traditional media, Twitter, Facebook, YouTube and other local social media sites also become essential in getting news out of the country, as well as in providing a rather independent news source of the current events. Before using Facebook to bring people on to the streets, the activists also used it to articulate their political critique and to build a constituency and growing community around those ideas.

Our analysis further reflects on the Middle East and Northern Africa events in demonstrating that Hip Hop cannot only be used for self-expression, but also for mobilising the (young) masses. We show how youth culture seems to be a perfect tool for reaching the young population, especially when distributed through new social media such as Facebook or YouTube.

porary sociological writings go back to the concept of swarms to describe internet collectivities. The notion of society does hardly appear within the sociology of the internet. Instead of simply taking that as a sociological blind spot, this paper argues for an empirical perspective. Discussing different supplements (Derrida) of the notion of society within internet culture it thus addresses internet practices as societal practice. Internet practices are social practices – and within modern society there has always been a typical figuration of proximity and distance, fluidity and diversity. But at the same time the different supplements for the notion of society could indicate that societal forms are changing (through the influence of new media practices), e.g. the figuration of proximity and distance or the figuration of privacy and publicity. For the special case of the internet, this might be an instance of “writing (society) into being” (boyd). The paper discusses the sociological discourse on internet collectivities from an empirical point of view. It emphasizes that internet practices take place within society. And it works out how the new supplements to/of the notion of society could be indicators for social transformations.

WAGNER, ELKE* (JGU Mainz, wagner@uni-mainz.de)

Internet Communities As Intimate Publics

The culture of the internet has long been described as community culture (Rheingold, Wellman, Thiedeke). But what does community here actually mean? On the one hand there is a sort of community feeling and support in online social groups (Boyd, Wellman). On the other hand internet communities are often communities between strangers who have never met or will never meet. Even in Social Network Sites like Facebook the Friending-Practices don’t often mean true friendship but simply contacts between different addresses. Therefore Danah Boyd (2006) has suggested to describe community-building on the Internet as “writing community into existence”: communities don’t exist per se, they have to be fabricated by writing practices. This paper wants to illustrate these community writing practices. It shows on the basis of screen-shots from Facebook and interviews with Facebook users how the special feeling of community does emerge here: On the one hand community means here an intimate sphere where contents between true friends are published. On the other hand contents remain indeterminate enough to include different friends from the contact list. Thus, community appears in Social Network Sites like Facebook as intimate publics. They are intimate because they assemble a list of close persons, but they are publics because there are different circles (Simmel) of close persons who have to be integrated in the writing practices. That is why indeterminate writing practices emerge.

True Finns and Non-True Finns: The Minority Rights Discourse of Populist Politics in Finland

This paper analyses the minority rights discourse found in political statements of the populist party called the True Finns. The party won a historic electoral result in the Finnish Parliamentary Election in 2011, increasing its share of the votes of the populist party called the True Finns and Non-True Finns: The Minority Rights Discourse of Populist Politics in Finland. Will Kymlicka (1995) distinguishes between the minority rights of two different types of modern nation states: on the one hand, old national minorities, and on the other hand, new minorities that have emerged as a consequence of immigration. Kymlicka (1995) argues that the international so-called backlash and retreat from multiculturalism has mainly occurred in relation to the acceptance of ethnic-cultural diversity among immigrant groups. In this paper, the support for a backlash against multicultural policies is found in the minority rights statements of the political party called the True Finns. The paper argues that Kymlicka’s assessment is not completely accurate in this particular case. The statements of the party are not only about policies relating to immigrants. In the political rhetoric of the party the basic principles of group-specific rights for minorities are disputed. Thus, any real or imagined minority who is not considered truly Finnish, or not considered sufficiently representing ‘Finnishness’, can become the target of the rhetoric.

WAHLSTRÖM, MATTIAS* (University of Gothenburg, mattias.wahlstrom@gu.se)

In connection with the Fifteenth Conference of the Parties to the United Nations Framework Convention on Climate Change (COP-15) in Copenhagen 2009, many activists had (at least reasonably) high hopes about successfully pushing for a new international climate agreement. After the complete stalemate between different country positions in Copenhagen, many climate activists lost their faith in the possibilities of achieving substantially changed international climate policies through the COP meetings. Four years later, facing the COP-19 meeting in Warsaw 2013, the climate movement mobilizes protest in a political situation with ostensibly more limited political opportunities. How do participants’ motives for protest and sense of efficacy vary between two equivalent climate protests when political opportunities change over time? The paper also explores shifts between the two points in time regarding what political strategies the participants in transnational climate demonstrations claim to prioritize. This is analysed based on two surveys of protest participants, one collected at the largest demonstration during the COP-15 meeting in Copenhagen 2009, and the other one at the main climate demonstration during the COP-19 meeting in Warsaw 2013. The data collection is based on a strict standardized methodology established in the international research programme CCC (Caught in the act of protest, Contextualizing Contestation) which ensures reliability as well as comparability across protest events. Inevitably, the research design not only involves comparison of cross-sections of climate protest participants over time, it is simultaneously a comparison of two national mobilizing contexts. However, these two aspects can be sufficiently disentangled by controlling for demonstrators’ country of origin in the highly transnational demonstrations. The study aims to contribute to current scientific discussions about protest mobilization, as well as to tap into the contemporary developments of the (European) climate movement, from the perspective of individual climate protestors.

Variations of Stressful Work and Effects on Health after Labour Market Exit. Results from Share and Elsa

Recent research has highlighted the importance of former life stages in explaining social inequalities in health at older age. In this paper, we describe working conditions during adulthood and analyse their influence on health after labour market exit. Analyses are based on two longitudinal studies with comparable information across 14 European countries: the English Longitudinal Study on Ageing (ELSA), and the Survey of Health, Ageing and Retirement in Europe (SHARE). We measure working conditions in terms of psychosocial stress at work (as defined by the demand-control and the effort-reward imbalance models), as well as working careers are regrouped using sequences analyses. Moreover - given cross-national dataset – we explore the relationship between specific indicators of social and labour market policies (e.g. expenditure on active labour market policy) and working conditions. Results show important variations of working conditions according to gender, socioeconomic position and countries. In addition, results illustrate the importance of work and employment for health among older adults, where effects of stressful work and unstable careers on later health were more consistent for men.

Disaster Preparedness Among Older People with Long-Term Care Needs and Family Caregivers: Who Is Vulnerable and What Do They Need for Preparedness in Communities?
Background: Hurricane Katrina in the U.S. highlighted the potentially fatal effects of a natural disaster on older individuals. This experience was reinforced by the Great East Japan Earthquake, where community-dwelling elderly were again at the greatest risk of mortality. Understanding the needs for and concerns of older persons with long-term care needs and their caregivers is vital to the development of public health programs for community level disaster planning.

Purpose: The preparedness of community-dwelling older people with long-term care needs were examined to identify characteristics of care-recipients and caregivers that are associated with worse preparedness and greater concern.

Methods: A self-administered survey among family caregivers of older Japanese with long-term care needs (n=952) were conducted in 2011. Logistic regression analysis was used to identify the predictors of disaster preparedness, including evacuation plans and caregiver's concern about preparation. Data were analyzed in 2013.

Results: Most older people had no concrete evacuation plans, and those with dementia were 40% less likely to be prepared. Caregivers who were responsible for older persons with worse mobility, as well as those in worse health or poor financial situations, reported higher levels of anxiety about their disaster preparation. However, more experienced, wealthier, and better socially integrated caregivers in the community were more prepared.

Conclusions: Older people with long-term care needs are at heightened risk in disasters, and rely upon caregivers who may be ill-prepared to respond in emergencies. Education of caregivers and development of community support programs could provide important sources of assistance to this vulnerable group.

Class was determined using Florida's (2012) scheme; specifically: “super-creative” (n=99), creative professional (n=110), working (n=83), and service and sales (n=281). An ANOVA indicated that working class participants were employed significantly more hours (M=52.1) than super-creative (M=46.7), creative professional (M=47.5), or service and sales (M=45.7) employees. Dependent t-tests examined differences between the three needs during leisure, and during work, by class. Results indicated that autonomy was significantly greater during leisure regardless of class; competence was significantly greater during work regardless of class; and belongingness did not differ by class. A second series of dependent t-tests examined differences between the three needs during leisure, and during work, by class. Results indicated that: (a) during leisure, autonomy was significantly greater than belonging except for working class Chinese, and belonging was greater than competence for creative professionals and sales and service workers; and (b) during work, belonging and competence were both greater than autonomy, regardless of class.

These results are noteworthy because they: (a) do not support Florida's (2012) contention that the super-creative class's leisure and work overlap; (b) suggest that while autonomy is the primary need satisfied during leisure, it is tertiary to competence and belongingness satisfaction during work, regardless of class; and (c) are not always congruent with findings from a comparable study conducted in Canada (Walker, & Glover, 2013).

Behavioral Versus Questionnaire Measures of Influence

In this project we examine the relationship between attitudinal measures of expectations and influence and a behavioral measure in an experimental setting. The attitudinal measures are typical questionnaire items regarding a study participant's views of themselves, a partner, and their task after interaction. The behavioral measure, P(s), is the standard dependent variable for the kinds of experiments from which the data comes. P(s) reflects the participant's resistance to influence from his/her partner and is thought to reflect underlying expectations for competence. In this study we regress P(s) on the series of attitudinal questionnaire items regarding expectations, influence, and affect. Results indicate that there is a strong relationship between attitude and behavior. Further, attitudes about ability, particularly the partner's ability, are more closely associated with behavioral influence than affective sentiment is.

Changing Meanings of Family in Personal Relationships: A Comparative Perspective

Personal relationships are today less dependent on marriage and blood ties, with commitments going far beyond the nuclear co-resident family to include kin, non-kin and ex-kin. The aim of this presentation is to examine the meanings of family ties by exploring the changing boundaries within kinship and a wider array of affinities, in three European countries with different historical and social pathways and characterized by distinct welfare regimes: Portugal, Lithuania and Switzerland. Drawing on a comparative survey including national representative samples of two cohorts from each country (individuals born in 1950-1955 and in 1970-1975), we begin by analysing the ties which individuals consider as “family” within their personal networks and describe the main types of family configurations. Then we examine the determinants of including non-kin as “family” and examine the influence of the family network. We intend to grasp whether family configurations reveal different levels of kinship integration, as well as the degree of fluidity in the social construction of family ties, in particular through the inclusion of friendship ties in the family setting. Do the different social and economic backgrounds that have been affecting family life in late modernity in these countries shape the patterns of family configurations? To what extent do other factors, such as the life-stage, structural conditions (gender, education), family circumstances (partnership, parenthood) or relational characteristics of the ties (duration) moderate these cohort effects? Findings reveal the salience of kinship ties, as well as a significant structural influence of the family network. Friends act as a bridge through friendship. However the degree of salience of kinship ties varies across the three countries. Structural, life stage and family variables are shaping factors, but relational effects (quality of the tie), are of particular importance.
Forgotten Estates: The Precarity of Neighbourhood Restructuring in Salford, UK

Since the 1980s, the Northern English city of Salford has undergone intense deindustrialisation and has been subject to systematic waves of urban regeneration. A key aspect of these regeneration efforts has been to rebrand and reconstitute the city and its districts from ‘grimy’ and ‘old Salford’, to dynamic and cosmopolitan. Under the aegis of the ‘New Deal for Communities’ policy, one specific district in the mid-2000s was earmarked for a distinct process of redevelopment entailing the demolition of public housing stock and the construction of private housing developments within newly enclosed estates and along the profitable local riverside. Ten years on and amid a challenging fiscal climate, this redevelopment vision has encompassed partially demolished public housing estates, threats of further eviction for housing tenants, the arrival of new private owners and a severely disinvested community infrastructure. Drawing on a programme of recent qualitative research, this paper examines the impact on new and established resident experiences of this stagnated and disrupted restructuring process to unpack the damaging, but under-researched effects of a neoliberalised regeneration logic.

The regional infrastructure is a crucial training determinant. Age and vocational degree do not directly affect training decisions. Yet, persons in specific occupational settings do exhibit a lower training tendency. Also, training behavior of these persons appears to be more rigid and less likely to react to changes in their cognitive training attitudes.

Encountering the ‘Other’: Interpreting Student Experiences of a Multi-Sensory Museum Exhibition

The Immigration Museum in Melbourne, Australia launched the Identity: Yours, Mine, Ours (IYMO) exhibition in 2011. Aimed primarily at young adults and secondary school students, this major long-term installation seeks to foster reflection on identity and belonging as well as dialogue about racism through a reflexive, empathetic and interactive museum experience. Drawing on findings from three secondary schools, this paper reflects on a multi-method approach that included narrative interviews, video diaries and focus groups with Year 11-12 students as well as key informant interviews with principals and teachers.

While focus groups were a catalyst for dialogue about everyday experiences with cultural diversity and racism, the ‘identity’ lens privileged in these groups could not account for the complexity of embodied experiences of belonging that were, to at least some extent, captured in narrative interviews and video diaries. For example, the narrative interviews allowed students to talk about themselves in relation to aspects of the exhibition rather than directing and framing their experience a priori, thus capturing a complex understanding of the students’ IYMO experience through an entanglement of their life worlds, at home and school.

Overall, the combination of qualitative methods revealed the ways in which an interactive and immersive museum space can support students to encounter and engage with individual stories and faces, move beyond abstract understandings of cultural diversity, unsettle the Self and destabilise stereotyped and prejudiced interpretations of the ‘Other’. We conclude by discussing the potential of multi-method qualitative approaches to draw upon students’ meaning-making, including the narrative barriers experienced in multilingual contexts, in order to provide a rich emic perspective on multi-sensory exhibitions.

Internet Public Sphere Under Construction: A Grounded Theory Analysis to Sina Netizens’ Comments on "Toilets Standard"

The dilemma for China to construct its internet public sphere does not result from the lacking of the same physical foundation as the western world has. On the contrary, the structural constrains such as no clear boundaries between public and private, the inner-circle communication oriented caused by “Chau Guji”, as well as the non-stand against as the “weapons of the weak” do matter, that finally prevent from the opinions transforming from personal to public. To break through the deduction circulation that whether the virtual or physical public spheres should make the first move, this paper try to get the answer from the induction from the Comments on "Toilets Standard" by Sina Netizens using the construction of a grounded theory as a research method. It is easily to find out after a series of coding that, the public all agree that this standard has very bad operational effects on identity and belonging as well as between Korea and Japan over the Dokdo/Takeshima islands) and the territorial disputes (between Japan and China over the Senkaku/Diaoyu islands, as well as between Korea and Japan over the Dokdo/Takeshima islands) and the debates over the so-called “historical consciousness” and history textbooks. How can we make sense of such a seemingly paradoxical situation, and what are possible outcomes of this contradictory development? This paper is a modest attempt to explore the answers to the above questions from a sociological perspective. Drawing on the theoretical insights from British cultural critic Raymond Williams and German social thinker Max Scheler, this paper provides a preliminary examination of what can be called “structures of feeling” in East Asia. Three dimensions of these structures are outlined for analysis: (1) grief/victimhood and the politics of memory; (2) resentment (or resentiment in Scheler’s terms) and value systems; and (3) power relations and the multi-layered structures of resentiment in East Asia. It is argued that the true reconciliation among different people in this region has to be reached before any ideal of Asianism or East Asian Community can be carried out. Towards the end of the paper, the implications for the reconciliation in the region will be further explored.

The (Im)Possibility of the "East Asian Community": Reflections on Nationalist Sentiments and the "Structures of Feeling" in East Asia

The recent development in East Asia has witnessed two contradicting trends: on the one hand, there have been reviving interests in Asianism (especially inspired by Takeuchi Yoshimi) and/or the so-called “East Asian Community” in both official and intellectual discourses; on the other hand, there has been an escalation of nationalist politics in the region, manifested in such incidents as territorial disputes (between Japan and China over the Senkaku/Diaoyu islands, as well as between Korea and Japan over the Dokdo/Takeshima islands) and the debates over the so-called “historical consciousness” and history textbooks. How can we make sense of such a seemingly paradoxical situation, and what are possible outcomes of this contradictory development? This paper is a modest attempt to explore the answers to the above questions from a sociological perspective. The Quest to “Overcome Modernity”: War, State-Building and Nationalism in Japan and China

Drawing on Japan and China as two illustrative cases, this paper intends to shed new light on our theoretical understanding of modernity by articulating the relations between war, state-building and nationalist discourse in the non-Western context. From its very burgeoning, the historical formation of modernity in East Asia has been intertwined with the experience of the defeat of war (or war threat) that, in turn, gives rise to nationalism. Moreover, understood as originating from the West, modernity to the East has been regarded as something to be achieved and overthrown at once. On the one hand, it is considered that the East has to catch up with the West in terms of material achievements (particularly economic performance and military power); on the other hand, it is also contended...
that Western modernity has intrinsic contradictions that will eventually lead to self-destruction, of which the only redemption is through the alternative path provided by the East. Such a dichotomous view of modernity has been dominating nationalist discourses in many instances in East Asia. Thus, nationalist projects in East Asia often have a double task: to pursue modernization through state-building, on the one hand, and to “overcome (Western) modernity”, on the other. However, due to the legacies of war, which leads to a lack of reflection on state ideology and violence, such nationalist projects often fall into the trap of modernity itself without being able to become the genuine critique of the latter. This paper will use the attempt to “overcome modernity” in wartime Japan and the search for “anti-modern modernity” in contemporary China as two examples to examine such a paradoxical situation. It is concluded that, to better theorize (and critique) modernity, the intertwined relationships between war, state-building, nationalism and global inequality have to be taken into account.

Feeling Good about the Iron Rice Bowl: Economic Sectors and Happiness in Post-Reform Urban China

Situated in China’s market transition, this study examines the relationship between economic sectors and individuals’ happiness in post-reform urban China. Based on pooled data analysis of restricted urban samples from the China General Social Survey (CGSS) 2003, 2006 and 2008, the subjective premium enjoyed by workers in the state sector is noteworthy: individuals working in the state sector have significantly higher levels of happiness compared to their counterparts in the private sector, other things being equal. After controlling for selectivity in mobility into the private sector, differences between those remaining in the state sector and those moving from the state to the private sector are highlighted: those remaining in the state sector are significantly happier than former state sector workers who moved into the private sector, whether the move was voluntary or involuntary. Possible underlying causes of these psychological costs are further explored: institutional segmentation in the allocation of social welfare benefits rather than psychological factors serves as the primary nexus linking state-to-private mobility and happiness. On the one hand, those who moved voluntarily experienced a trade-off of enjoying higher paid-offs while losing a sense of security. On the other hand, involuntary, downward mobility leaves long-term psychological scars to those who experienced layoffs or unemployment after controlling for social welfare benefits. People who experienced sectoral mobility, whether voluntary or involuntary, suffer from loss of the iron rice bowl. Results from robustness checks indicate that neither observed nor unobserved confounding factors, if any, would bias our conclusions. This study emphasizes the role of social security as an important dimension in determining individuals’ happiness that should be explored in future research.

Re-Territorialization and Social Resistance in the Remaking of Dafen Village, Shenzhen, China

After exhibited in Shanghai EXPO2010, Dafen Oil Painting Village has been advocated as an innovative “best practice” of governing that has transformed urban villages with low-skilled labors and chaotic landscape into a cultural cluster. Many scholars have noted that, in China, couples of famous cultural clusters have emerged and prospered in places with a near vacuum of governance, such as villages or remote suburbs, only to drastically change upon the extension of state governance. Nevertheless, there seems to be a marginalization of scholarly attention to the trade-painting community of Dafen Village, perhaps due to the common critiques on authenticity of trade-painting industry and thus, negligence of everyday life of trade-painting workers and their struggles.

What is changing is the changing landscape of social relations when a particular area is demarcated as a special cluster subject to the state’s regulation in name of objectifying the imagined economy. Instead of debating the nature of trade-painting industry, we argue that the remaking of Dafen Village into a cultural cluster is a project of re-territorialization, driven by the state with a market mindset. The fabrication of the cultural cluster thesis into the settlement of the trade-painting community entitles the state to try new logic and new forms of inclusion and exclusion. More specifically, we are concerned about the differentiated treatment given to different social groups through calculated policies and the corresponding social struggles of various social groups for their rights. Particular attention is given to two major calculated rules: spatial planning for land use regulation and differentiated welfare access rights. Through the study, we attempt to offer a critical yet nuanced perspective toward the heterogeneous society and changeable alignments or blurred boundaries between the state and society in the dialectic process of re-territorialization and counter-territorialization.

Gender Differences in Social Quality in Taiwan

This paper will try to explore the social quality through gender lances. Taiwan is a special transition in terms of dynamics and social progress. However, unstable and anxious social atmosphere tend to occupy the society quite often. This paper is going to see whether there in gender difference in perception of social quality.

The data is derived from 2nd wave SQSQ survey done by National Taiwan University. This questionnaire has been originally designed by the National Social University and modified by ACSQ network and Taiwanese SQ team member. Here are about 1200 sample are collected and CATI system has been utilized during data collection. Stratified random sampling has been used for sample representation purpose.

The data will address that here is gender difference in subjective feeling about social inclusion and social empowerment. Women compared their counterpart tend to be more satisfied in those area. More detail will be discussed in this paper.

Effects of Social Capital on the Psychosocial Development of Children in Middle Childhood in China

In this analysis, the effects of social capital (including family, school, peer and community social capital) on the psychosocial development of children from two wave-panel samples in China have been investigated. And five dimensions of psychosocial development are analyzed, including social competence, emotional competence, self-esteem, resilience and pro-social behavior. In total, 140 children studying in grades 4 to 6 from two primary schools in Tianjin have involved. And all of the participants are selected randomly. The outcomes suggest different effects of social capital on the five dimensions of psychosocial development. The interaction effect between family and community social capital significantly affects children’s social competence, emotional competence and resilience at the same time. School social capital and peer social capital are interacted, and influence emotional competence. Meanwhile, the interaction of school and community social capital has significant effect on resilience. However, except for the direct effect of family social capital on social competence, no other direct significant effects of social capital have been found surprisingly. It is also surprising to find no significant effects of social capital on self-esteem or pro-social behavior, which is conflict with the current literature from Western culture. The outcomes from empirical analysis suggest that, simple social capital can not promote the psychosocial development of children in middle childhood in Chinese context. To strengthen the interaction between family and school, school and community, family and community, will be very important to improve children’s psychosocial development level. Furthermore, more potential predictors are supposed to function to promote self-esteem and pro-social behavior in Chinese context, such as cultural capital.

The Guanxi Hierarchy - Family Ties and Finance in China’s SMEs

In his seminal work, From the Soil, Xiao-tong Fei found that solidarity in social ties fades with distance from primary group relations. Thus the power of guanxi (i.e., connections or relationships) would differ according to its source. Most powerful would be guanxi based on kinship, with the power of such connections fading as one moved down the scale from kinship, to regional ties, thirdly to business ties. However, unstable and anxious social atmosphere tend to occupy the society quite often. This paper is going to see whether there in gender difference in subjective feeling about social inclusion and social empowerment. Women compared their counterpart tend to be more satisfied in those area. More detail will be discussed in this paper.

Fei’s early work has returned to prominence in analyses of group ties in private enterprise, following market reforms over the past four decades. For instance, Yu-sheng Peng (2004) highlighted the economic benefit of kinship networks in China’s rural industrialization programs. He found that kin solidarity played an important role in protecting the property rights of private entrepreneurs. In the absence of credible market institutions or a legal order protecting property rights, kinship networks reduced transaction costs during the early stages of market reform. Yan-jie Bian (2009) broadened the thesis, arguing that the emergence of private firms can be traced back to guanxi networks. However, He and Jia (2005) discovered a reverse hierarchy in the strength of guanxi ties. They found business-based guanxi gaining prominence more recently in the management and operation of domestic private firms.

I look then to the pattern of guanxi ties, and relevant hierarchy in the strength and significance of such ties among owners of private enterprise. Data were drawn from about a thousand SMEs between October 2008 and March 2009. I found that strong kinship network ties were correlated with positive effects on
the financial support provided for private rural enterprise. At least regards investment, the original hierarchy dominated by kinship-based guanxi appears to remain at the center of most enterprise.

The Influence of Early Trauma on the Quality of Life in Taiwan: The Moderating Impacts of Religiosity?

A growing body of life course research based on the Western societies has displayed the long-term negative effects of childhood and teenage trauma on life conditions in later life stages and has pointed out that religion plays an essential role in moderating or buffering the critical impact of early trauma. However, whether similar patterns appear in Asian societies remains largely unexamined. It is especially ambiguous whether the effectiveness of religion's coping impacts applies to Asian societies where religious compositions are more diversified than non-Christian religions. As a result, this research regards Taiwan as an ideal setting to elaborate the associations among early trauma, religiosity and two indicators of adulthood life quality: happiness and self-reported health.

With the utilization of the data drawn from two nationwide representative samples: the 2009 Religion Module of the Taiwan Social Change Survey (TSCS) and the Survey of Religious Experience in Taiwan (REST), three sets of questions are investigated. The first sets of analyses enable this research to ascertain the impacts of diverse dimensions of early trauma on the life quality, including quantity views (as indicated by the number of early traumatic events); category views (as classified as parental-related, sibling-related, self-related, and economic early trauma), and juncture views (as sorted into childhood traumas and teenage traumas). Furthermore, this research discusses whether the Taiwanese with higher level of childhood and teenage traumas tend to display higher level of various types of religiosity during adulthood, including belonging aspect (as grouped into no-religion, diffused-religion, and institutional-religion), belief aspect (as measured by attitudes toward supreme god and spirituality), and behaviors aspect (as determined by public religious attendance, private observance, and religious techniques). Last but not least, this research gauges whether the negative influence of early trauma on adulthood life quality is moderated and buffered by religiosity during adulthood.

Immigrant Wives As Volunteers in Taiwan: Their Characteristics and Experiences

The prevalence of transnational marriage can be witnessed in Taiwan in the late twentieth century where Chinese and Southeast Asian women, mainly from Vietnam, dominate numerically. Most of the women got married to Taiwanese men through the means of predatorial marriage agencies. Asian immigrant wives, contracting “commodified transnational marriage”, are labeled in Taiwan as “foreign brides”, a derogatory term that implies exclusion and discrimination. It has been recognized that immigrants can improve their economic, social and emotional well-being, civic participation and integration in the host society by undertaking volunteering activities. Nevertheless a variety of factors can prevent them from voluntary work. In other words, it is significant to disclose immigrant wives’ experiences of being volunteers in Taiwan. However, the studies to date on the issue of these women have largely concentrated on adaption; little attention is paid to their participation in volunteering. Thus this paper aims to learn about the characteristics and experiences of immigrant wives who participating in volunteering in Taiwan by conducting qualitative research. The major questions raised for this paper are: 1) What are their factors for volunteering? 2) What are reasons keeping them from volunteering? 3) What types of volunteering work do they do and why? 4) What does volunteering work mean for them? The research results can put forward recommendation to policy-makers and mainstream organizations with a hope of promoting volunteer participation of immigrant wives in order to improve their well-being in Taiwan.

Cooperative Marriage: Queer Politics of Chinese Lalas and Gay Men

Being a new and under-researched phenomenon since 2005, cooperative marriage attracts attention and generates debate in and out of the mainland Chinese LGBT community. Cooperative marriage is a heterosexual marriage performed and negotiated by two non-heterosexual parties, a lala (lesbian, bisexual and transgender woman) and a gay man.

Various strategies are developed in finding and sustaining the (superficial) harmony of such families: different family practices, new family arrangement, the performance of masculinity and femininity in their conjugal houses and relevant public spaces. Friendship and even family bonds are thus developed and strengthened, forming new sexual alliances in the society.

Like all heterosexual marriages, cooperative marriage is also a gendered experience; therefore the study is especially interested in lalas’ experiences and narratives, their definition of love, family and intimacy. This research studies cooperative marriage from multiple aspects of family practices including domestic consumption, kinship, marriage, emotion and parental practices, in order to understand their lived experiences and how they do gender and families. Feminist, interpretivist qualitative approach is adopted in the research. Semi-structured interviews were conducted and participant observation as well to gain insights of such marriages, 13 lalas and 7 gay men were interviewed, as well as activists from the LGBT community.

The Embeddedness of Corruption in Contemporary China: The Bo Xilai and Lai Changxing Cases

Economic corruption cases are a window into networks linking state office holding with wealth accumulation. This paper draws on the concept of embeddedness (Granovetter 1985) to examine two prominent cases in contemporary China. The cases are, I claim, ideal typical of agents and their networks coming together. One is “corruption from below”. Its agent is an entrepreneur from a humble background, Lai Changxing, who forged networks with hundreds of officials in an immensely profitable smuggling operation that was exposed in Fujian Province in 1999. The other is “corruption from above”. Its agent was a high-level official born into the political elite, Bo Xilai, who accumulated great wealth through networks in his social circles that were revealed in 2013. This paper's analysis centers on how the agents select, monitor, and sanction others in their networks. There are two key findings. One is that the networks are organized through third-parties (proxies). The other is that the networks' institutional basis is constituted not only by trust, but also by coercion. The paper's subsequent discussion considers some mirrored differences reflected in the humble and elite positions of the agents, and how their two kinds of networks can interact. In the conclusion, I use the paper's argument to stress the need to develop an economic sociology of corruption.

Cool Towns for the Elderly - Protecting the Health of Elderly Urban Residents Against Heat Stress

Background: The 2003 heat wave in Europe resulted in 70,000 deaths. Particularly vulnerable are older persons living in socially deprived urban areas.

Methods: Using a standardised questionnaire, a telephone survey was conducted in numerically 2291, 400 subjects (>65) were interviewed in different residential area types in Vienna were interviewed. In addition, face-to-face interviews with residents of retirement homes (n=200) and 15 in-depth interviews with stakeholders were carried out.

Results: Heat primarily affects the elderly’s energy balance. Most frequently mentioned conditions are fatigue (58%) and sleeping problems (48%). Older people adjust their behavior during a heat wave mainly by wearing lighter clothes, increasing liquid intake and staying indoors during daytime. High-risk groups are persons with lower socio-economic status and activity level as well as poor health condition. This group is also more likely to withdraw from the public for the duration of the hot periods. Those who do not withdraw suffer from fewer heat-induced ailments. Factors that increase the likelihood to stay at home are a disadvantaged neighborhood, dissatisfaction with and lack of neighborhood networks

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
and age discrimination in the residential area. Whether older socially deprived individuals go out during a heat wave period is not so much a result of available green spaces, but rather of existing socio-spatial conditions.

Conclusion: The elderly are particularly vulnerable towards heat stress. With urban populations ageing, and urban temperatures rising, design of urban areas must increasingly consider the interaction of social and climatic factors to increase age-friendliness. Vulnerability towards heat is not natural, but produced by socio-spatial conditions and can be counteracted by community-building initiatives.

Since resources are limited, it is a common dilemma for religious organisations how much of their resources should be allocated for these different purposes. This dilemma can be approached analytically by distinguishing between Gemeinschaft-oriented and Gesellschaft-oriented activities, drawing upon Ferdinand Tonnies’ classical ideal types of social relations. Both kinds of activities are important for achieving a sustainable religious organisation with a potential for long-term growth. The author’s studies of the Bahá’ís and of fund-raising in Danish churches abroad provide empirical material for developing this proposition into a generally applicable model of the internal dynamics of proselytising organisations in terms of Gemeinschaft and Gesellschaft. It will be argued that Gemeinschaft and Gesellschaft are complementary to each other and not opposing ideal types of social relations. On the one hand, the organisation must fulfil the members’ expectations of Gemeinschaft – otherwise, in the long run they will become passive or even resign. On the other hand, the functioning of the organisation must not be jeopardised by neglecting the need for administrative efficiency and proper management of resources, which by definition are Gesellschaft-oriented activities. If proselytising is a more permanent activity, it requires formal organisation, rational planning and money to be efficient. When resources are limited, investing in proselytising usually occurs, at least partly, at the expense of activities that strengthen Gemeinschaft. Eager proselytising can therefore easily lead to an organisational and human strain which is not sustainable.

**WANKA, ANNA*** (University of Vienna, anna.wanka@univie.ac.at)

**Older People in Public Space(s) – Engagement or Disengagement?**

**Background:** Public spaces are in transition, and it doesn’t head towards age-friendly cities. Instead, spaces are turned into functions of mobility – lacking opportunities for social interactions and integration. This tendency intensifies in times of economic crisis with the withdrawal of public maintenance and the fortification of socio-environmental injustice. Older people are particularly affected as they are highly dependent upon their immediate residential environment for maintaining their quality of life.

**Methods:** The main research question is how older people cope with the deprioritisation of public places and what role the specific localities play in their strategies. A comparative case study of contrasting residential areas in Vienna, Austria, will be presented. A mixed-methods design combining both quantitative and qualitative methods is deployed.

**Preliminary Results:** The quality of the residential area significantly correlates to older people’s outdoor behavior. Factors that reduce the likeliness of spatial engagement are a disadvantaged neighborhood and age discrimination in the residential area. Who owns little resources is even more affected. However, older people also own specific resources that can contribute to the revitalization of public spaces, increasing not only their own quality of life but the quality of city life in general.

**Conclusion:** The intersectionality of old and new dimensions of inequality - like age intersecting with education and gender - poses new challenges for environmental justice discourse. Hence, environmental justice can be discussed under the keywords of age-friendliness. Without counteraction, environmental deprivations and the corresponding withdrawal of older people from public space will increase the need for age – both in regards to health and significance. Who withdraws from public space becomes invisible in society. However, older people are also a highly competent group that is yet hardly targeted by urban revitalization initiatives. Here lies potential for inclusive ‘gentrification’ of urban areas.

**WARING, JUSTIN*** (University of Nottingham, justin.waring@nottingham.ac.uk)

**The Contingent Legitimacy of Professional-Managerial Hybrids: Towards a Relational Sociology of Hybridisation**

Despite increased interest in professional-managerial hybrids, the unit of analysis for most research remains on the hybrids themselves, i.e. practices, interests and identities, or the processes of hybridisation, i.e. moving into the role. There is limited consideration to the experiences or influences of other professional or managerial actors with whom these hybrids must relate and achieve a new hybrid legitimacy. This highlights a relatively neglected aspect of professional-managerial hybrids and requires a shift in analysis from the hybrid to the wider constellation of relationships and stakeholders. Drawing on theories within relational sociology, especially the work of Bourdieu and Crossley, the paper examines the relational ties of 36 medical-managerial hybrids working in different areas of service organisation, including executive management, clinical leadership and clinical governance. Each of these hybrids exhibits different relational networks and points of ‘professional-organisational interaction’, which are drawn up, defined or dissolved when the hybrid is seeking to legitimise their new hybrid roles. It examines the relationships of co-workers, from both medical and managerial communities, to these new hybrid roles, where co-workers are often found to question hybrids in terms of their expertise, inter-occupational relations, strategic alignment, and reputation with colleagues. The study shows how hybrid managerial roles are contingent upon the relationships and sanctioning power of both other doctors and managers, and in fulfilling their hybrids roles and this involves drawing upon different forms of social, symbolic, cultural and, increasingly, economic capital. The paper concludes by calling for greater attention to the relational dimensions of professional work in organisational contexts and the relevance of Bourdieusian social theory within the sociology of professions.
New Approaches to Sociospatial Network Analysis: Understanding and Responding to Neighbourhood-Level Poverty and Disadvantage

While socio-economic-spatial divisions within cities and towns have long been evident, it is clear that they are generally considered to be growing sharper and differentiating at the scale of suburbs and neighbourhoods. This produces effects in which the poor and non-poor increasingly live apart from each other and is referred to as ‘sociospatial polarisation’. These socio-economic-spatial processes have significant implications for the ways in which poverty and socio-economic disadvantage is being reproduced through converging socio-economic and spatialised processes. Drawing on a series of studies conducted in Victoria, Australia, and exploring social network structures and experiences of community in disadvantaged and non-disadvantaged neighbourhoods, this paper explores the implications of converging socio-economic and spatialised processes with particular focus on settings of place-based neighbourhood disadvantage. Issues addressed are: 1) discussion of findings from network analyses that show contrasting patterning of social networks between residents of poor and non-poor neighbourhoods; 2) consideration of the implications of divergent network patterning experiences and potential of community in place-based settings for poverty reduction strategies. Network analyses use a range of methods to collect network data on residents’ networks including contact diaries, CATI surveys and ethnography and, more recently, mobile phone and Global Positioning System (GPS) technology. Evidence from these and other studies suggests that residents of socioeconomically disadvantaged neighbourhoods are likely to have more local networks and fewer extra-local networks, than residents living in other kinds of neighbourhoods. These findings have significant implications for poverty reduction strategies that assume neighbourhood ‘community’ to be potentially transformative mechanisms for driving socioeconomic change at local levels. Rather, efforts should focus on understanding macro processes that are contributing to socio-spatial disconnections among vulnerable populations and developing poverty alleviation strategies that include efforts to connect residents into extra-local and socioeconomically diverse networks.

Unpaid Domestic Work and the Economic Crisis: Reinforcing or Diluting Gender Inequalities in Britain?

The recession of 2008-9 and the prolonged economic downturn have brought to the fore fundamental questions about the ramifications of the crisis for the working lives of diverse social groups. In Britain, a marked absence in the plethora of research projects exploring the work and employment outcomes of the crisis is explicit attention to ‘housework’. Whilst campaigning women’s organizations have made multiple predictions about the impact of crisis on the gendering of work inside and not just outside the home, there has been little empirical attention paid to domestic work and the crisis. The evidence that does exist is patchy, often anecdotal, and hints at diverse ramifications of the crisis. This is a key gap in our current knowledge. It is significant because domestic work talks powerfully to our current knowledge. It is significant because domestic work talks powerfully of three types of examinations (contents and systems) and the preparatory educational reforms are continually introduced. Thus, entrance examinations function as a form of system maintenance, even when alien educational models are drafted onto education. Since the modes of these examinations are often consistent in both schools and the wider society (e.g., in employment and civil service exams), examinations contribute to the maintenance of much bigger systems, outside schools.

This paper examines the various functions of examinations by comparing three countries (France, United States, and Japan). Special attention is paid to the socialization patterns in each country. The Japanese National Center Test for University Admissions was modeled after the American SAT (Scholastic Aptitude Test), but what each test examines is quite different in terms of modes of knowledge and pedagogy, although the influence of globalization on education is apparent and educational reforms are continually introduced. Thus, entrance examinations function as a form of system maintenance, even when alien educational models are drafted onto education. Since the modes of these examinations are often consistent in both schools and the wider society (e.g., in employment and civil service exams), examinations contribute to the maintenance of much bigger systems, outside schools.

Gender Difference in Network Homophily By Parental Status Among Faculty at a Research Intensive University

Increasing attention is paid to work-family conflict among faculty members. Generally, however, women faculty tend to have a heavier share of family responsibilities and experience greater work-family conflict than men faculty. Previous research suggests that faculty, especially women faculty, are often hesitant to bring up work-life or discuss faculty conflict in the workplace because they are afraid that their colleagues might doubt their commitment to work. The purpose of this study is to better understand the academic work culture by exploring informal (non-work related) social networks of faculty focusing on parental status and gender. Social identity theory predicts that we tend to form homophilous social networks that follow our self-defined identity characteristics, such as race, gender, and social class. This is because when we meet someone with the same status characteristic, we expect the person to have similar viewpoints and interests and thus find it easier to talk with them. This study considers parental status as a status characteristic and examines if there is a gender difference in
the tendency to have informal social interactions (e.g., discuss personal matters, share free time) with departmental colleagues who share parental status (parents or non-parents). We use social network data on about 380 faculty within the natural and social sciences at a large research-intensive Midwestern university. For the preliminary analyses, we ran OLS with permutation tests and did not find a significant gender difference in parent homophily, which was measured using the point bi-serial correlation (PBS). The next step is to run Exponential Random Graph Models (ERGMs) and test the gender difference controlling for dyadic dependence.

Why Do Organizations Form Groups?: Complex Structure and Behavior of Japanese Groups from 1977 to 1998

Although it has been a well-known fact that Japanese business groups have consisted of two types of network, the structural difference between them has not been paid enough attention to by researchers. Applying the techniques of network analysis and regression analysis to data on a total of 2,972 large Japanese firms over a 22-year period, this paper demonstrates the correspondence between network structures and the three different goal-pursuing behaviors of firms.

Corporate Complexes (i.e., the largest six cross-industrial corporate networks with a circle pattern of bilateral equity ties) had a significantly positive effect on member firms’ status-oriented behavior as well as on firms’ technology-oriented behavior. However, the effect on firms’ efficiency-oriented behavior was not confirmed with the same dataset. Meanwhile, Corporate Groups (i.e., the seven corporate networks in the automobile industry with a tree or star pattern of unilateral equity ties) had a positive effect on member firms’ economic behavior as well as a negative effect on member firm’s technological behavior. In the case of the economic effect, however, only superordinate firms benefited from corporate groups. The effect of corporate groups on member firms’ social behavior was not confirmed. The patterns of group structures and member firms’ behaviors did not change throughout the observation period despite the fluctuation of the macroeconomic environment.

From the analyses, these findings suggest that Corporate Complexes were a system of resource-acquiring by means of firms’ high social status, while Corporate Groups were a system of making profits to sustain the costly system for superordinate firms. (For subordinate firms, corporate groups were the system for rate Groups were a system of making profits to sustain the costly system for superordinate firms. HARAYAMA, TETSU (Toyo University, t_harayama@toyonet.toyo.ac.jp)

Worlds of Nurses in the Care at Home, a Comparison France-Japan

Most of the Japanese nurses in the care at home in the regions Fukushima and Nagano are married, having children, but they had an interruption in their careers, longer than the French nurses. So we observe it in difference between length of having D.E. (Diploma of State) and experiences as nurse in the care at home. In France, the nurses in the care at home stress the activity and more exactly on their condition of exercise, at the levels of motivation and difficulty, unlike the nurses in hospitals, who like working in team, emphasize the cooperation with other professionals. The French nurses mention practically never the relations with patients’ families. So, the professional work of the first ones focuses on the market convention, while that of the second on the industrial convention. In Japan, the nurses in the care at home, quite as the hospitable, suggest the relations with patients in terms of motivation and difficulty; both are important in the professional world of the nurses in the care at home characterized by the proximity or domestic convention. However, the nurses in the care at home in Fukushima differ from those in Nagano. The second criticize care managers in the point of view of cooperation. The first ones suffer from the difficult situation after the disasters to improve the quality of life of the patient, but they think of the role of the professional associations in terms of civic convention. This requirement of collective organization comes along with a bigger autonomy and, doubtless, with a grip of more important responsibility. This will have important and positive consequences on the image of the profession.

Communicating the Discrepancy: Operational Outcomes of the Activation Policy in the Field of Local Support Activities for Migrant Residents in Germany

This paper addresses the question of how migrant residents and local welfare organizations experience the recent political changes to the “activation” welfare policy in Germany.

Because of a radical transformation of the political landscape in the last decade in Germany, people with migrant backgrounds are subjected to activation politics in two ways. Since there are twice as many jobless migrants compared to Germans, the migrants are necessarily the addressees in the new job placement measures, which may be well compared to the workplace policies in the United Kingdom. Furthermore, migrants are involved in the activation scheme through the formation of an integration policy in Germany that strongly reflects the concept of activation by requiring total engagement, self-responsibility, and willingness to get involved in the life and norms of the host country.

To access the practical outcomes of such a political arrangement in the direct surroundings of the involved actors, the author conducted narrative interviews with migrants and local actors who are either in charge of job placement measures, or in the job centers or organizations that support programs in elementary schools in migrant-dense city areas in Munich. A wide range of administrative documents were also referred to.

On the basis of these sources, this paper demonstrates the cognitive discrepancies among the actors and discusses that one of the most significant outcomes of the new job placement measures may be achieved by promoting a reflexive mindset among local institutions and migrant residents. The discussion is concluded by indicating that the operational interest of local welfare organizations is paid increasing to enhance their communicational sensitivity so that they could deal with the highly complex demands of their individual clients; i.e., the sensitivity that relativizes the predominant distinction between Germans/non-Germans in the traditional welfare community.

The Death of the Reinventing of the Social?: A System-Theoretical Contribution to Changing the Semantics of Inclusion and Exclusion in Activation Welfare Strategies

This paper addresses the question of how the landscape of inclusion and exclusion can be recast in the light of Luhmann’s systems theory by referring to narrative interviews with local actors from migrant support organizations.

The ongoing discussions about social inclusion and exclusion, which are mainly conducted in socio-political studies on poverty and inequality, represent a normative understanding of “the social” that is reflected in the notion of solidarity, social policy, and welfare state. On the contrary, Luhmann’s systems theory concerns another tradition of “the social” i.e., the tradition of social action, interaction, and communication. In a particular way, according to his definition of inclusion/exclusion, neither membership in the legal rights nor a status in the central labor market is crucial; only communicational relevance matters. Taking this definition seriously, even a bankrupt or jobless person is economically “included” insofar as (s)he is communicatively relevant in the economic system, which finally leads us to the conclusion that there is no “social exclusion” in the “social systems.”

Applying the systems theoretical understanding of inclusion/exclusion, this paper assesses how the communicational form of migrant support organizations is changing because of a radical shift in the activation policy of the last decade in Germany. The range of political reforms is generally considered to be a neo-liberal arrangement of the welfare state, which would be comparable to the diagnosis of “the death of the social” (N. Rose 1996).

This paper presents another scenario by highlighting that operational sensitivity is increasingly enhanced in local welfare organizations; this enhancement is meant to deal with the highly complex demands of individual clients and to ensure their cooperative engagement. Finally, it calls for “reinventing the social” (S. Lessenich 2008), particularly by aiming at a constructive contribution to link the very different assumptions of the social.

The Interational Accomplishment of “Impairment and Disability” in a Sport : From Game Analysis in Wheelchair Basketball Games

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
How can the Impairment and Disability be accomplished in the sports games? Answering this question, I apply interaction analysis and game analysis to the Wheelchair Basketball games. The social model of disability is very important in the way that “disability” is “the Social”. But this model is rarely used for the studies of the sports sociology. The social model is simply used as a factor to block personal sports participation. However, from a viewpoint of the Ethnomethodology, we can regard the severity of the impairments and the disability as the cooperative accomplishment in / by the interactions of people. The purpose of this study is to illustrate “the sociality of disabilities” from experiences in the sports practice. In this study, I classify games of wheelchair basketball, the top-level, middle-level, low-level and examined the play in each game.

The game analysis of sports paid attention to the result of a game and illustrated each play related to the result of the game for an index. However, the game analysis does not consider that the performance of the game “achieved” something. In the wheelchair basketball, it is empirically-known that a competition power of the team is closely concerned with the skill of the low-point player (a player with severe impairments). In the team having high competition power, the implication of a player with severe impairments may be different from a low team. In the logic of the wheelchair basketball rules, “impairments” is indispensable. The game performance shows it. While, “impairments” is experienced as difficulty in the game when the low-point player does not function effectively by the team. The negative “impairments” is achieved and maintained as a result of play interactions. “impairments and disability” are accomplished as a play interactions in a game.

Reducing Uncertainty and Improving Recovery through the Provision of Flexible Services
For many individuals living with mental health and substance abuse problems, it is difficult to obtain the safety and security that are necessary components of recovery. This is because they do not have access to resources such as food, housing, transportation, and employment that are needed to begin the process of stabilizing their lives. When these resources are available, they are often are attached to a variety of caveats that make it difficult to exercise personal agency, another important component of recovery. Recognizing this, new approaches to mental and behavioral health care have begun to emphasize the importance of immediate access to resources through the provision of flexible services that give individuals the latitude to establish their own goals and plans for obtaining them. This presentation will focus on this emerging paradigm and the effect it is having within the mental and behavioral health fields. Housing First (HF) and Access to Recovery (ATR) are two services approaches that will be highlighted as examples. HF is an intervention developed in the United States—and spreading internationally— that provides immediate housing with low service demands to chronically homeless individuals with co-occurring mental health and substance use disorders. ATR is a program funded by the U.S. Substance Abuse and Mental Health Services Administration (SAMHSA) that engages individuals with substance use disorders to develop their own recovery goals. ATR also provides individuals with stipends that can be used to access a number of services that are not provided by traditional programs. Discussion of both service approaches will emphasize findings from my own research, which demonstrate how these models assist individuals in their recovery processes by reducing uncertainties related to the lack of resources and by increasing personal agency.

Gender, Homelessness and Social Capital: Young Women's Management of Disrupted Housing Transitions
Mainstream understandings of young people’s housing transitions inadequately reflect the diversity of experiences and social processes that shape the course to independent living. By only recognising normative pathways for young people leaving the family home significant experiences are either being misrepresented or lost. In Australia, a largely hidden aspect of youth housing transitions is the presence of homelessness. Many young people in need of accommodation are faced with a difficult housing market where there is a short supply of safe and affordable properties. For young people, to be without a home is not only to be homeless but also to be removed from all the subjective meanings a home carries. In addition, increasingly globalised economies and deindustrialisation have had serious implications for young people’s transitions to secure accommodation due to employment insecurity and financial instability. I argue that the complex relationship between disrupted housing transitions and youth homelessness needs to take into account structural factors relating to gender, race/ethnicity, class, location, sexuality and disability. Accordingly, the variety of young people experiencing homelessness in Australia demands new ways of conceptualising the phenomenon. The application of a gendered lens to homelessness research is one possible way to challenge dominant discourses of youth housing transitions. In this paper I explore young women’s experiences of homelessness and the utilisation of intimate relationships as a form of context-specific capital for accessing material support, particularly access to stable accommodation. To this end, I draw on theoretical perspectives of social capital developed by Pierre Bourdieu. These concepts are examined from a feminist standpoint to explain how Bourdieu’s work may be appropriated to advance knowledge of how gender impacts on both the management of homelessness as well as transitions to stable accommodation.

Housing Market Restructuring and Inequalities in London and the UK
This paper aims to do two main things. Firstly it provides an overview of UK housing market restructuring, which has occurred as a result of longer-term shifts in tenurial patterns, and shorter-term impacts of the 2008 credit crunch aftermath and the Coalition Government’s welfare and housing policies. The impact of this restructuring is that the tenure boundary between social and private renting, in terms of rents and security, is becoming increasingly blurred, while homeownership is being transformed via shifts in mortgage finance availability. The result of these trends is the end of both social renting and home ownership as we know it. Secondly, the paper focuses on London and it demonstrates how the national trends have been exaggerated in the capital, partly as a result of the central London housing market providing a ‘safe haven’ in relation to global capital flows, and partly as a consequence of urban regeneration schemes which have had the net effect of reducing the proportion of social housing throughout much of London. The paper uses Census and other data to examine the dramatic rise private renting in London since 2001, a rise which is predicated on the buoyancy of the buy-to-let mortgage markets, foreign capital inflows which generate build-to-let developments, and also the increasing outflows of ex-public housing into the private rental market. The Coalition Government’s recent welfare and housing reforms, such as the ‘bedroom tax’, overlay these longer-term trends. The net result in London is an increased insecurity that parallels and arguably reinforces the labour-market based ‘precariat’ identified by Guy Standing (2011) and Loic Wacquant (2008).
of the paper), the paper shows the initial organizational and cultural obstacles to the institutionalization of the discipline and to the transnational exchange of ideas. Then, it moves to the case of Czarnowski's student Nina Assorodobraj-Kula (1908–1999), showing how she combined the Durkheimian thought with Marxism. Although the results of this unusual merger were interesting, the question arises whether they could be considered Durkheimian anymore. Finally, the works of a third generation (represented by Assorodobraj's students) show that what was still left from the Durkheimian core was more and more undermined by a reception of American sociology. Several tentative conclusions are drawn from this overview. 1. Although relatively influential in Poland, the Polish Durkheimians were internationally unknown, which already forms one of the dead ends of the school; 2. The way Durkheimian thought was reinterpreted, provokes the question whether it was still Durkheimian; 3. There has not been a conceptual innovation starting with the third generation. These observations can be extrapolated for the sake of future comparisons.

Interrogating Female Household Headship from Women Heads of Household Perspective: Findings from a Qualitative Study in Ouagadougou

Background and Objective

Despite its extensive use, the notion of female headship is a matter of constant controversial debate among scholars. This study analyzes how women household heads in Ouagadougou perceive themselves, versus the ways in which female household headship is conceptualized by researchers. Studies on female headed households are scarce in Burkina Faso, and it is our expectation that this study will contribute to fill the gap.

Methods

Semi-structural in-depth interviews were conducted to explore women's view of and experience on household headship, in relation with domestic power and decision-making. A sample of 20 female household heads was derived from a previous quantitative survey by using a purposive sampling method, in order to have women of different marital status and educational levels. Data were analyzed using a manual grid.

Findings

Findings show that all respondents acknowledged themselves as the current head of their respective households, even though all women mentioned the absence of a male partner as the reason why they defined themselves as the head. In terms of authority on family matters, the respondents made no spontaneous association between their being head and having domestic power nor making decisions in the household. It emerges from the responses that for female heads mothers of young children, the consistency of authority on household matters was mediated through women's relationship with in-laws, mostly men. Conclusion

The study reveals that women's experience of household headship differ significantly with the conceptualization of female household headship by researchers, in terms of control over family matters. While the husband/wife transition in the occupancy of household headship seems quite 'natural', the authority tied to this position seems when held by a woman. The study challenges key conceptual understanding of female headship and current debate around the dynamics of domestic power in their household.

WEAKLIEM, DAVID* (University of Connecticut, weakliem@uconn.edu)

Explaining the Rise in Top Incomes

Since the 1970s, the concentration of income at the top has grown in most advanced capitalist nations. The standard economic explanation is that the development of technology has increased the productivity of managers and professionals and reduced the demand for blue-collar and white-collar workers. However, the extent of growth in top incomes varies widely among countries, suggesting that it is necessary to go beyond the common technological factor. This paper suggests three factors that seem to have the potential to explain the national differences. The first is changes in the power of labor and capital. A decline in the strength of labor may have led to a decline in the wages of ordinary workers and an increase in profits and the wages of top management. The second is a combination of deregulation, especially in financial markets, and the degree to which the political system facilitates “rent-seeking.” The third is changes in social norms. There has been a good deal of discussion of the influence of social norms on pay, but most of it has focused on lower-level workers. However, it seems possible that the same factors also influence top earnings. On the one hand, a concern for reputation might put some restraint on top earnings. On the other hand, social comparison might lead to a “race” for relative position among top earners. It is possible that the increase in top earnings reflects the degree to which the forces that produced stability were weakened or disrupted.

The paper will discuss the implications of these three hypotheses and offer a preliminary test using data for OECD nations.

Policy Actions for Securing Computers

Societies rely on information technology, be it for business operations, private life, or for technical infrastructures. However, IT systems are not reliably protected against attacks on data integrity or confidentiality, as the debates around the Stuxnet worm and the NSA have shown. It is expected that powerful organizations, such as foreign competitors or secret services, will launch significant attacks on businesses or infrastructures in the future. Industry cannot invest large sums to create highly secure systems, as users who did not yet suffer large damages will not be willing to pay for their development costs. Therefore, only a slow migration takes place towards, e.g., the use of virtualization to isolate sensitive or risky applications. Moreover, the paths to highly secure systems are not clear.

One path would be to have careful specification, implementation and evaluation. This path is known to be expensive but would provide a level of protection so far unknown. However, even such implementations might be hacked. Therefore, a path towards provably secure systems might be preferable. Though significant progress has been made, the development of provably secure computing systems faces three challenges: first, a large open source software base needs to be created. Second, matching hardware needs to be designed and ultimately an entire secure system. Third, means need to be explored to make sure that actual implementations match the system design, without outsiders planting Trojan horses, and without having any implementation errors.

In either case, a policy push is needed which must take place in at least some economically significant countries. It is needed (1) to make the problems and solutions better known, (2) to explore the costs and benefits of the paths, and (3) to make some path mandatory. The latter could be done in a gradual way, starting with some devices and applications.
that the reported suicide statistics in the Berlin Health Report require a closer in-
spection because the zones used in reporting are not sensitive enough to provide a
robust picture of the articulation of social status and suicide. For example, in
2009 the Berlin health report suggested that there was no relationship between
elderly suicide (individuals over 60) and social status.

Although Germans have never been healthier, or had such high life expectancy,
social inequality continues to rise. While the population as a whole is experiencing
this positive social development, it runs counter to the findings that people who are
on the periphery, those who are socially and economically disadvantaged,
experience less of this good health and extended life. Often these people are
clustered together geographically.

The identification of these zones or socially weak areas is based on the re-
search of the working group "Monitoring Soziale Stadtentwicklung" in Berlin. They
to describe and analyse the socio-structural transformation of parts of the
city and different districts through a statistical indicator system. The very precise
development index for smaller spatial areas was correlated with the comprehen-
sive coroner data we collected. Then, by ranking the districts with the highest
suicide statistics and comparing them to the Berlin health report, we detected a
strong correlation between social status and elderly suicide. This suggests that
incorporating the legal and medical records from the coroner and altering the
definition of a municipal district to capture this fine level of detail establishes a
real and concerning trend.

Is Suicide a Question Of Social Standing? Elderly Suicide Rates In Cosmopolitan Berlin

Although Germans have never been healthier, or had such high life expectancy,
social inequality continues to rise. While the population as a whole is experiencing
this positive social development, it runs counter to the findings that people who are
on the periphery, those who are socially and economically disadvantaged,
experience less of this good health. International studies have shown that these
people are often clustered together geographically.

We argue that the reported suicide statistics in the Berlin Health Report require a closer in-
spection because the zones used in reporting are not sensitive enough to provide a
robust picture of the articulation of social status and suicide. For example, in 2009 the Berlin health report suggested that there was no relationship between elderly suicide and social status. We will introduce our comparative study which aims to test whether there is indeed no correlation between elderly suicide and districts when (a.) more comprehensive data from smaller heterogeneous urban zones beneath the district level are being accounted for.

The identification of these zones or socially weak areas is based on the re-
search of the working group "Monitoring Soziale Stadtentwicklung" in Berlin. They
to describe and analyse the socio-structural transformation of parts of the
city and different districts through a statistical indicator system. Their very precise
development index for smaller spatial areas was correlated with the comprehen-
sive coroner data we collected. Then, by ranking the districts with the highest
suicide statistics and comparing them to the Berlin health report, we detected a
strong correlation between social status and elderly suicide. This suggests that
incorporating the legal and medical records from the coroner and altering the
definition of a municipal district to capture this fine level of detail establishes a real and concerning trend.
Home Away at Home: Tourism Narratives of the German Village in South Korea

Where do you come from? is a question that haunts tourists. Here, places are conceived as fixed spaces in the same way destinations are considered an end in tourism. In the context of multi-strata mobilities, places are increasingly being reproduced through embodied relationships in a world that is never quite finished. They are performed on unstable stages as they are being reimagined. It becomes apparent then that spaces are emergent and need to be considered alongside the sedimentation of identities.

Places emerge as tourist places when they are appropriated and made part of memories and narratives through the experiences of people engaged in embodied social practices. They are not only packaged for touristic consumption, but are also constantly redefined especially in terms of spatial identities located through everyday tourist practice. This paper focuses on the German Village on the island of Namhae in South Korea, which was built over a decade ago as a tribute to the Korean workers who lived in Germany as Gastarbeiter. It explores the question of identity of the locals as portrayed in the film, ‘Endstation der Sehnsüchte’ by Cho SungHyung and juxtaposes this alongside the huge influx of ‘tourists’ indulging in photographing experience on the film set of Korean TV drama ‘Couple or Trouble’.

As the second German Village is now in the process of being built elsewhere in Korea, we need to ask even more so, how the notion of ‘place’ is reproduced through spatialities in which embodied performances and practices are facilitated within complex infrastructure, networks and mobilities. This paper incorporates reflexive and visual methodology to explore how identities are being configured through local narratives and practice, and questions how we identify the ‘tourist’ in this era of transformative change as exemplified by the German Village in Korea.
The stories found in a nation’s history textbooks are profound statements about the way the nation sees itself. Textbooks that exclude certain groups alienate these children and may lead to disengagement from education and lower levels of educational attainment. The Netherlands is known internationally for its tolerance and multiculturalism, particularly towards immigrants, and sees these elements crucial to their national identity. However, historical and contemporaneous policies and social attitudes towards immigrants reveal levels of racism not unlike their European peers who, like The Netherlands, have experienced increased immigration and xenophobia in the last decades. In the educational domain, multicultural policies of the 1990s have shifted to those emphasizing assimilation, with immigrants often blamed for low educational attainment. This paper examines how immigrants, multiculturalism, and tolerance are represented in all Dutch primary school history textbooks published since 1980 to identify trends to determine whether or not they reflect larger political discourses and speculate as to the potential effects of these depictions on the children who read them.

Preliminary analysis suggests that immigrant groups are depicted as culturally different outsiders from underdeveloped, poor, and violence nations who cause problems for the Dutch society that benevolently allows them entry. Textbooks fail to meaningfully address discrimination in The Netherlands suggesting that immigrants’ failure to integrate is due to cultural differences, which likely enhances social alienation among the many immigrant students encountering these texts. Findings are of relevance to multiple nations with large immigrant populations.

The Role of Preferences and Attitudes in Film Consumption

The sociological analysis of cultural consumption is usually situated in the field of social stratification research, identifying the way how cultural consumption is related to social stratification. Instead of weighing of aesthetic preferences and situational opportunities, in contrast, the second perspective points to the importance of culturally and aesthetically shaped attitudes and dispositions guiding cultural consumption in a rather automatic way, given relevant situational cues. Since either of these perspectives brings about both theoretical and empirical problems and seems reasonable to conceptualize cultural consumption as a joint process of conscious preference weighing and automatic attitude following. This in turn asks for a “dual-process” model of action which is assumed here to offer a more accurate picture of the individual foundations of cultural consumption.

Drawing on recent survey data from Switzerland (conducted in February 2013), this assumption will be tested in the domain of film consumption. This dataset includes measures of the frequency of attendance to various types of films, and measures of the respondent’s preferences for as well as attitudes towards these types of films. This for (1) comparisons between the effects of film preferences and situational opportunities, (2) the identification of the relationship between film preferences and film attitudes, and (3) the examination of the interplay of film preferences and film attitudes in the process of film consumption.

From School to Work and Back – Inequality in Late Postsecondary Education As Part of the School to Work Transition in the US, Germany and Sweden

Varieties in the school-to-work-transition are often discussed against the background of the public education system. The focus of most studies is the integration into the labor market. In this paper, I take a different perspective and compare differences between education systems in a. the patterns of school to work transitions with particular focus on non-traditional education and b. the decision to re-enroll into postsecondary education. In order to explain country differences, I refer to the openness and institutional flexibility for non-traditional students of the postsecondary education system.

Non-traditional patterns, such as late re-enrollment after an initial phase of work, vocational training or motherhood differ by country in their relevance for the typical school-to-work transition. In several industrialized countries, in particular countries with long education system and labor markets. The focus of most studies is the integration into the labor market. In this paper, I take a different perspective and compare differences between education systems in a. the patterns of school to work transitions with particular focus on non-traditional education and b. the decision to re-enroll into postsecondary education. In order to explain country differences, I refer to the openness and institutional flexibility for non-traditional students of the postsecondary education system.

You Snooze, You Lose? Returns to Interrupted and Delayed College Education in the US

Postsecondary is frequently not acquired straightforward, but through detours and along with initial phases of labor force experience. This circumstance raises questions about the role of timing of higher education for the returns on the labor market. It is further a fortunate situation for separating the role of work experience and education for labor market returns. Since educational detours are more often taken by minorities and young adults from lower social origins, this question also has implications for social inequality in postsecondary education.

The research question is whether delayed entries into and interruptions of educational careers of varying type and duration affect employment outcomes upon labor market entry. The situation of graduates and college-goers never completing is analyzed separately applying propensity score matching. The labor market outcomes studied are whether a job could be found which offers medical insurance, the authenticated wage and occupational outcomes measured as Hauser and Warrens 1997 version of the Socio Economic Index (SEI). Results show that graduates with a B.A.-degree are not affected by their educational pattern. For incomplete college, the timing matters more. While there are small penalties for interruptions in general, small bonuses can be gained if the time out of the education system was spent with full-time work. The dataset analyzed is the US National Longitudinal Study of Youth 79 (NLSY79).

Third Culture Kids and Intergenerational Challenges in Migrant Communities: Korean Christians and Tamil Hindus in Germany

After several decades of coexistence, the research fields migration studies and the sociology of religion have built a strong theoretical and empirical exchange. The impetus was a sociological conceptualization of migration as a decisive factor of religious dynamics in modern societies. This idea, in turn, triggered investigations of religious dynamics within migrant communities as they transmit religious knowledge to second generations and their way of adapting religion (doing religious culture). We propose, that intergenerational dynamics in migrant religions are reflected in areas of tensions between and among generations.

The paper presents the results of two research projects on intergenerational dynamics in Asian migrant communities in Germany. The first part of this paper focuses on Korean Christians and Tamil Hindus. We propose, that intergenerational dynamics in migrant religions are reflected in areas of tensions between and among generations.

The paper presents the results of two research projects on intergenerational dynamics in Asian migrant communities in Germany. The paper presents the results of two research projects on intergenerational dynamics in Asian migrant communities in Germany. The first part of this paper focuses on Korean Christians and Tamil Hindus. We propose, that intergenerational dynamics in migrant religions are reflected in areas of tensions between and among generations.

With re-establishing a religious life in a foreign land. They created a “home away from home”, not least to transmit religious knowledge to their children in an authentic setting, linked to their country of origin. However, the second generation, who will inevitably take over the community, was raised in two cultures. Do these youngsters still relate to their parents’ beliefs and practices? Which kind of intergenerational tensions challenge the transmission and reproduction of religious identities and thus institutionalized religion? We will discuss such questions in the paper. Special attention will be given to three areas of research that affect religious continuities and discontinuities in the Korean and Tamil milieu: (1) religious practices now considered “obsolete,” (2) differing ideas of religion and gender and (3) critique of religious organizations.

According to the data, this panel, the main focus of our comparative analysis between second generation Korean Christians and Tamil Hindus will be drawn to dynamics, which emerge during the transition to adulthood phase.
situations. By reviewing diverse but mutually complimentary theories the paper addresses that knowledge should be able to solve socio-material problems (b) comprising tacit and incorporated components. The first shows that their concepts of knowledge diverge: Knowledge is seen as (a) globalized while professional practice is not.

Based on a theoretical book project, but illustrated by results from two inter- and transnationally comparative research projects on skilled migration, the paper suggests a novel approach to the challenge. Building on individualist traditions with their focus on the resources of persons and households but emphasizing the relational character of capabilities I take a closer look at the social contexts in which resources are put to use. In times of globalization we must assume that persons and places in more than one social context and we should part with the assumption that the nation state can frame a congruent set of economic, political, cultural and territorial borders. By clarifying the ways in which persons and their resources are embedded in territorial, political, and functional contexts sociology can identify social layers in the world that are structured (a) by their resources and (b) by the socio-spatial autonomy of persons and resources.

The proposed model of social layers in the world is adequate for both an analysis of populations residing in strong national welfare-states and for the larger part of humankind who is mobile and/or embedded in zones of weak statehood and/or in transnational social fields. As socio-spatial autonomy can be operationalized the model will contribute a distinctly sociological perspective to empirical research on global inequalities.

**JS-63.6**

**WEISS, ANJA* (University of Duisburg-Essen, anja.weiss@uni-due.de)**

**Social Layers in a World of Territorial Containers, Political Closure, and Socially Differentiated Functionings**

The sociology of social stratification is caught in a dead-lock: Data and concepts remain bounded by the nation-state while recent theorizing as well as popular debate focus on the global level. Based on a theoretical book project, but illustrated by results from two inter- and transnationally comparative research projects on skilled migration, the paper suggests a novel approach to the challenge. Building on individualist traditions with their focus on the resources of persons and households but emphasizing the relational character of capabilities I take a closer look at the social contexts in which resources are put to use. In times of globalization we must assume that persons and places in more than one social context and we should part with the assumption that the nation state can frame a congruent set of economic, political, cultural and territorial borders. By clarifying the ways in which persons and their resources are embedded in territorial, political, and functional contexts sociology can identify social layers in the world that are structured (a) by their resources and (b) by the socio-spatial autonomy of persons and resources.

The proposed model of social layers in the world is adequate for both an analysis of populations residing in strong national welfare-states and for the larger part of humankind who is mobile and/or embedded in zones of weak statehood and/or in transnational social fields. As socio-spatial autonomy can be operationalized the model will contribute a distinctly sociological perspective to empirical research on global inequalities.

**WEISS, ANJA* (University of Duisburg-Essen, anja.weiss@uni-due.de)**

**The Glocalization of Professional Knowledge and Practice**

Current debates about migration and high skilled labor markets are characterized by an ambiguity: On the one hand, knowledge, especially in the natural and health sciences, appears to be globally accessible. On the other hand, the application of this knowledge in professional practice is inhibited by many factors, including national systems of higher education and licensing as well as migration regulation claiming that the knowledge of migrant professionals may be “different” or less reliable. Put shortly: professional knowledge is viewed as (a) globalized while professional practice is not.

In an attempt to overcome prevailing universal/local and theory/practice dichotomies in globalization research the paper suggests a diversity of ways in which professional knowledge and practice can universalize and/or remain bound to specific locations and in which the mobility of people and the spatial extension of bodies of knowledge co-constitute each other.

A review of newer theories in global studies (neo-institutionalism, migratory transnationalism, field theory, cosmopolitanism and social studies of science) firstly shows that their concepts of knowledge diverge: Knowledge is seen as (a) codified and explicit or as (b) comprising tacit and incorporated components. The latter perspective implies that knowledge (c) must be recognized in order to function. Also, knowledge should be able to solve socio-material problems (d) embedded in situations (e). The review secondly identifies a diversity of ways in which knowledge may globalize, namely: the setting and emulation of standards, the migration of professionals, transnational homologies in habitus, the formation of transnational communities, field specific struggle, and the “local universality” (Timmermans/Berg) of solving socio-material problems embedded in specific situations. By reviewing diverse but mutually complimentary theories the paper expands on Robertson’s notion that cultural forms can be part of universalizing and localizing processes simultaneously.

**WELLGRAF, STEFAN* (European University Viadrina, stefan.wellgraf@gmx.de)**

**Contempt. Dealing with Disrespect and Misrecognition Among Berlin Hauptschüler**

The issue of disrespect and misrecognition will be discussed both on a conceptual and an empirical level and shown to be part of a neoliberal logic.

1) According to Honneth, people experience misrecognition as a deprivation of requirements for a positive development of the self. In Germany, Honneth refers to these deprivations as “Missachtung” (misrecognition), while I prefer the slightly different term Verachtung, which better captures the emotional dynamics of this process and also has a more active connotation: in the sense that the students are not only deprived something but that their human dignity is actively harmed. The most appropriate English translation of Verachtung is ‘contempt’. The social production of contempt defines forms of exclusion via processes of social ascription in which low socio-economic status is linked with disregard, in turn ‘producing’ a disrespectful or contemptuous treatment of others.

2) In an ethnographic study of “Hauptschüler” in Berlin, Germany, I have shown that the problem of misrecognition is a pervasive experience among this status group. The main problem for the students proved to be misrecognition on emotional, legal, and social levels – the frequent coupling of social stigmatization with the deprivation of citizenship rights and precarious family situations. In this context, the social practices of “Hauptschüler” can be considered mechanisms of coping with contempt and as struggles for recognition. This can form taking of searching for respect within peer groups based on ideas of mutual support, it can take the form of emotional reactions (shame, anger, envy) and it can take forms of playing with stigmatizations through jokes and irony. What unifies these various reactions is the active approach of dealing with and reacting to the social contempt with which the students are confronted.

**Disputed Ambivalence. Berlin Hauptschüler As Strangers**

The multifaceted problem of the ambivalence of the stranger – how it is produced, how it can be researched and how it is lived – will be the focus of my paper, dealing specifically with “Hauptschüler” (secondary students, often migrants) in Berlin, Germany. These students are faced with a variety of exclusionary mechanisms – besides discrimination on the job-market also media stigmatization and the denial of full citizenship.

I will treat the morally loaded ambivalence of the cultural figure of the “Hauptschüler” made into strangers? How could one describe the ambivalent positions and positioning of the students? And how do the students themselves deal with their situation? In the first part, based on a media analysis of a public debate about the “Hauptschüler”, I will show how structural problems of the school system are constituted and problems of ethnicity and religion. In the second part, I will describe the actual mingling of class, ethnicity and gender in school. In the third part, I will turn the view on the question how the students themselves deal with negative stereotypes and racial or social classifications of being inferior.

The ambivalence of the „Hauptschüler“ as a stranger appears in all three perspectives in a different light: in the media debates ambivalence appears as a problem, in the ethnographic section ambivalences and intersections are treated as a challenge for sociological analysis and in the subversive practices of the students ambivalence is used to resist negative ascriptions and processes of self-victimization. The morally loaded processes of constructing, reproducing and deconstructing ambivalence are thus at the core of understanding the Berlin “Hauptschüler” as a stranger. The task of sociology is to show these processes are functioning and what kind of subjectivities they produce.

**The Social and Institutional Context of Decision-Making in the Case of Sickness**

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Illness has a major influence on people's lives. Studying healthcare-seeking is therefore of vital importance. Patients' decisions about healthcare fundamentally influence the performance of the overall healthcare system in terms of a population's health, the quality of healthcare services, and the level of expenditures. Even though illness behaviour has been an intensively studied research topic over the last five decades, previous work has largely overlooked the embeddedness of these decisions in social and institutional contexts. We will present first insights from a project that aims at theoretically, methodologically, and empirically enhancing previous research. It contributes to the development of an integrative theoretical framework of illness behaviour and provides an important test case for institutional theories and the theory of frame selection.

For analyzing healthcare decision-making a new survey is constructed to collect data on the basis of 2,000 face-to-face interviews in Germany that will provide a unique data source covering the healthcare needs and the way these needs are managed. At the conference, we will provide first results from the survey. We will analyze people's decision making when having a medical condition with a particular emphasis on the interpretation of symptoms and the utilization of healthcare, and generate information about the extent and variety of self-care strategies. Our paper covers how social networks and institutional features of the healthcare system influence the decision making of healthcare seeking.

**Capital-Labour Relations in China's Car Industry - What is “Chinese” about Them?**

Facing shrinking profit margins, and driven by a quest for cost-efficiency and market access, manufacturing enterprises intensified their expansion into the global South since the 1970s. It was especially the automotive industry that was eager to venture into promising markets, first and foremost China. Though global car manufacturers have been present in China since the 1980s, research on their operations is still limited – especially when dealing with sensitive issues such as labour relations and unrest. The presentation thus sets out to shed light on workers' reactive and pro-active agency in relation to enterprise strategies, trade union culture and developmental policy in a global car manufacturer operating in China. Based on intensive fieldwork in Mexico and China multiple factors determining the specific patterns of workers' agency in China's car industry shall be mapped out and questioned for whether they are rightly attributed to local “Chinese” specificities – or aspects that are better explained by reference to the qualities of the industrial sector and a capitalist global economy, respectively its current stage. On the one hand this will concern the enterprise orchestrating its established strategy with local conditions – of which labour issues are merely one factor amongst others – thus producing boundaries, potentials and vehicles for workers' political-economic agency on the shop floor. On the other, it will focus on workers’ subjective concerns, rooting their agency in their more complex social conditions of existence. Relating these findings to a functional examination of certain political and institutional patterns in China, the uniqueness of Chinese capital-labour relations will be raised to question.

**Comparison and Topicality of Three Classical European Concepts of Community**

Without any doubt, *community* is one of the most central sociological terms and concepts – particularly in the German/European sociological tradition, where Ferdinand Tönnies might be seen as the forefather of this concept. Taking relevant sociological literature regarding this issue in consideration, one may come to the conclusion that there are two traditional main ideal types of *community*: in one tradition, *community* is theorized as a collective with specific relationships, in the other tradition, *community* is conceptualized as a collective with a shared consciousness of kind, a collective identity (this questions the section of the social reality, which is emphasized). Furthermore, there are two main types of the intended use of the concept: theoretical ideal types on the one hand and terms for the apical social research (this questions the interest, which is tight to the conceptualization of *community*).

Taking these basic categories, three classical concepts of *community* will be analyzed and compared: the ones of Ferdinand Tönnies, Émile Durkheim, and Max Weber. Afterwards the question of the topicality of their concepts of *community* will be dealt with. Especially the possible application of the classical terms of *community* to new forms of communalisation, presented by the example of so called *brand communities*, will be discussed.

**The Discursive Construction of Risk**

In the past few years, an intensified discussion and dispute about the existence and extent of risks of anthropogenic organic micro-pollutants (OMP) and pathogens in drinking and surface water is taking place in public or semi-public discourses. These discourses influence how one perceives possible risks, what risks one states as true or false, and finally how one acts and behaves in everyday life and in times of risk-based uncertainty and crisis.

In this paper, discourses are understood as social practices of producing, reproducing and stabilizing social reality. These practices are usually controversial and conflictive – moreover they are always guided by specific interests. Discourses about the existence and extent of risks of anthropogenic OMP and pathogens in the water occur in and in-between the following main different discourse fields: media, general public (the "normal" consumer of water in everyday life), topic-related sciences (engineering, biology, toxicology, ecology, medicine ...), politics, and water supplier (including their representatives).

This paper aims to analyse, how knowledge about and attitude towards the existence and extent of these risks are being produced in the mentioned discourses above and how these discursively constructed "truths" effect social actors. Especially the role of the media will be emphasised.

An extensive survey was conducted to cover the different discourse fields and to explore how these risks are produced in and in-between these fields, which discourses are powerful and dominant. Informed by world society theory and modernity arguments, the paper suggests that the ideal type of a national society has found on the local medium level since the mid- to late 19th century. Here, we distinguish two trends: A trend towards the construction of nation-states as endogenously developing units ('societies') created by 'rationalized others' (John W. Meyer) such as international organizations, social scientists, economists, etc. a trend towards the integration of national identities in global fields such as economic, mass media, arts, sports or tourism (the global banalization of the nation). Both trends have fuelled the current association of national identities and state borders that is captured in the mainstream understanding of the term society. The second trend, however, also points to (2) the subordination of national identities to global fields, transcending the image of the nation-state as a spatial container of social processes and thus rendering the idea of a single world society more plausible. The analysis suggests that conceptual ambiguities of 'society' not only reflect differences between theoretical approaches or between an everyday and a scientific understanding of the term. Rather, these ambiguities indicate the complex interaction and mutual enforcement between two different social processes: global nation-building and the differentiation of global fields. Since the pattern of this interaction can be traced to the mid-to-late 19th century, we suggest studying it in a historical-sociological perspective.

**Western Tourism and Dialogical Remembering Of The American War In Vietnam**

The history/tourism nexus has typically been theorised in relation to either parochialism or simplification. However, this binary neglects the diversity of tourist forms and the different social actors involved in their production. This paper ex-
amines international tourism at the Cu Chi Tunnels in South Vietnam by focussing on the narration of the war by Vietnamese tour guides and its interpretation by young American, Australian, British and European tourists. While the oversight of tourism in Vietnam by the state sees tourists at Cu Chi presented with some strong anti-American rhetoric, this is offset by a strong dialogical narrative of the war presented by local guides. It is argued that guides are important entrepreneurial entrepreneurs who in order to account for post-Fordist tourists privilege the local while also drawing together different national traditions. For Western tourists this typically results in a greater recognition of Vietnamese suffering and a questioning of the anti-authoritarian and post-heroic narratives that have dominated Western projections of the war. However, the dialogical dimensions of the tour and their experience of everyday life in Vietnam also commonly provides tourists with greater agency to mourn the death of Western soldiers. It is argued that through media portrayals and word of mouth such ‘dark’ tourist experiences have a broader influence on understanding of history and in shaping debate within the cultural public sphere.

Social Networks and Subjective Wellbeing in Australia

Previous research into social networks and social wellbeing has tended to examine objective aspects of wellbeing such as employment and socioeconomic attainment, physical security, and political participation. Fewer studies have examined social connectedness and subjective wellbeing, and those that have tended to emphasise limited aspects of social connectedness, such as social support. This paper develops a comprehensive theory of the relationship between social networks and subjective wellbeing, with the latter concept defined in terms of cognitive (life satisfaction) and affective (happiness) evaluations of one’s own life. The theoretical framework defines social networks precisely, specifies different mechanisms for positive and negative network effects and also attempts to account for mechanisms and selection processes whose omission some critics argue undermines much previous social networks research. We examine this theoretical model empirically using data from a new national Australian survey currently being undertaken that is specifically designed to investigate social networks and subjective wellbeing. In the paper we describe our theoretical framework and the cross-national comparative project we are undertaking on the relationship between social networks and subjective wellbeing in Australia, China and the United Kingdom. We then present early results from the Australian survey, including measurement models of key scales and constructs, and substantive models examining some of the central relationships posited by the theory.

Alternative Lifestyles in Growth-Critical Societies – Conceptual Reflections on Social Movements

This paper attempts to give some conceptual reflections about the ongoing debate in social philosophy/social theory with regard to the conditions and the possibilities of an embodiment of the good and the right in sociological research. To look more closely and empirically to the outcomes of these debates, the focus lies on the conceptualization of lifestyles which are taken from different social movements/thoughts in Switzerland dealing with questions of (post-)growth (e.g. Decroissance), concerning these lifestyles for the actors it seems to be not so much whether or not the GDP is growing, but for them it is all about the rejection of growth as the dominant social imaginary (Castoriadis 1990, Latouche 2009) and instead of thinking about the design of alternative lifestyles. Two main themes will be presented:

(1) Social-theoretical focus: From the background of a discourse analytical approach the genealogy of growth will be examined and how this concept is treated in different movements. Besides the study of social and cultural practices, the (value) beliefs are primarily considered from an overall theoretical perspective. One main question is how individuals and communities are capable to make experiences of resonance in times of growth-critical societies.

(2) Empirical focus: Some hints can be given concerning the (sometimes disparate) designs or experimental lifestyles that are compatible with the requirements of a post-growth society. The central intuition here is that a successful life management depends not only on ethical and aesthetic ideas of a singular individual, but includes as well moral and political justice considerations (Sandel 1995, Nussbaum 2010).

Higher Response Rates - at What Price? Effects of Different Strategies to Increase Participation By Motivating (Un)Motivated Participants

Different approaches – e.g. normative explanations, rational choice models or social exchange frameworks – have been used to explain motives on survey participation. This paper deals with one of them, the rational choice theory. However, both commitment (e.g. triggered by appeals to attend to social norms (Misra et al., 2011)) and consideration of benefit/cost ratio (e.g. positively influenced by incentives) are regarded as decisive for survey participation – at least for the initial items. These strategies may result in higher response rates but also in satisfying “Instead of generating the most accurate answer, respondents settle for merely satisfactory ones” (Krosnick, 1999). Consequently, the longer a survey takes to finish “No-Opinion-Responses” (ibid) but also “Non-Responses” are expected to be more likely and both may affect data quality.

The central issue of this paper is to examine the effect of different motivating strategies on referrals to answer. For this reason experimental arrangements were included in a survey dealing with student participation at university. The survey population was randomly divided into several groups. The information provided to each group differed concerning the presence and combination of the following “triggers”:

i) the possibility to make profits (incentives),
ii) appeals to social conscience (commitment) and
iii) information on duration and progress (related to effort/burden).

Additionally the answer categories of several questions varied with regard to including a “No-Opinion-Option” to control for satisfying. Finally, pros and cons of the presented “manipulations” in order to gain higher response rates will be discussed.

WETZELHÜTTER, DANIELA* (Johannes Kepler University, danielia.wetzelhuetter@ku.at)

"I Haven't Got a Clue!?” Do Clueless Respondents Affect Data Quality through Response Behaviour?

Several papers are dealing with the effect of different numbers of response categories (e.g. Preston & Colman; 2000; Lai et al: 2010). However, irrespective
of the number of categories it can be assumed that respondents are facing difficulties in answering questions if they do not already have an opinion for the topic. If a “don’t-know-option” is offered the participant might tend to choose it even if it were possible for him or her to form an opinion. This is “making survey researchers reluctant to offer this option unless absolutely necessary” (DeRouvray & Cooper, 2002). However, if the “DK-option” is missing, respondents may skip the question and increase items missing. Offering a middle category in rating scales may even enlarge biases if perceived as “neither-nor-option”. In this connection personal characteristics and the type of question (e.g. opinion, attitude or behaviour) are expected to influence corresponding ad hoc decisions.

According to these considerations, the paper
i) focuses on the effect of different numbers of categories in combination with “don’t-know-options” on missing values;
ii) takes several question types into account and
iii) considers effects of personal characteristics on scale quality.

The results are based on methodical experiments included in three online surveys in Austria and Germany.

WHITE, THERESA* (California State University, Northridge, theresa.white@csun.edu)
The Racial Divide? African American College Students: Mitigating Digital Visual Culture

The most important development in terms of Internet users between 2000 and 2005 was the radical increase in the number of women, ethnic and racial minorities online. In the early years of the Internet's massification, cyberculture scholars discussed online with only marginal references to online media produced by African Americans, Asians and Latinos, instead focusing on representations of racial and ethnic minorities produced for consumption by white users and audiences (Nakamura, 2002).

Notably, social media, such as Facebook and Twitter, are platforms of web and mobile-based technology that enable consumers to turn communication into interactive conversation, much of which is widely consumed by college students today. Demographic studies on Internet use emphasize African American's position as consumers. But surveys of access, race and the “digital divide” that fail to measure digital production in favor of measuring access or consumption, cannot tell the whole story. This suggests that minorities are more or less successful consumers of a commodity rather than producers or active audiences. But how might African American college students use the Internet and mobile technology as sites of resistance?

This study will visually document the level of Internet/social media usage, the propensity and style of Internet user-created content, as well as its effect on cultural and social capital for African American college students. The project will gather visual data (videotaped interviews, focus groups and cyberspace photo mapping) on students who are engaging in content creation (e.g., developing Web sites, posting music, images and videos, managing and contributing to Listserves, or adding content to other textual sites). The study will demonstrate how these students are not only active consumers of the Internet, but also Internet content producers and creators.

Australian Fathers' Use of Leave for Parenting: Changing Patterns and Policy Implications

In the absence of policy measures widely-recognized as conducive to fathers' parental leave-taking, such as well-remunerated and non-transferable leave arrangements, a relatively low proportion of Australian fathers (around 30%) use paid paternity or parental leave, although around half take some paid annual leave in association with the birth of a child. These figures suggest persistent barriers to more gender egalitarian divisions of parenting and raise questions over the pace of change in Australia. Using survey and interview data collected over the past three years we examine fathers' leave usage in detail, analyzing the factors that influence leave uptake and duration and seeking evidence of changes in patterns of use. Change might be expected in part as a reflection of evolving expectations and behaviors associated with increases in the labour force engagement of mothers and/or as a result of a greater awareness and legitimacy of parental leave stimulated by recent policy initiatives. Our surveys suggest a complex picture in which the overall duration of leave taken by fathers increased somewhat in recent years, although the duration of leave specifically designated as 'paid paternity leave' decreased. We test these results for consistency when controlling for sample differences. The data also illustrate different patterns of leave usage among fathers, with a significant group taking leave for parenting purposes after their child was six months old. We use interview data with mothers and fathers to probe further into influences on fathers' use of leave arrangements around the birth of a child. Overall our analysis provides an assessment of changing patterns of leave usage by Australian fathers over a period of policy innovation, as well as a more nuanced picture of fathers' leave usage to inform future policy development in the interests of more gender egalitarian family outcomes.

Parenthood and Career Mobility: Implications of Transitions to Part-Time Work Among Australian Mothers

One of the main strategies adopted by Australian mothers to minimise work-life interference is to work part-time hours. The prevalence of this working pattern in Australia underlines contradictions between gender equality and care and raises questions about the contrasting possibilities for career retention and advancement associated with the transition to part-time work, particularly in the context of austerity pressures. In this study we examine the employment patterns of Australian mothers and assess the career implications of transitions made on return to work. Our analysis draws on data from the first two waves of a longitudinal survey of Australian mothers who had given birth to a child in 2010 (Wave 1, n=4,201;Wave 2, n=3,487).

Our basis for our analysis we map employment trajectories among these women, illustrating the prevalence of transitions from full-time to part-time work: 77% of those who had returned to work in Wave 2 of the survey were working part-time, and among those who had been working full-time prior to the birth of their child, 75% returned part-time. We use multivariate models to examine the impact of these and other transitions on indicators of career mobility, utilising changes in hourly earnings and occupational mobility as objective measures and responses to a question on perceptions of career prospects as a subjective measure.

Our analysis identifies some risks associated with the transition to part-time for example, around 40% of mothers making this transitional attempt that their career opportunities had declined compared with only around 20% of those who maintained their pre-birth working-time status. Our models explore the complex relationships between these and other potential influences on career mobility, including the type and duration of parental leave taken. The analysis establishes a baseline from which longer-term effects may be examined and the contradictions of the Australian context explored.

WHITTAKER, ANDREA* (Monash University, andrea.whittaker@monash.edu)

From intimate industry to rotten trade: reproductive travel in Southeast Asia

Intimate processes of conception and reproduction have become increasingly global in expectation and practice. They have become the focus of a new form of global commercialized reproductive travel, often termed ‘reproductive tourism’ whereby people travel to seek reproductive health services in other countries. This can involve the movement of patients, but also of service providers, ova donors and surrogates, as well as ova or embryos across the region. In this paper I concentrate upon the intimate industry of cross border IVF involving the movement and in some cases trafficking of women for reproductive services. The social and medical benefits in many parts of the region compromise attempts at ‘regulation’ of the trade. Examples of the internet advertising for Thai surrogates and testimonials of commissioning parents illustrate the ways in which Thai surrogates are marketed and constructed as willing and available to service the needs of foreigners. Implicit presumptions of race privilege are woven through exchanges between foreign and Thai often glossed within the discourse of ‘Asian service values’. In parallel to the legal circulation of these bodily commodities has arisen an unregulated market, a ‘rotten trade’, in which ‘bioavailable’ women and their body parts are trafficked to feed the demand for their reproductive capacities.
How should intergenerational inequality be explained? A common idea is that parents transfer resources to their children and that parental investments influence their children’s attainments. Most studies have emphasized the effects of parental investments in education. It is easier for parents to directly influence their children’s attainment of education than their success in the labor market. Therefore early parental investments are considered to have the largest impact on their children’s life chances. This is not the case for wealth transfers between generations. Wealth may be easily transferred during the whole life course, and in many cases transferred quite late in life.

In this paper, we measure intergenerational inequality through the life course using sibling correlations. A sibling correlation provides an omnibus measure of family background and neighborhood influences, a measure that includes both observable and unobservable characteristics. There are no prior studies to our knowledge that assess life course changes in sibling correlations using wealth as measurement.

Following recent theoretical developments, we explore the consequences of different parental investment strategies. Put simply, one strategy is that parents make equal investments in their children, something that leads to the expectation that sibling correlations in wealth should decrease over the life course. If, however, the parents seek to compensate for initial differences in talents and attainments among siblings, by transferring most to the least successful sibling, we expect an opposite trend. We discuss how these patterns may be influenced by children’s labor market success and savings, and by variations in parental strategies in different socioeconomic layers.

We use register data from Norway for brothers and sisters born 1955-1960, tracked annually 1993-2010. Our measures include earnings and capital income, as well as two measures of wealth (net and gross wealth). We also take into account sibling differences in education.

Increasing immigration poses a serious challenge for many countries. Empirical studies from around the world indicate that immigration and increasing diversity increase in social cohesion and increases in social withdrawal, particularly in disadvantaged areas. Less understood, however, are the mechanisms that explain these relationships. We contend that these associations are at least in part due to two key factors: how residents perceive the neighborhood composition and how these perceptions influence residents’ own social identity. Further we suggest that these relationships will differ in cities with different immigration histories. In this paper we integrate census data and the Australian Community Capacity Study survey data from approximately 10,000 residents from different immigrant groups from different areas.

Acknowledging the importance of social networks for explaining civic behaviour, I pay particular attention to the influence of various layers of social context. More specifically, I look at the impact of personal networks (the characteristics of partners, parents and friends), local living environments (the affluence and ethnic diversity of neighbourhoods and municipalities), and the ethnic composition of voluntary associations. Finally, I contrast the observed associational involvement patterns for different immigrant groups with their engagement in informal volunteering.

Studying the mobility of cross-border commuters, the mobility of cross-border commuters residing in the regions of the Czech Republic, Slovakia and Hungary bordering on Austria. This European core region has a long history of cross-border mobility and social exchange, from Habsburg Monarchy to post-war period and after 1989. Several years after the fall of the Iron Curtain a process of European re-integration began which led to the accession of post-socialist countries into the EU. However, substantial social inequalities between Central European countries still exist in terms of wages and unemployment. Cross-border mobility on an emerging transnational labor market therefore can be seen as an “individual response” to massive transformations in this region.

In the Dandenong Mountains near Melbourne, Australia, a small community has taken up a prolonged battle with a multi-national fast food giant. The battle is a symbolic one as much as it is about a capital and a building site. The picket line, the on-line world, the legal system and mass media are the different fronts of the battle, providing multiple sites for experiences of political engagement, confronting ideas about political issues, power inequalities, social justice and the role of the state.

In facing an unequal word, one of the challenges for global sociology is about creating the conditions where the systemic drivers of injustice can be recognised. Analysing material from the campaign’s social media pages, this paper identifies critical moments where activist sensibilities are awakened and identified, within, despite, and beyond. It shows how the patterns of fear and anger, humour and hope can be heightened when elements of difference in power, class, gender and generation are named and mobilised as resources.
ed in 2012 (N=2,550). Our results show that human and social capital resources serve as key factors for job finding strategies and successful labor market inte-
gration. There are also substantial gender differences and differences related to previous occupational status and migration experience within the group under study. Overall, our results reflect cross-border commuting as a renewed form of social practice in this European core region, which may reduce structural inequalities between Central European countries in the mid-run.

ADH-994.2

WIEVORKA, MICHEL* (Fond Maison des Sciences de l'Homme, wiev@msh-paris.fr)
The Limits Of Multiculturalism

1. Multiculturalism and transnationalism are concepts that belong to the present historical era. They have been produced in western countries, and are used often, with a deep unconscious ethnocentrism. Aren't they part of the intellectual hegemony of the west, and in the same time, maybe, of its decline?

2. There is in some parts of the world at least a feeling that multiculturalism, if not a failure, is at least in a difficult situation, and there are important criticisms of the idea of transnationalism.

3. The political concrete limits of multiculturalism are connected with the rising importance of globalization, including transnational phenomena. But globalization does not necessarily mean the decline or the crisis of the Nation and/or the State, which is the natural framework for multiculturalist policies and institutions. And the limits of transnationalism are given by States that still control borders, deliver passports, authorisations for transit, visas, etc. If societies are not entering in an era where multiculturalism and transnationalism are stronger and stronger, how will they deal with cultural differences, on the one hand, and with identities and practises that are not limited to one national state?

From Web Surveys to Online, Multi-Device Surveys

Untimely mobile survey completion rates have risen largely in the past couple of years, with around 7% of the online respondents attempting to access surveys using tablets and 2% using smartphones (USS panel, June 2013). While these rates are expected to continue to grow, the question arises whether one can speak of traditional web panels as we know them anymore. Especially the tablet user group has become too large to ignore anymore. While regular web surveys can be accessed via mobile browsers, this can be burdensome if the layout has not been adapted. To avoid coverage, nonresponse and measurement error, new strategies are needed for offering web surveys which can be properly accessed by the most common online devices.

We present the strategy for the Dutch LISS panel to develop from a web panel towards a true multi-platform compatibility to the different online respondent groups. We start with presenting the latest rates of unintended mobile response in online panels and provide a profile of the mobile respondent. We discuss the advantages and disadvantages of different multi-platform approaches and report the latest experimental findings from the field.

WILKESMANN, UWE* (TU Dortmund University, uwe.wilkemann@tu-dortmund.de)
Which Form of Organizational Governance Supports Freedom of Teaching and Increases Their Perception of Relevance? Empirical Evidence from Two Types of Higher Education Institutions

New Public Management caused an "economic turn" in universities to managerial governance. The leadership literature distinguishes two modes of governance, which can also be applied to the governance of universities: transactional and transformational modes of governance. Transformational governance encompasses all forms of managerial governance, which includes providing incentives and monitoring capacity. The theoretical underpinning of this mode can be found in Principal-Agent Theory which is the theoretical underpinning of New Public Management. Whereas transformational governance covers, on the one hand, the means of structuring the roles of principals and agents or the interaction situation in the organization, on the other hand, it also addresses all the means of restructuring the relationship between perceived environment and motivation, as can be seen in Self-Determination Theory. Other elements of transformational governance are social norms as such as those that inform the quality of research or approaches to teaching. As a result, the main research question is: What has more impact on professors’ perceptions of the significance attributed to academic teaching in Germany – transactional or transformational governance? Two hypotheses for transactional and two hypotheses for transformational governance are formulated. The research was conducted with the help of two quantitative surveys, one conducted in 2009 with a sample of 1,119 German research university professors and another conducted in 2011 with a sample of 942 German professors from universities of applied sciences. The main findings are that transactional governance has no impact on the perception of the significance attributed to academic teaching whereas transformational governance has ample influence. Under the bottom line, economic instruments could produce not intended effects but without an increase of the perceived relevance of teaching.

WILKINSON, LORI* (University of Manitoba, lori.wilkinson@ad.umanitoba.ca)
A Longitudinal Examination of the Intersections of Ethnicity and Sex and Their Influence on Perceived Racism Among Newcomer Youth in Canada

Perceptions of racism and discrimination are powerful forces influencing social cohesion of members of any society. Real or not, those holding a perception that they are victimized by discrimination feel marginalized and ostracized socially and may experience the instrumental forms of discrimination in various aspects of their lives, including careers, access to education and health care and others. The consequences of the belief that racism affects life chances mean that many people are unable to achieve their potential in employment, school, and health. This has a significant impact on their feeling of belonging. This paper uses data from a longitudinal national study of newcomer youth in Canada to examine the extent and factors influencing perceptions of discrimination. We follow nearly 4200 11 to 17 year old newcomer youth over 8 years on a variety of different topics. The data analysis technique involves a multivariate analysis of the changes in perceptions of dis-
crimination and the factors involved in perceived discrimination and changes in this perception over the eight year study period. The main control variables are sex and place of birth. Findings indicate that female newcomer youth are signifi-
cantly more likely to feel marginalized than their male counterparts regardless of their place of birth. Other factors influencing perceived discrimination include education and school income, the impact of the employment of the main between parents’ pre-arrival educa-
tion and post-arrival employment. These findings have significant influence over the sense of belonging in Canadian society among immigrant and refugee born youth and are interpreted through a lens of intersectional and identity theories. The presentation concludes with a discussion of policy and practical implications.
Economic Democracy in South Africa: Women at the Grassroots

In this paper we explore the ways in which women are creating spaces for economic and political participation in South Africa. The post-apartheid South African Constitution has been hailed as one of the most progressive constitutions in the world with its entitlement of socio-economic rights and recognition of equality along various cleavages such as gender, race, and sexual orientation. There are myriad policies and legislation entrenching women's rights. Despite the constitutional policy environment, the state has not created spaces for women's engagement at local levels. Nevertheless, women are creating their own spaces of political and economic participation, linking up with the state when and where it is possible, and forging ahead when it is not possible to link with the state. In this paper, we look at a township north of Johannesburg and a rural area in the Eastern Cape to see the ways in which are creating and engaging economic production within their communities. Are these simply survival strategies or do they represent an emergent alternative that is rooted in economic equality and social justice? Are they practicing economic democracy? What role has the state played in this process?

Rescaled Citizenships and Vernacular Cosmopolitanism in Sydney, Australia

In the Australian context, notions of cosmopolitanism have had less airtime than the nationally sponsored program of multiculturalism. Cosmopolitanism has emerged in academic theories of living together with difference, as well as in the realm of urban governance, where it is strategically employed as a place marketing technique, for example, in marketing Sydney as a multi-ethnic, globally competitive city. Academic theories of vernacular cosmopolitanism have been used to analyse forms of quotidian engagement across ethnic difference in Australian society, and are usually synonymous with notions of 'everyday multiculturality' (Velayutham and Wise, 2009). However, these theories have been less explicit about how such everyday, intercultural exchange might be part of a rescaling of belonging for migrant residents, and as how this might impact on the state. In this paper, I suggest drawing on notions of urban citizenship (Holston and Appadurai, 1996) as a form of post-national or sub-national belonging to scale up the potential implicit in quotidian modes of cosmopolitanism. Urban citizenship – as a set of substantive rights relating to residence in the city – enables a more explicit framework for thinking about how everyday practices of urban dwelling might complicate the dominant scaling of belonging at the level of the nation-state. The paper draws on qualitative research in two multi-ethnic neighbourhoods in Sydney, Australia to explore localized belonging amongst migrant communities and emergent forms of urban citizenship that destabilize dominant narratives of national belonging. The paper argues that urban citizenship as a form of post-nationalism can complement and augment the potentiality of everyday cosmopolitanism which is easily appropriated by the state and commercial interests. Also, arguments about emergent urban citizenship should draw on ethno-nationally understanding of ordinary cosmopolitanism to better understand the multiple ways migrants negotiate identity and socio-spatial belonging in urban settings.

Cosmopolitan Spaces in Non-Cosmopolitan Places

Encounters are an important part of the texture and form of social life, in a global world where opportunities for people to foster positive cosmopolitan outcomes are increasingly visible and accessible. The concept of cosmopolitan encounters offers a grounded way to understand the everyday dimensions of cosmopolitanism through considering certain practices and performances that people draw upon to negotiate situations of diversity. Questions of the spatiality, configurations and locations of where encounters take place, in both likely and unlikely places, are also central to understanding how cosmopolitanism may emerge and flourish, or falter, fade and fail. But while places can serve as a vector of cosmopolitan possibility, the distinction between ‘place’ and ‘space’ is also important.

Drawing on empirical, qualitative research as part of a three-year project into cosmopolitan encounters, our paper argues that both cosmopolitan and ‘unlikely’, micro-cosmopolitan spaces can co-exist and co-support each other. Our research sites include urban, regional and rural locations across Australia. Across these sites, our research employs observation and interviews with a broad range of respondents, clinical experts, third-sector charities and policy makers have sought to develop an infrastructure to increase the public collection of immunologically diverse umbilical cord stem cells (Brown et al 2011).

As such, we are witnessing the novel intersection of clinicians, charitable bodies, patient advocacy organisations and private enterprise. These stakeholders come together in parliamentary meetings to discuss barriers to development, produce policy documentation (APPSSCT 2012, UKSCSF 2010) and foster further dialogue.

As has been noted by Emerson et al (2012), such a model of collaborative governance facilitates discourse between parties seemingly separated by impenetrable boundaries of profession and politics. This paper explores the means through which expertise and interest are brought together toward opening policy discussion to a wider field of stakeholders. In this way, it is a case study of an emerging collaborative governance model that hopes to add to this burgeoning area of interdisciplinary theoretical development and practice.

The presented data, including interviews with stakeholders and observation of parliamentary meetings, also investigates the manner through which a recognised ethnicity-based health inequity can be strategically deployed for specifically professional, political or civic interests; that is, how socially charged notions of race and ethnicity can be mobilised toward potentially beneficent ends (St Louis 2010; Benjamin 2013). Finally, the paper also brings into relief the tenuous position of the “expert” within a widening forum of stakeholders.

Practicing Women’s Agency: Women’s Participation in Local Spaces in South Africa and Kerala

In this paper we look at the conditions for and effects of increased participation of women in political spaces in Kerala, India and South Africa. In both places, women enjoy supportive policy environments, yet patriarchal gender norms continue to limit women’s agency. Drawing on interviews of two communities in Kerala and two communities in South Africa, we show that despite the conducive policy context, women face various challenges in practicing their agency and citizenship.

Based on empirical research in four localities inhabited by economically and politically marginal populations (a Johannesburg township and rural Eastern Cape in South Africa and a Trivandrum slum and a fishing village in Kerala), we show that women’s participation is influenced by electoral dynamics and party politics; the relations and networks that women are part of both collectively and individually; the intersectionality of gender with other social structures based on caste, class, and race; and relations in the wider political economy including changing market relations as a consequence of globalisation. Kerala (as well as India at large) has targeted women directly in policies aimed at increasing the participation of women in political spaces in Kerala, India and South Africa. In both places, we show that despite the conducive policy context, women face various challenges in practicing their agency and citizenship.

of Australians to shed light on various ‘spaces’ of cosmopolitanism that provide the opportunity for cosmopolitan encounters. Rather than revealing a linear pathway to a final, utopian cosmopolitan destination, we highlight various gradations of opportunities enabled by certain spaces, and in a range of places, that may or may not nurture the seeds of cosmopolitanism to their full potential or permanency. We conclude with recommendations for deeper understandings of the relationship between space, place and performance into what constitutes cosmopolitan encounters. We then propose particular research strategies for uncovering cosmopolitan encounters, and highlight unlikely contexts worthy of investigation in future research.

*Fitness As Leisure - Exploring Physical Activity through Consumption and Lifestyle*

Drawing on the discussion on the commercialization of the fitness culture, this study examines fitness as a leisure activity. Fitness is prominent both in media and consumer culture, and it plays an important role in individuals’ everyday life as everyone is surrounded by the social world of the fitness culture, its meanings and signals. Fitness activities are practiced in numerous ways and due to various reasons. Also the fundamental aims of the activities have changed; they have become commodities of the leisure industry.

The core of leisure is in the production of value, and it can thus be associated either with freedom from work and responsibility, or as freedom for self-produccation. Fitness is understood in relation to both health and appearance, which have become central not only to the social order, but also to individuals’ occupational success and social status. Fitness has both instrumental and non-instrumental value, but the rationale for fitness is still instrumental; fitness is seen as an investment in the body’s physical capital.

This study takes a quantitative approach to examining how consumption and lifestyle are related to the motives for physical activity. The data is derived from The National Student Health Survey (n=4403) conducted in Finland in 2012. The results revealed three consumption styles/lifestyles: hedonistic, healthy and sustainable. Moreover, four main motives for physical activity were found: sociability, health, self-appreciation and self-actualization, which all correlate with the appreciation of well-being emphasizing different aspects. Hedonistic lifestyle correlated with all fitness motives, the strongest relation being with the motive of appearance. Also healthy lifestyle was related to all fitness motives, emphasizing the motives of sociability, health, and the most sustainable lifestyle, on the contrary, had no correlation with any other fitness motive than health, even having a slightly negative correlation with the motive of appearance.

WILSON, ANDREW* (George Mason University, awilso25@masonlive.gmu.edu)

*Glorious Mission: Social Media, Video Games, and Propaganda*

Governments and social movements have long used information technology to promote their causes. In the past books, songs, radio, and television where used to persuade people that political and social actions were necessary. With the growth of information and communication technologies there are now new media that can be used for propaganda and persuasion. Technology such as Twitter, Facebook, and Video Games have emerged in the past decade as growing forces in protest movements and government propaganda.

This paper will discuss how new technologies have been used for purposes of propaganda around a number of political issues in Asia. Analysis is based on content review of Twitter archives, online newspapers, blogs, and Video Games associated with political issues in East Asia. The issues to be addressed will include territorial disputes such as the Dokdo/Takeshima islands, North and South Korea, and the Telegram censorship. Results suggest that governments in East Asia have been quick to recognize the propaganda power of new media and have quickly organized to provide a government perspective on ongoing disputes. Protest movements may have had an initial advantage in recognizing the power of new technologies and new media, but government quickly responded to remove or restrict the tactical advantage they had. Even though new information technologies have become common the issues of public discourse and propaganda remain fundamentally the same. Propaganda through Twitter and Video Games has the same motivation as in the past, but presented using current and emerging technology.

*Managing Risk in a Complex Food System: The Importance of Inter-Personal, Professional and Organisational Trust*

A challenge of managing food safety risk is the multi-sectoral nature of the complex system set out to do so, with responsibilities lying with expert actors from both food industry and food regulation. Amidst this complexity, a unified message must be conveyed to consumers so that food risks are managed. This paper presents research conducted to navigate this complex system. We investigated the role of expert actors from the food regulatory and food industry settings in developing/breaking/repairing/maintaining trust with consumers about food. Qualitative interviews were undertaken in Australia (n=30), the United Kingdom (n=15) and New Zealand (n=5). Respondents identified that risk management, including increased consumer trust, could only be established if trust existed within and across the expert actors. As such the nature of the trust between actors became central to the research. Inter-personal, professional and organisational trust between these actors was observed. Interpersonal trust and relationships were developed between actors through transparency, good communication and regular phone and face to face informal meetings. Organisational trust was built through meetings and through documents such as memorandums of understanding and regular, formal meetings. Professional trust was particularly apparent between actors within the regulatory and industry systems who both had responsibilities for managing food risk. Some actors indicated that they did not understand the perspective of the other system, because of the different processes and systems in which they worked. Despite this, each system had a common goal (to avoid foodborne illness). When this common goal was recognised by industry and regulatory actors, stronger trust was formed which enabled a unified message to be communicated to consumers. Therefore one way to manage the complexity of the food regulatory system, and ultimately better manage food risks, is to develop inter-personal, professional and organisational trust between expert actors in the food system.

*Does Newsworthiness Influence Construction of Food Risk? Views of Media Actors*

In modern society, many risks are invisible and are brought to the attention of the public through the mass media. This is particularly relevant for food, where the widening gap between producers and consumers in the developed world has increased the need for consumer trust. Therefore the media play a crucial role in how food risk is constructed and presented to the public. It is pertinent to gain an understanding of the construction of food risk as this is likely to influence consumer trust in food. This paper presents empirical data from research investigating how the media construct food risk and ultimately affect consumer trust across three countries: Australia, the United Kingdom (UK) and New Zealand (NZ). Interviews were undertaken with media actors from each country including 20 from Australia, 10 from the UK and three from NZ. First, our findings identify that newsworthiness is important when constructing a story about food risk. This followed a hierarchy, with risks affecting children and babies perceived as the most newsworthy. Second, risk reporting follows a cycle with precedence given to the dissemination of any information about the risk, regardless of the severity of the risk to public health and safety. This is followed by tempering of the risk, coverage of new angles to keep the story going and seeking to uncover the ‘truth’ such as the source of contamination that led to the food incident. Third, working conditions of media actors, including limited time, limited space and short deadlines were found to diminish the ability to report a balanced story, hence adding to newsworthiness and augmenting construction of risk. Our findings indicate that the construction of food risk by the media is influenced by newsworthiness and this is likely to impact the ways in which consumers regard the food risk presented.

A Walk through Memory: Urban Interventions and the Sensual Battle Against Oblivion

In the years following the Latin American military dictatorships of the 1970s and 1980s, historians and activists noticed a disappearance of documentary evidence that paralleled the disappearances of human beings. Decades of activism by the Mothers and Grandmothers of the Plaza de Mayo, human rights groups, and political organizations that value human rights, has fueled an archive of memory: an ongoing city-wide network of projects and museums dedicated to remembering the Dirty War years throughout Buenos Aires.

This paper explores the roles of mural art and street flagstones in the production and reception of two post-conflict memory projects in Buenos Aires. The Olimpo murals for the La Forens de la Memoria y Justicia collective and the Barrios x Memoria y Justicia collective began as an ongoing endeavor to replace parts of sidewalks with small, colorful plaques, in front of places where victims of state terrorism were born, lived or were kidnapped.

We consider two-decades of historical data reflecting the struggles to establish memory projects that bring into conflict state authorities, human rights organizations, neighborhood groups and university students. These concrete visual reminders of state-sponsored violence are both memorials and fuel for the battle against forgetting and/or rewriting history.

The Origin of the World: Analysis, Representation and Performance

This paper focuses on an artistic experiment or performance, ‘The Origin of the World’, in which over a two year period, 50 male artists were provided with instructions, paper and instructions quickly to draw a vagina (only) with no human or other model. 20 of the drawings were later re-presented in a video in which the drawings slowly morph together and apart consecutively to music. Later, the drawings and video were exhibited in a university space. This paper explores this process and these data from a methodological perspective, discussing their potential as both representation and performance. First, the drawings were analysed interpretatively in relation to Lacanian psychoanalytic theory and feminist critiques of the same. This analysis highlighted the notable lack of consensus in the shapes produced, the extent to which the artists stuck to or deviated from the instructions given, and the clues they provided as to the artists’ responses to the exercise (anxiety? disgust? humour?). This work raised further questions as to the nature of the data analysed and the potential contribution to such analysis of interviews exploring the artists’ perspectives on the exercise, its distance from their habitual artistic practice and perhaps their own gender/sexual identities. However these data are also performative (Law 2009) in that they enact multiplicities, thereby interrogating categorisations and, in more general terms, illustrate the potential of such methods and data to provide an opening to the uncertain and less defined. Further the video itself constitutes an interpretation and interrogation of the artefacts, as well as an expanded argument to those artists’ responses to the exercise (anxiety? disgust? humour?).

This paper attempts to contribute to both the discussion of Mertonian unintended consequences of social action as largely undesirable and non-institutional.

WINTER, BRONWYN* (The University of Sydney, bronwyn.winter@sydney.edu.au)

Trends in Wealth Inequality

Nico Wilterdink: Trends in Wealth Inequality

This paper will present new estimates of inequality in household wealth in the Netherlands 1993-2011. Changes in this recent period will be connected with long-term trends in Dutch wealth inequality (from around 1900), which will be compared to trends in other Western countries. Preliminary findings are: there has been an overall tendency of partial collectivization (a shift from personal to collective wealth) and diminishing wealth inequality in the Netherlands and other Western countries during the greater part of the twentieth century, followed by a tendency of decollectivization and growing inequality since the 1980s. The latter trend will be explained by connecting it with processes of deindustrialization, globalization and politico-institutional change. The paper will give special attention to recent changes under the impact of the financial crisis, and discuss the question to what extent national government policy can be used to modify wealth inequality.

Legal Costs Insurance (LCI) – an Attempt at Comparative Analysis

Legal aid systems are best conceptualised as complex entities, comprising different institutional and non-institutional mechanisms enabling the individual to obtain legal advice. In this perspective, commercial, public-subsidized, pro bono or prepaid legal services are all one method of providing access to legal advice, just capitalising on different resources. The same can be said about private/informal mechanisms of dispute resolution, self-help, and unbundled legal services. Yet another widely-recognized mechanism for providing legal aid is legal costs insurance (LCI). Despite relative prevalence of this channel of access to legal advice in some countries (such as Germany, Netherlands or Austria), legal aid literature (with some notable exceptions) does not devote much attention to LCI. In particular, it by and large neglects the interactions between the LCI as a channel of access to legal aid and other types of provisioning such services. Not much is also known about the institutional and cultural conditions of establishment of LCI systems.

This paper aims to contribute to filling this gap. It undertakes an attempt to answer the question of the factors driving emergence, prevalence and stability of legal costs insurance and the interaction it enters with other channels of provisioning of legal aid. To this end, the paper does two things. First, it analyses the historical literature in the search for theoretical explanations of said phenomena. Second, it juxtaposes theoretical explanations with the outcomes of an comparative study of LCI in Europe, utilising existing data on LCI, legal systems, disputing behaviour as well as values and culture.

WINCZOREK, JAN* (University of Warsaw, janwin@janwin.info)

Why Do Procedures Have Unexpected Outcomes?

According to a famous statement by Adam Przeworski, the difference between democracy and dictatorship lies in the fact that in a democracy the content of a political decision cannot be known in advance: democracy, not dictatorship, institutionalizes uncertainty. Sociology has largely ignored the institutionalized uncertainty thesis that follows from this observation. In particular, one has to be careful not to confuse Przeworski’s argument with that of Robert Merton, which has animated the sociological discussion about unintended consequences for decades. Merton argued, famously, that important factors exist, which may keep the outcomes of action from the sight of the acting party, yet he perceived unintended consequences of action as largely undesirable and non-institutional.

This paper attempts to contribute to both the discussion of Mertonian unintended consequences and to the developing of a legal sociology of institutionalised uncertainty. Sociology and psychology of law, it is argued that procedures do not provide individuals with the means to anticipate the outcomes of their actions; instead, they provide a framework of possible courses of action. The paper attempts to contribute to both the discussion of Mertonian unintended consequences and to the developing of a legal sociology of institutionalised uncertainty. Sociology and psychology of law, it is argued that procedures do not provide individuals with the means to anticipate the outcomes of their actions; instead, they provide a framework of possible courses of action. The paper attempts to contribute to both the discussion of Mertonian unintended consequences and to the developing of a legal sociology of institutionalised uncertainty.

The paper has been published in Mica, Peisert, Winczorek (eds), Sociology and the Unintended. Robert Merton Revisited, Peter Lang 2012.

JS-59.6

WINTER, BRONWYN* (The University of Sydney, bronwyn.winter@sydney.edu.au)

(In)Visible and (im)Mobile : Lesbians, Exile and Global LGBT and Womens’ Rights Movements

In a world that is supposedly more and more mobile and in which globalised LGBT rights claims are now firmly on the UN and many national agendas, lesbians often remain, paradoxically, invisibilised and immobilised—but to varying degrees. This paper will consider this paradox with reference to the issue of political asylum.
On one hand, social movements campaigning nationally, transnationally and internationally for both women's and LGBT human rights have facilitated access to asylum, mostly in Western countries, for lesbians from the many countries where homosexuality remains illegal (76 countries), or where the state fails to protect homosexuals from abuse, despite decriminalisation (another 60-70 countries). The European Union, for example, now explicitly includes references to the specificities of LGBT experience and needs in its new standardised asylum procedure.

On the other hand, continued cultural taboos and in some cases political backlash have, in many countries, maintained or even exacerbated the isolation of lesbians, depriving them of easy access to global LGBT rights networks (including the very important online networks that have proliferated over the last decade, but which frequently continue to privilege gay men). Moreover, the significantly lower levels of financial and cultural autonomy for women in many countries have meant that access to escape routes is much more limited than for men—a problem that lesbians share with heterosexual women but can be even worse in their case. Yet, access of lesbians to asylum presents as one of the world's most urgent human rights issues, as almost without exception, lesbians seeking asylum have suffered multiple forms of physical and psychological torture.

The paper will discuss the above issues with reference to the importance of transnational social movement activism and support that specifically addresses the situation of lesbians, as well as to case studies from France in particular.

"My Boss Is like Family" - A Singaporean Case Study of Race Relations at Work -- CANCELLED

A growing literature on race relations foregrounds cultural 'contact' in developing stronger intercultural understanding and forms of community that bridge differences (Amin 2002). The nature of this literature takes the actual site and social field of 'contact' as important in mediating difference. The workplace is a special kind of micro-public, where the rules and codes of contemporary working cultures interplay with collegial and hierarchical relationships, which in turn mediate inter-ethnic relationships. In addition media cultures and wider national structures and discourses can play an important role in creating expectations and encouraging forms of co-operation and intercultural relations.

This paper focuses on a case study of low and 'middling' workers in a multi-national firm based in Singapore. The case study is drawn from a larger comparative study of inter-ethnic relations in workplaces in Singapore and Sydney. Drawing on the work of Lamont & Akcakaya (2002) and others, the paper explores the discourses, scripts, rituals and practices (Noble 2009) workers engage to create or overcome boundaries of difference.

Employees in the case study multinational framed experiences of belonging and collegiality in familial terms, drawing on ideas of reciprocity, care, friendship and informal modes of recognition and care. Despite the actual differences of same and different backgrounds. Race and cultural difference was described by most as having little salience in everyday working life. Yet we argue that the quality of collegial intercultural relations at work does not necessarily translate into shifts in racialised hierarchies nor views about cultural and racial 'Others' more generally. Indeed, the use of ideas of family and informal modes of recognition and care actually reinforces and legitimised certain forms of vulnerability and discrimination. This is so especially in a context like Singapore which is a highly racialised society with a variegated system of temporary work visas where opportunities, rights, and conditions differentially distributed according to national origin and race.

WISSELGREN, PER* (Umeå University, per.wisselgren@soc.umu.se)
Alva Myrdal, Unesco, and Cold War International Social Science, 1951-1955

The paper is concerned with the international organizing of the social sciences during the early Cold War era. Empirically it is focused on UNESCO's Social Science Department (SSD) during Alva Myrdal's directorship, 1951-1955. The SSD was set up in 1946, as part of the wide family of intergovernmental organisations that emerged with the United Nations in the aftermath of the Second World War. When Alva Myrdal (1901-1986) became the Director of SSD, it has been suggested that she "set the department on its feet". But what difference did she actually make? What ideas, visions and hopes did Myrdal have regarding the SSD? How did she try to realise them? Which projects did she initiate during her time as director? Which issues lay closest to her heart? What did she oppose? How did she view her own role as Director of the SSD? With which people and organisations did she collaborate? By employing a STS-perspective and analyzing the everyday practices at the SSD during these five years, the paper intends to discuss the above mentioned questions in relation to the contemporary geopolitical setting.

Beyond Generic Urban Theory? Grand Narratives, Assemblages, and Urban Critique

In the late 1970s, in his well-known proclamation, Lyotard announced the end of grand narratives. Nonetheless, thirty years later, urban studies research remains strongly structured by a selection of generic storylines. Developed in specific—mostly Anglo-Saxon—settings, these narratives are used to interpret and critique urban developments in cities around the world. This paper questions the implicit relationship between the narratives of urban theory and urban realities. It argues that theories can play an important role as ‘sensitising devices’, but that they should be critically confronted in urban research. The paper underlines this argument with an analysis of the relevance of two grand narratives in two Asian cities: the ‘end of public space’ in Mumbai, and ‘spatialising urbanism’ in Bangkok. The analysis shows that both storylines are relevant, but in ways other than the theory suggests. A direct translation of theory to specific urban settings will therefore lead to mistaken interpretations and inadequate critique. Unfortunately, urban studies research rarely incorporates such a critical confrontation of urban theory. From this observation, the paper draws conclusions on the practice of urban research, the value of urban theory, and the possibility of urban critique.

WITTROCK, CHRISTIAN* (Aarhus University, chr@wittrock.dk)

A Typology and Analysis of "World-Changing Management Concepts": Beliefs, Unanticipated Consequences and Anomie

I develop criteria for and analyze consequences of what I call "world-changing management concepts" (WCMC), drawing on Lean, TQM, BPR, JIT and coaching. To qualify as a WCMC, the authors claim that the concept: 1) yields specific, predictable results if implemented correctly; 2) enables fundamental, groundbreaking changes leading to a superior competitive advantage for the organization, regardless of the context; 3) is a more humane form of management practice, making previous approaches obsolete, and 4) will change the world for the better. I.e. they are presented as grand theories. However, the knowledge content in these concepts is based on studies of distinct or disparate cases, industries, or cultures (e.g. the Automobile Industry in Japan), or they are based on ideas from other fields of practice (e.g. sports).

I draw on translation models (by Lilirank (1995) and Ravik (2007)) to show how treating management concepts as theories of the middle range, rather than grand theories (like WCMCs), is likely to greatly enhance the local translation of management concepts and reduce unanticipated consequences. I further show how the claims of WCMCs logically require changes to basic underlying assumptions in the organizational culture (Schein 2010). Such requirements create a situation where the culture is at odds with what employees are asked to do, potentially creating anomic (Merton 1968), and in a further sense creating a double bind for employees (Bateson et al 1996).

Although theoretical in scope, the presentation builds on ethnography from management consultancy.

Lean between Practices and Ideology: the diffusion of a "World-Changing Management Concept"

In my international review of quantitative studies of lean diffusion, surveys indicate recurrent problems with the implementation of lean: managers report that a "lean culture" is difficult to attain. Furthermore, positive outcomes are scientifically unsubstantiated (Freytag & Arlijbern 2011). Lean is an example of what I call a "World-Changing Management Concept," characterized by holding ideological ambitions to create a better world, while claiming that practices work regardless of the context; 3) is a more humane form of management practice, making previous approaches obsolete, and 4) will change the world for the better. I.e. they are presented as grand theories. However, the knowledge content in these concepts is based on studies of distinct or disparate cases, industries, or cultures (e.g. the Automobile Industry in Japan), or they are based on ideas from other fields of practice (e.g. sports).

I draw attention to the distinction between the adoption of a management idea as a practice and as an ideology (Guillen 1994). I then use Guillen’s neo-institutional...
al framework to show how lean draws heavily on practices and ideologies that do have a long standing in Japanese history, including ideologies of co-prosperity (Goto-Jones 2005). I show how institutional factors in the organization adopting lean will be decisive for whether lean will come across as Taylorism in disguise or something closer to the original ideological intentions. In keeping with my arguments, recent research on work environment issues in lean projects gives a mixed picture of consequences for employees (Edwards et al. eds. 2010).

Information Et Participation Politiques En Ligne: Inégalités Ou Fracture ?

Dans les recherches interrogeant les rapports entre politique et numérique, l'une des théses les plus discutées porte sur l'existence d'une "fracture civique" entre citoyens et technologiques de l'information, une fracture qui pourrait être à l'origine d'une fragmentation ou un désordre en termes d'information pertinente, dans un contexte de profusion, de flux informationnels démultipliés par les réseaux numériques. Autrement dit, les individus qui seraient déjà motivés et intéressés par les questions politiques bénéficieraient pleinement du web comme ressource d'information, mais ceux qui seraient peu motivés n'en tireraient pas réellement profit. Ce gain informationnel serait donc marginal. Cette fracture civique reposait sur l'inégalité répartition des compétences d'individus disposant de manière variable de capitaux culturels et cognitifs. A cette fracture, viennent s'ajouter d'autres théses sur la contribution des médias, de la segmentation, les thématiques numériques ou câblées et la personnalisation des contenus permettraient aux individus qui préfèrent le divertissement de profiter d'opportunités encore plus nombreuses de ne pas être exposés à l'actualité politique. Les technologies de l'information et de la communication apparaissent dès lors comme les auxiliaires du désengagement civique d'individus auxquels serait de plus en plus défaut un niveau même basique de connaissances politiques. Le caractère alarmiste de cette proposition a été récemment contredécoule par plusieurs récents travaux qui incitent notamment à appréhender de manière modérée l'intensité des effets de l'information en ligne sur les internautes certes en fonction de déterminants classiques (âge, sexe) mais aussi de leurs préférences à l'égard de certains types de dispositifs numériques. Nous proposons de discuter ces différentes théses à partir de données recueillies par questionnaire durant les trois semaines qui suivirent l'élection présidentielle de 2012, auprès de 827 internautes français ayant utilisé Internet à des fins électorales (recherche d'information ou prise de parole en ligne) pendant la campagne.

Assessing Nonresponse Bias with Microdata from Official Statistics – the European Case

"Data without Boundaries" – a project funded under the 7th European Framework Programme – aims at improving access to microdata from official statistics in Europe. This overarching goal is reached through several tasks, among them: compiling information on available data and access conditions, proposals for harmonizing access conditions, building a remote access network and offering web-based, structured and searchable codebooks for Eurostat data. Among the data sources that Eurostat produces and disseminates and that “Data without Boundaries” is creating a service for is the European Union Labour Force Survey, the largest household survey of the continent. EU-LFS is a continuous household survey currently carried out in 33 countries. In many of these countries EU-LFS is mandatory leading to very high response rates. Because of its size and the high quality of its sampling this survey is often used as benchmark to measure nonresponse bias in social surveys.

After introducing “Data without Boundaries” the presentation will demonstrate how EU-LFS can be exploited to assess nonresponse bias in surveys conducted in Europe. The empirical analysis focusses on the European Social Survey, the European Values Study and the European part of the International Social Survey Programme. Nonresponse bias will be assessed relative to the variables sex, age, education, employment status, household size and where available region or size of place.

The analysis demonstrates how not only those directly interested in micro data from official statistics but also survey researches benefit from the efforts of “Data without Boundaries” and the improved access to Eurostat’s data.

Problems of Survey Measures of Social Networks

Since Fischers (1982) and Burts (1984) seminal contributions to collecting egocentric network data in social surveys the method has been employed in numerous studies and can be regarded as standard in this field. Nevertheless this approach has been severely criticized. Several authors have pointed out that the standard approach to measuring egocentric network data suffers from strong interviewer effects which may lead to misleading conclusions (Paik/Sanchagrin 2013; Bruderl et al. 2013).

The presentation will discuss the methodological problems with the standard approach to collecting egocentric network data. Several adjustments to the standard approach will be discussed and alternative methods to capture aspects of “social capital” will be presented. The presentation ends with a plea to use a combination of several independent measures of social embeddedness thereby over-come endogenous rejections of the main arguments of local autonomy and participatory democracy. However, within transnational networks these dual aspects of the cyber age, democracy and localism, are often in tension with one another.

In this paper, I use the indymedia movement as an exemplar of a transnational media network where the dynamics of global democracy and local autonomy come into tension, offering a more nuanced look at the intersection of the global and the local in global networked social movements. Founded during the WTO protests in 1999, indymedia is a global-spanning media network, with over 200 active nodes on six continents, where news and journalism is produced in multiple media networks in over 30 languages. In specific, in this chapter I look at the decision of the global indymedia network to reject a large grant from the Ford Foundation because of Ford’s history in the Argentine dirty wars. The heated episode almost forced the young dynamic network to shut its doors, and brings to the fore the complex tensions of local autonomy and global sovereignty, highlighting the conservative and oft-times reactive nature of transnational communication networks. Moreover, this episode and indymedia in general, brings to light the inability of decentralized networks to build proactive power, highlighting the disorganizing and at times debilitating organizational logic of contemporary social movements.

WON, JAEYOUN* (Yonsei University, jywon@yonsei.ac.kr) K. D. Har: A Public Sociologist in (Post)Colonial Korea

K.D. Har (1897-1951) is one of the first pioneers of Korean sociology, and may be the first Korean public sociologist. He was the student of Richard Gabot and James Ford at Harvard, and his book <Social Laws: A Study of the Validity of Sociological Generalizations> was published by the University of North Carolina Press in 1930. In his book, he argued that sociology is not science like natural sciences, but we should see it more as “social arts.” Sociologists can not separate themselves from the society, but only parts of the society that we are studying. In this sense, he argues for the need to engage in the public action to reform the society.

However, his hope to become a public sociologist in Korea was not possible due to the Japanese Colonial rule and the authoritarian post-colonial South Korean government. Japanese colonial government regarded sociology as a disci-
pline to teach the ideas of communism and social action, thus banned teaching sociology at universities in Korea. K. D. Har was not able to teach sociology, and eventually kicked out from the university. After liberation from Japan, he pursued the career in journalism, but his newspaper was not allowed to publish due to its critical report on post-Colonial South Korean government. Using K.D. Har as a case study, this paper discusses the potentials and limits of public sociology in (post) colonial context, and explores the challenges of global sociology in (post) colonial context.

Passing and Crossing: A Study of Transgender Embodiment in Hong Kong

Issues of transgender and transsexuality provide a new impetus and a practical need to problematize assumptions about bodies and identities and to rethink the categories of women and men. While transgender studies have exposed the artificiality and mutability of sex/genre/sexuality categories, a tension exists between the transgender/transsexual discourses which are oriented toward a search for a gendered home and the queer emphasis on creating trouble for the gender order through non-normative, unintelligible embodiments. This paper seeks to address the debates through an examination of the embodied experiences of passing and crossing in the transgender community in Hong Kong.

For many gays and lesbians, passing or acting straight is a strategy for coping with stigmatization in a hetero-normative society. For many transgender people, passing, that is, to blend into society both socially and visually in accordance with their preferred gender, is a goal rather than a means. They want the society to see them in their desired gender. The emphasis on passing is reinforced by the ‘Real Life Test’, which requires trans to dress and live in their gender identity successfully for a period of time in order to be eligible for hormonal treatment or surgery.

Questions will be raised as to whether a hierarchy based on the ability to pass has been created in Hong Kong’s transgender community; to what extent the practices of passing entail compliance with dominant standards of dress and behavior which are grounded in the class privilege and compulsory heterosexuality. Similarly, questions will also be raised with regard to incoherent embodiment. Who can afford incoherent or unintelligible embodiment? Whose incoherence is strategic, and whose incoherence is necessary or unlivable? This paper argues for the importance to subvert dominant codes, yet without losing sight of the materiality, complexity and ambiguity of the lived experiences of transgender people.

Biographical Experience, Desires, and Interests: A Case Study of Individual Hong Kong Fans of Japanese Boy Love Comics

This paper is an ethnographic attempt to understand the relationship between individual Hong Kong fans of Japanese Boy Love (BL) comic and the general image of male characters in BL through the fans’ derivative creation of BL. The key concept here is the desire. We show that while Hong Kong fans of Japanese BL comics share a collective meaning of the general image of male characters in BL comics, each of them tends to maintain a unique interest in it. We further argue that the unique interest in the general image of male characters in BL comics is closely related to the biographical experience of each individual Hong Kong fan. The biographical experience itself is a product of many social factors, among which family is the most important one. Following Sangren (2000), we argue that in order to understand how biographical experience shapes unique interest of each individual fan, we should understand how family as a social institution underlies the desire of individual fans toward BL comics in general and the general image of male character in BL comics in particular. The desires instituted by family in turn will be shown to motivate the unique behavior of individual fans toward BL comics. Through this ethnographic attempt, we shall try to transcend the classic dichotomy of individual and society, sociology and psychology, and culture and personality lingering in social sciences in general and sociology in particular.

A Spectral Existence: Living in a Chinese Ghost City

With more than half of the Chinese population now urbanized and 75% expected to be in the next two decades, the proliferation of new, ‘instant’ cities in China can be understood as the efforts of the Chinese government to house and provide employment for the fast expanding urban population, inducing them into ‘modern’ forms of production and consumption, thus fueling the wheels of global capital and China’s own rapid ascendance as an economic power house. However, of late, an emerging phenomenon that arises from this ceaseless urbanization is the sprouting of ghost cities and towns across the country. These are defined as cities and towns which lie largely under-populated and under-utilized, and where housing projects serve mostly as vehicles of real estate speculation rather than domestic accommodation. Ordos City (or Kangbashi) in Inner Mongolia is such a product of Chinese hyper-urbanization gone wrong. Contrary to the local government’s ambitions to build a global, modernized city in the midst of the desert, residents in this new city are living in the mirage of a future which is promised but has yet to arrive. With the collapse of the local coal industry and China’s own impending economic slowdown, the future of Ordos’s modern morphosis into a global city looks even more bleak. Discussing the ethnographic data collected from my fieldwork in Ordos City, I will attempt to show how residents manage this dissonance between the promised and the realities of life in a ghost city through their production and consumption activities—informal or otherwise; and how the nationalism embedded in class, gender and urban/rural status which have been simultaneously overcome or exacerbated in this rapid process of urbanization.

From ‘Reds’ to Riches: Contemporary Changes of Educational Assortative Mating in China from 1949 to 2000

Ever since the Chinese Communist Party took full control of the country in 1949, massive institutional transformations shattered and reshuffled traditional norms and structures, including individuals’ mate selection by deprecating the value of education, valorizing the importance of political loyalty (“red”), and thereby reducing the extent of educational homogamy and overall association. Between 1949 and 1979, political capital and class origins are paramount in determining individual’s position in the society. However, with the advent of economic and market reforms since the late 1970s, the tide has changed again. Under the new environment, de-collectivization, industrialization, and the rise of market economy all point to the rise of human capital and economic success as major determinants of one’s socioeconomic position.

Through the use of 1982, 1990, and 2000 China Population Census and 2005 Chinese mini-census, our results indicate that (1) massive political upheavals between 1950s and 1970s generally decrease the strength of educational association (ϕ) and increase the propensity of hypogamy; (2) the downward trend was abruptly halted since market reform and the strength of association has reversed its direction to sharply rising trend instead; and (3) assortative mating patterns in rural and urban areas are distinctly different from each other.

To further investigate whether sent-down experiences may have differential impacts on mate selection, additional analyses based on the 1995 and 2002 Chinese Household Income Project are included. Indeed, we find that the impact of sent-down experiences varies by gender, educational levels, and couples’ joint experiences.

Gender-Oriented Statistical Discrimination Theory: Empirical Evidence from the Hong Kong Labor Market

This paper proposes a simple search model to shed light on the role of aggregate fertility as a form of statistical discrimination against young working women in the labor market. Our proposed theory assumes that workers generate identical production value that does not differ by gender. When matched with a firm, the worker and the firm bargain over the wage rates. Since female workers receive wages during maternity leave and generate no production value, a matched pair with a female worker may generate lower expected profit to the firm. Rent-sharing ensures a male worker to be paid more than a female worker even with the absence of overt discrimination, thus resulting in statistical discrimination against female workers. Using the 5% random subsample of census and by-census data in Hong Kong in 1996, 2001, and 2006, the study provides unequivocal evidence that age-specific fertility rates exert negative impact on female wages, after controlling for other observable characteristics. More importantly, the negative effects of fertility on women’s earnings are notably greater in female dominated occupations whereas similarly situated men are unaffected. Since fertility rates tend to be increasing with age during the early stage of women’s work career, our theory partially explains why the gender gap tends to rise with age. One important implication from our model is that employers would similarly expect less workers to have lower fertility than their heterosexual counterparts and thereby resolves the puzzle of the existence of the lesbian earnings premium found in the economic literature.

Can the Industrial Relations in Japan be Reconstructed in the Long-Term Perspective?

More than ten years have already passed since it was first proposed that Japan's corporate management and labor relations should be reformed to keep pace with globalization. After the financial crisis of 1997, especially, corporate governance changed, and management began to shift emphasis to short term rather than long term profits and shareholders' rather than employees' concerns. In addition to the general reduction in labor costs, replacement of regular employees with non-permanent employees rapidly proceeded. The wage system became more performance-based as well in accordance with emerging HR policies that sought the immediate competence of employees. However, some scholars argue that, in the long term, such changes in business strategy and HR policy have negatively affected Japanese industries' productivity and quality. Moreover, Japan's industrial relations have been affected as well. Labor unions have failed to cope with problems such as wage reductions, growing numbers of non-regular workers, and the decrease of collective bargaining power. These problems exist against a backdrop of increasing wealth disparity. This paper aims to elucidate the possibility whether the Japan's industrial relations could be reconstructed or not in the long-term perspective, focusing on the mechanisms by which globalization and changes in corporate governance are influencing industrial relations at the micro level.

Welfare Support Attitudes in Korea, Taiwan, Germany, and Italy: Focusing on the Influence of Institutional and Political Factors

Previous studies have shown that welfare attitudes are determined by various demographic, economic, and social factors in Western countries. Class is found to be one of the most influential factors in explaining individual welfare attitudes in Western countries. On the contrary, no clear factors have been found to be significant in differentiating individual welfare attitudes in Asian countries, particularly in South Korea so far. To understand welfare attitudes in comparative perspective, we will analyze the Life and Society survey data collected from Korea, Taiwan, Germany, and Italy in 2012. Two Asian countries are small emerging welfare states, whereas Germany and Italy are already mature welfare states. However, these countries have some commonalities in that their welfare systems were constructed by the principle of Bismarckian insurance system. It would be very interesting to check changes in welfare attitudes in Western countries, finding out differences and commonalities between Western mature welfare states and Asian emerging welfare states.

The first purpose of this article is to explore whether there are different social cleavages in welfare attitudes in Western and Asian countries. The second purpose is the main part of this study. The study focuses on the issue addressed by institutionalists in the analysis of welfare attitudes. That is the importance of institutional and political factors. We expand the concept of political trust to measure an evaluation of the political world. We argue that institutional and political factors that measure institutional evaluations of the political world are important in explaining welfare attitudes such as individual support for welfare states in Western countries, finding out differences and commonalities between Western mature welfare states and Asian emerging welfare states.

The Rise Of The Precarious Class? Conceptualising Inequality

A key incentive for why many young researchers undertake research is the hope we 'make a difference' for the young people. No more so than community participatory research when we are invited to participate in transformative change for marginalised young people in particular. However, while we know that social change takes time, we are constrained in such research by timeframes imposed by neoliberal institutes that compel quick research turn-arounds and rapid outputs. Moreover, such constraints also encourage a very 'presentist' view of the young people at the focus of our research, thus overlooking historical legacies, continuities and discontinuities that are embedded in communities and how these shape their social worlds. In this paper I examine a participatory community youth research project that 'failed', forcing me to confront my own presentist and short-sighted views, as well as those imbued in methodological choices. Drawing on Hannah Arendt (1986), I re-examine the 'web of relations' (p. 150) which these narratives of 'failure' are situated in, thus highlighting the complex and intertwined historical and contemporary factors at play when we conduct research. The paper critiques 'presentist' tendencies in youth research and raises questions about collective ethical responsibilities toward sustainable actions of change through youth research.

WOODCOCK, JAMIE* (Goldsmiths, jamie.woodcock@googlemail.com)

Towards a Method For Activist-Scholar Research Collaborations: Taking Inspiration From The Tradition Of The Workers' Inquiry

This paper will argue for a method for collaborative research projects involving academics and workers that takes inspiration from the tradition of workers' inquiries. It draws on my own experience of conducting an inquiry in a UK call centre. In Marx's (1938: p379) attempt at an inquiry he stated that workers 'alone can describe with full knowledge the misfortunes from which they suffer,' and crucially that 'only they, and not saviors sent by Providence, can energetically apply the healing remedies for the social ills to which they are prey.' The innovations of the Johnson-Forest Tendency in the USA, in examples like The American Worker, highlight how collaborations between workers and intellectuals can be used to develop an understanding of society. The Italian Operaismo in the 1960s developed the methodological component of inquiries as a form of 'co-research.' The aim was to simultaneously develop a form of knowledge production and new organisations. The debates in their journals discussed the difficulties in this approach, seeking to move from inquiries 'from above' to those that involved workers self-organisation - an inquiry 'from below.' Romano Alquiati argued that in many ways this was not simply 'political militancy has always done research [co-research].' We would go in front of the factory and speak with workers: there cannot be organisation otherwise (quoted in Roggero, 2010: p3). This paper will argue that inspiration can be taken from previous attempts to develop workers' inquiries. They represent particular academic and activist conundrums that can inform contemporary debates on overcoming precarity. The examples of university teaching staff, call centre workers, and the campaigns against zero-hour contracts will be examined to understand how new forms of struggle can lay the basis for the renewal of workers' organisation. The paper will argue how the historical examples of new unionisation in the 1880s and 1930s can inform contemporary debates on overcoming precarity.
used a range of terms to capture the ‘grey zone’ that falls between worklessness on the one hand, and relatively secure full-time employment on the other. This ‘grey zone’ varies significantly in size across first world countries and is likely to expand under the current turbulent economic conditions. Although sociologists have both introduced and critiqued various concepts in a way that there have been few attempts at a theoretically driven conceptualisation that ties the new conditions to broader processes of change in advanced capitalist societies and links structural change to new forms of consciousness. While the idea of a framing the experiences of fragmented and casualized work in the new economy as a new class, for example the precarious, has some attraction, there are also difficulties with the conceptualisation. One of the core problems relate to the fact that not all young people who are structurally located in the precariat by virtue of their employment in casual or insecure forms of employment represent a disadvantaged or marginalised group. For some the experience of precarious employment is alleviated by access to other resources, such as family support, and they escape some or all of these precarious work conditions as they get older. Drawing on evidence from a number of countries, and primary data from an ongoing mixed-methods study of youth in Australia, in this paper we describe some of the ways in which changes in the labour market are affecting young people, consider the adequacy of representations of precarious and fragmented positions as the basis of a new ‘class’ and propose an alternative way of conceptualising ‘individualised’ structured inequalities in the new economy.

Balanced Advice? Appointments to Advisory Boards and Gender Quota’s in the European Union

Advisory councils and boards play an important role in countries with corporatist decision-making. Appointments to these boards are often controlled by political actors but regulated in a bureaucratic framework. Feminist movements identified these decision-making bodies as both crucial gatekeepers and easily malleable venues for a quick fix of gender balance. Given that many of the bodies are appointed by the state, boards and public committees seemed to offer the opportunity to quickly change the gender balance in decision-making, even as electoral sectors were changing slowly. Countries such as Belgium and Norway adopted legal gender composition rules for appointed bodies by 2005. Later quota’s in electoral politics became more widespread. Today many European countries have also started proceedings to implement gender quotas in advisory bodies and corporate business boards with state participation. To what extent has the increasing integration of Europe led to adaption of gender regulations of appointed boards in EU member states? How does this interact with political appointment processes? What are the results and how does the bureaucratic capacity of the state interact with implementation of gender-balance rules? This paper will report on comparative data and measures in the 27 European Union countries. Who has adopted quota for these bodies, and what are the arguments? How do gender equality considerations relate to debates about de-politicization of appointments? Further the paper will review available results on the composition of these boards and provide a potential for future research. The paper will argue that the notion of austerity has developed into a defensive ideology, geared around the rejection of comprehensive alternatives to the crisis. Instead, it is geared upon the idea of presenting austerity as a compulsory painful measure, required in order to re-stimulate growth and confidence in the economy. It will also suggest that this narrative has been strengthened by the failure of its criticisms to adequately construct a viable hegemonic alternative that might replace the status-quo. As a result, austerity has assumed a character that can be understood as a form of ‘common-sense’ in the wider Gramscian tradition. It serves as providing a set of norms and conditions which are understood as being both ‘natural’ and ‘universal’ in many ways. This paper will conclude that it is through this articulation of common-sense that neoliberalism (as least to date) managed to survive and to go on the defensive. Such a position that was not seen possible merely five years ago.
Concerns of social justice, human rights and pluralism in these two progressive Muslim movements.

Neoliberal metropolitanism and the remaking of welfare systems: The rise of professional projects in the government of the biopolitics of the metropolis

European research on the linkages between professionalization and political systems has focused either on the role of the state in professional projects or, more recently, on the relevance of transnational developments for a globalization of professions. This paper extends the analysis of political systems to a new scale, that of the metropolis, identifying the recent discourse of metropolises as ‘landscapes of power’ in global economy as a meta-level turn to neoliberal metabolism in public policy. The paper further argues that the new discourse has helped to constitute metropolises also as important landscapes for professional projects.

The analysis examines urban planning focusing on the Greater Helsinki region as a ‘world-class centre for business and innovation’, focusing on the professional projects that rise in the intersection of government and scientific expertise. I employ Patrick Carroll’s ideas about how the role of scientific expertise for ‘material design and conduct of movement’, as done by political systems. Carroll highlights how the key boundary objects of land, people, and built environment are transformed into ‘techno-territoriality’, ‘bio-population’, and ‘infrastructural jurisdiction’. Employing Carroll’s framework to my analysis of role of expertise for the biopolitics of the metropolis, I argue that expert professionals are key agents of transformation, forging expert knowledge into institutional practice.

The findings show that like the old liberal state that gave rise to new sciences such as public health the market-conscious metropolis also supports expert projects anchored in the public sector. The reported analysis of policy documents finds four expert professional projects: innovation policy and innovation professionals; new public management and efficiency professionals; transnational human resource management and recruitment professionals; and integration policy and diversity management professionals.

WRIGHT, KATIE* (The University of Melbourne, kwright@unimelb.edu.au)

Child Abuse and Public Inquiries: Historicizing the Imperative for Openness and Disclosure

By the late twentieth century, an imperative for openness and transparency - what might fruitfully be called a ‘culture of disclosure’ - was increasingly evident across all spheres of social, political and personal life in the West. While this can be identified in disparate domains, it has been particularly striking in relation to discourses of child abuse. This paper explores the imperative for openness and disclosure about the abuse and neglect of children against the backdrop of emerging constructions of childhood vulnerability since the 1970s. It takes as its focal point a key instantiation of societal openness over the last several decades: public inquiries into child maltreatment. While official inquiries have a number of functions, a key purpose is acknowledged as ‘learning lessons’ from the past in order to prevent future recurrence. Given it is now widely accepted that people who have suffered abuse and neglect of children often face lifelong challenges, including poverty, social isolation and poor mental health, there is a strong warrant for investigations that throw light on cases of past abuse. This paper first considers the rise of public inquiries in a number of countries, including the United Kingdom, Ireland and Australia, as exemplars of increasing societal concern about childhood vulnerability and abuse. Second, it examines inquiries against the backdrop of emerging theories of human development and psychological research that re-shaped how childhood experience, and the effects of ill-treatment, came to be understood. Finally, it explores the public pedagogical function of inquiries, and makes a case for the use of official inquiries in understanding broader processes of social change; in this case, changing concepts of childhood vulnerability and the emergence of social and educational policies aimed at safeguarding children and promoting their wellbeing.

Digital Contention: Anonymous and the Freedom of Information Movement

The main task of this paper is to analyze the online collective known as “Anonymous” as a case study using the theoretical framework of traditional social movement studies. I outline this framework in the literature review section of this paper as nine distinct characteristics, each pertaining to a different aspect of social movement research. My purpose in doing so is to argue that Anonymous is part of a larger, loosely-connected new social movement, which I call the Freedom Movement, as well as to show how its unique characteristics which have developed out of new digital technologies are making it necessary for sociologists to update and expand upon our existing theories and concepts of social movements. Some of this work has already begun. There have been several, though not many, studies of cyber-activism, hacktivism, digital repertoires of contention, cyber diffusion, online activist networks, and decentralized organizational forms of online movements. Through a combination of historical and qualitative content analyses of news articles, websites, operational fliers, and other written materials associated with Anonymous, I am attempting to build upon and expand this new and growing paradigm concerning online social movements and digital forms of contention.

WG02-901.1

WRIGHT, KATIE* (The University of Melbourne, kwright@unimelb.edu.au)

The Role of Official Inquiries in Understanding and Preventing Childhood Maltreatment
The 1970s saw both the emergence of child abuse as a recognised social problem and the rise of public inquiries to investigate issues of major social concern, including childhood maltreatment, in a number of Western countries. In the United Kingdom there have been more than 80 inquiries into various aspects of childhood abuse and neglect over the last four decades. In Ireland, 14 reports published since the 1990s have examined abuse in schools and institutions. Similarly, in Australia, growing concern about the welfare of children in out-of-home care has prompted a number of official investigations, the most recent being the current Royal Commission into Institutional Responses to Child Sexual Abuse. It is one of the largest public inquiries in Australia’s history and like the Irish Ryan Commission before it, is likely to be one of the most significant inquiries into historical instances of child abuse internationally. Through examination of a number of prominent inquiries, this paper first explores the role of official inquiries in social and educational policy reform, and in shaping public understandings of the problems of child abuse more broadly. It then considers the cathartic function of inquiries for victims and for societies more broadly, through exploration of the notion that inquiries reflect an open and transparent society in which ‘the voices of the powerless are heard’ and the powerful are held accountable. Finally, the paper analyses the fraught social justice issues at play in the investigation of past instances of abuse, and the promise of social and institutional change aimed at better protecting young people today.

**Choreographing Risk: Multiple Sociotechnical Networks of Multiple Pregnancy**

This paper creates the concept of “choreographing risk” to explore the socio-technical networks of multiple pregnancy, mostly caused by assisted reproductive technology. I argue that during the processes of assisted conception and multiple pregnancy, technical elements of technology, legal, financial, emotional, political and gender, are coordinated around risk. Data includes in-depth interviews of women and medical professionals, and archival data. I find that in the stage of getting pregnant with assisted reproductive technology, doctors tend to use multiple embryo transfer and ovarium stimulation medication to increase the pregnancy rate. Both doctors and women perceive failure of conception as the major risk, and tend to disregard the risk of multiple pregnancy. In the case of multifetal conception, fetal reduction becomes a technical model to reduce the risk of multiple pregnancy. However, some women and doctors refuse this technique for reasons other than health risk; network of fetal reduction often collapses. High prevalence of multiple pregnancy in Taiwan exists. Pregnant women of twins and triplets take embodied responsibility to avoid risk of premature birth, including diverse bodily work, and negotiation between productive and reproductive labor. This paper shows that as women vis-à-vis medical professionals become more and more the central choreographer in the multiple networks of multiple pregnancy. For policy implication, I suggest adjusting assisted conception methods, such as reducing the number of multiple embryo transfer during in-vitro fertilization, to relieve women from the hard labor of multiple risk choreography.

**How Scenes Drive Housing Prices in Beijing**

Wu (2011) proves that Scenes heavily influence the urban residential choices in China. In that paper, an analytical framework is constructed to study 375 counties of 25 larges cities in China. The objective of this paper is to improve on the previous analytical framework and delve into an examination of neighborhood level housing markets. Specifically, we focus on the city of Beijing in this paper and collect a dataset which includes three-year housing prices data and 85 types of amenities from 220 neighborhood areas in Beijing. In addition, we develop a novel technique to overcome the drawbacks of the existing theory in spatial econometric models due to strong spatial autocorrelations among housing prices. We also employ geographically weighted regression and Kriging mapping to support our analyses. Our conclusions are the following: (1) the distribution of local culture and amenities is polarized in Beijing; (2) housing prices in Beijing are significantly influenced by neighborhood level culture and amenities; (3) the distribution of housing prices in Beijing has the shape of a comet, corresponding to the distribution of local culture and amenities, and with tails spreading towards the northwest.

**The Research of Cost Performance of Urban Housing in China: Base on the Theory of Scenes**

In the last decade, the rising real estate price in Mainland China has become a worldwide issue. All walks of life paid close attention to the urbanization process stood by flourishing Real Estate Market in China. Moreover, some scholars have more emphasis on crisis and bubble hidden by the fast-rising real estate price. Researchers and analysis on commercial housing vacancy ratio, relationship with housing price land value and Housing Price-to-Income Ratio have occupied the mainstream. These researches either stressed the influence on housing price by the cost of residential land from the perspective of supply or underlined the mismatch of housing price and per capita income from the perspective of demand. However, this paper argues whether there exist bubbles in commodity residential market is a dynamic equilibrium process, it is difficult to judge only by one-side factors. Hence according the Theory of Equilibrium Price posed by New Classical Economics, this paper re-examine the residential market bubble issue in China from a totally new perspective- cost performance of commodity housing based on Principle of Supply-demand equilibrium. Using ideological system of the latest achievements of Scenes Theory from Chicago School, this paper selected Panel data from 2001 to 2012 in 147 main cities in china, built urban residential Scenario index to measure cost performance of commodity housing in different regions in China and empirically proved the rationality and validity of the index. Finally this paper points out that urban cost performance of commodity housing ruled low in general, Second-tier cities had a low commodity residential market bubble level rather than first- and third-tier cities had a high level and offers targeted policy recommendations for macro-control of real estate market of the government of China.

**Micro and Macro Conditions for Happiness in Urban China**

Despite the large literature on happiness research, sociological studies on the social determinants of happiness in China remain rare. This study examines not only micro conditions for happiness but also the potential interplay of micro and macro conditions in urban China. Specifically, we focus on some wide-studied and much overlooked micro conditions, socioeconomic achievements (what you get) and non-cognitive skills (who you are), respectively. However, the happiness effects of micro conditions may well differ across macro contexts. We thus investigate how the happiness effects socioeconomic achievements and non-cognitive skills depend on the level of economic development in urban China. Our data is drawn from the urban sample of the 2011 Chinese General Social Survey, a nationally representative social survey. Socioeconomic achievements refer to years of education and annual total income. Non-cognitive skills refer to conscientiousness, operationalized by indicators of consistency, dependability, and deferral of gratification in performing the student role. Macro conditions refer to urban areas in the most developed provinces, as indicated by provincial-level GDP per capita. We obtain three main findings: (1) Both adolescent conscientiousness and personal income, but not education, enhance personal happiness. (2) The happiness effects of education and income are highly contingent on the level of development, with education having a positive effect in less developed areas but a negative effect in more developed areas. (3) The happiness benefit of conscientiousness is robust across urban areas of high and low economic development. The evidence thus suggests that the micro conditions for happiness do depend on certain macro conditions in China. There is a penalty on happiness for high achievers of education and income in the most developed urban areas, but the happiness effect of adolescent conscientiousness is uniform across development contexts.
urban China? (2) Does adolescent conscientiousness also modify (interact with) the SWB effect of SES? (3) Are the SWB effects of conscientiousness and SES contingent on the degree socioeconomic competition of an urban area?

Drawing on the urban sample of the 2011 Chinese General Social Survey, a nationally representative social survey, we measure SWB with multiple indicators of positive and negative affect and conscientiousness with consistency, dependability, and deferral of gratification in performing the student role. We obtain three main findings: (1) Adolescent conscientiousness enhances education and income. (2) There is no interaction between adolescent conscientiousness and SES in predicting SWB. Each has independent effect on SWB. (3) However, psychological functioning and structural inequality interplay in a more complex way. We use level of economic development as an indicator of the degree of socioeconomic competition. While the SWB benefit of conscientiousness on SWB is robust across urban areas of high and low economic development, the SWB effects of education and income are highly contingent on the level of development. The evidence suggests that there is a penalty on SWB for high achievers of education and income in the most developed urban areas. Thus psychological functioning does not only affect socioeconomic achievement, it also critically determines the SWB benefits of socioeconomic achievement.

Perceptions on Hurricane Information and Protective Action Decisions

Tropical storms and hurricanes have caused extensive casualties and damage in past decades. Population and economic growth in the vulnerable coastal areas have made hurricanes a serious problem and created the potential for a catastrophic loss of life. The existing research literature lacks a sufficient scientific understanding dynamic protective action decision making during events in which additional information becomes available over time. Emergency managers and residents in the risk areas are most likely to make decisions on their protective actions based on National Hurricane Center's hurricane forecast advisories. This study uses the DynaSearch program to conduct a computer-based experiment that the understanding of hurricane strike probabilities and their choices of protective action recommendations during four different hurricane scenarios. Participants have difficulty interpreting hurricane strike probabilities. The results suggest that there is a penalty on SWB for high achievers of education and income in remote areas. The study also investigated how the effects of SWB on protective action recommendations vary between educational attainments.

Claiming a Sub-Urban Citizenship: Migrants, Parenting and Reunited Households in Margins of Beijing, China

This paper explores the new realities and challenges facing skilled self-employed migrants who have worked in Beijing for almost two decades and who tend to settle in the far-off, intersecting area between the rural and urban spaces of the city (zizhichi qingku). Based on in-depth interviews with some of these veteran migrants, this paper asks these questions: how do veteran migrants define their living space and resist structural discrimination? The research shows that veteran migrants are able to unite with their left-behind children and women in the outlying area of the city, where cheap accommodation and an informal economy are available. Examining the ways these migrants speak about parenting strategies, reunifying households and take advantage of various resources and opportunities in the intersecting area, this paper argues that they make claims on what I call a "sub-urban citizenship." The paper joins a broader discussion on citizenship mutation in the global era and argues that the concept of sub-urban citizenship allows one to understand the nuanced and everyday strategies peasant migrants actively assert to enfranchise themselves.

Left-behind and/or Migrant Statuses, Social Capital, and the Mental Health of Children in Rural China

Children migrating to the urban cities with their parents and children left behind in the rural counties by their migrant parents are two vulnerable populations accompanying the rural-urban migration in mainland China. Some of these children even have dual experiences of being migrant and left-behind at various occasions due to their parents' return migration as a consequence of the economic downturn or other family decisions. Despite a growing body of literature on the mental health of either migrant children or left-behind children, no previous study had ever tried to distinguish the various experiences of being migrant or left-behind, or both, that might contribute to children's well-being. This study was aimed to investigate how the left-behind experiences of children living in the rural context of China influenced their mental health status, with their potential migration experiences being taken into account. Moreover, it investigated how the effects of left-behind experiences on mental health might be mediated by the stock of social capital in their family and neighborhood.

Data of this study came from a questionnaire survey with 701 children ages 11-18 living in the rural counties of Guizhou province, China. The structural equation modeling results suggested that, compared to those rural children who lived with both parents and never had any experience of being migrant or left-behind, children who were currently left-behind and had some previous experience of being a migrant appeared to exhibit higher levels of depression. Children who used to be left-behind but lived with both parents at the time of study tended to experience less depressive symptoms, demonstrated both as the direct effect of their unique left-behind experiences and through the mediating effect of social capital in the family. Implications of these research findings were further discussed.

Ethnic Autonomous Policy and Ethnic Inequality in China: An Evaluation

China's 55 ethnic minorities constitute about 9 percent of the national population, and most are concentrated in remote areas and disadvantaged in social and economic development compared to the Han majority. To promote ethnic inequality, Chinese government has instituted the ethnic autonomous jurisdictions at different levels: 5 autonomous regions, 30 autonomous prefectures and 120 autonomous counties/banners, covering 71 percent of ethnic minorities and 64 percent of the territory as of 2005. This paper aims to employ China's census (from 1982 to 2010) and the mini-census data in 2005 to evaluate the effectiveness of such a policy on ethnic disparities in educational, occupational attainment and income. Specifically, we will employ the causal inference methods to investigate the experience of ethnic minority (relative to Han) living under their own autonomous jurisdiction and their counterparts otherwise. The findings will have important implications for China's policy towards ethnic minorities.

Trends in Intergenerational Social Mobility in China

This paper studies the intergenerational social mobility pattern in the People's Republic of China over half six decades, based on an analysis of 5 cohorts (born between 1932 and 1988) from a series of national representative surveys conducted in 1996, 2005, 2006, 2008, 2010, 2012, respectively. In the context of rapid economic industrialization since 1949, the absolute mobility rates in China increased over time, but the level is much lower than other countries. The relative mobility patterns were largely stable for both men and women except for the youngest cohort. Education played an important role in intergenerational social mobility: the effect of origin on educational attainment does not change over time, but the effect of education on destination does. The household registration (hukou) system that the Chinese government installed in to curb the rural-urban migration in the course of socialist industrialization created a unique pattern of social mobility in China that deviates from core models of social mobility found in other countries. The market reform has altered the structure of social mobility.

Between the Individualism and the Collectivism: Dilemma in the Socialization of Today's Chinese Adolescents

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
About one hundred years ago, William Bagley put forward several controversial issues on different trends of education concepts. One of them concerns the debate between two opposite values in pedagogy: the individualism and the collectivism. If these two values represent and distinguish two different notions in diverse civilizations, especially during this transitional stage and the context of globalization, China's young people are the first generation whom simultaneously contact with various cultures from the Western world and from their own tradition, thus directly confronting this dilemma during their socialization.

On one hand, Chinese social convention attaches importance to the strategies needed to maintain a collective life, in which individuals should adhere to the Confucian tradition and overstate their trust in the political values are sensitive, especially in China, and therefore distrust in inter-society introduced from western cultures, stresses the importance of the individual but, meanwhile, promotes integration into the communal solidarity and the sense of civic duties. Today's Chinese youth is growing up in this very conflict and the amalgamation of these paradoxical values.

How then, do they evaluate their own identities and their family relationships?

How do they consider their civic responsibilities and their social connections? Which values represent, for them, justice in their own lives and others? By means of a survey focusing on adolescents and conducted in a Chinese city, we try to discover, by still having an impact on those Chinese, the residents who hold traditional this young generation facing the obligation of the familial collectivist tradition with that of the impacts of the individual civic innovation.

Re-Thinking Political Trust in China

Political trust matters as it reflects a regime's perceived legitimacy. Cross-national survey research shows that political trust in China is very high. This is puzzling because China is not only governed by an authoritarian regime but it also has serious corruption and large wealth inequality. The high trust exhibited within the Chinese context is therefore questionable.

In this study, we argue that there are at least four key points that need to be considered when using survey data to examine political trust in China. First, the Chinese notion of "Xinren" commonly used in surveys such as the World Values Survey might be different from western concept of "trust". Second, questions about political values are sensitive, especially in China, and therefore the distrust in interviewers and political fear may lead Chinese citizens to overstate their trust in the authoritarian government. Third, the political system and culture of imperial China could have an impact on those Chinese, the residents who still hold traditional values. Fourth, the collectivist nature of Chinese cultures and the cultural tradition of being modest may encourage Chinese people to hide their political values.

Using the Chinese General Social Survey (2005 & 2006), in this study, we explore how traditional cultures and interview contexts impact the expression of trust among the Chinese. We distinguish between trusting attitudes and trusting behaviors and use alternatives to the standard question asking directly how much confidence the Chinese could still have an impact on those Chinese respondents who hold traditional political values are sensitive, especially in China, and therefore the distrust in inter-society introduced from western cultures, stresses the importance of the individual but, meanwhile, promotes integration into the communal solidarity and the sense of civic duties. Today's Chinese youth is growing up in this very conflict and the amalgamation of these paradoxical values.

How then, do they evaluate their own identities and their family relationships?

How do they consider their civic responsibilities and their social connections? Which values represent, for them, justice in their own lives and others? By means of a survey focusing on adolescents and conducted in a Chinese city, we try to discover, by still having an impact on those Chinese, the residents who hold traditional this young generation facing the obligation of the familial collectivist tradition with that of the impacts of the individual civic innovation.

**Multilingual Education of European Union – Backstage of Ideology**

The image of state education, together with visions of its main functions, priorities and expected results are constantly being reshaped under the impact of various social, economic, political and cultural changes. Being a powerful tool of influence, education is often becoming the battlefield of different interests, the most powerful of which have their reflection in educational policies and practice. This paper concentrates on the case of Poland, which faced several important transformational processes during last decade, among most important of which is joining the European Union (2004). What impact on educational system and its actors did it have? This paper investigates how EU’s directives and recommendations influenced polish educational system, using the example of foreign language proficiency. In 1995 the European Commission published a White Paper on Education and Training, which states that each citizen of European Union must speak at least two foreign languages, which would enable mobility and competitiveness on the labor market. This is the starting point of the analysis of the paper, which will present the insight to EU recommendations concerning foreign languages and relate this data with the actual educational reforms in Poland in 2004-2013. Further on, the paper will concentrate on the analysis of the foreign language skills characteristics of Polish citizens in 2013, using the data gathered in Polish Panel Survey POLPAN and European Survey on Language Competences (2011). Interpreting the results, the paper confronts the dominating idea that Poland should ‘catch up’ in learning foreign languages (Poland National Summary ESLC, 2011) and opens the questions of whether foreign language proficiency is an unavoidable condition of modern world and to which extent the multilingual pressure creates the new marginalization, unequal relationships and uneven chances.

**Contested Control: Irregular Transit Migrants in Europe**

This presentation is about young migrants’ journeys with low chances of receiving asylum or any other type of residence in Europe. These migrants exhibit a highly complex migration pattern. First, these migrants are frequently in durable “transit” across Europe, moving back and forth between different states. Second, transit migrants must exhibit a high degree of flexibility, as they have to respond to suddenly changing conditions, such as work opportunities, rejection of asylum claims, detention or deportation. Third, transit migrants often switch between different legal statuses, such as asylum seeker, rejected asylum seeker, illegal worker or detainee. This throws them into a general state of uncertainty and psychological distress. The experience of these young adults shows a deep illegal worker or detainee. This throws them into a general state of uncertainty of asylum claims, detention or deportation. Third, transit migrants often switch between different states. This paper examines the role that workers in Chinese internet companies play in relation to potential transformation of both online and offline China, by examining how workers in the organisations negotiate the gaze of the allegedly authoritarian state, and how they use the internet to create meaningful, expressive and resistant spaces. This paper outlines the complicated context of Chinese internet industries, in which Chinese state plays a significant role, and the difficulties that workers in internet companies face in their efforts to create alternative online spaces. The paper then discusses the various ways in which workers mobilise their agency, such as acts of negotiation and resistance, in order to respond to interference from the state. This paper also discusses how workers’ acts of negotiation and resistance in workplace, the internet companies in this research, contribute to creating a new online space which gives voice to diverse classes in contemporary Chinese society. On the one hand, this paper contributes a valuable perspective to explore the shaping of the new and socio-cultural space of online China, by suggesting a focus on workers in internet companies. On the other hand, this paper also contributes to debates about workplace agency. I argue that the tradition of understanding worker agency as workplace resistance is limited. As an alternative, some forms of worker agency can be characterised as negotiation, which might open up possibilities for online China in different ways. Meanwhile, I also argue that the tradition of understanding worker agency in the context of workplace is limited; rather, it is necessary to discuss such worker agency in the socio-cultural context, such as the resistant space of offline China.

**Is Another Economy Possible? the Prospects of Social Entrepreneurship from the Business Viewpoint**

The dynamics of the economy goes through three strands: the State, the market and civil society. The State, in principle, is characterized by the logic of intervention, by the regulation and entrepreneurship; the market prefers the competitive logic; and the third sector step by associative pathways. Currently, the economy of many countries goes through times of turbulence. The State no longer meets the diverse needs of its population; private companies are increasingly profitable. Social “companies”, in principle, have many weaknesses in their management and, in this regard, we realize that there is a disruption of economic and social order in society, like: increasing poverty, violence, environmental degradation and so on. We need an alternative to the productive process. In this way, the social entrepreneurship enables new forms of economic activity management with a logic contrary to market economies. In this paper, we describe an entity of third sector with the solidarity economy approach, through social entrepreneurship postulates. Our research is descriptive, qualitative, being a case study on a social entity. We use observation and documentary work for data collection and the analysis of the content reflected the catalogued information. The results suggest that there is a new economic order and that other alternatives practices of economic production are viable. Cooperating companies can be managed by the competitive logic, but with emphasis on the collective human needs. The entities have vision of solidarity and aim financial and social profit as well. The local market is valued and the cooperative process is visible. On the other hand, it is not easy to maintain an organization of this type in the market, with associative goals. Predatory and unfair competition of traditional companies undermines the survival of social entities. Finally, the success achieved by the Organization studied shows that another economic production is possible.
University, analyzing two key factors of variable quantity, marketing and word of mouth, we research China's audience of animated film and try to discover facts about it. We find that marketing is the weakest competence for China's Animated Film(CAF), university students is the strategic audience of CAF and middle-aged group with higher education is the target market of CAF.

Chinese Animated Film and its Audience; An Empirical Research on Chinese Cultural Wave

In this presentation I will take up the case of Chinese animated film and its audience as one of those examples of new cultural waves from Asia. Institute for Cultural Industries at Peking University has been conducting a survey research on the issue as a part of the survey program called Cultural Consumption Program. The program (survey project) has been one of the rare attempts of such kind in China and we are now analyzing the data gathered by the project. In the presentation of this session, I will show the results and the facts of the survey and I will try to connect the outcomes to the other cultural 'waves' from Asia in locating it in the broader picture in Asian settings in the whole. In doing so I shall commit the dialogues with other presenters who deal with the findings from other areas of Asia.

Who Becomes Registered Urban Resident during China's Massive Urbanization: Assessing the Roles of Human, Political and Social Capital

Background

Over the last half-century, registered urban residents persistently occupy an advantageous position over rural residents or rural-urban migrants in obtaining good jobs, health care, housing and even education for their children. Therefore, transforming one's household registration (hukou) status from rural to urban is a very effective path to upward social mobility. Prior research shows that education, Party membership and military service are the three most significant predictors of hukou conversion. However, the finding does not have the necessary data to address the statistical problems of reverse causation and unobserved heterogeneity, and the role of familial ties in hukou conversion.

Question

We re-examine the roles of three types of predictors in hukou conversion: human, political and social capital.

Data and Analysis

We draw on the 2008 Chinese General Social Survey that provides crucial timing data for life events, including the timing of hukou conversion for both the respondents and their spouses, first marriage and joining in the Communist Party.

Empirical Findings

(1) Education is a far more powerful credential than expected, facilitating the use of not only educational channels, but also a wide range of state sponsored conversion channels, such as military, employment in state sector or cadre; (2) when reverse causation is thoroughly eliminated, we show that Party membership actually impedes, not facilitates, hukou conversion, and thus wholly counter to the view of the prevailing literature. By controlling for the impact of unobserved heterogeneity, which is most pronounced among rural-urban migrants in towns, we find that securing urban status appears to undermine the incentive for mobility to urban areas by enhancing the chance of one's local success; (3) marrying an urban husband is rural women's social capital for hukou conversion, almost completely offsetting the urban capital advantages of rural men, resulting in no overall gender difference in becoming registered urban residents.

Field Fusion— the Experience of Engineering Education in New China’s Early Stage

The academy and disciplinization of higher engineering education leads to students’ lower engineering ability, which becomes a national common engineering education problem. However, the problem roots in science ideology and social field highly differentiated and autonomy. This study takes Harbin Institute of Technology Welding as an example, offering an early stage practice oriented engineering education experience. New China's higher education managed by government positively was responsible for the state-building needs. Under given ideology, engineering educational goal and behavior submits to the motto —education serves for politics and combines with production— called for by government, however, which fits the nature of the practice of engineering. Under the concept of objectivity of research and teaching for the needs of major national projects, China has created the interactive mode of “society-engineering-research-educating”. In a word, this unique phenomenon comes up under the condition that education highly mixed with political field, scientific field and economic field.

Income Inequality in Today’s China: How High and Why so High?

In this paper, we first document a rapid increase in income inequality in China. This result supports past, capitalistic-oriented studies of newly available survey data collected by several Chinese university survey organizations. By now, China's income inequality not only surpasses that of the US but also ranks among the highest in the world, especially in comparison to countries with comparable or higher standards of living. We argue that China's current high income inequality is mainly driven by structural factors that have been sustained by Chinese political system, the main structural determinants being the rural-urban divide and the local variation in economic well-being. Analyzing 2005 and 2010 comparable survey data in China and US, we examine these structural determinants that may help explain China's high income inequality. Our results show that for both periods, once we factor in China's large structural inequality due to the rural-urban divide and the regional variation in economic wellbeing, China's remaining inequality closely resembles that of the U.S.

A Differentiated Community: Chinese Journalists and Their Interest-Driven Professionalism

Professionalism of journalism has been debated in China in the past decade, partly because of the commercialization of the mass media and emerging elite media. It still remains a question whether there is a journalistic professionalism in China, or whether such professionalism is a fragmentary one instead of a coherent one. However, it is clear that traditional mouthpiece role of Chinese mass media has no longer been able to offer enough explanation to portray the current change in such a profession.

This paper focuses on one special phenomenon in Chinese journalistic activity usually named “red envelop journalism” or paid journalism. Journalists routinely accept money and other gifts from news source including government officials, industries and even foreign companies, which in western journalism is viewed as bribe. However, in Chinese social context, it should be considered more complicated rather than merely a violation of professional ethics.

In this paper the transition of function and structure of paid journalism from the mouthpiece era to the current party-market corporatism situation is historically reviewed and analyzed. Then by participatory observation and interview, it is concluded that professionalism is interpreted mainly according to differentiated interests such as fame, market and political capital within journalist community and by other participants in the institution. It is also noted that journalists use interpretative discourse to explain and defend such interest-driven professionalism. Consequently these developments may have profound implications for the transition of Chinese media from a lapdog perspective to a guard dog perspective, while the traditionally defined perspective of professionalism as a watch dog is dismissed.

Legacies of the Sichuan Earthquake: Disasters As Past and Present Political Events

This paper examines legacies of the 2008 Sichuan earthquake in China in politics of subsequent disasters, particularly Yushu and Ya’an earthquakes. The legacies are manifested in three political realms: state leaders’ compassionate performance, the state’s cooperation with the civil society, and mourning rituals for victims. While the Sichuan earthquake provided a cognitive template for people to interpret subsequent disasters as well as a political action pattern for political actors to follow, its legacies’ features and effectiveness varied across events and realms. First, while leaders’ compassionate performance in subsequent disasters resembled Premier Wen Jiabao’s in Sichuan, it was much less effective. Second, the state’s cooperation with the civil society organizations was politically selective and biased. Third, the mourning ritual for disaster victims was institutionalized but deprived of its substantive meaning, and the spontaneous mourning for student victims of the collapsed schools was suppressed. This paper explains the variations by examining both situational and structural dimensions of state-society relations. I argue that structural tensions between the state’s moral legitimation and its other political interests as well as contextual factors alter the shaping power of the Sichuan earthquake’s legacies. More broadly, I propose a state-society relations perspective to theorize political legacy.

**Hermeneutics and Cultural Sociology**

Hermeneutics and Cultural Sociology: A Discussion between Alexander’s “Strong Program” and the “Cultural self-awareness” of Chinese Sociology

Bing Xu, Shanghai University, China

Jeffrey Alexander’s concept of cultural sociology is closely related to hermeneutics, and hermeneutics has been built continuously as well as cultural sociology. He and Philip Smith’s “strong program” takes Dilthey’s hermeneutics as its philosophical resource and late Durkheim as its classic sociological resource (Alexander and Smith, 2003). What is the relationship between the two resources? My viewpoint is that both of them are inspired by Wilhelm von Humbolt’s metaphor of “the web of language” in German Romantic Philosophy, which plants the seed of modern hermeneutics (cf. Taylor, 1985: 231). “The web of language” is expanded from text to text-like actions by Dilthey, and from text-like action to social structure by Durkheim. Durkheim articulates his approach to reach beneath the symbol to grasp the social reality around 1920, which has hermeneutical implications (cf. Durkheim, 1995: 2). This approach has been transformed into structuralism in the French tradition in early 20 century, and has been extended by Alexander between French structuralism and American pragmatics as “cultural pragmatics” in the turn of 21 century.

Chinese sociologist Xiaotong Fei (2003) argues that hermeneutics is a powerful approach for the “cultural self-awareness” of Chinese sociology, because the profound thoughts on mind in Neo-Confucianism of Song and Ming Dynasties has hermeneutical implications. I would argue that hermeneutics can be developed in this exploration, and in return, the exploration can be pushed forward by the expanded hermeneutics. The hermeneutics in this context is different from that of Alexander but can be inspired by the latter.

**Aspirations, Motivations and Immigrant Children’s Unexpected Success in Education**

Evidences have shown that despite their undesirable family background, immigrant children are doing unexpectedly well in education when compared to their native counterparts. Previous studies have failed to prove that strong motivation towards better life and high aspiration for upward mobility may contribute to their academic success. To fill this gap, I use Hong Kong PISA data to identify four types of incentives that theoretically would cause immigrants’ outstanding performance, and use mediation analysis to measure how much of the effect of immigrant status on academic achievement is mediated through these factors. The results confirm that aspirations and motivations do mediate a part of the immigrant status effect on academic achievement, and educational aspiration seems to be the relatively more important one. For immigrant students from families with low socioeconomic status, although their academic advantage is especially large, but that does not mean they have stronger motivations and higher aspirations.

**Factors Associated with Subjective Well-Being in Chinese Elderly People**

This paper used the data from China General Social Survey to examine factors related to Subjective Well-Being (SWB) in Chinese elderly people. I constructed a conceptual model adapted from Anderson’s health behavioral model and probed the associations between SWB and predisposing, enabling, and need factors. I discovered that higher SWB is more likely to be found in elderly people who have spouses accompanied, maintain good quality of relationship with family relatives and friends, have stronger need for recreational activities, have better health status, exercise more, perceive an increase in their current socio-economic status compared to previous situation, and remain optimistic about their future socio-economic status. Results also suggested that enabling factors (socio-economic status and quality of social connections) can impose more influence on elderly people’s SWB. Thus, policies that maintain or boost the perception of upward socio-economic mobility and that enhance harmony between older people and their relatives and friends should be given special consideration in future.

**Socio-Political Crisis and the Language of the Media: The Case Study of Russian “Snow Revolution”**

This paper is devoted to the analysis of the Russian Media during the “Snow Revolution”: the period of a political crisis in Russia between December 2011 and March 2012. The falsification during the parliamentary elections caused numerous demonstrations and street actions, which continued till the presidential elections.

The social networks played undoubtedly important role at that time: as a source of information, as a mean of mobilization and as an environment for the discussion and reflection. As a consequence, several recent studies of the “Snow Revolution” have been focused on social networks, such as Twitter or Facebook. Unlike these previous studies, this paper focused on more traditional sources, such as newspapers, information agencies and news feeds on the Web. We address two interrelated research questions: first, how the socio-political crisis affects the content and language of the Media, and, second, to what extent their view of the events represents the public opinion.

To answer these questions we use various types of evidence. First, we collect large corpus (52 millions tokens) of Russian news, published both during the “Snow Revolution” and before this period; we automatically extract the statistically significant keywords that characterize the investigated period. Second, we conduct the experiment among 104 informants who were asked to recall words and phrases that they associate with the “Snow Revolution”.

We compare the results of these experiments and discover the correspondence between the news and the survey responses; this demonstrates that the traditional news still have an impact in mind-shaping of certain strata of people. We conduct the experiment among 104 informants who were asked to recall words and phrases that they associate with the “Snow Revolution”.

We compare the results of these experiments and discover the correspondence between the news and the survey responses; this demonstrates that the traditional news still have an impact in mind-shaping of certain strata of people. We conduct the experiment among 104 informants who were asked to recall words and phrases that they associate with the “Snow Revolution”.

**An Emerging Energy-Focused Community in France: A Local and Social Innovation**

Can we talk about “communities” in the field of energy in France? Local and citizen-led initiatives relating to energy are developing strongly in Anglo-Saxon countries and a growing body of research is examining the innovative potential of these grassroots initiatives, known as “community energy”. In France, similar initiatives – albeit with certain specifics – only began to emerge recently (in parallel of and related to the Degrowth Movement and the Transition Towns), and so far, very few studies have dealt with them. The purpose of this contribution is therefore to explore an explanatory and in-depth analysis of one advanced French case, that of Le Mené, a pioneer in local energy autonomy.

We and reflects on its possible diffusion in France.

Why so Weak?: The Social Conditions of Labor Insurgency in Malaysia

Many Asian countries have experienced rapid industrialization and developed manufacturing for the past several decades. Given that manufacturing was traditionally based on labor-intensive activities in many countries, the growth of manufacturing can activate the labor movement. Indeed, in many countries, taken a result, some newly industrialized countries including South Korea and China have also experienced labor upsurge in a large scale. However, in Malaysia, which has also been remarkably industrialized since the 1970s, there does not necessarily exist a strong labor movement. This paper seeks to explore the reason why the labor movement in Malaysia is so weak even though manufacturing has clustered. Firstly, the brief history of Malaysian labor movement is reviewed and the labor movement in Malaysia used to be very active in the past. Secondly, taking into account various social factors such as class relations, organizations, institutions, networks, and the state, the causes of the weak labor movement in Malaysia is clarified. Thirdly, examining the recent process of the enactment of minimum wage law in Malaysia, this paper clarifies that the labor movement did not necessarily affect the enforcement of minimum wage law but the government primarily took the initiative to decide its enactment. Lastly, this paper tries to examine the possibilities to support the labor movement through various measures for resource mobilization, and to analyze how the recent deterioration of economic inequality can affect workers and their movement in order to define the social conditions of labor insurgency in Malaysia.

Japanese Challenges Towards the Sustainable Society -- the Recovering Process from the Earthquake and Tsunami, and Establishing New Industrial Relations --

After the serious earthquakes and tsunami in 2011, Japanese society, mostly in Tohoku area, had been damaged horribly and the accidents of Fukushima nuclear power plant are still on-going. Japanese central government had established “Reconstruction Agency (http://www.reconstruction.go.jp/english/)” for reacting to them. The task is “leading and managing the reconstruction process”, and the role is “to accelerate structural reconstruction and revitalization in the affected areas, by supporting implementation of government policies and managing coordination of reconstruction strategy and initiatives between various branches of government at a national level and with local municipalities”. However, the reconstruction process is not sufficient for the local communities.

Following this situation, at a municipality and a community level, we could consider two distinctive changes as hints for new Japanese working features. This presentation tries to examine whether these changes will shed their skin and become new industrial relations or conditions.

The first case would be an excellent collaboration between fishermen and NPOs in Iwate prefecture. Traditionally, the cleavage between fishermen and leisure divers was deep, because of their miscommunication. Currently, a NPO is proposing a cooperation aiming at recovering the sea both for fishery and diving. Through the collaborative works, fishermen have gradually presented their positive attitudes to divers and both of them have been able to understand each philosophy of work.

The second case would be a citizens’ participation toward local administrations. For the aim at reconstructing a community, most of all municipalities are requesting citizens’ participation to set their future plan. In this case, the working style of municipality’s staff had changed to deliberative and negotiating process. Under this pressure, the staffs of municipality office have been forced to think how they can work with citizens and how they can realize the policies through deliberations.

A n Attempt to Analyze the Narrative World of the Life-Stories of Doctors and Patients Involved in the HIV Tainted Blood Product Incident in Japan

A n attempt to analyze the narrative world of the life-stories of doctors and patients involved in the HIV tainted blood product incident in Japan.

We have conducted the research projects started in 2001 ended 2010, which aimed at collecting and analyzing the life-stories of doctors and patients involved in the HIV tainted blood product incident in Japan. This endeavor culminated in the final reports consisting of 3 volumes which amount to 1358 pages. Against the simplified bipolar model of the perpetrator and the victim of this incident, we found much complicated and individualized world of life-stories which would reflect the differences of social and historical context where each interviewee was situated at that time. First, the doctors had been thrown into the uncertainty and indecisiveness toward the then unknown disease of HIV infection, which would result in refraining from taking a clear-cut attitude concerning the use of non-heat treated concentrated blood product. For most doctors, the change from cryoprecipitate to concentrated product meant undoubtedly a quantum progress of medical care treatment for hemophiliacs; to return to the old method looked retrogression and might run the risk of engendering the lives of hemophiliacs by the higher rate of intracranial bleeding.

Second, the older generation of hemophilia in Japan unanimously experienced the unbearable painfulness of bleeding and was told by parents that they would die young. For them, the anti-hemophilia factor concentrate was regarded as the miracle medicine to ease the pain and to endow a long life. However, facing up the occurrence of HIV infection, they felt being kept separated from every trustworthy information sources. Although, the frank communication between doctors and patients should be acutely demanded at the time of confusion and uncertainty, we found little evidence of any interchange between them.

The “Vocabulary of Motives” of Worker’s Suicide in Japan

Recently, Worker’s Suicide has emerged as a serious social problem in Japan. According to the governmental statistics, the number of application for insurance and the total amount of payout about “karo-jisatsu” in the worker’s compensation insurance system in Japan have gone up significantly last ten years. The purpose of this presentation is to examine how worker’s suicide is understood among Japanese people now through the interview researches with bereaved families.

Japanese government reported the number of the people who committed suicide per year in Japan has been more than 30,000 from 1998 to 2011. This presentation especially focuses on worker’s suicide, what is called “karo-jisatsu” in Japan. Koro-jisatsu is a Japanese word that means working person’s suicide after too much working or moral harassment in workplace. This word has been popular in our country since 1990’s, while “karo-shi” which means death from overwork has been known since 1970’s. Some lawyers and doctors who are engaged in labor problem or industrial hygiene have claimed that too much working and stress make worker exhausted, so he/she injures his/her mental health, in the worst case he/she kills him/herself. That is called “karo-jisatsu”.

But I point out there is a logical leap between overworking and committing suicide. I clarify how they have been connected in the discourse of “karo-jisatsu”. In the consideration of “karo-jisatsu” and “karo-shi” as negative symptoms of worker’s suicide, there has been a distinction between them.

Decomposition of Inequality By an Extension of the Dinardo-Fortin-Lemieux Method: An Application to an Analysis of Gender Inequality in the Proportion of Managers in Japan

As a method for analyzing how inequality in one dimension is explained by inequalities in other dimensions, this paper introduces a method for the decomposition of a group difference in the outcome into several components, explained by differences in the covariate values among groups and a component unexplained by them. The method is an extension of the decomposition method introduced by Dinardo, Fortin and Lemieux (DFL) based on propensity-score weighting. An application of this method focuses on the amount by which gender inequality in the proportion of managers is explained by sex differences in human capital and observable characteristics. The regression-based Blinder-Oaxaca decomposition cannot be employed for a decomposition of the difference in proportion because the linear probability model cannot be specified as a regression model. Unlike the BO method, the DFL method can be applied to decompose a difference in proportion, but the latter does not permit a simple further decomposition of the explained component into elements explained by each covariate. The method introduced in this paper enables alternative sequential decompositions to assess the contribution of each variable to the explained component.

Suppose we denote by C, birth cohorts, by E, the educational attainment, and by D, the employment duration, and the causal order, C→E→D. The decomposition in gender inequality in the proportion of managers by the forward order of equating the conditional distributions of C, E, and D between sexes leads to a sequential application of the DFL method and identifies the effects of C, E, and D including each variable’s indirect effects through causally posterior variables. The decomposition by the backward order of D, E, and C to assess the unique contribution of each covariate’s effect on gender inequality requires an extension of the DFL method, however. This paper demonstrates the usefulness of this extension.

The Determinants of Gender Inequality in the Proportion of Managers in Japan

This paper analyzes linked data of employer and employee surveys from the International Comparison of Surveys on Work-Life Balance conducted by the Research Institute of Economy, Trade, and Industry to find the determinants of gender inequality in the proportion of managers among white-collar workers in Japan. The high job quit rate among women is a common reason given in employer surveys conducted by the Ministry of Health, Labor and Welfare for “having few managers.” This cannot be the true cause underlying gender disparity. The proportion of managers among female college graduates is far below that among male high school graduates even when the female employees have worked the same number of years as the male employees at their current companies. The fundamental problem is the institutionalized managerial practices of Japanese firms through which sex is given greater weight than educational attainment in evaluation for managerial potential.

Using the decomposition method of DiNardo, Fortin and Lemieux, this paper shows that the difference in human capital between men and women only explains 21% of the gender disparity in the proportion of managers. It also shows that in order to become a manager, long hours of work are required even more for women than for men and that the proportion of managers increases for men and decreases for women depending on the age of their last child in a way suggestive of the reinforcement of traditional gender roles by employers. The analysis also shows that firms with 1000 or more regular employees and firms with centers dedicated to the promotion of work-life balance have smaller gender inequality, and that gender inequality in those firms decreases more rapidly than other firms as the quit rate of female employees decreases. Policy measures to eliminate gender inequality in attaining managerial positions are also discussed.

The Impact of the East Japan Great Earthquake on Community in a Small Village

This article explores the impact of the East Japan Great Earthquake on the sociocultural aspects of community based on 40 in-depth life history interviews and a survey administered to more than 1200 villagers in a small seaside village. Noda village, which is located in northern Japan and has a population of 4500, is characterized by close interpersonal ties, a traditional patriarchal system, and an ethic of mutual aid. During times of economic prosperity, many male villagers moved to the Tokyo metropolitan area to work as carpenters due to the lack of jobs in the village. When a 37-m-high tsunami hit this village, 37 people were killed and almost 30% of the houses were damaged. The tsunami caused not only material damage and life-threatening situations, but also changed the sociocultural character of the village. For instance, people were initially reluctant to accept support from outsiders, such as volunteers, and talking about the tsunami experience has become almost taboo among villagers. We explore the processes by which sociocultural changes occurred and discuss the goals of post-earthquake community reconstruction in the context of data from small village.

Lay Responses to Radiation Contamination of Food

The possibility of radioactive contamination of food presents a threat not only to health but to autonomy. Radioactive contaminants cannot be seen, smelled or tasted, and the extent of any possible danger is not easy for the lay public to assess. Consumers are thus forced to depend on external sources of knowledge, such as government oversight and advice from experts. In the aftermath of the Fukushima disaster on March 11, the Japanese public has experienced an increas-ingly diminishment of trust in the government’s ability to ensure the safety of the food supply. Consumers are not convinced that “the experts” (e.g., government officials) are providing sufficient information to enable them to avoid the threat. Beck (1986) suggests that in such a situation, individuals are forced to find “individually rational” solutions to the systemic contradictions, such as making their own private decisions about which foods to buy and dealing with any health issues as their own problem. However, there are indications that new social coalitions are emerging in Japan, motivated by shared fear of a common danger and/or by shared sense of sympathy and empathy. This paper is going to argue that these phenomena—in which individuals seek and create “societal approaches” to deal with the contradictions created by the emergence of this new set of risks and the perceived failure of experts to fulfill their roles and ensure safety—is an indication that experiences that concern safety or risks at the local level can motivate a response that is much more social and less individualistic than the theoretical formulation would predict. The data used come from a series of focus group discussions; separate groups were created by gender, by households with and without children, by educational background and by type of work.

Effects of the Natural Disaster Recovery Process on Multicultural Community

This presentation discusses the impact of natural disasters on foreign nations in Japan and the process of recovery that they underwent. The data were collected through interviews. The Great Hanshin-Awaji earthquake of 1995 had a major impact on both newcomers as well as early immigrants in our society. Most of the affected people were family units who shared the same heritage, and aids were accordingly designed to support these families. In the area affected by the Great East Japan Earthquake, foreign brides of Asian origin in Japanese families posed a major problem. Although they belonged to a different culture, they expected to be treated like their Japanese counterparts as they believed they played an important role in passing down traditional Japanese family culture just as a Japanese family member would. However, circumstances have changed their lives after the disaster; they have started using their mother tongue, and find many ways of giving expression to their culture. The experience of the disaster and the recovery process has created a bond among these foreign brides—many of them have taken cooking classes, enrolled in Japanese language programs, or become caregivers, and some of them have been employed as professionals in various organizations. Such empowerment programs have enhanced their self-esteem, which has changed their family lives and the local community. Participating in various social activities is crucial to being equal members in a society.
The labor demand for day-laborers decreased since the early 1990s. As a result, the number of homeless in major Japanese cities increased. After the establishment of a new law to help homeless people become financially independent in 2002, many people who were homeless or considered unable to work because of age or disability received welfare and took up residence in urban underclass areas. Kotobuki, Yokohama’s urban underclass area, currently houses the highest rate of welfare recipients—approximately 80%—of underclass areas in Japan. The number of welfare recipients in the area has especially increased this decade. As a result, the area has become the center of the socially vulnerable.

In light of this social change, the local government, the social welfare council, and nursing care business offices developed a community welfare system in 2011. This system mostly focuses on officially recognized residents, not on those who are homeless. In 2006, Yokohama City reduced its special temporary welfare support for homeless residents, and then cut it entirely in 2012. This created greater difficulties for the homeless in the neighborhood, creating a highly concentrated district of welfare recipients.

So far, urban underclass areas are important for the homeless with regard to providing access to social resources—for example through forging relations with supportive groups and getting free meals. As urban underclass areas have gradually changed into places of concentrated welfare recipients, those who do not receive welfare support and are homeless now face even greater pressure.

Displacement and Politics of ‘Transitory Space’ for Resilience: A Case of the Great East Japan Earthquake

Forced displacement induced by disaster makes various types of “transitory spaces” in the process of reconstruction. The aim of this presentation is to discuss about functions and politics of “transitory spaces” for disaster assistance in the age of population-shrinking/aging society based on a case study of the Great East Japan Earthquake and Tsunami in Iwate Sanriku coast. The first point is to rethink about “temporary housing” system established in the 20th century. In the history of disaster in Japan conventional relief act defines “sufferers” by the standard whether they lost their own “houses” or not. As a result after the dissolution of emergent shelters public assistance tended to be concentrated on temporary housings made by the municipal government. But in the case of the Great East Japan Earthquake and Tsunami this system did not adequately function because in the age of population-shrinking/aging society when power of kinship and community are weakened and more and more local areas become “more isolated” residents do not have “social vulnerability”. Inequality of assistance among sufferers in temporary housings and in their own houses became serious problem in the 2011 Japan disaster. To cope with such situation new types of social spaces emerged to mobilize multi-escalars resources which make possible and continue to exist on condition of sufferers accepting the case. This second point will present on a temporary “base point” of assistance which was constructed by individual affiliate labor union in Tono area, one of the inland cities in Iwate prefecture. On the background of urban precarity and dependency of central and provincial city this “base point” emerged as a nodal space for re-organizing collective infrastructure of life. Considering such politics of “transitory spaces” will offer a valuable hint to invent future system of social resilience.

Party Membership during Partisan Dealignment and Realignment Phases in Post-War Japan

This paper investigates whether an abrupt and drastic realignment trend (i.e. a revitalisation of political support) in Japan since 2000 has changed patterns of political membership, even though Japan had a quite similar political dealignment trend (i.e. a constant and substantial increase of independent electorates) to advanced industrial democracies in the West until 2000.

Political scientists have pointed out that party membership has constantly declined in contemporary Western democracies. This substantial downward trend has been caused by the widespread political detachment from conventional party-political participation throughout the post-war period. In Japan, scholars have rarely examined the association between dealignment and political membership, although a long-term dealignment trend throughout the 1960s to the 1990s was observed by newspaper opinion polls and social survey datasets. Furthermore, using the Japanese General Social Surveys (JGSS), this paper clarified that the dealignment trend inverted into realignment since 2000.

The data analyses using Japanese data in the World Values Survey indicated that party membership witnessed an increase of inactive members from 1981 to 1995 and the percentage of these had remained through 1995 to 2005, while the ratio of active members remained stable from 1981 to 2005. In addition, logistic regression models suggested that political interest was a significant predictor that party membership witnessed an increase of inactive members from 1981 to 1995. This paper clarified that the dealignment trend inverted into realignment since 2000.

A Half-Open Door to Africa: Chinese and Japanese Migrants in the Twentieth Century South Africa

Over recent years, amid the increased presence of China and residents of Chinese descent in African countries, growing attention has been paid to experiences of Asian migrants in interdisciplinary fields of studies in South Africa. What has been revealed by exploring their histories is that, despite their small numbers, the existence of Chinese and Japanese migrants had a considerable impact on the ‘white’ South African racial policies. By focusing on those who migrated from East Asia at the beginning of the twentieth century, this paper seeks to explore how they confronted the technologies of exclusion that South Africa introduced in order to maintain the colour bar of the country. While several countries and colonies had restricted Asian migration associated with the ‘Yellow Peril’ panic and a threat to the ‘white’ labour at that time, the British government imported Chinese labourers just after the Second South African War to compensate for the absence of labour in gold mines. Lake and Raynolds (2008) emphasizes that introduction of the Chinese strengthened ‘white’ labour unions and encouraged legislations which restricted skilled work to white men.

As for the Japanese, they were listed as prohibited migrants under the 1913 Immigration Act, and Asian political membership studies. This is because it has not only a Confucian political tradition but with their ‘enemy’ fathers. This paper suggests that investigation on children born to Timorese women were considered unable to work because of age or disability received welfare and took up residence in urban underclass areas.
Medicalizing the Male Obesity through Metabolic Syndrome – Some Social Aspects of the Japanese National Chronic Disease Prevention Program

The Japanese mandatory National Chronic Disease Prevention Program started in 2008. Although some experts in public health and medicine have questioned the efficacy and feasibility of the program, it cannot be denied that it spread the term “metabolic syndrome” among the public and contributed much to the medicalization of obesity in Japan.

We interviewed scientists, experts, doctors and public health nurses about the intention of the program and the difficulties in its implementation. Currently we found the following points. 1) In spite of the fact that the program designates the whole population aged 40 to 74 as its target, the real target of the program is middle-aged men, especially working for small companies or self-employed. In that sense the medicalization of obesity is gender-biased. 2) The program used the newly developed diagnostic concept, “metabolic syndrome,” as its key concept to prevent cardiovascular diseases and type 2 diabetes. The concept played the central role in medicalizing obesity in Japan, where men’s obesity has always been the focus of health professionals. 3) The program faced with serious difficulties and resistance in its implementation. Some of the difficulties are viewed as originating from the misunderstanding of one’s health and its care. 4) There is also a marked contrast in the understanding of the program between public health nurses and general practitioners. Whether the reason for this lies in the professional interests of the two or in the gender biased concept of health for the two is not yet clear.

We like to place all of these issues in the context of medicalization of men’s health in the post-industrial society where several traditional masculinity-related behaviors are viewed as problems and medicalized.

YAMANE, SUMIKA* (Yamagata University, sumikammm@nifty.com)

The Uneven Structure of Home Care Service Provision Between-for-Profit and Non-Profit Organizations in a Quasi-Market System

The Japanese Long Term Care Insurance (LTCI) was implemented in 2000, aiming the promotion of user’s choice and the competition among different kinds of providers (i.e. such as for-profit, non-profit). It was expected that a quasi-market system would facilitate the effective competition among providers and improve the quality of care, though the price of each service was regulated as “legal price” by the government. However, it is not clear that such competitions can be realized, because different providers have different motivations in providing care services.

Especially, non-profit organizations (NPOs) have altruistic motivations to meet the needs of local residents. Thus, the different motivations of providers may result in segregation among them rather than the effective competition over the quality of care.

Thus, this study investigates the structure and mechanism of segregation of providers’ motivations in NPOs based on the analysis of the data from 12 in-depth interviews with care workers and a questionnaire survey of 34 NPOs.

The findings are as follows: First, among the services of the LTCI, NPOs tend to undertake lower-priced domestic work, while for-profit providers take higher-priced services such as healthcare under de-regulated domestic work in spite of large costs. Second, NPOs provide the older people with additional services in order to meet their needs outside of the LTCI rubric, even though the income from the additional services is smaller than the services under the LTCI. Third, the altruistic motivation makes NPOs’ workers content with long working hours of additional services.

NPOs have tendency to deliver their services in spite of small profit, as long as users need them. This allows for-profit providers to choose the services with larger profit, that is, cream-skimming. The different motivations of providers create the uneven and uncompetitive structure of the elderly care system in Japan.

3.11 Crisis and Okinawa’s Demilitarization Movements

Okinawa has a long history of resistance against the U.S. imperialism and Japan’s power over its islands and have been engaging in various forms of resistance to protect their ancestral lands, dignity and human rights. This paper looks at how the medicalization movement of Okinawa and the effects of impact Japan’s post 3.11 crisis have brought to the movements and how Okinawans have responded to it. One of the common frameworks used to describe a connection between Okinawa and 3.11 survivors is that they both are “sacrificed” for the larger “national agenda.” Some of the anti-nuclear protestors and Japanese settlers in Okinawa suggest that it is a coalition opportunity between people of Okinawa and the survivors. However, some Okinawan activists criticize such framework because it overlooks complicated power struggles between Okinawa and the national government. Another common misconception is that Okinawa is a safer place to be. Various types of Japanese organizations have planned getaway programs for the survivors of 3.11 in Okinawa. Okinawa is marketed to be a “safer place” since it is the farthest location from the “affected region” in Japan. These programs upset some activists for its false and disrespectful claims. Due to the largely concentrated and long lasting U.S. military presence, Okinawa’s land and water has been contaminated by many toxic chemicals such as PCB, dioxin, depleted uranium and so on that on the military had stored. Lastly, some of the post 3.11 Japanese settlers in Okinawa declare themselves “refugees” and participate in the demilitarization activism that threaten the ownership of the movement and attempt to shift the focus of the movement to fulfill their agenda.

Social Perceptions and Environmental Communication on the ‘Benefits’ and ‘Risks’ of Tidal Flat Restorations

This paper looks at how the ‘risks’ and ‘benefits’ of tidal flat restoration projects are communicated, perceived and negotiated by different stakeholders in case studies from Japan, the UK, Netherlands and Malaysia.

Various tidal flat restoration projects have been conducted in Japan and elsewhere in recent years in an attempt to revitalise fish stocks or preparing sea level rise. Coastal wetland restoration projects, such as coastal realignments or re-flooding farmland, still represent a new concept. Due to the need for long-term social support and investment in such schemes, it will become increasingly important to take into account the various perceptions that exist in the community from now on. Yet, at the moment it is often not clear 1) what kinds of environmental and social benefits of tidal wetland restoration projects are considered by project contractors and other stakeholders in the community; 2) in what way various stakeholders perceive the ‘benefits’ and ‘risks’ of their local restoration projects; 3) what the commonalities and differences among these discourses are, within and across different case studies, and 4) how the findings could make a contribution to future decision making and support for coastal wetland restorations in Japan and beyond.

This paper explores the above four points to examine the improvement conditions of participatory sustainability initiatives. This paper is based on data collected during a three-year government-funded research project (2011–2013) from stakeholder interviews and through document analysis of the environmental information provided to citizens and decision makers via various media.

* denotes a presenting author. Abstracts are organized by first presenting author’s last name.
Despite the popularity of such cunning comedy, the boundaries between languages and ethnicity do not look as if they are loosening and liberating. Rather, the comic act securely positioned the hybridity in the marginal discursive space. In turn, even the seemingly liberal, multi-layered and sometimes fun nature of hybridity is supporting the hegemony and the distinction between the socioeconomically powerful and the rest.

Changing Determinants of Women's Continuous Employment at the Time of Family Formation: A Comparison Between Japan and Taiwan

[Background] Women's work-family experience differs across countries. This study analyzes how different employment systems (including firms' employment customs and public policies) lead to different work-family experiences for Japanese and Taiwanese women. The post-war employment system in Japan segregated women according to gender and marital status, and therefore women with lower human capital are more likely than others to retire at marriage or childbirth. Since the 1990s, however, with intensifying global economic competition and labor market liberalization, women's employment has qualitatively changed: non-standard employment expanded to include white-collar occupations and part-time work, and women with higher human capital are more likely to retire at marriage or childbirth. This study analyzes how employment systems since the 1990s affect women's work-family experiences for Japanese and Taiwanese women. [Results] Analysis of data obtained from the 2006 Japanese Social Stratification and Mobility Survey reveals that the determinants of women's continuous employment have changed in Japan: women in standard employment are more likely than those in non-standard employment to continue employment at marriage or childbirth while firm sizes and occupations no longer have large effects. In contrast to Japan, the situation in Taiwan is more complex and dynamic. Moreover, women in Taiwan are more likely than women in Japan to have a college degree, and the determinants of coresidence are more likely to be different in Taiwan. [Conclusions] Employment systems differ and historically change among East Asian societies, which produce different work-family experiences for women. Policy implications will be discussed.

Gender Difference in Older Parents' Coresidence with Their Adult Children: A Comparison Between Japan and Taiwan

[Background] In East Asian societies, being influenced by Confucian values, the intergenerational coresidence (i.e. older parents live with, are provided for, and cared for by their adult children) has been thought to be desirable. Recently, however, the coresidence rates are decreasing in Japan. More, there are differences in the manners of the coresidence between societies there. The coresidence rates are relatively low in Japan but high in Taiwan. Gender distributions of coresidence also differ between the two societies: in Japan, older mothers are more likely than fathers to live alone in Japan while there is no large gender difference in Taiwan. [Research question] Analyzing the process and determinants of coresidence, this study explores why mothers are more likely than fathers to live alone in Japan and why there is a no such difference in Taiwan. [Results] Analysis of data obtained from the 2006 East Asian Social Survey reveals that in Japan, the “reunion” coresidence (the coresidence after a parent become widowed) prevails, and the determinants of coresidence differ between widowed mothers and widowed fathers: the factors that promote widowed mothers’ coresidence with their children do not necessarily promote the widowed mother’s coresidence with their children. In contrast in Taiwan, “life-time” coresidence (the continuous coresidence before and after a child’s marriage) prevails, and there is no difference in the likelihood of coresidence between widowed mothers and fathers. [Conclusions] First, with different public pension systems in the backdrop, older Taiwanese dependents living at home is more expected in Japan than in Taiwan. Second, in Japan with different gender expectations (men are more likely to provide for their wives), more women are expected to continue employment at marriage and childbirth while firm sizes and occupations no longer have large effects. In contrast, in Taiwan, the situation is more complex and dynamic. Moreover, women in Taiwan are more likely than women in Japan to have a college degree, and the determinants of coresidence are more likely to be different in Taiwan. Employment systems differ and historically change among East Asian societies, which produce different work-family experiences for women. Policy implications will be discussed.

YAMUKI, SHIHO* (Aoyama Gakuin University, yamuki@hotmail.co.jp)

Performing Cool Japan and Uncool Hybrility: Analysing ‘Luugo’ (Lou Language)

‘Metrolingualism’ refers to young people’s use of new hybrid language or foreign languages/dialects, in popular culture or everyday interactions (Otsuji and Pennycook 2010). They are creative moves which challenge and loosen cultural, historical, and political boundaries, in-sync with the late-modern and globalised social reality that we apparently live in today.

As of Japan, Maher (2006) provocatively stated: ‘Cultural essentialism and ethnic orthodoxy are out. In Japan, metrolinguistic is in. Cool rules’. True, young people in Japan today are more open towards foreign cultures and languages: dimsum and Thai curry follow for dinner, followed by drinks at a British pub with the NBA games on TV screen. But are they really feeling ever so border-free in their daily lives?

The aim of this paper is to explore how experiences of emerging female sandwich generations are shaped by policy configuration, social and cultural contexts and their personal/family relationships in East Asia. The ageing of population, the decrease in average number of siblings and the rising average age of mothers at the time of child bearing, all to suggest that new types of sandwich generations who simultaneously provide care for their baby elders/relatives and young children/grandchildren may increasingly become common in developed countries. East Asian societies are not exceptions as facing with acute demographic and social changes. Through the comparative analysis of data from questionnaire surveys and semi-structured interviews, this paper investigates the new structure of social risk involved in the double responsibilities of care, work and generational relations with a specific focus on Japan. We will discuss both theoretical and practical implications of our research on double responsibilities of care, to wider social theory, care policy and practice.

Double Responsibilities of Care in East Asia

The aim of this paper is to explore how experiences of emerging female sandwich generations are shaped by policy configuration, social and cultural contexts and their personal/family relationships in selected East Asian societies - Hong Kong, Korea, Japan and Taiwan. The ageing of population, the decrease in average number of siblings and the rising average age of mothers at the time of child bearing, all to suggest that new types of sandwich generations who simultaneously provide care for their frail elderly relatives as well as young children/grandchildren may increasingly become common in developed countries. East Asian societies are not exceptions. More over double responsibility of care may possibly be more prevalent in East Asia than other European counterparts as facing with acute demographic changes and different family values embedded in the societies. Through the comparative analysis of data generated from mixed research methods in each society, this paper will investigate how these sandwich generations experience a double responsibility of care, by analysing resources available to them from local policy configurations and from personal and kin networks. The research will highlight increasing new risks emerging in East Asian societies in relation to women's citizenship, care, work and generational relations.

**Japanese Jewelry Market**

Though jewelry market size in Japan in 1991 was three trillion yen (around thirty billion USD at current rate), its size is less than one trillion yen (around less than ten billion USD at current rate) in 2013. [36x545]JC20-233.2

Japanese jewelry market size continues to shrink up to the present date. Japan had not had western style of jewelry market because Japanese wore “kimono” and western style of jewelry does not fit with kimono. Japanese does not wear western style of jewelry. After restoration of Imperial power in 1868, western style of clothes was getting popular in Japan and western style of jewelries started to be manufactured and sold in Japan. Along with western style of clothes population, western style of jewelry market continued growth. It means western style of jewelry market in Japan has only one hundred and fifty years’ history. In addition to that, generally the value of jewelry is difficult to judge for consumers. This is true not only for Japanese but also western people. In the process of new market of western style of jewelry growing, I will investigate how the knowledge of western style of jewelry was implemented and diffused or Not implemented and diffused to Japanese. I also will analyze how western style of jewelry market was formed in Japan during these one hundred and several decades and how the relationship among seller, purchaser and institution was transformed and affected each other from view of institution of jewelry and its contribution. As researches on jewelry from sociological points of view is very rare in Japan, I would like to make contribution by stating historical background of Japanese jewelry market and relationship of players and institutions.

**Reconstructing Biopower: From an Analysis of Television Programs about Conducting Surrogacy**

How does performance affect the human body in terms of biopower? This research analyzes a process where discourse about reproductive technology leads to its implementation to change actual bodies. From an examination of television programs in Japan, I show how culture impacts the materialistic sphere, which is mediated by performance regarding “America,” an icon of modernization for the Japanese. The Japanese national public broad casting organization, NHK (Nippon Hoso Kyokai), has aired programs about reproductive technology since the emergence of In Vitro Fertilization. At the beginning, NHK portrayed the technology as a realization of scientific progressivism, but regarded the ethical aspects as unrealistic. In the discourse, the image of Europe was that of an agent of intelligence; on the other hand, the image of the U.S. is that of savagerness.

However, after a Japanese celebrity couple conducted surrogacy in the U.S., “America” became a normative model for the Japanese; there was a contrast between the undeveloped Japanese and the developed American in terms of modernization. The television programs implied surrogacy stands for emancipation from the traditional Japanese convention to oppress women to construct a modern family. Moreover, they constructed a solenoid image of the children taken from the U.S. by utilizing imaginary which evolves memories of the imperial coronations. These images raised a positive public opinion toward surrogacy; which led the government to rush to legalize it. However, after foreign mass media revealed that a Japanese male had conducted surrogacy in India with a purchased egg (known as Manji’s case), NHK stopped discussing surrogacy and the Japanese government postponed the legalization of surrogacy. The Manji’s case showed the Japanese had already gone beyond the savage and modernized “America.” Therefore the Japanese lost their frame of reference.

The above examination indicates the decision to apply reproductive technology depends on culture.
of income and social security, where gender segregation and gender parity coexist. Compared with 10 years ago, the proportion of employed women in farming, forestry, animal husbandry, fishery and water conservation shows a substantial decline, while the increased ratio in wholesales and retail, and in public administration and social organizations are the two highest. The proportion of women in industries with higher degrees of monopoly is low, and the declining tendency reflects the intensified gender discrimination and gender differentiation in monopolies; the proportion of females in the modern service industry as well as the degree of gender parity in the industry have been increasing, making it possible for more and more women to obtain higher incomes.

YANG, HUNG-JEN* (National Yang-Ming University, Taiwan, hjyang@ym.edu.tw)

*From Green Energy Governance to Green Economy: A Case Study of a County in Southern Taiwan, 2009-2013*

After a lot of negotiations, conducted by Ping-Tung Government in Southern Taiwan, among solar PV companies, Tai-power Company, Central Government and local farmers, 25MW solar farms were installed on the damaged lands of orchards and fish farms in Lin-Bian and Jia-Dong, two towns in central Ping-Tung, in which the government carried on post-disaster reconstruction in the wake of Typhoon Morakot on 8th August 2009. Meanwhile, under these highly ground-mounted solar panels, there were organic vegetable farming and ecological fish farming set up. Inspired by the example of agricultural/solar farms in Lin-Bian and Jia-Dong, companies of various green energies came to Ping-Tung in search of different experimental. Since April 2013, a hydrogen fuel cell company has allied itself with local B&Bs, gas stations and convenience stores, offering 80 hydrogen-powered scooters to promote a “low-carbon tour.” Now, this company is preparing to get fuel cell scooters into mass production. Meanwhile, small-scale wind turbines are planned to be installed in central Ping-Tung, together with the existent solar farms and hydrogen fuel cell systems, to conduct a ‘smart grid’ experiment, which has been listed in the ‘Smarter Cities Challenge, 2013’ by IBM Company. Also, in northern Ping-Tung, there is another ‘smart grid’ plan to connect solar farms, wind farms, bio-gas plants, wind farms from pig farms, and micro hydropower systems. The author of this paper has investigated and analyzed the performance of green energy in Ping-Tung by means of participative-observations and in-depth interviews. More specifically, adopting the concepts of green energy governance, social innovation, green economy and STS, this paper describes and explains the relationships among gambling behavior, masculine attitudes and violence. In addition, the current geopolitical situations that have confronted with North Korea for more than half a century also contribute to preventing any left-leaning policies from taking place and in turn to strengthening right-wing power. By looking at political dynamics of historical context, class alliances, and political discourse, this paper will broaden the understanding of the relationship between the middle class and democracy in transitional periods.

YANG, MYUNGJI* (University of Hawaii at Manoa, myung@hawaii.edu)

*The Origins Of Conservative Democracy In South Korea: Nation-Building, Democratic Transition, and Middle-Class Politics*

After more than twenty years since the democratic transition in 1987, South Korea has experienced an ironic political scene, in which a daughter of the former dictator Park Chung Hee, Park Geun Hye, was elected as the new president in the winter of 2012. This paper argues that the middle class largely shaped the post-democratization trajectory in Korea by resisting any significant social reforms and preventing further social equality and redistribution. While the middle class is biased for a strong supporter of representative/electoral democracy to have led a democratic transition in Korea, the middle class has also been the one that resisted significant socioeconomic reforms implemented by the center-left governors including the Kim Dae Jung and Roh Mu Hyun administrations. This paper examines the origin of conservative democracy in Korea in which the middle class played a key role as a status-quo political actor. To do so, this paper traces the historical process of nation-building and economic development, through which the middle class was emerged by the support of the authoritarian state and became an exclusionary social group that advanced its own class interests. The origins of the middle class includes the history of Korean society which has confront with North Korea for more than half a century also contribute to preventing any left-leaning policies from taking place and in turn to strengthening right-wing power. By looking at political dynamics of historical context, class alliances, and political discourse, this paper will broaden the understanding of the relationship between the middle class and democracy in transitional periods.

YANG, NAI* (Chinese National Academy of Art, ynaaiww@163.com)

*Contradiction Between Leisure Pursuits and Structures of Inequality*

Applying the method of stratification research could be a more rational way of looking at matters, especially inspecting Leisure Pursuits from the perspective of structures of inequality. Leisure is not a simple individual behavior, and cannot be independent from social environment and the influence of time. Leisure pursuits is neither a matter in view of pure spiritual level nor a question of pure economics, but a resort of spirit and physical of human being which has close relationship with social political and economic structures. Essentially, structures of inequality or limited resources decide the inequality of leisure consumption. The contradiction between leisure pursuits and structures of inequality is an objective existence. Idiots intend to stress the universality of leisure pursuits or the individual right of leisure, criticize and neglect the positive impacting of the existing of structures of inequality on leisure pursuits. However, the existing of the inequality of leisure consumption is not only facilitating the reasonable distribution and portfolios of resources to a large extent but also playing an important role in maintaining structures of inequality as well as the vigorous vitality of the social organism actually.

It will be beneficial for us, if we treat positively the contradiction between leisure pursuit and structure of inequality, to treat the matter of leisure consumption correctly and help us deal with many confusion and difficulties in real life, particularly those related to a series of questions of imbalances, such as the imbalances between leisure and individual rights, leisure and social economics, leisure and wealth distribution as well as leisure and spiritual resort etc.

YANG, NAN* (Shanghai University of Sport, yangnan@sus.edu.cn)

*Athletic Sport or Health Promotion: Development Dilemma Confronted in Globalization of Chinese Traditional Martial Arts*

This study is to clarify the relationship between the two different purposes of Chinese Traditional Martial Arts as a sport: athletic sport and health promotion, and propose the author’s own view on the development direction of Chinese Traditional Martial Arts in the context of sport globalization.

This paper reviewed 75 related published articles and academic papers and summarized the views. The author held ten semi-conducted interviews with Chinese Traditional Martial Arts coaches, scholars, students and other Chinese Traditional Martial Arts enthusiasts.

Some hold that in the process of globalization we should focus on training elite players and develop athletic sport system for traditional martial arts, which will help traditional martial arts widely recognized by western cultures. This kind of thoughts results in an analogy that Chinese Traditional Martial Arts practitioners prefer to practice athletic Martial Arts. In university, Chinese Traditional Martial Arts Majors choose to practice athleticMartial Arts and attend contest of all kinds,
because this is the only way they can get authorized eligibility as first or second class national sportsmanship.

Others argue that since its functions of attacking and defending have been in degradation as modern weapons developed, Chinese traditional martial arts still can attract many people of different countries, ages, and backgrounds, not because of its athletic features, but because it contribute immensely to one's physical fitness and self-moral cultivation, and the cultivation of both physical and moral health is the power source of its sustainable development in the context of sport globalization.

The author think that as to the development of Chinese traditional martial arts, a regular authorized eligibility certification system as the athletic sport has will standardize its technical requirements, and put the focus on the physical and moral health promotion will keep its diversified national features in its globalization in the world.

Asian Migration to the United States and within Asia in Comparative Perspective

More than one million Asians have migrated to America before 1965. Since 1965, Asia has been a major source of migration to the USA and more than 10 million Asians have arrived on U.S. soil. Most recently, Asia has surpassed Latin America as the largest source of immigration to the USA. Up to the mid-19th century, Asians mainly migrated to other Asian countries, and in contemporary time Asians have continued to migrate within Asian countries. While the trends in Asian migration to the USA and within Asia resemble and differ? Do the same or different types of Asians migrate to the USA and within Asia? What are the similarities and differences in causes of migration to the USA and within Asia? Are there similarities and differences in Asian immigrant transnationalism between the USA and Asian countries? How are Asian migrants to the USA and within Asia similar and different in patterns of adaptation to host societies? How do the impacts on host societies of Asian migration to the USA and in Asia resemble and differ? What is likely to happen to Asian migration to the USA and within Asia in the near future? Using a variety of data from the USA and international organizations and focusing on the post-1965 period, this paper seeks to answer these questions through comparison and to address the implications of the findings.

Mechanisms of Trust Formation Under Different Conditions of Political Identity

Individual political behavior is a manifestation of social behavior, and individual voting behavior indicated his/her political choices and political identity. After democratization in Taiwan, presidential elections show bipartisan polarization and reinforce general distrust of social phenomena. Therefore, this study intends to explore how people form their trust behavior when they interact with others of the same or different political identity groups. In stage 1, the computer randomly assigns trustees and trustees and does not show political identity of 2012 presidential candidates (Ma Ying-jeou and Tsai Ing-wen). In stage 2, the computer displays political identity logo by random arrangement. In stage 3, the subjects can choose their preferred objects of the same or different political identity logo by themselves. There are three mechanisms of trust behavior formation under different identity condition. (1) Win-win mechanism: Win-win strategy is that both trustor and trustee attempt to maximize their provendence and return through exchanging with the targets of the same or different political identity groups from the beginning round. (2) Identity mechanism: Under the condition of political identity choice by subjects, identity effect becomes strongly significant at the beginning of the first round on the third stage of the experiment, especially for that of Ma-Ma group. (3) Mutuality mechanism: Mutuality effect is very significant in all three stages of trust experiment, especially in the second and third rounds of each stage. When people exchange with the same political identity groups, it will produce the phenomenon of polarization. When the trustee return high proportion profits to the trustor in the first round, the trustor will feedback more in the second round. However, if the trustee return lower proportion profits to the trustee, the trustor will feedback less and less, even lower than exchanging with different political identity groups.

Saemaul Undong and Beyond: Upgrading the Opportunities and Capabilities of Women in 1970s’ South Korea and Kenya Today

Capabilities and empowerment are no longer new concepts: they are well understood and widely seen as necessities for individual as well as community development. Practices in today's developing world, however, are not always successful. Nor have the successful practices of the past been much elaborated so as to provide practical lessons for today. This study attempts to fill this gap with the case of Saemaul Undong, a New Village Movement in South Korea in the 1970s, in combination with discussions of its applicability to Kenya, one of today's developing countries.

Saemaul Undong has recently become an inspiring development model for many developing countries. It is known for its strong and committed leadership both at central and local levels, as well as the high rate of local participation. The rise of women as equally capable agents of change as men has been noted as one of its distinctive features. Indeed, Saemaul Undong is understood as a remarkable turning point for women in rural areas, which made them visible and active in formal activities beyond their own family and household. This newly explored social force is known to have effectively served rural and national development during the high growth periods of Korea.

The objectives and the structure of this paper are as follows. First, it explains the mechanism and processes of Saemaul Undong, which made women's involvement, or empowerment, possible within a society that had a strong Confucian character at that time. Second, it elaborates the strengths and weaknesses of the Movement in terms of women's capabilities and empowerment. Finally, the paper discusses the applicability of the findings to today's developing world. Our selected case country is Kenya, but discussing the applicability of the case is expected to provide practical lessons the developing world in general.

YANICKI, SARAH* (University of Canterbury, missyanicki@yahoo.co)

A Tale of Two Suburbs: Earthquake Recovery and Civil Society in Christchurch, New Zealand

This study followed two similarly affected, but socio-economically disparate suburbs as residents recovered from the devastating 6.3 magnitude earthquake that struck Christchurch, New Zealand, on February 22, 2011. More specifically, it focuses on the role of local churches, community-based organisations (CBOs) and non-governmental organizations (NGOs), here referred to broadly as civil society, in meeting the immediate needs of local residents and assisting with the longer-term recovery of each neighbourhood. Analysis of sixteen qualitative interviews with residents as well as key informants from local civil society in each suburb found that despite considerable socioeconomic differences, civil society in both suburbs has been vital in addressing the needs of locals in the short and long term following the earthquake. Institutions were able to utilise local knowledge of residents and damage in the area to a) provide a swifter local response than government or civil defence and then help direct the relief these agencies provided locally; b) set up central points for distribution of supplies and information where locals would naturally gather; c) take action on what were perceived to be unmet needs; and d) act as a way of bridging locals to a variety of valuable resources. However, the findings also support literature which indicates that other factors are also important in understanding neighbourhood recovery and the role of civil society, including: local leadership, a shared, place-based identity, the type and form of civil society, social capital, and neighbourhood- and household-level indicators of relative vulnerability and inequality. The intertwining of these various factors has influenced how these neighbourhoods have coped with and taken steps in recovering from this disaster. It is suggested that a model that takes a multi-factorial approach in understanding community vulnerability and capacity within the Christchurch context be designed to more effectively explore further research in this area.

Culture As “Agnor”: Agonological Features of Weberian Sociology

Culture as Agon: Agonological Features of Weberian Sociology

Max Weber treated the Greek concept of “agon” with great interest, in the final parts of his treatise of the “City”. However, if we focus on his interest on “agones” in general, the social fields of competition and social selection, we should rather say that this interest can be considered as his premier Leitmotiv, which permeates his comparative study of cultures.
This page explores the advantages and the limits of this methodology on the cultural comparison of ogones (that will be coined "agonology"). Starting from Weber's concrete historical depiction of Asian competitions (especially, in his "Hinduism and Buddhism"), this paper moves in to the theoretical concerns. It argues that, it is much fruitful to point out the agonological features of Weberian methodology than just to stick the "cultural determinantism", "idealism", "methodological individualism", or "conflict theory". Finally, briefly contrasting this Weberian agonological features with modern sociological theories of competition, such as Bourdieu's theory of symbolic violence, etc., we will like to outline the future possibilities of this comparative agonological perspective.

International Political Support For Endangered Languages (The Uralic Languages of Russia as an example)

International political support for endangered languages (the Uralic languages of Russia as an example)[1]

According to the UNESCO Atlas of the World's Languages in danger there are 131 such languages in Russia; 20 vulnerable ones, 49 definitely endangered, 29 severely endangered, 22 critically endangered and 15 extinct languages. Uralic languages are among them. Along with traditional measures the World Congress of Finno-Ugrian peoples (the institutional form of the Finno-Ugrian language community) are forms to attract attention to the situation of these languages.

The beginnings of construction of the Finno-Ugrian community were laid in the eighteenth century by Henrik Gabriel Porthan, professor of rhetoric who popularized the idea of Finno-Ugrian brotherhood in Finland and urged Finnish scholars to investigate the kindred Finno-Ugrian languages. Spheres of cooperation expanded in the 19th century. This trend culminated in the Finno-Ugrian cultural congresses organized by Finnish, Estonian, and Hungarian scholars, teachers, and students. The first was held in Helsinki in 1921. The ideas of rebuilding began in the early 1990s. The Finno-Ugrian world was conceived as a broad cultural identity based on linguistic affinity, and attempt to integrate various Finno-Ugrian peoples in the social and cultural integrity. In 1992 the first World Congress of Finno-Ugrian Peoples was held in Syktyvkar where it was tasked to "achieve the status of non-governmental organization United Nations", further in 1996 (Budapest), in 2000 (Helsinki), in 2004 (Tallinn) in 2008 (Khanty-Mansiysk) and in 2012 (Siofok).

Over the past two decades, World Congresses did not grow into a non-governmental organization or analogue of the International Organization of la Francoophone. However, they have become forums where the problem of endangered languages is actualized. World Congresses are the guidelines for the implementation of language policies at the regional level.

Feasibility and Possible Fields for Application of Clinical Sociology in Iran

According to some Iranian sociologists, the absence of sociology, and sociologists themselves, in relation with the society in one of the most important negative aspects that has had a major impact on weakness of sociology in Iran. There are so many social problems in Iran for which we need social solutions. But the absence of sociology in obvious not only to recommend sociological theories that match these problems but also to intervene in the process of solving them. Clinical sociology can play an important role in filling this gap as a mediator between sociology and society. This study, first of all, assesses the practicability, and possible obstacles, of utilizing this particular type of sociology and then determines and introduces the fields in which it can be applied and intervene more effectively to improve the quality of lives in Iranian society.

By making use of documentary method, any attempt, if exist, for applying clinical sociology is considered and by interviewing some sociologists and social activists, different fields, and also major obstacles, for application of clinical sociology in Iran are proposed.

Social Justice, A Key Concept in the Social Movements of the Last Hundred Years in Iran

Social Justice is a very important and widely used concept in the political and social history of many nations. As well as many countries, it has had a significant role at least in mobilizing people for social movements and in protesting against the existing political system in Iran.

In analyzing the causes of many social and political processes and also the Constitutional and Islamic Revolutions in Iran, the realization of social justice is cited as one of the major and prominent indicators. It can be found in different kinds of resources and documents such as poems, speeches, political debates, rhetoric of social groups and so forth. Therefore a form of emphasis on the concept of social justice has existed in every single social movement in Iran based on its special arrangements and aspects which were shaped socially and politically.

This study aims to narrate the history of social justice in the social movements of the last hundred years in Iran to provide a better understanding of it during this very important period of time and to theorize this concept and its changes over this timeframe.

By making use of documentary method and interviewing some sociologists and social activists, a classification of usages of this concept and their differences, in the history of social movements in Iran, is presented.

Modern State of a Home Education in Russia

Over the last 20 years, an education system in Russia has undergone significant changes. The changes led to the organization of new forms of training, for example, a home education, which at the same time has its own long enough history in Russian traditions.

Home education takes on special significance in a modern life, giving new opportunities of training and reflecting challenges in both Russian educational system and the society in whole. For example such as:

- Dissatisfaction with: a quality of education at different levels; an established system of relations inside of pre- and comprehensive institutions;
- Difficulty with realization of constitutional right of choice of training form, because of imperfection of legislative base;
- Challenges of combination of family culture and religious principles with those of formal education and so on.

However, for all obvious advantages, a home education is not means of solving all the problems as gives rise to new questions. In Russia these are: efficacy and completeness of children and adolescents (who received a family education) socialization and adaptation in adulthood; compliance of the level of education of upperclassmen, graduated home education, to the requirements of the state educational standard; the lack of the system of diagnostic, methodical and consultation assistance.

They begin to raise like questions at the legislative level today. Since September 1, 2013, a new Federal law «On education» entered into force, where they pay more attention to this form of training. Legislators reflected growing tendency to an increase in the number of families, who resort to the help of this form of education.

Under the corys the development of a home education in Russia and an increase in the number of families, practiced this method, become not only a private affair but also a social phenomenon, needed social analyze and comprehension.

The Occupational Stratification Process for the Rural Poor in Mexico

The influence of socioeconomic origins on occupational outcomes is an expression of inequality of opportunity in society. The reproduction of intergenerational inequalities has been widely studied within the field of social mobility and stratification. Education and labor market insertion have been identified as key ele-
ments in the stratification process. Mexico is a highly stratified and rigid society in which children born in poor households have a high probability of experiencing intergenerational transmission of poverty. Using path analysis models, this paper provides empirical evidence on some of the factors that shape occupational allocation of the rural youth that belong to poor households in Mexico. This contributes to the understanding of the process of intergenerational reproduction of inequality and poverty.

Recreational Hunting in Africa: “Meat” or “Poison” for Local Community

Recreational hunting is one of the oldest known tourism activities using wildlife. Leader-Williams (2009) defined recreational hunting as the hunting where the hunter or hunters pursue their quarry for recreation or pleasure. Same as in colonial period, hunters, mainly from Europe and U.S.A., range over hill and dale in developing country to obtain trophy of big game and their pleasure.

Some researchers have suggested that controlled recreational hunting can benefit the development of local communities, thereby promoting the protection of wildlife resources as well as both ecological and economic sustainability. However, important debates remain regarding the social impacts of conservation and tourism on local communities. This presentation aimed to introduce a social impact of recreational hunting on local community in Cameroon. Approximately two years of fieldwork, mainly based on interviews and observations, showed that recreational hunting in North Province, Cameroon generated tax revenues of approximately 0.9 million US dollars in 2009/2010, that is, 200 times as large as than safari in National parks did in the same year. A part of economical benefits shared with local communities as profit sharing and employment opportunities. However, the local inhabitants were affected by regulations of their rights to use natural resources. Moreover, some villages experienced forced migration because of the beginning of hunting tourism in this area.

Recreational hunting brings to local community not only positive impacts such as profit sharing and employment opportunity, but also negative one as control of the livelihoods of local people and forced migration. Even if recreational hunting can play an important role in community conservation and wildlife conservation with its great economic benefit, the independence of local people and their connection with wildlife should be considered to re-conceptualize “Sustainability”.

Ethnic Food As Tourism Resources

This paper aims to examine ethnic food as one of the tourism resources, based on field research conducted in ethnic town in Yokohama city. In Tsurumi ward, Yokohama city, historically many ethnic minorities including Okinawan, Korean, Chinese and Nikkei Latin American (Brazilian, Bolivian and Argentine etc.) have moved to work in industrial complex of coastal areas. Such immigrants have made this area multietnic. Many conducted participant observations to some ethnic groups (Okinawa Association, Brazilian NPO etc.). Also I conducted in-depth interviews with some families who have multietnic backgrounds and experiences in order to understand their identities and their changes in the migration process. Based upon these field work data, this paper considers the social value of migrants from the methodological individualism.

In particular, this paper focuses in entrepreneurs of ethnic food business. For example, ethnic restaurant owners in this area are second generation migrant. They think their business not merely as a job but also as a cultural practice for keeping their ethnic culture. However, some ethnic owners have conflict because they must change flavor to suit Japanese guests’ taste although most of guests think their ethnic food authentic. Besides some first generation do not admit their work as a cultural practice. Multi ethnic condition makes the situation even more complicated.

Taking a tour through these multietnic migrants and their business, this paper charts an exploratory excursion through arguments that address ‘ethnicity’, ‘identity’, ‘memory’, ‘authenticity’, ‘Invention of tradition’ and cross-cultural encounters within the ‘mixed’ spaces and contradictory imperatives of postcolonial migrant in Japan urban area.

An Analysis of Recent Internationalization of Education in Japan: A Case Study of Nepalese Students

In this paper, we discuss the experiences of Japanese language school students from Nepal, as a case study, to understand the emerging new trends and issues surrounding the internationalization of education system in Japan. In 2008, the Japanese government proposed the goal to recruit 300,000 international students by 2020. Due to the effort of the Japanese government and school systems, the number of international students has been increasing; however, the patterns of international students have been changing simultaneously. For example, Chinese and Korean students, who used to be the most popular group of international students, are now less likely to choose Japan as their destination country to pursue their education. Instead, the number of students from Nepal, Vietnam and Myanmar has been increasing in the last five years.

To explain the new trends, we discuss the push-pull factors for the changes. Also, the international students need to acquire Japanese language skills to be enrolled in the Japanese university system, the Japanese language school often serves as the first school for many international students. For this reason, we focus the role of Japanese language schools to discuss students’ perspectives on life in Japan. Based on the case study of Nepalese students, we found that the most of them are “self-funding” students. Although they hope to pursue higher education and better career prospects, providing financial support to their families in Nepal has become the top priority. Nepalese students have to work double or even triple jobs to manage the heavy debt from study abroad, high living cost in Japan and support families in Nepal; consequently, many students face challenges to pursue their dreams. In addition, some of them expressed cultural differences and isolation from the society. Based on the analysis, we propose social implications of the emerging trend of international students.

A Systemic Approach to the Construction of Urban Places

This paper reports on research undertaken across three markets in the centre of London, England. The research adopts an ethnographic approach that focuses on the ongoing process construction. By using in-depth/iterative interviews the work highlights both the changing narrative that people constructs ‘in the moment’ while also highlighting the role of researcher in place construction. This projects works on the premise that it is beneficial to understand places as complicated adaptive systems that are constituted by an array of heterogeneous parts. Places have physical locations and material forms but they are also in part, made up of the very people who experience the place. Understanding such complexity leads the researcher to focus on the ‘how of place’, rather than the ‘what’, ‘where’, or ‘who’. Rather than attempting to understand place as unique, stable, concepts, this work builds on systems-theoretical approaches towards an understanding of places that facilitate both change and permanency so important to architecture and community building theories.
The author will examine the following points. (1) East Asia in Civilization Analysis from Durkheim, Mauss to S.N. Eisenstadt. (2) Asianism in the Japanese Civilization. (3) Is there any difference between (1) and (2). (3) New Civilization and value change. Finally the author will examine the present situation of East Asianism in East Asia.

RC04-79.3 YAZILITAS, DEMET* (PhD candidate, dyazilitas@vu.nl) Study Choice, Gender and Ethnicity

This study aims to explore ethnic differences in gender specific study choice patterns. The central research question is: to what extent do ethnic minorities present different gender-specific choice patterns in mathematics, science and technology (MST) and what are the reasons for such differences?

The study is based on the premise that pupils with non-western ethnic backgrounds differ in their evaluation of MST-studies from pupils with native ethnic backgrounds as a result of the difference in cultural values. To explore this premise, first we examined the effects of gender, ethnicity and grade averages on school profile choices of 265 pupils in higher secondary education in two schools in the Netherlands. This was followed by semi-structured interviews with 45 individual pupils about their choices.

In our sample 59% of male and 42% of female pupils have chosen a MST-profile, of which 39% of both male and female pupils have chosen this profile in combination with a Health-profile. Moreover, the combined grade average for mathematics, physics and chemistry is shown to have the strongest impact on a positive choice for a MST-profile. Gender also has a significant effect, even after controlling for the combined grade average. Ethnicity however does not.

The interviews reveal that female pupils who choose a MST-profile often did so because of interest in a health related career. The high share of pupils in particular female pupils with a MST-profile is partially also explained by the wish to keep options open for future educational choices since a MST-profile grants access to almost all fields of study in tertiary higher education. Ethnic background, despite not being significant, is thought to serve as a proxy for social class since pupils with non-western backgrounds have smaller social networks than pupils with native backgrounds through which they can acquire information about choices.

RC32-553.2 YEandle, SUE* (University of Leeds, S.M.Yeandle@leeds.ac.uk) KISpETER, ERIKA* (University of Leeds, e.kis peter@leeds.ac.uk) Class Differences in Women’s Work-Care Reconciliation in Contemporary Leeds

This paper focuses on women’s working lives in Leeds, England, where some of the UK’s most affluent and most deprived localities are found. The authors compare the work-care reconciliation practices and attitudes of lower and higher educated women, and consider how differences and similarities in these are shaped by local welfare state arrangements and conditions in the local labour market.

The analysis, conducted within the EU-funded FLOWS project, is based on data from a survey of local women and focus group interviews with women who combine paid work with raising young children or looking after old, disabled or sick family members.

While working-class women in the UK have ‘always worked’, the second part of the 20th century brought middle-class women’s mass entry into the labour force. In some other countries, this process was actively encouraged by state provision of publicly funded care services and other policies to support women’s attachment to the labour force while raising young children and/or looking after older family members. In the UK’s liberal welfare state, childcare and caring for older, sick or disabled adults have primarily been conceptualised as individual/familial responsibilities and care services are currently provided primarily by market actors, rather than by the state. The authors explore the relative importance of the national/local state, cultural preferences and market conditions on women’s working lives, and consider how these shape social inequalities between women in different socio-economic circumstances.

RC11-198.3 YEandle, SUE* (University of Leeds, S.M.Yeandle@leeds.ac.uk) BUCKNER, LISA (University of Leeds) Gender Disparities in How Older Workers Reconcile Work and Care in England

Carers in England and across the UK have been a focus of policy debate on work and care for several decades. In the 2000s, modest new employment rights (including the right to request flexibility at work) were introduced to support them reconcile work and care, and municipalities received new funding from central government to help develop local services to address carers’ needs. In national population censuses in 2001 and 2011, the Office for National Statistics collected data about caring responsibilities and these permit examination of the relationship between the (unpaid) care individuals give to their older, sick or disabled family members, friends or neighbours and paid work, age, gender and health. Based on analysis of these data, and supported by insights from two surveys of carers (the 2009/10 Survey of Carers in Households and the Carers, Employment and Services survey undertaken in 2006-7 at the University of Leeds), this contribution examines data on the intensity of caring responsibilities (using hours of weekly care provided as a measure of intensity) and participation in the labour market for men and women aged 45-64. The paper highlights gender differences in patterns of care and paid work, with a particular focus on the extent to which men and women in this age group appear to use part-time work and early retirement as ways of combining work and caring responsibilities. In interpreting these data, the authors also draw on qualitative and policy evaluation studies undertaken by the CIRCLe research group at the University of Leeds. These provide insights into older workers’ motivations, preferences and behaviour in relation to work and care, and indicate the complex cultural, moral and institutional contexts which shape patterns of caregiving in later life.

Over the past four decades, Taiwan has undergone a dramatic political transition from authoritarian rule to democracy. Accompanying this transition is a major change of the sense of national identification when hegemonic Chinese nationalism has increasingly given way to local Taiwanese consciousness. A series of survey data show that the percentage of people who identify themselves as being Taiwanese has risen from 17% in 1992 to 57.5% in 2013, while the percentage of people who identify themselves as being Chinese drops from 25.3% to 3.6% in this period. Yet few researches have been made on how common people formed a counter-hegemonic national identity on the personal level during the period. To investigate this transformative dynamics, we draw on the theoretical perspective of “narrative identity” to analyze a large number of “letters to the editor” describing personal experiences of identity transformation which were published in two major Taiwanese newspapers during the period from 1994 to 2004, when the change accelerated sharply. We find that a special historical narrative which consisted of a distinctive historical outlook and story line and displayed unique values and emotions served as a common framework of reference for those who began to discredit Chinese nationalism to reassess their individual life history and make sense of their connections with the destiny of Taiwan. It was critical to the formation of the counter-hegemonic Taiwanese identity. We argue that counter-hegemonic identity is typically effectively created and sustained when an elite-derived historical narrative had popular resonance in the sense that it demonstrates a remarkable ability to explain the marginalized and suppressed life experience of ordinary people. The analysis also shows that the act of narration or story-telling is a key mechanism through which linking individual to society, the present to the past, the micro to the macro, and agency to structure.

RC50-814.5 YEH, JOYCE HSIU-YEN* (National Dong Hwa University, jsyceye2@gmail.com) Indigenous Mobility: Experiences and Narratives of Mobility and Immobility of Yami Indigenous Youth on Lanyu (Orchid Island), Taiwan

Travel, mobility and diaspora are facts of contemporary societies across the globe and their implications are profoundly important. This paper attempts to articulate the significant connections between travel, mobility and diaspora in contemporary indigenous societies. Engaging with multi-sited fieldwork between Taiwan and Orchid Island, this study illustrates the tensions and dynamics of travel, mobility and diaspora. It aims to open a dialogue among tourism studies, indigenous studies and mobility studies in which issues of diaspora and people being ‘on the move’ are investigated.

Initiatives Collectives De Création D'Activités, Circuits Courts De Production Et Citoyenneté Au Travail Au Brésil

L'économie solidaire au Brésil regroupe des travailleurs (informels, chômeurs, personnes de périphéries urbaines, travailleurs ruraux) ainsi que des organismes communautaires, des mouvements de foi et des syndicats de la CUT (la Centrale unique des travailleurs, principale confédération syndicale au Brésil). Elle a impulsé des formes de développement local reposant sur la notion de circuits courts de production et de souveraineté alimentaire. Ces formes prennent appui sur l'organisation en coopératives auto-gérées d'agriculteurs familiaux et sur la mobilisation des Communautés traditionnelles (Quilombos, etc.) qui réinvestissent leur savoir faire en matière d'exploitation écologique des ressources naturelles. Elles associent les Cadetores, personnes qui ramassent et trient les matériaux recyclables. L'économie solidaire consiste aussi dans des « chaînes de valeur » qui regroupent, par exemple, des coopératives assurant la production du coton écologique jusqu'à la fabrication des vêtements, et leur commercialisation selon une politique de prix accessibles aux familles à faible revenus.

Ces initiatives collectives montrent que la redistribution de richesses s'opère en amont même de leur production, dans les choix de filière d'activité en relation avec les communautés locales. Ces initiatives donnent aussi un contenu concret à ce que peut être la citoyenneté au travail, qui consiste à remettre en cause les divisions traditionnelles entre concepteur et exécutant / intellectuel et manuel, et aussi entre travail marchand et travail de reproduction sociale. Ces réalisations questionnent les identités de l'individu et de représentation collective. L'étude de cas menée au Brésil auprès de syndicats et du Forum brésilien de l'économie solidaire indique que les initiatives se constituent comme des modèles alternatifs quand elles font appel à des formes participatives et délibératives de démocratie et non au processus habituel d'agrégation des intérêts par des syndicats, qui ont tendance à reproduire les pratiques dominantes.

YEROCHESKI, CAROLE* (Université de Montréal, CRIMT, GIREPS, caroleyerocheski@msn.com)

Reproduction Ou Transformation Des Organisations Du Travail Dans Les Coopératives De L'Économie Solidaire Au Brésil

Cette communication propose un éclairage sur la façon dont des syndicats de la CUT (Centrale unique des travailleurs, principale confédération syndicale au Brésil) sont amenés à prendre en compte le rapport au travail des personnes considérées peu qualifiées, en s'appuyant sur l'observation des pratiques sociales et des identités de travailleurs dans deux situations de reproduction du coton écologique au Brésil. Celui-ci rassemble des coopératives et associations de production d'horizons divers (anciennes entreprises industrielles récupérées par les travailleurs, création d'activités de faible valeur ajoutée en coutume, agriculture, collecte et tri des matériaux recyclables, coopératives d'agriculteurs familiaux), qui ont en commun d'être créées de manière collective et de représenter le travailleur. L'étude de cas menée au Brésil auprès de syndicats et du Forum brésilien de l'économie solidaire indique que les initiatives se constituent comme des modèles alternatifs ou de représentation collective. Ces initiatives interviennent à une échelle locale et contribuent à la construction d'une nouvelle forme d'identité collective au sein des coopératives de l'économie solidaire au Brésil. Leur impact sur la reproduction ou la transformation des structures de travail est à étudier.

Academics Producing Knowledge for the World Bank

The trend of neoliberalization that is experienced in all spheres of life also has its impact on the academia in the forms of managerialization and entrepreneurialization of universities, increasing workloads, increasing pressures on academics to generate funds, transformation of knowledge into a product that can be exchanged in the market, alienation of academic researchers from the knowledge they are producing, and an increasing degree of specialization and division of academic research labor in the developed and developing countries alike. Especially for the second group of countries, international organizations like the World Bank indeed have a major role in the development and spread of neoliberalization in academia. Limited resources for research lead the academics to look for external funding opportunities and international organizations like the World Bank emerge as important suppliers of funds for doing research in these circumstances. Doing research and producing knowledge for the World Bank create certain outcomes both in the short and long terms for these researchers themselves and also for academia in general. This paper demonstrates how the academics’ experience of producing knowledge for the World Bank fosters the neoliberalization of the university in Turkey. Depending on interviews with academics, the paper looks at the impacts of doing research for the World Bank. It concludes that although these academics are forced to act as entrepreneurial subjects, they haven't necessarily internalized this neoliberal mentality.

YILMAZ SENER, MELTEM* (Istanbul Bilgi University, meltem.sener@bilgi.edu.tr)

Belief in God, Religion and Secularism: Self-Identifications of Jewish-Muslim Mixed-Married Couples in Contemporary Turkey

This study destabilizes the dichotomous approach in secularization theories and in intermarriage literature, which views contemporary identities either as secular or religious, through the analysis of Jewish-Muslim mixed-married couples’ perceptions of their religious backgrounds in the officially secular state of Turkey. In-depth interviews with Jewish-Muslim mixed-married couples show that the 2005 data does not capture “religion” as externally defined religious rules and “faith” as an unmediated relationship between God and the individual to explain their connection to their religious backgrounds and to identify themselves as secular. Therefore, they establish a hybrid position which I conceptualize as “faithful secularity” that incorporates both belief in God and secularity within the Turkish context. Unlike Jewish partners, Muslim partners have difficulty perceiving their religious backgfround as one that goes beyond the religious identity; therefore, the distinction between religion and faith becomes particularly helpful for mixed-married Muslims to situate themselves with respect to their Muslim background. The concurrently secular and faithful identities of these Jewish-Muslim mixed-married couples break the artificial dichotomy between secularity and religiosity and pave the way for a new theory of secularization.
Struggling to Climb the Organizational Ladder in Turkey

Depending on twenty in-depth interviews with men and women who graduated from top universities of Turkey and who have been working in corporate jobs for more than ten years, this paper reflects on the impact of gender on prestigious white-collar jobs. It aims to answer the questions of to what extent gender has an influence on the experiences of a white-collar employee, what it means to be a white-collar employee for a woman, and what kind of factors prevent women from rising up in the corporate hierarchy. It points out that males talk about issues related to gender only when they are directly asked to respond on the impact of gender on work experience, whereas gender has a central role throughout the accounts of females, especially if they are married and have children. For married women with kids, it is not possible to talk about their jobs without talking about how they manage their domestic responsibilities. The paper suggests that organizational cultures that emphasize staying at the workplace for extended hours make it very hard for women with kids to climb the organizational ladder, as child care is still primarily considered as women’s responsibility. Women who have struggled to reach senior management positions give up, as they get exhausted because of the double shift of paid work and child care. Although these women have above average family incomes and can afford to hire domestic help, because of the traditional ideology that emphasizes the crucial role of mothers for socialization of kids, they give up their careers and shift to jobs that have regular work hours but no future prospects. Educated in the same way with their male colleagues to be successful and to have achievements, these women end up being unsatisfied with not only their jobs but also their lives.

Research on Public Attitude Towards Social Impact Assessment of Chang E Lunar Probe Program

For a long time, China evaluates engineering’s or projects’ impacts mainly by assessing its economic contribution, always lack of social impacts. This study chooses Chinese Chang E Lunar Probe Program and conducts a survey by using questionnaire about public’s attitude towards Chang E’s social impacts. The results suggest that public’s attitude towards high-tech and non-direct-interest engineering’s social impact consists of military impact factor, political and economic impact factor, psycho-social impact factor and educational impact factor. Furthermore, public’s attitude towards Chang E’s social impact is related to age, educational background, the time that concern Chang E project, and gender. This research will help the management of Chang E project to manage growth and multiply financial rewards through church building projects. This explicit engagement in business practices not only raise the question of to what extent gender has an influence on the experiences of a white-collar employee, but also on the language and practice of business. This not only extends understanding of neoliberal effects but also demonstrates the role of economic and political management in shaping religious practices in contemporary churches such as the megachurch in the ‘intelligent island’ state of Singapore. Singapore is famous for being run like a giant corporation[7] and is an affluent country characterised as ‘non-liberal-development’[8]. This is reflected in the religious organisations operating within it, especially megachurches that have pressing space issues in containing its burgeoning congregation in a highly urbanised and compact city.

RC22-382.2

YIP, JEANEY* (University of Sydney, jeaney.yip@sydney.edu.au)

The Business of Housing God: A Case of Singapore Megachurches

Religion and business are often seen as inhabiting separate social spheres but in this paper I explore how they are combined and reconciled in the activities of megachurches. Through two case studies of Singapore’s largest megachurches, I examine how they combine religion and business, focusing on how these churches strategically source and target high-tech and non-direct-interest investors to manage growth and multiply financial rewards through church building projects. This explicit engagement in business practices not only raise the question of to what extent gender has an influence on the experiences of a white-collar employee, but also on the language and practice of business. This not only extends understanding of neoliberal effects but also demonstrates the role of economic and political management in shaping religious practices in contemporary churches such as the megachurch in the ‘intelligent island’ state of Singapore. Singapore is famous for being run like a giant corporation[7] and is an affluent country characterised as ‘non-liberal-development’[8]. This is reflected in the religious organisations operating within it, especially megachurches that have pressing space issues in containing its burgeoning congregation in a highly urbanised and compact city.

into politics is also a possibility for political movements of other types, not just justifications. On the other hand, however, an acceptance of personal affinities of this interpretation, pointing out that nationalist politics made with reference to typical Finnish expectations of politics, focused on efficiency. The populist mode of argumentation is in stark contrast particularly to democratic, the market mechanism or technical efficiency, instead of mere personal preference. The populist mode of argumentation is in stark contrast to a typical requirement in mainstream politics: to distance the graduates into work in Japan had been once highly praised, but the system became less functional due to several factors (Mary C. Brinton, 2011, Lost in Transition). Many young people cannot get permanent and secure jobs, so some of them become 'freeters' who only get temporal and insecure jobs to make a living. Many empirical studies have taken place to find who are the most disadvantaged among Japanese youth, trying to find what causes the dysfunctional transition between school and labor market in the 2000’s. However, most of these studies focused on the youth transition during only a certain period of time, and they are not sufficient to clarify the complexity of youth transition. YCSJ has conducted a panel survey of a group of youth for five years from their age of 20, so that YCSJ is able to capture the dynamic young people’s transition in consideration of various factors. Above all, we aim at unraveling how youth transition differentiated with social class and educational opportunities.

A New Attempt At Organizing Irregular Workers In Korea: Examining The Activities Of The Korean Women’s Trade Union

It is difficult to organize irregular workers, especially female irregular workers in Korea, as many of them are employed by small enterprises, change their jobs frequently and enter and leave the labor market according to economic fluctuations. Therefore the Korean Women’s Trade Union (KWITU) has tried to build a new model of trade union and a new idea of a labor movement which are different from the enterprise unions for male regular workers in order to organize female irregular workers who have been entirely excluded from the protection of labor laws, the welfare system and the trade union. While the enterprise unions have concentrated on protecting employment and improving working conditions of the union members, each worker of the KWITU has been an independent women’s trade union which any working woman can join by herself without distinction of industry, occupation or region, or whether she is unemployed or not the enterprise, and performed various activities. In this presentation, we consider the activities of the KWITU as well as its implications.
The Rise of 'Reflexive University Governance' in the Risk Societies: Japan, the United Kingdom and the United States

Socio-economic upheavals after the Lehman Shock, and in European countries, the introduction of austerity measures have financially overshadowed the university sectors cross-nationally. The purpose of the paper is to identify how uncertainty and insecurity in the post-2008 period have re-shaped university governance relating to risk management. The study examines university governance at the system and institutional levels in Japan, the United Kingdom and the United States.

The paper is both theoretical and empirical driven. The study takes the theoretical approach by utilising two conceptions of 'peer reflexivity' and 'risk' in the context of university governance. The former refers to the ‘cycle of peer feedback, self-monitoring, self-analysis and action. Higher education institutions are treated as learning organisations’ (Clark 1998; Dill 1999). The latter explores Becks (1992) and Giddens’ (1999, 1991) risk society. The study then proposes, a new concept, ‘peer reflexive governance’, which is compared with Foucault’s neo-liberal ‘governmentality’ (1988, 1991) to capture the characteristics of ‘peer reflexive governance’.

Regarding empirical analysis, the study takes documentation for data collection in order to identify the extent to which the institutions in three country settings are autonomous (not in direct state control modes), making the peer reflexive mechanisms feasible. The collected document includes acts, government White Papers, circulars and other official documents.

The paper argues that ‘peer reflexive governance’ has become significant in the insecure and uncertain environment in the post-crude crunch period because the universities have become increasingly more self-aware, reflexive, and reflexive than ever before. The universities have strengthened their self-monitoring mechanisms in order to respond to uncertainty and risks, shaping them into learning organizations. The practices of peer reflexive governance, however, differ between Japan, the United Kingdom and the United States.

The study is significant because few literatures so far connect the conception of ‘risk’s to university governance.

Survey of Standardization in Tsuruoka, Japan

Survey of Standardization in Tsuruoka, Japan

Comparison of results from four surveys conducted at 20-year intervals YONEDA Masato, MIZUNO Yoshimichi, MAEDA Tadahiro, ABE Takahito.

The present study briefly reports the result of “Survey of Standardization in Tsuruoka” (hereafter abbreviated as SST). SST is a cooperative research project between National Institute for Japanese Language and Linguistics and the Institute of Statistical Mathematics since 1950, when the first survey was administered in central area of Tsuruoka, a local city in Tohoku district, Japan. Since then the project has been repeated at about twenty-year intervals (we administered the fourth survey in the fall of 2011). This project aims at describing the process of language standardization in Tsuruoka in both societal and individual levels.

SST is a combination of Area survey and Panel survey. In the Area survey, informants were sample randomly drawn in each survey occasion from the residential register of the target area. The aim of the Area survey is to capture the standardization process in societal level. In the Panel survey, respondents of the first, second and third Area surveys were followed up in the subsequent occasions and asked to answer to the same items. The aim of the panel survey is to investigate the typology of life-span linguistic change in individual level.

The sample size for the Area survey in fourth SST was 700 and number of respondents was 466 (response rate 66%). Panel survey in the fourth SST consists of three groups, four-time repeaters from the first survey, three-time repeaters from the second survey, and the two-time repeaters from the third survey. The total of the eligible sample for three groups was 437 and the number of respondents was 333 (response rate 76%).

In the presentation, we will report on selected results of the fourth survey on several items.

JS-12.5

YONENO-REYES, MICHIOY (University of the Philippines, michiyo@rocketmail.com)
Japanese Language Education for Japan-Philippines Economic Partnership Agreement

This paper asks how Japanese language education for Filipino nurse candidates under JPEPA can be located in the Philippine socio-cultural settings, in order to provide academic grounding toward more meaningful policy making for both governments.

Foreign nurses’ entry to Japan presents a unique pattern of migration from the point of view of language learning. It pertains to adults who learn a foreign language from the beginning, yet are required to reach a high level of proficiency. Historically speaking, adult migrants often meant either unskilled or skilled workers who are not required high level of language skills; or skilled workers who already know the language of the host country. In any cases, the movement often took place from a former colony to a former sovereignty. As for Japan and the Philippines, although Japan occupied the Philippines for a few years during World War II, linguistically speaking, there is no linguistic influence among the young generation of Filipinos today. Also, due to the eligibility constrains, it is unlikely possible to find an EPA candidate who has received higher education in Japan.

The paper illustrates the socio-cultural situation in language practice in the Philippines at large and points to the both governments’ weakness in systematic understanding and addressing it — a) multi-lingual-ness with ambivalent relation with English as both colonial and global language; b) prominence of orality over literacy; c) weaker establishment of Japanese language education than other Southeast Asian countries in quantity and quality; and d) class issue in gaps in motivation and needs of Japanese language learning.

JS-23.1

YONEZAWA, AKIYOSHI* (Nagoya University, yonezawa@gsid.nagoya-u.ac.jp)
University Governance and the Academic Profession in “Rising” East Asia

The role of universities is increasing with the rapid growth of the knowledge economy across the world. At the same time, universities are also being called upon to change their governance and management structures in order to transform themselves into the core sector of the globally competitive knowledge industry. Salmi (2008) suggests that “world-class” universities and higher education systems require favorable governance with autonomy and academic freedom. Terms such as “entrepreneurial universities” (Clark, 1998) and “academic capitalism” (Slaughter and Leslie, 1999), however, imply that traditional “collegium” governance is at risk. Most East Asian higher education systems have been established and developed through strong intervention by national governments, and, therefore, granting of academic freedom and autonomy has been relatively slow and recent. Namely, the top universities in these “Post-Confucian States” (Marginson, 2011) are now achieving “world-class” status without experiencing the strong “collegium” governance pattern of the past. Japan could be an exception, having developed strong academic freedom and autonomy led by the faculties since World War II. However, now, top Japanese universities are faced with stagnating performance in both research and education. As a result, there have been calls from business and government for drastic reforms of their governance to enhance their chances of survival in the growing competition with universities and other knowledge industries in Asia and around the world. By utilizing data from the Academic Profession in Asia (APA) survey among selected Asian countries in various development contexts gathered by Arimoto et. al., the author examines the following questions: Is it possible to establish highly competitive universities without a strong tradition of collegium culture? If so, as seen in the emerging Asian countries, what are the implications for the mature university governance typically seen in Japan and Western Europe?
The role of universities is increasing with the rapid growth of the knowledge economy across the world. At the same time, universities are also being called upon to change their governance and management structures in order to transform themselves into the core sector of the globally competitive knowledge industry. Salmi (2008) suggests that “world-class” universities and higher education systems require favorable governance with autonomy and academic freedom. Terms, such as “corporeal universities” (Clark, 1998) and “academic capitalism” (Slaughter and Leslie, 1999), however, imply that traditional “collegium” governance is at risk. Most East Asian higher education systems have been established and developed through strong intervention by national governments, and, therefore, granting of academic freedom and autonomy has been relatively slow and recent. Namely, the top universities in these “Post-Confucian States” (Margison, 2011) are now achieving “world-class” status without experiencing the strong “collegium” governance pattern of the past. Japan could be an exception, having developed strong academic freedom and autonomy led by the faculties since World War II. However, now, top Japanese universities are facing stagnating performance in both research and education. As a result, there have been calls from business and government for drastic reforms of their governance to enhance their chances of survival in the growing competition with universities and other knowledge industries in Asia and around the world. By utilizing data from the Academic Profession in Asia (APA) survey among selected Asian countries in various development contexts gathered by Arimoto et. al., the author examines the following questions: Is it possible to establish highly competitive universities without a strong tradition of collegium culture? If so, as seen in the emerging Asian countries, what are the implications for the mature university governance typically seen in Japan and Western Europe?
state as Northeast Asia experiences a conservative shift and territorial and historical disputes are reignited.

**The New ICTs and Gender Inequality in Korea**

This presentation aims to explore the implications for gender inequality of the increased access to and usage of mobile ICTs, based on the data collected in Korea. Korea used to be no exception to the conventional digital divide in which women, compared to men, are disadvantaged in the use of ICTs. In recent years, however, there has been a remarkable increase in Korean women’s access to internet and, specifically, mobile internet technology. Women have surpassed men in the number and proportion of ‘smart’ mobile phone users. Among young generations, in particular, girls, compared to boys, tend to have access to the mobile phone earlier and use it more frequently and longer in duration of time. In 2011, Korean children are reported to own their first mobile phone at the average age of 10.4 years (fifth grade at elementary school), and 80% of the third graders at elementary school owned it.

What would be consequences in terms of gender inequality of this earlier and increased exposure to mobile internet technology represented by the ‘smart’ phone? On the one hand, the user friendliness of the new technology has the potential of narrowing or eliminating the gender gap in its professional and financially lucrative utilization, and its mobility in time and space potentially brings the liberating effect for women both in employment and domestic labor. On the other hand, however, there are concerns that the easy availability and access to the mobile technology would lead to continued gender inequality, in which women remained male consumers, and increased vulnerability to the new problems brought by the new technology, such as digital/mobile addiction. This presentation investigates the consequences of the new ICTs in gender inequality and their implications to cope with the gender inequality at present and in the future.

**Cultivating Ethnic Solidarity in the Transnational Enclave: Co-Ethnic Relations Between South Korean “Newcomers” and Korean-Japanese/Korean-Chinese “Oldcomers” in the Korean Enclaves in Osaka and Beijing**

Recently, scholars have noted that migrants exhibit distinct patterns of adaptation characterized by frequent movement to their countries of origin. This influx of transnational migration has in turn, altered the structure of historically established minority communities. My research investigates how changes in the ethnic community are brought about by transnational migration have shaped the ways ethnic minorities construct notions of ethnic identity, using ethnographic, interview and survey data conducted in the Korean enclaves in Beijing and Osaka.

The Korean enclaves in Beijing and Osaka are characterized by two distinct waves of Korean migrants: recent South Korean transnational migrants, and third- and fourth-generation Korean Japanese/Korean Chinese minorities. As a result of the growing number of South Korean newcomers since the 1990s, the Korean communities in Beijing and Osaka today have become increasingly connected—both on the institutional and grassroots level—to the homeland. But rather than strengthen sentiments of ethnic identity, increasing contact to South Korea has led to the growth of formidable barriers in constructing a collective ethnic consciousness within the Korean community. Damaged co-ethnic relations between the two waves of Korean migrants have significantly hindered their ability to mobilize the rich transnational resources in the enclave for upward mobility. This paper brings to light the structural barriers Korean migrants encounter in cultivating ethnic solidarity in the transnational enclave. In doing so, I offer suggestions for social welfare policies that may aid transnational migrants in more effectively cooperating together to mobilize the resources of the enclave to better their life chances.

**Effects of Child Involvement in Housework on Future Gender Role Expectations**

Housework allocation has been studied extensively, particularly in its relation to women’s employment. Despite the richness and abundance of literature on this subject, most research has focused on housework allocation between couples, and children’s participation in housework has been understudied. These few studies, however, indicate that children participate in household tasks to varying degrees. The present study utilizes writing assignments submitted by approximately 120 undergraduate students enrolled in family sociology courses at a Midwestern U.S. university, and qualitatively analyzes patterns of housework participation in students’ familial, care, and career contexts. The students are asked to describe this participation. Preliminary data analysis shows that most college students expect to marry, and for both spouses to earn an income, even when students grew up in households with stay-at-home mothers. While this conclusion is reiterates more gender-neutral expectations in previous research, the descriptive context of childhood experiences, expectations regarding domestic tasks varied among college students, and childhood experiences appear to have important impacts on perceptions and expectations with regard to housework. Students who “helped” their employed mothers with the second shift were more likely to perceive indoor housework as family work, and employ “helpers” as helpers’ as a backup when they are not available. Other students who had no family members from whom they contributed to domestic tasks in their household households. These students tended to view housework as the responsibility of the entire family, and to hold less gendered expectations. The types of housework done by children were often gendered (e.g., sons doing yard work and daughters helping with cooking), and children who grew up in households shaped students’ perceptions and expectations. By analyzing childhood experiences, this study aims to fill a hole in the literature, shedding light on how parents include their children in negotiating housework allocation, and how childhood experiences shape gender role perceptions and future expectations.

**Lessons Learned from Great East Japan Earthquake - Birth Outcomes in the Catastrophe of Highly Aged Country**

The Great East Japan Earthquake and Tsunami occurred in 2011/3/11 and this disaster revealed health care issues that Japan already had. One is the lack of attention for maternal health care in the highly aged society and the other is decreasing OB/GYN providers in the Tohoku area. It was hard to see pregnant people and babies in the highly aged country like Japan, however, there were a few expecting mothers left in the cold, hungry and anxious shelter with another people. They were not prioritized as a vulnerable population. Continuing research of 11 hospitals and 37 clinics in one prefecture in the devastated area showed that most of pregnant mothers stayed more than 3 evacuation shelters to find a safer place to live and half of the pregnant patients could not find a way to go out from the Tsunami area to have birth. With more than 200 patients who could succeed to transport to another prefecture, their average delivery time (weeks of gestation), weight of baby, preterm birth rate, low birth weight rate, amount of blood loss and another birth outcomes of this catastrophic area tells us the importance of the pre-hospital OB/GYN care team in disaster response and safety confirmation system for mothers and babies. We should strengthen the perinatal care in highly aged society where mothers are “minority”. There is a generation inequality in health care of highly aging society like Japan - perinatal health care is less concern than elder care. 10 obstetricians set up a project specialized for pre- and postnatal care, and carried out medical activities in these disaster-stricken areas by taking care of pregnant and postpartum patients from April 1st until September 3rd, 2011. With dispatched specialist after natural disaster and built the visiting system and correct birth outcomes and neonatal health outcomes.

*Who Takes Part in Anti-Nuclear Actions? A case Study of the Organizations of Evacuated People from Fukushima Plant Area and Their Attitudes Concerning Nuclear Energy*  

It is often assumed that the people of Fukushima, especially those who lived near the nuclear plants, are increasingly aware of the impracticality of Japan’s nuclear energy policy as they have succeeded in replacing it on or near evacuation zones.

In this paper, the author asks whether the assumption is valid in any case, and if it isn’t, what are the reasons for the cases that go against the assumptions. The author will examine some of the reasons for the lack of organized opposition based on the areas bordering the Fukushima prefecture and other prefectures in the more distance.

First, it is shown that, as long as each organization represents the people who lived in the same municipality before the devastating event of March 2011, the extremes of both now passionate “anti-” or “pro-” opinions concerning the nuclear energy policy have been embraced by some of these organizations. Second, it is demonstrated why these people have taken either “pro-“ or “anti-“ stances in the process of the disaster followed by the nuclear accident, and the author points out that these attitudes are affected not only by their experiences...* denotes a presenting author. Abstracts are organized by first presenting author’s last name.*
after the beginning of the disaster, but also by their life-styles before the disaster and their memories of these life-styles. Third, the question of whether these organizations have simply endorsed or excluded some of these "anti-" attitudes or the "pro-" attitudes is discussed; rather, here we see the unexpected effect of the "anti-nuclear" discourse on the formation of these "anti-" people in doubt about the discourse; but even this adverse effect has not resulted in showing anti-"anti-nuclear" discourse. Hence scholars may expect that time would ease the unfortunate misunderstanding about the anti-nuclear opinions; however, this could take a generation, which may be too long a time for some witnesses.

Aging Problems in Suburban Neighborhoods: A Case of Hiroshima Region

The Japanese suburban neighborhoods that were developed in the 1960s to 1970s are standing at a crossroads; one path leads to sustainable communities to which young people move, while the other leads to "ghost towns" in which both young generations move out when they grow up and old people leave their houses because of residing in a nursing home. Regarding the demographic characteristics and housing conditions of Japanese suburbs, a large number of housing estates are at risk of heading towards the second road. Aging and the increase in vacant houses is one of the most serious and urgent topics to be surveyed by scholars in a variety of academic backgrounds. This paper examines (1) aging problems in Japanese suburban neighborhoods with GIS methods, and (2) relationship between aging and increasing vacant houses in Hiroshima region; and (3) finally, we discuss generative process of vacant houses in local cities.

A Sense of Absence: A Reflection on Ethnography of Walking in Yokohama and Vancouver

This paper reflects on our ethnography of walking, part of our larger cross-Pacific project on the formation and regulation of communities of sex-workers, which we have been conducting since the summer of 2012 in former-brothel-districts of Yokohama, Japan and Vancouver, Canada, places that are commonly marked by absences of material and discursive traces and documentation of communities of sex workers. We discuss how we came to make sense of and engage with the places through our sense of the material absences but "ghostly" presence (Gordon 2008) of sex workers' bodies and brothels. We also discuss how our affective responses such as frustration, numbness, boredom and anger, which we experienced when encountered the production of those absences, enabled us, emplaced ethnographers, to make the absences visible and envision an ethical way to engage with the spaces whose communities were uprooted and memories have been marginalized, erased or forgotten.

Women's Hair Loss from the Perspectives of Body and Gender

This research aims to pursue the social cognition on women's hair loss (women's baldness) due to alopecia, and to clarify the structure of oppression on which they were placed from the perspectives of body and gender. Through this study, I want to point out that women's hair loss should be argued as a sociological object than just a medical disease. Until recently, hair loss was mainly identified as alopecia in a medical or psychological research. By the previous studies, mental difficulties of women with alopecia are clarified (Eckert: F1976, Van der Donc et al.: F1994), and the usefulness of wearing wigs as the ways of coping is shown (Nakajima, Nakayama:2002). However, in these researches, it isn't clarified about the problem experience after wearing wigs.

So, this research uses Goffman's passing theory (Goffman: 1968) and analyzes the narration of 14 baid women with alopecia area who wear wigs. This study draws the following discussions. Firstly, the point of view of the concerned individual, wearing a wig itself is a disability for bald woman and it's based on the cultural norm which considers hair as the symbol of femininity. Secondly, one reason behind the production of the disability as being the existence of "close others" (family), who force or encourage the individual concerned to wear wigs. As the encouragement by society and the intimate sphere to wear the disability fits with the gender body's accepted norm, it is one reason why the individual continues to wear the wig.

* denotes a presenting author. Abstracts are organized by first presenting author's last name.

In conclusion, women's hair loss is seen both as a physical abnormality (disease) and as a deviation from the gendered body's norm, and that these two consequences place the issue in a structure of double oppression.

Organic Farming, Consumers and "Teikei" in Japan: Focusing on the Influence By the Nuclear Plant Accident

The nuclear power plant explosion in March, 2011 caused severe damage to the people in Fukushima and surrounding areas. Present paper examines its influence on organic farming, focusing on the behavior of consumers - general consumers and teike (direct co-partnership between farmers and consumers) consumers.

After the accident, farmers were restricted to sell contaminated products, and even if not contaminated, the fear restrained consumers from purchase. The heavier organic customers one is, the more sensitive was her/his reaction to products from affected area, and the economic damage of organic farmers was severe. It was ironical that the food industry and local people supported affected farmers at the critical stage.

Consumers and farmers of teikei groups held study meetings jointly to understand the situation, and such meetings were opened to general consumers, too. Among un-affected consumer groups, the number of members increased, which shows the reliability of Teikei was reevaluated.

Many consumer groups did some kinds of special supports, but continuing the relationship was also the support. Consumers went to farmers' fields to help farm work, and one group sued to nearby nuclear plant to stop the operation. Feelings of mutual help and solidarity encourage the affected farmers, and also give deep consuming to consumers.

Teikei is shrinking in Japan while “Community Supported Agriculture” is growing worldwide. Conventionally, teikei relied on voluntary work of women (especially for consumer side). Such style become difficult to maintain, and Teikei is now shifting to individual based one using parcel delivery service. Serious divergences between farmers (rural) and consumers (urban) in the consuming society is the cause and the result of the accident. Social consensus and broad struggle to get out of such divergence, learning from the experiences of teikei, need to be sought seriously and not to reopen the nuclear plant.

YOSHINO, RYOZO* (Institute of Statistical Mathematics, yoshino@ism.ac.jp)

Cultural Manifold Analysis (CULMAN) for Cross-National Comparative Survey

The objective of this presentation is to show our paradigm called Cultural Manifold Analysis (CULMAN) for the comparability of cross-national surveys. This paradigm has been developed in the longitudinal and cross-national surveys on national character by the Institute of Statistical Mathematics (ISM) over the past six decades since 1953. First, I summarize our paradigm of cross-national and longitudinal surveys. Second, I summarize some Japanese social values and, among others, aspects of people's sense of interpersonal trust shown in our longitudinal survey of Japanese national character. (See http://www.ism.ac.jp/ism_info_e/ko-kw.htm)

Thirdly, I present cross-national comparisons of interpersonal and institutional trust as well as some basic social values based on our past surveys, including the Seven Country Survey (surveys of seven-countries (Japan, USA and five European countries)), the East Asia Values Survey (EAVS) (2002-2005), the Pacific-Rim Values Survey (PRVS) (2004-2008) and the Asia-Pacific Values Survey (APVS) (2010-2014). (See http://www.jsp.s.go.jp/grantsnai2/12_kiban/ichiran_22_e-data/e33_yoshino.pdf) The results show that East Asian countries have already departed from traditional Confucianism and that people share more common social values beyond the distinction of East and West. Fourthly, I present an overview of data on Japanese immigrants in Brazil, Hawaii and the U.S. West Coast in order to study the interaction between the environment and ethnicity. Finally, some comments are provided for our future research.

The Representation of Wedding News in Taiwan: Critical Thinking about Romantic Love, Capitalist Ideology and Gender Politics

This research explores the representation of weddings news in mass media in Taiwan. Focusing on the gender/sexual politics, the researcher examines how wedding events are reported on mass media. In terms of textual analysis, the researcher discusses the gap between the wedding news representation and the
social reality. Additionally, the implied ideology is examined. Hopefully, the result could be transformed into teaching materials for the graduate course of sociology of gender.

Wedding as an event affects and is affected by a combination of external and internal constraints and expectations. In modern Taiwanese society, weddings are big events people want to get right on the act. Thus it may be said that, wedding consumption is related to emotion as well as interpersonal relations. The researcher is interested with how wedding is reported on mass media and how these representations will affect people's cognition and attitude.

Heterosexual relations and gender stereotype roles in the wedding events have been depicted in certain ways. These images also convey illusion of romantic love ideology. Popular culture plays a key role in naturalizing the capitalist as well as the gendered pattern. The present research attempts to analyzed the wedding news to explore the implied gender ideology.

We are living in an age often portrayed as being dominated by consumer capitalism and the products of capitalist popular culture. It is important to acknowledge the influence of the mass media in shaping people's identities and daily lives. Combining gender analysis with sociological inquiry, the researcher believes that the study on the representation of wedding news could provide some insights for the teaching practice of critical media literacy, gender equity education and relationship education in universities.

**YOUKHANA, EVA*** (University of Bonn, eva.youkhana@uni-bonn.de)

**The Power of Religious Objects in Transnational Migration**

Since the economic crisis in Spain hit most migrant households as the most vulnerable, religious institutions such as the Catholic Church, are becoming increasingly important. Their houses act as reference points by which migrants and their community are kept together. Tangible assistance is offered and transnational communication structures and family bonds are sustained. Being assisted by local Saints, the Catholic Church serves as a place of remembrance to produce and reproduce senses of belonging that date back to the early colonial era. Social relations of migrants are manifested in a symbolic representation that symbolizes the power and glory of the former Colonial regime.

Giving the example of the congregation of San Lorenzo in an immigrant neighborhood in Madrid, it is shown, which role and agency religious artifacts play in re-producing collective identities and allocating social and financial resources. By focusing on the object itself (not necessarily its symbolic representation) the functions and cultural meanings of the figure in different historic contexts become apparent. The religious staging around the object of the Saint show spatially and chronologically comprehensive chains of interaction which reflect deep seated power relations between the immigrant and the host communities.

**YOUNG, ARIEL*** (Uppsala University, ariel.young@statsvet uu.se)

**Economic Crisis: Toward the Erosion or Stability in Individual Welfare State Preferences?**

Understanding voter preferences for the welfare state and how they are formed has become an important basis for making claims about either the erosion or continued stability of the welfare state. In the past decade evidence has mounted to point towards a relationship between individual measures of economic hardship/risk and support for the welfare state. However, most of the research has been constrained to limited time-series data that evaluates this relationship under relatively stable business cycles which seldom affects individuals belonging to more secure economic groups (high skill, high income). In light of the increasing global economic instability that places these individuals at greater risk, it becomes important to determine if they will respond differently and change the direction of aggregate support for the welfare state.

This paper will examine in detail how different group classes respond to increasing risk, in particular more economically secure groups, and identify if recent findings of increased aggregate support as well as class convergence in Sweden hold or if they resemble a recent study that demonstrated a decline in welfare state support in the United States following the 2008 economic crisis. The leverage of this study is based on the use of (1) exogenous properties of the 2008 economic crisis, (2) a Swedish survey that reflects respondents' welfare state preferences and socio-economic attributes that spans seven consecutive years sampling approximately 3000 respondents per round, and (3) a design which employs a difference-in-differences method to compare individuals across municipalities. Municipalities are sorted according to those that experienced an immediate substantive spike in unemployment and those that experienced little change, which resembles a treatment and control group respectively. This design reduces endogeneity to make stronger claims for causality, improves estimation of increased economic risk on more economically secure groups, and consequently overall changes in public preferences.

**Racemaking in New Orleans: Racial Boundary Construction and the Prospects for Social Change**

This paper explores how an ideologically diverse group of affluent, white American college students respond to and process evidence of white racism and racial and class inequality in their immediate environment. It is based on an ethnographic study of Tulane University students living in post-Katrina New Orleans. Although participants' responses to racial and class inequality within and without New Orleans suggest their racial attitudes and ideologies are anything but uniform, they are not entirely uninvolved in combating these inequities. Drawing on anthropological and sociological theories of racialization, we suggest that students' socio-political inactivity is linked to their continuous construction and reinforcement of racial boundaries between themselves and local African American residents of New Orleans. Importantly, although there are some differences in how boundaries are constructed by participants who subscribe to different racial ideologies (e.g. color-blind racism, racial progressivism), we find the outcome to largely be the same. White Tulane students distance themselves socially from African Americans in the city, reinforcing social boundaries while deterring students from desire to combat structural inequalities. The findings offer valuable insight into racial boundary making processes and the socio-political implications of such boundary construction in the United States.
The article discusses the changes in marriage trends and the role of religion as an alternative source of help for immigrants. The author argues that delayed marriages and declining marriage rates in the developing world might be due to changing social norms and economic factors. The study explores the implications of these changes for the significance of marriage as an institution.

The author notes that overseas studies have suggested that during these time periods social ties and activities have a significant impact on life-decisions in adolescence and young adulthood. The survey also contains a section on health care utilization, thus making it possible for the author to analyze the relationship between religious participation and mental health.

The study advances the theory of social capital by incorporating its various dimensions into one conceptual framework. The author uses data from a survey conducted in Japan to explore the role of religion as a source of help for immigrants.

The author concludes that religion can help immigrants when they suffer from psychological distress and can be seen as a "balm for the soul." The study provides a comparative perspective on the changing trends of marriage and the role of religion in different regions under globalization.
er education, collectively known as academic harassment, has recently begun to attract public attention as a social problem. Academic harassment includes acts such as constant criticism, neglect, and distorted authorship credit in joint publications. Many universities now publicize measures against this type of harassment, and several quantitative surveys have shown that serious subcultural damage is a possible result of harassment. However, such surveys have focused on the ultimate outcome of the harassment; few sociological analyses have explored the actual process of harassment.

This paper describes how students view this process and the variety of problems they experience in mentor-student relationships recognized to involve harassment. Interview data was obtained from 17 graduate students and young researchers collected between 2009 and 2012, and this paper focuses on the narratives of six key informants from different disciplines. First, the interactive construction approach was applied to interpret narratives to reconstruct linguistic and cross-case analyses of these life stories was then conducted.

The results revealed three commonalities in students’ experiences of the relationship, regardless of their gender, academic discipline, and type of harassment experienced: 1) non-sexual, yet uncomfortable, closeness or distance with their mentor; 2) recognizing exploitation in the relationship; and 3) viewing their mentor as lacking integrity as a researcher, not as an educator. By elaborating on the interplay among these points, this paper describes the issue of academic harassment as relational, not as the specific attack behaviors described in previous works.

**YUN, AELIM** (Korea National Open University, gelimyun@hotmail.com)

**Reversing a Cost-and-Risks Transfer Chain for Workers’ Rights**

In many countries the basis of labour law protections is an employment relationship that has been identified as a ‘subordinate’ relation to a single employer in individual corporations. However, the emerging pattern of precarious work is often done in relation to multiple ‘users’ beyond corporate boundaries. Among triangular employment relationship or dependent self-employment, for example, different type of dependence – frequently referred to ‘economic dependence’ or ‘quasi subordination’ – is more dominant.

In case that labour law protections have been extended to those precarious workers, the grounds and the effectiveness of labour protections are still questioned. On one hand, the degree of similarity to employment relationship is not the elements for labour protections, as capital seeks to evade that type of relation. Therefore, the strategy for adjusting criteria of employment relationship (i.e. The ILO Employment Relationship Recommendation) is not enough. On the other hand, the need of social protections for precarious workers cannot fully explain why capital should take the burden of labour protections.

This paper explores an alternative basis and method of employment standards enforcement with cases of construction and personal care service industry in Korea. In both cases, trade unions have developed new strategy for organizing precarious workers and for closing the enforcement gap since 2000s. In particular, unions have focused on the liability of ‘user-enterprises’ in industries where other precarious work than employment relationship becomes the norm.

Furthermore, this paper analyzes the nature of dependence of precarious work and suggests that it can be understood as ‘externalized dependence’ which comes from the cost-and-risks transfer from capital to labour and society. In conclusion, this study shows reversing the cost-and-risks transfer chain is the better approach for expanding labour protections for all kinds of workers regardless of contract types.

**Reversing a Cost-and-Risks Transfer Chain for Workers’ Rights**

**YUSUF, FARHAT** (The University of Sydney, farhat.yusuf@gmail.com)

**Prevalence of Abortion in South Australia, 1970-2009**

The main objective of this paper is to review the first 40 years’ experience of legalised abortion in South Australia and its demographic implications.

Data sources included the official abortion statistics and demographic data from the Australian Bureau of Statistics. Standard demographic and statistical techniques of analysis were used.

After an initial rise during the 1970s, abortion rates remained fairly constant for the next decade but have increased since 1990. The Pregnancy Advisory Centre was opened in 1992, to reduce waiting times and to cater for late abortions. Concurrently this has resulted in an increase in abortion earlier in pregnancy and also an increase in late abortions. With the adoption of vacuum aspiration techniques and improved services, abortion is now a day only procedure, performed by specially trained GP (general practitioner) doctors. Morbidity and mortality have been greatly reduced. Concurrent sterilisation rates have declined. The increase in abortion has affected all age groups, but particularly women under 30, consistent with the national trend towards the postponement of births. After an initial rapid decline, the total pregnancy rate has risen slightly since 1990, reflecting changes in patterns of contraceptive use. However, this is not reflected in an increase in the total confinement rate. Overall, contraception has had a greater
effect than abortion in reducing births in South Australia. The abortion rate is still lower than in the rest of Australia as calculated from Medicare data, even though this is an underestimate because it includes only fee-paying patients. There remains a need for continuing emphasis on better contraceptive use, including better emergency contraception.

An international comparison of the recent abortions data for South Australia, UK and USA revealed that the prevalence of abortion in South Australia was marginally lower than that in the UK and USA.

YUSUPOV, MUSA* (Associate Professor, musa y17@hotmail.com)

The Chechen and Japanese Values in a Globalization Context: The Comparative Analysis

In the modern world the globalization process strengthens an interference of cultures and values, actualizes contradictions of secular and religious, traditions and the modernity, requirement of defining a vector of a society development.

Object of research - the Chechen and Japanese values in conditions of globalization.

Methods: cultural and action approaches, methods of the sociological, comparative analysis.

Results. In Caucaus, as well as in Asia, Japan in the hierarchy of values the key place take the values of family, collectivism, respect for seniors, mutual aid, solidarity, group unity. The Chechen values, despite religious and language distinctions in Caucasus, are considered as a part or a segment of the Caucasian and Russian values. During the post conflict period in the Chechen Republic, as well as during the post-war time in Japan, high interest to social and cultural values and norms is observed, responsibility for preservation and revival of traditions and customs is shown. In the Chechen and Japanese society there is a similarity and distinction in the ratio of collectivism and individualism, display of paternalism, reflections on globalization calls. Transformative changes in Russia cause social activity, among young and persons of middle age enterprise, initiative, requirement for a competition is more often observed. The Internet, mobile communication, other information means make changes to functioning of traditional norms. In this context interesting is the aspiration in Japan to adapt traditions for new conditions.

Conclusion. Caucasus is on crossing of the European and Asian cultures. Japanese social practice of combination of traditions and the modernity serves as a model for others in carrying out transformations in social and cultural spheres of life. However in each region and country it is necessary to develop a strategy of modernization taking into account social and cultural specificity.

Work Values in a Modern Linguistic Space

In the modern world, in the conditions of globalization many languages and cultures undergo changes. Social factors make the mediated impact on languages that is shown in contexts of their use, new word meanings.

The purpose of our research is the study of work values in the English, German, Russian and Chechen idioms taking into account social and language contexts, the language situation in the Chechen republic.

Methods. The comparative, semantic, corpus, sociolinguistic analysis of idioms, poll of the Chechen language speakers is carried out.

Results. In the basis of work values there are the material values focused on income, profit; spiritual and psychological values - self-realization in work, pleasure from work, understanding and feeling of the meaning of life, spiritual growth through work, creativity, social and career values - education, status in society. In an internal form of idioms the cultural values describing work traditions, customs, and the historical events forming work cultures of different countries were also reflected. So, in the English and German languages the value of official regulated work was accentuated, in German the value of an official duty was also specified. In the Russian contexts very similar social experience is fixed. According to the poll of Chechen language speakers at the present stage important are the values of income and success that can be connected with a post-war situation of revival, construction of work culture. In the frame of a language situation in Chechnya the idioms with the opaque internal form which fixed the facts and subjects of culture not taking place in the modern reality are less familiar and seldom used.

Conclusion. Thus, the study of contexts is necessary for revealing the influence of social factors on idioms and evaluation of the language situation in society.

This paper reports on research conducted in the Khutsong municipality, North-West Province, South Africa. In 2004 a presidential project was announced to re-settle the Khutsong township because it was built on a dolomite hazardous area that causes sinkholes. For this purpose the biggest town redevelopment programme in South Africa was undertaken. As the project now unfolds it is clear that different processes are running concurrently. The town planners professionally assessed the risk problem and provided a grand solution. For this they obtained political buy-in from national government. The local politicians on the other hand are careful to be involved in the demolition of the old houses or shacks of people moving to the new houses. They tend to protect their power bases. The people on the other hand are well informed about the hazards of dolomite but blame the municipality for allowing water seepages to occur in the water supply and sewerage systems. They use the new housing scheme to lessen household density with only a part of the family moving to the new houses and the rest remaining in the original house or shack. Or they use the original house or shack as a source of income by renting it. Poor households use this risk scenario as a tool to enhance their disadvantageous position by profiting with regard to housing. Richer households resist resettlement because the government is not in a position to replace their houses and businesses. In fact the businessmen use this to expand their businesses. This paper demonstrates that this municipality presents a salient example of professional risk management clashing with political instincts and how inequality, exclusion and inclusion become complex concepts in such a scenario due to the skills people have to exploit such major projects.
weakening of communal cohesion due to the recent economic crisis. In addressing these problems, Lefkadiana communal associations' employ different strategies to overcome their current predicament and counterbalance the "homogenizing" effects of globalization: Some, stressing the eternal qualities of traditional values, try to perform an almost religious "sabaptism" to old and unaffected identities through the ritualistic re-enactment of village customs and practices that promote group spirit. While others, introducing a "global" approach, adopt novel means and try to institutionalize new communal practices in order to appeal to youth. Thus, seeking to (re)establish communal bonds through "invented traditions", they renegotiate local identity and culture.

Private Provision, Public Care? Community Based Postnatal Care in Neoliberal Times
As with many other high-income welfare states, maternity care in Australia is available through a system of universal health coverage available to all citizens. However, Australia is distinctive in its parallel private health insurance sector which operates alongside and in competition with the public sector. The private health insurance sector has been heavily subsidised through a range of government policies, which have both contributed to its growth and led to its current problems. As they favour the most affluent segments of the Australian population and those in metropolitan regions. In addition, concerns about the impact of this stratified system of care on maternal outcomes have been increasing. For example, women birthing in the private sector are at substantially higher risk of instrumental delivery, caesarean birth, induction of labour, episiotomy and epidural analgesia; their stay in hospital following birth is, on average, twice as long as women birthing in public facilities (Australian Institute for Health and Welfare, 2011). What do these differences mean for how women experience post-birth care following discharge from hospital? In this paper, we report on analyses from two Queensland studies of women's experiences of care in the community following childbirth, with a particular focus on the impact of public and private care provision. We report findings from a Queensland survey of new mothers (N = 6,433) in terms of their experiences of care in the community, and their confidence and satisfaction with their healthcare providers. Additionally, we report the findings of qualitative interviews with 70 new mothers and 49 health care professionals providing post-birth care in public and private health care sectors in Queensland. Together, these analyses demonstrate inequities in health care provision resulting from the current stratification between public and private systems of maternity care.

Tempelhof: A Battle for the Green Heart of Berlin
Tempelhof Airport, an iconic building with rich history in the middle of Berlin, was closed for traffic in 2008 and the airfield turned into a huge park, much loved by inhabitants from the adjacent neighbourhoods as well as by Berliners from further afield. However, after the Berlin Senat, as a governing body of the metropolis, announced its much-trumpeted "Masterplan" to re-develop the airfield, a wave of activism emerged. What was in stake was not only a loss of a unique place of biodiversity, positively mitigating the urban climate, but also an irreversible transformation of a site with special atmosphere: green lungs of Berlin and one of the largest open green spaces within an urban landscape in the whole of Europe. Moreover, Tempelhof is a witness of 20th century history: Nazism, Berlin Airlift, Cold War and the 1989 Wende. Therefore, various kinds of creative activism appeared in order to save the park, consisting mostly of engaged volunteers and enthusiasts, yet of different educational and income backgrounds and age: from garden colony (established in the 1920s), fighting against the loss of social learning to public initiatives campaigning through education and rocketing rents. Thus, it is obvious that the perception of “urban renaissance” is dissimilar amongst different strata of society: it is not only the conflict of the power elites and citizens, but also of people who believe they belong to Tempelhof (and keep its memory) vs. those who do not.

ZAGORSKI, KRZYSZTOF* (Kozminski University, zagorski@kozminski.edu.pl)
Kozminski University Index of Balanced Economic and Social Development (“IBESD”) for Poland
The paper presents a new Index of Balanced Economic and Social Development (“IBESD”), designed to evaluate Polish economy and society, with an emphasis on human conditions. “IBESD” is constructed in Hillinge Radiant paradigm, on widely accepted assumption that traditional measures, such as GDP, are insufficient to evaluate socio-economic development. “IBESD” covers four domains: internal (national) economic, external (international) economic, internal ("macro" or subjective) social, and external ("macro" or objective) social. Each of them is measured as an aggregation of several simple indicators. All four medium level indices of four domains show almost parallel changes, so they can be aggregated into a general “IBESD” index. All of them, “IBESD” included, describe very well changes in Polish economy and society during 2000-2011. Their trends may be explained by general knowledge of economic cycles in Poland and they are surprisingly highly correlated with the ultimate measure of human conditions, operationalized as an aggregation of psychological well-being (state of mind and emotions) and suicide indicators. Economic and social components of “IBESD” show the same pattern of changes, with a slight delay and greater amplitude of social changes. That indicates “leading” role of economic aspects in relation to social ones and great sensitivity of social indicators to economic ones. As far as social aspects are concerned, the trend of subjective evaluations of current conditions repeats, with small delay, the “leading” trend of expectations for future social conditions. This delay does not appear, however, during the present economic crisis, when predictions and evaluations similarly react to dramatized economic news. “IBESD” was designed in a theoretical context of balanced development. Its application confirms the theory that rapid economic development is associated with diminishing balance between its different domains.

Discourse on Youth Sexual and Reproductive Health-Stigmatized in Lahore Pakistan
INTRODUCTION: Pakistan is facing various challenges to deal with issue of youth’ Sexual and Reproductive Health (SRH). Although youth represent large number of population, yet are deprived to seek proper education and treatment to cope with their SRH needs. Subject of human sexuality is associated with strong ideology, moral views and traditions. Being Muslim country where, to discuss the topic of SRH is a societal taboo, less research is done. Moreover, poor infrastructure coupled with non-co-operative behaviour of family/community and healthcare providers discourage youth’ practices to access particular services. Thus need for this study has arisen to understand youth development, enabling to provide appropriate information about sexuality and reproductive health to youth of Pakistan.

METHODS/Approach: Research on “Assessment of awareness of youth living in Lahore regarding Reproductive health” was conducted in 2009, funded by Small Scale Research Grant under Bill and Melinda Gates Foundation at John Hopkins University and organized by Population Council. Potential participants for study were youth (males and female of 15-24 years), parents, teachers, representatives of youth organizations, service-providers and Govt. officials/policy-makers. Qualitative research technique was adopted through 40 In-depth interviews and 12 Focus-Group discussions along with combining two techniques (Dynamic Contextual-Analysis and Formative-Research).

RESULTS: Research provided a deep insight into lives and thinking of youth. Results show that youth are quite aware about subject although there are still some concerns about access and understanding of correct/authentic knowledge. It highlighted gaps in access to information from reliable sources and non-cooperative behaviour of family and community.

CONCLUSION: Research concluded that there is major difference of perceptions and awareness level amongst females and males. Lack of reliable knowledge about sexuality/reproduction, unpreparedness for physical/emotional changes, over-exposure of information via internet, scarcity of youth-based interventions and ambiguity of key-stakeholders' roles are major constraints.

Dual Job Market for Universities’ Graduates – Comparing Educational Paths and Careers of Science and Humanities Graduates

During last twenty years huge expansion of tertiary education could be observed in Poland. Number of students has risen from less than half a million in the begging of the nineties to almost two millions in recent years (GUS, 2011). For most of the time in this period the number of students of humanities, especially social sciences, was rising at fastest pace. At the same time a shortage of technically skilled employees has occurred in the Polish economy. This led to number of policies aimed at increasing popularity of technical and scientific studies among secondary schools graduates and reversal of the aforementioned trend (MINiSW, 2013). These changes have yet to satisfy the demand for skilled labour force.

We will present results of multiple research projects conducted over the last five years among students and graduates of University of Warsaw – the biggest university in Poland. We combine results of statistical analyses of surveys and administrative registers with results of qualitative research (Jasinski et al., 2012). One of main conclusions is that there is a dual labour market for university graduates: one for highly demand graduate sciences and the other for the graduates of humanities. Representatives of these two clusters prove to have different approaches towards their studies and tend to develop different strategies for entering the labour market: students of sciences concentrate on gaining knowledge and specific skills whereas humanists tend to seek job experience during their studies to enhance their employability in the future. Careers possibilities of these groups differ substantially. Graduates of sciences seem to be more successful on the labour market.

Racialization of Labour Migrants in Russia - Taking Social Movements into Consideration

The anti-immigration movement is one of the most important actors in the Russian social movement network. The goal of this paper is to isolate the key elements of the movement’s frame, the ways in which it is applied in building the discourse around “illegal immigration”. It is shown that the social movement against immigration may be treated both as epiphenomena accompanying global processes of racialization but also as the producer and transformer of societal patterns, discourses and political constellations which has its own morphogenetic, structure-transforming potential. By revealing the relatively autonomous character of many of the key themes of racial discourse in Russia, I argue that although the processes of forming class, nations and ethnicity are intimately intertwined with the biologization of cultural differences, the latter cannot simply be reduced to the former. Racial discourse concerning labor migrants in Russia has been shaped by economic conditions and the realization of a nationhood project. Construction of the “migration issue” as a social problem in Russia is in many ways embedded in the tensions obtaining between the demands of the state for social cohesion and the demands of enterprises for socially dislocated labor. My study has demonstrated that the operation of these factors results in the racializing of visually recognizable groups of labor migrants, the social relations in which they are involved, and, more recently, the category of “migrant” itself. Since groups and individuals develop strategies for negotiating their place in the racial order, they are also involved in the process of negotiating access to material and discursive resources. We thus need to identify and examine trends in the shifting logic underlying the construction of the racial order through the migration regime and also take a closer look at individual and group responses and negotiations in respect to this process.

The Politicized Schooling: Institutionalizing Educational Decentralization in Indonesia’s New Democracy

The paper discusses the effect of new democratic environment on the implementation of a globalizing policy of educational decentralization in Indonesian high schools. It identifies the new policy has created a new organizational arena in which different governance arrangements arise, beyond the policy’s original will.

The Indonesian education decentralization policy was enacted in the early 2000s following one of the world’s most radical political decentralization projects. The central Education Ministry has transferred most of its authorities to municipal administrations who’s leadership is established through a democratic election. This new policy also offers greater school autonomy as well as invites wider civil society participation. While much research on education policy heavily emphasizes the role of formal institutions, this paper highlights the involvement of non-formal sectors that nonetheless play more dominant function. Analyses are done through developing two neo-institutionalist’s concepts: “organizational field” and “governance and exchange relations.”

Using the former, this paper proposes that the new democratic field has left the reformed education system trapped in a democratic network of constraints, involving numerous organized interests like political parties, teacher unions, education corporates, and rent seeking entrepreneurs. New alliances between autonomous schools and private suppliers do enable schools to attain their immediate outputs. However, school principals cannot simply enjoy such autonomy for they have to maintain a patron-client relationship with the municipal officers who appoint them.

Furthermore, employing the latter concept, the researcher goes beyond the boundaries of institutional and technical environments in analyzing the effect of the reformed organizational relations. Such relations do to some extent reflect the technical aspect of mandated civil society participation and help educational organizations avoid a loosely coupled management. As they become routine, however, new institutionalized practices are established. And as a result, the effort for their fulfillments tends to overlook the substantive changes originally intended from the policy.

Addressing Social Justice Issues Around the Economic Crisis in Spain

Against the backdrop of a deep economic and financial crisis worldwide, welfare regimes in countries of the European Union are undergoing drastic changes driven by austerity policies. In the case of Spain, such changes affect an already weak welfare state and the large support networks woven around the family. Extreme unemployment rates, weaker job security conditions or rising poverty rates coexist with recent, dramatic changes in values around the family, gender roles or individuals’ rights.

Given its length, it is feasible to expect that the crises may be influencing changes in the country’s demographic dynamics and its value system. This presentation focuses on three aspects of the crisis: their extent, the social groups most affected by births. Recent research in other countries suggests a reversal in the traditional pattern of childless in women: now less educated women are more likely to stay...
childfree/childless than the more educated (studies on men and childlessness keep being less abundant, though). Moreover, research findings from European countries suggest low fertility may be correlated to unemployment risk and job insecurity. How are births being affected in Spain? Secondly, an inquiry on how older never-married women and men, regardless of their sexual behaviour or identity, are facing difficulties due to the crisis. Within a familial welfare regime, never-married older individuals (and some childfree ones) build support networks in a slightly different fashion than do parents/married older adults. Such networks tend to be more diverse, but also more vulnerable to health/depen-dency-negative events. Thirdly, a question on whether salient social justice issues are being dealt with or not when looking at the two previous points: is becoming a parent a choice increasingly being reserved for the more educated and privileged individuals? Are childfree/childless and never-married individuals suffering cumulative inequalities just for the still prevailing stigma of such conditions?

Sociological Dilema of Iranian Sociology: Critic of Critics

Abstract: The purpose of this paper is to study the situation of sociology in Iran focusing especially on examining the lack of sociological theorizing. For thirty years the development of positivism and experimentalism has dominated, emphasizing quantitative methodology. The impact of this is that theorizing about Iranian society has been forgotten. To understand the reason for this we have performed a meta-analysis of discourses of social actors in social sciences. Findings indicate that this can be explained by social choices and not social chances, individualism, or a lack of cooperation or creativity. Findings also suggest that what is important is the manner in which they spoke, perhaps even more that what they actually said.

The Early Employment Inequalities of Disabled Postsecondary Graduates in Canada

Disabled youth have become an increasingly important at risk group for educators and policymakers in Canada. Youth with disabilities are more likely to drop out of high school and are significantly less likely to pursue higher education. Yet, many universities are now reporting that nearly 10 percent of their graduating students self-identify as having a disability, and educational achievement-based programs designed to accommodate students’ needs are growing across campuses. While accessibility within postsecondary education may be improving, existing studies suggest that youth with disabilities still face inaccessible workplaces and hiring discrimination. In fact, perceptions of disability by employers and colleagues have been shown to have stronger effects on workplace outcomes than lack of accommodations in the workplace. Drawing on Statistics Canada’s 2005 National Graduates Survey, we explore three major research questions. First, despite increased access to disability services at the postsecondary level, how do disabled individuals with postsecondary credentials fair in the labour market relative to their non-disabled counterparts? Second, what types of credentials appear to moderate the effects of disability on workplace outcomes? That is, how do the transition outcomes of disadvantaged groups compare across fields, faculties, and types of programs? Do these relationships vary across levels of education (college, trades, undergraduate degrees, graduate degrees)? Finally, do disabled graduates experience similar inequalities across economic and non-economic transition outcomes (earnings, education-job match, job satisfaction, employment, full-time employment)?

The Communist Legacy As a Self-Transforming Social and Semiotic Structure

This paper will focus on the problem of the contested meanings of the legacy of communism in Central and Eastern Europe and the relationship between moral and political assessment of the communist past and the modes of its interpretation in academic debates. Post-communist societies are commonly perceived in terms of the legacy of the communist period, which is seen as a crucial factor defining both their general path of development and shaping their internal social hierarchies. At the same time, elements of the communist legacy are imbued with strong moral and emotional judgments. In the majority of cases, this legacy’s connotation is clearly negative and is used to color most of the past and current outcomes of the socio-economic development in countries of the region. Moreover, contemporary social actors, for a variety of reasons, are often viewed as being
tainted by the communist legacy; as products of the communist institutions and path-dependent effects. Analogically, diverse discourses that may be perceived as harmful are seen as direct outcomes and/or new forms of communist “new-speak”. This highly moral and political nature of the communist legacy, which is an important component of the reservoir of moral metaphors of public discourses in the countries of the region, makes debates on the nature and scope of the “real” or structural impacts of the communist past extremely difficult. The paper will demonstrate how constantly re-negotiated meanings of communism, and the boundary between “negative” and “positive” (if any) aspects of the communist legacy, impact the way in which the role of the past is interpreted in academic debates. Examples will be taken from discussions of regional inequalities and from sources that examine the roots of economic and social backwardness of Poland and other countries in the region.

ZDRAVOMYSLOVA, ELENA* (European University at St. Petersburg, zdra3@yandex.ru)

Gender’s Crooked Path: Feminism Confronts Russian Patriarchy

This contribution discusses the uneasy development of gender studies in Russia as one example of public sociology, on the basis mainly of our own experience in the Gender Studies Program at the European University in St. Petersburg. It observes how the political and academic context of the 1990s created opportunities for academic innovations that ideologically challenged Soviet patriarchy and invoked gendered criticisms of post-Soviet changes. I discuss the effects of the rapid but partial institutionalization of gender studies in the Russian academic context and how gender became the umbrella term for both feminist and anti-feminist standpoints. Since international support for the gender studies diminished in the 2000s, the fashion and economic benefit of doing gender studies has declined, with only a small group of researchers maintaining their commitment to the feminist approaches. I focus on the politicization of gender in the last decade of Putin’s Russia and the role of feminist researchers in the analysis of the new conservatism, expressed in gender ideology. The problems of combining research to the feminist approach to gender .

Gender Socialization Of Children Through Toys: Between Stereotypes From a Globalized Market In Expansion and Daily Interactions With Family and Peers

The globalization and expansion of toy market in the 1980s and 1990s caused development of gender stereotypes. In order to be exported to many countries and to address to children increasingly prescribing purchases within the family, the commercial communication of toys’ manufacturers and distributors is indeed highly segmented and leads to the hegemony of explicitly gendered categories “boys toys” and “girls toys”. This categorization, both written (name of sections, sales pitch) and concrete (colors, photographs of children), is normative because it shows to children the “gender” of objects, activities and values depicted (like household toys that are in sections and departments called “girls” in catalogs and stores). The toy’s industry and trade appear more and more as an instance of children’s gender socialization, teaching them since their earliest childhood to distinguish masculinity and femininity. But children do not learn passively these gender categories: this initiation comes through interactions with other children (peer group, siblings) and adults (especially parents) that may strengthen as well the circulation of gender stereotypes in the late twentieth century . On the other hand, I will show that interactions between children and with adults produce contrasting effects depending on families’ possession of cultural capital, because children do not learn passively these gender categories: this initiation comes through interactions with other children (peer group, siblings) and adults (especially parents) that may strengthen as well the circulation of gender stereotypes in the late twentieth century .

ZEGHICHE, SABRINA* (University of Ottawa, sabrina.zeghiche@gmail.com) Apport De La Socio-Analyse à L’Etude Du Processus De Construction Identitaire

L’objectif de ma contribution consiste à explorer le lien entre l’expérience de l’immigration et la construction de l’identité ethnique, à partir d’un cas concret (une famille d’origine nigérienne émigrée/immigrée au Canada). Les théories de l’identité, qui ont connu un boom depuis les années 1970, ont certes rompu avec l’essentialisme des premières approches, mais perpétuent souvent (à leur insu) une prise en compte substantielle des identités ethniques (Brubaker, 2000; Jenkins, 2010). On reconnait volontiers ces dernières comme étant mouvantes et dynamiques, mais on s’attarde très rarement sur leurs incohérences, leurs ruptures, leurs contradictions (Bajoit, 2009; Collovald, 2007). Par ailleurs, l’ethnicté (comme l’université) est souvent traitée sous l’angle soit de l’intégration (le fameux concept du vivre-ensemble), soit du déracinement (crise d’identité), soit encore du rapport intergénérationnel (crispation ou dissolution de l’ethnicté, ethnicté sym- bolique). La socioanalyse (Sayad, 1991; Bajoit, 2009), en remettant l’individu au centre de la recherche et en privilégiant la méthode de la biographie reconstituée, permet de contester l’identité ethnique (dans ses discours dichotomiques) dans ses contradictions les plus profondes, ses ambivalences, ses évolutions (au cours d’une vie), ses mécanismes de dissimulation, etc.

For ce faire, il faut nécessairement saisir l’expérience de l’immigration dans toute sa complexité, autrement dit, dans les rapports qu’elle implique avec le pays d’origine : souvenirs, fantasmes, nostalgie, désillusion (du retour), avec la famille élargie : entre culpabilité et sentiment de devoir s’acquitter d’une dette; avec la so- cieté d’accueil : promesses (réelles ou déçues) d’une nouvelle vie ou de nouvelles possibilités, discriminations (raciales, sociales, économiques, etc.), sentiment de having the lowest level of SWB. Older people from English speaking countries such as USA, Canada, New Zealand and United Kingdom have, by contrast, the highest level of SWB. These results allow suggesting that the degree of modernization influences the level of SWB very strongly. For older people the country in which they live, the level of democracy, GDP per capita, freedom and tolerance are very important. In contemporary society late life period is a time for self-realization, new activities, new leisure and new emotions. If society understands the needs of older people and provides the opportunities for their realization, society can overcome the challenges caused by population aging. Only in this case we can say about such a conception as “successful aging”.

The Schooling Of Emotion and Memory: Analyzing The Emotional Styles Of A Teacher’s Pedagogical Practices

In this paper, we explore the intersection between emotions and memories using data from a case study of a teacher’s pedagogical practices in a conflict-troubled society. The aims of this study are: to examine the construction of emotional style(s) in a teacher’s pedagogical and interactional practices whilst teaching the memories of ethnic conflict and war; and, to investigate whether these emotional styles are plausible or disadvantageous to the pupils present in the classroom. In general, the study shows that individual emotional experiences are connected with larger historical, political and social structures, which, in turn, supply the meaning and motivation by which the particular emotional styles are enacted in the classroom. The implications of this study are discussed.

What Preconditions Industry-Level Collective Bargaining in China?
As indicated in a fair amount of existing literature, China has been seeing a tendency of fast growing collective bargaining in general and industry or regional level bargaining in particular. Significant cases have constituted a fact of the centralization of the bargaining structure in China as opposed to the established knowledge that collective bargaining in China is largely institutionalized at the firm level. The centralization is not only news in China’s industrial relations studies, but also somewhat counter-intuitive in the context of the worldwide decentralization of collective bargaining structure since the late 1980s and early 1990s.
This counter-intuition has raised the question of what has led to China’s centralization of collective bargaining, or more generally, what factors precondition relatively centralized bargaining (e.g. industry-level bargaining). No systematic study has provided a theoretical framework that helps us perceive this issue.
This study tracks multiple industry-level bargaining cases in a same city in China. It examines varieties of institutionalization processes of industry-level bargaining, as well as distinct roles of relevant players—unions, workers, employers’ associations, individual employers, and government officials.
The industry-level bargaining scenario it has revealed in this city, being admittedly somewhat regionally characterized, illustrates the power dynamics that relevant players interact with each other in the sphere of collective bargaining in China (political/institutional factors). It also shows that economic/industrial factors matter—different industries have had very different institutionalization processes of the bargaining.

Tourism As Ritual: A Space-Time Model
Tourism is considered as secular ritual and important topic of the anthropological study due to its symbolizing of individual life, and its indicating of the sacred-profane shift of away-home and at-home status. Based on the spatial study of tourism system and the temporal analysis of tourism ritual, the paper tries to develop a space-time model of tourism, and finds that tourism is the complex of space and time and secular ritual in modern society, and the space-time presentation of rites of passage in modern mobile world. For tourism, spatial movement is more distinctive than time elapsing, therefore, space is primary while time is secondary; the spatial characteristics of tourism is far beyond the micro-spatial territory of non-religion rites of passage, thus tourism can be the complement rites of passage in a world on the move.
the possibilities of resolving civil disputes from bottom up. Using a national survey dataset (CGSS2005) from China’s 410 villages, this study aims to examine the impact of social capital on rural residents’ preference and actual choice of resolution in virtual and actual civil disputes, respectively. The social capital in the village refers to the features of social organization, such as trust, norms and networks that can improve the ability of a village in facilitating the coordination. The author argues that increase in social capital can significantly increase the probability of mediation.

First, the abundant associations provide more platform and agency for the residents to resolve their civil disputes. Second, the networks on the community level could give rural residents more choices when they face disputes. Considering the high cost of administrative and legal ways of resolution, the macro networks are cheaper and more available for ordinary villagers. Third, the social trust increases the interaction and dependence with each other so that villagers may be more willing to resolve their disputes by resorting to the informal parts. This research is of great importance for discovering the informal institutions and disputes resolution and provides insightful evidence for rethinking the state-society relationship in authoritarian China.

ZHANG, JUNDAN (JASMINE)* (University of Otago, jasmin.zhang@otago.ac.nz)

“No Gods, No Shangri-La”: Rethinking Tourism In An Environmental Discourse

Currently, environmentalism and the conservation movement still largely are situated within a positivist epistemological paradigm that is built on a tradition of Western science and knowledge production. Consequently, the value of the current concepts of the green economy and sustainable development often are not challenged from non-Western political and ethical perspectives. Drawn from a study in a remote Tibetan village called Nizu, in Shangri-la County of northwest Yunnan province, China, I pose the question: “what role does tourism play in the formulation and dosing of power and reshaping knowledge in terms of how humans relate to ‘nature’?” From a political ecology perspective, I will identify an environmental discourse within which tourism is embedded. By describing how tourism acts as a medium for mediating the material needs and cosmological beliefs in the village, I will challenge the idea that tourism is an imported product with the power to bring people and their living environment to modernity, in a more “ecological” way than would otherwise be the case. I argue that the descriptors “prehistorical”, “modern” and “postmodern” are performed by the villagers in one way or another, through tourism. Such performances can be contextualized in the environmental discourse that constantly is shaping and reshaping: ecological knowledge that has been taken for granted. Finally, I suggest we look further into the subjectivities that determine such performances of tourism, and the power relations involved, to better understand the complex and fluid nature of concepts such as “nature”, “culture” and “tourism” in this setting.

**RC50-807.7**

ZHANG, JUNDAN (JASMINE)* (University of Otago, jasmin.zhang@otago.ac.nz)

Tourism, Politics and Beliefs in Nizu Village in Shangri-La, Southwest China

While most of the literature in tourism studies focuses on the problems relating to tourism development at World Heritage Sites, little attention is paid to places that somehow failed to be included in the list of World Heritage Sites. This paper will talk about tourism, politics and beliefs in a Tibetan village called Nizu, with a reputation as the “backyard of Shangri-La” in relation to the famous tourism destination Shangri-la County, Southwest China. Geographically located within the Three Parallel Rivers Region, which is a natural World Heritage Site, the 2003 application of Nizu village to be included in the Three Parallel Rivers WHS failed due to the governmental plan for a copper mine north of the village. Pudacuo National Park’s establishment in 2007 brought hope to the villagers of Nizu for promoting to develop the village and region around its ecotourism products. Such hope hasn’t realized. Currently, the village attracts approximately 1500 visitors each year. One significant issue in the village, brought about by the underdeveloped tourism dream, is the diversity of ideas held about environment/nature. Traditionally, the villagers believed in the ancient Bon Religion, a belief that treats mountains and rivers as gods and then bonds people’s everyday life to these gods. In such a belief, the tangible (mountains and rivers) and the intangible (spirits and gods) are intertwined and inseparable. With the existing ambivalent attitudes to developing ecotourism in the village, various ideas of dealing natural resources become tangled with other socio-political issues among villagers. By contextualizing and theorizing from a political ecology perspective, I question what role does the notion of world heritage site play in a complicated situation such as in Nizu village? Also, I ask how far can the idea of ‘protecting heritage’ progress without close scrutiny on the power issues involving the different players?
further help to think more clearly about the possible path of urbanization and guide more effectively the practice and exploration. This paper takes Mei county—a county located in the core zone of Zou-Qin culture, which is of thousands of years of history—as research object, by historically presenting its development to observe the developing stages, distinguishing characteristics and historical evolution of China’s urbanization.

**A Study on the Method of Public Participation Based on Discourse-Power Model Among Different Stakeholders: A Case for Avoiding NIMBY Risks of Waste Transfer Stations in Nanjing, China**

Promoting sustainable development of the world is a common of different country. Because of sustainable development and public participation are inextricably linked, to promote sustainable development, it should to enhance the public participation.

The “NIMBY” phenomenon which means that not in my backyard is an increasing prominent urban problem in China to threat sustainable development. NIMBY risks are the kinds of negative external effects of urban facilities. However, in China, with its rapid urbanisation rate, city services still need to be optimised, and many public facilities must be established. Thus, the remission of avoiding NIMBY risks is an urgent problem which can help to improve social equality and justice. NIMBY conflicts are a type of social conflicts among different stakeholders including governments, experts, planners, developers, media, residents from different locations, etc. To solve it, we need to coordinate the interests among different stakeholders to achieve public participation.

This study constructs a method of public participation based on discourse-power model among different stakeholders for avoiding NIMBY risks and also the related approaches to realize them in Nanjing. Firstly, it classifies the different interests groups basing on the spatial zoning of different negative impact areas and the services area of waste transfer stations by using GIS-based spatial quantitative analysis approach. Secondly, it introduces the concept of discourse power, establishes a discourse-power model based on different interests groups, and analyses the game relationship among them. Thirdly, it builds a mechanism of distribution and implementation of discourse power to clarify different discourse power among stakeholders. This study attempts to improve an ordered public participation on avoiding NIMBY risks to guarantee a scientific, participatory, and operational urban governance.

**Data Envelopment Analysis on Assessing the Efficiency of Japanese Film Release Market from 1955 to 2011**

The film industry, as one crucial component of the leisure and entertainment industry, has received much attention in decades due to its great contribution to the economy and culture. Undoubtedly, with the presence of a big domestic market and excellent works, the Japanese film industry is playing a crucial role both to Japan and the world.

This study examines economic performance of Japanese film release market quantitatively from the perspective of input-output by applying the method of DEA based on the data from 1955 to 2011, and tries to interpret the change in light of historical development. The results demonstrate a wide range of efficiency among the individual units, and suggest a new perspective to recognize the performance of Japanese film industry for years.

Specifically, the models adopted in this study are Charnes, Cooper, and Rhodes model (CCR, 1978) and Banker, Charnes, and Cooper model (BCC, 1984), which are frequently used models of DEA. Technical efficiency (CCR efficiency) measures a DMU’s ability to convert inputs to outputs given the size of the DMU. On the other hand, by decomposition of CCR efficiency scores, BCC scores (Pure Technology Efficiency) and Scale Efficiency (SE) is calculated to examine whether the scale of the industry has any impact on its efficiency. The input includes number of screens, number of Japanese films released, number of imported films released, and average admission fee. On the other hand, the number of admission and box office receipts is output. The results also present the change of inefficiency slacks on basis of different model, which helps to improve the potential input and output. Based on the above calculation, possible reasons for the changes of efficiencies and also some managerial implications and helpful insights are provided to competitors, investors and researchers.

**China’s Class Structure and Future Trend**

According to a series of nationwide sample data, the paper analyzes the changed trend of Chinese class structure, finds that the population of middle class is becoming more and more, the population of working class is surpassing the counterpart of farmer class. With the expansion of higher education, the population of middle class will be the first biggest class in the near future, but the new middle class is still smaller. However, farmer class will be shrunk dramatically when urbanization is speed up. This kind of social transformation will affect the distribution of most Chinese society’s social policy.

**Formalize the Informal? the “Pacification” of Favelas in Rio De Janeiro**

Associated with the rapid urbanisation, there is a gigantic issue of social change in China. Part of that change is caused by the millions of rural-urban migrants. As a consequence, their integration into China’s urban society has drawn extensive attention in recent years. Thus, how to socio-spatially manage new-generation migrants whose prospects of integration cannot be simply gleaned from the experience of their predecessors, the old-generation migrants. Based on the concept of lifeworld (Habermas), the character of the new generation migrants are investigated from the perspective of their social interactions at the neighbourhood level. The study uses qualitative and quantitative data derived from a survey of a large resettlement neighbourhood (new ‘urban village’) in Suzhou. In the survey, we examine the socio-spatial sphere of migrants’ social interaction and the role of the receiving neighbourhood in facilitating such interaction.

Our sample shows that new-generation migrants are more willing and have more potential to integrate into the urban society and become permanent urban citizens. Although new-generation migrants have weak neighbourly interactions, they have relatively high attachment and sense of belonging of the neighbourhood. The findings also shows the quality of public open space is important for a more flourishing neighbourly life which could support better social integration of migrants.

**China’s Aging Population and Challenges It Is Facing**

According to Chinese population projections, the paper analyzes future aging process of different historical periods. Findings indicate that unless the family planning policy reforms in future decades, the bottom of population pyramid will shrink drastically, and growing life expectancy will progressively expand its top. By the year 2050, the aging population over 65 will account for 25% of the society. Considering the reduction of children population, the population in the labor force between 15-64 years old will also decrease.

This population transition will bring some very serious problems in the near future: Firstly, China will face the shortage of labor force if automatic standards of production process can’t be improved, especially in the low-end industries. It means migrant workers’ income will keep increasing and the labor cost in the production process will get higher. It will produce some negative effect on China’s international competitiveness.

Whereas aging process will accelerate, the adult population will save money for their future aging, restricting the consumption rate. It will affect the domestic spending policy. On the one hand, the decreasing of children population will lower family’s expenditure rate, on the other hand, the lower level social security will prevent the people in the labor force from contributing more to savings in their productive years.

With the population transition and the changing Chinese family structure, the aging people will face the shortage of social support network, especially due to lack of family members’ support. The linkage between mother and children’s family will weaken because of population migration. Thus Chinese aging population will have to depend on their spouses for their care. If they lose their spouse, the aging people will have to be send to beadhouse to be cared for. But up to now, China has not prepared enough beadhouses for their aging population.
What is the boundary between formalization and informalization? Why does the state attempt to formalize the informal space and how does it do so? Will the effort of formalization produce new forms of social, spatial, and political order amid the expansion of informality in the Global South? This paper tackles these issues by examining the current effort of favela “pacification” in Rio de Janeiro. As one of the most visible manifestations of urban informality, favelas of Rio de Janeiro have gone through several regulatory and upgrading programs but none have succeeded. Starting in late 2008, Rio de Janeiro’s State Government has been placing a special police unit called Pacifying Police Unit (Unidades de Policiais Comunitárias) inside some favelas and providing public services to the residents in order to regain control over territories long lost to drug traffic and re-integrate the economically challenged communities into society. As of September 2013, thirty-three favelas were “pacified” in Rio. Despite the official discourse of crime control and public goods provision, the “pacification” program is highly controversial in order to provides a frame to observe the tendency. In this paper, the author identifies three principles, equality, togetherness and openness, as the Chinese Academy of Social Sciences, zhengxiangchun@gmail.com

Awards and Conservation of Intangible Heritage

In 1804, Napoléon Bonaparte rewarded for the French “Honneur et Patrie”, which became the first modern awards institution international in order to select and dignify. Thus such awards systems spread throughout the modernizing world and fostered the formation of world’s fairs, such as modern Olympics and UNESCO, which almost accepts all countries as its membership.

Specific to the awards systems of intangible heritage which promoted by UNESCO. On the one hand, it generates a consensus or protect ICH, but on the other hand, for different countries and areas to implement the same awards way, could it really accomplish the protection aim? It is noteworthy that each country and area form the culture logic and mode in their-own history, when the local culture rule meets the global culture awards, actually it’s difficult to reach the expected aim. Today UNESCO carries out a series of awards ways all of the world, including “Masterpiece”, “Nominations”, “Medals”, “Living National Treasures” and “Heritage Funds”, in fact, when China operated these awards way specifically, which led to the “culture crash” will usually make the counter result that awards really wants.

As the Guizhou Miao ethnic group’s Yalu King Epic for a example, The paper will research the culture awards in the conservation of intangible heritage, emphasize the importance of the local culture logic and rule in intangible heritage awards, make sure the awards could really protect the intangible heritage.
the organization's future. Under different situations, GPOs will choose different paths. Some will professionalize, and become paid staff NGOs; some will remain informal and wait for better opportunities; some will take a clear stand to resist future attempts of formalization; and some will dissolve or break into different organizations. Government policy only starts to influence GPOs once they decide to seek registration.

*The Rise of Income Inequality in Urban China, 1996-2010: Increasing Returns to Education, State Sector Shrinkage, and Composition Effects*

Income inequality in urban China has experienced a rapid growth over the past two decades. To account for the rise in income inequality, previous studies have provided three major explanations: widening regional gaps, increasing returns to education, and growing residual inequality. Since the mid-1990s, however, the composition of the urban labor force has been considerably reshaped by three large-scale structural changes: (1) the expansion of higher education, (2) the shrinkage of state sector employment, and (3) a surge in rural-to-urban migration. In this article, I discuss how the recent rise of income inequality can be driven by these institutional and demographic shifts. Based on data from two nationally representative surveys, I use variance function regressions to decompose the growth in income inequality from 1996 to 2010 into four components: changes in between-group income gaps, changes in within-group income variation, and two types of composition effects (*distribution effect* and *transfer effect*). The decomposition results indicate that changes in between-group income gaps explain around 40% of the rise in inequality, while more than half of the total growth can be attributed to composition effects. Using counterfactual analysis, I find that changes in between-group income gaps are almost entirely driven by increases in returns to education, and growing residual inequality.

*Participation and Cooperation: An Approach to Productive Aging for Institutional Care Service in F Resident*

Institutional care service is an important part of the elderly welfare system aiming at improving the quality of life of the elderly. In the resource-input type of the welfare service, care-givers tend to treat the older people as vulnerable groups and to ignore their abilities and value. Based on the materials obtained from the observations and interviews in F Social Welfare Institution, the “functioning” of the residents is defined as their own ability to buy their first houses in this period, i.e. the young generation born in the late 1970s and post-1980s. This paper aims to examine how the institutional care-givers and residents build the “life world” during care service with the subjective recognition of the elderly’s agency, constituting the impetus of their involvement in institutional care service.

*How Home Ownership Becomes a Measurement of Inequalities: Analysis of Home Ownership of the Young Generation*

Since the beginning of the 21st century in contemporary China, house prices have been increasing rapidly especially in metropolitan cities like Beijing and Shanghai. The problems of ‘unaffordable houses’ are most significant among people who were born for the first time in the 1990s, i.e. the young generation born in the late 1970s and post-1980s. This paper aims to examine how home ownership influences life and work chances in contemporary China. It uses data from both national surveys and survey of the university graduates. The empirical analysis will start with home ownership rate with regard to type of employer, age, household registration and residential areas, which this paper argues that are the four most important factors for the segregations in home ownership. The core analysis focuses on the young generation, concerning their differences in expenditure (leisure, holiday and education), car ownership, savings, subjective feelings as well as needs of the household, and living in a metropolitan city or not. The main arguments are people without home ownership are in a relatively disadvantageous position in life quality and even the marriage and labor market, so in the metropolitan cities in China, home ownership has become an important index of socio-economic status or to measure social inequalities.

*Contesting Imaginaries: New Urban Spaces of Xi’an*

The development of heritage tourism in historical cities of China is regarded as a vital ingredient of urban regeneration by state and local governments. In Xi’an, the imperial capital of thirteen dynasties of Chinese history, the construction of a modern landscape catapulted the city from an isolated entity to the globalized world system. Guided by a fifty-year governmental city plan, the densely populated inner city of Xi’an is currently being transformed into a functioning replica of the Tang-era Imperial City to reconstruct the glorious past of Chinese civilization.

In the early 2000s, when the local government initiated a plan to demolish and relocate local residents, to attract middle-class immigrants from other cities of China, this study will examine the multiplicity of imaginaries that are produced and negotiated by actors involved in urbanization, and the way these imaginaries shape new urban spaces of Xi’an. I will analyze the role of the main actors in this dynamic process: how the municipal government implements urban regenera-
tion policies with their own entrepreneurial agendas; how real estate investors, empowered by local administrations, utilize cultural resources and real estate property for commercialization and consumption; how immigrants inhabit newly created urban spaces to search for leisure lifestyles and cosmopolitan identities; and how the traditional residents negotiate, resist and manifest their identity through daily practices. The complex associations of these actors co-construct new urban spaces through contestation and meaning-making.

Moving beyond the macro-perspectives of political economy and economic geography, the research will engage with Xi’an as an important ground for testing urban transition of social and spatial landscape, and examining social inequality in the rapid development of modern China.

*How the Internet Is Transforming Health Experiences: Reflections from a Decade of Qualitative Research on Experiences of Cancer, Chronic Illness, Infertility and Bereavement*

This study explores how people talk about the internet and how attitudes and concerns about different types of websites have changed over the last decade, drawing on comparative qualitative analysis of narrative interview studies, conducted during the years 2002-2012.

In the early 2000s patients’ narratives suggested that only particularly engaged, expert and activated patients sought health information online. By 2010 the web had become an almost unremarked, routine part of people’s experience (eg ‘of course we all looked it up straight away’). The internet has transformed how people make sense of and respond to symptoms, decide whether to consult, make treatment choices, cope with the diagnosis of a life-threatening condition or loss of a loved one. Increasingly doctors are aware of this and recommend useful sites to their patients yet, even in 2012, respondents express reluctance to talk to their doctors about what they find online, fearing that such revelations might damage the relationship. GPs have reported feeling threatened (having a ‘heartbeat moment’) when faced with a patient who uses the internet.

People want more than information online, they also want to find reflections, insights and practical advice from other patients. UK doctors may want more evidence about the health effects of using the internet but patients and the public are routinely online, even if they do not mention it in the consultation. In this paper we consider why it is not yet routine to discuss websites in primary care consultations and the consequences for inequalities in health.

*Drawing a Picture of the Changing Global Elite after World War II*

One of the primary methods of analysing elite cohesion is the analysis of corporate networks, focusing on interlocking directorates. However, there are some network qualities, especially the intersection between economy and politics, which cannot be adequately analyzed this way. I propose that in order to do this it is necessary to take into account informal organisations, like the Bilderberg Group, in which influential people from both fields interact with each other.

Using previously unresearched archive material, which provides a list of all participants of Bilderberg meetings in the years 1954-1958, I draw the social network

* denotes a presenting author. Abstracts are organized by first presenting author's last name.
of what can be labelled the „conservative“ block of the Western elite. „Conserva-
tive“ means that its primary interest is the conservation of the status quo: the role of a small elite through a democratic capitalist system. Attempting to achieve this
goal in a dynamic environment with major challenges (the spreading of the com-
munist ideology, the breaking up of the colonial system etc.), it needs to adapt
innovative methods, like the creation of supranational institutions.
In the descriptive part I focus on nationality, age, gender and occupation of
the participants. In the second, analytic part, I present the connections between
different sectors of the industry as well as positions of political power that the
participants held. In a further step I attempt to describe the shift in this network
between the 1950s and today. The official lists of current participants of the Bil-
derberg meetings allow researchers to draw an adequate picture of this network
in its current form. From previous research on the topic of the change in the elite
it can be expected that the major changes have occurred regarding the dominant
industries and little changes are to be expected regarding the nationality, the
gender and the age of the participants.

Between Voicelessness and Empowerment – A Biographical
Approach to Life Stories of Complex Traumatised Mothers

Regarding currency and scope of sexualised violence against children my re-
search takes a look at the long-term consequences for victim-survivors of these
human rights abuses. With this perspective the social positioning of highly men-
tally burdened survivors comes into consideration. This paper is based on a bi-
ographical-sociological approach of the life stories of women, who are all patients
of a traumapsychiatric hospital and who were abused in their childhood. I
would like to contribute first empirical results of my PhD project. Due to the fact
that all the women I interviewed have children my results point to the major dif-
ficulties of being diagnosed, treated and seeing oneself as mentally ill and at the
same time being a mother who is not supposed to be mentally tainted in any way.
In my presentation I would like to illustrate that there is a strong self devaluation
regarding the women’s motherhood that leads to a form of voicelessness of the
interviewees towards actors, e.g. in medicine or social work. Based on further
empirical results I will also take a closer look at ways of empowerment due to
traumapsychic approaches the women have appropriated to themselves. I would
like to discuss on the one hand to what extent a traumapsychic approach might
overcome women’s voicelessness concerning issues of motherhood and on the
other hand to what extent these women are somehow limited to pathologising
labels of mental illness that detach their present mental symptoms from their
biographical background.

ZIMMERMANN, BÉNÉDICTE* (École Hautes Études Sciences Sociales, bzim@ehess.fr)
Capabilities, Critique and Sociology

This paper discusses the implications of the double dimension of capability, a
normative and descriptive concept, for sociology and its relationship to critique.
Using a capability approach means endorsing a critical stance. But the resulting
critical standpoint is as much a matter of concept, as of theoretical and method-
ological implementation. Therefore different ways of bringing together capabili-
ties, critique and social sciences are at hand.

The conceptualization of capabilities along freedom and power of achievement
offers a common normative background. Beyond equal distribution of resources,
it makes out of equal freedom to choose and achieve, i.e. to convert resources
into valuable realizations, a yardstick for assessing social inequalities.

Once settled this common background, conversion factors bring into play the
second dimension of capabilities, namely the descriptive one, which is diversely
taken up. Economists have worked a lot on measures and descriptions of capa-
bilities. Sociologists should contribute to this debate with their own means. The
paper argues that the sociological design of inquiry may offer an as important
source for critical social sciences. Along the lines opened by J. Dewey’s logic of
inquiry, its shows how the capability concept may fuel a critical research
based on the confrontation of different levels of analysis: institutional semantics (the
public policy level), which designs how things should be, its implementation (or-
ganizational level) and the outcomes it actually produces in people’s lives (the
biographical level).

Finally, the paper gives an insight into the analytical and critical perspectives
opened up by a capability approach focusing on the interactions between insti-
tutions, organizations, and individuals on issues such as freedom, responsibility,
empowerment and employability, core-concepts in the reforms of European Wel-
fare states.

Comparative Analysis of Changing Family Formation – Different
Life Course Regimes and Developmental Paths Identified in
European Countries

The paper contributes to the comparative analysis of life course dynamics and
cohort changes in Europe. Varying forms of data collection and preparation often
hinder quantitative comparative analyses; therefore, international survey pro-
grams like the Generations and Gender Survey (GGS) have been initiated. I added
data from the National Educational Panel Survey (NEPS, research methodology
very similar) for West Germany to compare developmental paths with regard to
family related life courses between four European countries (Germany (NEPS),
Italy, France and Norway (GGS)). I use sequence analysis to examine life course
patterns of nearly 40,000 respondents and identify life course regimes and chang-
es between them. The empirical patterns are finally related to classifications
of coalitions and developmental paths as provided by concepts of welfare regimes
e.g. Esping-Andersen).

Findings show, that Northern and Western European countries follow a similar
sequence of regimes, starting from a traditional life course regime, marked by a
second start of cohabitation and marriage and subsequent fertility among
the majority of respondents. Afterwards, they pass through a ‘semi-traditional’
regime with unmarried cohabitation preceding traditional family formation.
Finally, they reach a ‘post-modern’ life course regime, in which life courses with
first birth(s) to unmarried, cohabiting couples are more frequent than other life
courses. The process of change has proceeded in Norway and France, while in West
Germany the transformation from the second to the third regime is retarded. Italy
follows a different developmental path: The change towards a ‘semi-traditional’
regime is much slower and the regime is characterized by a postponement of the
traditional process of family formation.
Finally, the concept of family related life course regimes is helpful to under-
stand, compare and classify life course dynamics. The sequence of the regimes
can be interpreted as developmental paths; developments are not determined,
differing speeds and changes in directions are possible.

The Aesthetics of Banality

Be it Breton's fascination for an adorned wooden spoon or Valéry's ambiguous affection for a sea shell and not to mention the rapturing experience of cracking the crust of Crème Brûlée described by the mov- ie character Amélie Poulain, all these seemingly ordinary objects are said to be surrounded by a sacred aura offering the possibility to sense the (assumed actual) ie character Amélie Poulain, all these seemingly ordinary objects are said to be

allowing addressing both, the issue of incomplete data and the problem of round-

proportions usually causes severe bias. In order to allow to adequately modeling

ing such data to compute, e.g., distribution characteristics like sample quantiles or

and abnormal concentrations of reported values at certain "heaping points." Us-

questions depends on individual characteristics. For example, people with migra-

beginning with pre-school children.

At the same time it became clear that allegedly smooth process had some

condition postmoderne: on the one side with regard to the construction of the banal as a category of sensu-

sity and on the other side with respect to diverse strategies of aestheticism cre-

ating the aural effects of trivial things. Hereon we will secondly shed light on the con-

sequences of this discourse on the study of material culture suggesting that

we won't be able to expose the cultural significance of mundane objects properly,

if we don't account for the factor that these "actual significatory structures" are themselves part of a prevalent model of the aesthetics of banality.

Multi-Level Governance in the Adaptation to Climate Change in Australia - the Latrobe Valley

The planning and political negotiation processes of sustainable energy produc-

tion in Australia can be understood as contradictory processes. A number of different players from Commonwealth, State Government and regional level got engaged to transform the Latrobe Valley region that has the dirtiest coal fired power stations in Aus-

tralia.

We examined the intertwined processes of strategic planning and governance, the set-up of the Latrobe Valley Transition Committee and the development of a Roadmap to transform the region as well as the funding of concrete projects to provide new jobs within the region. What has been seen by many as a smooth and successful process came to a halt when the political conditions changed.

At the same time it became clear that allegedly smooth process had some weaknesses. Collected process had been driven by funding promises of Commonwealth and State Government the region did not develop an independent vision of the transformation of the region. With the loss of funding it became obvious that there is a need to develop such a vision to further drive the process. How-

ever, good networks have been developed that might be strong enough to push forward where major funding resources are no longer available.

This paper will discuss the conditions of climate change adaptation and the advantages and challenges multi-level governance structures provide for regional planning and governance.

A Multiple Imputation Approach To Address The Problem Of Nonignorable Nonresponse and Misreporting Patterns In Income Data

When people are asked to report their monthly income they are likely to refuse to answer. If they answer, they tend to round their income to the nearest fifty, hundred or thousand, or they even completely misreport the value of income. It is well known that the propensity to misreport or to refuse to answer income questions depends on individual characteristics. For example, people with migra-

tion background are normally more likely to refuse to answer. Thus, commonly income data collected by personal interviews show nonignorable nonresponse and abnormal concentrations of reported values at certain "heaping points." Us-

ing such data to compute, e.g., distribution characteristics like sample quantities or proportions usually causes severe bias. In order to allow to adequately modeling

such kind of incomplete and heaped data, we introduce a general method that allows addressing both, the issue of incomplete data and the problem of round-

ing. To impute missing values, we suggest using the proven method of multiple imputation by chained equations. The method requires determining a univariate imputation model for each variable with missing values. We suggest specifying the imputation model for the income variable such that it describes the true dis-

tribution of the income variable simultaneously with the heaping pattern present in a data set. Monte Carlo simulations are used to validate the novel approach. To illustrate the capacity of the approach we conduct a case study using income data from the adult cohort of the German National Educational Panel Study.

Relationships Between Gender Role Attitudes, Role Division, and Perception of Equity Among Heterosexual, Gay and Lesbian Couples in Israel

Abstract

The purpose of the present study was to investigate the relationships between gender role attitudes, household tasks, and the perception of equity among het-

erosexual, gay and lesbian couples. One hundred and twenty-four participants (54 heterosexuals, 30 gay men and 40 lesbians) were tested. It was found that same-sex couples had more liberal attitudes toward gender roles than did hetero-

sexual couples. In addition, significant differences were found between the spouses in their responses regarding role division in housekeeping in each group. The responses of heterosexual spouses correlate more closely with each other regarding the role of each of the spouses than was the case for same-sex couples. However, the role division among lesbian couples was more egalitarian than that of heterosexual couples. In addition, heterosexual women consider their married life less equitable than heterosexual men do. Similarly, one of the gay spouses considers the relationship less equitable than the other spouse does. The results are discussed in terms of their relevance to theories of social perception and cul-

tural backgrounds.

Predicted and Observed Child Health Indicators in Haiti: Exploring the Impact of the 2010 Earthquake at National and Regional Levels

The 2010 Haitian earthquake caused catastrophic damage within the impact zone and had a profound effect on social, economic and political conditions within in Haiti since the disaster. Regional variations in the severity of disaster impact
and the social and economic consequences have been encountered. The 2010 Haitian earthquake occurred within a country with a history of poor child health indicators and outcomes. The indicators include child nutritional status, immunization status, and diarrheal disease treatment. Despite the low performance on many child health indicators, data from Demographic and Health Surveys (DHS) have shown national-level improvements in key child health indicators in the three surveys conducted prior to the earthquake. These improvements continued in the 2012 DHS despite the 2010 earthquake and chlorella outbreak. The purpose of this study is to determine national and regional differences in child health indicators in the context of the influence of the disaster and the performance of child health indicators. Simple extrapolation method was employed to calculate the estimates. The results show a difference between expected and observed values, with observed values indicating poor health outcomes for children compared what was predicted based on the previous three time points. Further, regional variations were apparent and linked to proximity to the earthquake area, health center and family composition. The results provide evidence of the effects of the disaster on child health in Haiti.

ZUCKER, GREGORY* (The Graduate Center, CUNY, gzucker@gc.cuny.edu)

Is Georg Lukacs' Critique Of Neo-Kantianism Justified?

A recurrent theme in the work of Georg Lukacs is a critique of the prevailing currents of sociological theory and method of his time. For Lukacs, Marxism provided a sociological theory that surpassed social theory modeled on the neo-Kantian distinction between facts and value. Several scholars have argued that Lukacs' commitment to Marxism blinded him to the contributions made by other social scientific approaches. In effect, Lukacs is charged with dismissing all other social scientific approaches on the basis of his alleged dogmatic Marxism. Moreover, Lukacs is accused of identifying any non-Marxian approach to the social science as reactionary. This paper revisits Lukacs' critique of social theory as well as the ways it has been dismissed. In this paper, I wish to argue that the nature of Lukacs' critique has been misinterpreted and warrants renewed consideration. Reexamining Lukacs' critique of neo-Kantianism reopens debates over claims that Lukacs' notion that prevailing currents of social theory overlook the problems of alienation and reification.

ZUCKER, GREGORY* (The Graduate Center, CUNY, gzucker@gc.cuny.edu)

Refication and Racism

Both historians of social theory and practicing social theorists have drawn attention to the prevalence of racist thinking in nineteenth and early twentieth century social theory. They have been increasingly aware of the ways such thought entered into social theory and questioned the extent to which the vestiges of such thought still informs contemporary social theory. This paper examines an overlooked chapter in the critique of racialist social theory. In particular, it focuses on the seldom-studied work of Georg Lukacs, The Destruction of Reason. In that work, Lukacs develops a critique of racialist social theory and argues that the critique Lukacs develops can contribute to the examination of racism in social theory. Further, it argues that Lukacs' critique should be reconnected to the concept of refication, which Lukacs developed earlier in his career. This allows intellectuals to interpret the experience of racial prejudice under capitalism as a form of refication. In this respect, this paper attempts to move toward developing a social theory that can employ the concept of refication in the understanding of racism.

ZUEV, DENNIS* (Independent Scholar, tungus66@gmail.com)

In and Beyond the Visual Gaze of the Tourists: Humanizing Antarctic Wilderness

The objective of this study was to unwrap the Antarctic tourism imaginary and go beyond the oral-visual narratives of tourists in order to understand which other senses and how are activated when touring in Antarctica. What is the ground master plot at the core of the Antarctic tourism imaginary? To summarize, most of the visualization of Antarctica and Antarctic experience rotates around the theme of "humanized nature": the penguins are seen as human-like creatures, the icebergs are spoken about as the perfect examples of abstract art and whalebones are static reminders of once prolific whale-hunting industry. Antarctica is the only land that has no myths of origin but compensates this with the heroic stories of its first explorers. In contrast to the "gaze" centered approach to tourism, Antarctic tourism presents an example of multisensuous, non-ocularcentric geography. Deepest affective encounters of tourists come from engaging various senses: interviewees talked about the powerful sounds of calving glaciers and meditating brace ice, the awful smells of penguin and seal colonies, the caresses of Antarctic wind, of refreshing Polar plunge and thick morning mist, which concealed the land and upon seeing which people would start to cry.

ZUEV, DENNIS* (Independent Scholar, tungus66@gmail.com)

Self-Transformation Of Russian Youth Through Work and Travel Program In The USA

In this study I wish to examine the mechanisms of personal transformation among Russian youth through the contact with America as an imaginary and real-life entity in the course of the program "Work and Travel". I delineate several families of transformation: relational transformations, physical transformation, and attitudinal transformations. I argue that the transformations that occur with individuals during the contact with another culture or as a consequence of the trip are part of the (de)civilizing process of the individual. One of the practical questions behind the study is whether after being a guest in the other culture young people become positive towards others being guests in their home culture.

Some of the effects of the trip have civilizing effect in the sense that they touch the structures of habitus and modes of knowledge. Through lived-in experience young people transit to the stage of reevaluation of their distance with parents and intimate partners. One of the important configurational changes is the revaluation of the relationship with parents who initially serve the primary instance in regulating the trip (through financial and emotional support).

The physical changes in perception of one's body and emotional management are reflected with ambiguous reaction: the body reaction to the contact with the fast-food culture resulting in weight gain increases refutation of American civilization, however the behavioural patterns of everyday communication can be adopted and attempted to be transplanted in home culture. One of the leading emotional changes concern the feeling of embarrassment for the behavior practiced or observed before the trip: accepting money from parents became embarrassing for some respondents and seeing people behaving rude towards them was also considered embarrassing.

ZUKIN, SHARON* (Brooklyn College, zukin@brooklyn.cuny.edu)

Globalizing the Local: Restaurants, Racial Identity, Gentrification, and Immigration

The globalization of cuisines takes place in sites ranging from the family dinner table to fast food franchises, with the integration of new products, new production techniques, and new taste criteria into traditional formulas. Located between the private, domestic space of the family and the public, mass-market space of McDonalds, neighborhood restaurants and modest takeout food shops provide a middle ground of individual action and collective provisioning where globalization reshapes local identities. Much of the globalization is carried out by demographic changes, with the entry of immigrant and "creative" entrepreneurs who both replace old restaurant owners but open new kinds of restaurants and food stores.

But globalization is also encouraged by the entry of menus that define traditional cuisines in new ways, repositioning them, on the one hand, in a new global culinary order and, on the other hand, in changing local markets. Recent changes in restaurants in a majority-black neighborhood of Brooklyn, New York, suggest that the global migrations of cuisines help to create more complex social, racial, and local identities.

ZULUETA, JOHANNA* (Soka University, zulueta@soka.ac.jp)

Memory, Nostalgia and the Creation of “Home”: An Okinawan Woman's Journey

This study looks at how elderly Okinawan women return migrants created and re-created perceptions of “home” upon their return to Okinawa through the life story of an elderly Okinawan woman presently living in Naha, Okinawa. Married to Filipino base workers during the American Occupation of Okinawa, these so-called “war brides” spent a considerable number of years in their husbands’ country, assimilating into Filipino culture as well as negotiating their identities as Okinawan “war brides” spent a considerable number of years in their husbands’ country, assimilating into Filipino culture as well as negotiating their identities as Okinawan women amid wartime sentiments against the Japanese in post-war Philippines.

Some of these women have been returning to Okinawa, creating a significant community – albeit small in number – of Okinawan women return migrants.

For this paper, I seek to explore how migration, memory, and nostalgia came to define these women’s identities as return migrants in an Okinawa that saw the dismantlement of its islands (i.e. Okinawa) and changed its place vis-à-vis the Japanese mainland (i.e. the current base-related issues) by focusing primarily on one woman’s life history. Along with this interview that was carried out in October 2012 (as well as subsequent conversations with her), data culled from fieldwork, interviews with other Okinawan returnees, and interviews with family members of these women are to be utilized as well. The migration of Oki-
nawan women to the Philippines during the immediate post-war years is a lesser
known phenomenon in contrast to the migration of “war brides” to the United
States. While similarities present themselves in these two migration streams, cir-
cumstances widely differ, and thus it is hoped that this research would be a con-
tribution to existing on Okinawan women’s international marriages and overseas
migration during the post-war years.

RC05-101.3

ZULUETA, JOHANNA* (Japan Society for the Promotion of
Science/Hitotsubashi University, zulueta@soka.ac.jp)

Okinawan and Beyond: Okinawan Women and The Re/Creation Of
Diasporic Identities

Studies on Okinawan women migrating to the Philippines during the postwar
years are scant and not accorded much attention by scholars looking at Japanese/
Okinawan migration. Furthermore, the role of women in the maintenance and
re/creation of diasporic identities have been significantly overlooked. These Oki-

nawan women married Filipino men who worked on U.S. bases in Okinawa during
the early years of the Occupation Period (1945-1972). Many of these women went
with their husbands to the Philippines and settled there, raising families and living
new lives. Upon migration, many of these women consciously assimilated into
Philippine society. Despite this, they still acknowledge their Okinawan selves by
passing on aspects of Okinawan culture to their offspring, creating in the process,
a diasporic Okinawan identity that contains both Philippine and Okinawan char-
acteristics.

I argue that these migrant women are active agents in the transmission of Oki-
nawan culture, at the same time promoting the culture of their husbands and
their adopted land, thus creating a distinct “Philippine Uchinānchu” identity. This
particular identity is continuously being maintained and re/created not only with-
in familial and contiguous boundaries, but also across space and time, through
various activities these women engage in. I also argue that these women engage
in this process of re/creating as they fashion out their sense of a “home” away
from home. The creation and re/creation of an Okinawan diasporic identity also
relates to a re-definition of Japanese identity, which tends to conflate nationality,
ethnicity, and race, and continues to leave Okinawans in an ambivalent position
vis-à-vis a Japanese identity.

This study analyzes data gathered from interviews with these women, as well
as from participation in meetings/gatherings of the Philippine-Okinawan Society
in Manila. Interview data from their children are also pertinent sources of infor-
mation about their mothers and thus will be utilized in the analyses.

Anti Doping and Controls: Social Sorting For Fair Play?

Viewing doping controls in the lights of social sorting, puts a new perspective
on the subject. Besides touching on issues such as data protection, citizens rights
of informational self-determination, privacy and the right to be let alone, those
controls foster forms of social sorting, albeit ones that claims to sort out particular
subjects in the name of fairness. As much as doping practices are a problem to a
culture of fairness and good sportsmanship, so are the controls.

From existing research, it is apparent that the athletes’ perspective is missing
in the discussion. The athletes are the object of the public debate, rather than the
subject. Athletes that are convicted (or even only suspected) of doping practices
are blamed and condemned - often by the same people that were generating the
pressure under which the decision to take illegal performance enhancing sub-
stances was made. Doping and its controls therefore operate in a twofold field
of social sorting: one that sorts out the guilty - and one that sorts out the losers,
which may turn to illegal measures to improve their situation.

From interviews with athletes, officials and doping controllers on doping con-

trol practices, I will highlight what forms of social sorting are generated through
doping controls, how they are perceived and what discourses are being formed.

I want to draw the attention to other issues within the debate on doping, such
as have not received wide attention and are not likely to, as athletes more and
more are put under a general suspicion within the system that is generating a
massive pressure and puts athletes at risk. Social sorting is by no means an in-
tended consequence, but a „collateral” effect that does play a major role on how
these controls are perceived and hence legitimised.

Italian Young People and the Choice of Emigration: Economic
Crisis’ Weird Effects

In Italy, as well as in other European countries, the economic crisis and the
austerity policies have exacerbated the structural national problems, worsening
the already difficult situations of the whole population and, in particular, of the
youngest generations. In a country where the unemployment rate touches the
35% among the 18-24yo young people and where the demographic, socio-econo-

mical and political disparities between young and adult generations lead to a
worrying decrease of the social visibility of the first ones, emigration become
again an option for many Italian young people. Although still quantitatively lim-
ited, it’s emerging among them a new migration trend which involve extra-Euro-

pean countries such as Australia, where the emigration phenomenon acquires
new peculiar characteristics in terms of adaptation plans and future projects. The
proposed contribute aims at exploring the new features of the old phenomenon
of young people emigrations through the analysis of 25 in-depth interviews - col-
lected between January and June 2013 in Sydney and Melbourne - to a group of
Italian young people aged between 18 and 26yo, emigrated in Australia in the last
two years. Trying to situate the emigration project within the framework of the
interviewees’ transition to adulthood, the analysis will focus on the reasons push-
ning them to emigrate, on their adaptation strategies and on their future plans.
The first results highlight the weight of personal, familiar and socio-demographic
characteristics on the choice and especially on the results of immigration, which
does not mitigate the starting social inequalities: within the transitions to adult-
hood, emigration becomes an opportunity of realisation for the strongest and a
‘trap’ for the weakest. Finally, as immigration has a mirror effect on the society,
the interviewees’ stories stress the difficulties of a country that seems no more
able to invest on its present and future.
